## DRILL CORE IN FOR ASSAY FROM NORTHERN DYNASTY'S PHASE TWO PROGRAM AT PEBBLE GOLD-COPPER PORPHYRY PROJECT

September 12, 2002, Vancouver, BC - Ronald W. Thiessen, President and CEO of Northern Dynasty Minerals Ltd. (TSX Venture: NDM; OTCBB: NDMLF) is pleased to announce that the Company has successfully completed its Phase Two drilling program at the Pebble gold-copper-molybdenum property in southwestern Alaska. All assay results from this program are expected to be received by the second week of October and will be reported at that time. A major Phase Three drill program is now being planned to commence in early Spring 2003.

The Phase Two program consisted of 27 core holes totaling 6000 metres and included 14 wide-spaced holes in the vicinity of the new copper-gold-molybdenum porphyry deposit, 3 holes at the copper-gold skarn discovery, and 4 holes in the high-grade gold discovery area. Additional wildcat exploration drilling was also completed within the 89 square kilometre Pebble mineralized system and successfully located a new area of widespread copper mineralization situated 15 kms southwest of the Pebble deposit.

Currently at site, drills are being serviced and a major core preparation and storage facility is being procured. Geologists are also completing a detailed review and analysis of core from the Pebble deposit. Their work is expected to lead to a recommendation for extensive drilling to upgrade and delineate higher grade resources within the 1 billion tonne Pebble resource which contains 10.9 million ounces of gold and 6.6 billion pounds of copper.

For further details on Northern Dynasty Minerals Ltd. and its Pebble Project please visit the Hunter Dickinson website at [www.hdgold.com](http://www.hdgold.com) or contact Investor Services at (604) 684-6365 or within North America at 1-800-667-2114.
