VIROTEC REACHES AGREEMENT WITH TERRAPLUS TO PURSUE OPPORTUNITIES IN SPAIN AND PORTUGAL

Virotec International Ltd ("Virotec") (ASX/AIM: VTI), an environmental remediation company, has signed a Memorandum of Understanding ("MOU") with TerraPlus Engenharia Do Ambiente E Fiscalizacao LDA ("TerraPlus"). Both companies will work together in order to identify and develop mutually beneficial business opportunities for Bauxsol™ Technology and the geochemical and related services offered by Virotec.

TerraPlus, a company incorporated in Portugal, has an established international engineering consultancy business in Portugal and Spain. It has a particularly strong presence in the fields of civil engineering, minerals extraction, water management and sanitation services.

TerraPlus has already identified potential opportunities in the Portuguese and Spanish mining industries to use Virotec's Bauxsol™ Technology.

The MOU provides for the following:

- Both parties will work toward entering a formal agreement
- Virotec will appoint TerraPlus as its exclusive licensed agent in Portugal and as a non-exclusive licensed agent in Spain
- Virotec will provide initial technical support on a project by project basis
- TerraPlus will provide ongoing project management, technical and operational support
- Virotec will supply the required Bauxsol™ Technology products

Brian Sheeran, Executive Chairman of Virotec, commented:

"Clean water is a scarce commodity in Spain and Portugal. The Directors believe the hundreds of existing tailings dams in these countries could be reservoirs for industry and agriculture. This agreement provides us with a potentially untapped market of new business opportunities in new market territories. It also further strengthens Virotec's European infrastructure in a cost-effective manner. We look forward to working with TerraPlus and to reporting further progress to shareholders."

Notes to editors

Bauxsol™ Technology is a fast and cost-effective green technology. Developed in Australia from a by-product of aluminium mining, it simultaneously neutralizes acid and extracts heavy metals from contaminated water and soils.
