OAO Gazprom and its subsidiaries (the "Group") operate one of the largest gas pipeline systems in the world and are responsible for substantially all gas production and high pressure gas transportation in the Russian Federation. The Group is also a major exporter of natural gas to European countries.

The Group is directly involved in the following principal activities:

- Production – exploration and production of gas and other hydrocarbons;
- Refining – processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation – transportation of gas; and
- Distribution – domestic and export sale of gas.

The weighted average number of employees during 2001, 2000 and 1999 was 300 thousand, 306 thousand and 298 thousand, respectively.

### 2 ECONOMIC ENVIRONMENT IN THE RUSSIAN FEDERATION

The economy of the Russian Federation continues to display characteristics of an emerging market. These characteristics include, but are not limited to, the existence of:

- a currency that is not freely convertible outside of the country;
- extensive currency controls;
- a low level of liquidity in the public and private debt and equity markets; and
- high inflation.

Transactions on the Russian stock exchange market are influenced by underdeveloped infrastructure, especially registration and settlement systems which are in the process of formation as well as regulation basis.

*The prospects for future economic stability in the Russian Federation are largely dependent upon the effectiveness of economic measures undertaken by the government, together with legal, regulatory, and political developments.*

### 3 BASIS OF PRESENTATION

These financial statements are prepared in accordance with International Accounting Standards ("IAS"). The Group subsidiaries and associated undertakings maintain their statutory financial statements in accordance with the Regulation on Accounting and Reporting of the Russian Federation ("RAR") or the accounting regulations of the country in which the particular Group company is resident. The financial statements of the Group's subsidiaries and associated undertakings resident in the Russian Federation, which account for substantially all the assets and liabilities of the Group, are based on their statutory records, which are maintained under the historical cost convention with adjustments and reclassifications recorded in the financial statements for the purpose of fair presentation in accordance with IAS. Similar adjustments are recorded in the financial statements in respect of Group companies not resident in the Russian Federation.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 3 BASIS OF PRESENTATION—(continued)

The preparation of consolidated financial statements in conformity with IAS requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

The adjustments and reclassifications made to the statutory accounts for the purpose of IAS reporting include the restatement for changes in the general purchasing power of the Russian Rouble ("RR") in accordance with IAS 29, "Financial Reporting in Hyperinflationary Economies" ("IAS 29") (see Note 29).

The US dollar to RR exchange rates were 30.14, 28.16 and 27.00 as of 31 December 2001, 2000 and 1999, respectively. The euro to RR exchange rates were 26.49, 26.14 and 27.23 as of 31 December 2001, 2000 and 1999, respectively.

#### Reclassifications

Certain reclassifications have been made to prior year balances to conform to the current year presentation.

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies followed by the Group are set out below.

##### Consolidation

Significant subsidiary companies in which the Group, directly or indirectly, has an interest of more than 50% of the voting rights or is otherwise able to exercise control over the operations have been consolidated.

Subsidiaries are consolidated from the date on which effective control is transferred and are no longer consolidated from the date from which control ceases. All intercompany transactions, balances and unrealized surpluses and deficits on transactions between group companies have been eliminated. Separate disclosure is made of minority interests.

Acquisitions of subsidiaries are recorded in accordance with the purchase accounting method. The consolidated financial statements of the Group reflect the results of operations of any subsidiaries acquired from the date control is established.

Assets and liabilities of subsidiaries acquired are restated to comply with uniform Group accounting policies. Any excess of the cost of an acquisition over the fair value of the Group's share of the identifiable net assets of the acquired subsidiary/associated undertaking at the date of acquisition is recorded as goodwill. Goodwill on acquisition of subsidiary undertakings is included in other long-term assets. Goodwill on acquisition of associated undertakings is included in investments in associated undertakings. Goodwill is amortised using the straight-line method over the shorter of its estimated useful life or 20 years.

##### Associated undertakings

Associated undertakings are undertakings over which the Group has significant influence, but which it does not control. Associated undertakings are accounted for using the equity method. Provisions are recorded for any impairment in value.

The equity method involves recognising in the statement of operations the Group's share of the associated undertakings' profit or loss for the year, less dividends received. The Group's interest in each associate is carried at the balance sheet at an amount that reflects cost, including the goodwill at acquisition, plus share of profit and

## OA0 GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

losses less dividends received less amortisation of goodwill. Equity accounting is discontinued when the carrying amount of the investment in an associated undertaking reaches zero, unless the Group has incurred obligations or guaranteed obligations in respect of the associated undertaking.

##### **Joint ventures**

Joint ventures are contractual agreements whereby two or more parties undertake economic activity, which is subject to joint control. Jointly controlled entities are accounted for using the equity method.

##### **Mutual cancellation and barter transactions**

A significant portion of accounts receivable arising from sales are settled either through a chain of non-cash transactions (mutual cancellations), sometimes involving several enterprises, or, to a lesser extent, through direct settlement by goods from the final customer (barter). A portion of operations, including capital expenditures, is transacted by mutual cancellations or barter. Such transactions are excluded from investing and financing activities in the consolidated statement of cash flows. Net cash received from operating activities in the consolidated statement of cash flow also represents actual cash flow transactions. However, individual items within operating activities are stated inclusive of both cash and non-cash transactions due to the significance of non-cash transactions in the form of barter and mutual-cancellation offsets. Management believes the costs which would be required to be expended to determine such information would outweigh the benefits of having such information.

Receivables and payables that are expected to be settled by mutual settlements, barter or other non-cash settlements, are recognized based on management's estimate of the fair value to be received or given up. Approximately, 18%, 22% and 40% of accounts receivable from gas sales settled during the years ended 31 December 2001, 2000 and 1999, respectively, were settled in this manner.

##### **Deferred tax**

Deferred tax assets and liabilities are calculated in respect of temporary differences using a balance sheet liability method for financial reporting and accounting for deferred income taxes. Deferred tax is recorded for all temporary differences arising between the tax basis of assets and liabilities and their carrying values for financial reporting purposes. A deferred tax asset is recorded only to the extent that it is probable that taxable profit will be available against which the deductible temporary differences can be utilised. Deferred tax assets and liabilities are measured at tax rates that are expected to apply to the period when the asset is realized or the liability is settled, based on tax rates that have been enacted or substantively enacted at the balance sheet date.

##### **Foreign currencies**

The balance sheets of foreign subsidiaries and associated undertakings and the monetary assets and liabilities which are held by the Group and denominated in foreign currencies at the year end are translated into Roubles at the exchange rates prevailing at the year end. Exchange differences arising on the retranslation of the net assets of foreign subsidiaries and associated undertakings are recognised as translation differences and included in shareholders' equity. Statements of operations of foreign entities are translated at average exchange rates for the year.

Foreign currency transactions are accounted for at the exchange rates prevailing at the date of the transactions. Gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognised in the consolidated statement of operations.

## OA0 GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

##### Property, plant and equipment

Property, plant and equipment are carried at historical cost after deduction of accumulated depreciation restated to the equivalent purchasing power of the RR as of 30 September 2002 on the basis of the indices included in Note 29.

Gas and oil exploration and production activities are accounted for in accordance with the successful efforts method. Under the successful efforts method, costs of successful development and exploratory wells are capitalised. Costs of unsuccessful exploratory wells are expensed upon determination that the well does not justify commercial development. Other exploration costs are expensed as incurred.

Major renewals and improvements are capitalised. Maintenance, repairs and minor renewals are expensed as incurred. Minor renewals include all expenditures that do not result in a technical enhancement of the asset beyond its original capability. Gains and losses arising from the disposal of property, plant and equipment are included in the consolidated statement of operations as incurred.

Interest costs on borrowings to finance the construction of property, plant and equipment are capitalised as part of the cost of the asset during the period of time that is required to complete and prepare the asset for its intended use.

The return to a governmental authority of social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation are recorded only upon both the transfer of title to, and termination of operating responsibility for, the social assets. These disposals are deemed to be shareholder transactions because they represent a return of assets for the benefit of governmental authorities, as contemplated in the original privatisation arrangements. Consequently, such disposals are accounted for as a charge to other reserves.

Depreciation is calculated on a straight-line basis. Depreciation on wells and production equipment has been calculated on cost restated to the equivalent purchasing power of the Rouble as of 30 September 2002, using the straight line method rather than, as is the more generally accepted international industry practice, on the unit-of-production method as the difference is not material. Assets under construction are not depreciated.

As the Group operates in the gas exploration, extraction and transportation industry in the Russian Federation, its normal activity probably results in damage to the environment. The Group annually evaluates its contingent obligations under environmental regulations. Environmental provisions are determined as the fair value of costs for conservation of wells and plants. As obligations are determined, they are recognised immediately. Expenditures that extend the life of the related property or mitigate or prevent future environmental contamination are capitalised.

The estimated useful lives of the Group's assets are as follows:

	<u>Years</u>
Pipelines .....	33
Wells and production equipment .....	12-40
Machinery and equipment .....	10-18
Buildings .....	30-40
Roads .....	20-40
Social assets .....	10-40

##### Investments

As of 1 January 2001 the Group adopted IAS 39 "Financial Instruments: Recognition and Measurement" and classified its investments into the following categories: trading, held-to-maturity and available-for-sale.

## ОАО ГАЗПРОМ

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

Investments that are acquired principally for the purpose of generating a profit from short-term fluctuations in price are classified as trading investments and included in current assets. Investments with fixed maturity that the management has the intent and ability to hold to maturity are classified as held-to-maturity and are included in non-current assets; during the years ended 31 December 2001, 2000 and 1999 the Group did not hold any investments in this category. Investments intended to be held for an indefinite period of time, which may be sold in response to needs for liquidity or changes in fair value, are classified as available-for-sale. These are included in non-current assets unless management has the expressed intention of holding the investments for less than 12 months from the balance sheet date or unless they will need to be sold to raise operating capital, in which case they are included in current assets. Management determines the appropriate classification of its investments at the time of the purchase and re-evaluates such designation on a regular basis.

All purchases and sales of investments are recognized on the trade date, which is the date that the Group commits to purchase or sell the asset. Cost of purchase includes transaction costs. Trading and available-for-sale investments are subsequently re-measured to fair value. The most part of available-for-sale investments comprise principally non-marketable equity securities, which are not publicly traded or listed on the Russian stock exchange and, due to the nature of the local financial markets, it is not possible to obtain current market value for these investments. For these investments, fair value is estimated by reference to the discounted operating cash flows of the investee. For other investments traded in active markets, fair value is determined by reference the current market value at the close of business on 31 December 2001.

Realized and unrealized gains and losses arising from changes in the fair value of trading and available-for-sale investments are included in the statement of operations in the period in which they arise.

Prior to the adoption of IAS 39 the Group had valued its marketable equity securities at the lower of cost restated to the equivalent purchasing power of the Rouble at the reporting date on the basis of indices included in Note 29, or market value. Long-term investments were reflected at cost restated to the equivalent purchasing power at the reporting date. Provision for impairment was only made where, in the opinion of the Group's management, there was a diminution in value, which was other than temporary. On disposal of an investment, the difference between the net disposal proceeds and the carrying amount was charged or credited to the consolidated statement of operations.

In the cash flow statement, purchases and sales of trading investments are presented within the section on operating activities as part of changes in working capital.

In the statement of operations, changes in fair values of trading investments are recorded in other operating expenses.

#### **Cash and cash equivalents**

Cash comprises cash on hand and balances in banks, including demand deposits. Cash equivalents comprise short-term investments which are readily converted to cash and have an original maturity of three months or less.

#### **Treasury shares**

Treasury shares are recorded at cost, using the specific identification method. The gains (losses) arising from treasury share transactions are recognised as a movement in shareholders' equity, net of associated costs including taxation.

#### **Dividends**

Dividends are recognised as a liability and deducted from equity in the period in which they are declared.

## OAD GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

##### Accounts receivable

Trade receivables are carried at original invoice amount less provision made for impairment of these receivables. Such provision for impairment of trade receivables is established if there is objective evidence that the Group will not be able to collect all amounts due according to the original terms of receivables. The amount of the provision is the difference between the carrying amount and the recoverable amount, being the present value of expected cash flows, discounted at the market rate of interest for similar borrowers at the origination of receivables.

##### Inventories

Inventories are valued at the lower of net realisable value or weighted average cost restated to the equivalent purchasing power of the RR as of 30 September 2002 on the basis of indices included in Note 29.

##### Borrowings

Borrowings are recognised initially at the fair value of the proceeds received (which is determined using the prevailing market rate of interest for a similar instrument, if significantly different from the transaction price), net of transaction costs incurred. In subsequent periods, borrowings are recognised at amortised cost, using the effective yield method.

##### Provisions

Provisions, including provisions for environmental liabilities, are recognised when the Group has a present legal or constructive obligation as a result of past events, it is probable that an outflow of resources embodying economic benefits will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made.

##### Impairment of assets

At each balance sheet date management assess whether there is any indication that the recoverable value of the Group's assets has declined below the carrying value. When such a decline is identified, the carrying amount is reduced to the recoverable amount. The amount of the reduction is recorded in the consolidated statement of operations in the period in which the reduction is identified.

##### Pension and other post-retirement benefits

The Group operates a defined benefit plan. Pension costs are assessed using the projected unit credit method: the cost of providing pensions is charged to operating expenses within the consolidated statement of operations so as to spread the regular cost over the service lives of employees. The pension obligation is measured at the present value of the estimated future cash outflows using interest rates of government securities, which have the terms to maturity approximating the terms of the related liability. Actuarial gains and losses are recognised over the average remaining service live of employees.

The Group owns and controls NPF Gazfund, which administers the Group's defined benefit plan. Members of Group's management are trustees of NPF Gazfund. The assets of NPF Gazfund primarily consist of shares of OAO Gazprom. The parent/subsidiary relationship between the Group and NPF Gazfund means that the assets held by NPF Gazfund do not meet the definition of plan assets and are, therefore, recognized in the consolidated balance sheet as treasury shares or other investments, as appropriate.

Mandatory contributions to the State pension plan, which is defined as a contribution plan, are expensed when incurred and are included within staff costs in operating expenses. The cost of providing other discretionary post-retirement obligations (including constructive) is charged to the consolidated statement of operations so as to spread the regular cost over the service lives of employees.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

##### Revenue recognition

Sales are recognised for financial reporting purposes when products are delivered to customers and title passes and are stated net of VAT, excise taxes and other similar compulsory payments.

##### Interest

Interest income and expense are recognised in the statement of operations for all interest bearing instruments on an accrual basis using the effective yield method. Interest income includes coupons earned on fixed income investment and trading securities and accrued discount and premium on treasury bills and other discounted instruments. When loans become doubtful of collection, they are written down to their recoverable amounts and interest income is thereafter recognised based on the rate of interest that was used to discount the future cash flows for the purpose of measuring the recoverable amount.

##### Research and development

Research and development expenditure is recognised as an expense as incurred. Costs incurred on development projects are recognised as intangible assets to the extent that such expenditure is expected to generate future economic benefits. However, development costs previously recognised as an expense are not recognised as an asset in a subsequent period.

Development costs that have been capitalised are amortised from the commencement of the commercial production of the product on a straight-line basis over the period of its expected benefit.

##### Financial instruments

The Group adopted IAS 39 "Financial Instruments: Recognition and Measurement" as of 1 January 2001. The financial effects of adopting IAS 39 are disclosed in Note 18.

Financial instruments carried on the balance sheet include cash and bank balances, investments, receivables, accounts payable and borrowings. The particular recognition methods adopted are disclosed in the individual policy statements associated with each item.

##### Financial risk factors

The Group's activities expose it to a variety of financial risks, including the effects of: changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Group's overall risk management focuses on the unpredictability of financial markets and seeks to minimize potential adverse effects on the financial performance of the Group.

- Foreign exchange risk

The Group operates internationally and is exposed to foreign exchange risk arising from various currency exposures primarily with respect to the US dollar and the Euro.

In an operational sense, the Group's exposure to foreign exchange risk is reduced by the existence of both costs (principally transit expenses) and income denominated in foreign currency. Similarly, the Group has significant receivables denominated in foreign currency, which in effect act as a partial economic hedge against similarly denominated liabilities, principally long-term borrowings.

The Group has investments in foreign entities (see Notes 11 and 25), whose net assets are exposed to currency translation risk. Currency exposure of the net assets of the subsidiaries is reduced primarily through borrowings denominated in Euro. Exchange differences on the euro loans are recognized in the statement of operations.

## OA0 GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

- Interest rate risk

The Group borrows long-term debt principally at variable (LIBOR referenced) rates. Currently the Group does not operate a formal management programme focusing on the unpredictability of financial markets or seeking to minimize potential adverse effects on the financial performance of the Group. The Group has no significant interest-bearing assets.

- Credit risk

Financial instruments, which potentially subject the Group to concentrations of credit risk primarily consist of accounts receivable. Credit risks related to accounts receivable are systematically monitored and are considered when impairment provisions are created. A significant portion of the Group's accounts receivable are from local gas distribution companies and energy companies. Although collection of these receivables could be influenced by governmental and other economic factors affecting these industries, management believes there is no significant risk of losses to the Group, other than to the extent to which provision for impairment of receivables has already been made.

The Group does not have formal hedging arrangements to mitigate interest rate risks or foreign exchange risks of the Group's operations.

#### Accounting for derivative financial instruments

As part of trading activities, primarily by the banking subsidiaries, the Group is also party to derivative financial instruments including forward and options contracts in foreign exchange and precious metals. The Group's normal policy is to measure these instruments at fair value using contractual rates, with resultant gains or losses being reported within the consolidated statement of operations.

The Group does not apply hedge accounting in preparation of its financial statements.

#### Fair value estimation

The fair value of publicly traded derivatives and trading and available-for-sale securities is based on quoted market prices at the balance sheet date.

Quoted market prices or dealer quotes for the specific or similar instruments are used for fair value estimation of long-term debt. Other techniques, such as estimated discounted value of future cash flows, are used to determine fair value for the remaining financial instruments. The fair value of unquoted financial instruments is estimated from the future cash flows expected from both the periodic income generated by the investments and from their disposal, discounted by a rate that reflects the risk inherent in the investment.

The fair value of financial liabilities for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Group for similar financial instruments.

The fair value of accounts receivable for disclosure purposes is estimated by discounting the value of expected cash flows at the market rate of interest for similar borrowers at the balance sheet date.

#### 5 SEGMENT INFORMATION

Management does not separately identify segments within the Group as it operates as a vertically integrated business with substantially all external sales generated by the gas distribution business. However, following the practice suggested by IAS 14, "Segment Reporting", Revised 1997 ("IAS 14") for vertically integrated businesses, information can be analysed based on the following business segments:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;

The inter-segment revenues mainly consist of:

- Production—sale of gas to the Distribution segment and sale of hydrocarbons to the Refining segment;
- Refining—sale of refined products to other segments;
- Transport—rendering transportation services to the Distribution segment; and
- Distribution—sale of gas to the Transport segment for operational needs.

**ОАО ГАЗПРОМ**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**5 SEGMENT INFORMATION—(continued)**

Internal transfer prices are established by the management of the Group with the objective of providing for the specific medium and long-term funding requirements of the individual segments. Provisions for guarantees (see Note 27) have been included within unallocated expenses. Also included within unallocated expenses are certain corporate expenses, including provision for the impairment of other investments.

Segment assets consist primarily of property, plant and equipment and current assets. Unallocated assets include other investments and deferred tax assets. Segment liabilities comprise operating liabilities, excluding items such as taxes payable, borrowings, and deferred tax liabilities.

Capital expenditures comprise additions to property, plant and equipment. Charges for impairment and provisions relate only to those charges made against allocated assets and include provisions for accounts receivable, assets under construction, investments, inventory and other long-term assets.

Substantially all of the Group's operating assets are located in the Russian Federation. Gas sales to different geographical regions are disclosed in Note 21.

**6 CASH AND CASH EQUIVALENTS**

Balances included within cash and cash equivalents in the consolidated balance sheet represent cash in hand and balances with banks. Included within restricted cash are balances of cash and cash equivalents totalling RR37,840, RR42,631 and RR33,541 as of 31 December 2001, 2000 and 1999, respectively, which are restricted as to withdrawal under the terms of certain borrowings. In addition, restricted cash comprises of balances of cash RR6,493, RR6,547 and RR5,688 as of 31 December 2001, 2000 and 1999, respectively, in subsidiary banks, which are restricted as to withdrawal under banking regulations.

**7 SHORT-TERM INVESTMENTS**

	<i>Note</i>	<b>31 December</b>		
		<b>2001</b>	<b>2000</b>	<b>1999</b>
Trading investments .....	12	14,562	17,610	10,005
Available-for-sale investments .....		15,523	13,845	13,735
		<u>30,085</u>	<u>31,455</u>	<u>23,740</u>

Trading investments primarily comprise marketable equity and debt securities held by the Group's banking subsidiaries with a view to generating short-term profits. These investments are traded in active markets and are valued at market at the close of business on reporting date by reference to stock exchange quoted bid prices.

Available-for-sale investments primarily comprise promissory notes of third parties and maturing within twelve months of the balance sheet date or other debt and equity securities intended for sale within twelve months of the balance sheet date.

**OAQ GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**8 ACCOUNTS RECEIVABLE AND PREPAYMENTS**

	31 December		
	2001	2000	1999
Trade receivables (net of impairment provision of RR104,877, RR91,672 and RR 76,422 as of 31 December 2001, 2000 and 1999, respectively) . . . . .	147,710	222,851	232,933
Prepayments and advances paid (net of impairment provision of RR12,164, RR7,090 and RR9,017 as of 31 December 2001, 2000 and 1999, respectively) . . . . .	40,461	35,401	26,009
Other receivables (net of impairment provision of RR26,976, RR19,868 and RR30,297 as of 31 December 2001, 2000 and 1999, respectively) . . . . .	59,075	64,653	74,586
	<u>247,246</u>	<u>322,905</u>	<u>333,528</u>

The fair value of accounts receivable and prepayments is RR268,313 as of 31 December 2001.

Management has considered the likelihood of collection of receivables beyond 2002 when determining the amount of the impairment provision on receivables.

RR78,504, RR104,287 and RR119,334 of trade receivables are denominated in hard currency, mainly US dollars, as of 31 December 2001, 2000 and 1999, respectively.

Other receivables include RR39,121, RR29,387 and RR37,832 relating to the operations of AB Gazprombank (ZAO) and National Reserve Bank (see Note 25) as of 31 December 2001, 2000 and 1999, respectively. These balances mainly represent deposits with other banks and loans issued to customers at commercial rates, depending on credit risks and maturities. As of 31 December 2001, the average year-end interest rate on banking deposits and loans ranged from 12.6% to 16.6% on balances denominated in Russian Roubles and from 2.3% to 10.7% on balances denominated in foreign currency. As of 31 December 2000, the average year-end interest rate on banking deposits and loans ranged from 4.7% to 23.6% on balances denominated in Russian Roubles and from 4.9% to 11.5% on balances denominated in foreign currency. As of 31 December 1999, the average year-end interest rate on banking deposits and loans ranged from 3.0% to 40.0% on balances denominated in Russian Roubles and from 5.0% to 18.0% on balances denominated in foreign currency.

As of 31 December 2001, 2000 and 1999 AB Gazprombank (ZAO) had pledged deposits with banks and other financial institutions of RR8,220, RR11,116 and RR2,243, respectively. They are pledged as collateral for borrowings received by OAO Gazprom and credit exposures of Altanos Ertekforgalmi Bank Rt (“AEB”).

The fair value of banking deposits and loans approximate the carrying values, as the majority are short-term in nature and at commercial rates.

**9 INVENTORIES**

	31 December		
	2001	2000	1999
Materials and supplies . . . . .	35,384	38,616	32,461
Gas (in pipelines and storage) . . . . .	36,269	32,794	27,763
Refined products . . . . .	3,688	549	1,786
Goods for resale . . . . .	6,635	5,705	5,850
	<u>81,976</u>	<u>77,664</u>	<u>67,860</u>

Inventories are presented net of a provision for obsolescence of RR15,525, RR15,833 and RR10,810 as of 31 December 2001, 2000 and 1999, respectively.

**OAD GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**10 PROPERTY, PLANT AND EQUIPMENT—(continued)**

Assets under construction are presented net of a provision for impairment of RR98,270, RR92,033 and RR59,241 as of 31 December 2001, 2000 and 1999, respectively.

For the year ended 31 December 2001, disposals include RR15,034 related to the disposal of OAO Lebedinsky GOK (see Note 25).

Included in additions above is capitalized interest of RR18,087, RR20,647 and RR14,674 for the years ended 31 December 2001, 2000 and 1999, respectively. Capitalization rates of 7.3%, 8.2% and 8.1% were used representing the weighted average actual borrowing cost of the relevant loans for the years ended 31 December 2001, 2000 and 1999, respectively.

Included in the property, plant and equipment above are fully depreciated assets, which are still in service of RR565,371, RR304,525 and RR302,812 as of 31 December 2001, 2000 and 1999, respectively. Also included in additions above are non-cash additions from mutual cancellations and barter settlements of RR47,127, RR62,458 and RR74,060 for the years ended 31 December 2001, 2000 and 1999, respectively.

Depreciation disclosed above includes RR630, RR999 and RR1,111 for the years ended 31 December 2001, 2000 and 1999, respectively, which is considered a cost of self-constructed assets and thus capitalized rather than expensed in the consolidated statement of operations. Similarly, RR14,149, RR12,185 and RR12,155 of depreciation for the years ended 31 December 2001, 2000 and 1999, respectively, is capitalized as a component of gas inventories and expensed in the consolidated statement of operations when the gas is sold.

Included in the property, plant and equipment are social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation of RR42,671, RR47,812 and RR54,923 as of 31 December 2001, 2000 and 1999, respectively. The Group intends to continue the transfers of social assets to governmental authority as stipulated in original privatisation arrangements.

The Group's gas fields are operated under licenses granted by federal and local authorities. These licenses to develop and extract hydrocarbons expire between 2013 and 2019, however they may be extended. Management intends to extend the existing licenses on properties expected to produce hydrocarbons subsequent to their current expiration dates.

During 1999, the Group was the principal shareholder in AEB and executed effective control over the Bank. In April 2000, a portion of the controlling interest the Group held in AEB was sold, leaving the Group with a 26% interest in AEB (see Note 26). Thus, due to the inability of the Group to control the operations of AEB from April 2000, AEB was accounted for under the equity method.

Dividends received from associated undertakings were RR791, RR852 and RR1,424 for the years ended 31 December 2001, 2000 and 1999, respectively.

as of 30 September 2002, except as noted)**

**12 OTHER LONG-TERM INVESTMENTS—(continued)**

South Pars is a joint venture with Total South Pars and Parsi International Ltd. established in 1997 to provide services to National Iranian Oil Company in relation to development of South Pars oil and gas field in Iran. Under the terms of agreement OAO Gazprom has a 30% interest in the joint venture. Management have assessed the recoverable amount of the Group's investment in the South Pars joint venture based on the present value of expected future cash flows and applying a discount rate of 16%. As a result, a RR1,954 impairment has been recognised and recorded within operating expenses in the consolidated statements of operations for the year ended 31 December 2001. The impairment is primarily due to revised timing of cash inflows and outflows associated with the joint venture.

At 31 December 1999, other investments included Ukrainian Ministry of Finance bonds held by National Reserve Bank with a carrying value of RR6,781. These bonds were issued by the Ukrainian government in settlement of gas sales made to the Ukraine in 1994. The bonds were denominated in US dollars, carry an interest rate of 8.5% per annum and were redeemable between June 1999 and March 2006. At 31 December 1999 the Group had pledged Ukrainian bonds against certain short-term borrowings. In April 2000, the Group elected to participate in a restructuring program and exchanged these bonds for US dollar denominated eurobonds issued by the Cabinet of Ministers of Ukraine bearing interest at 11.0% per annum. The new eurobonds matured between March 2001 and March 2007 with repayment of principal to be made in semi-annual installments, commencing in March 2001. Upon exchange of the original bonds the Group transferred the eurobonds to trading securities at their estimated fair value of RR7,691 at 31 December 2000 (see Note 7).

Available for sale investments at 31 December 2001, 2000 and 1999 include the Group's 14.3% interest in ZAO Media-Most. This interest in ZAO Media-Most was acquired in November 1999 via the settlement of a ZAO Media-Most debt to the Group. ZAO Media-Most is a holding company owning interests in a number of mass media companies (see Note 27).

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**14 TAXES PAYABLE**

	31 December		
	2001	2000	1999
Excise tax (including deferred amounts of RR 23,050, RR 26,656 and RR 34,055 as of 31 December 2001, 2000 and 1999, respectively) .....	37,679	44,596	61,521
Tax penalties and interest .....	22,122	44,010	47,761
Net VAT .....	1,081	28,404	45,738
Road users tax (including deferred amounts of RR 2,497, RR 3,250 and RR 7,290 as of 31 December 2001, 2000 and 1999, respectively) .....	6,153	13,944	25,264
Profit tax .....	511	10,836	12,205
Royalty and mineral restoration taxes (including deferred amounts of RR 2,256, RR 2,236 and RR 1,762 as of 31 December 2001, 2000 and 1999, respectively) .....	6,868	10,444	7,939
State pension fund and other social taxes .....	606	3,028	1,903
Other taxes .....	6,823	6,556	9,692
	81,843	161,818	212,023
Less: long-term portion of restructured tax liabilities .....	(21,060)	(11,615)	—
	<u>60,783</u>	<u>150,203</u>	<u>212,023</u>

The deferred amounts included in the taxes above are payable upon settlement of the related trade receivable balances. Substantially all accrued taxes above, excluding the deferred amounts and restructured tax liabilities (see below) incur interest at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (the refinancing rate decreased from 28% to 25% in November 2000). Interest does not accrue on tax penalties and interest.

As of 31 December 1999, net VAT comprised current and deferred VAT liabilities of RR 27,571 and RR 18,167, respectively. As of 31 December 2000, net VAT comprised current, deferred and restructured VAT liabilities of RR 20,273, RR 4,473 and RR 3,658, respectively. As of 31 December 2001, net VAT represents only restructured VAT payable as the Group had net VAT prepayments for current and deferred VAT amounting to RR 14,103; these receivables are included within other current assets.

As of 31 December 2000, profit tax payable included current and restructured liabilities of RR 9,921 and RR 915, respectively. As of 31 December 2001, profit tax payable represents only restructured profit tax as the Group had a net prepayment for current profit tax amounting to RR 8,036; these receivables are included within other current assets.

In 2001 excise tax rate for gas sales to CIS countries was reduced from 30% to 15%, effective from 1 January 2001.

During 2000 and 2001 the Group negotiated the restructuring of its tax liabilities in accordance with existing tax regulations. The Group's restructuring agreements presume payments of outstanding restructured taxes over a period of ten years through 2011, in accordance with agreed payment schedules. Interest expense on restructured tax liabilities is accrued quarterly based on outstanding restructured tax liabilities, applying the refinancing rate of the Central Bank of the Russian Federation.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**14 TAXES PAYABLE—(continued)**

The long-term portion of the restructured tax and penalties liabilities has the following maturity profile:

	31 December		
	2001	2000	1999
Due for repayment:			
Between one and two years .....	4,410	2,985	—
Between two and five years .....	6,693	8,935	—
After five years .....	43,898	19,493	—
	55,001	31,413	—
Less: unamortized discount on restructured taxes .....	(33,940)	(19,798)	—
	<u>21,061</u>	<u>11,615</u>	<u>—</u>

The gain recorded upon restructured taxes is disclosed in the statements of operations as a part of net finance costs in the amount of RR 20,647, RR 22,096 and nil for the years ended 31 December 2001, 2000 and 1999, respectively. The amortization of the discount on restructured taxes is recorded within other interest expense and amounted to RR 3,370, RR 2,298 and nil for the years ended 31 December 2001, 2000 and 1999, respectively.

**15 SHORT-TERM BORROWINGS AND CURRENT PORTION OF LONG-TERM BORROWINGS**

	31 December		
	2001	2000	1999
Short-term borrowings:			
RR denominated borrowings .....	75,027	82,601	64,072
Foreign currency denominated borrowings .....	22,882	2,928	12,197
	97,909	85,529	76,269
Current portion of long-term borrowings (see Note 16) .....	87,297	61,279	57,930
	<u>185,206</u>	<u>146,808</u>	<u>134,199</u>

Short-term RR denominated borrowings had average interest rates ranging from 5.0% to 25.0%, 17.0% to 37.0% and 35% to 40% for the years ended 31 December 2001, 2000 and 1999, respectively. Short-term foreign currency denominated borrowings had average interest rates ranging from 6.5% to 15.0%, from 7.0% to 18.0% and from 8.5% to 15% for the years ended 31 December 2001, 2000 and 1999, respectively.

The Group's short-term promissory notes payable had average interest rates ranging from 18.0% to 24.7%, 18.0% to 53.0% and 15% to 63% for the years ended 31 December 2001, 2000 and 1999, respectively.

Hungarian banking consortium	US dollar	2001-2005	4,360	—	—
Other long-term borrowings		Various	32,137	31,753	35,720
Total long-term borrowings			315,017	330,064	425,801
Less: current portion of long-term borrowings			(87,297)	(61,279)	(57,930)
			<u>227,720</u>	<u>268,785</u>	<u>367,871</u>

	31 December		
	2001	2000	1999
<b>Due for repayment:</b>			
Between one and two years	88,304	63,807	82,359
Between two and five years	119,730	169,245	213,867
After five years	19,686	35,733	71,645
	<u>227,720</u>	<u>268,785</u>	<u>367,871</u>

Long-term borrowings include fixed rate loans with a carrying value of RR 65,306, RR 42,316 and RR 54,955 and fair value of RR 55,601, RR 37,197 and RR 51,884 as of 31 December 2001, 2000 and 1999, respectively. All other long-term borrowings have variable interest rates linked to LIBOR, and the carrying amounts approximate fair value.

The weighted average effective interest rates at the balance sheet date were as follows:

	31 December		
	2001	2000	1999
Fixed rate long-term borrowings	8.86%	7.64%	5.82%
Variable rate long-term borrowings	6.33%	7.38%	7.41%

Substantially all long-term borrowings received from international banking consortiums are secured by contractual obligations to sell gas in Europe.

The Group has no subordinated debt and no debt that may be converted into an equity interest in the Group.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**16 LONG-TERM BORROWINGS—(continued)**

Other long-term borrowings include RR3,077, RR3,514 and RR4,073 as of 31 December 2001, 2000 and 1999, respectively, of coupon non-documentary bearer bonds issued by OAO Gazprom in 1999. The issue amounted to 3.0 million bonds with a nominal value of 1,000 Roubles each and a due date of 15 April 2003.

During the years 2000 and 2001, the Group repurchased 577 thousand bonds. The total liability recorded in respect of the bonds excludes the unamortized discount related to future periods.

The Group's long-term promissory notes payable had average interest rates ranging from 22.0% to 26.5%, 21.5% to 51.0% and 50.0% to 63.0% for the years ended 31 December 2001, 2000 and 1999, respectively.

Included within the current portion of long-term borrowings as of 31 December 2001 is an interest free loan provided by RAO UES with a fair value of RR9,666 and nominal value of RR11,197. The loan was received on 27 December 2001. The purpose of the loan is to finance settlements of current tax liabilities of the Group's subsidiaries. The loan is to be settled by the delivery of gas from January 2002 to December 2002.

**17 PROFIT TAX**

Before 1 January 2001 the Group accrued profit tax at rates of 30.0% and 38.0% on profits from non-banking and banking activities, respectively, computed in accordance with the Russian tax legislation. Following the enactment of new tax rates on 1 January 2001, the Group accrued current profit tax at the rate of 35% and 43% on profits from non-banking and banking activities, correspondingly, for the year ended 31 December 2001.

Profit before profit tax for financial reporting purposes is reconciled to profit tax expense as follows:

	<u>Year ended 31 December</u>		
	<u>2001</u>	<u>2000</u>	<u>1999</u>
Profit before profit tax and minority interest .....	222,269	202,284	30,378
Theoretical tax charge at the statutory rate thereon .....	(77,794)	(60,685)	(9,113)
Tax effect of items which are not deductible or assessable for taxation purposes:			
Non-temporary element of net monetary gains .....	(88,754)	(59,691)	(125,481)
Non-deductible expenses .....	(36,682)	(52,067)	(52,562)
Statutory tax concessions .....	13,162	25,910	17,099
Other non-temporary differences .....	(9,943)	(7,000)	10,663
Inflation effect on deferred profit tax balance at beginning of year .....	7,131	6,902	3,681
Effect of increase in taxable base due to statutory revaluation .....	—	303,386	—
Effect of change in tax rate .....	(11,608)	18,377	672
Profit tax (expense) benefit .....	<u>(204,488)</u>	<u>175,132</u>	<u>(155,041)</u>

The non-temporary impact of monetary gains reflects the effect of inflation on the theoretical tax charge with respect to non-monetary items of a non-temporary nature (primarily equity).

Profit tax expense in the consolidated statement of operations is stated net of RR911, RR1,075 and RR165 of tax attributable to gains arising on treasury share transactions for the years ended 31 December 2001, 2000 and 1999, respectively (see-Note 4).

In August 2001 the Profit tax chapter of the Tax Code was enacted, which introduced a new profit tax rate of 24%. This rate will become effective starting from 1 January 2002.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**17 PROFIT TAX—(continued)**

Differences between the recognition criteria in Russian statutory taxation regulations and IAS give rise to certain temporary differences between the carrying value of certain assets and liabilities for financial reporting purposes and for profit tax purposes. The tax effect of the movement on these temporary differences is recorded at the rate of 24%, 35% and 30% for the years ended 31 December 2001, 2000 and 1999, respectively.

	<u>31 December 2001</u>	<u>Effect of changes in tax rules</u>	<u>Differences recognition and reversals</u>	<u>31 December 2000</u>	<u>Effect of changes in tax rules</u>	<u>Differences recognition and reversals</u>	<u>31 December 1999</u>
Tax effects of taxable temporary differences:							
Accounts receivable .....	(18,922)	8,672	6,872	(34,466)	(4,924)	(11,195)	(18,347)
Investments .....	(904)	413	(279)	(1,038)	(148)	(477)	(413)
Tax effects of deductible temporary differences:							
Property, plant and equipment .....	32,202	(14,759)	(117,137)	164,098	23,443	261,843	(121,188)
Inventories .....	2,856	(1,307)	8,744	(4,581)	(656)	2,615	(6,540)
Impairment provision for accounts receivable .....	—	(4,627)	—	4,627	662	1,428	2,537
Tax losses carryforward ..	—	—	—	—	—	(6,640)	6,640
Total net deferred tax assets (liabilities) .....	<u>15,232</u>	<u>(11,608)</u>	<u>(101,800)</u>	<u>128,640</u>	<u>18,377</u>	<u>247,574</u>	<u>(137,311)</u>

Deferred tax assets and liabilities arise mainly from differences in the taxable and financial reporting bases of property, plant and equipment. These differences are due to the fact that a significant proportion of the tax base is based upon independent appraisals while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR (see Note 29).

At 31 December 1999 the Group recognised a deferred tax liability of RR137,311, mainly as the tax base was lower than the financial reporting base for property, plant and equipment. The difference was due to the fact that a significant portion of the tax basis is based upon independent appraisal, which was last recognised at 1 January 1998. At 31 December 2000 the Group recognised a RR303,386 increase in a deferred tax asset due to temporary differences resulting from a revaluation of the tax basis of property, plant and equipment recognised at 1 January 2001.

The deferred tax expense of RR117,137 for the year ended 31 December 2001 mostly arose due to the impact of inflation eroding the tax-deductible value of the Group's property, plant and equipment.

The temporary differences associated with undistributed earnings of subsidiaries amount to RR52,442, RR48,118 and RR19,289 as of 31 December 2001, 2000 and 1999, respectively. A deferred tax liability on these temporary differences was not recognized because management controls the timing of the reversal of the temporary differences and believes that they will not reverse in the foreseeable future.

**18 FINANCIAL INSTRUMENTS**

The Group adopted IAS 39 at 1 January 2001. The impact on shareholders' equity at 1 January 2001 was a net gain of RR602 in retained earnings for the re-measurement of available-for-sale securities, stated at fair value as of 1 January 2001. In accordance with IAS 39, the comparative financial statements for the year ended 31 December 2000 are not restated.

**ОАО ГАЗПРОМ**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**18 FINANCIAL INSTRUMENTS—(continued)**

**Available-for-sale investments: amounts reported in the statement of operations**

	<b>31 December 2001</b>
Unrealized fair value losses, net .....	(1,162)
Realized net gains on sale .....	209
Total loss on available-for-sale investments .....	(953)

Foreign exchange off-balance sheet financial instruments are generally traded in an over-the-counter market with professional market counterparties on standardized contractual terms and conditions. As of 31 December 2001 the Group's banking subsidiaries had outstanding contracts to purchase and sell precious metals at the market price at the date of maturity. The Group expects to settle these contracts in the normal course of business.

The nominal amounts for off-balance sheet financial instruments are not reflected in the consolidated balance sheet.

The following table provides an analysis of the principal or agreed amounts of contracts outstanding at the year-end. The table includes both the contracts for which the date of maturity has past due and no settlements had been completed as of 31 December 2001, and the contracts with maturity dates subsequent to 31 December 2001. The amounts included in the table are presented on a net basis after gross positions were grouped and netted off by counterparty, where appropriate.

	<b>Principal or agreed amount</b>	
	<b>Domestic</b>	<b>Foreign</b>
Deliverable forward currency .....	3,262	634
Deliverable forward precious metal contracts .....	2,262	—
Written foreign currency option contracts .....	—	11,191
Total .....	5,524	11,825

At 31 December 2001 the Group had outstanding forward foreign exchange contracts with Russian and foreign banks whereby it had agreed to buy or sell Russian Roubles in exchange for another currency at an exchange rate agreed to at the date of the contract. Some of these contracts were entered into prior to 17 August 1998 and matured during 1998, but have not yet been settled. The Group has been able to settle outstanding contracts with a few counterparties and any resultant gains or losses have been recorded in the consolidated statement of operations.

The Civil Code of the Russian Federation stipulates a three-year period for commencing action to enforce contracts. This period expired during 2001. On the basis of legal advice regarding the enforceability of these contracts under Russian law, market practices and the activities of other participants in the derivatives market in Russia, as well as a significant passage of time, management is of the opinion that these contracts with domestic banks are no longer legally enforceable, and that therefore no losses will arise for the Group as a result of these contracts.

Management has therefore not recorded any liabilities in respect of these contracts with domestic banks in the consolidated financial statements of the Group for the year ended 31 December 2001. Previously recorded liabilities under these contracts, amounting to RR8,958, have been released and recorded as derivative gains within operating expenses for the year ended 31 December 2001 (see Note 22).

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**19 PROVISIONS FOR LIABILITIES AND CHARGES**

	Notes	31 December		
		2001	2000	1999
Provision for pension obligations .....		13,353	10,277	8,660
Provision for guarantees .....	27	—	11,431	21,499
Provision for environmental liabilities .....	27	1,321	5,864	5,620
Other .....		4,555	16,576	22,107
		19,229	44,148	57,886
Less: current portion of provisions for liabilities and charges .....		—	(11,431)	(8,872)
		<u>19,229</u>	<u>32,717</u>	<u>49,014</u>

Total expenses associated with pension obligations are included within operating expenses in the consolidated statement of operations and amount to RR3,381, RR1,594 and RR2,076 for years ended 31 December 2001, 2000 and 1999, respectively.

Movements in the provision for pension obligations recognized in the balance sheet are as follows:

	Year 2001
As of 1 January 2001 .....	10,277
Current service costs .....	1,593
Interest costs .....	1,788
Pensions paid .....	(305)
As of 31 December 2001 .....	<u>13,353</u>

Principal actuarial assumptions used (expressed as weighted average):

	31 December		
	2001	2000	1999
Real discount rate .....	8%	8%	8%
Future salary increases .....	2%	0%	0%

**20 SHAREHOLDERS' EQUITY**

**Share capital**

Share capital authorised, issued and paid in totals RR311,918 as of 31 December 2001, 2000 and 1999 and consists of 23.7 billion ordinary shares, each with a historical par value of RR5.

**Dividends**

Dividends accrued and paid for the year 1999, amounted of RR0.11 per share. In 2000, the Group accrued and paid total dividends in the amount of RR0.19 (including interim dividends in the amount of RR0.08 per share as well as final dividends in respect of 1999, in the amount of RR0.11 per share). In 2001, the Group accrued and paid final dividends for the year ended 31 December 2000 in the amount of RR0.25 per share.

In 2002 the Board of Directors recommended payment of a final dividend for the year ended 31 December 2001 in the amount of RR0.49 per share. Because this decision of the Group management was reached after the balance sheet date, the final dividend proposed in respect of 2001 has not been recognised in the consolidated balance sheet. The final dividend of RR11,501 (including income tax on dividends in the amount of RR690) will be paid prior to 31 December 2002.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

#### 20 SHAREHOLDERS' EQUITY—(continued)

##### Treasury shares

As of 31 December 2001, subsidiaries of OAO Gazprom held 2,672 million of the ordinary shares of OAO Gazprom (as of 31 December 2000—2,684 million; as of 31 December 1999—2,614 million). The Group controls the voting rights of these shares.

##### Retained earnings and other reserves

Included in retained earnings and other reserves are the effects of the cumulative restatement to the equivalent purchasing power of the Rouble as of 30 September 2002, and cumulative translation differences of RR18,285, RR19,755 and RR18,933 arising on the retranslating of the net assets of foreign subsidiaries and associated undertakings as of 31 December 2001, 2000 and 1999, respectively.

Other reserves include a statutory fund for social assets, created at the time of privatisation in accordance with Russian legislation. The Group is negotiating to return certain of these assets to governmental authorities, though this process is expected to be protracted. Social assets with a net book value of RR5,141, RR7,111 and RR5,931 have been transferred to governmental authorities during the years ended 31 December 2001, 2000 and 1999, respectively. These transactions have been recorded as a charge to other reserves.

The statutory accounting reports of the parent company, OAO Gazprom, are the basis for profit distribution and other appropriations. The basis of distribution is defined by legislation as the current year net profit, as calculated in accordance with RAR. For 2001, 2000 and 1999 the statutory profit for the parent company was RR85,292, RR64,168 and RR67,834, respectively. However, the legislation and other statutory laws and regulations dealing with profit distribution are open to legal interpretation and accordingly management believes at present it would not be appropriate to disclose an amount for the distributable reserves in these consolidated financial statements.

#### 21 SALES

	Year ended 31 December

Gross sales of gas .....	681,066	712,516	539,859
Excise tax .....	<u>(118,183)</u>	<u>(116,928)</u>	<u>(93,983)</u>
Net sales of gas .....	562,883	595,588	445,876
Sales of gas condensate and oil and gas products (net of sales taxes) .....	71,594	38,842	20,885
Gas transportation sales .....	17,482	35,066	27,425
Other revenues .....	<u>31,900</u>	<u>38,870</u>	<u>30,894</u>
Total sales .....	<u><u>683,859</u></u>	<u><u>708,366</u></u>	<u><u>525,080</u></u>

Commencing in 1999 the Group has been participating in the creation of regional companies involved in the distribution of gas in Russia. The interest of the Group in the majority of such companies as of 31 December 2001, 2000 and 1999 amounted to less than 20% of their respective share capital (see Note 28).

Gas sales (net of VAT and excise tax) to customers in Russia include sales made to the regional companies of 222 billion cubic meters (bcm), 141 bcm and 43 bcm, or RR90,271, RR54,257 and RR15,656 for 2001, 2000 and 1999, respectively. For 2001 sales are made to the regional companies at prices approximately 4% below regulated prices set for sales to final customers in Russia.

Transportation charges are provided at rates established by the Federal Energy Commission.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**21 SALES—(continued)**

Gas transportation sales (net of VAT) are primarily comprised of sales to companies of the Itera Group totalling RR15,285 (64 bcm), RR28,534 (71 bcm) and RR20,160 (57 bcm) for the years ended 31 December 2001, 2000 and 1999, respectively. Trade receivables in respect of gas transportation services supplied to the Itera Group amounted to RR11,505, RR14,193 and RR4,431 as of 31 December 2001, 2000 and 1999, respectively. The Itera Group is a producer and distributor of gas in the Russian Federation and the former Soviet Union.

**22 OPERATING EXPENSES**

	Year ended 31 December		
	2001	2000	1999
Depreciation .....	95,790	92,261	82,731
Transit costs .....	91,222	102,418	101,454
Staff costs .....	57,029	57,012	51,811
Materials .....	57,169	43,030	31,483
Taxes other than on income .....	44,400	53,881	46,749
Impairment provision for accounts receivable and debts written off .....	33,638	34,643	20,088
Repairs and maintenance .....	20,671	16,833	15,097
Purchased refined products .....	16,502	—	—
Processing services .....	12,081	—	—
Electricity .....	10,964	10,620	10,291
Purchased gas .....	7,161	11,641	2,460
Provision for impairment of assets under construction .....	6,238	32,791	26,926
Provision for impairment of other property, plant and equipment and losses on disposal of property, plant and equipment .....	5,610	13,648	13,868
Research and development .....	4,182	5,596	3,604
Cost of goods for resale .....	3,721	1,704	1,041
Provision for impairment and write-off of investments and other long-term assets .....	2,446	29,329	31,780
Provisions for guarantees and other charges .....	—	1,271	11,402
Provision for inventory obsolescence .....	—	7,891	2,867
Derivative gains .....	(8,958)	(3,716)	(5,268)
Other .....	26,282	22,761	38,083
	<u>486,148</u>	<u>533,614</u>	<u>486,467</u>

During the year ended 31 December 2000, the Group purchased 9.0 bcm of Turkmenian gas from Itera LLC for RR16,781. No gas was purchased from Itera LLC in 2001 and 1999. Additionally, in 2001 various Group subsidiaries purchased 1.4 bcm of gas from other Itera Group companies for RR817.

Purchases and processing of refined products mainly relate to the acquisition of OAO AK Sibur in January 2001 (see Note 25).

Due to changes in the tax legislation of the Russian Federation, effective 1 January 2001, accounts receivable written off are subject to VAT. For the year ended 31 December 2001, this resulted in a charge of RR11,377 related to VAT on accounts receivable balances written off during the prior periods. The charge is included within the impairment provision for accounts receivable and debts written off.

**ОАО GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**22 OPERATING EXPENSES—(continued)**

Taxes other than on income consist of:

	Year ended 31 December		
	2001	2000	1999
Royalty .....	12,117	9,907	7,517
Road users tax and housing fund .....	9,519	27,768	25,218
Property tax .....	9,173	5,701	5,335
Mineral restoration tax .....	8,719	4,977	3,908
Other taxes .....	4,872	5,528	4,771
	44,400	53,881	46,749

Taxes other than on income included in operating expenses are computed as follows:

- Road users tax—is charged on sales of Group entities; changes in legislation effective 1 January 2001 reduced the road users tax from 2.5% to 1.0% and abolished the housing fund tax.
- Royalty is imposed at rates ranging from 6% to 16% of the sales value of gas and hydrocarbons produced. The actual rates of the tax are dictated in field licenses and are based on various factors;
- Property tax is imposed at a maximum rate of 2% on the average annual net book value of fixed assets, intangible assets, inventory and (effective from 1 January 2001) on assets under construction which were not completed within contracted terms. Legislation provides for the exclusion of trunk pipelines from the taxable base; and
- Mineral restoration tax is imposed at the rate of 10.0% of the sales value of gas and hydrocarbons sold by the production subsidiaries. Under current legislation, up to 100.0% of mineral restoration tax assessments may be offset by a sum equal to the value of certain exploration works performed and paid for by the Group. In 2001, 2000 and 1999, the Group recovered 32.4%, 39.9% and 34% of mineral restoration tax assessments, respectively.

All taxes and rates discussed above are calculated based on amounts recorded in accordance with Russian statutory accounting regulations.

**23 EARNINGS PER SHARE**

Earnings per share has been calculated by dividing the net profit for the year by the weighted average number of shares outstanding during the year, excluding the average number of ordinary shares purchased by the Group and held as treasury shares (see Note 20).

There were 21.0 billion weighted average shares outstanding for the year ended 31 December 2001, 21.0 billion weighted average shares outstanding for the year ended 31 December 2000 and 21.1 billion weighted average shares outstanding for the year ended 31 December 1999.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

#### 25 SUBSIDIARY UNDERTAKINGS

##### Principal subsidiary undertakings, 100% owned

Astrakhangazprom	Gazsviaz	Permtransgaz
Bashtransgaz	Zarubezhgaz Erdgashandel GmbH (ZGG)	Podzemgazprom
Burgaz	Informgaz	Samaratransgaz
VNIIGaz	IRTs Gazprom	Severgazprom
Volgogradtransgaz	Kavkaztransgaz	Servicegazprom
Volgotransgaz	Kaspygazprom	Liquified gas
Gazkomplektimpex	Kubangazprom	Surgutgazprom
Gaznadzor	Leadville Investments Limited	Tattransgaz
Gazobezopasnost	Lentransgaz	Tomsktransgaz
Gazpromavia	Mezhregiongaz	TyumenNIIgiprogaz
Gazprominvestholding	Mostransgaz	Tyumentransgaz
Gazprom-Media	Nadymgazprom	Uraltransgaz
Gazprom Finance B.V.	Nadymstroygazdobytcha	Urengoigazprom
Gaztorgpromstroy	Novourengoysky GCC	Yugtransgaz
Gazflot	Noyabrskgazdobytcha	Yamalgazinvest
Gazexport	Orenburggazprom	Yamburggazdobytcha

All of these subsidiaries are incorporated in the Russian Federation, with the exception of Gazprom Finance B.V., ZGG and Leadville Investments Limited, which are incorporated in the Netherlands, Germany and Cyprus, respectively. Gazprom Finance B.V. was established in February 1999 for the purpose of obtaining financing for the Group outside Russia. ZGG acts as the holding company for the Group's interests in a number of gas distribution, storage and transportation companies operating in Central Europe. Leadville Investments Limited was established in 2000 to manage the Group's investments in Russian media companies. Other companies are mainly involved in production, transportation and sale of gas.

##### Principal subsidiary undertakings, less than 100% owned

	Percent of share capital held as of 31 December		
	2001	2000	1999
OAO Gazavtomatika .....	49	51	51
OAO Gazenergосervice .....	51	51	51
AB Gazprombank (ZAO) .....	98	97	93
OAO Gazsibcontract .....	96	51	51
ZAO Gerosgaz .....	51	51	—
ZAO Kostromatrubinvest .....	99	99	94
OAO Lebedinsky GOK .....	—	57	57
OAO AKB National Reserve Bank .....	40	40	40
OAO AK Sibur .....	51	—	—
ZAO AKB Sovfintrade .....	94	65	—

OAO Volgogradneftemash .....	51	51	51
OAO Vostokgazprom .....	51	51	51
OAO Zapsibgazprom .....	34	34	51

In 2001 the Group's interest in OAO Gazavtomatika decreased from 51% to 49% as the Group did not participate in an additional share issue by OAO Gazavtomatika.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 25 SUBSIDIARY UNDERTAKINGS—(continued)

In August 2001 the Group participated in the fourth stock issue of ZAO AKB Sovfintrade and as a result, the Group's interest in the bank's share capital increased from 65% to 94%, including 26% held by AB Gazprombank (ZAO).

As of 31 December 2001, the Group's interest in the equity capital of OAO AKB National Reserve Bank is 40%, in OAO Zapsibgazprom—34% and OAO Gazavtomatika—49%. However, due to the fact that the Group continued to exercise control over activities of the above companies in the year ended 31 December 2001, they were still considered as subsidiaries.

#### Acquisition of OAO AK SIBUR

In January 2001 the Group acquired 51% of the voting shares of OAO AK Sibur. OAO AK Sibur is a leading seller of petrochemical products in Russia, it is also involved in light hydrocarbons processing. The consideration of RR2,892 given was a combination of cash, promissory notes of Group companies and other securities.

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Cash paid .....	828
Promissory notes of Group companies .....	1,309
Shares in other investments .....	755
Total purchase consideration .....	<u>2,892</u>
Fair value of identifiable net assets acquired .....	(1,084)
Goodwill .....	<u>1,808</u>

Other than for short-term investments, the fair value of the net assets approximated the book value of the net assets acquired.

The net cash flow arising from the acquisition is as follows:

Total purchase consideration .....	<u>2,892</u>
Less:	
Cash and cash equivalents acquired .....	(1,150)
Promissory notes of the Group companies .....	(1,309)
Shares in other investments .....	(755)
Net cash received on acquisition .....	<u>(322)</u>

OAO AK Sibur is one of the founders of OAO Gazsibcontract with a 45% interest in the charter capital. As a result of acquiring OAO AK Sibur the Group's effective share in the charter capital of OAO Gazsibcontract increased from 51% to 74%.

**OAD GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

**25 SUBSIDIARY UNDERTAKINGS—(continued)**

In December 2001 the Group subsidiary OAO AK Sibur purchased interests in the following companies:

<u>Companies (subsidiaries and associated undertakings)</u>	<u>Purchased interest as of 31 December 2001 (%)</u>
OAO Kemerovsky Azot .....	75
OAO Kautchuk .....	100
OAO Uralorgsintez .....	51
OAO Volzhsky AKZ .....	51
OAO Sibur-Tyumen .....	42
OAO Stinol .....	42

Interests in the above companies, all of which are involved in the petrochemical industry in the Russian Federation, were purchased from OOO IT. Total fair value of consideration paid to OOO IT was RR7,167, of which RR4,076 was attributable to acquired subsidiaries. The Group management is currently unable to assess whether the transaction with OOO IT is a related party transaction or if OOO IT is a related company to former management of OAO AK Sibur.

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Promissory notes of OAO AK Sibur's related parties and contractors at fair value .....	4,076
Total purchase consideration .....	4,076
Less fair value of identifiable net assets acquired .....	(1,383)
Goodwill at acquisition .....	2,693
Less goodwill impaired .....	(2,693)
Unamortised goodwill as of 31 December 2001 .....	<u>—</u>

**Lebedinsky GOK**

In January 2001 the Group exchanged a 57% interest in Lebedinsky GOK and a 17% interest in Oskolsky EMK for a 48% interest in ZAO Gazmetall. ZAO Gazmetall is a metallurgical holding company with controlling interests in Lebedinsky GOK and Oskolsky EMK. As the Group intends to sell its shares of ZAO Gazmetall, the investment has been classified as an available-for-sale investment. During the third quarter of 2001 management revalued the investment in ZAO Gazmetall to its estimated current market value of RR2,208, recognising the net effect of revaluation in gains and losses on available-for-sale securities in the consolidated statement of operations (See Note 7). In March 2002 the Group made an agreement to sell its 48% interest in ZAO Gazmetall for USD70 million. In accordance with the agreement the buyer of the above shares is OAO Oskolsky Metallurgical Plant, a subsidiary of ZAO Gazmetall.

**Minority interest**

	<u>Year ended 31 December</u>		
	<u>2001</u>	<u>2000</u>	<u>1999</u>
Minority interest at the beginning of the reporting period .....	11,434	9,738	7,468
Minority interest share of net profit of subsidiary undertakings .....	5,121	1,989	288
Change in minority interest as a result of acquisitions/(disposals) of subsidiaries .....	122	(293)	1,982
Minority interest at the end of reporting period .....	16,677	11,434	9,738

## ОАО ГАЗПРОМ

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 26 RELATED PARTIES

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions.

##### Government

The Government of the Russian Federation, the principal shareholder of the Group, owns approximately 38.37% of the issued shares of the Group. Governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

As a condition of privatisation in 1992, the Government imposed an obligation on the Group to provide an uninterrupted supply of gas to customers in the Russian Federation at government controlled prices.

##### Directors' remuneration

The Company paid to members of the Board of Directors and Management Committee remuneration (salary and bonuses) of approximately RR81 and RR74 for the years ended 31 December 2001 and 2000, respectively. The remuneration of members of the Board of Directors is subject to approval by the General shareholders meeting. Compensation paid to members of the Management Committee is determined by the terms of annual employment contracts.

##### Associated undertakings

Included within associated undertakings (see Note 11) is the loan receivable from EuRoPol GAZ S.A., in the amount of RR29,847, RR30,757 and RR30,065 as of 31 December 2001, 2000 and 1999, respectively, issued by AB Gazprombank (ZAO), a subsidiary of the Group, at an interest rate of LIBOR + 2.6%. Also included within associated undertakings (see Note 11) as a component of the carrying amount are USD denominated receivables from EuRoPol GAZ S.A. of RR11,985, RR15,906 and RR19,326 as of 31 December 2001, 2000 and 1999, respectively.

Also included within associated undertakings (see Note 11) is a loan receivable from WINGAS GmbH, in the amount of RR13,171, RR17,004 and RR21,275 as of 31 December 2001, 2000 and 1999, respectively. The interest rates vary for different loan tranches. As of 31 December 2001 the aggregate effective interest rate for the loan receivable from WINGAS GmbH was LIBOR + 2.17%.

Included within accounts receivable (see Note 8) are accounts receivable from Group associates (excluding EuRoPol GAZ S.A.) in the amount of RR32,039, RR14,509 and RR24,402 as of 31 December 2001, 2000 and 1999, respectively.

During periods ended 31 December 2001, 2000 and 1999 the Group recorded sales of gas to its associates in the amount of RR79,952 and RR71,408 and RR30,576, respectively.

Gas is sold to associates, except for that sold to AO Moldovagaz, on the basis of long-term contracts, at index prices based on world oil and gas prices. Gas prices per thousand cubic meters for such sales ranged from USD 75 to USD 144, from USD 64 to USD 133 and from USD 50 to USD 84 in the year ended 31 December 2001, 2000 and 1999, respectively. Gas is sold to AO Moldovagaz based on annual contracts with fixed prices. Prices of gas per thousand cubic meters sold to Moldova amounted to USD 80 in the years ended 31 December 2001 and 2000 and amounted USD 60 in the year ended 31 December 1999, respectively.

The Group's impairment provision on accounts receivable included RR13,791, RR15,569 and RR21,196 in respect of amounts due from AO Moldovagaz as of 31 December 2001, 2000 and 1999, respectively.

In addition, the Group purchased gas transportation services from certain of the associated undertakings, principally EuRoPol GAZ S.A., which amounted to RR9,648, RR11,225 and RR634 for the years ended 31 December 2001, 2000 and 1999, respectively. The cost of these services was determined based on prices of gas sold to these companies.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**26 RELATED PARTIES—(continued)**

As of 31 December 2001, the Group had accounts payable, included in "Other payables" line, as contribution to charter capital due to ZAO Armros gazprom of USD 126 million (RR4,194). The Group expects to pay its contribution into the charter capital of ZAO Armros gazprom by July 2002, the date established under legislation of the Armenian Republic as the deadline for shareholders to settle their obligations.

**OAO AK Sibur**

Set out below is condensed financial statement information for OAO AK Sibur as of and for the year ended 31 December 2001, before Group intercompany eliminations and adjustments for minority interests:

	<b>As of 31 December 2001</b>
Non-current assets .....	7,365
Current assets .....	22,197
Non-current liabilities .....	(4,748)
Current liabilities .....	(44,187)
Net liabilities .....	<u>(19,373)</u>
	<b>Year ended 31 December 2001</b>
Sales .....	54,872
Operating expenses .....	(63,972)
Net loss .....	<u>(22,735)</u>
	<b>Year ended 31 December 2001</b>
Operating expenses include:	
Materials .....	18,235
Purchases of refined products .....	16,502
Processing of refined products .....	12,081
Impairment provision for accounts receivable and debts written off .....	5,730
Provision for impairment and write-off of other long-term assets .....	5,683
Purchased gas .....	2,958
Other .....	2,783
	<u>63,972</u>

A substantial portion of OAO AK Sibur's transactions were executed with related parties. OAO AK Sibur's related party transactions included those with its associated undertakings and the following companies:

ZAO Gazoneftekhimicheskaya Companya .....	OAO Tobolskiy NKhK
Megler Group .....	OAO Tomsky NKhZ
OAO Omskshina .....	OAO Voronezhskiyntezkauchuk
Petrochemical Holding AG .....	OAO Yaroslavskiy Shinniy Zavod
OAO Salavatnefteorgsintez .....	

In the first quarter of 2002 external supervision has been introduced in respect of OAO AK Sibur under decision of the arbitration court. The arbitration court has cancelled the decision on placement of additional stock issue as a result of which OAO Gazprom could have lost control over OAO AK Sibur. OAO Gazprom maintains control over OAO AK Sibur.

## OAD GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 26 RELATED PARTIES—(continued)

##### OAD Stroytransgaz

In the normal course of business, the Group enters into transactions with OAD Stroytransgaz for the construction of pipelines in the Russian Federation on the basis of the results of tenders. During the years ended 31 December 2001, 2000 and 1999 certain representatives of the Group Board of Directors and members of their families owned significant shareholdings in OAD Stroytransgaz.

OAD Stroytransgaz rendered construction services for the Group in the amounts of RR45,421, RR31,073 and RR26,245 for the years ended 31 December 2001, 2000 and 1999, respectively. As of 31 December 2001, 2000 and 1999, the Group had advances and receivables due from OAD Stroytransgaz in the amounts of RR8,160, RR2,225 and RR908, respectively. As of 31 December 2001, 2000 and 1999, the Group had accounts payable to OAD Stroytransgaz in respect of construction of RR17,850, RR11,954 and RR6,489, respectively. Included within other long-term assets is a receivable due from OAD Stroytransgaz in connection with finance arrangements for construction for the Group undertaken by OAD Stroytransgaz in the amount of RR3,885, RR7,688 and RR11,274 as of 31 December 2001, 2000 and 1999.

##### AEB

In 2001, 2000 and 1999 the Group raised short-term loans from AEB, an associated undertaking of AB Gazprombank (ZAO), for the total amount of RR3,245 (11.0%—14.8% p.a.), RR3,228 (12.5% p.a.) and nil, respectively.

During 2000, a member of the Council of Gazprombank acquired from that bank an 8.5% interest in AEB for RR281. AEB is an associated undertaking of the Group at 31 December 2000 (see Note 11). A loss of RR230 was recognized under IAS on the disposal. This loss was the result of a decrease in the Group's share in the net assets of AEB and translation differences on the foreign operations recognised on the disposed shares.

##### OOO Interprokom

During the years ended 31 December 2001, 2000 and 1999, respectively, certain members of the families of certain members of the Board of Directors of the Company owned significant interests in OOO Interprokom.

OOO Interprokom acts as an agent for the Group in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. OOO Interprokom acted as an agent in the Group's acquisition of RR11,137, RR6,053 and RR4,684 of equipment for the years ended 31 December 2001, 2000 and 1999, respectively. As of 31 December 2001 and 2000 the Group had advances and receivables due from OOO Interprokom in the amount of RR624 and RR3,213, respectively. Commission paid to OOO Interprokom amounted to RR103, RR80 and RR30 for years ended 31 December 2001, 2000 and 1999, respectively. As of 31 December 2001, 2000 and 1999, the Group had accounts payable to OOO Interprokom in respect of equipment supplies of RR8,352, RR6,680 and RR3,431, respectively.

AB Gazprombank (ZAO), the Group's principal banking subsidiary, had outstanding import letters of credit issued on behalf of OOO Interprokom and sub-contractors of OOO Interprokom in the amount of RR9,353, RR10,633 and RR6,134 as of 31 December 2001, 2000 and 1999, respectively. These import letters of credit are issued to third-party suppliers in connection with the purchase of equipment by OOO Interprokom on behalf of the Group.

## ОАО ГАЗПРОМ

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 27 COMMITMENTS AND CONTINGENCIES

##### Operating environment

The operations and earnings of the Group continue, from time to time and in varying degrees, to be affected by political, legislative, fiscal and regulatory developments, including those related to environmental protection, in the Russian Federation. Due to the capital-intensive nature of the industry, the Group is also subject to physical risks of various kinds. The nature and frequency of the developments and events associated with these risks as well as their effect on future operations and earnings, are not predictable.

##### Legal proceedings

The Group is a party to certain legal proceedings arising in the ordinary course of business. Additionally, the Group is subject to various environmental laws regarding handling, storage, and disposal of certain products and is subject to regulation by various governmental authorities. In the opinion of management, there are no current legal proceedings or other claims outstanding which could have a material adverse effect on the result of operations or financial position of the Group.

##### Taxation

Tax legislation in the Russian Federation is subject to varying interpretations and frequent changes. Further, the interpretation of tax legislation by tax authorities as applied to the transactions and activity of the Group may not coincide with that of management. As a result, transactions may be challenged by tax authorities and the Group may be assessed additional taxes, penalties and interest, which can be significant. Under Russian legislation, penalties are levied at 20% of the tax amount underpaid and interest is charged at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (see Note 14). The Group's tax records remain open to review by the tax and customs authorities with respect to tax liabilities for three years.

In June 2002, the tax authorities completed an audit of the accrual and payment of natural gas excise tax by OAO Gazprom covering the period from 1 January 1999 to 30 June 2001. Following the completion of this excise tax audit, the tax authorities issued a tax act to OAO Gazprom. In accordance with estimations of the tax authorities included within the tax act, the amount of additional potential excise tax due is RR19,037, exclusive of penalties and interest. The major part of this amount relates to the tax audit's interpretation of the method of determination of gas volumes exempt from excise tax under Russian tax law. OAO Gazprom management intends to dispute the total amount of the tax authorities' claim in court as it does not comply with the tax legislation. Accordingly no accrual has been recorded. Management does not believe that the financial effect of this contingency will be material to the Group.

##### Group changes

The Group is continuing to undergo significant restructuring and reform initiatives and the future direction and effects of such reforms are the subject of political considerations. Potential reforms in tariff setting policies, settlements of outstanding debts by governmental entities, and other government initiatives could each have a significant, but undeterminable, effect on enterprises operating in the Group.

##### Environmental matters

The Group periodically evaluates its obligations under environmental regulations. Potential liabilities which might arise as a result of stricter enforcement of existing regulations, civil litigation or changes in legislation or regulation cannot be estimated, but could be material. In the current enforcement climate, under existing legislation, management believes that there are no significant liabilities for environmental damage, other than amounts that have been accrued in the consolidated financial statements.

**NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)**

**27 COMMITMENTS AND CONTINGENCIES—(continued)**

**Social commitments**

The Group significantly contributes to the maintenance and upkeep of the local infrastructure and the welfare of its employees in the areas of its production, including contributions toward the construction, development and maintenance of housing, hospitals, transport services, recreation and other social needs in the geographical areas in which it operates.

**Financial guarantees**

The Group had outstanding issued guarantees to third parties in the amount of RR77,006, RR65,535 and RR 72,607 (including guarantees denominated in USD of USD 2,502 million, USD 1,659 million and USD 1,700 million) as of 31 December 2001, 2000 and 1999, respectively.

Management believes that the Group will be required to settle certain of the obligations under the guarantees issued. Provisions of RRnil, RR11,431 and RR21,499 were recorded within provisions for liabilities and charges as of 31 December 2001, 2000 and 1999, respectively, in respect of the outstanding issued guarantees.

	<i>Note</i>	<b>31 December</b>		
		<b>2001</b>	<b>2000</b>	<b>1999</b>

Itera Group companies .....		4,303	6,202	4,136
OAD AK Sibur .....		—	5,959	—
Other .....		15,098	6,767	5,784
		<u>77,006</u>	<u>65,536</u>	<u>72,607</u>
Less: provisions for guarantees .....	19	—	(11,431)	(21,499)
		<u>77,006</u>	<u>54,105</u>	<u>51,108</u>

In April 2000, credit facilities were provided to BSPC, an associated undertaking (see Note 11), by a group of Italian and Japanese banks for the amount of RR68,325 (USD 2,053 million) for the construction of the offshore portion of the Blue Stream pipeline. In 2001, the Group provided guarantees in respect of RR39,504 (USD 1,187) related to the credit facilities obtainable by BSPC. As of 31 December 2001 BSPC had used RR37,470 (USD 1,126 million) of the credit facilities of which RR20,996 (USD 631 million) was guaranteed by the Group, pursuant to its obligation.

The Group provided guarantees on behalf of Interconnector (UK) Limited in connection with equipment and fixed assets leased for the construction of the Interconnector gas pipeline linking the United Kingdom to Continental Europe. The Group has a 10% interest in Interconnector (UK) Limited.

At 31 December 1999, the Group held collateral representing an interest of 17.1% in ZAO Media-Most in exchange for providing certain loan guarantees on behalf of ZAO Media-Most. During 2000, ZAO Media-Most defaulted on its payment obligation and the Group fulfilled its obligations.

In November 2000, the Group signed agreements with ZAO Media-Most to change the collateral under the guarantees, both those fulfilled in 2000 and those outstanding at 31 December 2000 to interests in NTV and other ZAO Media-Most operating companies. The Group then exercised its rights to take ownership of interests in ZAO Media-Most operating companies and a further interest in NTV.

As of 31 December 2000, the Group held a 46% interest in NTV and 25% plus one share interest in various other ZAO Media-Most operating companies.

## OAD GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 27 COMMITMENTS AND CONTINGENCIES—(continued)

In July 2001 ZAO Media-Most defaulted on a payment obligation of RR9,661 under a loan agreement. This balance was settled by the Group in accordance with a loan guarantee agreement. The terms of the guarantee agreement provided for collateral in respect of the guarantee in the form of a 19% interest in NTV and a 25% interest in a number of other ZAO Media-Most operating companies.

As of 31 December 2001 the Group held a 65% interest in NTV and 50% plus one share interest in a number of ZAO Media-Most operating companies. These interests are included in short-term available-for-sale investments as the Group does not view investments in these companies as long-term investments and intends to sell its interest in these companies.

Line "Other" includes mainly guarantees issued by subsidiaries under contracts for purchasing of equipment, construction and installation works. As of 31 December 2001 this balance includes guarantees issued by OAO AK Sibur to third parties of RR7,408.

#### Capital commitments

In the normal course of business, the Group has entered into contracts for the purchase of property, plant and equipment. The Board has approved a capital expenditure budget for 2002 of RR155,471 including RR61,466 in respect of capital expenditures related to the Yamal project (that includes, in particular, construction of the Yamal-Europe pipeline).

#### Supply commitments

The Group has entered into long-term supply contracts for periods ranging from 5 to 20 years with various companies operating in Europe. The volumes and prices in these contracts are subject to change due to various contractually defined factors. As of 31 December 2001 no loss is expected to result from these long-term commitments.

#### 28 POST BALANCE SHEET EVENTS

##### Financial investments

In March 2002 a consortium of the German gas company Ruhrgas and French gas company Gaz de France acquired a 49% interest in Slovensky Plynarensky Priemysel (SPP) for USD 2,700 million. SPP is the State gas company in Slovakia involved in gas production and transportation. Under an agreement with the consortium, the Group has the ability to purchase an interest from the consortium before 31 March 2004.

In connection with changes in RF Federal law No.208-FZ of 26 December 1995 "On Joint Stock Companies", effective from 1 January 2002, the Group was not able to exercise its conversion rights on preference shares in OAO AKB National Reserve Bank. The Group has, therefore, lost the opportunity to obtain voting rights on these shares and no longer exercises control over the activities of the bank (see Note 25). In June 2002, the Board of Directors approved the sale of the Group's interest in OAO AKB National Reserve Bank.

In April 2002 the Federal Securities Commission cancelled the registration of additional stock issued by OAO Zapsibgazprom, a subsidiary of the Group. As a result, the Group increased its interest in the charter capital of OAO Zapsibgazprom to 51%. At present, at the Group's initiative, external supervision has been introduced in respect of OAO Zapsibgazprom under decision of the arbitration court.

In the second quarter of 2002 the Federal Securities Commission cancelled the registration of additional stock issued by OAO Severneftegazprom, which if not canceled would have reduced the Group's interest in the company's charter capital to 20%. As a result, the Group's interest in the charter capital of OAO Severneftegazprom is 49%.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 30 September 2002, except as noted)

#### 28 POST BALANCE SHEET EVENTS—(continued)

In April 2002, the Group completed the repurchase of 32% of the shares in ZAO Purgaz from Itera pursuant to the repurchase option provided by a share purchase agreement dated 10 February 1999. As a result Group's interest in ZAO Purgaz rose from 19% to 51%. ZAO Purgaz has a licence for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these ZAO Purgaz shares, the Group paid Itera RR35 thousand and financed ZAO Purgaz repaying RR6,325 of financing provided by Itera to ZAO Purgaz to finance development work.

In April 2002, the shareholders of EuRoPol GAZ s.a., an associated company of the Group, agreed to increase the charter capital of the company. The decision is aimed at providing additional financing for the further construction of the Polish section of the Yamal—Europe pipeline. The amount and timing of the additional contribution into charter capital is under consideration by the shareholders.

During the first quarter of 2002, the Group increased its interest in the majority of the regional companies, in which it held investments, from less than 20% to 51%. These companies are involved in the distribution of gas in Russia (see Note 21).

#### Borrowings

During the first quarter of 2002 the Group signed an additional agreement of USD 50 million for a five-year period with a consortium led by Moskovsky Narodny Bank Ltd. (interest rate LIBOR +3.75%), a loan agreement of USD 300 million for a six year period with a consortium led by Bayerische Hupo und Ferajnsbank AG (interest rate LIBOR + 3.75 %), loan agreements of USD 150 million with Deutsche Bank AG (London) for a one year period (interest rate—9.5 %) and of USD 50 million with the AEB bank for a one year period (interest rate—8.5 %).

During the second quarter of 2002 the Group signed additional loan agreement of USD 200 millions for a two-year period with ABN AMRO Bank N.V. (interest rate—LIBOR+6.15%) and a loan agreement of USD 250 million for a six-year period with a consortium led by Societe Generale (interest rate—LIBOR+3.65%).

In April 2002 the Group issued USD 500 million of Loan Participation Notes due 2007 with an interest rate of 9.125%.

#### Changes in the profit taxation

Chapter 25 "Profit Tax" of the Russian Federation Tax Code became effective since 1 January 2002.

Among other changes the profit taxation procedure has been changed as follows:

- reduced tax rate;
- elimination of the majority of allowances;
- recognition of sales revenue for tax purposes on an accrual basis.
- different depreciation rates for different groups of fixed assets;

Currently it is impossible to accurately assess the impact of the changes in the taxation procedure on the financial position and financial results of the Group.

Starting from 1 January 2002 the Group has been implementing the required tax accounting policy which provides separate accounting for tax liabilities and settlements with the budget in accordance with requirements of Chapter 25 of the Tax Code of the Russian Federation.

## OAO GAZPROM

### NOTES TO THE IAS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002, except as noted)

#### 28 POST BALANCE SHEET EVENTS—(continued)

##### Changes in taxation of mineral resources

Effective 1 January 2002, royalty, mineral restoration tax, oil and gas condensate excise have been replaced with a mineral severance tax, which will be imposed at the rate of 16.5% of the value of gas and RR340 per ton of oil and gas condensate produced. The latter rate is subject to adjustments depending on fluctuations of oil price and the RR exchange rate.

#### 29 ADJUSTMENTS FOR HYPERINFLATION

In accordance with IAS 29 the consolidated financial statements as of and for the years ended 31 December 2000 and 1999 were originally prepared in terms of the measuring unit current at the balance sheet date. The restatement was calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics ("Goskomstat"), and from indices obtained from other published sources for years prior to 1992.

The significant guidelines followed in restating the consolidated financial statements are:

- all amounts are stated in terms of the measuring unit current at 31 December 2001;
- monetary assets and liabilities are not restated because they are already expressed in terms of the monetary unit current at 31 December 2001;
- non-monetary assets and liabilities (items which are not expressed in terms of the monetary unit current at 31 December 2001) and shareholders' equity, including the share capital, are restated by applying the relevant conversion factors;
- all items in the consolidated statements of operations and of cash flows are restated by applying appropriate conversion factors;
- the effect of inflation on the Group's net monetary position is included in the consolidated statement of operations as a net monetary gain or loss; and
- comparative amounts for 2000 and 1999 are restated using the conversion factors 1.19 and 1.43 respectively in order to state them in terms of the measuring unit current at 31 December 2001.

All amounts originally stated in the consolidated financial statements in terms of the measuring unit current at the balance sheet date have been subsequently restated using the conversion factor of 1.10 in order to state them in terms of the monetary unit current at 30 September 2002. The restatement makes the consolidated financial statements more meaningful when compared to the information for the nine months ended 30 September 2002.

The indices used to restate the consolidated financial statements, based on 1988 prices (1988=100) for the five years ended 31 December 2001 and period ended 30 September 2002, and the respective conversion factors used were:

<u>Year</u>	<u>Index</u>	<u>Conversion Factor to 31 December 2001</u>	<u>Conversion Factor to 30 September 2002</u>
31 December 1997	659,403	3.60	3.97
31 December 1998	1,216,400	1.95	2.15
31 December 1999	1,661,481	1.43	1.58
31 December 2000	1,995,937	1.19	1.31
30 September 2001	2,276,965	1.04	1.15
31 December 2001	2,371,572	1.00	1.10
30 September 2002	2,618,690		1.00

The consolidated statement of operations includes net monetary gains of RR32,147, RR57,867 and RR80,765 for the years ended 31 December 2001, 2000 and 1999, respectively, because on average the Group had net monetary liabilities in reporting years.

## **OAO GAZPROM**

### **NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION (UNAUDITED)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)**

#### **1 NATURE OF OPERATIONS**

RAO Gazprom was established as a Russian joint stock company by Presidential Decree No. 1333 dated 5 November 1992. The Annual General Meeting of shareholders, held on 26 June 1998, approved a recommendation from the Board of Directors on revising the name of the Company in order to comply with the federal law on joint stock companies. Consequently, the Company became the open joint stock company Gazprom or OAO Gazprom.

OAO Gazprom and its subsidiaries (the "Group") operate one of the largest gas pipeline systems in the world and are responsible for substantially all gas production and high pressure gas transportation in the Russian Federation. The Group is also a major exporter of gas to other European countries.

The Group is directly involved in the following principal activities:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas; and
- Distribution—domestic and export sale of gas.

The gas business is subject to seasonal fluctuations with peak demand in the first and fourth quarters of each year. The volumes of gas shipped during the three and the nine months ended 30 September 2002 represented 18% and 69%, respectively, of annual volumes shipped to customers in the year ended 31 December 2001.

#### **2 ECONOMIC ENVIRONMENT IN THE RUSSIAN FEDERATION**

The economy of the Russian Federation continues to display characteristics of an emerging market. These characteristics include, but are not limited to, the existence of:

- a currency that is not freely convertible outside of the country;
- extensive currency controls;
- a low level of liquidity in the public and private debt and equity markets; and
- high inflation.

Transactions on the Russian stock exchanges are influenced by underdeveloped infrastructure, especially registration and settlement systems which are in the process of formation, as are the underlying regulations.

The prospects for future economic stability in the Russian Federation are largely dependent upon the effectiveness of economic measures undertaken by the government, together with legal, regulatory, and political developments.

#### **3 BASIS OF PRESENTATION**

The interim condensed financial information is prepared in accordance with International Accounting Standard 34 "Interim financial reporting" ("IAS 34"). The Group subsidiaries and associated undertakings maintain their statutory financial statements in accordance with the Regulation on Accounting and Reporting of the Russian Federation ("RAR") or the accounting regulations of the country in which the particular Group company is resident. The financial statements of the Group's subsidiaries and associated undertakings resident in the Russian Federation, which account for substantially all the assets and liabilities of the Group, are based on their statutory records, which are maintained under the historical cost convention with adjustments and reclassifications recorded in the financial statements for the purpose of fair presentation in accordance with IAS 34. Similar adjustments are recorded in the financial statements in respect of Group companies not resident in the Russian Federation.

**OA O GAZPROM**  
**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL**  
**INFORMATION—(Continued)**  
**(UNAUDITED)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)

**3 BASIS OF PRESENTATION—(continued)**

The preparation of consolidated interim condensed financial information in conformity with IAS 34 requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

The adjustments and reclassifications made to the statutory accounts for the purpose of IAS reporting include the restatement for changes in the general purchasing power of the Russian Rouble (“RR”) in accordance with IAS 29, “Financial Reporting in Hyperinflationary Economies” (“IAS 29”). IAS 29 requires that financial information prepared in the currency of a hyperinflationary economy be stated in terms of the measuring unit current at the balance sheet date. The restatement was calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics (“Goskomstat”), and from indices obtained from other published sources for years prior to 1992.

The indices used to restate the consolidated interim condensed financial information, based on 1988 prices (1988=100) for the sixty nine months ended 30 September 2002, and the respective conversion factors used are:

<u>Year</u>	<u>Index</u>	<u>Conversion Factor</u>
31 December 1997	659,403	3.97
31 December 1998	1,216,400	2.15
31 December 1999	1,661,481	1.58
31 December 2000	1,995,937	1.31
30 September 2001	2,276,965	1.15
31 December 2001	2,371,572	1.10
30 September 2002	2,618,690	1.00

The significant guidelines followed in restating the consolidated interim condensed financial information are:

- all amounts are stated in terms of the measuring unit current as of 30 September 2002;
- monetary assets and liabilities are not restated because they are already expressed in terms of the monetary unit current as of 30 September 2002;
- non-monetary assets and liabilities (items which are not expressed in terms of the monetary unit current as of 30 September 2002) and shareholders’ equity, including the share capital, are restated by applying the relevant conversion factors;
- all items in the consolidated interim condensed statements of operations and of cash flows are restated by applying appropriate conversion factors;
- the effect of inflation on the Group’s net monetary position is included in the consolidated interim condensed statement of operations as a monetary gain or loss; and
- comparative amounts for the nine months of 2001 and for the 2001 consolidated financial information are restated using the conversion factors of 1.15 and 1.10 in order to state them in terms of the monetary unit current as of 30 September 2002.

The consolidated interim condensed statement of operations includes net monetary gains of RR4,039 and RR5,077 for the three months ended 30 September 2002 and 2001, and RR19,824 and RR26,501 for the nine months ended 30 September 2002 and 2001, respectively, because on average the Group had net monetary liabilities in those periods.

As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from 1 January 2003 the Group will no longer apply the provisions of IAS 29, Financial Reporting in Hyperinflationary Economies.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL  
INFORMATION—(Continued)  
(UNAUDITED)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)**

**3 BASIS OF PRESENTATION—(continued)**

The US dollar to RR exchange rates were 31.64 and 30.14 as of 30 September 2002 and 31 December 2001, respectively. The euro to RR exchange rates were 30.91 and 26.49 as of 30 September 2002 and 31 December 2001, respectively.

**Reclassifications**

Certain reclassifications have been made to prior year balances to conform to the current year presentation. These reclassifications include RR18,987 of costs reclassified from finance costs to operating expenses for the nine months ended 30 September 2001.

**4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES**

The principal accounting policies followed by the Group are consistent with those disclosed in the financial statements for the year ended 31 December 2001.

**5 SEGMENT INFORMATION**

Management does not separately identify segments within the Group as it operates as a vertically integrated business with substantially all external sales generated by the gas distribution business. However, following the practice suggested by IAS 14, "Segment Reporting", Revised 1997 ("IAS 14") for vertically integrated businesses, information can be analysed based on the following business segments:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas;
- Distribution—domestic and export sale of gas; and
- Other—other activities, including banking.

**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL  
INFORMATION—(Continued)  
(UNAUDITED)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)

**5 SEGMENT INFORMATION—(continued)**

Internal transfer prices are established by the management of the Group with the objective of providing for the specific medium and long-term funding requirements of the individual segments. The change in inter-segment sales and expenses by segment in the three and nine months ended 30 September 2002 is primarily due to changes in internal transfer prices.

**6 CASH AND CASH EQUIVALENTS AND RESTRICTED CASH**

Balances included within cash and cash equivalents in the consolidated balance sheet represent cash on hand and balances with banks. Included within restricted cash are balances of cash and cash equivalents totalling RR38,531 and RR37,840 as of 30 September 2002 and 31 December 2001, respectively, which are restricted as to withdrawal under the terms of certain borrowings and other contractual obligations. In addition, restricted cash comprises cash of RR6,591 and RR6,493 as of 30 September 2002 and 31 December 2001, respectively, in subsidiary banks, which are restricted as to withdrawal under banking regulations.

**7 ACCOUNTS RECEIVABLE AND PREPAYMENTS**

	30 September 2002	31 December 2001
Trade receivables .....	109,526	147,710
Prepayments and advances paid .....	43,708	40,461
Other receivables .....	65,419	59,075
	218,653	247,246

Accounts receivable and prepayments are presented net of an impairment provision of RR131,259 and RR144,017 as of 30 September 2002 and 31 December 2001, respectively.

**8 INVENTORY**

Inventories are presented net of a provision for obsolescence of RR15,837 and RR15,525 as of 30 September 2002 and 31 December 2001, respectively.

**9 PROPERTY, PLANT AND EQUIPMENT**

After five years .....			19,467	19,686
			<u>216,785</u>	<u>227,720</u>

Long-term borrowings include fixed rate loans with a carrying value of RR81,017 and RR65,306 as of 30 September 2002 and 31 December 2001, respectively. Other long-term borrowings generally have variable interest rates linked to LIBOR, and the carrying amounts approximate fair value.

Long-term borrowings include RR3,920 and RR3,077 as of 30 September 2002 and 31 December 2001, respectively, of coupon non-documentary bearer bonds issued by OAO Gazprom in 1999. The issue amounted to 3.0 million bonds, each with a nominal value of 1,000 roubles each and a due date of 15 April 2003. During the years 2000 and 2001, the Group repurchased 577 thousand bonds. As of 30 September 2002 all previously purchased bonds were resold to external parties.

**INFORMATION—(Continued)**  
**(UNAUDITED)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)

**13 PROFIT TAX**

In August 2001 the Profit tax chapter of the Tax Code was enacted, which changed the profit tax rate to 24% on profits for non-banking and banking activities. This rate became effective starting from 1 January 2002. During the year ended 31 December 2001, the Group accrued current profit tax at the rate of 35% and 43% on profits from non-banking and banking activities, respectively.

Differences between the recognition criteria in Russian statutory taxation regulations and IAS give rise to certain temporary differences between the carrying value of certain assets and liabilities for financial reporting purposes and for profit tax purposes. The tax effect of the movement on these temporary differences is recorded at the rate of 24%.

	<u>30 September 2002</u>	<u>Differences, recognition and reversals</u>	<u>31 December 2001</u>
<b>Tax effects of taxable temporary differences:</b>			
Property, plant and equipment .....	(34,695)	(66,897)	32,202
Accounts receivable .....	—	18,922	(18,922)
Investments .....	(1,973)	(1,069)	(904)
Inventories .....	(961)	(3,817)	2,856
<b>Tax effects of deductible temporary differences:</b>			
Tax losses carryforward .....	<u>10,755</u>	<u>10,755</u>	<u>—</u>
<b>Total net deferred tax (liabilities) assets .....</b>	<b><u>(26,874)</u></b>	<b><u>(42,106)</u></b>	<b><u>15,232</u></b>

Deferred tax assets and liabilities arise mainly from differences in the taxable and financial reporting bases of property, plant and equipment and accounts receivable. These differences for property, plant and equipment are historically due to the fact that a significant proportion of the tax base is based upon independent appraisals, the most recent of which was recognised as of 1 January 2001, while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR (see Note 3).

Included in differences, recognition and reversals is the effect of deconsolidating our interest in OAO AKB National Reserve Bank which resulted in the derecognition of a deferred tax liability of RR3,142 (see Note 18).

Following the enactment of Chapter 25 "Profit tax" of the Russian Federation Tax Code on 1 January 2002, the profit tax regulations allowed for different tax depreciation lives for different groups of property, plant and equipment. In accordance with the tax regulations, the Group recognised shorter tax depreciation lives effective 1 January 2002, resulting in a RR24,400 increase in the deferred tax liability attributable to property, plant and equipment as of 30 September 2002. The Group recognised the results of the assessment of the revised tax depreciation lives for property, plant and equipment in the three months ended 30 September 2002 when such an assessment was completed by the Group.

The revised tax depreciation lives also gave rise to current period tax losses in the statutory books of OAO Gazprom. Statutory entities can carry forward tax losses generated in an individual period for ten years, subject to a maximum utilization of 30% of the total amount of taxable profit each year. This resulted in a recognition of a deferred tax asset of RR10,755 as of 30 September 2002, as management believes it is probable that these losses will be offset against future taxable profit.

Management does not believe recording the revised tax depreciation lives in the third quarter has a material impact on the results for the three months ended 30 September 2002.

The deferred tax liability attributable to accounts receivable balances reversed in the nine months ended 30 September 2002 principally as a result of the change in the underlying tax legislation, effective 1 January 2002, to recognize sales revenue for profit tax purposes on an accrual rather than a cash basis.

**OAO GAZPROM**

**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL  
INFORMATION—(Continued)  
(UNAUDITED)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)**

**17 EARNINGS PER SHARE**

Earnings per share have been calculated by dividing the net profit for the period by the weighted average number of shares outstanding during the period, excluding the average number of ordinary shares purchased by the Group and held as treasury shares (see Note 14).

The weighted average number of shares outstanding was 21.0 and 20.9 billion for the periods ended 30 September 2002 and 2001, respectively.

**18 SUBSIDIARY UNDERTAKINGS**

Principal subsidiaries of the Group remain unchanged since 31 December 2001, including OAO AK Sibur, but except for the other changes disclosed below. All entities listed below, except for OAO AKB National Reserve Bank, were accounted for as subsidiaries from the date on which control was obtained or, in the case of media companies, the date from which the Group decided to operate the companies as subsidiaries and to delay the sale of these companies.

**OAO AKB National Reserve Bank**

In connection with changes in RF Federal law No.208-FZ of 26 December 1995 "On Joint Stock Companies", effective from 1 January 2002, the Group was not able to exercise its conversion rights on preference shares in OAO AKB National Reserve Bank. At the same time, the Group lost majority representation on the Board of Directors and no longer exercised control over the activities of the bank. Accordingly, effective 1 January 2002 the Group's investment in the bank was classified as an investment in an associated undertaking. In July 2002, in accordance with the decision of the Board of Directors, the Group disposed of 37% of ordinary shares and all of its preference shares in OAO AKB National Reserve Bank with total carrying value of RR1,898, in exchange for consideration consisting of promissory notes issued by OAO AKB National Reserve bank with a fair value of RR349 payable in June 2003, and 50 million of ordinary shares of OAO Gazprom. As of the date of the transaction ordinary shares of OAO Gazprom were traded at a nominal price of RR30.6 per share. No gain or loss resulted from the disposal of the Group's interest in OAO AKB National Reserve Bank. Following the transaction, the Group retains a 3% interest in OAO AKB National Reserve Bank, which is recorded within other long-term investments.

**ZAO Purgaz**

In April 2002 the Group completed the repurchase of 32.0% of the shares in ZAO Purgaz from Itera pursuant to the repurchase option provided by a share purchase agreement dated 10 February 1999. As a result, the Group's interest in ZAO Purgaz rose from 19.0% to 51.0%. ZAO Purgaz has a licence for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these ZAO Purgaz shares, the Group paid Itera RR32 thousand in cash and financed ZAO Purgaz repaying RR6,325 of original financing provided by Itera to ZAO Purgaz to finance development work. The consideration approximated the fair value of the incremental interest in the net assets acquired.

During the three month and nine month periods ended 30 September 2002 ZAO Purgaz contributed to the Group revenues of RR560 and RR768 and operating profit of RR318 and RR354, respectively.

The assets and liabilities arising from the repurchase are as follows:

Cash and cash equivalents .....	4
Property, plant and equipment .....	6,304
Other (net) .....	<u>17</u>
Fair value of net assets repurchased .....	<u>6,325</u>

**OA0 GAZPROM**

**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL  
INFORMATION—(Continued)  
(UNAUDITED)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)**

**18 SUBSIDIARY UNDERTAKINGS—(continued)**

The net cash flow arising from the repurchase is as follows:

Total purchase consideration .....	6,325
Less:	
Cash and cash equivalents acquired .....	<u>(4)</u>
Net cash outflow on repurchase .....	<u>6,321</u>

**OA0 Vostokgazprom**

In April 2002 the Group acquired an additional 32.8% of the voting shares of its production subsidiary OA0 Vostokgazprom, increasing its interest from 51.0% to 83.8%. The consideration of RR2 was settled in cash and approximated the fair value of the incremental interest in the net assets acquired.

**OA0 Zapsibgazprom**

In April 2002 the Federal Securities Commission cancelled the registration of additional stock issued by OA0 Zapsibgazprom, a subsidiary of the Group. As a result, the Group increased its interest in the charter capital of OA0 Zapsibgazprom from 34.0% to 51.0% (see Note 21).

**Media companies**

Effective 1 January 2002 the Group's interests in media companies were reclassified from short-term available-for-sale investments to subsidiary undertakings as management announced its intention to operate these companies as subsidiaries and to delay the sale of its interest in these companies. The media companies do not materially impact the financial position of the Group.

In July 2002 the Group acquired additional interests in ZAO Media-Most, in NTV and other media subsidiaries. Additionally, the Group acquired payables and promissory notes to third parties due by these companies. The consideration was partially settled in cash and partially through the forgiveness of debt owed to OA0 Gazprom. As a result of this transaction the Group increased its interest in NTV from 65% to 95.6% and in ZAO Media-Most from 14.3% to 78.2%. The Group has also increased its controlling interests in the other media subsidiaries. This transaction is an integral part of the restructuring of the Group's media assets (see Note 21).

**OA0 AK Sibur**

In the first quarter of 2002 external supervision was introduced in respect of OA0 AK Sibur under decision of the arbitration court. The arbitration court has cancelled the decision on placement of additional stock issue as a result of which OA0 Gazprom could have lost control over OA0 AK Sibur. OA0 Gazprom maintains control over OA0 AK Sibur.

On 10 September 2002 the creditors' meeting approved an amicable settlement agreement, which was subsequently approved by the court. The agreement provides for the restructuring and rescheduling of OA0 AK Sibur's debts generally over a period of 8 years with first payments due in 2004 (See Note 16).

**19 RELATED PARTIES**

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions.

**(UNAUDITED)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)**

**19 RELATED PARTIES—(continued)**

**Government**

The Government of the Russian Federation is the principal shareholder of the Group, directly owning approximately 38.37% of the issued shares of the Group. Government representatives also have the majority of seats on the Board of Directors. Governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

As a condition of privatisation in 1992, the Government imposed an obligation on the Group to provide an uninterrupted supply of gas to customers in the Russian Federation at government controlled prices.

**Associated undertakings**

Included within associated undertakings (see Note 10) is the loan receivable from EuRoPol GAZ S.A., in the amount of RR27,127 and RR29,846 as of 30 September 2002 and 31 December 2001, respectively, issued by AB Gazprombank (ZAO), a subsidiary of the Group, at an interest rate of LIBOR + 2.6%. Also included within associated undertakings (see Note 10) as a component of the carrying amount are USD denominated long-term receivables from EuRoPol GAZ S.A. of RR8,083 and RR11,985 as of 30 September 2002 and 31 December 2001, respectively.

Also included within associated undertakings (see Note 10) is a EURO denominated loan receivable from WINGAS GmbH, in the amount of RR13,368 and RR13,171 as of 30 September 2002 and 31 December 2001, respectively. The interest rates vary for different loan tranches. As of 30 September 2002 and 31 December 2001 the aggregate effective interest rate for the loan receivable from WINGAS GmbH was 5.6%.

Included within accounts receivable (see Note 7) are accounts receivable from Group associates (excluding EuRoPol GAZ S.A.) in the amount of RR12,441 and RR16,655 as of 30 September 2002 and 31 December 2001, respectively.

During three and nine months ended 30 September 2002 and 2001 the Group recorded sales of gas to its associates in the amount of RR15,971 and RR9,380, and RR48,663 and RR61,100 respectively.

Gas is sold to associates, except for that sold to AO Moldovagaz, on the basis of long-term contracts, at index prices based on world oil and gas prices. Gas prices per thousand cubic meters for such sales ranged from USD 73 to USD 114 and from USD 77 to USD 133 in the nine months ended 30 September 2002 and 2001, respectively. Gas is sold to AO Moldovagaz based on annual contracts with fixed prices. Prices of gas per thousand cubic meters sold to Moldova amounted to USD 81 in the nine months ended 30 September 2002 and 2001, respectively.

The Group's impairment provision on accounts receivable included RR12,490 and RR13,792 in respect of amounts due from AO Moldovagaz as of 30 September 2002 and 31 December 2001, respectively.

In addition, the Group purchased gas transportation services from certain of the associated undertakings, principally EuRoPol GAZ S.A., which amounted to RR2,915 and RR2,348, and RR8,022 and RR7,444 for the three and nine months ended 30 September 2002 and 2001, respectively. The cost of these services was determined based on prices of gas sold to these companies.

As of 30 September 2002, the Group had accounts payable due as a contribution to the charter capital of ZAO Armros gazprom of USD 126 million (RR3,986). As described Note 21, this amount was settled in October 2002.

### NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION—(Continued) (UNAUDITED)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)

#### 19 RELATED PARTIES—(continued)

##### OAO Stroytransgaz

In the normal course of business, the Group enters into transactions with OAO Stroytransgaz for the construction of pipelines in the Russian Federation on the basis of the results of tenders. During the nine months ended 30 September 2002 and year ended 31 December 2001 transactions with OAO Stroytransgaz were entered into under contracts which had been executed by certain prior representatives of the Group's Board of Directors and members of their families who at that time owned significant shareholdings in OAO Stroytransgaz.

OAO Stroytransgaz rendered construction services for the Group in the amounts of RR8,058 and RR11,662, and RR25,766 and RR26,688 for the three and nine months ended 30 September 2002 and 2001, respectively. As of 30 September 2002 and 31 December 2001, the Group had advances and receivables due from OAO Stroytransgaz in the amounts of RR7,694 and RR8,160, respectively. As of 30 September 2002 and 31 December 2001, the Group had accounts payable to OAO Stroytransgaz in respect of construction of RR12,853 and RR 17,850, respectively. Included within accounts receivable and prepayments as of 30 September 2002 is a receivable due from OAO Stroytransgaz in connection with finance arrangements for construction for the Group undertaken by OAO Stroytransgaz in the amount of RR1,792, net of an impairment provision in the amount of RR92. As of 31 December 2001 abovementioned receivable in amount of RR3,456 net of an impairment provision in the amount of RR429, was included within other long-term assets.

##### AEB

In the three and nine months ended 30 September 2002 and 2001 the Group received short-term loans from AEB, an associated undertaking of AB Gazprombank (ZAO), for the total amount of RR1,797 (interest rate—9.0%) and nil, and RR4,530 (interest rates of 8.5%—9.0%) and RR4,500 (interest rates of 11.0%—14.8%), respectively.

##### OOO Interprokom

During the nine months ended 30 September 2002 and year ended 31 December 2001 transactions with OOO Interprokom were entered into under contracts which had been executed by certain prior members of the Board of Directors and a member of the Management Committee of the Company and members of their families who at that time or currently own significant interests in OOO Interprokom.

OOO Interprokom acts as an agent for the Group in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. OOO Interprokom acted as an agent in the Group's acquisition of RR1,788 and RR2,692, and RR5,902 and RR8,444 of equipment in the three and nine months ended 30 September 2002 and 2001, respectively. As of 30 September 2002 and 31 December 2001, the Group had advances and receivables due from OOO Interprokom in the amount of RR669 and RR624 respectively. Commission paid to OOO Interprokom amounted to RR85 and RR71 for the nine months ended 30 September 2002 and 2001, respectively. As of 30 September 2002 and 31 December 2001, the Group had accounts payable to OOO Interprokom in respect of equipment supplies of RR6,469 and RR8,352, respectively.

AB Gazprombank (ZAO), the Group's principal banking subsidiary, had outstanding import letters of credit issued on behalf of OOO Interprokom and sub-contractors of OOO Interprokom in the amount of RR7,859 and RR9,353 as of 30 September 2002 and 31 December 2001, respectively. These import letters of credit are issued to third-party suppliers in connection with the purchase of equipment by OOO Interprokom on behalf of the Group.

**OA0 GAZPROM**  
**NOTES TO THE IAS CONSOLIDATED INTERIM CONDENSED FINANCIAL**  
**INFORMATION—(Continued)**  
**(UNAUDITED)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 30 September 2002)

**20 COMMITMENTS AND CONTINGENCIES**

**Taxation**

Tax legislation in the Russian Federation is subject to varying interpretations and frequent changes. Further, the interpretation of tax legislation by tax authorities applied to the transactions and activity of the Group may not coincide with that of management. As a result, transactions may be challenged by tax authorities and the Group may be assessed additional taxes, penalties and interest, which can be significant. Under Russian legislation, penalties are levied at 20% of the tax amount underpaid and interest is charged at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (the refinancing rate as of 30 September 2002 was 21.0%). The Group's tax records remain open to review by the tax and customs authorities with respect to tax liabilities for three years.

In June 2002 the tax authorities completed an audit of the accrual and payment of natural gas excise tax by OAO Gazprom covering the period from 1 January 1999 to 30 June 2001. Following the completion of this excise tax audit, the tax authorities issued a tax act to OAO Gazprom. In accordance with estimations of the tax authorities included within the tax act, the amount of additional potential excise tax due is RR19,037, exclusive of penalties and interest. The major part of this amount relates to the tax auditors' interpretation of the method of determination of gas volumes exempt from excise tax under Russian tax law. OAO Gazprom management disputed the total amount of the tax authorities' claim in court as they believe it does not comply with the tax legislation. On 28 October 2002 the Moscow Arbitration Court announced its decision that OAO Gazprom owed RR3 of additional excise tax, exclusive of penalties and interest, out of the total amount claimed by the tax authorities. The tax authorities have the right to file an appeal within one month of the court's written decision. Management does not believe that the financial effect of this contingency will be material to the Group.

**Financial guarantees**

The Group had outstanding issued guarantees to third parties in the amount of RR81,923 and RR77,006 (including guarantees denominated in USD of USD 3,157 million and USD 2,502 million) as of 30 September 2002 and 31 December 2001, respectively.

No provisions were recorded within provisions for liabilities and charges as of 30 September 2002 and 31 December 2001, respectively, in respect of the outstanding issued guarantees.

	<u>30 September 2002</u>	<u>31 December 2001</u>
Outstanding guarantees issued on behalf of:		
BSPC .....	36,224	20,996
Interconnector (UK) Limited .....	34,799	36,609
Itera Group companies .....	3,163	4,303

	81,923	77,006
Less: provisions for guarantees .....	<u>—</u>	<u>—</u>
	<u>81,923</u>	<u>77,006</u>

In April 2000, credit facilities were provided to BSPC, an associated undertaking (see Note 10), by a group of Italian and Japanese banks for the amount of RR64,948 (USD 2,053 million) for the construction of the offshore portion of the Blue Stream pipeline. In 2001, the Group was obligated to provide guarantees on behalf of BSPC in respect of RR37,552 (USD 1,187) related to these credit facilities. As of 30 September 2002 and 31 December 2001 BSPC had used RR58,217 and RR37,470 (USD 1,840 million and USD 1,126 million) of the credit facilities of which RR36,224 (USD 1,145 million) and RR20,996 (USD 631 million) was guaranteed by the Group, pursuant to its obligation.

**20 COMMITMENTS AND CONTINGENCIES—(continued)**

Line "Other" includes mainly guarantees issued by subsidiaries under contracts for purchasing equipment, construction and installation works. As of 30 September 2002 and 31 December 2001 this balance includes guarantees issued by OAO AK Sibur to third parties of RR3,458 and RR7,408, respectively.

**21 POST BALANCE SHEET EVENTS**

**Media Assets**

In October 2002 the Group signed a framework agreement to sell non-controlling interests in several media companies, including NTV, to Eurofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of ZAO Media-Most and its media companies. The disposed interests primarily comprised those acquired in July 2002 (See Note 18). Under the framework agreement, Eurofinance Group shall contribute cash and these acquired interests into a new media holding company, which will be controlled and majority-owned by OAO Gazprom. The Group's contribution into the new holding company will comprise the remaining interests in its media subsidiaries. The transactions are expected to close in the second quarter of 2003. Management does not believe that the financial effect of these transactions will be material to the Group.

**ZAO Armrosgazprom**

In October 2002 the Group has settled accounts payable due as a contribution to the charter capital of ZAO Armrosgazprom of USD 126 million, which was outstanding as of 30 September 2002. The Group will continue to maintain its investment in ZAO Armrosgazprom as an associated undertaking.

**OAO Stroytransgaz**

In September 2002 the Group entered into an agreement with OAO Stroytransgaz to establish a joint activity. The joint activity was formally established in October 2002 into which the Group contributed promissory notes of OAO Gazprom with a fair value of RR4,565 (face value RR5,719) payable in January 2004 and OAO Stroytransgaz contributed 1,144 million of ordinary shares in OAO Gazprom. Voting rights for the ordinary shares of OAO Gazprom, held by the joint activity, are controlled by the Group.

**Rosshelf**

The Rosshelf joint activity was established to develop the Pirazlomnoye and Schtokmanovskoye fields in the Barents Sea. OAO Gazprom and its subsidiary ZAO Rosshelf had 99.1% and 0.9% interest in the project, respectively. In October 2002 OAO Gazprom and its subsidiary ZAO Rosshelf signed an amendment to the Rosshelf joint activity agreement that provided for an additional participant—ZAO Sevmorneftegaz. ZAO Sevmorneftegaz is a company jointly controlled by ZAO Rosshelf and OAO Rosneft-Purneftegaz. Under the agreement ZAO Sevmorneftegaz will make a non-cash contribution valued at RR4,334, in exchange for a 48.9% interest in the Rosshelf joint activity. The effect of this transaction was to decrease OAO Gazprom direct and indirect interest in the Rosshelf joint activity from 99.1% to 62.9%. Management does not believe that the financial effect of these transactions will be material to the Group. The OAO Gazprom and ZAO Rosshelf will have 48.7% and 2.4% direct interest in the joint activity, respectively.

**OAO Zapsibgazprom**

In December 2002 the Group disposed of its 12% interest in OAO Arcticgas with a carrying value of RR1 in exchange for 25.6% interest in OAO Zapsibgazprom and additional cash consideration of USD 2.95 million, increasing its interest in the ordinary share capital of OAO Zapsibgazprom from 51.1% to 76.7%. Management does not expect this transaction to result in any material gain or loss.

**Significant borrowings**

In October 2002 the Group issued USD 700 million of Loan Participation Notes due 2009 with an interest rate of 10.5%. The notes contain an option for the holder to put the notes to the Group as of 21 October 2005.

In October 2002 GazInvest Finance B.V., a wholly owned subsidiary of AB Gazprombank (ZAO), completed the placement of a second issue of 150 million of Medium Term Notes (EMTNs) due 2005 with an interest rate of 9.75% and guaranteed by AB Gazprombank (ZAO).

In November 2002 the Group issued RR5,000 (USD 157 million) of bonds at 100 percent of face value due 2005 with an interest rate of 15%. The notes contain an option for the holder to put the notes to the Group as of 14 November 2003.

During the fourth quarter of 2002 the Group signed an additional loan agreement of USD 450 million for a five and a half year period with a consortium led by Bayerische Hypo-und Verreinsbank, AG (interest rate—LIBOR+3.3%) and a loan agreement of USD 300 million for a two year period with Deutsche Bank, AG (interest rate—9.1%).

DEGOLYER AND MACNAUGHTON  
4925 GREENVILLE AVENUE, SUITE 400  
ONE ENERGY SQUARE  
DALLAS, TEXAS 75206

February 13, 2003

OA0 Gazprom  
16A, Nametkina Street  
117884, Moscow B-420  
Russia

Gentlemen:

DeGolyer and MacNaughton has prepared estimates, as of December 31, 2000, of the extent and value of the proved and probable natural gas, oil, condensate, gas liquids, and sulfur reserves of certain fields in Russia owned by OA0 Gazprom (Gazprom). These estimates have been presented in reports prepared for Gazprom by DeGolyer and MacNaughton listed in Attachment I, to this letter and are referred to collectively as "the Reports." The 18 fields evaluated are located in western Siberia and the Volga-Ural Province of Russia and include the following:

Astrakhan	Urengoi Oil
Bovanenko	Viengapursk
Kharasevai	West Tarkosalinsk
Komsomolsk	Yamburg
Medvezhye	Yamsovieyskoye
North Urengoi	Yen-Yakha
Novy Port	Yeti-Purovskoye
Orenburg	Yubileyne
Urengoi	Zapolarnoye

The estimated proved and probable gas, oil, condensate, and gas liquids reserves owned by Gazprom, as of December 31, 2000, in the fields evaluated in the Reports, expressed in billions of cubic meters (BCM) and billions of cubic feet (BCF) or millions of metric tons (MMmt) and millions of barrels (MMbbl) are summarized below:

	English Units		
	Gazprom Separator Gas		
	Total Proved (BCF)	Probable (BCF)	Proved Plus Probable (BCF)
Astrakhan	7,057.99	1,435.89	8,493.88
Bovanenko	115,483.92	10,289.28	125,773.20
Kharasevai	38,201.29	10,688.69	48,889.98
Komsomolsk	17,249.10	273.34	17,522.44
Medvezhye	14,203.61	788.17	14,991.78
Novyport	0.00	6,867.64	6,867.64
Orenburg	14,880.54	619.42	15,499.96
Urengoi	114,791.39	3,547.01	118,338.40
Urengoi (Oil)	626.48	741.95	1,368.43
Urengoi (North)	8,319.43	1,616.00	9,935.43
Viengapursk	1,438.02	134.22	1,572.24
West Tarkosalinsk	8,494.98	114.41	8,609.39
Yamburg	114,769.86	10,771.67	125,541.53
Yamsovieyskoye	15,468.56	195.26	15,663.82
Yen-Yakha	6,041.99	502.52	6,544.51
Yeti-Purovskoye	10,562.62	116.18	10,678.80
Yubileyne	11,458.55	161.04	11,619.59
Zapolarnoye	99,674.59	5,634.46	105,309.05
<b>Total</b>	<b>598,722.92</b>	<b>54,497.15</b>	<b>653,220.07</b>

Note:

Probable reserves have not been adjusted to account for risk.

<b>Total .....</b>	<b>182,175.82</b>	<b>204,873.13</b>	<b>48,837.69</b>	<b>49,370.01</b>

\* In the preparation of these estimates, future income tax expenses have been taken into account at the field level and for transportation of gas for export.

\*\* There has been no adjustment applied to the value of probable reserves to account for risk.

Note:

Future Net Revenue and Present Worth include the value of Sulfur Reserves from the Astrakhan field, as shown in Attachment II.

The estimates of reserves, future net revenue, and present worth of future net revenue summarized are subject to the definitions, assumptions, qualifications, explanations, and conclusions expressed in the Reports. These summaries should be considered in view of the conditions of the Reports and are susceptible to being misunderstood apart from the Reports.

Very truly yours,

DEGOLYER AND MACNAUGHTON

### Programme for the Issuance of Loan Participation Notes

to be issued by, but with limited recourse to,

**Gaz Capital S.A., registered office at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg, Register of Commerce and Companies Luxembourg B-95071 for the purpose of financing loans to**

**Open Joint Stock Company Gazprom**

RECEIVED  
2005 SEP -5 P 2 25  
OFFICE OF THE  
CORPORATE SECRETARY

Under the Programme for the Issuance of Loan Participation Notes described in this Offering Circular (the "Programme"), Gaz Capital S.A. (the "Issuer"), subject to compliance with all relevant laws, regulations and directives, may from time to time issue loan participation notes (the "Notes") on the terms set out herein, as supplemented by a pricing supplement (each a "Pricing Supplement") setting out the specific terms of each issue. The aggregate principal amount of Notes outstanding will not at any time exceed U.S.\$5,000,000,000 (or the equivalent in other currencies).

Notes will be issued in Series (as defined in "Summary of the Programme") and the sole purpose of issuing each Series will be to finance loans (each a "Loan") to Open Joint Stock Company Gazprom (the "Borrower," "Gazprom" or the "Company") as borrower, on the terms of a facility agreement between the Issuer and the Borrower dated September 22, 2003 (the "Facility Agreement"), as amended and supplemented by a loan supplement to be entered into in respect of each Loan on each Issue Date (each a "Loan Supplement" and, together with the Facility Agreement, the "Loan Agreement") between the Issuer and the Borrower. Subject as provided in the Trust Deed (as defined herein) the Issuer will charge, by way of first fixed charge as security for its payment obligations in respect of each Series of Notes and under the Trust Deed, its rights and interests as lender under the relevant Loan Agreement to Deutsche Bank Trust Company Americas as trustee (the "Trustee"), for the benefit of the holders of the corresponding Series of Notes (the "Noteholders") and will assign its administrative rights under such Loan Agreement to the Trustee (the "Assigned Rights").

In each case where amounts of principal, interest and additional amounts (if any) are stated to be payable in respect of a Series of Notes, the obligation of the Issuer to make any such payment constitutes an obligation only to account to the Noteholders, on each date upon which such amounts of principal, interest and additional amounts (if any) are due in respect of such Series of Notes, for an amount equivalent to all principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the corresponding Loan. **Noteholders will be deemed to have accepted and agreed that they will be relying solely on the credit and financial standing of the Borrower in respect of the payment obligations of the Issuer under the Notes.**

#### **AN INVESTMENT IN THE NOTES INVOLVES A HIGH DEGREE OF RISK. SEE "RISK FACTORS."**

The Notes and the corresponding Loans (together, the "Securities") have not been, and will not be, registered under the U.S. Securities Act of 1933 (the "Securities Act") and, subject to certain exceptions, may not be offered and sold within the United States or to, or for the account or benefit of, U.S. persons. The Notes may be offered and sold (i) within the United States to qualified institutional buyers (as defined in Rule 144A under the Securities Act ("Rule 144A")) that are also qualified purchasers as defined in Section 2(a)(51) of the U.S. Investment Company Act of 1940 (the "Investment Company Act") in reliance on the exemption from registration provided by Rule 144A (the "Rule 144A Notes"); and (ii) to certain persons in offshore transactions in reliance on Regulation S under the Securities Act (the "Regulation S Notes"). The Issuer has not been and will not be registered under the Investment Company Act. Prospective purchasers are hereby notified that sellers of the Notes may be relying on the exemption from the provisions of Section 5 of the Securities Act provided by Rule 144A. For a description of these and certain further restrictions, see "Subscription and Sale" and "Transfer Restrictions."

Application has been made to list the Notes issued under the Programme on the Luxembourg Stock Exchange. However, unlisted Notes may also be issued pursuant to the Programme. The relevant Pricing Supplement in respect of the issue of any Notes will specify whether or not such Notes will be listed on the Luxembourg Stock Exchange (or any other stock exchange).

Regulation S Notes of each Series which are sold in an "offshore transaction" within the meaning of Regulation S under the Securities Act ("Regulation S"), will initially be represented by interests in a global unrestricted Note in registered form (each a "Regulation S Global Note"), without interest coupons, which will be deposited with a common nominee for, and registered in the name of a common nominee of, Euroclear Bank S.A./N.V. as operator of the Euroclear System ("Euroclear") and Clearstream Banking, société anonyme ("Clearstream, Luxembourg") on its Issue Date. Beneficial interests in a Regulation S Global Note will be shown on, and transfers thereof will be effected only through records maintained by, Euroclear or Clearstream, Luxembourg. Rule 144A Notes of each Series sold to a qualified institutional buyer within the meaning of Rule 144A under the Securities Act, as referred to in, and subject to the transfer restrictions described in "Subscription and Sale" and "Transfer Restrictions," will initially be represented by a global restricted Note in registered form (each a "Rule 144A Global Note" and together with any Regulation S Global Notes, the "Global Notes"), without interest coupons, which will be deposited with a custodian for, and registered in the name of a nominee of, The Depository Trust Company ("DTC") on its Issue Date. Beneficial interests in a Rule 144A Global Note will be shown on, and transfers thereof will be effected only through, records maintained by DTC and its participants. See "Clearing and Settlement." Individual definitive Notes in registered form will only be available in certain limited circumstances as described herein. Application may also be made to have Rule 144A Notes designated as eligible for trading in the Private Offering, Resale and Trading through Automated Linkages ("PORTAL") System of the National Association of Securities Dealers, Inc., as specified in the applicable Pricing Supplement.

Gazprom, having made all reasonable enquiries, confirms that (i) this offering circular (the "Offering Circular") contains all information with respect to Gazprom, Gazprom and its subsidiaries taken as a whole (the "Group"), the Loans and the Notes that is material in the context of the issue and offering of the Notes; (ii) the statements contained in this Offering Circular relating to Gazprom and the Group are in every material particular true and accurate and not misleading; (iii) the opinions, expectations and intentions expressed in this Offering Circular with regard to Gazprom and the Group are honestly held, have been reached after considering all relevant circumstances and are based on reasonable assumptions; (iv) there are no other facts in relation to Gazprom, the Group, the Loans or the Notes the omission of which would, in the context of the issue and offering of the Notes, make any statement in this Offering Circular misleading in any material respect; and (v) all reasonable enquires have been made by Gazprom to ascertain such facts and to verify the accuracy of all such information and statements. Gazprom accepts responsibility accordingly. The Issuer accepts responsibility for all information with respect to itself.

This Offering Circular does not constitute an offer of, or an invitation by or on behalf of the Issuer, Gazprom, the Dealers or the Arrangers to subscribe for or purchase, any Notes.

The distribution of this Offering Circular and the offer or sale of the Notes in certain jurisdictions may be restricted by law. Persons into whose possession this Offering Circular comes are required by the Issuer, Gazprom, any of the Dealers and the Arrangers to inform themselves about and to observe any such restrictions. Further information with regard to restrictions on offers and sales of the Notes and the distribution of this Offering Circular is set out under "Subscription and Sale."

No person is authorized to provide any information or make any representation not contained in this Offering Circular and any information or representation not contained in this Offering Circular and any information or representation so contained must not be relied upon as having been authorized by or on behalf of the Issuer, Gazprom, the Trustee, any of the Dealers or the Arrangers. The delivery of this Offering Circular at any time does not imply that the information contained in it is correct as at any time subsequent to its date.

None of the Issuer, Gazprom, the Dealers or the Arrangers or any of the respective representatives is making any representation to any offeree or purchaser of the Notes offered hereby, regarding the legality of an investment by such offeree or purchaser under appropriate legal investment or similar laws. Each investor should consult with their own advisors as to the legal, tax, business, financial and related aspects of purchase of the Notes.

In connection with any Series of Notes, the Dealer (if any) disclosed as a stabilizing agent (the "Stabilizing Agent") in the relevant Pricing Supplement (or any person acting for the Stabilizing Agent) may over-allot or effect transactions with a view to supporting the market price of Notes at a level higher than that which might otherwise prevail for a limited period. However, there may be no obligation on the Stabilizing Agent (or any agent of the Stabilizing Agent) to do this. Such stabilizing, if commenced, may be discontinued at any time and must be brought to an end after a limited period. Such stabilizing shall be in compliance with all applicable laws, regulations and rules.

NO REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, IS MADE BY THE DEALERS OR THE ARRANGERS AS TO THE ACCURACY OR COMPLETENESS OF THE INFORMATION SET FORTH IN THIS DOCUMENT, AND NOTHING CONTAINED IN THIS DOCUMENT IS, OR SHALL BE RELIED UPON AS, A PROMISE OR REPRESENTATION, WHETHER AS TO THE PAST OR THE FUTURE.

EACH PERSON CONTEMPLATING MAKING AN INVESTMENT IN ANY NOTES ISSUED UNDER THIS PROGRAMME FROM TIME TO TIME MUST MAKE ITS OWN INVESTIGATION AND ANALYSIS OF THE CREDITWORTHINESS OF GAZPROM AND THE ISSUER AND ITS OWN DETERMINATION OF THE SUITABILITY OF ANY SUCH INVESTMENT, WITH PARTICULAR REFERENCE TO ITS OWN INVESTMENT OBJECTIVES AND EXPERIENCE, AND ANY OTHER FACTORS WHICH MAY BE RELEVANT TO IT IN CONNECTION WITH SUCH INVESTMENT.

THE NOTES HAVE NOT BEEN APPROVED OR DISAPPROVED BY THE U.S. SECURITIES AND EXCHANGE COMMISSION, ANY STATE SECURITIES COMMISSION IN THE UNITED STATES OR ANY OTHER U.S. REGULATORY AUTHORITY NOR HAVE ANY OF THE FOREGOING AUTHORITIES PASSED UPON OR ENDORSED THE MERITS OF THE OFFERING OF NOTES OR THE ACCURACY OR THE ADEQUACY OF THIS OFFERING CIRCULAR. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE IN THE UNITED STATES.

## NOTICE TO NEW HAMPSHIRE RESIDENTS

NEITHER THE FACT THAT A REGISTRATION STATEMENT, OR AN APPLICATION FOR A LICENSE HAS BEEN FILED UNDER CHAPTER 421-B OF THE NEW HAMPSHIRE REVISED STATUTES WITH THE STATE OF NEW HAMPSHIRE NOR THE FACT THAT A SECURITY IS EFFECTIVELY REGISTERED OR A PERSON IS LICENSED IN THE STATE OF NEW HAMPSHIRE CONSTITUTES A FINDING BY THE SECRETARY OF STATE OF NEW HAMPSHIRE THAT ANY DOCUMENT FILED UNDER RSA 421-B IS TRUE, COMPLETE AND NOT MISLEADING. NEITHER ANY SUCH FACT NOR THE FACT THAT AN EXEMPTION OR EXCEPTION IS AVAILABLE FOR A SECURITY OR A TRANSACTION MEANS THAT THE SECRETARY OF STATE OF NEW HAMPSHIRE HAS PASSED IN ANY WAY UPON THE MERITS OR QUALIFICATIONS OF, OR RECOMMENDED OR GIVEN APPROVAL TO, ANY PERSON, SECURITY OR TRANSACTION. IT IS UNLAWFUL TO MAKE, OR CAUSE TO BE MADE, TO ANY PROSPECTIVE PURCHASER, CUSTOMER, OR CLIENT ANY REPRESENTATION INCONSISTENT WITH THE PROVISIONS OF THIS PARAGRAPH.

## ENFORCEABILITY OF JUDGMENTS

We, Gazprom, are an open joint stock company incorporated under the laws of the Russian Federation and most of our assets are currently located outside the United States and the United Kingdom. In addition, all of our directors and executive officers are residents of countries other than the United States and the United Kingdom. As a result, it may not be possible for you to:

- effect service of process within the United States and the United Kingdom upon any of our directors or executive officers named in this Offering Circular; or
- enforce, in the U.S. or English courts, judgments obtained outside United States or English courts against us or any of our directors and executive officers, named in this Offering Circular in any action.

In addition, it may be difficult for you to enforce, in original actions brought in courts in jurisdictions located outside the United Kingdom, liabilities predicated upon English laws.

Judgments rendered by a court in any jurisdiction outside the Russian Federation will be recognised by courts in Russia only if an international treaty providing for the recognition and enforcement of judgments in civil cases exists between the Russian Federation and the country where the judgment is rendered. No such treaty exists between the United States and the Russian Federation or the United Kingdom and the Russian Federation for the reciprocal enforcement of foreign court judgments.

Each Loan Agreement will be governed by English law and will provide the option for disputes, controversies and causes of action brought by any party thereto against us to be settled by arbitration in accordance with the Rules of the London Court of International Arbitration. The Russian Federation is a party to the United Nations (New York) Convention on the Recognition and Enforcement of Foreign Arbitral Awards. However, it may be difficult to enforce arbitral awards in the Russian Federation due to:

- the inexperience of the Russian courts in international commercial transactions;
- official and unofficial political resistance to the enforcement of awards against Russian companies in favour of foreign investors; and
- the inability of Russian courts to enforce such awards.

## DOCUMENTS INCORPORATED BY REFERENCE

This Offering Circular should be read and construed in conjunction with each relevant Pricing Supplement, any other amendment or supplement to this Offering Circular prepared from time to time in accordance with the undertakings by the Issuer and Gazprom in the Dealer Agreement described below, and the most recently published audited annual accounts and any interim accounts (whether audited or unaudited) published subsequently to such annual accounts, of Gazprom and the Issuer, which shall be deemed to be incorporated in, and to form part of, this Offering Circular and which shall be deemed to modify or supersede the contents of this Offering Circular to the extent that a statement contained in any such document is inconsistent with such contents. All documents incorporated by reference will be available free of charge from the offices of the Trustee and the Paying Agent in Luxembourg during normal business hours.

Any statement contained in a document incorporated herein by reference shall be deemed to be modified or superseded for the purposes of this Offering Circular to the extent that a statement contained in any subsequent document which is also incorporated herein by reference or that is a supplement hereto, modifies or supersedes such a statement (whether expressly, by implication or otherwise). Any statement so superseded shall not be deemed, except as so modified or superseded, to constitute a part of this Offering Circular.

## SUPPLEMENTAL OFFERING CIRCULAR

Gazprom will, in connection with the listing of the Notes on the Luxembourg Stock Exchange, so long as any Note remains outstanding and listed on such exchange, in the event of any material change in the condition of the Issuer or Gazprom which is not reflected in this Offering Circular, prepare a supplement to this Offering Circular or publish a new Offering Circular for use in connection with any subsequent issue of the Notes to be listed on the Luxembourg Stock Exchange.

The Issuer and Gazprom may agree with any Dealer that a Series of Notes may be issued in a form not contemplated by the Conditions herein, in which event a supplemental Offering Circular, if appropriate, will be published which will describe the effect of the agreement reached in relation to such Notes.

In this document, the terms “Company,” “we,” “us” and “our” refer to Open Joint Stock Company Gazprom (also known as OAO Gazprom) and its subsidiaries, unless the context otherwise requires.

We measure our gas condensate and crude oil in metric tons. This document contains conversions of certain volumes from tons into barrels solely for the convenience of the reader. The conversion of volumes from metric tons to barrels varies at each of our fields due to different geological conditions. In this document, however, we use a conversion rate for all conversions of tons to barrels of one ton = 7.33 barrels. This document also contains conversions of cubic meters of natural gas and barrels of gas condensate and crude oil into barrels of oil equivalent solely for the convenience of the reader. In this document, we use a conversion rate for all conversions of one thousand cubic meters of natural gas = 5.8858 barrels of oil equivalent, one barrel of gas condensate = one barrel of oil equivalent and one barrel of crude oil = one barrel of oil equivalent.

Information contained under the heading “Overview of the Russian Gas Industry and its Regulation” includes extracts from information and data publicly released by official and other sources, and we accept responsibility for accurately reproducing such information and data but accept no further responsibility in respect of such information and data.

In this document, references to “roubles” and “RR” are to the lawful currency for the time being of the Russian Federation, references to “U.S. dollars,” “dollars,” “U.S.\$” and “\$” are to the lawful currency for the

time being of the United States of America, references to "euro" and "€" are to the currency introduced at the start of the third stage of European economic and monetary union, and references to "pounds," "sterling" or "£" are to the lawful currency for the time being of the United Kingdom. This document contains conversions of certain amounts into dollars at specified rates solely for the convenience of the reader. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR31.78 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on December 31, 2002. With effect from January 1, 1998, the rouble was redenominated, with one new rouble being set equal to one thousand old roubles. All references herein to amounts in "roubles" are references to new roubles, and any rouble amounts relating to the period prior to January 1, 1998 have been restated in new roubles. No representation is made that the rouble or dollar amounts referred to herein could have been or could be converted into roubles or dollars, as the case may be, at these rates, at any particular rate or at all.

