Mauritania Drilling Update

Premier reports that the Merou-1 exploration well in PSC-B, offshore Mauritania has reached total depth of 3060 metres. Preliminary drilling and wireline logging information, including pressure and fluid sampling data, indicate that thin hydrocarbon bearing sands have been intersected by the well. The initial assessment is that these are sub-commercial accumulations, however more detailed analysis is needed before any further comment can be made.

Mauritania Drilling Update

Premier reports the following activity offshore Mauritania.

Tiof-3 ST2 Appraisal well

The "West Navigator" drill ship is preparing to suspend the Tiof-3 ST2 appraisal well as a potential future development well. The production test data acquisition has been limited to various samples and pressure measurements due to operational difficulties. Further production testing of the reservoir will be required during the appraisal campaign.

Future operations

The "Stena Tay" rig will plug and abandon the Merou-1 well as planned, prior to moving to the Tiof-5 appraisal well location.
