Media Release

26 August 2004

Optus and Vodafone Australia announce plans to roll out shared 3G network

Optus and Vodafone Australia today announced a heads of agreement to share 3G network sites and radio infrastructure across Australia.

Under the agreement, Optus and Vodafone will work together to build and operate a joint national 3G radio network infrastructure.

Russell Hewitt, Acting CEO, Vodafone Australia said, "We have always been a strong advocate of 3G network partnering. We are delighted to be able to work with another operator with a strong commitment to delivering a quality network.

"By bringing together two extremely talented teams, we will be able to share resources so we can roll out faster and deliver efficiencies to our business."

Allen Lew, Managing Director, Optus Mobile said, "The Radio Access Network represents about two thirds of the total capital cost of a 3G network, so to be able to share this cost with another company is beneficial.

"This agreement will lower our 3G cost structure – but consumers will be the real winners. Consumers will have access to a robust and reliable network since it will tap into the 3G expertise and success of Vodafone and Optus."

Optus will draw on SingTel's regional presence and expertise and Vodafone will draw on its global experience in rolling out 3G networks around the world including Japan, the UK, Germany and Italy. This will ensure that the 3G customer experience is first rate.

Although the two companies will share 3G infrastructure, they will provide completely separate customer services and continue to compete vigorously for customer business.

The two companies expect to sign a long form agreement by late October 2004.

The arrangements will be conditional upon necessary regulatory approvals.

Statement

26 August 2004

Optus and 3G network roll out

Further to today's announcement - Optus and Vodafone Australia announce plans to roll out shared 3G network - Optus wishes to share some preliminary financial information associated with the proposed agreement.

By Optus' own calculations, the cost of rolling out 2,000 3G base stations to cover the cities of Sydney, Melbourne, Brisbane, Perth, Adelaide and Canberra is estimated to be approximately A\$435 million.

Under the proposed agreement with Vodafone Australia, Optus estimates that this capital expenditure will be reduced by between A\$130 million and A\$140 million.

In addition, Optus estimates that over a 10-year period, operating expenditure for maintenance, operations and site leases will be reduced by approximately \$100 million.