## FORWARD-LOOKING STATEMENTS

Certain statements in this document are not historical facts and are “forward-looking.” This document contains certain forward-looking statements in various sections, including, without limitation, under the headings “Summary,” “Risk Factors,” and “Business.” We may from time to time make written or oral forward-looking statements in reports to shareholders and in other communications. Examples of such forward-looking statements include, but are not limited to:

- statements of our plans, objectives or goals, including those related to products or services;
- statements of future economic performance; and
- statements of assumptions underlying such statements.

Forward-looking statements that may be made by us from time to time (but that are not included in this document) may also include projections or expectations of revenues, income (or loss), earnings (or loss) per share, dividends, capital structure or other financial items or ratios.

Words such as “believes,” “anticipates,” “expects,” “estimates,” “intends” and “plans” and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that the predictions, forecasts, projections and other forward-looking statements will not be achieved. You should be aware that a number of important factors could cause actual results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- inflation, interest rate and exchange rate fluctuations;
- the price of natural gas;
- the effects of, and changes in, the policy of the government of the Russian Federation (the “Government”);
- the effects of competition in the geographic and business areas in which we conduct operations;
- the effects of changes in laws, regulations, taxation or accounting standards or practices;
- our ability to increase market share for our products and control expenses;
- acquisitions or divestitures;
- technological changes;
- the effects of international political events on our business; and
- our success at managing the risks of the aforementioned factors.

This list of important factors is not exhaustive. When relying on forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, especially in light of the political, economic, social and legal environment in which we operate. Such forward-looking statements speak only as of the date on which they are made, and are not subject to any continuing obligations under the listing rules of the Luxembourg Stock Exchange. Accordingly, we do not undertake any obligation to update or revise any of them, whether as a result of new information, future events or otherwise. We do not make any representation, warranty or prediction that the results anticipated by such forward-looking statements will be achieved, and such forward-looking statements represent, in each case, only one of many possible scenarios and should not be viewed as the most likely or standard scenario.

## SUMMARY

### Overview

We are the world's largest natural gas company, and the world's largest publicly-traded hydrocarbons company, in terms of reserves, production and transportation. We supply substantially all of the natural gas consumed in Russia, approximately 50% of the natural gas consumed in the six FSU countries to which we export our natural gas—Belarus, Estonia, Latvia, Lithuania, Moldova and Ukraine—and approximately 26% of the natural gas consumed in Europe. For the year ended December 31, 2002, our sales net of excise tax, value added tax, customs duties and sales tax were RR644,687 million (U.S.\$20.29 billion) and our operating profit was RR147,974 million (U.S.\$4.66 billion). As of December 31, 2002, we had total assets of RR2,480,699 million (U.S.\$78.06 billion) and total shareholders' equity of RR1,711,872 million (U.S.\$53.87 billion).

*Reserves.* We estimate our reserves using the Russian reserves system, which differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. As of December 31, 2002, we had Russian reserves system combined ABC1 reserves (including that portion of reserves attributable to us through shareholdings in our subsidiaries, entities in which we hold less than 50% and joint ventures) of 28.2 tcm of natural gas, 1,283.4 million tons (9.4 bbls) of gas condensate and 562.3 million tons (4.1 bbls) of crude oil, for a total of 179,483.0 mmboe. Most of our natural gas reserves are located in western Siberia and are tightly geographically concentrated. As of December 31, 2002, our three largest fields, Urengoiskoye, Yamburgskoye and Zapolyarnoye, all located in the Yamal-Nenets Region in western Siberia, accounted for 13.3 tcm of combined ABC1 natural gas reserves, or 47.2% of our total combined ABC1 natural gas reserves. The majority of our reserves outside of western Siberia are located in the Barents Sea and southern Russia.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has been evaluating our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had evaluated 20 fields with proved reserves of 16.3 tcm of natural gas, 282.0 million tons (2,067.1 mmbbls) of gas condensate and 7.7 million tons (56.2 mmbbls) of crude oil and probable reserves of 1.5 tcm of natural gas, 77.9 million tons (571.3 mmbbls) of gas condensate and 98.8 million tons (724.1 mmbbls) of crude oil. We believe that the 20 fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties.

*Exploration and Production.* As of June 30, 2003, we held 24 licenses for exploration and assessment (without development rights) with terms of up to five years, 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of between 18 and 23 years and 75 production licenses with initial terms of 20 to 25 years and with remaining terms of between 10 and 20 years. In the year ended December 31, 2002, we produced 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbbls) of gas condensate and 706,400 tons (5.2 mmbbls) of crude oil, for a total of 3,149.6 mmboe, as compared with 512.0 bcm of natural gas, 9.5 million tons (69.6 mmbbls) of gas condensate and 704,400 tons (5.2 mmbbls) of crude oil, for a total of 3,088.1 mmboe in the year ended December 31, 2001. Our production of natural gas in 2002 represented the first annual increase in our production since 1999. Our natural gas production represented approximately 87.7% of total natural gas production in Russia in 2002, as compared with 88.1% in 2001. Four of our production subsidiaries, Urengoigazprom, Yamburggazdobycha, Noyabrskgazdobycha and Nadyngazprom, together produced 91.8% of our natural gas in 2002, as compared with 92.5% in 2001. The Zapolyarnoye field, which came on stream in the third quarter of 2001, produced approximately 36.8 bcm of natural gas in 2002, or approximately 7% of our total natural gas production. In the three months ended March 31, 2003, we produced 143.1 bcm of natural gas, 2.6 million tons (19.0 mmbbls) of gas condensate and 196,100 tons (1.4 mmbbls) of crude oil, for a total of 862.7 mmboe, as compared with 140.4 bcm of natural gas, 2.4 million tons (17.8 mmbbls) of gas condensate and 181,800 tons (1.3 mmbbls) of crude oil, for a total of 845.5 mmboe, in the three months ended March 31, 2002.

*Transportation.* We own and operate Russia's Unified Gas Supply System (the "UGSS"), which gathers, processes, transports, stores and delivers substantially all the natural gas sold in Russia. The UGSS comprises the world's largest high-pressure trunk pipeline system, with a total length of over 149,900 km (not including connecting pipelines), 256 compressor stations and 24 underground natural gas storage facilities. We control and manage the transportation of gas in the UGSS network from our central dispatch management center, located in

Moscow. We transported 637.1 bcm and 630.6 bcm through the UGSS in 2002 and 2001, respectively, and 193.4 bcm and 179.4 bcm of natural gas in the three months ended March 31, 2003 and 2002, respectively. Although we use most of the UGSS capacity for the transportation of the natural gas we produce or purchase, we also provide gas transportation services to third parties. Third-party use accounted for 12.7% and 12.9% of the total volume of natural gas supplied through the UGSS in 2002 and 2001, respectively.

As discussed more fully below, beginning in the late 1990s, we began acquiring interests in regional gas distribution companies. These regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

*Processing and Refining.* Our refining operations are carried out by our wholly-owned refining facilities and our majority-owned subsidiary Sibur. For a discussion of Sibur, see "Business—Refining." Our refining facilities process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. The processing, stabilizing and refining of natural gas, gas condensate and crude oil is carried out by six integrated refineries that remove hazardous and corrosive substances from natural gas and gas condensate and produce a broad range of products. The refineries also stabilize and refine gas condensate and crude oil as a single crude oil and condensate mixture. Our refineries produce products derived from natural gas such as dry marketable natural gas, de-ethanized natural gas, liquefied natural gas, ethane, helium, sulfur and odorant. Stabilized and refined products derived from gas condensate and crude oil include stable gas condensate, gas condensate distillate, diesel fuel, furnace fuel oil and automobile gasoline. In 2002 our wholly-owned refining facilities processed and refined 33.8 bcm of our natural gas and 9.5 million tons (69.6 mmbbls) of our gas condensate and crude oil, for a total volume of 268.5 mmbbl, compared to 34.6 bcm of our natural gas and 10.1 million tons (74.0 mmbbls) of our gas condensate and crude oil, for a total volume of 277.7 mmbbl in 2001. We also provide gas condensate refining services for third parties.

*Exports.* We export our natural gas to Europe through our wholly-owned trading subsidiary, Gazexport. Our exports to Europe also accounted for approximately 27.4% and 27.2% of the volume of natural gas we sold in 2002 and 2001, respectively. Net sales of natural gas to Europe accounted for 63.3% and 69.4% of our net gas sales in 2002 and 2001, respectively. According to the statistical survey CEDIGAZ—"Natural Gas in the World—2002," July 2003, we supplied 20% of the natural gas consumed in western Europe and 61% of the natural gas consumed in central and eastern Europe in 2002. Most of our exports are transported by pipeline through Ukraine and through the Yamal-Europe pipeline, part of which came on stream in 1999.

*Domestic sales.* We sell our products domestically through our wholly-owned subsidiary OOO Mezhtregiongaz ("Mezhtregiongaz") and its 50 regional marketing companies, 43 of which we controlled as of June 30, 2003, to large industrial consumers, to regional gas distribution companies and to household consumers. Historically, Mezhtregiongaz sold natural gas to third-party regional gas distribution companies and to large industrial consumers. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies that had failed to pay for the gas we sold them. As of June 30, 2003, we had controlling interests in 113, and non-controlling interests in an additional 52, of the approximately 320 regional gas distribution companies in Russia. When we acquire controlling interests in the regional gas distribution companies, we are able to capture the transportation and regional energy sales tariffs that are payable to them in respect of the transportation services they provide.

We are testing a strategy to streamline our domestic marketing operations by removing Mezhtregiongaz from our marketing chain and reassigning it primary responsibility for coordinating the collection of unpaid debts and developing our electronic trading market for gas. We believe that removing Mezhtregiongaz from the marketing chain may result in cost and tax savings and increase the efficiency of our marketing.

*New senior management.* Our annual general meeting of shareholders in June 2001 began a process that has led to the replacement of substantially all of the senior management team that ran our business since the early 1990s. Our new senior management team devoted its attention first to familiarizing itself with our extensive operations and to reacquiring certain assets disposed of in prior years. Our senior management is now engaged in the implementation of our strategy, including initiatives relating to the disposition of non-core assets, cost

reductions, debt reduction, priorities for the development of gas fields and infrastructure, and our relationship with the Government. See “Business—Strategy” and “Certain Factors Affecting our Financial Condition and Results of Operations—Liquidity and Capital Resources.”

*Relationship with the Government.* The Russian Federation currently directly owns 38.37% of our shares, and representatives of the state hold six of the 11 seats on our Board of Directors. Moreover, our subsidiaries hold approximately 16.26% of our shares (as of June 30, 2003), which they are entitled to vote as owners. In addition, we are a “natural monopoly” under the Russian Federal Law “On Natural Monopolies” No. 147-FZ dated August 17, 1995. As a result, the Government regulates and sets the prices we charge for gas supplied to the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations. At the same time, we play a significant role in Russia’s financial system and economy. According to our analyses, we accounted for approximately 15% of federal budget revenues, approximately 20% of foreign exchange earnings and approximately 8% of GDP of the Russian Federation in 2002. See “Risk Factors—Risks Relating to our Business—The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.”

### **History and Privatization**

Prior to 1991, the Russian gas industry was regulated by the Council of Ministers of the gas industry. State-owned concern “Gazprom,” which was formed in 1991, was the successor to the Council of Ministers of the gas industry. This state-owned concern formed the basis for our transformation into a joint stock company in accordance with Presidential Decree No. 1333 of November 5, 1992 “On the Transformation of the State Gas Concern Gazprom into Russian Joint Stock Company Gazprom” (“Decree No. 1333”) and Resolution of the Council of Ministers of the Government of the Russian Federation No. 138 of February 17, 1993 “On the Establishment of Russian Joint Stock Concern Gazprom” (“Order No. 138”). Decree No. 1333 made us responsible for ensuring the efficient operation and development of the UGSS. Decree No. 1333 and the Presidential Decree of the Russian Federation No. 2116 of December 6, 1993 made us responsible for natural gas exports through Gazexport, our wholly-owned foreign trade subsidiary.

Decree No. 1333 charged us with the following principal tasks:

- ensuring a reliable supply of natural gas to customers in Russia and to foreign customers, and supplying gas abroad under inter-governmental and inter-state agreements;
- conducting a coordinated technical and investment policy for maintaining and further developing the UGSS;
- controlling the operation of the UGSS;
- financing and constructing natural gas pipelines and high pressure outlets to service areas of Russia where natural gas was previously unavailable; and
- providing access for any independent producer of natural gas to the UGSS in proportion to the amount of natural gas produced by such independent producer in Russia, subject to Government regulation of the natural gas price mechanism.

Our functions as owner of the UGSS and providing access to the UGSS are now regulated in accordance with the Federal Law No. 69 FZ dated March 31, 1999 “On Gas Supply in the Russian Federation” (the “Gas Supply Law”).

The Council of Ministers of the Russian Federation approved our original Charter in Order No. 138, and we were registered as an open joint stock company on February 25, 1993. In 1993 and 1994 the Government issued us with licenses pursuant to the Subsoil Resources Law of 1992, granting us rights to exploit hydrocarbon reserves.

The Gas Supply Law states that at least 35% of the UGSS owner's shares (i.e., Gazprom) must be retained in federal ownership for an indefinite period of time and may only be disposed of pursuant to federal law. These shares, together with the 0.87% of our shares not placed during the privatization program in 1993 and 1994 and the 2.5% of our shares not sold in the second quarter of 1999, comprise the 38.37% of our shares currently directly held by the state.

## Strategy

Our main strategic objective is to maintain and strengthen our position as a leading gas company, both domestically and globally, by continuing to adapt to a rapidly changing business environment. To achieve this objective, we plan to:

- meet our production targets, including achieving and maintaining our natural gas production target of not less than 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030;
- ensure the effective, reliable and balanced supply of gas to Russian customers; and
- fulfill our long-term export contracts and inter-governmental agreements on gas supply.

In implementing these plans, we intend to apply the following principles:

- managing our business effectively, with a view to enhancing the profitability of our assets and reducing our costs;
- respecting our shareholders' rights, including those of our major shareholder—the Russian Federation—as well as those of our minority shareholders;
- improving our corporate governance and the transparency of our business activities; and
- inculcating in our managers a sense of personal responsibility for the success of our business.

To implement these objectives, plans and principles, we have developed a number of strategic priorities, including:

**Developing cost-effective sources of supply from our existing reserves base to replace declines in our largest old fields.** Based on (i) our current export contract portfolio; (ii) anticipated future demand and prices domestically; and (iii) our reserves base, we believe that achieving and maintaining annual natural gas production of 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030 is strategically optimal. In light of expected continuing declines from three of our largest old west Siberian fields (Urengoiskeye, Yamburgskoye and Medvezhye), we intend to continue to invest in developing new production. Production from Zapolyaroye field began in 2001 and reached approximately 36.8 bcm in 2002. We plan to invest RR29.1 billion in 2004 and 2005 in developing the Zapolyaroye field to full capacity. We intend to complete the development of Zapolyaroye by 2006, after which its production should reach 100 bcm per year. We also intend to invest in new production from our other western and eastern Siberian, Far Eastern and southern Russian deposits and also in off-shore fields, including Obshch-Tazovskaya. See "Business—Reserves and Production—Development Activities." To develop and maintain this production as efficiently as possible, we intend to work closely with international energy service companies and local institutes, both of which are essential to ensuring the best use of the latest technologies.

**Purchasing gas from Central Asia.** To help maintain our natural gas sales while production from our mature fields declines, we have signed long-term agreements to purchase natural gas from Turkmenistan and Uzbekistan. Purchases from GTK Turkmenneftegaz, the state oil and gas company of Turkmenistan, are expected to be 5-6 bcm in 2004, rise to 6-7 bcm in 2005, 10 bcm in 2006, 60-70 bcm in 2007, and reach 70-80 bcm annually from 2009 to 2028. Purchases from AK Uztransgaz, the state gas company of Uzbekistan, are expected to be 3.2 bcm this year, rise to 7 bcm in 2004 and reach 10 bcm annually from 2005 to 2012.

**Further developing transportation infrastructure to meet growing demand for gas and increase our flexibility in delivering gas to export and domestic markets.** To meet domestic gas supply requirements and our contractual export obligations, we are developing new pipeline construction projects, such as Yamal-Europe (Torzhok-Poland), Russia-Turkey (Blue Stream), Zapolyarnoye-Urengoi, northern areas of the Tyumen region-Torzhok, and Pochinky-Izobilnoye-North Stavropolskoye Underground Gas Storage. We expect demand for gas in our core export market (Europe) to grow, and our export obligations to those markets to grow as well. We have recently completed and launched the first stage of the Blue Stream pipeline from Russia to Turkey under the Black Sea, with planned capacity of 16 bcm per year. We have also announced plans to develop a north European pipeline, from northwest Russia (under the Baltic Sea) to the German shore, with capacity of 20 bcm per year. The anticipated cost of the north European pipeline is U.S.\$5.7 billion. Market research and planning for this project is currently underway. We are also proceeding with the Yamal-Europe project. The purpose of the project is to meet our contractual obligations to supply natural gas to Europe and to diversify export routes. Connecting the Yamal-Europe pipeline to the existing natural gas transportation network in Germany will allow for the full integration of this pipeline into the European gas network. In July 2003, our Board of Directors approved our participation in a consortium that plans to build the West-East pipeline across China. In addition, we are currently analyzing opportunities in Asian and other markets and the potential attractiveness of investments in gas production and transportation infrastructure, including liquified natural gas ("LNG") to meet anticipated demand growth and market opportunities in China, Japan, the United States and elsewhere.

**Enhancing our refining capabilities.** Our long-term refining strategy is to enhance our competitive position in Russia, the FSU and Europe, in particular through our subsidiary Sibur, one of Russia's leading petrochemical companies. We plan to modernize our gas processing and refining facilities at Sibur and elsewhere in order to increase our production of refined products overall (and our refining throughput) as well as the depth of our refining, allowing us to produce higher margin products.

**Enhancing profitability by taking advantage of the profitable and growing European export markets and by increasing cash generation from domestic and FSU sales.** In the year ended December 31, 2002, net sales of natural gas to Europe represented 27.4% of our total gas sales volumes and 63.3% of our net gas sales. We expect to increase our export sales volumes under our export contracts. This should allow us to enhance profitability. In addition, we intend to continue our current efforts to (i) improve the profitability of our domestic sales by lobbying the Government for price increases; (ii) improve payment discipline; and (iii) sell gas on the planned open domestic exchanges at prices above regulated prices.

**Continuing to develop strategic partnerships, both internationally and in Russia.** We have entered into various strategic partnerships, both domestically and abroad, and are continually seeking new opportunities to maximize the value of our assets through these relationships. We have established a joint venture, WINGAS GmbH ("WINGAS"), with BASF AG ("BASF"), that owns several pipelines in Germany and allows us to access that market further downstream than by delivering gas at the border only. We have also entered into strategic partnership agreements with Royal Dutch/Shell Group and with LUKOIL. LUKOIL produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries from 2002 to 2005. Under this strategic partnership agreement, in March 2003 we concluded an agreement with LUKOIL according to which LUKOIL will sell us gas it has processed at its Nakhodkinskii gas field starting from the fourth quarter of 2005. In June 2003, we concluded an agreement with LUKOIL on the development of hydrocarbon structures in the Caspian Sea. We have also entered into cooperation agreements with Rosneft, including agreements for the development of the Shtokmanovskoye and Prirazlomnoye fields. We anticipate entering into strategic agreements with other domestic producers in the future.

**Building our research and development capabilities further to ensure low-cost development, production and transportation of our gas to increasingly competitive markets.** We invest in research and development in a number of scientific and technical areas. In general, our research and development focuses on expanding our mineral resource base, developing hydrocarbon deposits in new regions (for example, the Ob-Taz Estuary, Arctic offshore fields and the Yamal Peninsula), maintaining the reliability of the UGSS, ensuring production in fields that are being developed, optimizing financial, investment and pricing policies and increasing ecological and industrial safety. We are focusing on several specific projects, including researching how to extract natural gas cost-effectively from the Yamal Peninsula fields and increasing the efficiency of gas transportation via our pipelines. We are also focusing on developing and implementing new technologies by which to deliver our gas, including LNG.

**Improving corporate governance by introducing best-practice management techniques and increased levels of transparency.** At our 2002 general meeting of shareholders, we approved a new corporate governance charter outlining procedures for the protection of shareholders' rights. In addition, our Board of Directors adopted resolutions on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) our shares, or interests or participations that we or our subsidiaries hold in other companies; (ii) loans or other borrowings having a value of greater than 0.3% of our unconsolidated net balance sheet assets determined under Russian accounting principles; and (iii) purchases or disposals of assets having a value greater than 0.3% of our unconsolidated net balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors. Our new management team, now consisting of an expanded and almost entirely new Management Committee, has also recently launched several initiatives to measure more accurately and improve our operating and financial performance, including programs related to optimizing domestic sales (including increasing cash collection), increasing internal controls over budget planning and execution, cost cutting and deployment of investment capital and debt management. Finally, we intend to continue our efforts with respect to increasing transparency through ongoing publication of interim and year-end IFRS accounts, improved levels of disclosure for public market financings and improved relations with our shareholders.

### Summary Reserves Information

We estimate our reserves of natural gas, gas condensate and crude oil using the "Russian reserves system," which differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. See "Business—Reserves and Production—Reserves."

The estimation of reserves of natural gas, gas condensate and crude oil can be broken down into two components: (i) geological reserves, or the quantities of natural gas, gas condensate and crude oil contained in the subsoil and (ii) extractable reserves, or the portion of geological reserves whose extraction from the subsoil as of the date the reserves are calculated is economically efficient given market conditions and rational use of modern extraction equipment and technologies and taking into account compliance with the requirements of subsoil and environmental protection.

The Russian reserves system is based solely on an analysis of geological reserves. Explored reserves are represented by categories A, B, and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. We have included in this Offering Circular only information about our explored reserves, or reserves in categories A, B and C1.

While the Russian reserves system focuses on the actual physical presence of hydrocarbons in geological formations, and reserves are estimated based on the probability of such physical presence, SPE International Standards take into account not only the probability that hydrocarbons are physically present in a given geological formation but also the economic viability of recovering the reserves (including such factors as exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for the products, and other factors that influence the economic viability of a given deposit).

Under SPE International Standards, reserves are classified as "proved," "probable" and "possible," based on both geological and commercial factors. We have included in this Offering Circular information about our proved and probable reserves as of December 31, 2002, based on the evaluation by DeGolyer and MacNaughton of 20 of our fields.

The following table provides certain summary information about our combined ABC1 natural gas reserves as of December 31, 2002, 2001 and 2000. All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures.

	At December 31,		
	2002	2001	2000
<b>Western Siberia (Urals federal district)</b>			
Natural Gas (bcm) .....	22,992	22,983	23,576

Combined (mmboe) .....	977	610	530
<b>Total<sup>(1)</sup></b>			
Natural Gas (bcm) .....	28,159	28,147	28,890
Condensate (mmbls) .....	9,407	9,460	9,335
Crude oil (mmbls) .....	4,122	4,184	4,345
Combined (mmboe) .....	179,483	179,312	183,721

Note:

(1) Totals may not add due to rounding.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has been evaluating our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had evaluated 20 fields with proved reserves of 16.3 tcm of natural gas, 282.0 million tons (2,067.1 mmbls) of gas condensate and 7.7 million tons (56.4 mmbls) of crude oil and probable reserves of 1.5 tcm of natural gas, 77.9 million tons (571.0 mmbls) of gas condensate and 98.8 million tons (724.2 mmbls) of crude oil. We believe that the 20 fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties.

## Summary Production Information

The following table presents summary production information for the periods indicated. Our production activities are more fully described in "Business—Reserves and Production."

	For the three months ended March 31,		For the year ended December 31,		
	2003	2002	2002	2001	2000
<b>West Siberia<sup>(1)</sup> (Urals federal district)</b>

Notes:

- (1) Includes 90% of the production at the West Tarkosalinsk field. We do not hold a production license for this field, but we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (2) Includes our 51% share in natural gas produced at the Gubkinskoye field subsequent to the consolidation of Purgaz into our consolidated financial statements in April 2002. See "Certain Factors Affecting our Financial Condition and Results of Operations—Certain Acquisitions and Dispositions."
- (3) Constitutes 100% of the output of Vostokgazprom. We are entitled to 100% of the production of Vostokgazprom, though we hold only an 83.8% interest. Vostokgazprom commenced production in the second quarter of 2002.
- (4) Totals may not add due to rounding.

## Summary Sales and Operating Information

The following table summarizes certain sales and operating information for the periods indicated. You should read this information together with our annual audited consolidated financial statements prepared in accordance with IFRS and included elsewhere in this Offering Circular and the information under "Certain Factors Affecting our Financial Condition and Results of Operations." Our sales and operations are more fully described in "Business."

As noted above under "Summary Consolidated Financial Information," our consolidated financial information includes a restatement for changes in the general purchasing power of the RR in accordance with IAS 29. As discussed more fully there and in "Certain Factors Affecting Our Financial Condition and Results of Operations," this has had a significant impact on the financial information we report.

All RR amounts in the following table are expressed in constant RR as of December 31, 2002 purchasing power. The U.S. dollar amounts were not included in our consolidated financial information and are provided for convenience only. They should not be construed as representations that the RR amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR31.78 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on December 31, 2002.

	For the year ended December 31,					
	2002		2001		2000	
	U.S.\$	RR	U.S.\$	RR	U.S.\$	RR
	(amounts in millions, except volumes)

## SUMMARY OF THE PROGRAMME

*The following summary contains basic information about the Notes and Loans and should be read in conjunction with, and is qualified in its entirety by, the information set forth under "Terms and Conditions of the Notes" and "Facility Agreement" appearing elsewhere in this Offering Circular.*

### Summary of Loans under the Programme

Each transaction will be structured as a Loan to Gazprom by the Issuer. The Issuer will issue Notes to Noteholders for the sole purpose of funding such Loan. Each Series will be constituted by a supplemental trust deed which is supplemental to a principal trust deed (together, the "Trust Deed"), each entered into between the Issuer and Deutsche Bank Trust Company Americas (the "Trustee"). Pursuant to the Trust Deed the Issuer will (i) charge by way of first fixed charge as security certain of its rights and interests under such Loan (other than certain Reserved Rights, as defined in the Trust Deed) to the Trustee for the benefit of the Noteholders of the corresponding Series of Notes and (ii) assign its administrative rights under the relevant Loan Agreement to the Trustee as security (together, the "Security Interests") for its payment obligations in respect of such Series of Notes. As a consequence of the assignment of the administrative rights under the Loan Agreement the Trustee shall assume the administrative rights of the Issuer as set out in the relevant provisions of the Trust Deed. If and when the first fixed charge of certain of the Issuer's rights and interests under any Loan is enforced, the Trustee will assume the rights of the Issuer under such Loan as set out in the relevant provisions of the Trust Deed, and the Trustee will assume certain rights and obligations towards the Noteholders, as more fully set out in the Trust Deed. Each issue of Notes will be made on a limited recourse basis and the Issuer will not have any obligations to the Noteholders save for to account to the Noteholders for amounts equivalent to the amounts of payments of principal and interest under any Loan if and to the extent received by it from Gazprom.

## Notes to be issued under the Programme

Issuer .....	Gaz Capital S.A. (the "Issuer").
Gazprom (as Borrower) .....	Open Joint Stock Company Gazprom (the "Borrower," "Gazprom" or the "Company") with its registered office and business headquarters at 16 Nametkina Street, 117884 Moscow, Russia.
Description .....	Programme for the Issuance of Loan Participation Notes pursuant to which the Issuer may issue loan participation notes (the "Notes").
Programme Size .....	Up to U.S.\$5,000,000,000 (or its equivalent in other currencies at the date of issue) aggregate principal amount of Notes outstanding at any one time. Gazprom may increase the amount of the Programme in accordance with the Dealer Agreement (as defined herein). For the purpose of calculating the aggregate principal amount of Notes outstanding, Notes issued at a premium shall be treated as having been issued at the amount of their net proceeds received by the Issuer.
Arrangers .....	Deutsche Bank AG London and UBS Limited.
Dealers .....	Deutsche Bank AG London, UBS Limited, ABN AMRO Bank N.V., Bayerische Hypo- und Vereinsbank AG, Commerzbank Aktiengesellschaft, Credit Suisse First Boston (Europe) Limited, J.P. Morgan Securities Ltd., Merrill Lynch International, Morgan Stanley & Co. International Limited, Renaissance Securities (Cyprus) Limited and Joint Stock Commercial Bank Rosbank.  Pursuant to the terms of the Dealer Agreement, the Issuer, on Gazprom's instructions, may from time to time terminate the appointment of any dealer under the Programme or appoint additional dealers either in respect of one or more Series of Notes or in respect of the whole Programme. References in this Offering Circular to "Permanent Dealers" are to the persons listed above as Dealers and to such additional persons that are appointed as dealers in respect of the whole program (and whose appointment has not been terminated) and to "Dealers" are to all Permanent Dealers and all persons appointed as dealers in respect of one or more Series of Notes.
Trustee .....	Deutsche Bank Trust Company Americas.
Principal Paying Agent .....	Deutsche Bank AG London, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another principal paying agent is appointed in respect of that Series. References in this Offering Circular to "Principal Paying Agent" are to Deutsche Bank AG London or such other alternative principal paying agent, as the case may be.
Registrar .....	Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that an alternative registrar is appointed in respect of that Series. References in this Offering Circular to "Registrar" are to Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative Registrar, as the case may be.

Paying Agents .....	Deutsche Bank AG London and Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another paying agent is appointed in respect of that Series. References in this Offering Circular to "Paying Agents" are to Deutsche Bank AG London, Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative paying agent, as the case may be.
Transfer Agents .....	Deutsche Bank AG London and Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another transfer agent is appointed in respect of that Series. References in this Offering Circular to "Transfer Agents" are to Deutsche Bank AG London, Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative transfer agent, as the case may be.
Method of Issue .....	The Notes will be issued on a syndicated or non-syndicated basis. The Notes will be issued in series (each a "Series") having one or more issue dates and on terms otherwise identical (or identical other than in respect of the first payment of interest), the Notes of each Series being intended to be interchangeable with all other Notes of that Series. The specific terms of each Series will be set out in a pricing supplement to this Offering Circular (each a "Pricing Supplement") which shall supplement the Terms and Conditions of the Notes.
Issue Price of Notes .....	Notes may be issued at their principal amount or at a discount or premium to their principal amount.
Status .....	Each Series of Notes will constitute the obligation of the Issuer to apply the proceeds from the issue of the Notes solely for financing the corresponding Loan and to account to the Noteholders for amounts equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to such Loan, all as more fully described in "Terms and Conditions of the Notes—Status."
Security .....	Each Series of Notes will be secured by a first fixed charge on: <ul style="list-style-type: none"> <li>● all of the Issuer's rights to principal, interest and other amounts paid and payable under the relevant Loan Agreement and its right to receive all sums paid and payable under any claim, award or judgment relating to such Loan Agreement (in each case, other than its right to Reserved Rights and to any amounts in respect of Reserved Rights); and</li> <li>● all the rights, title and interest in and to all sums of money held from time to time in an account specified in the relevant Pricing Supplement, together with the debt represented thereby (including interest from time to time earned thereon and other than its right to Reserved Rights and to any amounts in respect of Reserved Rights) pursuant to the Trust Deed.</li> </ul>
Assignment of Administrative Rights .....	The Issuer will assign its administrative rights under the relevant Loan Agreement (save for those rights charged or excluded above) to the Trustee upon the closing of the offering of the corresponding Series of Notes.

Form .....	The Notes will be issued in registered form. Each Series of Notes will be represented by a global unrestricted Note (each a "Regulation S Global Note") and, in the case of Notes sold pursuant to Rule 144A, a global restricted Note (each a "Rule 144A Global Note" and together with any Regulation S Global Notes, the "Global Notes"), in each case without interest coupons. Global Notes will be exchangeable for Notes in definitive form in the limited circumstances specified in the Global Notes.
Clearing Systems .....	DTC (in the case of Notes sold pursuant to Rule 144A), Clearstream, Luxembourg and Euroclear and, in relation to any Series, such other clearing system as may be agreed between the Issuer, the Borrower, the Paying Agent, the Trustee and the relevant Dealer. Application may be made for trading of Rule 144A Notes in PORTAL, as specified in the applicable Pricing Supplement.
Initial Delivery of Notes .....	On or before the issue date for each Series, the Regulation S Global Note shall be deposited with Deutsche Bank AG London as a common depository for Euroclear and Clearstream, Luxembourg and the Rule 144A Global Notes, if any, will be deposited with Deutsche Bank Trust Company Americas as custodian for DTC, as the case may be. Global Notes may also be deposited with any other clearing system or may be delivered outside any clearing system provided that the method of such delivery has been agreed in advance by the Issuer, the Borrower, the Paying Agent, the Trustee and the relevant Dealer(s). Notes that are to be credited to one or more clearing systems on issue will be registered in the name of nominees or a common nominee for such clearing systems.
Currencies .....	<p>Subject to compliance with all relevant laws, regulations and directives, Notes may be issued in any currency agreed between the Issuer, the Borrower and the relevant Dealers.</p> <p>Issues of Notes denominated in Swiss francs or carrying a Swiss franc related element with a maturity of more than one year (other than Notes privately placed with a single investor with no publicity) will be effected in compliance with the relevant regulations of the Swiss National Bank based on article 7 of the Federal Law on Banks and Savings Banks of 8 November 1934 (as amended) and article 15 of the Federal Law on Stock Exchanges and Securities Trading of 24 March 1995 in connection with article 2, paragraph 2 of the Ordinance of the Federal Banking Corporation on Stock Exchanges and Securities Trading of 2 December 1996. Under the said regulations, the relevant Dealer or, in the case of a syndicated issue the lead manager (the "Swiss Dealer"), must be a bank domiciled in Switzerland (which includes branches or subsidiaries of a foreign bank located in Switzerland or a securities dealer duly licensed by the Swiss Federal Banking Commission as per the Federal Law on Stock Exchanges and Securities Trading of 24 March 1995). The Swiss Dealer must report certain details of the relevant transaction to the Swiss National Bank no later than the relevant issue date for such a transaction.</p>
Maturities .....	Subject to compliance with all relevant laws, regulations and directives, any maturity as may be agreed between the Issuer, Gazprom and the relevant Dealers.

Denomination .....	Notes will be in such denominations as may be specified in the relevant Pricing Supplement, save that unless otherwise permitted by then current laws and regulations, Notes which have a maturity of less than one year and in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the Financial Services and Markets Act 2000 will have a minimum denomination of £100,000 (or its equivalent in other currencies). Notes resold pursuant to Rule 144A shall be in denominations of U.S.\$100,000 (or its equivalent rounded upwards as agreed between the Issuer, Gazprom and the relevant Dealer(s)) or higher integral multiples of U.S.\$1,000. Where notes of any Series are intended for distribution in the Republic of Italy, the minimum denomination of any such Series should be €100,000 or equivalent and integral multiples of €1,000 thereafter, unless otherwise agreed with the Bank of Italy.
Rate of Interest .....	The Notes may be issued on a fixed rate or floating rate basis.
Fixed Rate Notes .....	Fixed interest will be payable in arrear on the date or dates in each year specified in the relevant Pricing Supplement.
Floating Rate Notes .....	Floating Rate Notes will bear interest determined separately for each Series and corresponding Loan as follows: <ul style="list-style-type: none"> <li>(i) on the same basis as the floating rate under a notional interest rate swap transaction in the relevant Specified Currency governed by an agreement incorporating the 2000 ISDA Definitions, as published by the International Swaps and Derivatives Association, Inc.; or</li> <li>(ii) by reference to LIBOR, LIBID, LIMEAN or EURIBOR (or such other benchmark as may be specified in the relevant Pricing Supplement) as adjusted for any applicable margin.</li> </ul>
Interest Periods and Interest Rates ...	The length of the interest periods for the Notes and the applicable interest rate may differ from time to time or be constant for any Series. Notes may have a maximum interest rate, a minimum interest rate, or both. The use of interest accrual periods permits the Notes to bear interest at different rates in the same interest period. All such information will be set out in the relevant Pricing Supplement.
Redemption .....	The relevant Pricing Supplement will specify the basis for calculating the redemption amounts payable. Unless permitted by then current laws and regulations, Notes which have a maturity of less than one year and in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the Financial Services and Markets Act 2000 must have a minimum redemption amount of £100,000 (or its equivalent in other currencies).
Issuer's Restrictions and Covenants .....	So long as any Note remains outstanding, the Issuer will not, without the consent of the Trustee, <i>inter alia</i> , incur any other indebtedness for borrowed moneys, or enter into other transactions or engage in any business (other than transactions contemplated by this Offering Circular), declare any dividends or have any subsidiaries. See "Terms and Conditions of the Notes—4. Restrictive Covenants."
Optional Redemption by the Issuer in Limited Circumstances .....	In limited circumstances as more fully described in the relevant Loan Agreement, the Notes may be redeemed at the option of the Issuer in whole, but not in part, on any Interest Payment Date in the case of

Floating Rate Notes or, at any time, in the case of Fixed Rate Notes upon giving notice to the Trustee, at the principal amount thereof, together with accrued and unpaid interest and additional amounts, if any, to the date of redemption in the event that it becomes unlawful for the Issuer to fund the Loan or allow the Loan to remain outstanding under the Loan Agreement or allow the Notes to remain outstanding. In such a case, the Issuer would require the Loan to be repaid in full.

Mandatory Redemption .....	The Issuer is required to redeem the Notes in whole, but not in part, at 100% of their aggregate principal amount plus accrued and unpaid interest and all additional amounts, if any, if we elect to repay any Loan in the event we are required to pay additional amounts on account of Russian or Luxembourg withholding taxes or in the event that we are required to pay additional amounts on account of certain costs incurred by the Issuer pursuant to the relevant Loan Agreement.
Relevant Events .....	In the case of certain events in relation to the Issuer (as defined in the "Terms and Conditions of the Notes"), the Trustee may, subject as provided in the Trust Deed, enforce the security created in the Trust Deed in favour of the Noteholders.
Withholding Tax .....	All payments of principal and interest in respect of each Series of Notes will be made in full without set-off or counterclaim and free and clear of and without deduction for or on account of all taxes, which are or will be imposed, assessed, charged, levied, collected, demanded, withheld or claimed by the Russian Federation or Luxembourg, or any taxing authority thereof or therein, other than as required by law. If any such taxes are payable, the sum payable by the Borrower to the Issuer will be required (subject to certain exceptions) to be increased to the extent necessary to ensure that the Noteholders receive the net sum which they would have received free from any liability in respect of any such deduction or withholding had no such deduction or withholding been made or required to be made. The sole obligation of the Issuer in this respect will be to pay to the Noteholders sums equivalent to the sum received from the Borrower.
Further Issues .....	The Issuer may from time to time issue further Notes of any Series on the same terms as existing Notes and such further Notes shall be consolidated and form a single Series with such existing Notes of the same Series.
Listing .....	Application will be made, where specified in the relevant Pricing Supplement, for a Series of Notes to be listed on the Luxembourg Stock Exchange or such other stock exchange as shall be specified in the relevant Pricing Supplement or the Series of Notes will remain unlisted.
Rating .....	Series of Notes issued under the Programme may be rated or unrated. Where a Series of Notes is rated, such rating will not necessarily be the same as the rating assigned to the Programme. A security rating is not a recommendation to buy, sell or hold securities and may be subject to suspension, reduction or withdrawal at any time by the assigning rating agency.
Governing Law .....	The Notes will be governed by English law. For the avoidance of doubt, the provisions of articles 86 to 94-8 of the Luxembourg law of 10 August 1915, as amended, on commercial companies are excluded.

Selling Restrictions ..... United Kingdom, United States, Luxembourg, Russian Federation, Italy and any other jurisdiction relevant to any Series. See "Subscription and Sale."

**The Loan corresponding to each Series of Notes**

Issuer (as Lender) ..... Gaz Capital S.A.

Borrower ..... Gazprom.

Security and Ranking ..... None of the Loans will be secured by any collateral. Each Loan will effectively rank below all of our secured debt and the debt and other liabilities of our subsidiaries.

Interest Basis Dates ..... Interest will be payable on a fixed or floating rate basis as specified in the relevant Loan Supplement.

Optional Redemption ..... Each Loan may be prepaid at our option in whole, but not in part, on any Interest Payment Date in the case of Floating Rate Loans or, at any time, in the case of Fixed Rate Loans, at the principal amount thereof, together with accrued and unpaid interest and additional amounts, if any, to the date of repayment, for tax reasons or by reason of certain increased costs.

Mandatory Repayments ..... In the event that it becomes unlawful for the Issuer to fund any Loan or allow such Loan to remain outstanding under the Loan Agreement or allow the corresponding Series of Notes to remain outstanding, we may be required by the Issuer to repay such Loan in full.

Certain Restrictions and Covenants .. The Issuer will have the benefit of certain covenants made by Gazprom, including a negative pledge and restrictions on mergers and disposals, all as fully described in the relevant Loan Agreement.

Events of Default ..... In the case of an Event of Default (as defined in the relevant Loan Agreement), the Trustee may, subject as provided in the Trust Deed, require the Issuer to declare all amounts payable under the relevant Loan Agreement by Gazprom to be due and payable.

Use of Proceeds of the Notes and the Loans ..... The Issuer will lend the net proceeds of the offering of each Series of Notes to Gazprom. We intend to use the net proceeds from such offering for general corporate purposes.

Withholding Tax ..... All payments of principal and interest under each Loan will be made in full without set-off or counterclaim and free and clear of and without deduction for or on account of all taxes which are or will be imposed, assessed, charged, levied, collected, demanded, withheld or claimed by Luxembourg or the Russian Federation, other than as required by law. If any such taxes, duties, fees or other charges are payable, the sum payable by the Borrower will be required (subject to certain conditions) to be increased to the extent necessary to ensure that the Noteholders receive the net sum which they would have received free from any liability in respect of any such deduction or withholding had no such deduction or withholding been made or required to be made. The sole obligation of the Issuer in this respect will be to pay to the Noteholders sums equivalent to the sums received by it from the Borrower.

## RISK FACTORS

*Prospective investors should consider carefully the risks set forth below and the other information contained in this Offering Circular prior to making any decision to invest. Each of the risks highlighted below could have a material adverse effect on our business, operations and financial condition which, in turn, could have a material adverse effect on our ability to service our payment obligations under any Loan and thus on debt service on the corresponding Series of Notes. In addition, the trading price of the Notes could decline due to any of these risks, and you could lose some or all of your investment.*

*You should note that the risks described below are not the only risks we face. We have described only the risks we consider to be material. However, there may be additional risks that we currently consider not to be material or of which we are not currently aware, and any of these risks could have the effects set forth above.*

### Risks Relating to Our Business

**The prices of the natural gas we sell in Europe under long-term contracts are linked to international prices for oil products, and so a decline in international prices for oil products could adversely affect us.**

We sell a substantial portion of our natural gas in Europe, which is our primary source of foreign currency revenues and cash flows. For more than 30 years, we and our predecessors have sold natural gas to purchasers in western Europe, generally pursuant to long-term contracts with prices linked to international prices for oil products. Changes in the prices we realize on natural gas under our long-term contracts with European customers typically lag about six to nine months behind changes in oil product prices. Such prices have fluctuated widely in response to changes in many factors, over which we have no control. These factors include:

- economic and political developments in oil producing regions, particularly in the Middle East;
- global and regional supply and demand, and expectations regarding future supply and demand, for oil products;
- the ability of members of the Organization of Petroleum Exporting Countries, or OPEC, and other crude oil producing nations to agree upon and maintain specified global production levels and prices;
- other actions taken by major crude oil producing or consuming countries;
- prices and availability of alternative fuels;
- global economic and political conditions;
- prices and availability of new technologies; and
- weather conditions.

Should international oil product prices deteriorate, the natural gas prices we realize under our long-term contracts with European customers would decline as well, resulting in a reduction in our export revenues. A decline in our European natural gas export revenues would adversely affect our business, results of operations, cash flows and financial condition, and our ability to finance planned capital expenditures.

In addition, the European Commission has recently expressed a desire to see a move from long-term contracts in favor of short-term contracts. Such an alteration of the basis on which we conduct our business could further increase our exposure to currency and gas and oil price fluctuations as well as potentially limit our ability to support long-term investment plans. We have held discussions with the EU in this regard and it has recognized the importance of long-term contracts to the continued development of the oil and gas industry. There can be no assurance that the EU will continue to support the use of long-term contracts, however, or that the outcome of further discussions will be to our benefit.

During the next ten years, export contracts accounting for almost one-third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012. Most of the contracts that are expiring contain clauses that provide for automatic renewal unless one party objects. Although we believe that these contracts will be renewed, no assurance can be given that we will be able to do so on favorable pricing and other terms or at all.

**We are required to supply natural gas to customers in Russia at prices that are regulated by the Government and that are lower than international natural gas prices.**

We are, and are likely to remain for the foreseeable future, a regulated monopoly. In Russia, natural gas prices are subject to control by governmental authorities and are significantly lower than the prices we charge to western European off-takers even after netting back export and customs duties and transportation costs. Moreover, domestic natural gas prices for households are currently less than natural gas prices for industrial and commercial end users, and the wholesale prices we are able to charge for gas delivered to households reflect this discount.

The Government has stated that, over time, natural gas prices for all customers in Russia will gradually be increased. Moreover, we believe that Government regulation of natural gas prices for domestic end-users will be abandoned in the long run in favor of free market prices; we believe that in the long run state regulation is likely to be maintained for natural gas transportation tariffs only.

No assurance can be given, however, that natural gas prices in Russia will increase, that consumers will be willing or able to pay increased natural gas prices or that the regulation of natural gas prices will be relaxed. If the Government decides to keep natural gas prices at artificially low levels, thereby effectively forcing us to continue to subsidize the rest of the Russian economy, there is a risk that we will not generate sufficient revenues to proceed with investments in the development of certain natural gas fields (for instance the Yamal Peninsula reserves) or to continue to develop export pipelines, or that we will be able to take these steps only through outside financing beyond currently anticipated requirements. If we are unable to develop these fields or export pipelines, or if we are able to do so only on the basis of additional outside financing, our future results of operations, cash flows and financial condition could be adversely affected.

In accordance with the Gas Supply Law, consumers are obliged to pay for natural gas supplies and transportation services. If consumers fail to make such payments, suppliers have the right to limit or suspend natural gas supplies to such consumers in accordance with specific procedures provided for by a number of Government resolutions. The Government of the Russian Federation has, however, issued a number of resolutions (e.g., Government Resolution No. 1 dated January 5, 1998 and Government Resolution No. 364 dated May 29, 2002) regulating the restriction or suspension of supplies to certain customers. These consumers include, *inter alia*, medical institutions, military units, nuclear plants, communication organizations and certain vital utilities.

**Delayed, non-collectable and non-cash payments by our customers in Russia and the FSU could adversely affect us.**

Our cash flows are adversely affected by the limited ability, or the inability, of our customers in Russia and FSU countries to pay for our natural gas. There can be no assurance that amounts owed to us by our customers in Russia and the FSU will be paid in full or, if paid in full, that payment will be in cash. As is the case with many Russian companies, we have had to accept various forms of non-cash settlement, including negotiable promissory notes, bonds, equity interests in natural gas companies and goods and services as payment for supplies to customers in Russia and the FSU. Recently, cash payments have increased as a proportion of our sales proceeds, and almost all non-cash settlements are now in the form of promissory notes. For example, the percentage of non-cash settlements related to domestic sales decreased from approximately 65% in 1999 to approximately 21% in 2002. See "Certain Factors Affecting our Financial Condition and Results of Operation—Certain Factors Affecting our Results of Operations—Non-cash settlements." Non-cash settlement of transactions has had in the past, and may continue to have in the future, an adverse effect on our ability to fund operational or capital expenditures required to be made in cash and to make tax and other mandatory payments when due.

**We bear a substantial tax burden.**

We are subject to a broad range of taxes imposed at federal, regional and local levels and we are one of the largest sources of tax revenue to the federal authorities, as well as to the regional and local authorities in those regions and localities in which we operate. The combination of political pressure on the federal, regional and local authorities to address social and economic issues (and in particular the non-payment of salaries and pensions) and the difficulties associated with collecting taxes from companies and enterprises in financial difficulties, all increase the risk that the Government, as well as regional and local governments, will seek to mitigate these problems by increasing our already substantial tax burden.

**The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.**

The Russian Federation owns 38.37% of our shares, and representatives of the state hold six of the 11 seats on our Board of Directors. Moreover, our subsidiaries held approximately 16.26% of our shares (as of June 30, 2003), which they are entitled to vote as owners. In addition, we are a “natural monopoly” under the Natural Monopoly Law. As a result, the Government regulates the prices we charge for gas in the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations. The Government has previously required Russian companies, including us, to take actions—such as the undertaking of projects and the supply of goods and services to customers—that may not be in the best interests of such companies or their shareholders. For example, the Government sets the prices for domestic gas delivered by us at a low level and requires us to supply natural gas to certain customers notwithstanding their inability to pay for the natural gas supplied.

**State authorities may reorganize our business to increase competition in the gas sector.**

The possibility that we may be reorganized into several smaller and less powerful production and transportation companies has been and continues to be the subject of much domestic and international press speculation. There have at times been public statements by certain Russian politicians and Government officials calling for our natural gas operations to be divided into a number of companies, or for particular functions to be re-allocated to other entities. Although the adoption of the Gas Supply Law mitigates the risk of reorganization and both we and the Government have made clarifying statements about any potential future restructuring, we are not fully protected against the risks of a state-led reorganization.

**Our new senior management may not be successful in implementing our strategy.**

Our June 2001 annual general meeting of shareholders began a process that has led to the replacement of the senior management team that had run our business since the early 1990s. Our new senior management team devoted its attention first to familiarizing itself with our extensive operations and to intensifying our efforts to reacquire certain assets disposed of in prior years. See “Certain Factors Affecting our Financial Condition and Results of Operations—Certain Acquisitions and Dispositions.” Our senior management is now engaged in the implementation of our strategy, and no assurance can be given that it will be successful. See “Business—Strategy.”

**Our licenses may be suspended, amended or terminated prior to the end of their terms, and we may not be able to obtain or maintain various permits and authorizations.**

The licensing regime in Russia for the exploration, development and production of natural gas, gas condensates and crude oil is governed primarily by the Subsoil Resources Law and numerous regulations issued thereunder. We currently conduct our operations under multiple exploration and production licenses, substantially all of which are held by our subsidiaries and related entities. Our production licenses for our major producing fields extend through the period between 2012 and 2019. Most of our licenses also provide that they may be terminated if we fail to comply with license requirements, do not make timely payments of levies and taxes for the use of the subsoil, systematically fail to provide information, go bankrupt or fail to fulfill any capital expenditure and/or production obligations.

Although we believe we are currently in material compliance with the requirements of our licenses, we may not be able to remain in compliance with some or all of these requirements in the future. If we fail to fulfill the specific terms of any of our licenses or if we operate in the license areas in a manner that violates Russian law, Government regulators may impose fines on us or suspend or terminate our licenses. Any suspension, amendment or termination of our licenses could have an adverse effect on our operations, financial position or the value of our assets.

In addition, we are required to obtain and maintain permits or approvals to develop our fields and retain our licenses. If we fail to obtain or maintain these permits and authorizations, we may be required to delay our investment program, or our licenses could be terminated, and this may reduce our cash flows and adversely affect our business.

**We must increase our capital expenditures in order to satisfy the anticipated demand of our customers.**

Over the next several years, we must improve our natural gas, gas condensate and oil production capabilities to meet the anticipated demand of customers in western Europe, Russia and certain FSU countries and offset declines in our main producing fields. Our principal planned developments include modernizing our pipeline system, further developing the Zapolyarnoye field and developing our fields in the Yamal Peninsula. These developments will require significant capital expenditures over the next several years. We expect to fund such capital expenditure through internal sources and external financing. There can be no assurance, however, that we will be able to generate and raise sufficient funds to meet such capital requirements in the future or to do so at a reasonable cost. Lack of sufficient funds in the future may require us to delay or abandon some or all of our anticipated projects.

**Exploratory drilling involves numerous risks, including the risk that we will encounter no commercially productive natural gas reserves.**

We are exploring in various geographical regions, including western Siberia and the Barents Sea, which are characterized by their remoteness from population centers, challenging environmental conditions and high costs. The cost of drilling, completing and operating wells is often uncertain. As a result, we may incur cost overruns or may be required to curtail, delay or cancel drilling operations because of a variety of factors, including unexpected drilling conditions, pressure or irregularities in geological formations, equipment failures or accidents, adverse weather conditions, compliance with governmental requirements and shortages or delays in the availability of drilling rigs and the delivery of equipment. Our overall drilling activity or drilling activity in particular project areas may be unsuccessful in that we may not find commercially productive reservoirs.

**If we fail to develop our undeveloped fields, our production levels will decline materially.**

We expect the volume of natural gas produced in three of our leading fields, Yamburgskoye, Medvezhye and Urengoiyskoye, to decline significantly over the next eight years as we deplete the natural gas deposits in these fields. Our future production of natural gas is highly dependant on developing the natural gas reserves in our other large fields. If we are unsuccessful we may not meet our long-term production targets, which could adversely affect our ability to meet our contractual export commitments and domestic supply obligations.

**We encounter competition from alternative fuels and other natural gas producers and suppliers in Europe.**

We face varying degrees of competition in each of our major markets in Europe from providers of alternative fuels, such as oil and coal. No assurance can be given that we will be able to compete effectively with such providers of alternative fuels.

We also encounter competition in Europe from other natural gas suppliers (especially from The Netherlands, Norway and Algeria), which could affect the prices and volumes of our sales to Europe. If an oversupply of natural gas occurs, natural gas purchasers may be able to negotiate lower prices on supply contracts with producers such as ourselves. Although we believe that current prices in the European markets are sustainable over the medium term, especially in light of the forecast growth in European natural gas demand, continued economic slowdown in Europe or the emergence of new large suppliers of natural gas could result in an oversupply, and downward pressure on natural gas prices.

In addition, during the next ten years, export contracts accounting for almost one-third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012. Most of the contracts that are expiring contain clauses that provide for automatic renewal unless one party objects. Although we believe that these contracts will be renewed, no assurance can be given that we will be able to do so on favorable pricing and other terms or at all.

We received a request for information from the European Commission with respect to the so-called destination clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. Similar clauses are included in our contracts with many other European off-takers. A successful challenge of such clauses by the European Commission would have meant that such off-takers could be free to sell natural gas supplied by us to other off-takers outside of the relevant market, leading to increased competition and the possibility of lower prices. The European Commission's original

position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We found such a solution with ENI and are negotiating alternatives with several other off-takers. We will no longer include such clauses in new contracts. However, there can be no assurance that our discussions with the European Commission will lead to a beneficial result or that the current position of the European Commission will not change.

In addition, the western European gas market is undergoing significant change as a result of the EU Gas Directive (the "Gas Directive"), which came into force on August 10, 1998. The purpose of the Gas Directive is to deregulate and liberalize the EU gas market by introducing greater competition into the market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening transmission and distribution infrastructure to third parties and establishing fair tariffs for third-party use of natural gas transportation infrastructure and greater transparency of transportation and distribution costs by unbundling of the accounts for gas transportation, distribution and storage.

The Gas Directive may also promote the emergence of a short-term price or "spot" market for natural gas. Because of the time it takes to transport our natural gas from our western Siberian natural gas fields to western European markets, it would be difficult for us to engage in spot transactions involving physical settlement. The emergence of a spot market may also make it more difficult for us to negotiate long-term supply contracts under which we currently export a majority of our natural gas and may decrease the period between pricing revisions under new long-term contracts, which are currently set at three years for most contracts.

Despite this liberalization of the natural gas market, however, the price of natural gas in western Europe has remained steady and prices for different regions have not converged significantly. Nonetheless, the Gas Directive will increase competition in European gas markets as a greater number of suppliers gain access to the natural gas infrastructure, which may adversely affect our long-term supply contracts with European customers.

Russia has signed the Energy Charter Treaty, an international treaty for establishing and improving the legal framework for corporate international co-operation in energy matters, but the State Duma has not yet ratified the Treaty. See "Overview of the Russian Gas Industry and its Regulation." We believe that ratification of the Energy Charter Treaty would result in greater access to the energy markets in Russia for foreign investment as well as the further access by third parties to our pipelines, including for the transportation of natural gas from Central Asia to European markets. Accordingly, although we believe that we could benefit from increased third-party access and influence the manner in which access was distributed, the ratification of the Energy Charter Treaty could also lead to substantially increased competition and affect our long-term supply contracts with European customers.

#### **We face certain operational risks which may result in losses and additional expenditures.**

A large number of our gas production facilities are located in western Siberia, where remoteness and the harsh climate complicate and increase the cost of production and affect our ability to transport our natural gas economically.

Our gas exploration, production and transportation operations may be adversely affected by many factors, including the breakdown or failure of equipment or processes, performance below our expected levels of output or efficiency, labor disputes, natural disasters, weather conditions and terrorist attacks or sabotage to our extensive pipeline network. We have only limited insurance in relation to our assets and operations and, therefore, the financial effect of any such factors would generally have to be satisfied out of our cash flow. For example, we do not carry insurance for environmental damage arising from accidents on our property, for business interruption or against terrorist attacks. See "Business—Support Activities—Insurance."

We own and operate Russia's Unified Gas Supply System, which is responsible for the gathering, processing, transportation, storage and delivery of substantially all natural gas supplies in Russia (except for supplies to the Norilsk, Yakutsk and Sakhalin regions). This extensive network of pipelines and compressor installations has been largely developed over the past 30 years. Most of the pipeline is over 10 years old with some parts of the pipeline over 30 years old. A significant part of the pipeline is protected by chemical processes of limited duration and effectiveness. In addition, large segments of the network are located in regions with harsh

climates, where construction, maintenance and refurbishment are difficult and costly. Considerable sums of money are required each year to maintain the Unified Gas Supply System. Although there have been no significant delays or curtailments of the supply of natural gas to our customers recently, no assurance can be given that such delays or curtailments will not occur in the future due to the stress and corrosion of pipelines, defective construction of compressor stations, problems associated with the harsh climate or the insufficient maintenance or refurbishment of the network.

We are dependent on the links between our pipeline network and other pipeline networks that we do not control for the export of natural gas. Although it is our strategy to diversify our export routes, we are currently dependent on pipelines in Ukraine to deliver a large proportion of the natural gas we sell to customers in western Europe. We are also dependent on the Ukrainian pipeline system for a significant amount of our storage capacity. At the same time, Ukraine is dependent on us to meet its domestic requirements for natural gas. Although this interdependence is taken into account in negotiations over a number of matters, including the terms of payment for natural gas supplied by us and transit fees, and we have recently entered into an agreement with the Ukrainian government for the creation of a consortium to operate the Ukrainian pipeline system, we currently have no control over the Ukrainian pipeline system and cannot prevent any material disruption in the flow of our natural gas through Ukraine. In the past, some of our gas has been diverted as it passed through Ukraine. We can only monitor the flow of natural gas into and out of Ukraine and therefore may not be able to detect losses when and where they occur.

We plan to expand our export capacity and to diversify our export routes through additional capital investments in the Yamal-Europe Project and through other export-oriented projects, such as the Transbalkan Project and the north European pipeline project under the Baltic Sea. It is possible, however, that these plans will be affected by, among other things, difficulties related to localized planning and construction processes and our ability to obtain external financing on acceptable terms. No assurance can be given that we will be able to meet our construction targets. If we do not, we could experience difficulties in meeting our contractual obligations to supply gas under certain of our long-term contracts.

**We depend on regular access to the domestic rouble bank loan and rouble debt markets to meet a significant portion of our financing requirements.**

Our financing strategy involves the refinancing of a portion of our short-term rouble-denominated indebtedness with long-term borrowings in convertible currencies, such as the U.S. dollar and the euro. However, we fund a portion of our debt financing requirements with short-term, rouble-denominated debt, and are thus dependent on access to short-term rouble financing. This includes access to both the domestic rouble-denominated bank loan market as well as to the growing domestic market for short- to medium-term, rouble-denominated bonds. Our ability to continue to access the rouble debt markets in amounts sufficient to meet our financing needs could be adversely affected by a number of factors, including economic conditions in Russia, the health of the Russian banking and financial system in general and the extent of the exposure of individual Russian banks and other investors in the rouble debt market to Gazprom risk. If we are unable to continue to access the short-term rouble bank loan and debt markets as required, our financial condition and results of operations could be materially and adversely affected.

**As an energy company we face significant environmental risks.**

Our operations, which are often potentially hazardous, are subject to the risk of liability arising from environmental damage or pollution and the cost of any associated remedial work in relation thereto. We have an established environmental policy and monitor our operations in an effort to meet applicable environmental standards. We have made provisions in our financial statements prepared in accordance with IFRS for such environmental liabilities where it was probable that an obligation exists and the amount could be reasonably estimated. Such provisions have been made in accordance with what we believe is a reasonable and prudent policy that takes into account payments made in prior years, among other factors. However, in Russia in particular, federal, regional and local authorities may enforce existing laws and regulations more strictly than they have done in the past and may impose stricter environmental standards, or higher levels of fines and penalties for violations, than those now in effect. Accordingly, we are unable to estimate the future financial impact of our environmental obligations.

**The Russian reserves system differs significantly from SPE International Standards and the standards applied by the United States Securities and Exchange Commission.**

Most of the information relating to natural gas, gas condensate and oil reserves contained in this Offering Circular has been prepared on the basis of the Russian reserves system, which differs significantly from SPE International Standards and the standards applied by the United States Securities and Exchange Commission, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves.

As of December 31, 2002, DeGolyer and MacNaughton had evaluated according to SPE International Standards our reserves of natural gas, gas condensate and crude oil at our 20 principal fields. We believe that the 20 fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full audit of our upstream properties. See "Business—Reserves and Production—Reserves."

**Violations of existing international or U.S. sanctions could subject us to penalties that could have an adverse effect on us.**

International and U.S. sanctions have been imposed on companies engaging in certain types of transactions with specified countries or companies in those countries.

Since 1997, we have been involved, in partnership with Total and Petronas, in a project to develop the second and third phases of the South Pars field, located in the Iranian segment of the Persian Gulf. In May 1998, the U.S. Department of State issued a determination that the investment made by our partners and us in Iran's South Pars gas and condensate field constituted activity covered by the Iran and Libya Sanctions Act ("Sanctions Act"), and, at the same time, communicated its decision to waive sanctions under Section 9(c) of the Sanctions Act with respect to such investment. The waiver applies to activities in the South Pars field only, and not to any other activities we may conduct in Iran. See "Business—Reserves and Production—Projects and Alliances in Reserves and Production."

In November 2002 we concluded a strategic partnership agreement with LUKOIL that, among other things, provides for cooperation with respect to potential oil and gas projects in a number of countries, including Iran. We have not yet undertaken any projects under this agreement in countries subject to international or U.S. sanctions.

If we violate existing international or U.S. sanctions, penalties could include a prohibition or limitation on our ability to obtain goods and services on the international market or to access the U.S. or international capital markets. We are not currently involved in any transactions in Iran or other countries that could result in sanctions against us or for which we have not received a waiver of such sanctions.

**Risks Relating to the Russian Federation**

We are a Russian company and substantially all of our fixed assets are located in, and a significant portion of our revenues are derived from, Russia. There are certain risks associated with an investment in Russia.

**Governmental instability could adversely affect the value of investments in Russia, including the Notes.**

Since 1991, Russia has sought to transform itself from a one-party state with a centrally-planned economy to a pluralist democracy with a market-oriented economy. The course of reform has in some respects been uneven, and the composition of the Russian Government—in particular, the prime minister and the other heads of federal ministries—has at times been highly unstable. Six different prime ministers, for example, headed governments between March 1998 and May 2000. On December 31, 1999, President Yeltsin unexpectedly resigned and Vladimir Putin, prime minister at the time, became the acting president and was subsequently elected president on March 26, 2000. While President Putin has maintained governmental stability and policies generally oriented towards the continuation of economic reforms, no assurance can be given that such conditions will continue over time. State Duma elections are to be held at the end of 2003, and presidential elections in 2004. The value of investments in Russia, including the Notes, could be reduced and our prospects could be harmed if governmental instability recurs or if reform policies are reversed.

**Conflict between federal and regional authorities and other domestic political conflicts could create an uncertain operating environment that would hinder our long-term planning ability and could adversely affect the value of investments in Russia.**

The Russian Federation consists of 89 sub-federal political units, some of which exercise considerable autonomy over their internal affairs pursuant to agreements with the federal authorities. In practice, the division of authority between federal and regional governmental authorities remains uncertain and contested. This uncertainty could hinder the operation and the expansion of our business.

For example, to achieve consistency in the regulation of natural gas supplies throughout Russia, the federal authorities have assumed responsibility for the development and implementation of state policy with respect to the supply of natural gas and the industrial and environmental safety of such supplies in Russia. However, regional and local authorities have a significant degree of autonomy in exercising their rights over the use of land and natural resources (including natural gas). Accordingly, the relationship between the relevant federal, regional and local authorities as well as between us and such authorities can have a significant impact on the conditions under which we can operate in any particular region.

In addition, ethnic, religious, historical and other divisions have, on occasion, given rise to communal tensions and military conflict. From 1994 to 1996 and since 1999, Russian military forces have been engaged in operations in Chechnya, bringing normal economic activity within Chechnya to a halt and disrupting the economy of the neighboring region, and groups associated with the Chechen opposition have committed various acts of terrorism in population centers in Russia, resulting in significant loss of life, injury and damage to property. The spread of violence, or political measures taken to counter violence, such as the imposition of a state of emergency, could hinder the operation and the expansion of our business.

### **Economic Risks**

**Economic instability in Russia could adversely affect our business.**

Since the dissolution of the Soviet Union, the Russian economy has experienced at various times:

- significant declines in gross domestic product;
- hyperinflation;
- an unstable currency;
- high state debt relative to gross domestic product;
- a weak banking system providing limited liquidity to Russian enterprises;
- high levels of loss-making enterprises that continued to operate due to the lack of effective bankruptcy proceedings;
- significant use of barter transactions and illiquid promissory notes to settle commercial transactions;
- widespread tax evasion;
- growth of “black” and “gray” market economies;
- high levels of capital flight;
- corruption and extensive penetration of organized crime into the economy;
- significant increases in unemployment and underemployment; and
- high poverty levels among the Russian population.

The Russian economy has been subject to abrupt downturns. In particular, on August 17, 1998, in the face of a rapidly deteriorating economic situation, the Russian Government defaulted on its rouble-denominated securities, the Central Bank stopped its support of the rouble and a temporary moratorium was imposed on certain hard currency payments. These actions resulted in an immediate and severe devaluation of the rouble and a sharp increase in the rate of inflation; a dramatic decline in the prices of Russian debt and equity securities; and an inability of Russian issuers to raise funds in the international capital markets.

These problems were aggravated by the near collapse of the Russian banking sector after the events of August 17, 1998. This further impaired the ability of the banking sector to act as a consistent source of liquidity to Russian companies, and resulted in the loss of bank deposits in some cases.

There can be no assurance that recent trends in the Russian economy, such as the increase in the gross domestic product, a relatively stable rouble, and a reduced rate of inflation, will continue or will not be abruptly reversed. Moreover, the recent fluctuations in international oil and natural gas prices, the strengthening of the rouble in real terms relative to the U.S. dollar and the consequences of a relaxation in monetary policy, or other factors, could adversely affect Russia's economy and our business in the future.

**We face inflation and foreign exchange rate risks that could adversely affect our results of operations.**

Over 64%, 67% and 74% of our gross sales (including excise tax and net of VAT and customs duties) for the years ended December 31, 2002, 2001 and 2000, respectively, were denominated in U.S. dollars or euro, while most of our costs were denominated in RR. The relative movement of inflation and exchange rates therefore significantly affects our results of operations. In particular, our operating margins are generally adversely affected by a real appreciation of the rouble against the U.S. dollar or euro (i.e., by an inflation rate that is higher than the rate at which the rouble is depreciating against the U.S. dollar or euro), because this will generally cause our costs to increase in real terms relative to our sales revenues. Conversely, our operating margins are generally positively affected by a real depreciation of the rouble against the U.S. dollar or euro, because this will generally cause our costs to decrease in real terms relative to our sales revenues. Continued real appreciation of the rouble against the U.S. dollar and the euro could adversely affect our financial condition and results of operations. See "Certain Factors Affecting our Financial Condition and Results of Operations—Certain Factors Affecting our Results of Operations—Impact of the change in purchasing power of the RR and fluctuations in RR exchange rates against the U.S. dollar and euro."

At the same time, a high rate of inflation in Russia results in a decline in the value of our rouble-denominated monetary assets, such as rouble deposits, domestic debt instruments and accounts receivable.

**We may have difficulty converting roubles into other currencies, which could adversely affect our business.**

We are currently required to repatriate and convert into roubles 25% of our proceeds from export sales, though in the past this percentage has been as high as 75%. The percentage of proceeds we are required to repatriate and convert into roubles may be increased or decreased from time to time by the Russian authorities. Under legislation effective from July 7, 2003, the maximum percentage that must be converted was reduced from 50% to 30%, and on July 9, 2003 the Central Bank of Russia adopted the present regulations that require the conversion of 25% of such proceeds.

Restrictions on our ability to convert our rouble revenues into foreign currencies, or to reconvert the roubles we obtain pursuant to the mandatory repatriation and conversion requirements, may adversely affect our business, results of operations and our ability to repay a Loan, and thus the corresponding Series of Notes. The rouble is not convertible outside the Commonwealth of Independent States, so our ability to hedge against fluctuations by converting to other currencies is significantly limited. Within Russia, our ability to convert roubles into other currencies is subject to rules and procedures that restrict the purposes for which conversion and payment in foreign currencies is allowed. In addition, because of the limited development of the foreign currency market in Russia, we may experience difficulty converting roubles into other currencies, although we have been successful to date in doing so.

**Russia's physical infrastructure is in very poor condition, which could disrupt normal business activity.**

Russia's physical infrastructure largely dates back to the Soviet period and has not been adequately funded and maintained since then. Particularly affected are the rail and road networks, power generation and transmission, communication systems and building stock. For example, during the winter of 2000-2001, electricity and heating shortages in Russia's far-eastern Primorye region seriously disrupted the local economy. Road conditions throughout Russia are poor, with many roads not meeting minimum requirements for usability and safety. The Government is actively pursuing plans to reorganize the nation's rail, electricity and telephone systems. These reorganizations may result in increased charges and tariffs while failing to generate the anticipated capital investment needed to repair, maintain and improve these systems.

The deterioration of Russia's physical infrastructure harms the national economy, disrupts the transportation of goods and supplies, adds costs to doing business in Russia and can interrupt business operations, and this could have a material adverse effect on our business.

## **Fluctuations in the global economy may adversely affect Russia's economy and our business.**

Russia's economy is vulnerable to market downturns and economic slowdowns elsewhere in the world. As has happened in the past, financial problems or an increase in the perceived risks associated with investing in emerging economies could dampen foreign investment in Russia and adversely affect the Russian economy. Additionally, because Russia is one of the world's largest producers of, and a major exporter of, natural gas and oil, the Russian economy is especially sensitive to the price of natural gas and oil on the world markets, and a decline in the price of natural gas and oil could slow or disrupt the Russian economy. These developments could severely limit our access to capital and could adversely affect the purchasing power of our customers and thus our business.

## **Social Risks**

### **Crime and corruption could disrupt our ability to conduct our business and could materially adversely affect our financial condition and results of operations.**

The political and economic changes in Russia since the early 1990s have resulted in reduced policing of society and increased lawlessness. Organized criminal activity has reportedly increased significantly since the dissolution of the Soviet Union, particularly in large metropolitan centers and with respect to a substantial increase in property crime in large cities. In addition, the Russian and international press have reported high levels of official corruption in Russia and the FSU, including the bribing of officials for the purpose of initiating investigations by state agencies. Press reports have also described instances in which state officials have engaged in selective investigations and prosecutions to further interests of the state and individual officials. Additionally, published reports indicate that a significant number of Russian media regularly publish slanted articles in return for payment. Our business, and the value of the Notes, could be adversely affected by illegal activities, corruption or by claims implicating us in illegal activities.

### **Social instability could increase support for renewed centralized authority, nationalism or violence and thus materially adversely affect our ability to conduct our business effectively.**

The failure of the state and many private enterprises to pay full salaries on a regular basis and the failure of salaries and benefits generally to keep pace with the rapidly increasing cost of living have led in the past, and could lead in the future, to labor and social unrest. For example, in 1998, miners in several regions of Russia, demanding payment of overdue wages, resorted to strikes that included blocking major railroads. Such labor and social unrest may have political, social and economic consequences, such as increased support for a renewal of centralized authority; increased nationalism, with restrictions on foreign involvement in the economy of Russia; and increased violence. Any of these could restrict our operations and lead to a loss of revenue, materially adversely affecting us.

## **Risks Relating to the Russian Legal System and Russian Legislation**

### **Weaknesses relating to the Russian legal system and Russian legislation create an uncertain environment for investment and for business activity.**

Russia is still developing the legal framework required by a market economy. Several fundamental Russian laws have only recently become effective. The recent nature of much of Russian legislation and the rapid evolution of the Russian legal system place the enforceability and underlying constitutionality of laws in doubt and result in ambiguities, inconsistencies and anomalies. In addition, Russian legislation often leaves substantial gaps in the regulatory infrastructure. Among the risks of the current Russian legal system are:

- since 1991, Soviet law has been largely, but not entirely, replaced by a new legal regime as established by the 1993 Federal Constitution, the Civil Code, by other federal laws and by decrees, orders and regulations issued by the president, the Government and federal ministries, which are, in turn, complemented by regional and local rules and regulations. These legal norms, at times, overlap or contradict one another;
- limited judicial and administrative guidance on interpreting Russian legislation;
- the relative inexperience of judges in interpreting Russian legislation;
- a high degree of discretion on the part of state authorities; and
- bankruptcy procedures that are not well developed and are subject to abuse.

All of these weaknesses could affect our ability to enforce our rights under contracts, or to defend us against claims by others.

**Inexperience and lack of independence of certain members of the judiciary and the difficulty of enforcing court decisions and governmental discretion in instigating, joining and enforcing claims could prevent us or investors from obtaining effective redress in a court proceeding, including in respect of expropriation or nationalization.**

The independence of the judicial system and its immunity from economic, political and nationalistic influences in Russia remain largely untested. The court system is understaffed and underfunded. Judges and courts are generally inexperienced in the area of business and corporate law. Russia is a civil law jurisdiction and, as such, judicial precedents have no binding effect on subsequent decisions. In addition, most court decisions are not readily available to the public. Enforcement of court judgments can in practice be very difficult in Russia. All of these factors make judicial decisions in Russia difficult to predict and effective redress uncertain. Additionally, court claims are often used in furtherance of political aims. We may be subject to such claims and may not be able to receive a fair hearing. Additionally, court judgments are not always enforced or followed by law enforcement agencies.

There are also legal uncertainties relating to property rights. During Russia's transformation from a centrally planned economy to a market economy, legislation has been enacted to protect private property against expropriation and nationalization. However, it is possible that due to the lack of experience in enforcing these provisions and due to political changes, these protections would not be enforced in the event of an attempted expropriation or nationalization, or in the event our business is reorganized. Expropriation or nationalization of any of our entities, their assets or portions thereof, or their break-up into separate companies, potentially with little or no compensation, could have a material adverse effect on our operations and revenues, and on the value of the Notes.

**Unlawful or arbitrary state action may have an adverse effect on our business.**

State authorities have a high degree of discretion in Russia and at times exercise their discretion arbitrarily, without hearing or prior notice, and sometimes in a manner that is contrary to law. Moreover, the state also has the power in certain circumstances to interfere with the performance of, nullify or terminate contracts. Unlawful or arbitrary state actions have included withdrawal of licenses, sudden and unexpected tax audits, criminal prosecutions and civil actions. Federal and local government entities have also used common defects in matters surrounding share issuances and registration as pretexts for court claims and other demands to invalidate such issuances and registrations and/or to void transactions, often for political purposes. Unlawful or arbitrary state action, if directed at us, could have a material adverse effect on our business, and on the value of the Notes.

**The rights of our shareholders, the public reporting requirements and the Russian Accounting Regulations to which we are subject differ significantly from comparable listed companies in other jurisdictions.**

Our corporate affairs are governed by our Charter, internal regulations adopted pursuant to our Charter and by laws governing companies incorporated in Russia. The rights of shareholders and the responsibilities of members of the Board of Directors and the Management Committee under Russian law are different from, and may be subject to certain requirements not generally applicable to, corporations organized in the United States, the United Kingdom or other jurisdictions. See "Management—Description of our Management."

We are subject to Russian law, which contains certain regular disclosure requirements including the requirement to publish annual financial statements in accordance with Russian Accounting Regulations, together with an independent auditor's report. In addition, since 1997, the Russian Ministry of Finance has required all joint stock companies that are natural monopolies to produce annual financial statements prepared in accordance with IFRS in addition to financial statements prepared in accordance with Russian accounting standards. We have published financial statements in accordance with IFRS since 1996. Due to the large number of our subsidiaries, the wide geographic range of our business and the fact that our systems and processes are tailored for Russian statutory requirements, it takes us longer than most western companies to prepare our consolidated annual and interim financial reports and our consolidated periodic internal accounts.

In accordance with Russian legislation, we are obliged to file quarterly reports on our activities to the Federal Commission for the Securities Market within 30 days of the end of the relevant quarter. Such reports include certain information about us, our management, subsidiaries, affiliates, selected financial and business information (such as events of litigation, quarterly accounts prepared in accordance with Russian accounting standards, etc.) but do not contain all of the information contained in our IFRS financial statements. We have regularly published such reports since the fourth quarter of 1998 and generally comply with the reporting requirements, although in the past we have not always met the deadlines for filing such reports.

In addition, Russian law requires certain disclosure by open joint stock companies, such as the disclosure of annual reports, annual accounts (audited and approved by shareholders), any material facts affecting the financial condition and the business of the relevant company, certain board of directors' resolutions and lists of affiliated companies.

The Russian Federal Commission for the Securities Market has recently issued a corporate governance code and is recommending that it be adopted by all Russian public companies.

In light of the current focus on corporate governance issues, we reviewed our own position on such issues and established a special committee headed by a First Deputy Chairman of the Management Committee to develop a corporate governance code for the Company. Such a code was adopted by the Annual Shareholders Meeting of the Company in June 2002. In addition, on September 27, 2002, our Board of Directors enacted procedures to improve the co-ordination of transactions and to increase the level of control by the Board of Directors over the work of the Management Committee. See "Certain Transactions." Despite these initiatives, there is nonetheless less publicly-available information about us than there is available for comparable listed companies in, for example, the United States or the United Kingdom.

**Shareholder liability under Russian legislation could cause us to become liable for the obligations of our subsidiaries.**

The Civil Code of the Russian Federation (the "Civil Code"), the Russian Federal Law "On Joint Stock Companies" No. 208-FZ dated December 26, 1995 (the "Joint Stock Companies Law") and the Russian Federal Law "On Limited Liability Companies" No. 14-FZ dated February 8, 1998 generally provide that shareholders in a Russian joint stock company or members in a Russian limited liability company are not liable for the obligations of the joint stock company or limited liability company and bear only the risk of loss of their investment. An exception to this rule, however, is when one company (the "effective parent") is capable of making decisions for another company (the "effective subsidiary"). Under certain circumstances the effective parent bears joint and several responsibility for transactions concluded by the effective subsidiary in carrying out these decisions. In addition, the effective parent is secondarily liable for the effective subsidiary's debts if the effective subsidiary becomes insolvent or bankrupt resulting from the action or inaction of an effective parent. Accordingly, in our position as the effective parent of the subsidiaries in which we own, directly or indirectly, more than 50% of the charter capital, we could be liable for their debts. This liability could materially adversely affect us.

**Some transactions between us and interested parties or affiliated companies require the approval of disinterested directors or shareholders and our failure to obtain approvals could cause our business to suffer.**

Russian law requires a company that enters into transactions with certain types of its affiliates that are referred to as "interested party transactions" to comply with special approval procedures. Under Russian law, an "interested party" includes (i) members of the board of directors or the collegial executive body of the company; (ii) the CEO of the company (including a managing organization or manager); (iii) any person that owns, together with that person's affiliates, at least 20% of the company's voting shares; or (iv) a person who on legal grounds has the right to give mandatory instructions to the company, if any of the above listed persons, or a close relative or affiliate of such person, is:

- a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction;
- the owner of at least 20% of the shares in a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction; or
- a member of the board of directors or the collegial executive body or the CEO of a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction or an officer of the managing organization of such company.

Transactions between members of a consolidated corporate group may be considered to be interested party transactions in certain circumstances, even when the companies involved are wholly-owned by the parent company.

Under applicable Russian law, interested party transactions are to be approved by a majority of the disinterested independent members of the board of directors of the company. Where all the directors are interested, or are not independent, or if the subject matter of the transaction exceeds 2% of the balance sheet assets of the company determined under Russian accounting principles (with certain exceptions for share placements), a majority vote of the disinterested shareholders of the company is required. The consequence of not having obtained the appropriate approval is that the transaction in question may be declared invalid upon a claim by the company or any of its shareholders.

In certain circumstances, such as when an interested party transaction is entered into between companies within our Group, the transaction will not always be submitted to the boards of directors of the companies for advance approval because, under Russian law, the lack of advance approval makes the transaction voidable, but not void. If any transaction is challenged in court, the matter of approving it will be submitted for consideration to the boards of directors. In 2000, 2001 and 2002, the Board of Directors of OAO Gazprom approved certain transactions after, rather than before, they were consummated, and since 1996 the Board of Directors has never recognized any such transaction to be contrary to OAO Gazprom's interests or denied approval thereof *post factum*. We cannot be certain that any such *post factum* approval would be obtained in the future or, if obtained, would be effective under Russian law.

In accordance with certain existing judicial practice with respect to the consideration of claims seeking the invalidation of transactions in other legal contexts, *post factum* approval has been regarded as being a sufficient basis for the claim to be rejected. While there can be no assurance that a claim for a violation of the interested party transaction approval requirements would also be rejected, we have proceeded when we have believed it to be necessary to do so on the basis that judicial practice in this area would be similar. However, on the basis that the Joint Stock Companies Law, following the amendments which became effective on January 1, 2002, now explicitly requires that interested party transactions should be approved in advance, it is unclear whether future judicial practice will uphold *post factum* approval of interested party transactions concluded after January 1, 2002. Any successful challenge to our interested party transactions could result in the invalidation of transactions that are important to our business. See "Certain Transactions."

**Russian tax law is not fully developed and is subject to frequent changes which could have an adverse effect on us.**

We are subject to a broad range of taxes imposed at the federal, regional and local levels, including but not limited to excise and export duties, income tax, mineral severance tax, property tax and social taxes. See "Certain Factors Affecting our Financial Condition and Results of Operation—Certain Factors Affecting our Results of Operations—Our high tax burden."

Laws related to these taxes, such as the Tax Code, have been in force for a short period relative to tax laws in more developed market economies and the Government's implementation of these tax laws is often unclear or inconsistent. Accordingly, few precedents with regard to the interpretation of these laws have been established. Often, differing opinions regarding legal interpretation exist both between companies subject to such taxes and the Government and within Government ministries and organizations, such as the Ministry of Taxes and Duties and its various inspectorates, creating uncertainties and areas of conflict. Generally, tax declarations remain open and subject to inspection by tax and/or customs authorities for a period of three years following the tax year. The fact that a year has been reviewed by tax authorities does not close that year, or any tax declaration applicable to that year, from further review during the three-year period. These facts create tax risks in Russia substantially more significant than typically found in countries with more developed tax systems.

The taxation system in Russia is subject to frequent change and inconsistent enforcement at the federal, regional and local levels. Until the recent adoption of the new Tax Code, the system of tax collection was relatively ineffective, resulting in the continual imposition of new taxes in an attempt to raise state revenues. There can be no assurance that the Tax Code will not be changed in the future in a manner adverse to the stability and predictability of the tax system. These factors, plus the potential for state budget deficits, raise the risk of a sudden imposition of additional taxes on us. This could adversely affect us.

The Russian tax system has recently been revised. The new tax system is intended to reduce the number of taxes and the overall tax burden on businesses and to simplify the tax laws. However, the revised tax system relies heavily on the judgments of local tax officials and fails to address many of the existing problems. Even if

further reforms to tax legislation are enacted, they may not result in a reduction of the tax burden on Russian companies and the establishment of a more efficient tax system. Conversely, they may introduce additional tax collection measures. Accordingly, we may have to pay significantly higher taxes, which could have a material adverse effect on our business.

### **Risks Relating to Notes and the Trading Market**

**The Issuer's rights to receive payments under a Loan (and therefore its ability to make payments under the corresponding Series of Notes as they fall due) are effectively subordinated to any liabilities of our subsidiaries and could be adversely affected if any of these subsidiaries declares bankruptcy, liquidates or reorganizes.**

Most of our operations are conducted through our subsidiaries and to a large extent we depend on the earnings and cash flows of these subsidiaries to meet our debt obligations, including our obligations under each Loan. In addition, our subsidiaries' assets constitute a significant part of our operating assets. Finally, our subsidiaries have significant liabilities, including accounts payable and accrued charges, taxes payable, restructured tax liabilities, other long-term liabilities and provisions for liabilities and charges. Because our subsidiaries do not guarantee the payment obligations of our parent company, OAO Gazprom, under each Loan or the Issuer's payment obligations under the corresponding Series of Notes, neither the Issuer nor you will have any direct claim on our subsidiaries' cash flows or assets. In the event of a bankruptcy, liquidation or reorganization of any of our subsidiaries, their creditors will generally be entitled to payment of their claims from the cash flows and assets of those subsidiaries before any cash flows or assets are made available for distribution to us as a shareholder. This may adversely affect our ability to service our payment obligations under any Loan.

**We have borrowed under a number of secured credit facilities and we will seek to continue to incur secured debt in the future.**

As of December 31, 2002, our parent company, OAO Gazprom, the obligor under each Loan, had borrowed approximately RR192.9 billion (U.S.\$6.08 billion) under various secured credit facilities, and OAO Gazprom expects to incur additional secured debt in the future. The assets securing these obligations consist primarily of our export receivables under our long-term contracts with European customers.

We understand that the Russian Federation is subject to a negative pledge clause in its borrowings from the International Bank of Reconstruction and Development (the "IBRD"). The negative pledge clause prevents any entity owned or controlled by, or operating for the account or benefit of, the Russian Federation from pledging any of its assets to secure further borrowings unless the IBRD is equally and ratably secured. Whether we should be considered such an entity, and thus subject to this negative pledge clause, is uncertain. This uncertainty will be heightened if the Russian Federation increases its direct ownership interest in us to more than 50% of our shares. If the negative pledge clause is applicable, we do not know whether the Russian Federation would be prepared to let us continue to borrow on a secured basis, or whether potential lenders would continue to be willing to loan to us on a secured basis.

**The lack of a public market for the Notes could reduce the value of your investment.**

There may not be an existing market for the Notes at the time they are issued. Each Series of Notes is expected to be listed on the Luxembourg Stock Exchange. However, there can be no assurance that a liquid market will develop for the Notes, that holders of the Notes will be able to sell their Notes, or that such holders will be able to sell their Notes for a price that reflects their value.

**Payments we make under any Loan may be subject to Russian withholding tax.**

In general, payments of interest on borrowed funds by a Russian entity to a non-resident legal person are subject to Russian withholding tax at the rate of 20%, absent reduction or elimination pursuant to the terms of an applicable double tax treaty. Based on professional advice we have received, we believe that payments of interest on each Loan should not be subject to withholding under the terms of the double tax treaty between Russia and Luxembourg. However, there can be no assurance that such relief will be obtained. In addition, if interest under a Loan becomes payable to the Trustee pursuant to the Trust Deed, any benefit of the double tax treaty between Russia and Luxembourg will cease and payments of interest could be subject to Russian withholding tax.

Prior to January 1, 2002, a claim for treaty relief from Russian withholding tax was subject to preliminary approval by the Russian tax authorities after review of relevant contracts. As of January 1, 2002, such preliminary approval from and contract disclosure to the Russian tax authorities is no longer required. As a result of this new procedure, the Russian tax authorities may review the Issuer's eligibility for treaty relief in greater detail during tax audits.

If the payments under any Loan are subject to any withholding of Russian tax (as a result of which the Issuer would reduce payments under the corresponding Series of Notes in the amount of such withholding), we are obliged to increase payments as may be necessary so that the net payments received by the Noteholders will not be less than the amounts they would have received in the absence of such withholding. It should be noted, however, that gross-up provisions may not be enforceable under Russian law. If we are obliged to increase payments, we may, subject to certain conditions, prepay such Loan in full. In such case, all outstanding Notes of the corresponding Series would be redeemable at par with accrued interest. See "Terms and Conditions of the Notes."

**Tax might be withheld on dispositions of the Notes in Russia, reducing their value.**

If a non-resident holder that is a legal person or organization sells any Notes and receives proceeds from a source within Russia, there is a risk that the part of the payment, if any, representing accrued interest may be subject to a 20% Russian withholding tax. Where proceeds from a disposition of the Notes are received from a source within Russia by an individual non-resident holder, a similar withholding tax would be charged at a rate of 30% on gain from the disposition. The imposition or possibility of imposition of this withholding tax could adversely effect the value of the Notes.

**Financial instability in emerging markets could cause the price of the Notes to suffer.**

Financial instability in Russia and other emerging market countries in 1997 and 1998 adversely affected market prices in the world's securities markets for the debt and equity securities of companies that operate in those countries. Financial instability in emerging market countries other than Russia could adversely affect the market price of the Notes, even if the Russian economy remains relatively stable.

**Risks Relating to Luxembourg Insolvency Proceedings**

**Provisions of the Luxembourg Commercial Code may adversely affect the security given pursuant to a Trust Deed.**

Under each Trust Deed, the Issuer will charge and assign all its present and future rights and interests in respect of each Loan and the relevant Account to the Trustee as security for the payment obligations of the Issuer under the corresponding Series of Notes.

Article 445 of the Luxembourg Commercial Code provides that the creation of a charge, for pre-existing debts of the chargor, is void and without effect if created during the "suspect period" (as defined in the Commercial Code) or up to ten days before the suspect period.

The suspect period is the period of time immediately preceding the date of the bankruptcy judgement. Its duration is fixed by the Court at a maximum of six months.

The provisions of the Article 445 of the Luxembourg Commercial Code may affect the Security Interests granted by the Issuer pursuant to the Trust Deed. Indeed, if the Charge was created during the suspect period, or up to 10 days before the suspect period for pre-existing obligations of the Issuer, such charge would be declared void and invalid by the Courts of Luxembourg.

## USE OF PROCEEDS

The net proceeds from each offering of a Series of Notes will be used by the Issuer for the sole purpose of financing the corresponding Loan to us. The proceeds of such Loan will be used by us for general corporate purposes.

## CAPITALIZATION

The following table shows our consolidated cash and cash equivalents, certain restricted cash, short-term loans and promissory notes, current portion of long-term borrowings and total capitalization, including long-term borrowings, long-term promissory notes payable and shareholders' equity, as of December 31, 2002, extracted from our audited consolidated financial statements as of and for the year ended December 31, 2002. For further information regarding our financial condition, see "Selected Consolidated Financial Information," "Certain Factors Affecting our Financial Condition and Results of Operations" and our consolidated financial information included elsewhere in this Offering Circular.

All RR amounts are expressed in constant RR as of December 31, 2002 purchasing power. The U.S. dollar amounts set forth below were not included in our annual audited consolidated or unaudited consolidated interim condensed financial information and are provided for convenience only. They should not be construed as representations that the Rouble amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR31.78 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on December 31, 2002.

	As of December 31, 2002	
	(millions of RR)	(millions of U.S.\$)
Cash and cash equivalents and certain restricted cash <sup>(1)</sup> .....	96,991	3,052
Short-term borrowings and current portion of long-term borrowings .....	184,823	5,816
Short-term promissory notes payable .....	41,384	1,302
Total .....	<u>226,207</u>	<u>7,118</u>
Long-term borrowings .....	248,603	7,823
Long-term promissory notes payable .....	20,218	636
Shareholders' equity		
Share capital .....	325,194	10,233
Treasury shares .....	(30,367)	(956)
Retained earnings and other reserves .....	1,417,045	44,589
Total shareholders' equity .....	1,711,872	53,866
Total capitalization <sup>(2)</sup> .....	<u>1,980,693</u>	<u>62,325</u>

Notes:

(1) Includes cash restricted as to withdrawal under the terms of certain borrowings and other contractual obligations but excludes cash restricted as to withdrawal under banking regulations.

(2) Totals may not add due to rounding.

There have been no material changes in our total capitalization since December 31, 2002, other than as described under "Certain Factors Affecting our Financial Condition and Results of Operations—Certain Factors Affecting our Liquidity and Capital Resources—Debt obligations."

## SELECTED CONSOLIDATED FINANCIAL INFORMATION

The selected consolidated financial information set forth below shows our historical consolidated financial information as of December 31, 2002, 2001 and 2000 and for the years then ended. The annual consolidated financial information as of December 31, 2002, 2001 and 2000 and for the years then ended has been extracted from, and should be read in conjunction with, the annual audited consolidated financial statements included elsewhere in this Offering Circular. The annual consolidated financial information should also be read in conjunction with "Certain Factors Affecting our Financial Condition and Results of Operations" below.

Our annual consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"), including International Accounting Standards ("IAS") and Interpretations issued by the International Accounting Standards Board.

Our consolidated financial information include a restatement for changes in the general purchasing power of the RR in accordance with IAS 29, "Financial Reporting in Hyperinflationary Economies" ("IAS 29"). IAS 29 requires that financial statements prepared in the currency of a hyperinflationary economy such as Russia's be stated in terms of the measuring unit current at the most recent balance sheet date. The restatement is calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics ("Goskomstat"), and from indices obtained from other published sources for years prior to 1992. As the Russian economy is no longer considered to be hyperinflationary, from January 1, 2003 we no longer apply IAS 29.

The impact of stating our financial information in terms of the measuring unit current at the most recent balance sheet date is to:

- inflate current period transactions recorded in the statement of operations of the local statutory books by the average rate of inflation for the period in order to state them in terms of the purchasing power of the RR as of the balance sheet date (i.e., using the average inflation factor of 1.0638 for all relevant transactions in the year ended December 31, 2002);
- restate the period end non-monetary assets and liabilities and shareholders' equity, including share capital, in terms of the measuring unit current as of the period end; and
- restate all comparatives, both monetary and non-monetary items, in terms of the purchasing power of the RR as of the most recent balance sheet date (i.e., for the information included in this Offering Circular, to inflate the comparatives in terms of the purchasing power of the RR as of December 31, 2002).

The restatement of all comparatives, in particular, can have a significant impact on our reported sales and operating margins. For example, sales expressed in constant RR will decrease if increases in nominal prices are lower than inflation and will increase less than might otherwise be expected even when increases in nominal prices are higher than inflation. Our ability to increase the prices we charge for our gas sales in the domestic market is constrained by state regulations, and the impact of U.S. dollar and euro price increases for our export sales has been offset in recent periods by the real appreciation of the RR (i.e., by a rate of inflation that is higher than the rate at which the RR is depreciating against the U.S. dollar or euro). As a result, our reported sales have lagged behind the increases in our actually realized prices in nominal terms. On the other hand, our costs, which are mainly in RR and are generally not regulated, have tended to increase in line with or even above inflation in recent periods.

In addition, the restatement of all comparatives can have a significant impact on our debt balances. For example, even though we borrowed more than we repaid during the years ended December 31, 2002, 2001 and 2000, the restatement of our comparatives into current purchasing power results in our reported debt balances having declined. (The ratios we show below are not affected by this, because the other components of the ratios are subject to similar adjustments.)

All RR amounts set forth below are expressed in constant RR as of December 31, 2002 purchasing power. The U.S. dollar amounts set forth below were not included in our annual consolidated financial statements and are provided for convenience only. They should not be construed as representations that the RR amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of the U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated

from the RR amounts at the rate of RR31.78 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on December 31, 2002.

Adjusted EBITDA/Gross interest expense	8.12		7.44		5.71	
Adjusted EBITDA/Net interest expense	12.75		11.11		7.53	
Net debt/Adjusted EBITDA	1.72		1.40		1.29	

Notes:

- (1) Includes impairment provisions for accounts receivable and prepayments, assets under construction, investments and other long-term assets, guarantees and inventory obsolescence.
- (2) Gross interest expense less interest income.
- (3) Monetary gain, exchange gains and gains on and extinguishment of restructured liabilities, less exchange losses. Monetary gain reflects the effect of inflation on our net monetary liability position as a result of the application of IAS 29.

On September 3, 1999 the Government issued regulation # 1002 allowing certain companies to negotiate the restructuring of various overdue taxes, interest and fines due to the federal government authorities over ten years. Interest accrues on the restructured tax payables (excluding interest and fines) at a rate of 5.5% per annum, representing 1/10 of the Central Bank of Russia's annual refinancing rate (55%) as specified in the regulation, and is paid quarterly. Current tax payments must be made timely. If the terms of the restructuring are violated, the original nominal value of the tax payable (including interest and fines) becomes due with additional interest of 1/300 of the Central Bank refinancing rate accruing for each day since the restructuring agreement.

During the years ended December 31, 2002, 2001 and 2000, certain of our subsidiaries signed such restructuring agreements. This resulted in the recognition of a gain in each of the respective periods based on the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables. This gain is reflected in gain on restructured taxes. Following the restructurings, we recognize the amortization of the discount and the interest accruing under the restructuring agreements as interest expense on taxes payable, which also includes interest that accrues when tax payments are overdue.

- (4) Share of net income (losses) of associated undertakings and gains (losses) on available-for-sale investments.
- (5) Cash and cash equivalents and certain restricted cash include balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations but exclude cash restricted as to withdrawal under banking regulations.
- (6) Operating profit plus depreciation and the provisions referred to in note 1 above except for provisions for accounts receivable and prepayments. Provisions for accounts receivable and prepayments were RR17,411 million, RR35,070 million and RR36,119 million for the years ended December 31, 2002, 2001 and 2000, respectively. Adjusted EBITDA should not be considered as an alternative to net profits, operating profit, net cash provided by operating activities or any other measure of performance under IFRS.
- (7) Interest expense on taxes payable, short- and long-term debt and other interest expense. See note 3 above for an explanation of interest expense on taxes payable.
- (8) Short-term borrowings and current portion of long-term borrowings, short-term promissory notes payable, long-term borrowings, long-term promissory notes payable and restructured tax liabilities.
- (9) Total debt less cash and cash equivalents and balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations.

## CERTAIN FACTORS AFFECTING OUR FINANCIAL CONDITION AND RESULTS OF OPERATIONS

*Set out below are certain factors affecting our financial condition and results of operations. You should read the following discussion and analysis of these factors in conjunction with our audited financial statements as of and for the years ended December 31, 2002 and 2001. All RR amounts are expressed in constant RR as of December 31, 2002 purchasing power, unless otherwise noted. The U.S. dollar amounts, except as indicated, have been translated from the RR amounts at the rate of RR31.78 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on December 31, 2002.*

### **Certain Factors Affecting Our Results Of Operations**

The primary factor that affects our results is the price for which we can sell our natural gas and other hydrocarbon products, both internationally and in Russia. Other factors affecting our results are:

- the impact of changes in the purchasing power of the RR resulting from inflation in Russia and of fluctuations in RR exchange rates against the U.S. dollar and euro;
- our high tax burden;
- interest rates and discounts on promissory notes;
- non-cash settlements; and
- impairment of assets.

#### *The export price of natural gas*

We are the world's largest exporter of natural gas. We export natural gas (as well as gas condensate, crude oil, oil products and liquified natural gas), and we also sell these products domestically to industrial consumers, to regional gas distribution companies and, through our own regional gas distribution companies, to other end consumers. In the years ended December 31, 2002, 2001 and 2000 our net sales of natural gas to Europe were RR335,115 million, RR407,220 million and RR440,342 million, respectively; our net sales of natural gas to the FSU were RR51,068 million, RR49,198 million and RR67,840 million, respectively; and our net sales of natural gas in Russia were RR142,855 million, RR130,424 million and RR112,777 million, respectively.

Our results are heavily reliant on natural gas export prices. Prices for the natural gas we export strengthened considerably in 2000 and 2001 in U.S. dollar terms (although they declined in constant RR terms in 2001), weakened during the first six months of 2002, after which prices strengthened, although not to an extent sufficient to fully offset the prior price declines in 2002, and then strengthened significantly in the first six months of 2003. Export gas prices to European countries are indexed mainly to oil product prices as stipulated in long-term contracts and, therefore, fluctuate based on world oil prices. Due to the formulae underlying our long-term contracts, our prices are not as volatile on a short-term basis as spot oil prices and tend to lag upward and downward movements in oil prices by approximately six to nine months.

Our business requires significant ongoing capital expenditures in order to maintain our production and transportation systems. An extended period of low gas prices would limit our ability to maintain an adequate level of capital expenditures, which in turn could limit our ability to maintain current levels of production and deliveries of gas, adversely affecting our results.

The European Union Gas Directive of June 22, 1998, which established common rules for the transmission, distribution, supply and storage of natural gas in the European market, may cause substantial changes to existing European market structures and to the overall level and volatility of prices. See "Business—Marketing—Europe—Western Europe" and "Business—Competition—Western Europe."

Natural gas export prices for sales to FSU countries are generally based on one-year fixed price contracts negotiated based on prevailing oil prices. Average natural gas export prices to FSU countries are more than 50% below the level of those for European countries. This is partly due to lower transportation costs and excise tax burdens but is principally due to the impact of intergovernmental agreements, which effectively limit the prices we can charge to FSU countries.

The weather is another factor affecting demand for and, therefore, the price of natural gas. Changes in weather conditions from year to year can influence demand for natural gas and to some extent gas condensate and oil products.

We do not enter into any significant hedging arrangements to mitigate the price risk of our sales activities.

The following table shows our average natural gas export price to Europe and FSU countries (including excise tax and net of VAT and customs duties) for the years ended December 31, 2002, 2001 and 2000, expressed in average actual realized nominal U.S. dollar and in average constant RR terms:

	Year ended December 31,		
	2002	2001	2000
	(including excise tax, net of VAT and customs duties)		
Our natural gas export price to Europe (average actual realized U.S.\$ per mcm <sup>(1)</sup> )	102.5	122.6	98.4
Our natural gas export price to Europe (average actual realized U.S.\$ per mcf <sup>(1)</sup> )	2.9	3.5	2.8
Our natural gas export price to Europe (average constant RR per mcm)	3,369.0	4,100.0	4,223.9
Our natural gas export price to FSU countries (average actual realized U.S.\$ per mcm <sup>(2)</sup> )	45.4	41.5	45.4
Our natural gas export price to FSU countries (average actual realized U.S.\$ per mcf <sup>(2)</sup> )	1.5	1.2	1.3
Our natural gas export price to FSU countries (average constant RR per mcm)	1,444.2	1,417.5	1,891.6

Notes:

- (1) Average actual realized nominal prices and not convenience translations of constant RR prices.
- (2) Average actual realized nominal prices and not convenience translations of constant RR prices, except sales to Belarus, which are made in RR and for accounting purposes converted to dollars at the end of each month at the exchange rate then in effect.

#### Regulation of domestic natural gas prices and transportation tariffs

In the years ended December 31, 2002, 2001 and 2000, we sold 298.0 bcm, 300.8 bcm and 307.7 bcm of natural gas in Russia, representing 63.5%, 64.4% and 64.2% of our total natural gas sales volumes.

Natural gas prices and transportation tariffs in Russia are regulated by the Natural Monopoly Law and the Gas Supply Law, as well as by a number of supplemental Government resolutions, and do not currently fluctuate based on supply and demand. The Federal Energy Commission of the Russian Federation ("FEC") regulates natural monopolies, including the establishment and regulation of natural gas prices and transportation tariffs.

Natural gas prices in Russia have remained significantly below export prices (even after netting back export duty, excise tax and transportation costs) primarily due to Governmental regulation, via the FEC. Over the last five years the FEC has reset domestic gas tariffs at rates that, on a cumulative basis, failed to recover fully the effects of inflation. As of December 31, 2002 the domestic natural gas price was 125% higher in nominal RR terms than in 1997, whereas cumulative inflation over the same period was 314%.

Since 2000, however, domestic natural gas prices have increased faster than inflation. Our average domestic natural gas sales prices were equivalent to RR383.4 per mcm in 2000, RR442.8 per mcm in 2001 and RR535.7 per mcm in 2002, expressed in constant RR.

The following table shows our average domestic natural gas price (including excise tax and net of VAT) for the years ended December 31, 2002, 2001 and 2000, expressed in average actual realized nominal RR terms and in average constant RR terms:

	Year ended December 31,		
	2002	2001	2000
	(including excise tax, net of VAT)		
Our domestic natural gas price (average actual realized RR per mcm)	505.0	357.9	254.7
Our domestic natural gas price (average actual realized RR per mcf)	14.3	10.1	7.2
Our domestic natural gas price (average constant RR per mcm) <sup>(1)</sup>	535.7	442.8	383.4
Our domestic natural gas price (average constant RR per mcf) <sup>(1)</sup>	15.2	12.5	10.8
Our domestic natural gas price (average U.S.\$ per mcm) <sup>(2)</sup>	16.0	11.9	9.0
Our domestic natural gas price (average U.S.\$ per mcf) <sup>(2)</sup>	0.45	0.34	0.26

Notes:

- (1) Constant RR price in terms of the equivalent purchasing power of the RR as of December 31, 2002.
- (2) Translated from average actual realized RR price for convenience only using period-end exchange rates.

The Government's policy is gradually to increase the regulated natural gas price, and ultimately to abandon natural gas price regulation altogether. The Government is also considering the introduction of an unregulated wholesale domestic market on which some natural gas can be sold at prices determined by market forces. See "Business—Marketing—Russia—Domestic Market Conditions." Concerns about inflation, and political considerations, constrain the Government's ability to move too rapidly in this direction, however. For example, we proposed that natural gas prices should increase by 38% on average in 2003 (40% for industrial consumers and 20% for household consumers), but the Government approved an average increase of only 20% (a 20% increase for industrial consumers commencing January 1, 2003 and a 23% increase for household consumers commencing February 1, 2003). The Government is currently planning an additional 20% increase for 2004.

During the years ended December 31, 2002, 2001 and 2000, our sales revenues derived from the transport of gas produced by third parties were relatively small. As independent production of natural gas increases, however, we would expect our sales revenues from the transport of natural gas to increase as well. For a discussion of our transport tariffs, see "Business—Transportation—Third party access to the UGSS."

*Impact of the change in purchasing power of the RR and fluctuations in RR exchange rates against the U.S. dollar and the euro*

*Impact of inflation accounting and presentation in our financial statements of constant RR.* Our financial results, including comparatives, include a restatement for changes in the general purchasing power of the RR in accordance with IAS 29. IAS 29 requires that financial statements prepared in the currency of a hyperinflationary economy such as Russia's be stated in terms of the measuring unit current at the balance sheet date. The restatement is calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by Goskomstat, and from indices obtained from other published sources for years prior to 1992. As the Russian economy is no longer considered to be hyperinflationary, from January 1, 2003 we no longer apply IAS 29.

The impact of stating our financial information in terms of the measuring unit current at the most recent balance sheet date is to:

- inflate the current period transactions recorded in the statement of operations of the local statutory books by the average rate of inflation for the period in order to state them in terms of the purchasing power of the RR as of the balance sheet date (i.e., using the average inflation factor of 1.0638 for all relevant transactions in the year ended December 31, 2002);
- restate the period end non-monetary assets and liabilities and shareholders' equity, including share capital, in terms of the measuring unit current as of the period-end; and
- restate all comparatives, monetary and non-monetary items, in terms of the purchasing power of the RR as of the most recent balance sheet date (i.e., for the information included in this Offering Circular, to inflate the comparatives in terms of the purchasing power of the RR as of December 31, 2002).

The restatement of all comparatives, in particular, can have a significant impact on our reported sales and operating profit. For example, sales expressed in constant RR will decrease if increases in nominal prices are lower than inflation and will increase less than might otherwise be expected even when increases in nominal prices are higher than inflation. Our ability to increase the prices we charge for our natural gas sales in the domestic market is constrained by Government regulations and, as we discuss more fully below, the impact of U.S. dollar and euro price increases for our export sales has been offset in recent periods by the real appreciation of the RR (i.e., by a rate of inflation that is higher than the rate at which the RR is depreciating against the U.S. dollar or euro). As a result, our reported sales have lagged behind the increases in our average actual realized prices in nominal terms. On the other hand, our costs, which are mainly in RR and generally not regulated, have tended to increase in line with or even above inflation in recent periods.

In addition, the restatement of all comparatives can have a significant impact on our debt balances. For example, even though we borrowed more than we repaid during the years ended December 31, 2002, 2001 and 2000, the restatement of our comparatives into current purchasing power resulted in our reported debt balances declining at each period end. For a discussion of our debt obligations, see "—Certain Factors Affecting our Liquidity and Capital Resources—Debt obligations."

*Impact of inflation and changes in exchange rates on export sales and operating margins.* Over 54%, 67% and 74% of our gross sales (including excise tax and net of VAT and customs duties) for the years ended December 31, 2002, 2001 and 2000, respectively were denominated in U.S. dollars or euro, while most of our

costs were denominated in RR. The relative movements of inflation and exchange rates therefore significantly affect our results of operations. In particular, our operating margins are generally adversely affected by a real appreciation of the RR against the U.S. dollar or euro, because this will generally cause our costs to increase in real terms relative to our sales revenues. Conversely, our operating margins are generally positively affected by a real depreciation of the RR against the U.S. dollar or euro, because this will generally cause our costs to decrease in real terms relative to our sales revenues.

The following table sets forth the rates of inflation in Russia, the rates of nominal depreciation of the RR against the U.S. dollar and euro and the rates of real change in the value of the RR against the U.S.\$ and euro for the periods shown.

	Year ended December 31,		
	2002	2001	2000
Inflation (CPI) .....	15.1%	18.8%	20.1%
Nominal depreciation of the RR against the U.S.\$ .....	5.4%	7.0%	4.3%
Real appreciation of the RR against the U.S.\$ .....	9.2%	11.0%	15.2%
Nominal depreciation (appreciation) of the RR against the euro .....	25.0%	1.3%	(3.9)%
Real appreciation (depreciation) of the RR against the euro .....	(7.9)%	17.2%	25.0%

Period to period comparisons of our export sales revenues, as restated in constant RR, have been significantly affected by the real change in the value of the RR against the U.S. dollar and the euro. If our actual realized U.S. dollar or euro prices and the related sales for any periods being compared are the same, but between the periods the RR has appreciated in real terms against the U.S. dollar or the euro, the related sales expressed in constant RR will decline from one period to the next. If the real appreciation of the RR is great enough, our export prices and sales expressed in constant RR will decline from one period to the next even in circumstances where our actual realized U.S. dollar prices and the related sales have increased. Conversely, if the RR has depreciated in real terms against the U.S. dollar or the euro, our prices and the related sales expressed in constant RR will increase from one period to the next if our actual realized U.S. dollar or euro prices and related sales remain unchanged, and may increase even if our U.S. dollar or euro prices and related sales decline.

*Impact of Monetary Effects.* Our results of operations have also been substantially affected by the impact of nominal devaluation and inflation on the value of our monetary assets and liabilities. Nominal devaluation of the RR has generally resulted in foreign exchange gains on monetary assets denominated in foreign currencies and foreign exchange losses on monetary liabilities denominated in foreign currencies. These gains and losses are recorded on a net basis in our statements of operations under the caption "Exchange loss (gain)." Inflation has resulted in purchasing-power gains on monetary liabilities and purchasing power losses on monetary assets; because our financial statements are price-level restated, these gains and losses are recorded on a net basis in our statements of operations under the caption "Monetary gain."

#### *Our high tax burden*

We are subject to a wide range of taxes imposed at federal, regional, and local levels and are one of the largest sources of tax revenue to the federal authorities in Russia, as well as to the regional and local authorities in those regions and localities in which we operate. The combination of political pressure on the federal, regional and local authorities to address social and economic issues (and in particular the non-payment of salaries and pensions) and the difficulties associated with collecting taxes from companies and enterprises in financial difficulties, all increase the risk that the Government, as well as regional and local governments, will seek to mitigate these problems by increasing our already substantial tax burden.

Given the relative size of our activities in Russia, our tax burden is largely determined by the taxes payable in Russia. In addition to profits tax, we are subject to a number of other taxes in Russia, many of which are based on revenue or volumetric measures. The principal taxes to which we are subject in Russia (other than profits tax) are as follows:

- excise tax (to be abolished effective January 1, 2004);
- sales tax and VAT;
- natural resources production tax (which replaced geological and royalty taxes and mineral extraction taxes effective January 1, 2002), calculated based on the revenue generated from exploration and production activities;

- export duty;
- property tax; and
- social taxes and contributions, determined as a function of salaries and wages.

Our effective profit tax rates (current and deferred tax expense/benefit as a percentage of IFRS profit before profit tax and minority interest) for the years ended December 31, 2002, 2001 and 2000 were 82.1%, 92.0% and a benefit of 86.6%, respectively, while the statutory profit tax rates in Russia were 24%, 35% and 30% in, 2002, 2001 and 2000, respectively. The significant difference between our effective profit tax rates and the statutory rates and the volatility of those rates has been the result of:

- significant non-deductible expenses, primarily relating to social expenses;
- significant deferred tax benefits and expenses. The revaluation of property, plant and equipment for statutory tax purposes resulted in a deferred tax benefit in 2000. In each period, temporary differences related to property, plant and equipment affected deferred taxes due to the fact that a significant proportion of the tax base is based on independent appraisals while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR;
- the impact of accounting for inflation which has increased our effective tax rate; and
- changes in Russian tax legislation.

Current profit tax expense for the years ended December 31, 2002, 2001 and 2000 was RR54,187 million, RR94,957 million and RR94,688 million, respectively. This represents a current profit tax rate (current profit tax expense as a percentage of IFRS profit before tax and minority interest) for the years ended December 31, 2002, 2001 and 2000 of 32.7%, 41.0% and 44.9%, respectively.

Effective January 1, 2002, the Russian Government adopted new tax legislation. This tax legislation included a number of changes, the most significant of which were:

- a decrease in the profit tax rate from 35% to 24%;
- the elimination of upper limits on the deductibility of expenses considered to be in the normal course of business;
- a general decrease in the useful lives of property, plant and equipment for tax accounting purposes;
- the elimination of independent appraisals or use of indices to increase the tax base of property, plant and equipment (capped to 30% of any increase associated with a revaluation as of January 1, 2002 and totally eliminated thereafter). No independent appraisal was undertaken or revaluation recorded for tax purposes as of January 1, 2002 as we projected tax losses at our parent company, which holds most of our property, plant and equipment, in light of the decrease in the tax depreciation lives of property, plant and equipment and did not want to increase the taxable base for property tax purposes;
- the elimination of investment tax credits, although this will have no significant impact because since June 1999 we have been unable to claim such credits due to the structure of our capital funding programs with subsidiaries. The capital funding program was structured in such a way to maximize management control over capital expenditures throughout our consolidated Group. We believe that the advantages of tighter control outweighed additional tax costs associated with the inability to claim the investment tax credits;
- the ability to deduct interest on business loans regardless of the source and use; and
- the ability to offset exploration expenditure against profit tax instead of against mineral restoration taxes.

We expect that our current and overall effective profit tax rates as percentages of IFRS profit will continue to be high for the foreseeable future.

We do not anticipate any significant change in our overall tax liability in 2004 to result from expected changes in Russian tax legislation. We expect that the increase in the export duty on oil and gas from 5% to 30% effective January 1, 2004, as approved by the Government on August 19, 2003, and an increase in the natural resources production tax rate from 16.5% of the price of gas produced (currently resulting in a tax of approximately RR30-35 per mcm of gas produced) to RR107 per mcm of gas produced, will be offset by the

elimination of the excise tax on natural gas (currently 15% of the sales price to Russian industrial consumers and 15% of the sales price less customs duties and transit costs for exports within the Commonwealth of Independent States, in particular to Ukraine, Belarus and Moldova, and 30% of the sales price less customs duties and transit costs for exports to other countries) effective January 1, 2004 and a resulting expected reduction in our profit tax liability.

On September 3, 1999 the Government issued regulation # 1002 allowing certain companies to restructure various overdue taxes, interest and fines due to the federal government authorities over ten years. During the years ended December 31, 2001 and 2002, certain of our subsidiaries signed such restructuring agreements. This resulted in the recognition of a gain in each of the respective periods based on the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables. This gain is reflected as gain on restructured taxes. Following the restructurings, we recognize the amortization of the discount as interest expense on taxes payable. Interest accrues on the restructured tax payables (excluding interest and fines) at a rate of 5.5% per annum, representing  $\frac{1}{10}$  of the Central Bank of Russia's annual financing rate (55%) as specified in the regulation, and is paid quarterly. This interest is also included in interest expense on taxes payable. If the terms of the restructuring are violated, the original nominal value of the tax payable (including interest and fines) becomes due, with additional interest of  $\frac{1}{300}$  of the Central Bank refinancing rate accruing daily.

*Interest rates*

We have significant short-term and long-term debt obligations with both fixed and variable interest rates. Fluctuations in interest rates therefore affect our financial results. We do not have any significant hedging arrangements to mitigate interest rate risks resulting from our financing activities.

*Non-cash settlements*

Historically, in common with other Russian companies, we have entered into agreements to settle a number of transactions by the transfer of goods and services, as opposed to cash. This results principally from the following factors:

- high inflation in Russia;
- unreliable banking services; and
- gas that we produce is required for the day-to-day operations of a number of our key suppliers.

As the general economic climate in Russia has improved, the value of these transactions has decreased.

While the use of barter transactions and illiquid promissory notes to settle commercial transactions continues to be prevalent in Russia, our reliance on such non-cash transactions has decreased as a proportion of the value of transactions. As can be seen in the table below, the percentage of non-cash settlements (i) related to total sales decreased from approximately 22% in the year ended December 31, 2000 to approximately 18% in the year ended December 31, 2002; (ii) related to domestic sales decreased from approximately 31% in the year ended December 31, 2000 to approximately 21% in the year ended December 31, 2002; and (iii) related to capital expenditures decreased from approximately 47% in the year ended December 31, 2000 to approximately 15% in the year ended December 31, 2002. The relative portion of non-cash settlements attributable to non-domestic sales increased in 2002 because cash payments in Russia increased while we continued our practice of accepting non-cash payments from Ukrainian customers in the form of transit services.

	Year ended December 31,		
	2002	2001	2000
% of non-cash settlements related to total sales .....	18%	18%	22%
% of non-cash settlements related to domestic sales .....	21%	23%	31%
% of non-cash settlements related to total capital expenditures .....	15%	31%	47%

Barter transactions have been substantially reduced and now non-cash settlements primarily represent mutual cancellations using promissory notes. We give promissory notes, mainly those of OAO Gazprom, to our suppliers in exchange for services or products. Such promissory notes are comparatively liquid in the Russian

market and are commonly traded by other Russian companies. The difference between the carrying value of the payables being settled and the face value of the promissory notes is recorded as interest expense within net finance costs. Promissory notes are shown separately in our balance sheet. See “—Liquidity and Capital Resources—Debt obligations.”

#### *Impairment of assets*

Historically, our results have been significantly affected by impairment provisions on accounts receivable, inventory, assets under construction, property, plant and equipment, investments and other long-term assets. The impairment provision arising during the year ended December 31, 2002 was RR13,509 million, as compared to RR48,712 million arising during the year ended December 31, 2001 and RR124,806 million arising during the year ended December 31, 2000.

Our provisions for trade receivables have been significant. As of December 31, 2002 the balance sheet impairment provision for trade receivables was RR94,541 million, or 45.3% of the gross trade receivables balance. Provisions for trade receivables have related mainly to non-payment for natural gas sold to Ukraine, Moldova and Serbia and Montenegro and certain domestic consumers.

Our provisions for impairment of assets under construction have also been significant. As of December 31, 2002, the aggregate balance sheet provision related to assets under construction was RR95,570 million, or 32% of gross assets under construction. This primarily relates to the following projects: RR31,751 million for Khorosoveiskoye and Bovanenkovskoye field development, including part of Obskaya-Bovanenkovskoye railroad construction; RR20,474 million for the Novy Urengoi Chemical Complex; and RR8,470 million for the Long-Yugan-Salekhard-Labytnangi-Kharp pipeline. Although these projects have not been mothballed, under the current investment program we do not believe they will generate positive cash flows in the future.

Because of our operating cycle, certain significant decisions about capital construction projects are made after the end of our fiscal year. Accordingly, we typically have larger charges in the fourth quarter of our fiscal year as compared to other quarters.

#### **Certain Acquisitions and Dispositions**

Since January 1, 2000, we have made a number of acquisitions and dispositions.

##### *January 1, 2000 through December 31, 2002*

In January 2001, we exchanged a 57% interest in Lebedinsky GOK (“LGOK”), a mining and ore enrichment company operating in the Russian Federation, and a 17% interest in Oskolsky EMK for a 48% interest in ZAO Gazmetall (“Gazmetall”). Gazmetall is a metallurgical holding company with controlling interests in LGOK and Oskolsky EMK. In March 2002, we sold our 48% interest in Gazmetall for U.S.\$70 million to OAO Oskolsky Metallurgical Plant, a subsidiary of Gazmetall. The financial effect of these transactions was not material to our financial position or results of operations.

In January 2001, we acquired 51% of the voting shares of OAO AK Sibur (“Sibur”), a leading producer and marketer of petrochemical products in Russia. The consideration of RR3,015 million consisted of a combination of cash, promissory notes issued by companies in our Group and other securities. Sibur was consolidated as a subsidiary effective from January 1, 2001.

In April 2002, the Federal Commission for the Securities Market cancelled the registration of additional stock issued to third parties by OAO Zapsibgazprom (“Zapsibgazprom”). As a result, we increased our interest in the ordinary share capital of Zapsibgazprom from 34.0% to 51.1%. In December 2002, we sold our 12% interest in OAO Arcticgas with a carrying value of RR1 million to the OAO NK Yukos group in exchange for 25.6% of the shares of Zapsibgazprom with a nominal value of RR300,000 and additional cash consideration of U.S.\$2.95 million. We thereby increased our interest in the share capital of Zapsibgazprom from 51.1% to 76.7%.

In April 2002 we acquired an additional 32.8% of the voting shares in our production subsidiary OAO Vostokgazprom for RR2 million, increasing our interest from 51.0% to 83.8%. We hold these additional shares through our subsidiary Gazprom UK Ltd.

In July 2002, we acquired additional interests in ZAO Media-Most (“Media-Most”), in OAO TV Company NTV (“NTV”) and in certain of our other media subsidiaries, as well as payables and promissory notes to third parties due by these companies. The consideration was paid partly in cash and partly through the forgiveness of debt owed to OAO Gazprom. As a result of this transaction we increased our interest in NTV from 65% to 95.6% and in Media-Most from 14.3% to 38.6%. This transaction also provided for us to acquire a further 39.6%

interest in Media-Most, but as of December 31, 2002 this interest was under court arrest and we did not control the voting rights for these shares.

In October 2002, we signed a framework agreement to sell non-controlling interests in certain media companies, including NTV, to Evrofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of Media-Most and its media companies to us. The disposed interests primarily comprised those acquired in July 2002. As a result, our interest in NTV has been reduced to 65.3%. Under the framework agreement, Evrofinance Group is to contribute cash and these acquired interests into a new media holding company, of which we will own 51% and Evrofinance the balance. Our contribution into the new holding company will comprise the remaining interests in certain of our media subsidiaries. The transactions are expected to be completed by the end of 2003.

In October 2002, we added an additional participant to the Rosshelf joint activity, ZAO Sevmorneftegaz ("Sevmorneftegaz"). The Rosshelf joint activity was established to develop the Pirazlomnoye and Shtokmanovskoye fields in the Barents Sea. Sevmorneftegaz is a company jointly controlled by our subsidiary ZAO Rosshelf ("Rosshelf") and OAO Rosneft-Purneftegaz ("Rosneft-Purneftegaz"), a subsidiary of OAO NK Rosneft ("Rosneft"). In conjunction with its entry into the joint activity, in February 2003 Sevmorneftegaz made a non-cash contribution valued at RR4,334 million in exchange for a 48.9% interest in the Rosshelf joint activity. The effect of this transaction was to decrease our combined direct and indirect interest in the Rosshelf joint activity from 99.1% to 62.9%. As a result of a further contribution to the joint activity by Rosneft in July 2003, beneficial interests in the joint activity are now held 50% each by us and by Rosneft.

#### *After December 31, 2002*

In the third quarter of 2002, we signed agreements to acquire additional interests in a number of Russian petrochemicals companies, the majority of which were already affiliated with Sibur. The consideration to be paid is expected to consist of OAO Gazprom promissory notes that mature in 2005 and have a face value of RR19,494 million. In April 2003, following the completion of the necessary legal procedures, we established control over the majority of these companies and through their shareholdings in Sibur increased our controlling interest in the charter capital of Sibur from 50.7% to 75.7%.

In February 2003, the management of our wholly-owned subsidiary OOO Mezhrefiongaz ("Mezhrefiongaz"), acting in violation of our internal procedures, sold 40.1% (out of our total 46.4% interest) of the share capital of ZAO Agrochemical Corporation Azot ("Azot"), a large manufacturer of agricultural fertilizer in Russia, at its carrying value of RR394 million. We have sought the recovery of these shares from the three purchasers. Two of the purchasers subsequently agreed to sell their shares to us at the price originally paid; this resulted in our re-acquisition of 33.9% of Azot for RR333 million in April 2003, bringing our total stake to 40.1%. The third purchaser, OOO Alan Invest ("Alan Invest"), has refused to sell to us the remaining 6.26% that it acquired in February 2003, and we are pursuing litigation against Alan Invest to reacquire these shares. In July 2003 the Moscow arbitration court ordered that these shares be arrested pending its judgment. In July 2003 we acquired an additional 7.24% of Azot from SVL Holding S.A., a shareholder not involved in the February sale. We are currently working to amend the charters of our subsidiaries to help prevent similar acts by the management of our subsidiaries in the future.

In March 2003 OAO Stroytransgaz transferred its interest in a joint activity to our subsidiary Gazprominvestholding in return for OAO Gazprom promissory notes with a face value RR5,719 million and payable in January 2004 that we had contributed into this joint activity in October 2002. As a result, we now control the 1,144 million ordinary shares in OAO Gazprom (or 4.83% of our shares) owned by the joint activity.

In April 2003 we acquired 25.9% of the ordinary shares of OAO Stroytransgaz for consideration with a fair value of RR3,335 million, including investments, promissory notes and cash.

#### *Our asset reacquisition program*

Our senior management has carried out an asset reacquisition program, through which we have reacquired certain assets from various entities.

In April 2002, we completed the repurchase of 32% of the shares in ZAO Purgaz (“Purgaz”) from the Itera International Energy group of companies (“Itera”) pursuant to a repurchase option provided by the 1999 share purchase agreement under which we had sold the shares to Itera for their nominal value. As a result, our interest in Purgaz rose from 19% to 51%, and Purgaz is consolidated in our consolidated financial statements from April 2002. Purgaz holds a license for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these Purgaz shares, we paid Itera RR33,000 in cash (the nominal value of the shares) and financed Purgaz’s repayment of RR6,594 million of financing originally provided by Itera to Purgaz to finance development work, thereby satisfying all of Purgaz’s outstanding liabilities to Itera. Subsequent to its consolidation in April 2002, Purgaz contributed 4.5 bcm to our natural gas production volumes in 2002.

In February 2003 we acquired an additional 51.0% interest in OAO Severneftegazprom (“Severneftegazprom”) from Itera at its nominal value of RR102,000, thereby increasing our interest in the share capital of Severneftegazprom to 100%. At the same time, we sold to Itera a 10.0% interest in OAO Sibirsky Oil and Gas Company at its book value of RR2.55 million as well as a 7.8% interest in OAO Tarkosaleneftegaz at its book value of RR356 million in satisfaction of Severneftegazprom indebtedness to Itera. Itera had acquired control over Severneftegazprom in 2001. We believe that the book value of consideration paid approximated the fair values of our interest in the net assets that we acquired in Severneftegazprom. Severneftegazprom holds a license for the development of the Yuzhno-Russkoye field.

ZAO Achimneftegaz (“Achimneftegaz”) was created as a wholly-owned subsidiary of our subsidiary, OOO Urengoigazprom (“Urengoigazprom”), to accelerate development of the Achimov layer gas condensate deposit in the Urengoiskoye field. Achimneftegaz is currently working on the second section of the Achimov layer of the field. Several years ago, ZAO CTI-Sigma, an Itera affiliate, acquired a 49% stake in Achimneftegaz. We are currently taking measures to acquire a 48% stake in Achimneftegaz from the 49% previously acquired by ZAO CTI-Sigma.

We initially held a 51% stake in ZAO Nortgaz (“Nortgaz”), a company that holds licenses for the development of the North Urengoiskoye field. Our initial stake was reduced to 0.5% in 2001 as a result of a court decision invalidating our participation in a share issuance by Nortgaz in 1999 on the basis that the value of the property that we contributed to the company had not been approved by the Nortgaz Board of Directors. We are currently attempting to reacquire the Nortgaz shares we lost as a result of this prior decision through further court actions. According to published reports, Nortgaz has audited gas reserves of approximately 325 bcm. See “Business—Litigation and Investigations.”

### Certain Factors Affecting Our Liquidity and Capital Resources

We make significant capital expenditures to explore for natural gas, to develop our natural gas fields, to produce our natural gas, gas condensate and crude oil, and to maintain and expand the UGSS and international pipelines. Our capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications) were RR180,268 million in 2002, RR180,815 million in 2001 and RR162,991 million in 2000.

We make a significant portion of our capital expenditures using consideration other than cash. See “—Capital expenditures.” In the years ended December 31, 2002, 2001 and 2000, our operating cash flows exceeded our cash capital expenditures by significant margins, but were not sufficient to cover our combined cash and non-cash capital expenditures.

Following is a table of our cash and non-cash capital expenditures in constant RR terms (including cash advances to contractors and suppliers and excluding the effect of acquisitions of subsidiaries and reclassifications):

	Year ended December 31,		
	2002	2001	2000
	(RR million)		
Cash capital expenditures .....	141,124	108,453	66,397
Interest paid and capitalized .....	12,998	16,711	19,923
Mutual cancellations and barter settlements .....	42,893	49,135	65,119
Other non-cash expenditures .....	(16,717)	6,516	11,552
Total capital expenditures .....	<u>180,268</u>	<u>180,815</u>	<u>162,991</u>

Other significant uses of our cash flows include servicing our debt and paying dividends. Interest paid, net of amounts paid and capitalized, was RR22,379 million, RR27,389 million and RR38,420 million, in the years ended December 31, 2002, 2001 and 2000, respectively. Interest paid and capitalized was RR12,998 million, RR16,711 million and RR19,923 million in those periods, respectively. We paid dividends of RR10,328 million, RR6,736 million and RR4,150 million for the years ended December 31, 2002, 2001 and 2000, respectively.

