Dear Sir

BIG BLOW PROSPECT - DRILLING RESULTS

Mining Project Investors Pty Ltd ("MPI"), managers of our joint venture operations at Coolgardie, have advised results from the latest drilling programme for 2002.

At Big Blow, four angled RC holes were drilled on sections 40m apart to test for plunge extensions below historic mining. Previous production (to the mid 1930's) was ~ 10,000t @ 10.3g/t Au from a zone of stockwork veining controlled by the near - vertical Big Blow Fault.

The recent drillholes were designed to provide four pierce-points between 75m and 100m vertical depth. Significant results were returned from the northern and southern most holes of this program:

6571800N	TNG1748R	7m @ 12.69g/t Au from 99m
6571680N	TNG1750R	23m @ 5.72g/t Au from 104m including a central zone of 9m @ 11.36g/t Au from 115m

The two remaining holes returned anomalous results over similar widths. Detailed results are shown on the table below. All intercepts are in fresh-rock and comprised of dry, high quality samples.

Program 2 RC Results to 23 September

Big Blow Prospect (see attached Location Plan)						Significant Results (1.0 g/t Au lower cut off grade)			
Hole No:	Grid	Dip	Magnetic Azimuth	RC Depth (m)	Total Depth (m)	From (m)	To (m)	Interval (m)	Grade (g/t Au)
TNG1747R	6571762.55N 325444.53E	-50.00	270.00	138.00	138.00	114.00	124.00	10.00	1.04
TNG1748R	6571801.45N 325450.67E	-50.00	270.00	132.00	132.00	99.00	106.00	7.00	12.69
TNG1749R	6571720.27N 325432.28E	-50.00	270.00	120.00	120.00	86.00	98.00	12.00	*
TNG1750R	6571682.10N 325459.66E	-55.00	270.00	138.00	138.00	104.00	127.00	23.00	5.72
					Incl.	115.00	124.00	9.00	11.36

* Anomalous

Mineralisation is hosted by a zone of intense silica-carbonate-sulphide alteration in basalt, and was intersected in all four holes. The local control of high-grade shoots within the zone is not known, but this program has demonstrated potential for multiple shoots of high-grade mineralisation. Both intercepts are open at depth, and TNG1748R is open to the north.

Empress Perseverance Trend

All results from the Empress, Perseverance, and Redemption RAB drilling have been returned. At Perseverance, 2m to 5m composite samples defined several zones of mineralisation in granodiorite and altered basalt. Better results were:

6570800N TNG1654R 12m @ 1.19g/t Au from 17m
 6570800N TNG1658P 17m @ 2.43g/t Au from 19m
 6570980N TNG1666P 4m @ 1.55g/t Au from 11m and 2m @ 2.15g/t Au from 30m

