Dear Sirs,

Re: 12g3-2(b) Reg. No. 82-34714

For your information, we enclose a copy of the Company's news release dated January 25, 2005 with accompanying Material Change Report.

Yours truly,

IMPERIAL METALS CORPORATION

Sabine Goetz  
Executive Assistant

Encl.

**Form 51-102F3  
Material Change Report**

**Item 1 Name and Address of Company**

Imperial Metals Corporation  
Suite 200 – 580 Hornby Street  
Vancouver, BC V6C 3B6

**Item 2 Date of Material Change**

January 25, 2005

**Item 3 News Release**

January 25, 2005 – Vancouver, British Columbia

A news release was issued through CCN Matthews on January 25, 2005 and was electronically filed through SEDAR.

**Item 4 Summary of Material Change**

Imperial Metals Corporation reported additional high grade drill intercepts in the northern extension of the Northeast Zone.

**Item 5 Full Description of Material Change**

Imperial Metals Corporation reported additional high grade drill intercepts in the northern extension of the Northeast Zone.

The intensely mineralized intersections in holes WB04-161 and WB04-179 have confirmed the presence of a significantly higher grade zone within the Northeast Zone, called the Green Zone, that could be amenable to underground mining. These intersections include 25.1 metres grading 4.43% copper, 1.28 g/t gold and 26.92 ppm silver in hole WB04-161, and 15.0 metres grading 5.86% copper, 3.13 g/t gold and 39.06 ppm silver in hole WB04-179. This recently discovered higher grade zone, which includes 10.6 metres grading 5.43% copper, 3.08 g/t gold and 30.22 ppm silver in previously reported hole WB04-158, has been identified over a 70.0 metre strike length and is open along strike in both directions.

Selected drill hole results are included in the table below. An updated Table of Assay Results, Drill Plan and Section are available on the Company's website.

Northeast Zone Drill Hole #	Azimuth	Dip	Total Length (m)	Metre Interval		Interval Length	Copper %	Gold g/t	Silver ppm
				from	to

Further delineation and testing of the Northeast Zone, along with the Springer Zone and numerous geological targets within the Mount Polley property will resume February 1, 2005 with four drills.

Patrick McAndless is the Qualified Person, as defined by National Instrument 43-101, and responsible for the preparation of the technical information in this release. Samples were analyzed by Acme Analytical Labs Ltd. in Vancouver, BC.

The wholly owned Mount Polley property has been the focus of continuous exploration since August 2003. The open pit copper-gold mine, idled in September 2001 due to low metal prices, is scheduled to recommence operations during the first quarter of 2005. Approximately 100 of the expected compliment of 225 people have now been hired. Work to restart operations is now well underway with logging of the Wight Pit area 90% complete, construction of the Wight Pit access road 80% complete, stripping of waste started in the Bell Pit, recommissioning of the concentrator virtually complete, and additions to the mill nearly complete, including the installation of more flotation cells and a new concentrate thickener.

Mount Polley is located 56 kilometres northeast of Williams Lake in central British Columbia. The Mount Polley property mineral claims now encompass 19,801 hectares. As of January 13, 2005 a total of 10,758 hectares were acquired in the vicinity of Mount Polley using the new "paper" staking method instituted by the British Columbia Ministry of Energy and Mines. This additional ground will undergo geological mapping this summer, with a focus on discovering additional "Northeast Zone" type mineralization.