In the years ended December 31, 2002, 2001 and 2000, our borrowings exceeded our repayments of debt. Our borrowings net of repayments (including bonds and promissory notes) were RR41,803 million, RR27,684 million and RR15,789 million for the years ended December 31, 2002, 2001 and 2000, respectively. However, as a result of the inflation of our prior period debt balances due to the application of inflation accounting under IAS 29, our debt balances reported in our financial statements have declined significantly despite these net borrowings. See “—Debt obligations.” Our cash and cash equivalents decreased in 2000 and then increased in 2001 and 2002.

Our plan for 2003 is to finance our budgeted capital expenditures, interest and dividends mainly out of operating cash flows, which we are planning to increase through our cost cutting program and through higher domestic tariffs and higher realized prices for, and increased volumes of, the natural gas we export. In addition, we expect sales of our non-core assets to contribute to the financing of our budgeted capital expenditures, interest and dividends. At the same time, we intend to reduce our debt through net repayments, and improve our mix of indebtedness. We plan to accomplish this by retiring a portion of our short-term RR denominated debt (in particular our short-term RR denominated promissory notes) and by refinancing other RR denominated debt with long-term borrowings in convertible currencies. There can be no assurance that we will be able to implement this plan.

#### *Capital expenditures*

Total capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications) increased from RR162,991 million in 2000 to RR180,815 million in 2001 and to RR180,268 million in 2002.

Most of our capital expenditures during these periods were for transportation infrastructure and for production assets. Capital expenditures on transportation infrastructure comprised RR86,176 million, or 47.8% of total capital expenditures in 2002, increasing from RR81,631 million, or 45.1% of total capital expenditures in 2001 and from RR56,978 million in 2000 or 35.0% of total capital expenditures in 2000. In 2002 capital expenditures on production assets comprised RR76,985 million, or 42.7% of total capital expenditures in 2002, increasing from RR74,890 million in 2001, or 41.4% of total capital expenditures in 2001 and RR59,453 million in 2000, or 36.5% of total capital expenditures in 2000, in line with our strategy to develop new gas fields, including Zapolarnoye, in order to maintain stable production volumes for the next ten years, and thereafter to increase production.

Total capital expenditures (including cash advances to contractors and suppliers and excluding the effect of acquisitions of subsidiaries and reclassifications) by segment for the years ended December 31, 2002, 2001 and 2000 in constant RR terms amounted to the following:

	Year ended December 31,		
	2002	2001	2000
	(RR million)		
Transportation .....	86,176	81,631	56,978
Production .....	76,985	74,890	59,453
Refining .....	7,125	5,371	3,627
Distribution .....	1,663	378	454
Other <sup>(1)</sup> .....	8,319	18,545	42,479
<b>Total</b> .....	<b>180,268</b>	<b>180,815</b>	<b>162,991</b>

Note:

(1) Includes expenditures for service activities such as drilling and automobile transport and repair.

Budgeted total capital expenditures by segment for our principal transportation, production, refining and certain distribution and service subsidiaries for the year ended December 31, 2002 was, and for the year ending December 31, 2003 is, as follows (expressed in nominal RR):

	Year ended December 31, 2002 <sup>(1)</sup>	Year ending December 31, 2003
	(RR million) <sup>(2)</sup>	
Transportation .....	71,448	85,535
Production .....	65,567	93,486
Refining .....	2,220	3,183
Distribution .....	67	52
Other <sup>(3)</sup> .....	6,215	11,444
<b>Total</b> .....	<u>145,517</u>	<u>193,700</u>

Notes:

- (1) For 2002 expenditures by our consolidated Group, see the preceding table.
- (2) Expressed in nominal RR.
- (3) Includes expenditures for service activities such as drilling and automobile transport and repair.

The Board of Directors initially approved a capital expenditure budget for 2003 of RR179,800 million, including RR73,840 million in respect of capital expenditures related to the Yamal project (including RR21,128 million for construction of the Zapolarnoye-Urengoi pipeline, RR20,950 million for construction of a pipeline from the northern region of the Tyumen Oblast to Torzhok and RR13,929 million for the development of the Zapolarnoye gas field). In July 2003, the Board of Directors approved an increase in the budget for 2003 of RR13,900 million (including RR4,700 million for further development of the Zapolarnoye field, RR4,700 million for the Pestsovoye field and RR4,000 million for compressor stations). Our preliminary budget for capital expenditures for 2004 for our principal transportation, production, refining and certain distribution and service subsidiaries as approved by our Board of Directors in April 2003 is RR212,300, though the final allocation of these funds will not be determined until late 2003.

We expect that our future capital expenditures will be made primarily on developing and maintaining our pipeline network and production field development. We expect to maintain the current allocation of resources through 2006, at which point we anticipate increased expenditures in accordance with our plans to develop new gas fields. See "Business—Reserves and Production—Development Activities."

The actual amount and timing of capital expenditures are subject to change depending on economic and political conditions. We also may engage in strategic acquisitions if such opportunities arise.

*Debt obligations*

Our borrowings net of repayments were RR41,803 million, RR27,684 million and RR15,789 million for the years ended December 31, 2002, 2001 and 2000, respectively. However, as a result of the inflation of our prior period debt balances due to the application of inflation accounting under IAS 29, our debt balances are reported to have declined despite these net borrowings.

The overall decline in our borrowings as reported in our financial statements resulted from opposite movements in our long-term and short-term borrowings. Our long-term borrowings (including the current portion of long-term borrowings and long-term promissory notes payable), which are predominantly denominated in convertible currencies (mainly the U.S. dollar and the euro), are reported to have declined in constant RR terms at December 31, 2001 compared to December 31, 2000, and then to have increased at December 31, 2002. Our short-term borrowings (excluding the current portion of long-term borrowings but including short-term promissory notes payable), which are predominantly denominated in U.S. dollars as at December 31, 2002, 2001 and 2000, are reported to have increased in constant RR terms at December 31, 2001 compared to December 31, 2000, and then to have declined at December 31, 2002 compared to December 31, 2001, reflecting in part our strategy of refinancing short-term debt with long-term borrowings.

The following table shows our borrowings at December 31, 2002, 2001 and 2000 expressed in constant RR terms:

	December 31,		
	2002	2001	2000
	(RR million)		
<b>Long-term borrowings</b>			
Fixed interest rate borrowings	138,612	107,516	73,547
Weighted average interest rates for fixed rate borrowings	9.2%	9.1%	7.6%
Variable interest rate borrowings	207,754	220,910	270,578
Weighted average interest rates for variable rate borrowings	4.7%	6.4%	7.4%
<b>Total long-term borrowings</b>	<b>346,366</b>	<b>328,426</b>	<b>344,125</b>
RR denominated borrowings	31,548	39,767	33,106
Foreign currency denominated borrowings	314,818	288,659	311,019

The following table shows our actual U.S. dollar and euro denominated long-term borrowings (expressed in U.S. dollars) at December 31, 2002, 2001 and 2000 as well as the same balances expressed in constant RR terms:

	December 31,		
	2002	2001	2000
	(amounts in millions)		
<b>Long-term convertible-currency-denominated borrowings</b>			
U.S.\$ denominated (expressed in U.S.\$)	8,280	6,088	6,397
euro denominated <sup>(1)</sup> (expressed in U.S.\$)	1,625	2,275	1,677
<b>Total long-term convertible-currency-denominated borrowings expressed in U.S.\$</b>	<b>9,905</b>	<b>8,363</b>	<b>8,074</b>
<b>Total long-term convertible-currency-denominated borrowings expressed in constant RR</b>	<b>314,818</b>	<b>288,659</b>	<b>311,019</b>

Note:

(1) Converted at the euro to U.S.\$ exchange rate of 1.04, 0.88 and 0.93 as of December 31, 2002, December 31, 2001 and December 31, 2000, respectively.

Our actual long-term borrowings denominated in convertible currencies decreased significantly in 2000, as we refinanced a portion of our borrowings denominated in convertible currencies with short-term borrowings

largely denominated in convertible currencies. Since 2000, however, our actual long-term borrowings denominated in convertible currencies have grown, as we increasingly financed our capital expenditures with long-term borrowings in the capital markets and began refinancing our short-term obligations.

Since December 31, 2002, we have incurred additional indebtedness as described below.

In January 2003, we received an unsecured loan from Deutsche Bank AG of U.S.\$200 million for a two-year period at an interest rate of 9.1% per annum.

In February 2003 we received an unsecured loan from BNP Paribas Bank of euro 200 million for a one-year period at an interest rate of 9.8% per annum.

In February 2003 we received an unsecured loan from Morgan Stanley Bank AG in connection with the issuance of U.S.\$1.75 billion Loan Participation Notes due 2013 at an interest rate of 9.625% per annum.

In March and April 2003 we received an unsecured loan from DEPFA Investment Bank Ltd. of U.S.\$500 million due 2008 at an interest rate of 9.8% per annum.

In May 2003, Zarubezhgaz Erdgashandel GmbH ("ZGG"), a German subsidiary of ours, repaid the outstanding balance of a loan payable to an international banking consortium totalling euro 318 million. Simultaneously, ZGG received another loan from a different consortium for euro 280 million. The new loan bears interest at six-month EURIBOR plus a margin that varies from 1% to 2% depending on the debt service cover ratio. As of the borrowing date, the interest rate was 4.2% per annum. The loan is scheduled to be repaid from October 2003 to October 2007 (similar to the replaced loan).

In May and June 2003, we received two loans, each secured by a pledge of OAO Gazprom promissory notes, from Sberbank of RR4 billion each, each for a six month period and each at an interest rate between 10.5% and 12.5% (depending on the aggregate deposits that OAO Gazprom maintains at Sberbank).

In May and June 2003 we received unsecured loans from WestLB AG totalling \$215 million for a two-year period at an interest rate of LIBOR plus 4%.

In June 2003, our Board of Directors approved the issuance of RR10 billion face value of three-year bonds to be issued on the Russian capital markets with a semi-annual coupon of 4%. This issuance was registered by the Federal Commission for the Securities Market on August 5, 2003. In accordance with Russian legislation, we may issue the bonds within one year of the date of the registration.

In June 2003, we received an unsecured loan from Deutsche Bank AG for U.S.\$200 million for a three-year period at an interest rate of 8% per annum.

A significant portion of our long-term borrowings denominated in convertible currencies are collateralized by receivables under certain of our export contracts.

### Contractual obligations and other commitments

The following table shows our schedule of repayments for long-term borrowings excluding long-term promissory notes at December 31, 2002, expressed in constant RR terms (in millions of RR):

Schedule of repayment for long-term borrowings (excluding long-term promissory notes)	December 31, 2002
Within one year .....	97,763
Between one and two years .....	92,378
Between two and five years .....	132,010
After five years .....	24,215
	<u>346,366</u>

The amount of outstanding guarantees issued to third parties increased by RR7,423 million to RR87,707 million at December 31, 2002 as compared to December 31, 2001. Of the increase, RR15,368 million was due to guarantees issued to banks for construction of the offshore portion of the Blue Stream pipeline. As of December 31, 2002 our guarantees balance included RR6,213 million of guarantees issued by subsidiaries under contracts for purchases of equipment, construction and installation works.

We have significant obligations to supply gas under long-term contracts with European customers.

## BUSINESS

### Overview

We are the world's largest natural gas company, and the world's largest publicly-traded hydrocarbons company, in terms of reserves, production and transportation. We supply substantially all of the natural gas consumed in Russia, approximately 50% of the natural gas consumed in the six FSU countries to which we export our natural gas—Belarus, Estonia, Latvia, Lithuania, Moldova and Ukraine—and approximately 26% of the natural gas consumed in Europe. For the year ended December 31, 2002, our sales net of excise tax, value added tax, customs duties and sales tax were RR644,687 million (U.S.\$20.29 billion) and our operating profit was RR147,974 million (U.S.\$4.66 billion). As of December 31, 2002, we had total assets of RR2,480,699 million (U.S.\$78.06 billion) and total shareholders' equity of RR1,711,872 million (U.S.\$53.87 billion).

*Reserves.* We estimate our reserves using the Russian reserves system, which differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. As of December 31, 2002, we had Russian reserves system combined ABC1 reserves (including that portion of reserves attributable to us through shareholdings in our subsidiaries, entities in which we hold less than 50% and joint ventures) of 28.2 tcm of natural gas, 1,283.4 million tons (9.4 bbls) of gas condensate and 562.3 million tons (4.1 bbls) of crude oil, for a total of 179,483.0 mmboe. Most of our natural gas reserves are located in western Siberia and are tightly geographically concentrated. As of December 31, 2002, our three largest fields, Urengoiskoye, Yamburgskoye and Zapolyarnoye, all located in the Yamal-Nenets Region in western Siberia, accounted for 13.3 tcm of ABC1 natural gas reserves, or 47.2% of our total combined ABC1 natural gas reserves. The majority of our reserves outside of western Siberia are located in the Barents Sea and southern Russia.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has been evaluating our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had evaluated 20 fields with proved reserves of 16.3 tcm of natural gas, 282.0 million tons (2,067.1 mmbbls) of gas condensate and 7.7 million tons (56.2 mmbbls) of crude oil and probable reserves of 1.5 tcm of natural gas, 77.9 million tons (571.3 mmbbls) of gas condensate and 98.8 million tons (724.1 mmbbls) of crude oil. We believe that the 20 fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties.

*Exploration and Production.* As of June 30, 2003, we held 24 licenses for exploration and assessment (without development rights) with terms of up to five years, 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of between 18 and 23 years and 75 production licenses with initial terms of 20 to 25 years and with remaining terms of between 10 and 20 years. In the year ended December 31, 2002, we produced 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbbls) of gas condensate and 706,400 tons (5.2 mmbbls) of crude oil, for a total of 3,149.6 mmboe, as compared with 512.0 bcm of natural gas, 9.5 million tons (69.6 mmbbls) of gas condensate and 704,400 tons (5.2 mmbbls) of crude oil, for a total of 3,088.1 mmboe in the year ended December 31, 2001. Our production of natural gas in 2002 represented the first annual increase in our production since 1999. Our natural gas production represented approximately 87.7% of total natural gas production in Russia in 2002, as compared with 88.1% in 2001. Four of our production subsidiaries, Urengoigazprom, Yamburggazdobycha, Noyabrskgazdobycha and Nadymgazprom, together produced 91.8% of our natural gas in 2002, as compared with 92.5% in 2001. The Zapolyarnoye field, which came on stream in the third quarter of 2001, produced approximately 36.8 bcm of natural gas in 2002, or approximately 7% of our total natural gas production. In the three months ended March 31, 2003, we produced 143.1 bcm of natural gas, 2.6 million tons (19.0 mmbbls) of gas condensate and 196,100 tons (1.4 mmbbls) of crude oil, for a total of 862.7 mmboe, as compared with 140.4 bcm of natural gas, 2.4 million tons (17.8 mmbbls) of gas condensate and 181,800 tons (1.3 mmbbls) of crude oil, for a total of 845.5 mmboe, in the three months ended March 31, 2002.

*Transportation.* We own and operate the UGSS, which gathers, processes, transports, stores and delivers substantially all the natural gas sold in Russia. The UGSS comprises the world's largest high-pressure trunk pipeline system, with a total length of over 149,900 km (not including connecting pipelines), 256 compressor stations and 24 underground natural gas storage facilities. We control and manage the transportation of gas in the UGSS network from our central dispatch management center, located in Moscow. We transported 637.1 bcm and 630.6 bcm through the UGSS in 2002 and 2001, respectively, and 193.4 bcm and 179.4 bcm of natural gas in the three months ended March 31, 2003 and 2002, respectively. Although we use most of the UGSS capacity for the

transportation of the natural gas we produce or purchase, we also provide gas transportation services to third parties. Third-party use accounted for 12.7% and 12.9% of the total volume of natural gas supplied through the UGSS in 2002 and 2001, respectively.

As discussed more fully below, beginning in the late 1990s, we began acquiring interests in regional gas distribution companies. These regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

*Processing and Refining.* Our refining operations are carried out by our wholly-owned refining facilities and our majority-owned subsidiary Sibur. For a discussion of Sibur, see “—Refining.” Our refining facilities process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. The processing, stabilizing and refining of natural gas, gas condensate and crude oil is carried out by six integrated refineries that remove hazardous and corrosive substances from natural gas and gas condensate and produce a broad range of products. The refineries also stabilize and refine gas condensate and crude oil as a single crude oil and condensate mixture. Our refineries produce products derived from natural gas such as dry marketable natural gas, de-ethanized natural gas, liquefied natural gas, ethane, helium, sulfur and odorant. Stabilized and refined products derived from gas condensate and crude oil include stable gas condensate, gas condensate distillate, diesel fuel, furnace fuel oil and automobile gasoline. In 2002 our wholly-owned refining facilities processed and refined 33.8 bcm of our natural gas and 9.5 million tons (69.6 mmbbls) of our gas condensate and crude oil, for a total volume of 268.5 mmbbls, compared to 34.6 bcm of our natural gas and 10.1 million tons (74.0 mmbbls) of our gas condensate and crude oil, for a total volume of 277.7 mmbbls in 2001. We also provide gas condensate refining services for third parties.

*Exports.* We export our natural gas to Europe through our wholly-owned trading subsidiary, Gazexport. Our exports to Europe also accounted for approximately 27.4% and 27.2% of the volume of natural gas we sold in 2002 and 2001, respectively. Net sales of natural gas to Europe accounted for 63.3% and 69.4% of our net gas sales in 2002 and 2001, respectively. According to the statistical survey CEDIGAZ—“Natural Gas in the World—2002,” July 2003, we supplied 20% of the natural gas consumed in western Europe and 61% of the natural gas consumed in central and eastern Europe in 2002. Most of our exports are transported by pipeline through Ukraine and through the Yamal-Europe pipeline, part of which came on stream in 1999.

*Domestic sales.* We sell our products domestically through our wholly-owned subsidiary Mezhrefiongaz and its 50 regional marketing companies, 43 of which we controlled as of June 30, 2003, to large industrial consumers, to regional gas distribution companies and to household consumers. Historically, Mezhrefiongaz sold natural gas to third-party regional gas distribution companies and to large industrial consumers. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies that had failed to pay for the gas we sold them. As of June 30, 2003, we had controlling interests in 113, and non-controlling interests in an additional 52, of the approximately 320 regional gas distribution companies in Russia. When we acquire controlling interests in the regional gas distribution companies, we are able to capture the transportation and regional energy sales tariffs that are payable to them in respect of the transportation services they provide.

We are testing a strategy to streamline our domestic marketing operations by removing Mezhrefiongaz from our marketing chain and reassigning it primary responsibility for coordinating the collection of unpaid debts and developing our electronic trading market for gas. We believe that removing Mezhrefiongaz from the marketing chain may result in cost and tax savings and increase the efficiency of our marketing.

*New senior management.* Our annual general meeting of shareholders in June 2001 began a process that has led to the replacement of substantially all of the senior management team that ran our business since the early 1990s. Our new senior management team devoted its attention first to familiarizing itself with our extensive operations and to reacquiring certain assets disposed of in prior years. Our senior management is now engaged in the implementation of our strategy, including initiatives relating to the disposition of non-core assets, cost reductions, debt reduction, priorities for the development of gas fields and infrastructure, and our relationship with the Government. See “—Strategy” and “Certain Factors Affecting our Financial Condition and Results of Operations—Liquidity and Capital Resources.”

*Relationship with the Government.* The Russian Federation currently directly owns 38.37% of our shares, and representatives of the state hold six of the 11 seats on our Board of Directors. Moreover, our subsidiaries

hold approximately 16.26% of our shares (as of June 30, 2003), which they are entitled to vote as owners. In addition, we are a “natural monopoly” under the Russian Federal Law “On Natural Monopolies” No. 147-FZ dated August 17, 1995. As a result, the Government regulates and sets the prices we charge for gas supplied to the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations. At the same time, we play a significant role in Russia’s financial system and economy. According to our analyses, we accounted for approximately 15% of federal budget revenues, approximately 20% of foreign exchange earnings and approximately 8% of GDP of the Russian Federation in 2002. See “Risk Factors—Risks Relating to our Business—The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.”

### **Strategy**

Our main strategic objective is to maintain and strengthen our position as a leading gas company, both domestically and globally, by continuing to adapt to a rapidly changing business environment. To achieve this objective, we plan to:

- meet our production targets, including achieving and maintaining our natural gas production target of not less than 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030;
- ensure the effective, reliable and balanced supply of gas to Russian customers; and
- fulfill our long-term export contracts and inter-governmental agreements on gas supply.

In implementing these plans, we intend to apply the following principles:

- managing our business effectively, with a view to enhancing the profitability of our assets and reducing our costs;
- respecting our shareholders’ rights, including those of our major shareholder—the Russian Federation—as well as those of our minority shareholders;
- improving our corporate governance and the transparency of our business activities; and
- inculcating in our managers a sense of personal responsibility for the success of our business.

To implement these objectives, plans and principles, we have developed a number of strategic priorities, including:

**Developing cost-effective sources of supply from our existing reserves base to replace declines in our largest old fields.** Based on (i) our current export contract portfolio; (ii) anticipated future demand and prices domestically; and (iii) our reserves base, we believe that achieving and maintaining annual natural gas production of 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030 is strategically optimal. In light of expected continuing declines from three of our largest old west Siberian fields (Urengoiskeye, Yamburgskoye and Medvezhye), we intend to continue to invest in developing new production. Production from the Zapolyarnoye field began in 2001 and reached approximately 36.8 bcm in 2002. We plan to invest RR29.1 billion in 2004 and 2005 in developing the Zapolyarnoye field to full capacity. We intend to complete the development of Zapolyarnoye by 2006, after which its production should reach 100 bcm per year. We also intend to invest in new production from our other western and eastern Siberian, Far Eastern and southern Russian deposits and also in off-shore fields, including Obsk-Tazobskaya. See “—Reserves and Production—Development Activities.” To develop and maintain this production as efficiently as possible, we intend to work closely with international energy service companies and local institutes, both of which are essential to ensuring the best use of the latest technologies.

**Purchasing gas from Central Asia.** To help maintain our natural gas sales while production from our mature fields declines, we have signed long-term agreements to purchase natural gas from Turkmenistan and Uzbekistan. Purchases from GTK Turkmenneftegaz, the state oil and gas company of Turkmenistan, are expected to be 5-6 bcm in 2004, rise to 6-7 bcm in 2005, 10 bcm in 2006, 60-70 bcm in 2007, and reach 70-80

bcm annually from 2009 to 2028. Purchases from AK Uztransgaz, the state gas company of Uzbekistan, are expected to be 3.2 bcm this year, rise to 7 bcm in 2004 and reach 10 bcm annually from 2005 to 2012.

**Further developing transportation infrastructure to meet growing demand for gas and increase our flexibility in delivering gas to export and domestic markets.** To meet domestic gas supply requirements and our contractual export obligations, we are developing new pipeline construction projects, such as Yamal-Europe (Torzhok-Poland), Russia-Turkey (Blue Stream), Zapolyarnoye-Urengoi, northern areas of the Tyumen region-Torzhok, and Pochinky-Izobilnoye-North Stavropolskoye Underground Gas Storage. We expect demand for gas in our core export market (Europe) to grow, and our export obligations to those markets to grow as well. We have recently completed and launched the first stage of the Blue Stream pipeline from Russia to Turkey under the Black Sea, with planned capacity of 16 bcm per year. We have also announced plans to develop a north European pipeline, from northwest Russia (under the Baltic Sea) to the German shore, with capacity of 20 bcm per year. The anticipated cost of the north European pipeline is U.S.\$5.7 billion. Market research and planning for this project is currently underway. We are also proceeding with the Yamal-Europe project. The purpose of the project is to meet our contractual obligations to supply natural gas to Europe and to diversify export routes. Connecting the Yamal-Europe pipeline to the existing natural gas transportation network in Germany will allow for the full integration of this pipeline into the European gas network. In July 2003, our Board of Directors approved our participation in a consortium that plans to build the West-East pipeline across China. In addition, we are currently analyzing opportunities in Asian and other markets and the potential attractiveness of investments in gas production and transportation infrastructure, including liquified natural gas ("LNG") to meet anticipated demand growth and market opportunities in China, Japan, the United States and elsewhere.

**Enhancing our refining capabilities.** Our long-term refining strategy is to enhance our competitive position in Russia, the FSU and Europe, in particular through our subsidiary Sibur, one of Russia's leading petrochemical companies. We plan to modernize our gas processing and refining facilities at Sibur and elsewhere in order to increase our production of refined products overall (and our refining throughput) as well as the depth of our refining, allowing us to produce higher margin products.

**Enhancing profitability by taking advantage of the profitable and growing European export markets and by increasing cash generation from domestic and FSU sales.** In the year ended December 31, 2002, net sales of natural gas to Europe represented 27.4% of our total gas sales volumes and 63.3% of our net gas sales. We expect to increase our export sales volumes under our export contracts. This should allow us to enhance profitability. In addition, we intend to continue our current efforts to (i) improve the profitability of our domestic sales by lobbying the Government for price increases; (ii) improve payment discipline; and (iii) sell gas on the planned open domestic exchanges at prices above regulated prices.

**Continuing to develop strategic partnerships, both internationally and in Russia.** We have entered into various strategic partnerships, both domestically and abroad, and are continually seeking new opportunities to maximize the value of our assets through these relationships. We have established a joint venture, WINGAS GmbH ("WINGAS"), with BASF AG ("BASF"), that owns several pipelines in Germany and allows us to access that market further downstream than by delivering gas at the border only. We have also entered into strategic partnership agreements with Royal Dutch/Shell Group and with LUKOIL. LUKOIL produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries from 2002 to 2005. Under this strategic partnership agreement, in March 2003 we concluded an agreement with LUKOIL according to which LUKOIL will sell us gas it has processed at its Nakhodkinskii gas field starting from the fourth quarter of 2005. In June 2003, we concluded an agreement with LUKOIL on the development of hydrocarbon structures in the Caspian Sea. We have also entered into cooperation agreements with Rosneft, including agreements for the development of the Shtokmanovskoye and Prirazlomnoye fields. We anticipate entering into strategic agreements with other domestic producers in the future.

**Building our research and development capabilities further to ensure low-cost development, production and transportation of our gas to increasingly competitive markets.** We invest in research and development in a number of scientific and technical areas. In general, our research and development focuses on expanding our mineral resource base, developing hydrocarbon deposits in new regions (for example, the Ob-Taz Estuary, Arctic offshore fields and the Yamal Peninsula), maintaining the reliability of the UGSS, ensuring production in fields that are being developed, optimizing financial, investment and pricing policies and increasing ecological and industrial safety. We are focusing on several specific projects, including researching how to extract natural gas cost-effectively from the Yamal Peninsula fields and increasing the efficiency of gas transportation via our pipelines. We are also focusing on developing and implementing new technologies by which to deliver our gas, including LNG.

**Improving corporate governance by introducing best-practice management techniques and increased levels of transparency.** At our 2002 general meeting of shareholders, we approved a new corporate governance charter outlining procedures for the protection of shareholders' rights. In addition, our Board of Directors adopted resolutions on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) our shares, or interests or participations that we or our subsidiaries hold in other companies; (ii) loans or other borrowings having a value of greater than 0.3% of our unconsolidated net balance sheet assets determined under Russian accounting principles; and (iii) purchases or disposals of assets having a value greater than 0.3% of our unconsolidated net balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors. Our new management team, now consisting of an expanded and almost entirely new Management Committee, has also recently launched several initiatives to measure more accurately and improve our operating and financial performance, including programs related to optimizing domestic sales (including increasing cash collection), increasing internal controls over budget planning and execution, cost cutting and deployment of investment capital and debt management. Finally, we intend to continue our efforts with respect to increasing transparency through ongoing publication of interim and year-end IFRS accounts, improved levels of disclosure for public market financings and improved relations with our shareholders.

### **History and Privatization**

Prior to 1991, the Russian gas industry was regulated by the Council of Ministers of the gas industry. State-owned concern "Gazprom," which was formed in 1991, was the successor to the Council of Ministers of the gas industry. This state-owned concern formed the basis for our transformation into a joint stock company in accordance with Presidential Decree No. 1333 of November 5, 1992 "On the Transformation of the State Gas Concern Gazprom into Russian Joint Stock Company Gazprom" ("Decree No. 1333") and Resolution of the Council of Ministers of the Government of the Russian Federation No. 138 of February 17, 1993 "On the Establishment of Russian Joint Stock Concern Gazprom" ("Order No. 138"). Decree No. 1333 made us responsible for ensuring the efficient operation and development of the UGSS. Decree No. 1333 and the Presidential Decree of the Russian Federation No. 2116 of December 6, 1993 made us responsible for natural gas exports through Gazexport, our wholly-owned foreign trade subsidiary.

Decree No. 1333 charged us with the following principal tasks:

- ensuring a reliable supply of natural gas to customers in Russia and to foreign customers, and supplying gas abroad under inter-governmental and inter-state agreements;
- conducting a coordinated technical and investment policy for maintaining and further developing the UGSS;
- controlling the operation of the UGSS;
- financing and constructing natural gas pipelines and high pressure outlets to service areas of Russia where natural gas was previously unavailable; and
- providing access for any independent producer of natural gas to the UGSS in proportion to the amount of natural gas produced by such independent producer in Russia, subject to Government regulation of the natural gas price mechanism.

Our functions as owner of the UGSS and providing access to the UGSS are now regulated in accordance with the Federal Law No. 69 FZ dated March 31, 1999 "On Gas Supply in the Russian Federation" (the "Gas Supply Law").

The Council of Ministers of the Russian Federation approved our original Charter in Order No. 138, and we were registered as an open joint stock company on February 25, 1993. In 1993 and 1994 the Government issued us with licenses pursuant to the Subsoil Resources Law of 1992, granting us rights to exploit hydrocarbon reserves.

Decree No. 1333 provided for the transfer to us of 100% of the share capital of enterprises comprising the UGSS, controlling equity stakes (not less than 51%) in a number of other entities that had been reorganized into joint stock companies, the interests of State Gas Concern "Gazprom" in Russian and foreign enterprises, and other assets of State Gas Concern "Gazprom," the privatization of which was not restricted. Decree No. 1333 also provided for all rights and obligations of State Gas Concern "Gazprom" to inure to our benefit, including its rights to use underground deposits and natural resources, as well as its rights and obligations under contracts. Gas producing enterprises Yakutgazprom and Norilskgazprom, which had been part of State Gas Concern "Gazprom," were reorganized into separate joint stock companies independent from us.

Decree No. 1333, Directive No. 58-rp of the President of the Russian Federation dated January 26, 1993, our privatization plan and certain other legislative acts issued by the President and the Government provided for:

- 15.0% of our shares to be sold by closed subscription to employees and the management of the enterprises comprising the reorganized UGSS;
- 33.9% of our shares to be sold to Russian individuals in return for privatization vouchers (of which 0.87% has not been sold and remains within federal ownership);
- 40.0% of our shares to be fixed for three years in federal ownership;
- 1.1% of our shares to be transferred to joint stock company "Rosgazifikatsiya" (a supplier of natural gas to end consumers); and
- 10.0% of our shares to be purchased by us before June 1, 1993 at nominal value in exchange for privatization vouchers and to be placed in the securities market within one year to finance the development of natural gas fields.

Presidential Decree of the Russian Federation No. 399 of March 20, 1996 extended by a further three years the original period during which 40% of our shares were to be retained in federal ownership. Presidential Decree of the Russian Federation No. 887 of July 25, 1998 reduced the percentage of our shares to be retained in federal ownership to 35%, in anticipation of the sale of 5% of our shares. The Government subsequently sold 2.5% of our shares to Ruhrgas through a privatization auction in December 1998. Although our privatization plan envisaged the sale of the other 2.5% in the second quarter of 1999, these shares were not sold and continue to be owned by the Government.

The Gas Supply Law states that at least 35% of the UGSS owner's shares (i.e., Gazprom) must be retained in federal ownership for an indefinite period of time and may only be disposed of pursuant to federal law. These shares, together with the 0.87% of our shares not placed during the privatization program in 1993 and 1994 and the 2.5% of our shares not sold in the second quarter of 1999, comprise the 38.37% of our shares currently directly held by the state.

## **Corporate Structure**

We operate through a number of direct and indirect wholly- or majority-owned subsidiaries. In addition, we hold direct and indirect equity interests of between 21% and 50% in a number of other entities. Our subsidiaries include natural gas production subsidiaries; natural gas transportation subsidiaries; and subsidiaries responsible for a number of other activities, including technical supervision of our pipeline systems, oil and gas well drilling, research and development, data processing, banking and procurement.

We do not separately identify segments within our Group as we operate as an integrated business. However, information about our business can be analyzed based on five segments: (i) exploration and production (referred to in the notes to our financial statements as "production"); (ii) transportation; (iii) refining; (iv) marketing (referred to in the notes to our financial statements as "distribution"); and (v) other (which includes banking activities).

*Head office.* Our head office, located in Moscow, exercises a substantial degree of managerial and financial control over the operations of our subsidiaries. Head office functions include strategy, planning, external financing, financial reporting, allocation of financial resources and supervision of principal areas of operations, such as construction, drilling, production, transportation, some natural gas sales in Russia, and sales in the FSU and equipment procurement.

The dispatch management center, based at our head office, continuously monitors, controls and manages our natural gas transportation system throughout Russia. We also process operational information, including data on produced and transported natural gas volumes, at our head office. Our head office is also responsible for internal financial reporting for the preparation of consolidated accounts and for the monitoring of our cash receipts and cash requirements.

*Exploration and Production.* We operate our production segment through our production subsidiaries, which develop and operate our natural gas fields and related natural gas processing facilities. Our four principal natural gas production subsidiaries, Urengoi Gazprom, Yamburggazdobycha, Nadymgazprom and Noyabrskgazdobycha, are located in western Siberia. Together they accounted for 91.8% of our total natural gas production in 2002. Exploration and drilling operations are carried out by our wholly-owned subsidiary, Burgaz, which acts as both a direct service provider and a general contractor.

*Transportation.* We have a total of 19 wholly-owned natural gas transportation subsidiaries, of which five also produce and/or process natural gas. Our natural gas transportation subsidiaries are responsible for the transportation of natural gas along trunk pipelines and for the delivery of natural gas within their respective regions. As discussed more fully below, beginning in the late 1990s, we began acquiring interests in regional gas distribution companies, which own and operate medium- and low-pressure pipelines that transport gas to end consumers.

*Refining.* We operate our refining segment through our five principal refining subsidiaries, four of which are also engaged in natural gas production and transportation activities and engage in refining activities principally to remove corrosive substances from the natural gas they produce and to prepare it for transportation. In January 2001 we acquired 50.7% of the voting shares of Sibur, a leading seller of petrochemical products in Russia that is also involved in light hydrocarbons processing, and in April 2003 we increased our interest in Sibur to 75.7%. The acquisition of Sibur, one of Russia's leading hydrocarbon refining companies, has expanded our refining capacity. See "—Refining—Sibur."

*Marketing.* We export our products through our wholly-owned trading subsidiary, Gazexport. We sell our products domestically through our wholly-owned subsidiary Mezhhregiongaz and its 50 regional marketing companies, 43 of which we controlled as of June 30, 2003, to large industrial consumers, to regional gas distribution companies and to household consumers. Historically, Mezhhregiongaz sold natural gas to third-party regional gas distribution companies and to large industrial consumers. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies that had failed to pay for the gas we sold them. As of June 30, 2003, we had controlling interests in 113, and non-controlling interests in an additional 52, of the approximately 320 regional gas distribution companies in Russia. The regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

When we acquire controlling interests in the regional gas distribution companies, we are able to capture the transportation and regional energy sales tariffs that are payable to them in respect of the transportation services they provide.

We are testing a strategy to streamline our domestic marketing operations by removing Mezhhregiongaz from our marketing chain and reassigning it primary responsibility to collect unpaid debts and develop our electronic trading market for gas. We believe that removing Mezhhregiongaz from the marketing chain may result in cost and tax savings and increase the efficiency of our marketing. In accordance with this strategy, on a trial basis we concluded 15 contracts to sell gas directly to our regional marketing subsidiaries, and we will evaluate the results under these initial contracts in late 2003.

*Other.* We are engaged in various non-core activities that support our business. These activities include technical supervision of the pipeline system, construction activities supporting the operation of the UGSS,

research and development and non-core production activities such as the production of construction and telecommunications equipment. We also own Gazprombank, Russia's third largest bank measured by total assets, which meets most of our domestic banking needs, Gazfund, the largest private pension fund in Russia, which we use to provide pension services to our employees, and Sogaz, an insurance company that provides us with our insurance coverage.

We also own various other businesses that are not related to our core operations. These include Gazprom-Media, a holding company that owns various media production and distribution channels, other media companies and various other agricultural, civil, construction, medical care, insurance and telecommunications activities. In addition, we participate in a number of natural gas transportation and marketing joint ventures involving foreign partners. See "—Transportation—International Projects and Alliances for Transportation."

## Reserves and Production

We are the world's largest producer of natural gas, and of hydrocarbons generally. Our major reserves and production areas are western Siberia, southern Russia, the Volga region and northern European Russia. As of December 31, 2002, we had Russian reserves system A, B and C1 reserves (including that portion of reserves attributable to us through shareholdings in our subsidiaries, entities in which we hold less than 50% and joint ventures) of 28.2 tcm of natural gas, 1,283.4 million tons (9.4 bbls) of gas condensate and 562.3 million tons (4.1 bbls) of crude oil, for a total of 179,483.0 mmboc.

Based on an evaluation conducted by DeGolyer and MacNaughton under SPE International Standards, we had 16.3 tcm of proved natural gas reserves, 1.5 tcm of probable natural gas reserves and 17.8 tcm of combined proved and probable natural gas reserves in 20 of our fields as of December 31, 2002. The 20 fields also contained proved reserves of 282.0 million tons (2,067.1 mmbbls) of gas condensate and 7.7 million tons (56.4 mmbbls) of crude oil and probable reserves of 77.9 million tons (571.0 mmbbls) of gas condensate and 98.8 million tons (724.2 mmbbls) of crude oil as of December 31, 2002. We believe that the 20 fields audited by DeGolyer and MacNaughton are likely to contain most of our reserves which would be deemed proved or probable upon a full audit of our upstream properties.

As of June 30, 2003, we held 24 exploration and assessment licenses with terms of up to five years (without development rights), 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of between 18 and 23 years, and 75 exploration and production licenses with initial terms of 20 to 25 years and with remaining terms of between 10 and 20 years. We are in material compliance with all of our subsoil licenses.

In 2002, we produced 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbbls) of gas condensate and 706,400 tons (5.2 mmbbls) of crude oil, for a total of 3,149.6 mmboc, representing the first annual increase in our production of natural gas since 1999. In the three months ended March 31, 2003, we produced 143.1 bcm of natural gas, 2.6 million tons (19.0 mmbbls) of gas condensate and 196,100 tons (1.4 mmbbls) of crude oil, for a total of 862.7 mmboc.

We have budgeted approximately U.S.\$50 billion through 2010 to maintain and increase exploration, production, transportation and refining of natural gas as part of our plans to achieve and maintain annual natural gas production of not less than 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030. We have also entered into a number of strategic alliances and joint ventures with major western and Russian oil and gas companies to develop fields in the Barents Sea, the Caspian Sea, western Siberia, China and the Persian Gulf (South Pars).

The following table sets forth certain data for our production segment for the periods indicated:

	For the year ended or as at December 31,		
	2002	2001	2000
<b>Total natural gas production</b> (bcm) .....	521.9	512.0	523.2
<b>Depreciation</b> (million RR) <sup>(1)</sup> .....	28,436	30,023	28,172
<b>Capital Expenditure</b> (million RR) <sup>(1)</sup> .....	78,248	70,898	59,453
<b>Total Assets</b> (million RR) <sup>(1)</sup> .....	623,155	536,126	536,667

Note:

(1) Constant RR as of December 31, 2002 purchasing power.

## *Reserves*

We estimate our hydrocarbon reserves in accordance with the Russian reserves system. We have also had the reserves in 20 of our fields evaluated according to SPE International Standards by DeGolyer and MacNaughton, an independent petroleum engineering consulting firm, and this has yielded estimates of our proved and probable reserves as of December 31, 2002.

The Russian reserves system differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves, as described more fully below.

### *Russian Reserves System*

The estimation of reserves of natural gas, gas condensate and crude oil can be broken down into two components: (i) geological reserves, or the quantities of natural gas, gas condensate and crude oil contained in the subsoil and (ii) extractable reserves, or the portion of geological reserves whose extraction from the subsoil as of the date the reserves are calculated is economically efficient given market conditions and rational use of modern extraction equipment and technologies and taking into account compliance with the requirements of subsoil and environmental protection.

The Russian reserves system is based solely on an analysis of geological reserves. Explored reserves are represented by categories A, B, and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. We have included in this Offering Circular only information about our explored reserves, or reserves in categories A, B and C1.

*Category A* reserves are calculated on the part of a deposit drilled in accordance with an approved development project for the oil or natural gas field. They represent reserves that have been analyzed in sufficient detail to define comprehensively the type, shape and size of the deposit; the level of the hydrocarbon saturation; the reservoir type; the nature of changes in the reservoir characteristics; the hydrocarbon saturation of the productive strata of the deposit; the content and characteristics of the hydrocarbons; and the major features of the deposit that determine the conditions of its development (mode of operations, well productivity, strata pressure, natural gas, gas condensate and oil balance, hydro- and piezoconductivity and other features).

*Category B* reserves are calculated on the part of a deposit drilled in accordance with either a trial industrial development project in the case of a natural gas field or an approved technological development scheme in the case of an oil field. They represent reserves in which natural gas, gas condensate and oil content is determined on the basis of commercial flows from wells at various depths.

*Category C1* reserves are calculated based on the results of both commercial flows from operational wells and geological exploratory work, which are analysed to determine the type, shape and size of the deposit and the structure of the hydrocarbon bearing reservoir. The lithological content, reservoir type and characteristics, hydrocarbon saturation, liquid hydrocarbon displacement rate, level of hydrocarbon saturation of the productive strata, content and characteristics of the hydrocarbons under stratum and standard conditions productivity, hydro- and piezoconductivity of the stratum, stratum pressure, temperature, hydrocarbon balance and hydro-geological and geocryological conditions are analyzed according to test data from drilled wells, core analyses and comparisons with neighboring explored fields. Based on these analyses, preliminary data for trial industrial development in the case of a natural gas field or a technological development project in the case of an oil field is prepared.

For a description of C2, C3, D1 and D2 reserves and resources, see "Overview of the Russian Gas Industry and Its Regulation—Classification of Reserves."

### *SPE International Standards*

While the Russian reserves system focuses on the actual physical presence of hydrocarbons in geological formations, and reserves are estimated based on the probability of such physical presence, SPE International Standards take into account not only the probability that hydrocarbons are physically present in a given

geological formation but also the economic viability of recovering the reserves (including such factors as exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for the products, and other factors that influence the economic viability of a given deposit).

Under SPE International Standards, reserves are classified as “proved,” “probable” and “possible,” based on both geological and commercial factors. We have included in this Offering Circular information about our proved and probable reserves as of December 31, 2002, based on the evaluation by DeGolyer and MacNaughton of 20 of our fields.

*Proved reserves* include reserves that are confirmed with a high degree of certainty through an analysis of the development history and/or volume method analysis of the relevant geological and engineering data. Proved reserves are those that, based on the available evidence and taking into account technical and economic factors, have a better than 90% chance of being produced.

*Probable reserves* are those reserves in which hydrocarbons have been located within the geological structure with a lesser degree of certainty because fewer wells have been drilled and/or certain operational tests have not been conducted. Probable reserves are those reserves that, on the available evidence and taking into account technical and economic factors, have a better than 50% chance of being produced.

An evaluation of proved and probable natural gas reserves naturally involves multiple uncertainties. The accuracy of any reserves evaluation depends on the quality of available information and engineering and geological interpretation. Based on the results of drilling, testing and production after the audit date, reserves may be significantly restated upwards or downwards. Changes in the price of natural gas, gas condensate or oil may also affect our proved and probable reserves estimates, as well as estimates of our future net revenues and net present worth, because the reserves are evaluated, and the future net revenues and net present worth are estimated, based on prices and costs as of the audit date.

#### *Differences between SPE International Standards and SEC Standards*

DeGolyer and MacNaughton conducted its evaluation of our 20 fields using SPE International Standards, which differ in certain material respects from standards applied by the United States Securities and Exchange Commission (the “SEC Standards”). The principal differences include the following:

*Certainty of Existence.* Under SPE International Standards, reserves in undeveloped drilling sites that are located more than one well location from a commercial producing well may be classified as proved reserves if there is “reasonable certainty” that they exist. Under SEC Standards, it must be “demonstrated with certainty” that reserves exist before they may be classified as proved reserves.

*Duration of License.* Under SPE International Standards, proved reserves are projected to the economic production life of the evaluated fields. Under SEC Standards, oil and gas deposits may not be classified as proved reserves if they will be recovered after the expiration of a current license period unless the license holder has the right to renew the license and there is a demonstrated history of license renewal.

Accordingly, information relating to our estimated natural gas, gas condensate and oil reserves included in this Offering Circular is not indicative of information that would be reported under SEC Standards.

We currently do not intend to engage DeGolyer and MacNaughton to evaluate our reserves to SEC Standards. If at some point in the future we were to do so, the adoption of SEC Standards could potentially cause the amount of estimated proved natural gas, gas condensate and oil reserves reported by us in future periods to be lower than would otherwise be reported under SPE International Standards. A relative decrease in the amount of estimated proved developed natural gas, gas condensate and oil reserves reported by us could, if material, affect the amount of depreciation and depletion expense, impairment charges or certain other financial information derived from or relating thereto reported by us in our consolidated financial statements in future periods.

#### *Our Reserves*

We estimate that we had combined ABC1 reserves of 28.2 tcm of natural gas, 1,283.4 million tons (9.4 bbls) of gas condensate and 562.3 million tons (4.1 bbls) of crude oil, for a total of 179,483.0 mmboe as of

December 31, 2002. Our wholly-owned production subsidiaries held mineral resource licenses at December 31, 2002 for 25.9 tcm of combined ABC1 natural gas reserves, while associated companies held licenses for another 4.6 tcm of combined ABC1 natural gas reserves (of which 2.3 tcm was attributable to us in proportion to our actual shareholding). This included 3.5 tcm of natural gas reserves owned by enterprises in which we own 50% or more (with our proportionate share equaling 1.9 tcm) and 1.1 tcm owned by enterprises in which we own less than 50% (with our proportionate share equaling 0.4 tcm). Our total combined ABC1 natural gas reserves represent approximately 60% of the total combined ABC1 natural gas reserves in Russia. Most of our reserves are concentrated in the very large Yamburgskoye, Bovanenkovskoye, Urengoiskoye, Zapolyarnoye, Astrakhanskoye, Kharasoveiskoye, Medvezhye and Orenburgskoye fields, each with combined ABC1 natural gas reserves of at least 500 bcm. More than half of our combined ABC1 natural gas reserves are in Cenomanian deposits, which are characterized by low bedding depth, high delivery rates of wells and dry natural gas.

As of December 31, 2002, DeGolyer and MacNaughton had evaluated our proved and probable reserves at 20 of our fields. The following table shows as of December 31, 2002 our total combined ABC1 natural gas, gas condensate and crude oil reserves and our combined ABC1 and proved and probable natural gas, gas condensate and crude oil reserves in these 20 fields. Approximately 87% of the proved and probable reserves evaluated in accordance with SPE International Standards are located in western Siberia. The remaining 13% are located in the Orenburg and Astrakhan Regions.

The correlation between A, B and C1 natural gas reserves and proved and probable natural gas reserves may differ in the fields that have not yet been evaluated by DeGolyer and MacNaughton, and we may not have any proved or probable reserves in those fields. Moreover, the correlation may vary at different times for the same fields.

All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures unless otherwise noted.

<u>Total reserves</u>	<u>As of December 31, 2002</u>
	<u>Combined ABC1</u>
Natural Gas (bcm) .....	28,159.0
Gas Condensate (mmbbls) .....	9,407.3
Crude Oil (mmbbls) .....	4,121.7

<u>Reserves in our 20 fields audited to SPE International Standards<sup>(1)(2)</sup></u>	<u>As of December 31, 2002</u>			
	<u>Russian Reserves</u>	<u>SPE International Standards</u>		
	<u>Combined ABC1</u>	<u>Proved</u>	<u>Probable</u>	<u>Combined Proved and Probable</u>
Natural Gas (tcm) .....	24.5	16.3	1.5	17.8
Gas Condensate (mmbbls) .....	6,565.5	2,067.1 <sup>(3)</sup>	571.3 <sup>(3)</sup>	2,638.4 <sup>(3)</sup>
Crude Oil (mmbbls) .....	2,654.9	56.2 <sup>(3)</sup>	724.1 <sup>(3)</sup>	780.3 <sup>(3)</sup>

Notes:

- (1) Data presented here includes 90% of the reserves of the West Tarkosalinsk field. We do not hold a production license for this field; however, we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it. DeGolyer and MacNaughton included in its evaluation the West Tarkosalinsk field and credited 90% of the reserves of that field as our reserves, including proved and probable natural gas reserves of 203.0 bcm and 3.13 bcm, respectively, and combined ABC1 natural gas reserves of 234.9 bcm. When we estimate our combined ABC1 natural gas reserves, we also include 90% of the reserves of the West Tarkosalinsk field as our reserves.
- (2) Data presented here includes 100% of the reserves of the Gubkinskoye field, though we only hold a 51% proportionate interest through our subsidiary Purgaz. When we estimate our combined ABC1 natural gas reserves, we include only 51% of the reserves at the Gubkinskoye field as our reserves.
- (3) Amounts differ from those provided in the DeGolyer and MacNaughton letter attached as Appendix A because in this Offering Circular we use a conversion rate from metric tons to barrels of 1 ton = 7.33 barrels. Amounts in barrels provided in the DeGolyer and MacNaughton letter are calculated based on the specific gravities of each field.

The following table sets out our combined ABC1 and proved and probable natural gas reserves in our major fields as of December 31, 2002. All of our major fields, with the exception of the Shtokmanovskoye field, were included in the 20 fields evaluated by DeGolyer and MacNaughton.

The correlation between A, B and C1 natural gas reserves and proved and probable reserves may differ in the fields that have not yet been audited by DeGolyer and MacNaughton, and we may not have any proved or probable reserves in many of those fields. Moreover, the correlation may vary at different times for the same fields.

All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures.

In the period from December 31, 2001 through December 31, 2002, our combined ABC1 natural gas reserves increased by 11 bcm after accounting for production as a result of our exploration and other activities.

#### *Licenses*

As of June 30, 2003, we held:

- 24 exploration and assessment licenses with terms of up to five years (without development rights);
- 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years, and with remaining terms of mostly between 18 and 23 years; and
- 75 production licenses with initial terms of 20 to 25 years, and with remaining terms of mostly between 10 and 20 years.

We hold our subsoil licenses either directly or through our wholly-owned subsidiaries. The following table sets out which of our subsidiaries hold these licenses, and the number and type of licenses each of them held as of June 30, 2003:

	Type of License <sup>(1)</sup>			Total
	Exploration and Assessment	Exploration, Assessment and Production	Production	
Gazprom .....	4	2	0	6
Astrakhangazprom .....	0	1	1	2
Bashtransgaz .....	0	0	1	1
Kaspiygazprom .....	0	7	0	7
Kavkaztransgaz .....	0	0	13	13
Kubangazprom .....	0	4	35	39
Nadymgazprom .....	1	0	6	7
Noyabrskgazdobycha .....	1	0	4	5
Orenburggazprom .....	8	1	1	10
Severgazprom .....	7	0	4	11
Severneftegazprom .....	0	0	1	1
Surgutgazprom .....	0	0	1	1
Tyumentransgaz .....	0	0	3	3
Uraltransgaz .....	1	0	0	1
Urengoigazprom .....	2	0	3	5
Yamburggazdobycha .....	0	1	2	3
All Subsoil Users .....	24	16	75	115

Note:

(1) Licenses are categorized by type in accordance with the official indexing established at the time the license is issued. In practice, while a license may be officially indexed as a production license, it may also authorize exploration and assessment activities.

None of our exploration, assessment and production licenses or production licenses expires prior to 2012.

In accordance with federal legislation, licenses are issued by the federal subsoil management authority jointly with the authority of the relevant constituent entity of the Russian Federation. Most of our hydrocarbon exploration, assessment and production licenses were granted in 1993 through 1996 in accordance with the Subsoil Resources Law, as well as regulatory acts issued in 1992 that govern the licensing and use of the subsoil. The principal negotiations in obtaining licenses involve the timing for bringing fields on stream. The timing we propose is generally accepted.

The term of a license may be extended at the initiative of the subsoil user where the license holder complies with the terms of the license and where the development of the field requires completion or liquidation. The licenses impose certain obligations on us to provide employment, develop local infrastructure, pay local and federal taxes and meet certain requirements relating to environmental matters. Licenses may be suspended or revoked if we fail to comply with their terms. See "Overview of the Russian Gas Industry and Its Regulation—Russian Regulation." We believe we are in substantial compliance with the terms of all of our material subsoil licenses (although minor technical breaches may have occurred such as untimely submission of materials for official evaluation and preparation of development documents) and we expect to extend existing licenses at their scheduled expiration. As of the date of this Offering Circular, there have been no suspensions of production as a result of decisions by the relevant federal and regional authorities. See "Risk Factors—Risks Relating to our Business—Our licenses may be suspended, amended or terminated prior to the end of their terms, and we may not be able to obtain or maintain various permits and authorizations."

#### *Exploration Activities*

We are continually engaged in the exploration for new deposits of natural gas. This involves geological and seismic exploration in our existing license areas and fields, as well as exploration work in prospective new fields.

Approximately 76% of the 49 exploration and appraisal wells we have completed from 2000 through 2002 have yielded discoveries or positive appraisals confirming our estimates regarding hydrocarbons in place. In 2001, we completed 11 exploration and appraisal wells, of which seven yielded discoveries or positive appraisals confirming estimates regarding hydrocarbons in place. In 2002, we completed 22 exploration and appraisal wells,

of which 20 yielded discoveries or positive appraisals confirming estimates of hydrocarbons in place. Our current exploration strategy is to focus on the exploration of new fields and natural gas-bearing horizons in close proximity to fields that have already been developed and have processing and transportation infrastructure. We believe that this strategy will allow us to maximize the percentage of successful drilling at as low a cost as possible and to minimize the investment required for processing and implementation.

In 2002 we opened six new fields in western Siberia and in Krasnoyarsk Krai. We are currently in the process of estimating the reserves of these fields. We are currently conducting exploration activities in eastern Siberia, the Republics of Bashkortostan, Dagestan and Komi, and Arkhangelsk, Astrakhan, Orenburg, and Stavropol regions. The Government is currently considering a development and exploration program for eastern Siberia in which we would be responsible for coordinating the development of natural gas fields and transportation infrastructure in the region.

The following table sets out data by geographic region on the exploration wells we completed in the periods indicated:

#### *Production Activities*

We produce natural gas, gas condensate and crude oil from 75 fields located in various regions of the Russian Federation. The majority of our natural gas production is from the Cenomanian layer, which is located approximately 850 to 1,500 meters below the surface. Our main production regions are as follows:

*Western Siberia region (Urals federal district).* This is our main natural gas production region and is characterized by severe weather conditions. There are 12 active natural gas, gas condensate and crude oil fields in the Nadym-Pur-Taz region of western Siberia. Our wholly-owned production subsidiaries Nadyngazprom, Urengoigazprom, Yamburggazdobycha and Noyabrskgazdobycha operate in this region as well as Purgaz, of which we own 51% and have a proportionate share in its output, which together accounted for 92.5% of our natural gas, 51.4% of our gas condensate and 72.1% of our crude oil production in 2002. Four of our leading fields, Medvezhye, Urengoiskoye, Yamburgskoye and Zapolyarnoye, are located in this region.

*Northern European Russia (Northwestern federal district).* This region is characterized by severe weather conditions and has four active gas condensate fields which accounted for 0.6% of our natural gas and 3.8% of our gas condensate production in 2002. The operating production company for this region is Severgazprom.

*Southern Russia (Southern federal district)*. This area is comprised of two regions, Astrakhan Oblast and the northern Caucasus. The Astrakhan region contains one active gas condensate field, Astrakhanskoye, which accounted for 2.1% of our natural gas and 38.4% of our gas condensate production in 2002. The operating company for this field is Astrakhangazprom. These 57 fields in the northern Caucasus region accounted for 0.4% of our natural gas and 1.3% of our gas condensate in 2002. This production is carried out by Kubangazprom and Kavkaztransgaz.

*Volga region (Privolzhski federal district)*. There is one active oil and gas condensate field, Orenburgskoye, in the Volga region which accounted for 4.1% of our natural gas, 3.2% of our gas condensate and 27.2% of our crude oil production in 2002. The operating company for this field is Orenburggazprom, which produces, processes and transports natural gas.

*Eastern Siberia (Siberian federal district)*. Our subsidiary Vostokgazprom, of which we own 83.8% and have a 100% share in its production, produces natural gas from two gas fields in this area. In 2002, this area accounted for 0.3% of our natural gas, 1.9% of our gas condensate and 0.8% of our crude oil production subsequent to the commencement of production by Vostokgazprom in the second quarter of 2002.

*Natural Gas*. In 2002, we produced 521.9 bcm of natural gas (compared to 512.0 bcm in 2001) and accounted for approximately 87.7% of the natural gas produced in Russia. We plan to achieve and maintain annual production of not less than 530 bcm through 2013, increasing to 580 bcm by 2020 and 610 bcm by 2030.

*Gas Condensate*. We produced 9.9 million tons (72.6 mmbbls) of gas condensate in 2002 (compared to 9.5 million tons (69.4 mmbbls) in 2001). Our production of gas condensate has increased in recent years as we have commissioned new gas condensate fields, including new areas at the Yamburgskoye field. We intend to continue to increase our gas condensate production, particularly in the Yamburgskoye and Astrakhanskoye fields, and to bring on stream the Yen-Yakhinskoye field during 2003.

*Crude oil*. In 2002, we produced approximately 706,400 tons (5.2 mmbbls) of crude oil (compared to 704,400 tons (5.2 mmbbls) in 2001) from the crude oil perimeters of the fields at which we produced crude oil.

The following table sets out certain production data by region for our wholly-owned and certain other subsidiaries for the periods indicated. Most of our production activities are conducted through wholly-owned subsidiaries.

Notes:

- (1) Includes 90% of the production at the West Tarkosalinsk field. We do not hold a production license for this field, but we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (2) Includes our 51% share in natural gas produced at the Gubkinskoye field subsequent to the consolidation of Purgaz into our consolidated financial statements in April 2002. See "Certain Factors Affecting our Financial Condition and Results of Operations—Certain Acquisitions and Dispositions."
- (3) Constitutes 100% of the output of Vostokgazprom. We are entitled to 100% of the output of Vostokgazprom, though we hold only an 83.8% interest. Vostokgazprom commenced production in the second quarter of 2002.
- (4) Totals may not add due to rounding.

### Major Producing Fields

The following tables set out certain production and other information for our major producing fields in the periods indicated. The fields accounted for 87.2%, 88.1% and 88.2% of our total natural gas production in the years ended December 31, 2002, 2001 and 2000, respectively. The production licenses for these fields are held by wholly-owned subsidiaries.

	<u>Startup year</u>	<u>License expiry year</u>	<u>Peak production year</u>	<u>Peak annual production (bcm of natural gas)</u>

### Production Costs

Our production costs largely reflect the geological composition of the hydrocarbon deposit under production as well as the cost of operating and maintaining the supporting infrastructure in the surrounding region.

Current production costs at three of our leading fields, Medvezhye, Urengoiskoye and Yamburgskoye, will likely increase because we will be required to use more expensive extraction techniques to compensate for declining pressure in the deposits and to extract natural gas from deeper, more geologically complex deposits. Production costs at our fields in the Yamal Peninsula are also expected to be high. Our strategy is to mitigate these higher costs of production through the development and use of new technologies and through the low costs of production at our Zapolyarnoye field due to the geological structure of its deposit and the proximity of the field to existing supporting infrastructure.

### Development Activities

We are engaged in developing new fields for commercial production and aim to achieve and maintain annual natural gas production of not less than 530 bcm through 2010, increasing to 580 to 590 bcm by 2020 and 610 to 630 bcm by 2030. The development of our fields involves drilling and completing production wells, installing units for processing of natural gas for transportation and installing booster compressor stations to compensate for the loss of pressure in our fields with declining production.

The following table sets out data by region on the development wells we drilled in the period from 2000 to 2002 and for the three months ended March 31, 2003 and 2002, respectively:

	For the three months ended March 31,		For the year ended December 31,		
	2003	2002	2002	2001	2000
<b>Western Siberia (Urals federal district)</b> .....	45	42	176	117	39
<b>Northern European Russia (Northwestern federal district)</b> .....	0	0	0	0	0
<b>Southern Russia (Southern federal district)</b> .....	2	2	6	6	1
<b>Volga region (Privolzhski federal district)</b> .....	1	1	5	5	0
<b>Total</b> .....	48	45	187	128	40

There is typically a lag time of several years between discovery and development of a field. Our strategy is to develop fields only when required to meet our production plans.

The Urengoiskoye, Yamburgskoye and Medvezhye fields in the Nadym-Pur-Taz region of western Siberia have historically accounted for the bulk of our production. Production from these three leading fields has been declining in recent years and will continue to decline significantly in the years ahead as we deplete the natural gas deposits in these fields. See "Risk Factors—Risks Relating to our Business—If we fail to develop our undeveloped fields, our production levels will decline materially" and "—Production Activities." To achieve and maintain our targeted production levels, we plan to bring our Zapolyarnoye field to its targeted production level of 100 bcm per year, to finalize the completion of the Yubileinoe field, the Cenomanian layers of the Vnygayakhinskoye and Etyupurovskoye fields and the Kharvutinskoye area of the Yamburgskoye field, and to commence development of the Pestsovoye field, the Aneryakhinskoye area of the Yamburgskoye field, the Valanginian layers of the Yen-Yakhinskoye field no later than 2008. After 2008, we plan to maintain our production level by bringing on stream the Valanginian layer of the Zapolyarnoye field and the Bovanenkovskoye or Kharasaveiskoye field of the Yamal peninsula.

We are currently engaged in significant development projects including:

*Zapolyarnoye field.* This field is located adjacent to our main producing fields in the Nadym-Pur-Taz region and we are currently developing its Cenomanian layer, which is characterized by low bedding depth, high delivery rates of wells and dry natural gas. The field commenced commercial production in the third quarter of 2001 after we commissioned a gas treatment plant ("GTP") with a design capacity of 35 bcm, which enabled us to produce 7.1 bcm of natural gas during the remainder of 2001. In December 2002 we commissioned a second GTP, which increased the Zapolyarnoye field's total annual natural gas production capacity to 67.5 bcm. During 2002, we produced approximately 36.8 bcm of natural gas from the Zapolyarnoye field. After we commission a planned third GTP and complete development of the field, we expect annual natural gas production capacity to increase to approximately 100 bcm, by 2006. We expect to make additional investments of approximately RR29.1 billion in developing the field in 2004 and 2005. We anticipate that we will be able to sustain peak

production of 100 bcm per year for about a 12-year period starting from 2006. Development of the Zapolyarnoye field will partially compensate for the declining production in our mature fields and the overall decrease in our natural gas production in western Siberia.

*Yubileinoye field.* This field has been under development since 1993. In 2002, production from the field was 17.6 bcm, as compared to 17.4 bcm in 2001. We expect the field to become fully operational in 2003 with a production level of 20 bcm per year. We plan additional investments in the development of the field to be RR2.6 billion.

*Kharvutinskoye area of the Yamburgskoye gas condensate field.* This area is located in the Nadym-Pur-Taz region. It was brought on stream in 1996 and produced 8.6 bcm of natural gas in 2002, as compared to 4.5 bcm in 2001. We have made it a high priority to increase gas production in this area to 25 bcm by 2009, and have planned for capital investments of RR27.8 billion through 2007 for this project.

*Pestsovoye field.* The Pestsovoye field is located in western Siberia. We have planned capital investments of RR23.0 billion through 2004 to complete developing this field for commercial production and bring it on stream in 2004. The field is expected to reach a planned annual production capacity of 27.5 bcm of natural gas per year in 2007.

*Aneryakhinskoye area of the Yamburgskoye field.* This field is located in western Siberia. We have planned capital investments of RR14.7 billion through 2004 to develop natural gas production in this area of the Yamburgskoye field and anticipate bringing it on stream in 2004. This area is expected to reach its planned production capacity of 10 bcm of natural gas per year by 2008.

*Yen-Yakhinskoye field.* This field is located in western Siberia. We have planned capital investments of RR4.3 billion through 2004 to develop the Valanginian layer of this field and anticipate bringing it on stream in late 2003. We anticipate that this field will produce 5 bcm of natural gas per year by 2007.

*Vyngayakhinskoye and Etypurovskoye fields.* These fields are located in western Siberia. We have planned capital investments of RR11.0 billion through 2004 to develop these two fields. We anticipate that the Vyngayakhinskoye field will come on stream in 2003 and produce 5 bcm of natural gas per year starting in 2004 and that the Etypurovskoye field will come on stream in 2004 and produce 15 bcm of natural gas annually by 2006. See “—Reserves and Production—Projects and Alliances in Reserves and Production—Rosneft.”

*Yamal Peninsula.* The Yamal Peninsula is located to the north of, and is characterized by harsher climatic conditions than, the Nadym-Pur-Taz region. The Yamal Peninsula's explored reserves are in excess of 10 tcm and are concentrated primarily in the Bovanenkovskoye, Kharasaveiskoye and Kruzenshternovskoye fields. We hold production licenses for the Bovanenkovskoye and Kharasaveiskoye gas condensate fields and the Novoportovskoye crude oil field. In conjunction with the Yamal-Nenets regional administration, we developed a “Program for Comprehensive Commercial Development of Hydrocarbon Deposits on the Yamal Peninsula and under its Adjacent Waters” and submitted the plan to the Ministry of Energy of the Russian Federation (the “Ministry of Energy”) and other government agencies in April 2002. On November 27, 2002, the Government instructed various federal ministries to accelerate their review of the draft program to allow for its submission for final approval by the Government and to give the development program the status of a federal program, which could have beneficial tax implications for us or result in other Government exemptions. Development of hydrocarbon resources in the Yamal Peninsula is planned to commence from 2008. The natural gas production potential of the Yamal Peninsula's fields is estimated at 250 bcm per year for natural gas and a total of 10 to 12 million tons of liquid hydrocarbons. We anticipate that the production of natural gas from these fields will help enable us to reach our long-term production targets.

*Shtokmanovskoye and Prirazlomnoye fields.* The Shtokmanovskoye field is an off-shore natural gas field located in the Barents Sea north-west of the Yamal Peninsula, and the Prirazlomnoye field is an off-shore oil field in the Pechora Sea. We are currently preparing to develop these fields in a joint activity with Rosneft, Rosshelf (our subsidiary) and Sevmorneftegaz, a joint venture in which Rosshelf and Rosneft-Purneftegaz, a subsidiary of Rosneft, each have a 50% stake and which holds a production license for the Prirazlomnoye and Shtokmanovskoye fields. As a result of a further contribution to the joint activity by Rosneft in July 2003, beneficial interests in the joint activity are now held 50% each by us and by Rosneft. We and Rosneft have equal

obligations for financing the projects conducted by this joint activity. The Shtokmanovskoye field is being developed within the framework of a development plan that calls for a planned eventual annual production of 70 bcm of natural gas. We estimate that this development project will require investments of U.S.\$11.0 billion. The plans for the development of the Prirazlomnoye field contemplate maximum annual production of 7.55 million tons (55.3 mmbls) of oil with total investment of U.S.\$1.1 billion. The Shtokmanovskoye gas condensate field and the Prirazlomnoye oil field are both included on the list of fields that may be developed on a production sharing basis.

*Eastern Siberia and the Far East.* On July 16, 2002, the Government issued Decision No. 975-r appointing us to coordinate the implementation of a program for creating in eastern Siberia and the Far East a unified natural gas production, transportation and supply system taking into account eventual gas exports to China and other Asian-Pacific countries. On March 13, 2003, the Government issued a decision outlining the general principles for this program. In accordance with this program our subsidiary Krasnoyarskgazprom has received a license to develop the Sobinsk field, and is conducting geological exploration activities.

#### *Projects and Alliances in Reserves and Production*

*Central Asia.* As part of our strategy to maintain our natural gas sales while production from our mature fields declines, we have signed agreements to purchase natural gas from Uzbekistan and Turkmenistan. In December 2002 we signed an agreement with NKKh Uzbekneftegaz that provides for cooperation in purchasing natural gas in Uzbekistan, producing gas in Uzbekistan under the terms of a Production Sharing Agreement, conducting diagnostic assessments of trunk pipelines, and modernizing gas transport capacity. In 2003, we concluded an agreement with AK Uztransgaz to purchase natural gas between 2003 and 2012, and we started purchases from Uzbekistan in May 2003. Our purchases from Uzbekistan in 2003 are expected to total 3.2 bcm, with the quantity increasing to 7 bcm in 2004 and 10 bcm annually starting from 2005.

In April 2003, the Presidents of Russia and Turkmenistan concluded an agreement on cooperation in the gas sector for 25 years, coming into force from January 1, 2004. Pursuant to this agreement we have agreed with GTK Turkmenneftegaz ("Turkmenneftegaz") to purchase natural gas from Turkmenistan of 5-6 bcm in 2004, increasing to 6-7 bcm in 2005, 10 bcm in 2006, 60-70 bcm in 2007, and 70-80 bcm annually from 2009. The initial price for this gas is U.S.\$44 per mcm, of which 50% will be paid in cash and 50% in the form of technological equipment and services through 2006. We are also considering projects to improve and expand the transportation infrastructure in the region. See "—Transportation—International Projects and Alliances for Transportation—Central Asia."

While these purchases of natural gas are expected to constitute a significant proportion of our total sales volumes in the coming years, they are expected to decline in importance when we bring on stream new production fields after 2008, particularly in the Yamal Peninsula.

*Rosneft.* We entered into a framework agreement with Rosneft in October 2001 to create a joint venture company for the development of the Kharampurskoe, Vyngayakhinskoye, Etypurovskoe, Prirazlomnoe and Shtokmanovskoye fields, and work is currently being conducted in accordance with the terms of this agreement. In October 2002 we and our subsidiary Rosshelf amended the Rosshelf joint activity agreement pursuant to which we were developing projects for the Prirazlomnoye and Shtokmanovskoye fields. The amendment allowed a third company, Sevmorneftegaz, to participate in the development project and joint activity agreement (see "—Development Activities—Shtokmanovskoye and Prirazlomnoye fields"), and in November 2002 the production license for the Prirazlomnoye and Shtokmanovskoye fields was transferred to Sevmorneftegaz. In February 2003 Sevmorneftegaz made a non-cash contribution valued at RR4,334 million in exchange for a 48.9% stake in the Rosshelf joint activity pursuant to which we were developing projects for the Shtokmanovskoye and Prirazlomnoye fields. The effect of this transaction was to decrease our total interest in the Rosshelf joint activity from 99.1% to 62.9%. As a result of a further contribution to the joint activity by Rosneft in July 2003, beneficial interests in the joint activity are now held 50% each by us and by Rosneft.

*LUKOIL.* In November 2002, we entered into a strategic partnership agreement with LUKOIL. LUKOIL produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries. In March 2003 we concluded an addendum to this agreement, according to which LUKOIL will sell us gas it has processed at its Nakhodkinskii gas field starting from the fourth quarter of 2005, and totalling approximately 7 bcm in 2006. LUKOIL is constructing a connecting gas pipeline from the Nakhodkinskii field to the Yamburg compressor station, from where we will transport the gas to final customers.

In June 2003 we concluded a founding agreement on the organization of OOO TsentrCaspNeftegaz (“TsentrCaspNeftegaz”), a joint venture in which we and LUKOIL each hold a 50% stake. The joint venture has been established under the parameters of a Protocol to the treaty between Russia and Kazakhstan on the demarcation of the seabed in the northern part of the Caspian Sea. TsentrCaspNeftegaz will be authorized to act on behalf of the Russian Federation for the development of the Central geological structure in the Caspian Sea together with ZAO NK KazMunaiGaz on behalf of Kazakhstan in a joint venture in which each of the participants will hold a 50% stake. The Central geological structure is located within the Russian sector of the Caspian Sea, 150 kilometers to the east of Makhachkala. According to estimates by LUKOIL, this structure contains 521.1 million tons (3,819.7 mmbbls) of extractable oil reserves and 91.7 bcm of oil gas.

*Wintershall.* Under a strategic alliance agreement with BASF (see “—Transportation—International Projects and Alliances for Transportation”), we prepared a feasibility study for the joint development of the Achimovsk formations of the Urengoiskoye field jointly with Wintershall AG (“Wintershall”), a wholly-owned subsidiary of BASF. In July 2003 we concluded a framework agreement and constitutive documents on the creation of a joint venture between Gazprom and Wintershall for this project. Under this agreement, we established a joint venture in which we and Wintershall each have a 50% interest, Achimgaz, to develop the first experimental section of the Achimovsk layer of the Urengoiskoye gas and condensate field. At its plateau production levels we expect to produce approximately 8.3 bcm of gas and 2.8 million tons (20.5 mmbbls) of gas condensate annually, and a total of approximately 200 bcm of gas and 40 million tons (293.2 mmbbls) of gas condensate over its 43-year productive life. Developing this section will require approximately U.S.\$700 million in capital investment. The approximately U.S.\$90 million required for the pilot phase of the project will be financed by Wintershall, including detailed engineering work and experimental-industrial exploitation of the first part. If this first phase is successful, industrial development of the field will begin. Our investment will be made from profits generated by the project. We will purchase gas and gas condensate produced by Achimgaz in order to secure a single export channel, with prices to be determined based on the price of gas on the border of Germany and the Yamal-Nenets autonomous region.

*South Pars.* Since 1997, we have been involved in a project to develop the second and third phases of the South Pars field, located in the Iranian segment of the Persian Gulf, with a total cost of more than U.S.\$2 billion. We hold a 30% interest in the project. Our partners in this project are Total, which holds a 40% interest, and Petronas, which holds a 30% interest.

A contract with the National Iranian Oil Company (“NIOC”) provided for the construction and installation of two off-shore production platforms, drilling 20 exploration wells, laying two off-shore pipelines extending 105 km from the coast and construction of an on-shore gas processing facility. The construction of these facilities has been completed, and the gas production complex is now operational. NIOC started to make payments to the project partners for this work in the second quarter of 2002, with such payments scheduled to continue through 2009. The consortium partners continue to provide general technical assistance to NIOC in exploiting the facilities. When such technical assistance has been completed, project operations are to be transferred to NIOC.

The U.S. Department of State has issued a determination that the investment made by our partners and us in Iran’s South Pars gas and condensate field constituted activity that is covered by the Iran and Libya Sanctions Act and, at the same time, communicated its decision to waive sanctions under Section 9(c) of the Sanctions Act with respect to such investment. The waiver applies to activities in the South Pars field only, and not to any other activities we may conduct in Iran. See “Risk Factors—Risks Relating to Our Business—Violations of existing international or U.S. sanctions could subject us to penalties that could have an adverse effect on us.”

## Transportation

We own and operate the UGSS, a single, centrally-controlled system for natural gas preparation, transportation and storage. In 2002, we transported 637.1 bcm of natural gas. Transportation for third parties accounted for approximately 81.2 bcm, or 12.7%, of the natural gas transported by us, and generated RR18,028 million in revenues for us in 2002.

The following table sets out certain data for our transportation segment for the periods indicated:

	As of or for the year ended December 31,		
	2002	2001	2000
<b>Total volume transported (bcm)</b> .....	637.1	630.6	633.5
<b>of which for third parties (bcm)</b> .....	81.2	81.3	97.7
<b>Depreciation (million RR)<sup>(1)</sup></b> .....	58,051	62,533	61,377
<b>Capital expenditures (million RR)<sup>(1)</sup></b> .....	81,019	77,295	56,978
<b>Total Assets (million RR)<sup>(1)</sup></b> .....	1,212,772	1,240,431	1,246,366

Note:

(1) Constant RR as of December 31, 2002 purchasing power.

The UGSS includes the world's largest high-pressure trunk pipeline system, with over 149,900 km of pipelines (not including connecting pipelines). Gas transportation is powered by 256 compressor stations with a total capacity of approximately 42,600 MW. To help handle seasonal and other peak demand, we maintain 24 underground natural gas storage facilities with a storage capacity of approximately 62.0 bcm.

During the last ten years there has not been any material interruption of the flow of natural gas through the UGSS. We have been able to use the reserve capacity of the UGSS to meet our scheduled delivery commitments even when there have been minor disruptions in the system.

In Russia, the UGSS transports natural gas an average distance of approximately 2,400 km for domestic consumption and 3,400 km for export. Our dispatch management center, located in Moscow, controls and manages the UGSS and all natural gas transportation in Russia.

The pipeline system consumed approximately 47.7 bcm of natural gas in 2002, 87% of which was used to power its operations and the rest of which was accounted for by technological losses, including gas lost during maintenance work on the pipelines.

The following table sets forth data on the natural gas balance of the UGSS for the periods indicated (including natural gas in transit from Central Asia):

<u>Gas Balance Items</u>	For the three months ended March 31,		For the year ended December 31,		
	2003	2002	2002	2001	2000
	(bcm)				
<b>Total gas supplies, including</b> .....	<b>193.4</b>	<b>179.4</b>	<b>637.1</b>	<b>630.6</b>	<b>633.5</b>
Gazprom's own production <sup>(1)(2)</sup> .....	139.1	137.0	512.4	499.0	510.3
Gas from independent suppliers, including purchases by Gazprom and gas in transit from Central Asia .....	23.5	21.6	78.4	78.1	68.7
Withdrawals from underground storage <sup>(3)</sup> .....	29.3	19.8	40.4	48.3	53.3
Decrease in natural gas volume within UGSS pipelines <sup>(4)</sup> .....	1.5	1.0	5.9	5.2	1.2
<b>Total deliveries, including</b> .....	<b>193.4</b>	<b>179.4</b>	<b>637.1</b>	<b>630.6</b>	<b>633.5</b>
Additions to underground storage .....	0	0.4	45.7	46.8	60.3
Deliveries to customers in Russia .....	113.1	103.2	319.1	317.5	308.4
Deliveries to Europe .....	37.7	35.3	129.4	127.0	129.0
Deliveries to FSU countries .....	26.6	26.2	88.8	88.0	87.0
Technological needs of transportation system <sup>(5)</sup> .....	14.0	13.3	47.7	45.7	47.1
Increase in natural gas volume within UGSS pipelines <sup>(4)</sup> .....	2.0	1.0	6.4	5.6	1.7

Notes:

(1) Amounts are less than yearly total production because some of the natural gas we produce is used in northern cities near our fields and thus does not enter the UGSS.

- (2) Includes production of Purgaz and Vostokgazprom after their consolidation into our consolidated financial statements from April 1, 2002.
- (3) Includes gas of independent suppliers.
- (4) Represents changes in the volume of gas contained within the UGSS pipeline network.
- (5) Includes own consumption required to run natural gas compressor stations plus technological losses, including gas lost during repair work.

Our pipeline system transports natural gas principally from large western Siberian fields westward toward the more heavily populated regions of Russia, certain FSU countries and Europe. Other parts of the pipeline system originate in the natural gas fields of the southern Russia-Volga region, including the Orenburgskoye and Astrakhanskoye fields. Several large pipeline systems enter Russia from Kazakhstan, transporting natural gas from fields in Turkmenistan, Uzbekistan and Kazakhstan. In 2003, we concluded agreements to purchase and transport significant volumes of natural gas from Turkmenistan and Uzbekistan. See “—Reserves and Production—Projects and Alliances in Reserves and Production.”

All of the natural gas we export to Europe (except Finland and in part to Turkey) is transported outside of Russia through pipelines maintained by other countries, primarily Ukraine. We pay transit fees for the use of these pipelines, and in 2002 we paid NAK Naftogaz Ukrainy RR33,442 million in the form of 26.2 bcm of natural gas for the transit of our gas across Ukraine. The negotiations of these fees and access to these pipelines are important elements of our export business. Transit fees are a significant element of the natural gas price to end users in Europe. See “—Marketing.” Natural gas is transported to western, central and eastern European markets primarily through the system of trunk pipelines from Urengoi to Uzhgorod.

#### *Third-party Access to the UGSS*

Since 1998, independent Russian suppliers have been granted non-discriminatory access to existing UGSS capacity. We provide independent suppliers with access to the UGSS subject to the following requirements:

- availability of spare transport capacity for the time period proposed by the independent supplier;
- quality and technical parameters of the natural gas supplies;
- availability of input connections from suppliers and output connections to consumers and natural gas recovery and quality control stations; and
- availability of natural gas supplies and relevant customer demand for the proposed time period.

In 2002, a total of 28 independent gas suppliers, with a combined volume of gas transported of approximately 81.2 bcm, or 12.7% of the total volume of gas transported through the UGSS, had access to our transportation system. Itera was the largest third-party user of the UGSS in 2002, accounting for approximately 75% of such volumes. We currently transport gas from Turkmenistan to Ukraine under intergovernmental agreements between Turkmenistan and Ukraine that are scheduled to expire in 2006.

Tariffs charged to unaffiliated third parties for the transportation of natural gas through our trunk pipelines are established by the Federal Energy Commission and have recently been adjusted for fluctuations in the level of regulated wholesale prices for natural gas (which are also established by the Federal Energy Commission).

Tariffs charged to third parties for the transportation of Russian natural gas are set forth below:

- RR16.56 (RR13.80 until August 1, 2003) per mcm per 100 km (not including VAT) for shipments to consumers located within the Russian Federation and the Eurasian Economic Union (in particular, Belarus); and
- U.S.\$0.92 per mcm per 100 km (not including VAT) to be paid in RR at the exchange rate of the Central Bank of the Russian Federation as of the date of payment for shipments to consumers located outside the Russian Federation and the Eurasian Economic Union.

Tariffs charged for the transportation of gas from Central Asia belonging to third parties are unregulated.

Our gas transport sales were RR18.0 billion for the year ended December 31, 2002 and RR18.2 billion for the year ended December 31, 2001. Most of the third-party natural gas we transported through the UGSS during this period was for Itera and was transported under U.S. dollar-denominated contracts. A significant portion of this gas was sourced from Central Asia, and thus the tariffs were unregulated.

### Organization of the Transportation Segment

Our transportation segment is highly integrated to ensure reliable natural gas deliveries to distributors, export customers and consumers. The high level of integration of our pipeline network is achieved through the use of multiple and parallel pipelines, inter-connectors and underground storage facilities. We believe that within the past ten years there have been no significant supply interruptions to consumers, despite several pipeline failures, as a result of the use of available spare transportation capacity within the UGSS. The various subcomponents that constitute our integrated pipeline system are described more fully below.

- *High pressure trunk pipeline.* Our high pressure trunk pipeline transports natural gas from production areas to refining facilities. The trunk pipeline consists of multiple parallel lines of large diameter pipes (defined as pipes with diameters of 1,420 mm, 1,220 mm and 1,020 mm). The total length of these large diameter trunk pipelines is 91,900 km.
- *Regional and local distribution.* On a regional basis, our specialized gas transportation subsidiaries and a number of our production subsidiaries that operate high pressure pipelines organize the transportation of natural gas. Our gas transportation subsidiaries are responsible for the operation and maintenance of high pressure pipelines and for the transit of natural gas to regional and local distribution companies or directly to industrial end consumers. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies which had failed to pay for the gas we sold them. As of June 30, 2003, we held controlling interests in 113, and non-controlling interests in an additional 52, of the approximately 320 regional gas distribution companies in Russia. The regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.
- *Storage.* We operate 24 underground storage facilities in Russia. By the start of the 2003/2004 heating season, we expect to have stored 62.0 bcm of market-grade natural gas reserves in these facilities. We generally supply approximately 18% of the daily volume of natural gas consumed in Russia during the heating season from these facilities, and up to 26% of the daily volume on extremely cold days. We are currently constructing three new underground gas storage facilities. Aggregate investment in storage facilities in 2002, including operational drilling, amounted to RR4.3 billion. We plan to store 7.5 bcm, 2.5 bcm and 2.2 bcm of natural gas for the autumn and winter season of 2003/2004 in underground storage facilities in Ukraine, Germany and Latvia under our storage lease agreements for these facilities.

### Age and Maintenance

While construction of our gas pipeline system commenced 57 years ago with the first Saratov-Moscow pipeline, most of our gas pipeline system was constructed from 1970 to 1990. The age of the pipeline system, as of December 31, 2002, is shown in the table below (not including connecting pipelines):

<u>Years Since Construction</u>	<u>Length</u> (km)	<u>%</u>
Up to 10 years .....	22,200	15
11-20 years .....	62,100	41
21-33 years .....	43,400	29
Over 33 years .....	22,200	15
Total .....	<u>149,900</u>	<u>100</u>

We carry out annual capital repairs and preventative maintenance to improve the reliability of gas supply, technological and environmental safety and the efficiency of gas distribution. Maintenance work is preceded by gas pipeline inspections achieved through various means. In 2002, we inspected approximately 16,000 km of pipelines with in-the-pipe probes and checked approximately 34,500 km of trunk gas lines using electric measurements. As a result of these diagnostic checks, we undertook repairs to approximately 1,370 km of pipelines and 238 underwater crossings. As a result of such pipeline repairs and an improvement in the technology of our pipeline, the incidence of faults that involve interruptions or restrictions of gas supply dropped from 0.58 per 1,000 km of pipelines in 1985 to 0.21 per 1,000 km in 2002.

Under the auspices of the European Bank of Reconstruction and Development ("EBRD"), 13 western European companies in conjunction with our specialists conducted a two-year study of the UGSS between 1993

and 1995 to assess the system's condition and to formulate measures for improving its performance. The final report, which was based on an analysis of the operation of the UGSS in 1995, showed that, in most cases, the extensive branching structure of the UGSS, together with the availability of spare pipeline throughput capacity, enabled us to re-route or to increase natural gas flow in case of an emergency.

We are continually working to improve the UGSS. In 2002, we approved an investment program to refurbish a number of gas transportation facilities by the end of 2006. The main objectives of this program include:

- ensuring the supply of our projected volumes of gas, especially from the Nadym-Pur-Taz region, to both our domestic and export markets;
- ensuring the reliability of gas transportation and supply to gas consumers in Russia;
- improving industrial and ecological safety measures; and
- ensuring the efficiency of the transportation system through energy saving measures, optimizing our utilization of the system and lowering maintenance costs.

We anticipate that the program will require investments of RR230.6 billion from its inception in 2002 through 2006, of which RR155.7 billion or 67.5% will be spent on the restructuring of key technological facilities, such as compressor stations and pipelines, and RR74.9 billion or 32.5% on the restructuring of support systems facilities, such as our energy, water supply, communications and electrochemical protection infrastructure. For 2003, we have budgeted capital expenditures of RR85.5 billion on our transportation system, RR15.2 billion is for refurbishment of compressor stations, existing pipelines and system-wide facilities, and the balance of which will be dedicated to the expansion of the pipeline system.

Since the commencement of the present program in 2002, we have refurbished 36 gas pumping units with a total power output of 661 MW. The program has already allowed us to reduce our hazardous emissions by 908,000 tons in 2002 as compared to 2001, including a reduction of carbon monoxide emissions by 905,000 tons and of nitric oxide emissions by 3,000 tons. We anticipate that by 2006 the program will increase our gas transportation throughput capacity in the UGSS by 15 bcm per year, increase our gas export throughput capacity by 5 bcm per year, decrease the UGSS internal use of gas by 5 bcm per year and decrease hazardous emissions, including 45,000 tons per year of nitric oxides, in comparison to the corresponding amounts in 2002.

We outsource a significant amount of our pipeline construction work to third-party contractors through a tender process. Our tender committee awards contracts to the most competitive bidder. Stroytransgaz has been a successful bidder for a large number of our construction projects, due to the competitive terms that it has offered and its historical experience of successful cooperation with us. See "Certain Transactions."

#### *International Projects and Alliances for Transportation*

##### *Blue Stream Project*

In alliance with ENI, we have constructed a gas trunk pipeline from Russia under the Black Sea to Turkey. We estimate that annual volumes of natural gas exports along this pipeline will reach 16 bcm starting in 2010. The Italian engineering firm Saipem, partly owned by ENI, laid the undersea pipeline, and initial gas flow through the pipeline commenced in December 2002 with the first commercial deliveries to Turkey in February 2003.

In November 1998, we entered into a memorandum of understanding with ENI to participate on an equal basis in the Blue Stream Pipeline Company B.V., a special purpose vehicle for the construction, ownership and operation of a natural gas transportation system from Dzubga in Russia (including the nearby Beregovaya compressor station) to Samsun in Turkey (the "Offshore Section"). We and ENI each have a 50% stake in the Blue Stream Pipeline Company B.V., which receives transportation tariffs for the gas transported through the Offshore Section, and we and ENI share these proceeds in proportion to our respective ownership interests. This system is connected to our existing pipeline network through a new pipeline running from Izobylnoye to Beregovaya (the "Onshore Section"). The Onshore Section and the Offshore Section together constitute the Blue Stream Project.

The pipeline from Russia to Turkey is approximately 760 km long, of which about 390 km runs under the Black Sea. The Onshore Section of the Blue Stream Project is connected to the existing Gazprom pipeline network through a pipeline from Frolovo to Izobylnoye, which was commissioned in 1998.

The total construction cost of the Offshore and Onshore Sections of the Blue Stream Project was approximately U.S.\$3.3 billion. The value of the turnkey contract for the construction of the Offshore Section of the pipeline and the Beregovaya compressor station was approximately U.S.\$1.7 billion.

To arrange for our share of the third-party financing required for the Blue Stream Project, we and the Blue Stream Pipeline Company B.V. entered into three loan agreements secured by export receivables with consortia of western European and Japanese banks. The total amount of financing provided by these facilities is U.S.\$1.76 billion. For these facilities, we act as borrower and/or as guarantor for the Blue Stream Pipeline Company B.V. The financing also benefits from guarantees provided by the national export credit agencies of the lending banks' respective countries. As of June 30, 2003, U.S.\$1.73 billion of this financing had been drawn. The remainder of the financing for the Offshore Section of the Blue Stream Project was covered by the contributions of Gazprom, SNAM (ENI's subsidiary) and a U.S.\$866 million loan provided to the Blue Stream Pipeline Company B.V. under the guarantee of SNAM. The remainder of the financing required for the Onshore Section of the Blue Stream Project was provided from our own resources, including a euro 250 million loan that we received in February 2001 from a consortium of international banks led by Bayerische Hypo- und Vereinsbank AG.

In March 2003, Turkey halted deliveries through Blue Stream, in part due to an excess domestic supply resulting from an economic downturn. After negotiations failed to reach a satisfactory solution, as provided for under the relevant agreements we filed for international arbitration in July 2003. We subsequently reached a satisfactory arrangement with Turkey that we believe will address Turkey's concerns and suspended the arbitration proceedings. Shipments of gas through Blue Stream restarted in early August 2003. We are currently in the process of negotiating a long-term solution with Turkey with respect to the volume, timing and pricing of gas delivered through Blue Stream. We do not believe that the final resolution of this situation will have a material impact on our financing obligations or the economic viability of the Blue Stream Project.

#### *The Yamal-Europe Pipeline Project*

We are proceeding with the Yamal-Europe project in order to meet our contractual obligations to supply natural gas to Europe and to diversify export routes. Connecting the Yamal-Europe pipeline to the existing natural gas transportation network in Germany will allow for the full integration of this pipeline into the European gas network.

The Yamal-Europe pipelines are being constructed in such a way that it will be possible to utilize some of the segments and pumping station capacity in connection with existing gas transportation facilities as market demands require before the entire system comes on line.

During the first stage of development, the pipeline will transport natural gas from existing and new fields of the Nadym-Pur-Taz area of the Tyumen region. In the future, gas will be supplied from the Bovanenskoye field on the Yamal Peninsula.

The projected annual capacity for the first trunk pipeline is approximately 33 bcm. We have planned capital investments for 2004 and 2005 of RR26.7 billion for the construction of the portion of the pipeline from Torzhok, Russia to the Polish border.

In October 1999 the most important section of the first pipeline (approximately 1,230 km), connecting the Nesvizhskaya compressor station in Belarus to the German STEGAL pipeline and three compressor stations, became operational.

The completed facilities account for approximately 60% of the pipeline's potential capacity. Gas supplies via the Yamal-Europe pipeline started on November 7, 1999. In 2001 and 2002, 15.5 bcm and 18.1 bcm of natural gas, respectively, were transported through the pipeline. The German section of the pipeline is owned by WINGAS, our joint venture with Wintershall. The Polish section is owned by EuRoPol GAZ S.A. ("EuRoPol GAZ"), a joint venture in which we participate with PGNiG S.A. (a 100% state-owned Polish gas company), and Gaztrading (a Polish gas company). We own the section of the pipeline in Belarus.

The remaining pipeline section within Belarus is expected to be completed in 2003. In addition, we expect to complete construction of the gas lines of the pipeline from Torzhok to the Belarus border in by the end of

2004, and the construction of all compressor stations between Torzhok and the Polish border is scheduled for completion in 2005. Torzhok is a key pipeline junction north of Moscow where several of our trunk pipelines converge.

We are deciding, based on demand for natural gas in western Europe and the economic efficiency of exporting gas in this manner, whether to construct a second Yamal-Europe trunk pipeline.

#### *North European Pipeline Project*

We are currently engaged in market research and planning for the north European pipeline project. Construction of this pipeline would help to diversify and to provide flexibility in our export gas routes; increase our capacity to supply gas to western Europe, including Scandinavia, in order to fulfill long-term and future export contracts; and directly connect our gas transportation system in Russia with the gas transportation system in the EU.

The pipeline would have an annual capacity of about 20 bcm of natural gas in a single-line configuration and would run 1,189 km from Vyborg, Russia to Greifswald, Germany. We anticipate that construction of the pipeline will take approximately four years to complete once implementation of the plan has commenced. The anticipated cost of constructing the north European pipeline is approximately U.S.\$5.7 billion. As the pipeline will run directly from Russia to Germany, it will avoid the political and economic risks related to the reliability of transit deliveries through third countries. The EU has designated the project a high priority European project in the Trans-European Gas Network, which is expected to help us secure long-term financing for the project. Major oil and gas companies such as BP, Fortum Corporation, Gazunie, Norsk Hydro, Royal Dutch/Shell, Ruhrgas, Total and Wintershall have expressed interest in participating in this project.

#### *United Kingdom Interconnector Pipeline*

In 1994, we acquired 10% of the capacity of the Interconnector pipeline, a pipeline connecting Belgium and the United Kingdom that allows for gas flow in both directions as a result of our participation in Interconnector (UK) Limited. As a result of our 10% stake, our current annual quotas in the Interconnector pipeline are 2 bcm of natural gas from the United Kingdom to continental Europe and 0.85 bcm of natural gas from continental Europe to the United Kingdom. Beginning in 2005, we expect throughput to the United Kingdom via the Interconnector pipeline to increase in conjunction with an anticipated increase in natural gas imports by the United Kingdom. We have applied to participate in the capacity expansion, as a result of which our annual quota in the continental Europe to United Kingdom direction of the Interconnector pipeline would increase to 2.2 bcm.

In 2002 we distributed approximately 0.73 bcm of natural gas in the United Kingdom through our Interconnector pipeline capacity. In addition, we sold more than one bcm of natural gas on the Belgian spot market. In 2003, through our subsidiary Gazprom UK Trading Ltd. and our joint venture WINGAS we have concluded contracts to sell more than 1.2 bcm of natural gas in the U.K. market. In addition, we concluded contracts to sell more than 0.15 bcm on the Zeebrugge hub in Belgium. We intend to further develop our position on the British and Belgian gas markets by making use of our capacity in the Interconnector pipeline, but our future sales of gas on these markets will depend on market situations (primarily prices) as well as the availability of transportation capacity and uncommitted natural gas.

#### *West-East Project in China*

On July 4, 2002, together with Shell and ExxonMobil, we signed a framework agreement with Petro China on creating a joint venture on the West-East pipeline project across China. The project envisages the production of natural gas in the Sintszyan-Uigur region in China, the construction of a pipeline of approximately 4,000 km in length to Shanghai and the sale of gas in the eastern Chinese market.

The parties are in the process of negotiating the terms of the joint venture on the construction and operation of the pipeline as well as on the conclusion of gas production sharing agreements and on the establishment of a unified trading company responsible for gas sales to consumers. These negotiations are scheduled to be completed by the end of 2003.

### *Transbalkan Pipeline Project*

To increase natural gas supplies to the Balkan states, we have worked in association with various national companies on the expansion and modernization of the existing pipeline network in Ukraine, Romania and Bulgaria.

Gastransit, a joint Russian-Ukrainian-Turkish venture in which we have a 37% direct stake and an indirect stake through our 45% interest in Turusgaz, has implemented a program to expand transit capacity within Ukraine. The first stage, a compressor station at Tarutino within the operating transit gas pipeline Ananiev-Tiraspol-Izmail, was put into operation in 2001. The compressor station was constructed with the use of an EBRD loan and equity funds of shareholders (including Gazprom funds in the amount of U.S.\$9.62 million). The second phase, consisting of loopings within the Ananiev-Tiraspol-Izmail gas pipeline, was constructed with the use of an additional EBRD loan and, subordinated to it, loans from Gastransit shareholders (including Gazprom funds in the amount of U.S.\$8.1 million). The construction and expansion of transit capacities within Bulgaria and Romania have also been completed. The construction was carried out with Romanian and Bulgarian funds and a commodities credit from Gazprom.

This project has increased the throughput of the pipelines at the border with Turkey to up to 14 bcm per year to help ensure our contractual volumes of supply of Russian gas to the Balkan countries and Turkey.

### *Cooperation with Wintershall*

In 1990, we entered into a long-term cooperation agreement with Wintershall, on the basis of which WINGAS was organized in 1993. We hold a 35% stake in WINGAS, and Wintershall holds a 65% stake. WINGAS has participated in the construction of and owns the following system of trunk pipelines:

*STEGAL Pipeline.* The STEGAL gas pipeline was completed in 1992. The pipeline is 323 km long and has a design capacity of 12 bcm per year. It passes through Germany and connects the MIDAL gas pipeline with the Czech natural gas pipeline system.

*MIDAL Pipeline.* Built in 1993, the MIDAL Pipeline has a total length of 642 km. Its capacity is 13 bcm per year. It goes through the territory of Germany and connects a natural gas storage facility at Emden (on the border with The Netherlands) with a BASF chemical plant in Ludwigshafen.

*WEDAL Pipeline.* The 314 km WEDAL pipeline became operational at the end of 1998, linking the WINGAS pipeline network with the Belgian pipeline system and the Interconnector pipeline. Initially, the WEDAL pipeline was designed to transport gas produced in the United Kingdom under contracts between WINGAS, British Gas and Conoco and to provide WINGAS with a secure supply of gas from diverse transportation sources. Gas supplies from continental Europe to the United Kingdom may also be carried through the Interconnector pipeline.

*YAGAL Pipeline.* At the end of 1999, the 340 km YAGAL pipeline, with a design capacity of 29 bcm per year, was put into operation. This pipeline connects the Yamal-Europe pipeline with the STEGAL pipeline. The completion of this pipeline enabled us to expand our supplies of natural gas to European countries and improved the reliability and flexibility of supplies of Russian natural gas to the European market.

### *Central Asia*

We have also concluded long-term strategic cooperation agreements with respect to gas exports from Uzbekistan and Turkmenistan. In addition to agreements to purchase natural gas that is produced in both Uzbekistan and Turkmenistan (see “—Reserves and Production—Projects and Alliances in Reserves and Production”), we are considering joint projects to modernize and expand the gas transport capacity in the region and to promote cooperation in gas transportation between Russia, Kazakhstan, Turkmenistan and Uzbekistan.

### **Refining**

Our refining operations consist of the operations of our principal wholly-owned refining facilities and our majority-owned subsidiary Sibur.

Our refining facilities process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. The processing, stabilizing and refining of natural gas, gas condensate and crude oil is carried out by six integrated refineries that remove hazardous and corrosive substances from natural gas and gas condensate and produce a broad range of products. In the year ended December 31, 2002, our wholly-owned refining facilities processed and refined 33.8 bcm of our natural gas and refined 9.5 million tons (69.6 mmbbls) of our gas condensate and crude oil for a total of 268.5 mmboe, compared to 34.6 bcm of our natural gas and refined 10.1 million tons (74.0 mmbbls) of our gas condensate and crude oil for a total of 277.7 mmboe in the year ended December 31, 2001.

Our total annual processing and refining capacity at our wholly-owned refining facilities as of December 31, 2002 was 49.5 bcm of natural gas and 20.8 million tons (152.5 mmbbls) of gas condensate and crude oil. We sell our refined products domestically and in the FSU and Europe.

We operate our refining segment through Astrakhangazprom, Orenburggazprom, Severgazprom, Surgutgazprom and Urengoigazprom, which are wholly-owned subsidiaries that combine refining with either production or transportation. As of January 1, 2003, we have centralized our refining segment and all of our refinery assets are directly held by OAO Gazprom. We have also discontinued the practice of selling our raw products to and then purchasing refined products from the refineries in favor of tolling arrangements with our refineries. We expect that these changes will result in considerable tax savings and the centralization of our cash flows.

Our natural gas and gas condensate refineries are sophisticated plants that combine chemical facilities with petroleum processing and refining facilities. Each of our refineries is directly linked to gas or gas condensate fields, and among their principal functions is to process natural gas and gas condensate produced at our Astrakhanskoye and Orenburgskoye fields for transportation via our trunk pipelines. Our refineries produce such products as dry market-grade natural gas, stabilized gas condensate, liquefied natural gas, technical carbon, diesel fuel and motor gasoline from natural gas and gas condensate. Some of our plants have implemented unique technologies for treating natural gas with a high sulfur content (for example, the Astrakhan plant treats natural gas with hydrogen sulfide and carbon dioxide content of 15-25%), and produce odorants, technical carbon and gaseous and liquified helium.

We plan to increase our processing of gas condensate and crude oil and more fully to utilize our excess processing and refining capacity, both through our majority-owned subsidiary Sibur and by partnering with western oil companies to further develop certain of our gas condensate fields. See “—Reserves and Production—Projects and Alliances in Reserves and Production.” We also plan to increase the volume of refined products we produce. For example, we plan to increase our annual production of automobile gasoline and jet fuel at our wholly-owned facilities to 2.3 million tons and 240,000 tons, respectively, by 2006.

Through 2006, we plan to invest approximately RR38 billion to reconstruct and refurbish equipment at our wholly-owned natural gas and gas condensate refineries and to construct new refineries. We anticipate that these improvements will increase our refining capacity to 52.5 bcm of natural gas per year by 2005. We also intend to increase the amount of gas condensate and crude oil we refine to 11.2 million tons (82.1 mmbbls) per year by 2005 by increasing the capacity of refinery facilities that have extra feedstock available. We also anticipate increasing the initial processing of our gas condensate and crude oil to 6.6 million tons (48.4 mmbbls) per year by 2005.

The following are our major refineries:

*Astrakhan Gas Refinery.* This refinery is operated by our subsidiary Astrakhangazprom. It is an integrated refinery, the first stage of which came on-stream in 1986 and the second in 1997. The Astrakhan Gas Refinery processes natural gas with a high sulfur content and gas condensate extracted from the Astrakhan gas condensate field and it receives all of its feedstock from this field. The plant comprises two lines, with a total annual capacity of 12.0 bcm of natural gas and an annual gas condensate stabilization capacity of 7.3 million tons (53.5 mmbbls). In 2002, the refinery processed 10.9 bcm of our natural gas and 3.8 million tons (27.9 mmbbls) of our unstable gas condensate. The refinery's products include dry market-grade natural gas that is fed into trunk pipelines; natural gas-derived sulfur; motor gasoline; diesel fuel; furnace fuel oil; and industrial-grade propane/butane mixture. All of the refinery's products were sold domestically in 2002. As part of our strategy to deepen our feedstock processing, we plan to build polyethylene production facilities that will enhance the overall efficiency of the Astrakhan refinery. We plan to invest RR7.1 billion by 2006 to develop and refurbish this refinery.

*Orenburg Gas Refinery and Orenburg Helium Plant.* Our Orenburg gas chemical complex consists of two facilities, the Orenburg Gas Refinery and the Orenburg Helium Plant.

The Orenburg Gas Refinery is operated by our subsidiary Orenburggazprom. It came on-stream in 1974 and is one of the world's largest gas refineries. It processes natural gas with a high sulfur content and gas condensate. The first stage of this plant became operational in 1974, the second in 1977 and the third in 1978. The refinery has an annual capacity of 37.5 bcm of natural gas and a capacity of 6.2 million tons (45.4 mmbbls) of gas condensate per year. In 2002 the refinery processed 21.5 bcm of our natural gas and 511 thousand tons (3.75 mmbbls) of our gas condensate and crude oil, as well as supplies from other producers. The refinery's products include dry market-grade natural gas; stabilized gas condensate; liquefied natural gas; multi-component hydrocarbon distillate (MHD); natural gas-derived sulfur; and odorants. We plan to invest RR3.6 billion by 2006 to develop and refurbish this refinery.

The Orenburg Helium Plant is operated by our subsidiary Orenburggazprom. It is one of Russia's largest producers of helium. The first stage of the plant became operational in 1974, the second in 1975 and the third in 1978. The refinery has an annual capacity of 15 bcm of natural gas and it processed 13.9 bcm of our natural gas in 2002. The plant's products include dry market-grade natural gas; gaseous and liquefied helium; ethane; multi-component hydrocarbon distillate (MHD); and liquefied natural gas. All of the plant's refined products were sold domestically in 2002. We plan to invest RR7.4 billion by 2006 to develop and refurbish this processing complex.

*Sosnogorsky Gas Refinery.* This refinery is operated by our subsidiary Severgazprom. It came on-stream in 1946 and has an annual capacity of 1.5 bcm of natural gas and 1.25 million tons (9.2 mmbbls) of unstable gas condensate per year. In 2002, the refinery processed 1.4 bcm of our natural gas and 366,000 tons (2.7 mmbbls) of our gas condensate and crude oil. The refinery's products include dry market-grade natural gas; liquefied natural gas; stabilized gas condensate; motor gasoline; and technical carbon. In 2002, the refinery exported 61% and 64% of the stable gas condensate and liquified gas, respectively, that it refined. The rest of the refinery's output was sold domestically. Over the past three years, the refinery has been refurbished both with internally generated funds from Severgazprom and with borrowings in the amount of euro 108 million which was used for the reconstruction of the refinery's gas refining facilities. We plan to invest RR1.2 billion by 2006 to reconstruct the refinery's facilities. We anticipate that these projects will enable us to significantly increase the depth of feedstock processing and the percentage of liquefied gas, such as propane and butane, that we can extract from natural gas.

*Urengoi Condensate Preparation Plant and Surgut Condensate Stabilization Plant.* Our western Siberian processing and refining complex consists of two facilities, the Urengoi Condensate Preparation Plant and the Surgut Condensate Stabilization Plant.

The Urengoi Condensate Preparation Plant is operated by our subsidiary Urengoi-gazprom. The first stage of this plant came on-stream in 1985 and the second in 2001. The plant's main function is to prepare condensate for transportation to the Surgut Condensate Stabilization Plant. With the completion of the second stage, the plant now has an annual capacity of 12 million tons (88.0 mmbbls) of gas condensate. The plant had a throughput of 4.9 million tons (35.7 mmbbls) of our gas condensate in 2002, in addition to gas condensate from third parties. The plant's products include de-ethanized gas condensate (which is used as feedstock for the Surgut Condensate Stabilization Plant); motor gasoline; and diesel fuel. We have budgeted investments of RR700 million by 2006 for an overhaul of the facility.

The Surgut Condensate Stabilization Plant is operated by our subsidiary Surgutgazprom. It processes a crude oil and gas condensate mixture produced from the western Siberian fields and came on-stream in 1985. It has an annual capacity of approximately 8 million tons (58.6 mmbbls) of de-ethanized condensate, and in 2002 processed 3.7 million tons (27.1 mmbbls) of our gas condensate, as well as a significant quantity of gas condensate from third parties. The refinery's products include stabilized condensate; motor gasoline; and diesel fuel; liquefied gases; and pentane-hexane fraction. In 2002, 14.1% and 4.5% of the plant's stable gas condensate output and liquefied gas output, respectively, were exported.

The Surgut Condensate Stabilization Plant is currently operating at close to full capacity, while the Urengoi Condensate Preparation Plant, which provides it with its feedstock, is working under its capacity. A bottleneck may occur at the refinery in the next several years as more independent producers utilize the Surgut Condensate Stabilization Plant. To mitigate this risk, we have budgeted investment expenditures of RR3.1 billion by 2006 to further develop the capacity of the Surgut Condensate Stabilization facility.

The table below sets forth data on our six refining plants and the volume amounts of key products that we produced in 2002 from our raw materials:

	Astrakhan Gas Refinery	Orenburg Gas Refinery	Orenburg Helium Plant	Sosnogorsky Gas Refinery	Urengoi Condensate Preparation Plant	Surgut Condensate Stabilization Plant	Total <sup>(1)</sup>
<b>Year built</b> .....	1986	1974	1975	1946	1985	1985	
<b>Production Data for the Year ended December 31, 2002</b>							
<b>Raw material processing:</b>							
Gas processing (bcm) .....	10.86	21.47	15.27	1.44	—	—	33.77 <sup>(2)</sup>
Processing of crude oil and gas condensate (thousand tons) .....	3,800	511	—	366	4,864	3,688	9,541 <sup>(3)</sup>
<b>Initial processing of gas condensate and crude oil (thousand tones)<sup>(4)</sup> .....</b>	<b>2,254</b>	<b>—</b>	<b>—</b>	<b>50</b>	<b>426</b>	<b>2,471</b>	<b>5,201</b>
<b>Post-process product:</b>							
Dry natural gas (bcm) .....	5.59	—	19.47	1.13	0.57	—	26.76
Liquefied natural gas (thousand tons) .....	278	196	452	122	18	868	1,935
Ethane (thousand tons) .....	—	—	290	—	—	—	290
Stable condensate (thousand tons) .....	607	548	—	245	497	784	2,681
Gasoline (thousand tons) .....	965	—	—	22	9	396	1,392

De-ethanized natural gas (thousand tons) .....	—	—	—	—	216	732	948

Notes:

- (1) Totals may not add due to rounding.
- (2) Total does not add because 21.47 bcm of natural gas initially processed at the Orenburg Gas Refinery is thereafter further processed at the Orenburg Helium Plant. Although this amount is processed by both facilities, it is counted only once in the total.
- (3) Total does not add because 4,864 thousand tons of gas condensate and crude oil initially processed at the Urengoi Condensate Preparation Plant is thereafter further refined at the Surgut Condensate Stabilization Plant. Although this amount is processed by both facilities, it is counted only once in the total.
- (4) Refined gas condensate and crude oil product that may be subject to further refining.

*Novy Urengoi Chemical Complex.* The technical plan for the Novy Urengoi Chemical Complex was designed in cooperation with Salzgitter Anlagenbau and Linde, with some participation by BASF. Most of the equipment necessary to build the Novy Urengoi Chemical Complex in western Siberia was delivered in 1997. The Novy Urengoi Chemical Complex, which is not yet operational, is designed to process 1.62 million tons of de-ethanized natural gas per year, yielding 340,000 tons of ethylene to be used as feedstock for 300,000 tons of high pressure polyethylene, and is also designed to produce annually up to 280,000 tons of long distillate of light hydrocarbons, as well as up to 920,000 tons of methane gas. We have planned to invest approximately RR15 billion in completing this facility through 2006, but have not yet obtained financing for these investments.

*Sibur*

We acquired 50.7% of the voting shares of Sibur in January 2001, and an additional 25% in April 2003 through the acquisition of several petrochemical companies. Sibur owns, through various subsidiaries, and operates natural gas processing and refining plants in western Siberia and Perm and is a market leader in refined hydrocarbon products. In 2002, Sibur refined 8.2 bcm of oil gas and processed 3.0 million tons of feedstock from other hydrocarbons, compared with 11.8 bcm of oil gas and 5.5 million tons of other hydrocarbon feedstock in 2001. The decline in throughput in 2002 is attributable to the external supervision proceedings that occurred during that year. For the year ended December 31, 2002, Sibur had sales of RR36.0 million and a net loss of RR3.7 million, in comparison to sales of RR57.2 million and a net loss of RR23.7 million for the year ended December 31, 2001.

In early 2002, as a result of bankruptcy proceedings initiated by us, a Russian court imposed external management over Sibur. The imposition of external management contributed to the decline in Sibur's production in 2002. In September 2002, Sibur reached an amicable settlement agreement with its creditors which was subsequently approved by a court, and Sibur emerged from bankruptcy. Under the settlement agreement, Sibur's debts were restructured with repayment to occur over a period of eight years starting in 2004. The present value of this restructured debt as of December 31, 2002 was RR10.4 billion.

Since emerging from bankruptcy, Sibur has increased its production. According to management estimates, Sibur currently accounts for almost half of Russian production of tires and synthetic rubber and almost a quarter of Russian production of polyethylene and LNG, as well as producing other hydrocarbon products. We supply over half of Sibur's hydrocarbon feedstock, with the balance being supplied by various Russian oil companies. Sibur sells its products in Russia and abroad, in particular to China, Finland and the Baltic States. We are exploring the expansion of Sibur's exports to the Chinese market.

We plan to restructure Sibur to create a vertically integrated refining company that will engage in the full cycle of natural gas processing and manufacturing, ranging from the production of natural gas and liquid hydrocarbons to the processing of natural gas for transportation to the production of complex refined petroleum products such as tire rubber. Through 2010, we intend to focus on restructuring the indebtedness of Sibur, improving Sibur's financial management and investing in Sibur's production facilities, many of which require renovation. Sibur has planned capital investments of RR8.2 billion in 2003 to modernize and expand its production facilities.

## **Marketing**

We are the world's largest exporter of natural gas. We export natural gas (as well as gas condensate, crude oil, oil products and liquefied natural gas) through our wholly-owned subsidiary, Gazexport. We also sell these products domestically to industrial consumers, to regional gas distribution companies and, through our own regional gas distribution companies, to other end consumers. In 2002, our net sales of natural gas to Europe were RR335,115 million; our net sales of natural gas to the FSU were RR51,068 million; and our net sales of natural gas in Russia were RR142,855 million.

We are currently the only supplier of Russian natural gas to Europe. Our exports to Europe also accounted for approximately 27.4% of the volume of natural gas we sold in 2002 and for 63.3% of our net gas sales. We supplied 20% of the natural gas consumed in western Europe and 61% of the natural gas consumed in central and eastern Europe in 2002 according to CEDIGAZ—"Natural Gas in the World—2002," July 2003. In 2002, we delivered 128.6 bcm of natural gas to Europe, of which western Europe accounted for approximately 87.1 bcm and central and eastern Europe for approximately 41.4 bcm. Germany, Italy, Turkey and France were our largest export markets in Europe. We are actively seeking to increase our European export efficiency and have entered into various joint ventures abroad, such as WINGAS in Germany and Gasum in Finland. See "—International Projects and Alliances in Marketing." These joint ventures allow us to capture a margin from sales further downstream in the markets we serve in addition to receiving export proceeds from deliveries at the borders of the markets we serve.

In 2002, we supplied approximately 298.0 bcm of natural gas, constituting substantially all of the natural gas consumed, in Russia, and 42.6 bcm of natural gas, constituting approximately 50% of the natural gas consumed, in six FSU countries, Belarus, Estonia, Latvia, Lithuania, Moldova and Ukraine. Ukraine and Belarus are the largest consumers of the natural gas we supply to the FSU.

The following table sets out by volume our natural gas deliveries by geographical market for the periods indicated:

<u>Gas Sales</u>	<u>For the year ended December 31,</u>		
	<u>2002</u>	<u>2001</u>	<u>2000</u>
	(bcm)		
Russia .....	298.0	300.8	307.6
FSU .....	42.6	39.6	42.3
Europe .....	128.6	127.0	129.0
<b>Total</b> .....	<b><u>469.2</u></b>	<b><u>467.4</u></b>	<b><u>478.9</u></b>

### *The Natural Gas Market*

Natural gas is gaining an increasing share of the world energy market, in part because it is an effective and environmentally clean fuel. According to the BP Statistical Review of World Energy (June 2003) (the "BP Review"), natural gas consumption, as a percentage of energy consumption in western Europe, has increased in recent years and is expected to continue to increase. This is primarily due to the growth in natural gas-fired power generating capacity, an increase in the use of natural gas for residential consumption (particularly in central and eastern Europe), a decline in the attractiveness of nuclear power, and environmental considerations (which have reduced the attractiveness of fuels such as coal). In 2002, natural gas consumption accounted for approximately 22.9% of primary energy consumption in western Europe and approximately 23.6% in central and eastern Europe.

The following table sets forth primary energy and natural gas consumption in our principal markets for 1992, 1997 and 2002 as well as the percentage of natural gas consumed as a proportion of primary energy consumption in such markets for such years:

	<u>2002</u>	<u>1997</u>	<u>1992</u>
	(mtoe, except for percentages)		
<b>Western Europe<sup>(1)</sup></b>			
Energy consumption <sup>(2)</sup> .....	1,612.6	1,546.4	1,463.9
Gas consumption .....	368.8	315.6	245.8
Gas consumption as a percentage of primary energy consumption <sup>(3)</sup> .....	<u>22.9%</u>	<u>20.4%</u>	<u>16.8%</u>
<b>Central and Eastern Europe<sup>(4)</sup></b>			
Energy consumption .....	228.6	247.1	245.9
Gas consumption .....	53.9	54.1	52.0
Gas consumption as a percentage of primary energy consumption .....	<u>23.6%</u>	<u>21.9%</u>	<u>21.1%</u>
<b>FSU (except Russia)<sup>(5)</sup></b>			
Energy consumption .....	284.6	285.3	420.2
Gas consumption .....	148.1	138.9	165.2
Gas consumption as a percentage of primary energy consumption .....	<u>52.0%</u>	<u>48.7%</u>	<u>39.3%</u>
<b>Russia</b>			
Energy consumption .....	640.2	610.9	820.8
Gas consumption .....	349.6	315.3	375.5
Gas consumption as a percentage of primary energy consumption .....	<u>54.6%</u>	<u>51.6%</u>	<u>45.7%</u>

Source: BP Statistical Review of World Energy (June 2003).

Notes:

- (1) Defined for the purposes of this summary to consist of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Luxembourg, Republic of Ireland, Italy, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the United Kingdom.
- (2) Energy consumption comprises commercially traded fuels only.
- (3) Oil, gas, nuclear, hydroelectric and coal.
- (4) Defined for the purposes of this summary to consist of Bulgaria, Czech Republic, Hungary, Poland, Romania and Slovakia.
- (5) Defined for the purposes of this summary to consist of Azerbaijan, Belarus, Kazakhstan, Lithuania, Turkmenistan, Ukraine and Uzbekistan.

According to the BP Review, natural gas consumption in western Europe represented 16.2% of worldwide natural gas consumption in 2002 (as compared to 13.4% in 1992). In the period from 1992 through 2002, the proportion of natural gas to primary energy consumption in western Europe rose from 16.8% to 22.9%. According to the International Energy Agency, this trend is expected to continue.

### *Europe*

In 2002, we delivered 128.6 bcm of natural gas to Europe (compared to 127.0 bcm in 2001). In 2003 we expect to increase our exports to Europe to approximately 134 bcm.

We export natural gas to Europe mostly pursuant to long-term contracts, which generally include the following terms:

- price-setting mechanisms that are based on prices for competing forms of energy such as oil products and, to some extent, coal;
- price adjustment clauses pursuant to which the formulae for determining the price of natural gas under the contracts can be reviewed and adjusted once every three years if market conditions have changed;
- clauses that prevent unilateral termination except in instances of prolonged force majeure;
- extension clauses which provide for the automatic extension of the contract upon expiration unless one of the parties objects; and
- “take-or-pay” provisions that provide that (i) off-takers who have purchased less than the minimum contracted-for annual volume of natural gas at year’s end are required to pay for some portion (but generally not all) of the shortfall and (ii) such payment is credited to the off-taker if, in a subsequent year, the off-taker purchases more than the minimum contracted-for volume of natural gas.

Certain of our contracts contain “destination clauses” that prohibit the re-export of natural gas that is purchased from us by the importer. We received a request for information from the European Commission with respect to this clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission’s original position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We have found such a solution with ENI and are negotiating alternatives with several other off-takers. We will no longer include such clauses in new contracts.

During the next ten years, beginning mainly in 2008, export contracts accounting for almost one third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012.

We believe that our contracts that are scheduled to expire will be renewed. We are currently negotiating for the extension of long-term contracts that expire between 2008 and 2012 with Ruhrgas, OMV and Wintershall Erdgas Handelshaus (“WIEH”), a joint venture with Wintershall. These contracts relate to aggregate minimum natural gas volumes of approximately 23 bcm per year. Our new contracts will not contain destination clauses. We are also discussing certain modifications to our contract with Turkey for deliveries through the Blue Stream pipeline that will satisfy Turkish requirements. See “—Western Europe.”

### *Western Europe*

In 2002, we exported 87.1 bcm of natural gas to western Europe (compared to 86.6 bcm in 2001), which represented 18.6% of our total natural gas sales volumes in 2002.

The following table sets out our natural gas export volumes to western European countries for the periods indicated:

<u>Country</u>	<u>For the year ended December 31,</u>		
	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>
		(bcm)	
Austria .....	5.2	4.9	5.1

<b>Total<sup>(2)</sup></b> .....	<b>87.1</b>	<b>86.6</b>	<b>90.4</b>

Notes:

- (1) Volumes have been determined using managerial accounting methods to calculate sales, and as a result may differ from corresponding data presented in our consolidated financial statements.
- (2) Totals may not add due to rounding.

We have delivered natural gas to western Europe since the late 1960s, providing us with a significant amount of commercial experience in the region. Acting through Gazexport, we supply natural gas to our western European customers on the basis of long-term contracts, the initial terms of which are generally 20 years or longer. Outstanding long-term supply contracts with major western European customers have remaining terms of between five and 20 years.

Currently, our principal western European customers are Ruhrgas (Germany), ENI (Italy), Gaz de France (France), Botas (Turkey), OMV (Austria) and our joint ventures in Germany, WINGAS, in which we have a 35% stake, and WIEH, in which we have a 50% stake. We are paid in U.S. dollars and euro for the natural gas we sell in western Europe.

One of our fastest growing export markets in recent years has been Turkey. While domestic economic difficulties have reduced Turkish demand in 2003, we still believe that the Turkish gas market has significant long-term growth potential. According to statistics compiled by Botas, Turkey's state-owned gas company, natural gas consumption in Turkey amounted to approximately 17.6 bcm in 2002, of which our exports accounted for 11.8 bcm, or 67.0%, compared to consumption of approximately 16.4 bcm in 2001 and 14.6 bcm in 2000, of which our exports accounted for 11.1 and 10.3 bcm, or 67.7% and 69.9%, respectively. Our natural gas exports to Turkey are delivered via the Transbalkan Pipeline through Ukraine, Romania and Bulgaria, and the Blue Stream pipeline under the Black Sea that links Russia directly with the Turkish market. While deliveries through Blue Stream were temporarily halted from March to August 2003 due to a disagreement with Turkey, we believe that this disagreement has now been resolved in a satisfactory manner and deliveries have resumed. See "—Transportation—International Projects and Alliances for Transportation."

Since 1998, we have negotiated a number of agreements, some of which extended our existing contracts, including contracts with: Ruhrgas (Germany) under which we have a maximum annual delivery obligation of 20.6 bcm annually through 2008, falling to 14.7 bcm annually through 2020, and with whom we have entered into a second contract for possible further deliveries of 1.5 bcm through 2010; Gaz de France, under which we have a maximum annual delivery obligation of 8.0 bcm annually through 2015; Gasunie (The Netherlands), under which we will have a maximum annual delivery obligation of 4.0 bcm during its plateau period through 2021; and WINGAS (Germany), under which we will have a maximum annual delivery obligation of 4.0 bcm through 2023. The "plateau period" of a contract is the period during which the maximum annual amount of gas is contracted for. Export volumes under our western European export contracts are usually expressed as a range, the lower end of which establishes the benchmark for the take-or-pay obligation and the upper end of which establishes our maximum annual delivery obligation. We are also seeking to expand our position in spot trading markets in Europe both independently and through our partners and affiliated companies.

In 2002, we distributed approximately 0.73 bcm of natural gas in the United Kingdom through our Interconnector pipeline capacity. In addition, we sold more than 1 bcm of natural gas on the Belgian spot market. In 2003, through our subsidiary Gazprom UK Trading Ltd. and our joint venture WINGAS we have concluded contracts to sell more than 1.2 bcm of natural gas in the U.K. market. In addition, we concluded contracts to sell more than 0.15 bcm on the Zeebrugge hub in Belgium. We intend to increase our sales on the U.K. and Belgian markets, in part by using our Interconnector pipeline capacity. Our future sales on these markets will, however, depend on market conditions (primarily prices) as well as the availability of transportation capacity and uncommitted natural gas.

Western European gas markets are undergoing significant restructuring. In particular, the Gas Directive is to deregulate and liberalize the EU gas market by introducing greater competition into the market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening up transmission and distribution infrastructure to third parties and establishing fair tariffs for third-party use of natural gas transportation infrastructure and greater transparency of transportation and distribution costs by an unbundling of the accounts for gas transportation, distribution and storage. The Gas Directive will increase competition in European gas markets as a greater number of suppliers gain access to the natural gas infrastructure. See "Competition—Western Europe."

#### *Central and Eastern Europe*

We enjoy a dominant position in supply to the central and eastern European gas markets for historical, economic, political and geographic reasons.

In 2002, we exported 41.4 bcm of natural gas to central and eastern Europe, up from 40.4 bcm in 2001, which represented 8.8% of our total 2002 natural gas sales volumes. We are paid in U.S. dollars for the natural gas we sell in central and eastern Europe.

The following table sets out natural gas export volumes to central and eastern European countries for the periods indicated:

<u>Country</u>	<u>For the year ended December 31,</u>		
	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>
	(bcm)		
Bosnia .....	0.2	0.1	0.3

<b>Total<sup>(2)</sup></b> .....	<b><u>41.4</u></b>	<b><u>40.4</u></b>	<b><u>38.6</u></b>

Note:

(1) Volumes have been determined using managerial accounting methods to calculate sales, and as a result may differ from corresponding data presented in our consolidated financial statements.

(2) Totals may not add due to rounding.

Prior to 1999, we had supplied a significant volume of our natural gas to central and eastern Europe under the Yamburg Inter-Governmental Agreements, which originally provided for the settlement of construction costs by the delivery of natural gas to certain countries in central and eastern Europe and the German Democratic Republic (now part of the Federal Republic of Germany). These Agreements expired in 1999. In the last four

years, we have adopted a policy of negotiating medium-term and long-term contracts with our central and eastern European customers and gradually introducing western European contract terms into these contracts. Most of our central and eastern Europe export contracts now terms similar to those discussed above. See “—Europe.”

We supply natural gas in central and eastern Europe to state-owned natural gas distribution companies and in certain countries to joint ventures in which we participate in gas marketing and distribution. We are also considering the acquisition of additional gas marketing and distribution assets in the region.

#### *The FSU*

Historically, we have had, and continue to have, a dominant position in the supply of natural gas to certain countries within the FSU. In 2002, we exported to six countries of the FSU 42.5 bcm of natural gas (as compared to 39.6 bcm in 2001), which represented approximately 9.1% of our total 2002 natural gas sales volumes. Of the 42.5 bcm of natural gas exported, Ukraine accounted for approximately 61.2%. Our sales to the FSU are made in U.S. dollars, except that sales to Belarus are made in Russian roubles.

The following table sets out our natural gas export volumes to FSU countries for the periods indicated.

<u>Country</u>	<u>For the year ended December 31,</u>		
	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>
	(bcm)

Moldova .....	2.1	2.1	1.8
Ukraine .....	26.0	21.9	26.1
<b>Total<sup>(2)</sup></b> .....	<b>42.5</b>	<b>39.6</b>	<b>42.3</b>

#### Notes:

- (1) Volumes have been determined using managerial accounting methods to calculate sales, and as a result may differ from corresponding data presented in our consolidated financial statements.
- (2) Totals may not add due to rounding.

Current annual contract prices for the natural gas we supply to FSU countries (other than Belarus) are higher than current Russian domestic prices but lower than the prices we realize on sales to Europe.

Since 1999 we have limited our export supplies to certain FSU countries to avoid further exposure to non-paying customers. However, we expect these markets to recover. We plan to supply approximately 49.5 bcm of natural gas annually to the FSU through 2005, decreasing to approximately 45.8 bcm annually by 2010. In 2000, we signed long-term contracts with consumers in the Baltic States, which have historically maintained low levels of arrears, to supply a total of 25.5 bcm of natural gas between 2000 and 2005.

Gas deliveries to Ukraine, Belarus and Moldova are made pursuant to contracts with the national natural gas companies Naftogaz Ukrainy, Beltransgaz and Moldovagaz, respectively. These contracts are negotiated annually pursuant to intergovernmental agreements. The contracts set out price parameters for the natural gas being sold and transit rates for natural gas through the relevant country. Sales to FSU countries are made directly by Gazprom.

Ukraine, our largest FSU customer, is traversed by major pipeline routes from the natural gas fields of western Siberia to export markets in Europe. Ukraine is also the source of substantial amounts of our industrial supplies, such as pipes and construction equipment. Currently, we are dependent on Ukraine for the transit of substantially all our natural gas sold in western Europe. We have entered into agreements that guarantee us access to the Ukrainian pipeline system, including 100 bcm in 2003. However, the Yamal-Europe pipeline, which is nearing completion, and the Blue Stream pipeline, through which gas flow started in December 2002, as well as the proposed North European pipeline under the Baltic Sea, will reduce our dependence on Ukraine for the

transportation of natural gas to western Europe (including Turkey). See "Business—Transportation—International Projects and Alliances for Transportation." Moreover, Ukraine is dependent on us to meet its domestic natural gas requirements. This interdependence is taken into account in negotiations over a number of matters, including the terms of payment for natural gas supplied by us and transit fees charged by Ukraine.

On October 7, 2002, the Russian and Ukrainian governments signed an Agreement on Strategic Cooperation in the Gas Industry that envisioned the creation of a consortium to manage and develop Ukraine's gas transportation system and to ensure reliable supplies to customers. Pursuant to this agreement, we entered into an agreement in November 2002 with Naftogaz Ukrainy to create a joint venture that will upgrade and increase the capacity of the Ukrainian natural gas transportation network and ensure reliable transportation of natural gas across Ukraine. The constituent documents of the joint venture company were registered in Ukraine in January 2003. Negotiations are being conducted on attracting an international partner to the activities of the joint venture.