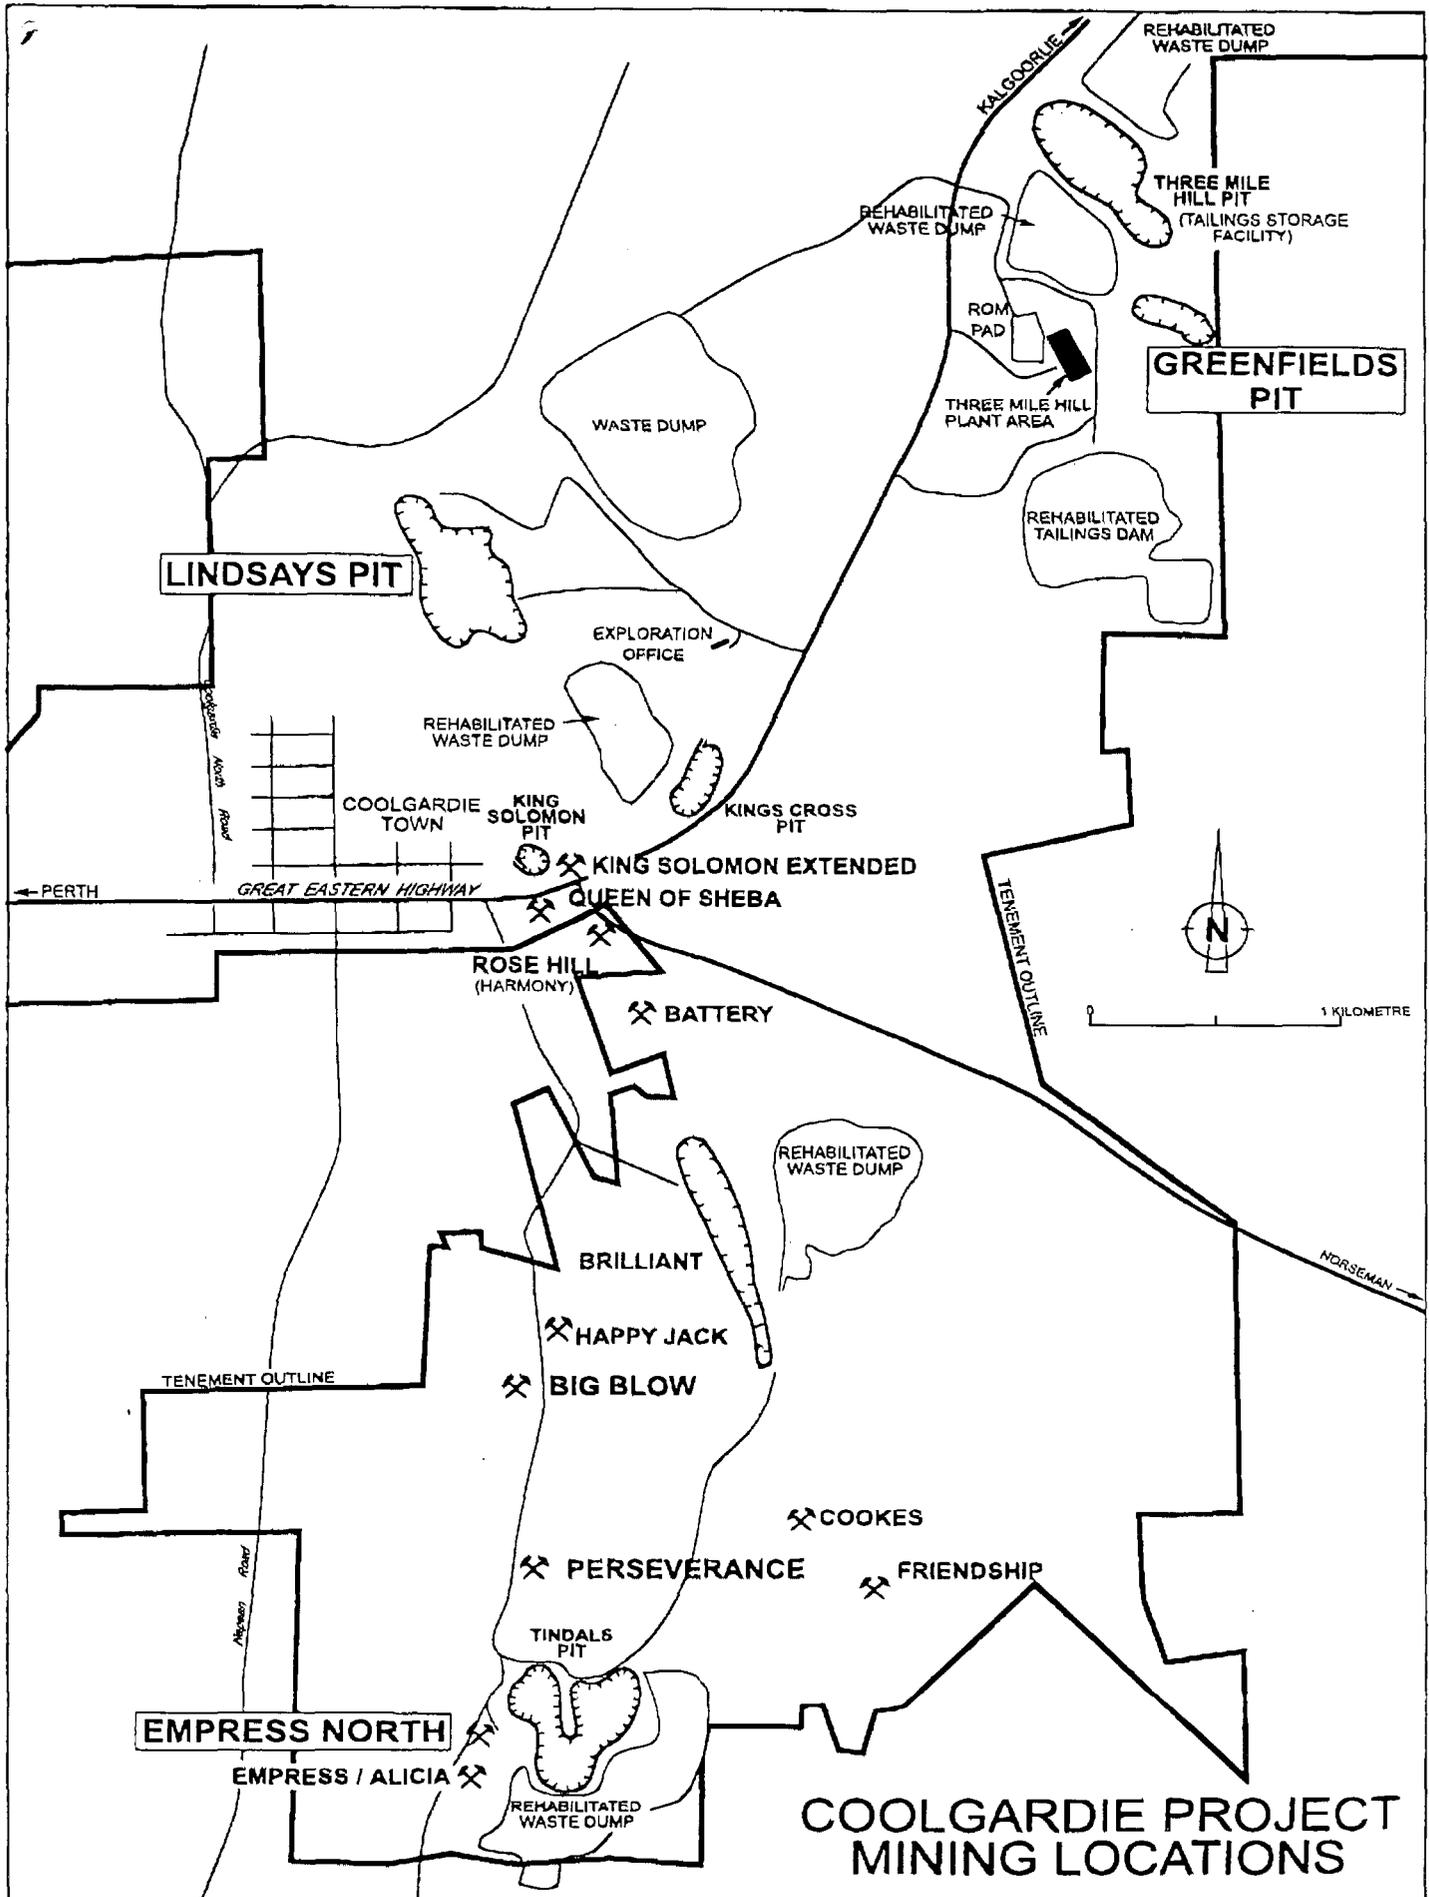

Resampling at 1m intervals is yet to be completed.

These results have confirmed the prospectivity of the Perseverance target area, and will be followed up with RC drilling scheduled for early October.

Yours faithfully

M P WRIGHT
Executive Director
