## **Mobile Internet surfing with T-Online via Wireless LAN**

Customers surf conveniently at T-Com and T-Mobile HotSpots / New WLAN Access Finder simplifies search for available dial-in points

**T-Online/Darmstadt, 8 December 2004** – T-Online customers will in future surf the Internet at the HotSpot-locations of T-Com and T-Mobile the fast, wireless way. Dial-in at a HotSpot is either by entering your personal eMail-address and password at the HotSpot portal, or via the StartCenter of T-Online Software 5.0. Availability of a HotSpot can be automatically detected and displayed with help of the T-Online WLAN Access Finder, a new function of the current T-Online Software 5.0. With HotSpot by T-Com and T-Mobile, T-Online customers will conveniently dial in at more than 3500 public WLAN locations.

“More and more mobile people are using public dial-in points in order to surf the Internet without cables,” says T-Online board member Thomas Hille. “With the new Access Finder, we offer our customers maximum convenience when using any of more than 3500 HotSpots.”

With the latest version of T-Online Software 5.0, T-Online offers fast, simple dial-in options via the various access technology variants (analog, ISDN, T-DSL, WLAN). Customer benefit: once installed on the laptop, personal access data can be used for all dial-in variants. Whether at home with T-DSL, at friends via ISDN, or at a T-Com and T-Mobile HotSpot. For dial-in via HotSpot, T-Online customers pay €0.16 per minute. Costs incurred by surfing at the HotSpot are charged via the monthly Deutsche Telekom bill, calculated precisely to the minute.

The HotSpot locations of T-Com and T-Mobile are to be further expanded in the near future. T-Com concentrates on sites with primarily private usage such as cafés, restaurants or hotels, while T-Mobile expands business locations such as business hotels, airports and fairgrounds.