The failure of a number of FSU customers to pay us for supplies of natural gas has resulted in substantial debts to us. As of December 31, 2002, accounts receivable due from FSU countries for sales of natural gas were RR64,121 million (including VAT but excluding charges for late payment). This included amounts due from customers in Ukraine of RR41,633 million, Belarus of RR3,733 million and Moldova of RR17,206 million. These also represent our largest natural gas markets in the FSU. In June 2000, we limited deliveries of natural gas to Ukrainian customers to those deliveries required to pay for transit services through Ukraine, although since 2001 we have made some sales of gas to Ukrainian customers on a commercial basis. Since 2000, no further debts for the non-payment of gas delivered to Ukraine have accrued. In addition, we have recently concluded gas export agreements with Belarus that require all payments for deliveries of gas in 2003 to be made only in cash.

We are also taking specific measures to reduce arrears for payments of natural gas owed by FSU customers. In 2000, Moldova restructured a portion of its debt to us by issuing U.S.\$90 million worth of sovereign notes with a repayment schedule over seven years. In 2001, we cancelled indebtedness to us for gas supplied in 1997 in exchange for equity in Moldovagaz valued at U.S.\$60 million. An amount of U.S.\$276 million owed by Ukraine was set off against delivery of military hardware to the Ministry of Defense of the Russian Federation. In consideration of this delivery of military hardware, we received tax credits in an amount equal to the amount owed to us by Ukraine. In October 2001, the Russian Government signed agreements with the Cabinet of Ministers of Ukraine and with the Government of Moldova that provided for the restructuring of Ukraine's and Moldova's remaining debt for previously supplied natural gas in the amounts of U.S.\$1.4 billion and U.S.\$0.9 billion. According to the agreement between the Russian Government and the Cabinet of Ministers of Ukraine, Naftogaz Ukrainy is to transfer Eurobonds maturing between 2004 and 2013 to us in full settlement of these remaining obligations. We are currently engaged in discussions to resolve certain outstanding tax and legal issues, on the resolution of which these Eurobonds will be transferred to us.

### *Russia*

In 2002, we sold 298.0 bcm of natural gas, down from 300.8 bcm in 2001, in Russia. This represented 63.5% of our total natural gas sales volumes in 2002.

*Domestic Market Conditions.* According to market analyses, the share of natural gas as a percentage of the total volume of primary energy consumption in Russia increased from 42.1% in 1990 to 50.4% in 2002, while during the same period the share of crude oil consumption in primary energy consumption decreased from 28.9% to 20.9% and the share of coal consumption decreased from 20.1% to 15.7%. The Government regulates natural gas prices for the gas that we sell but does not regulate the prices of crude oil or coal (or the price of natural gas sold by independent producers). As a result, the regulated price of natural gas in 2002 was approximately 45% of the price of power-generating coal and 30% of the price of fuel oil as referenced against one toe.

The result of the regulation of natural gas at below market prices has been a shift in Russia toward increased use of natural gas compared with other sources of energy. Russia has the world's most gas-intensive economy. In contrast to many other major industrial economies where gas is primarily used for household consumption, natural gas in Russia is used principally for electricity generation and in the metallurgical and chemical industries. We believe that households accounted for 14% of total natural gas consumption in Russia in 2002, while industrial users, electricity generation, federal budget and municipal organizations and other consumers accounted for 86% of total natural gas consumption in Russia in 2002.

Specific wholesale prices fixed by the Federal Energy Commission of Russia (the "FEC") are differentiated between household and industrial consumers, as well as along seven price bands among which prices vary based on relative distance from the gas production region.

Wholesale prices for natural gas supplied to industrial consumers in the Russian Federation are higher than wholesale prices for natural gas supplied to household consumers. In addition, excise tax applies to sales to industrial consumers but not to sales to household consumers.

The following table sets forth the FEC regulated nominal wholesale natural gas prices for industrial consumers in the Russian Federation in each price band for the periods indicated in nominal RR per thousand cubic meters (including excise tax but excluding VAT). The excise tax is approximately 15%, and is scheduled to be abolished from January 1, 2004.

Price bands	From Nov. 1, 1999	From May 1, 2000	From Jan. 20, 2001	From Feb. 15, 2002	From July 1, 2002	From Jan. 1, 2003
	(nominal RR per mcm)					
0 .....	224	224	264	317	365	438

II .....	283	315	372	446	513	616
III .....	305	353	417	500	575	690
IV .....	312	371	438	526	605	726
V .....	317	388	458	550	633	760
VI .....	323	400	472	566	651	781
Price increase .....	20%	20%	18%	20%	15%	20%
Weighted average .....	312	373	440	528	607	732

The total price paid by industrial consumers for natural gas includes the wholesale price, a transportation tariff and, since January 1, 2003, in certain cases a regional service tariff. The wholesale price, which is established by the FEC, is paid to us, and includes the 15% excise tax applicable to sales to industrial consumers. The transportation tariffs, which are also established by the FEC, but which vary by region, are paid to the regional gas distribution companies that transport the gas through their medium- and low-pressure pipelines to the industrial consumers.

The following table sets forth the FEC regulated nominal wholesale gas prices for household consumers in the Russian Federation in each price band for the periods indicated in nominal RR per mcm (excluding VAT).

Price bands	From Nov. 1, 1999	From May 1, 2000	From Mar. 1, 2001	From Feb. 15, 2002	From Aug. 1, 2002	From Feb. 1, 2003
	(nominal RR per mcm)					
0 .....	157	181	226	271	314	387
I .....	165	190	238	286	332	410
II .....	181	208	260	312	362	447
III .....	194	223	279	335	389	480
IV .....	198	228	285	342	397	490
V .....	203	233	291	349	405	500
VI .....	206	237	296	355	412	508
Price increase .....	5%	15%	25%	20%	16%	23%
Weighted average .....	200	231	289	347	402	495

The total price paid by household consumers for natural gas is established by the regional authorities and covers the wholesale price, a transportation tariff and distribution expenses. The wholesale price, which is established by the FEC, is paid to us. The transportation tariffs, which are also established by the FEC, but which vary by region, are paid to the regional gas distribution companies that transport the gas through their medium- and low-pressure pipelines to the household consumers.

The pricing structure for household consumers is complicated by a variety of factors. These include the existence of multiple price sub-categories (for example, pensioners and war veterans pay discounted prices); the

lack of metering devices on individual apartments (gas fees are generally included as part of the monthly rent); and the fact that certain customers cannot be cut off for non-payment because of legal and technical constraints.

From late 1996 through 1999, regulated gas prices remained stable. Since 2000, the Government has adjusted gas prices on an annual basis. The Government increased gas prices by an average of 20% for the year 2003 for both industrial consumers and household consumers by raising the price of gas for industrial consumers by 20% from January 1, 2003 and for household consumers by 23% from February 1, 2003. In 2003, average wholesale prices for household consumers are 32.4% lower than those charged to industrial consumers.

The program for the Social and Economic Development of the Russian Federation for 2002 through 2004 (as approved by the Government in June 2001) provides for ensuring the financial sustainability of the gas sector, and increasing investment in the area. The Government has also acknowledged that domestic gas prices remain below an economically viable level, and plans to increase prices in 2004 by 20%, more than the estimated inflation level. We have also proposed to increase the number of wholesale price zones from seven to eleven starting in 2004 in order to better reflect actual transportation costs to regions that are more distant from production fields. We have also proposed to introduce seasonal variation in gas prices in order to smooth demand and transportation requirements.

Based on our proposals, the Russian Energy Strategy for the period through 2020 (as approved by the Government in May 2003 and signed by the Prime Minister of the Russian Federation in September 2003) includes estimates of long-term dynamics of gas prices required in order to achieve targeted levels of gas production. These prices are forecast at U.S.\$22 in 2003, U.S.\$40-41 in 2006 and U.S.\$59-64 in 2010 per mcm, excluding VAT and including excise tax for 2003 only (excise tax is scheduled to be eliminated from January 1, 2004). The Russian Energy Strategy also provides for a gradual shift to the sale of gas at market prices in order to facilitate self-financing by gas market participants and a more objective estimation of demand for gas. As a first step towards the sale of gas at market prices, together with independent producers we have prepared proposals on organizing open tenders for the sale at market prices of certain quantities of gas (determined by the Government) at market prices starting in 2004. Such sales would help to test and develop market relationships and provide a foundation for the further development of this market, ultimately leading to the creation of a gas market in Russia in which prices and volumes are determined by market forces.

*Domestic Sales.* We sell our products domestically through our wholly-owned subsidiary Mezhrefiongaz and its 50 regional marketing companies, 43 of which we controlled as of June 30, 2003, to large industrial consumers, to regional gas distribution companies and to household consumers. Historically, Mezhrefiongaz sold natural gas to third-party regional gas distribution companies and to large industrial consumers. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies that had failed to pay for the gas we sold them. As of June 30, 2003, we had controlling interests in 113, and non-controlling interests in an additional 52, of the approximately 320 regional gas distribution companies in Russia. The regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

When we acquire controlling interests in the regional gas distribution companies, we are able to capture the transportation and regional energy sales tariffs that are payable to them in respect of the transportation services they provide as described above.

We are testing a strategy to streamline our domestic marketing operations by removing Mezhrefiongaz from the marketing chain, allowing us to sell gas directly through its 50 regional marketing companies, 43 of which we controlled as of June 30, 2003. As part of this strategy, starting from January 2003 on a trial basis we concluded 15 contracts to sell gas directly to our regional marketing subsidiaries, and we will evaluate the results under these initial contracts in late 2003. We believe that removing Mezhrefiongaz from the marketing chain may result in cost and tax savings and increase the efficiency of our marketing. Accordingly, Mezhrefiongaz would be reassigned primary responsibility for coordinating the collection of receivables for gas deliveries that are currently outstanding and on developing an electronic trading market for gas. The electronic trading market, currently intended as a spot market trading platform, should facilitate free market sales of natural gas by ourselves and independent producers with access to the UGSS by monitoring and matching supply, demand and adequate transportation capacity through to the point of demand.

Another part of our strategy is to remove from the marketing chain the regional gas distribution companies that we control. Currently, some of our regional gas distribution companies still buy gas from our marketing

subsidiaries and market and sell it to end users. We have begun to implement a strategy according to which our marketing subsidiaries are to contract directly with the end customers. In more and more regions, our marketing subsidiaries increasingly are contracting directly with and collecting payments directly from end consumers. Our regional gas distribution companies will continue to transport the gas we sell from our high-pressure pipelines through their medium- and low-pressure pipelines to the end consumers.

In the past several years, we have shifted from long-term domestic gas supply contracts with terms of up to ten years (subject to annual delivery volume adjustments) to one year gas supply contracts with our industrial customers and regional gas distribution companies. These contracts require customers to make full payment (excluding any advanced deposits) for the natural gas they received on or before the tenth or fifteenth day of the month immediately following the month of delivery. The contracts may contain penalty terms for late payment and customers' supplies of natural gas may be restricted and eventually stopped if non-payment continues. In addition, surcharges may be levied for gas supplied in excess of the contracted-for daily quotas (50% in winter and 10% in summer).

*Delayed Payments for Gas Deliveries in Russia.* During the early and mid-1990s, natural gas prices rose rapidly for all domestic customers, partly to keep pace with high inflation and partly to reflect the much higher prices received from exports to Europe. The sharp rise in price led to an increase in non-payment by Russian customers and settlement in forms other than cash. The increase in the price of natural gas had a particularly pronounced negative impact on the power generating industry, which accounted for most of the non-payments.

From 1999 through 2002, we improved our cash collection dramatically for natural gas delivered to Russian consumers. This was due generally to the improvement of the Russian economy and more specifically to our cooperation with consumers and administrations of various Russian regions. As of December 31, 2002, gross accounts receivable for natural gas supplied to Russian customers amounted to approximately RR47,768 billion, compared to RR56,073 billion as of December 31, 2001 (including Russian VAT but excluding late payment charges). During 2002, we received approximately 79% of payments for domestic gas sales in cash, and 21% in other forms, almost of all of which was in promissory notes. For payments in promissory notes, by the end of 2002 we had succeeded in reducing the average maturity to three months, down from 12 to 18 months previously. In November 2002, our management passed a resolution requiring that cash constitute not less than 95% of our receipts from sales of natural gas in Russia.

Pursuant to various Government regulations, we do not have the right to cut natural gas deliveries to a number of categories of consumers, including hospitals, household utilities (such as water and electricity suppliers), military and state telecommunication organizations, and other consumers whose activities are vital for Russia's national security and environmental safety.

#### *International Projects and Alliances in Marketing*

*WIEH Marketing Arrangement.* In 1990, we and BASF agreed to undertake the joint marketing of natural gas and to build and operate a network of trunk gas pipelines in Germany. See "Business—Transportation—International Projects and Alliances in Transportation."

We and Wintershall AG (a wholly-owned subsidiary of BASF) each have a 50% shareholding in the trading company WIEH. WIEH purchases its natural gas supplies exclusively from Gazexport under long-term contracts. We have concluded two long-term natural gas supply contracts with WIEH for a total annual volume of 13.9 bcm. WIEH sells gas to WINGAS, Verbundnetzgas, a major natural gas distributor in eastern Germany (of which ZGG, a wholly-owned subsidiary of Gazexport, owns approximately 5%) and BASF. WINGAS sells gas to municipal undertakings, gas utilities and major industrial consumers. We have also concluded two long-term natural gas supply contracts directly with WINGAS for a total annual volume of 5.8 bcm during the plateau period. In 2002, we supplied 14.4 bcm of natural gas to WINGAS and WIEH for sale in Germany and other western European countries. Overall, we supplied a total of 125.5 bcm of natural gas to WIEH and WINGAS between 1991 and 2002. During the same period, we supplied 38.0 bcm of natural gas to WIEH for resale in Bulgaria and Romania.

*Beltransgaz privatization.* The Belarussian parliament is in the process of privatizing Beltransgaz, the Belarussian state-owned gas transportation and distribution company. Under the auspices of an agreement between the Government of the Russian Federation and the government of Belarus on expanding cooperation in the gas sector, in late July 2003 we held negotiations with the government of Belarus for the creation of a joint gas transportation organization, and we may participate in the privatization of Beltransgaz.

*Other Joint Ventures.* In addition to our activities in Germany, we have established joint ventures to transport and market natural gas in other European markets. In certain countries, our subsidiaries or affiliates also distribute natural gas. We have begun to implement our strategy of acquiring equity participations in gas transportation companies and gas marketing companies, which was a success in Germany, in other European markets. In Finland, we acquired a 25% interest in Gasum Oy, a joint venture with Fortum Corporation (previously Neste Oy), in 1994. Gasum Oy is the sole distributor of natural gas in Finland, and we are its sole supplier. In Poland, EuRoPol GAZ, a joint venture with PGNiG S.A., a state-owned Polish gas company, is engaged in the construction of the Polish section of the Yamal-Europe Project. We hold a 48% interest in EuRoPol GAZ. When construction is completed, EuRoPol GAZ will own the Polish section of the transit pipeline and transport our natural gas to Germany. The following table summarizes the main natural gas transportation and marketing joint ventures in which we, or Gazexport, participated in European markets other than Germany as at July 31, 2003:

<u>Country</u>	<u>Entity</u>	<u>Interest</u>	<u>Joint Venture Partner</u>	<u>Description</u>
Austria .....	Gas und Warenhandels-gesellschaft GmbH	50%	OMV	Gas marketing and general trading company
Bulgaria .....	Overgaz Inc.	50%	AO Overgaz Holding	Marketing of Russian natural gas in Balkan countries
Estonia .....	AO Eesti Gaas	37%	Ruhrgas AG, Fortum Corporation, Itera-Latvia, other shareholders	Marketing of natural gas, development of Estonia's gas transportation networks
Finland .....	Gasum Oy	25%	Fortum Corporation, Ruhrgas, the State of Finland, other Finnish companies	Gas transportation and marketing
	NordGaz Oy	50%	Fortum Corporation	Transportation of natural gas and operation of gas transportation network
France .....	Fragaz	50%	Gaz de France	Gas trading and general trading activities
Greece .....	Prometheus Gas	50%	Copelouzos	Gas marketing and construction of gas transportation systems
Hungary .....	Panrusgaz	40%	MOL	Gas marketing
Italy .....	Promgaz	50%	ENI	Gas marketing
Latvia .....	AO Latvias Gaze	25%	Itera-Latvia, Ruhrgas Energie Beteiligungs, E.ON Energie AG, the State of Latvia, other shareholders	Marketing of natural gas and liquefied gas, development and modernization of Latvia's natural gas and services industries
Lithuania .....	Stella Vitae	30%	Auri, other shareholders	Marketing of gas, crude oil and refined products
Poland .....	EuRoPol GAZ S.A.	48%	PGNiG S.A.	Transportation, construction, ownership and operation of the Polish section of the Yamal-Europe project
	Gas Trading	16%	PGNiG S.A., Bartimpex S.A., WIEH, Wenglokoks	Gas marketing
Slovakia .....	Slovrusgaz	50%	SPP	Gas transportation and marketing, general trading business
Turkey .....	Turusgaz	45%	Botas International Ltd., Gama Industrial Plants Manufacturing and Erection Corp.	Gas marketing

We and our subsidiaries also own stakes in companies located in Armenia, Belarus, Kazakhstan, Moldova, The Netherlands, Serbia and Montenegro, Ukraine and the United Kingdom.

## Competition

The oil and gas industry is currently subject to several important influences that impact the industry's competitive landscape. These include the following:

*Consolidation.* In the past few years, the strategic and competitive landscape of oil and gas markets have been transformed by mergers and acquisitions, driven mainly by aspirations for greater profits and intensified competition to capture the growing potential of new, attractive business opportunities.

*Technological Advances.* Technological innovations in the oil and gas industry have improved the technical-economic performance in finding and developing hydrocarbon resources. Active and effective application of advanced technology has helped to improve geologic exploration success rates, to increase field life and recovery rates from existing fields and to reduce full project cycle costs. In general, there is comparable access to technology across the industry, and to achieve our strategic and financial goals, we will seek to compete by applying available technology to complex projects.

*Environmental and Social Concerns.* Oil and gas companies worldwide are also facing increasing demands to conduct their operations consistent with environmental protection and social goals. Investors, customers and governments are more actively following companies' performance with respect to environmental responsibility, human rights and development of alternative and renewable fuel resources. As a result, we expect competition to intensify in the markets we serve.

### Europe

The table below shows the proportion of European natural gas supply attributable to each supplier of natural gas to the European market in 2002.

<u>Country</u>	<u>% of European Natural Gas Supply in 2002</u>
Russia (Gazprom) .....	25.5
United Kingdom .....	20.1
The Netherlands .....	14.0
Norway .....	12.9
Algeria .....	10.9
Germany .....	4.2
Italy .....	2.9
Denmark .....	1.7
Nigeria .....	1.5
Other .....	6.3

Source: CEDIGAZ—"Natural Gas in the World—2002," July 2003.

### Western Europe

Natural gas supplies to western Europe have outpaced demand in the past several years and, according to specialists from the International Energy Agency, this trend will continue until 2007-2008. As a result, we anticipate exporting natural gas to western Europe at close to the minimum amounts defined in our export contracts over this period. Over the long-term, however, production in the countries of western Europe will continue to decline due to the depletion of explored natural gas reserves in the region and imports from Russia, Algeria and Norway are likely to increase in importance as a proportion of consumption.

Western European gas markets are undergoing significant restructuring as a result of the Gas Directive which came into force on August 10, 1998. As noted above, the purpose of the Gas Directive is to deregulate and liberalize the EU gas market by stimulating competition in the gas market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening up gas transmission and distribution infrastructure to third parties and establishing fair tariffs on third-party use of natural gas transportation infrastructure and greater transparency of transportation and distribution costs by an unbundling of the accounts for gas transportation, distribution and storage. It may also promote the emergence of a short-term price and "spot" markets for natural gas. Because of the distance of our western Siberian natural gas fields from consumers in Europe, it would be difficult for us to engage in spot transactions involving physical settlement. We believe,

however, that natural gas is likely to continue to be supplied under long-term export contracts, both because long-term contracts provide a stable supply of natural gas to Europe during a period of declining local production and because long-term supply contracts are essential in enabling us to finance investment in our natural gas exploration and development. We expect that the substantial gas reserves owned by Gazprom will support our competitive position as a major supplier of natural gas to the western European market.

We received a request for information from the European Commission with respect to the destination clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission's original position was that the inclusion of destination clauses violated EU law. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We have found such a solution with ENI and are negotiating alternatives with various other off-takers. We will no longer include such clauses in new contracts.

In response to the changes in the European market brought about by the Gas Directive, we have entered into a number of marketing joint ventures and we now have joint ventures in, among other countries, Austria, Finland, France, Germany, Hungary and Italy. See "Business—Marketing—International Projects and Alliances in Marketing."

Developed reserves and production of natural gas and crude oil in western Europe are expected to decline in the next several years. For example, production of natural gas in the United Kingdom is expected to decrease by 2005 and, accordingly, its imports will increase to keep pace with the growth of demand. According to estimates by EC experts, the dependence of EU member states on imports of gas from third-party countries will grow from 40% in 2000 to 70% in 2020, which may lead to increased demand for Russian gas.

#### *Central and Eastern Europe*

The competitive pressures we face in central and eastern Europe are similar to those we face in western Europe, namely a liberalization of the natural gas market, privatization of natural gas companies and competition from other suppliers. As a result of existing historical and economic factors, as well as the geographical proximity of central and eastern European markets to Russia, we still consider ourselves to be the main supplier of gas to countries in this region. Despite the steps taken by central and eastern European countries to diversify their sources of gas supplies, we believe we will retain our role as the leading supplier of gas to central and eastern Europe.

#### *Russia and the FSU*

In Russia, we face competition from other crude oil and natural gas suppliers, in particular from independent suppliers in Russia. In the FSU, we face competition from independent suppliers in Russia and natural gas producing companies in Turkmenistan, Kazakhstan and Uzbekistan. Since April 1998, independent Russian suppliers have been granted non-discriminatory access to existing UGSS capacity in Russia. The independent suppliers (the largest of which include Itera, OAO NOVATEK, OOO Orensai and OAO Tsentrusgaz) have historically been, and continue to be, our competitors. In our view, this position is mainly a result of the Government's policy of offering preferential terms for gas sales by such independent suppliers (for example, the low transportation tariff set by the Federal Energy Commission for transportation of natural gas through the UGSS). Additionally, such independent suppliers can generally be more flexible than we can be with respect to the contractual terms and conditions that they can offer to customers in Russia and the FSU, as they are not bound by the same strict regulatory requirements that apply to us. See "Overview of the Russian Gas Industry and its Regulation—Russian Regulation."

In 2002, the independent suppliers accounted for 12.7% of natural gas transported through the UGSS. However, the competitive position of alternative suppliers is limited by the relatively small size of their reserves base, relatively high costs of production and their dependence on access to our transportation network.

## Research and Development

We have pursued a policy of investing in research and development in a number of scientific and technical areas. In general, our research and development focuses on:

- economically efficient ways to develop newly discovered fields in regions such as the Obshk-Tazobskaya Bay, the Yamal Peninsula, the Barents Shelf and the Karsk Sea, eastern Siberia and the Russian Far East that are characterized by difficult climatic and geological conditions;
- maintaining production from existing fields with declining reserves;
- creating technology for the effective development of small natural gas fields and non-traditional resources, for example methane from coal fields;
- creating technology for the production, transportation and utilization of low-pressure natural gas reserves that remain in the earth during the final stages of gas field development;
- developing a diagnostic system, technical funds and a new generation of technology and equipment for maintaining the dependability and effectiveness of the UGSS; and
- creating energy-saving technology and equipment, and developing a comprehensive energy-saving scientific-technical program.

## Support Activities

We engage in various activities that support our main business, including insurance, banking and the largest non-state pension fund in Russia, Gazfund, which we use to provide pension services for our employees.

Because of the broad geographic range of our core business, the remoteness of our fields and the relatively undeveloped infrastructure in the regions in which we produce natural gas, we operate our own electricity generation and communications operations as well as various other activities, such as food processing and procurement and transportation (including auto transport and aviation), to support the activities of the employees who work in the exploration, production, and transport of our gas.

We currently operate 80,713 km of electricity transmission lines as well as 1,709 electric power stations with a generation capacity of over 100 kW and with a total capacity of 1.53 million kW. Production of electricity in 2002 was approximately 1,700 million kWh, compared to 1,168.5 million kWh and 1,117.1 million kWh in 2001 and 2000, respectively.

We operate an extensive internal communications network, which we maintain and operate in conjunction with the UGSS to help ensure the technical reliability and safety of the UGSS. The network consists of a ground-based network and a satellite system. As of December 31, 2002, the based network included 83,500 km of cable communication lines, 21,500 km of multi-channel radio lines and 694 automated telephone stations with a total capacity of 282,500 numbers. The satellite system consists of the satellite "Yamal-100" and 119 land-earth stations that transmit to and receive signals from the satellite. We have been expanding this system in conjunction with our production and transportation projects, including the Zapolyarnoye field and construction of the Blue Stream, northern Tyumen—Torzhok (Yamal-Europe) and Pochinki—Frolovo—Izobilnoye pipelines.

### *Insurance*

Exploration for and production, refining and transportation of natural gas, gas condensate and crude oil is hazardous. Natural disasters, operator error or other occurrences can result in oil spills, blowouts, cratering, fires, equipment failure and loss of well control, which can injure or kill people, damage or destroy wells and production facilities, and damage property and the environment.

We are insured through our wholly-owned insurance subsidiary Sogaz, which in turn reinsures approximately 95% of the coverage it provides to us through the international reinsurance market, mainly with western insurance companies. We generally pay premiums at market rates for the insurance that we obtain through Sogaz. Our insurance coverage falls into three categories: (i) insurance of fixed assets owned or leased by OAO Gazprom, including pipelines, compressor and gas distribution stations, gas processing plants, wells and production equipment and production and non-production buildings; (ii) insurance of the natural gas we transport through the UGSS in Russia; and (iii) insurance of liabilities arising out of legal obligation to pay for damages to third parties and environmental damages resulting from malfunctions in our production facilities. We do not

carry insurance for environmental damage arising from accidents on our property, business interruption insurance or insurance against terrorist attacks. We do not have full insurance for all of our plant facilities and are currently discussing with Sogaz the possibility of increasing the insurance coverage of our refineries and of fixed assets owned by our subsidiaries. See "Risk Factors—Risks Relating to our Business—We face certain operational risks which may result in losses and additional expenditures."

### *Gazprombank*

Gazprombank, Russia's third largest bank as measured by total assets, services a majority of our banking needs. Gazprombank was founded in 1990 with the primary goal of improving the quality and effectiveness of financial services to our Group and the Russian gas industry as a whole. Gazprombank's principal services comprise lending, deposit taking, securities and foreign exchange trading and trade finance. Gazprombank also generates income from providing settlement services for interregional payments for gas supplies, plastic card operations, depository and custodial services and servicing financings for our Group. Since its founding, Gazprombank has developed a network of 31 branch offices and 92 regional representative offices located throughout the Russian Federation. The bank also has shareholdings in nine other banks, which extends its network to approximately 260 banking offices in 50 regions of Russia, four regions of Belarus and Hungary. Its network extends to the principal regions where gas is extracted, produced and transported and to many of the largest financial and industrial centers in the Russian Federation.

As of December 31, 2002, we owned directly or through our subsidiaries 99% of Gazprombank's charter capital. Our liability in Gazprombank is limited to the extent of our equity participation. Most of Gazprombank's funding is from, and most of its credit exposures are to, our Group. Gazprombank's activities are closely linked to the requirements of our Group and pricing is determined accordingly.

Gazprombank had total assets under IFRS as recorded in its audited IFRS consolidated financial statements as of December 31, 2002 of U.S.\$4,937 million, of which transactions with our group accounted for U.S.\$2,770 million, and total liabilities of U.S.\$4,104 million, of which transactions with our Group accounted for U.S.\$1,782 million. As of that date, transactions of Gazprombank with members of our Group accounted for U.S.\$3,159 million (60%) of Gazprombank's total gross exposures (including assets and off-balance sheet commitments).

As of December 31, 2002, approximately 69% of Gazprombank's total loans outstanding were either directly to, or were guaranteed by, members of our Group, 58% of its current accounts and deposits were due to our Group (as well as a significant additional portion due to one of our associated companies, Gazenergoprombank), a majority of its trade finance activity related to our Group and most of its securities trading activities were in respect of our shares. While these amounts exceed current Central Bank exposure limitations, Gazprombank is seeking to diversify its customer base in order to comply with these regulations. Gazprombank's principal customers outside our Group include enterprises in the engineering, petrochemical, transport, precious metals and precious stones, food processing, high technology machinery, pension fund and insurance sectors.

### **Non-Core Businesses**

In addition to the support activities described above, we have investments in various other businesses that are not related to our core operations. Such investments mainly represent equity holdings which have been received in the course of privatization (e.g. interests in agricultural, civil, construction and medical care enterprises) or acquired either through debt for equity swaps (e.g. stakes in regional utility companies) or directly for strategic and other considerations. One of our larger non-core businesses is Gazprom-Media, our subsidiary that manages our investments in a number of media holding companies, including NTV, Russia's largest independent TV channel. Following successful litigation to enforce a share pledge that was given as collateral for the guarantee by us of loans to Media-MOST, NTV's parent company, as of December 31, 2002 we had a controlling interest of 95.6% in NTV and controlling interests in a number of other media companies. In October 2002, we signed a framework agreement to sell non-controlling interests in several media companies, including NTV, to Evrofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of Media-Most and its media companies to us. As a result, our interest in NTV has been reduced to 65.3%. Under the framework agreement, Evrofinance Group is to contribute cash and these acquired interests into a new media holding company, of which we will own 51% and Evrofinance the balance. Our contribution into the new holding company will comprise the remaining interests in certain of our media subsidiaries. These transactions are expected to be completed by the end of 2003.

## Health, Safety and Environment

Our operations in Russia are subject to a number of environmental laws and regulations. These laws govern, among other things, regulations on the composition of emissions into the atmosphere, wastewater discharges and discharges to the sea, the use, handling and disposal of hazardous substances and wastes, soil and groundwater contamination and employee health and safety. As we are a production company, environmental liability risks are inherent in our operations. See "Risk Factors—Risks Relating to our Business—As an energy company we face significant environmental risks" and "Overview of the Russian Gas Industry and its Regulation—Russian Regulation—Environmental Requirements."

We have developed and continue to improve a system for monitoring harmful leaks, water contamination, and the quality of air, water and soil in the Russian regions in which the UGSS infrastructure is located. In a number of regions this system has become an integral part of the Russian Federation's unified State Ecological Monitoring System. We have completed certifications of seven of our facilities according to International Standard ISO 14000, a widely recognized set of environmental standards developed by the International Organization for Standardization (the "ISO"), a nongovernmental body composed of national standard making bodies from over 140 countries. We intend to conduct such certifications at our other facilities and intend to confirm that our environmental protection management system as a whole is ISO 14000 compliant.

In August 2002, we presented a report derived from these certifications to the General Prosecutor's Office, which identified several instances in which we were not in compliance with Russian environmental regulations. We have now brought our practices in line with the regulations.

To date, we have not had any serious accidents that have had a significant environmental impact.

The Russian Federal Law "On Environmental Protection," dated December 19, 1991 (the "1991 Law on Environmental Protection"), as amended and later replaced by the Russian Federal Law "On Environmental Protection" dated January 10, 2002 (the "2002 Law on Environmental Protection," and together with the 1991 Law on Environmental Protection, the "Laws on Environmental Protection"), establishes a "pay-to-pollute" regime administered by the Ministry of Natural Resources and regional authorities. In accordance with this regime, we make statutory payments to ecological funds and state authorities for environmental pollution. We paid (in nominal RR amounts) RR75.8 million in 2000; RR119.0 million in 2001; and RR83.2 million in 2002. We have also paid (in nominal RR amounts) the following environmental penalties: RR0.8 million in 2000; RR0.8 million in 2001; and RR0.8 million in 2002 relating to environmental protection. Forthcoming changes in environmental legislation are expected to eliminate the "pay-to-pollute" regime in favor of increasing punitive payments for environmental violations. Since we paid only a small amount in environmental penalties, we anticipate that the environmental protection payments we make will decrease overall with the enactment of this new legislation.

Our balance sheet, prepared in accordance with IFRS, contains provisions for environmental payments (which take into account probable liabilities that can be reasonably estimated). Such provisions have been made in accordance with what we believe is a reasonable and prudent policy that takes into account payments made in prior years, among other factors. However, in Russia in particular, federal, regional and local authorities may enforce existing laws and regulations more strictly than they have done in the past and may impose stricter environmental standards or higher levels of fines and penalties for violations than those now in effect. Accordingly, we are unable to estimate the future financial impact of our environmental obligations with a high degree of certainty. However, we do not expect environmental obligations to have a material adverse effect on our future financial condition.

We have one trade union, the Gazprom Inter-Regional Trade Union Organization of the Oil, Gas and Construction Employees of the Russian Federation, to which 88.6% of our employees belonged as of December 31, 2002. We have entered into a tariff agreement with the union which, among other things, sets forth our health and safety procedures. Compliance with these obligations is monitored by the trade union. On the basis of a package of social and labor-related, organizational and technical, health-care and preventive, and sanitary and hygienic measures, we have developed and operate a unified labor protection and industrial safety management system and our subsidiary companies and organizations are developing labor protection agreements and financing their activities. Our tariff agreement with the trade union is scheduled to be renegotiated at the end of 2003. We anticipate that our obligations with respect to employee health and safety procedures will not change materially under a new agreement with the union.

## Litigation and Investigations

We are from time to time the subject of legal proceedings and other investigations in the ordinary course of our business.

In 2001, we received a request for information from the European Commission with respect to the destination clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission's original position was that the inclusion of destination clauses violated EU law. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We no longer include such clauses in new contracts.

OAO ANGK Neftegaspostavka ("Neftegaspostavka") has filed two claims against us resulting from our refusal to grant Neftegaspostavka access to our pipelines, allegedly in breach of anti-monopoly regulation. The first claim, relating to claims arising in 1999, resulted in a judgement against us of RR177 million. The second claim, relating to claims arising in 2000, initially resulted in a judgement against us by the Moscow City Arbitration Court of RR726 million, but upon appeal and retrial that judgement was set aside and judgment was rendered in our favor in July 2003. In general, OAO Gazprom remains confident that it conducts its operations, including making its pipelines available for third party use, in compliance with applicable anti-monopoly regulations.

In February 2003, the management of Mezhhregiongaz, acting in violation of our internal procedures, sold 40.1% (out of our total 46.4% interest) in the share capital of Azot, a large manufacturer of agricultural fertilizer in Russia, at its carrying value of RR394 million. We have sought the recovery of these shares from the three purchasers. Two of the purchasers subsequently agreed to sell their shares to us at the price originally paid; this resulted in our acquisition of 33.9% of Azot for RR333 million in April 2003. The third purchaser, Alan Invest, has refused to sell to us the remaining 6.26% that it acquired in February 2003, and we are pursuing litigation against Alan Invest in order to reacquire these shares. In July 2003 the Moscow arbitration court ordered that these shares be arrested pending its judgment. In July 2003 we acquired an additional 7.24% of Azot from SVL Holding S.A., a shareholder not involved in the February sale. We are currently working to amend the charters of our subsidiaries in order to help prevent similar acts by the management of our subsidiaries in the future.

On March 31, 2003, the Ministry of the Russian Federation for Antimonopoly Policy and Support of Entrepreneurship (the "MAP") issued a decision finding conduct by Gazprom, Mezhhregiongaz and three regional gas marketing companies to have violated the Federal law "On Competition and the Limitation of Monopolistic Activities in Trading Markets." The MAP found that the regional gas marketing companies had encouraged consumers to accept more expensive gas purchased on the electronic spot trading market, rather than available gas at the lower regulated prices. See "Business—Marketing—Russia—Domestic Market Conditions." As a result of these activities, Lipetskregiongaz, Kirovregiongaz and Chuvashregiongaz temporarily suspended their participation in electronic gas trading. The MAP also found that we had established internal gas transportation tariffs (i.e., tariffs for gas transported from one company to another within our consolidated group) higher than those prescribed by the FEC. We were ordered to set our internal transportation tariffs at the rates established by the FEC, and we have now fully complied with this order.

OAO Degtyarskoye Rudouprovleniye has filed a complaint with the MAP claiming that Mezhhregiongaz had violated antimonopoly legislation and seeking to order us to resume deliveries to it when, on Gazprom's decision, gas for the customers of the Sverdlovsk region has not been delivered since 1999 because demand for gas at regulated prices exceeded the available supply in the region. Proceedings on this matter before the MAP are scheduled to begin in September 2003.

We initially held a 51% stake in Nortgaz, a company that holds licenses for the development of the North Urengoiyskoye field. Our initial stake was reduced to 0.5% in 2001 as a result of a court decision invalidating our participation in a share issuance by Nortgaz in 1999 on the basis that the value of the property that we contributed to the company had not been approved by the Nortgaz Board of Directors. We are currently attempting to reacquire the Nortgaz shares we lost as a result of this prior decision through further court actions.

The Prosecutor of the Tomsk region filed suit against the regional administration and the regional Committee for Natural Resources seeking to invalidate the 1995 order by the Tomsk Oblast Geological

Committee reregistering a production license for the Mylbzhinskoye Field from OAO Tomskneft VNK to OAO Tomskgaz ("Tomskgaz") and the subsequent 1998 transfer of the license from Tomskgaz to its wholly-owned subsidiary OAO Tomskgazprom). We owned Tomskgaz jointly with OAO Tomskneft VNK and OAO VNK, and from 1996 through 2002 held a controlling interest in Tomskgaz. While this claim was dismissed in October 2002, this judgment was reversed and the case remanded for a new trial on appeal in January 2003. A new hearing is scheduled for September 2003.

These proceedings and investigations have not had, and are not expected to have, individually or in the aggregate, a material adverse effect on our business, operations and financial condition or on our ability to service our payment obligations under the Notes.

### **Employees**

For the years ending December 31, 2002, 2001 and 2000, we had a weighted average of approximately 301 thousand, 304 thousand and 306 thousand employees, respectively.

We have one trade union to which 88.6% of our employees belonged as of December 31, 2002. We have never experienced any strikes, work stoppages, labor disputes or actions that have affected the operation of our business and we consider our relationship with our employees to be good.

## MANAGEMENT

The current members of our Board of Directors are as follows:

<u>Name</u>	<u>Position</u>	<u>Year of Birth</u>	<u>Term expires</u>
D. Medvedev	Chairman of the Board of Directors; First Deputy Head of the Presidential Administration of the Russian Federation	1965	June 27, 2004
A. Miller	Deputy Chairman of the Board of Directors; Chairman of the Management Committee	1962	June 27, 2004
A. Ananenko	Deputy Chairman of the Management Committee	1952	June 27, 2004
B. Bergmann	Chairman of the Management Committee of Ruhrgas	1943	June 27, 2004
B. Fedorov	Head of the political movement "Russia, Ahead!"	1958	June 27, 2004
F. Gazizullin	Minister of Property Relations of the Russian Federation	1946	June 27, 2004
G. Gref	Minister for Economic Development and Trade of the Russian Federation	1964	June 27, 2004
V. Khristenko	Deputy Prime Minister of the Russian Federation	1957	June 27, 2004
A. Levistskaya	First Deputy Head of the Secretariat of the Presidential Administration of the Russian Federation	1954	June 27, 2004
M. Sereda	Head of Gazprom's Management Committee Office	1970	June 27, 2004
I. Yusufov	Minister of Energy of the Russian Federation	1956	June 27, 2004

The current members of our Management Committee are as follows:

<u>Name</u>	<u>Position</u>	<u>Year of Birth</u>	<u>Term expires</u>
A. Miller	Chairman of the Management Committee; Deputy Chairman of the Board of Directors	1962	May 29, 2006
A. Ananenko	Deputy Chairman of the Management Committee	1952	December 16, 2006
E. Vasilieva	Deputy Chairman of the Management Committee; Chief Accountant	1959	November 26, 2006
N. Guslisty	Deputy Chairman of the Management Committee	1933	September 26, 2007
Y. Komarov	Deputy Chairman of the Management Committee	1945	August 20, 2008
A. Ryazanov	Deputy Chairman of the Management Committee	1953	November 26, 2006
S. Ushakov	Deputy Chairman of the Management Committee	1952	April 17, 2008
B. Yurlov	Deputy Chairman of the Management Committee	1948	June 19, 2007
M. Akselrod	Management Committee Member (Capital Construction)	1946	November 26, 2006
B. Budzulyak	Management Committee Member (Gas Transportation System)	1946	June 18, 2006
K. Chuichenko	Management Committee Member (Legal)	1965	September 26, 2007
V. Golubev	Management Committee Member; General Director of OOO Gazkomplektimpex	1952	April 17, 2008
A. Kruglov	Management Committee Member (Corporate Finance)	1969	June 19, 2007
V. Ilyushin	Management Committee Member (Relationships with Regional Authorities)	1947	September 26, 2007
A. Medvedev	Management Committee Member; General Director of Gazexport	1955	September 26, 2007
V. Podyuk	Management Committee Member (Gas, Gas Condensate and Oil Production)	1946	September 26, 2007
K. Seleznev	Management Committee Member (Marketing, Gas and Liquid Hydrocarbon Processing)	1974	September 26, 2007

### Director Biographies .

*D. Medvedev.* Dmitri Anatolievich Medvedev has been the Chairman of our Board of Directors since June 2002. Previously, Mr. Medvedev was the Chairman of the Board of Directors from June 2000 through June 2001 and our Deputy Chairman of the Board of Directors of the Company from June 2001 through June 2002. Mr. Medvedev is First Deputy Head of the Presidential Administration of the Russian Federation (since 2000). He was Deputy Head of the Presidential Administration of the Russian Federation (1999-2000), Deputy Head of the Administration of the Government of the Russian Federation (1999) and an assistant at St. Petersburg State University (1990-1999).

*A. Miller.* Alexei Borisovich Miller has been the Deputy Chairman of our Board of Directors since June 2002 and the Chairman of our Management Committee since May 2001. He was appointed to his position as Chairman of the Management Committee by the Government of the Russian Federation, our major shareholder. Mr. Miller is also Chairman of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002) and a member of the Board of Directors of Closed Joint Stock Company Russian Company for the Reclamation of the Shelf (since May 2002). Mr. Miller was deputy Minister of Energy of the Russian Federation (2000-2001); Chairman of the Supervisory Council of Joint Stock Company EuRoPol GAZ (March-June 2002); Chairman of the Management Committee of Joint Stock Company Nord Transgaz (2001-2002); Chairman of the Board of Directors of Open Joint Stock Company Vostokgazprom (2001-2002); General Director of the Open Joint Stock Company Baltiiskaya Truboprovodnaya Sistema (Baltic Pipeline System) (1999-2000); and Director for Development and Investments in Open Joint Stock Company Morskoy Port St. Petersburg (1998-1999).

*A. Ananenkov.* Alexander Georgievich Ananenkov has been a member of our Board of Directors since June 2002 and the Deputy Chairman of our Management Committee since December 2001. Mr. Ananenkov is also Chairman of the Board of Directors of Open Joint Stock Company Vostokgazprom (since May 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since April 2000); and a member of the Board of Directors of Open Joint Stock Company Zapsibcombank (since April 1997). Mr. Ananenkov was General Director of Yamburggazdobycha from 1997 through 2001.

*B. Bergmann.* Burekhard Bergmann has been a member of our Board of Directors since 2000. He is elected to the Board by Ruhrgas AG, one of our major shareholders. Mr. Bergmann has been the Chairman of the Executive Board of Ruhrgas AG since June 2001, and was previously Deputy Chairman. He is also a member of numerous supervisory boards, including the Supervisory Board of Allianz Lebensversicherungs-AG and as the Chairman of the Supervisory Board of VNG-Verbundnetz Gas AG and Mittel-Europaische Gasleitungsgesellschaft mbH.

*B. Fedorov.* Boris Grigorievich Fedorov has been a member of our Board of Directors since July 2000. He is also a member of the supervisory board of the Savings Bank of Russia (since July 1999). Mr. Fedorov was a member of the Board of Directors of Russian Joint Stock Company UES (1999-2001); Chairman of the Board of Directors of Unified Financial Group (through 1998); and Chairman of the Board of Directors of Vostok-Zapad Bank from (1997-1998). He also serves as Head of the political movement "Russia, Ahead!"

*F. Gazizullin.* Farit Rafikovich Gazizullin has been a member of our Board of Directors since June 1998. He was the Chairman of our Board of Directors from June 1998 through June 1999. Mr. Gazizullin is also a member of the Board of Directors of Open Joint Stock Company FSK UES (since January 2002) and a member of the Board of Directors of Open Joint Stock Company SO-TsDU UES (since June 2002). Mr. Gazizullin is the Minister for Property Relations of the Russian Federation (since 2000). He was the Minister for State Property of the Russian Federation (1998-2000); Deputy Chairman of the Government of the Russian Federation—Minister for the State Property of the Russian Federation (1997-1998); and First Deputy Chairman of the State Committee for Property of the Russian Federation and the First Deputy Minister for the State Property of the Russian Federation (1996-1997).

*G. Gref.* German Oskarovich Gref has served as a member of our Board of Directors since June 1999. From 1998-2000 he was First Deputy Minister for State Property of the Russian Federation. Since 2000 he has served as Minister for Economic Development and Trade of the Russian Federation.

*V. Khristenko.* Victor Borisovich Khristenko has been a member of our Board of Directors since 2000. In 1998 he served as Deputy Prime Minister of the Russian Federation. From 1998 to 1999 he served as First Deputy Minister of Finance of the Russian Federation. In 1999 he was acting state-secretary of the First Deputy Minister of Finance of the Russian Federation. From 1999 to 2000 he served as First Deputy Prime Minister of the Russian Federation. From 2000 to the present he has served as Deputy Prime Minister of the Russian Federation.

*A. Levistskaya.* Alexandra Yurievna Levistskaya has been a member of our Board of Directors since 2001. She is the First Deputy Head of the Presidential Administration of the Russian Federation (since June 2000). She was the assistant to the Head of the Administration of the President of the Russian Federation (1999-2000); President of the Federal Stock Corporation (1998-1999); and Director of the Department for Administrative Questions and the Executive Director of Open Joint Stock Company Federalnaya Fondovaya Corporatsiya (Federal Stock Corporation) (1995-1998).

*M. Sereda.* Mikhail Leonidovich Sereda has been a member of our Board of Directors since June 2002 and Head of our Administration of our Management Committee since July 2001. Mr. Sereda is also a member of the Board of Directors of Joint Stock Company Global Bank for Values Circulation (since August 2001); a member of the Supervisory Board of Wintershal Erdgaz Handelshaus GmbH (since March 2002); a member of the Supervisory Board of WINGAS GmbH (since March 2002); a member of the Board of Directors of Gazprom UK Ltd. (since April 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002); a member of the Board of Directors of Open Joint Stock Company Vostokgazprom (since June 2002); and the Managing Director of Limited Liability Company Gazprom Finance B.V. (since July 2002). Mr. Sereda was the Deputy Head for Economy of Branch BTS of Open Joint Stock Company Verhnevolzhskie Magistralnye Nefteprovody (Verhnevolzhskie Trunk Pipelines) (May-July 2001); Deputy General Director for Finance of Open Joint Stock Company Baltic Pipeline System (then Branch BTS of Open Joint Stock Company Verhnevolzhskie Magistralnye Nefteprovody (Verhnevolzhskie Trunk Pipelines) (1999-2001); and a Leading Economist of the Credit Department of the St. Petersburg Bank of Open Joint Stock Company Joint Stock Commercial Savings Bank of the Russian Federation (1997-1999).

*I. Yusufov.* Igor Khanukovich Yusufov has been a member of our Board of Directors since June 2003. He has been Minister of Energy of the Russian Federation since 2001. He previously served as General Director of the Russian Agency for Government Reserves.

### **Management Committee Biographies**

*A. Miller.* See “—Director Biographies.”

*A. Ananenkov.* See “—Director Biographies.”

*E. Vasilieva.* Elena Alexandrovna Vasilieva has been a Deputy Chairman of our Management Committee, and our Chief Accountant since September 2001. Ms. Vasilieva is also a member of the Board of Directors of Open Joint Stock Company Lazurnaya (since June 2002); a member of the Board of Directors of Closed Joint Stock Company Yamalgazinvest (since June 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002); a member of the Board of Directors of Gazprom UK Ltd. (since April 2002); and a member of the Supervisory Board of Slavrusgaz (since November 2002). Ms. Vasilieva was the Chief Accountant of Open Joint Stock Company Baltic Pipeline System and the Chief Accountant of Branch BTS of Open Joint Stock Company Verhnevolzhskie Trunk Pipelines (1999-2001) and was Deputy Chief Accountant of Open Joint Stock Company St. Petersburg Seaport.

*N. Guslisty.* Nikolai Nikiforovich Guslisty has been a member and Deputy Chairman of our Management Committee since April 1997. He is also Chairman of the Board of Directors of Limited Liability Company Gazprommedstrakh (since April 1998) and Chairman of the Board of Directors of Commercial Bank Olimpiiskii (since February 1998). Mr. Guslisty was Chairman of the Boards of Directors of Limited Liability Company Volgogradneftemash and of Open Joint Stock Company Lazurnaya (1996-2002); and was a member of the management and General Director of PKP Gazcompromselstroj (1997).

*Y. Komarov.* Yuri Alexandrovich Komarov has been a Deputy Chairman of the Management Committee since 2002 and a member of the Management Committee since 1998. Mr. Komarov is the Chairman of the Board of Directors at Closed Joint Stock Company Gaztransit; Chairman of the Board of Directors of Joint Stock Company Yugrosgaz; Chairman of the Board of Directors of Closed Joint Stock Company Zarubezhneftegaz; and a member of the Management Committee of BSPC.

*A. Ryazanov.* Alexander Nikolaevich Ryazanov has been a Deputy Chairman of our Management Committee since November 2001. He also serves as Chairman of the Board of Directors of Joint Stock Company Sibur; as Chairman of the Board of Directors of Joint Stock Company Volgogradneftemash; as Chairman of the Board of Directors of Joint Stock Company Salavatnefteorgsyntez; as a member of the Supervisory Committee of Joint Stock Company Gazum; and as a member of the Board of Directors of Joint Stock Company Zapsibgazprom. Mr. Ryazanov served as a delegate to and Deputy Chairman of the Property Committee of the State Duma of the Federal Assembly of the Russian Federation from December 1999 through November 2001. He was a delegate to the legislative body of Tyumen region and a deputy of the legislative body of Khanty-Mansiisk autonomous region (1999); and General Director of Open Joint Stock Company Surgutskii Gazopererabatyvayushii Zavod (Surgut Gas-Processing Plant) (1994-1999).

*S. Ushakov.* Sergey Konstantinovich Ushakov was born in 1952 in Leningrad and graduated from Leningrad State University in 1974. Mr. Ushakov has been a member of our Management Committee since February 2003. He was Deputy Director of the Federal Protection Services from 2002 until February 2003 and was employed by the Directorate of the Federal Securities Service for St. Petersburg and the St. Petersburg region from 1974 until 2002.

*B. Yurlov.* Boris Dmitrievich Yurlov has been the Deputy Chairman of our Management Committee since June 2002. Mr. Yurlov was Deputy and subsequently First Deputy Manager of Affairs of the President of the Russian Federation (2000-2002) and Director of the Department of Project Financing of the Savings Bank of Russia (1998-2000).

*M. Akselrod.* Mikhail Arkadievich Akselrod has been a member of our Management Committee and Head of our Department of Capital Construction and Transportation since September 2001. Mr. Akselrod also serves as Chairman of the Board of Directors of Closed Joint Stock Company Informgazinvest (since August 2002); Chairman of the Board of Directors of Closed Joint Stock Company Yamalgazinvest (since July 2002); a member of the Board of Directors of Limited Liability Company Gazpromrazvitie (since October 2002); a member of the Board of Directors of Closed Joint Stock Company Gazpromstroieniengineering (since October 2002); Chairman of the Board of Directors of the Closed Joint Stock Company Kostromatrubinvest (since April 2002); Chairman of the Board of Directors of Open Joint Stock Company Spetsavtotrans (since June 2002); Chairman of the Board of Directors of Open Joint Stock Company Tsentrغاز (since April 2002); a member of the Board of Directors of Open Joint Stock Company Druzhba (since June 2002); a member of the Board of Directors of Open Joint Stock Company Zapsibgazprom (since May 2002); a member of the Board of Directors of Open Joint Stock Company Zavod po Proizvodstvu Trub Bolshogo Diametra (since May 2002); Chairman of the Board of Directors of Open Joint Stock Company Krasnodargazstroi (since May 2002); a member of the Management of Joint Stock Company Turusgaz (since February 2002); and General Director of Closed Joint Stock Company Gazpromstroieniengineering (since June 2002). He was the Deputy Director (1999-2000), Director for Investments and Constructions of Lenenergo (2000-2001) and Director for Use of Stations (2001) of Open Joint Stock Company Lenenergo; and President of Company Trade House Yappilya (from 1995-1999).

*B. Budzulyak.* Bogdan Vladimirovich Budzulyak has been a member of our Management Committee since 1993 and Head of our Department of Gas Transportation, Underground Storage and Utilization since 2001. He also previously served as Head of our Department of Gas Transportation and Utilization. Mr. Budzulyak is also a member of the Administrative Council of Joint Stock Company Promgas (Italy); Chairman of the Administrative Council of Joint Stock Company Overgas Inc. (Bulgaria); Chairman of the Administrative Council of Joint Stock Company Topenergy (Bulgaria); a member of the Management Committee of Joint Stock Company Panrusgas (Hungary); a member of the Supervisory Council of Joint Stock Company EuRoPol GAZ (Poland); the Chairman of the Board of Directors of Closed Joint Stock Company Gaztelekom; Chairman of the Board of Directors of Open Joint Stock Company Gazcom; Chairman of the Board of Directors of Limited Liability Company Gazpromenergo; a member of the Board of Directors of Open Joint Stock Company Vostokgazprom; Chairman of the Board of Directors of Open Joint Stock Company Tomskgazprom; the Chairman of the Board of Directors of Closed Joint Stock Company Iskra-Avigaz; a member of the Board of Directors of Closed Joint Stock Company Yamalgazinvest; Chairman of the Board of Directors of Closed Joint Stock Company AKB Moskovskii Vekselnyi Bank; Chairman of the Board of Directors of Open Joint Stock Company Global Exchange Russian Gas; and Chairman of the Board of Directors of Closed Joint Stock Company Trade House Rus-gaz.

*K. Chuichenko.* Konstantin Anatolievich Chuichenko has been a member of our Management Committee since September 2002 and Head of the Legal Department since May 2001. Mr. Chuichenko is also Chairman of the Board of Directors of Closed Joint Stock Company Gazpromstroieniengineering; a member of the Board of Directors of Closed Joint Stock Company TNT-Teleset (since July 2002); Chairman of the Board of Directors of Open Joint Stock Company Gazprom-Media (since July 2002); Chairman of the Board of Directors of Open Joint Stock Company Zapsibgazprom (since May 2002); a member of the Board of Directors of Open Joint Stock Company Lazurnaya (since June 2002); a member of the Board of Directors of Open Joint Stock Company Gazprommedstrakh (since June 2002); and a member of the Moscow branch of the International St. Petersburg Bar Association (1997-2001).

*V. Golubev.* Valeri Alexandrovich Golubev has been a member of our Management Committee since June 2003. Since February 2003 he has also served as the General Director of Limited Liability Company Gazkomplektimpex. From 2002 to 2003 he served as the representative of the Legislative Assembly of the Leningrad Region in the Federal Council of the Federal Assembly of the Russian Federation. He has also been the Chairman of the Tourism Committee of the St. Petersburg Administration (1999 to 2002) and Head of the Vasileostrovski Administrative District of St. Petersburg (1993 to 1999).

*A. Kruglov.* Andrei Vyacheslavovich Kruglov has been a member of our Management Committee since 2002 and Head of our Department of Corporate Finance since April 2002. Mr. Kruglov is also a member of the Boards of Directors of Open Joint Stock Company Sibur (since June 2002) and of Joint Stock Company Global Bank for Value Circulation (since September 2002). He was Head of Group of Financial and Credit Cooperation of the Department of Technical Cooperation with Foreign Countries and International Organizations of the Managing Department for Foreign Economic Cooperation of St. Petersburg Administration (1995 to 2001); and an inspector of management of the international operations of BNP- Dresdner Bank (Russia) (1994 to 1995).

*V. Ilyushin.* Viktor Vasilievich Ilyushin has been a member of our Management Committee since 1997 and the Head of our Department for Relationships with Regions of the Russian Federation since 1998. Mr. Ilyushin is also a member of the Board of Directors of Joint Stock Company Gazprommedstrakh (since June 2002).

*A. Medvedev.* Alexander Ivanovich Medvedev has been a member of our Management Committee since 2002. He is the General Director of Limited Liability Company Gazexport. Mr. Medvedev was the Director of Company IMAG GmbH (1997, 1998-2002) and Vice-President of Open Joint Stock Company Vostochnaya Neftyanaya Companiya (1997-1998).

*V. Podyuk.* Vasili Grigorievich Podyuk has been a member of our Management Committee and Head of our Department for Gas, Gas Condensate and Oil Production since August 1997. He is also a member of the Board of Directors of Open Joint Stock Company Commercial Bank Severgazbank (since April 2002) and a member of the Board of Directors of Closed Joint Stock Company Informgazinvest (since June 2002). Mr. Podyuk was a member of the Board of Directors of Open Joint Stock Company Sibur (2001-2002); a member of the Board of Directors of Gazprom UK Ltd. (1999-2002); and Chairman of the Supervisory Council of Open Joint Stock Company Cherepovetskii Azot (2000-2001).

*K. Seleznev.* Kirill Gennadievich Seleznev has been a member of our Management Committee since September 2002 and is Head of our Department for Marketing and Processing of Gas and Liquid Hydrocarbons. He is also Chairman of the Board of Directors of Closed Joint Stock Company Armrosgazprom (since June 2002); Chairman of the Board of Directors of Closed Joint Stock Company Sevmorneftegaz (since August 2002); a member of the Board of Directors of Joint Stock Company Latvias Gaze (since June 2002); a member of the Board of Directors of Sibur (since June 2002); a member of the Board of Directors of Rosshelf (since May 2002); and a member of the Board of Directors of Open Joint Stock Company Druzhba (since June 2002). He was Deputy Head of the Management Apparatus and assistant to the Chairman of the Management Committee of Gazprom (2001 to 2002); Head of the Tax Group of the Open Joint Stock Company Baltic Pipeline System (2000-2001); Chief Specialist of the Group for the Coordination of Investment Activities of Open Joint Stock Company St. Petersburg Sea Port (1999-2000); and leading Securities Specialist of the Stock Operations Department of Open Joint Stock Company Investment and Finance Group Management-Investments-Development (1998-1999).

### **Description of our Management**

In accordance with the Joint Stock Companies Law and our Charter, we are governed by our General Meeting of Shareholders, Board of Directors, Management Committee and the Management Committee Chairman. The General Meeting of Shareholders is our highest governing body and, among other things, elects our Board of Directors. In practice, our Board of Directors is responsible for formulating our strategy and the Management Committee is responsible for implementing the strategy and managing the Company on a day-to-day basis.

### *General Meeting of Shareholders*

The General Meeting of Shareholders takes place annually, usually in June. The following decisions can be taken only by the General Meeting of Shareholders: amendments to the Charter, the reorganization or liquidation of the Company, the election of the members of our Board of Directors and Audit Commission, determination of the quantity, category, nominal price, number of authorized shares, increases in the charter capital (where such decision is reserved for the General Meeting of Shareholders by law and by the Charter), reduction of the charter capital, approval of the annual report and annual accounts, approval of large transactions and transactions that involve interested parties (in accordance with the terms of Chapters X and XI of the Joint Stock Companies Law).

### *Board of Directors*

The Board of Directors is responsible for the general management of our activities. The Board of Directors must consist of a minimum of nine persons; at present, it has 11. Six members of the Board of Directors hold positions in the Government or in the Presidential Administration. The Chairman of the Management Committee, a member of the Management Committee and a member of our administration were all elected to the Board of Directors.

The powers of our Board of Directors include the following: to determine the priorities of our operations; to approve annual budgets; to call General Meetings of Shareholders and to determine the agenda for such meetings; to determine the record date for General Meetings of Shareholders and for the payment of dividends; to increase our charter capital (except where such increase is within the competence of the General Meeting of Shareholders); to issue bonds or other securities in accordance with the Joint Stock Companies Law; to appoint our executive bodies (i.e., the Management Committee and the Chairman of the Management Committee); to decide on early termination of the powers of these bodies; to nominate candidates for the position of Deputy Chairman of the Management Committee; to determine the remuneration of the Chairman and members of the Management Committee; to recommend the size of dividends; to use the reserve and other funds; to create branch and representative offices; to specify the means of effecting transactions; to adopt decisions on certain major transactions and certain "interested party" transactions (except such major or interested party transactions, the approval of which is within the competence of the General Meeting of Shareholders); and to establish the terms of cooperation with subsidiaries and organizations of which Gazprom holds stock and equity participations.

Members of the Board of Directors are elected by the shareholders through a system of cumulative voting until the next annual General Meeting of Shareholders and may be re-elected any number of times. The General Meeting of Shareholders may also terminate the authority of all members of the Board of Directors. Members of the Management Committee may not comprise more than one-quarter of the Board of Directors and there must be at least nine Directors at all times. The Chairman of the Board of Directors is elected by the members of the Board of Directors by a majority vote of all members of the Board of Directors and may be re-elected at any time by a special resolution requiring at least a two-thirds majority. The Chairman of the Management Committee cannot simultaneously serve as the Chairman of the Board of Directors.

### *Management Committee*

The Management Committee and the Chairman of the Management Committee manage our day-to-day affairs. The Chairman and members of the Management Committee are appointed by the Board of Directors for a term of five years. The Board of Directors has the right to terminate the authority of any Management Committee members as well as the Chairman of the Management Committee.

The competence of the Management Committee includes: (i) development of forward-looking plans and principal programs, including our annual budget and investment programs, preparation of reports on the implementation of those programs for submission to our Board of Directors; (ii) organization of gas flow management and management of the UGSS; (iii) organizing control over the development of our current and prospective plans and programs; (iv) securing the organization and reliability of our bookkeeping accounts and the timely preparation of the annual report and other financial reports; and (v) presenting information about our activities for the use of shareholders, creditors, and the media.

The Management Committee meets at least twice every month in accordance with a schedule which is approved by the Chairman of the Management Committee.

### *Chairman of the Management Committee*

The Chairman of the Management Committee has authority to act in our name without power of attorney, present our interests, approve staff, issue orders and decrees, give instructions to be carried out by all the employees of Gazprom, and issue internal documents with respect to the current activities with the exception of internal documents which are within the competence of our other management organs.

### **Additional Information about our Directors and Management Committee Members**

#### *Directors' and Officers' Compensation*

Our shareholders determine the compensation of directors at each General Meeting of Shareholders. Our Charter does not contain any provisions directly relating to the power of directors to approve remuneration (including pensions or other benefits) for themselves or any other member of our Board of Directors.

In the year ended December 31, 2002, we paid compensation (salaries and pensions) to our directors and members of the Management Committee of RR143 million, including compensation of Sergey Alexeevich Lukash, who has since ceased to be a member of the Management Committee.

#### *Share Ownership of Directors, Management Committee Members and Employees*

The aggregate direct ownership of shares by the members of our Management Committee and Board of Directors was 0.013% and 0.003%, respectively, at June 30, 2003.

## SHAREHOLDING STRUCTURE

As of June 30, 2003, our charter capital was RR118,367,564,500, consisting of 23,673,512,900 shares with a nominal value of RR5 each.

Pursuant to Government Resolution No. 654 of May 30, 1997, our shares are traded in Russia on the Moscow Stock Exchange, the St. Petersburg Stock Exchange, the Yekaterinburg Stock Exchange and the Siberian Stock Exchange.

We have held shareholders' meetings since 1995. The number of our shareholders has decreased from 1,030,002 in 1995 to approximately 488,709 as at June 30, 2003.

Presidential Decree of the Russian Federation No. 529 of May 28, 1997 limited foreign equity participation in the Company to 9% of our shares. Presidential Decree of the Russian Federation No. 943 of August 10, 1998 authorized the sale of a further 5% of our shares to foreign shareholders. Only 2.5% out of the 5% authorized has been sold, and therefore the current level of foreign equity participation is currently 11.5%. The Gas Supply Law also limits foreign shareholdings in our charter capital to 20%.

In 1996, we placed shares representing 1.98% of our charter capital on the foreign markets in the form of American Depositary Shares ("ADS"). Due to the restrictions on foreign equity ownership that prevent the purchase of our shares by foreign participants in the domestic market, the issue of ADSs created a dual market in our shares, with the ADSs trading at a substantial premium over our shares in the domestic market. In 1999, Ruhrgas acquired 1% of our shares in the form of ADSs. Between December 2000 and January 2001 an additional 1.44% of our shares were sold to foreign investors in the form of ADSs. As of June 30, 2003, 4.42% of our shares are held in the form of ADSs. Our ADSs are currently listed on the London Stock Exchange. In April 2001, President Putin established a working group to examine ways in which to liberalize the current dual market in our shares.

The following table summarizes our shareholding structure as at June 30, 2003:

<u>Shareholders</u>	<u>%</u>
Russian Federation <sup>(1)</sup> .....	38.37
Our subsidiaries <sup>(2)</sup> .....	16.26
Foreign shareholders other than our subsidiaries <sup>(3)</sup> .....	6.92
Other <sup>(4)</sup> .....	<u>38.45</u>
Total .....	<u><u>100.00</u></u>

Notes:

- (1) Six of the 11 members of our Board of Directors are representatives of the state.
- (2) Includes (i) 4.58% held by Gazprom Finance B.V., Gazprom's wholly-owned financial vehicle, which shareholding is intended to be used to secure Gazprom's liabilities and issue derivative financial instruments; and (ii) 4.68% held by the Gazprom pension fund. Our subsidiaries are entitled to vote the shares they own. As of December 31, 2002 our subsidiaries held 16.2% of our shares. Changes in the ownership of our shares by our subsidiaries occur as a result of trading activity conducted in the ordinary course of business by certain of our subsidiaries.
- (3) Includes Ruhrgas holdings of (i) 2.5% of Gazprom shares acquired through a privatization auction which was held pursuant to Presidential Decree No. 1316 of October 31, 1998; and (ii) 1% in the form of ADSs.
- (4) Includes shares held by our employees.

## CERTAIN TRANSACTIONS

### Interested Party Transactions under Russian Law

Russian law requires a company that enters into transactions with certain types of its affiliates that are referred to as “interested party transactions” to comply with special approval procedures. Under Russian law, an “interested party” includes (i) members of the board of directors or the collegial executive body of the company, (ii) the CEO of the company (including a managing organization or manager), (iii) any person that owns, together with that person’s affiliates, at least 20% of the company’s voting shares or (iv) a person who on legal grounds has the right to give mandatory instructions to the company, if any of the above listed persons, or a close relative or affiliate of such person, is:

- a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction;
- the owner of at least 20% of the shares in a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction; or
- a member of the board of directors or the collegial executive body or the CEO of a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction or an officer of the managing organization of such company.

Transactions between members of a consolidated corporate group may be considered to be interested party transactions in certain circumstances, even when the companies involved are wholly-owned by the parent company.

Under applicable Russian law, interested party transactions are to be approved by a majority of the disinterested independent members of the board of directors of the company. Where all the directors are interested, or are not independent, or if the subject matter of the transaction exceeds 2% of the balance sheet assets of the company determined under Russian accounting principles (with certain exceptions for share placements), a majority vote of the disinterested shareholders of the company is required. The consequence of not having obtained the appropriate approval is that the transaction in question may be declared invalid upon a claim by the company or any of its shareholders.

In certain circumstances, such as when an interested party transaction is entered into between companies within our Group, the transaction will not always be submitted to the boards of directors of the companies for advance approval because, under Russian law, the lack of advance approval makes the transaction voidable, but not void. If any transaction is challenged in court, the matter of approving it will be submitted for consideration to the boards of directors. In 2000, 2001 and 2002, the Board of Directors of OAO Gazprom approved certain transactions after, rather than before, they were consummated, and since 1996 the Board of Directors has never recognized any such transaction to be contrary to OAO Gazprom’s interests or denied approval thereof *post factum*. In accordance with certain existing judicial practice with respect to the consideration of claims seeking the invalidation of transactions in other legal contexts, *post factum* approval has been regarded as being a sufficient basis for the claim to be rejected. While there can be no assurance that a claim for a violation of the interested party transaction approval requirements would also be rejected, we have proceeded when we have believed it to be necessary to do so on the basis that judicial practice in this area would be similar. However, on the basis that the Joint Stock Company Law, following the amendments which became effective on January 1, 2002, now explicitly requires that interested party transactions should be approved in advance, it is unclear whether future judicial practice will uphold *post factum* approval of interested party transactions concluded after January 1, 2002.

We have put in place procedures to monitor our interested party transactions, which include keeping a register of all such transactions and maintaining a quarterly-updated database of information provided to us by our managers and directors about companies in which they or their families hold positions on management bodies or have equity interests. In addition, our Board of Directors adopted a resolution on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) shares, interests or participations held by us or our subsidiaries in other companies; (ii) loans or other borrowings having a value of greater than 0.3% of our unconsolidated balance sheet assets determined under Russian accounting principles; or (iii) purchases or disposals of fixed assets having a value greater than 0.3% of our unconsolidated balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors.

The foregoing information relates to transactions and agreements entered into by our parent company, OAO Gazprom. Our subsidiaries are subject to the same (or similar) legal requirements regarding the approval of interested party transactions.

### **Transactions with the Government of the Russian Federation**

The Government directly owns approximately 38.37% of our issued shares and controls our Board of Directors. See “Business—Marketing—Delayed Payments for Gas Deliveries in Russia” and “Risk Factors—Risks Relating to our Business—The Government has exercised, and can continue to be expected to exercise, a strong influence over our operations.” In the normal course of our business, we sell gas to the Government and certain Government-owned or -controlled entities. The price at which we sell gas to these entities is the same regulated price at which we sell gas to other domestic consumers. Some of these entities fall into the category of consumers whom we are prevented from disconnecting pursuant to Government regulation.

### **Transactions with Sroytransgaz**

Certain former members of our Board of Directors and members of their families own or owned significant shareholdings in Sroytransgaz. In the mid-1990s, Sroytransgaz acquired about 5% of our shares as part of the settlement of a debt owed by us to Sroytransgaz for various construction services. The shares we transferred to Sroytransgaz were part of a 10% block of our shares that we and our subsidiary Gazfund acquired from the Government in 1995 for nominal value using privatization vouchers. This nominal value was used as the basis for determining the number of shares to be transferred to Sroytransgaz in respect of the debt we owed them for the construction services they provided. We subsequently challenged this transaction with Sroytransgaz and reached an understanding for the return of 4.83% of our shares. These shares were held jointly by three of our subsidiaries and Sroytransgaz pursuant to a joint activity agreement under which we had the right to vote the shares. As a result of our agreement with Sroytransgaz, in March 2003 Sroytransgaz transferred its stake in the joint activity to our subsidiary Gazprominvestholding in exchange for the Gazprom promissory notes with a face value of RR5,719 million and payable in January 2004 that we had contributed to the joint activity. We subsequently acquired 25.9% of the ordinary shares of Sroytransgaz for consideration of RR3,335 million, including investments, promissory notes and cash, in April 2003. In the normal course of business, we enter into transactions with Sroytransgaz for the construction of pipelines in the Russian Federation which we outsource to third-party contractors through a tender process. Sroytransgaz has been a successful bidder in a large number of these tenders. Sroytransgaz rendered construction services to us in the amounts of RR32,278 million in 2002 and RR39,963 million in 2001.

### **Transactions with Interprokom**

Family members of certain former members of our Board of Directors and a member of the Management Committee own significant interests in OOO Interprokom (“Interprokom”).

Interprokom acts as our agent in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. Interprokom acted as an agent in our acquisition of RR8,021 million and RR11,611 million of equipment during 2002 and 2001, respectively. Commissions paid to Interprokom amounted to RR113 million and RR107 million during 2002 and 2001, respectively.

Gazprombank, our principal banking subsidiary, had outstanding import letters of credit issued on behalf of Interprokom and sub-contractors of Interprokom in the amount of RR6,982 million and RR9,751 million as of December 31, 2002 and 2001, respectively. These import letters of credit are issued to third-party suppliers in connection with the purchase of equipment by Interprokom on our behalf.

### **Transactions with Itera**

Beginning around 1997, under our previous management, we entered into a number of transactions with Itera, a company that operates as an independent supplier of gas in Russia and the FSU. Certain of these transactions were questioned by some of our minority shareholders. The transactions involved acquisitions by Itera of interests in certain of our gas fields, tax arrangements involving Itera in the Yamal-Nenets and Nadym-Pur-Taz regions of Russia, purchases of gas from Itera, the transportation of gas owned by Itera through the

UGSS, loans to Itera and guarantees of Itera indebtedness. In early 2001, our Board of Directors appointed our independent auditors, PricewaterhouseCoopers, to examine certain aspects of our financial and operating activities and, in particular, our operating relationship with Itera. PricewaterhouseCoopers presented its report (the "Report") at a meeting of our Board of Directors in July 2001. The Report made certain recommendations, some of which have been implemented and others of which are in the process of being implemented. Partly as a result of the Report, we intensified our asset reacquisition program through which we have reacquired assets from Itera. See "Certain Factors Affecting our Financial Condition and Results of Operations—Certain Acquisitions and Dispositions—Our asset reacquisition program."

## FACILITY AGREEMENT

*The following is the text of the Facility Agreement that has been entered into between us and the Issuer. In the context of each Series of Notes and the corresponding Loan, this Facility Agreement should be read in conjunction with, and is qualified in its entirety by, the relevant Loan Supplement for such Series and Loan.*

This Facility Agreement is made on 22 September 2003 between:

- (1) **OPEN JOINT STOCK COMPANY GAZPROM**, a company established under the laws of the Russian Federation whose registered office is at 16 Nametkina Street, 117884 Moscow, Russian Federation (“**Gazprom**”); and
- (2) **GAZ CAPITAL S.A.**, a société anonyme established under the laws of Luxembourg whose registered office is at 2, Boulevard Konrad Adenauer L-1115 Luxembourg, registered with the Register of Commerce and Companies, Luxembourg under number B - 95071 (the “**Lender**”).

**Whereas**, the Lender has at the request of Gazprom agreed to make available to Gazprom a loan facility in the maximum amount of the Programme Limit (as defined below) on the terms and subject to the conditions of this Agreement, as amended and supplemented in relation to each Loan by a Loan Supplement dated the Closing Date substantially in the form set out in the Schedule hereto (each, a “**Loan Supplement**”);

**Whereas**, it is intended that, concurrently with the extension of any Loan under this loan facility, the Lender will issue certain loan participation notes in the same nominal amount and bearing the same rate of interest as such Loan; and

**Whereas**, it has been agreed in the Principal Trust Deed (as defined below) that if following the assignment by the Lender of its rights and obligations under any Loan Agreement, the Trustee or any person receiving payments under the direction of the Trustee in accordance with Clause 2.8 of the Principal Trust Deed is no longer a resident of a state with which the Russian Federation has a double taxation treaty providing for a zero withholding tax rate on income in the form of interest, then the Trustee shall use its best endeavours (using its powers under the Principal Trust Deed) to select a new trustee or co-trustee, appoint an agent or nominee, delegate any of its functions or take such other measures that it deems advisable or necessary so that payments obtain the benefit of a zero withholding tax rate on payments in the form of interest.

Now it is hereby agreed as follows:

### 1 Definitions and Interpretation

#### 1.1 Definitions

In this Agreement (including the recitals), the following terms shall have the meanings indicated:

“**Account**” means an account in the name of the Lender with the Principal Paying Agent as specified in the relevant Loan Supplement.

“**Affiliates**” of any specified Person means any other Person, directly or indirectly, controlling or controlled by or under direct or indirect control by such specified Person. For the purposes of this definition, “control” when used with respect to any Person means the power to direct the management and policies of such Person, directly or indirectly, whether through the ownership of voting securities, by contract or otherwise; and the terms “controlling” and “controlled” have meanings correlative to the foregoing.

“**Agency Agreement**” means the paying agency agreement relating to the Programme dated 22 September 2003 between the Lender, Gazprom, the Trustee and the agents named therein.

“**Arrangers**” mean Deutsche Bank AG London and UBS Limited or any additional or replacement arranger appointed, and excluding any Arranger whose appointment has terminated pursuant to the Dealer Agreement.

“**Business Day**” means (save in relation to Clause 4) a day (other than a Saturday or Sunday) on which (a) banks and foreign exchange markets are open for business generally in the relevant place of payment, and (b) if on that day a payment is to be made in a Specified Currency other than euro hereunder, where payment is to be made by transfer to an account maintained with a bank in the Specified Currency, foreign exchange transactions may be carried on in the Specified Currency in the principal financial centre of the country of such Specified Currency and (c) if on that day a payment is to be made in euro hereunder, a day on which the TARGET System is operating and (d) in relation to a Loan corresponding

to a Series of Notes to be sold pursuant to Rule 144A under the Securities Act, banks and foreign exchange markets are open for business generally in New York City.

**“Calculation Agent”** means, in relation to a Loan, Deutsche Bank AG London or any person named as such in the relevant Loan Supplement or any successor thereto.

**“Closing Date”** means the date specified as such in the relevant Loan Supplement.

**“Consolidated Net Tangible Assets”** means the total of all assets less (i) total liabilities, (ii) goodwill, trade names, trade marks, service marks, patents, licences, organisational expenses, research and development expenses, unamortised debt discount and expense, unamortised deferred charges and all other like intangible assets, (iii) all write-ups of fixed assets, net of accumulated depreciation thereon, after the most recent consolidated balance sheet of Gazprom and its consolidated Subsidiaries immediately preceding the relevant Closing Date prepared in accordance with IFRS, as consistently applied, other than any revaluation supported by an independent appraisal completed by an appropriately qualified firm and disregarding, for the avoidance of doubt, any restatement for changes in the general purchasing power of the Rouble in accordance with IFRS 29 “Financial Reporting in Hyperinflationary Economics” and (iv) preferred stock, if any, all as set forth on the most recent consolidated balance sheet of Gazprom and its consolidated Subsidiaries prepared in accordance with IFRS, as consistently applied.

**“Day Count Fraction”** has the meaning specified in the relevant Loan Supplement.

**“Dealer Agreement”** means the dealer agreement relating to the Programme dated 22 September 2003 between the Lender, Gazprom, the Arrangers and the other dealers appointed pursuant to it.

**“Dollars”**, **“\$”** and **“U.S.\$”** means the lawful currency of the United States of America.

**“Encumbrance”** means any mortgage, charge, pledge, lien (other than a lien arising solely by operation of law which is discharged within 45 days of arising) or other security interest securing any obligation of any Person or any other type of preferential arrangement (including any title transfer and retention arrangement) having a similar effect.

**“Environmental Law”** means any applicable law in any jurisdiction in which any member of the Group conducts business which relates to the pollution or protection of the environment or harm to or the protection of human health or the health of animals or plants.

**“euro”** or **“€”** means the lawful currency of the member states of the European Union that adopted the single currency in accordance with the Treaty of Rome, as amended.

**“Event of Default”** has the meaning assigned to such term in sub-clause 11.1 hereof.

**“Financial Indebtedness”** means any obligation for the payment of money in any currency, other than an obligation for the payment of money in the lawful currency for the time being of the Russian Federation payable to any person domiciled, resident or having its head office or principal place of business in the Russian Federation, whether sole, joint or several, and whether actual or contingent, in respect of:

- (a) moneys borrowed or raised (including the capitalised value of obligations under financial leases and hire purchase agreements and deposits, but excluding moneys raised by way of the issue of share capital (whether or not for a cash consideration) and any premium on such share capital) and interest and other charges thereon or in respect thereof;
- (b) any liability under any debenture, bond, note, loan stock or other security or under any acceptance or documentary credit, bill discounting or note purchase facility or any similar instrument;
- (c) any liability in respect of the deferred acquisition cost of property, assets or services to the extent payable after the time of acquisition or possession thereof by the party liable, but not including any such liability in respect of normal trade credit for a period not exceeding six months for goods or services supplied;
- (d) any liability under any interest rate or currency hedging agreement;
- (e) any liability under or in respect of any bonding facility, guarantee facility or similar facility; and
- (f) (without double counting) any guarantee or other assurance against financial loss in respect of such moneys borrowed or raised, interest, charges or other liability (whether the person liable in respect of such moneys borrowed or raised, interest, charges or other liability is or is not a member of the Group),

but not where the same relates to or is in connection with any Project Financing.

**“Fixed Rate Loan”** means a Loan specified as such in the relevant Loan Supplement.

**“Floating Rate Loan”** means a Loan specified as such in the relevant Loan Supplement.

**“Gazprom Account”** means an account in the name of Gazprom as specified in the relevant Loan Supplement for receipt of Loan funds.

**“Gazprom Agreements”** means this Agreement, the Agency Agreement, the Dealer Agreement and together with, in relation to each Loan, the relevant Subscription Agreement and Loan Supplement.

**“Group”** means Gazprom and its Subsidiaries taken as a whole.

**“IFRS”** means the International Financial Reporting Standards issued by the International Accounting Standards Board (as amended, supplemented or re-issued from time to time).

**“Interest Payment Date”** means the dates specified as such in the relevant Loan Supplement.

**“Interest Period”** means each period beginning on (and including) an Interest Payment Date and ending on (but excluding) the next Interest Payment Date.

**“Lead Manager(s)”** means the Relevant Dealer(s) specified as such in the relevant Subscription Agreement.

**“Lender Agreements”** means the Dealer Agreement, this Agreement, the Agency Agreement, the Principal Trust Deed and together with, in relation to each Loan, the relevant Subscription Agreement, Loan Supplement and Supplemental Trust Deed.

**“Loan”** means each loan to be made pursuant to, and on the terms specified in this Agreement and the relevant Loan Supplement and includes each Fixed Rate Loan and Floating Rate Loan.

**“Loan Agreement”** means this Agreement and (unless the context requires otherwise), in relation to a Loan means this Agreement as amended and supplemented by the relevant Loan Supplement.

**“Material Adverse Effect”** means a material adverse effect on (a) the financial condition or operations of Gazprom or its Principal Subsidiaries or (b) Gazprom’s ability to perform its obligations under a Loan Agreement or (c) the validity, legality or enforceability of a Loan Agreement or the rights or remedies of the Lender under a Loan Agreement.

**“Notes”** means the loan participation notes that may be issued from time to time by the Lender under the Programme in Series, each Series corresponding to a Loan and in relation to a Loan as defined in the relevant Loan Supplement.

**“Noteholder”** means, in relation to a Note, the person in whose name such Note is registered in the register of the noteholders (or in the case of joint holders, the first named holder thereof).

**“Officer’s Certificate”** means a certificate signed by an officer of Gazprom who shall be the principal executive officer, principal accounting officer or principal financial officer of Gazprom.

**“Opinion of Counsel”** means a written opinion from international legal counsel being acceptable to the Lender.

**“Permitted Encumbrance”** means:

- (i) any Encumbrance existing on the date of the relevant Loan Agreement;
- (ii) any Encumbrance existing on any property, income or assets of any corporation at the time such corporation becomes a Subsidiary of Gazprom and not created in contemplation of such event, provided that no such Encumbrance shall extend to any other property, income or assets of such corporation or the Group;
- (iii) any Encumbrance on any property, income or assets of any corporation existing at the time such corporation is merged or consolidated with or into Gazprom or any Subsidiary of Gazprom and not created in contemplation of such event, provided that no such Encumbrance shall extend to any other property, income or assets of the Group;
- (iv) any Encumbrance on any property or assets securing Financial Indebtedness of Gazprom or any Subsidiary incurred or assumed for the purpose of financing all or part of the cost of acquiring, purchasing, constructing or developing such property or assets, provided that no such Encumbrance shall extend to any other property or assets of the Group, the principal

amount of the Financial Indebtedness secured by such Encumbrance shall not exceed the cost of acquiring, purchasing, constructing or developing such property or assets, and such Encumbrance attaches to such property or assets concurrently with or within 90 days after the acquisition or purchase, or the commencement of the construction or development, thereof;

- (v) any Encumbrance on any property or assets securing Financial Indebtedness of Gazprom or any Subsidiary incurred or assumed for the purpose of financing all or part of the cost of repairing or refurbishing such property or assets, provided that no such Encumbrance shall extend to any other property or assets of the Group, the principal amount of the Financial Indebtedness secured by such Encumbrance shall not exceed the cost of such repairs or refurbishments, and such Encumbrance attaches to such property or assets concurrently with or within 90 days after the commencement of such repairs or refurbishments;
- (vi) any Encumbrance existing on any property, income or assets prior to the acquisition thereof by Gazprom or any Subsidiary and not created in contemplation of such acquisition, provided that no such Encumbrance shall extend to any other property, income or assets of the Group;
- (vii) any Encumbrance on the property, income or assets of any Subsidiary securing intercompany Financial Indebtedness of such Subsidiary owing to Gazprom or another Subsidiary;
- (viii) any Encumbrance securing Financial Indebtedness incurred in connection with a Project Financing if the Encumbrance is solely on the property, income, assets or revenues of the project for which the financing was incurred;
- (ix) any Encumbrance securing Financial Indebtedness not exceeding 50 per cent. of Gazprom's Consolidated Net Tangible Assets at any time of determination;
- (x) any Encumbrance arising out of the refinancing, extension, renewal or refunding of any Financial Indebtedness of Gazprom or any Subsidiary secured by any Permitted Encumbrance, provided that such Financial Indebtedness is not increased and, if the property, income or assets securing any such Financial Indebtedness are changed in connection with any such refinancing, extension, renewal or refunding, the value of the property, income or assets securing such Financial Indebtedness is not increased;
- (xi) any Encumbrance over any goods or products, or documents, insurance policies or sale contracts in relation to any goods or products, arising in the ordinary course of trading in connection with the provision of a letter of credit or any similar transaction where such Encumbrance secures only so much of the acquisition cost or selling price (and amounts incidental thereto) of such goods or products which is required to be paid within 120 days after the date upon which liability in respect of the same was first incurred; and
- (xii) a right of set-off, right to combine accounts or any analogous right which any bank or other financial institution may have relating to any credit balance of any member of the Group.

**"Person"** means any individual, corporation, partnership, limited liability company, joint venture, association, joint-stock company, company, firm, trust, organisation, government, or any agency or political subdivision thereof or any other entity, whether or not having a separate legal personality.

**"Potential Event of Default"** means any event which is, or after notice or passage of time or both would be, an Event of Default.

**"Principal Subsidiary"** means at any relevant time a Subsidiary of Gazprom:

- (i) whose total assets or gross revenues (or, where the Subsidiary in question prepares consolidated accounts, whose total consolidated assets or gross consolidated revenues, as the case may be) represent not less than 5 per cent. of the total consolidated assets or the gross consolidated revenues of Gazprom and its Subsidiaries, all as calculated by reference to the then latest audited accounts (or consolidated accounts as the case may be) (in each case, produced on the basis of IFRS, consistently applied) of such Subsidiary and the then latest audited consolidated accounts of Gazprom (produced on the basis of IFRS, consistently applied) and its consolidated Subsidiaries; or
- (ii) to which is transferred all or substantially all the assets and undertaking of a Subsidiary which immediately prior to such transfer is a Principal Subsidiary.

**"Principal Trust Deed"** means the principal trust deed dated 22 September 2003 between the Lender and the Trustee.

“**Programme**” means the programme for the issuance of loan participation notes.

“**Programme Limit**” means U.S.\$5,000,000,000 or its equivalent in other currencies, being the maximum aggregate principal amount of Notes that may be issued and outstanding at any time under the Programme as may be increased in accordance with the Dealer Agreement.

“**Project Financing**” means any financing of all or part of the costs of the acquisition, construction, development or operation of any asset or project if the person or persons providing such financing expressly agrees to limit its recourse solely to the asset or project financed and the revenues derived from such asset or project as the principal source of repayment for the moneys advanced.

“**Rate of Interest**” has the meaning assigned to such term in the relevant Loan Supplement.

“**Relevant Time**” means, in relation to a payment in a Specified Currency, the time in the principal financial centre of such Specified Currency and, in relation to a payment in euro, Brussels time.

“**Repayment Date**” means the date specified as such in the relevant Loan Supplement.

“**Roubles**” means the lawful currency of the Russian Federation.

“**Same-Day Funds**” means funds for payment, in the Specified Currency as the Lender may at any time determine to be customary for the settlement of international transactions in the principal financial centre of the country of the Specified Currency or, as the case may be, euro funds settled through the TARGET System or such other funds for payment in euro as the Lender may at any time determine to be customary for the settlement of international transactions in Brussels of the type contemplated hereby.

“**Series**” means a series of Notes that (except in respect of the first payment of interest and their issue price) have identical terms on issue and are expressed to have the same series number.

“**Side Letter**” means the letter specified as such in the relevant Loan Supplement.

“**Specified Currency**” means the currency specified as such in the relevant Loan Supplement.

“**Subscription Agreement**” means the agreement specified as such in the relevant Loan Supplement.

“**Subsidiary**” means, with respect to any Person, (i) any corporation, association or other business entity of which at least 50 per cent. of the total voting power entitled (without regard to the occurrence of any contingency) to vote in the election of directors, managers or trustees thereof is at the time owned or controlled, directly or indirectly, by such Person or one or more of the other Subsidiaries of such Person (or any combination thereof) and (ii) any partnership (a) the sole general partner or the managing general partner of which is such Person or a Subsidiary of such person or (b) the only general partners of which are such Person or of one or more Subsidiaries of such Person (or any combination thereof).

“**Supplemental Trust Deed**” means a supplemental trust deed in respect of a Series of Notes which constitutes and secures, *inter alia*, such Series dated the relevant Closing Date and made between the Lender and the Trustee (substantially in the form set out in Schedule 10 of the Principal Trust Deed).

“**TARGET System**” means the Trans-European Automated Real-Time Gross Settlement Express Transfer (TARGET) System or any successor thereof.

“**Taxes**” means any taxes (including interest or penalties thereon) which are now or at any time hereafter imposed, assessed, charged, levied, collected, demanded, withheld or claimed by the Russian Federation, Luxembourg or any taxing authority thereof or therein provided, however, that for the purposes of this definition the references to Luxembourg shall, upon the occurrence of the Relevant Event (as this term is defined in the Trust Deed), be deemed to be references to the jurisdiction in which the Trustee is domiciled for tax purposes; and the term “**Taxation**” shall be construed accordingly.

“**Trust Deed**” means the trust deed specified as such in the relevant Loan Supplement.

“**Trustee**” means Deutsche Bank Trust Company Americas, as trustee under the Trust Deed and any successor thereto as provided thereunder.

“**Warranty Date**” means the date hereof, the date of each Loan Supplement, each Closing Date, each date on which the Offering Circular or any of the Lender Agreements is amended, supplemented or replaced and each date on which the Programme Limit is increased.

## 1.2 Other Definitions

Unless the context otherwise requires, terms used in this Agreement which are not defined in this Agreement but which are defined in the Principal Trust Deed, the Notes, the Agency Agreement or the Dealer Agreement shall have the meanings assigned to such terms therein.

### **1.3 Interpretation**

Unless the context or the express provisions of this Agreement otherwise require, the following shall govern the interpretation of this Agreement:

- 1.3.1** All references to "Clause" or "sub-clause" are references to a Clause or sub-clause of this Agreement.
- 1.3.2** The terms "hereof", "herein" and "hereunder" and other words of similar import shall mean the relevant Loan Agreement as a whole and not any particular part hereof.
- 1.3.3** Words importing the singular number include the plural and vice versa.
- 1.3.4** All references to "taxes" include all present or future taxes, levies, imposts and duties of any nature and the terms "tax" and "taxation" shall be construed accordingly.
- 1.3.5** The table of contents and the headings are for convenience only and shall not affect the construction hereof.
- 1.3.6** Any reference herein to a document being in "agreed form" means that the document in question has been agreed between the proposed parties thereto, subject to any amendments that the parties may agree upon prior to the Issue Date.

## **2 Loans**

### **2.1 Loans**

On the terms and subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, the Lender hereby agrees to make available to Gazprom Loans up to the total aggregate amount equal to the Programme Limit.

### **2.2 Purpose**

The proceeds of each Loan will be used for general corporate purposes, but the Lender shall not be concerned with the application thereof.

### **2.3 Separate Loans**

It is agreed that with respect to each Loan, all the provisions of this Facility Agreement and the Loan Supplement shall apply *mutatis mutandis* separately and independently to each such Loan and the expressions "Account", "Closing Date", "Day Count Fraction", "Interest Payment Date", "Loan Agreement", "Notes", "Rate of Interest", "Repayment Date", "Specified Currency", "Subscription Agreement" and "Trust Deed", together with all other terms that relate to such a Loan shall be construed as referring to those of the particular Loan in question and not of all Loans unless expressly so provided, so that each such Loan shall be made pursuant to this Facility Agreement and the relevant Loan Supplement, together comprising the Loan Agreement in respect of such Loan and that, unless expressly provided, events affecting one Loan shall not affect any other.

## **3 Drawdown**

### **3.1 Drawdown**

On the terms and subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, on the Closing Date thereof the Lender shall make a Loan to Gazprom and Gazprom shall make a single drawing in the full amount of such Loan.

### **3.2 Loan Fees and Expenses**

In consideration of the Lender making a Loan to Gazprom, Gazprom hereby agrees that it shall, two Business Days before each Closing Date, pay to the Lender, in Same-Day Funds, an amount equal to the reimbursable expenses incurred by the Lender in a total amount to be specified in the relevant Loan Supplement.

### **3.3 Disbursement**

Subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, on each Closing Date the Lender shall transfer the amount of the relevant Loan to the Gazprom Account specified in the relevant Loan Supplement.

### **3.4 Programme Fees and Expenses**

In consideration of the Lender establishing and maintaining the Programme and agreeing to make Loans to Gazprom, Gazprom shall pay on demand to the Lender each year an amount to reimburse the Lender

for its expenses relating to its management and operation in servicing the Loans as set forth to Gazprom in an invoice from the Lender.

#### **4 Interest**

##### **4.1 Rate of Interest for Fixed Rate Loans**

Each Fixed Rate Loan bears interest on its outstanding principal amount from (and including) the Interest Commencement Date at the rate(s) per annum (expressed as a percentage) equal to the applicable Rate of Interest.

If a Fixed Amount or a Broken Amount is specified in the relevant Loan Supplement, the amount of interest payable on each Interest Payment Date will amount to the Fixed Amount or, if applicable, the Broken Amount so specified and in the case of the Broken Amount will be payable on the particular Interest Payment Date(s) specified in the relevant Loan Supplement.

##### **4.2 Payment of Interest for Fixed Rate Loans**

Interest at the Rate of Interest shall accrue on each Fixed Rate Loan from day to day, starting from (and including) the Interest Commencement Date and thereafter from (and including) each Interest Payment Date, to (but excluding) the next Interest Payment Date and shall be paid in arrear not later than 10.00 a.m. (Relevant Time) one Business Day prior to each Interest Payment Date.

##### **4.3 Interest for Floating Rate Loans**

**4.3.1** *Interest Payment Dates:* Each Floating Rate Loan bears interest on its outstanding principal amount from (and including) the Interest Commencement Date and thereafter from (and including) the Interest Payment Date, to (but excluding) the next Interest Payment Date at the rate per annum (expressed as a percentage) equal to the applicable Rate of Interest, such interest being payable in arrear not later than 10:00 a.m. (Relevant Time) one Business Day prior to each Interest Payment Date. Such Interest Payment Date(s) is/are either shown in the relevant Loan Supplement as Specified Interest Payment Date(s) or, if no Specified Interest Payment Date(s) is/are shown in the relevant Loan Supplement, Interest Payment Date shall mean each date which falls the number of months or other period shown in the relevant Loan Supplement as the Interest Period after the preceding Interest Payment Date or, in the case of the first Interest Payment Date, after the Interest Commencement Date.

**4.3.2** *Business Day Convention:* If any date referred to in the relevant Loan Supplement that is specified to be subject to adjustment in accordance with a Business Day Convention would otherwise fall on a day that is not a Business Day, then, if the Business Day Convention specified is (A) the Floating Rate Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event (x) such date shall be brought forward to the immediately preceding Business Day and (y) each subsequent such date shall be the last Business Day of the month in which such date would have fallen had it not been subject to adjustment, (B) the Following Business Day Convention, such date shall be postponed to the next day that is a Business Day, (C) the Modified Following Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event such date shall be brought forward to the immediately preceding Business Day or (D) the Preceding Business Day Convention, such date shall be brought forward to the immediately preceding Business Day.

**4.3.3** *Rate of Interest for Floating Rate Loans:* The Rate of Interest in respect of Floating Rate Loans for each Interest Accrual Period shall be determined in the manner specified in the relevant Loan Supplement and the provisions below relating to either ISDA Determination or Screen Rate Determination shall apply, depending upon which is specified in the relevant Loan Supplement.

(i) **ISDA Determination for Floating Rate Loans**

Where ISDA Determination is specified in the relevant Loan Supplement as the manner in which the Rate of Interest is to be determined, the Rate of Interest for each Interest Accrual Period shall be determined by the Calculation Agent as a rate equal to the relevant ISDA Rate. For the purposes of this sub-paragraph (i), "ISDA Rate" for an Interest Accrual Period means a rate equal to the Floating Rate that would be

determined by the Calculation Agent under a Swap Transaction under the terms of an agreement incorporating the ISDA Definitions and under which:

- (a) the Floating Rate Option is as specified in the relevant Loan Supplement;
- (b) the Designated Maturity is a period specified in the relevant Loan Supplement; and
- (c) the relevant Reset Date is the first day of that Interest Accrual Period unless otherwise specified in the relevant Loan Supplement.

For the purposes of this sub-paragraph (i), “**Floating Rate**”, “**Calculation Agent**”, “**Floating Rate Option**”, “**Designated Maturity**”, “**Reset Date**” and “**Swap Transaction**” have the meanings given to those terms in the ISDA Definitions.

(ii) Screen Rate Determination for Floating Rate Loans

Where Screen Rate Determination is specified in the relevant Loan Supplement as the manner in which the Rate of Interest is to be determined, the Rate of Interest for each Interest Accrual Period shall be determined by the Calculation Agent at or about the Relevant Time on the Interest Determination Date in respect of such Interest Accrual Period in accordance with the following:

- (a) if the Primary Source for Floating Rate is a Page, subject as provided below, the Rate of Interest shall be:
  - (I) the Relevant Rate (where such Relevant Rate on such Page is a composite quotation or is customarily supplied by one entity); or
  - (II) the arithmetic mean of the Relevant Rates of the persons whose Relevant Rates appear on that Page,

in each case appearing on such Page at the Relevant Time on the Interest Determination Date;

- (b) if the Primary Source for the Floating Rate is Reference Banks or if sub-paragraph (a)(I) applies and no Relevant Rate appears on the Page at the Relevant Time on the Interest Determination Date or if sub-paragraph (a)(II) above applies and fewer than two Relevant Rates appear on the Page at the Relevant Time on the Interest Determination Date, subject as provided below, the Rate of Interest shall be the arithmetic mean of the Relevant Rates that each of the Reference Banks is quoting to leading banks in the Relevant Financial Centre at the Relevant Time on the Interest Determination Date, as determined by the Calculation Agent; and
- (c) if paragraph (b) above applies and the Calculation Agent determines that fewer than two Reference Banks are so quoting Relevant Rates, subject as provided below, the Rate of Interest shall be the arithmetic mean of the rates per annum (expressed as a percentage) that the Calculation Agent determines to be the rates (being the nearest equivalent to the Benchmark) in respect of a Representative Amount of the Specified Currency that at least two out of five leading banks selected by the Calculation Agent in the principal financial centre of the country of the Specified Currency or, if the Specified Currency is euro, in Europe as selected by the Calculation Agent (the “**Principal Financial Centre**”) are quoting at or about the Relevant Time on the date on which such banks would customarily quote such rates for a period commencing on the Effective Date for a period equivalent to the Specified Duration (I) to leading banks carrying on business in Europe, or (if the Calculation Agent determines that fewer than two of such banks are so quoting to leading banks in Europe) (II) to leading banks carrying on business in the Principal Financial Centre; except that, if fewer than two of such banks are so quoting to leading banks in the Principal Financial Centre, the Rate of Interest shall be the Rate of Interest determined on the previous Interest Determination Date (after readjustment for any difference between any Margin, Rate Multiplier or Maximum or Minimum Rate of Interest applicable to the preceding Interest Accrual Period and to the relevant Interest Accrual Period).

#### **4.4 Accrual of Interest**

Interest shall cease to accrue on each Loan on the due date for repayment unless payment is improperly withheld or refused, in which event interest shall continue to accrue (as well after as before judgment) at the applicable Rate of Interest to but excluding the date on which payment in full of the principal thereof is made.

#### **4.5 Margin, Maximum/Minimum Rates of Interest, Rate Multipliers and Rounding**

**4.5.1** If any Margin or Rate Multiplier is specified in the relevant Loan Supplement (either (x) generally, or (y) in relation to one or more Interest Accrual Periods), an adjustment shall be made to all Rates of Interest, in the case of (x), or the Rates of Interest for the specified Interest Accrual Periods, in the case of (y), calculated in accordance with Clause 4.3 above by adding (if a positive number) or subtracting the absolute value (if a negative number) of such Margin or multiplying by such Rate Multiplier, subject always to the next paragraph.

**4.5.2** If any Maximum or Minimum Rate of Interest is specified in the relevant Loan Supplement, then any Rate of Interest shall be subject to such maximum or minimum, as the case may be.

**4.5.3** For the purposes of any calculations required pursuant to a Loan Agreement (unless otherwise specified), (x) all percentages resulting from such calculations shall be rounded, if necessary, to the nearest one hundred-thousandth of a percentage point (with halves being rounded up), (y) all figures shall be rounded to seven significant figures (with halves being rounded up) and (z) all currency amounts that fall due and payable shall be rounded to the nearest unit of such currency (with halves being rounded up), save in the case of yen, which shall be rounded down to the nearest yen. For these purposes “unit” means the lowest amount of such currency that is available as legal tender in the country or countries of such currency.

#### **4.6 Calculations**

The amount of interest payable in respect of any Loan for any period shall be calculated by multiplying the product of the Rate of Interest and the outstanding principal amount of such Loan by the Day Count Fraction, unless an Interest Amount (or a formula for its calculation) is specified in the relevant Loan Supplement in respect of such period, in which case the amount of interest payable in respect of such Loan for such period shall equal such Interest Amount (or be calculated in accordance with such formula). Where any Interest Period comprises two or more Interest Accrual Periods, the amount of interest payable in respect of such Interest Period shall be the sum of the amounts of interest payable in respect of each of those Interest Accrual Periods.

#### **4.7 Determination and Publication of Rates of Interest and Interest Amounts**

As soon as practicable after the Relevant Time on each Interest Determination Date or such other time on such date as the Calculation Agent may be required to calculate any rate or amount, obtain any quotation or make any determination or calculation, it shall determine such rate and calculate the Interest Amounts in respect of such Floating Rate Loan for the relevant Interest Accrual Period, obtain such quotation or make such determination or calculation, as the case may be, and cause the Rate of Interest and the Interest Amounts for each Interest Period and the relevant Interest Payment Date to be notified to Gazprom, the Trustee, the Lender, each of the Paying Agents and any other Calculation Agent appointed in respect of such Floating Rate Loan that is to make a further calculation upon receipt of such information. Where any Interest Payment Date or Interest Period Date is subject to adjustment pursuant to Clause 4.3.2, the Interest Amounts and the Interest Payment Date so published may subsequently be amended (or appropriate alternative arrangements made with the consent of Gazprom and the Lender by way of adjustment) without notice in the event of an extension or shortening of the Interest Period. If such Floating Rate Loan becomes due and payable under Clause 11, the accrued interest and the Rate of Interest payable in respect of such Floating Rate Loan shall nevertheless continue to be calculated as previously in accordance with this Clause but no publication of the Rate of Interest or the Interest Amount so calculated need be made unless the Lender otherwise requires. The determination of any rate or amount, the obtaining of each quotation and the making of each determination or calculation by the Calculation Agent(s) shall (in the absence of manifest error) be final and binding upon all parties.

#### **4.8 Determination or Calculation by Trustee**

If the Calculation Agent does not at any time for any reason determine or calculate the Rate of Interest for an Interest Period or any Interest Amount in relation to a Floating Rate Loan, the Lender and Gazprom agree that such determination or calculation may be made by or at the direction of the Trustee as set out in the conditions of the corresponding Series of Notes.

#### 4.9 Definitions

In this Clause 4, unless the context otherwise requires, the following defined terms shall have the meanings set out below:

“**Benchmark**” has the meaning specified in the relevant Loan Supplement;

“**Business Day**” means:

- (i) in the case of a currency other than euro, a day (other than a Saturday or Sunday) on which commercial banks and foreign exchange markets settle payments in the principal financial centre for such currency; and/or
- (ii) in the case of euro, a day on which the TARGET system is operating (a “**TARGET Business Day**”); and/or
- (iii) in the case of a currency and/or one or more Business Centres a day (other than a Saturday or a Sunday) on which commercial banks and foreign exchange markets settle payments in such currency in the Business Centre(s) or, if no currency is indicated, generally in each of the Business Centres.

“**Day Count Fraction**” means, in respect of the calculation of an amount of interest on any Note for any period of time (from and including the first day of such period to but excluding the last) (whether or not constituting an Interest Period, the “**Calculation Period**”):

- (i) if “**Actual/365**” or “**Actual/Actual - ISDA**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 365 (or, if any portion of that Calculation Period falls in a leap year, the sum of (A) the actual number of days in that portion of the Calculation Period falling in a leap year divided by 366 and (B) the actual number of days in that portion of the Calculation Period falling in a non-leap year divided by 365);
- (ii) if “**Actual/365 (Fixed)**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 365;
- (iii) if “**Actual/360**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 360;
- (iv) if “**30/360**”, “**360/360**” or “**Bond Basis**” is specified in the relevant Loan Supplement, the number of days in the Calculation Period divided by 360 (the number of days to be calculated on the basis of a year of 360 days with 12 30-day months (unless (a) the last day of the Calculation Period is the 31st day of a month but the first day of the Calculation Period is a day other than the 30th or 31st day of a month, in which case the month that includes that last day shall not be considered to be shortened to a 30-day month, or (b) the last day of the Calculation Period is the last day of the month of February, in which case the month of February shall not be considered to be lengthened to a 30-day month));
- (v) if “**30E/360**” or “**Eurobond Basis**” is specified in the relevant Loan Supplement, the number of days in the Calculation Period divided by 360 (the number of days to be calculated on the basis of a year of 360 days with 12 30-day months, without regard to the date of the first day or last day of the Calculation Period unless, in the case of a Calculation Period ending on the Maturity Date, the Maturity Date is the last day of the month of February, in which case the month of February shall not be considered to be lengthened to a 30-day month); and
- (vi) if “**Actual/Actual-ISMA**” is specified in the relevant Loan Supplement:
  - (a) If the Calculation Period is equal to or shorter than the Determination Period during which it falls, the number of days in the Calculation Period divided by the product of (x) the number of days in such Determination Period and (y) the number of Determination Periods normally ending in any year; and
  - (b) if the Calculation Period is longer than one Determination Period, the sum of:
    - (I) the number of days in such Calculation Period falling in the Determination Period in which it begins divided by the product of (1) the number of days in such Determination Period and (2) the number of Determination Periods normally ending in any year; and

- (II) the number of days in such Calculation Period falling in the next Determination Period divided by the product of (1) the number of days in such Determination Period and (2) the number of Determination Periods normally ending in any year

where:

“**Determination Period**” means the period from and including a Determination Date in any year to but excluding the next Determination Date.

“**Determination Date**” means the date specified in the relevant Loan Supplement or, if none is so specified, the Interest Payment Date.

“**Effective Date**” means, with respect to any Floating Rate to be determined on an Interest Determination Date, the date specified as such in the relevant Loan Supplement or, if none is so specified, the first day of the Interest Accrual Period to which such Interest Determination Date relates.

“**Interest Accrual Period**” means the period beginning on (and including) the Interest Commencement Date and ending on (but excluding) the first Interest Period Date and each successive period beginning on (and including) an Interest Period Date and ending on (but excluding) the next succeeding Interest Period Date.

“**Interest Amount**” means the amount of interest payable, and in the case of Fixed Rate Loans, means the Fixed Amount or Broken Amount, as the case may be.

“**Interest Commencement Date**” means the Closing Date or such other date as may be specified in the relevant Loan Supplement.

“**Interest Determination Date**” means, with respect to a Rate of Interest and Interest Accrual Period, the date specified as such in the relevant Loan Supplement or, if none is so specified, (i) the first day of such Interest Accrual Period if the Specified Currency is Sterling or (ii) the day falling two Business Days in London for the Specified Currency prior to the first day of such Interest Accrual Period if the Specified Currency is neither Sterling nor euro or (iii) the day falling two TARGET Business Days prior to the first day of such Interest Accrual Period if the Specified Currency is euro.

“**Interest Period**” means the period beginning on (and including) the Interest Commencement Date and ending on (but excluding) the first Interest Payment Date and each successive period beginning on (and including) an Interest Payment Date and ending on (but excluding) the next succeeding Interest Payment Date.

“**Interest Period Date**” means each Interest Payment Date unless otherwise specified hereon.

“**ISDA Definitions**” means the 2000 ISDA Definitions, as published by the International Swaps and Derivatives Association, Inc., unless otherwise specified in the relevant Loan Supplement.

“**Page**” means such page, section, caption, column or other part of a particular information service (including, but not limited to, Reuters Markets 3000 (“**Reuters**”) and Moneyline Telerate (“**Moneyline Telerate**”)) as may be specified for the purpose of providing a Relevant Rate, or such other page, section, caption, column or other part as may replace it on that information service or on such other information service, in each case as may be nominated by the person or organisation providing or sponsoring the information appearing there for the purpose of displaying rates or prices comparable to that Relevant Rate.

“**Reference Banks**” means the institutions specified as such in the relevant Loan Supplement or, if none, four major banks selected by the Calculation Agent in the interbank market (or, if appropriate, money, swap or over-the-counter index options market) that are most closely connected with the Benchmark (which, if EURIBOR is the relevant Benchmark, shall be Europe).

“**Relevant Financial Centre**” means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the financial centre as may be specified as such in the relevant Loan Supplement or, if none is so specified, the financial centre with which the relevant Benchmark is most closely connected (which, in the case of EURIBOR, shall be Europe) or, if none is so connected, London.

“**Relevant Rate**” means the Benchmark for a Representative Amount of the Specified Currency for a period (if applicable or appropriate to the Benchmark) equal to the Specified Duration commencing on the Effective Date.

**“Relevant Time”** means, with respect to any Interest Determination Date, the local time in the Relevant Financial Centre specified in the relevant Loan Supplement or, if no time is specified, the local time in the Relevant Financial Centre at which it is customary to determine bid and offered rates in respect of deposits in the Specified Currency in the interbank market in the Relevant Financial Centre and for this purpose “local time” means, with respect to Europe as a Relevant Financial Centre, 11.00 hours, Brussels time.

**“Representative Amount”** means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the amount specified as such in the relevant Loan Supplement or, if none is specified, an amount that is representative for a single transaction in the relevant market at the time.

**“Specified Duration”** means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the duration specified in the relevant Loan Supplement or, if none is specified, a period of time equal to the relative Interest Accrual Period, ignoring any adjustment pursuant to Clause 4.3.2.

#### **4.10 Calculation Agent and Reference Banks**

The Lender shall procure that there shall at all times be specified no less than four Reference Banks (or such other number as may be required) with offices in the Relevant Financial Centre and appointed one or more Calculation Agents if provision is made for them hereon and for so long as any amount remains outstanding under a Loan Agreement. If any Reference Bank (acting through its relevant office) is unable or unwilling to continue to act as a Reference Bank, then the Lender shall (with the prior approval of Gazprom) appoint another Reference Bank with an office in the Relevant Financial Centre to act as such in its place. Where more than one Calculation Agent is appointed in respect of a Loan, references in the relevant Loan Agreement to the Calculation Agent shall be construed as each Calculation Agent performing its respective duties under the relevant Loan Agreement. If the Calculation Agent is unable or unwilling to act as such or if the Calculation Agent fails duly to establish the Rate of Interest for an Interest Period or Interest Accrual Period or to calculate any Interest Amount, or to comply with any other requirement, the Lender shall (with the prior approval of Gazprom) appoint a leading bank or investment banking firm engaged in the interbank market (or, if appropriate, money, swap or over-the-counter index options market) that is most closely connected with the calculation or determination to be made by the Calculation Agent (acting through its principal London office or any other office actively involved in such market) to act as such in its place. The Calculation Agent may not resign its duties without a successor having been appointed as aforesaid. Both Gazprom and the Lender agree that such successor Calculation Agent will be appointed on the terms of the Agency Agreement in relation to each particular Series.

### **5 Repayment and Prepayment**

#### **5.1 Repayment**

Except as otherwise provided herein and in the applicable Loan Supplement, Gazprom shall repay each Loan not later than 10.00 a.m. (Relevant Time) one Business Day prior to the Repayment Date therefor.

#### **5.2 Special Prepayment**

If, as a result of the application of or any amendments to or change in the double tax treaty between the Russian Federation and Luxembourg or the laws or regulations of the Russian Federation or Luxembourg or of any political sub-division thereof or any authority therein or the enforcement of the security provided for in any Trust Deed, Gazprom would thereby be required to make or increase any payment due pursuant to any Loan Agreement as provided in sub-clauses 6.2 or 6.3, or if (for whatever reason) Gazprom would have to or has been required to pay additional amounts pursuant to Clause 8, then Gazprom may (without premium or penalty), upon not less than 10 days' notice to the Lender (which notice shall be irrevocable), prepay the relevant Loan in whole (but not in part) on any Interest Payment Date, in the case of a Floating Rate Loan, or at any time, in the case of a Fixed Rate Loan.

#### **5.3 Illegality**

If, at any time after the date of the relevant Loan Supplement, by reason of the introduction of, or any change in any applicable law or regulation or regulatory requirement or directive of any agency of any state the Lender reasonably determines (such determination being accompanied by an Opinion of Counsel with the cost of such Opinion of Counsel being borne solely by Gazprom) that it is or would be unlawful or contrary to such applicable law, regulation, regulatory requirement or directive for the Lender to allow all or part of the relevant Loan or the corresponding Series of Notes to remain outstanding or for the Lender to maintain or give effect to any of its obligations in connection with the relevant Loan Agreement and/or to

charge or receive or to be paid interest at the rate then applicable to such Loan, then upon notice by the Lender to Gazprom in writing (setting out in reasonable detail the nature and extent of the relevant circumstances), Gazprom and the Lender shall consult in good faith as to a basis which eliminates the application of such circumstances; provided, however, that the Lender shall be under no obligation to continue such consultation if a basis has not been determined within 30 days of the date on which it so notified Gazprom. If such a basis has not been determined within the 30 days, then upon notice by the Lender to Gazprom in writing, Gazprom shall prepay such Loan in whole (but not in part) on the next Interest Payment Date therefor, in the case of a Floating Rate Loan, or, in the case of a Fixed Rate Loan, on such date as the Lender shall certify to be necessary to comply with such requirements.

#### **5.4 Payment of Other Amounts**

If a Loan is to be prepaid by Gazprom pursuant to any of the provisions of Clauses 5.2 or 5.3, Gazprom shall, simultaneously with such prepayment, pay to the Lender accrued interest thereon to the date of actual receipt of payment by the Lender and all other sums payable by Gazprom pursuant to the relevant Loan Agreement.

#### **5.5 Provisions Exclusive**

Gazprom may not voluntarily prepay any Loan except in accordance with the express terms of the relevant Loan Agreement. Any amount prepaid may not be reborrowed.

### **6 Payments**

#### **6.1 Making of Payments**

All payments of principal and interest to be made by Gazprom under each Loan Agreement shall be made to the Lender not later than 10.00 a.m. (Relevant Time) one Business Day prior to each Interest Payment Date or the Repayment Date (as the case may be) in Same-Day Funds to the relevant Account. The Lender agrees with Gazprom that it will not deposit any other monies into such Account and that no withdrawals shall be made from such Account other than as provided for and in accordance with the relevant Trust Deed and the Paying Agency Agreement.

#### **6.2 No Set-Off, Counterclaim or Withholding; Gross-Up**

All payments to be made by Gazprom under each Loan Agreement shall be made in full without set-off or counterclaim and (except to the extent required by law) free and clear of and without deduction for or on account of any Taxes. If Gazprom shall be required by applicable law to make any deduction or withholding from any payment under a Loan Agreement for or on account of any Taxes, it shall increase any payment due under such Loan Agreement to such amount as may be necessary to ensure that the Lender receives a net amount in the Specified Currency equal to the full amount which it would have received had payment not been made subject to such Taxes, shall account to the relevant authorities for the relevant amount of such Taxes so withheld or deducted within the time allowed for such payment under the applicable law and shall deliver to the Lender without undue delay evidence satisfactory to the Lender of such deduction or withholding and of the accounting therefor to the relevant taxing authority. If the Lender pays any amount in respect of such Taxes, Gazprom shall reimburse the Lender in the Specified Currency for such payment on demand. For the avoidance of doubt, this Clause 6.2 is without prejudice to the obligation of the Lender to use its best endeavours to obtain a certificate from the competent authorities in Luxembourg pursuant to Clause 10.7.1.

#### **6.3 Withholding on Notes**

If the Lender notifies Gazprom (setting out in reasonable detail the nature and extent of the obligation with such evidence as Gazprom may reasonably require) that it has become obliged to make any withholding or deduction for or on account of any Taxes from any payment which it is obliged to make under or in respect of a Series of Notes in circumstances where the Lender is required to pay additional amounts pursuant to Condition 8 of such Series of Notes, Gazprom agrees to pay to the Lender, not later than 10:00am (Relevant Time) one Business Day prior to the date on which payment is due to the Noteholders of such Series in Same-Day Funds to the relevant Account, such additional amounts as are equal to the said additional amounts which the Lender must pay pursuant to Condition 8 of such Series of Notes; provided, however, that the Lender shall immediately upon receipt from any Paying Agent of any sums paid pursuant to this provision, to the extent that the Noteholders of such Series, as the case may be, are not entitled to such additional amounts pursuant to the Conditions of such Series of Notes, repay such additional amounts to Gazprom (it being understood that neither the Lender, nor the Principal Paying Agent nor any Paying Agent shall have any obligation to determine whether any Noteholder of such Series is entitled to such additional amount).

## **6.4 Reimbursement**

To the extent that the Lender subsequently obtains or uses any tax credit or allowance or other reimbursements relating to a deduction or withholding with respect to which Gazprom has made a payment pursuant to this Clause 6 or obtains any reimbursement from the Trustee pursuant to the terms of any Trust Deed, it shall pay to Gazprom so much of the benefit it received as will leave the Lender in substantially the same position as it would have been had no additional amount been required to be paid by Gazprom pursuant to this Clause 6 or had no reimbursement been paid to the Lender pursuant to such Trust Deed; provided, however, that the question of whether any such benefit has been received, and accordingly, whether any payment should be made to Gazprom, the amount of any such payment and the timing of any such payment, shall be determined solely by the Lender. The Lender shall use its best endeavours to obtain any credits or refunds available to it, and the Lender shall disclose to Gazprom any information regarding its tax affairs or computations requested by Gazprom and notify Gazprom of any tax credit or allowance or other reimbursement it receives from the Trustee pursuant to such Trust Deed.

## **6.5 Mitigation**

If at any time either party hereto becomes aware of circumstances which would or might, then or thereafter, give rise to an obligation on the part of Gazprom to make any deduction, withholding or payment as described in sub-clauses 6.2 or 6.3, then, without in any way limiting, reducing or otherwise qualifying the Lender's rights, or Gazprom's obligations, under such Clauses, such party shall promptly upon becoming aware of such circumstances notify the other party, and, thereupon the parties shall consider and consult with each other in good faith with a view to finding, agreeing upon and implementing a method or methods by which any such obligation may be avoided or mitigated and, to the extent that both parties can do so without taking any action which in the reasonable opinion of such party is prejudicial to its own position, take such reasonable steps as may be reasonably available to it to avoid such obligation or mitigate the effect of such circumstances. Gazprom agrees to reimburse the Lender for all properly incurred costs and expenses (including but not limited to legal fees) incurred by the Lender in connection with this Clause.

## **7 Conditions Precedent**

### **7.1 Documents to be Delivered**

The obligation of the Lender to make each Loan shall be subject to the receipt by the Lender on or prior to the relevant Closing Date of evidence that the persons mentioned in sub-clauses 14.10.5 and 14.10.6 hereof have agreed to receive process in the manner specified therein.

### **7.2 Further Conditions**

The obligation of the Lender to make each Loan shall be subject to the further conditions precedent that as of the relevant Closing Date (a) the representations and warranties made and given by Gazprom in Clause 9 shall be true and accurate as if made and given on such Closing Date with respect to the facts and circumstances then existing, (b) no event shall have occurred and be continuing that constitutes, or that, with the giving of notice or the lapse of time, or both, would constitute, an Event of Default, (c) Gazprom shall not be in breach of any of the terms, conditions and provisions of the relevant Loan Agreement, (d) the relevant Subscription Agreement, Trust Deed and the Paying Agency Agreement shall have been executed and delivered, and the Lender shall have received the full amount of the proceeds of the issue of the corresponding Series of Notes pursuant to such Subscription Agreement and (e) the Lender shall have received in full the amount referred to in sub-clauses 3.2 and 3.4, if due and payable, above, as specified in the relevant Loan Supplement.

## **8 Change in Law or Increase in Cost**

### **8.1 Compensation**

In the event that after the date of a Loan Agreement there is any change in or introduction of any tax, law, regulation, regulatory requirement or official directive (whether or not having the force of law but, if not having the force of law, the observance of which is in accordance with the generally accepted financial practice of financial institutions in the country concerned) or in the interpretation or application thereof by any person charged with the administration thereof, which:

**8.1.1** subjects or will subject the Lender to any Taxes with respect to payments of principal or interest on such Loan or any other amount payable under such Loan Agreement (other than any Taxes payable by the Lender on its overall net income or any Taxes referred to in sub-clauses 6.2 or 6.3); or

**8.1.2** increases or will increase the taxation of or changes or will change the basis of taxation of payments to the Lender of principal of or interest on such Loan or any other amount payable under such Loan Agreement (other than any such increase or change which arises by reason of any increase in the rate of tax payable by the Lender on its overall net income or as a result of any Taxes referred to in sub-clauses 6.2 or 6.3); or

**8.1.3** imposes or will impose on the Lender any other condition affecting such Loan Agreement or such Loan,

and if as a result of any of the foregoing:

(i) the cost to the Lender of making, funding or maintaining such Loan is increased; or  
(ii) the amount of principal, interest or other amount payable to or received by the Lender under such Loan Agreement is reduced; or

(iii) the Lender makes any payment or foregoes any interest or other return on or calculated by reference to the gross amount of any sum receivable by it from Gazprom hereunder or makes any payment or foregoes any interest or other return on or calculated by reference to the gross amount of such Loan, then subject to the following, and in each such case:

(a) the Lender shall, as soon as practicable after becoming aware of such increased cost, reduced amount or payment made or foregone, give written notice to Gazprom, together with a certificate signed by two directors of the Lender or by any person empowered by the board of directors of the Lender to sign on behalf of the Lender describing in reasonable detail the introduction or change or request which has occurred and the country or jurisdiction concerned and the nature and date thereof and demonstrating the connection between such introduction, change or request and such increased cost, reduced amount or payment made or foregone, and setting out in reasonable detail the basis on which such amount has been calculated, and all relevant supporting documents evidencing the matters set out in such Notes; and

(b) Gazprom, in the case of clauses (i) and (iii) above, shall on demand by the Lender, pay to the Lender such additional amount as shall be necessary to compensate the Lender for such increased cost, and, in the case of clause (ii) above, at the time the amount so reduced would otherwise have been payable, pay to the Lender such additional amount as shall be necessary to compensate the Lender for such reduction, payment or foregone interest or other return,

provided that this sub-clause 8.1 will not apply to or in respect of any matter for which the Lender has already been compensated under sub-clauses 6.2 or 6.3.

## **8.2 Mitigation**

In the event that the Lender becomes entitled to make a claim pursuant to sub-clause 8.1:

**8.2.1** the Lender shall consult in good faith with Gazprom and shall use reasonable efforts (based on the Lender's reasonable interpretation of any relevant tax, law, regulation, requirement, official directive, request, policy or guideline) to reduce, in whole or in part, Gazprom's obligations to pay any additional amount pursuant to such sub-clause; and

**8.2.2** Gazprom may, only in accordance with Clause 17 of the Principal Trust Deed (including with the consent of the Trustee thereunder), require the substitution of the Lender as lender under the relevant Loan Agreement(s) and as issuer of the corresponding Series of Notes,

except that nothing in this sub-clause 8.2 shall obligate the Lender to incur any costs or expenses in taking any action hereunder unless Gazprom agrees to reimburse the Lender such costs or expenses.

## **9 Representations and Warranties**

### **9.1 Gazprom's Representations and Warranties**

Gazprom does, and on each Warranty Date shall be deemed to, represent and warrant to the Lender as follows, to the intent that such shall form the basis of each Loan Agreement:

**9.1.1** Gazprom is duly organised and incorporated and validly existing under the laws of the Russian Federation and has the power and legal right to own its property, to conduct its business as currently conducted and to enter into and to perform its obligations under each Loan

Agreement and to borrow Loans; Gazprom has taken all necessary corporate, legal and other action required to authorise the borrowing of Loans on the terms and subject to the conditions of each Loan Agreement and to authorise the execution and delivery of each Loan Agreement and all other documents to be executed and delivered by it in connection with each Loan Agreement, and the performance of each Loan Agreement in accordance with its terms.

- 9.1.2** The Loan Agreement, including each Loan Supplement in relation thereto, has been duly executed and delivered by Gazprom and constitutes a legal, valid and binding obligation of Gazprom enforceable in accordance with its terms, subject to applicable bankruptcy, insolvency, moratorium and similar laws affecting creditors' rights generally, and subject, as to enforceability, (i) to general principles of equity (regardless of whether enforcement is sought in a proceeding in equity or at law); (ii) with respect to the enforceability of a judgment whether there is a treaty in force relating to the mutual recognition of foreign judgments; and (iii) to the fact that the gross-up provisions contained in sub-clause 6.2 or 6.3 may not be enforceable under Russian law.
- 9.1.3** The execution, delivery and performance of each Loan Agreement, including each Loan Supplement in relation thereto, by Gazprom will not conflict with or result in any breach or violation of (i) any law or regulation or any order of any governmental, judicial or public body or authority in the Russian Federation, (ii) the constitutive documents, rules and regulations of Gazprom or (iii) any agreement or other undertaking or instrument to which Gazprom is a party or which is binding upon Gazprom or any of its assets, nor result in the creation or imposition of any Encumbrance on any of its assets pursuant to the provisions of any such agreement or other undertaking or instrument.
- 9.1.4** All consents, authorisations or approvals of, or filings with, any governmental, judicial or public bodies or authorities of the Russian Federation required by Gazprom in connection with the execution, delivery, performance, legality, validity, enforceability, and, subject to Russian legal requirements, admissibility in evidence of each Loan Agreement have been obtained or effected and are in full force and effect.
- 9.1.5** No event has occurred that constitutes, or that, with the giving of notice or the lapse of time, or both, would constitute, an Event of Default or a default under any agreement or instrument evidencing any Financial Indebtedness of Gazprom, and no such event will occur upon the making of a Loan.
- 9.1.6** Except as disclosed in the offering circular dated 22 September 2003 relating to the Programme (the "**Offering Circular**") there are no judicial, arbitral or administrative actions, proceedings or claims pending or, to the knowledge of Gazprom, threatened, against Gazprom or any of its Principal Subsidiaries, the adverse determination of which could have a Material Adverse Effect.
- 9.1.7** Except for Encumbrances of the types referred to in the definition of Permitted Encumbrances in sub-clause 1.1 hereof, Gazprom and each of its Principal Subsidiaries has the right of ownership (as that expression is defined under the laws of the Russian Federation) to its property free and clear of all Encumbrances which if existing could have a Material Adverse Effect and Gazprom's obligations under the Loans will rank at least *pari passu* with all its other unsecured and unsubordinated Financial Indebtedness (apart from any obligations mandatorily preferred by law).
- 9.1.8** The most recent audited consolidated financial statements of Gazprom:
- (i) were prepared in accordance with IFRS, as consistently applied; and
  - (ii) save as disclosed therein, present fairly in all material respects the assets and liabilities as at that date and the results of operations of Gazprom during the relevant financial year.
- 9.1.9** Except as disclosed in the Offering Circular, there has been no material adverse change since the date of the last audited consolidated financial statements of Gazprom in the financial condition, results of business operations or prospects of Gazprom or the Group taken as a whole.
- 9.1.10** The execution, delivery and enforceability of each Loan Agreement is not subject to any tax, duty, fee or other charge, including, without limitation, any registration or transfer tax, stamp

duty or similar levy, imposed by or within the Russian Federation or any political subdivision or taxing authority thereof or therein.

- 9.1.11** Neither Gazprom nor its property has any right of immunity from suit, execution, attachment or other legal process on the grounds of sovereignty or otherwise in respect of any action or proceeding relating in any way to each Loan Agreement.
- 9.1.12** Gazprom is in compliance in all material respects with all applicable provisions of law except where failure to be so in compliance would not have a Material Adverse Effect.
- 9.1.13** Neither Gazprom, nor any of its Principal Subsidiaries has taken any corporate action nor, to the best of the knowledge and belief of Gazprom, have any other steps been taken or legal proceedings started or threatened in writing against Gazprom or any of its Principal Subsidiaries for its or their bankruptcy, winding-up, dissolution, external administration or re-organisation (whether by voluntary arrangement, scheme of arrangement or otherwise) or for the appointment of a receiver, administrator, administrative receiver, conservator, custodian, trustee or similar officer of it or of any or all of its or their assets or revenues.
- 9.1.14** There are no strikes or other employment disputes against Gazprom which are pending or, to Gazprom's knowledge, threatened in writing which could have a Material Adverse Effect.
- 9.1.15** In any proceedings taken in the Russian Federation in relation to each Loan Agreement, the choice of English law as the governing law of each Loan Agreement and any arbitration award obtained in England pursuant to Clause 14.10 in relation to each Loan Agreement will be recognised and enforced in the Russian Federation after compliance with the applicable procedural rules and all other legal requirements in Russia.
- 9.1.16** Subject to sub-clause 10.7.1, under the laws of the Russian Federation, it will not be required to make any deduction or withholding from any payment it may make hereunder.
- 9.1.17** Its execution of each Loan Agreement will constitute, and its exercise of its rights and performance of its obligations thereunder will constitute, private and commercial acts done and performed for private and commercial purposes.
- 9.1.18** It has no overdue tax liabilities which could have a Material Adverse Effect other than those which it has disclosed to the Lender prior to the date hereof or which it is contesting in good faith.
- 9.1.19** All licences, consents, examinations, clearances, filings, registrations and authorisations which are or may be necessary to enable Gazprom and any of its Principal Subsidiaries to own its assets and carry on its business are in full force and effect and, if not, the absence of which could not have a Material Adverse Effect.
- 9.1.20** With respect to the offer and sale of Notes pursuant to each Subscription Agreement:
- (i) solely with respect to Notes comprising a Rule 144A Series, neither Gazprom nor any of its affiliates (as defined in Rule 405 under the Securities Act), nor any person acting on its or their behalf (other than the Dealers (as defined in the Dealer Agreement), on behalf of which Gazprom makes no undertaking) (i) has made offers or sales of any security, or solicited offers to buy, or otherwise negotiated in respect of, any security, under circumstances that would require the registration of the Notes or the corresponding Loan (collectively, the "**Securities**") under the Securities Act; or (ii) has engaged in any form of general solicitation or general advertising (within the meaning of Regulation D under the Securities Act) in connection with any offer or sale of the Securities in the United States; and
  - (ii) neither Gazprom nor any of its affiliates (as defined in Rule 405 under the Securities Act), nor any person acting on its or their behalf (other than the Dealers (as defined in the Dealer Agreement), on behalf of which Gazprom makes no undertaking) (i) has engaged or will engage in any directed selling efforts (as defined in Regulation S under the Securities Act ("**Regulation S**")) and Gazprom, its Affiliates and any persons acting on its or their behalf have complied and will comply with the offering restrictions requirement of Regulation S.
- 9.1.21** Gazprom, and each of its Principal Subsidiaries, are in compliance with all Environmental Law except where failure to do so could not have a Material Adverse Effect.

## **9.2 Lender's Representations and Warranties**

The Lender represents and warrants to Gazprom as follows:

- 9.2.1** The Lender is duly incorporated under the laws of and is a resident for Luxembourg taxation purposes in Luxembourg and has full power and capacity to execute the Lender Agreements and to undertake and perform the obligations expressed to be assumed by it herein and therein and the Lender has taken all necessary action to approve and authorise the same.
- 9.2.2** The execution of the Lender Agreements and the undertaking and performance by the Lender of the obligations expressed to be assumed by it herein and therein will not conflict with, or result in a breach of or default under, the laws of Luxembourg or the constitutive documents, rules and regulations of the Lender or any agreement or instrument to which it is a party or by which it is bound or in respect of indebtedness in relation to which it is a surety.
- 9.2.3** The Lender Agreements constitute legal, valid and binding obligations of the Lender.
- 9.2.4** All authorisations, consents and approvals required by the Lender for or in connection with the execution of the Lender Agreements, the performance by the Lender of the obligations expressed to be undertaken by it herein and therein have been obtained and are in full force and effect.
- 9.2.5** So long as any amount remains outstanding under a Loan Agreement, it will comply with the provisions of Clause 14.14 of the Principal Trust Deed.

## **10 Covenants**

So long as any amount remains outstanding under a Loan Agreement:

### **10.1 Negative Pledge**

Neither Gazprom nor any Principal Subsidiary will create or permit to subsist any Encumbrance (other than a Permitted Encumbrance) upon or in respect of any of its undertakings, property, income, assets or revenues, present or future, to secure any Financial Indebtedness unless, at the same time or prior thereto, Gazprom's obligations hereunder are secured equally and rateably therewith or benefit from such other security or other arrangement, as the case may be, in each case to the satisfaction of the Trustee.

### **10.2 Maintenance of Authorisations**

Gazprom shall take all necessary action to obtain, and do or cause to be done all things reasonably necessary to ensure the continuance of, all consents, licences, approvals and authorisations, and make or cause to be made all registrations, recordings and filings, which may at any time be required to be obtained or made in the Russian Federation for the execution, delivery or performance of such Loan Agreement or for the validity or enforceability thereof.

### **10.3 Mergers**

Gazprom shall not, without the prior written consent of the Lender, enter into any reorganisation (whether by way of a merger, accession, division, separation or transformation, as these terms are construed by applicable Russian legislation), or participate in any other type of corporate reconstruction and Gazprom shall ensure that no Principal Subsidiary enters into any reorganisation (whether by way of a merger, accession, division, separation or transformation as these terms are construed by applicable Russian legislation), or participates in any other type of corporate reconstruction if such reorganisation or other type of corporate reconstruction could have a material adverse effect on Gazprom's ability to perform its obligations under such Loan Agreement or the validity or enforceability of such Loan Agreement or the rights or remedies of the Lender under such Loan Agreement.

### **10.4 Disposals**

Gazprom shall not and Gazprom shall ensure that no member of the Group shall, without the prior written consent of the Lender, (disregarding (i) sales of stock in trade in the ordinary course of business and assignments of or other arrangements over the rights or revenues arising from contracts for the sale of gas, gas condensate, crude oil or any other hydrocarbon products, (ii) any lease or related transaction and (iii) dispositions of assets or rights not related to the extraction, production, transportation, marketing or supply of gas) sell, transfer or otherwise dispose of, by one or more transactions or series of transactions (whether related or not), the whole or any part of its revenues or its assets (which for the avoidance of doubt excludes payments of cash, or other consideration, for the acquisition of any asset on

normal commercial terms) which have an aggregate value in excess of U.S.\$1,000,000,000 or the equivalent thereof to a person that is not a member of the Group.

#### **10.5 Maintenance of Property**

Gazprom and any Principal Subsidiaries will cause all property used in the carrying on by it of its business for the time being to be kept in good repair and working order as, in the judgment of Gazprom or any Principal Subsidiary, may be reasonably necessary so that the business may be carried on and the failure to keep such property in such condition would have a Material Adverse Effect.

#### **10.6 Payment of Taxes and Other Claims**

Gazprom shall pay or discharge or cause to be paid or discharged, before the same shall become overdue, all taxes, assessments and governmental charges levied or imposed upon, or upon the income, profits or property of Gazprom; provided that Gazprom shall not be required to pay or discharge or cause to be paid or discharged any such tax, assessment, charge or claim (a) whose amount, applicability or validity is being contested in good faith by appropriate proceedings and for which adequate reserves in accordance with IFRS as consistently applied or other appropriate provision has been made or (b) whose amount, together with all such other unpaid or undischarged taxes, assessments, charges and claims, does not in the aggregate exceed U.S.\$100,000,000.

#### **10.7 Withholding Tax Exemption**

**10.7.1** The Lender shall use its best endeavours to provide Gazprom no later than 10 Business Days before the first Interest Payment Date with respect to the first Loan made pursuant to this Agreement (and thereafter as soon as possible at the beginning of each calendar year but not later than 10 Business Days prior to the first Interest Payment Date in that year) with a certificate, issued and certified by the competent Luxembourg authorities, confirming that the Lender is resident in Luxembourg, provided that the Lender shall not be liable for any failure to provide, or any delays in providing, such residency certificate as a result of any action or inaction of the competent Luxembourg authorities, but shall notify Gazprom without delay about any such failure or delay with a written description of the actions taken by the Lender to obtain such residency certificate. In the event that the Lender has not complied with its duty to use best endeavours as set out in this sub-clause, Gazprom has a right of recourse against the Lender in respect of such non compliance. Such certificate shall be appropriately apostilled and a certified translation supplied.

**10.7.2** Gazprom and the Lender agree that, should the Russian legislation regulating the procedure for obtaining an exemption from Russian income tax withholding change then the procedure referred to in sub-clause 10.7.1 will be deemed changed accordingly.

#### **10.8 Maintenance of Insurance**

Gazprom and any Principal Subsidiary shall keep those of their properties which are of an insurable nature insured with insurers who implement good business practices and are believed by Gazprom or such Principal Subsidiary, as the case may be, to be responsible against loss or damage to the extent that property of similar character is usually so insured by corporations in the same jurisdictions similarly situated.

#### **10.9 Reports**

**10.9.1** Gazprom will furnish to the Lender commencing with the year ending 31 December 2002, within 9 months of the relevant year-end audited annual financial statements prepared in accordance with IFRS as consistently applied, including a report thereon by Gazprom's certified independent accountants.

**10.9.2** On each Interest Payment Date, Gazprom shall deliver to the Lender a written notice in the form of an Officer's Certificate stating whether any Potential Event of Default or Event of Default has occurred and, if it has occurred and shall be continuing, what action Gazprom is taking or proposes to take with respect thereto.

**10.9.3** Gazprom will on request of the Lender provide the Lender with such further information, other than information which Gazprom determines in good faith to be confidential, about the business and financial condition of Gazprom and its Subsidiaries as the Lender may require (including pursuant to Clauses 14.5 and 14.12 of the Principal Trust Deed).

## **10.10 Compliance with Terms of Trust Deed**

The Lender agrees that it will observe and comply with its obligations set out in the relevant Trust Deed and will not agree to any amendment to the terms of such Trust Deed without prior consultation, if reasonably practicable, with Gazprom. In addition, the Lender agrees that it will only exercise its power to appoint a new Trustee pursuant to Clause 26.1 of the Principal Trust Deed with the consent of Gazprom (such consent not to be unreasonably withheld or delayed).

## **11 Events of Default**

### **11.1 Events of Default**

If one or more of the following events of default (each, an “**Event of Default**”) shall occur and be continuing, the Lender shall be entitled to the remedies set forth in sub-clause 11.3:

- 11.1.1** Gazprom fails to pay within three Business Days any amount payable under a Loan Agreement as and when such amount becomes payable in the currency and in the manner specified therein, provided that such default will not be an Event of Default if (i) it occurs by reason only of administrative or technical difficulties affecting the transfer of the funds due from Gazprom, (ii) Gazprom issued the appropriate transfer and payment instructions in sufficient time to permit the transfer and payment of the amount due to be made on its due date and (iii) the Lender receives from Gazprom that amount within six Business Days after the due date for payment.
- 11.1.2** Gazprom fails to perform or observe any of its other obligations under a Loan Agreement and (except where in any such case that failure is not capable of remedy when no such notices as is hereinafter mentioned will be required) that failure continues for the period of 30 days (or such longer period as the Lender may permit) next following the submission by the Lender to Gazprom of notice in writing requesting the same to be remedied.
- 11.1.3** Any representation or warranty of Gazprom or any statement deemed to be made by Gazprom in a Loan Agreement or in any other document, certificate or notice delivered to the Lender in connection with such Loan Agreement or the issue of the corresponding Series of Notes proves to have been inaccurate, incomplete or misleading in any material respect at the time it was made or repeated or deemed to have been made or repeated.
- 11.1.4** Gazprom or any Principal Subsidiary (i) fails to pay any of its Financial Indebtedness as and when such Financial Indebtedness becomes payable, taking into account any applicable grace period or (ii) fails to perform or observe any covenant or agreement to be performed or observed by it contained in any other agreement or in any instrument evidencing any of its Financial Indebtedness if, as a result of such failure, any other party to such agreement or instrument is entitled to exercise, and has not irrevocably waived, the right to accelerate the maturity of any amount owing thereunder; provided, that the total amount of such Financial Indebtedness unpaid or capable of being accelerated exceeds U.S.\$20,000,000 (or its equivalent in another currency); provided however that this sub-clause 11.1.4 shall not apply to foreign currency Financial Indebtedness owed to Russian Persons.
- 11.1.5** Gazprom or any Principal Subsidiary commences negotiations with its creditors generally with a view to the general readjustment or rescheduling of its indebtedness or makes a general assignment for the benefit of or a composition with its creditors generally; provided that in the case of a Principal Subsidiary the same could have a Material Adverse Effect.
- 11.1.6** Gazprom or any Principal Subsidiary takes any corporate action or any order is made by a competent court for its winding-up, dissolution, external administration or re-organisation whether by way of voluntary arrangement, scheme of arrangement or otherwise or for the appointment of a liquidator, receiver, administrator, administrative receiver, conservator, custodian, trustee or similar officer of it or of all or a material part of its revenues and assets.
- 11.1.7** Gazprom or any Principal Subsidiary (i) fails or is unable to pay its debts generally as they become due or (ii) commences a voluntary case in bankruptcy or any other action or proceeding for any other relief under any law affecting creditors’ rights as is similar to bankruptcy law, or (iii) a bankruptcy (insolvency) petition in respect of Gazprom or any Principal Subsidiary is accepted by any competent court and bankruptcy proceedings are initiated by such competent court, or any action is brought in and accepted by any competent court for the liquidation of Gazprom or any Principal Subsidiary or a Russian federal law that

provides for the liquidation of Gazprom as operator of the Unified Gas Supply System is adopted and comes into effect.

- 11.1.8 Any governmental authorisation necessary for the performance of any obligation of Gazprom under a Loan Agreement fails to be in full force and effect.
- 11.1.9 Any governmental authority or court takes any action that has a material adverse effect on Gazprom's ability to perform its obligations under a Loan Agreement or the validity or enforceability of a Loan Agreement or the rights or remedies of the Lender under a Loan Agreement.
- 11.1.10 Any execution or distress is levied against, or an encumbrancer takes possession of, the whole or any material part of, the assets of Gazprom or any event occurs which under the laws of any jurisdiction has a similar or analogous effect and the same could have a Material Adverse Effect unless such execution, distress, enforcement of an Encumbrance or similar or analogous event is being contested in good faith by Gazprom and is not removed, paid out, stayed or discharged within 30 days of such execution, distress being levied, taking of possession or similar or analogous act, as the case may be.
- 11.1.11 The aggregate amount of unsatisfied final judgments, decrees or orders of courts of competent jurisdiction or other appropriate and competent law-enforcement bodies for the payment of money against Gazprom and its Principal Subsidiaries in the aggregate exceeds U.S.\$25,000,000, or the equivalent thereof in any other currency or currencies and there is a period of 30 days following the entry thereof during which such judgment, decree or order is not appealed, discharged, waived or the execution thereof stayed and such default continues for ten days after the notice specified in sub-clause 11.2.
- 11.1.12 Any seizure, compulsory acquisition, expropriation, nationalisation or renationalisation after the date of a Loan Agreement by or under the authority of a government authority of all or part (the book value of which is fifteen per cent. (15 per cent.) or more of the book value of the whole) of the assets or all or more than fifteen per cent. (15 per cent.) of the voting or non-voting shares of Gazprom or any Principal Subsidiary is made by any person.
- 11.1.13 Gazprom or any of its Principal Subsidiaries ceases to carry on the principal business it carries on at the date of a Loan Agreement.
- 11.1.14 At any time it is or becomes unlawful for Gazprom to perform or comply with any or all of its obligations under a Loan Agreement or any of such obligations (subject as provided in sub-clause 9.1.2) are not, or cease to be, legal, valid, binding and enforceable.
- 11.1.15 Any event occurs which under the laws of any relevant jurisdiction has an analogous effect to any of the events referred to in any of the foregoing paragraphs.

## 11.2 Notice of Default

Gazprom shall deliver to the Lender and the Trustee, within 30 days after becoming aware thereof, written notice of any event which is a Potential Event of Default or an Event of Default, its status and what action Gazprom is taking or proposes to take with respect thereto.

## 11.3 Default Remedies

If any Event of Default shall occur and be continuing, the Lender may, by notice in writing to Gazprom, (a) declare the obligations of the Lender under the relevant Loan Agreement to be immediately terminated, whereupon such obligations shall terminate, and (b) declare all amounts payable under such Loan Agreement by Gazprom that would otherwise be due after the date of such termination to be immediately due and payable, whereupon all such amounts shall become immediately due and payable, all without diligence, presentment, demand of payment, protest or notice of any kind, which are all expressly waived by Gazprom; provided, however, that if any event of any kind referred to in sub-clause 11.1.7 occurs, the obligations of the Lender under such Loan Agreement shall immediately terminate, and all amounts payable under such Loan Agreement by Gazprom that would otherwise be due after the occurrence of such event shall become immediately due and payable, all without diligence, presentment, demand of payment, protest or notice of any kind, which are all especially waived by Gazprom.

## 11.4 Rights Not Exclusive

The rights provided for in each Loan Agreement are cumulative and are not exclusive of any other rights, powers, privileges or remedies provided by law.

## **12 Indemnity**

### **12.1 Indemnification**

Gazprom undertakes to the Lender that if the Lender or any director, officer, employee or agent (other than the Principal Paying Agent or any of the Paying Agents) of the Lender (each an "**Indemnified Party**") incurs any loss, liability, cost, claim, charge, expense (including all legal fees properly incurred) demand or damage (a "**Loss**") which may be properly incurred in respect of a Loan Agreement (or enforcement thereof), and/or the issuance, constitution, sale, listing and/or enforcement of the corresponding Series of Notes and/or the Notes of such Series being outstanding (excluding a Loss that is the subject of the undertakings contained in Clauses 8 and 13 and sub-clause 14.6 of this Agreement (it being understood that the Lender may not recover twice in respect of the same Loss)) Gazprom shall pay to the Indemnified Party on demand an amount equal to such Loss (as evidenced by an invoice distributed to Gazprom by the Lender in accordance with sub-clause 14.4) unless, in any such case, such Loss was either caused by such Indemnified Parties' negligence or wilful misconduct or arose out of a breach of the representations and warranties of the Lender contained herein or in the Dealer Agreement; provided that this sub-clause 12.1 will not apply to or in respect of any Taxes with respect to payments of principal and interest on the Loan or any other amount payable under such Loan Agreement.

### **12.2 Independent Obligation**

Sub-clause 12.1 constitutes a separate and independent obligation of Gazprom from its other obligations under or in connection with each Loan Agreement or any other obligations of Gazprom in connection with the issuance of Notes by the Lender and shall not affect, or be construed to affect, any other provision of a Loan Agreement or any such other obligations.

### **12.3 Evidence of Loss**

A certificate of the Lender, supported by relevant documentation, setting forth the amount of losses, expenses and liabilities described in sub-clause 12.1 and specifying in full detail the basis therefor shall be prima facie evidence of the amount of such losses, expenses and liabilities.

### **12.4 Survival**

The obligations of Gazprom pursuant to sub-clauses 6.2, 6.3 and 12.1 shall survive the execution and delivery of each Loan Agreement and the drawdown and repayment of the relevant Loan, in each case by Gazprom.

## **13 Expenses**

### **13.1 Reimbursement of Front-end Expenses for the Extension of the Loan by the Lender**

Gazprom shall, pursuant to sub-clause 3.2 hereof and the relevant Loan Supplement, reimburse the Lender in the Specified Currency for all reasonable costs and expenses incurred by the Lender in connection with the negotiation, preparation and execution of each Loan Agreement and all related documents and other expenses connected with the extension of each Loan, including, without limitation, the fees and expense of its counsel.

### **13.2 Payment of Ongoing Expenses**

In addition, Gazprom hereby agrees to pay to the Lender on demand in the Specified Currency all ongoing commissions, costs, fees and expenses (including, without limitation, enforcement costs), payable by the Lender under or in respect of the Lender Agreements and the letter entered into between Gazprom, the Lender, the Trustee and the Agents dated 22 September 2003 in respect of the Programme (the "**Fee Side Letter**"). Gazprom shall also pay the Lender for any indemnification or other payment obligations of the Lender under or in respect of the Agency Agreement, Trust Deed and/or the Fee Side Letter (other than the obligation of the Lender to make payments of principal, interest or additional amounts in respect of the corresponding Series of Notes). Payments to the Lender referred to in this sub-clause 13.2 shall be made by Gazprom at least two Business Days before the relevant payment is to be made or expense incurred.

## **14 General**

### **14.1 Evidence of Debt**

The entries made in the relevant Account shall, in the absence of manifest error, constitute prima facie evidence of the existence and amounts of Gazprom's obligations recorded therein.

## 14.2 Stamp Duties

**14.2.1** Gazprom shall pay all stamp, registration and documentary taxes or similar charges (if any) imposed on Gazprom by any person in the Russian Federation, Luxembourg or the United States of America which may be payable or determined to be payable in connection with the execution, delivery, performance, enforcement, or admissibility into evidence of any Loan Agreement and shall indemnify the Lender against any and all costs and expenses which may be incurred or suffered by the Lender with respect to, or resulting from, delay or failure by Gazprom to pay such taxes or similar charges.

**14.2.2** Gazprom agrees that if the Lender incurs a liability to pay any stamp, registration and documentary taxes or similar charges (if any) imposed by any person in the Russian Federation, the United States of America or Luxembourg which may be payable or determined to be payable in connection with the execution, delivery, performance, enforcement, or admissibility into evidence of any Loan Agreement and any documents related thereto as well as Notes of corresponding Series and any documents related thereto, Gazprom shall repay the Lender on demand an amount equal to such stamp or other documentary taxes or duties and shall indemnify the Lender against any and all costs and expenses connected with the payment of such amounts.

## 14.3 Waivers

No failure to exercise and no delay in exercising, on the part of the Lender or Gazprom, any right, power to privilege under any Loan Agreement and no course of dealing between Gazprom and the Lender shall operate as a waiver thereof, nor shall any single or partial exercise of any right, power or privilege preclude any other or further exercise thereof, or the exercise of any other right, power or privilege. The rights and remedies provided in each Loan Agreement are cumulative and not exclusive of any rights, or remedies provided by applicable law.

## 14.4 Notices

All notices, requests, demands or other communications to or upon the respective parties to each Loan Agreement shall be given or made in the English language by telex or otherwise in writing and shall be deemed to have been duly given or made at the time of delivery, if delivered by hand or courier or if sent by facsimile transmission or by airmail, to the party to which such notice, request, demand or other communication is required or permitted to be given or made under such Loan Agreement addressed as follows:

**14.4.1** if to Gazprom:

Open Joint Stock Company Gazprom  
16 Nametkina Street  
117884 Moscow  
Russian Federation

Telecopier: (7 095) 719 8352  
Attention: Corporate Finance Department

**14.4.2** if to the Lender:

Gaz Capital S.A.  
2, Boulevard Konrad Adenauer  
L-1115 Luxembourg

Telecopier: (352) 421 22 243  
Attention: The Directors

or to such other address or telecopier number as any party may hereafter specify in writing to the other.

## 14.5 Assignment

**14.5.1** Each Loan Agreement shall inure to the benefit of and be binding upon the parties, their respective successors and any permitted assignee or transferee of some or all of a party's rights or obligations under such Loan Agreement. Any reference in a Loan Agreement to any party shall be construed accordingly and, in particular, references to the exercise of rights and discretions by the Lender, following the enforcement of the security and/or assignment

referred to in sub-clause 14.5.3 below, shall be references to the exercise of such rights or discretions by the Trustee (as Trustee). Notwithstanding the foregoing, the Trustee shall not be entitled to participate in any discussions between the Lender and Gazprom or any agreements of the Lender or Gazprom pursuant to sub-clauses 6.4 or 6.5 or Clause 8.

**14.5.2** Gazprom shall not assign or transfer all or any part of its rights or obligations hereunder to any other party.

**14.5.3** The Lender may not assign or transfer, in whole or in part, any of its rights and benefits or obligations under any Loan Agreement except (i) the charge by way of first fixed charge granted by the Lender in favour of the Trustee (as Trustee) of the Lender's rights and benefits under such Loan Agreement and (ii) the absolute assignment by the Lender to the Trustee of certain rights, interests and benefits under such Loan Agreement, in each case, pursuant to Clause 6 of the relevant Supplemental Trust Deed.

#### **14.6 Currency Indemnity**

To the fullest extent permitted by law, the obligation of Gazprom in respect of any amount due in the Specified Currency under a Loan Agreement shall, notwithstanding any payment in any other currency (whether pursuant to a judgment or otherwise), be discharged only to the extent of the amount in the Specified Currency that the Lender may, in accordance with normal banking procedures, purchase with the sum paid in such other currency (after any premium and costs of exchange) on the Business Day immediately following the day on which the Lender receives such payment. If the amount in the Specified Currency that may be so purchased for any reason falls short of the amount originally due (the "**Due Amount**"), Gazprom hereby agrees to indemnify and hold harmless the Lender against any deficiency in the Specified Currency. Any obligation of Gazprom not discharged by payment in the Specified Currency shall, to the fullest extent permitted by applicable law, be due as a separate and independent obligation and, until discharged as provided the relevant Loan Agreement, shall continue in full force and effect. If the amount in the Specified Currency that may be purchased exceeds that Due Amount the Lender shall promptly pay the amount of the excess to Gazprom.

#### **14.7 Prescription**

Subject to the Lender having received the principal amount thereof or interest thereon from Gazprom, the Lender shall forthwith repay to Gazprom the principal amount or the interest amount thereon, respectively, of any Series of Notes upon such Series of Notes becoming void pursuant to Condition 11 of such Notes.

#### **14.8 Contracts (Rights of Third Parties) Act 1999**

A person who is not a party to a Loan Agreement has no right under the Contracts (Rights of Third Parties) Act 1999 to enforce any term of such Loan Agreement.

#### **14.9 Choice of Law**

Each Loan Agreement shall be governed by, and construed in accordance with, the laws of England.

#### **14.10 Jurisdiction**

**14.10.1** For the exclusive benefit of the other party, each of Gazprom and the Lender hereby irrevocably agrees that the courts of England shall have jurisdiction to settle any disputes which may arise out of or in connection with any Loan Agreement and that accordingly any suit, action or proceeding (collectively, "**Proceedings**") arising out of or in connection with such Loan Agreement may be brought in such courts.

**14.10.2** Each of the parties irrevocably waives any objection which it may now or hereafter have to the laying of the venue of any Proceedings in any such court referred to in this Clause 14 and any claim that any such Proceedings have been brought in an inconvenient forum and further irrevocably agrees that a final and conclusive judgment in any Proceedings brought in the English courts with competent jurisdiction shall be conclusive and binding and may be enforced in the courts of any other jurisdiction.

**14.10.3** Nothing contained in any Loan Agreement shall limit the right of any party to take Proceedings against another party in any other court of competent jurisdiction to the extent permitted by any applicable law, nor shall the taking of Proceedings in connection with such

Loan Agreement in one or more jurisdictions preclude the taking of Proceedings in any other jurisdiction or in any other court of competent jurisdiction in connection with such Loan Agreement to the extent permitted by any applicable law.

**14.10.4** Each of the parties hereby agrees that, at the option of the other party, any dispute, controversy, claim or cause of action brought by any party against another party or arising out of or relating to any Loan Agreement may be settled by arbitration in accordance with the Rules of the London Court of International Arbitration, which rules are deemed to be incorporated by reference into this Clause. The place of arbitration shall be London, England and the language of the arbitration shall be English. The number of arbitrators shall be three, each of whom shall be disinterested in the dispute or controversy, shall have no connection with any party thereto and shall be an attorney experienced in international securities transactions. Each party shall nominate an arbitrator, who, in turn, shall nominate the Chairman of the Tribunal. If a dispute, claim controversy or cause of action shall involve more than two parties, the parties thereto shall attempt to align themselves in two sides (i.e. claimant and respondent) each of which shall appoint an arbitrator as if there were only two sides to such dispute, claim controversy or cause of action. If such alignment and appointment shall not have occurred within twenty (20) calendar days after the initiating party serves the arbitration demand or if a Chairman has not been selected within thirty (30) calendar days of the selection of the second arbitrator, the Arbitration Court of the London Court of International Arbitration shall appoint the three arbitrators or the Chairman, as the case may be. The parties and the Arbitration Court may appoint arbitrators from among the nationals of any country, whether or not a party is a national of that country. The arbitrators shall have no authority to award punitive or other punitive type damages and may not, in any event, make any ruling, finding or award that does not conform to the terms and conditions of this Agreement.

Fees of the arbitration (excluding each party's preparation, travel, attorneys' fees and similar costs) shall be borne in accordance with the decision of the arbitrators. The decision of the arbitrators shall be final, binding and enforceable upon the parties and judgment upon any award rendered by the arbitrators may be entered in any court having jurisdiction thereof. In the event that the failure of a party to comply with the decision of the arbitrators requires any other party to apply to any court for enforcement of such award, the non-complying party shall be liable to the other for all costs of such litigation, including reasonable attorneys' fees.

**14.10.5 Lender's Process Agent:** The Lender agrees that the process by which any Proceedings in England are begun may be served on it by being delivered to Deutsche Bank Luxembourg S.A., c/o Deutsche Bank AG London, Winchester House, 1 Great Winchester Street, London EC2N 2DB or its other principal place of business in England for the time being or at any other address for the time being at which process may be served on such person in accordance with Part XXIII of the Companies Act 1985 (as modified or re-enacted from time to time). If such person is not or ceases to be effectively appointed to accept service of process on the Lender's behalf, the Lender shall, on the written demand of Gazprom, appoint a further person in England to accept service of process on its behalf and, failing such appointment within 15 days, Gazprom shall be entitled to appoint such a person by written notice to the Lender. Nothing in this Clause shall affect the right of Gazprom to serve process in any other manner permitted by law.

**14.10.6 Gazprom's Process Agent:** Gazprom agrees that the process by which any Proceedings in England are begun may be served on it by being delivered to Gazprom (U.K.) Limited at 35 Vine Street, London EC3N 2AA or its other principal place of business in England for the time being or at any other address for the time being at which process may be served on such person in accordance with Part XXIII of the Companies Act 1985 (as modified or re-enacted from time to time). If such person is not or ceases to be effectively appointed to accept service of process on Gazprom's behalf, Gazprom shall, on the written demand of the Lender, appoint a further person in England to accept service of process on its behalf and, failing such appointment within 15 days, the Lender shall be entitled to appoint such a person by written notice to Gazprom. Nothing in this Clause shall affect the right of the Lender to serve process in any other manner permitted by law.

**14.11 Counterparts**

Each Loan Agreement may be executed in any number of counterparts and all of such counterparts taken together shall be deemed to constitute one and the same agreement.

**14.12 Language**

The language which governs the interpretation of each Loan Agreement is the English language.

**14.13 Amendments**

Except as otherwise provided by its terms, each Loan Agreement may not be varied except by an agreement in writing signed by the parties.

**14.14 Partial Invalidity**

The illegality, invalidity or unenforceability to any extent of any provision of each Loan Agreement under the law of any jurisdiction shall affect its legality, validity or enforceability in such jurisdiction to such extent only and shall not affect its legality, validity or enforceability under the law of any other jurisdiction, nor the legality, validity or enforceability of any other provision.

**IN WITNESS WHEREOF**, the parties hereto have caused this Facility Agreement to be executed on the date first written above.

**Schedule  
Form of Loan Supplement**

**This Loan Supplement is made on ● between:**

- (1) **GAZ CAPITAL S.A.**, a société anonyme established under the laws of Luxembourg whose registered office is at 2, Boulevard Konrad Adenauer L-1115 Luxembourg, registered with the Register of Commerce and Companies, Luxembourg under number B - 95071 (the "**Lender**"); and
- (2) **OPEN JOINT STOCK COMPANY GAZPROM**, a company established under the laws of the Russian Federation whose registered office is at 16 Nametkina Street, 117884 Moscow, Russian Federation ("**Gazprom**").

**Whereas:**

- (A) Gazprom has entered into a facility agreement dated 22 September 2003 (the "**Facility Agreement**") with the Lender in respect of Gazprom's U.S.\$5,000,000,000 Programme for the Issuance of Loan Participation Notes (the "**Programme**").
- (B) Gazprom proposes to borrow ● (the "**Loan**") and the Lender wishes to make such Loan on the terms set out in the Facility Agreement and this Loan Supplement.

**It is agreed as follows:**

**1 Definitions**

Capitalised terms used but not defined in this Loan Supplement shall have the meaning given to them in the Facility Agreement save to the extent supplemented or modified herein. The Schedule forms part of this Loan Supplement and shall have effect accordingly.

**2 Additional Definitions**

For the purpose of this Loan Supplement, the following expressions used in the Facility Agreement shall have the following meanings:

"**Account**" means the account in the name of the Lender with the Principal Paying Agent (account number ●, ●);

["**Calculation Agent**" means Deutsche Bank AG London;]

"**Closing Date**" means ●;

"**Gazprom Account**" means the account in the name of Gazprom (account number ●);

"**Loan Agreement**" means the Facility Agreement as amended and supplemented by this Loan Supplement;

"**Notes**" means ● [● per cent.] [Floating Rate] Loan Participation Notes due ● issued by the Lender as Series ● under the Programme;

"**Repayment Date**" means ● [*amend as required for Floating Rate Notes*];

"**Specified Currency**" means ●;

"**Subscription Agreement**" means an agreement between the Lender, Gazprom and ● dated ● relating to the Notes; and

"**Trust Deed**" means the Principal Trust Deed between the Lender and the Trustee dated 22 September 2003 as amended and supplemented by a Supplemental Trust Deed dated ● constituting and securing the Notes.

**3 Incorporation by Reference**

Except as otherwise provided, the terms of the Facility Agreement shall apply to this Loan Supplement as if they were set out herein and the Facility Agreement shall be read and construed, only in relation to the Loan constituted hereby, as one document with this Loan Supplement.

**4 The Loan**

**4.1 Drawdown**

Subject to the terms and conditions of the Loan Agreement, the Lender agrees to make the Loan on the Closing Date to Gazprom and Gazprom shall make a single drawing in the full amount of the Loan.

## 4.2 Interest

The Loan is a [Fixed Rate][Floating Rate] Loan. Interest shall be calculated, and the following terms used in the Facility Agreement shall have the meanings, as set out below:

- 4.2.1 Fixed Rate Loan Provisions** [Applicable/Not Applicable]  
*(If not applicable, delete the remaining sub-paragraphs of this paragraph)*
- (i) Interest Commencement Date ●
  - (ii) Rate[(s)] of Interest: ● per cent. per annum [payable [annually/semi-annually] in arrear
  - (iii) Interest Payment Date(s): ● in each year [adjusted in accordance with [specify Business Day Convention and any applicable Business Centre(s) for the definition of "Business Day"]/ not adjusted]
  - (iv) Fixed Amount[(s)]: ● per ● in principal amount
  - (v) Broken Amount: [Insert particulars of any initial or final broken interest amounts which do not correspond with the Fixed Amount [(s)] and the Interest Payment Date(s) to which they relate]
  - (vi) Day Count Fraction (Clause 4.9): ●  
*(Day count fraction should be Actual/ Actual-ISMA for all fixed rate loans other than those denominated in U.S. dollars, unless specified)*
  - (vii) Determination Date(s) (Clause 4.9): ● in each year. [Insert regular interest payment dates, ignoring issue date or maturity date in the case of a long or short first or last interest period]\*\*
  - (viii) Other terms relating to the method of calculating interest for Fixed Rate Loans: [Not Applicable/give details]
- 4.2.2 Floating Rate Loan Provisions** [Applicable/Not Applicable] *(If not applicable, delete the remaining sub-paragraphs of this paragraph)*
- (i) Interest Commencement Date ●
  - (ii) Interest Period(s): ●
  - (iii) Specified Interest Payment Dates: ●
  - (iv) Business Day Convention: [Floating Rate Business Day Convention/Following Business Day Convention/Modified Following Business Day Convention/Preceding Business Day Convention/other (give details)]
  - (v) Business Centre(s) (Clause 4.9): ●
  - (vi) Manner in which the Rate(s) of Interest is/are to be determined: [Screen Rate Determination/ISDA Determination/other (give details)]
  - (vii) Interest Period Date(s): [Not Applicable/specify dates]

\*\* Only to be completed for a Loan where Day Count Fraction is Actual/Actual-ISMA

- (viii) Party responsible for calculating the Rate(s) of Interest and Interest Amount(s) (if not the Calculation Agent): ●
- (ix) Screen Rate Determination (Clause 4.3.3):
  - Relevant Time: ●
  - Interest Determination Date: *[[•] [TARGET] Business Days in [specify city] for [specify currency] prior to [the first day in each Interest Accrual Period/each Interest Payment Date]]*
  - Primary Source for Floating Rate: *[Specify relevant screen page or "Reference Banks"]*
  - Reference Banks (if Primary Source is "Reference Banks"): *[Specify four]*
  - Relevant Financial Centre: *[The financial centre most closely connected to the Benchmark—specify if not London]*
  - Benchmark: *[LIBOR, LIBID, LIMEAN, EURIBOR or other benchmark]*
  - Representative Amount: *[Specify if screen or Reference Bank quotations are to be given in respect of a transaction of a specified notional amount]*
  - Effective Date: *[Specify if quotations are not to be obtained with effect from commencement of Interest Accrual Period]*
  - Specified Duration: *[Specify period for quotation if not duration of Interest Accrual Period]*
- (x) ISDA Determination (Clause 4.3):
  - Floating Rate Option: ●
  - Designated Maturity: ●
  - Reset Date: ●
  - ISDA Definitions: (if different from those set out in the Conditions) ●
- (xi) Margin(s): *[+/-] ● per cent. per annum*
- (xii) Minimum Rate of Interest: ● per cent. per annum
- (xiii) Maximum Rate of Interest: ● per cent. per annum
- (xiv) Day Count Fraction (Clause 4.9): ●
- (xv) Rate Multiplier: ●
- (xvi) Fall back provisions, rounding provisions, denominator and any other terms relating to the method of calculating interest on Floating Rate Loans, if different from those set out in the Facility Agreement: ●

## **5 Fees and Expenses**

Pursuant to Clause 3.2 of the Facility Agreement and in consideration of the Lender making the Loan to Gazprom, Gazprom hereby agrees that it shall, two Business Days before the Closing Date, pay to the Lender, in Same-Day Funds, the amount of the reimbursable expenses incurred by the Lender in connection with such Loan, [which expenses shall include the amount of all of the commissions, fees, costs and expenses as set forth in sub-clause [5.1] of the Subscription Agreement, paragraphs 1 and 4 of the Fee Side Letter and sub-clauses 3.2 and 13.1 of the Facility Agreement] pursuant to an invoice submitted by the Lender to Gazprom in the total amount of ●.

## **6 Governing Law**

This Loan Supplement shall be governed by and construed in accordance with English law.

This Loan Supplement has been entered into on the date stated at the beginning.

## TERMS AND CONDITIONS OF THE NOTES

*The following is the text of the Terms and Conditions of the Notes, which contain summaries of certain provisions of the Trust Deed, and which (subject to completion and amendment in accordance with the provisions of the relevant Pricing Supplement) will be attached to the Notes in definitive form, if issued, and (subject to the provisions thereof) apply to the Global Notes representing each Series. Either (i) the full text of these terms and conditions together with the relevant provisions of the Pricing Supplement or (ii) these terms and conditions as so completed, amended, supplemented or varied (and subject to simplification by the deletion of non-applicable provisions), shall be endorsed on such Notes. All capitalised terms that are not defined in these Conditions will have the meanings given to them in the relevant Pricing Supplement. Those definitions will be endorsed on the definitive Notes. References in the Conditions to "Notes" are to the Notes of one Series only, not to all Notes that may be issued under the Programme.*

The Notes are constituted by, are subject to, and have the benefit of, a supplemental trust deed dated the Issue Date specified hereon (the "**Supplemental Trust Deed**") supplemental to a trust deed (as amended or supplemented as at the Issue Date, the "**Principal Trust Deed**") dated 22 September 2003, each made between Gaz Capital S.A. (the "**Issuer**") and Deutsche Bank Trust Company Americas (the "**Trustee**", which expression shall include any trustee or trustees for the time being under the Trust Deed) as trustee and successors thereof for the holders of the Notes (the "**Noteholders**"). The Principal Trust Deed and the Supplemental Trust Deed as modified from time to time in accordance with the provisions therein contained and any deed or other document expressed to be supplemental thereto, as from time to time so modified, are together referred to as the "**Trust Deed**".

The Issuer has authorised the creation, issue and sale of the Notes for the sole purpose of financing a loan (the "**Loan**") as specified hereon to Open Joint Stock Company Gazprom (the "**Borrower**"). The Issuer and the Borrower have recorded the terms of the Loan in a facility agreement (the "**Facility Agreement**") dated 22 September 2003, as supplemented on the Issue Date specified hereon by a loan supplement (the "**Loan Supplement**") each between the Issuer and the Borrower (together, the "**Loan Agreement**").

In each case where amounts of principal, interest and additional amounts (if any) are stated herein or in the Trust Deed to be payable in respect of the Notes, the obligations of the Issuer to make any such payment shall constitute an obligation only to account to the Noteholders on each date upon which such amounts of principal, interest and additional amounts (if any) are due in respect of the Notes, for an amount equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the Loan Agreement.

The Issuer has charged by way of first fixed charge in favour of the Trustee certain of its rights and interests as lender under the Loan Agreement (other than any rights and benefits constituting Reserved Rights (as defined in the Trust Deed)) as security for its payment obligations in respect of the Notes and under the Trust Deed (the "**Charge**") and has assigned absolutely certain other rights under the Loan Agreement to the Trustee (the "**Assigned Rights**" and together with the Charge, the "**Security Interests**"). In certain circumstances, the Trustee can (subject to it being indemnified and/or secured to its satisfaction) be required by Noteholders holding at least one quarter of the principal amount of the Notes outstanding or by an Extraordinary Resolution (as defined in the Trust Deed) of the Noteholders to exercise certain of its powers under the Trust Deed (including those arising under the Assigned Rights).

The Notes have the benefit of, and payments in respect of the Notes will be made (subject to the receipt of the relevant funds from the Borrower) pursuant to, a paying agency agreement (the "**Agency Agreement**") dated 22 September 2003 and made between the Issuer, Deutsche Bank Luxembourg S.A. as paying agent and Luxembourg registrar, Deutsche Bank Trust Company Americas as paying agent and U.S. registrar (together, with Deutsche Bank Luxembourg S.A. in such capacity, each a "**Registrar**", which expressions shall include any successors), Deutsche Bank AG London as the principal paying agent (the "**Principal Paying Agent**") and calculation agent and Deutsche Bank AG London and Deutsche Bank Luxembourg S.A. as transfer agents (the "**Transfer Agents**"), which expressions shall include any additional or successor transfer agents), the Borrower and the Trustee.

Copies of the Trust Deed, the Loan Agreement, the Agency Agreement and the Pricing Supplement are available for inspection at the principal office of the Trustee being, at the date hereof, at Winchester House, 1 Great Winchester Street, London EC2N 2DB, at the specified office of the Principal Paying Agent and at the specified office of the Paying Agent in Luxembourg.

The statements contained in these Terms and Conditions include summaries or restatements of, and are subject to, the detailed provisions of the Trust Deed, the Pricing Supplement, the Loan Agreement (the form of which is scheduled to and incorporated in the Trust Deed) and the Agency Agreement. Noteholders are entitled to the benefit of, are bound by, and are deemed to have notice of, all the provisions thereof.

## 1. Status

The sole purpose of the issue of the Notes is to provide the funds for the Issuer to finance the Loan. The Notes constitute the obligation of the Issuer to apply the proceeds from the issue of the Notes solely for financing the Loan and to account to the Noteholders for an amount equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the Loan Agreement.

The Trust Deed provides that payments in respect of the Notes equivalent to the sums actually received by or for the account of the Issuer by way of principal, interest or additional amounts (if any) pursuant to the Loan Agreement will be made pro rata among all Noteholders, on the date of, and in the currency of, and subject to the conditions attaching to, the equivalent payment pursuant to the Loan Agreement. The Issuer shall not be liable to make any payment in respect of the Notes other than as expressly provided herein and in the Trust Deed. As provided therein, neither the Issuer nor the Trustee shall be under any obligation to exercise in favour of the Noteholders any rights of set-off or of banker's lien or to combine accounts or counterclaim that may arise out of other transactions between the Issuer and the Borrower.

Noteholders have notice of, and have accepted, these Terms and Conditions, the Pricing Supplement and the contents of the Trust Deed and the Loan Agreement, and have hereby accepted that:

- 1.1 neither the Issuer nor the Trustee makes any representation or warranty in respect of, or shall at any time have any responsibility for, or, save as otherwise expressly provided in the Trust Deed or in paragraph 1.6 below, liability or obligation in respect of the performance and observance by the Borrower of its obligations under the Loan Agreement or the recoverability of any sum of principal or interest (or any additional amounts) due or to become due from the Borrower under the Loan Agreement;
- 1.2 neither the Issuer nor the Trustee shall at any time have any responsibility for, or obligation or liability in respect of, the financial condition, creditworthiness, affairs, status or nature of the Borrower;
- 1.3 neither the Issuer nor the Trustee shall at any time be liable for any representation or warranty or any act, default or omission of the Borrower under or in respect of the Loan Agreement;
- 1.4 neither the Issuer nor the Trustee shall at any time have any responsibility for, or liability or obligation in respect of, the performance and observance by the Principal Paying Agent, any of the Paying Agents, the Registrar or the Transfer Agent of their respective obligations under the Agency Agreement;
- 1.5 the financial servicing and performance of the terms of the Notes depend solely and exclusively upon performance by the Borrower of its obligations under the Loan Agreement and its covenant to make payments under the Loan Agreement and its credit and financial standing. The Borrower has represented and warranted to the Issuer in the Loan Agreement that the Loan Agreement constitutes a legal, valid and binding obligation of the Borrower; and
- 1.6 the Issuer and the Trustee shall be entitled to rely on a certificate signed by a duly authorised officer of the Borrower confirming that the Borrower is complying with its obligations under the Loan Agreement and shall not otherwise be responsible for investigating any aspect of the Borrower's performance in relation thereto and, subject as further provided in the Trust Deed, the Trustee will not be liable for any failure to make the usual or any investigations which might be made by a security holder in relation to the property which is the subject of the Trust Deed and held by way of security for the Notes, and shall not be bound to enquire into or be liable for any defect or failure in the right or title of the Issuer to the assigned property whether such defect or failure was known to the Trustee or might have been discovered upon examination or enquiry or whether capable of remedy or not, nor will it have any liability for the enforceability of the security created by the Security Interests whether as a result of any failure, omission or defect in registering or filing or otherwise protecting or perfecting such security; the Trustee has no responsibility for the value of such security.

Under the Trust Deed, the obligations of the Issuer in respect of the Notes rank *pari passu* and rateably without any preference among themselves.

In the event that the payments under the Loan Agreement are made by the Borrower to, or to the order of, the Trustee or (subject to the provisions of the Trust Deed) the Principal Paying Agent, they will *pro tanto* satisfy the obligations of the Issuer in respect of the Notes.

Save as otherwise expressly provided herein and in the Trust Deed, no proprietary or other direct interest in the Issuer's right under or in respect of the Loan Agreement or the Loan exists for the benefit of the Noteholders. Subject to the terms of the Trust Deed, no Noteholder will have any entitlement to enforce the Loan Agreement or direct recourse to the Borrower except through action by the Trustee pursuant to the Assigned Rights granted to the Trustee in the Trust Deed. Neither the Issuer nor, following the enforcement of the Security Interests created in the Trust Deed, the Trustee shall be required to take proceedings to enforce payment under the Loan Agreement unless it has been indemnified and/or secured by the Noteholders to its satisfaction.

**2. Form, Denomination and Title**

The Notes will be issued in fully registered form, and in the Specified Denomination shown hereon or integral multiples thereof, without interest coupons; provided that the Rule 144A Notes shall be held in amounts of not less than U.S.\$100,000.

A Note issued under the Principal Trust Deed may be a Fixed Rate Note, a Floating Rate Note, a combination of the foregoing or any other kind of Note, depending upon the Interest and Redemption/Payment Basis specified hereon.

**3. Register, Title and Transfers**

The Registrar will maintain a register (the "**Register**") in respect of the Notes in accordance with the provisions of the Agency Agreement. In these Conditions the "holder" of a Note means the person in whose name such Note is for the time being registered in the Register (or, in the case of a joint holding, the first named thereof) and "Noteholder" shall be construed accordingly. A Note will be issued to each Noteholder in respect of its registered holding.

The holder of each Note shall (except as otherwise required by law) be treated as the absolute owner of such Note for all purposes (whether or not it is overdue and regardless of any notice of ownership, trust or any other interest therein, any writing on the Note relating thereto (other than the endorsed form of transfer) or any notice of any previous loss or theft of such Note) and no person shall be liable for so treating such holder.

A Note may be transferred upon surrender of the relevant Note, with the endorsed form of transfer duly completed, at the specified office of the Registrar or at the specified office of the Transfer Agent, together with such evidence as the Registrar or the Transfer Agent may reasonably require to prove the title of the transferor and the authority of the individuals who have executed the form of transfer. Where not all the Notes represented by the surrendered Note are the subject of the transfer, a new Note in respect of the balance of the Note will be issued to the transferor.

Subject to the last paragraph of this Condition, within five business days of the surrender of a Note in accordance with the immediately preceding paragraph above, the Registrar will register the transfer in question and deliver a new Note to each relevant holder at its specified office or (at the request and risk of such relevant holder) by uninsured first class mail (airmail if overseas) to the address specified for the purpose by such relevant holder. In this paragraph, "business day" means a day on which commercial banks are open for business (including dealings in foreign currencies) in the city where the Registrar has its specified office.

The transfer of a Note will be effected without charge but against such indemnity as the Registrar may require in respect of any tax or other duty of whatsoever nature which may be levied or imposed in connection with such transfer.

Noteholders may not require transfers to be registered during the period of 15 days ending on the due date for any payment of principal or interest in respect of the Notes.

**4. Restrictive Covenants**

As provided in the Trust Deed, so long as any of the Notes remains outstanding (as defined in the Trust Deed), the Issuer will not, without the prior written consent of the Trustee, agree to any amendments to or any modification or waiver of, or authorise any breach or proposed breach of, the terms of the Loan Agreement and will act at all times in accordance with any instructions of the Trustee from time to time

with respect to the Loan Agreement, except as otherwise expressly provided in the Loan Agreement. Any such amendment, modification, waiver or authorisation made with the consent of the Trustee shall be binding on the Noteholders and, unless the Trustee agrees otherwise, any such amendment or modification shall be notified by the Issuer to the Noteholders in accordance with Condition 14.

Save as provided above, so long as any Note remains outstanding, the Issuer, without the prior written consent of the Trustee shall not, *inter alia*, incur any other indebtedness for borrowed moneys, engage in any other business (other than acquiring and holding the Charged Property in respect of each Series issuing Notes, entering into Loans and performing any act incidental to or necessary in connection with the foregoing), declare any dividends, have any subsidiaries or employees, purchase, own, lease or otherwise acquire any real property (including office premises or like facilities), consolidate or merge with any other person or convey or transfer its properties or assets substantially as an entity to any person (otherwise than as contemplated in these conditions and the Trust Deed), issue any shares, give any guarantee or assume any other liability, or subject to the laws of Luxembourg, petition for any winding-up or bankruptcy.

## 5. Interest

(a) **Interest on Fixed Rate Notes:** Each Fixed Rate Note bears interest on its outstanding principal amount from (and including) the Interest Commencement Date at the rate(s) per annum (expressed as a percentage) equal to the Rate(s) of Interest specified hereon which shall be equal to the rate per annum at which interest under the Loan accrues. Accordingly, on each Interest Payment Date the Issuer shall account to the Noteholders for an amount equivalent to amounts of interest under the Loan received by or for the account of the Issuer pursuant to the Loan Agreement.

If a Fixed Coupon Amount or a Broken Amount is specified hereon, the amount of interest payable on each Interest Payment Date will amount to the Fixed Coupon Amount or, if applicable, the Broken Amount so specified and in the case of the Broken Amount will be payable on the particular Interest Payment Date(s) specified hereon.

(b) **Interest on Floating Rate Notes:**

(i) *Interest Payment Dates:* Each Floating Rate Note bears interest on its outstanding nominal amount from (and including) the Interest Commencement Date at the rate per annum (expressed as a percentage) equal to the Rate of Interest specified hereon, which shall be equal to the rate per annum at which interest under the Loan accrues, such interest being payable in arrear on each Interest Payment Date. Such Interest Payment Date(s) is/are either shown hereon as Specified Interest Payment Dates or, if no Specified Interest Payment Date(s) is/are shown hereon, Interest Payment Date shall mean each date which falls the number of months or other period shown hereon as the Interest Period after the preceding Interest Payment Date or, in the case of the first Interest Payment Date, after the Interest Commencement Date. Accordingly, on each such date, the Issuer shall account to the Noteholders for an amount equivalent to amounts of interest under the Loan received by or for the account of the Issuer pursuant to the Loan Agreement.

(ii) *Business Day Convention:* If any date referred to in these Conditions that is specified to be subject to adjustment in accordance with a Business Day Convention would otherwise fall on a day that is not a Business Day, then, if the Business Day Convention specified is (A) the Floating Rate Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event (x) such date shall be brought forward to the immediately preceding Business Day and (y) each subsequent such date shall be the last Business Day of the month in which such date would have fallen had it not been subject to adjustment, (B) the Following Business Day Convention, such date shall be postponed to the next day that is a Business Day, (C) the Modified Following Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event such date shall be brought forward to the immediately preceding Business Day or (D) the Preceding Business Day Convention, such date shall be brought forward to the immediately preceding Business Day.

- (iii) *Rate of Interest for Floating Rate Notes:* The Rate of Interest in respect of Floating Rate Notes for each Interest Accrual Period shall be determined in the manner specified hereon and as set out in the Loan Agreement.
- (c) **Accrual of Interest:** Interest shall cease to accrue on each Note on the due date for redemption unless, upon due presentation, payment is improperly withheld or refused, in which event interest shall continue to accrue (as well after as before judgment) at the Rate of Interest in the manner provided in this Condition 5 to the Relevant Date (as defined in Condition 8).
- (d) **Calculations:** The amount of interest payable in respect of any Note for any period shall be calculated by multiplying the product of the Rate of Interest and the outstanding nominal amount of such Note by the Day Count Fraction as specified hereon and in the Loan Agreement, unless an Interest Amount (or a formula for its calculation) is specified in respect of such period, in which case the amount of interest payable in respect of such Note for such period shall equal such Interest Amount (or be calculated in accordance with such formula). Where any Interest Period comprises two or more Interest Accrual Periods, the amount of interest payable in respect of such Interest Period shall be the sum of the amounts of interest payable in respect of each of those Interest Accrual Periods.
- (e) **Publication of Rates of Interest and Interest Amounts:** As soon as practicable after calculating or determining the Rate of Interest and the Interest Amounts for each Interest Period and the relevant Interest Payment Date as set out in the Loan Agreement, the Calculation Agent shall cause such Rate of Interest and Interest Amounts to be notified to the Trustee, the Issuer, Gazprom, each of the Paying Agents, the Noteholders, any other Calculation Agent appointed in respect of the Notes that is to make a further calculation upon receipt of such information and, if the Notes are listed on a stock exchange and the rules of such exchange or other relevant authority so require, such exchange or other relevant authority as soon as possible after their determination but in no event later than (i) the commencement of the relevant Interest Period, if determined prior to such time, in the case of notification to such exchange of a Rate of Interest and Interest Amount, or (ii) in all other cases, the fourth Business Day after such determination. Where any Interest Payment Date or Interest Period Date is subject to adjustment pursuant to Condition 5(b)(ii), the Interest Amounts and the Interest Payment Date so published may subsequently be amended (or appropriate alternative arrangements made with the consent of the Trustee by way of adjustment) without notice in the event of an extension or shortening of the Interest Period. If the Notes become due and payable under Clause 11 of the Facility Agreement, the accrued interest and the Rate of Interest payable in respect of the Notes shall nevertheless continue to be calculated as previously in accordance with this Condition but no publication of the Rate of Interest or the Interest Amount so calculated need be made unless the Trustee otherwise requires. The determination of any rate or amount, the obtaining of each quotation and the making of each determination or calculation by the Calculation Agent(s) shall (in the absence of manifest error) be final and binding upon all parties.
- (f) **Determination or Calculation by Trustee:** If the Calculation Agent does not at any time for any reason determine or calculate the Rate of Interest for an Interest Period or any Interest Amount pursuant to the Loan Agreement, the Trustee shall do so (or shall appoint an agent on its behalf to do so) and such determination or calculation shall be deemed to have been made by the Calculation Agent. In doing so, the Trustee shall apply the foregoing provisions of this Condition, with any necessary consequential amendments, to the extent that, in its opinion, it can do so, and, in all other respects it shall do so in such manner as it shall deem fair and reasonable in all the circumstances.

## 6. Redemption

Unless previously prepaid or repaid pursuant to Clause 5.2 or 5.3 of the Facility Agreement, the Borrower will be required to repay the Loan on its Repayment Date (as defined in the Loan Agreement) and, subject to such repayment, as set forth in the Loan Agreement, all the Notes then remaining outstanding will on that date be redeemed or repaid by the Issuer in the relevant Specified Currency on the Maturity Date specified hereon at their Final Redemption Amount (which, unless otherwise specified hereon, is 100 per cent. of the principal amount thereof).

If the Loan should become repayable (and be repaid) pursuant to the Loan Agreement prior to its Repayment Date, all Notes then remaining outstanding will thereupon become due and redeemable or repayable at their Early Redemption Amount (which, unless otherwise specified hereon is par together with interest accrued to the date of redemption) and the Issuer will endeavour to give not less than eight days' notice thereof to the Trustee and the Noteholders in accordance with Condition 14.

To the extent that the Issuer receives amounts of principal, interest or other amounts (other than amounts in respect of the Reserved Rights) following acceleration of the Loan pursuant to Clause 11 of the Loan Agreement, the Issuer shall pay an amount equal to and in the same currency as such amounts on the Business Day following receipt of such amounts, subject as provided in Condition 7.

The Issuer, subject to the Borrower's written consent (which consent shall not be unreasonably withheld or delayed), may compel any beneficial owner of Notes initially sold pursuant to Rule 144A under the U.S. Securities Act 1933 (the "**Securities Act**") to sell its interest in such Notes, or may sell such interest on behalf of such holder, if such holder is a U.S. person that is not a qualified institutional buyer (as defined in Rule 144A under the Securities Act) and a qualified purchaser (as defined in Section 2(a)(51) of the U.S. Investment Company Act of 1940).

## 7. **Payments and Agents**

Payments of principal shall be made against presentation and surrender of the relevant Notes at the specified office of the Principal Paying Agent or at the specified office of any Transfer Agent or of the Registrar and in the manner provided in the paragraph below.

Interest shall be paid to the person shown on the Register at the close of business on the fifteenth day before the due date for payment thereof (the "**Record Date**"). Payments of interest shall be made in the Specified Currency by cheque drawn on a bank in the principal financial centre for the Specified Currency or, in the case of euro, in a city in which banks have access to the TARGET System (a "**Bank**") and mailed to the holder (or to the first named of joint holders) of such Note at its address appearing in the Register. Upon application by the holder to the specified office of the Registrar or any Transfer Agent before the Record Date, such payment of interest may be made by transfer to an account in the relevant currency maintained by the payee with a Bank, or by transfer to an account in the Specified Currency maintained by the payee with a Bank in the principal financial centre of such Specified Currency or in the case of euro, a Bank specified by the payee or at the option of the payee, by a euro-cheque and (in the case of interest payable on redemption) upon surrender of the relevant Notes at the specified office of the Principal Paying Agent or at the specified office of the Transfer Agent.

All payments in respect of the Notes are subject in all cases to any applicable fiscal or other laws and regulations, but without prejudice to the provisions of Condition 8. No commissions or expenses shall be charged to the Noteholders in respect of such payments.

If the due date for payments of interest or principal is not a business day, a Noteholder shall not be entitled to payment of the amount due until the next following business day and shall not be entitled to any further interest or other payment in respect of any such delay. In this paragraph, "**business day**" means a day (other than a Saturday or a Sunday) on which banks and foreign exchange markets are open for business in the relevant place of presentation, in such jurisdictions as shall be specified as "**Financial Centres**" hereon, and (i) (in the case of a payment in a currency other than euro) where payment is to be made by transfer to an account maintained with a bank in the relevant currency, on which foreign exchange transactions may be carried on in the relevant currency in the principal financial centre of the country of such currency or (ii) (in the case of a payment in euro) which is a TARGET Business Day.

The names of the initial Paying Agents and their initial specified offices are set out below. The Agency Agreement provides that the Issuer may at any time, with the prior written approval of the Trustee, vary or terminate the appointment of the Principal Paying Agent or any of the Paying Agents, and appoint additional or other paying agents provided that (i) so long as the Notes are listed on any stock exchange or admitted to listing by any other relevant authority, there will be a paying agent and transfer agent with a specified office in such place as may be required by the rules and regulations of the relevant stock exchange or other relevant authority and (ii) a Paying Agent with a specified office in a European Union member state that will not be obliged to withhold or deduct tax pursuant to any European Union Directive on the taxation of savings implementing the conclusions of the ECOFIN Council meeting of 26<sup>th</sup> - 27<sup>th</sup> November 2000 or any law implementing or complying with or introduced in order to

conform to such Directive. Any such variation, termination or appointment shall only take effect (other than in the case of insolvency, when it shall be of immediate effect) after not more than 45 days' and not less than 30 days' notice thereof shall have been given to the Noteholders in accordance with Condition 14.

In addition, if the due date for redemption or repayment of a Note is not an Interest Payment Date, interest accrued from the preceding Interest Payment Date or, as the case may be, from the Issue Date as specified hereon shall be payable only as and when actually received by or for the account of the Issuer pursuant to the Loan Agreement.

Save as otherwise directed by the Trustee at any time after any of the Security Interests created in the Trust Deed becomes enforceable, the Issuer will, pursuant to Clause 6 of the Agency Agreement require the Borrower to make all payments of principal and interest to be made pursuant to the Loan Agreement to the Principal Paying Agent to an account in the name of the Issuer (the "**Account**"). Under the Charge, the Issuer will charge by way of first fixed charge all the rights, title and interest in and to all sums of money then or in the future deposited in the Account in favour of the Trustee for the benefit of the Noteholders.

## 8. **Taxation**

All payments in respect of the Notes by or on behalf of the Issuer will be made without deduction or withholding for or on account of any present or future taxes or duties of whatever nature imposed or levied by or on behalf of the Russian Federation or Luxembourg or any authority thereof or therein having the power to tax, unless the deduction or withholding of such taxes or duties is required by law.

In such event, the Issuer shall make such additional payments as shall result in the receipt by the Noteholders of such amount as would have been received by them if no such withholding or deduction had been required but only to the extent and only at such time as the Issuer receives an equivalent amount from the Borrower under the Loan Agreement. To the extent that the Issuer receives a lesser additional amount from the Borrower, the Issuer will account to each Noteholder for an additional amount equivalent to a pro rata proportion of such additional amount (if any) as is actually received by, or for the account of, the Issuer pursuant to the Loan Agreement on the date of, in the currency of, and subject to any conditions attaching to the payment of such additional amount to the Issuer provided that no such additional amount will be payable in respect of any Note:

- 8.1 to a Noteholder who (a) is able to avoid such deduction or withholding by satisfying any statutory requirements or by making a declaration of non-residence or other claim for exemption to the relevant tax authority; or (b) is liable for such taxes or duties by reason of his having some connection with the Russian Federation or Luxembourg other than the mere holding of such Note or the receipt of payments in respect thereof;
- 8.2 in respect of a Note presented for payment of principal more than 30 days after the Relevant Date except to the extent that such additional payment would have been payable if such Note had been presented for payment on such 30th day;
- 8.3 where such withholding or deduction is imposed on a payment to an individual and is required to be made pursuant to any European Union Directive on the taxation of savings implementing the conclusions of the ECOFIN Council meeting of 26-27 November 2000 or any law implementing or complying with, or introduced in order to conform to, such Directive; or
- 8.4 in respect of a Note presented for payment by or on behalf of a Noteholder who would have been able to avoid such withholding or deduction by presenting the relevant Note to another Paying Agent in a Member State of the European Union.

As used herein, "**Relevant Date**" (i) means the date on which any payment under the Loan Agreement first becomes due but (ii) if the full amount payable by the Borrower has not been received by, or for the account of, the Issuer pursuant to the Loan Agreement on or prior to such date, it means the date on which such moneys shall have been so received and notice to that effect shall have been duly given to the Noteholders by or on behalf of the Issuer in accordance with Condition 14.

Any reference herein or in the Trust Deed to payments in respect of the Notes shall be deemed also to refer to any additional amounts which may be payable in accordance with the Trust Deed and this Condition 8 or any undertaking given in addition thereto or in substitution therefor pursuant to the Trust Deed.

**9. Enforcement**

The Trust Deed provides that only the Trustee may pursue the remedies under the general law, the Trust Deed or the Notes to enforce the rights of the Noteholders and no Noteholder will be entitled to pursue such remedies unless the Trustee (having become bound to do so in accordance with the terms of the Trust Deed) fails or neglects to do so within a reasonable period and such failure or neglect is continuing.

At any time after the occurrence of an Event of Default (as defined in the Facility Agreement) or of a Relevant Event (as defined in the Trust Deed), the Trustee may, at its discretion and without notice and shall, if requested to do so by Noteholders owning 25 per cent. in aggregate principal amount of the Notes outstanding, or if directed to do so by an Extraordinary Resolution and, in either case, subject to it being secured and/or indemnified to its satisfaction, declare all amounts payable under the Loan Agreement by the Borrower to be due and payable (in the case of an Event of Default), or enforce the security created in the Trust Deed in favour of the Trustee (in the case of a Relevant Event). Upon repayment of the Loan following an Event of Default and a declaration as provided herein, the Notes will be redeemed or repaid at their principal amount together with interest accrued to the date fixed for redemption and thereupon shall cease to be outstanding.

**10. Meetings of Noteholders; Modification of Notes, Trust Deed and Loan Agreement; Waiver; Substitution of the Issuer**

The Trust Deed contains provisions for convening meetings of Noteholders to consider any matter affecting their interests, including any modification of, or any arrangement in respect of, the Notes, the Loan Agreement or the Trust Deed. Noteholders will vote pro rata according to the principal amount of their Notes. Special quorum provisions apply for meetings of Noteholders convened for the purpose of amending certain terms concerning, *inter alia*, the amount payable on, and the currency of payment in respect of, the Notes and the amounts payable and currency of payment under the Loan Agreement. Any resolution duly passed at a meeting of Noteholders will be binding on all the Noteholders, whether present or not.

The Trustee may agree, without the consent of the Noteholders, to any modification of the Notes and the Trust Deed or, following the creation of the Security Interests, the Loan Agreement which in the opinion of the Trustee is of a formal, minor or technical nature, is made to correct a manifest error or is not materially prejudicial to the interests of the Noteholders.

The Trustee may also waive or authorise or agree to the waiving or authorising of any breach or proposed breach by the Issuer of the Terms and Conditions of the Notes or the Trust Deed or, following the creation of the Security Interests, by the Borrower of the terms of the Loan Agreement, or determine that any event which would or might otherwise give rise to a right of acceleration under the Loan Agreement shall not be treated as such, if, in the opinion of the Trustee, to do so would not be materially prejudicial to the interests of the Noteholders (as a class). Any such modification, waiver or authorisation shall be binding on the Noteholders and, unless the Trustee agrees otherwise, any such modification shall be promptly notified to the Noteholders.

The Trust Deed contains provisions to the effect that the Issuer may, and at the request of the Borrower shall, having obtained the consent of the Borrower (if such substitution is not to be made at the request of the Borrower) and the Trustee (which latter consent may be given without the consent of the Noteholders) and having complied with such reasonable requirements as the Trustee may direct in the interests of the Noteholders, substitute any entity in place of the Issuer as creditor under the Loan Agreement, as issuer and principal obligor in respect of the Notes and as principal obligor under the Trust Deed, subject to the relevant provisions of the Trust Deed and the substitute's rights under the Loan Agreement being charged and assigned, respectively, to the Trustee as security for the payment obligations of the substitute obligor under the Trust Deed and the Notes.

In connection with the exercise of any of its powers, trusts, authorities or discretions, the Trustee shall have regard to the interests of the Noteholders as a class and, in particular, shall not have regard to the consequences of such exercise for individual Noteholders resulting from their being for any purpose domiciled or resident in, or otherwise connected with, or subject to the jurisdiction of, any particular territory. No Noteholder is entitled to claim from the Issuer or the Trustee any indemnification or payment in respect of any tax consequence of any such exercise upon individual Noteholders.

**11. Prescription**

Notes will become void unless presented for payment of principal within 10 years (in the case of principal) or five years (in the case of interest) from the due date for payment in respect thereof.

**12. Indemnification of Trustee**

The Trust Deed contains provisions for the indemnification of the Trustee and for its relief from responsibility, including provisions relieving it from taking proceedings to enforce payment unless indemnified to its satisfaction. The Trustee is entitled to enter into contracts or transactions with the Issuer and/or the Borrower and any entity related to the Issuer and/or the Borrower without accounting for any profit, fees, corresponding interest, discounts or share of brokerage earned, arising or resulting from any such contract or transactions.

The Trustee's responsibilities are solely those of trustee for the Noteholders on the terms of the Trust Deed. Accordingly, the Trustee makes no representations and assumes no responsibility for the validity or enforceability of the Loan Agreement or the security created in respect thereof or for the performance by the Issuer of its obligations under or in respect of the Notes and the Trust Deed or by the Borrower in respect of the Loan Agreement.

**13. Replacement of Notes**

If any Note shall become mutilated, defaced, lost, stolen or destroyed it may, subject to all applicable laws and regulations and stock exchange requirements, be replaced at the specified office of the Registrar in Luxembourg or at the specified office of the Paying Agent in Luxembourg on payment of such costs, expenses, taxes and duties as may be incurred in connection therewith and on such terms as to evidence, security and indemnity and otherwise as may reasonably be required by or on behalf of the Issuer or the Trustee. Mutilated or defaced Notes must be surrendered before replacements will be issued.

**14. Notices**

All notices to the Noteholders shall be deemed to have been duly given if (i) posted to such holders at their respective addresses as shown on the Register and (ii) so long as the Notes are listed on the Luxembourg Stock Exchange and the rules of that exchange so require, published in a daily newspaper of general circulation in Luxembourg approved by the Trustee, currently expected to be the *Luxemburger Wort*. Any such notice shall be deemed to have been given on the first date on which both conditions shall have been met.

In case by reason of any other cause it shall be impracticable to publish any notice to holders of Notes as provided above, then such notification to such holders as shall be given with the approval of the Trustee shall constitute sufficient notice to such holders for every purpose hereunder.

**15. Further Issues**

The Issuer may from time to time, without the consent of the Noteholders, create and issue further Notes having the same terms and conditions as the Notes in all respects (or in all respects except for the amount and the date of the first payment of interest) so as to be consolidated and form a single series with the Notes. Such further Notes shall be constituted by a deed supplemental to the Trust Deed between the Issuer and the Trustee. The Trust Deed contains provisions for convening a single meeting of Noteholders and the holders of Notes of other series in certain circumstances where the Trustee so decides. In relation to any further issue which is to be consolidated and form a single series with the Notes, the Issuer will enter into a loan agreement supplemental to the Loan Agreement with the Borrower on substantially the same terms as the Loan Agreement (or in all respects except for the amount and the date of the first payment of interest on the further Notes). The Issuer will provide a further fixed charge in favour of the Trustee in respect of certain of its rights and interests under such loan agreement and will assign absolutely certain of its rights under such loan agreement which will secure both the Notes and such further Notes and which will supplement the Security Interests in relation to the existing Notes of such Series.

**16. Contracts (Rights of Third Parties) Act 1999**

No person shall have any right to enforce any term or condition of the Notes under the Contracts (Rights of Third Parties) Act 1999.

**17. Governing Law**

The Notes, the Agency Agreement and the Trust Deed are governed by, and shall be construed in accordance with, English law. The Issuer has submitted in the Trust Deed to the exclusive jurisdiction of the courts of England and has appointed an agent for the service of process in England. For the avoidance of doubt, the provisions of articles 86 to 94-8 of the Luxembourg law of 10 August 1915, as amended, on commercial companies are excluded.

## GAZ CAPITAL S.A.

Gaz Capital S.A. was incorporated as a société anonyme on July 23, 2003 for an unlimited duration with limited liability under the laws of the Grand Duchy of Luxembourg. Its Articles of Incorporation have been published in the Mémorial, Recueil des Sociétés et Associations on August 21, 2003. It is registered with the Register of Commerce and Companies, Luxembourg under number B-95071.

Its registered office is located at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg.

Gaz Capital S.A.'s subscribed share capital amounts to euro 31,000 divided into 31 registered shares with a par value of euro 1,000 each. All of the shares are fully paid up. Thirty shares are owned by Stichting Gaz Capital and one share by Stichting Participatie DITC Amsterdam.

Gaz Capital S.A. has a Board of Directors, currently consisting of three directors. The directors at present are:

1. Rolf Caspers, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg,
2. Peter Dickinson, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg, and
3. Vincent de Rycke, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg.

Deutsche Bank Luxembourg S.A. is the domiciliation agent of Gaz Capital S.A. Its duties include the provision of certain administrative and related services. Its appointment may be terminated and it may retire upon 2 months prior notice subject to the appointment of an alternative domiciliation agent.

The corporate object of Gaz Capital S.A., as described in Article 3 of its Articles of Incorporation, is:

- the issue of Notes and other debt securities under a program for the issuance of loan participation notes for the purpose of financing loans to Open Joint Stock Company Gazprom;
- the granting of loans to Open Joint Stock Company Gazprom;
- the granting of security interests over its assets to a trustee in relation to the issuance of the loan participation notes; and,
- the making of deposits at banks or with other depositaries.

Gaz Capital S.A. may carry out any transactions, whether commercial or financial which are directly or indirectly connected with its corporate object at the exclusion of any banking activity.

In general Gaz Capital S.A. may carry out any operation which it may deem useful or necessary in the accomplishment and the development of its corporate purpose.

Elpers & Co Réviseurs d'entreprises S.à r.l., having its registered office at 11, Boulevard du Prince Henri, L-1724 Luxembourg has been appointed to act as statutory auditors to Gaz Capital S.A.

### Capitalization

The following table sets forth the unaudited capitalization of Gaz Capital S.A. as at the date of this Offering Circular:

	<u>€</u>
Shareholders' Funds:	
Share capital (issued 31 Ordinary Shares of €1,000 each) .....	31,000
Total Capitalization .....	<u>31,000</u>

Other than as detailed above, Gaz Capital S.A. does not have any loan capital, borrowings or contingent liabilities.

### **Financial Statements**

Since its date of incorporation, no financial statements of Gaz Capital S.A. have been prepared. Gaz Capital S.A. intends to publish its first financial statements in respect of the period ending on December 31, 2003. Any future published financial statements prepared by Gaz Capital S.A. (which will be in respect of the period ending on December 31 in each year) will be available from the Paying Agent in Luxembourg.

## TRANSFER RESTRICTIONS

### Rule 144A Notes

Each purchaser of Rule 144A Notes within the United States, by accepting delivery of this Offering Circular and the Notes, will be deemed to have represented, agreed and acknowledged that:

- (1) It is (a) a qualified institutional buyer within the meaning of Rule 144A (a "QIB") that is also a qualified purchaser as defined in Section 2(a)(51) of the Investment Company Act (a "QP"), (b) not a broker-dealer which owns and invests on a discretionary basis less than U.S.\$25 million in securities of unaffiliated issuers, (c) not a participant-directed employee plan, such as a 401(k) plan, (d) acting for its own account, or for the account of another QIB that is also a QP, (e) not formed for the purpose of investing in the Issuer, and (f) aware, and each beneficial owner of such Notes has been advised, that the sale of such Notes to it is being made in reliance on Rule 144A.
- (2) It will, (a) along with each account for which it is purchasing, hold and transfer beneficial interests in the Rule 144A Notes in a principal amount that is not less than U.S.\$100,000 and (b) provide notice of these transfer restrictions to any subsequent transferees. In addition, they understand that the Issuer may receive a list of participants holding positions in its securities from one or more book-entry depositories.
- (3) It understands that the Rule 144A Notes have not been and will not be registered under the Securities Act and may not be offered, sold, pledged or otherwise transferred except (a) in accordance with Rule 144A to a person that it and any person acting on its behalf reasonably believe is a QIB that is also a QP purchasing for its own account or for the account of a QIB that is also a QP, (b) in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S under the Securities Act, in each case in accordance with any applicable securities laws of any State of the United States.
- (4) It understands that the Issuer has the power under the Trust Deed to compel any beneficial owner of Rule 144A Notes that is a U.S. person and is not a QIB and a QP to sell its interest in the Rule 144A Notes, or may sell such interest on behalf of such owner. The Issuer has the right to refuse to honour the transfer of an interest in the Rule 144A Notes to a U.S. person who is not a QIB and a QP.
- (5) It understands that the Rule 144A Notes, unless otherwise agreed between the Issuer and the Trustee in accordance with applicable law, will bear a legend to the following effect:

THIS NOTE AND THE LOAN IN RESPECT HEREOF HAVE NOT BEEN AND WILL NOT BE REGISTERED UNDER THE U.S. SECURITIES ACT OF 1933 (THE "SECURITIES ACT") OR WITH ANY SECURITIES REGULATORY AUTHORITY OF ANY STATE OR OTHER JURISDICTION OF THE UNITED STATES AND MAY NOT BE OFFERED, SOLD, PLEDGED OR OTHERWISE TRANSFERRED EXCEPT (1) IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT ("RULE 144A") TO A PERSON THAT THE HOLDER AND ANY PERSON ACTING ON ITS BEHALF REASONABLY BELIEVE IS A QUALIFIED INSTITUTIONAL BUYER WITHIN THE MEANING OF RULE 144A (A "QIB") THAT IS ALSO A QUALIFIED PURCHASER AS DEFINED IN THE INVESTMENT COMPANY ACT OF 1940 (A "QP") THAT (A) IS NOT A BROKER-DEALER WHICH OWNS AND INVESTS ON A DISCRETIONARY BASIS LESS THAN U.S.\$25 MILLION IN SECURITIES OF UNAFFILIATED ISSUERS, (B) IS NOT A PARTICIPANT-DIRECTED EMPLOYEE PLAN, SUCH AS A 401(K) PLAN, (C) WAS NOT FORMED FOR THE PURPOSE OF INVESTING IN THE ISSUER OF THIS NOTE, (D) IS ACQUIRING THIS NOTE FOR ITS OWN ACCOUNT OR FOR THE ACCOUNT OF A QIB THAT IS ALSO A QP, IN A PRINCIPAL AMOUNT THAT IS NOT LESS THAN U.S.\$100,000, (E) UNDERSTANDS THAT THE ISSUER MAY RECEIVE A LIST OF PARTICIPANTS HOLDING POSITIONS IN ITS SECURITIES FROM ONE OR MORE BOOK-ENTRY DEPOSITORIES AND (F) WILL PROVIDE NOTICE OF THE TRANSFER RESTRICTIONS TO ANY SUBSEQUENT TRANSFEREE, OR (2) IN AN OFFSHORE TRANSACTION IN ACCORDANCE WITH RULE 903 OR RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, IN EACH CASE IN ACCORDANCE WITH ANY APPLICABLE SECURITIES LAWS OF ANY STATE OF THE UNITED STATES. TRANSFER IN VIOLATION OF THE FOREGOING WILL BE OF NO FORCE OR EFFECT, WILL BE VOID *AB INITIO*, AND WILL NOT OPERATE TO TRANSFER ANY RIGHTS TO THE TRANSFEREE, NOTWITHSTANDING ANY INSTRUCTIONS TO THE CONTRARY TO THE ISSUER OF THIS NOTE, THE TRUSTEE OR ANY INTERMEDIARY. THE ISSUER HAS THE RIGHT UNDER THE TRUST DEED TO COMPEL ANY BENEFICIAL OWNER THAT IS A U.S. PERSON AND IS NOT A QIB AND A QP TO SELL ITS INTEREST IN THIS NOTE, OR MAY SELL SUCH INTEREST ON BEHALF OF SUCH BENEFICIAL OWNER. THE ISSUER HAS THE RIGHT TO REFUSE TO HONOUR A TRANSFER OF AN INTEREST IN THIS NOTE TO A U.S. PERSON WHO IS NOT A QIB AND A QP. THE ISSUER HAS NOT BEEN AND WILL NOT BE REGISTERED UNDER THE INVESTMENT COMPANY ACT OF 1940.

- (6) It understands and acknowledges that its purchase and holding of such Notes constitutes a representation and agreement by it that either (a) it is not an employee benefit plan as described in Section 3(3) of the United States Employee Retirement Income Security Act of 1974, as amended (“ERISA”) and subject to ERISA, or a plan subject to Section 4975 of the United States Internal Revenue Code of 1986, as amended (the “Code”), or a governmental plan or church plan which is subject to any federal, state or local law that is substantially similar to the provisions of Section 406 of ERISA or Section 4975 of the Code, or an entity whose assets are treated as assets of any such plan or (b) its purchase and holding of a Note will not constitute a non-exempt prohibited transaction under Section 406 of ERISA or Section 4975 of the Code or any substantially similar provisions of any federal, state or local law.
- (7) It acknowledges that the Issuer, Gazprom, the Registrar, the Dealers and their affiliates, and others will rely upon the truth and accuracy of the above acknowledgements, representations and agreements and agrees that, if any of the acknowledgements, representations or agreements deemed to have been made by it by its purchase of Rule 144A Notes is no longer accurate, it shall promptly notify the Issuer, Gazprom and the Dealers. If it is acquiring any Notes as a fiduciary or agent for one or more investor accounts, it represents that it has sole investment discretion with respect to each of those accounts and that it has full power to make the above acknowledgements, representations and agreements on behalf of each account.
- (8) It understands that the Rule 144A Notes will be evidenced by a global Note (the “Rule 144A Global Note”). Before any interest in the Rule 144A Global Note may be offered, sold, pledged or otherwise transferred to a person who takes delivery in the form of an interest in the Regulation S Global Note, it will be required to provide a Transfer Agent with a written certification (in the form provided in the Paying Agency Agreement) as to compliance with applicable securities laws.

**Prospective purchasers are hereby notified that sellers of the Notes may be relying on the exemption from the provisions of Section 5 of the Securities Act provided by Rule 144A.**

#### **Regulation S Notes**

Each purchaser of Regulation S Notes outside the United States and each subsequent purchaser of Regulation S Notes in resales prior to the expiration of the distribution compliance period, by accepting delivery of this Offering Circular and the Regulation S Notes, will be deemed to have represented, agreed and acknowledged that:

- (1) It is, or at the time Regulation S Notes are purchased will be, the beneficial owner of such Regulation S Notes and (a) it is not a U.S. person and it is located outside the United States (within the meaning of Regulation S) and (b) it is not an affiliate of the Issuer, Gazprom or a person acting on behalf of such an affiliate.
- (2) It understands that the Regulation S Notes have not been and will not be registered under the Securities Act and, prior to the expiration of the distribution compliance period, it will not offer, sell, pledge or otherwise transfer such Notes except (a) in accordance with Rule 144A to a person that it and any person acting on its behalf reasonably believes is a QIB that is also a QP purchasing for its own account or the account of a QIB that is also a QP or (b) in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S, in each case in accordance with any applicable securities laws of any State of the United States.
- (3) It understands that the Regulation S Notes will be evidenced by a global Note (the “Regulation S Global Note”). Before any interest in the Regulation S Global Note may be offered, sold, pledged or otherwise transferred to a person who takes delivery in the form of an interest in the Rule 144A Global Note, it will be required to provide a Transfer Agent with a written certification (in the form provided in the Paying Agency Agreement) as to compliance with applicable securities laws.
- (4) It understands and acknowledges that its purchase and holding of such Notes constitutes a representation and agreement by it that either (a) it is not an employee benefit plan as described in Section 3(3) of ERISA and subject to ERISA, or a plan subject to Section 4975 of the Code, or a governmental plan or church plan which is subject to any federal, state or local law that is substantially similar to the provisions of Section 406 of ERISA or Section 4975 of the Code, or an entity whose assets are treated as assets of any such plan or (b) its purchase and holding of a Note will not constitute a non-exempt prohibited transaction under Section 406 of ERISA or Section 4975 of the Code or any substantially similar provisions of any federal, state or local law.

- (5) It acknowledges that the Issuer, Gazprom, the Registrar, the Dealers and their affiliates and others will rely upon the truth and accuracy of the above acknowledgements, representations and agreements and agree that, if any of the acknowledgements, representations or agreements deemed to have been made by it by its purchase of Notes is no longer accurate, it shall promptly notify the Issuer, Gazprom and the Dealers. If it is acquiring any Notes as a fiduciary or agent for one or more investor accounts, it represents that it has sole investment discretion with respect to each of those accounts and that it has full power to make the above acknowledgements, representations and agreements on behalf of each account.

## CLEARING AND SETTLEMENT

### The Global Notes

Each Series of Notes will be evidenced on issue by a Regulation S Global Note deposited with, and registered in the name of a nominee for, a common depository for Euroclear and Clearstream, Luxembourg and, in the case of Rule 144A Notes, a Rule 144A Global Note deposited with a custodian for, and registered in the name of Cede & Co. as nominee of, DTC.

Beneficial interests in a Regulation S Global Note may be held only through Euroclear or Clearstream, Luxembourg at any time. See “—Book-Entry Procedures for the Global Notes.” By acquisition of a beneficial interest in a Regulation S Global Note, the purchaser thereof will be deemed to represent, among other things, that it is not a U.S. person, and that, if it determines to transfer such beneficial interest prior to the expiration of the 40 day distribution compliance period, it will transfer such interest only to a person whom the seller reasonably believes (a) to be a non-U.S. person in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S or (b) to be a person who takes delivery in the form of an interest in a Rule 144A Global Note (if applicable). See “Transfer Restrictions.” Beneficial interests in a Rule 144A Global Note may only be held through DTC at any time. See “—Book-Entry Procedures for the Global Notes.” By acquisition of a beneficial interest in a Rule 144A Global Note, the purchaser thereof will be deemed to represent, among other things, that it is a QIB that is also a QP and that, if in the future it determines to transfer such beneficial interest, it will transfer such interest in accordance with the procedures and restrictions contained in the Trust Deed. See “Transfer Restrictions.”

Beneficial interests in each Global Note will be subject to certain restrictions on transfer set forth therein and in the Trust Deed, and with respect to Rule 144A Notes, as set forth in Rule 144A, and the Notes will bear the legends set forth thereon regarding such restrictions set forth under “Transfer Restrictions.” A beneficial interest in a Regulation S Global Note may be transferred to a person who takes delivery in the form of an interest in a Rule 144A Global Note in denominations greater than or equal to the minimum denominations applicable to interests in a Rule 144A Global Note and only upon receipt by the Registrar of a written certification (in the form provided in the Paying Agency Agreement) to the effect that the transferor reasonably believes that the transferee is a QIB that is also a QP and that such transaction is in accordance with any applicable securities laws of any state of the United States or any other jurisdiction. Beneficial interests in a Rule 144A Global Note may be transferred to a person who takes delivery in the form of an interest in a Regulation S Global Note only upon receipt by the Registrar of a written certification (in the form provided in the Paying Agency Agreement) from the transferor to the effect that the transfer is being made to a non-U.S. person and in accordance with Regulation S.

Any beneficial interest in a Regulation S Global Note that is transferred to a person who takes delivery in the form of an interest in a Rule 144A Global Note will, upon transfer, cease to be an interest in the Regulation S Global Note and become an interest in the Rule 144A Global Note, and, accordingly, will thereafter be subject to all transfer restrictions and other procedures applicable to beneficial interests in the Rule 144A Global Note for as long as it remains such an interest. Any beneficial interest in a Rule 144A Global Note that is transferred to a person who takes delivery in the form of an interest in a Regulation S Global Note will, upon transfer, cease to be an interest in the Rule 144A Global Note and become an interest in the Regulation S Global Note and, accordingly, will thereafter be subject to all transfer restrictions and other procedures applicable to beneficial interests in the Regulation S Global Note for so long as it remains such an interest. No service charge will be made for any registration of transfer or exchange of Notes, but the Registrar may require payment of a sum sufficient to cover any tax or other governmental charge payable in connection therewith. Except in the limited circumstances described below, owners of beneficial interests in Global Notes will not be entitled to receive physical delivery of certificated Notes in definitive form (the “Definitive Notes”). The Notes are not issuable in bearer form.

### Amendments to Conditions

Each Global Note contains provisions that apply to the Notes that they represent, some of which modify the effect of the above Terms and Conditions of the Notes. The following is a summary of those provisions:

- *Payments.* Payments of principal and interest in respect of Notes evidenced by a Global Note will be made against presentation for endorsement by the Principal Paying Agent and, if no further payment falls to be made in respect of the relevant Notes, surrender of such Global Note to or to the order of the Principal Paying Agent or such other Paying Agent as shall have been notified to the relevant Noteholders for such

purpose. A record of each payment so made will be endorsed in the appropriate schedule to the relevant Global Note, which endorsement will be *prima facie* evidence that such payment has been made in respect of the relevant Notes.

- *Notices.* So long as any Notes are evidenced by a Global Note and such Global Note is held by or on behalf of a clearing system, notices to Noteholders may be given by delivery of the relevant notice to that clearing system for communication by it to entitled account holders in substitution for delivery thereof as required by the Terms and Conditions of such Notes provided that for so long as the Notes are listed on the Luxembourg Stock Exchange and the rules of the Luxembourg Stock Exchange so require, notices will also be published in a leading newspaper having general circulation in Luxembourg (which is expected to be the *Luxemburger Wort*).
- *Meetings.* The holder of each Global Note will be treated as being one person for the purposes of any quorum requirements of, or the right to demand a poll at, a meeting of Noteholders and in any such meeting as having one vote in respect of Notes for which the relevant Global Note may be exchangeable.
- *Trustee Powers.* In considering the interests of Noteholders while the Global Notes are held on behalf of a clearing system, the Trustee, to the extent it considers it appropriate to do so in the circumstances, may have regard to any information provided to it by such clearing system or its operator as to the identity (either individually or by category) of its accountholders with entitlements to each Global Note and may consider such interests as if such accountholders were the holders of any Global Note.
- *Cancellation.* Cancellation of any Note required by the Terms and Conditions of the Notes to be cancelled will be effected by reduction in the principal amount of the applicable Global Note.

## **Exchange for Definitive Notes**

### *Exchange*

Each Global Note will be exchangeable, free of charge to the holder, in whole but not in part, for Notes in definitive form if: (i) a Global Note is held by or on behalf of a clearing system and such clearing system is closed for business for a continuous period of 14 days (other than by reason of holidays, statutory or otherwise) or announces an intention permanently to cease business or does in fact do so, by the holder giving notice to the Registrar or any Transfer Agent or (ii) if the Issuer would suffer a material disadvantage in respect of the Notes as a result of a change in the laws or regulations (taxation or otherwise) of any jurisdiction referred to in Condition 8 which would not be suffered were the Notes in definitive form and a notice to such effect signed by two directors of the Issuer or by any person(s) empowered by the board of directors of the Issuer to sign on behalf of the Issuer is delivered to the Trustee, by the Issuer giving notice to the Registrar or the Transfer Agent and the Noteholders of its intention to exchange the relevant Global Note for Definitive Notes on or after the Exchange Date (as defined below) specified in the notice.

The Registrar will not register the transfer of, or exchange of interests in, a Global Note for Definitive Notes for a period of 15 calendar days ending on the date for any payment of principal or interest in respect of the Notes.

“Exchange Date” means a day falling not later than 90 days after that on which the notice requiring exchange is given and on which banks are open for business in the city in which the specified office of the Registrar or the Transfer Agent is located.

### *Delivery*

In such circumstances, the relevant Global Note shall be exchanged in full for Definitive Notes and the Issuer will, at the cost of the Borrower (but against such indemnity as the Registrar or any relevant Transfer Agent may require in respect of any tax or other duty of whatever nature which may be levied or imposed in connection with such exchange), cause sufficient Definitive Notes to be executed and delivered to the Registrar for completion, authentication and dispatch to the relevant Noteholders. A person having an interest in a Global Note must provide the Registrar with (a) a written order containing instructions and such other information as the Issuer and the Registrar may require to complete, execute and deliver such Notes and (b) in the case of a Rule

144A Global Note only, a fully completed, signed certification substantially to the effect that the exchanging holder is not transferring its interest at the time of such exchange or, in the case of simultaneous sale pursuant to Rule 144A, a certification that the transfer is being made in compliance with the provisions of Rule 144A to a QIB that is also a QP. Definitive Notes issued in exchange for a beneficial interest in a Rule 144A Global Note shall bear the legend applicable to transfers pursuant to Rule 144A, as set out under "Transfer Restrictions."

### *Legends*

The holder of a Definitive Note may transfer the Notes evidenced thereby in whole or in part in the applicable minimum denomination by surrendering it at the specified office of the Registrar or any Transfer Agent, together with the completed form of transfer thereon. Upon the transfer, exchange or replacement of a Rule 144A Definitive Note bearing the legend referred to under "Transfer Restrictions," or upon specific request for removal of the legend on a Rule 144A Definitive Note, the Issuer will deliver only Rule 144A Definitive Notes that bear such legend, or will refuse to remove such legend, as the case may be, unless there is delivered to the Issuer and the Registrar such satisfactory evidence, which may include an opinion of counsel, as may reasonably be required by the Issuer that neither the legend nor the restrictions on transfer set forth therein are required to ensure compliance with the provisions of the Securities Act and the Investment Company Act.

### **Book-Entry Procedures for the Global Notes**

For each Series of Notes evidenced by both a Regulation S Global Note and a Rule 144A Global Note, custodial and depository links are to be established between DTC, Euroclear and Clearstream, Luxembourg to facilitate the initial issue of the Notes and cross-market transfers of the Notes associated with secondary market trading. See "—Book Entry—Ownership—Settlement and Transfer of Notes."

### *Euroclear and Clearstream, Luxembourg*

Euroclear and Clearstream, Luxembourg each hold securities for their customers and facilitate the clearance and settlement of securities transactions through electronic book-entry transfer between their respective accountholders. Indirect access to Euroclear and Clearstream, Luxembourg is available to other institutions which clear through or maintain a custodial relationship with an accountholder of either system. Euroclear and Clearstream, Luxembourg provide various services including safekeeping, administration, clearance and settlement of internationally-traded securities and securities lending and borrowing. Euroclear and Clearstream, Luxembourg also deal with domestic securities markets in several countries through established depository and custodial relationships. Euroclear and Clearstream, Luxembourg have established an electronic bridge between their two systems across which their respective customers may settle trades with each other. Their customers are worldwide financial institutions including underwriters, securities brokers and dealers, banks, trust companies and clearing corporations. Investors may hold their interests in such Global Notes directly through Euroclear or Clearstream, Luxembourg if they are accountholders ("Direct Participants") or indirectly ("Indirect Participants" and together with Direct Participants, "Participants") through organisations which are accountholders therein.

### *DTC*

DTC has advised the Issuer as follows: DTC is a limited purpose trust company organised under the laws of the State of New York, a "banking organization" under the laws of the State of New York, a member of the U.S. Federal Reserve System, a "clearing corporation" within the meaning of the New York Uniform Commercial code and a "clearing agency" registered pursuant to the provisions of Section 17A of the U.S. Securities Exchange Act of 1934 (the "Exchange Act"). DTC was created to hold securities for its Participants and facilitate the clearance and settlement of securities transactions between Participants through electronic computerised book-entry changes in accounts of its Participants, thereby eliminating the need for physical movement of certificates. Participants include securities brokers and dealers, banks, trust companies, clearing corporations and certain other organisations. Indirect access to DTC is available to others, such as banks, securities brokers, dealers and trust companies, that clear through or maintain a custodial relationship with a DTC Direct Participant, either directly or indirectly.

Investors may hold their interests in Rule 144A Global Notes directly through DTC if they are Direct Participants in the DTC system, or as Indirect Participants through organisations which are Direct Participants in such system.

DTC has advised the Issuer that it will take any action permitted to be taken by a holder of Notes only at the direction of one or more Direct Participants and only in respect of such portion of the aggregate principal amount of the relevant Rule 144A Global Notes as to which such Participant or Participants has or have given such direction. However, in the circumstances described under "Exchange for Definitive Notes," DTC will surrender the relevant Rule 144A Global Notes for exchange for individual Rule 144A Definitive Notes (which will bear the legend applicable to transfers pursuant to Rule 144A).

### **Book-Entry Ownership**

#### *Euroclear and Clearstream, Luxembourg*

The Regulation S Global Note representing Regulation S Notes of any Series will have an ISIN and a Common Code and will be registered in the name of a nominee for, and deposited with a common depository on behalf of, Euroclear and Clearstream, Luxembourg.

#### *DTC*

The Rule 144A Global Note representing Rule 144A Notes of any Series will have a CUSIP number and will be deposited with a custodian (the "Custodian") for and registered in the name of Cede & Co. as nominee of, DTC. The Custodian and DTC will electronically record the principal amount of the Notes held within the DTC System.

#### *Relationship of Participants with Clearing Systems*

Each of the persons shown in the records of Euroclear, Clearstream, Luxembourg or DTC as the holder of a Note evidenced by a Global Note must look solely to Euroclear, Clearstream, Luxembourg or DTC (as the case may be) for his share of each payment made by the Issuer to the holder of such Global Note and in relation to all other rights arising under the Global Note, subject to and in accordance with the respective rules and procedures of Euroclear, Clearstream, Luxembourg or DTC (as the case may be). The Issuer expects that, upon receipt of any payment in respect of Notes evidenced by a Global Note, the common depository by whom such Note is held, or nominee in whose name it is registered, will immediately credit the relevant participants' or accountholders' accounts in the relevant clearing system with payments in amounts proportionate to their respective beneficial interests in the principal amount of the relevant Global Note as shown on the records of the relevant clearing system or its nominee. The Issuer also expects that payments by Direct Participants in any clearing system to owners of beneficial interests in any Global Note held through such Direct Participants in any clearing system will be governed by standing instructions and customary practices. Save as aforesaid, such persons shall have no claim directly against the Issuer in respect of payments due on the Notes for so long as the Notes are evidenced by such Global Note and the obligations of the Issuer will be discharged by payment to the registered holder, as the case may be, of such Global Note in respect of each amount so paid. None of the Issuer, the Trustee or any Agent will have any responsibility or liability for any aspect of the records relating to or payments made on account of ownership interests in any Global Note or for maintaining, supervising or reviewing any records relating to such ownership interests.

#### *Settlement and Transfer of Notes*

Subject to the rules and procedures of each applicable clearing system, purchases of Notes held within a clearing system must be made by or through Direct Participants, which will receive a credit for such Notes on the clearing system's records. The ownership interest of each actual purchaser of each such Note (the "Beneficial Owner") will in turn be recorded on the Direct and Indirect Participants' records. Beneficial Owners will not receive written confirmation from any clearing system of their purchase, but Beneficial Owners are expected to receive written confirmations providing details of the transaction, as well as periodic statements of their holdings, from the Direct or Indirect Participant through which such Beneficial Owner entered into the transaction.

Transfers of ownership interests in Notes held within the clearing system will be affected by entries made on the books of Participants acting on behalf of Beneficial Owners. Beneficial Owners will not receive certificates representing their ownership interests in such Notes, unless and until interests in any Global Note held within a clearing system are exchanged for Definitive Notes.

No clearing system has knowledge of the actual Beneficial Owners of the Notes held within such clearing system and their records will reflect only the identity of the Direct Participants to whose accounts such Notes are credited, which may or may not be the Beneficial Owners. The Participants will remain responsible for keeping account of their holdings on behalf of their customers. Conveyance of notices and other communications by the clearing systems to Direct Participants, by Direct Participants to Indirect Participants, and by Direct Participants and Indirect Participants to Beneficial Owners will be governed by arrangements among them, subject to any statutory or regulatory requirements as may be in effect from time to time.

The laws of some jurisdictions may require that certain persons take physical delivery in definitive form of securities. Consequently, the ability to transfer interests in a Global Note to such persons may be limited. Because DTC can only act on behalf of Direct Participants, who in turn act on behalf of Indirect Participants, the ability of a person having an interest in a Rule 144A Global Note to pledge such interest to persons or entities that do not participate in DTC, or otherwise take actions in respect of such interest, may be affected by a lack of physical certificate in respect of such interest.

#### *Trading between Euroclear and/or Clearstream, Luxembourg Participants*

Secondary market sales of book-entry interests in the Notes held through Euroclear or Clearstream, Luxembourg to purchasers of book-entry interests in the Notes held through Euroclear or Clearstream, Luxembourg will be conducted in accordance with the normal rules and operating procedures of Euroclear and Clearstream, Luxembourg and will be settled using the procedures applicable to conventional Eurobonds.

#### *Trading between DTC Participants*

Secondary market sales of book-entry interests in the Notes between DTC participants will occur in the ordinary way in accordance with DTC rules and will be settled using the procedures applicable to United States corporate debt obligations in DTC's Same-Day Funds Settlement ("SDFS") system in same-day funds, if payment is effected in U.S. Dollars, or free of payment, if payment is not effected in U.S. Dollars. Where payment is not effected in U.S. Dollars, separate payment arrangements outside DTC are required to be made between the DTC participants.

#### *Trading between DTC seller and Euroclear/Clearstream, Luxembourg purchaser*

When book-entry interests in Notes are to be transferred from the account of a DTC participant holding a beneficial interest in a Rule 144A Global Note to the account of a Euroclear or Clearstream, Luxembourg accountholder wishing to purchase a beneficial interest in a Regulation S Global Note (subject to the certification procedures provided in the Paying Agency Agreement), the DTC participant will deliver instructions for delivery to the relevant Euroclear or Clearstream, Luxembourg accountholder to DTC by 12 noon, New York time, on the settlement date. Separate payment arrangements are required to be made between the DTC participant and the relevant Euroclear or Clearstream, Luxembourg participant. On the settlement date, the custodian of the Rule 144A Global Note will instruct the Registrar to (i) decrease the amount of Notes registered in the name of Cede & Co. and evidenced by the Rule 144A Global Note of the relevant class and (ii) increase the amount of Notes registered in the name of the nominee of the common depositary for Euroclear and Clearstream, Luxembourg and evidenced by the Regulation S Global Note. Book-entry interests will be delivered free of payment to Euroclear or Clearstream, Luxembourg, as the case may be, for credit to the relevant accountholder on the first business day following the settlement date.

#### *Trading between Euroclear/Clearstream, Luxembourg seller and DTC purchaser*

When book-entry interests in the Notes are to be transferred from the account of a Euroclear or Clearstream, Luxembourg accountholder to the account of a DTC participant wishing to purchase a beneficial interest in a Rule 144A Global Note (subject to the certification procedures provided in the Paying Agency Agreement), the Euroclear or Clearstream, Luxembourg participant must send to Euroclear or Clearstream, Luxembourg delivery free of payment instructions by 7:45 p.m., Brussels or Luxembourg time, one business day prior to the settlement date. Euroclear or Clearstream, Luxembourg, as the case may be, will in turn transmit appropriate instructions to the common depositary for Euroclear and Clearstream, Luxembourg and the Registrar to arrange delivery to the DTC participant on the settlement date. Separate payment arrangements are required to be made between the DTC participant and the relevant Euroclear or Clearstream, Luxembourg accountholder, as the case may be. On the settlement date, the common depositary for Euroclear and Clearstream, Luxembourg will (a) transmit

appropriate instructions to the custodian of the Rule 144A Global Note who will in turn deliver such book-entry interests in the Notes free of payment to the relevant account of the DTC participant and (b) instruct the Registrar to (i) decrease the amount of Notes registered in the name of the nominee of the common depository for Euroclear and Clearstream, Luxembourg and evidenced by a Regulation S Global Note; and (ii) increase the amount of Notes registered in the name of Cede & Co. and evidenced by a Rule 144A Global Note.

Although Euroclear, Clearstream, Luxembourg and DTC have agreed to the foregoing procedures in order to facilitate transfers of beneficial interest in Global Notes among participants and accountholders of Euroclear, Clearstream, Luxembourg and DTC, they are under no obligation to perform or continue to perform such procedure, and such procedures may be discontinued at any time. None of the Issuer, the Trustee or any Agent will have the responsibility for the performance by Euroclear, Clearstream, Luxembourg or DTC or their respective Direct or Indirect Participants of their respective obligations under the rules and procedures governing their operations.

#### *Pre-issue Trades Settlement*

It is expected that delivery of Notes will be made against payment therefor on the Closing Date thereof, which could be more than three business days following the date of pricing. Under Rule 15c6-1 under the Exchange Act, trades in the United States secondary market generally are required to settle within three business days (T+3), unless the parties to any such trade expressly agree otherwise. Accordingly, purchasers who wish to trade Notes in the United States on the date of pricing or the next succeeding business days until three days prior to the relevant Closing Date will be required, by virtue of the fact the Notes initially will settle beyond T+3, to specify an alternate settlement cycle at the time of any such trade to prevent a failed settlement. Settlement procedures in other countries will vary. Purchasers of Notes may be affected by such local settlement practices, and purchasers of Notes between the relevant date of pricing and the relevant Closing Date should consult their own advisors.

## SUBSCRIPTION AND SALE

### Summary of Dealer Agreement

Subject to the terms and on the conditions contained in a Dealer Agreement dated September 22, 2003 (the "Dealer Agreement") between the Issuer, Gazprom, the Permanent Dealers and the Arrangers, the Notes will be offered from time to time by the Issuer to the Permanent Dealers or such other Dealers as may be appointed from time to time in respect of any Series of Notes pursuant to the Dealer Agreement. Any agreement for the sale of Notes will, *inter alia*, make provision for the form and terms and conditions of the relevant Notes, whether the placement of the Notes is underwritten or sold on an agency basis only, the price at which such Notes will be purchased by the Dealers and the commissions or other agreed deductibles (if any) which are payable or allowable by the Issuer in respect of such purchase and the form of any indemnity to the Dealers against certain liabilities in connection with the offer and sale of the relevant Notes. The Notes may be resold at prevailing market prices, or at prices related thereto, at the time of such resale, as determined by the Relevant Dealer. The Dealer Agreement also provides for Notes to be issued in syndicated Series that may be jointly and severally underwritten by two or more Dealers.

Each of the Issuer and Gazprom has agreed to indemnify the Dealers against certain losses, as set out in the Dealer Agreement. The Dealer Agreement entitles the Dealers to terminate any agreement that they make to subscribe for the Notes in certain circumstances prior to payment for such Notes being made to the Issuer.

### Selling Restrictions

#### *United States*

The Notes and the corresponding Loans have not been and will not be registered under the Securities Act, the securities laws of any State or other jurisdiction of the United States or the securities laws of any other jurisdiction. Each Dealer has agreed, and each further Dealer appointed under the Programme will be required to agree, that:

- the Notes may not be offered or sold within the United States or to, or for the account or benefit of, U.S. persons except pursuant to an exemption from the registration requirements of the Securities Act or in transactions not subject to those registration requirements; and
- except as permitted by the Dealer Agreement it will not offer or sell the Notes of any Series (i) as part of their distribution at any time or (ii) otherwise until 40 days after the completion of the distribution of the Series of which such Notes are a part, as determined and certified to the Principal Paying Agent by such Dealer (or, in the case of such Series of Notes sold to or through more than one Dealer on a syndicated basis, by any Dealer acting as lead manager), within the United States or to, or for the account or benefit of, U.S. persons, and it will have sent to each Dealer to which it sells Notes (other than a sale pursuant to Rule 144A) during the distribution compliance period a confirmation or other notice setting forth the restrictions on offers and sales of the Notes within the United States or to, or for the account or benefit of, U.S. persons.

Terms used in this section have the meanings given to them by Regulation S.

Notes offered and sold outside the United States to non-U.S. persons may be sold in reliance on Regulation S. The Dealer Agreement provides that the Dealers may directly or through their respective U.S. broker-dealer affiliates arrange for the offer and resale of Notes within the United States only to persons whom they reasonably believe are QIBs and QPs who can represent that (a) they are QPs who are QIBs within the meaning of Rule 144A; (b) they are not broker-dealers who own and invest on a discretionary basis less than U.S.\$25 million in securities of unaffiliated issuers; (c) they are not a participant-directed employee plan, such as a 401(k) plan; (d) they are acting for their own account, or the account of another QIB who is a QP; (e) they are not formed for the purpose of investing in the Issuer; (f) each account for which they are purchasing will hold and transfer at least U.S.\$100,000 in principal amount of Notes at any time; and (g) they will provide notice of the transfer restrictions set forth in this offering circular to any subsequent transferees.

In addition, until 40 days after commencement of the offering of any Series of Notes, an offer or sale of such Notes within the United States by a dealer that is not participating in the offering of such Series of Notes may violate the registration requirements of the Securities Act, if such offer or sale is made otherwise than in accordance with Rule 144A.

This Offering Circular has been prepared by the Issuer for use in connection with the offer and sale of the Notes outside the United States, the resale of the Notes in the United States and for the listing of Notes on the Luxembourg Stock Exchange. The Issuer and the Dealers reserve the right to reject any offer to purchase the Notes, in whole or in part, for any reason. This Offering Circular does not constitute an offer to any person in the United States or to any U.S. person other than any QIB who is also a QP and to whom an offer has

been made directly by one of the Dealers or its U.S. broker-affiliate. Distribution of this Offering Circular by any non-U.S. person outside the United States or by any QIB/QP in the United States to any U.S. person or to any other person within the United States, other than any QIB/QP and those persons, if any, retained to advise such non-U.S. person or QIB/QP with respect thereto, is unauthorized and any disclosure without the prior written consent of the Issuer of any of its contents to any such U.S. person or other person within the United States, other than any QIB/QP and those persons, if any, retained to advise such non-U.S. person or QIB/QP, is prohibited.

#### *United Kingdom*

Each Dealer has represented and agreed that (i) in relation to any Notes which have a maturity of one year or more, it has not offered or sold and prior to the expiry of the period of six months from the Issue Date thereof will not offer or sell any Notes to persons in the United Kingdom except to persons whose ordinary activities involve them in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of its business or otherwise in circumstances which have not resulted and will not result in an offer to the public in the United Kingdom within the meaning of the Public Offers of Securities Regulations 1995 (as amended), (ii) in relation to any Notes which have a maturity of less than one year, (a) it is a person whose ordinary activities involve it in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of its business and (b) it has not offered or sold and will not offer or sell any Notes other than to persons whose ordinary activities involve them in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of their businesses or who it is reasonable to expect will acquire, hold, manage or dispose of investments (as principal or agent) for the purposes of their businesses where the issue of the Notes would otherwise constitute a contravention of section 19 of the Financial Services and Markets Act 2000 (the "FSMA") by the Issuer, (iii) it has only communicated or caused to be communicated and will only communicate or cause to be communicated any invitation or inducement to engage in investment activity (within the meaning of section 21 of the FSMA) received by it in connection with the issue or sale of any Notes in circumstances in which section 21(1) of the FSMA does not apply to the Issuer, and (iv) it has complied and will comply with all applicable provisions of the FSMA with respect to anything done by it in relation to the Notes in, from or otherwise involving the United Kingdom.

#### *Russian Federation*

Each Dealer has represented and agreed that it has not offered or sold or otherwise transferred and will not offer or sell or otherwise transfer as part of their initial distribution or at any time thereafter any Notes to or for the benefit of any persons (including legal entities) resident, incorporated, established or having their usual residence in the Russian Federation or to any person located within the territory of the Russian Federation unless and to the extent otherwise permitted under Russian law.

#### *Luxembourg*

Each Dealer has represented and agreed that no public offerings or sales of the Notes or any distribution of any offering material relating to the Notes will or may be made in or from Luxembourg, except for the Notes in respect of which the requirements of Luxembourg law concerning public offerings of securities in Luxembourg have been fulfilled. A listing on the Luxembourg Stock Exchange of the Notes does not necessarily imply that a public offering in Luxembourg has been authorized.

#### *Republic of Italy*

Each Dealer has represented to and agreed with the Issuer, Gazprom and each other Dealer that offers of Notes in the Republic of Italy ("Italy") have not been and will not be registered with the *Commissione Nazionale per le Società e la Borsa* ("CONSOB") pursuant to Italian securities legislation and, accordingly, that it has not offered, and will not offer, any Notes in Italy in a solicitation to the public at large (*sollecitazione all'investimento*) within the meaning of Article 1, paragraph 1, letter (t) of Legislative Decree no. 58 of 24 February 1998, that such Notes shall not be placed, sold and/or offered, either in primary or in the secondary market, to individuals resident in Italy and that sales of Notes in Italy will only be:

- negotiated on an individual basis with "Professional Investors" (*operatori qualificati*), as defined under Article 31, paragraph 2, of CONSOB Regulation no. 11522 of 1 July 1998, as amended;
- effected in compliance with Article 129 of the Legislative Decree no. 385 of 1 September 1993 and the implementing instructions of the Bank of Italy, pursuant to which the issue or offer of securities in Italy is subject to prior notification to the Bank of Italy, unless an exemption, depending inter alia on the amount of the issue and the characteristics of the securities, applies;

- effected in accordance with any other Italian securities, tax and exchange control and other applicable laws and regulations and any other applicable requirement or limitation which may be imposed by CONSOB or the Bank of Italy; and
- made by an investment firm, bank or financial intermediary permitted to conduct such activities in Italy in accordance with the relevant provisions of Italian law.

Where Notes of any Series are intended for distribution in the Republic of Italy, the minimum denomination of any such Series should be €100,000 or equivalent and integral multiples of €1,000 thereafter, unless otherwise agreed with the Bank of Italy.

### **General**

Each Dealer has agreed that it has, to the best of its knowledge and belief, complied and will comply with applicable laws and regulations in each jurisdiction in which they offer, sell or deliver Notes or distribute this Offering Circular (and any amendments thereof and supplements thereto) or any other offering or publicity material relating to the Notes, the Issuer or Gazprom.

These selling restrictions may be modified by the agreement of the Issuer, Gazprom and the Dealers following a change in a relevant law, regulation or directive. Any such modification will be set out in the Pricing Supplement issued in respect of the issue of Notes to which it relates or in a supplement to this Offering Circular.

## TAXATION

*Prospective purchasers of the Notes are advised to consult their own tax advisors as to the consequences under the tax laws of the country of which they are residents of a purchase of Notes, including, but not limited to, the consequences of the receipt of interest and the sale or redemption of Notes. The following is a general description of certain tax laws relating to each Series of Notes and the corresponding Loan as in effect on the date hereof and does not purport to be a comprehensive discussion of the tax treatment of the Notes.*

### **Russian Federation**

The following is a summary of certain Russian tax considerations relevant to the purchase, ownership and disposition of Notes by non-resident holders, including information regarding the taxation of payments on any corresponding Loan. The summary is based on the laws of Russia in effect on the date of this Offering Circular. The summary does not seek to address the applicability of, and procedures in relation to, taxes levied by regions, municipalities or other non-federal level authorities of Russia, nor does the summary seek to address the availability of double tax treaty relief in respect of the Notes, or practical difficulties involved in obtaining such double tax treaty relief.

Prospective investors should consult their own tax advisors regarding the tax consequences of investing in the Notes in their own particular circumstances. No representation with respect to the Russian tax consequences to any particular holder is made hereby.

Many aspects of Russian tax law are subject to significant uncertainty. Further, the substantive provisions of Russian tax law applicable to financial instruments may be subject to more rapid and unpredictable change and inconsistency than in jurisdictions with more developed capital markets. In this regard, the interpretation and application of such provisions will in practice rest substantially with local tax inspectorates.

For the purposes of this summary, a “non-resident holder” means a physical person actually present in Russia for an aggregate period of less than 183 days in a given calendar year or a legal person or organisation in each case not organised under Russian law which holds and disposes of the Notes otherwise than through its permanent establishment in Russia.

The Russian tax treatment of interest payments made by Gazprom to the Issuer under any Loan Agreement may affect the holders of the Notes. See “Taxation of the Loan” below.

### *Taxation of the Notes*

A non-resident holder will not be subject to any Russian taxes in respect of interest payments on the Notes received from the Issuer.

A non-resident holder also generally should not be subject to any Russian taxes in respect of a redemption, sale or other disposition of the Notes outside of Russia, provided that the proceeds of such disposition are not received from a source within Russia.

In the event that proceeds of a disposition of Notes are received from a source within Russia, a non-resident holder that is a legal person or organisation should not be subject to any Russian taxation in respect of the proceeds, provided that no portion thereof is attributable to accrued interest. There is some residual uncertainty regarding the treatment of the portion of such proceeds, if any, that is attributable to accrued interest, and such portion may be taxed at a rate of 20%, even if the disposal results in a capital loss. Non-resident holders that are legal persons or organisations should consult their own tax advisors with respect to this possibility.

A non-resident holder who is a physical person will generally be subject to tax at a rate of 30%, subject to any available double tax treaty relief, in respect of gain from a disposition of Notes if the proceeds are received from a source within Russia. In this regard, if the Notes are disposed of in Russia, the proceeds of such disposition are likely to be regarded as received from a Russian source. In certain circumstances, if the disposal proceeds are payable by a Russian organisation, individual entrepreneur or a Russian permanent establishment of a foreign organisation, the payer may be required to withhold this tax. In such a situation, there is a risk that the taxable base may be affected by changes in the exchange rates between the currency of acquisition of the Notes, the currency of sale and Roubles. Non-resident holders who are physical persons should consult their own tax advisors with respect to this possibility.

### *Taxation of the Loan*

In general, payments of interest on borrowed funds by a Russian entity to a non-resident legal person are subject to Russian withholding tax at the rate of 20%, absent reduction or elimination pursuant to the terms of an applicable double tax treaty. Based on professional advice it has received, Gazprom believes that payments of interest on any Loan should not be subject to withholding tax under the terms of the double tax treaty between Russia and Luxembourg. However, there can be no assurance that such relief will be obtained. In addition, if interest under such Loan becomes payable to the Trustee pursuant to the Trust Deed, any benefit of the double tax treaty between Russia and Luxembourg will cease and payments of interest could be subject to Russian withholding tax.

If payments under any Loan are subject to any withholding of Russian tax (as a result of which the Issuer would reduce payments under the relevant Series of Notes in the amount of such withholding), Gazprom is obliged (subject to certain conditions) to increase payments as may be necessary so that the net payments received by the Noteholders will be equal to the amounts they would have received in the absence of such withholding. It should be noted, however, that gross-up provisions may not be enforceable under Russian law. If Gazprom is obliged to increase payments, it may, subject to certain conditions, prepay such Loan in full. In such case, all outstanding Notes would be redeemable at par with accrued interest.

No VAT will be payable in Russia in respect of any Loan.

### **European Union**

The Council of the European Union has adopted a new directive regarding the taxation of savings income on June 3, 2003. Subject to a number of important conditions being met, Member States will be required from January 1, 2005 to provide to the tax authorities of another Member State details of payments of interest (or other similar income) paid by a person within its jurisdiction to or for the benefit of an individual resident in that other Member State, except that Belgium, Luxembourg and Austria will instead operate a withholding system for a transitional period in relation to such payments.

### **Luxembourg**

#### *Taxation of the Notes*

##### *Withholding Tax*

Under Luxembourg tax laws currently in effect, there is no withholding tax for resident and non-resident Noteholders on payments of principal or interest on, or on accrued but unpaid interest on, nor is any Luxembourg withholding tax payable on payments received upon redemption, repurchase, or exchange of, the Notes.

##### *Taxes on Income and Capital Gains*

Noteholders will not become residents or be deemed to be resident in Luxembourg by reason only of the holding of the Notes or of the execution, performance, delivery and/or enforcement of the Notes.

Noteholders who are non-residents of Luxembourg and who do not hold the Notes through a permanent establishment in Luxembourg are not liable to Luxembourg income tax on (i) payments of principal or interest, (ii) accrued but unpaid interest, (iii) payments received upon redemption, repurchase or exchange of the Notes, or (iv) capital gains on the sale of any Notes.

Noteholders who are residents of Luxembourg and who are fully taxable, or non-resident Noteholders who have a permanent establishment in Luxembourg with which the holding of the Notes is connected, must for income tax purposes include any interest received in their taxable income. They will not be liable for any Luxembourg income tax on repayment of principal.

Individual Luxembourg resident Noteholders are not subject to taxation on capital gains upon the disposal of the Notes, unless the disposal of the Notes precedes the acquisition of the Notes, or the Notes are disposed of within six months of the date of acquisition of these Notes. Upon a repurchase, redemption or exchange of the Notes, individual Luxembourg resident Noteholders must, however, include the portion of the repurchase, redemption or exchange price corresponding to accrued but unpaid interest in their taxable income.

A corporate entity, or "*société de capitaux*," which is a Luxembourg resident Noteholder, or a foreign entity of the same type which has a Luxembourg permanent establishment, will need to include in its taxable income the difference between the sale, repurchase, redemption or exchange price (including accrued but unpaid interest) and the lower of cost or book value of the Notes sold, repurchased, redeemed or exchanged. These Noteholders should not be liable for any Luxembourg income tax on repayment of principal upon repurchase, redemption or exchange of the Notes.

#### *Other Taxes*

There is no Luxembourg registration tax, stamp duty or any other similar tax or duty payable in Luxembourg by a Noteholder as a consequence of the issuance of the Notes, nor will any of these taxes be payable as a consequence of a subsequent transfer or redemption or repurchase of the Notes. Proceedings in a Luxembourg court or the presentation of documents relating to the Notes, other than the Notes themselves, to an "*autorité constituée*" may require registration of the documents, in which case the documents will be subject to registration duties depending on the nature of the documents. In particular, a loan agreement not represented by the Notes will be subject to an ad valorem registration of 0.24% of the amounts mentioned therein.

No gift, estate or inheritance taxes are levied on the transfer of the Notes upon the death of a Noteholder in cases where the deceased was not a resident of Luxembourg for inheritance tax purposes.

Luxembourg net wealth tax will not be levied on a Noteholder, unless (i) such Noteholder is or is deemed to be resident in Luxembourg for the purpose of the relevant legal provisions; or (ii) the Notes are attributable to an enterprise or part thereof which is carried on through a permanent establishment or a permanent representative in Luxembourg.

There is no Luxembourg value added tax payable in respect of payments in consideration for the issuance of the Notes or in respect of the payment of interest or principal under the Notes or the transfer of the Notes. Luxembourg value added tax may, however, be payable in respect of fees charged for certain services rendered to the Issuer if, for Luxembourg value added tax purposes, such services are rendered or are deemed to be rendered in Luxembourg and an exemption from Luxembourg value added tax does not apply with respect to such services.

#### *Taxation of the Loan*

The Issuer, receiving the interest paid on the Loan by Gazprom, as a Luxembourg resident company, will be considered to be a resident taxpayer in Luxembourg for the purposes of the application of the double tax treaty concluded by Luxembourg and Russia.

## FORM OF PRICING SUPPLEMENT

The form of Pricing Supplement that will be issued in respect of each Series, subject only to the deletion of non-applicable provisions, is set out below:

Pricing Supplement dated ●

### Open Joint Stock Company GAZPROM

Issue of [Aggregate Principal Amount of Series] [Title of Loan Participation Notes]  
by Gaz Capital S.A.

for the purpose of financing a Loan to Open Joint Stock Company GAZPROM  
under a U.S.\$ 5,000,000,000 Programme for the Issuance of Loan Participation Notes

This document constitutes the Pricing Supplement relating to the issue of Notes described herein. Terms used herein shall be deemed to be defined as such for the purposes of the Conditions set forth in the Offering Circular dated 22 September 2003 [and the supplemental Offering Circular dated ●]. This Pricing Supplement contains the final terms of the Notes and must be read in conjunction with such Offering Circular [as so supplemented].

*[The following alternative language applies if the first Series of an issue which is being increased was issued under an Offering Circular with an earlier date.]*

Terms used herein shall be deemed to be defined as such for the purposes of the Conditions (the "Conditions") set forth in the Offering Circular dated 22 September 2003. This Pricing Supplement contains the final terms of the Notes and must be read in conjunction with the Offering Circular dated [current date] [and the supplemental Offering Circular dated ●], save in respect of the Conditions which are extracted from the Offering Circular dated 22 September 2003 and are attached hereto.]

*[Include whichever of the following apply or specify as "Not Applicable" (N/A). Note that the numbering should remain as set out below, even if "Not Applicable" is indicated for individual paragraphs or subparagraphs. Italics denote directions for completing the Pricing Supplement.]*

- |   |  |   |
|---|--|---|
| 1 | (i) Issuer:  | Gaz Capital S.A.  |
|   | (ii) Borrower:   | Open Joint Stock Company GAZPROM  |
| 2 | Series Number:   | ●   |
|   | [(If fungible with an existing Series, details of that Series, including the date on which the Notes become fungible.) | ●]  |
| 3 | Specified Currency:  | ●   |
| 4 | Aggregate Principal Amount:  | ●   |
| 5 | (i) Issue Price:   | ● per cent. of the Aggregate Principal Amount [plus accrued interest from [insert date] (in the case of fungible issues only, if applicable)] |
|   | (ii) [Net proceeds:  | ● (Required only for listed issues)]  |
| 6 | Specified Denominations:   | ●*  |
|   |  | ●   |

\* Notes (including Notes denominated in sterling) in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the FSMA and which have a maturity of less than one year must have a minimum redemption value of £100,000 (or its equivalent in other currencies).

- 7 (i) Issue Date: ●  
(ii) Interest Commencement Date: ●
- 8 Maturity Date: [specify date or (for Floating Rate Notes) Interest Payment Date falling in or nearest to the relevant month and year]
- 9 Interest Basis: [● per cent. Fixed Rate]  
[Floating Rate]  
(further particulars specified below)
- 10 Redemption/Payment Basis: Redemption at par
- 11 Change of Interest or Redemption/Payment Basis: [Specify details of any provision for convertibility of Notes into another interest or redemption/ payment basis]
- 12 Status and Form of the Notes: Senior, Registered
- 13 Listing: [Luxembourg/Other (specify)/None]
- 14 Method of distribution: [Syndicated/Non-syndicated]
- 15 Financial Centres (Condition 7): ●
- 16 Loan: ●

#### PROVISIONS RELATING TO INTEREST PAYABLE UNDER THE LOAN

- 17 Fixed Rate Note Provisions: [Applicable/Not Applicable] (if not applicable, delete the remaining sub-paragraphs of this paragraph)
- (i) Rate [(s)] of Interest: ● per cent. per annum payable [annually/semi-annually] in arrear
- (ii) Interest Payment Date(s): ● in each year [adjusted in accordance with [specify Business Day convention and any applicable Business Centre(s) for the definition of "Business Day"]/not adjusted]
- (iii) Fixed Coupon Amount [(s)]: ● per ● in principal amount
- (iv) Broken Amount: [Insert particulars of any initial or final broken interest amounts which do not correspond with the Fixed Coupon Amount [(s)] and the Interest Payment Date(s) to which they relate]
- (v) Day Count Fraction (Condition 5): ●  
(Day count fraction should be Actual/Actual-ISMA for all fixed rate issues other than those denominated in U.S. dollars, unless the client requests otherwise)
- (vi) Determination Date(s) (Condition 5): ● in each year. [Insert regular interest payment dates, ignoring issue date or maturity date in the case of a long or short first or last coupon]\*\*
- (vii) Other terms relating to the method of calculating interest for Fixed Rate Notes: [Not Applicable/give details]

\*\* Only to be completed for an issue where Day Count Fraction is Actual/Actual-ISMA

- 18 Floating Rate Note Provisions:** [Applicable/Not Applicable] *(If not applicable, delete the remaining sub-paragraphs of this paragraph)*
- (i) Interest Period(s): ●
  - (ii) Specified Interest Payment Dates: ●
  - (iii) Business Day Convention: [Floating Rate Business Day Convention/  
Following Business Day Convention/Modified  
Following Business Day Convention/ Preceding  
Business Day/Convention/other *(give details)*]
  - (iv) Business Centre(s) ●
  - (v) Manner in which the Rate(s) of Interest is/ are to  
be determined: [Screen Rate Determination/ISDA  
Determination/other *(give details)*]
  - (vi) Interest Period Date(s): [Not Applicable/*specify dates*]
  - (vii) Party responsible for calculating the Rate(s) of  
Interest and Interest Amount(s) (if not the  
Calculation Agent): ●
  - (viii) Screen Rate Determination: As set out in the attached Loan Supplement
  - (ix) ISDA Determination: As set out in the attached Loan Supplement
  - (x) Margin(s): [ +/- ] ● per cent. per annum
  - (xi) Minimum Rate of Interest: ● per cent. per annum
  - (xii) Maximum Rate of Interest: ● per cent. per annum
  - (xiii) Day Count Fraction (Condition 5): ●
  - (xiv) Rate Multiplier: ●
  - (xv) Fall back provisions, rounding provisions,  
denominator and any other terms relating to the  
method of calculating interest on Floating Rate  
Loans, if different from those set out in the  
Conditions: ●

#### PROVISIONS RELATING TO REDEMPTION

- 19** Final Redemption Amount of each Note: ● per Note of ● specified denomination/Other]
- 20** Early Redemption Amount(s) of each Note payable if  
the Loan should become repayable under the Loan  
Agreement prior to the Maturity Date: [Principal Amount/Other]

#### GENERAL PROVISIONS APPLICABLE TO THE NOTES

- 21** Other terms or special conditions:<sup>1</sup> [Not Applicable/*give details*]

#### DISTRIBUTION

- 22** (i) If syndicated, names of Managers: [Not Applicable/*give names*]
- (ii) Stabilising Agent (if any): [Not Applicable/*give name*]
- (iii) Dealer's Commission: ●
- 23** If non-syndicated, name of Dealer: [Not Applicable/*give name*]
- 24** Additional selling restrictions: [Not Applicable/*give details*]

**OPERATIONAL INFORMATION**

- 25 ISIN Code: ●
- 26 Common Code: ●
- 27 Any clearing system(s) other than Euroclear and Clearstream, Luxembourg and the relevant identification number(s): [Not Applicable/give name(s) and number(s)]
- 28 The Agents appointed in respect of the Notes are: ●

**GENERAL**

- 29 Additional steps that may only be taken following approval by an Extraordinary Resolution in accordance with Condition 10: [Not Applicable/give details]
- 30 The aggregate principal amount of Notes issued has been translated into U.S. dollars at the rate of ●, producing a sum of (for Notes not denominated in U.S. dollars): [Not Applicable/U.S.\$●]

**[LISTING APPLICATION**

This Pricing Supplement comprises the final terms required to list the issue of Notes described herein pursuant to the U.S.\$5,000,000,000 Programme for the Issuance of Loan Participation Notes of Gazprom.]

**[STABILISING**

In connection with this issue, [insert name of Stabilising Agent] (the “Stabilising Agent”) or any person acting for him may over-allot or effect transactions with a view to supporting the market price of the Notes at a level higher than that which might otherwise prevail for a limited period. However, there may be no obligation on the Stabilising Agent or any agent of his to do this. Such stabilising, if commenced, may be discontinued at any time, and must be brought to an end after a limited period.]

**[MATERIAL ADVERSE CHANGE STATEMENT**

[Except as disclosed in this document, there/There]<sup>2</sup> has been no significant change in the financial or trading position of the Issuer, Gazprom or of the Group since [insert date of last audited accounts or interim accounts (if later)] and no material adverse change in the financial position or prospects of the Issuer, Gazprom or of the Group since [insert date of last published annual accounts.]

**RESPONSIBILITY**

The Issuer and Gazprom accept responsibility for the information contained in this Pricing Supplement which, when read together with the Offering Circular [and the supplemental Offering Circular] referred to above, contains all information that is material in the context of the issue of the Notes.

Signed on behalf of the Issuer:

Signed on behalf of Gazprom:

Duly authorised

By: \_\_\_\_\_  
Duly authorised

By: \_\_\_\_\_  
Duly authorised

By: \_\_\_\_\_  
Duly authorised

1. If full terms and conditions are to be used, please add the following here:

“The full text of the Conditions which apply to the Notes [and which will be endorsed on the Notes in definitive form] are set out in [the Annex hereto], which Conditions replace in their entirety those appearing in the Offering Circular for the purposes of these Notes and such Conditions will prevail over any other provision to the contrary.”

The first set of bracketed words is to be deleted where there is a permanent global Note instead of Notes in definitive form. The full Conditions should be attached to and form part of the pricing supplement.

2. If any change is disclosed in the Pricing Supplement, it will require approval by the Luxembourg Stock Exchange. Consideration should be given as to whether or not such disclosure should be made by means of a supplemental Offering Circular rather than in a Pricing Supplement.

[THE FINAL FORM OF LOAN SUPPLEMENT WILL BE ATTACHED]

## GENERAL INFORMATION

- (1) Gazprom and the Issuer will obtain all necessary consents, approvals and authorizations in Russia and Luxembourg in connection with any Loan and the issue and performance of the corresponding Series of Notes.
- (2) In connection with the application to list the Notes issued under the Programme on the Luxembourg Stock Exchange, a legal notice relating to the issue of the Notes and copies of the Articles of Association of the Issuer will be deposited with the Register of Commerce and Companies in Luxembourg where such documents may be examined and copies obtained.
- (3) The Luxembourg Stock Exchange has allocated the number 12887 to the Programme for listing purposes.
- (4) No consents, approvals, authorizations or orders of any regulatory authorities are required by the Issuer under the laws of Luxembourg for the maintaining of any Loan or for the issue and performance of the corresponding Series of Notes.
- (5) Except as disclosed in this Offering Circular, there has been no significant change in the financial or trading position or prospects of Gazprom or the Group since December 31, 2002 and no material adverse change in the financial or trading position or prospects of Gazprom or of the Group since December 31, 2002.
- (6) Except as disclosed in this Offering Circular, neither Gazprom nor any of its subsidiaries is involved in any litigation or arbitration proceedings relating to claims or amounts that are material in the context of the issue of the Notes nor, so far as Gazprom is aware, is any such litigation or arbitration pending or threatened.
- (7) For so long as any Series of Notes is outstanding, copies in English of the latest annual report and consolidated annual accounts of Gazprom and the latest interim consolidated unaudited accounts of Gazprom prepared according to IFRS and the latest consolidated and unconsolidated audited annual accounts of Gazprom prepared according to Russian Accounting Regulations may be obtained free of charge, and copies of the Trust Deed in respect of the Notes (including the forms of the Global Notes and Definitive Notes), the Paying Agency Agreement and the relevant Loan Agreement will be available for inspection, at the specified offices of the Trustee and the Paying Agent in Luxembourg during normal business hours.
- (8) Gazprom publishes interim consolidated unaudited condensed financial statements, prepared in accordance with IAS 34, for the three month period ended March 31, the six-month period ended June 30 and for the nine-month period ended September 30 in each year. Gazprom does not publish audited or unaudited interim or year-end consolidated or non-consolidated financial statements prepared in accordance with U.S. GAAP.
- (9) Certain information with respect to Gazprom's natural gas, gas condensate and crude oil reserves associated with Gazprom's natural gas, gas condensate and crude oil properties is derived from the reports of DeGolyer and MacNaughton, an internationally recognized firm of independent reservoir engineers, dated December 31, 2002, and has been included herein upon the authority of said firm as experts with respect to the matters covered by such report and in giving such report.
- (10) Each of Gazprom and the Issuer has agreed that, for so long as any Notes are "restricted securities" within the meaning of Rule 144(a)(3) under the Securities Act, Gazprom or the Issuer will, during any period in which it is neither subject to Section 13 or 15(d) of the Exchange Act nor exempt from reporting pursuant to Rule 12g3-2(b) thereunder, provide to any holder or beneficial owner of such restricted securities or to any prospective purchaser of such restricted securities designated by such holder or beneficial owner or to the Trustee for delivery to such holder, beneficial owner or prospective purchaser, in each case upon the request of such holder, beneficial owner, prospective purchaser or Trustee, the information required to be provided by Rule 144A(d)(4) under the Securities Act.
- (11) The Notes have been accepted for clearance through Euroclear and Clearstream, Luxembourg. Rule 144A Notes, if issued, will be accepted for clearance through DTC. The Common Code and the International Securities Identification Number (ISIN) and (where applicable) the CUSIP number and the identification number for any other relevant clearing system for each Series of Notes will be set out in the relevant Pricing Supplement. In addition, application may be made to have Rule 144A Notes designated as eligible for trading in PORTAL, as specified in the applicable Pricing Supplement.

## OVERVIEW OF THE RUSSIAN GAS INDUSTRY AND ITS REGULATION

*The information set forth in this section is based on publicly available information.*

### General

The Russian natural gas industry developed during the Soviet era and expanded rapidly after the discovery in the 1960s of significant reserves in the exceptionally large natural gas fields of western Siberia. Russia experienced a profound crisis in the early 1990s as a result of the dissolution of the Soviet Union, suffering a decline in industrial production and GDP.

Between 1990 and 1999, the Government's policies on natural gas industry structure and prices kept demand for natural gas and natural gas production relatively stable in comparison to demand for other energy sources over the same period, such as oil and coal. Total natural gas production declined by only 7.6% over the period, whereas the production of oil and coal declined by 41.7% and 36.7%, respectively. Moreover there has been a shift away from the use of oil and coal in favor of natural gas over the period, primarily because domestic natural gas prices have been kept at a low level.

Since the dissolution of the Soviet Union, the oil and coal industries have been restructured into several regional enterprises whereas the natural gas industry (including production, refining, transportation and sales) has remained unified.

### Classification of Reserves

Russian methods for calculating and classifying reserves differ from generally accepted practices in the United States and other countries. Reserves which are calculated using different methods cannot be accurately reconciled.

#### *Categories of reserves and potential and forecasted oil and natural gas resources*

Natural gas, gas condensate and oil reserves are categorized under the Russian reserves system based on their physical presence in a deposit. Explored reserves are represented by categories A, B and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. For a description of categories A, B and C1, see "Business—Reserves and Production."

**Category C2** reserves are preliminary estimated reserves of a deposit calculated on the basis of geological and geophysical research of unexplored sections of deposits adjoining sections of a field containing reserves of higher categories and of untested deposits of explored fields. The shape, size, structure, level, reservoir types, content and characteristics of the hydrocarbon deposit are determined in general terms based on the results of the geological and geophysical exploration and information on the more fully explored portions of a deposit. Category C2 reserves are used to determine the development potential of a field and to plan geological, exploration and production activities.

**Category C3** resources are prospective reserves prepared for the drilling of (i) traps within the oil-and-gas bearing area, delineated by geological and geophysical exploration methods tested for such area and (ii) the formation of explored fields which have not yet been exposed by drilling. The form, size and stratification conditions of the assumed deposit are estimated from the results of geological and geophysical research. The thickness, reservoir characteristics of the formations, the composition and the characteristics of hydrocarbons are assumed to be analogous to those for explored fields. Category C3 resources are used in the planning of prospecting and exploration work in areas known to contain other reserve bearing fields.

**Category D1** resources are calculated based on the results of regional geological, geophysical and geochemical research and by analogy with explored fields within the region being evaluated. Category D1 resources are reserves in lithological and stratigraphic series that are evaluated within the boundaries of large regional structures confirmed to contain commercial reserves of oil and gas.

**Category D2** resources are calculated using assumed parameters on the basis of general geological concepts and by analogy with other, better studied regions with explored oil and gas fields. Category D2 resources are reserves in lithological and stratigraphic series that are evaluated within the boundaries of large regional structures not yet confirmed to contain commercial reserves of oil and gas. The prospects for these series to prove to be oil-and-gas-bearing are evaluated based on geological, geophysical and geochemical research.

The evaluation of gas reserves in newly discovered natural gas or oil-and-gas deposits is carried out under the Russian reserves system using the volume method. The volume method determines the volume of reserves by examining the filtration and capacitive parameters of the deposit based on (i) the area of the deposit; (ii) the effective depth of hydrocarbon saturation; and (iii) the porousness of the deposit and the level of saturation of the hydrocarbons, taking into account thermobaric conditions.

The evaluation of natural gas reserves in deposits already under development is carried out under the Russian reserves system using both the volume method and the material balance method. The material balance method takes into account temporal changes in the effective reservoir pressure as a result of the extraction of the hydrocarbons and the resultant influx of water.

### **Russian Regulation**

The Russian legal system's rapid evolution during the last ten years is particularly evident in the context of natural gas industry regulation. Below is a brief overview of some key aspects of the current regulatory regime for the natural gas industry.

The regulation of legal and economic relations in the Russian natural gas industry is based on the following legislation: the Constitution of the Russian Federation, the Civil Code, the Subsoil Resources Law, the Natural Monopoly Law, the Federal Law "On the Continental Shelf of the Russian Federation" No. 187-FZ dated November 30, 1995 and the Gas Supply Law. The most important recent piece of legislation is the Gas Supply Law which creates a regulatory framework for natural gas exploration, production, transportation, storage and supplies.

Under the Gas Supply Law, Russian federal authorities have jurisdiction over natural gas supplies, including, *inter alia*, the development and implementation of Government policy on natural gas supply; the regulation of strategic natural gas reserves; control over the industrial and environmental safety of the natural gas supply systems; and standardization and certification.

The Government (i) sets the projected natural gas production levels and the sales balance in Russia; (ii) determines the level of natural gas prices and natural gas transportation tariffs; (iii) regulates natural gas deliveries; (iv) sets procedures for providing independent organizations with access to the natural gas transportation and distribution networks; and (v) defines the categories of customers to whom natural gas deliveries cannot be restricted or suspended.

The Ministry of Energy is specifically responsible for the practical implementation of Government fuel and energy industry policy and the coordination of the activities of the federal executive bodies.

The Ministry of Natural Resources of the Russian Federation is responsible for regulating the exploration, use and protection of natural resources. It is the body that licenses the production and exploration of subsoil resources.

The Constitution of the Russian Federation stipulates that the use of subsoil is under the joint jurisdiction of the federal and regional authorities.

Under the Gas Supply Law, regional governing authorities have substantial power to regulate projects related to the exploration of oil and natural gas fields and the transportation and refining of oil and natural gas. In cooperation with the Ministry of Natural Resources, regional authorities grant licenses for the exploration and production of subsoil resources (except for subsoil plots located in Russia's internal waters, territorial seas or on its continental shelf which fall under exclusive federal jurisdiction). Regional authorities usually also have jurisdiction over land use, environmental, employee health and safety, social security and certain financial regulations. The relationship between the relevant federal, regional and local authorities, as well as between any one natural gas company and such authorities, has a significant impact on the conditions under which a natural gas company can operate in any particular region.

### Subsoil Licensing

In 1992, the Subsoil Resources Law introduced a licensing system governing the study, exploration and production of natural resources from the subsoil in Russia. Until 1995, licenses for fields where exploration and production was already in process were granted without a tender offer. Licenses for new fields and subsoil plots, however, were awarded through auctions or tenders conducted by the governing body of the relevant regional government and the Ministry of Natural Resources. The most important criterion for granting the license at these auctions was the lump sum amount the bidder was prepared to pay for the right to use the subsoil, but technical, environmental, safety and national security factors were also taken into consideration.

In certain instances, such as upon the enactment of production sharing agreements between the development company, investors and regional and federal governments, the Subsoil Resources Law allows for licenses to be issued without a tender procedure.

Licensing agreements for subsoil use identify the terms and conditions for the use of the subsoil, the rights and obligations of the licensee and the manager of the subsoil plot and the level of payments. There are usually three parties to any licensing agreement: the regional authority of the region where the field is located, the Ministry of Natural Resources and the licensee.

There are several types of licenses applicable to the study, exploration and production of natural resources including: (i) licenses for geological exploration and assessment of the subsoil plot; (ii) licenses for the production of natural resources; and (iii) combined licenses for exploration, assessment and production of natural resources. Under the Subsoil Resources Law, licenses are granted for the term stipulated in the license. Prior to January 2000, exploration and assessment licenses could have a maximum term of five years, production licenses a maximum term of 20 years, and combined exploration, assessment and production licenses a maximum term of 25 years. After the enactment of amendments to the Subsoil Resources Law in January 2000, exploration and assessment licenses still may have a maximum term of five years; production licenses may have a short one-year term or a term of the expected operational life of the field based on a feasibility study report; and combined exploration, assessment and production licenses can also be issued for the term of the expected operational life of the field based on a feasibility study report. In practice, production licenses continue in many cases to be issued for 20 years and the combined exploration, assessment and production licenses for 25 years. Furthermore, in practice, while a license may be officially indexed as a production license, it may also authorize exploration and assessment activities. The Subsoil Resources Law allows the subsoil user to request an extension of the existing license in order to complete either the exploration of the field or the procedures necessary to vacate the land once the exploitation of the subsoil is complete, provided such user complies with the terms and conditions of the license. Indefinite term licenses are provided for the construction and operation of waste burial facilities, and underground storage facilities.

Licenses granted in accordance with the Subsoil Resources Law cannot be sold or transferred to another entity except in limited circumstances, such as to a spin-off company or a subsidiary in which the licensee has a 50% or greater share. Generally, a license cannot be held by more than one legal entity.

Under a licensing agreement, the licensee makes a number of commitments. For example, the licensee agrees to bring the field on stream by a certain date; to extract an agreed volume of natural resources each year; to keep environmental pollutants within specified limits; and to clean up environmental contamination. When the license expires, the licensee must return the relevant land, at its own expense, to a condition which is adequate for future use. The licensee can be fined or the license can be revoked in the event that it remains unused for a period of time, as a result of repeated or significant breaches of the law or the conditions of the license, upon the occurrence of a direct threat to the lives or health of people working or residing in an area where licensed activities are carried on, or upon the occurrence of *force majeure* events.

Although most of the conditions set out in a license are based on mandatory rules contained in Russian law, there are a number of provisions in a licensing agreement which are negotiated between the parties.

The holder of an exploration, assessment and production license is subject to a quarterly natural resources production tax, which for natural gas is calculated as a percentage of the value of the resources extracted. The Tax Code currently establishes a tax rate of 16.5% of the regulated price of gas per unit volume on natural gas production (a separate formula applies to oil and gas condensate production). The rate for the production of gas is to change to a fixed rate of RR107 per mcm of gas produced from January 1, 2004.

A holder of a license for exploration and assessment of hydrocarbons is to make quarterly payments for the use of the subsoil based on the total area of its allotment and a rate ranging from RR120 to RR360 per square

meter. Fees for combined exploration, assessment and production licenses are negotiated by the parties to each license.

These payments for subsoil are in addition to relevant tax obligations applicable to the license holder in accordance with general tax legislation.

#### *The Unified Gas Supply System*

The UGSS is defined by the Gas Supply Law as a centrally managed, technologically and economically regulated system of gas production, transportation, storage and supply.

Gazprom is currently the owner of the UGSS. Under the Gas Supply Law the owner of the UGSS has a number of responsibilities, including ensuring a reliable supply of natural gas within Russia; maintaining and developing the UGSS network; monitoring the function of UGSS facilities; ensuring the natural gas supply agreements entered into by Russia; procuring the use of equipment and processes for power-saving and environmental safety in the UGSS; ensuring industrial safety within the UGSS; and disaster management.

The Gas Supply Law does not permit the division of the UGSS or the liquidation of its owner without the consent of the Government. The Gas Supply Law also regulates the ownership of shares in the company which owns the UGSS. In particular, foreign persons and companies are not permitted to own more than 20% of the owner's issued ordinary shares and at least 35% of the owner's issued ordinary shares must be owned by the Government. The sale or any other transfer of title of such owner's shares can only be carried out if a federal law is issued permitting such sale or transfer.

#### *Transportation and Supply of Gas*

The relationship between natural gas suppliers and off-takers is governed by the Regulation on Natural Gas Supplies within the territory of the Russian Federation approved by Government Resolution No. 162 dated February 5, 1998.

A right of priority to enter into natural gas supply agreements is given to off-takers that purchase natural gas for the Government, utility, consumers and households, and to certain off-takers wishing to extend their existing natural gas supply agreements.

In accordance with Government Resolution No. 858 dated July 14, 1997, Gazprom is obliged to provide independent suppliers with access to its natural gas transportation system in Russia. This requirement is subject to the availability of spare capacity in the natural gas transportation system, natural gas from independent suppliers being of sufficient quality and the availability of connecting and branch pipelines to consumers.

In accordance with the Gas Supply Law, consumers are obliged to pay for natural gas supplies and transportation services. If consumers fail to make such payments, suppliers have the right to limit or suspend natural gas supplies to such consumers in accordance with specific procedures provided for by a number of Government resolutions. The Government of the Russian Federation has, however, issued a number of resolutions (e.g., Government Resolution No. 1 dated January 5, 1998 and Government Resolution No. 364 dated May 29, 2002) regulating the restriction or suspension of supplies to certain customers. These consumers include, *inter alia*, medical institutions, military units, nuclear plants, communication organizations and certain vital utilities.

#### *Prices and Tariffs*

Gas prices and transportation tariffs in Russia are regulated by the Natural Monopoly Law and the Gas Supply Law as well as by a number of supplemental Government resolutions. Government Resolution No. 1021 "On State Regulation of Gas Prices and Tariffs for Gas Transportation in the Territory of the Russian Federation" dated December 29, 2000, as amended ("Resolution No. 1021"), sets out the main provisions relating to natural gas prices and transportation tariffs.

The Federal Energy Commission of the Russian Federation ("FEC") regulates natural monopolies and establishes and regulates natural gas prices and tariffs. In accordance with Resolution No. 1021, the FEC establishes the level of:

- wholesale natural gas prices;

- tariffs for gas transportation services through trunk pipelines for independent organizations;
- tariffs for gas transportation through pipelines owned by independent gas transportation organizations;
- tariffs for gas transportation through supply networks; and
- payments for the supply and marketing services rendered by gas distribution companies to end-users.

#### *Environmental Requirements*

Environmental rules and standards are regulated by a number of Russian federal laws and regulations. The Laws on Environmental Protection are among the principal environmental laws. The 1991 Environmental Protection Law established a “pay-to-pollute” regime administered by the Ministry of Natural Resources and local authorities, and this regime was extended by the 2002 Environmental Protection Law. Fees are assessed for both pollution within the limits agreed on emissions and effluents and for pollution in excess of these limits. There are additional fines for certain other breaches of environmental regulations. The Environmental Protection Laws contain an obligation to make compensation payments to the budget for all environmental losses caused by pollution. In the event of a dispute concerning losses caused by breaches of environmental laws and regulations, the prosecutor’s office or other authorized governmental bodies may bring suit, though there is no private right of action. Courts may impose clean-up obligations subject to the agreement of the parties in lieu of or in addition to imposing fines.

Exploration licenses and production licenses generally require certain environmental commitments. Although such commitments may be stringent in a particular license, the penalties for failing to comply and clean-up requirements are generally low.

#### *Regulating the Activities of Natural Monopolies*

The Natural Monopoly Law defines “natural monopoly” as a condition of the commodities market in which the demand for products is satisfied more effectively in the absence of competition and in which another product cannot readily be substituted for the monopoly product. The Natural Monopoly Law sets out, *inter alia*, a regime for the regulation of entities which have a natural monopoly over natural gas transportation. It has also established an authority (currently the FEC) which supervises:

- transactions involving the acquisition by a natural monopoly entity of title to (or the rights to use) assets where the value of such assets exceeds 10% of the natural monopoly entity’s own capital (as calculated in accordance with its latest audited balance sheet). Such transactions may not be related to the industry of the natural monopoly entity;
- investments whose value exceeds 10% of the natural monopoly entity’s own capital (as calculated in accordance with its latest audited balance sheet). Such investments may not be related to the industry of the natural monopoly entity; and
- sales, leases or other transactions, whereby the natural monopoly entity disposes of assets used in the industry that it monopolizes where the value of such assets exceeds 10% of the value of the natural monopoly entity’s own capital (as calculated in accordance with its latest audited balance sheet).

The FEC can penalize a natural monopoly entity and insist that it take certain actions if the entity breaches the Natural Monopoly Law. The FEC may access information on a natural monopoly entity, whether it be held by such entity itself, Government bodies or local authorities.

The FEC’s principal methods of regulating the activities of natural monopolies are:

- price regulation; and
- identifying consumers entitled to obligatory services and setting natural monopoly minimum supply levels for such consumers (with a view to protecting the rights and legal interests of citizens, state security, the environment and cultural values).

As a natural monopoly entity, Gazprom must submit ongoing reports on its activities and drafts of capital investment plans to the FEC. The FEC has the right (i) to implement, amend or suspend the Natural Monopoly Law regulations; (ii) to instruct natural monopoly entities to enter into contracts with those consumers entitled to

obligatory service; (iii) to make amendments to existing contracts; (iv) to transfer revenues from activities which contravene the Natural Monopoly Law to the federal budget; and (v) to fine natural monopoly entities for violations of the Natural Monopoly Law.

### **Energy Charter Treaty**

The Energy Charter (“EC”) was conceived at a meeting of the European Council in June 1990 as a means to strengthen the relationship which existed in the energy sector between the USSR, the countries of central and eastern Europe and the countries of western Europe. The EC was officially adopted in December 1991. It is a political declaration on co-operation between east and west in the energy sector and is not legally binding on any of its parties. At present, the EC has been signed by 52 countries, including the countries of the European Union.

In December 1994, following three years of negotiations, the general intentions contained in the EC were put into a legally binding form, the Energy Charter Treaty (the “ECT”). As at July 23, 2002, the ECT had been signed by 52 countries, including Russia and the member states of the EU, and has been ratified by 46 countries.

The main objectives of the ECT are to: (i) provide a stable energy supply; (ii) provide effective production, processing, transportation, distribution and consumption of energy resources; (iii) assist in the development of the European energy market and the improvement of the global energy market through implementing principles of non-discriminatory access and free market pricing; and (iv) legally protect the interests of energy-related companies and entities on issues relating to investments, transit, trade and dispute resolution procedures.

Although Russia signed the ECT in December 1994, the State Duma has not yet ratified it, in part due to concerns regarding the impact of the ECT on pipeline access. Although Russia has not ratified the ECT, it is a member of the Energy Charter Conference and participates in the Energy Charter Secretariat’s day-to-day activities.

### **European Union Gas Directive**

On June 22, 1998, the European Parliament and the Council of the European Union adopted a directive on common rules for the internal market in natural gas (the “Gas Directive”). The Directive came into force on August 10, 1998.

The Gas Directive establishes common rules for the transmission, distribution, supply and storage of natural gas. It sets out rules for the organization of the natural gas sector (including liquefied natural gas), access to the market, the operation of transmission and distribution systems, and the criteria and procedures for authorizing the transmission, distribution, supply and storage of natural gas. The Gas Directive requires member states to open up their natural gas markets to competition on a staged basis: 20% by August 2000, 28% by August 2002 and 33% by August 2008. Member states may accelerate the rate at which they open their markets if they so wish, and many have done so.

The implementation of the Gas Directive has led to significant structural changes in the European natural gas market. The Gas Directive is bringing about a significant liberalization of the European natural gas market, which goes further than the Directive’s minimum requirements. Almost 80% of the total EU market has now been opened up to competition. The European Commission is considering the possibility of introducing a further directive that would require total liberalization of European natural gas markets by 2004.

Russia is the largest supplier of natural gas for western Europe, followed by Norway and the United Kingdom. Current EU projections show that in order to meet demand for natural gas and to compensate for the decline in the production of natural gas within the EU, there will be an increasing dependence upon imports from outside the EU. The electricity industry and other sectors of the economy are increasingly using natural gas because of its favorable ecological characteristics, which has increased demand.

As a result of the liberalization of the EU’s natural gas market, short-term contracts and single transactions involving natural gas have become more popular. In time, this may have a significant effect on the state of the market. The long-term “take-or-pay” contracts, under which most of Europe’s natural gas is supplied by Gazprom and other traditional exporters, however, provide for secure and stable natural gas supplies while at the same time balancing the interests of both exporters and importers. Such contracts are also the main element of major natural gas export financing projects, which provide producers with capital needed for investments and exploration. As a result, it is unlikely that long-term natural gas contracts will be replaced by spot market transactions.

## GLOSSARY OF TERMS

“bbls”	Billions of barrels
“bcm”	Billion cubic meters, as measured under one atmosphere of pressure at 20°C
“Blue Stream Project”	The construction and operation by Gazprom, in alliance with key Italian natural gas purchaser and distributor ENI, of a new natural gas trunk pipeline from Russia via the Black Sea to Turkey
“Board of Directors”	Gazprom’s board of directors consisting of 11 members and appointed pursuant to the Joint Stock Companies Law and the Charter
“boe”	Barrel of oil equivalent
“central and eastern Europe”	For the purposes of this Offering Circular: Bosnia, Bulgaria, Croatia, Czech Republic, former Yugoslav Republic of Macedonia, (“FYROM”), Hungary, Poland, Romania, Serbia and Montenegro, Slovakia and Slovenia
“Central Bank”	Central Bank of the Russian Federation
“Charter”	Gazprom’s Charter of May 31, 1996, as amended
“Commonwealth of Independent States”	Those states that have ratified the “Charter of the Commonwealth of Independent States” of January 22, 1993, currently Armenia, Azerbaijan, Belarus, Georgia, Kazakhstan, Kyrgyzstan, Moldova, Russia, Tajikistan, Turkmenistan, Ukraine and Uzbekistan
“Constitution”	The constitution of the Russian Federation adopted on December 12, 1993
“EBRD”	European Bank for Reconstruction and Development
“Energy Charter Treaty”	Treaty between European states, the main objective of which is to assist in the development of the European energy market
“EU”	European Union
“Eurasian Economic Union”	Those states that have ratified the “Treaty on the Establishment of the Eurasian Economic Union” of October 10, 2000, currently Belarus, Kazakhstan, Kyrgyzstan, Russia and Tajikistan
“Europe”	For the purposes of this Offering Circular, central and eastern Europe and western Europe
“FEC”	Federal Energy Commission of the Russian Federation, established pursuant to Government Decree No. 960 dated August 13, 1996 and which is responsible, <i>inter alia</i> , for regulating domestic gas prices, transportation tariffs and natural resources monopoly activities
“FSU”	Excluding Russia, the countries which formerly comprised the Soviet Union: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Tajikistan, Turkmenistan, Ukraine and Uzbekistan
“Gas Directive”	A directive adopted by the European Parliament and the Council, which came into force in August 1998, with the purpose of establishing common rules for the organization and functioning of the European natural gas market

“General Meeting of Shareholders” .....	Gazprom’s highest authority in accordance with its Charter, with exclusive power over various aspects of Gazprom’s management
“IFRS” .....	International Financial Reporting Standards, including International Accounting Standards (“IAS”) and Interpretations issued by the International Accounting Standards Board.
“International Energy Agency” ....	A forum with 26 member countries that serves as a forum in which to share energy information, coordinate energy policies and to cooperate in the development of energy programs, and is an authoritative source for energy statistics worldwide
“kW” .....	Kilowatts
“LNG” .....	Liquefied natural gas
“Management Committee” .....	An executive body of Gazprom, which along with the Management Committee Chairman, manages Gazprom’s day-to-day affairs and implements the strategic plans of the Board of Directors
“mcf” .....	Million cubic feet
“mcm” .....	Thousand cubic meters, as measured under one atmosphere of pressure at 20°C
“mmbbls” .....	Millions of barrels
“mtoe” .....	Million metric tons of oil equivalent
“State Duma” .....	Lower chamber of the Russian parliament
“tcm” .....	Trillion cubic meters, as measured under one atmosphere of pressure at 20°C
“toe” .....	Metric ton of oil equivalent
“ton” .....	One metric ton
“Transbalkan Pipeline Project” ....	Gazprom’s project to expand and modernize the existing pipeline network in Ukraine, Romania and Bulgaria
“UGSS” .....	Unified Gas Supply System
“U.K.” .....	United Kingdom
“US” or “U.S.” .....	United States of America
“western Europe” .....	For the purposes of this Offering Circular Andorra, Austria, Belgium, Cyprus, Denmark, Finland, France, Germany, Greece, Greenland, Iceland, Republic of Ireland, Italy, Liechtenstein, Luxembourg, Malta, Monaco, The Netherlands, Norway, Portugal, San Marino, Spain, Sweden, Switzerland, Turkey and the United Kingdom
“Yamal-Europe Project” .....	Gazprom’s project to construct pipelines (total length approximately 5,900 km) from the northern part of the Tyumen region in the Russian Federation to Germany, traversing Belarus and Poland

## CONVERSION TABLE

<u>metric measure</u>	<u>U.S. measure</u>
1 bcm .....	35,316,000,000 cubic feet
1 tcm .....	35,316,000,000,000 cubic feet
1 ton .....	1,000 kilos, 2,204.6 pounds, 7.33 barrels
1 kilometer .....	approximately 0.62 miles
1 metric ton of oil equivalent .....	25.2 Quadrillion Btus (British Thermal Unit), approximately 1,125 cubic meters of natural gas
1 barrel of gas condensate .....	1 barrel of oil equivalent (boe)
1 thousand cubic meters of natural gas .....	5.8858 barrels of oil equivalent (boe)

## AUDITORS' REPORT

To the Shareholders of OAO Gazprom

1. We have audited the accompanying consolidated balance sheets of OAO Gazprom and its subsidiaries (the "Group") as of 31 December 2002 and 2001, and the related consolidated statements of income, of cash flows and of changes in shareholders' equity for each of the years then ended. These financial statements are the responsibility of the Group's management. Our responsibility is to express an opinion on the consolidated financial statements based on our audit.
2. We conducted our audits in accordance with International Standards on Auditing. Those Standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.
3. In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Group as of 31 December 2002 and 2001, and the results of its operations and its cash flows for the years then ended in accordance with International Financial Reporting Standards.
4. Without qualifying our opinion, we draw your attention to Note 30 to the consolidated financial statements. The Government of the Russian Federation is the principal shareholder of the Group and governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

Moscow, Russian Federation  
20 June 2003

The accompanying notes are an integral part of these financial statements.

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 1 NATURE OF OPERATIONS

OA0 Gazprom and its subsidiaries (the "Group") operate one of the largest gas pipeline systems in the world and are responsible for substantially all gas production and high pressure gas transportation in the Russian Federation. The Group is a major exporter of gas to European countries.

The Group is involved in the following principal activities:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas; and
- Distribution—domestic and export sale of gas.

The weighted average number of full time employees during 2002, 2001 and 2000 was 301 thousand, 304 thousand and 306 thousand, respectively.

#### 2 ECONOMIC ENVIRONMENT IN THE RUSSIAN FEDERATION

Whilst there have been improvements in the economic situation in the Russian Federation in recent years, the country continues to display some characteristics of an emerging market. These characteristics include, but are not limited to, the existence of a currency that is not freely convertible in most countries outside of the Russian Federation, restrictive currency controls, and relatively high inflation.

The prospects for future economic stability in the Russian Federation are largely dependent upon the effectiveness of economic measures undertaken by the Government, together with legal, regulatory, and political developments.

#### 3 BASIS OF PRESENTATION

These consolidated financial statements are prepared in accordance with, and comply with, International Financial Reporting Standards ("IFRS"), including International Accounting Standards and Interpretations issued by the International Accounting Standards Board.

The Group companies maintain their statutory financial statements in accordance with the Regulation on Accounting and Reporting of the Russian Federation ("RAR") or the accounting regulations of the country in which the particular Group company is resident. The Group's financial statements are based on the statutory records, with adjustments and reclassifications recorded in the financial statements for the purpose of fair presentation in accordance with IFRS.

The consolidated financial statements of the Group are prepared under the historical cost convention except as described in Note 4. The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from these estimates.

The adjustments and reclassifications made to the statutory accounts for the purpose of IFRS presentation include the restatement of balances and transactions for changes in the general purchasing power of the Russian Rouble ("RR") in accordance with IAS 29, "Financial Reporting in Hyperinflationary Economies" ("IAS 29"). IAS 29 requires that financial statements prepared in the currency of a hyperinflationary economy be stated in

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 3 BASIS OF PRESENTATION—(continued)

terms of the measuring unit current at the balance sheet date. The restatement was calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics ("Goscomstat"), and from indices obtained from other published sources for years prior to 1992.

The indices used to restate the consolidated financial statements, based on 1988 prices (1988=100) for the five years to 31 December 2002, and the respective conversion factors used are:

<u>Year</u>	<u>Index</u>	<u>Conversion Factor</u>
1998 .....	1,216,400	2.24
1999 .....	1,661,481	1.64
2000 .....	1,995,937	1.37
2001 .....	2,371,572	1.15
2002 .....	2,730,154	1.00

The significant guidelines followed in restating the consolidated financial statements are:

- all amounts are stated in terms of the measuring unit current as of 31 December 2002;
- monetary assets and liabilities are not restated because they are already expressed in terms of the monetary unit current as of 31 December 2002;
- non-monetary assets and liabilities (items which are not expressed in terms of the monetary unit current as of 31 December 2002) and shareholders' equity, including the share capital, are restated by applying the relevant conversion factors;
- all items in the consolidated statements of income and of cash flows are restated by applying appropriate conversion factors;
- the effect of inflation on the Group's net monetary position is included in the consolidated statement of income as a net monetary gain or loss; and
- comparative amounts for 2001 and 2000 are restated using the conversion factor 1.15 and 1.37, respectively, in order to state them in terms of the monetary unit current as of 31 December 2002.

The consolidated statement of income includes net monetary gains of RR 31,380, RR 33,513 and RR 60,332 for the years ended 31 December 2002, 2001 and 2000, respectively, because on average the Group had net monetary liabilities in the three years.

As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from 1 January 2003 the Group will no longer apply the provisions of IAS 29.

#### Reclassifications

Certain reclassifications have been made to prior year balances to conform to the current year presentation.

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies followed by the Group are set out below.

##### 4.1 Group accounting

##### Subsidiary undertakings

Subsidiary undertakings in which the Group, directly or indirectly, has an interest of more than 50% of the voting rights or is otherwise able to exercise control over the operations have been consolidated.

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

The consolidated financial statements of the Group reflect the results of operations of any subsidiaries acquired from the date control is established. Subsidiaries are no longer consolidated from the date from which control ceases. All intercompany transactions, balances and unrealized surpluses and deficits on transactions between group companies have been eliminated. Separate disclosure is made of minority interests. Acquisitions of subsidiaries are recorded in accordance with the purchase accounting method.

Minority interest at the balance sheet date represents the minority shareholders' portion of the pre-acquisition carrying amount of the identifiable assets and liabilities of the subsidiary at the acquisition date, and the minorities' portion of movements in equity since the date of the combination. Minority interest is presented separately from liabilities and shareholders' equity.

#### Associated undertakings

Associated undertakings are undertakings over which the Group has significant influence, but which it does not control. Generally significant influence occurs when the Group has between 20% and 50% of the voting rights. Associated undertakings are accounted for using the equity method.

The equity method involves recognising in the statement of income the Group's share of the associated undertakings' profit or loss for the year, less dividends received. Unrealised gains on transactions between the Group and its associated undertakings are eliminated to the extent of the Group's interest in the associated undertakings; unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred.

The Group's interest in each associated undertaking is carried in the balance sheet at an amount that reflects cost, including the goodwill at acquisition, plus its share of profit and losses. Provisions are recorded for any impairment in value.

Equity accounting is discontinued when the carrying amount of the investment in an associated undertaking reaches zero, unless the Group has incurred obligations or guaranteed obligations in respect of the associated undertaking.

#### 4.2 Investments

The Group classified its investments into the following categories: trading, held-to-maturity and available-for-sale.

Investments that are acquired principally for the purpose of generating a profit from short-term fluctuations in price are classified as trading investments and included in current assets. Investments with fixed maturity that the management of the Group companies has the intent and ability to hold to maturity are classified as held-to-maturity and are included in non-current assets. There were no such investments as of 31 December 2002, 2001 and 2000. Investments intended to be held for an indefinite period of time, which may be sold in response to needs for liquidity or changes in fair value, are classified as available-for-sale. These are included in non-current assets unless management has the expressed intention of holding the investments for less than 12 months from the balance sheet date or unless they will need to be sold to raise operating capital, in which case they are included in current assets. Management determines the appropriate classification of its investments at the time of the purchase and re-evaluates such designation on a regular basis.

All purchases and sales of investments are recognized on the trade date, which is the date that the Group commits to purchase or sell the financial asset. Cost of purchase includes transaction costs. Trading and available-for-sale investments are subsequently re-measured to fair value. Available-for-sale investments

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

principally comprise non-marketable equity securities, for which it is not possible to obtain current market quotes. For these investments, fair value is estimated based on the market price of similar financial assets or estimated future discounted cash flows. For other investments traded in active markets, fair value is determined by reference to the current market value at the close of business on the reporting date.

Realized gains and losses arising from sale and unrealized gains and losses arising from changes in the fair value of trading and available-for-sale investments are included in the statement of income in the period in which they arise.

Prior to the adoption of IAS 39 the Group had valued its marketable equity securities at the lower of cost restated to the equivalent purchasing power of the Rouble at the reporting date on the basis of indices included in Note 3, or market value. Long-term investments were reflected at cost restated to the equivalent purchasing power at the reporting date. Provision for impairment was only made where, in the opinion of the Group's management, there was a diminution in value, which was other than temporary. On disposal of an investment, the difference between the net disposal proceeds and the carrying amount was charged or credited to the consolidated statement of operations.

Changes in the fair value of trading and available-for-sale investments are recorded in the statement of income within operating expenses and gains and losses on available-for-sale investments, respectively.

In the statement of cash flow, purchases and sales of trading investments are classified as operating activities.

#### 4.3 Goodwill

Any excess of the cost of an acquisition over the fair value of the Group's share of the identifiable net assets of the acquired subsidiary or associated undertaking at the date of acquisition is recorded as goodwill. Goodwill on acquisition of subsidiary undertakings is included in other long-term assets. Goodwill on acquisition of associated undertakings is included in investments in associated undertakings. Goodwill is amortised using the straight-line method over the shorter of its estimated useful life or 20 years.

#### 4.4 Joint ventures

Joint ventures are contractual agreements whereby two or more parties undertake economic activity, which is subject to joint control. Joint ventures are accounted for using the equity method.

#### 4.5 Cash and cash equivalents

Cash comprises cash on hand and demand deposits. Cash equivalents comprise short-term investments which are readily converted to cash and have an original maturity of three months or less. Restricted cash balances comprise balances of cash and cash equivalents which are restricted as to withdrawal under the terms of certain borrowings or under banking regulations. Restricted cash balances are excluded from cash in the consolidated statement of cash flows.

#### 4.6 Accounts receivable

Trade receivables are carried at original invoice amount less provision made for impairment of these receivables. The provision for impairment of trade receivables is established if there is objective evidence that the Group will not be able to collect all amounts due according to the original terms of the receivables or if collection is not anticipated for a long period of time. The amount of the provision is the difference between the carrying amount and the recoverable amount, being the present value of expected cash flows, discounted at the market rate of interest for similar borrowers at the date of origination of the receivable.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)**

**4.7 Inventories**

Inventories are valued at the lower of net realisable value and cost. Cost of inventory is determined on the weighted average basis. The cost of finished goods and work in progress comprises raw material, direct labour, other direct costs and related production overhead (based on normal operating capacity) but excludes borrowing costs. Net realisable value is the estimated selling price in the ordinary course of business, less selling expenses.

**4.8 Property, plant and equipment**

Property, plant and equipment are carried at historical cost of acquisition or construction after deduction of accumulated depreciation.

Gas and oil exploration and production activities are accounted for in accordance with the successful efforts method. Under the successful efforts method, costs of successful development and exploratory wells are capitalised. Costs of unsuccessful exploratory wells are expensed upon determination that the well does not justify commercial development. Other exploration costs are expensed as incurred.

Major renewals and improvements are capitalised. Maintenance, repairs and minor renewals are expensed as incurred. Minor renewals include all expenditures that do not result in a technical enhancement of the asset beyond its original capability. Gains and losses arising from the disposal of property, plant and equipment are included in the consolidated statement of income as incurred.

Interest costs on borrowings are capitalised as part of the cost of self constructed assets during the period of time that is required to construct and prepare the asset for its intended use. All other borrowing costs are expensed.

The return to a governmental authority of social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation is recorded only upon both the transfer of title to, and termination of operating responsibility for, the social assets. There is no specified timetable for such social assets to be transferred to the governmental authorities, and transfer does not occur until the agreement of both parties is reached. These disposals are considered to be shareholder transactions because they represent a return of assets for the benefit of governmental authorities, as contemplated in the original privatisation arrangements. Consequently, such disposals are accounted for as a charge to shareholders' equity.

Depreciation is calculated on a straight-line basis. Depreciation on wells and production equipment has been calculated on cost, using the straight line method rather than, as is the more generally accepted international industry practice, on the unit-of-production method as the difference is not material. Assets under construction are not depreciated.

The estimated useful lives of the Group's assets are as follows:

	<u>Years</u>
Pipelines .....	33
Wells and production equipment .....	12-40
Machinery and equipment .....	10-18
Buildings .....	30-40
Roads .....	20-40
Social assets .....	10-40

**4.9 Impairment of assets**

At each balance sheet date management assess whether there is any indication that the recoverable value of the Group's assets has declined below the carrying value. When such a decline is identified, the carrying amount

NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

**4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)**

is reduced to the recoverable amount. The amount of the reduction is recorded in the consolidated statement of income in the period in which the reduction is identified. An impairment loss recognised for an asset in prior years is reversed if there has been a change in the estimates used to determine the asset's recoverable amount.

**4.10 Borrowings**

Borrowings are recognised initially at the fair value of the proceeds received which is determined using the prevailing market rate of interest for a similar instrument, if significantly different from the transaction price, net of transaction costs incurred. In subsequent periods, borrowings are recognised at amortised cost, using the effective yield method; any difference between fair value of the proceeds (net of transaction costs) and the redemption amount is recognised as interest expense over the period of the borrowings.

**4.11 Deferred tax**

Deferred tax assets and liabilities are calculated in respect of temporary differences using a balance sheet liability method. Deferred tax assets and liabilities are recorded for all temporary differences arising between the tax basis of assets and liabilities and their carrying values for financial reporting purposes. A deferred tax asset is recorded only to the extent that it is probable that taxable profit will be available against which the deferred tax asset will be realised or if it can be offset against existing deferred tax liabilities. Deferred tax assets and liabilities are measured at tax rates that are expected to apply to the period when the asset is realized or the liability is settled, based on tax rates that have been enacted or substantively enacted at the balance sheet date.

**4.12 Foreign currency transactions**

Monetary assets and liabilities held by the Group as of 31 December 2002, 2001 and 2000, and denominated in foreign currencies are translated into Roubles at the exchange rate prevailing at that date. Foreign currency transactions are accounted for at the exchange rates prevailing at the date of the transactions. Gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognised as exchange gains or losses in the consolidated statement of income.

The balance sheets of foreign subsidiaries and associated undertakings are translated into Roubles at the exchange rate prevailing at the reporting date. Statements of income of foreign entities are translated at average exchange rates for the year. Exchange differences arising on the translation of the net assets of foreign subsidiaries and associated undertakings are recognised as translation differences and included in shareholders' equity.

The official US dollar to RR exchange rates, as determined by the Central Bank of the Russian Federation, were 31.78, 30.14 and 28.16 as of 31 December 2002, 2001 and 2000, respectively. The official Euro to RR exchange rates, as determined by the Central Bank of the Russian Federation, were 33.11, 26.49 and 26.14 as of 31 December 2002, 2001 and 2000, respectively.

Exchange restrictions and currency controls exist relating to converting the RR into other currencies. The RR is not freely convertible in most countries outside of the Russian Federation.

**4.13 Provisions for liabilities and charges**

Provisions, including provisions for environmental liabilities and asset retirement obligations, are recognised when the Group has a present legal or constructive obligation as a result of past events, and it is probable that an outflow of resources will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made. As obligations are determined, they are recognised immediately based on the present value of the expected future cash flows arising from the obligations.

NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

**4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)**

**4.14 Shareholders' equity**

**Treasury shares**

Where the Group companies purchase the Group's equity share capital, the consideration paid including any attributable transaction costs net of income taxes is deducted from total shareholders' equity as treasury shares until they are re-sold. Where such shares are subsequently sold, any consideration received is included in shareholders' equity. Treasury shares are recorded at weighted average cost. The gains (losses) arising from treasury share transactions are recognised as a movement in the consolidated statement of changes in shareholders' equity, net of associated costs including taxation.

**Dividends**

Dividends are recognised as a liability and deducted from shareholders' equity at the balance sheet date only if they are declared before or on the balance sheet date.

**4.15 Revenue recognition**

Sales are recognised for financial reporting purposes when products are delivered to customers and title passes and are stated net of VAT, excise taxes and other similar compulsory payments. Gas transportation sales are recognised when transportation services have been provided, as evidenced by delivery of gas in accordance with the contract.

Natural gas prices and gas transportation tariffs in the Russian Federation are established by the Federal Energy Commission. Export gas prices for sales to European countries are indexed mainly to oil product prices as stipulated in long-term contracts. Export gas prices for sales to Former Soviet Union countries are generally based on one-year fixed price contracts.

Revenues are measured at the fair value of the consideration received or receivable. When the fair value of consideration received cannot be measured reliably, the revenue is measured at the fair value of the goods or services given up.

**4.16 Mutual cancellation and other non-cash transactions**

A significant portion of accounts receivable arising from sales are settled either through a chain of non-cash transactions (mutual cancellations), sometimes involving several enterprises, or other non-cash settlements. Non-cash settlements include promissory notes which are negotiable debt obligations. A portion of operations, including capital expenditures, is also transacted by mutual cancellations or other non-cash settlements.

Approximately, 18%, 18% and 22% of accounts receivable from gas sales settled during the years ended 31 December 2002, 2001 and 2000, respectively, were settled via mutual settlements or other non-cash settlements.

Promissory notes are issued by the Group entities as payment instruments. The promissory notes carry a fixed date of repayment and the supplier can sell them in the over-the-counter secondary market. Promissory notes issued by the Group are recorded initially at the fair value of the consideration received or the fair value of the note, which is determined using the prevailing market rate of interest for a similar instrument. In subsequent periods, promissory notes are stated at amortised cost using the effective yield method. Any difference between the fair value of the consideration (net of transaction costs) and the redemption amount is recognised as interest expense over the period of the promissory note.

The Group's short-term promissory notes payable had average interest rates ranging from 12.0% to 25.0%, from 12.0% to 28.0% and from 11.0% to 58.0% for the years ended 31 December 2002, 2001 and 2000,

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

respectively. The Group's long-term promissory notes payable had average interest rates ranging from 15.0% to 26.0%, from 22.0% to 26.5% and from 8.0% to 32.0% for the years ended 31 December 2002, 2001 and 2000, respectively.

The Group also accepts promissory notes from its customers (both issued by customers and third parties) as a settlement of receivables. Promissory notes issued by customers are recorded in the same manner as accounts receivable originated by the Group. Promissory notes issued by other third parties are recorded as available-for-sale investments.

##### 4.17 Interest

Interest income and expense are recognised in the statement of income for all interest bearing instruments on an accrual basis using the effective yield method. Interest income includes nominal interest and accrued discount and premium. When loans become doubtful of collection, they are written down to their recoverable amounts and interest income is thereafter recognised based on the rate of interest that was used to discount the future cash flows for the purpose of measuring the recoverable amount.

##### 4.18 Research and development

Research expenditure is recognised as an expense as incurred. Costs incurred on development projects are recognised as intangible assets (within other long-term assets) to the extent that such expenditure is expected to generate future economic benefits. Other development expenditures are recognised as an expense as incurred. However, development costs previously recognised as an expense are not recognised as an asset in a subsequent period if the asset recognition criteria are subsequently met.

##### 4.19 Pension and other post-retirement benefits

The Group operates a defined benefit plan. Pension costs are recognised using the projected unit credit method. The cost of providing pensions is charged to operating expenses within the consolidated statement of income so as to spread the regular cost over the service lives of employees. The pension obligation is measured at the present value of the estimated future cash outflows using interest rates of government securities, which have the terms to maturity approximating the terms of the related liability. Actuarial gains and losses are recognised over the average remaining service lives of employees.

The Group owns and controls NPF Gazfund, which administers the Group's defined benefit plan. Members of Group's management are trustees of NPF Gazfund. The assets of NPF Gazfund primarily consist of shares of OAO Gazprom. The parent/subsidiary relationship between the Group and NPF Gazfund means that the assets held by NPF Gazfund do not meet the definition of plan assets and are, therefore, recognized in the consolidated balance sheet as treasury shares or other investments, as appropriate.

In the normal course of business the Group contributes to the Russian Federation State pension plan on behalf of its employees. Mandatory contributions to the State pension plan, which is a defined contribution plan, are expensed when incurred and are included within staff costs in operating expenses. The cost of providing other discretionary post-retirement obligations (including constructive obligations) is charged to the consolidated statement of income so as to spread the regular cost over the service lives of employees.

##### 4.20 Financial instruments

The Group adopted IAS 39 "Financial Instruments: Recognition and Measurement" as of 1 January 2001. The financial effects of adopting IAS 39 are disclosed in Note 19.

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

Financial instruments carried on the balance sheet include cash and cash equivalent balances, investments, receivables, promissory notes, accounts payable and borrowings. The particular recognition and measurement methods adopted are disclosed in the individual policy statements associated with each item.

##### Accounting for derivative financial instruments

As part of trading activities, primarily by the banking subsidiaries, the Group is also party to derivative financial instruments including forward and options contracts in foreign exchange and precious metals. The Group's policy is to measure these instruments at fair value, with resultant gains or losses being reported within the consolidated statement of income. Derivatives are not accounted for as hedges.

##### Fair value disclosure

The fair value of accounts receivable for disclosure purposes is estimated by discounting the value of expected cash flows at the market rate of interest for similar borrowers at the reporting date.

The fair value of financial liabilities and other financial instruments (except if publicly quoted) for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Group for similar financial instruments.

The fair value of publicly quoted financial instruments for disclosure purposes are estimated based on current market value at the close of business on the reporting date.

#### 5 SEGMENT INFORMATION

Management does not separately identify segments within the Group as it operates as a vertically integrated business with substantially all external sales generated by the gas distribution business. However, following the practice suggested by IAS 14, "Segment Reporting", Revised 1997 ("IAS 14") for vertically integrated businesses, information can be analysed based on the following business segments:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas;
- Distribution—domestic and export sale of gas; and
- Other—other activities, including banking.

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 5 SEGMENT INFORMATION—(continued)

The inter-segment revenues mainly consist of:

- Production—sale of gas to the Distribution segment and sale of hydrocarbons to the Refining segment;
- Refining—sale of refined products to other segments;
- Transport—rendering transportation services to the Distribution segment; and
- Distribution—sale of gas to the Transport segment for operational needs.

Internal transfer prices are established by the management of the Group with the objective of providing for the specific medium and long-term funding requirements of the individual subsidiaries within each segment. Prices are determined on the basis of the statutory accounting reports of the individual subsidiaries on a cost plus basis.

Included within unallocated expenses are corporate expenses, including provision for the impairment of other investments and guarantees.

Substantially all of the Group's operating assets are located in the Russian Federation. Gas sales to different geographical regions are disclosed in Note 22.

#### 6 CASH AND CASH EQUIVALENTS

Balances included within cash and cash equivalents in the consolidated balance sheet represent cash on hand and balances with banks. Included within restricted cash are balances of cash and cash equivalents totalling RR 38,637, RR 39,450 and RR 44,447 as of 31 December 2002, 2001 and 2000, respectively, which are restricted as to withdrawal under the terms of certain borrowings. In addition, restricted cash comprises cash balances of RR 6,956, RR 6,770 and RR 6,826 as of 31 December 2002, 2001 and 2000, respectively, in subsidiary banks, which are restricted as to withdrawal under banking regulations.

#### 7 SHORT-TERM INVESTMENTS

	31 December		
	2002	2001	2000
Trading investments .....	14,143	15,182	18,360
Available-for-sale investments .....	14,752	16,184	14,435
	<u>28,895</u>	<u>31,366</u>	<u>32,795</u>

Trading investments primarily comprise marketable equity and debt securities held by the Group's banking subsidiaries with a view to generating short-term profits.

Available-for-sale investments primarily comprise promissory notes of third parties and maturing within twelve months of the balance sheet date or other debt and equity securities intended for sale within twelve months of the balance sheet date.

During the year ended 31 December 2002, RR 6,205 of short-term investments of OAO AKB National Reserve Bank were deconsolidated (see Note 28).

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**8 ACCOUNTS RECEIVABLE AND PREPAYMENTS**

	31 December		
	2002	2001	2000
Trade receivables (net of impairment provision of RR 94,541, RR 109,341 and RR 95,577 as of 31 December 2002, 2001 and 2000, respectively) .....	113,990	153,997	232,344
Prepayments and advances (net of impairment provision of RR 7,206, RR 12,682 and RR 7,392 as of 31 December 2002, 2001 and 2000, respectively) .....	34,026	42,183	36,909
Other receivables (net of impairment provision of RR 25,459, RR 28,124 and RR 20,714 as of 31 December 2002, 2001 and 2000, respectively) .....	44,026	61,591	67,408
	<u>192,042</u>	<u>257,771</u>	<u>336,661</u>

The fair value of accounts receivable, excluding prepayments and advances, is RR 148,399 and RR 165,425 as of 31 December 2002 and 2001, respectively.

RR 62,173, RR 81,846 and RR 108,730 of trade receivables, net of impairment provision, are denominated in foreign currencies, mainly US dollar and Euro, as of 31 December 2002, 2001 and 2000, respectively.

As of 31 December 2002, 2001 and 2000, other receivables include RR 24,843, RR 40,786 and RR 30,639, respectively, relating to the operations of AB Gazprombank (ZAO) and OAO AKB National Reserve Bank (OAO AKB National Reserve Bank was included only at 31 December 2001 and 2000—see Note 28). These balances mainly represent deposits with other banks and loans issued to customers at commercial rates based on credit risks and maturities.

As of 31 December 2002 the average year-end interest rate on banking deposits and loans ranged from 9.2% to 21.4% on balances denominated in Russian Roubles and from 2.0% to 13.0% on balances denominated in foreign currencies. As of 31 December 2001 the average year-end interest rate on banking deposits and loans ranged from 12.6% to 21.2% on balances denominated in Russian Roubles and from 2.3% to 15.0% on balances denominated in foreign currencies. As of 31 December 2000 the average year-end interest rate on banking deposits and loans ranged from 4.7% to 23.6% on balances denominated in Russian Roubles and from 4.9% to 11.5% on balances denominated in foreign currencies.

As of 31 December 2002, 2001 and 2000, AB Gazprombank (ZAO) had pledged deposits with banks and other financial institutions of RR 7,736, RR 8,570 and RR 11,590, respectively. These are pledged as collateral for borrowings received by OAO Gazprom and credit exposures of Altalanos Ertekforgalmi Bank Rt (“AEB”) (see Note 30).

The fair value of banking deposits and loans approximate the carrying values, as the majority are short-term in nature and at commercial rates.

As of 31 December 2002 other receivables included US dollar denominated loans of RR 7,303 issued by the Group’s subsidiaries Gazprom Finance BV and AB Gazprombank (ZAO) to OOO Lotsman (see Note 33). The loans are due to be repaid in March 2003 and bear interest of 5% and 12.5% per annum, respectively. As of 31 December 2001 and 2000 there were no loans outstanding to OOO Lotsman.

**9 INVENTORIES**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)**

**10 PROPERTY, PLANT AND EQUIPMENT—(continued)**

At each balance sheet date management assesses whether there is any indication that the recoverable value has declined below the carrying value of the property, plant and equipment. As a result of management's assessment of the recoverable amount, assets under construction are presented net of a provision for impairment of RR 95,570, RR 102,453 and RR 95,954 at 31 December 2002, 2001 and 2000, respectively. The provision for impairment of assets under construction primarily relates to projects that have been indefinitely suspended.

For the year ended 31 December 2001, disposals include RR 15,674 related to the disposal of OAO Lebedinsky GOK (see Note 28).

Included in additions above is capitalized interest of RR 13,012, RR 18,857 and RR 21,527 for the years ended 31 December 2002, 2001 and 2000, respectively. Capitalization rates of 7.2%, 7.3% and 8.2% were used representing the weighted average actual borrowing cost of the relevant borrowings for the years ended 31 December 2002, 2001 and 2000, respectively.

Included in the property, plant and equipment above are fully depreciated assets which are still in service with the gross cost of RR 637,970, RR 589,436 and RR 317,498 as of 31 December 2002, 2001 and 2000, respectively. Included in additions are non-cash additions of RR 42,639, RR 49,133 and RR 65,119 for the years ended 31 December 2002, 2001 and 2000, respectively.

Depreciation includes RR 746, RR 657 and RR 1,042 for the years ended 31 December 2002, 2001 and 2000, respectively, which is considered a cost of self-constructed assets and thus capitalized rather than expensed in the consolidated statement of income. RR 19,979, RR 14,751 and RR 12,704 of depreciation for the years ended 31 December 2002, 2001 and 2000, respectively, is capitalized as a component of gas inventories and will be expensed in the consolidated statement of income when the gas is sold.

Included in the property, plant and equipment are social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation with a net book value of RR 40,526, RR 44,487 and RR 49,849 as of 31 December 2002, 2001 and 2000, respectively.

The Group's gas fields are operated under licenses granted by federal and local authorities. These licenses to develop and extract hydrocarbons expire between 2012 and 2019, however they may be extended. Management expects to extend the existing licenses on properties expected to produce hydrocarbons subsequent to their current expiration dates. Because of the expected renewals, the assets are depreciated over their useful lives even if this is beyond the end of the current license.

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**12 OTHER LONG-TERM INVESTMENTS**

	31 December		
	2002	2001	2000
South Pars (net of provision for impairment of RR 2,038, RR 2,038 and nil as of 31 December 2002, 2001 and 2000 respectively) .....	22,930	19,566	15,925
Joint ventures (net of provision for impairment of RR 5,383, RR 4,954 and RR 6,467 as of 31 December 2002, 2001 and 2000, respectively) .....	2,354	2,088	2,612
Available-for-sale investments (net of provision for impairment of RR 23,796, RR 13,971 and RR 7,727 as of 31 December 2002, 2001 and 2000, respectively) .....	12,868	15,768	17,799
	<u>38,152</u>	<u>37,422</u>	<u>36,336</u>

South Pars is a jointly controlled contractual arrangement with Total South Pars and Parsi International Ltd. established in 1997 to provide services to National Iranian Oil Company in relation to development of South Pars oil and gas field in Iran. Under the terms of agreement OAO Gazprom has a 30% interest in this arrangement.

During the year ended 31 December 2002, RR 9,335 of other long-term investments of OAO AKB National Reserve Bank were deconsolidated (see Note 28).

Available for sale investments at 31 December 2001 and 2000 include the Group's 14.3% interest in ZAO Media-Most. This interest in ZAO Media-Most was acquired in November 1999 via the settlement of a ZAO Media-Most debt to the Group. ZAO Media-Most is a holding company owing interests in a number of mass media companies (see Note 28).

**13 OTHER LONG-TERM ASSETS**

	31 December		
	2002	2001	2000
Long-term accounts receivable and prepayments (net of provision of RR 3,061, RR 5,422 and RR 10,424 as of 31 December 2002, 2001 and 2000, respectively) .....	23,840	16,375	23,112
Advances for assets under construction (net of provision of RR 988, RR 2,255 and nil as of 31 December 2002, 2001 and 2000, respectively) .....	22,114	11,766	7,994
VAT related to assets under construction .....	10,480	5,963	—
Other long-term assets .....	16,027	14,817	10,808
	<u>72,461</u>	<u>48,921</u>	<u>41,914</u>

The fair value of long-term accounts receivable, excluding prepayments, is RR 19,353 and RR 9,218 as of 31 December 2002 and 2001, respectively.

**14 ACCOUNTS PAYABLE AND ACCRUED CHARGES**

	31 December		
	2002	2001	2000
Trade payables .....	35,841	46,162	38,769

Advances received .....	2,404	2,222	2,375
Accruals and deferred income .....	1,241	2,763	1,496
Other payables .....	32,137	37,522	42,677
	<u>95,840</u>	<u>123,557</u>	<u>116,563</u>

**OAQ GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**14 ACCOUNTS PAYABLE AND ACCRUED CHARGES—(continued)**

Other payables include RR 19,634, RR 13,584 and RR 18,927 related to the operations of the Group's banking subsidiaries as of 31 December 2002, 2001 and 2000, respectively. These balances mainly represent amounts due to the banks' customers with terms at commercial rates, varying by maturity of deposit, ranging from 2.2% to 12.5% per annum as of 31 December 2002, from 0.7% to 12.6% per annum as of 31 December 2001, and from 3.6% to 11.6% per annum as of 31 December 2000.

In the years ended 31 December 2002 and 2001 approximately 31% and 41% of the Group's settlements of accounts payable and accrued charges were settled via non-cash settlements.

RR 2,182 and RR 1,098 of trade payables are denominated in foreign currency, mainly the US dollar, at 31 December 2002 and 2001, respectively.

**15 TAXES PAYABLE**

	31 December		
	2002	2001	2000
Excise tax .....	28,052	39,282	46,496
Tax penalties and interest .....	12,411	23,063	45,885
Road users tax .....	4,400	6,414	14,538
Net VAT .....	3,885	1,127	29,614
Profit tax .....	3,027	533	11,298
Royalty and mineral restoration taxes .....	336	7,160	10,889
Other taxes .....	6,209	7,748	9,992
	<u>58,320</u>	<u>85,327</u>	<u>168,712</u>
Less: long-term portion of restructured tax liabilities .....	<u>(10,592)</u>	<u>(21,957)</u>	<u>(12,110)</u>
	<u>47,728</u>	<u>63,370</u>	<u>156,602</u>

Substantially all accrued taxes above, except restructured tax liabilities (see below) incur interest at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (21% and 25% per annum as of 31 December 2002 and 2001, respectively, and the refinancing rate decreased from 28% to 25% in November 2000). Interest does not accrue on tax penalties and interest.

The long-term portion of restructured tax liabilities comprise various taxes, penalties and interest payable to the Russian Government which were previously past due and which have been restructured following the application of Government Resolution dated 3 September 1999 No.1002. During 2002, 2001 and 2000 the Group negotiated the restructuring of its tax liabilities. The Group's current restructuring agreements presume payments of outstanding restructured taxes over a period of ten years, in accordance with agreed payment schedules.

The restructuring resulted in the recognition of a gain recorded in the consolidated statement of income as part of net monetary effects and financing items in the amount of RR 1,349, RR 21,526 and RR 23,037 for the years ended 31 December 2002, 2001 and 2000, respectively (see Note 24). The gain is based on the difference between the estimated fair value of the new restructuring agreement (based on discounted future cash flows) and the carrying amount of the old payables. Failure to pay the restructured taxes as they become due would result in reinstatement of the original liability.

The amortization of the discount on restructured taxes is recorded within interest expense and amounted to RR 4,650, RR 3,513 and RR 2,396 for the years ended 31 December 2002, 2001 and 2000, respectively.

**OA O GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**15 TAXES PAYABLE—(continued)**

The long-term portion of restructured tax liabilities has the following maturity profile:

	31 December		
	2002	2001	2000
Between one and two years .....	6,615	4,598	3,112
Between two and five years .....	14,675	6,977	9,316
After five years .....	702	45,767	20,323
	21,992	57,342	32,751
Less: unamortized discount on restructured taxes .....	(11,400)	(35,385)	(20,641)
	<u>10,592</u>	<u>21,957</u>	<u>12,110</u>

The total amortised cost of restructured tax liabilities were RR 13,071, RR 24,943 and RR 12,110 as of 31 December 2002, 2001 and 2000, respectively.

Interest on restructured tax liabilities is accrued quarterly based on outstanding restructured tax liabilities, applying the refinancing rate of the Central Bank of the Russian Federation. RR 6,622, RR 7,949 and RR 14,257 of the restructured tax liabilities as of 31 December 2002, 2001 and 2000, respectively, accrue interest at one-tenth of the official rate of the Central Bank of the Russian Federation as of the date of the Government Resolution (5% p.a.).

During the year ended 31 December 2002 some of the Group's subsidiaries became eligible to extinguish one half of restructured tax interest and penalties. The additional gain recorded upon extinguishment of restructured tax interest and penalties is recorded in the consolidated statement of income as a part of net monetary effects and financing items in the amount of RR 9,435 for the year ended 31 December 2002 (see Note 24). The amortisation of the respective discount is recorded within interest expense and amounted to RR 2,734 for the year ended 31 December 2002.

In 2001 excise tax rate for gas sales to CIS countries was reduced from 30% to 15%, effective from 1 January 2001.

**16 SHORT-TERM BORROWINGS AND CURRENT PORTION OF LONG-TERM BORROWINGS**

	31 December		
	2002	2001	2000
Short-term borrowings:			
RR denominated borrowings .....	11,134	38,581	38,475
Foreign currency denominated borrowings .....	75,926	63,496	50,698
	87,060	102,077	89,173
Current portion of long-term borrowings (see Note 17) .....	97,763	91,013	63,889
	<u>184,823</u>	<u>193,090</u>	<u>153,062</u>

Short-term RR denominated borrowings had average interest rates ranging from 5.0% to 20.1%, from 5.0% to 25.0% and from 17.0% to 37.0% for the years ended 31 December 2002, 2001, 2000 respectively. Short-term foreign currency denominated borrowings had average interest rates ranging from 5.0% to 15.5%, from 6.5% to 16.0% and from 7.0% to 18.0% for the years ended 31 December 2002, 2001 and 2000, respectively.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**16 SHORT-TERM BORROWINGS AND CURRENT PORTION OF LONG-TERM BORROWINGS—  
(continued)**

In 2002 OAO Gazprom placed RR 5,000 of bonds due 3 November 2005 with an interest rate of 15% payable every 6 months and a put option on 14 November 2003. The fair value of the put option is RR 43 as of 31 December 2002.

Included within the current portion of long-term borrowings as of 31 December 2001 is an interest free loan provided by RAO UES with a fair value of RR 8,754 and nominal value of RR 10,140. The loan was received on 27 December 2001. The purpose of the loan was to finance settlements of current tax liabilities of the Group's subsidiaries. The loan was settled in cash during the year ended 31 December 2002.

<b>Due for repayment:</b>			
Between one and two years .....	92,378	92,063	66,525
Between two and five years .....	132,010	124,826	176,455
After five years .....	24,215	20,524	37,255
	<u>248,603</u>	<u>237,413</u>	<u>280,235</u>

Long-term borrowings include fixed rate loans with a carrying value of RR 120,134, RR 71,294 and RR 44,119, and fair value of RR 120,010, RR 68,243 and RR 38,782 as of 31 December 2002, 2001 and 2000, respectively. All other long-term borrowings have variable interest rates linked to LIBOR, and the carrying amounts approximate fair value.

The group does not have formal hedging arrangements to mitigate its foreign exchange risk or interest rate risk.

The weighted average effective interest rates at the balance sheet date were as follows:

	31 December		
	2002	2001	2000
Fixed rate RR denominated long-term borrowings .....	15.01%	16.15%	14.95%
Fixed rate foreign currency denominated long-term borrowings .....	8.14%	7.84%	5.54%
Variable rate foreign currency denominated long-term borrowings .....	4.68%	6.33%	7.38%

As of 31 December 2002, 2001 and 2000 loans and borrowings of RR 192,918 and RR 184,243 and RR 301,753 respectively, inclusive of current portion of long-term borrowings, are secured by revenues from export supplies of gas to Europe.

The Group has no subordinated debt and no debt that may be converted into an equity interest in the Group.

As of 31 December 2002 long-term bank borrowings included loans from Salomon Brothers AG received in 2002 in connection with the issuance of USD 500 million of Loan Participation Notes due 2007 with an interest rate of 9.125% and of USD 700 million of Loan Participation Notes due 2009, with an interest rate of 10.5%. The Notes were issued by, but without recourse to, Salomon Brothers AG with the sole purpose of financing a loan to OAO Gazprom. The USD 700 million Loan Participation Notes have a put option due on 21 October 2005. The fair value of the put option is RR 766 as of 31 December 2002.

As of 31 December 2001 other long-term borrowings include RR 3,207 of coupon documentary bearer bonds issued by OAO Gazprom in 1999. The issue amounted to 3.0 million bonds, each with a nominal value of 1,000 roubles and a due date of 15 April 2003. During the years 2000 and 2001, the Group repurchased 577 thousand bonds. As of 31 December 2002 the bonds were resold to external parties and are included within short-term borrowings. The total liability recorded in respect of the bonds excludes the unamortized discount related to future periods.

**OA0 GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**  
**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble**  
**as of 31 December 2002, unless otherwise stated)**

**18 PROFIT TAX**

Before 1 January 2001 the Group accrued profit tax at rates of 30.0% and 38.0% on profits from non-banking and banking activities, respectively, computed in accordance with the Russian tax legislation. Following the enactment of new tax rates on 1 January 2001, the Group accrued current profit tax at the rate of 35% and 43% on profits from non-banking and banking activities, correspondingly, for the year ended 31 December 2001.

In August 2001 the Profit tax chapter of the Tax Code was enacted, which changed the profit tax rate to 24% on profits for non-banking and banking activities. This rate became effective starting from 1 January 2002.

Profit before profit tax for financial reporting purposes is reconciled to profit tax expense as follows:

	<u>Year ended 31 December</u>		
	<u>2002</u>	<u>2001</u>	<u>2000</u>
Profit before profit tax and minority interest .....	165,754	231,729	210,901
Theoretical tax charge at a statutory rate (24%, 35% and 30% for the years ended 31 December 2002, 2001 and 2000, respectively) .....	(39,781)	(81,105)	(63,270)
Tax effect of items which are not deductible or assessable for taxation purposes:			
Inflationary effects .....	(63,278)	(101,338)	(52,608)
Non-deductible expenses .....	(40,665)	(40,535)	(23,041)
Statutory tax concessions .....	—	13,721	27,013
Other non-temporary differences .....	7,592	8,167	(40,959)
Effect of increase in taxable base due to statutory revaluation .....	—	—	316,299
Effect of change in tax rate .....	—	(12,101)	19,159
Profit tax (expense) benefit .....	<u>(136,132)</u>	<u>(213,191)</u>	<u>182,593</u>

Inflationary effects principally include the impact of inflation on shareholders' equity, deferred tax assets and liabilities at the beginning of the reporting period and current tax expense.

Profit tax expense in the consolidated statement of income is stated net of RR 35, RR 950 and RR 1,121 of tax attributable to gains arising on treasury share transactions for the year ended 31 December 2002, 2001 and 2000 respectively (see Note 4).

OAO GAZPROM

NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

18 PROFIT TAX—(continued)

Differences between the recognition criteria in Russian statutory taxation regulations and IFRS give rise to certain temporary differences between the carrying value of certain assets and liabilities for financial reporting purposes and for profit tax purposes. The tax effect of the movement on these temporary differences is recorded at the rate of 24%, 35% and 30% for the years ended 31 December 2002, 2001 and 2000, respectively.

	31 December 2002	Differences recognition and reversals	Effect of changes in tax legislation	Effect of deconsoli- dation of NRB	31 December 2001	Differences recognition and reversals	Effect of changes in tax legislation	31 December 2000
<b>Tax effects of taxable temporary differences:</b>

<b>Total net deferred tax (liabilities) assets .....</b>	<b><u>(63,019)</u></b>	<b><u>(71,732)</u></b>	<b><u>(10,444)</u></b>	<b><u>3,276</u></b>	<b><u>15,881</u></b>	<b><u>(106,136)</u></b>	<b><u>(12,103)</u></b>	<b><u>134,120</u></b>

Deferred tax assets and liabilities arise mainly from differences in the taxable and financial reporting bases of property, plant and equipment and accounts receivable. These differences for property, plant and equipment are historically due to the fact that a significant proportion of the tax base is based upon independent appraisals, the most recent of which was recognised as of 1 January 2001, while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR.

Following the enactment of Chapter 25 "Profit tax" of the Russian Federation Tax Code on 1 January 2002, the profit tax regulations allowed for different tax depreciation lives for different groups of property, plant and equipment. In accordance with the tax regulations, the Group recognised shorter tax depreciation lives effective 1 January 2002, resulting in increased tax depreciation and a RR 30,171 increase in the deferred tax liability attributable to property, plant and equipment as of 31 December 2002.

The revised tax depreciation lives also gave rise to current period tax losses in the statutory books of OAO Gazprom. Statutory entities can carry forward tax losses generated in an individual period for ten years, subject to a maximum utilization of 30% of the total amount of taxable profit each year. This resulted in a recognition of a deferred tax asset of RR 10,248 as of 31 December 2002, as management believes it is probable that these losses will be realized through offset against future taxable profit.

The deferred tax liability attributable to accounts receivable balances reversed in the year ended 31 December 2002 principally as a result of the change in the underlying tax legislation, effective 1 January 2002, to recognize sales revenue for profit tax purposes on an accrual rather than a cash basis.

The difference between the amount of temporary differences recognition and reversals for the year ended 31 December 2002 and respective deferred profit tax expense recognised in the consolidated statement of income for the year ended 31 December 2002 arises from transactions with treasury shares and is recognised in the consolidated statement of changes in shareholders' equity.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**18 PROFIT TAX—(continued)**

In the context of the Group's current structure, tax losses and current tax assets of the different companies may not be set off against current tax liabilities and taxable profits of other companies and, accordingly, taxes may accrue even where there is a net consolidated tax loss. Therefore, a deferred tax asset of one company of the Group is not offset against a deferred tax liability of another company. As at 31 December 2002 deferred tax assets in the amount of RR 9,835 have not been recorded for the deductible temporary differences for which it is not probable that sufficient taxable profit will be available to allow the benefit of that deferred tax asset to be utilised.

The temporary differences associated with undistributed earnings of subsidiaries amount to RR 105,453, RR 54,674 and RR 50,168 as of 31 December 2002, 2001 and 2000, respectively. A deferred tax liability on these temporary differences was not recognized because management controls the timing of the reversal of the temporary differences and believes that they will not reverse in the foreseeable future.

**19 FINANCIAL INSTRUMENTS**

**Available-for-sale investments: amounts reported in the statement of income**

The Group adopted IAS 39 at 1 January 2001. The impact on shareholders' equity at 1 January 2001 was a net gain of RR 627 in retained earnings for the re-measurement of available-for-sale securities, stated at fair value as of 1 January 2001.

	31 December	
	2002	2001
Unrealized fair value losses, net .....	(4,828)	(1,211)
Realized gains on sale, net .....	1,099	218
Losses on available-for-sale investments, net .....	(3,729)	(993)

**Derivative financial instruments**

As of 31 December 2002 the Group's banking subsidiaries had outstanding contracts to purchase and sell precious metals and foreign currencies at the market price at the date of maturity. The Group expects to settle these contracts in the normal course of business. These instruments are generally traded in an over-the-counter market with professional market counterparties on standardized contractual terms and conditions.

The following table provides an analysis of the Group's position and fair value of derivatives outstanding as of the end of the reporting period.

	31 December			
	2002		2001	
	Notional principal	Fair value	Notional principal	Fair value
Deliverable securities forward contracts .....	951	1,013	708	708
Deliverable forward currency contracts .....	651	655	4,062	4,071
Deliverable forward precious metal contracts .....	—	—	2,359	2,429
Written foreign currency option contracts .....	—	—	11,667	11,667
Total .....	1,602	1,668	18,796	18,875

As of 31 December 2001 the Group had outstanding forward foreign exchange contracts with Russian and foreign banks whereby it had agreed to buy or sell Russian Roubles in exchange for another currency at an exchange rate agreed to at the date of the contract. Some of these contracts were entered into prior to 17 August

**OAD GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**19 FINANCIAL INSTRUMENTS—(continued)**

1998 and matured during 1998, but had not yet been settled. The Group has been able to settle outstanding contracts with some counterparties and any resultant gains or losses have been recorded in the consolidated statement of income.

The Civil Code of the Russian Federation stipulates a three-year period for commencing action to enforce contracts. This period expired during 2001. On the basis of legal advice regarding the enforceability of these contracts under Russian law, market practices and the activities of other participants in the derivatives market in Russia, as well as a significant passage of time, management believes these contracts with domestic banks were no longer legally enforceable, and no losses will arise for the Group as a result of these contracts. Management has therefore not recorded any liabilities in respect of these contracts with domestic banks in the consolidated financial statements. Liabilities recorded under these contracts before 2001, amounting to RR 9,340, were released and recorded as derivative gains within operating expenses for the year ended 31 December 2001. The remaining written foreign currency option contracts with the principal amount of RR 11,667 at 31 December 2001 were due mostly by the Group banking subsidiary OAO AKB National Reserve Bank to foreign customers. In July 2002 the Group sold a 37% interest in the bank (see Note 28) and, accordingly, as of 31 December 2002 did not include the results of bank's operations into the Group's consolidated financial statements.

**20 PROVISIONS FOR LIABILITIES AND CHARGES**

<u>Note</u>		<u>31 December</u>		
		<u>2002</u>	<u>2001</u>	<u>2000</u>
..	Provision for pension obligations	19,386	13,921	10,715

**20 PROVISIONS FOR LIABILITIES AND CHARGES—(continued)**

The amounts recognized in the statement of income are as follows:

	Year ended 31 December	
	2002	2001
Current service cost .....	1,261	1,613
Interest cost .....	3,392	1,912
Net actuarial losses .....	434	—
Vested prior service cost .....	726	—
Net expense recognised in the statement of income .....	<u>5,813</u>	<u>3,525</u>

Movements in the net liability recognised in the balance sheet are as follows:

	Year ended 31 December	
	2002	2001
Net liability at the beginning of the reporting period .....	13,921	10,714
Net expense recognised in the income statement .....	5,813	3,525
Benefits paid .....	(348)	(318)
Net liability at the end of the reporting period .....	<u>19,386</u>	<u>13,921</u>

Principal actuarial assumptions used (expressed as weighted average):

	Year ended 31 December	
	2002	2001
Discount rate (real) .....	5%	8%
Future salary increases (real) .....	2%	2%
Employees average remaining working life (years) .....	19	17

**21 SHAREHOLDERS' EQUITY**

**Share capital**

Share capital authorised, issued and paid in totals RR 325,194 as of 31 December 2002, 2001 and 2000, and consists of 23.7 billion ordinary shares, each with a historical par value of RR 5.

**Dividends**

In 2002, the Group accrued and paid total dividends in the nominal amount of RR 0.44 per share in respect of 2001. In 2001, the Group accrued and paid final dividends for the year ended 31 December 2000 in the nominal amount of RR 0.23 per share. In 2000, the Group accrued and paid total dividends in the nominal amount of RR 0.19 per share (including interim dividends in the amount of RR 0.08 per share as well as final dividends in respect of 1999, in the amount of RR 0.11 per share).

In 2003 the Board of Directors recommended payment of a final dividend for the year ended 31 December 2002 in the amount of RR 0.40 per share. Because this decision of the Group management was reached after the balance sheet date and is subject to approval of the General shareholders meeting, the final dividend proposed in respect of 2002 has not been recognised in the consolidated balance sheet. If approved, the final dividend of RR 9,469 (including income tax on dividends in the amount of RR 667) will be paid prior to 31 December 2003.

**Treasury shares**

As of 31 December 2002, 2001 and 2000, subsidiaries of OAO Gazprom held 3,841, 2,672 and 2,684 million of the ordinary shares of OAO Gazprom. The Group controls the voting rights of these shares.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**21 SHAREHOLDERS' EQUITY—(continued)**

In September 2002 the Group entered into an agreement with OAO Stroytransgaz to establish a joint activity which was formally established in October 2002. The Group contributed promissory notes of OAO Gazprom with a fair value of RR 4,759 (face value RR 5,719) payable in January 2004 and OAO Stroytransgaz contributed 1,144 million of ordinary shares of OAO Gazprom. Voting rights for the ordinary shares of OAO Gazprom, held by the joint activity are controlled by the Group (see Note 33). Accordingly, as of 31 December 2002, the Group's contribution into the joint activity with OAO Stroytransgaz was classified as investment in treasury shares, and classified as a deduction from shareholders' equity.

**Retained earnings and other reserves**

Included in retained earnings and other reserves are the effects of the cumulative restatement to the equivalent purchasing power of the Rouble as of 31 December 2002. Also, retained earnings and other reserves include translation differences of RR 2,052, RR (1,532) and RR 857 arising on the translating of the net assets of foreign subsidiaries and associated undertakings for the years ended 31 December 2002, 2001 and 2000, respectively.

Other reserves include a statutory fund for social assets, created at the time of privatisation in accordance with Russian legislation. From time to time, the Group negotiates to return certain of these assets to governmental authorities, and this process may continue. Social assets with a net book value of RR 2,133, RR 5,360 and RR 7,414 have been transferred to governmental authorities during the years ended 31 December 2002, 2001 and 2000, respectively. These transactions have been recorded as a reduction of retained earnings and other reserves.

The statutory accounting reports of the parent company, OAO Gazprom, are the basis for profit distribution and other appropriations. The basis of distribution is defined by legislation as the current year net profit, as calculated in accordance with RAR. The statutory profit for the parent company was RR 53,513, RR 85,292 and RR 64,168 for 2002, 2001 and 2000, respectively. However, the legislation and other statutory laws and regulations dealing with profit distribution are open to legal interpretation and accordingly management believes at present it would not be appropriate to disclose an amount for the distributable reserves in these consolidated financial statements.

**22 SALES**

**OAQ GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)**

**22 SALES—(continued)**

Gas sales (net of VAT and excise tax) to customers in Russia include sales made to the regional trade houses of 222 billion cubic meters (bcm) and 141 bcm, or RR 94,117 and RR 56,568 for 2001 and 2000, respectively. For 2001 sales were made to the regional trade houses at prices approximately 4% below regulated prices set for sales to final customers in Russia.

In 2002, the Group took control of certain regional trade houses. Following their consolidation, beginning in 2002 the Group incurred excise tax on domestic sales in the amount of RR 14,469 for the year ended 31 December 2002 (see Note 28).

A significant part of the natural gas sold by the Group in Europe is transported through the territory of Ukraine. The existing contract with the major customer in Ukraine, the Group's largest FSU customer, stipulates that transit services provided to the Group in Ukraine are settled by gas sales. For the years ended 31 December 2002, 2001 and 2000 net gas sales to Ukraine in settlement of transit services were RR 33,442 (26.2 bcm), RR 27,440 (21.9 bcm) and RR 30,338 (22.6 bcm), respectively.

Gas transportation sales (net of VAT) are primarily comprised of sales to companies of the Itera Group totalling RR 13,920 (61 bcm), RR 15,936 (64 bcm) and RR 29,750 (71 bcm) for the years ended 31 December 2002, 2001 and 2000, respectively. Trade receivables in respect of gas transportation services supplied to the Itera Group amounted to RR 4,029, RR 11,994 and RR 14,798 as of 31 December 2002, 2001 and 2000, respectively. The Itera Group is a producer and distributor of gas in the Russian Federation and other former Soviet Union countries.

**23 OPERATING EXPENSES**

	<u>Year ended 31 December</u>		
	<u>2002</u>	<u>2001</u>	<u>2000</u>

Cost of goods for resale, including refined products .....	17,900	21,085	1,777
Impairment provision for accounts receivable .....	17,411	35,070	36,119
Electricity .....	13,449	11,430	11,072
Processing services .....	13,226	12,595	—
Purchased gas .....	9,957	7,466	12,137
Social expenses .....	7,013	6,088	3,481
Losses on disposal of property, plant and equipment .....	6,405	5,849	14,229
Insurance .....	5,825	4,147	1,334
Pension expense .....	5,813	3,525	2,582
Research and development .....	4,464	4,360	5,834
Impairment provision for investments and other long-term assets .....	—	2,550	30,578
Release of provision on forward foreign exchange contracts .....	—	(9,340)	(3,874)
(Release of) provision for impairment of assets under construction .....	(6,883)	6,503	34,188
Other .....	24,827	13,643	25,887
	<u>496,713</u>	<u>506,843</u>	<u>556,346</u>

During the year ended 31 December 2000, the Group purchased 9.0 bcm of Turkmenian gas from Itera LLC for RR 16,781. No gas was purchased from Itera LLC in 2002 and 2001. Additionally, in 2001 various Group subsidiaries purchased 1.4 bcm of gas from Itera Group companies for RR 740.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**23 OPERATING EXPENSES—(continued)**

Due to changes in the tax legislation of the Russian Federation, effective 1 January 2001, accounts receivable written off are subject to VAT. For the year ended 31 December 2001, this resulted in a charge of RR 10,303 related to VAT on accounts receivable balances written off during the period. The charge is included within the impairment provision for accounts receivable.

Taxes other than on income consist of:

	Year ended 31 December		
	2002	2001	2000
Mineral severance tax .....	20,485	—	—
Road users tax .....	10,369	9,924	28,951
Property tax .....	9,371	9,563	5,944
Royalty tax .....	—	12,633	10,329
Mineral restoration tax .....	—	9,090	5,189
Other taxes .....	3,750	5,079	5,763
	<u>43,975</u>	<u>46,289</u>	<u>56,176</u>

Taxes other than on income included in operating expenses are computed as follows:

- Effective 1 January 2002, the royalty and mineral restoration taxes were abolished and replaced by a mineral severance tax. The rate of mineral severance tax is 16.5% of the value of gas produced from gas condensate fields and RR 340 per ton of oil and gas condensate produced from oil and gas condensate fields. The latter rate is subject to adjustments depending on fluctuations of oil price and the RR exchange rate;
- Road users tax is charged on sales of Group entities; changes in legislation effective 1 January 2001 reduced the road users tax from 2.5% to 1.0% and abolished the housing fund tax. An additional RR 2,261 of road users' tax was accrued in 2002 in respect of unpaid accounts receivable as of 31 December 2002 as the tax is abolished from 1 January 2003;
- Property tax is imposed at a maximum rate of 2.0% on the average annual net book value of fixed assets, intangible assets, inventory and (effective from 1 January 2001) on assets under construction which were not completed within contracted terms. Legislation provides for the exclusion of trunk pipelines from the taxable base;
- In 2001 royalty tax was imposed at rates ranging from 6.0% to 16.0% of the sales value of gas and other hydrocarbons produced. The actual rates of the tax were dictated in field licenses and were based on various factors;
- In 2001 mineral restoration tax was charged at the rate of 10.0% of the sales value of gas and other hydrocarbons sold by the production subsidiaries paid. Under legislation, in 2001 up to 100% of mineral restoration tax assessments could have been offset by a sum equal to the value of certain exploration works performed and paid for by the Group. In 2001 and 2000 the Group recovered 32.4% and 39.9% of mineral restoration tax assessments using this provision.

All taxes and rates discussed above are calculated based on amounts recorded in accordance with Russian statutory accounting regulations.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**24 GAINS ON AND EXTINGUISHMENT OF RESTRUCTURED LIABILITIES**

<u>Note</u>	Year ended 31 December		
	2002	2001	2000
Gain on extinguished restructured tax liabilities .....	9,435	—	—
Gain on restructured other liabilities .....	3,124	1,596	—
15 Gain on restructured tax liabilities .....	1,349	21,526	23,037
	<u>13,908</u>	<u>23,122</u>	<u>23,037</u>

During 2002 an amicable agreement was signed by OAO AK Sibur with its creditors to restructure its liabilities (see Note 28). The present value of RR and foreign currency denominated liabilities, discounted at 17.1% and 8.7%, respectively, is RR 10,373. The resulting decrease is accounted for as an extinguishment of liability and the gain of RR 3,124 has been recognised in the consolidated statement of income. The increase of the carrying amount of the liability in subsequent years, as a result of the accretion of the discount, will be recognised in the statement of income as an interest expense.

**25 RECONCILIATION OF RAR PROFIT TO IFRS NET PROFIT**

	Year ended 31 December		
	2002	2001	2000
RAR profit per consolidated statutory accounts .....	121,598	115,565	83,095

IFRS net profit .....	<u>28,955</u>	<u>13,199</u>	<u>391,420</u>

**26 EARNINGS PER SHARE**

Earnings per share has been calculated by dividing the net profit for the year by the weighted average number of shares outstanding during the year, excluding the weighted average number of ordinary shares purchased by the Group and held as treasury shares (see Note 21).

There were 20.8 billion, 21.0 billion and 21.0 billion weighted average shares outstanding for the years ended 31 December 2002, 2001 and 2000 respectively.

#### **OAO AKB National Reserve Bank**

In connection with changes in RF Federal law No.208-FZ of 26 December 1995 “On Joint Stock Companies”, effective from 1 January 2002, the Group was not able to exercise its conversion rights on preference shares in OAO AKB National Reserve Bank. At the same time, the Group lost majority representation on the Board of Directors and no longer exercised control over the activities of the bank. Accordingly, effective 1 January 2002 the Group’s investment in the bank was classified as an investment in an associated undertaking. In July 2002, in accordance with the decision of the Board of Directors, the Group disposed of 37.0% of ordinary shares and all of its preference shares in OAO AKB National Reserve Bank with total carrying value of RR 1,979, in exchange for consideration consisting of promissory notes issued by OAO AKB National Reserve Bank with a fair value of RR 364 payable in June 2003, and 50 million of ordinary shares of OAO Gazprom. As of the date of the transaction ordinary shares of OAO Gazprom were traded at RR 30.6 per share (in nominal roubles). No gain or loss resulted from the disposal of the Group’s interest in OAO AKB National Reserve Bank. Following the transaction, the Group retains a 3.0% interest in OAO AKB National Reserve Bank, which is recorded within other long-term investments.

#### **Rosshelf**

The Rosshelf joint activity was established to develop the Prirazlomnoye and Schtokmanovskoye fields in the Barents Sea. OAO Gazprom and its subsidiary ZAO Rosshelf had 99.1% and 0.9% interest in the project, respectively. In October 2002 OAO Gazprom and its subsidiary ZAO Rosshelf signed an amendment to the Rosshelf joint activity agreement that provided for an additional participant—ZAO Sevmorneftegaz. ZAO Sevmorneftegaz is a company jointly controlled by ZAO Rosshelf and OAO Rosneft-Purneftegaz. Under the agreement ZAO Sevmorneftegaz will make a non-cash contribution valued at RR 4,334 in exchange for a 48.9% interest in the Rosshelf joint activity (see Note 33).

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 28 SUBSIDIARY UNDERTAKINGS—(continued)

##### OAD Vostokgazprom

In April 2002 the Group acquired an additional 32.8% of the voting shares of its production subsidiary OAD Vostokgazprom, increasing its interest from 51.0% to 83.8%. The consideration of RR 2 settled in cash approximates the fair value of purchased assets.

##### OAD Zapsibgazprom

In April 2002 the Federal Securities Commission cancelled the registration of additional stock issued by OAD Zapsibgazprom, a subsidiary of the Group. As a result, the Group increased its interest in the charter capital of OAD Zapsibgazprom from 34.0% to 51.1%.

In December 2002 the Group disposed of its 12% interest in OAD Arcticgas with a carrying value of RR 1 in exchange for 25.6% interest in OAD Zapsibgazprom and additional cash consideration of USD 2.95 million, increasing its interest in the ordinary share capital of OAD Zapsibgazprom from 51.1% to 76.7%. No significant gain or loss resulted from this transaction.

##### Media companies

Effective 1 January 2002 the Group's interests in media companies were reclassified from short-term available-for-sale investments to subsidiary undertakings as management announced its intention to operate these companies as subsidiaries rather than dispose of them. The media companies do not materially impact the financial position of the Group.

In July 2002 the Group acquired additional interests in ZAO Media-Most, in OAD TV Company NTV and in other media subsidiaries. Additionally, the Group acquired payables and promissory notes to third parties due by these companies. The consideration was partially settled in cash and partially through the forgiveness of debt owed to OAD Gazprom. As a result of this transaction the Group increased its interest in OAD TV Company NTV from 65.0% to 95.6% and in ZAO Media-Most from 14.3% to 38.6%. The Group has also increased its controlling interests in the other media subsidiaries. The transaction also provided for the Group to receive a further 39.6% interest in ZAO Media-Most but as of 31 December 2002 this interest was under arrest and the Group did not control the voting rights for these shares. As of 31 December 2002 ZAO Media Most was under liquidation and accordingly, the Group classified its 38.6% interest as other long-term investments.

In October 2002 the Group signed a framework agreement to sell non-controlling interests in several media companies, including OAD TV Company NTV, to Eurofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of ZAO Media-Most and its media companies. The disposed interests primarily comprised those acquired in July 2002. As a result, the Group's interest in OAD TV Company NTV reduced to 65.3%. Under the framework agreement, Eurofinance Group shall contribute cash and these acquired interests into a new media holding company, which will be controlled and majority-owned by OAD Gazprom. The Group's contribution into the new holding company will comprise the remaining interests in its media subsidiaries. The transactions are expected to close in the third quarter of 2003. Management does not believe that the financial effect of these transactions will be material to the Group. As of 31 December 2002 the Group continues to hold a controlling interest in the above media companies.

##### ZAO Purgaz

In April 2002 the Group completed the repurchase of 32.0% of the shares in ZAO Purgaz from Itera pursuant to the repurchase option provided by a share purchase agreement dated 10 February 1999. As a result, the Group's interest in ZAO Purgaz increased from 19.0% to 51.0%. ZAO Purgaz has a licence for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these ZAO

**28 SUBSIDIARY UNDERTAKINGS—(continued)**

Purgaz shares, the Group paid Itera RR 33 thousand in cash and financed ZAO Purgaz repaying RR 6,594 of original financing provided by Itera to ZAO Purgaz to finance development work. The consideration approximated the fair value of the incremental interest in the net assets acquired.

**OAD AK Sibur**

In January 2001 the Group acquired 51% of the voting shares of OAD AK Sibur. OAD AK Sibur is a leading seller of petrochemical products in Russia, it is also involved in light hydrocarbons processing. The consideration of RR 3,015 was settled by a combination of cash, promissory notes of Group companies and other securities.

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Cash paid .....	863
Promissory notes of Group companies .....	1,365
Shares in other investments .....	<u>787</u>
Total purchase consideration .....	3,015
Fair value of identifiable net assets acquired .....	<u>(1,130)</u>
Goodwill .....	<u>1,885</u>

Other than for short-term investments, the fair value of the net assets approximated the book value of the net assets acquired.

The net cash flow arising from the acquisition is as follows:

Total purchase consideration .....	<u>3,015</u>
Less:	
Cash and cash equivalents acquired .....	(1,200)
Promissory notes of the Group companies .....	(1,365)
Shares in other investments .....	<u>(787)</u>
Net cash received on acquisition .....	<u>(337)</u>

OAD AK Sibur is one of the founders of OAD Gazsibcontract with a 45% interest in the charter capital. As a result of acquiring OAD AK Sibur the Group's effective share in the charter capital of OAD Gazsibcontract increased from 51% to 74%.

In December 2001 the Group subsidiary OAD AK Sibur purchased interests in the following companies:

<u>Companies (subsidiaries and associated undertakings)</u>	<u>Purchased interest as of 31 December 2001 (%)</u>
OAD Kemerovsky Azot .....	75
OAD Kautchuk .....	100
OAD Uralorgsintez .....	51
OAD Volzhsky AKZ .....	51
OAD Sibur-Tyumen .....	42
OAD Stirol .....	42

Interests in the above companies, all of which are involved in the petrochemical industry in the Russian Federation, were purchased from OOO IT. Total fair value of consideration paid to OOO IT was RR 7,472, of

## OAD GAZPROM

#### 28 SUBSIDIARY UNDERTAKINGS—(continued)

which RR 4,250 was attributable to acquired subsidiaries. The Group management is currently unable to assess whether the transaction with OOO IT is a related party transaction or if OOO IT is a related company to former management of OAO AK Sibur.

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Promissory notes of OAO AK Sibur's related parties and contractors at fair value .....	4,250
Total purchase consideration .....	4,250
Less fair value of identifiable net assets acquired .....	(1,442)
Goodwill at acquisition .....	2,808
Less goodwill impaired .....	(2,808)
Unamortised goodwill as of 31 December 2001 .....	—

In the first quarter of 2002 external supervision was introduced in respect of OAO AK Sibur under decision of the arbitration court. The arbitration court has cancelled the decision on placement of additional stock issue as a result of which OAO Gazprom could have lost control over OAO AK Sibur. As a result, OAO Gazprom maintains control over OAO AK Sibur.

On 10 September 2002 the creditors' meeting approved an amicable settlement agreement, which was subsequently approved by the court. The agreement provides for the restructuring and rescheduling of OAO AK Sibur's debts generally over a period of 8 years with first payments due in 2004.

#### Regional trade houses

Commencing in 1999 the Group has been participating in the creation of regional trade houses involved in the distribution of gas in Russia. In 2002 the interest of the Group in the majority of such companies increased from 20% to 51% of their share capital and these companies were consolidated.

#### Lebedinsky GOK

In January 2001 the Group exchanged a 57% interest in Lebedinsky GOK and a 17% interest in Oskolsky EMK for a 48% interest in ZAO Gazmetall. ZAO Gazmetall is a metallurgical holding company with controlling interests in Lebedinsky GOK and Oskolsky EMK. As the Group intends to sell its shares of ZAO Gazmetall, the investment has been classified as an available-for-sale investment. During the third quarter of 2001 management revalued the investment in ZAO Gazmetall to its estimated current market value of RR 2,302 recognising the net effect of revaluation in gains and losses on available-for-sale securities in the consolidated statement of operations. In March 2002 the Group made an agreement to sell its 48% interest in ZAO Gazmetall for USD 70 million. In accordance with the agreement the buyer of the above shares is OAO Oskolsky Metallurgical Plant, a subsidiary of ZAO Gazmetall.

#### Sovfintrade

In August 2001 the Group participated in the fourth stock issue of ZAO AKB Sovfintrade and as a result, the Group's interest in the bank's share capital increased from 65% to 94%, including 26% held by AB Gazprombank (ZAO).

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 28 SUBSIDIARY UNDERTAKINGS—(continued)

##### Gazavtomatika

In 2001 the Group's interest in OAO Gazavtomatika decreased from 51% to 49% as the Group did not participate in an additional share issue by OAO Gazavtomatika. However, due to the fact that the Group continued to exercise control over activities of the above company, it was still considered as subsidiary.

#### 29 MINORITY INTEREST

	Year ended 31 December		
	2002	2001	2000
Minority interest at the beginning of the reporting period .....	17,387	11,921	10,153
Minority interest share of net profit of subsidiary undertakings .....	667	5,339	2,074
Net change in minority interest as a result of (disposals) acquisitions .....	(7,877)	127	(306)
Minority interest at the end of the reporting period .....	<u>10,177</u>	<u>17,387</u>	<u>11,921</u>

#### 30 RELATED PARTIES

For the purpose of these financial statements, parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions as defined by IAS 24 "Related Party Disclosures". In considering each possible related party relationship attention is directed to the substance of the relationship, not merely the legal form.

Related parties may enter into transactions which unrelated parties might not, and transactions between related parties may not be effected on the same terms, conditions and amounts as transactions between unrelated parties.

The nature of the related party relationships for those related parties with whom the Group entered into significant transactions or had significant balances outstanding as of 31 December 2002, 2001 and 2000 are detailed below.

##### Government

The Government of the Russian Federation is the principal shareholder of the Group, directly owns approximately 38.37% of the issued shares of the Group. Government representatives also have the majority of seats on the Board of Directors. As of 31 December 2002 the subsidiaries of the Group held 16.2% of OAO Gazprom shares, through which they are entitled to vote as owners. Governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

As a condition of privatisation in 1992, the Government imposed an obligation on the Group to provide an uninterrupted supply of gas to customers in the Russian Federation at government controlled prices.

##### Directors' remuneration

OAO Gazprom paid to members of the Board of Directors and Management Committee salary and bonuses of approximately RR 143, RR 84 and RR 77 for the years ended 31 December 2002, 2001 and 2000, respectively. The salary and bonuses of members of the Board of Directors is subject to approval by the General Meeting of Shareholders. Salary and bonus compensation paid to members of the Management Committee is determined by the terms of annual employment contracts.

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 30 RELATED PARTIES—(continued)

##### Associated undertakings

Included within associated undertakings (see Note 11) is the loan receivable from EuRoPol GAZ S.A., in the amount of RR 27,344, RR 31,117 and RR 32,067 as of 31 December 2002, 2001 and 2000, respectively, issued by AB Gazprombank (ZAO), a subsidiary of the Group, at an interest rate of LIBOR + 2.6 %. Also included within associated undertakings as a component of the carrying amount are USD denominated receivables from EuRoPol GAZ S.A. of RR 8,555, RR 12,495 and RR 16,584 as of 31 December 2002, 2001 and 2000, respectively.

Associated undertakings include a loan receivable from WINGAS GmbH, in the amount of RR 14,331, RR 13,732 and RR 17,728 as of 31 December 2002, 2001 and 2000, respectively. The interest rates vary for different loan tranches. As of 31 December 2002 the aggregate effective interest rate for the loan receivable from WINGAS GmbH was 5.56%.

Included within accounts receivable are accounts receivable from Group associates (excluding EuRoPol GAZ S.A.) in the amount of RR 15,767, RR 17,571 and RR 15,127 as of 31 December 2002, 2001 and 2000, respectively.

During periods ended 31 December 2002, 2001 and 2000 the Group sold gas to its associated undertakings in the amount of RR 74,068, RR 84,821 and RR 74,450, respectively.

Gas is sold to associated undertakings, except for that sold to AO Moldovagaz, on the basis of long-term contracts, at index prices based on world oil and gas prices. Gas prices per thousand cubic meters for such sales ranged from USD 67 to USD 131, from USD 75 to USD 144 and from USD 64 to USD 133 in the year ended 31 December 2002, 2001 and 2000, respectively. Gas is sold to AO Moldovagaz based on annual contracts with fixed prices. Prices of gas per thousand cubic meters sold to Moldova amounted to USD 80 in the year ended 31 December 2002, 2001 and 2000, respectively.

The Group's impairment provision on accounts receivable included RR 14,914, RR 14,378 and RR 16,232 in respect of amounts due from AO Moldovagaz as of 31 December 2002, 2001 and 2000, respectively.

In 2002 the Group purchased gas from ZAO KazRosGaz for RR 140 at USD 28 per tcm. In 2001 and 2000 no gas was purchased from ZAO KazRosGaz.

In addition, the Group purchased gas transportation services from certain of the associated undertakings, principally EuRoPol GAZ S.A., which amounted to RR 13,795, RR 10,098 and RR 11,703 for the year ended 31 December 2002, 2001 and 2000, respectively. The cost of these services was determined based on prices of gas sold to these companies.

As of 31 December 2001, the Group had accounts payable for the contribution to charter capital due to ZAO Armrosgazprom of USD 126 million (RR 3,798). The Group settled the accounts payable in October 2002.

##### OAD AK Sibur

A substantial portion of OAD AK Sibur's transactions were executed with related parties. OAD AK Sibur's related party transactions are mainly with its associated undertakings listed below:

OAD Omskshina  
OAD Sibur-Neftekhim  
OAD Sibur-Tyumen  
OAD Tobolsky NKhK  
OOO Togliatti-Kauchuk

OAD Voltair-Prom  
OAD Voltair  
OAD Tomsky NKhZ  
OAD Voronezhsyntezkauchuk  
OAD Yaroslavskiy Shinniy Zavod

**OAO GAZPROM**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**30 RELATED PARTIES—(continued)**

The table below presents summarised financial information of OAO AK Sibur's and its subsidiaries for the years ended 31 December 2002 and 2001, after Group intercompany eliminations and before adjustments for minority interests:

	Year ended 31 December	
	2002	2001
Current assets .....	15,651	23,141
Non-current assets .....	17,870	7,679
Current liabilities .....	(27,978)	(46,068)
Non-current liabilities .....	(24,569)	(4,950)
	(19,026)	(20,198)
Sales .....	36,047	57,208
Operating expenses .....	(31,191)	(66,695)
Net loss .....	(3,732)	(23,703)

**OAO Stroytransgaz**

OAO Stroytransgaz is a major Russian constructor of pipelines, compressor stations and oil refineries. In the normal course of business, the Group enters into transactions with OAO Stroytransgaz for the construction of pipelines in the Russian Federation on the basis of the results of tenders. During years ended 31 December 2002, 2001 and 2000 transactions with OAO Stroytransgaz were entered into under contracts which had been executed by certain prior representatives of the Group's Board of Directors and members of their families who at that time owned significant shareholdings in OAO Stroytransgaz.

OAO Stroytransgaz rendered construction services for the Group in the amounts of RR 32,278, RR 39,963 and RR 32,397 for the year ended 31 December 2002, 2001 and 2000, respectively. As of 31 December 2002, 31 December 2001 and 31 December 2000, the Group had advances and receivables due from OAO Stroytransgaz in the amounts of RR 6,276, RR 8,507 and RR 2,320, respectively. As of 31 December 2002, 31 December 2001 and 31 December 2000, the Group had accounts payable to OAO Stroytransgaz in respect of construction of RR 10,911, RR 18,610 and RR 12,463, respectively. As of 31 December 2001 and 31 December 2000 receivable due from OAO Stroytransgaz in connection with finance arrangements for construction for the Group undertaken by OAO Stroytransgaz in amount of RR 4,050 and RR 8,016, respectively, net of an impairment provision in the amount of nil, was included within other long-term assets.

**AEB**

In 2002, 2001 and 2000 the Group obtained short-term loans from AEB, an associated undertaking of AB Gazprombank (ZAO), for the total amount of RR 4,530 (9.0% interest), RR 3,385 (14.8% interest) and RR 3,366 (12.5%), respectively.

**OOO Interprokom**

During the years ended 31 December 2002, 2001 and 2000, respectively, transactions with OOO Interprokom were entered into under contracts which had been executed by certain prior members of the Board of Directors and a member of the Management Committee of the Company and members of their families who at that time or currently own significant interests in OOO Interprokom.

OOO Interprokom acts as an agent for the Group in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. OOO Interprokom acted as an agent in the Group's acquisition of RR 8,021, RR 11,611 and RR 6,311 of equipment year ended 31 December 2002, 2001 and 2000,

## OAO GAZPROM

#### 30 RELATED PARTIES—(continued)

respectively. As of 31 December 2002, 2001 and 2000, the Group had advances and receivables due from OOO Interprokom in the amount of RR 877, RR 650 and RR 3,350, respectively. Commission paid to OOO Interprokom amounted to RR 113, RR 107 and RR 83 for year ended 31 December 2002, 2001 and 2000, respectively. As of 31 December 2002, 2001 and 2000, the Group had accounts payable to OOO Interprokom in respect of equipment supplies of RR 5,265, RR 8,708 and RR 6,965, respectively.

AB Gazprombank (ZAO), the Group's principal banking subsidiary, had outstanding import letters of credit issued on behalf of OOO Interprokom and sub-contractors of OOO Interprokom in the amount of RR 6,982, RR 9,751 and RR 11,086 as of 31 December 2002, 2001 and 2000 and, respectively. These import letters of credit are issued to third party suppliers in connection with the purchase of equipment by OOO Interprokom on behalf of the Group.

#### 31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS

##### Operating environment

The operations and earnings of the Group continue, from time to time and in varying degrees, to be affected by political, legislative, fiscal and regulatory developments, including those related to environmental protection, in the Russian Federation. Due to the capital-intensive nature of the industry, the Group is also subject to physical risks of various kinds. The nature and frequency of these developments and events associated with these risks as well as their effect on future operations and earnings, are not predictable.

##### Legal proceedings

The Group is a party to certain legal proceedings arising in the ordinary course of business. Additionally, the Group is subject to various environmental laws regarding handling, storage, and disposal of certain products and is subject to regulation by various governmental authorities. In the opinion of management, there are no current legal proceedings or other claims outstanding which could have a material adverse effect on the result of operations or financial position of the Group.

##### Taxation

Russian tax legislation is subject to varying interpretations and frequent changes. Further, the interpretation of tax legislation by tax authorities as applied to the transactions and activity of the Group may not coincide with that of management. As a result, transactions may be challenged by tax authorities and the Group may be assessed additional taxes, penalties and interest, which can be significant. Under Russian legislation, penalties are levied at 20% of the tax amount underpaid and interest is charged at a rate of  $\frac{1}{300}$  of the refinancing rate of the Central Bank of the Russian Federation per day (see Note 15). The Group's tax records remain open to review by the tax and customs authorities with respect to tax liabilities for three years.

##### Group changes

The Group is continuing to be subject to reform initiatives in the Russian Federation and in some of its export markets and the future direction and effects of any reforms are the subject of political considerations. Potential reforms in the structure of the Group, tariff setting policies, settlements of outstanding debts by governmental entities, and other government initiatives could each have a significant, but undeterminable, effect on enterprises operating in the Group.

##### Environmental matters

The enforcement of environmental regulation in the Russian federation is evolving and the enforcement posture of government authorities is continually being reconsidered. The Group periodically evaluates its

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS—(continued)**

obligations under environmental regulations. As obligations are determined, they are recognised immediately. Potential liabilities which might arise as a result of stricter enforcement of existing regulations, civil litigation or changes in legislation or regulation cannot be reasonably estimated, but could be material. In the current enforcement climate under existing legislation, the Group management believes that there are no significant liabilities for environmental damage, other than amounts that have been accrued in the consolidated financial statements.

**Social commitments**

The Group significantly contributes to the maintenance and upkeep of the local infrastructure and the welfare of its employees in the areas of its production operations, including contributions toward the construction, development and maintenance of housing, hospitals, transport services, recreation and other social needs.

**Financial guarantees**

	31 December		
	2002	2001	2000
Outstanding guarantees issued on behalf of:			
BSPC .....	37,258	21,890	—
Interconnector (UK) Limited .....	34,963	38,167	38,521
Itera Group companies .....	3,088	4,486	6,466
Albustan Investments Ltd .....	2,843	—	—
ZAO Media-Most .....	—	—	10,073
OA0 AK Sibur .....	—	—	6,213
Other .....	9,555	15,741	7,055
	87,707	80,284	68,328
Less: provision for guarantees .....	—	—	(11,918)
	87,707	80,284	56,410

Included in financial guarantees are amounts denominated in USD of USD 2,634 million, USD 2,119 million and USD 1,659 as of 31 December 2002, 2001 and 2000, respectively.

In April 2000, credit facilities were provided to BSPC, an associated undertaking (see Note 11), by a group of Italian and Japanese banks for the amount of RR 71,233 (USD 2,053 million) for the construction of the offshore portion of the Blue Stream pipeline. In 2001, the Group was obligated to provide guarantees on behalf of BSPC in respect of RR 39,152 (USD 1,187) related to these credit facilities. As of 31 December 2002 and 2001, BSPC had borrowed RR 37,258 (USD 1,172 million) and RR 21,890 (USD 631 million), respectively, of these credit facilities which were guaranteed by the Group, pursuant to its obligation.

The Group provided guarantees on behalf of Interconnector (UK) Limited in connection with equipment and fixed assets leased for the construction of the Interconnector gas pipeline linking the United Kingdom to Continental Europe. The Group has a 10% interest in Interconnector (UK) Limited.

Line "Other" includes mainly guarantees issued by subsidiaries under contracts for purchasing equipment, construction and installation works. As of 31 December 2002 and 2001 this balance includes guarantees issued by OA0 AK Sibur to third parties of RR 2,572 and RR 7,723, respectively.

NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

**31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS—(continued)**

**Capital commitments**

In the normal course of business, the Group has entered into contracts for the purchase of property, plant and equipment. The Board has approved a capital expenditure budget for 2003 of RR 179,800 including RR 73,840 in respect of capital expenditures related to the Yamal project.

**Supply commitments**

The Group has entered into long-term supply contracts for periods ranging from 5 to 20 years with various companies operating in Europe. The volumes and prices in these contracts are subject to change due to various contractually defined factors. As of 31 December 2002 no loss is expected to result from these long-term commitments.

**Loan commitments**

As of 31 December 2002, 2001 and 2000 the Group banking subsidiary AB Gazprombank (ZAO) had undrawn loan commitments related to credit facilities issued to external customers in amounts of RR 6,959, RR 2,804 and RR 867 respectively.

**32 FINANCIAL RISK FACTORS**

The Group's activities expose it to a variety of financial risks, including the effects of: changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Group's overall risk management focuses on the unpredictability of financial markets and seeks to reduce potential adverse effects on the financial performance of the Group.

**Foreign exchange risk**

The Group operates internationally and is exposed to foreign exchange risk arising from various currency exposures primarily with respect to the US dollar and the Euro.

In an operational sense, the Group's exposure to foreign exchange risk is reduced by the existence of both costs (principally transit expenses) and income denominated in foreign currency. Similarly, the Group has significant receivables denominated in foreign currency, which in effect act as a partial economic hedge against similarly denominated liabilities, principally long-term borrowings.

The Group has investments in foreign entities (see Notes 11 and 28), whose net assets are exposed to currency translation risk. Currency exposure of the net assets of the subsidiaries is reduced primarily through borrowings denominated in Euro. Exchange differences on the euro loans are recognized in the statement of income.

**Interest rate risk**

The Group borrows long-term debt principally at variable (LIBOR referenced) rates. Currently the Group does not operate a formal management programme focusing on the unpredictability of financial markets or seeking to minimize potential adverse effects on the financial performance of the Group. The Group has no significant interest-bearing assets.

**Credit risk**

Financial instruments, which potentially subject the Group to concentrations of credit risk primarily consist of accounts receivable including promissory notes. Credit risks related to accounts receivable are systematically monitored and are considered when impairment provisions are created. A significant portion of the Group's

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 32 FINANCIAL RISK FACTORS—(continued)

accounts receivable are from local gas distribution companies and energy companies. Although collection of these receivables could be influenced by governmental and other economic factors affecting these industries, management believes there is no significant risk of losses to the Group, other than to the extent to which provision for impairment of receivables has already been made.

##### **Commodity risk**

Revenues generated by the transportation and distribution segments depend on volumes and commodity prices, both of which can be affected by the prices of natural gas and other hydrocarbons. A decline in energy prices could result in a decrease in net income and cash flows. An extended period of low prices could precipitate a decrease in development activities and could cause a decrease in the volume of reserves available for transportation and processing through the Group's systems or facilities and ultimately impact the Group's ability to deliver under its contractual obligations.

#### 33 POST BALANCE SHEET EVENTS

##### **Financial investments**

###### *Petrochemical companies*

In the third quarter of 2002 the Group signed agreements to acquire additional interests in a number of Russian petrochemical companies, the majority of which were already affiliated with OAO AK Sibur. The consideration to be paid is expected to consist primarily of long-term promissory notes which mature in 2005 with nominal value of RR 19,494. The fair value of the consideration has not yet been determined. As of 31 December 2002 the Group did not complete the majority of transactions and therefore did not control the voting rights associated with the additional interests. In April 2003, following the completion of the legal procedures the Group established control over majority of these companies and thereby increased its controlling interest in the charter capital of OAO AK Sibur from 50.7% to 75.7%. The management believes that the Group will not incur any substantial cash outflow in connection with these acquisitions.

###### *OAO Severneftegazprom*

In February 2003 the Group acquired a 51.0% additional interest in OAO Severneftegazprom from the Itera group at their nominal value (RR 102 thousand) and increased its interest in the share capital of OAO Severneftegazprom to 100%. At the same time the Group sold to Itera Group a 10.0% interest in OAO Sibirsky Oil and Gas Company at its carrying value of RR 2.55 plus a 7.8% interest in OAO Tarkosaleneftegaz at its total carrying value of RR 356. Management believes that the carrying value of consideration paid approximated the fair values of the Group's interest in the net assets acquired. OAO Severneftegazprom, a production company, holds a license for the development of the Yuzhno-Russkoye field.

###### *ZAO Agrochemical Corporation Azot*

In February 2003 the Group sold its 40.1% interest in the share capital of ZAO Agrochemical Corporation Azot at its carrying value of RR 394. The shares were sold to the other shareholders of Azot as a result of the latter taking advantage of the pre-emptive purchase rights. Management believes that fair values of the shares being exchanged approximated the contract amounts. In April 2003 the Group re-acquired 33.9% interest for RR 333. Additionally, in May 2003 the Group reached an agreement with the shareholders of ZAO Agrochemical Corporation Azot to acquire an additional 52.64% interest in ZAO Agrochemical Corporation Azot for RR 606.

###### *Rosshelf*

In February 2003 ZAO Sevmorneftegaz made its non-cash contribution valued of RR 4,334 in exchange for a 48.9% interest in the Rosshelf joint activity (see Note 28). The effect of this transaction was to decrease OAO

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 33 POST BALANCE SHEET EVENTS—(continued)

Gazprom's direct and indirect interest in the Rosshelf joint activity from 99.1% to 62.9%. Management does not believe that the financial effect of these transactions is material to the Group. As a result of the transaction OAO Gazprom and ZAO Rosshelf will have 48.7% and 2.4% direct interests in the joint activity, respectively.

##### *OAO Stroytransgaz*

In March 2003 OAO Stroytransgaz terminated its participation in the joint activity agreement with the Group (see Note 21) in return for promissory notes contributed by the Group into this joint activity in October 2002. As a result, the Group now owns (as well as votes) the treasury shares owned by the joint activity.

In April 2003 the Group acquired 25.9% of the ordinary shares of OAO Stroytransgaz. The consideration with the fair value RR 3,335 included investments, promissory notes and cash.

#### **Accounts receivable and prepayments**

In March 2003 OOO Lotsman repaid in cash the amounts due under loans issued by the Group's subsidiaries in 2002 (see Note 8).

#### **Borrowings**

In January 2003 OAO Gazprom received a loan from Deutsche Bank AG of USD 200 million for a two year period at an interest rate of 9.1% per annum.

In February 2003 OAO Gazprom signed a loan agreement with BNP Paribas Bank of Euro 200 million for one year period at an interest rate of 9.8% per annum.

In February 2003 OAO Gazprom received a loan from Morgan Stanley Bank AG in connection with the issuance of USD 1.75 billion Loan Participation Notes due 2013 at an interest rate of 9.625% per annum.

In March and April 2003 OAO Gazprom received a loan from DEPFA Investment Bank Ltd of USD 500 million due 2008 at an interest rate of 9.8% per annum.

In May 2003 ZGG, a Group subsidiary in Germany, repaid the outstanding balance of the loan payable to an international banking consortium totalling Euro 318 million. At the same time ZGG received another loan from a different consortium totalling Euro 280 million. The new loan bears interest at six-month EURIBOR plus margin. The margin can vary from 1% to 2% depending on the debt service cover ratio. As of the date of the borrowing receipt the interest rate was 4.2% per annum. The loan will be repaid from October 2003 to October 2007 (similar to the replaced loan).

#### **Treasury shares**

In March 2003, the Group entered into purchase agreements with OOO Lotsman and OOO Prom-Invest to acquire 286 million ordinary shares of OAO Gazprom for cash consideration of RR 7,635 (USD 0.85 per share).

In May 2003 the Group entered into a sale agreement with an affiliate of Ruhrgas AG to sell 117 million ordinary shares of OAO Gazprom for cash consideration of RR 3,109 (USD 0.86 per share).

APPENDIX A—DEGOLYER AND MACNAUGHTON LETTER

DEGOLYER AND MACNAUGHTON  
4925 GREENVILLE AVENUE, SUITE 400  
ONE ENERGY SQUARE  
DALLAS, TEXAS 75206

September 8, 2003

OAO Gazprom  
16A, Nametkina Street  
117884, Moscow B-420  
Russia

Gentlemen:

DeGolyer and MacNaughton has prepared estimates, as of December 31, 2002, of the extent and value of the proved and probable natural gas, oil, condensate, gas liquids, and sulfur reserves of certain fields in Russia owned or controlled by OAO Gazprom (Gazprom). These estimates will be presented in forthcoming reports being prepared for Gazprom by DeGolyer and MacNaughton listed in Attachment I, to this letter and are referred to collectively as "the Reports". The 20 fields evaluated are located in western Siberia and the Volga-Ural Province of Russia and include the following:

Astrakhan	Urengoi Oil
Bovanenko	Viengapursk
Gubkinsk	West Tarkosalinsk
Kharasevai	Yamburg
Komsomolsk	Yamsovieyskoye
Medvezhye	Yen-Yakha
North Urengoi	Yeti-Purovskoye
Novy Port	Yubileyne
Orenburg	Yuzhno Russkoye
Urengoi	Zapolarnoye

The estimated proved and probable gas, oil, condensate, gas liquids, and sulfur reserves owned or controlled by Gazprom, as of December 31, 2002, in the fields evaluated in the Reports, expressed in billions of cubic meters ( $10^9\text{m}^3$ ) and billions of cubic feet ( $10^9\text{ft}^3$ ), or millions of metric tons ( $10^6\text{mt}$ ) and millions of barrels ( $10^6\text{bbl}$ ), or millions of metric tons ( $10^6\text{mt}$ ) and millions of U.S. tons ( $10^6\text{U.S.t}$ ) are summarized below:

English Units  
Gazprom Separator Gas

	Total Proved	Probable	Proved Plus Probable
	(10 <sup>9</sup> ft <sup>3</sup> )	(10 <sup>9</sup> ft <sup>3</sup> )	(10 <sup>9</sup> ft <sup>3</sup> )

Notes:

1. There has been no adjustment applied to the value of probable reserves to account for risk.
2. Future net revenue and present worth include the value of sulfur reserves from the Astrakhan field, as shown in Attachment II.
3. The values shown for the Gubkinsk field and total include revenues attributable to the 49% interest in the field not owned by Gazprom.
4. In preparation of these estimates, future income tax expenses have been taken into account at the field level and for transportation of gas for export.

The estimates of reserves, future net revenue, and present worth of future net revenue summarized are subject to the definitions, assumption, qualifications, explanations, and conclusions expressed in the Reports. These summaries should be considered in view of the conditions of the Reports and are susceptible to being misunderstood apart from the Reports.

Very truly yours,

*DeGolyer and MacNaughton*

Attachment II

ESTIMATES  
of  
SULFUR RESERVES and REVENUE  
owned by  
OAO GAZPROM  
as of  
DECEMBER 31, 2002

	Gazprom Sulfur Reserves		Gazprom Sulfur Revenue	
	English Units (10 <sup>6</sup> U.S.t)	Metric Units (10 <sup>6</sup> mt)	Future Net Revenue (10 <sup>6</sup> U.S.\$)	Present Worth @ 10% (10 <sup>6</sup> U.S.\$)
Total Proved .....	146.71	133.09	605.42	202.46
Probable .....	31.77	28.82	131.10	4.29
<b>Proved plus Probable</b> .....	<b><u>178.48</u></b>	<b><u>161.91</u></b>	<b><u>736.52</u></b>	<b><u>206.75</u></b>

Notes:

1. Sulfur reserves are expressed as millions of metric tons (10<sup>6</sup>mt) and millions of U.S. tons (10<sup>6</sup>U.S.t).
2. All sulfur reserves are located in the Astrakhan field.
3. Probable reserves and associated revenue have not been adjusted for risk.

# Open Joint Stock Company Gazprom

## U.S.\$5,000,000,000

### Programme for the Issuance of Loan Participation Notes

to be issued by, but with limited recourse to,  
**Gaz Capital S.A.**, registered office at **2, Boulevard Konrad Adenauer, L-1115 Luxembourg**, Register of  
**Commerce and Companies Luxembourg B-95071**  
for the purpose of financing loans to

### Open Joint Stock Company Gazprom

Under the Programme for the Issuance of Loan Participation Notes described in this Offering Circular (the "Programme"), Gaz Capital S.A. (the "Issuer"), subject to compliance with all relevant laws, regulations and directives, may from time to time issue loan participation notes (the "Notes") on the terms set out herein, as supplemented by a pricing supplement (each a "Pricing Supplement") setting out the specific terms of each issue. The aggregate principal amount of Notes outstanding will not at any time exceed U.S.\$5,000,000,000 (or the equivalent in other currencies).

Notes will be issued in Series (as defined in "Summary of the Programme") and the sole purpose of issuing each Series will be to finance loans (each a "Loan") to Open Joint Stock Company Gazprom (the "Borrower," "Gazprom" or the "Company") as borrower, on the terms of a facility agreement between the Issuer and the Borrower dated September 22, 2003 (the "Facility Agreement"), as amended and supplemented by a loan supplement to be entered into in respect of each Loan on each Issue Date (each a "Loan Supplement" and, together with the Facility Agreement, the "Loan Agreement") between the Issuer and the Borrower. Subject as provided in the Trust Deed (as defined herein) the Issuer will charge, by way of first fixed charge as security for its payment obligations in respect of each Series of Notes and under the Trust Deed, its rights and interests as lender under the relevant Loan Agreement to Deutsche Bank Trust Company Americas as trustee (the "Trustee"), for the benefit of the holders of the corresponding Series of Notes (the "Noteholders") and will assign its administrative rights under such Loan Agreement to the Trustee (the "Assigned Rights").

In each case where amounts of principal, interest and additional amounts (if any) are stated to be payable in respect of a Series of Notes, the obligation of the Issuer to make any such payment constitutes an obligation only to account to the Noteholders, on each date upon which such amounts of principal, interest and additional amounts (if any) are due in respect of such Series of Notes, for an amount equivalent to all principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the corresponding Loan. **Noteholders will be deemed to have accepted and agreed that they will be relying solely on the credit and financial standing of the Borrower in respect of the payment obligations of the Issuer under the Notes.**

AN INVESTMENT IN THE NOTES INVOLVES A HIGH DEGREE OF RISK. SEE "RISK FACTORS."

**The Notes and the corresponding Loans (together, the "Securities") have not been, and will not be, registered under the U.S. Securities Act of 1933 (the "Securities Act") and, subject to certain exceptions, may not be offered and sold within the United States or to, or for the account or benefit of, U.S. persons. The Notes may be offered and sold (i) within the United States to qualified institutional buyers (as defined in Rule 144A under the Securities Act ("Rule 144A")) that are also qualified purchasers as defined in Section 2(a)(51) of the U.S. Investment Company Act of 1940 (the "Investment Company Act") in reliance on the exemption from registration provided by Rule 144A (the "Rule 144A Notes"); and (ii) to certain persons in offshore transactions in reliance on Regulation S under the Securities Act (the "Regulation S Notes"). The Issuer has not been and will not be registered under the Investment Company Act. Prospective purchasers are hereby notified that sellers of the Notes may be relying on the exemption from the provisions of Section 5 of the Securities Act provided by Rule 144A. For a description of these and certain further restrictions, see "Subscription and Sale" and "Transfer Restrictions."**

Application has been made to list the Notes issued under the Programme on the Luxembourg Stock Exchange. However, unlisted Notes may also be issued pursuant to the Programme. The relevant Pricing Supplement in respect of the issue of any Notes will specify whether or not such Notes will be listed on the Luxembourg Stock Exchange (or any other stock exchange).

Regulation S Notes of each Series which are sold in an "offshore transaction" within the meaning of Regulation S under the Securities Act ("Regulation S"), will initially be represented by interests in a global unrestricted Note in registered form (each a "Regulation S Global Note"), without interest coupons, which will be deposited with a common nominee for, and registered in the name of a common nominee of, Euroclear Bank S.A./N.V. as operator of the Euroclear System ("Euroclear") and Clearstream Banking, société anonyme ("Clearstream, Luxembourg") on its Issue Date. Beneficial interests in a Regulation S Global Note will be shown on, and transfers thereof will be effected only through records maintained by, Euroclear or Clearstream, Luxembourg. Rule 144A Notes of each Series sold to a qualified institutional buyer within the meaning of Rule 144A under the Securities Act, as referred to in, and subject to the transfer restrictions described in "Subscription and Sale" and "Transfer Restrictions," will initially be represented by a global restricted Note in registered form (each a "Rule 144A Global Note" and together with any Regulation S Global Notes, the "Global Notes"), without interest coupons, which will be deposited with a custodian for, and registered in the name of a nominee of, The Depository Trust Company ("DTC") on its Issue Date. Beneficial interests in a Rule 144A Global Note will be shown on, and transfers thereof will be effected only through, records maintained by DTC and its participants. See "Clearing and Settlement." Individual definitive Notes in registered form will only be available in certain limited circumstances as described herein. Application may also be made to have Rule 144A Notes designated as eligible for trading in the Private Offering, Resale and Trading through Automated Linkages ("PORTAL") System of the National Association of Securities Dealers, Inc., as specified in the applicable Pricing Supplement.

RECEIVED  
2005 APR -5 PM 2  
OFFICE OF THE  
CORPORATE

Gazprom, having made all reasonable enquiries, confirms that (i) this offering circular (the "Offering Circular") contains all information with respect to Gazprom, Gazprom and its subsidiaries taken as a whole (the "Group"), the Loans and the Notes that is material in the context of the issue and offering of the Notes; (ii) the statements contained in this Offering Circular relating to Gazprom and the Group are in every material particular true and accurate and not misleading; (iii) the opinions, expectations and intentions expressed in this Offering Circular with regard to Gazprom and the Group are honestly held, have been reached after considering all relevant circumstances and are based on reasonable assumptions; (iv) there are no other facts in relation to Gazprom, the Group, the Loans or the Notes the omission of which would, in the context of the issue and offering of the Notes, make any statement in this Offering Circular misleading in any material respect; and (v) all reasonable enquiries have been made by Gazprom to ascertain such facts and to verify the accuracy of all such information and statements. Gazprom accepts responsibility accordingly. The Issuer accepts responsibility for all information with respect to itself.

This Offering Circular does not constitute an offer of, or an invitation by or on behalf of the Issuer, Gazprom, the Dealers or the Arrangers to subscribe for or purchase, any Notes.

The distribution of this Offering Circular and the offer or sale of the Notes in certain jurisdictions may be restricted by law. Persons into whose possession this Offering Circular comes are required by the Issuer, Gazprom, any of the Dealers and the Arrangers to inform themselves about and to observe any such restrictions. Further information with regard to restrictions on offers and sales of the Notes and the distribution of this Offering Circular is set out under "Subscription and Sale."

No person is authorized to provide any information or make any representation not contained in this Offering Circular and any information or representation not contained in this Offering Circular and any information or representation so contained must not be relied upon as having been authorized by or on behalf of the Issuer, Gazprom, the Trustee, any of the Dealers or the Arrangers. The delivery of this Offering Circular at any time does not imply that the information contained in it is correct as at any time subsequent to its date.

None of the Issuer, Gazprom, the Dealers or the Arrangers or any of the respective representatives is making any representation to any offeree or purchaser of the Notes offered hereby, regarding the legality of an investment by such offeree or purchaser under appropriate legal investment or similar laws. Each investor should consult with their own advisors as to the legal, tax, business, financial and related aspects of purchase of the Notes.

In connection with any Series of Notes, the Dealer (if any) disclosed as a stabilizing agent (the "Stabilizing Agent") in the relevant Pricing Supplement (or any person acting for the Stabilizing Agent) may over-allot or effect transactions with a view to supporting the market price of Notes at a level higher than that which might otherwise prevail for a limited period. However, there may be no obligation on the Stabilizing Agent (or any agent of the Stabilizing Agent) to do this. Such stabilizing, if commenced, may be discontinued at any time and must be brought to an end after a limited period. Such stabilizing shall be in compliance with all applicable laws, regulations and rules.

**NO REPRESENTATION OR WARRANTY, EXPRESS OR IMPLIED, IS MADE BY THE DEALERS OR THE ARRANGERS AS TO THE ACCURACY OR COMPLETENESS OF THE INFORMATION SET FORTH IN THIS DOCUMENT, AND NOTHING CONTAINED IN THIS DOCUMENT IS, OR SHALL BE RELIED UPON AS, A PROMISE OR REPRESENTATION, WHETHER AS TO THE PAST OR THE FUTURE.**

**EACH PERSON CONTEMPLATING MAKING AN INVESTMENT IN ANY NOTES ISSUED UNDER THIS PROGRAMME FROM TIME TO TIME MUST MAKE ITS OWN INVESTIGATION AND ANALYSIS OF THE CREDITWORTHINESS OF GAZPROM AND THE ISSUER AND ITS OWN DETERMINATION OF THE SUITABILITY OF ANY SUCH INVESTMENT, WITH PARTICULAR REFERENCE TO ITS OWN INVESTMENT OBJECTIVES AND EXPERIENCE, AND ANY OTHER FACTORS WHICH MAY BE RELEVANT TO IT IN CONNECTION WITH SUCH INVESTMENT.**

**THE NOTES HAVE NOT BEEN APPROVED OR DISAPPROVED BY THE U.S. SECURITIES AND EXCHANGE COMMISSION, ANY STATE SECURITIES COMMISSION IN THE UNITED STATES OR ANY OTHER U.S. REGULATORY AUTHORITY NOR HAVE ANY OF THE FOREGOING AUTHORITIES PASSED UPON OR ENDORSED THE MERITS OF THE OFFERING OF NOTES OR THE ACCURACY OR THE ADEQUACY OF THIS OFFERING CIRCULAR. ANY REPRESENTATION TO THE CONTRARY IS A CRIMINAL OFFENSE IN THE UNITED STATES.**

## NOTICE TO NEW HAMPSHIRE RESIDENTS

NEITHER THE FACT THAT A REGISTRATION STATEMENT, OR AN APPLICATION FOR A LICENSE HAS BEEN FILED UNDER CHAPTER 421-B OF THE NEW HAMPSHIRE REVISED STATUTES WITH THE STATE OF NEW HAMPSHIRE NOR THE FACT THAT A SECURITY IS EFFECTIVELY REGISTERED OR A PERSON IS LICENSED IN THE STATE OF NEW HAMPSHIRE CONSTITUTES A FINDING BY THE SECRETARY OF STATE OF NEW HAMPSHIRE THAT ANY DOCUMENT FILED UNDER RSA 421-B IS TRUE, COMPLETE AND NOT MISLEADING. NEITHER ANY SUCH FACT NOR THE FACT THAT AN EXEMPTION OR EXCEPTION IS AVAILABLE FOR A SECURITY OR A TRANSACTION MEANS THAT THE SECRETARY OF STATE OF NEW HAMPSHIRE HAS PASSED IN ANY WAY UPON THE MERITS OR QUALIFICATIONS OF, OR RECOMMENDED OR GIVEN APPROVAL TO, ANY PERSON, SECURITY OR TRANSACTION. IT IS UNLAWFUL TO MAKE, OR CAUSE TO BE MADE, TO ANY PROSPECTIVE PURCHASER, CUSTOMER, OR CLIENT ANY REPRESENTATION INCONSISTENT WITH THE PROVISIONS OF THIS PARAGRAPH.

### ENFORCEABILITY OF JUDGMENTS

We, Gazprom, are an open joint stock company incorporated under the laws of the Russian Federation and most of our assets are currently located outside the United States and the United Kingdom. In addition, all of our directors and executive officers are residents of countries other than the United States and the United Kingdom. As a result, it may not be possible for you to:

- effect service of process within the United States and the United Kingdom upon any of our directors or executive officers named in this Offering Circular; or
- enforce, in the U.S. or English courts, judgments obtained outside United States or English courts against us or any of our directors and executive officers, named in this Offering Circular in any action.

In addition, it may be difficult for you to enforce, in original actions brought in courts in jurisdictions located outside the United Kingdom, liabilities predicated upon English laws.

Judgments rendered by a court in any jurisdiction outside the Russian Federation will be recognized by courts in Russia only if an international treaty providing for the recognition and enforcement of judgments in civil cases exists between the Russian Federation and the country where the judgment is rendered. No such treaty exists between the United States and the Russian Federation or the United Kingdom and the Russian Federation for the reciprocal enforcement of foreign court judgments.

Each Loan Agreement will be governed by English law and will provide the option for disputes, controversies and causes of action brought by any party thereto against us to be settled by arbitration in accordance with the Rules of the London Court of International Arbitration. The Russian Federation is a party to the United Nations (New York) Convention on the Recognition and Enforcement of Foreign Arbitral Awards. However, it may be difficult to enforce arbitral awards in the Russian Federation due to:

- the inexperience of the Russian courts in international commercial transactions;
- official and unofficial political resistance to the enforcement of awards against Russian companies in favour of foreign investors; and
- the inability of Russian courts to enforce such awards.

### DOCUMENTS INCORPORATED BY REFERENCE

This Offering Circular should be read and construed in conjunction with each relevant Pricing Supplement, any other amendment or supplement to this Offering Circular prepared from time to time in accordance with the undertakings by the Issuer and Gazprom in the Dealer Agreement described below, and the most recently published audited annual accounts and any interim accounts (whether audited or unaudited) published subsequently to such annual accounts, of Gazprom and the Issuer, which shall be deemed to be incorporated in, and to form part of, this Offering Circular and which shall be deemed to modify or supersede the contents of this Offering Circular to the extent that a statement contained in any such document is inconsistent with such contents. All documents incorporated by reference will be available free of charge from the offices of the Trustee and the Paying Agent in Luxembourg during normal business hours.

Any statement contained in a document incorporated herein by reference shall be deemed to be modified or superseded for the purposes of this Offering Circular to the extent that a statement contained in any subsequent document which is also incorporated herein by reference or that is a supplement hereto, modifies or supersedes such a statement (whether expressly, by implication or otherwise). Any statement so superseded shall not be deemed, except as so modified or superseded, to constitute a part of this Offering Circular.

### **SUPPLEMENTAL OFFERING CIRCULAR**

Gazprom will, in connection with the listing of the Notes on the Luxembourg Stock Exchange, so long as any Note remains outstanding and listed on such exchange, in the event of any material change in the condition of the Issuer or Gazprom which is not reflected in this Offering Circular, prepare a supplement to this Offering Circular or publish a new Offering Circular for use in connection with any subsequent issue of the Notes to be listed on the Luxembourg Stock Exchange.

The Issuer and Gazprom may agree with any Dealer that a Series of Notes may be issued in a form not contemplated by the Conditions herein, in which event a supplemental Offering Circular, if appropriate, will be published which will describe the effect of the agreement reached in relation to such Notes.

APPENDIX A—DEGOLYER AND MACNAUGHTON LETTER.....	A-1

In this document, the terms “Company,” “we,” “us” and “our” refer to Open Joint Stock Company Gazprom (also known as OAO Gazprom) and its subsidiaries, unless the context otherwise requires. Definitions of certain terms used in this document may be found under the heading “Glossary of Selected Terms.”

We measure our gas condensate and crude oil in metric tons. This document contains conversions of certain volumes from tons into barrels solely for the convenience of the reader. The conversion of volumes from metric tons to barrels varies at each of our fields due to different geological conditions. In this document, however, we use a conversion rate for all conversions of tons to barrels of one ton = 7.33 barrels. This document also contains conversions of cubic meters of natural gas and barrels of gas condensate and crude oil into barrels of oil equivalent solely for the convenience of the reader. In this document, we use a conversion rate for all conversions of one thousand cubic meters of natural gas = 5.8858 barrels of oil equivalent, one barrel of gas condensate = one barrel of oil equivalent and one barrel of crude oil = one barrel of oil equivalent.

Information contained under the heading “Overview of the Russian Gas Industry and its Regulation” includes extracts from information and data publicly released by official and other sources, and we accept responsibility for accurately reproducing such information and data but accept no further responsibility in respect of such information and data.

In this document, references to “roubles” and “RR” are to the lawful currency for the time being of the Russian Federation, references to “U.S. dollars,” “dollars,” “U.S.\$” and “\$” are to the lawful currency for the time being of the United States of America, references to “euro” and “€” are to the currency introduced at the start of the third stage of European economic and monetary union and references to “pounds,” “sterling” or “£” are to the lawful currency for the time being of the United Kingdom. This document contains conversions of certain amounts into dollars at specified rates solely for the convenience of the reader. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003. With effect from January 1, 1998, the rouble was redenominated, with one new rouble being set equal to one thousand old roubles. All references herein to amounts in “roubles” are references to new roubles, and any rouble amounts relating to the period prior to January 1, 1998 have been restated in new roubles. No representation is made that the rouble or dollar amounts referred to herein could have been or could be converted into roubles or dollars, as the case may be, at these rates, at any particular rate or at all.

## FORWARD-LOOKING STATEMENTS

Certain statements in this document are not historical facts and are “forward-looking.” This document contains certain forward-looking statements in various sections, including, without limitation, under the headings “Summary,” “Risk Factors,” and “Business.” We may from time to time make written or oral forward-looking statements in reports to shareholders and in other communications. Examples of such forward-looking statements include, but are not limited to:

- statements of our plans, objectives or goals, including those related to products or services;
- statements of future economic performance; and
- statements of assumptions underlying such statements.

Forward-looking statements that may be made by us from time to time (but that are not included in this document) may also include projections or expectations of revenues, income (or loss), earnings (or loss) per share, dividends, capital structure or other financial items or ratios.

Words such as “believes,” “anticipates,” “expects,” “estimates,” “intends” and “plans” and similar expressions are intended to identify forward-looking statements but are not the exclusive means of identifying such statements.

By their very nature, forward-looking statements involve inherent risks and uncertainties, both general and specific, and risks exist that the predictions, forecasts, projections and other forward-looking statements will not be achieved. You should be aware that a number of important factors could cause actual results to differ materially from the plans, objectives, expectations, estimates and intentions expressed in such forward-looking statements. These factors include:

- inflation, interest rate and exchange rate fluctuations;
- the price of natural gas;
- the effects of, and changes in, the policy of the government of the Russian Federation (the “Government”);
- the effects of competition in the geographic and business areas in which we conduct operations;
- the effects of changes in laws, regulations, taxation or accounting standards or practices;
- our ability to increase market share for our products and control expenses;
- acquisitions or divestitures;
- technological changes;
- the effects of international political events on our business; and
- our success at managing the risks of the aforementioned factors.

This list of important factors is not exhaustive. When relying on forward-looking statements, you should carefully consider the foregoing factors and other uncertainties and events, especially in light of the political, economic, social and legal environment in which we operate. Such forward-looking statements speak only as of the date on which they are made, and are not subject to any continuing obligations under the listing rules of the Luxembourg Stock Exchange. Accordingly, we do not undertake any obligation to update or revise any of them, whether as a result of new information, future events or otherwise. We do not make any representation, warranty or prediction that the results anticipated by such forward-looking statements will be achieved, and such forward-looking statements represent, in each case, only one of many possible scenarios and should not be viewed as the most likely or standard scenario.

[THIS PAGE LEFT INTENTIONALLY BLANK]

## SUMMARY

### Overview

We are the world's largest natural gas company, and the world's largest publicly-traded hydrocarbons company, in terms of reserves, production and transportation. We supply substantially all of the natural gas consumed in Russia, approximately 50% of the volume of natural gas consumed in the eight FSU countries to which we export our natural gas—Armenia, Belarus, Estonia, Georgia, Latvia, Lithuania, Moldova and Ukraine—and approximately 26% of the volume of natural gas consumed in Europe, making us the largest single supplier of natural gas to Europe. For the year ended December 31, 2002, our net sales were RR644,687 million (U.S.\$21.06 billion) and our operating profit was RR147,974 million (U.S.\$4.83 billion). For the nine months ended September 30, 2003, our net sales were RR597,382 million (U.S.\$19.5 billion) and our operating profit was RR182,022 million (U.S.\$5.95 billion). As of September 30, 2003, we had total assets of RR2,677,315 million (U.S.\$87.5 billion) and total shareholders' equity of RR1,819,821 million (U.S.\$59.5 billion).

*Reserves.* We estimate our reserves using Russian classifications and methodologies (the "Russian reserves system"), which differ significantly from internationally accepted classifications and methodologies developed by the Society of Petroleum Engineers and approved by the Joint Reserves Evaluation Committee ("SPE International Standards"), in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. As of December 31, 2003, we had Russian reserves system combined ABC1 reserves of 28.0 tcm (989.1 tcf) of natural gas, 1,279.8 million tons (9.4 bbls) of gas condensate and 569.1 million tons (4.2 bbls) of crude oil, for a total of 178,390.2 mmboe. Over 80% of our Russian reserve system combined ABC1 natural gas reserves are located in western Siberia and are geographically concentrated. As of December 31, 2003, our three largest producing fields, Urengoiskeye, Yamburgskoye and Zapolyarnoye, all located in the Yamal-Nenets Region in western Siberia, accounted for 12.9 tcm of ABC1 natural gas reserves, or 46% of our total combined ABC1 natural gas reserves. The majority of our reserves outside of western Siberia are located in the Barents Sea and southern Russia.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has evaluated our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had completed evaluations of 19 fields (21 deposits) accounting for approximately 89% of our combined ABC1 natural gas reserves, approximately 92% of our combined ABC1 gas condensate reserves and approximately 64% of our combined ABC1 crude oil reserves. As of December 31, 2002, these 21 fields contained proved reserves of 16.8 tcm (594.8 tcf) of natural gas, 374.9 million tons (2,748.0 mmbls) of gas condensate and 7.7 million tons (56.2 mmbls) of crude oil, for a total of 101,936.0 mmboe, and probable reserves of 1.9 tcm (67.1 tcf) of natural gas, 140.9 million tons (1,032.8 mmbls) of gas condensate and 98.8 million tons (724.1 mmbls) of crude oil, for a total of 12,863.1 mmboe. We believe that the fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties according to SPE International Standards.

SPE International Standards differ from the standards applied by the United States Securities and Exchange Commission ("SEC Standards"). See "Business—Reserves and Production—Reserves—Differences between SPE International Standards and SEC Standards."

*Exploration and Production.* As of March 31, 2004, licenses held by OAO Gazprom and our wholly-owned subsidiaries included 36 for exploration and assessment (without development rights) with terms of up to five years, 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of mostly between 18 and 23 years and 74 production licenses with initial terms of 20 to 25 years and with remaining terms of mostly between 11 and 23 years.

In the year ended December 31, 2003, we produced 540.2 bcm (19,078 bcf) of natural gas, 10.2 million tons (74.9 mmbls) of gas condensate and 802,800 tons (5.9 mmbls) of crude oil, for a total of 3,259.7 mmboe, as compared with 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbls) of gas condensate and 706,400 tons (5.2 mmbls) of crude oil, for a total of 3,149.6 mmboe, in the year ended December 31, 2002. In the nine months ended September 30, 2003, we produced 395.7 bcm (13,975 bcf) of natural gas, 7.5 million tons (55.2 mmbls) of gas condensate and 595,200 tons (4.4 mmbls) of crude oil, for a total of 2,388.6 mmboe, as compared with 380.2 bcm (13,427 bcf) of natural gas, 7.3 million tons (53.3 mmbls) of gas condensate and 527,100 tons (3.9 mmbls) of crude oil, for a total volume of 2,294.9 mmboe, in the nine months ended September 30, 2002.

Our natural gas production represented approximately 87.1% of total natural gas production in Russia in 2003, as compared with 87.7% in 2002. Four of our production subsidiaries, Urengoigazprom, Yamburggazdobycha, Noyabrskgazdobycha and Nadymgazprom, together produced 91.1% of our natural gas in 2003, as compared with 91.8% in 2002. The Zapolyarnoye field, which came on stream in the third quarter of 2001, produced approximately 67.5 bcm and 36.8 bcm of natural gas in 2003 and 2002, or approximately 12% and 7% of our total natural gas production in those years, respectively.

*Exports.* We export our natural gas to Europe through our wholly-owned trading subsidiary, OOO Gazexport ("Gazexport"). Our exports to Europe accounted for approximately 27.4% and 27.2% of the volume of the natural gas we sold in 2002 and 2001, respectively, and 63.3% and 69.4% of our natural gas net sales revenues in those years. Our exports to Europe accounted for approximately 29.7% and 29.5% of the volume of the natural gas we sold in the nine months ended September 30, 2003 and 2002, respectively, and 66.2% and 65.0% of our natural gas net sales revenues in those periods. According to the statistical survey CEDIGAZ—"Natural Gas in the World—2002" (July 2003), we supplied 20% of the volume of natural gas consumed in western Europe and 61% of the volume of natural gas consumed in central and eastern Europe in 2002. Most of our exports to Europe are transported by pipeline through Ukraine and through the Yamal-Europe pipeline.

*Domestic sales.* We sell our products domestically to large industrial consumers, to regional gas distribution companies and to household consumers. In the past, we did not sell natural gas to household consumers, but as we gained influence over regional gas distribution companies through the acquisitions described below we began to make sales to household consumers.

*Transportation.* We own and operate Russia's Unified Gas Supply System (the "UGSS"), which gathers, processes, transports, stores and delivers substantially all the natural gas sold in Russia. The UGSS comprises the world's largest high-pressure trunk pipeline system, with a total length of over 151,600 km (not including connecting pipelines), 263 compressor stations and 24 underground natural gas storage facilities. We control and manage the transportation of gas in the UGSS network from our central dispatch management center, located in Moscow. We transported 674.1 bcm and 637.1 bcm through the UGSS in 2003 and 2002, respectively. Although we use most of the UGSS capacity for the transportation of the natural gas we produce or purchase, we also provide gas transportation services to third parties. Deliveries on behalf of third parties accounted for 16.4% and 12.7% of the total volume of natural gas supplied through the UGSS in 2003 and 2002, respectively.

Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies. As of December 31, 2003, we had controlling interests in 114, and non-controlling interests in an additional 71, of the approximately 320 regional gas distribution companies in Russia. These regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

*Processing and Refining.* Our refining operations are carried out by our refining facilities, including those of our majority-owned petrochemicals subsidiary Sibur.

Our refining facilities, other than Sibur's, process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. The processing, stabilizing and refining of natural gas, gas condensate and crude oil is carried out by six integrated refineries that remove hazardous and corrosive substances from natural gas and gas condensate and produce a broad range of products. The refineries also stabilize and refine gas condensate and crude oil as a single crude oil and gas condensate mixture. Our refineries produce products derived from natural gas such as dry marketable natural gas, de-ethanized natural gas, liquefied natural gas, ethane, helium, sulfur and odorant. Stabilized and refined products derived from gas condensate and crude oil include stable gas condensate, gas condensate distillate, diesel fuel, furnace fuel oil and automobile gasoline. In 2003, our refining facilities, excluding Sibur's, processed and refined 39.7 bcm of natural gas and 17.2 million tons (125.7 mmbbls) of unstabilized gas condensate and crude oil, for a total volume of 359.4 mmboe, compared to 39.3 bcm of natural gas and 16.9 million tons (123.9 mmbbls) of unstabilized gas condensate and crude oil, for a total volume of 355.2 mmboe, in 2002.

For a discussion of Sibur, see "Business—Refining—Sibur."

*Relationship with the Government.* The Russian Federation currently owns 38.37% of our shares directly, and representatives of the state have a voting majority on our Board of Directors (six of 11 seats). Moreover, our subsidiaries held approximately 17.33% of our shares as of September 30, 2003, which they are entitled to vote as owners. In addition, our transportation activities are a "natural monopoly" under

the Russian Federal Law “On Natural Monopolies” No. 147-FZ dated August 17, 1995. As a result, the Government regulates and sets the prices we charge for gas supplied to the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations and our dividend policy. At the same time, we play a significant role in Russia’s financial system and economy. According to our analyses, we accounted for approximately 20% of federal budget revenues and approximately 10% of foreign exchange earnings of the Russian Federation in 2003. See “Risk Factors—Risks Relating to our Business—The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.”

### **Strategy**

Our main strategic objective is to maintain and strengthen our position as a leading gas company, both domestically and globally, by continuing to adapt to a rapidly changing business environment. To achieve this objective, we plan to:

- meet our production targets, including achieving our natural gas production target of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030;
- ensure the effective, reliable and balanced supply of gas to Russian customers; and
- fulfill our long-term export contracts and inter-governmental agreements on gas supply.

To implement these plans, we have developed a number of strategic priorities, including:

**Developing new cost-effective sources of supply from our existing reserves base to replace production declines in our largest fields.** Based on (i) our current export contract portfolio, (ii) anticipated future demand and prices domestically and (iii) our reserves base, we believe that achieving annual natural gas production of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030 is strategically optimal. In light of expected continuing production declines from three of our large west Siberian fields (Urengoiskeye, Yamburgskoye and Medvezhye), which accounted for approximately 61.8% of our total natural gas production in 2003, but only 35.9% of our total combined ABC1 natural gas reserves as of December 31, 2003, we intend to continue to invest in developing new production. Production from the Zapolyarnoye field began in 2001 and reached approximately 36.8 bcm in 2002 and 67.5 bcm in 2003. We intend to invest RR18.0 billion in 2004 and 2005 in developing the Zapolyarnoye field to full capacity, after which its production should reach 100 bcm per year. We also intend to invest in new production from our other western and eastern Siberian, Far Eastern and southern Russian deposits, the Yamal Peninsula and also in off-shore fields, including the Obsk-Tazovskaya Bay. See “Reserves and Production—Development Activities.” To develop and maintain this production as efficiently as possible, we intend to work closely with international energy service companies and local institutes, both of which are essential to ensuring the best use of the latest technologies.

**Purchasing gas from Central Asia.** To help maintain our natural gas sales while production from our mature fields declines and new fields are being developed, we have signed long-term agreements to purchase natural gas from Turkmenistan and Uzbekistan. Purchases from GTK Turkmenneftegaz, the state oil and gas company of Turkmenistan, are expected to be 5-6 bcm in 2004 and may rise to 6-7 bcm in 2005 and up to 10 bcm in 2006. Depending on available transportation capacity, these purchases could reach 60-70 bcm in 2007 and 70-80 bcm annually from 2009 to 2028. Purchases from Uzbekistan totaled 1.3 bcm in 2003, are expected to rise to 7 bcm in 2004 and up to 10 bcm annually from 2005 to 2012.

**Further developing transportation infrastructure to meet growing demand for gas and increase our flexibility in delivering gas to export and domestic markets.** We expect demand for natural gas in our core export market—Europe—to grow and for our European export obligations to grow accordingly. In order to integrate our production sites into our pipeline network and to continue to meet our contractual export obligations, we are developing new pipelines, such as the Zapolyarnoye-Urengoi pipeline, the northern areas of the Tyumen region-Torzhok (SRTO-Torzhok) pipeline, the Pochinki-Izobilnoye-North Stavropolskoye underground gas storage facility pipeline and the Yamal-Europe (Torzhok-Poland) pipeline. We have announced plans to develop a North European pipeline from northwest Russia (under the Baltic Sea) to the German shore and onwards through The Netherlands to the United Kingdom. We are also currently analyzing opportunities in Asian and other markets and the potential desirability of further investments in gas transportation infrastructure, including for liquified natural gas (“LNG”), to meet anticipated demand growth and market opportunities in China, Japan, the United States and elsewhere.

**Enhancing our refining capabilities.** Our long-term refining strategy is to enhance our competitive position in Russia, the FSU and Europe, in particular through our subsidiary Sibur, one of Russia's leading petrochemicals companies. We plan to modernize our gas processing and refining facilities at Sibur and elsewhere in order to increase our production of refined products overall (and our refining throughput) as well as the depth of our refining, allowing us to produce higher margin products.

**Enhancing profitability by capitalizing on the profitable and growing European export markets, while increasing cash generation from domestic and FSU sales.** In the first nine months of 2003, net sales of natural gas to Europe represented 29.7% of our total gas sales volumes and 66.2% of our net gas sales revenues. We expect to continue to increase our export sales volumes under our export contracts, thus contributing to our profitability. In addition, we intend to continue our current efforts to improve the profitability of our domestic sales by lobbying the Government for price increases and by improving payment discipline from domestic and FSU customers.

**Continuing to develop strategic partnerships, both in Russia and internationally.** We have entered into various strategic partnerships, both domestically and abroad, and are continually seeking new opportunities to maximize the value of our assets through these relationships. We have entered into cooperation agreements with Rosneft, including agreements for the development of the significant Shtokmanovskoye and Prirazlomnoye fields and, in conjunction with Surgutneftegaz, for the development of gas and oil fields and an integrated natural gas supply system in eastern Siberia and the Republic of Sakha (Yakutia). We have also entered into a strategic partnership agreement with OAO LUKOIL ("LUKOIL"), which produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries from 2002 to 2005. Under this agreement, we concluded a framework agreement in March 2003 according to which LUKOIL will sell us gas that it processes at its Nakhodkinskii field, an agreement in June 2003 on the development of hydrocarbon deposits in the Caspian Sea and a further agreement in October 2003 with respect to our purchasing gas produced at the Nakhodkinskii field. We have established a joint venture, WINGAS GmbH ("WINGAS"), with BASF AG ("BASF"), that owns pipelines in Germany and allows us to access the German market further downstream than by merely delivering gas at the border. We anticipate entering into strategic agreements with other domestic and international energy companies in the future.

**Building our research and development capabilities to ensure low-cost development, production and transportation of our gas to increasingly competitive markets.** We continue to invest in research and development in a number of scientific and technical areas. See "Business—Research and Development."

**Improving corporate governance and protecting shareholders' rights by introducing best-practice management techniques and increased levels of transparency.** At our 2002 general meeting of shareholders, we approved a new corporate governance charter outlining procedures for the protection of the rights of our shareholders, including our major shareholder, the Russian Federation, as well as our minority shareholders. In addition, our Board of Directors adopted resolutions on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) OAO Gazprom shares, or interests or participations that OAO Gazprom or its subsidiaries hold in other companies, (ii) loans or other borrowings by OAO Gazprom having a value of greater than 0.3% of OAO Gazprom's unconsolidated balance sheet assets determined under Russian accounting principles and (iii) purchases or disposals by OAO Gazprom or its subsidiaries of its assets having a value greater than 0.3% of its unconsolidated balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors. We are now in the process of adopting similar procedures at our subsidiaries. We have also launched several initiatives to measure more accurately and improve our operating and financial performance, including programs related to optimizing domestic sales (including increasing cash collection), increasing internal controls over budget planning and execution, deployment of investment capital and debt management and increasing control over our subsidiaries. Finally, we intend to continue our efforts with respect to increasing transparency through ongoing publication of interim and year-end IFRS financial information, improved levels of disclosure for public market financings and improved relations with our public shareholders. In general, we seek to instill in our managers a sense of personal responsibility for the success of our business.

### **History and Privatization**

Prior to 1991, the Russian gas industry was regulated by the Ministry of the Gas Industry. State-owned concern "Gazprom," which was formed in 1991, was the successor to the Ministry of the Gas Industry. This state-owned concern formed the basis for our transformation into a joint stock company in

accordance with Presidential Decree No. 1333 of November 5, 1992 "On the Transformation of the State Gas Concern Gazprom into Russian Joint Stock Company Gazprom" ("Decree No. 1333") and Resolution of the Council of Ministers of the Government of the Russian Federation No. 138 of February 17, 1993 "On the Establishment of Russian Joint Stock Concern Gazprom" ("Order No. 138"). Decree No. 1333 made us responsible for ensuring the efficient operation and development of the UGSS. Decree No. 1333 and the Presidential Decree of the Russian Federation No. 2116 of December 6, 1993 made us responsible for natural gas exports through Gazexport, our wholly-owned foreign trade subsidiary.

Decree No. 1333 charged us with the following principal tasks:

- ensuring a reliable supply of natural gas to customers in Russia and to foreign customers, and supplying gas abroad under inter-governmental and inter-state agreements;
- conducting a coordinated technical and investment policy for maintaining and further developing the UGSS;
- controlling the operation of the UGSS;
- financing and constructing natural gas pipelines and high pressure outlets to service areas of Russia where natural gas was previously unavailable; and
- providing access for any independent producer of natural gas to the UGSS in proportion to the amount of natural gas produced by such independent producer in Russia, subject to Government regulation of the natural gas price mechanism.

Our functions as owner of the UGSS and providing access to the UGSS are now regulated in accordance with the Federal Law No. 69 FZ dated March 31, 1999 "On Gas Supply in the Russian Federation" (the "Gas Supply Law").

The Council of Ministers of the Russian Federation approved our original Charter in Order No. 138, and we were registered as an open joint stock company on February 25, 1993. In 1993 and 1994 the Government issued us with licenses pursuant to the Subsoil Resources Law of 1992, granting us rights to exploit hydrocarbon reserves.

The Gas Supply Law states that at least 35% of the UGSS owner's shares (i.e., Gazprom) must be retained in federal ownership for an indefinite period of time and may only be disposed of pursuant to federal law. These shares, together with the 0.87% of our shares not placed during the privatization program in 1993 and 1994 and the 2.5% of our shares not sold in the second quarter of 1999, comprise the 38.37% of our shares currently directly held by the state.

### Summary Consolidated Financial Information

The summary consolidated financial information set forth below shows our historical consolidated financial information as of September 30, 2003 and 2002 and for the nine months then ended and as of December 31, 2002, 2001 and 2000 and for the years then ended. The annual consolidated financial information as of December 31, 2002, 2001 and 2000 and for the years then ended has been extracted from, and should be read in conjunction with, the annual audited consolidated financial statements included elsewhere in this Offering Circular. The unaudited interim consolidated financial information as of September 30, 2003 and 2002 and for the nine months then ended has been extracted from and should be read in conjunction with the unaudited consolidated interim condensed financial information included elsewhere in this Offering Circular. The annual and interim consolidated financial information should also be read in conjunction with "Management's Discussion and Analysis of Financial Condition and Results of Operations" below.

Our annual consolidated financial statements have been prepared in accordance with International Financial Reporting Standards ("IFRS"), including International Accounting Standards ("IAS") and Interpretations issued by the International Accounting Standards Board. Our interim consolidated condensed financial information is prepared in accordance with IAS 34. IFRS differs in certain respects from U.S. GAAP. For a summary of certain differences between IFRS and U.S. GAAP that are relevant to us, see "Management's Discussion and Analysis of Financial Condition and Results of Operations—Summary of Certain Differences between IFRS and U.S. GAAP."

All RR amounts related to financial information for periods prior to 2003 are expressed in constant RR as of December 31, 2002 purchasing power, unless otherwise noted. As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from January 1, 2003, we no longer apply the provisions of IAS 29, "Financial Reporting in Hyperinflationary Economies" ("IAS 29"). Accordingly, no adjustment for the effects of changes in general purchasing power have been made for periods starting from January 1, 2003. Corresponding figures for the nine month period ended September 30, 2002 have been restated in constant RR as of December 31, 2002 purchasing power.

For periods up to and including December 31, 2002, the impact of stating our financial information in terms of the measuring unit as of December 31, 2002 was to:

- inflate current period transactions recorded in the statement of operations of the local statutory books by the average rate of inflation for the period in order to state them in terms of the purchasing power of the RR as of the balance sheet date (i.e., using the average inflation factor of 1.0638 for all relevant transactions in the year ended December 31, 2002);
- restate the period end non-monetary assets and liabilities and shareholders' equity, including share capital, in terms of the measuring unit current as of the period end; and
- restate all comparatives, both monetary and non-monetary items, in terms of the purchasing power of the RR as of December 31, 2002.

The restatement of all comparatives, in particular, had a significant impact on our reported sales and operating profit. For example, domestic sales expressed in constant RR decreased when increases in nominal prices were lower than inflation and increased less than might otherwise be expected even when increases in nominal prices were higher than inflation. Our ability to increase the prices we charge for our natural gas sales in the domestic market is constrained by Government regulations. Moreover, the impact of U.S. dollar and euro price increases for our export sales was offset in recent periods, and the impact of U.S. dollar and euro price decreases was magnified in recent periods, by the real appreciation of the RR (i.e., by a rate of inflation that is higher than the rate at which the RR is depreciating against the U.S. dollar or euro). As a result, our reported sales lagged behind the changes in our actually realized prices in nominal terms. On the other hand, our costs, which are mainly in RR and are generally not regulated, tended to increase in line with or even above inflation in recent periods.

In addition, the restatement of all comparatives had a significant impact on our debt balances. For example, even though we borrowed more than we repaid during the years ended December 31, 2002, 2001 and 2000, the restatement of our comparatives into current purchasing power resulted in our reported debt balances having declined at each period end until December 31, 2002. (The ratios we show below are not affected by this, because the other components of the ratios are subject to similar adjustments.)

The U.S. dollar amounts set forth below were not included in our annual or interim consolidated financial information and are provided for convenience only. They should not be construed as

representations that the RR amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of the U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003.

Net debt/Adjusted EBITDA . . . . .	1.25 <sup>(10)</sup>		1.81 <sup>(10)</sup>		1.77		1.42		1.34	

Notes:

- (1) Includes impairment provisions for accounts receivable and prepayments, assets under construction, investments and other long-term assets, guarantees and inventory obsolescence.
- (2) Gross interest expense less interest income.
- (3) Monetary gain, exchange gains and gains on and extinguishment of restructured liabilities, less exchange losses. Monetary gain reflects the effect of inflation on our net monetary liability position as a result of the application of IAS 29 prior to 2003.

On September 3, 1999 the Government issued regulation #1002 allowing certain companies to negotiate the restructuring of various overdue taxes, interest and fines due to the federal government authorities over ten years. Interest accrues on the restructured tax payables (excluding interest and fines) at a rate of 5.5% per annum, representing 1/10 of the Central Bank of Russia's annual refinancing rate (55%) as specified in the regulation, and is paid quarterly. Current tax payments must be made timely. If the terms of the restructuring are violated, the original nominal value of the tax payable (including interest and fines) becomes due with additional interest of 1/300 of the Central Bank refinancing rate accruing for each day since the restructuring agreement.

Certain of our subsidiaries have signed such restructuring agreements. This resulted in the recognition of a gain in the respective periods based on the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables. This gain is reflected in gain on restructured taxes. Following the restructurings, we recognize the amortization of the discount and the interest accruing under the restructuring agreements as interest expense on taxes payable, which also includes interest that accrues when tax payments are overdue.

- (4) Share of net income (losses) of associated undertakings and gains (losses) on available-for-sale investments.
- (5) Cash and cash equivalents and certain restricted cash include balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations but exclude cash restricted as to withdrawal under banking regulations.
- (6) Operating profit plus depreciation and the provisions referred to in note 1 above except for provisions for accounts receivable and prepayments. Provisions for accounts receivable and prepayments were RR3,004 million and RR8,079 million for the nine months ended September 30, 2003 and 2002, respectively, and RR17,411 million, RR35,070 million and RR36,119 million for the years ended December 31, 2002, 2001 and 2000, respectively. Adjusted EBITDA should not be considered as an alternative to net profits, operating profit, net cash provided by operating activities or any other measure of performance under IFRS.
- (7) Interest expense on taxes payable, short- and long-term debt and other interest expense, excluding capitalized interest on borrowings. See note 3 above for an explanation of interest expense on taxes payable.
- (8) Short-term borrowings and current portion of long-term borrowings, short-term promissory notes payable, long-term borrowings, long-term promissory notes payable and restructured tax liabilities.
- (9) Total debt less cash and cash equivalents and balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations.
- (10) Based on Adjusted EBITDA for the twelve months ended September 30 and net debt as of the balance sheet date. Adjusted EBITDA was RR317,317 million and RR240,663 million for the twelve-month periods ended September 30, 2003 and 2002, respectively.

### **Summary Reserves Information**

We estimate our reserves of natural gas, gas condensate and crude oil using the “Russian reserves system,” which differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. See “Business—Reserves and Production—Reserves.”

The estimation of reserves of natural gas, gas condensate and crude oil can be broken down into two components: (i) geological reserves, or the quantities of natural gas, gas condensate and crude oil contained in the subsoil and (ii) extractable reserves, or the portion of geological reserves whose extraction from the subsoil as of the date the reserves are calculated is economically efficient given market conditions and rational use of modern extraction equipment and technologies and taking into account compliance with the requirements of subsoil and environmental protection.

The Russian reserves system is based solely on an analysis of geological reserves. Explored reserves are represented by categories A, B, and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. We have included in this Offering Circular only information about our explored reserves, or reserves in categories A, B and C1.

While the Russian reserves system focuses on the actual physical presence of hydrocarbons in geological formations, and reserves are estimated based on the probability of such physical presence, SPE International Standards take into account not only the probability that hydrocarbons are physically present in a given geological formation but also the economic viability of recovering the reserves (including such factors as exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for the products, and other factors that influence the economic viability of a given deposit).

Under SPE International Standards, reserves are classified as “proved,” “probable” and “possible,” based on both geological and commercial factors. We have included in this Offering Circular information about our proved and probable reserves as of December 31, 2002, 2001 and 2000 based on evaluations by DeGolyer and MacNaughton of certain of our fields according to SPE International Standards. SPE International Standards differ from SEC Standards. See “Business—Reserves and Production—Reserves—Differences between SPE International Standards and SEC Standards.”

The following table provides certain summary information about our combined ABC1 natural gas reserves as of December 31, 2003, 2002, 2001 and 2000. All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures, unless otherwise noted.

Combined (mmboe).....	178,390	179,483	179,312	183,721

Note:

- (1) As a result of our participation with Rosneft and other parties in a joint activity for the development of the Shtokmanovskoye and Prirazlomnoye fields, we included in our combined ABC1 reserves 50% of the reserves of these fields as of December 31, 2003, 62% of the reserves of these fields as of December 31, 2002 and 100% of the reserves of these fields for prior periods. See "—Projects and Alliances in Reserves and Production—Shtokmanovskoye and Prirazlomnoye fields."
- (2) Totals may not add due to rounding.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has evaluated our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had completed evaluations of 19 fields (21 deposits) accounting for approximately 91% of our combined ABC1 natural gas reserves, approximately 92% of our combined ABC1 gas condensate reserves and approximately 64% of our combined ABC1 crude oil reserves. We believe that the fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties according to SPE International Standards.

The following table provides certain summary information about our proved and probable natural gas reserves in the fields evaluated by DeGolyer and MacNaughton as of December 31, 2002, 2001 and 2000. All reserves amounts shown in the table below are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures unless otherwise noted.

Reserves in our fields evaluated to SPE International Standards <sup>(1)(2)</sup>	As of December 31,

Notes:

- (1) Data presented relates to the 19 fields (21 deposits), 17 fields (18 deposits) and 17 fields (18 deposits) evaluated by DeGolyer and MacNaughton as of December 31, 2002, 2001 and 2000, respectively.
- (2) Data presented here includes 90% of the reserves of the West Tarkosalinsk field. We do not hold a production license for this field; however, we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (3) Data presented here includes 100% of the reserves of the Gubkinskoye field, though we only hold a 51% proportionate interest through our subsidiary Purgaz.
- (4) Data presented here includes 49% of the reserves of the Yuzhno-Russkoye field. The license for this field is held by Severneftegazprom, in which we held a 49% interest as of December 31, 2002.
- (5) Amounts differ from those provided in the DeGolyer and MacNaughton letter attached as Appendix A because in this Offering Circular we use a conversion rate from metric tons to barrels of 1 ton = 7.33 barrels. Amounts in barrels provided in the DeGolyer and MacNaughton letter are calculated based on the specific gravities of each field.

### Summary Production Information

The following table presents summary production information for the periods indicated. Our production activities are more fully described in "Business—Reserves and Production."

**Notes:**

- (1) Includes 90% of the production at the West Tarkosalinsk field. We do not hold a production license for this field, but we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (2) Includes our 51% share in natural gas produced at the Gubkinskoye field subsequent to the consolidation of Purgaz into our consolidated financial statements in April 2002. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisitions and Dispositions."
- (3) Constitutes 100% of the output of Vostokgazprom. We are entitled to 100% of the production of Vostokgazprom, though we hold only an 83.8% interest. Vostokgazprom commenced production in the second quarter of 2002.
- (4) Totals may not add due to rounding.

## Summary Sales and Operating Information

The following table summarizes certain sales and operating information for the periods indicated. You should read this information together with our annual audited consolidated financial statements prepared in accordance with IFRS and unaudited consolidated interim condensed financial information prepared in accordance with IAS 34 included elsewhere in this Offering Circular and the information under "Management's Discussion and Analysis of Financial Condition and Results of Operations." See "Business" for a full description of our sales and operations.

All RR amounts in the following table for periods prior to January 1, 2003 are expressed in constant RR as of December 31, 2002 purchasing power. As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from January 1, 2003 we no longer apply the provisions of IAS 29. Accordingly, no adjustment for the effects of changes in general purchasing power has been made for periods starting from January 1, 2003. Corresponding figures for the period ended September 30, 2002 have been restated in constant RR as of December 31, 2002 purchasing power.

The U.S. dollar amounts were not included in our consolidated financial information and are provided for convenience only. They should not be construed as representations that the RR amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003.

## SUMMARY OF THE PROGRAMME

*The following summary contains basic information about the Notes and Loans and should be read in conjunction with, and is qualified in its entirety by, the information set forth under "Terms and Conditions of the Notes" and "Facility Agreement" appearing elsewhere in this Offering Circular.*

### Summary of Loans under the Programme

Each transaction will be structured as a Loan to Gazprom by the Issuer. The Issuer will issue Notes to Noteholders for the sole purpose of funding such Loan. Each Series will be constituted by a supplemental trust deed which is supplemental to a principal trust deed (together, the "Trust Deed"), each entered into between the Issuer and Deutsche Bank Trust Company Americas (the "Trustee"). Pursuant to the Trust Deed the Issuer will (i) charge by way of first fixed charge as security certain of its rights and interests under such Loan (other than certain Reserved Rights, as defined in the Trust Deed) to the Trustee for the benefit of the Noteholders of the corresponding Series of Notes and (ii) assign its administrative rights under the relevant Loan Agreement to the Trustee as security (together, the "Security Interests") for its payment obligations in respect of such Series of Notes. As a consequence of the assignment of the administrative rights under the Loan Agreement the Trustee shall assume the administrative rights of the Issuer as set out in the relevant provisions of the Trust Deed. If and when the first fixed charge of certain of the Issuer's rights and interests under any Loan is enforced, the Trustee will assume the rights of the Issuer under such Loan as set out in the relevant provisions of the Trust Deed, and the Trustee will assume certain rights and obligations towards the Noteholders, as more fully set out in the Trust Deed. Each issue of Notes will be made on a limited recourse basis and the Issuer will not have any obligations to the Noteholders save for to account to the Noteholders for amounts equivalent to the amounts of payments of principal and interest under any Loan if and to the extent received by it from Gazprom.

## Notes to be issued under the Programme

- Issuer..... Gaz Capital S.A. (the "Issuer").
- Gazprom (as Borrower)..... Open Joint Stock Company Gazprom (the "Borrower," "Gazprom" or the "Company") with its registered office and business headquarters at 16 Nametkina Street, 117884 Moscow, Russia.
- Description..... Programme for the Issuance of Loan Participation Notes pursuant to which the Issuer may issue loan participation notes (the "Notes").
- Programme Size..... Up to U.S.\$5,000,000,000 (or its equivalent in other currencies at the date of issue) aggregate principal amount of Notes outstanding at any one time. Gazprom may increase the amount of the Programme in accordance with the Dealer Agreement (as defined herein). For the purpose of calculating the aggregate principal amount of Notes outstanding, Notes issued at a premium shall be treated as having been issued at the amount of their net proceeds received by the Issuer.
- Arrangers ..... Deutsche Bank AG London and UBS Limited.
- Dealers ..... Deutsche Bank AG London, UBS Limited, ABN AMRO Bank N.V., Bayerische Hypo- und Vereinsbank AG, Commerzbank Aktiengesellschaft, Credit Suisse First Boston (Europe) Limited, J.P. Morgan Securities Ltd., Merrill Lynch International, Morgan Stanley & Co. International Limited, Renaissance Securities (Cyprus) Limited and Joint Stock Commercial Bank Rosbank.
- Pursuant to the terms of the Dealer Agreement, the Issuer, on Gazprom's instructions, may from time to time terminate the appointment of any dealer under the Programme or appoint additional dealers either in respect of one or more Series of Notes or in respect of the whole Programme. References in this Offering Circular to "Permanent Dealers" are to the persons listed above as Dealers and to such additional persons that are appointed as dealers in respect of the whole program (and whose appointment has not been terminated) and to "Dealers" are to all Permanent Dealers and all persons appointed as dealers in respect of one or more Series of Notes.
- Trustee ..... Deutsche Bank Trust Company Americas.
- Principal Paying Agent..... Deutsche Bank AG London, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another principal paying agent is appointed in respect of that Series. References in this Offering Circular to "Principal Paying Agent" are to Deutsche Bank AG London or such other alternative principal paying agent, as the case may be.
- Registrar..... Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that an alternative registrar is appointed in respect of that Series. References in this Offering Circular to "Registrar" are to Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative Registrar, as the case may be.

Paying Agents ..... Deutsche Bank AG London and Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another paying agent is appointed in respect of that Series. References in this Offering Circular to "Paying Agents" are to Deutsche Bank AG London, Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative paying agent, as the case may be.

Transfer Agents..... Deutsche Bank AG London and Deutsche Bank Luxembourg S.A., or, in relation to Notes sold pursuant to Rule 144A, Deutsche Bank Trust Company Americas, unless it is specified in the relevant Pricing Supplement relating to a Series of Notes that another transfer agent is appointed in respect of that Series. References in this Offering Circular to "Transfer Agents" are to Deutsche Bank AG London, Deutsche Bank Luxembourg S.A., Deutsche Bank Trust Company Americas or such alternative transfer agent, as the case may be.

Method of Issue ..... The Notes will be issued on a syndicated or non-syndicated basis. The Notes will be issued in series (each a "Series") having one or more issue dates and on terms otherwise identical (or identical other than in respect of the first payment of interest), the Notes of each Series being intended to be interchangeable with all other Notes of that Series. The specific terms of each Series will be set out in a pricing supplement to this Offering Circular (each a "Pricing Supplement") which shall supplement the Terms and Conditions of the Notes.

Issue Price of Notes ..... Notes may be issued at their principal amount or at a discount or premium to their principal amount.

Status..... Each Series of Notes will constitute the obligation of the Issuer to apply the proceeds from the issue of the Notes solely for financing the corresponding Loan and to account to the Noteholders for amounts equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to such Loan, all as more fully described in "Terms and Conditions of the Notes—1. Status."

Security..... Each Series of Notes will be secured by a first fixed charge on:

- all of the Issuer's rights to principal, interest and other amounts paid and payable under the relevant Loan Agreement and its right to receive all sums paid and payable under any claim, award or judgment relating to such Loan Agreement (in each case, other than its right to Reserved Rights and to any amounts in respect of Reserved Rights); and
- all the rights title and interest in and to all sums of money held from time to time in an account specified in the relevant Pricing Supplement, together with the debt represented thereby (including interest from time to time earned thereon and other than its right to Reserved Rights and to any amounts in respect of Reserved Rights) pursuant to the Trust Deed.

Assignment of Administrative Rights ..... The Issuer will assign its administrative rights under the relevant Loan Agreement (save for those rights charged or excluded above) to the Trustee upon the closing of the offering of the corresponding Series of Notes.

Form ..... The Notes will be issued in registered form. Each Series of Notes will be represented by a global unrestricted Note (each a "Regulation S Global Note") and, in the case of Notes sold pursuant to Rule 144A, a global restricted Note (each a "Rule 144A Global Note" and together with any Regulation S Global Notes, the "Global Notes"), in each case without interest coupons. Global Notes will be exchangeable for Notes in definitive form in the limited circumstances specified in the Global Notes.

Clearing Systems ..... DTC (in the case of Notes sold pursuant to Rule 144A), Clearstream, Luxembourg and Euroclear and, in relation to any Series, such other clearing system as may be agreed between the Issuer, the Borrower, the Paying Agent, the Trustee and the relevant Dealer. Application may be made for trading of Rule 144A Notes in PORTAL, as specified in the applicable Pricing Supplement.

Initial Delivery of Notes ..... On or before the issue date for each Series, the Regulation S Global Note shall be deposited with Deutsche Bank AG London as a common depository for Euroclear and Clearstream, Luxembourg and the Rule 144A Global Notes, if any, will be deposited with Deutsche Bank Trust Company Americas as custodian for DTC, as the case may be. Global Notes may also be deposited with any other clearing system or may be delivered outside any clearing system provided that the method of such delivery has been agreed in advance by the Issuer, the Borrower, the Paying Agent, the Trustee and the relevant Dealer(s). Notes that are to be credited to one or more clearing systems on issue will be registered in the name of nominees or a common nominee for such clearing systems.

Currencies. .... Subject to compliance with all relevant laws, regulations and directives, Notes may be issued in any currency agreed between the Issuer, the Borrower and the relevant Dealers.

Issues of Notes denominated in Swiss francs or carrying a Swiss franc related element with a maturity of more than one year (other than Notes privately placed with a single investor with no publicity) will be effected in compliance with the relevant regulations of the Swiss National Bank based on article 7 of the Federal Law on Banks and Savings Banks of 8 November 1934 (as amended) and article 15 of the Federal Law on Stock Exchanges and Securities Trading of 24 March 1995 in connection with article 2, paragraph 2 of the Ordinance of the Federal Banking Corporation on Stock Exchanges and Securities Trading of 2 December 1996. Under the said regulations, the relevant Dealer or, in the case of a syndicated issue the lead manager (the "Swiss Dealer"), must be a bank domiciled in Switzerland (which includes branches or subsidiaries of a foreign bank located in Switzerland or a securities dealer duly licensed by the Swiss Federal Banking Commission as per the Federal Law on Stock Exchanges and Securities Trading of 24 March 1995). The Swiss Dealer must report certain details of the relevant transaction to the Swiss National Bank no later than the relevant issue date for such a transaction.

Maturities ..... Subject to compliance with all relevant laws, regulations and directives, any maturity as may be agreed between the Issuer, Gazprom and the relevant Dealers.

Denomination ..... Notes will be in such denominations as may be specified in the relevant Pricing Supplement, save that unless otherwise permitted by then current laws and regulations, Notes which have a maturity of less than one year and in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the Financial Services and Markets Act 2000 will have a minimum denomination of £100,000 (or its equivalent in other currencies). Notes resold pursuant to Rule 144A shall be in denominations of U.S.\$100,000 (or its equivalent rounded upwards as agreed between the Issuer, Gazprom and the relevant Dealer(s)) or higher integral multiples of U.S.\$1,000. Where notes of any Series are intended for distribution in the Republic of Italy, the minimum denomination of any such Series should be €100,000 or equivalent and integral multiples of €1,000 thereafter, unless otherwise agreed with the Bank of Italy.

Rate of Interest ..... The Notes may be issued on a fixed rate or floating rate basis.

Fixed Rate Notes ..... Fixed interest will be payable in arrear on the date or dates in each year specified in the relevant Pricing Supplement.

Floating Rate Notes ..... Floating Rate Notes will bear interest determined separately for each Series and corresponding Loan as follows:

- (i) on the same basis as the floating rate under a notional interest rate swap transaction in the relevant Specified Currency governed by an agreement incorporating the 2000 ISDA Definitions, as published by the International Swaps and Derivatives Association, Inc.; or
- (ii) by reference to LIBOR, LIBID, LIMEAN or EURIBOR (or such other benchmark as may be specified in the relevant Pricing Supplement) as adjusted for any applicable margin.

Interest Periods and Interest

Rates ..... The length of the interest periods for the Notes and the applicable interest rate may differ from time to time or be constant for any Series. Notes may have a maximum interest rate, a minimum interest rate, or both. The use of interest accrual periods permits the Notes to bear interest at different rates in the same interest period. All such information will be set out in the relevant Pricing Supplement.

Redemption ..... The relevant Pricing Supplement will specify the basis for calculating the redemption amounts payable. Unless permitted by then current laws and regulations, Notes which have a maturity of less than one year and in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the Financial Services and Markets Act 2000 must have a minimum redemption amount of £100,000 (or its equivalent in other currencies).

Issuer's Restrictions and

Covenants ..... So long as any Note remains outstanding, the Issuer will not, without the consent of the Trustee, inter alia, incur any other indebtedness for borrower moneys, or enter into other transactions or engage in any business (other than transactions contemplated by this Offreing Circular), declare any dividends or have any subsidiaries. See "Terms and Conditions of the Notes – 4. Restrictive Covenants."

Optional Redemption by the Issuer in Limited Circumstances

In limited circumstances as more fully described in the relevant Loan Agreement, the Notes may be redeemed at the option of the Issuer in whole, but not in part, on any Interest Payment Date in the case of Floating Rate Notes or, at any time, in the case of Fixed Rate Notes upon giving notice to the Trustee, at the principal amount thereof, together with accrued and unpaid interest and additional amounts, if any, to the date of redemption in the event that it becomes unlawful for the Issuer to fund the Loan or allow the Loan to remain outstanding under the Loan Agreement or allow the Notes to remain outstanding. In such a case, the Issuer would require the Loan to be repaid in full.

Mandatory Redemption . . . . . The Issuer is required to redeem the Notes in whole, but not in part, at 100% of their aggregate principal amount plus accrued and unpaid interest and all additional amounts, if any, if we elect to repay any Loan in the event we are required to pay additional amounts on account of Russian or Luxembourg withholding taxes or in the event that we are required to pay additional amounts on account of certain costs incurred by the Issuer pursuant to the relevant Loan Agreement.

Relevant Events . . . . . In the case of certain events in relation to the Issuer (as defined in the "Terms and Conditions of the Notes"), the Trustee may, subject as provided in the Trust Deed, enforce the security created in the Trust Deed in favour of the Noteholders.

Withholding Tax . . . . . All payments of principal and interest in respect of each Series of Notes will be made in full without set-off or counterclaim and free and clear of and without deduction for or on account of all taxes, which are or will be imposed, assessed, charged, levied, collected, demanded, withheld or claimed by the Russian Federation or Luxembourg, or any taxing authority thereof or therein, other than as required by law. If any such taxes are payable, the sum payable by the Borrower to the Issuer will be required (subject to certain exceptions) to be increased to the extent necessary to ensure that the Noteholders receive the net sum which they would have received free from any liability in respect of any such deduction or withholding had no such deduction or withholding been made or required to be made. The sole obligation of the Issuer in this respect will be to pay to the Noteholders sums equivalent to the sum received from the Borrower.

Further Issues . . . . . The Issuer may from time to time issue further Notes of any Series on the same terms as existing Notes and such further Notes shall be consolidated and form a single Series with such existing Notes of the same Series.

Listing . . . . . Application will be made, where specified in the relevant Pricing Supplement, for a Series of Notes to be listed on the Luxembourg Stock Exchange or such other stock exchange as shall be specified in the relevant Pricing Supplement or the Series of Notes will remain unlisted.

Rating . . . . . Series of Notes issued under the Programme may be rated or unrated. Where a Series of Notes is rated, such rating will not necessarily be the same as the rating assigned to the Programme. A security rating is not a recommendation to buy, sell or hold securities and may be subject to suspension, reduction or withdrawal at any time by the assigning rating agency.

- Governing Law ..... The Notes will be governed by English law. For the avoidance of doubt, the provisions of articles 86 to 94-8 of the Luxembourg law of 10 August 1915, as amended, on commercial companies are excluded.
- Selling Restrictions ..... United Kingdom, United States, Luxembourg, Russian Federation, Italy and any other jurisdiction relevant to any Series. See "Subscription and Sale."
- ERISA Considerations..... A Series of Notes issued under the Programme may be regarded for ERISA purposes as equity interests in a separate entity whose sole asset is the Loan corresponding with that Series. Accordingly, the Notes should not be acquired by any benefit plan investor, regardless of whether the benefit plan investor is itself subject to ERISA. Each purchaser and/or holder of Notes and each transferee therefore will be deemed to have made representations that it is not a benefit plan investor. Potential purchasers should read the sections entitled "Certain ERISA Considerations" and "Transfer Restrictions."

**The Loan corresponding to each Series of Notes**

- Issuer (as Lender)..... Gaz Capital S.A.
- Borrower..... Gazprom
- Security and Ranking..... None of the Loans will be secured by any collateral. Each Loan will effectively rank below all of our secured debt and the debt and other liabilities of our subsidiaries.
- Interest Basis Dates ..... Interest will be payable on a fixed or floating rate basis as specified in the relevant Loan Supplement.
- Optional Redemption..... Each Loan may be prepaid at our option in whole, but not in part, on any Interest Payment Date in the case of Floating Rate Loans or, at any time, in the case of Fixed Rate Loans, at the principal amount thereof, together with accrued and unpaid interest and additional amounts, if any, to the date of repayment, for tax reasons or by reason of certain increased costs.
- Mandatory Repayments..... In the event that it becomes unlawful for the Issuer to fund any Loan or allow such Loan to remain outstanding under the Loan Agreement or allow the corresponding Series of Notes to remain outstanding, we may be required by the Issuer to repay such Loan in full.
- Certain Restrictions and  
Covenants..... The Issuer will have the benefit of certain covenants made by Gazprom, including a negative pledge and restrictions on mergers and disposals, all as fully described in the relevant Loan Agreement.
- Events of Default ..... In the case of an Event of Default (as defined in the relevant Loan Agreement), the Trustee may, subject as provided in the Trust Deed, require the Issuer to declare all amounts payable under the relevant Loan Agreement by Gazprom to be due and payable.
- Use of Proceeds of the Notes  
and the Loans ..... The Issuer will lend the net proceeds of the offering of each Series of Notes to Gazprom. We intend to use the net proceeds from such offering for general corporate purposes.

Withholding Tax ..... All payments of principal and interest under each Loan will be made in full without set-off or counterclaim and free and clear of and without deduction for or on account of all taxes which are or will be imposed, assessed, charged, levied, collected, demanded, withheld or claimed by Luxembourg or the Russian Federation, other than as required by law. If any such taxes, duties, fees or other charges are payable, the sum payable by the Borrower will be required (subject to certain conditions) to be increased to the extent necessary to ensure that the Noteholders receive the net sum which they would have received free from any liability in respect of any such deduction or withholding had no such deduction or withholding been made or required to be made. The sole obligation of the Issuer in this respect will be to pay to the Noteholders sums equivalent to the sums received by it from the Borrower.

## RISK FACTORS

*Prospective investors should consider carefully the risks set forth below and the other information contained in this Offering Circular prior to making any decision to invest. Each of the risks highlighted below could have a material adverse effect on our business, operations and financial condition which, in turn, could have a material adverse effect on our ability to service our payment obligations under any Loan and thus on debt service on the corresponding Series of Notes. In addition, the trading price of the Notes could decline due to any of these risks, and you could lose some or all of your investment.*

*You should note that the risks described below are not the only risks we face. We have described only the risks we consider to be material. However, there may be additional risks that we currently consider not to be material or of which we are not currently aware, and any of these risks could have the effects set forth above.*

### Risks Relating to Our Business

**The prices of the natural gas we sell in Europe under long-term contracts are linked to international prices for oil products, and so a decline in international prices for oil products could adversely affect us.**

We sell a substantial portion of our natural gas in Europe, which is our primary source of foreign currency revenues and cash flows. For more than 30 years, we and our predecessors have sold natural gas to purchasers in western Europe, generally pursuant to long-term contracts with prices linked to international prices for oil products. Changes in the prices we realize on natural gas under our long-term contracts with European customers typically lag about six to nine months behind changes in oil product prices. Such prices have fluctuated widely in response to changes in many factors, over which we have no control. These factors include:

- economic and political developments in oil producing regions, particularly in the Middle East;
- global and regional supply and demand, and expectations regarding future supply and demand, for oil products;
- the ability of members of the Organization of Petroleum Exporting Countries, or OPEC, and other crude oil producing nations to agree upon and maintain specified global production levels and prices;
- other actions taken by major crude oil producing or consuming countries;
- prices and availability of alternative fuels;
- global economic and political conditions;
- prices and availability of new technologies; and
- weather conditions.

Should international oil product prices deteriorate, the natural gas prices we realize under our long-term contracts with European customers would decline as well, resulting in a reduction in our export revenues. A decline in our European natural gas export revenues would adversely affect our business, results of operations, cash flows and financial condition, and our ability to finance planned capital expenditures.

In addition, the European Commission has expressed a desire to see a move from long-term contracts in favor of short-term contracts. Such an alteration of the basis on which we conduct our business could further increase our exposure to currency and gas and oil price fluctuations as well as potentially limit our ability to support long-term investment plans. We have held discussions with the EU in this regard and it has recognized the importance of long-term contracts to the continued development of the oil and gas industry. There can be no assurance that the EU will continue to support the use of long-term contracts, however, or that the outcome of further discussions will be to our benefit.

During the next nine years, export contracts accounting for almost one-third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012. Most of the contracts that are expiring contain clauses that provide for automatic renewal unless one party objects. Although we believe that these contracts will be renewed, no assurance can be given that we will be able to do so on favorable pricing and other terms or at all.

**We are required to supply natural gas to customers in Russia at prices that are regulated by the Government and that are lower than international natural gas prices.**

We are, and are likely to remain for the foreseeable future, a regulated monopoly. In Russia, natural gas prices are subject to control by governmental authorities and are significantly lower than the prices we charge to western European off-takers even after netting back export and customs duties and transportation costs. Moreover, domestic natural gas prices for households are currently less than natural gas prices for industrial and commercial end users, and the wholesale prices we are able to charge for gas delivered to households reflect this discount.

The Government has stated that, over time, natural gas prices for all customers in Russia will gradually be increased. Moreover, we believe that Government regulation of natural gas prices for domestic end-users will be abandoned in the long run in favor of free market prices; we believe that in the long run state regulation is likely to be maintained for natural gas transportation tariffs only.

No assurance can be given, however, that natural gas prices in Russia will increase, that consumers will be willing or able to pay increased natural gas prices or that the regulation of natural gas prices will be relaxed. If the Government decides to keep natural gas prices at artificially low levels, thereby effectively forcing us to continue to subsidize the rest of the Russian economy, there is a risk that we will not generate sufficient revenues to proceed with investments in the development of certain natural gas fields (for instance the Yamal Peninsula reserves) or to continue to develop export pipelines, or that we will be able to take these steps only through outside financing beyond currently anticipated requirements. If we are unable to develop these fields or export pipelines, or if we are able to do so only on the basis of additional outside financing, our future results of operations, cash flows and financial condition could be adversely affected.

In accordance with the Gas Supply Law, consumers are obliged to pay for natural gas supplies and transportation services. If consumers fail to make such payments, suppliers have the right to limit or suspend natural gas supplies to such consumers in accordance with specific procedures provided for by a number of Government resolutions. The Government of the Russian Federation has, however, issued a number of resolutions (e.g., Government Resolution No. 1 dated January 5, 1998 and Government Resolution No. 364 dated May 29, 2002) regulating the restriction or suspension of supplies to certain customers. These consumers include, *inter alia*, medical institutions, military units, nuclear plants, communication organizations and certain vital utilities.

**Delayed, non-collectable and non-cash payments by our customers in Russia and the FSU could adversely affect us.**

Our cash flows are adversely affected by the limited ability, or the inability, of our customers in Russia and FSU countries to pay for our natural gas. There can be no assurance that amounts owed to us by our customers in Russia and the FSU will be paid in full or, if paid in full, that payment will be in cash. As is the case with many Russian companies, we have had to accept various forms of non-cash settlement, including negotiable promissory notes, bonds, equity interests in natural gas companies and goods and services as payment for supplies to customers in Russia and the FSU. Recently, cash payments have increased as a proportion of our sales proceeds, and almost all non-cash settlements are now in the form of promissory notes. For example, the percentage of non-cash settlements related to domestic sales of natural gas decreased from approximately 65% in 1999 to approximately 21% in 2002 and to approximately 20% in the nine months ended September 30, 2003. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Factors Affecting our Results of Operations—Non-cash settlements." Non-cash settlement of transactions has had in the past, and may continue to have in the future, an adverse effect on our ability to fund operational or capital expenditures required to be made in cash and to make tax and other mandatory payments when due.

**We bear a substantial tax burden.**

We are subject to a broad range of taxes imposed at federal, regional and local levels and we are one of the largest sources of tax revenue to the federal authorities, as well as to the regional and local authorities in those regions and localities in which we operate. The combination of political pressure on the federal, regional and local authorities to address social and economic issues (and in particular the non-payment of salaries and pensions) and the difficulties associated with collecting taxes from companies and enterprises in financial difficulties, all increase the risk that the Government, as well as regional and local governments, will seek to mitigate these problems by increasing our already substantial tax burden.

**The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.**

The Russian Federation owns 38.37% of our shares, and representatives of the Government have a voting majority on our Board of Directors (six of 11 seats). Moreover, our subsidiaries held approximately 17.33% of our shares as of September 30, 2003, which they are entitled to vote as owners. In addition, we are a “natural monopoly” under the Natural Monopoly Law. As a result, the Government regulates the prices we charge for gas in the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations and our dividend policy. The Government has previously required Russian companies, including us, to take actions—such as the undertaking of projects and the supply of goods and services to customers—that may not be in the best interests of such companies or their shareholders. For example, the Government sets the prices for domestic gas delivered by us at a low level and requires us to supply natural gas to certain customers notwithstanding their inability to pay for the natural gas supplied.

**State authorities may reorganize our business to increase competition in the gas sector.**

The possibility that we may be reorganized into several smaller and less powerful production and transportation companies has been and continues to be the subject of much domestic and international press speculation. There have at times been public statements by certain Russian politicians and Government officials calling for our natural gas operations to be divided into a number of companies, or for particular functions to be re-allocated to other entities. Although the adoption of the Gas Supply Law mitigates the risk of reorganization and both we and the Government have made clarifying statements about any potential future restructuring, we are not fully protected against the risks of a state-led reorganization.

**Our licenses may be suspended, amended or terminated prior to the end of their terms, and we may not be able to obtain or maintain various permits and authorizations.**

The licensing regime in Russia for the exploration, development and production of natural gas, gas condensates and crude oil is governed primarily by the Subsoil Resources Law and numerous regulations issued thereunder. We currently conduct our operations under multiple exploration and production licenses, substantially all of which are held by our subsidiaries and related entities. Our production licenses for our major producing fields extend through the period between 2012 and 2019. Most of our licenses also provide that they may be terminated if we fail to comply with license requirements, do not make timely payments of levies and taxes for the use of the subsoil, systematically fail to provide information, go bankrupt or fail to fulfill any capital expenditure and/or production obligations.

Although we believe we are currently in material compliance with the requirements of our licenses, we may not be able to remain in compliance with some or all of these requirements in the future. If we fail to fulfill the specific terms of any of our licenses or if we operate in the license areas in a manner that violates Russian law, Government regulators may impose fines on us or suspend or terminate our licenses. Any suspension, amendment or termination of our licenses could have an adverse effect on our operations, financial position or the value of our assets.

In addition, we are required to obtain and maintain permits or approvals to develop our fields and retain our licenses. If we fail to obtain or maintain these permits and authorizations, we may be required to delay our investment program, or our licenses could be terminated, and this may reduce our cash flows and adversely affect our business.

**We must increase our capital expenditures in order to satisfy the anticipated demand of our customers.**

Over the next several years, we must further improve our natural gas, gas condensate and oil production capabilities to meet the anticipated demand of customers in western Europe, Russia and certain FSU countries and offset declines in our main producing fields. Our principal planned developments include modernizing our pipeline system, further developing the Zapolyarnoye field and developing our fields in the Yamal Peninsula. These developments will require significant capital expenditures over the next several years. We expect to fund such capital expenditures through internal sources and external financing. There can be no assurance, however, that we will be able to generate and raise sufficient funds to meet such capital requirements in the future or to do so at a reasonable cost. Lack of sufficient funds in the future may require us to delay or abandon some or all of our anticipated projects.

**Exploratory drilling involves numerous risks, including the risk that we will encounter no commercially productive natural gas reserves.**

We are exploring in various geographical regions, including western Siberia and the Barents Sea, which are characterized by their remoteness from population centers, challenging environmental conditions and high costs. The cost of drilling, completing and operating wells is often uncertain. As a result, we may incur cost overruns or may be required to curtail, delay or cancel drilling operations because of a variety of factors, including unexpected drilling conditions, pressure or irregularities in geological formations, equipment failures or accidents, adverse weather conditions, compliance with governmental requirements and shortages or delays in the availability of drilling rigs and the delivery of equipment. Our overall drilling activity or drilling activity in particular project areas may be unsuccessful in that we may not find commercially productive reservoirs.

**If we fail to develop our undeveloped fields, our production levels will decline materially.**

We expect the volume of natural gas produced in three of our leading fields, Yamburgskoye, Medvezhye and Urengoiyskoye, to decline significantly over the next eight years as we deplete the natural gas deposits in these fields. Our future production of natural gas is highly dependant on developing the natural gas reserves in our other large fields. If we are unsuccessful we may not meet our long-term production targets, which could adversely affect our ability to meet our contractual export commitments and domestic supply obligations.

**We encounter competition from alternative fuels and other natural gas producers and suppliers in Europe.**

We face varying degrees of competition in each of our major markets in Europe from providers of alternative fuels, such as oil and coal. No assurance can be given that we will be able to compete effectively with such providers of alternative fuels.

We also encounter competition in Europe from other natural gas suppliers (especially from The Netherlands, Norway and Algeria), which could affect the prices and volumes of our sales to Europe. If an oversupply of natural gas occurs, natural gas purchasers may be able to negotiate lower prices on supply contracts with producers such as ourselves. Although we believe that current prices in the European markets are sustainable over the medium term, especially in light of the forecast growth in European natural gas demand, continued economic slowdown in Europe or the emergence of new large suppliers of natural gas could result in an oversupply, and downward pressure on natural gas prices.

In addition, during the next nine years, export contracts accounting for almost one-third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012. Most of the contracts that are expiring contain clauses that provide for automatic renewal unless one party objects. Although we believe that these contracts will be renewed, no assurance can be given that we will be able to do so on favorable pricing and other terms or at all.

We received a request for information from the European Commission with respect to the so-called destination clauses in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. Similar clauses are included in our contracts with many other European off-takers. A successful challenge of such clauses by the European Commission would have meant that such off-takers could be free to sell natural gas supplied by us to other off-takers outside of the relevant market, leading to increased competition and the possibility of lower prices. The European Commission's original position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We have, for example, found such a solution with one of our off-takers, and are negotiating alternatives with several other off-takers. We will no longer include such clauses in new contracts. However, there can be no assurance that our discussions with the European Commission will lead to a beneficial result or that the current position of the European Commission will not change.

In addition, the western European gas market is undergoing significant change as a result of the EU Gas Directive, which was initially adopted in August 1998 and subsequently replaced by the new Gas Directive, adopted in June 2003. The purpose of the Gas Directive is to deregulate and liberalize the EU gas market by introducing greater competition into the market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening transmission and distribution infrastructure to third parties and establishing fair tariffs for third-party use of natural gas transportation

infrastructure and greater transparency of transportation and distribution costs by unbundling of the accounts for gas transportation, distribution and storage. The new Gas Directive provides that from July 1, 2004, all non-household gas consumers are to have the right to select the gas supplier, and from July 1, 2007 this right is to be extended to all natural gas consumers.

The new Gas Directive may also promote the emergence of a short-term price or "spot" market for natural gas. Because of the time it takes to transport our natural gas from our natural gas fields to western European markets, it would be difficult for us to engage in spot transactions involving physical settlement. The emergence of a spot market may also make it more difficult for us to negotiate long-term supply contracts under which we currently export a majority of our natural gas and may decrease the period between pricing revisions under new long-term contracts, which are currently set at three years for most contracts.

Despite this liberalization of the natural gas market, however, the price of natural gas in western Europe has remained steady and prices for different regions have not converged significantly. Nonetheless, the new Gas Directive will increase competition in European gas markets as a greater number of suppliers gain access to the natural gas infrastructure, which may adversely affect our long-term supply contracts with European customers.

Russia has signed the Energy Charter Treaty, an international treaty for establishing and improving the legal framework for corporate international co-operation in energy matters, but the State Duma has not yet ratified the Treaty. See "Overview of the Russian Gas Industry and its Regulation." We believe that ratification of the Energy Charter Treaty would result in greater access to the energy markets in Russia for foreign investment as well as the further access by third parties to our pipelines, including for the transportation of natural gas from Central Asia to European markets. Accordingly, although we believe that we could benefit from increased third-party access and influence the manner in which access was distributed, the ratification of the Energy Charter Treaty could also lead to substantially increased competition and affect our long-term supply contracts with European customers.

**We face certain operational risks which may result in losses and additional expenditures.**

A large number of our gas production facilities are located in western Siberia, where remoteness and the harsh climate complicate and increase the cost of production and affect our ability to transport our natural gas economically.

Our gas exploration, production and transportation operations may be adversely affected by many factors, including the breakdown or failure of equipment or processes, performance below our expected levels of output or efficiency, labor disputes, natural disasters, weather conditions and terrorist attacks or sabotage to our extensive pipeline network. We have only limited insurance in relation to our assets and operations and, therefore, the financial effect of any such factors would generally have to be satisfied out of our cash flow. For example, we do not carry insurance for environmental damage arising from accidents on our property, for business interruption or against terrorist attacks. See "Business—Support Activities—Insurance."

We own and operate the UGSS, which is responsible for the gathering, processing, transportation, storage and delivery of substantially all natural gas supplies in Russia (except for supplies to the Norilsk, Yakutsk and Sakhalin regions). This extensive network of pipelines and compressor installations has been largely developed over the past 30 years. Most of the pipeline is over 10 years old with some parts of the pipeline over 30 years old. A significant part of the pipeline is protected by chemical processes of limited duration and effectiveness. In addition, large segments of the network are located in regions with harsh climates, where construction, maintenance and refurbishment are difficult and costly. Considerable sums of money are required each year to maintain the UGSS. Although there have been no significant delays or curtailments of the supply of natural gas to our customers recently, no assurance can be given that such delays or curtailments will not occur in the future due to the stress and corrosion of pipelines, defective construction of compressor stations, problems associated with the harsh climate or the insufficient maintenance or refurbishment of the network.

We are dependent on the links between our pipeline network and other pipeline networks that we do not control for the export of natural gas. Although it is our strategy to diversify our export routes, we are currently dependent on pipelines in Ukraine and Belarus to deliver a large proportion of the natural gas we sell to customers in western Europe. We are also dependent on the Ukrainian pipeline system for a significant amount of our storage capacity. At the same time, Ukraine and Belarus are dependent on us to meet their domestic requirements for natural gas. Although this interdependence is taken into account

in negotiations over a number of matters, including the terms of payment for natural gas supplied by us and transit fees, and we have recently entered into an agreement with the Ukrainian government for the creation of a consortium to operate the Ukrainian pipeline system, we currently have no control over the pipeline systems in Ukraine or Belarus and cannot prevent any material disruption in the flow of our natural gas through Ukraine and Belarus. In the past, some of our gas has been diverted as it passed through Ukraine. In February 2004, some of our gas was diverted as it passed through Belarus, leading us to suspend, for one day, all deliveries through the Belarus pipeline to Europe (which did not interrupt our deliveries in light of stored capacity). We can only monitor the flow of natural gas into and out of Ukraine and Belarus and therefore may not be able to detect losses when and where they occur. Disputes with Ukraine or Belarus could lead to suspension of gas deliveries through their pipeline systems, disrupting our exports to Europe.

We plan to expand our export capacity and to diversify our export routes through additional capital investments in the Yamal-Europe Project and through other export-oriented projects, such as the North European pipeline project under the Baltic Sea. It is possible, however, that these plans will be affected by, among other things, difficulties related to localized planning and construction processes and our ability to obtain external financing on acceptable terms. No assurance can be given that we will be able to meet our construction targets. If we do not, we could experience difficulties in meeting our contractual obligations to supply gas under certain of our long-term contracts.

**We depend on regular access to the domestic rouble bank loan and rouble debt markets to meet a significant portion of our financing requirements.**

Our financing strategy involves the refinancing of a portion of our short-term rouble-denominated indebtedness with long-term borrowings in convertible currencies, such as the U.S. dollar and the euro. However, we fund a portion of our debt financing requirements with short-term, rouble-denominated debt, and are thus dependent on access to short-term rouble financing. This includes access to both the domestic rouble-denominated bank loan market as well as to the growing domestic market for short- to medium-term, rouble-denominated bonds. Our ability to continue to access the rouble debt markets in amounts sufficient to meet our financing needs could be adversely affected by a number of factors, including economic conditions in Russia, the health of the Russian banking and financial system in general and the extent of the exposure of individual Russian banks and other investors in the rouble debt market to Gazprom risk. If we are unable to continue to access the short-term rouble bank loan and debt markets as required, our financial condition and results of operations could be materially and adversely affected.

**As an energy company we face significant environmental risks.**

Our operations, which are often potentially hazardous, are subject to the risk of liability arising from environmental damage or pollution and the cost of any associated remedial work in relation thereto. We have an established environmental policy and monitor our operations in an effort to meet applicable environmental standards. We have made provisions in our financial information prepared in accordance with IFRS for such environmental liabilities where it was probable that an obligation exists and the amount could be reasonably estimated. Such provisions have been made in accordance with what we believe is a reasonable and prudent policy that takes into account payments made in prior years, among other factors. However, in Russia in particular, federal, regional and local authorities may enforce existing laws and regulations more strictly than they have done in the past and may impose stricter environmental standards, or higher levels of fines and penalties for violations, than those now in effect. Accordingly, we are unable to estimate the future financial impact of our environmental obligations.

**The Russian reserves system differs significantly from SPE International Standards and the standards applied by the United States Securities and Exchange Commission.**

Most of the information relating to natural gas, gas condensate and oil reserves contained in this Offering Circular has been prepared on the basis of the Russian reserves system, which differs significantly from SPE International Standards and the standards applied by the U.S. Securities and Exchange Commission (the "SEC"), in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves.

Since 1997, DeGolyer and MacNaughton has evaluated our reserves of natural gas, gas condensate and crude oil according to SPE International Standards. We believe that the fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties according to SPE International Standards. See "Business—Reserves and Production—Reserves."

**Violations of existing international or U.S. sanctions could subject us to penalties that could have an adverse effect on us.**

International and U.S. sanctions have been imposed on companies engaging in certain types of transactions with specified countries or companies in those countries.

Since 1997, we have been involved, in partnership with Total and Petronas, in a project to develop the second and third phases of the South Pars field, located in the Iranian segment of the Persian Gulf. In May 1998, the U.S. Department of State issued a determination that the investment made by our partners and us in Iran's South Pars gas and condensate field constituted activity covered by the Iran and Libya Sanctions Act ("Sanctions Act"), and, at the same time, communicated its decision to waive sanctions under Section 9(c) of the Sanctions Act with respect to such investment. The waiver applies to activities in the South Pars field only, and not to any other activities we may conduct in Iran. See "Business—Reserves and Production—Projects and Alliances in Reserves and Production."

In November 2002 we concluded a strategic partnership agreement with LUKOIL that, among other things, provides for cooperation with respect to potential oil and gas projects in a number of countries, including Iran. We have not yet undertaken any projects under this agreement in countries subject to international or U.S. sanctions.

If we violate existing international or U.S. sanctions, penalties could include a prohibition or limitation on our ability to obtain goods and services on the international market or to access the U.S. or international capital markets. We are not currently involved in any transactions in Iran or other countries that could result in sanctions against us or for which we have not received a waiver of such sanctions.

**Risks Relating to the Russian Federation**

We are a Russian company and substantially all of our fixed assets are located in, and a significant portion of our revenues are derived from, Russia. There are certain risks associated with an investment in Russia.

**Governmental instability could adversely affect the value of investments in Russia, including the Notes.**

Since 1991, Russia has sought to transform itself from a one-party state with a centrally planned economy to a pluralist democracy with a market-oriented economy. As a result of the sweeping nature of the reforms, and the failure of some of them, the Russian political system remains vulnerable to popular dissatisfaction, including dissatisfaction with the result of privatization in the 1990s, as well as to demands for autonomy from particular regional and ethnic groups.

The course of reform has in some respects been uneven, and the composition of the Government—in particular, the prime minister and the other heads of federal ministries—has at times been highly unstable. For example, six different prime ministers headed governments between March 1998 and May 2000. On December 31, 1999, President Yeltsin unexpectedly resigned and Vladimir Putin was subsequently elected president on March 26, 2000 and re-elected on March 14, 2004. While President Putin has maintained governmental stability and even accelerated the reform process, he may adopt a different approach over time.

In late February 2004, President Putin dismissed Mikhail Kasyanov, the Prime Minister for most of Mr. Putin's presidency, and appointed Mikhail Fradkov as Prime Minister. Shortly after appointment of Mr. Fradkov as Prime Minister, a Presidential decree significantly reduced the number of federal ministries, redistributed certain functions among various Government agencies and announced plans for a major overhaul of the federal administrative system. For example, the Ministry of Energy, which was responsible for the practical implementation of Government fuel and energy industry policy and coordinating the activities of federal executive bodies in the energy sector, was abolished and its functions divided among the Ministry of Industry and Energy and the Federal Energy Agency.

Future changes in the Government, major policy shifts or lack of consensus between President Putin, the Government, Russia's parliament and powerful economic groups could disrupt or reverse economic and regulatory reforms. The value of investments in Russia and the Notes could be reduced and our prospects could be harmed if there is further governmental instability or if the course of reform policies does not continue.

**Conflict between federal and regional authorities and other domestic political conflicts could create an uncertain operating environment that would hinder our long-term planning ability and could adversely affect the value of investments in Russia.**

The Russian Federation consists of 88 sub-federal political units, some of which exercise considerable autonomy over their internal affairs pursuant to agreements with the federal authorities. In practice, the division of authority between federal and regional governmental authorities remains uncertain and contested. This uncertainty could hinder the operation and the expansion of our business.

For example, to achieve consistency in the regulation of natural gas supplies throughout Russia, the federal authorities have assumed responsibility for the development and implementation of state policy with respect to the supply of natural gas and the industrial and environmental safety of such supplies in Russia. However, regional and local authorities have a significant degree of autonomy in exercising their rights over the use of land and natural resources (including natural gas). Accordingly, the relationship between the relevant federal, regional and local authorities as well as between us and such authorities can have a significant impact on the conditions under which we can operate in any particular region. In addition, ethnic, religious, historical and other divisions have, on occasion, given rise to communal tensions and, in certain cases, military conflict, such as the continuing conflict in Chechnya, which has brought normal economic activity within Chechnya to a halt and disrupted the economy of the neighboring regions. Various armed groups in Chechnya have regularly engaged in guerrilla attacks in that area. Violence and attacks relating to this conflict have also spread to other parts of Russia, and several terrorist attacks have been carried out by Chechen terrorists in Moscow. The further intensification of violence, including terrorist attacks and suicide bombings, or its spread to other parts of Russia, could have significant political consequences, including the imposition of a state of emergency in some or all of Russia. Moreover, any terrorist attacks and the resulting heightened security measures are likely to cause disruptions to domestic commerce and exports from Russia, and could materially adversely affect our business and the value of investments in Russia, such as the Notes.

**Economic Risks**

**Economic instability in Russia could adversely affect our business.**

Since the dissolution of the Soviet Union, the Russian economy has experienced at various times:

- significant declines in gross domestic product;
- hyperinflation;
- an unstable currency;
- high state debt relative to gross domestic product;
- a weak banking system providing limited liquidity to Russian enterprises;
- high levels of loss-making enterprises that continued to operate due to the lack of effective bankruptcy proceedings;
- significant use of barter transactions and illiquid promissory notes to settle commercial transactions;
- widespread tax evasion;
- growth of “black” and “gray” market economies;
- high levels of capital flight;
- corruption and extensive penetration of organized crime into the economy;
- significant increases in unemployment and underemployment; and
- high poverty levels among the Russian population.

The Russian economy has been subject to abrupt downturns. In particular, on August 17, 1998, in the face of a rapidly deteriorating economic situation, the Russian Government defaulted on its rouble-denominated securities, the Central Bank stopped its support of the rouble and a temporary moratorium was imposed on certain hard currency payments. These actions resulted in an immediate and severe devaluation of the rouble and a sharp increase in the rate of inflation; a dramatic decline in the prices of Russian debt and equity securities; and an inability of Russian issuers to raise funds in the international capital markets.

These problems were aggravated by the near collapse of the Russian banking sector after the events of August 17, 1998. This further impaired the ability of the banking sector to act as a consistent source of liquidity to Russian companies, and resulted in the loss of bank deposits in some cases.

There can be no assurance that recent positive trends in the Russian economy, such as the increase in the gross domestic product, a relatively stable rouble, and a reduced rate of inflation, will continue or will not be abruptly reversed. Moreover, fluctuations in international oil and natural gas prices, the strengthening of the rouble in real terms relative to the U.S. dollar and the consequences of a relaxation in monetary policy, or other factors, could adversely affect Russia's economy and our business in the future.

**We face inflation and foreign exchange rate risks that could adversely affect our results of operations.**

For the nine months ended September 30, 2003 and 2002, 64% and 60% of our gross sales, respectively, and 64%, 67% and 74% of our gross sales (including excise tax and net of VAT and customs duties) for the years ended December 31, 2002, 2001 and 2000, respectively, were denominated in U.S. dollars or euro, while most of our costs were denominated in roubles. The relative movement of inflation and exchange rates therefore significantly affects our results of operations. In particular, our operating margins are generally adversely affected by a real appreciation of the rouble against the U.S. dollar or euro (i.e., by an inflation rate that is higher than the rate at which the rouble is depreciating against the U.S. dollar or euro), because this will generally cause our costs to increase in real terms relative to our sales revenues. Conversely, our operating margins are generally positively affected by a real depreciation of the rouble against the U.S. dollar or euro, because this will generally cause our costs to decrease in real terms relative to our sales revenues. Continued real appreciation of the rouble against the U.S. dollar and the euro could adversely affect our financial condition and results of operations. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Factors Affecting our Results of Operations—Impact of the change in purchasing power of the RR and fluctuations in RR exchange rates against the U.S. dollar and euro."

At the same time, a high rate of inflation in Russia results in a decline in the value of our rouble-denominated monetary assets, such as rouble deposits, domestic debt instruments and accounts receivable.

**We may have difficulty converting roubles into other currencies, which could adversely affect our business.**

We are currently required to repatriate and convert into roubles 25% of our proceeds from export sales, though in the past this percentage has been as high as 75%. The percentage of proceeds we are required to repatriate and convert into roubles may be increased or decreased from time to time by the Russian authorities. Under legislation effective from July 7, 2003, the maximum percentage that must be converted was reduced from 50% to 30%, and on July 9, 2003 the Central Bank of Russia adopted the present regulations that require the conversion of 25% of such proceeds.

A new framework law on exchange controls will take effect on June 18, 2004. This law will empower the Government and the Central Bank of Russia to further regulate and restrict currency control matters, including operations involving foreign securities and foreign currency borrowings by Russian companies. The new law will abolish the need for companies to obtain transaction-specific licenses from the Central Bank, envisaging instead the implementation of generally applicable restrictions on currency control operations, such as posting mandatory reserves with the Central Bank and authorized banks for certain currency operations, preliminary registration of certain accounts that are opened abroad and for performing some other currency operations, and special accounts for certain foreign currency settlements. Although it is believed that the new law will liberalize the currency control regime, the specific nature of these new requirements is not yet certain.

Restrictions on our ability to convert our rouble revenues into foreign currencies, or to reconvert the roubles we obtain pursuant to the mandatory repatriation and conversion requirements, may adversely affect our business, results of operations and our ability to repay a Loan, and thus the corresponding Series of Notes. The rouble is not convertible outside the Commonwealth of Independent States, so our ability to hedge against fluctuations by converting to other currencies is significantly limited. Within Russia, our ability to convert roubles into other currencies is subject to rules and procedures that restrict the purposes for which conversion and payment in foreign currencies is allowed. In addition, because of the limited development of the foreign currency market in Russia, we may experience difficulty converting roubles into other currencies, although we have been successful to date in doing so.

**Russia's physical infrastructure is in very poor condition, which could disrupt normal business activity.**

Russia's physical infrastructure largely dates back to the Soviet period and has not been adequately funded and maintained since then. Particularly affected are the rail and road networks, power generation and transmission, communication systems and building stock. For example, during the winter of 2000-2001, electricity and heating shortages in Russia's far-eastern Primorye region seriously disrupted the local economy. Road conditions throughout Russia are poor, with many roads not meeting minimum requirements for usability and safety. The Government is actively pursuing plans to reorganize the nation's rail, electricity and telephone systems. These reorganizations may result in increased charges and tariffs while failing to generate the anticipated capital investment needed to repair, maintain and improve these systems.

The deterioration of Russia's physical infrastructure harms the national economy, disrupts the transportation of goods and supplies, adds costs to doing business in Russia and can interrupt business operations, and this could have a material adverse effect on our business.

**Fluctuations in the global economy may adversely affect Russia's economy and our business.**

Russia's economy is vulnerable to market downturns and economic slowdowns elsewhere in the world. As has happened in the past, financial problems or an increase in the perceived risks associated with investing in emerging economies could dampen foreign investment in Russia and adversely affect the Russian economy. Additionally, because Russia is one of the world's largest producers of, and a major exporter of, natural gas and oil, the Russian economy is especially sensitive to the price of natural gas and oil on the world markets, and a decline in the price of natural gas and oil could slow or disrupt the Russian economy. These developments could severely limit our access to capital and could adversely affect the purchasing power of our customers and thus our business.

**Social Risks**

**Crime and corruption could disrupt our ability to conduct our business and could materially adversely affect our financial condition and results of operations.**

The political and economic changes in Russia since the early 1990s have resulted in reduced policing of society and increased lawlessness. Organized criminal activity has reportedly increased significantly since the dissolution of the Soviet Union, particularly in large metropolitan centers and with respect to a substantial increase in property crime in large cities. In addition, the Russian and international press have reported high levels of official corruption in Russia and the FSU, including the bribing of officials for the purpose of initiating investigations by state agencies. Press reports have also described instances in which state officials have engaged in selective investigations and prosecutions to further interests of the state and individual officials. Additionally, published reports indicate that a significant number of Russian media regularly publish slanted articles in return for payment. Our business, and the value of the Notes, could be adversely affected by illegal activities, corruption or by claims implicating us in illegal activities.

**Social instability could increase support for renewed centralized authority, nationalism or violence and thus materially adversely affect our ability to conduct our business effectively.**

The failure of the state and many private enterprises to pay full salaries on a regular basis and the failure of salaries and benefits generally to keep pace with the rapidly increasing cost of living have led in the past, and could lead in the future, to labor and social unrest. For example, in 1998, miners in several regions of Russia, demanding payment of overdue wages, resorted to strikes that included blocking major railroads. Such labor and social unrest may have political, social and economic consequences, such as increased support for a renewal of centralized authority; increased nationalism, with restrictions on foreign involvement in the economy of Russia; and increased violence. Any of these could restrict our operations and lead to a loss of revenue, materially adversely affecting us.

**Risks Relating to the Russian Legal System and Russian Legislation**

**Weaknesses relating to the Russian legal system and Russian legislation create an uncertain environment for investment and for business activity.**

Russia is still developing the legal framework required by a market economy. Since 1991, Soviet law has been largely, but not entirely, replaced by a new legal regime as established by the 1993 Federal Constitution, the Civil Code, by other federal laws and by decrees, orders and regulations issued by the

president, the Government and federal ministries, which are, in turn, complemented by regional and local rules and regulations. These legal norms, at times, overlap or contradict one another. Several fundamental Russian laws have only recently become effective. The recent nature of much of Russian legislation and the rapid evolution of the Russian legal system place the enforceability and underlying constitutionality of laws in doubt and result in ambiguities, inconsistencies and anomalies. In addition, Russian legislation often leaves substantial gaps in the regulatory infrastructure. Among the risks of the current Russian legal system are:

- inconsistencies among (1) federal laws, (2) decrees, orders and regulations issued by the president, the government, federal ministries and regulatory authorities and (3) regional and local laws, rules and regulations;
- limited judicial and administrative guidance on interpreting Russian legislation;
- the relative inexperience of judges in interpreting Russian legislation;
- substantial gaps in the regulatory structure due to delay or absence of implementing legislation;
- a high degree of discretion on the part of state authorities; and
- bankruptcy procedures that are not well developed and are subject to abuse.

All of these weaknesses could affect our ability to enforce our rights under contracts, or to defend us against claims by others.

**Inexperience and lack of independence of certain members of the judiciary and the difficulty of enforcing court decisions and governmental discretion in instigating, joining and enforcing claims could prevent us or investors from obtaining effective redress in a court proceeding, including in respect of expropriation or nationalization.**

The independence of the judicial system and its immunity from economic, political and nationalistic influences in Russia remain largely untested. The court system is understaffed and underfunded. Judges and courts are generally inexperienced in the area of business and corporate law. Russia is a civil law jurisdiction and, as such, judicial precedents have no binding effect on subsequent decisions. In addition, most court decisions are not readily available to the public. Enforcement of court judgments can in practice be very difficult in Russia. All of these factors make judicial decisions in Russia difficult to predict and effective redress uncertain. Additionally, court claims are often used in furtherance of political aims. We may be subject to such claims and may not be able to receive a fair hearing. Additionally, court judgments are not always enforced or followed by law enforcement agencies.

There are also legal uncertainties relating to property rights. During Russia's transformation from a centrally planned economy to a market economy, legislation has been enacted to protect private property against expropriation and nationalization. However, it is possible that due to the lack of experience in enforcing these provisions and due to political changes, these protections would not be enforced in the event of an attempted expropriation or nationalization, or in the event our business is reorganized. Expropriation or nationalization of any of our entities, their assets or portions thereof, or their break-up into separate companies, potentially with little or no compensation, could have a material adverse effect on our operations and revenues, and on the value of the Notes.

**Unlawful or arbitrary state action may have an adverse effect on our business.**

State authorities have a high degree of discretion in Russia and at times exercise their discretion arbitrarily, without hearing or prior notice, and sometimes in a manner that is contrary to law. Moreover, the state also has the power in certain circumstances to interfere with the performance of, nullify or terminate contracts. Unlawful or arbitrary state actions have included withdrawal of licenses, sudden and unexpected tax audits, criminal prosecutions and civil actions. Federal and local government entities have also used common defects in matters surrounding share issuances and registration as pretexts for court claims and other demands to invalidate such issuances and registrations and/or to void transactions, often for political purposes. Unlawful or arbitrary state action, if directed at us, could have a material adverse effect on our business, and on the value of the Notes.

**The rights of our shareholders, the public reporting requirements and the Russian Accounting Regulations to which we are subject differ significantly from comparable listed companies in other jurisdictions.**

Our corporate affairs are governed by our Charter, internal regulations adopted pursuant to our Charter and by laws governing companies incorporated in Russia. The rights of shareholders and the

responsibilities of members of the Board of Directors and the Management Committee under Russian law are different from, and may be subject to certain requirements not generally applicable to, corporations organized in the United States, the United Kingdom or other jurisdictions. See “Management—Description of our Management.”

We are subject to Russian law, which contains certain regular disclosure requirements including the requirement to publish annual unconsolidated financial statements in accordance with Russian Accounting Regulations, together with an independent auditor’s report. In addition, since 1997, the Russian Ministry of Finance has required all joint stock companies that are natural monopolies to produce annual consolidated financial statements prepared in accordance with IFRS in addition to financial statements prepared in accordance with Russian accounting standards. We have published financial statements in accordance with IFRS since 1996. Due to the large number of our subsidiaries, the wide geographic range of our business and the fact that our systems and processes are tailored for Russian statutory requirements, it takes us longer than most western companies to prepare our consolidated annual and interim financial reports and our consolidated periodic internal accounts.

In accordance with Russian legislation, we are obliged to file quarterly reports on the activities of OAO Gazprom to the Federal Commission for the Securities Market, now the Federal Service for Financial Markets, within 30 days of the end of the relevant quarter. Such reports include certain information about us, our management, subsidiaries, affiliates, selected financial and business information (such as events of litigation, quarterly accounts prepared in accordance with Russian accounting standards, etc.) but do not contain all of the information contained in our IFRS consolidated financial statements. We have regularly published such reports since the fourth quarter of 1998 and generally comply with the reporting requirements, although in the past we have not always met the deadlines for filing such reports.

In addition, Russian law requires certain disclosure by open joint stock companies, such as the disclosure of annual reports, annual accounts (audited and approved by shareholders), any material facts affecting the financial condition and the business of the relevant company, certain board of directors’ resolutions and lists of affiliated companies. One of our strategic priorities is to enhance our internal controls over budget planning and execution, deployment of investment capital and debt management, and to increase control over our subsidiaries. Despite these initiatives, there is nonetheless less publicly-available information about us than there is available for comparable listed companies in, for example, the United States or the United Kingdom.

The Russian Federal Commission for the Securities Market, now the Federal Service for Financial Markets, has issued a corporate governance code and recommended that it be adopted by all Russian public companies. In light of the ongoing focus on corporate governance issues, we reviewed our own position on such issues and established a special committee headed by a First Deputy Chairman of the Management Committee to develop a corporate governance code for the Company. Such a code was adopted by the Annual Shareholders Meeting of the Company in June 2002. In addition, on September 27, 2002, our Board of Directors enacted procedures to improve the co-ordination of transactions and to increase the level of control by the Board of Directors over the work of the Management Committee. See “Certain Transactions.”

**Shareholder liability under Russian legislation could cause us to become liable for the obligations of our subsidiaries.**

The Civil Code of the Russian Federation (the “Civil Code”), the Russian Federal Law “On Joint Stock Companies” No. 208-FZ dated December 26, 1995 (the “Joint Stock Companies Law”) and the Russian Federal Law “On Limited Liability Companies” No. 14-FZ dated February 8, 1998 generally provide that shareholders in a Russian joint stock company or members in a Russian limited liability company are not liable for the obligations of the joint stock company or limited liability company and bear only the risk of loss of their investment. An exception to this rule, however, is when one company (the “effective parent”) is capable of making decisions for another company (the “effective subsidiary”). Under certain circumstances the effective parent bears joint and several responsibility for transactions concluded by the effective subsidiary in carrying out these decisions. In addition, the effective parent is secondarily liable for the effective subsidiary’s debts if the effective subsidiary becomes insolvent or bankrupt resulting from the action or inaction of an effective parent. Accordingly, in our position as the effective parent of the subsidiaries in which we own, directly or indirectly, more than 50% of the charter capital, we could be liable for their debts. This liability could materially adversely affect us.

**Some transactions between us and interested parties or affiliated companies require the approval of disinterested directors or shareholders and our failure to obtain approvals could cause our business to suffer.**

Russian law requires a company that enters into transactions with certain types of its affiliates that are referred to as “interested party transactions” to comply with special approval procedures. Under Russian law, an “interested party” includes (i) members of the board of directors or the collegial executive body of the company; (ii) the CEO of the company (including a managing organization or manager); (iii) any person that owns, together with that person’s affiliates, at least 20% of the company’s voting shares; or (iv) a person who on legal grounds has the right to give mandatory instructions to the company, if any of the above listed persons, or a close relative or affiliate of such person, is:

- a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction;
- the owner of at least 20% of the shares in a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction; or
- a member of the board of directors or the collegial executive body or the CEO of a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction or an officer of the managing organization of such company.

Transactions between members of a consolidated corporate group may be considered to be interested party transactions in certain circumstances, even when the companies involved are wholly-owned by the parent company.

Under applicable Russian law, interested party transactions are to be approved by a majority of the disinterested independent members of the board of directors or the shareholders of the company. Where all the directors are interested, or are not independent, or if the subject matter of the transaction exceeds 2% of the balance sheet assets of the company determined under Russian accounting principles (with certain exceptions for share placements), a majority vote of the disinterested shareholders of the company is required. The consequence of not having obtained the appropriate approval is that the transaction in question may be declared invalid upon a claim by the company or any of its shareholders.

The Joint Stock Companies Law has contained an implicit requirement that interested party transactions be approved since it was enacted in 1996. Under Russian law, the lack of advance approval makes such a transaction voidable, but not void. However, certain judicial practice indicated that *post factum* approval of interested party transactions could be sufficient. In certain circumstances, such as when an interested party transaction is entered into between companies within our Group, the transaction will not always be submitted to the boards of directors of the companies for advance approval. In 2000, 2001 and 2002, the Board of Directors of OAO Gazprom approved certain transactions after, rather than before, they were consummated, and since 1996 the Board of Directors has never recognized any such transaction to be contrary to OAO Gazprom’s interests or denied approval thereof *post factum*. Following the revisions to the Joint Stock Companies Law that came into effect on January 1, 2002 and which explicitly require an advance approval of interested party transactions, the judicial practice in this regard has also changed. In November 2003, the Highest Arbitration Court of the Russian Federation ruled that an interested party transaction must be approved before it is entered into. Thus, we have now limited the practice of seeking *post factum* approvals and now, where possible, seek to approve interested party transactions in advance.

**Russian tax law is not fully developed and is subject to frequent changes which could have an adverse effect on us.**

We are subject to a broad range of taxes imposed at the federal, regional and local levels, including but not limited to export duties, income tax, natural resources production tax, property tax and social taxes. See “Management’s Discussion and Analysis of Financial Condition and Results of Operation—Certain Factors Affecting our Results of Operations—Our high tax burden.”

Laws related to these taxes, such as the Tax Code, have been in force for a short period relative to tax laws in more developed market economies and the Government’s implementation of these tax laws is often unclear or inconsistent. Accordingly, few precedents with regard to the interpretation of these laws have been established. Often, differing opinions regarding legal interpretation exist both between

companies subject to such taxes and the Government and within Government ministries and organizations, such as the former Ministry of Taxes and Duties (the functions of which have now been divided between the Federal Tax Service and the Ministry of Finance) and its various inspectorates, creating uncertainties and areas of conflict. Generally, tax declarations remain open and subject to inspection by tax and/or customs authorities for a period of three years following the tax year. The fact that a year has been reviewed by tax authorities does not close that year, or any tax declaration applicable to that year, from further review during the three-year period. These facts create tax risks in Russia substantially more significant than typically found in countries with more developed tax systems.

The taxation system in Russia is subject to frequent change and inconsistent enforcement at the federal, regional and local levels. Until the recent adoption of the new Tax Code, the system of tax collection was relatively ineffective, resulting in the continual imposition of new taxes in an attempt to raise state revenues. There can be no assurance that the Tax Code will not be changed in the future in a manner adverse to the stability and predictability of the tax system. These factors, plus the potential for state budget deficits, raise the risk of a sudden imposition of additional taxes on us. This could adversely affect us.

The Russian tax system has recently been revised. The new tax system is intended to reduce the number of taxes and the overall tax burden on businesses and to simplify the tax laws. However, the revised tax system relies heavily on the judgments of local tax officials and fails to address many of the existing problems. Even if further reforms to tax legislation are enacted, they may not result in a reduction of the tax burden on Russian companies and the establishment of a more efficient tax system. Conversely, they may introduce additional tax collection measures. Accordingly, we may have to pay significantly higher taxes, which could have a material adverse effect on our business.

#### **Risks Relating to Notes and the Trading Market**

**The Issuer's rights to receive payments under a Loan (and therefore its ability to make payments under the corresponding Series of Notes as they fall due) are effectively subordinated to any liabilities of our subsidiaries and could be adversely affected if any of these subsidiaries declares bankruptcy, liquidates or reorganizes.**

Most of our operations are conducted through our subsidiaries and to a large extent we depend on the earnings and cash flows of these subsidiaries to meet our debt obligations, including our obligations under each Loan. In addition, our subsidiaries' assets constitute a significant part of our operating assets. Finally, our subsidiaries have significant liabilities, including accounts payable and accrued charges, taxes payable, restructured tax liabilities, other long-term liabilities and provisions for liabilities and charges. Because our subsidiaries do not guarantee the payment obligations of our parent company, OAO Gazprom, under each Loan or the Issuer's payment obligations under the corresponding Series of Notes, neither the Issuer nor you will have any direct claim on our subsidiaries' cash flows or assets. In the event of a bankruptcy, liquidation or reorganization of any of our subsidiaries, their creditors will generally be entitled to payment of their claims from the cash flows and assets of those subsidiaries before any cash flows or assets are made available for distribution to us as a shareholder. This may adversely affect our ability to service our payment obligations under any Loan.

**We have borrowed under a number of secured credit facilities and we will seek to continue to incur secured debt in the future.**

As of December 31, 2002, 2001 and 2000, we had loans and borrowings of RR192,918 million, RR184,243 million and RR301,753 million, respectively, inclusive of current portion of long-term borrowings, that were secured by revenues from our sales of natural gas to Europe. Since December 31, 2002, we have borrowed an additional U.S.\$300 million that is secured by revenues from our sales of natural gas to Europe, and we have prepaid U.S.\$675 million of our outstanding loans and borrowings under such facilities. We intend to continue to borrow on a secured basis in the future. The Issuer's rights to receive payments under a Loan are not secured, and are thus effectively subordinated to our secured borrowings.

We understand that the Russian Federation is subject to a negative pledge clause in its borrowings from the International Bank of Reconstruction and Development (the "IBRD"). The negative pledge clause prevents any entity owned or controlled by, or operating for the account or benefit of, the Russian Federation from pledging any of its assets to secure further borrowings unless the IBRD is equally and ratably secured. Whether we should be considered such an entity, and thus subject to this negative pledge clause, is uncertain. This uncertainty will be heightened if the Russian Federation increases its direct ownership interest in us to more than 50% of our shares. If the negative pledge clause is applicable, we

do not know whether the Russian Federation would be prepared to let us continue to borrow on a secured basis, or whether potential lenders would continue to be willing to loan to us on a secured basis.

**The lack of a public market for the Notes could reduce the value of your investment.**

There may not be an existing market for the Notes at the time they are issued. Each Series of Notes is expected to be listed on the Luxembourg Stock Exchange. However, there can be no assurance that a liquid market will develop for the Notes, that holders of the Notes will be able to sell their Notes, or that such holders will be able to sell their Notes for a price that reflects their value.

**Payments we make under any Loan may be subject to Russian withholding tax.**

In general, payments of interest on borrowed funds by a Russian entity to a non-resident legal person are subject to Russian withholding tax at the rate of 20%, absent reduction or elimination pursuant to the terms of an applicable double tax treaty. Based on professional advice we have received, we believe that payments of interest on each Loan should not be subject to withholding under the terms of the double tax treaty between Russia and Luxembourg. However, there can be no assurance that such relief will be obtained. In addition, if interest under a Loan becomes payable to the Trustee pursuant to the Trust Deed, any benefit of the double tax treaty between Russia and Luxembourg will cease and payments of interest could be subject to Russian withholding tax.

If the payments under any Loan are subject to any withholding of Russian tax (as a result of which the Issuer would reduce payments under the corresponding Series of Notes in the amount of such withholding), we are obliged to increase payments as may be necessary so that the net payments received by the Noteholders will not be less than the amounts they would have received in the absence of such withholding. It should be noted, however, that gross-up provisions may not be enforceable under Russian law. If we are obliged to increase payments, we may, subject to certain conditions, prepay such Loan in full. In such case, all outstanding Notes of the corresponding Series would be redeemable at par with accrued interest. See "Terms and Conditions of the Notes."

**Tax might be withheld on dispositions of the Notes in Russia, reducing their value.**

If a non-resident holder that is a legal person or organization sells any Notes and receives proceeds from a source within Russia, there is a risk that the part of the payment, if any, representing accrued interest may be subject to a 20% Russian withholding tax. Where proceeds from a disposition of the Notes are received from a source within Russia by an individual non-resident holder, a similar withholding tax would be charged at a rate of 30% on gain from the disposition. The imposition or possibility of imposition of this withholding tax could adversely affect the value of the Notes.

**Financial instability in emerging markets could cause the price of the Notes to suffer.**

Financial instability in Russia and other emerging market countries in 1997 and 1998 adversely affected market prices in the world's securities markets for the debt and equity securities of companies that operate in those countries. Financial instability in emerging market countries other than Russia could adversely affect the market price of the Notes, even if the Russian economy remains relatively stable.

**Risks relating to Luxembourg Insolvency Proceedings**

**Provisions of the Luxembourg Commercial Code may adversely affect the security given pursuant to a Trust Deed.**

Under each Trust Deed, the Issuer will charge and assign all its present and future rights and interests in respect of each Loan and the relevant Account to the Trustee as security for the payment obligations of the Issuer under the corresponding Series of Notes.

Article 445 of the Luxembourg Commercial Code provides that the creation of a charge, for pre-existing debts of the chargor, is void and without effect if created during the "suspect period" (as defined in the Commercial Code) or up to ten days before the suspect period.

The suspect period is the period of time immediately preceding the date of the bankruptcy judgement. Its duration is fixed by the Court at a maximum of six months.

The provisions of the Article 445 of the Luxembourg Commercial Code may affect the Security Interests granted by the Issuer pursuant to the Trust Deed. Indeed, if the Charge was created during the suspect period, or up to 10 days before the suspect period for pre-existing obligations of the Issuer, such charge would be declared void and invalid by the Courts of Luxembourg.

### **USE OF PROCEEDS**

The net proceeds from each offering of a Series of Notes will be used by the Issuer for the sole purpose of financing the corresponding Loan to us. The proceeds of such Loan will be used by us for general corporate purposes.

## CAPITALIZATION

The following table shows our consolidated cash and cash equivalents and certain restricted cash, short-term borrowings and current portion of long-term borrowings, short-term promissory notes payable and total capitalization, consisting of long-term borrowings, long-term promissory notes payable and shareholders' equity, as of September 30, 2003, extracted from our unaudited consolidated interim condensed financial information as of and for the nine months ended September 30, 2003. For further information regarding our financial condition, see "Selected Consolidated Financial Information," "Management's Discussion and Analysis of Financial Condition and Results of Operations" and our consolidated financial information included elsewhere in this Offering Circular.

The U.S. dollar amounts set forth below were not included in our annual audited consolidated or unaudited consolidated interim condensed financial information and are provided for convenience only. They should not be construed as representations that the Rouble amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003.

	<b>As of September 30, 2003</b>	
	<b>(millions of RR)<sup>(1)</sup></b>	<b>(millions of U.S.\$)<sup>(1)</sup></b>
Cash and cash equivalents and certain restricted cash <sup>(2)</sup> . . . . .	136,514	4,460
Short-term borrowings and current portion of long-term borrowings . . . . .	173,514	5,668
Short-term promissory notes payable . . . . .	37,315	1,219
Total . . . . .	210,829	6,887
Long-term borrowings . . . . .	306,235	10,004
Long-term promissory notes payable . . . . .	8,409	275
Total shareholders' equity, of which: . . . . .	1,819,821	59,452
Share capital . . . . .	325,194	10,624
Treasury shares . . . . .	(38,854)	(1,269)
Retained earnings and other reserves . . . . .	1,533,481	50,097
Total capitalization <sup>(3)</sup> . . . . .	2,134,465	69,731

Notes:

- (1) Unaudited.
- (2) Includes cash restricted as to withdrawal under the terms of certain borrowings and other contractual obligations but excludes cash restricted as to withdrawal under banking regulations.
- (3) Totals may not add due to rounding.

There have been no material changes in our total capitalization since September 30, 2003, other than additional long-term borrowings in the amount of U.S.\$1.95 billion and RR16 billion, less prepayments of long-term borrowings in the amount of U.S.\$675 million.

## SELECTED CONSOLIDATED FINANCIAL INFORMATION

The selected consolidated financial information set forth below shows our historical consolidated financial information as of September 30, 2003 and 2002 and for the nine months then ended and as of December 31, 2002, 2001 and 2000 and for the years then ended. The annual consolidated financial information as of December 31, 2002, 2001 and 2000 and for the years then ended has been extracted from, and should be read in conjunction with, the annual audited consolidated financial statements included elsewhere in this Offering Circular. The unaudited interim consolidated financial information as of September 30, 2003 and 2002 and for the nine months then ended has been extracted from and should be read in conjunction with the unaudited consolidated interim condensed financial information included elsewhere in this Offering Circular. The annual and interim consolidated financial information should also be read in conjunction with “Management’s Discussion and Analysis of Financial Condition and Results of Operations” below.

Our annual consolidated financial statements have been prepared in accordance with IFRS, including IAS and Interpretations issued by the International Accounting Standards Board. Our interim consolidated condensed financial information is prepared in accordance with IAS 34. IFRS differs in certain respects from U.S. GAAP. For a summary of certain differences between IFRS and U.S. GAAP that are relevant to us, see “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Summary of Certain Differences between IFRS and U.S. GAAP.”

All RR amounts related to financial information for periods prior to 2003 are expressed in constant RR as of December 31, 2002 purchasing power, unless otherwise noted. As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from January 1, 2003, we no longer apply the provisions of IAS 29. Accordingly, no adjustment for the effects of changes in general purchasing power have been made for periods starting from January 1, 2003. Corresponding figures for the nine month period ended September 30, 2002 have been restated in constant RR as of December 31, 2002 purchasing power.

For periods up to and including December 31, 2002, the impact of stating our financial information in terms of the measuring unit as of December 31, 2002 was to:

- inflate current period transactions recorded in the statement of operations of the local statutory books by the average rate of inflation for the period in order to state them in terms of the purchasing power of the RR as of the balance sheet date (i.e., using the average inflation factor of 1.0638 for all relevant transactions in the year ended December 31, 2002);
- restate the period end non-monetary assets and liabilities and shareholders’ equity, including share capital, in terms of the measuring unit current as of the period end; and
- restate all comparatives, both monetary and non-monetary items, in terms of the purchasing power of the RR as of December 31, 2002.

The restatement of all comparatives, in particular, had a significant impact on our reported sales and operating profit. For example, domestic sales expressed in constant RR decreased when increases in nominal prices were lower than inflation and increased less than might otherwise be expected even when increases in nominal prices were higher than inflation. Our ability to increase the prices we charge for our natural gas sales in the domestic market is constrained by Government regulations. Moreover, the impact of U.S. dollar and euro price increases for our export sales was offset in recent periods, and the impact of U.S. dollar and euro price decreases was magnified in recent periods, by the real appreciation of the RR (i.e., by a rate of inflation that is higher than the rate at which the RR is depreciating against the U.S. dollar or euro). As a result, our reported sales lagged behind the changes in our actually realized prices in nominal terms. On the other hand, our costs, which are mainly in RR and are generally not regulated, have tended to increase in line with or even above inflation in recent periods.

In addition, the restatement of all comparatives had a significant impact on our debt balances. For example, even though we borrowed more than we repaid during the years ended December 31, 2002, 2001 and 2000, the restatement of our comparatives into current purchasing power resulted in our reported debt balances having declined at each period end until December 31, 2002. (The ratios we show below are not affected by this, because the other components of the ratios are subject to similar adjustments.)

The U.S. dollar amounts set forth below were not included in our annual and interim consolidated financial information and are provided for convenience only. They should not be construed as representations that the RR amounts have been or could be converted into U.S. dollars at that or any other rate or as being representative of the U.S. dollar amounts that would have resulted if we reported in U.S. dollars. The U.S. dollar amounts have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003.

Net debt/Adjusted EBITDA . . . . .	1.25 <sup>(10)</sup>		1.81 <sup>(10)</sup>		1.77		1.42		1.34	

Notes:

- (1) Includes impairment provisions for accounts receivable and prepayments, assets under construction, investments and other long-term assets, guarantees and inventory obsolescence.
- (2) Gross interest expense less interest income.
- (3) Monetary gain, exchange gains and gains on and extinguishment of restructured liabilities, less exchange losses. Monetary gain reflects the effect of inflation on our net monetary liability position as a result of the application of IAS 29 prior to 2003.  

On September 3, 1999 the Government issued regulation #1002 allowing certain companies to negotiate the restructuring of various overdue taxes, interest and fines due to the federal government authorities over ten years. Interest accrues on the restructured tax payables (excluding interest and fines) at a rate of 5.5% per annum, representing 1/10 of the Central Bank of Russia's annual refinancing rate (55%) as specified in the regulation, and is paid quarterly. Current tax payments must be made timely. If the terms of the restructuring are violated, the original nominal value of the tax payable (including interest and fines) becomes due with additional interest of 1/300 of the Central Bank refinancing rate accruing for each day since the restructuring agreement.

Certain of our subsidiaries have signed such restructuring agreements. This resulted in the recognition of a gain in each of the respective periods based on the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables. This gain is reflected in gain on restructured taxes. Following the restructurings, we recognize the amortization of the discount and the interest accruing under the restructuring agreements as interest expense on taxes payable, which also includes interest that accrues when tax payments are overdue.
- (4) Share of net income (losses) of associated undertakings and gains (losses) on available-for-sale investments.
- (5) Cash and cash equivalents and certain restricted cash include balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations but exclude cash restricted as to withdrawal under banking regulations.
- (6) Operating profit plus depreciation and the provisions referred to in note 1 above except for provisions for accounts receivable and prepayments. Provisions for accounts receivable and prepayments were RR3,004 million and RR8,079 million for the nine months ended September 30, 2003 and 2002, respectively, and RR17,411 million, RR35,070 million and RR36,119 million for the years ended December 31, 2002, 2001 and 2000, respectively. Adjusted EBITDA should not be considered as an alternative to net profits, operating profit, net cash provided by operating activities or any other measure of performance under IFRS.
- (7) Interest expense on taxes payable, short- and long-term debt and other interest expense, excluding capitalized interest on borrowings. See note 3 above for an explanation of interest expense on taxes payable.
- (8) Short-term borrowings and current portion of long-term borrowings, short-term promissory notes payable, long-term borrowings, long-term promissory notes payable and restructured tax liabilities.
- (9) Total debt less cash and cash equivalents and balances of cash and cash equivalents restricted as to withdrawal under the terms of certain borrowings and other contractual obligations.
- (10) Based on Adjusted EBITDA for the twelve months ended September 30 and net debt as of the balance sheet date. Adjusted EBITDA was RR317,317 million and RR240,663 million for the twelve-month periods ended September 30, 2003 and 2002 respectively.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

*You should read the following discussion and analysis of our financial condition and results of operations as of September 30, 2003 and 2002 and December 31, 2002, 2001 and 2000 and the periods then ended in conjunction with our unaudited interim consolidated condensed financial information as of and for the nine months ended September 30, 2003 and 2002 and the audited financial statements as of and for the years ended December 31, 2002, 2001 and 2000. The Consolidated Financial Statements and the related Notes thereto have been prepared in accordance with IFRS, which differ in certain respects from generally accepted accounting principles applied in the United States. For a summary of certain differences between IFRS and U.S. GAAP that could be significant to Gazprom, see "Summary of Certain Differences Between IFRS and U.S. GAAP." All RR amounts related to financial information for periods prior to 2003 are expressed in constant RR as of December 31, 2002 purchasing power, unless otherwise noted. As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from January 1, 2003, we no longer apply the provisions of IAS 29. Accordingly, no adjustment for the effects of changes in general purchasing power have been made for periods starting from January 1, 2003. Corresponding figures for the nine month period ended September 30, 2002 have been restated in constant RR as of December 31, 2002 purchasing power. The U.S. dollar amounts, except as indicated, have been translated from the RR amounts at the rate of RR30.61 = U.S.\$1.00, which is the rate published by the Central Bank of Russia on September 30, 2003.*

### Overview

We are the world's largest natural gas company, and the world's largest publicly-traded hydrocarbons company, in terms of reserves, transportation and production volumes. Our revenues are primarily derived from sales of natural gas to western and central Europe, Russia and other former Soviet Union countries.

We divide our operations into the following four main business segments:

- Production (referred to elsewhere in the Offering Circular as "Exploration and Production"): exploration, development and production operations relating to natural gas and other hydrocarbons. These activities are primarily located within Russia.
- Refining: processing and refining of natural gas, gas condensate and other hydrocarbons (including crude oil), and sale of hydrocarbon products. Operations relating to refining of natural gas, gas condensate and oil significantly increased during 2001 due to our acquisition of OAO AK Sibur ("Sibur") (see "—Certain Acquisitions and Dispositions"). Sibur's operations significantly increased in the nine months ended September 30, 2003 following the completion of bankruptcy procedures in September 2002.
- Transportation: transportation of natural gas through the world's largest high-pressure trunk pipeline system (151,600 km). We own and operate a single centrally controlled system for natural gas production, processing, transportation, storage and deliveries. Beginning in the late 1990s, we began acquiring interests in regional gas distribution companies that own and operate medium- and low-pressure pipelines.
- Distribution (referred to elsewhere in the Offering Circular as "Marketing"): domestic and export sale of natural gas. We are the world's largest exporter of natural gas.

Other businesses primarily comprise banking, insurance, construction and media. These businesses are not separately reflected in our financial statements because they do not represent individually material segments.

Our four main business segments are mutually dependent, with a significant portion of the revenues of one segment comprising a part of the costs of another segment. In particular, our Distribution and Refining segments purchase natural gas from our Production segment and transportation services from our Transportation segment. We establish internal transfer prices to provide for the funding requirements of the individual subsidiaries within each segment. Accordingly, the results of operations of these segments on a stand-alone basis do not necessarily represent that segment's underlying financial position and results of operations as if it were a stand-alone business. For this reason, we do not analyze any of our main segments separately in the discussion that follows.

## **Critical Accounting Policies**

Our financial statements reflect the selection and application of accounting policies that require management to make significant estimates and assumptions. We believe that the following are some of the most critical accounting policies that currently affect our financial condition and results of operations.

### ***Gas and oil exploration and production activities***

Gas and oil exploration and production activities are accounted for in accordance with the successful efforts method as it provides a timelier accounting of the success or failure of our exploration and production activities. Under the successful efforts method, costs of successful development and exploratory wells are capitalized. Costs of unsuccessful exploratory wells are expensed upon determination that the well does not justify commercial development. Other exploration costs are expensed as incurred.

Assets associated with exploration and production activities are depreciated on a straight-line basis calculated on the basis of cost. IFRS does not specifically require the use of the units-of-production method for the depreciation, depletion and amortization of gas production assets, primarily because there is no specific accounting standard for oil and gas producing companies. In making our estimates of depreciation, and considering the corresponding asset lives, we include in proved reserves those reserves that relate to quantities that will be produced beyond the initial license period date in circumstances where we have both the right to request and the intent to renew the license. A significant increase or decrease in reserves or the terms of our licenses could result in shorter or longer estimated useful lives for depreciation of assets.

### ***Site restoration and environmental costs***

Site restoration costs that may be incurred by us at the end of the operating life of certain of our facilities and properties are recognized on a straight-line basis over the asset's productive life. Liabilities for environmental obligations are recorded when it is probable that such obligations have been incurred and the amounts can be reasonably estimated.

IFRS prescribes the recording of liabilities for these costs. Estimating the amounts and timing of these obligations that should be recorded requires significant judgment. This judgment is based on cost and engineering studies using currently available technology and is based on current environmental regulations. Liabilities for site restoration are subject to change because of change in laws and regulations, and their interpretation. The timing of the recognition of these liabilities is affected by the life of our gas and oil fields.

### ***Impairment provision for accounts receivable***

The impairment provision for accounts receivable is based on our assessment of the collectibility of specific customer accounts. If there is a deterioration in a major customer's creditworthiness or actual defaults are higher than our estimates, the actual results could differ from these estimates.

### ***Impairment of other assets and accounting for provisions***

At each balance sheet date we assess whether there is any indication that the recoverable amount of our assets has declined below the carrying value. The recoverable amount is the higher of an asset's net selling price and its value in use. When such a decline is identified, the carrying amount is reduced to the recoverable amount. The amount of the reduction is recorded in the consolidated statement of operations in the period in which the reduction is identified.

Our accounting for impairment includes provisions against capital construction projects, investments, other long-term assets and inventory obsolescence. The provisions for liabilities and charges include provisions for guarantees, environmental and pension liabilities. We record impairment or accrue these provisions when our assessments indicate that it is probable that a liability has been incurred or an asset will not be recovered, and an amount can be reasonably estimated. Our estimates for provisions for liabilities and charges are based on currently available facts and our estimates of the ultimate outcome or resolution of the liability in the future. Actual results may differ from our estimates, and our estimates can be revised in the future, either negatively or positively, depending upon the outcome or expectations based on the facts surrounding each exposure.

Because of our operating cycle, certain significant decisions about capital construction projects are made after the end of our fiscal year. Accordingly, we typically have larger impairment charges or releases in the fourth quarter of our fiscal year as compared to other quarters. For example, in 2002 we recorded a fourth quarter impairment provision release of RR6,884 million related to assets under construction compared to a nil impairment provision for the first nine months of 2002. In 2001 we recorded a fourth quarter impairment provision of RR6,503 million related to assets under construction compared to a nil impairment provision for the first nine months of 2001.

### ***Interest costs on borrowings***

We capitalize interest costs on borrowings as part of the cost of assets under construction during the period required to prepare the assets for their intended use. All other borrowing costs are expensed. IFRS permits but does not require the capitalization of borrowing costs for qualifying assets. We capitalize borrowing costs that relate to funds borrowed specifically for, and funds borrowed generally and deemed to be used for, the purpose of assets under construction. For general borrowings, the borrowing costs eligible for capitalization are determined by applying a capitalization rate to the cumulative expenditures on assets under construction. This rate represents the weighted average of the borrowing costs applicable to the general borrowings. The amount of interest costs capitalized is primarily affected by the level of capital expenditures for assets under construction, interest rates and total borrowings.

### ***Profit tax and other taxes***

Tax legislation in the Russian Federation is subject to varying interpretations and frequent changes.

Deferred tax assets and liabilities are calculated in respect of temporary differences using a balance sheet liability method. Deferred tax is recorded for all temporary differences arising between the tax basis of assets and liabilities and their carrying values for financial reporting purposes. A deferred tax asset is recorded only to the extent that it is probable that taxable profit will be available against which the deductible temporary differences can be utilized. Deferred tax assets and liabilities are measured at tax rates that are expected to apply to the period when the asset is realized or the liability is settled, based on tax rates that have been enacted or substantively enacted at the balance sheet date.

### **Certain Factors Affecting our Results of Operations**

The primary factor that affects our results is the price for which we can sell our natural gas and other hydrocarbon products, both internationally and in Russia. Other factors affecting our results are:

- the impact of changes in the purchasing power of the RR resulting from inflation in Russia and of fluctuations in RR exchange rates against the U.S. dollar and euro;
- our high tax burden;
- interest rates and discounts on promissory notes;
- non-cash settlements; and
- impairment of assets.

### ***The export price of natural gas***

Our results are heavily reliant on natural gas export prices. Prices for the natural gas we export increased considerably in 2000 and 2001 in U.S. dollar terms (although they declined in constant RR terms in 2001), and then declined during the first six months of 2002, and increased for the last six months of 2002 and the nine months ended September 30, 2003. Export gas prices to European countries are indexed mainly to oil product prices as stipulated in long-term contracts and, therefore, fluctuate based on world oil prices. Due to the formulae underlying our long-term contracts, our prices are not as volatile on a short-term basis as spot oil prices and tend to lag upward and downward movements in oil prices by approximately six to nine months.

Our business requires significant ongoing capital expenditures in order to maintain our production and transportation systems. An extended period of low gas prices would limit our ability to maintain an adequate level of capital expenditures, which in turn could limit our ability to maintain current levels of production and deliveries of gas, adversely affecting our results.

The European Union Gas Directive of June 22, 1998, and the new Gas Directive of June 26, 2003 that replaced it, have established common rules for the transmission, distribution, supply and storage of

natural gas in the European market and may cause substantial changes to existing European market structures and to the overall level and volatility of prices. See “Business—Marketing—Europe—Western Europe” and “Business—Competition—Western Europe.”

Natural gas export prices for sales to FSU countries are generally based on one-year fixed price contracts. Average natural gas export prices to FSU countries are more than 50% below the level of those for European countries. This is partly due to lower transportation costs and excise tax burdens but is principally due to the impact of intergovernmental agreements, which effectively limit the prices we can charge to FSU countries.

The weather is another factor affecting demand for and, therefore, the price of natural gas. Changes in weather conditions from year to year can influence demand for natural gas and to some extent gas condensate and oil products.

We do not enter into any significant hedging arrangements to mitigate the price risk of our sales activities.

The following table shows our average natural gas export price to Europe and FSU countries (including excise tax and net of VAT) for the nine month periods ended September 30, 2003 and 2002 and the years ended December 31, 2002, 2001 and 2000:

	<u>Nine months ended</u> <u>September 30,</u>		<u>Year ended</u> <u>December 31,</u>		
	<u>2003</u>	<u>2002</u>	<u>2002</u>	<u>2001</u>	<u>2000</u>
	(including excise tax, net of VAT and customs duties)				
Our natural gas export price to Europe (average actual realized U.S.\$ per mcm) <sup>(1)</sup> .....	127.1	100.4	102.5	122.6	98.4
Our natural gas export price to Europe (average actual realized U.S.\$ per mcf) <sup>(1)</sup> .....	3.6	2.8	2.9	3.5	2.8
Our natural gas export price to Europe (average constant RR per mcm, except for 2003 amount which is in nominal RR) .....	3,980.4	3,221.7	3,369.0	4,100.0	4,223.9
Our natural gas export price to FSU countries (average actual realized U.S.\$ per mcm) <sup>(2)</sup> .....	41.1	42.5	45.4	41.5	45.4
Our natural gas export price to FSU countries (average actual realized U.S.\$ per mcf) <sup>(2)</sup> .....	1.2	1.2	1.5	1.2	1.3
Our natural gas export price to FSU countries (average constant RR per mcm, except for 2003 amount which is in nominal RR).....	1,276.1	1,385.0	1,444.2	1,417.5	1,891.6

Notes:

- (1) Average actual realized nominal prices and not convenience translations of constant RR prices.
- (2) Average actual realized nominal prices and not convenience translations of constant RR prices, except sales to Belarus, which are made in RR and for the purposes hereof converted to dollars at the end of each month at the exchange rate then in effect.

**Regulation of domestic natural gas prices and transportation tariffs**

Natural gas prices and transportation tariffs in Russia are regulated by the Natural Monopoly Law and the Gas Supply Law, as well as by a number of supplemental Government resolutions, and do not currently fluctuate based on supply and demand. The Federal Energy Commission of the Russian Federation (“FEC”) regulates natural monopolies, including the establishment and regulation of natural gas prices and transportation tariffs. From March 2004 the FEC was reorganized into the Federal Tariffs Service (“FTS”).

Natural gas prices in Russia have remained significantly below export prices (even after netting back export tariffs and transportation costs) primarily due to Governmental regulation, by the FEC (and now the FTS). Over the last five years the FEC reset domestic gas tariffs at rates that, on a cumulative basis, failed to recover fully the effects of inflation. As of September 30, 2003 the domestic natural gas price was 202% higher in nominal RR terms than in 1997, whereas cumulative inflation over the period to December 31, 2002 was 314%, and 350% to September 30, 2003.

Since 2000, however, domestic natural gas prices have increased faster than inflation. Our average domestic natural gas sales prices were equivalent to RR676.6 per mcm in the first nine months of 2003,

RR535.7 per mcm in 2002, RR442.8 per mcm in 2001 and RR383.4 per mcm in 2000, all expressed in constant RR, except for 2003 data which is in nominal RR.

The following table shows our average domestic natural gas price (including excise tax and net of VAT) for the nine-month periods ended September 30, 2003 and 2002 and the years ended December 31, 2002, 2001 and 2000:

	Nine months ended September 30,		Year ended December 31,		
	2003	2002	2002	2001	2000
	(including excise tax, net of VAT)				
Our domestic natural gas price (average actual realized RR per mcm) .....	676.6	438.7	505.0	357.9	254.7
Our domestic natural gas price (average actual realized RR per mcf) .....	19.2	12.4	14.3	10.1	7.2
Our domestic natural gas price (average constant RR per mcm, except for 2003 amount which is in nominal RR) <sup>(1)</sup> .....	676.6	472.5	535.7	442.8	383.4
Our domestic natural gas price (average constant RR per mcf, except for 2003 amount which is in nominal RR) <sup>(1)</sup> .....	19.2	13.4	15.2	12.5	10.8
Our domestic natural gas price (average U.S.\$ per mcm) <sup>(2)</sup> .....	21.9	14.0	16.0	11.9	9.0
Our domestic natural gas price (average U.S.\$ per mcf) <sup>(2)</sup> .....	0.6	0.4	0.5	0.3	0.3

Notes:

(1) Constant RR price in terms of the equivalent purchasing power of the RR as of December 31, 2002.

(2) Translated from average actual realized RR price for convenience only using period-end exchange rates.

The Government has allowed domestic gas prices to increase and may continue to do so in the foreseeable future. The Government is considering the introduction of an unregulated wholesale domestic market where some natural gas can be sold at prices determined by market forces. See "Business—Marketing—Russia—Domestic Market Conditions." Concerns about inflation and political considerations constrain the Government's ability to move rapidly in this direction, however. For example, we proposed that natural gas prices should increase by 38% on average in 2003 (40% for industrial consumers and 20% for household consumers), but the Government approved an average increase of only 20% (a 20% increase for industrial consumers commencing January 1, 2003 and a 23% increase for household consumers commencing February 1, 2003). Prices for both industrial and household consumers were increased by a further 20% with effect from January 1, 2004.

During the nine months ended September 30, 2003 and the years ended December 31, 2002, 2001 and 2000, our sales revenues derived from the transport of gas produced by third parties were relatively small, though increasing. For a discussion of our transport tariffs, see "Business—Transportation—Third party access to the UGSS."

***Impact of the change in purchasing power of the RR and fluctuations in RR exchange rates against the U.S. dollar and the euro***

*Impact of inflation accounting and presentation in our financial statements of constant RR.* Until December 31, 2002, our financial results, including comparatives, include a restatement for changes in the general purchasing power of the RR in accordance with IAS 29. IAS 29 requires that financial statements prepared in the currency of a hyperinflationary economy such as Russia's be stated in terms of the measuring unit current at the balance sheet date. The restatement is calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics ("Goskomstat"), and from indices obtained from other published sources for years prior to 1992. As the Russian economy is no longer considered to be hyperinflationary, from January 1, 2003 we no longer apply IAS 29.

The impact of stating our financial information in terms of the measuring unit current at the balance sheet dates, prior to and as of December 31, 2002, is to:

- inflate the current period transactions recorded in the statement of operations of the local statutory books by the average rate of inflation for the period in order to state them in terms of the purchasing power of the RR as of the balance sheet date (i.e. using the average inflation factor of 1.0638 for all relevant transactions in the year ended December 31, 2002);
- restate the period end non-monetary assets and liabilities and shareholders' equity, including share capital, in terms of the measuring unit current as of the period-end; and
- restate all comparatives, monetary and non-monetary items, in terms of the purchasing power of the RR as of December 31, 2002 (i.e. for the information included in this offering circular, to inflate the comparatives in terms of the purchasing power of the RR as of December 31, 2002).

The restatement of all comparatives, in particular, had a significant impact on our reported sales and operating profit. For example, domestic sales expressed in constant RR decreased when increases in nominal prices were lower than inflation and increased less than might otherwise be expected even when increases in nominal prices were higher than inflation. Our ability to increase the prices we charge for our natural gas sales in the domestic market is constrained by Government regulations. Moreover, as we discuss more fully below, the impact of U.S. dollar and euro price increases for our export sales was offset in recent periods, and the impact of U.S. dollar and euro price decreases was magnified in recent periods, by the real appreciation of the RR (i.e., by a rate of inflation that is higher than the rate at which the RR is depreciating against the U.S. dollar or euro). As a result, our reported sales lagged behind the changes in our average actual realized prices in nominal terms. On the other hand, our costs, which are mainly in RR and are generally not regulated, tended to increase in line with or even above inflation in recent periods.

In addition, the restatement of all comparatives had a significant impact on our debt balances. For example, even though we borrowed more than we repaid during the nine-month period ended September 30, 2003 and during the years ended December 31, 2002, 2001 and 2000, the restatement of our comparatives into current purchasing power resulted in our reported debt balances having declined at each period end until December 31, 2002. For a discussion of our debt obligations, see “—Liquidity and Capital Resources—Debt obligations.”

*Impact of inflation and changes in exchange rates on export sales and operating margins.* 64% of our gross sales (including excise tax and net of VAT and customs duties) for the nine months ended September 30, 2003 and 64%, 67% and 74% for the years ended December 31, 2002, 2001 and 2000, respectively were denominated in U.S. dollars or euros, while most of our costs were denominated in RR. The relative movements of inflation and exchange rates therefore significantly affect our results of operations. In particular, our operating margins are generally adversely affected by a real appreciation of the RR against the U.S. dollar or euro, because this will generally cause our costs to increase in real terms relative to our sales revenues. Conversely, our operating margins are generally positively affected by a real depreciation of the RR against the U.S. dollar or euro, because this will generally cause our costs to decrease in real terms relative to our sales revenues.

The following table sets forth the rates of inflation in Russia, the rates of nominal depreciation of the RR against the U.S. dollar and euro and the rates of real change in the value of the RR against the U.S. dollar and euro for the periods shown.

	Nine months ended September 30,		Year ended December 31,		
	2003	2002	2002	2001	2000
Inflation (CPI) . . . . .	8.6%	10.4%	15.1%	18.8%	20.1%
Nominal (appreciation) depreciation of the RR against the U.S.\$ . . . . .	(3.7)%	5.0%	5.4%	7.0%	4.3%
Real appreciation of the RR against the U.S.\$ . . . . .	12.8%	5.2%	9.2%	11.0%	15.2%
Nominal depreciation (appreciation) of the RR against the euro . . . . .	5.9%	16.7%	25.0%	1.3%	(3.9)%
Real appreciation (depreciation) of the RR against the euro . . . . .	2.5%	(5.4)%	(7.9)%	17.2%	25.0%

Period to period comparisons of our export sales revenues, as restated in constant RR for periods prior to 2003, have been significantly affected by the real change in the value of the RR against the U.S. dollar and the euro. If our actual realized U.S. dollar or euro prices and the related sales for any periods

before 2003 being compared were the same, but between the periods the RR appreciated in real terms against the U.S. dollar or the euro, the related sales expressed in constant RR would have declined from one period to the next. And if the real appreciation of the RR was great enough, our export prices and sales expressed in constant RR would have declined from one period to the next even in circumstances where our actual realized U.S. dollar prices and the related sales would have increased. Conversely, if the RR depreciated in real terms against the U.S. dollar or the euro, our prices and the related sales expressed in constant RR would have increased from one period to the next if our actual realized U.S. dollar or euro prices and related sales remained unchanged, and could have increased even if our U.S. dollar or euro prices and related sales declined.

*Impact of Monetary Effects.* Our results of operations were also substantially affected prior to 2003 by the impact of nominal devaluation and inflation on the value of our monetary assets and liabilities. Nominal devaluation of the RR generally resulted in foreign exchange gains on monetary assets denominated in foreign currencies and foreign exchange losses on monetary liabilities denominated in foreign currencies. These gains and losses were recorded on a net basis in our statements of operations under the caption "Exchange gain (loss)." Inflation resulted in purchasing-power gains on monetary liabilities and purchasing power losses on monetary assets; because our financial statements for periods and as of dates prior to 2003 are price-level restated, these gains and losses are recorded on a net basis in our statements of operations for periods prior to 2003 under the caption "Monetary gain." There was no monetary gain for the nine months ended September 30, 2003 as the characteristics of the economic environment of the Russian Federation indicated that hyperinflation had ceased, and effective from January 1, 2003 we no longer apply the provisions of IAS 29. Accordingly, no adjustments for the effects of changes in general purchasing power are recorded in the financial statements beginning January 1, 2003.

### ***Our high tax burden***

We are subject to a wide range of taxes imposed at federal, regional, and local levels and are one of the largest sources of tax revenue to the federal authorities in Russia, as well as to the regional and local authorities in those regions and localities in which we operate. The combination of political pressure on the federal, regional and local authorities to address social and economic issues and the difficulties associated with collecting taxes from companies and enterprises in financial difficulties, all increase the risk that the Government, as well as regional and local governments, will seek to mitigate these problems by increasing our already substantial tax burden.

Given the relative size of our activities in Russia, our tax burden is largely determined by the taxes payable in Russia.

In addition to profits tax, we are subject to a number of other taxes in Russia, many of which are based on revenue or volumetric measures. Royalty taxes, mineral extraction taxes and road taxes are calculated based on the revenue generated from exploration and production activities. Social taxes and contributions are a function of salaries and wages. Significant taxes to which we are subject include:

- excise tax (abolished effective January 1, 2004 for gas produced after January 1, 2004);
- VAT (reduced from 20% to 18% effective January 1, 2004) and sales tax (abolished effective January 1, 2004);
- natural resources production tax, which replaced royalty taxes and mineral extraction taxes effective January 1, 2002 (effective January 1, 2004 natural resources production tax for gas changed from 16.5% of the value of gas produced to a fixed rate of RR107/mcm, and for gas condensate from 16.5% of the value of gas condensate produced from gas condensate fields and RR340 per ton of gas condensate produced from oil and gas condensate fields (the latter rate being subject to adjustments depending on fluctuations of oil prices and the RR exchange rate) to a single rate of 17.5% of the value of gas condensate produced);
- gas export duty (increased from 5% to 30% effective January 1, 2004);
- property tax (increased from 2% to 2.2% effective January 1, 2004);
- road users tax (abolished effective January, 1 2003);
- housing fund tax (abolished effective January 1, 2001); and
- social taxes and contributions.

Our overall effective profit tax rates (current and deferred tax expense/benefit as a percentage of IFRS profit before profit tax and minority interest) for the nine-month period ended September 30, 2003 and the years ended December 31, 2002, 2001 and 2000 were 30.1%, 82.1%, 92.0%, and a benefit of 86.6%, respectively, while the statutory income tax rates in Russia were 24%, 24%, 35% and 30% in 2003, 2002, 2001 and 2000, respectively. The significant difference between our effective profit tax rates and the statutory rates and the volatility of those rates since 2000 has been the result of:

- significant non-deductible expenses, primarily relating to social expenses;
- significant deferred tax benefits and expenses. The revaluation of property, plant and equipment for statutory tax purposes resulted in a deferred tax benefit in 2000. In each period, temporary differences related to property, plant and equipment affected deferred taxes due to the fact that a significant proportion of the tax base is based on independent appraisals while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR;
- the impact of accounting for inflation, which had been increasing our effective tax rate during the periods ending before 2003; and
- changes in Russian tax legislation.

Current profit tax expense for the nine-month period ended September 30, 2003 and the years ended December 31, 2002, 2001 and 2000 was RR31,259 million, RR54,187 million, RR94,957 million and RR94,688 million, respectively. This represents effective current profit tax rates (current profit tax expense as a percentage of IFRS profit before tax and minority interest) for the nine-month period ended September 30, 2003 and the years ended December 31, 2002, 2001 and 2000 of 17.0%, 32.7%, 41.0% and 44.9%, respectively. The general reduction of the current profit tax rate in the year ended December 31, 2002 and the nine months ended September 30, 2003 was primarily due to the shorter depreciation lives of fixed assets for tax purposes effective January 1, 2002, which increased depreciation for tax purposes and consequently reduced our current tax expense in those periods. The reduction of the current profit tax rate from the year ended December 31, 2002 to the nine months ended September 30, 2003 was primarily due to the effect of “transition period” profit tax charged as a one time expense in 2002 resulting from changes in tax legislation. See “—Results of Operations—Nine months ended September 30, 2003 versus nine months ended September 30, 2002—Profit tax.”

Effective January 1, 2002, the Russian Government adopted new tax legislation. This tax legislation included a number of changes, the most significant of which for the profit tax were:

- a decrease in the statutory profit tax rate from 35% to 24%;
- the elimination of upper limits on the deductibility of expenses considered to be in the normal course of business;
- a general decrease in the useful lives of property, plant and equipment for tax accounting purposes;
- the elimination of independent appraisals or use of indices to increase the tax base of property, plant and equipment (capped to 30% of any increase associated with a revaluation as of January 1, 2002 and eliminated entirely thereafter). No independent appraisal was undertaken or revaluation recorded for tax purposes as of January 1, 2002 as we projected tax losses at our parent company, which holds most of our property, plant and equipment, in light of the decrease in the tax depreciation lives of property, plant and equipment and did not want to increase the taxable base for property tax purposes;
- the elimination of investment tax credits, although this has had and will have no significant impact because since June 1999 we have been unable to claim such credits due to the structure of our capital funding programs with subsidiaries. Our capital funding program is structured in such a way to maximize management control over capital expenditures throughout our consolidated Group. We believe that the advantages of tighter control outweigh the additional tax costs associated with the inability to claim the investment tax credits;
- the ability to deduct interest on business loans regardless of the source and use; and
- the ability to offset exploration expenditure against profit tax instead of against mineral restoration taxes.

We expect that our overall effective profit tax rate as a percentage of IFRS profit will continue to be higher than the statutory profit tax rate for the foreseeable future.

On September 3, 1999 the Government issued regulation #1002 allowing certain companies to restructure over ten years various overdue taxes, interest and fines due to the federal government authorities. During the years ended December 31, 2000, 2001 and 2002 certain of our subsidiaries signed such restructuring agreements. This resulted in the recognition of a gain in each of the respective periods based on the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables. This gain is reflected as gain on restructured taxes. Following the restructurings, we recognize the amortization of the discount (representing the difference between the nominal and discounted value of the restructured taxes) as interest expense on taxes payable. Interest accrues on the restructured tax payables (excluding interest and fines) at a rate of 5.5% per annum, representing 1/10 of the Central Bank's annual financing rate (55%) as specified in the regulation, and is paid quarterly. This interest is also included in interest expense on taxes payable. If the terms of the restructuring are violated, the original nominal value of the tax payable (including interest and fines) becomes due with additional interest of 1/300 of the Central Bank refinancing rate accruing daily. In the year ended December 31, 2002 and nine months ended September 30, 2003 a number of our subsidiaries were able to extinguish part of the restructured interest and fines, having complied with the terms of the accelerated repayment schedules of such payables provided for by the regulation.

### **Interest rates**

We have significant short-term and long-term debt obligations with both fixed and variable interest rates. Fluctuations in interest rates therefore affect our financial results. We do not have any significant hedging arrangements to mitigate interest rate risks resulting from our financing activities.

### **Non-cash settlements**

Historically, in common with other Russian companies, we have entered into agreements to settle a number of transactions by the transfer of goods and services, or promissory notes, instead of cash. This practice has resulted principally from the following factors:

- high inflation in Russia;
- unreliable banking services; and
- gas that we produce is required for the day-to-day operations of a number of our key suppliers.

As the general economic climate in Russia has improved, the volume and value of these transactions has decreased significantly.

While the use of barter transactions and illiquid promissory notes to settle commercial transactions continues to be prevalent in Russia, our reliance on such non-cash transactions has decreased as a proportion of the value of our transactions. As can be seen in the table below, the percentage of non-cash settlements (i) related to total sales decreased from approximately 22% in the year ended December 31, 2000 to approximately 15% in the nine month period ended September 30, 2003; (ii) related to domestic sales decreased from approximately 31% in the year ended December 31, 2000 to approximately 20% in the nine month period ended September 30, 2003; and (iii) related to capital expenditures decreased from approximately 47% in the year ended December 31, 2000 to approximately 23% in the nine month period ended September 30, 2003.

	<u>Nine months ended</u> <u>September 30,</u>	<u>Year ended</u> <u>December 31,</u>		
	<u>2003</u>	<u>2002</u>	<u>2001</u>	<u>2000</u>
% of non cash settlements related to total gross sales .	15%	18%	18%	22%
% of non cash settlements related to gross domestic sales . . . . .	20%	21%	23%	31%
% of non cash settlements related to total capital expenditures . . . . .	23%	15%	31%	47%

Barter transactions have been substantially reduced and now non-cash settlements primarily represent mutual cancellations using promissory notes. We receive promissory notes from our customers (both issued by customers and third parties) as payment in respect of receivables. Promissory notes issued by customers are recorded in the same manner as accounts receivable we originate. Promissory notes issued by other third parties are recorded as available-for-sale investments. We give promissory notes,

mainly those of OAO Gazprom, to our suppliers in exchange for services or products. Such promissory notes are relatively liquid in the Russian market and are commonly traded by other Russian companies. The difference between the carrying value of the payables being settled and the face value of the promissory notes is recorded as interest expense within net finance costs. Promissory notes are shown separately in our balance sheet. See “—Liquidity and Capital Resources—Debt Obligations.”

### ***Impairment of assets***

Historically, our results have been affected by impairment provisions on accounts receivable, inventory, assets under construction, property, plant and equipment, investments and other long-term assets. Such provisions were RR4,245 million and RR10,175 million for the nine months ended September 30, 2003 and 2002, and RR7,104 million, RR42,863 million and RR110,577 million for the years ended December 31, 2002, 2001 and 2000, respectively.

Our provisions for accounts receivable have been significant. As of September 30, 2003, the aggregate balance sheet provision for accounts receivable and prepayments was RR131,661 million or 31% of the gross receivable balance. Provisions for accounts receivable have related mainly to non-payment for natural gas sold to Ukraine, Moldova, Serbia and Montenegro and certain domestic consumers. See “Business—Marketing—FSU” and “Business—Marketing—Russia.”

Our provisions for impairment of assets under construction have also been significant. As of September 30, 2003, the aggregate balance sheet provision related to assets under construction was RR99,493 million or 25.3% of gross assets under construction. This primarily relates to the following projects: RR18,895 million for part of the Obskaya-Bovanenkovo railroad construction; RR20,627 million for the Novy Urengoi Chemical Complex; and RR9,086 million for the Long-Yugan-Labytnangi-Salekhard-Kharp pipeline. Although these projects have not been abandoned, under the current investment program we do not believe they will generate positive cash flows in the future.

The cumulative provision against assets under construction has generally continued to increase, though at a slower rate. The decrease in the additions to those provisions in recent periods primarily reflects the strategy of current management to focus on priority projects in a systematic way. Moreover, provisions for assets under construction can be released if we once again begin to fund the relevant projects, as occurred in 2002.

Because of our operating cycle, certain significant decisions about capital construction projects are made after the end of our fiscal year. Accordingly, we typically have larger charges (releases) in the fourth quarter of our fiscal year as compared to other quarters. For a discussion of our impairment provisions in the nine-month periods ended September 30, 2003 and 2002, see “—Results of Operations—Nine months ended September 30, 2003 versus nine months ended September 30, 2002.”

### **Certain Acquisitions and Dispositions**

Since January 1, 2000, we have made a number of acquisitions and dispositions.

#### ***January 1, 2000 through September 30, 2003***

In 1999 we began participating in the creation of regional trade houses involved in the trading of gas in Russia. In 2002 our interest in the majority of such companies increased from 20% to 51% of their share capital and these companies were consolidated as subsidiaries.

In January 2001, we exchanged a 57% interest in Lebedinsky GOK (“LGOK”), a mining and ore enrichment company operating in the Russian Federation, and a 17% interest in the Oskolsky EMK for a 48% interest in ZAO Gazmetall (“Gazmetall”). Gazmetall is a metallurgical holding company with controlling interests in LGOK and the Oskolsky EMK. In March 2002, we sold our 48% interest in Gazmetall for U.S.\$70 million to OAO Oskolsky Metallurgical Plant, a subsidiary of Gazmetall. The financial effect of these transactions was not material to our financial position or results of operations.

In January 2001, we acquired 50.7% of the voting shares of Sibur, a leading marketer of petrochemicals products in Russia. The consideration of RR3,015 million consisted of a combination of cash, promissory notes issued by companies in our Group and other securities. Sibur was consolidated as a subsidiary effective from January 1, 2001. In the first quarter of 2002 external supervision was introduced, at our initiative, in respect of Sibur pursuant to a decision of the arbitration court. On September 10, 2002 a creditors’ meeting approved an amicable settlement agreement, which was

subsequently approved by the court. The agreement provided for the restructuring and rescheduling of Sibur debts generally over a period of eight years with first payments due in 2004. In the third quarter of 2002, we signed agreements to acquire additional interests in a number of Russian petrochemicals companies, the majority of which were already affiliated with Sibur. In April 2003, following the completion of the necessary legal procedures, we established control over the majority of these companies, some of which held interests in Sibur, and thereby increased our controlling interest in the share capital of Sibur from 50.7% to 75.7%. The consideration for the acquisition of the additional interests in these companies was to consist primarily of long-term promissory notes with a face amount of RR17,824 million and an estimated fair value of approximately RR6,770 million. In September 2003 we acquired an additional 2.4% interest in Sibur for RR102 million.

In 2000 OAO Zapsibgazprom issued additional shares, thereby decreasing our interest in its share capital from 51.1% to 34%. In April 2002, the Federal Commission for the Securities Market cancelled the registration of additional stock issued to third parties by OAO Zapsibgazprom ("Zapsibgazprom"). As a result, we increased our interest in the ordinary share capital of Zapsibgazprom back from 34% to 51.1%. In December 2002, we sold our 12% interest in OAO Arcticgas with a carrying value of RR1 million to the OAO NK Yukos group in exchange for 25.6% of the shares of Zapsibgazprom with a nominal value of RR300,000 and additional cash consideration of U.S.\$2.95 million. We thereby increased our interest in the share capital of Zapsibgazprom from 51.1% to 76.7%.

In April 2002 we acquired an additional 32.8% of the voting shares in our production subsidiary OAO Vostokgazprom for RR2 million, increasing our interest from 51.0% to 83.8%. We hold these additional shares through our subsidiary Gazprom UK Ltd.

During 2000, ZAO Media-Most ("Media-Most") defaulted on its payment obligation under certain loans, which we had guaranteed. We fulfilled our obligations under the guarantee, and in November 2000, signed agreements with Media-Most to change the collateral under the guarantees to obtain a 46% interest in OAO TV Company NTV ("NTV") and 25% plus one share interests in various other Media-Most operating companies. In July 2001 Media-Most defaulted on another loan, which we had guaranteed. After fulfilling its obligation under this loan guarantee, we obtained a further 19% interest in NTV and additional 25% interests in the other Media-Most operating companies. In July 2002, we acquired additional interests in Media-Most, in NTV and in certain of our other media subsidiaries, as well as payables and promissory notes to third parties due by these companies. The consideration was paid partly in cash and partly through the forgiveness of debt owed to OAO Gazprom. As a result of this transaction we increased our interest in NTV from 65% to 95.6% and in Media-Most from 14.3% to 38.6%. This transaction also provided for us to acquire a further 39.6% interest in Media-Most, but as of September 30, 2003 this interest was under court arrest and we did not control the voting rights for these shares. In October 2002, we signed a framework agreement to sell non-controlling interests in certain media companies, including NTV, to Evrofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of Media-Most and its media companies to us. The interests to be sold primarily comprised those acquired in July 2002. As a result, our interest in NTV has been reduced to 65.3%. Under the framework agreement, Evrofinance Group is to contribute cash and these acquired interests into a new media holding company, of which we will own 51% and Evrofinance the balance. Our contribution into the new holding company will comprise the remaining interests in certain of our media subsidiaries. The transactions are expected to be completed by the middle of 2004.

In September 2002 we entered into an agreement with OAO Stroytransgaz to establish a joint activity which was formally established in October 2002. We contributed promissory notes of OAO Gazprom with a fair value of RR4,759 million (face value RR5,719 million) payable in January 2004 and OAO Stroytransgaz contributed 1,144 million of ordinary shares of OAO Gazprom (4.83% of our shares). In March 2003 OAO Stroytransgaz terminated its participation in the joint activity agreement and transferred its interest in the joint activity to our subsidiary Gazprominvestholding in return for OAO Gazprom promissory notes with a face value RR5,719 million and payable in January 2004.

Initially, we and ZAO Rosshelf, our 53% owned subsidiary, had 99.1% and 0.9% direct interests, respectively, in a joint activity established to develop the Arctic shelf (Prirazlomnoye and Shtokmanovskoye fields) in the Barents Sea. In October 2002, we signed an amendment to the joint activity agreement that provided for the addition of ZAO Sevmorneftegaz to our joint activity agreement. ZAO Sevmorneftegaz is jointly controlled by ZAO Rosshelf and Rosneft-Purneftegaz, a subsidiary of OAO NK Rosneft ("Rosneft"). Under the agreement, in February 2003 ZAO Sevmorneftegaz made a non-cash contribution valued at RR4,334 million, thereby obtaining a 48.9% interest in the assets of the joint

activity. As a result of the transaction we and ZAO Rosshelf held 48.7% and 2.4% direct interests in the joint activity, respectively, and our total effective interest decreased from 99.6% to 62.9%. In July 2003 Rosneft signed an agreement to acquire a 49.95% direct interest in the joint activity for U.S.\$136 million to be paid in cash or by settlement of the loan payable by ZAO Sevmorneftegaz to Rosneft. The effect of this transaction was to decrease our total effective interest in the joint activity from 62.9% to 48.85% and to establish our joint control over the assets of the joint activity with Rosneft.

In May 2003, Gazprombank acquired a 15.76% interest in OAO Mosenergo for RR10,900 million. As of September 30, 2003 this was recorded as a trading investment within short-term investments.

In April 2003 we acquired 25.9% of the ordinary shares of OAO Stroytransgaz for consideration with a fair value of RR3,336 million, including primarily promissory notes and cash. In August 2003 we acquired 15.54% of preferred shares and an additional 0.2% of ordinary shares in OAO Stroytransgaz for RR152 million.

### ***Recent developments***

In January 2004, Gazprombank acquired a 5.3% interest in RAO UES for RR19,800 million.

In March 2004, we acquired a 34% interest in AO Lietuvos Dujos from the State Property Fund of Lithuanian Republic for RR1,020 million. Lietuvos Dujos engages primarily in the distribution and transportation of natural gas in Lithuania.

### ***Our asset reacquisition program***

Our senior management has carried out an asset reacquisition program, through which we have reacquired certain assets from various entities.

In April 2002, we completed the repurchase of 32% of the shares in ZAO Purgaz (“Purgaz”) from the Itera International Energy group of companies (“Itera”) pursuant to a repurchase option provided by the 1999 share purchase agreement under which we had sold the shares to Itera for their nominal value. As a result, our interest in Purgaz rose from 19% to 51%. Purgaz holds a license for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these Purgaz shares, we paid Itera RR33,000 in cash (the nominal value of the shares) and financed Purgaz’s repayment of RR6,594 million of financing originally provided by Itera to Purgaz to finance development work, thereby satisfying all of Purgaz’s outstanding liabilities to Itera. Subsequent to its consolidation in April 2002, Purgaz contributed 11.2 bcm to our natural gas production volumes in 2002, and 11.2 bcm in the nine months ended September 30, 2003.

In February 2003 the management of our wholly-owned subsidiary OOO Mezhhregiongaz (“Mezhregiongaz”), acting in violation of our internal procedures, sold a 40.1% (out of our total 46.4% interest) of the share capital of ZAO Agrochemical Corporation Azot at its carrying value of RR394 million for cash, reducing our interest to 6.3%. The shares were sold to the other shareholders of ZAO Agrochemical Corporation Azot as a result of the latter taking advantage of their pre-emptive purchase rights. In April 2003, a part of this transaction was cancelled by an agreement of the parties. As a result, we received back a 33.9% interest in ZAO Agrochemical Corporation Azot and returned RR333 million of the cash received in February 2003. In July 2003 we acquired an additional 7.2% interest in ZAO Agrochemical Corporation Azot at par value from the existing shareholders for RR71 million in cash. Accordingly, as of September 30, 2003 we had a 47.4% interest in ZAO Agrochemical Corporation Azot. In an action we brought to recover the remaining 6.2% of our prior interest, the Moscow Region Arbitration Court has ruled in our favor, and the procedural execution of this decision is ongoing.

In February 2003 we acquired a 51.0% additional interest in OAO Severneftegazprom (“Severneftegazprom”) from Itera at the nominal value of the shares (RR102,000) for cash and thereby increased our interest in the share capital of OAO Severneftegazprom to 100%. In connection with the acquisition of this interest, we paid RR369 million in cash to Itera to settle the amount owed by Severneftegazprom to finance development work. Severneftegazprom, a production company, holds a license for the development of the Yuzhno-Russkoye field. At the same time we sold to Itera a 10.0% interest in OAO Sibirsky Oil and Gas Company at its carrying value of RR2.55 million plus a 7.8% interest in OAO Tarkosale-neftegaz at its carrying value of RR356 million for cash.

ZAO Achimneftegaz (“Achimneftegaz”) was created as a wholly-owned subsidiary of our subsidiary, OOO Urengoigazprom (“Urengoigazprom”), to accelerate development of the Achimov layer gas

condensate deposit in the Urengoiskoye field. Achimneftegaz is currently working on the second section of the Achimov layer of the field. Several years ago, ZAO CTI-Sigma, an Itera affiliate, acquired a 49% stake in Achimneftegaz. We are currently taking measures to reacquire a 48% stake in Achimneftegaz from the 49% previously acquired by ZAO CTI-Sigma.

We initially held a 51% stake in ZAO Nortgaz (“Nortgaz”), a company that holds licenses for the development of the North Urengoiskoye field. Our initial stake was reduced to 0.5% in 2001 as a result of a court decision invalidating our participation in a share issuance by Nortgaz in 1999 on the basis that the value of the property that we contributed to the company had not been approved by the Nortgaz Board of Directors. We are currently attempting to reacquire the Nortgaz shares we lost as a result of this prior decision through further court actions. According to published reports, Nortgaz has gas reserves of approximately 325 bcm. See “Business—Litigation and Investigations.”

## Results of Operations

The following table and discussion is a summary of our consolidated results of operations for the nine-month periods ended September 30, 2003 and 2002 and the years ended December 31, 2002, 2001 and 2000. Each line-item is also shown as a percentage of our total sales. All RR amounts related to financial information for periods prior to 2003 are expressed in constant RR as of December 31, 2002 purchasing power, unless otherwise noted. No adjustment for the effects of changes in general purchasing power have been made for period starting from January 1, 2003. Corresponding figures for the nine month period ended September 30, 2002 have been restated in constant RR as of December 31, 2002 purchasing power.

	Nine months ended September 30,				Year ended December 31,					
	2003		2002		2002		2001		2000	
	(RR million)	(% of sales)	(RR million)	(% of sales)	(RR million)	(% of sales)	(RR million)	(% of sales)	(RR million)	(% of sales)

*Nine months ended September 30, 2003 versus nine months ended September 30, 2002*

*Sales*

The following tables set out our volumes and realized prices for the nine months ended September 30, 2003 and 2002.

	Nine months ended September 30,	
	2003	2002
	(RR million, unless otherwise indicated)	
<b>Sales of gas</b>		
<i>Europe</i>		
Gross sales (including excise tax) <sup>(1)</sup> .....	409,536	309,104
Excise tax .....	(93,020)	(70,355)
Net sales .....	316,516	238,749
Excise tax as a percentage of sales .....	23%	23%
Volumes in bcm .....	102.9	95.9
Average price, US\$ per mcm <sup>(2)</sup> (including excise tax and net of customs duties) <sup>(3)</sup> .....	127.1	100.4
Average price, constant RR per mcm as of December 31, 2002 purchasing power, except for 2003 amount which is in nominal RR (including excise tax and net of customs duties) .....	3,980.4	3,221.7
<i>FSU</i>		
Gross sales (including excise, net of VAT) .....	39,920	44,532
Excise tax .....	(7,103)	(7,464)
Net sales .....	32,817	37,068
Excise tax as a percentage of sales .....	18%	17%
Volumes in bcm .....	31.3	32.2
Average price, US\$ per mcm <sup>(2)</sup> (including excise tax and net of VAT and customs duties) <sup>(3)</sup> .....	41.1	42.5
Average price, constant RR per mcm as of December 31, 2002 purchasing power, except for 2003 amount which is in nominal RR (including excise tax and net of VAT and customs duties) .....	1,276.1	1,385.0
<i>Russia</i>		
Gross sales (including excise, net of VAT) .....	143,956	93,333
Excise tax .....	(15,117)	(1,606)
Net sales .....	128,839	91,727
Excise tax as a percentage of sales .....	11%	2%
Volumes in bcm .....	212.8	197.5
Average price, nominal RR per mcm <sup>(2)</sup> (including excise tax and net of VAT) .....	676.6	438.7
Average price, constant RR per mcm <sup>(2)</sup> as of December 31, 2002 purchasing power, except for 2003 amount which is in nominal RR (including excise tax and net of VAT) .....	676.6	472.5
<i>Total sales of gas</i>		
Gross sales (including excise, net of VAT and customs duties) .....	593,412	446,969
Excise tax .....	(115,240)	(79,425)
Net sales .....	478,172	367,544
Excise tax as a percentage of sales .....	19%	18%
Volumes in bcm .....	347.0	325.6
Sales of gas condensate and other oil and gas products (net of excise tax and VAT) .....	62,269	35,913
Gas transportation sales (net of VAT) .....	20,421	12,428
Other sales (net of VAT) .....	36,520	25,625
<b>Total sales (net of excise tax, VAT and customs duties) .....</b>	<b><u>597,382</u></b>	<b><u>441,510</u></b>

Notes:

(1) VAT is not charged on sales to Europe.

(2) One mcm is equivalent to 35,316 cubic feet.

(3) Average actual prices and not a convenience translation.

Net sales revenues increased by RR155,872 million, or 35%, to RR597,382 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002. Net sales of gas accounted for 80% of total sales in the nine months ended September 30, 2003 (83% in the same period of 2002) and were RR110,628 million or 30% higher than in the same period of 2002.

Net sales of natural gas to Europe increased by RR77,767 million, or 33%, to RR316,516 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002. This was primarily due to a 24% increase in prices (comparing nominal prices for the nine months ended September 30, 2003 to prices in constant RR terms as of December 31, 2002 purchasing power for the nine months ended September 30, 2002), and a 7%, or 7 bcm, increase in sales volumes. Following the increase in U.S. dollar oil prices, average U.S. dollar export gas prices increased 27% in the nine months ended September 30, 2003 to U.S.\$127.1 per mcm compared to the nine months ended September 30, 2002. Nevertheless, our reported average RR export gas prices to Europe increased by only 24% to RR3,980.4 per mcm as a result of a 1% nominal appreciation of the RR against the U.S. dollar for the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002 and 4% inflation for the period from September 30, 2002 to December 31, 2002 (which increased the average RR price for the nine months ended September 30, 2002 because it is expressed in constant RR as of December 31, 2002). The increase in sales volumes was primarily due to increased volumes sold to Romania, Hungary, Austria and Holland under existing long-term contracts.

Net sales of natural gas to FSU countries decreased by RR4,251 million, or 11%, to RR32,817 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002. This was due to an 8% decrease in the average prices of gas (comparing nominal prices for the nine months ended September 30, 2003 to prices in constant RR terms as of December 31, 2002 purchasing power for the nine months ended September 30, 2002), and a 3%, or 0.9 bcm, decrease in volumes. The 8% decrease in our reported average RR price to RR1,276.1 per mcm resulted from a 3% decrease in average realized U.S. dollar price to U.S.\$41.1 per mcm, nominal appreciation of the RR against the U.S. dollar and inflation. The decrease in volumes of gas sold to FSU countries was primarily due to a 1.4 bcm reduction in sales volumes to Belarus, which more than offset increased shipments of gas to Baltic countries. In 2003 we continued to restrict our shipments to Ukraine to those required to cover transportation services, so-called "transit-gas", which mitigates our collection risk. Shipments to Ukraine in the nine months ended September 30, 2003 were 19.7 bcm compared to 19.5 bcm in the nine months ended September 30, 2002.

Net sales of natural gas in the domestic market increased by RR37,112 million, or 40%, to RR128,839 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002. This was due to the increase in domestic gas tariffs set by the Federal Energy Commission and an 8%, or 15.3 bcm, increase in sales volumes. The nominal average domestic price increased by 54% from RR438.7 per mcm in the nine months ended September 30, 2002 to RR676.6 per mcm in the nine months ended September 30, 2003. However, due to the impact of inflation for the period from September 30, 2002 to December 31, 2002, our average domestic prices (comparing nominal prices for the nine months ended September 30, 2003 to domestic prices in constant RR as of December 31, 2002 purchasing power for the nine months ended September 30, 2002) increased by 43%. The 8% increase in domestic sales volumes reflects increased sales by Sibur (3.0 bcm), and gas sales through an electronic terminal by our subsidiary Mezhtregiongaz, which commenced at the end of 2002 (1.1 bcm). See "Business—Marketing—Russia."

Total excise taxes on natural gas sales increased by 45%, to RR115,240 million, in the nine months ended September 30, 2003 from RR79,425 million in the nine months ended September 30, 2002, representing 19% and 18% of gross sales of natural gas, respectively. The increase was primarily due to higher natural gas sales to customers in Europe and Russia and the impact of our consolidation of regional trade houses in 2002, which increased excise tax by RR13,104 million in the nine months, ended September 30, 2003. The consolidation of regional trade houses resulted in an increase in our excise tax liability, as the liability to pay excise tax lies with the entity selling gas to the final customer.

Sales of gas condensate and oil and gas products increased by RR26,356 million, or 73%, to RR62,269 million in the nine months ended September 30, 2003 compared to RR35,913 million in the nine months ended September 30, 2002. This increase was primarily due to higher oil product prices and the fact that Sibur increased its level of operations following the completion of bankruptcy procedures in September 2002, and consolidation of additional petrochemicals companies in the three months ended June 30, 2003. Sibur and these petrochemicals companies accounted for 60% of sales of gas condensate and oil and gas products in the nine months ended September 30, 2003.

Gas transportation sales increased by 64%, to RR20,421 million, in the nine months ended September 30, 2003 from RR12,428 million in the nine months ended September 30, 2002. This was primarily due to the commencement of transportation sales to Eural Trans Gas starting from January 2003, which amounted to RR10,745 million in the nine months ended September 30, 2003 and more than offset the RR5,196 million reduction in transportation sales to Itera. Eural Trans Gas is incorporated in Hungary, and was established by independent third parties to purchase and resell Central Asian gas to customers in Europe. See "Business—Transportation—Third-party Access to the UGSS." The volume of gas transported under the contract with Eural Trans Gas in the nine months ended September 30, 2003 was 25 bcm.

Other sales increased by RR10,895 million, or 43%, to RR36,520 million in the nine months ended September 30, 2003 compared to RR25,625 million in the nine months ended September 30, 2002, which was primarily attributable to the increased level of operations of Sibur. Other sales represent activities such as construction work, gas storage services, drilling work and sales of other services and goods.

#### *Operating expenses*

Operating expenses increased by 21%, to RR415,360 million, in the nine months ended September 30, 2003 from RR342,627 million in the nine months ended September 30, 2002. Operating expenses decreased as a percentage of sales from 78% in the first nine months of 2002 to 70% in the first nine months of 2003. The table below presents a breakdown of operating expenses in each period:

	Nine months ended September 30,			
	2003 (RR million)	% of net sales	2002 (RR million)	% of net sales
Transit costs .....	80,062	13%	71,782	16%
Depreciation .....	71,095	12%	68,314	16%
Staff costs .....	64,511	11%	47,535	11%
Taxes other than on income .....	26,748	5%	32,564	7%
Materials .....	25,756	4%	27,793	6%
Repairs and maintenance .....	22,316	4%	15,079	3%
Purchased gas .....	20,872	4%	7,320	2%
Electricity .....	13,840	2%	8,676	2%
Processing services .....	13,464	2%	8,546	2%
Cost of goods for resale, including refined products .....	11,844	2%	11,649	3%
Provisions .....	9,672	2%	9,697	2%
Social expenses .....	6,522	1%	4,700	1%
Losses on disposal of property, plant and equipment .....	2,654	0%	5,004	1%
Other .....	46,004	8%	23,968	6%
<b>Total operating expenses .....</b>	<b>415,360</b>	<b>70%</b>	<b>342,627</b>	<b>78%</b>

#### *Transit costs*

Transit costs increased by 12%, to RR80,062 million, in the nine months ended September 30, 2003 from RR71,782 million in the nine months ended September 30, 2002. Transit costs relate principally to fees charged by Ukraine, Poland and other Eastern Europe and Central Asian countries for the transit of gas to markets in Europe. The increase was primarily due to the increased volume of gas sales to Europe, new transit contracts in Central Asia and higher transportation tariffs in Poland.

In the nine months ended September 30, 2003, ZGG, our wholly owned subsidiary in Germany, started to purchase gas for resale to customers in Western Europe and incur transit costs primarily in the territory of Ukraine. Also, in January 2003 we began to provide gas transportation services to Eural Trans Gas relating to the transportation of gas from fields in Central Asia to the Russian border with Ukraine, resulting in increased transit costs payable by us to third parties for the transportation of gas across Kazakhstan and Uzbekistan. Our increased transit cost in Poland resulted from an increase in the U.S. dollar denominated gas transportation tariff by U.S.\$1.35, to U.S.\$2.68, per mcm per 100km in January 2003. The effect of the increased tariffs, largely U.S. dollar denominated, was partially offset by the nominal appreciation of the RR against the U.S. dollar for the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002 and the cumulative inflation for the period from September 30, 2002 to December 31, 2002.

### *Depreciation*

Depreciation increased by 4%, to RR71,095 million, in the nine months ended September 30, 2003 from RR68,314 million in the nine months ended September 30, 2002. The increase primarily resulted from our growing fixed asset base and the effect of a decrease in the volume of gas in storage in the nine months ended September 30, 2003, which in turn decreased the amount of depreciation that was capitalized as gas in storage and increased depreciation charged to expenses.

### *Staff costs*

Staff costs increased by 36%, to RR64,511 million, in the nine months ended September 30, 2003 from RR47,535 million in the nine months ended September 30, 2002. The increase was primarily due to the rise in the average base salaries in January 2003 and June 2003, and to the bonus paid for the 10<sup>th</sup> anniversary of OAO Gazprom in February 2003. There was no significant change in the number of employees.

### *Taxes other than on income*

Taxes other than on income consist of:

	Nine months ended September 30,	
	2003	2002
	(RR million)	
Natural resources production tax .....	15,207	15,436
Property tax .....	7,538	7,010
Road users tax .....	—	7,617
Other taxes .....	<u>4,003</u>	<u>2,501</u>
<b>Taxes other than on income .....</b>	<b><u>26,748</u></b>	<b><u>32,564</u></b>

Taxes other than on income decreased by 18% to RR26,748 million in the nine months ended September 30, 2003 from RR32,564 million in the nine months ended September 30, 2002. The decrease was primarily attributable to road users tax, which was abolished effective January 1, 2003.

### *Materials*

Cost of materials decreased by 7%, to RR25,756 million, in the nine months ended September 30, 2003 from RR27,793 million in the nine months ended September 30, 2002. The decrease was primarily related to lower prices for material purchases as we reduced the use of non-cash settlements, which are generally made at higher prices relative to purchases for cash.

### *Repairs and maintenance*

Cost of repairs and maintenance increased by 48%, to RR22,316 million, in the nine months ended September 30, 2003 from RR15,079 million in the nine months ended September 30, 2002. The increase was primarily related to increased repair and maintenance activities in the transportation segment due to the ageing of the pipeline assets. See “—Business—Transportation—Age and Maintenance.”

### *Purchased gas*

Cost of purchased gas increased by 185%, to RR20,872 million, in the nine months ended September 30, 2003 from RR7,320 million in the nine months ended September 30, 2002. The increase was primarily related to purchases of gas from Central Asia for resale to customers in Western Europe, which commenced in January 2003. See “Business—Reserves and Production—Projects and Alliances in Reserves and Production.”

### *Electricity*

Electricity expense increased by 60%, to RR13,840 million, in the nine months ended September 30, 2003 from RR8,676 million in the nine months ended September 30, 2002. The increase resulted primarily from an increase in electricity tariffs set by the FEC, and increased usage due to the increased volume of gas transported in Russia, in line with the increased volume of gas sales.

### *Processing services*

Processing services for refined products increased by 58%, to RR13,464 million, in the nine months ended September 30, 2003 from RR8,546 million in the nine months ended September 30, 2002. These

processing services, which are provided by third parties, primarily pertain to the operations of Sibur, which increased its level of operations following the completion of bankruptcy procedures in September 2002.

#### *Provisions*

Provision expense decreased by RR25 million, to RR9,672 million, in the nine months ended September 30, 2003 compared to RR9,697 million in the nine months ended September 30, 2002. The decrease was a result of a smaller impairment provision for accounts receivable and a release in the provision for inventory obsolescence in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002, almost offset by an increase in provisions for assets under construction and increases in provisions for environmental and pension liabilities.

The impairment provision expense for accounts receivable and prepayments decreased by RR5,075 million, or 63%, to RR3,004 million in the nine months ended September 30, 2003 from RR8,079 million in the nine months ended September 30, 2002. The decrease was primarily a result of improved collections on domestic sales partially offset by non-recurring items mainly related to other debtors. As of September 30, 2003, the aggregate provision related to accounts receivable and prepayments was RR131,661 million, or 31% of the gross receivable balance.

The impairment provision expense for assets under construction was RR3,923 million in the nine months ended September 30, 2003 compared to nil for the nine months ended September 30, 2002. The impairment provision expense in the nine months ended September 30, 2003 was primarily due to changes in the current investment program which have reduced funding for certain projects. These projects include the development of the Kharasaveiskoye and Bovanenkovskoye fields, construction of part of the Obskaya-Bovanenkovo railroad, construction of the Long-Yugan-Labytnangi-Salekhard-Kharp pipeline and construction of parts of the Novy Urengoi Chemical Complex. Although these projects have not been abandoned, under the current investment program we do not believe they will generate sufficient positive cash flows in the future to recover all costs incurred.

Because of our operating cycle, certain significant decisions about capital construction projects are made after the end of our fiscal year. Accordingly, we typically have larger impairment charges in the fourth quarter of our fiscal year as compared to other quarters.

#### *Other operating expenses*

Other expenses increased by RR22,036 million, or 92%, to RR46,004 million, in the nine months ended September 30, 2003 compared to RR23,968 million in the nine months ended September 30, 2002. The increase was primarily related to an increase in costs of research and development and insurance, and also arose from other services, such as auto transportation services, equipment maintenance services and charitable donations.

#### *Operating profit*

As a result of the factors discussed above, our operating profit increased by RR83,139 million, or 84%, from RR98,883 million in the nine months ended September 30, 2002 to RR182,022 million in the nine months ended September 30, 2003. Our operating profit margin increased from 22% in the nine months ended September 30, 2002 to 30% in the nine months ended September 30, 2003.

### *Net monetary effects and financing items*

	Nine months ended September 30,	
	2003	2002
	(RR million)	
Net exchange gain (loss) .....	8,042	(8,659)
Interest income .....	9,499	6,576
Interest expense .....	(22,601)	(25,401)
Gains on and extinguishment of restructured liabilities .....	4,049	12,356
Monetary gain .....	—	20,644
<b>Net monetary effects and financing items .....</b>	<b><u>(1,011)</u></b>	<b><u>5,516</u></b>

We incurred a net exchange gain of RR8,042 million in the nine months ended September 30, 2003 compared to a net exchange loss of RR8,659 million in the nine months ended September 30, 2002. The change reflects primarily the impact on foreign currency denominated borrowings of a 4% appreciation of the RR against the U.S. dollar as of September 30, 2003 compared to December 31, 2002 compared to a 5% devaluation as of September 30, 2002 compared to December 31, 2001.

Interest expense decreased by RR2,800 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002 primarily due to the increased capitalized interest in line with increased capital expenditures.

Gains on and extinguishment of restructured liabilities decreased by RR8,307 million to RR4,049 million in the nine months ended September 30, 2003. This was primarily due to the fact that there were no tax payables eligible for restructuring in 2003, and there was a one-off RR3,358 million gain on the restructuring of Sibur's debts, following the approval of the settlement agreement with Sibur's creditors on September 10, 2002, recognized in the nine months ended September 30, 2002. We recognized RR4,049 million of gains in the nine months ended September 30, 2003 due to the forgiveness by certain tax authorities of penalties relating to overdue taxes that had previously been restructured.

There was no monetary gain for the nine months ended September 30, 2003 as the characteristics of the economic environment of the Russian Federation indicated that hyperinflation had ceased; effective from January 1, 2003 we no longer apply the provisions of IAS 29. Accordingly, no adjustments for the effects of changes in general purchasing power are recorded in the financial statements subsequent to December 31, 2002.

### *Share of net income of associated undertakings*

Share in net income of associated undertakings increased by RR1,782 million to RR4,194 million in the nine months ended September 30, 2003 compared to the nine months ended September 30, 2002. The increase was primarily due to higher net profits recorded by EuRoPol GAZ S.A. and the consolidation as a subsidiary of Sibur-Tyumen in 2003 with respect to which we had recorded losses in 2002 when it was an associated undertaking.

### *(Losses) gains on available-for-sale investments*

In the nine months ended September 30, 2003 we recognized losses on available-for-sale investments of RR1,626 million compared to gains of RR1,092 million in the nine months ended September 30, 2002. The change was primarily due to decreases in the estimated fair value of third party promissory notes held by our subsidiaries.

### *Profit tax*

Profit tax expense decreased by RR35,057 million, or 39%, to RR55,198 million in the nine months ended September 30, 2003 compared to RR90,255 million in the nine months ended September 30, 2002.

Our overall effective profit tax rate decreased from 84% in the nine months ended September 30, 2002 to 30% in the nine months ended September 30, 2003. The decrease primarily resulted from the fact that from January 1, 2003 we no longer apply the provisions of IAS 29, which eliminated the inflationary increase of the financial reporting base for fixed assets and therefore, reduced the deferred tax expense related to fixed assets. The deferred tax expense resulting from the effect of inflation on our fixed assets for the nine months ended September 30, 2002 totaled RR42,298 million.

Our current profit tax expense decreased by RR11,997 million, to RR31,259 million, in the nine months ended September 30, 2003 from RR43,256 million in the nine months ended September 30, 2002. Our effective current profit tax rate decreased to 17% in the nine months ended September 30, 2003 compared to 40% for the nine months ended September 30, 2002, primarily resulting from the effect of a "transition period" profit tax in the nine months ended September 30, 2002 and the impact of increased tax depreciation and the utilization of tax losses at OAO Gazprom in the nine months ended September 30, 2003. The transition period profit tax was a one time current tax charge of RR22,637 million resulting from the change in tax legislation, effective January 1, 2002, to recognize profit tax on an accrual rather than a cash basis. Transition period profit tax is payable over a period of up to five years.

*Minority interests*

Minority interest expense increased by RR936 million, to RR1,942 million, in the nine months ended September 30, 2003 compared to RR1,006 million in the nine months ended September 30, 2002. The increase was primarily due to increased earnings of Purgaz and Sibur.

*Net profit*

As a result of the factors discussed above, our net profit increased by RR109,797 million, or by 660%, from RR16,642 million in the nine months ended September 2002 to RR126,439 million in the nine months ended September 30, 2003.

**Year ended December 31, 2002 versus year ended December 31, 2001**

**Sales**

The following tables set out our volumes and realized prices for the years ended December 31, 2002 and 2001.

	<b>Year ended December 31,</b>

Notes:

(1) VAT is not charged on sales to Europe.

(2) One mcm is equivalent to 35,316 cubic feet.

(3) Average actual prices and not a convenience translation.

Net sales revenues fell by RR68,280 million, or 10%, to RR644,687 million in 2002 compared to 2001. Net sales of gas accounted for 82% of total sales in 2002 (82% in 2001) but were RR57,804 million, or 10%, lower than in 2001.

Net sales of natural gas to Europe decreased by RR72,083 million, or 18%, in 2002 compared to 2001. This was primarily due to an 18% decrease in the average price of gas exported to Europe expressed in constant RR from RR4,100.0 per mcm in 2002 to RR3,369.0 per mcm in 2003, reflecting a 16% decrease in the average actual U.S. dollar gas export price per mcm from U.S.\$122.6 in 2001 to U.S.\$102.5 in 2002 following the decrease in U.S. dollar oil prices in the second half of 2001, and the fact that devaluation of the RR against the U.S. dollar continued to lag behind inflation for the comparable periods. The cumulative inflation index for the period from the beginning of 2001 to the end of 2002 was 36.8% while the RR devaluation against the U.S. dollar for the same period was only 12.9%. The decrease in export gas prices was partially offset by a 1.6 bcm, or 1%, increase in export sales volumes, primarily due to increased volumes sold to Germany and Turkey under existing long-term contracts.

Net sales of natural gas to FSU countries increased by RR1,896 million, or 4%, to RR51,069 million in 2002 compared to 2001. This was primarily due to a 2% increase in the average constant RR price of gas and an 8% increase in FSU sales volumes. The main reason for the increase in FSU sales volumes was a 19% or 4.2 bcm increase in sales volumes to Ukraine from 21.9 bcm in 2001 to 26.1 bcm in 2002, which more than offset the decreased shipments of gas shipped to Belarus and Moldova; shipments to Baltic countries remained at the same level. Sales volumes to Ukraine increased as they represent transit gas' — i.e., consideration for transportation services provided in Ukraine, which eliminates our collection risk — and our Ukrainian transit costs increased. See “—Operating expenses—Transit costs” below. The average U.S. dollar price for FSU natural gas sales increased by 9%, to U.S.\$45.4 per mcm, in 2002, primarily due to a 34% increase in the contract price of transit gas sales to Ukraine from U.S.\$50 per mcm to U.S.\$67 per mcm in the third quarter of 2002. Despite the 9% increase in the average U.S. dollar price for FSU gas sales the constant RR gas price increased only 2%, reflecting the fact that devaluation of the RR against the U.S. dollar continued to lag behind inflation for the comparable periods. Excise tax increased by 48% or RR3,389 million, primarily due to a change in excise tax legislation effective October 1, 2001, whereby sales of dry gas became subject to excise tax whereas previously such sales had been exempt. The majority of our natural gas sales to the Baltic countries are shipments of dry gas.

Net sales of natural gas in the domestic market increased by RR12,383 million, or 9%, to RR142,854 million in 2002 compared to 2001. This increase was primarily due to a 21% increase in average constant RR domestic prices, which more than offset the 1% decrease in domestic sales volumes, which fell 2.8 bcm to 298.0 bcm in 2002. The decrease in domestic sales volumes was primarily due to a 3.5 bcm decrease in gas sales volumes by Sibur, which substantially reduced its operations at the end of 2001 and during the first six months of 2002. Sibur increased its activity at the end of the third quarter of 2002 after reaching an amicable agreement with its creditors, but this increase was insufficient to offset the decrease in the first six months of 2002. Nominal average domestic natural gas sales prices increased 41% from RR357.9 per mcm in 2001 to RR505.0 per mcm in 2002 following the 20% and a further 15% increase in domestic prices to industrial consumers effective March 1, 2002 and July 1, 2002, respectively, and a 15% increase in domestic prices to the general population effective August 1, 2002. Average constant RR domestic natural gas price increased only 21%, as the increase in nominal prices was partly eroded due to 15.1% inflation in the year ended December 31, 2002. Excise tax on domestic sales increased by RR14,072 million, or 518%, in 2002 compared to 2001, primarily due to the acquisition of controlling interests in many regional trade houses and their subsequent consolidation in 2002. The consolidation of regional trade houses resulted in an increase in our excise tax liability, as the liability to pay excise tax lies with the entity selling gas to the final customer.

Total excise taxes on natural gas sales increased 2%, or RR1,982 million, to RR125,195 million in 2002 from RR123,213 million in 2001, representing 19% and 17% of gross sales of natural gas in 2002 and 2001, respectively.

Sales of gas condensate and oil and gas products decreased by RR17,993 million, or 24%, to RR56,647 million in 2002 compared to RR74,640 million in 2001. This decrease was primarily due to the reduction in operations at Sibur at the end of 2001 and during the first six months of 2002. Sibur's level of operations began to increase beginning at the end of the third quarter of 2002, but this increase was insufficient to offset the decrease in the first six months of 2002. Sibur accounted for 37% and 64% of sales of gas condensate and oil and gas products in 2002 and 2001, respectively.

Gas transportation sales decreased by RR198 million, or 1%, to RR18,028 million in 2002 from RR18,226 million in 2001 due to lower prices in constant RR terms and lower volumes. Approximately 73% of third-party transportation sales were to Itera under U.S. dollar denominated contracts. A 7% increase in the average tariffs we charged Itera (in nominal RR terms after conversion of the U.S. dollar

tariffs into RR) was insufficient to offset inflation of 15.1% for the year ended December 31, 2002 and in addition was largely offset by a 6% decrease in the volume of gas we transported for third parties.

Other sales increased by RR7,715 million, or 23%, to RR40,974 million in 2002 compared to RR33,259 million in 2001. Other sales represent activities such as construction work, gas storage services, drilling work and sales of other services and goods.

#### *Operating expenses*

Operating expenses decreased by RR10,130 million, or 2%, to RR496,713 million in 2002 compared to RR506,843 million in 2001. Operating expenses increased as a percentage of sales from 71% in 2001 to 77% in 2002. The table below presents a breakdown of operating expenses in each period:

	Year ended December 31,			
	2002		2001	
	RR million	% of net sales	RR million	% of net sales
Transit costs .....	102,632	16%	95,105	13%
Depreciation .....	93,454	14%	99,868	14%
Staff costs .....	65,717	10%	59,456	8%
Materials .....	47,310	7%	59,602	8%
Taxes other than on income .....	43,975	7%	46,289	6%
Repairs and maintenance .....	24,218	4%	21,552	3%
Cost of goods for resale, including refined products .....	17,900	3%	21,085	3%
Provisions .....	13,908	2%	41,083	6%
Electricity .....	13,449	2%	11,430	2%
Processing services .....	13,226	2%	12,595	2%
Purchased gas .....	9,957	2%	7,466	1%
Social expenses .....	7,013	1%	6,088	1%
Losses on disposal of property, plant and equipment .....	6,405	1%	5,849	1%
Insurance .....	5,825	1%	4,147	1%
Research and development .....	4,464	1%	4,360	1%
Other .....	27,260	4%	10,868	1%
<b>Total operating expenses .....</b>	<b><u>496,713</u></b>	<b><u>77%</u></b>	<b><u>506,843</u></b>	<b><u>71%</u></b>

#### *Transit costs*

Transit costs increased by RR7,527 million, or by 8%, from RR95,105 million in 2001 to RR102,632 million in 2002. Transit costs relate principally to fees charged by Ukraine, Poland and other Eastern European and Central Asian countries for the transit of gas to markets in Europe. The increase was primarily due to higher transportation tariffs in Ukraine and Poland and an increased volume of transit services. U.S. dollar denominated gas transportation tariffs through the Ukraine increased by 34% from July 1, 2002, from U.S.\$1.09 per mcm per 100 km to U.S.\$1.46 per mcm per 100 km. U.S. dollar denominated gas transportation tariffs through Poland increased by 99% in the fourth quarter of 2002 from approximately U.S.\$1.35 per mcm per 100 km to approximately U.S.\$2.68 per mcm per 100 km. The effect of increased tariffs was partially offset by the fact that transit costs are largely U.S. dollar denominated and the rate of devaluation of the RR against the U.S. dollar in 2002 compared to 2001 was below the rate of inflation for the respective periods.

#### *Depreciation*

Depreciation decreased by RR6,414 million, or 6.4%, to RR93,454 million in 2002 from RR99,868 million in 2001. This decrease was primarily due to an increase in the amount of depreciation included in the cost of gas in storage from RR2,048 million in 2001 to RR5,228 million in 2002. The depreciation associated with those volumes will be expensed in future periods when the gas is sold.

#### *Staff costs*

Staff costs increased by RR6,261 million, or 11%, to RR65,717 million in 2002 from RR59,456 million in 2001. There was no significant change in the number of employees, and the increase was primarily due to an increase in staff salaries above inflation.

### *Materials*

The cost of materials used in our activities decreased by RR12,292 million, or 21%, from RR59,602 million in 2001 to RR47,310 million in 2002. The decrease was primarily related to lower prices for material purchases as we reduced the use of non-cash settlements.

### *Taxes other than on income*

Taxes other than on income consist of:

	Year ended December 31,	
	2002	2001
	(RR million)	
Natural resources production tax .....	20,485	—
Road users tax .....	10,369	9,924
Property tax .....	9,371	9,563
Royalty tax .....	—	12,633
Mineral restoration tax .....	—	9,090
Other taxes .....	<u>3,750</u>	<u>5,079</u>
<b>Taxes other than on income</b> .....	<u>43,975</u>	<u>46,289</u>

Taxes other than on income decreased by RR2,314 million, or 5%, from RR46,289 million in 2001 to RR43,975 million in 2002. This resulted mainly from the replacement of the royalty and mineral restoration taxes payable by production entities with the natural resources production tax effective January 1, 2002. The rate of natural resources production tax was 16.5% of the value of gas produced and of the value of gas condensate produced from gas condensate fields and RR340 per ton of oil and gas condensate produced from oil and gas condensate fields. The latter rate was subject to adjustment depending on fluctuations of oil prices and the RR exchange rate. The rates of this tax have now changed, as described above under “—Certain Factors Affecting our Results of Operations—Our high tax burden.”

### *Repairs and maintenance*

Repairs and maintenance increased by RR2,666 million, or 12%, from RR21,552 million in 2001 to RR24,218 million in 2002 primarily due to the ageing of our production and transportation facilities.

### *Cost of goods for resale, including refined products*

Cost of goods for resale, including refined products, decreased by RR3,185 million, or 15%, from RR21,085 million in 2001 to RR17,900 million in 2002 primarily as a result of the reduction in operations at Sibur in 2002.

### *Provisions*

Provision expenses decreased by RR27,175 million, or 66%, to RR13,908 million in 2002 compared to RR41,083 million in 2001. The decrease primarily resulted from lower provisions in respect of accounts receivable and prepayments, which fell 50%, from RR35,070 million in 2001 to RR17,411 million in 2002, and for impairment of assets under construction, which changed from a RR6,503 charge in 2001 to a RR6,884 million release in 2002.

As of December 31, 2002, the balance of provisions related to accounts receivable and prepayments was RR130,267 million, or 37.6% of the gross receivable balance, both short-term and long-term.

Provision expense in respect of accounts receivable and prepayments for 2001 includes a RR11,861 million charge as a result of changes in tax legislation effective from January 1, 2001 which required a provision for VAT to be recorded for accounts receivable balances that were provided for (including those provided for in prior periods). Absent this charge, provisions decreased by RR5,798 million in 2002. The decrease was primarily attributable to lower provision expense against trade receivables of Ukraine, which fell from RR18,284 million in 2001 to RR1,081 million in 2002, partially offset by additional provision expenses against trade receivables and prepayments and other receivables.

Provision expense related to impairment of assets under construction decreased by 206% from a RR6,503 million charge in 2001 to a RR6,884 million release in 2002, primarily as a result of our efforts to focus our capital program on priority projects and thereby reduce our total number of projects, and our allocating funds to projects that had previously been frozen or lacked financing under investment programs for prior years.

### *Other operating expenses*

Other operating expenses increased by RR16,392 million, or 151%, from RR10,868 million in 2001 to RR27,260 million in 2002 primarily due to the impact of the release of the RR9,340 million provision on forward foreign exchange contracts in 2001, and lower gains on trading investments in 2002 as a result of the de-consolidation of National Reserve Bank, (see “—Share of net income of associated undertakings” below).

### *Operating profit*

As a result of the factors discussed above, our operating profit decreased by RR58,150 million, or 28%, from RR206,124 million in 2001 to RR147,974 million in 2002. Our operating profit margin decreased from 29% in 2001 to 23% in 2002.

### *Net monetary effects and financing items*

	Year ended December 31,	
	2002	2001
	(RR million)	
Net exchange loss .....	(9,435)	(5,406)
Interest income .....	10,636	14,184
Interest expense .....	(29,265)	(42,902)
Monetary gain .....	31,380	33,513
Gains on and extinguishment of restructured liabilities .....	<u>13,908</u>	<u>23,122</u>
<b>Net monetary effects and financing items .....</b>	<b><u>17,224</u></b>	<b><u>22,511</u></b>

Our net exchange loss increased by RR4,029 million, or 75%, to RR9,435 million in 2002, reflecting the impact of (i) a 5.4% devaluation of the RR against the U.S. dollar and a 25.0% devaluation of the RR against the euro in 2002 on our U.S. dollar and euro denominated borrowings (offset in part by the impact of these devaluations on our U.S. dollar and euro denominated receivables) and (ii) an increase in our net foreign currency liability position.

Interest expense decreased by RR13,637 million, or 32%, to RR29,265 million in 2002 compared to 2001 primarily due to a RR6,296 million decrease in interest expense on taxes payable, following a reduction in overdue taxes payable, and a reduction in our borrowing costs resulting from the improved interest rate environment.

Monetary gain decreased by RR2,133 million, or 6%, to RR31,380 million in 2002 compared to 2001 due to the decrease in the rate of inflation and our lower net monetary liability position.

Gains on and extinguishment of restructured liabilities decreased by RR9,214 million, or 40%, to RR13,908 million in 2002. This was primarily due to a significant reduction in tax payables eligible for restructuring in 2002, offset by RR3,358 million of gain on the restructuring of Sibur's debts, following the approval of the settlement agreement with Sibur's creditors on September 10, 2002. We also recognized gains due to the forgiveness by certain tax authorities of fines relating to overdue taxes that had previously been restructured.

### *Share of net income of associated undertakings*

Share of net income of associated undertakings increased by RR198 million, or 5%, to RR4,285 million in 2002 primarily due to an increase in our share of the net income recorded by EuRoPol GAZ S.A. from RR223 million in 2001 to RR2,367 million in 2002, and the inclusion of RR667 million of equity income from National Reserve Bank, offset by our share of the net loss recorded by Sibur-Tyumen of RR1,529 million and of a loss of Moldovagas of RR526 million in 2002 compared to RR487 million of income in 2001. We ceased to exercise control over the activities of National Reserve Bank from January 1, 2002. Accordingly, effective January 1, 2002 we de-consolidated our investment in National Reserve Bank and recorded it as an associated undertaking until we disposed of 37% of our ordinary shares and all of our preference shares of the bank in July 2002. We currently own 3% of the ordinary shares of National Reserve Bank and account for this investment at cost.

### *Losses on available for sale investments*

Losses on available for sale investments increased by RR2,736 million, or 276%, to RR3,729 million in 2002, primarily due to the effect of the de-consolidation of National Reserve Bank. In 2001 National

Reserve Bank recognized a gain of RR1,510 million in available-for-sale investments. Our losses on available-for-sale investments also increased due to an increase in provisions against promissory notes of RR580 million related to certain short-term promissory notes held by Sibur and its subsidiaries and a decrease in realized gains on promissory notes of RR629 million following reduction in the scope of transactions with promissory notes.

*Profit tax*

	<u>Year ended December 31,</u>	
	<u>2002</u>	<u>2001</u>
	(RR million)	
Profit before profit tax and minority interest .....	165,754	231,729
Theoretical tax charge at the statutory rate thereon .....	(39,781)	(81,105)
Tax effect of items which are not deductible or assessable for taxation purposes:		
Inflationary effects .....	(63,278)	(101,338)
Non-deductible expenses .....	(40,665)	(40,535)
Statutory tax concessions .....	—	13,721
Other non-temporary differences .....	7,592	8,167
Effect of change in tax rate .....	—	(12,101)
<b>Profit tax expense .....</b>	<b><u>(136,132)</u></b>	<b><u>(213,191)</u></b>

Profit tax expense decreased RR77,059 million, or 36%, to RR136,132 million in 2002 compared to RR213,191 million in 2001.

Our current profit tax expense decreased by RR40,770 million, or 43%, to RR54,187 million in 2002 from RR94,957 million in 2001. Our effective current profit tax rate decreased from 41% in 2001 to 33% in 2002. Our high current profit tax rate for 2001 resulted in part from Russian tax regulations that limited the deductibility of some of our operating expenses. The decrease in our current tax rate was primarily due to the application of revised tax depreciation lives for property, plant and equipment following the enactment of Chapter 25 "Profit tax" of the Russian Federation Tax Code on January 1, 2002. The revised tax depreciation tax lives, which became generally shorter, gave rise to current period tax losses in the statutory books of OAO Gazprom. We recognized the results of the assessment of the revised tax depreciation lives for property, plant and equipment in the three months ended September 30, 2002 when such an assessment was completed. Revised tax returns were then filed for the nine months ended September 30, 2002. The current tax benefit as a result of changing depreciation lives was partially offset by RR22,637 million of current profit tax expense in 2002 related to a "transition period" profit tax, which is a one time current tax charge resulting from the change in tax legislation, effective January 1, 2002, to recognize profit tax on an accrual rather than a cash basis. Transition period profit tax is payable over a period of up to five years.

Our high overall effective tax rate of 82% and 92% for 2002 and 2001, respectively, primarily resulted from the impact of non-deductible expenses as described above, as well as from inflation accounting, which among other things, was increasing the book value of our fixed assets compared to their tax basis, resulting in a deferred tax expense. The magnitude of our overall effective tax rate in 2001 also resulted from the impact of the reduction in Russian tax rates from 35% to 24%, which reduced our net deferred tax asset, resulting in a deferred tax expense. Our deferred tax expense was RR81,945 million and RR118,234 million for the years ended December 31, 2002 and 2001, respectively. The depreciation adjustment and transition period profit tax charge referred to in the preceding paragraph did not affect our overall tax rate in 2002 because they were offset by corresponding deferred tax expense and benefit, respectively.

*Minority interest*

Minority interest expense decreased by RR4,672 million to RR667 million in 2002 compared to RR5,339 million in 2001. This was primarily due to the effect of the de-consolidation of National Reserve Bank effective January 1, 2002 which contributed RR4,235 million to the minority share in equity earnings in 2001.

*Net profit*

As a result of the factors discussed above, our net profit increased by RR15,756 million, or by 119%, from RR13,199 million in 2001 to RR28,955 million in 2002.

**Year ended December 31, 2001 versus year ended December 31, 2000**

*Sales*

The following tables set out our volumes and realized prices for the years ended December 31, 2001 and 2000.

Notes:

- (1) VAT is not charged on sales to Europe.
- (2) One mcm is equivalent to 35,316 cubic feet.
- (3) Average actual prices and not a convenience translation.

Net sales revenues fell by RR25,572 million, or 3%, to RR712,967 million in 2001 compared to 2000. Sales of gas accounted for 82% of total sales in 2001 (84% in 2000) but were RR34,117 million, or 5%, lower than in 2000. The decrease in sales of gas together with the RR18,334 million, or 50%, decrease in gas transportation and other sales more than offset the RR34,143 million, or 84%, increase in sales of gas condensate and other oil and gas products.

Net sales of natural gas to Europe decreased by RR33,144 million, or 8%, to RR407,198 million in 2001 compared to 2000. This was primarily due to a 2%, or 2.0 bcm, decrease in sales volumes and a decrease in prices in constant RR terms. Following the increase in U.S. dollar oil prices in the first half of 2001, average U.S. dollar export gas prices increased 25% in 2001 to U.S.\$122.6 per mcm compared to 2000. Nevertheless, average constant RR export gas prices to Europe decreased by 3% to RR4,100.0 per mcm, reflecting the fact that devaluation of the RR against the U.S. dollar continued to lag behind inflation. The cumulative inflation index for the period from the beginning of 2000 to the end of 2001 was 42.7% while the RR devaluation against the U.S. dollar was only 11.6%. Sales volumes decreased as customers took minimum volumes under their long-term contracts following the increase in the U.S. dollar prices paid by our customers.

Net sales of natural gas to FSU countries decreased by RR18,667 million, or 28.0%, to RR49,173 million in 2001 compared to 2000. This was primarily due to a 25% decrease in the average constant RR price of gas and a 6% decrease in FSU sales volumes. The main reason for the decrease in FSU sales volumes was a 15% reduction in sales volumes to Ukraine from 26 bcm in 2000 to 22 bcm in 2001 which more than offset the increased shipments of gas shipped to Belarus, Moldova and the Baltic countries. In light of Ukraine's poor payment history, we restricted our shipments to Ukraine to those required to cover transit services. The 25% decrease in the average constant RR price of gas to RR1,417.5 per mcm reflected a 9% decrease in the average actual U.S. dollar gas price to U.S.\$41.5 per mcm, as transit gas' is priced lower than that for normal FSU shipments to the Ukraine, and the fact that the devaluation of the RR against the U.S.\$ continued to lag behind inflation.

Net sales of natural gas in the domestic market increased by RR17,694 million, or 13%, to RR130,471 million in 2001 compared to 2000. Government control, via the FEC, of domestic gas prices has meant in recent years increases in nominal domestic gas prices, on a cumulative basis, failed to recover fully the effects of inflation. However, 2001 saw the beginning of a reversal of this trend, as the nominal average domestic price increased 41% from 2000 to 2001, rising from RR254.7 mcm to RR357.9 mcm. Thus, despite 19% inflation in 2001, the average constant RR domestic price was 15% higher in 2001 compared to 2000. The increase in constant RR prices more than offset the 2%, or 6.9 bcm, decrease in domestic sales volumes, which fell 6.9 bcm to 300.8 bcm in 2001. This decrease was primarily due to the reduction in sales volumes of our production subsidiaries to regional government authorities in order to settle mineral restoration tax and royalty liabilities.

Total excise taxes on natural gas sales increased 1% to RR123,213 million in 2001 from RR121,909 million in 2000, representing 17% and 16% of gross sales of natural gas in 2001 and 2000, respectively.

Sales of gas condensate and oil and gas products increased by RR34,143 million, or 84%, to RR74,640 million in 2001 compared to RR40,497 million in 2000. This increase was the result of the acquisition of Sibur in January 2001, which accounted for 64% of sales of gas condensate and oil and gas products in 2001.

Gas transportation sales decreased by RR18,334 million, or 50%, to RR18,226 million in 2001 from RR36,560 million in 2000. This was primarily due to lower revenues from the transportation services we provided to Itera. In 2001, the gas we transported for Itera was purchased mainly by Itera from independent producers in Central Asia and Kazakhstan, whereas in 2000 it was purchased from us in the Yamal-Nenets districts resulting in shorter transit distances and therefore less revenue.

Other sales decreased by 18% to RR33,259 million in 2001 compared to RR40,526 million in 2000. This decrease was primarily due to lower construction and other services.

### Operating expenses

Operating expenses decreased by 8.9% in 2001 to RR506,841 million from RR556,327 million in 2000. The table below presents a breakdown of operating expenses in each period:

	Year ended December 31,			
	2001		2000	
	(RR million)	(% of net sales)	(RR million)	(% of net sales)
Depreciation .....	99,868	14%	96,191	13%
Transit costs .....	95,105	13%	106,781	14%
Materials .....	59,602	8%	44,863	6%
Staff costs .....	59,456	8%	59,441	8%
Taxes other than on income .....	46,289	6%	56,176	8%
Provisions .....	41,083	6%	113,275	15%
Repairs and maintenance .....	21,552	3%	17,550	2%
Cost of goods for resale, including refined products .....	21,085	3%	1,777	0%
Processing services .....	12,595	2%	—	0%
Electricity .....	11,430	2%	11,072	2%
Purchased gas .....	7,466	1%	12,137	2%
Social expenses .....	6,088	1%	3,481	1%
Losses on disposal of property, plant and equipment .....	5,849	1%	14,229	2%
Research and development .....	4,360	1%	5,834	1%
Insurance .....	4,147	1%	1,334	0%
Other .....	10,868	1%	12,205	2%
<b>Total operating expenses .....</b>	<b>506,843</b>	<b>71%</b>	<b>556,346</b>	<b>75%</b>

#### Depreciation

Depreciation increased by RR3,677 million, or 4%, from RR96,191 million in 2000 to RR99,868 million in 2001. This increase reflected a higher depreciable fixed asset base, as more assets were put into operation, mainly in projects such as the Zapolyarnoye field, the Zapolyarnoye-Urengoi pipeline and the Yamburgskoye and Urengoiszkoye fields. The increase in the balance of fully depreciated assets, from RR317,487 million in 2000 to RR589,436 million in 2001, partly offset the increase of depreciation caused by property, plant and equipment additions in 2000 and 2001.

#### Transit costs

Transit costs decreased by RR11,676 million, or 11%, from RR106,781 million in 2000 to RR95,105 million in 2001. Transit costs related principally to fees charged by Ukraine and Poland for the transit of gas to markets in Europe.

Gas transportation tariffs are largely denominated in U.S. dollars. U.S. dollar denominated gas transportation tariffs through the Ukraine were constant during 2000 and 2001 and approximated U.S.\$1.09 per mcm per 100 km. U.S. dollar denominated gas transportation tariffs through Poland were constant during 2000 and 2001 and approximated U.S.\$1.30 per mcm per 100 km. The decrease in transportation costs in constant RR terms resulted from the fact that the rate of devaluation of the RR against the U.S. dollar was below the rate of inflation in 2001. Volumes of transit services provided were consistent with 2000.

#### Staff costs

Staff costs were largely unchanged in 2001 compared to 2000 as there was no significant change in the number of employees, and staff salaries increased in line with inflation.

#### Materials

The cost of materials used in our activities increased by RR14,739 million, or 33%, from RR44,863 million in 2000 to RR59,602 million in 2001. The increase was primarily due to the consolidation of Sibur from January 1, 2001 and a general increase in our materials prices in excess of inflation.

*Taxes other than on income*

Taxes other than on income consist of:

	<b>Year ended December 31,</b>	
	<b>2001</b>	<b>2000</b>
	<b>(RR million)</b>	
Royalty .....	12,633	10,329
Road users tax and housing fund tax.....	9,924	28,951
Property tax .....	9,563	5,944
Mineral restoration tax.....	9,090	5,189
Other taxes.....	<u>5,079</u>	<u>5,763</u>
<b>Taxes other than on income .....</b>	<b><u>46,289</u></b>	<b><u>56,176</u></b>

Taxes other than on income decreased by RR9,887 million, or 18%, from RR56,176 million in 2000 to RR46,289 million in 2001. Both royalty and mineral restoration tax, payable by production subsidiaries, increased by RR2,304 million and RR3,901 million, respectively, in line with the increase in internal transfer gas prices. Road users tax decreased by RR14,858 million in 2001 compared to 2000, reflecting a decrease in the road users tax rate from 2.5% to 1% (effective from January 1, 2001). Effective from January 1, 2001, the housing fund tax was abolished which in prior periods was calculated at 1.5% of our sales revenues, resulting in a RR4,169 million decrease. Property taxes increased by RR3,619 million in 2001 compared to 2000 due to a statutory revaluation of our property, plant and equipment as of January 1, 2001 and changes in property tax legislation.

*Provisions*

Provisions decreased by RR72,192 million, or 64%, from RR113,275 million in 2000 to RR41,083 million in 2001 primarily due to lower provisions in respect of accounts receivable and prepayments and for assets under construction.

The impairment provision for accounts receivable and prepayments (including VAT provisions on accounts receivable, as explained below) decreased by RR1,048 million, or 3.0%, from RR36,118 million in 2000 to RR35,070 million in 2001. As at December 31, 2001, the balance of provisions related to accounts receivable and prepayments was RR156,933 million, or 36% of the gross receivable balance.

Changes in the tax legislation of the Russian Federation, effective January 1, 2001, required a provision for VAT to be recorded for accounts receivable balances that are provided for (including those that were provided for in prior periods), whereas previously the related VAT was not required to be provided for or paid. For the year ended December 31, 2001, this resulted in a charge of RR11,861 million. Excluding the effect of this charge, the impairment provision for accounts receivable and prepayments increased by 45% in 2001 compared to 2000 primarily as a result of higher provision expense against trade receivables of Ukraine.

Provision expense related to impairment of assets under construction decreased by RR27,685 million, or 81%, from RR34,188 million in 2000 to RR6,503 million in 2001 in line with our strategy to focus our capital program on priority projects and thereby reduce our total number of projects.

Expenses in respect of other provisions decreased by RR43,459 million, or 101%, from a charge of RR42,969 million in 2000 to a release of RR490 million in 2001, primarily due to a RR28,027million decrease in the provision expense on investments and other long-term assets, a RR8,549 million decrease in the provision for inventory obsolescence and a RR1,833 million decrease in the provision for guarantees and other charges.

The decrease in the provision expense on investments and other long-term assets was primarily due to the reduction in new investments in non-core activities for which provisions had been recorded in prior periods. The decrease in the provision expense on inventory obsolescence was primarily due to the disposal of previously surplus stock of production materials and improved inventory turnover.

*Cost of goods for resale, including refined products and processing services*

Purchased refined products and processing services for refined products provided pertains to the activities of Sibur, consolidated from January 1, 2001.

### *Purchased gas*

The cost of purchased gas decreased by RR4,671 million, or 38%, from RR12,137 million in 2000 to RR7,466 million in 2001. A RR10,463 million decrease in the cost of purchased gas related to the one-time purchase of Turkmenistan gas from Itera in 2000, which was made in order to fulfill our contractual obligations to European customers. This decrease was partially offset by RR3,091 million of gas purchased in 2001 by Sibur, which purchases external gas in certain regions for further processing.

### *Operating profit*

As a result of the factors described above, our operating profit increased by RR23,928 million, or 13%, from RR182,196 million in 2000 to RR206,124 million in 2001. Our operating profit margin increased from 25% in 2000 to 29% in 2001.

### *Net monetary effects and financing items*

	<u>Year ended December 31,</u>	
	<u>2001</u>	<u>2000</u>
	(RR million)	
Net exchange loss .....	(5,407)	(3,533)
Interest income .....	14,184	15,611
Interest expense .....	(42,902)	(64,544)
Monetary gain .....	33,514	60,332
Gain on restructured taxes, interest and fines .....	<u>23,122</u>	<u>23,037</u>
<b>Net monetary effects and financing items .....</b>	<b><u>22,511</u></b>	<b><u>30,903</u></b>

Our net exchange loss increased by RR1,874 million, or 53%, from RR3,533 million in 2000 to RR5,407 million in 2001, reflecting the impact of the 7% devaluation of the RR against the U.S. dollar and the 1.3% devaluation of the RR against the euro on our U.S. dollars and euro denominated borrowings (offset in part by the impact of these devaluations on our U.S. dollar and euro denominated receivables). Interest expense decreased by RR21,642 million to RR42,902 million in 2001, in line with our efforts to restructure our profit tax liabilities.

During the years ended December 31, 2001 and 2000, several of our subsidiaries entered into contracts with Government authorities to restructure overdue taxes, interest and fines so that those liabilities would be settled by installment payments due over 10 years. The RR21,526 million gain in 2001 on restructured taxes, interest and fines (RR23,037 million in 2000) represented the difference between the estimated fair value of the new agreements (based on discounted future cash flows) and the carrying amount of the old payables (RR57,342 million).

Monetary gain decreased by RR26,816 million to RR33,514 million in 2001 due to the fall in the rate of inflation and our lower net monetary liability position.

### *Share of net income of associated undertakings*

Share of net income of associated undertakings increased by RR3,216 million, or 369%, to RR4,087 million in 2001 due to our share of the net income (loss) recorded by WINGAS GmbH increasing from a RR243 million loss in 2000 to RR1,118 million of income in 2001, RR1,100 million of income from Turusgaz, RR487 million of income from Moldovagaz and RR327 million of income from Altalanos Evtkeforgalmi Bank Rt ("AEB") in 2001.

### *Losses on available for sale investments*

Losses on available for sale investments decreased by RR2,076 million, or 68%, to RR993 million in 2001, primarily due to the RR6,444 million reduction in provisions against long-term and short-term promissory notes and RR1,511 million of unrealized gains on available-for-sale securities, partially offset by RR4,852 million of losses on promissory notes held by Sibur and the RR2,051 million write-down of our investment in Gazmetall following an independent valuation.

### *Profit tax*

	<u>Year ended December 31,</u>	
	<u>2001</u>	<u>2000</u>
	<u>(RR million)</u>	
Profit before profit tax and minority interest . . . . .	231,729	210,901
Theoretical tax charge at the statutory rate thereon . . . . .	(81,105)	(63,270)
Tax effect of items which are not deductible or assessable for taxation purposes:		
Inflationary effects . . . . .	(101,338)	(52,608)
Non-deductible expenses . . . . .	(40,535)	(23,041)
Statutory tax concessions . . . . .	13,721	27,013
Other non-temporary differences . . . . .	8,167	(40,959)
Effect of increase in taxable base due to statutory revaluation . . . . .	—	316,299
Effect of change in tax rate . . . . .	<u>(12,101)</u>	<u>19,159</u>
<b>Profit tax expense . . . . .</b>	<b><u>(213,191)</u></b>	<b><u>182,593</u></b>

Our current profit tax expense increased by RR269 million, or 0.3%, from RR94,688 million in 2000 to RR94,957 million in 2001. Our effective current profit tax rate decreased from 45% in 2000 to 41% in 2001. Our high current profit tax rate for 2001 and 2000 resulted in part from Russian tax regulations that limited the deductibility of some of our operating expenses.

Our overall effective tax rate for 2001 of 92% primarily resulted from the impact of non-deductible expenses as described above, as well as from inflation accounting, which among other things, increases the book value of our fixed assets compared to their tax basis, resulting in a deferred tax expense, and the impact of the reduction in Russian tax rates from 35% to 24%, which reduced our net deferred tax asset, resulting in a deferred tax expense. Our deferred tax expense was RR118,234 million for the year ended December 31, 2001.

Our total profit tax benefit in 2000 consisted primarily of a deferred tax benefit of RR277,281 million, representing the deferred tax impact of recording an upward revaluation of our fixed assets for Russian statutory purposes, partially offset by the impact of non-deductible expenses as described above, and by deferred tax expense related to the impact of inflation accounting, which among other things as noted above, increases the book value of our fixed assets compared to their tax basis, resulting in a deferred tax expense.

### *Minority interest*

Minority interest expense increased by RR3,265 million to RR5,339 million in 2001 primarily due to the increased profitability of National Reserve Bank, our banking subsidiary, following an increase in the value of its investment portfolio and the release of prior year provisions against outstanding forward exchange contracts which had been entered into prior to August 17, 1998. Such contracts became unenforceable against National Reserve Bank in 2001 in accordance with requirements of the Civil Code of the Russian Federation.

### *Net profit*

As a result of the factors described above, our net profit decreased by RR378,221 million, or by 97%, from RR391,420 million in 2000 to RR13,199 million in 2001.

## Liquidity and Capital Resources

We make significant capital expenditures to explore for natural gas, to develop our natural gas fields and to produce our natural gas, gas condensate and crude oil, and to maintain and expand the UGSS and international pipelines. Our capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications) were RR145,701 million and RR131,722 million in the first nine months of 2003 and 2002, respectively, and RR180,268 million in 2002, RR180,815 million in 2001 and RR162,991 million in 2000. Our budgeted capital expenditure for 2003 was RR193,700 million.

We make a significant portion of our capital expenditures using consideration other than cash. See “—Capital expenditures.” In the first nine months of 2003 and for the years ended December 31, 2002 and 2001, our operating cash flows exceeded our cash capital expenditures by significant margins, but were not sufficient to cover our combined cash and non-cash capital expenditures.

Other significant uses of our cash flows include servicing our debt and paying dividends. Interest paid and expensed was RR16,258 million and RR19,711 million in the first nine months of 2003 and 2002, respectively, and RR22,379 million, RR27,389 million and RR38,420 million in the years ended December 31, 2002, 2001 and 2000, respectively. Interest paid and capitalized was RR12,562 million and RR6,033 million in the first nine months of 2003 and 2002, respectively, and RR12,998 million, RR16,711 million and RR19,923 million in the years ended December 31, 2002, 2001 and 2000, respectively. Total interest paid, both expensed and capitalized, was RR28,820 million and RR25,744 million for the nine months ended September 30, 2003 and 2002, and RR35,377 million, RR44,100 million and RR58,343 million for the years ended December 31, 2002, 2001 and 2000, respectively. We paid dividends of RR1,574 million and RR2,016 million in the first nine months of 2003 and 2002, respectively, and RR10,328 million, RR6,736 million and RR4,150 million in the years ended December 31, 2002, 2001 and 2000, respectively.

In the nine months ended September 30, 2003 and 2002 and the years ended December 31, 2002, 2001 and 2000, our borrowings exceeded our repayments of debt. Our borrowings net of repayments (including bonds and promissory notes) were RR51,793 million and RR37,428 million in the first nine months of 2003 and 2002, respectively, and RR41,803 million, RR27,684 million and RR15,789 million for the years ended December 31, 2002, 2001 and 2000, respectively. However, as a result of the inflation of our prior period debt balances due to the application of inflation accounting under IAS 29 prior to January 1, 2003, our debt balances until December 31, 2002 reported in our financial statements have declined significantly despite these net borrowings. See “—Debt Obligations.” Our cash and cash equivalents decreased in 2000, and increased in 2001, 2002 and the nine months ended September 30, 2003.

Our plan for 2004 is to finance our budgeted capital expenditures, interest and dividends mainly out of operating cash flows, which we expect to increase through higher domestic tariffs for sales of natural gas and higher prices for, and increased volumes of, the natural gas we export. At the same time, we intend to improve our debt profile by retiring a portion of our short-term RR denominated debt (in particular our short-term RR denominated promissory notes) and by refinancing other RR denominated debt with long-term borrowings in convertible currencies.

### Cash flows

The following table summarizes the statements of cash flows for the nine months ended September 30, 2003 and 2002 and years ended December 31, 2002, 2001 and 2000.

	Nine months ended September 30,		Year ended December 31,		
	2003	2002	2002	2001	2000
			(RR million)		
Net cash provided by operating activities . . . . .	115,314	43,630	160,111	161,289	116,670
Net cash used for investing activities . . . . .	(99,293)	(78,629)	(160,688)	(117,603)	(75,968)
Net cash provided by (used for) financing activities . . . . .	34,502	13,786	3,017	(6,821)	(37,229)

#### *Net cash provided by operating activities*

Net cash provided by operating activities increased to RR115,314 million in the nine months ended September 30, 2003 from RR43,630 million in the nine months ended September 30, 2002. This was primarily due to higher operating income generated by our gas sales during the nine months ended September 30, 2003. The positive impact of higher gas prices on our cash flow was partially offset by negative changes in our net working capital position and higher profit tax paid (resulting from settlement of prior period profit tax liabilities) compared to the nine months ended September 30, 2002. The negative change in our working capital position reflected an increase in accounts receivable and prepayments, inventories and other current assets and a decrease in taxes payable other than profit tax, which more than offset the increase in accounts payable.

Net cash provided by operating activities decreased to RR160,111 million in the year ended December 31, 2002 from RR161,289 million in the year ended December 31, 2001. The decrease was primarily due to lower margins generated by our sales during the year ended December 31, 2002 which followed the 18% reduction in the average realized constant RR prices on our gas sales to Europe, and negative changes in our working capital position, reflecting a decrease in accounts payable and taxes payable and increased available-for-sale and trading investments. These two factors more than offset the decrease in profit taxes paid.

Net cash provided by operating activities increased to RR161,289 million in the year ended December 31, 2001 from RR116,670 million in the year ended December 31, 2000. The increase was primarily due to a RR71,142 million positive impact from working capital changes reflecting better cash collections from domestic customers, partially offset by increases in tax payments.

#### *Net cash used for investing activities*

Net cash used for investing activities increased to RR99,293 million in the nine months ended September 30, 2003 from RR78,629 million in the nine months ended September 30, 2002. This 26% increase was primarily due to the increase in cash capital expenditures reflecting our ability to utilize higher cash flows generated by our operating and financing activities during the nine months ended September 30, 2003 for a number of major construction projects.

Net cash used for investing activities increased to RR160,688 million in the year ended December 31, 2002 from RR117,603 million in the year ended December 31, 2001. Net cash used for investing activities for the year ended December 31, 2002 includes the effect of the deconsolidation of OAO AKB National Reserve Bank, which resulted in a net cash outflow of RR4,058 million in the year ended December 31, 2002 as OAO AKB National Reserve Bank previously contributed to the consolidated cash and cash equivalents balance. Absent this change, net cash used for investing activities increased by RR39,027 million in the year ended December 31, 2002. The 36.6% increase was primarily due to the RR32,671 million increase in cash capital expenditures to RR141,124 million in the year ended December 31, 2002.

Net cash used for investing activities increased to RR117,603 million in the year ended December 31, 2001 from RR75,968 million in the year ended December 31, 2000. The 54.8% increase was primarily due to the RR42,056 million increase in cash capital expenditures to RR108,453 million in the year ended December 31, 2001.

#### *Net cash provided by financing activities*

Net cash provided by financing activities increased to RR34,502 million in the nine months ended September 30, 2003 from RR13,786 million in the nine months ended September 30, 2002. This was primarily due to the increase in long-term borrowings, which exceeded repayments of short-term and long-term borrowings and redemption of promissory notes, and lower interest paid and a reduction of restricted cash, partially offset by an increase in net purchases of treasury shares.

Net cash provided by financing activities amounted to RR3,017 million in the year ended December 31, 2002 compared to net cash used of RR6,821 million in the year ended December 31, 2001. The 144% increase was mainly the result of an increase in net proceeds from long-term borrowings, which exceeded the net outflows from the redemption of promissory notes, and a reduction in interest paid.

Net cash used for financing activities decreased to RR6,821 million in the year ended December 31, 2001 from RR37,229 million in the year ended December 31, 2000. The 82% decrease was mainly the result of an increase in net proceeds from long-term borrowings, which exceeded the net outflows from the redemption of promissory notes, and a reduction in interest paid.

### Working capital

Our working capital surplus (current assets less current liabilities) was RR176,649 million as of September 30, 2003 and RR60,160 million as of December 31, 2002. The RR116,489 million increase in our working capital in the nine months ended September 30, 2003 was primarily due to an increase in cash and cash equivalents by RR50,063 million, an increase in accounts receivable and prepayments by RR45,300 million, a seasonal increase in inventory by RR24,001 million and a change in other working capital components by RR39,251 million (including an increase in short-term investments by RR12,783 million, a decrease in short-term borrowings including current portion of long-term borrowings by RR11,309 million, an increase in other current assets by RR10,623 million, a decrease in taxes payable by RR9,342 million, a decrease in short-term promissory notes payable by RR4,069 million, and a decrease in restricted cash by RR8,875 million), partially offset by an increase in accounts payable and accrued charges by RR42,126 million. We believe that we have sufficient working capital to meet our requirements for at least the next twelve months; however, we are dependent on the short-term credit markets to finance our working capital. See "Risk Factors—Risks Relating to our Business—We depend on regular access to the domestic rouble bank loan and rouble debt markets to meet a significant portion of our financing requirements."

As of December 31, 2002, our working capital surplus amounted to RR60,160 million compared to RR45,041 million as of December 31, 2001. The RR15,119 million increase in working capital was primarily due to a decrease in accounts payable and accrued charges by RR27,717 million, a decrease in short-term promissory notes payable by RR29,018 million, a decrease in taxes payable by RR15,642 million and a change in other working capital components by RR8,471 million, partially offset by a decrease in accounts receivable and prepayments by RR65,729 million.

As of December 31, 2001, our working capital surplus amounted to RR45,041 million compared to RR4,153 million as of December 31, 2000. The RR40,888 million increase in working capital was primarily due to an increase in cash and cash equivalents by RR37,759 million and a decrease in taxes payable by RR93,232 million, partially offset by a decrease in accounts receivable and prepayments by RR78,890 million and a change in other working capital components by RR11,213 million.

### Capital expenditures

Total capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications) by segment for the nine months ended September 2003 and 2002 and for the years ended December 31, 2002, 2001 and 2000 in constant RR terms amounted to the following:

	Nine months ended September 30,				Year ended December 31,					
	2003		2002		2002		2001		2000	
	(RR million)	(% of total)	(RR million)	(% of total)	(RR million)	(% of total)	(RR million)	(% of total)	(RR million)	(% of total)
Transportation . . . . .	56,316	39%	63,516	48%	86,176	48%	81,631	45%	56,978	35%
Production . . . . .	76,665	53%	49,808	38%	76,985	43%	74,890	42%	59,453	37%
Refining . . . . .	2,693	2%	1,903	2%	7,125	4%	5,371	3%	3,627	2%
Distribution . . . . .	2,427	1%	5,842	4%	1,663	0%	378	0%	454	0%
Other <sup>(1)</sup> . . . . .	7,600	5%	10,653	8%	8,319	5%	18,545	10%	42,479	26%
<b>Total . . . . .</b>	<b>145,701</b>	<b>100%</b>	<b>131,722</b>	<b>100%</b>	<b>180,268</b>	<b>100%</b>	<b>180,815</b>	<b>100%</b>	<b>162,991</b>	<b>100%</b>

Note:

<sup>(1)</sup> Primarily includes expenditures for service activities such as drilling and automobile transport and repair.

The reduction in capital expenditures on transportation and the significant increase in capital expenditures on production in the first nine months of 2003 compared to the same period in 2002, represented a temporary change in the trend over the three years ended December 31, 2002. Our expectation of future capital expenditures are discussed below.

Total capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications) increased from RR131,722 million in the nine months ended September 30, 2002 to RR145,701 million in

the nine months ended September 30, 2003. The increase was primarily due to increased funding of new production projects including the development of Yamburgskoye, Pestsovoye, Vyngayakhinskoye and Yen-Yakhinskoe fields and Aneryakhinskoe area of Yamburgskoye field.

Following is a table of our cash and non-cash capital expenditures (including cash advances to contractors and suppliers, which are recorded within other long-term assets, and excluding the effect of acquisitions of subsidiaries and reclassifications):

	Nine months ended September 30,		Year ended December 31,		
	2003	2002	2002	2001	2000
			(RR million)		
Cash capital expenditures.....	99,233	76,082	141,124	108,453	66,397
Interest paid and capitalized.....	12,562	6,033	12,998	16,711	19,923
Mutual cancellations and barter settlements <sup>(1)</sup> ...	—	—	42,893	49,135	65,119
Other <sup>(2)</sup> .....	<u>33,906</u>	<u>49,607</u>	<u>(16,717)</u>	<u>6,516</u>	<u>11,552</u>
Total capital expenditures.....	<u>145,701</u>	<u>131,722</u>	<u>180,268</u>	<u>180,815</u>	<u>162,991</u>

Note:

- (1) A meaningful breakdown of this amount is not available for the nine month periods ended September 30, 2003 and 2002. For these nine month periods these amounts are combined with "other non-cash expenditures."
- (2) Includes changes in accounts payable related to capital construction, changes in promissory notes related to capital construction.

Budgeted total capital expenditures by segment for the year ended December 31, 2003 was, and for the year ending December 31, 2004 is, as follows (excluding expenditures for Sibur, Vostokgazprom and Purgaz):

	Year ended December 31,	
	2003 <sup>(1)</sup>	2004
	(RR million) <sup>(2)</sup>	
Production.....	93,486	71,600
Transportation.....	85,535	111,600
Refining.....	3,183	2,380
Distribution.....	52	— <sup>(3)</sup>
Other <sup>(4)</sup> .....	<u>11,444</u>	<u>6,760</u>
Total.....	<u>193,700</u>	<u>192,340</u>

Notes:

- (1) The Board of Directors initially approved a capital expenditure budget for 2003 of RR179,800 million, including RR73,840 million in respect of capital expenditures related to the Yamal project. In September 2003, the Board of Directors approved a RR13,900 million increase in the budget for 2003, including RR4,650 million for further development of the Zapolyaroye field, RR3,950 million for the Pestsovoye field and RR3,100 million for booster compressor stations. The information presented here reflects these increases.
- (2) Expressed in nominal RR.
- (3) For 2004, included within other segments.
- (4) Primarily includes expenditures for service activities such as drilling and automobile transport and repair.

Our capital expenditures in 2003 were approximately RR194 million compared to approximately RR180 billion in 2002.

The actual amount and timing of capital expenditures made are subject to adjustment.

### **Debt obligations**

Our borrowings net of repayments were RR51,794 million, RR41,803 million, RR27,684 million and RR15,789 million, for the nine months ended September 30, 2003 and the years ended December 31, 2002, 2001 and 2000, respectively. However, as a result of the inflation of our prior period debt balances due to the application inflation accounting under IAS 29 prior to January 1, 2003, our debt balances are reported to have declined until December 31, 2002 despite these net borrowings.

The overall increase in our borrowings as of September 30, 2003 and the decline in our borrowings, as reported in our financial statements for the three years ended December 31, 2002, resulted from opposite movements in our long-term and short-term borrowings. Our long-term borrowings (including the current portion of long-term borrowings and long-term promissory notes payable), which are predominantly denominated in convertible currencies (mainly the U.S. dollar and the euro), are reported to have declined in constant RR terms at December 31, 2001 compared to December 31, 2000, and then to have increased at December 31, 2002 and at September 30, 2003. Our short-term borrowings (excluding the current portion of long-term borrowings but including short-term promissory notes payable), which are predominantly denominated in RR except for at December 31, 2002, are reported to have increased in constant RR terms at December 31, 2001 compared to December 31, 2000, and then to have declined at December 31, 2002 and at September 30, 2003, reflecting in part our strategy of refinancing short-term debt with long-term borrowings. The following table shows our borrowings at September 30, 2003 and at December 31, 2002, 2001 and 2000 expressed in constant RR terms:

	<u>As of September 30,</u>	<u>As of December 31,</u>		
	<u>2003</u>	<u>2002</u>	<u>2001</u>	<u>2000</u>

<b>Total short-term debt borrowings</b> .....	<b>210,829</b>	<b>226,207</b>	<b>263,492</b>	<b>231,811</b>
<b>Total borrowings</b> .....	<b><u>525,473</u></b>	<b><u>495,028</u></b>	<b><u>515,164</u></b>	<b><u>520,508</u></b>

The following table shows our actual U.S. dollar and euro denominated long-term borrowings (expressed in U.S. dollars) at September 30, 2003 and at December 31, 2002, 2001 and 2000 as well as the same balances expressed in constant RR terms.

	<u>As of September 30,</u>	<u>As of December 31,</u>		
	<u>2003</u>	<u>2002</u>	<u>2001</u>	<u>2000</u>
		(RR million)		
U.S. dollar denominated (expressed in U.S. dollars) . . . . .	9,528	8,280	6,088	6,397
Euro denominated (expressed in U.S. dollars) <sup>(1)</sup> . . . . .	<u>3,165</u>	<u>1,625</u>	<u>2,275</u>	<u>1,677</u>
<b>Total long-term convertible-currency-denominated borrowings expressed in U.S. dollars . . . . .</b>	<u>12,692</u>	<u>9,905</u>	<u>8,363</u>	<u>8,074</u>
<b>Total long-term convertible-currency-denominated borrowings expressed in constant RR, except for data as of September 30, 2003 which is in nominal RR. . . . .</b>	<u>388,539</u>	<u>314,818</u>	<u>288,659</u>	<u>311,019</u>

Note:

<sup>(1)</sup> Converted at the euro to U.S. dollar exchange rate of 1.15, 1.04, 0.88 and 0.93 as of September 30, 2003, and December 31, 2002, 2001 and 2000, respectively.

From December 31, 2000 to September 30, 2003, our actual long-term borrowings denominated in convertible currencies grew, as we increasingly met our financing requirements with long-term borrowings in the capital markets and began to refinance our short-term obligations.

A significant portion of our long-term borrowings denominated in convertible currencies are collateralized by receivables under certain of our export contracts. As of December 31, 2002, 2001 and 2000 borrowings of RR192,918 million, RR184,243 million and RR301,753 million, respectively, inclusive of current portion of long-term borrowings, were secured by revenues from export supplies of gas to Europe. Since December 31, 2002, we have borrowed an additional U.S.\$300 million that is secured by revenues from our sales of natural gas to Europe, and we have prepaid U.S.\$675 million of our outstanding loans and borrowings under such facilities.

The following table shows our schedule of repayments for long-term borrowings (excluding long-term promissory notes) at September 30, 2003 and December 31, 2002, expressed in constant RR terms:

	<u>As of September 30,</u>	<u>As of December 31,</u>
	<u>2003</u>	<u>2002</u>
	(RR million)	
Within one year . . . . .	98,852	97,763
Between one and two years . . . . .	66,163	92,378
Between two and five years . . . . .	135,884	132,010
After five years . . . . .	<u>104,188</u>	<u>24,215</u>
	<u>405,087</u>	<u>346,366</u>

### ***Contractual obligations and other commitments***

The amount of outstanding guarantees issued to third parties increased by RR2,289 million to RR89,996 million as of September 30, 2003 as compared to December 31, 2002 primarily as a result of guarantees issued to Eural Trans Gas in the amount of RR6,949 million. See "Business—Transportation—Third-party Access to the UGSS."

The amount of outstanding guarantees issued to third parties increased by RR7,423 million to RR87,707 million as of December 31, 2002 as compared to December 31, 2001. RR15,368 million of the increase was due to guarantees issued to banks for the construction of the offshore portion of the Blue Stream pipeline. As of December 31, 2002 our guarantees balance included RR6,213 million of guarantees issued by subsidiaries under contracts for purchases of equipment, construction and installation works.

We have significant obligations to supply gas under long-term contract with European customers.

## **Qualitative and Quantitative Disclosures and Market Risks**

We are exposed to market risk from changes in commodity prices, foreign currency exchange rates, interest rates and prices of marketable securities. We are exposed to commodity risk as we are a commodity business and our natural gas export sales are linked to oil product prices. We are exposed to foreign exchange risk to the extent that our sales revenues and costs are denominated in currencies other than RR. We are subject to market risk from changes in interest rates that may affect the cost of our financing. Other than in our banking subsidiaries, we do not use financial instruments, such as foreign exchange forward contracts, foreign currency options, interest rate swaps and forward rate agreements, to manage these market risks. We also do not hold or issue derivative or other financial instruments for trading purposes.

### ***Foreign Currency Risk***

Our principal exchange rate risk involves changes in the value of the RR relative to the U.S. dollar and euro. At September 30, 2003, approximately RR322,567 million and RR107,401 million of our borrowings were denominated in U.S. dollars and euros, respectively (out of RR479,749 million of our total borrowings, excluding promissory notes, at that date). Decreases in the value of the RR relative to the U.S. dollar or euro will increase our foreign currency denominated costs and expenses and our debt service obligations for foreign currency denominated borrowings in RR terms. A depreciation of the RR relative to the U.S. dollar or euro will also result in a decrease in the value of our foreign currency borrowings in RR terms. We believe that the risks associated with our foreign currency exposure are mitigated by the fact that a significant portion of our revenues, approximately 64% for the nine months ended September 30, 2003, are U.S. dollar or euro denominated. As of September 30, 2003 the RR had appreciated against the U.S. dollar by approximately 3.7% and depreciated against the euro by approximately 5.4% since January 1, 2003.

A hypothetical, instantaneous and unfavorable 10% change in currency exchange rates on September 30, 2003 and December 31, 2002 would have resulted in additional interest expense, including default interest, of approximately RR2,013 million and RR2,549 million (nominal) for the nine months ended September 30, 2003 and the year ended December 2002, respectively, reflecting the increased costs in RR of servicing our foreign currency denominated borrowings held at September 30, 2003 and December 31, 2002. A hypothetical, instantaneous and unfavorable 10% change in currency exchange rates as of September 30, 2003 and December 31, 2002 would have resulted in an estimated foreign exchange loss of approximately RR42,997 million and RR41,567 million on foreign currency denominated borrowings held at September 30, 2003 and December 31, 2002, respectively.

### ***Interest Rate Risk***

We are exposed to interest rate risk in our borrowings that bear interest at floating rates. At September 30, 2003 and December 31, 2002, we had RR479,749 million and RR433,426 million in total borrowings (excluding promissory notes), of which approximately RR304,510 million and RR224,033 million bore interest at fixed rates and approximately RR175,239 million and RR209,393 million bore interest at floating rates determined by reference to the London inter-bank offered rate ("LIBOR") for U.S.\$ and euro deposits, respectively.

A hypothetical, instantaneous and unfavorable change of 100 basis points in the interest rate applicable to floating rate financial liabilities held at September 30, 2003 and December 31, 2002 would have resulted in additional net interest expense of approximately RR1,918 million and RR2,050 million (nominal) for the nine months ended September 30, 2003 and the year ended December 31, 2002, respectively. This sensitivity analysis is based on the assumption of an unfavorable 100 basis point movement of the interest rate applicable to each homogenous category of financial liabilities. A homogeneous category is defined according to the currency in which financial liabilities are denominated and assumes the same interest rate movement within each homogeneous category (e.g. U.S.\$ and euro).

A hypothetical, instantaneous and unfavorable change (decrease) of 100 basis points in the interest rate would have resulted in an increase of fair value of fixed rate financial liabilities held at September 30, 2003 and December 31, 2002 to RR9,204 million and RR1,545 million, respectively.

### ***Derivatives***

For the purpose of reducing currency risk, our banking subsidiaries use a number of derivative instruments. These comprise forward foreign exchange contracts and written foreign currency option

contracts. The objective, when using any derivative instrument, is to ensure that the risk to reward profile of any transaction is optimized. The normal policy is to measure these instruments at their fair value, using the spot rate at the year end as the basis for the fair value measurement with resultant gains or losses being reported within gains less losses arising from dealing in foreign currencies within the statement of operations. These derivatives are not material to the Group.

***Commodity risk***

Substantially all of our natural gas, gas condensate and other hydrocarbon export sales to Europe are sold under long-term contracts. Our natural gas export prices to Europe are based on a formula linked to world oil product prices which in turn are linked to world crude oil prices. Worldwide political developments and the actions of the Organization of Petroleum Exporting Countries affect crude oil prices and thus our natural gas export prices. We do not use any derivative instruments to hedge our production in order to decrease our price risk exposure.

***Securities price risk***

We are exposed to movements in the prices of marketable securities that we hold in our investment portfolio. Specifically, as of September 30, 2003, we held RR19,085 million of corporate shares and bonds and RR3,734 million of state and municipal securities. A change in Russia's sovereign credit rating, or an external event that impacts Russian debt and equity prices, could have an impact on the market value of our trading securities.

## SUMMARY OF CERTAIN DIFFERENCES BETWEEN IFRS AND U.S. GAAP

The financial information included herein is prepared and presented in accordance with IFRS. Certain differences exist between IFRS and U.S. GAAP, which might be material to the financial information herein. The matters described below summarize certain differences between IFRS and U.S. GAAP that may be material. The Company has not prepared a complete reconciliation of its consolidated financial statements and related footnote disclosures between IFRS and U.S. GAAP and has not quantified such differences. Accordingly, no assurance is provided that the following summary of differences between IFRS and U.S. GAAP is complete. Potential investors should consult their own professional advisors for an understanding of the differences between IFRS and U.S. GAAP, and how those differences might affect the financial information herein.

---

### IFRS

---

### U.S. GAAP

---

#### Accounting framework

Historical cost basis, adjusted for inflation by applying the consumer price index, for the periods when Russia was considered highly inflationary (through December 31, 2002). However, generally financial assets and liabilities must be carried at fair value.

Similar to IFRS.

#### Depreciation of property, plant and equipment

The depreciable amount of an item of property, plant and equipment must be allocated on a systematic basis over its useful life, reflecting the pattern in which the asset's benefits are consumed by the entity. Any changes in the depreciation method used are treated as change in accounting estimate reflected in the depreciation charge for the current and prospective periods.

Similar to IFRS, except that U.S. GAAP classifies a change in the depreciation method as a change in accounting policy. The cumulative effect of the change is then reflected in the current year's income statement.

We use the straight-line method for depreciating all our property, plant and equipment. In making depreciation estimates, and considering the corresponding asset lives, the company includes periods beyond the initial license period date in circumstances where the company has both the right to request and the intent to renew such licenses.

U.S. GAAP has specific accounting guidance for oil and gas producing companies that requires the application of the units-of-production method for depreciation, depletion and amortization of oil and gas producing assets. Additionally, for the purpose of calculating depreciation, depletion and amortization charges under the units-of-production method and complying with other specific oil and gas accounting prescribed by US GAAP, the definitions of proved reserves are the definitions adopted by the SEC for its reporting purposes that are in effect on the dates for which such calculations and other disclosures are required under US GAAP. Previously reported quantities are not revised retroactively if the SEC definitions are changed.

#### Impairment of assets

An entity must assess annually whether there are any indications that an asset may be impaired. If there is any such indication, the assets must be tested for impairment. An impairment loss must be recognized in the statement of operations when an asset's carrying amount exceeds its recoverable amount (see below).

Similar to IFRS except that for assets to be held and used, impairment is first measured by reference to undiscounted cash flows. If impairment exists the entity must measure impairment by comparing the asset's carrying value to its fair value. If there is no impairment by reference to undiscounted cash flows, no further action is required but the useful life of the asset must be reconsidered.

## **IFRS**

The impairment loss is the difference between the asset's carrying amount and its recoverable amount. The recoverable amount is the higher of the asset's net selling price and its value in use. Value in use is the future cash flows to be derived from the particular asset, discounted to present value using a pre-tax market determined rate that reflects the current assessment of the time value of money and the risks specific to the asset.

An impairment loss recognized for an asset should be reversed if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognized, in which case, the carrying amount of the asset should be increased to its recoverable amount.

IFRS does not require disclosure of comprehensive income.

Business combinations can be in the form of either an acquisition or a uniting of interest. Acquisitions are the most common and uniting of interests are severely restricted.

The date of acquisition is the date on which the acquirer obtains control over the acquired entity.

The purchase method records the assets and liabilities of the acquired entity at fair value. The cost of acquisition is the amount of cash or cash equivalents paid (or fair value of non-monetary assets exchanged). Where consideration comprises an exchange of shares, specific guidance applies under each of the two frameworks. Under IFRS, shares issued as consideration are recorded at their fair value as at the date of the exchange, being the date when the acquirer obtains control over the net assets and operations of the acquiree. When the acquisition occurs in stages, the fair value of the shares issued as purchase consideration is determined at each exchange date. In an active market the published price of a share at the date of exchange is the best evidence of fair value.

## **U.S. GAAP**

The impairment loss is based on the asset's fair value, being either market value (if an active market for the asset exists) or the sum of discounted future cash flows. The discount rate reflects the risk specific to that asset.

For assets to be disposed of, the loss recognized is the excess of the asset's carrying amount over its fair value less cost to sell. Such assets are not depreciated or amortized during the selling period.

Prohibits reversals of impairment losses for assets to be held and used. Subsequent revisions, both increases and decreases, to the carrying amount of an asset to be disposed, must be reported as adjustments to the carrying amount of the asset but limited by the carrying amount at the date the decision to dispose of the asset is made.

U.S. GAAP requires disclosure of comprehensive income, which is defined as the change in equity of a business enterprise during a period from transactions and other events and circumstances from non-owner sources. It includes all changes in equity during a period except those resulting from investments by owners and distribution to owners.

All business combinations initiated after June 30, 2001 are acquisitions and accounted for in accordance with one method—the purchase method. Before June 30, 2001, business combinations were accounted for using either the purchase method or the pooling-of-interests method.

The date of acquisition is the date on which assets are received or securities are issued.

Similar to IFRS.

Shares issued as consideration are measured at their market price over a reasonable period of time (interpreted to be a few days) before and after the parties reach an agreement on the purchase price and the proposed transaction is announced. The date for measuring the value of marketable securities must not be influenced by the need to obtain shareholder or regulatory approval.

### **Comprehensive income**

### **Business combinations**

### Definition of a subsidiary

Focuses on the concept of the power to control in determining whether a parent/subsidiary relationship exists. Control is the parent's ability to govern the financial and operating policies of a subsidiary to obtain benefits. Subsidiaries are consolidated from the date on which effective control is transferred and are no longer consolidated from the date control ceases. Generally companies own more than 50% of the voting interests in these subsidiaries.

Focuses on a controlling financial interest through ownership of a majority voting interest or by contract, coupled with control. Also variable interest entities (VIEs) in which a parent does not have voting control but absorbs the majority of losses or returns must also be consolidated.

### Special purpose entities (SPEs)

Consolidate where the substance of the relationship indicates control.

SPEs must be consolidated if consolidation requirements for VIEs are met. To avoid consolidation, the SPE must be a qualifying SPE.

### Goodwill

Capitalize and amortize over its useful life. There is a rebuttable presumption that the useful life of goodwill does not exceed 20 years. In very rare cases goodwill may be demonstrated to have a useful life in excess of 20 years. If the useful life does exceed 20 years, amortization is still mandatory and the reasons for rebutting the presumption must be disclosed.

For fiscal years beginning after December 15, 2001 goodwill should not be amortized but should be tested for impairment at least annually at the reporting unit level. For prior periods, goodwill was required to be capitalized and amortized over a useful life not to exceed 40 years. It was also required to be tested for impairment if factors indicated that impairment may exist.

Negative goodwill relating to expected future losses or expenses identified in the acquirer's plan for the acquisition must be recognized in the statement of operations when those losses/expenses occur. Otherwise negative goodwill not exceeding the fair value of acquired identifiable, non-monetary assets must be recognized in the statement of operations on a systematic basis over the useful lives of such assets. Where negative goodwill exceeds the fair value of non-monetary assets it must be immediately recognized in the statement of operations.

Treatment of an excess of fair value of acquired net assets over cost of acquisition under U.S. GAAP is similar to IFRS with the exception of provision for expected future losses which is not allowable as part of fair-value exercise for the purposes of determination of goodwill under U.S. GAAP.

### Inventories

Carried at the lower of cost or net realizable value (being sale proceeds less all further costs to bring the inventories to completion). Reversal is required for a subsequent increase in value of inventory previously written down.

Broadly consistent with IFRS, in that the lower of cost and market value is used to value inventories. Market value is defined as being current replacement cost subject to an upper limit of net realizable value and a lower limit of net realizable value less a normal profit margin. Reversal of a write down is prohibited.

### Taxation

Current and deferred taxes are measured based on tax laws and rates that have been enacted or "substantively enacted" by the balance sheet date. "... in some jurisdictions, announcements of tax rates (and tax laws) by the government have the substantive effect of actual enactment, which may follow the announcement by a period of several months. In these circumstances, tax assets and liabilities are measured using the announced tax rate (and tax laws)."

Current and deferred taxes are measured using enacted tax laws and rates. For federal tax purposes in the United States, the enactment date is the date that the president signs the tax law. Enactment of a new tax law is viewed as a discrete event of the period of enactment.

**Restructured Liabilities**

Liabilities are remeasured (extinguished) and gain or loss recognized when there is a significant modification of terms.

Liabilities are remeasured and gain or loss recognized in accordance with EITF 96-19, "Debtors Accounting for a Modification in Exchange of Debt Instruments" which is more restrictive than IFRS concerning what represents a significant modification of terms.

**Deferred tax assets**

Deferred tax assets are recognized when it is probable that future taxable profits will be available against which the deferred tax asset can be utilized. The carrying amount of the deferred tax asset is reviewed at each balance sheet date and reduced if appropriate.

Similar to IFRS but recognize all deferred tax assets and provide a valuation allowance if it is more likely than not that some portion, or all, of the deferred tax asset will not be realized. There are a number of specific differences in application.

**Segment reporting**

Report primary and secondary (business and geographic) segments based on risks and returns.

Report based on internal reporting segments. Operating segments are those business activities for which discrete information is available, and whose operating results are regularly reviewed by the entity's chief operating decision maker in determining resource allocation and assessing performance.

**Related parties**

There is no specific requirement in IFRS to disclose the name of the related party (other than the ultimate parent entity) or the amounts involved in a transaction. Disclosure of "pricing policy" is required along with the elements of transactions necessary for an understanding of the financial statements. IFRS also currently exempts state controlled enterprises from disclosing transactions with other state controlled enterprises. IFRS also currently excludes from related parties government departments and agencies to the extent that such dealings are in the normal course of business.

Transactions involving related parties cannot be presumed to be carried out on an arm's-length basis, as the requisite conditions of competitive, free-market dealings may not exist. U.S. GAAP requires the disclosure of any changes in the method of establishing "terms" for related party transactions and the resulting effect on the financial statements. In addition disclosure of the nature of the relationship, a description of the transaction, the amounts for each period, and the amounts due to or from related parties is required. US GAAP contains no exemptions for disclosing transactions with other state controlled enterprises but requires disclosure of all material related party transactions.

**Supplemental oil and gas disclosures**

No specific oil and gas accounting standards exist under IFRS and no requirement to publish supplemental oil and gas disclosures.

Unaudited supplemental oil and gas disclosures as stipulated in SFAS 69 are required for public companies.

**Guarantees**

Guarantees are recognized as part of provisions and should be the best estimate of the expenditure required to settle the present obligation at the balance sheet date.

Upon issuance of a guarantee, the guarantor must recognize a liability for the fair value of the obligation it assumes under the guarantee. The fair value of guarantees may be represented by transactions for similar guarantees on a stand-alone basis or part of bundled transactions or the present value of future expected economic outflows. Subsequent to its initial recognition, the liability for a guarantee should not continue to be measured at its fair value but amortized into earnings through a systematic method over the term of the guarantee or released at the expiration of obligation based on the terms of the obligation.

## BUSINESS

### Overview

We are the world's largest natural gas company, and the world's largest publicly-traded hydrocarbons company, in terms of reserves, production and transportation. We supply substantially all of the natural gas consumed in Russia, approximately 50% of the volume of natural gas consumed in the eight FSU countries to which we export our natural gas—Armenia, Belarus, Estonia, Georgia, Latvia, Lithuania, Moldova and Ukraine—and approximately 26% of the volume of natural gas consumed in Europe making us the largest single supplier of natural gas to Europe. For the year ended December 31, 2002, our sales net of excise tax, value added tax, customs duties and sales tax were RR644,687 million (U.S.\$21.06 billion) and our operating profit was RR147,974 million (U.S.\$4.83 billion). For the nine months ended September 30, 2003, our sales net of excise tax, value added tax, customs duties and sales tax were RR597,382 million (U.S.\$19.5 billion) and our operating profit was RR182,022 million (U.S.\$5.95 billion). As of September 30, 2003, we had total assets of RR2,677,315 million (U.S.\$87.5 billion) and total shareholders' equity of RR1,819,821 million (U.S.\$59.5 billion).

*Reserves.* We estimate our reserves using the Russian reserves system, which differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves. As of December 31, 2003, we had Russian reserves system combined ABC1 reserves of 28.0 tcm (989.1 tcf) of natural gas, 1,279.8 million tons (9.4 bbls) of gas condensate and 569.1 million tons (4.2 bbls) of crude oil, for a total of 178,390.2 mmboe. Over 80% of our Russian reserve system combined ABC1 natural gas reserves are located in western Siberia and are geographically concentrated. As of December 31, 2003, our three largest producing fields, Urengoiskoye, Yamburgskoye and Zapolyarnoye, all located in the Yamal-Nenets Region in western Siberia, accounted for 12.9 tcm of ABC1 natural gas reserves, or 46% of our total combined ABC1 natural gas reserves. The majority of our reserves outside of western Siberia are located in the Barents Sea and southern Russia.

Since 1997, DeGolyer and MacNaughton, an independent U.S. petroleum engineering consulting firm, has evaluated our reserves according to SPE International Standards. As of December 31, 2002, DeGolyer and MacNaughton had completed evaluations of 19 fields (21 deposits) accounting for approximately 89% of our combined ABC1 natural gas reserves, approximately 92% of our combined ABC1 gas condensate reserves and approximately 64% of our combined ABC1 crude oil reserves. As of December 31, 2002, these 21 fields contained proved reserves of 16.8 tcm (594.8 tcf) of natural gas, 374.9 million tons (2,748.0 mmbbls) of gas condensate and 7.7 million tons (56.2 mmbbls) of crude oil, for a total of 101,936.0 mmboe, and probable reserves of 1.9 tcm (67.1 tcf) of natural gas, 140.9 million tons (1,032.8 mmbbls) of gas condensate and 98.8 million tons (724.1 mmbbls) of crude oil, for a total of 12,863.1 mmboe. We believe that the fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties according to SPE International Standards.

SPE International Standards differ from SEC Standards. See “—Reserves and Production—Reserves—Differences between SPE International Standards and SEC Standards.”

*Exploration and Production.* As of March 31, 2004, licenses held by OAO Gazprom and our wholly-owned subsidiaries included 36 for exploration and assessment (without development rights) with terms of up to five years, 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of mostly between 18 and 23 years and 74 production licenses with initial terms of 20 to 25 years and with remaining terms of mostly between 11 and 23 years.

In the year ended December 31, 2003, we produced 540.2 bcm (19,078 bcf) of natural gas, 10.2 million tons (74.9 mmbbls) of gas condensate and 802,800 tons (5.9 mmbbls) of crude oil, for a total of 3,259.7 mmboe, as compared with 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbbls) of gas condensate and 706,400 tons (5.2 mmbbls) of crude oil, for a total of 3,149.6 mmboe, in the year ended December 31, 2002. In the nine months ended September 30, 2003, we produced 395.7 bcm (13,975 bcf) of natural gas, 7.5 million tons (55.2 mmbbls) of gas condensate and 595,200 tons (4.4 mmbbls) of crude oil, for a total of 2,388.6 mmboe, as compared with 380.2 bcm (13,427 bcf) of natural gas, 7.3 million tons (53.3 mmbbls) of gas condensate and 527,100 tons (3.9 mmbbls) of crude oil, for a total volume of 2,294.9 mmboe, in the nine months ended September 30, 2002.

Our natural gas production represented approximately 87.1% of total natural gas production in Russia in 2003, as compared with 87.7% in 2002. Four of our production subsidiaries, Urengoigazprom,

Yamburggazdobycha, Noyabrskgazdobycha and Nadymgazprom, together produced 91.1% of our natural gas in 2003, as compared with 91.8% in 2002. The Zapolyarnoye field, which came on stream in the third quarter of 2001, produced approximately 67.5 bcm and 36.8 bcm of natural gas in 2003 and 2002, or approximately 12% and 7% of our total natural gas production in those years, respectively.

*Exports.* We export our natural gas to Europe through our wholly-owned trading subsidiary, Gazexport. Our exports to Europe accounted for approximately 27.4% and 27.2% of the volume of the natural gas we sold in 2002 and 2001, respectively, and 63.3% and 69.4% of our natural gas net sales revenues in those years. Our exports to Europe accounted for approximately 29.7% and 29.5% of the volume of the natural gas we sold in the nine months ended September 30, 2003 and 2002, respectively, and 66.2% and 65.0% of our natural gas net sales revenues in those periods. According to the statistical survey CEDIGAZ—"Natural Gas in the World—2002" (July 2003), we supplied 20% of the volume of natural gas consumed in western Europe and 61% of the volume of natural gas consumed in central and eastern Europe in 2002. Most of our exports to Europe are transported by pipeline through Ukraine and through the Yamal-Europe pipeline.

*Domestic sales.* We sell our products domestically to large industrial consumers, to regional gas distribution companies and to household consumers. In the past, we did not sell natural gas to household consumers, but as we gained influence over regional gas distribution companies through the acquisitions described below, we began to make sales to household consumers.

*Transportation.* We own and operate the UGSS, which gathers, processes, transports, stores and delivers substantially all the natural gas sold in Russia. The UGSS comprises the world's largest high-pressure trunk pipeline system, with a total length of over 151,600 km (not including connecting pipelines), 263 compressor stations and 24 underground natural gas storage facilities. We control and manage the transportation of gas in the UGSS network from our central dispatch management center, located in Moscow. We transported 674.1 bcm and 637.1 bcm through the UGSS in 2003 and 2002, respectively. Although we use most of the UGSS capacity for the transportation of the natural gas we produce or purchase, we also provide gas transportation services to third parties. Deliveries on behalf of third parties accounted for 16.4% and 12.7% of the total volume of natural gas supplied through the UGSS in 2003 and 2002, respectively.

Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies. As of December 31, 2003, we had controlling interests in 114, and non-controlling interests in an additional 71, of the approximately 320 regional gas distribution companies in Russia. These regional gas distribution companies own and operate medium- and low-pressure pipelines that transport gas to end consumers.

*Processing and Refining.* Our refining operations are carried out by our refining facilities, including those of our majority-owned petrochemicals subsidiary Sibur.

Our refining facilities, other than Sibur's, process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. The processing, stabilizing and refining of natural gas, gas condensate and crude oil is carried out by six integrated refineries that remove hazardous and corrosive substances from natural gas and gas condensate and produce a broad range of products. The refineries also stabilize and refine gas condensate and crude oil as a single crude oil and gas condensate mixture. Our refineries produce products derived from natural gas such as dry marketable natural gas, de-ethanized natural gas, liquefied natural gas, ethane, helium, sulfur and odorant. Stabilized and refined products derived from gas condensate and crude oil include stable gas condensate, gas condensate distillate, diesel fuel, furnace fuel oil and automobile gasoline. In 2003, our refining facilities, excluding Sibur's, processed and refined 39.7 bcm of natural gas and 17.2 million tons (125.7 mmbbls) of unstabilized gas condensate and crude oil, for a total volume of 359.4 mmboe, compared to 39.3 bcm of natural gas and 16.9 million tons (123.9 mmbbls) of unstabilized gas condensate and crude oil, for a total volume of 355.2 mmboe, in 2002.

Sibur is one of the leading Russian producers of petrochemical products. According to Sibur's management estimates, Sibur accounted for 48% of the production of synthetic rubber, 47% of the production of tires, 18% of the production of polyethylene, 35% of the production of polypropylene and 31% of the production of liquified gases in Russia in 2003. Sibur's output is used in the production of plastics, high-octane gasoline and other products in the automotive, agricultural, construction and aerospace industries. See "—Refining —Sibur."

*Relationship with the Government.* The Russian Federation currently owns 38.37% of our shares directly, and representatives of the state have a voting majority on our Board of Directors (six of 11 seats).

Moreover, our subsidiaries held approximately 17.33% of our shares as of September 30, 2003, which they are entitled to vote as owners. In addition, our transportation activities are a “natural monopoly” under the Russian Federal Law “On Natural Monopolies” No. 147-FZ dated August 17, 1995. As a result, the Government regulates and sets the prices we charge for gas supplied to the domestic market, the tariffs we charge for the transportation of third parties’ gas through the UGSS and other matters affecting our business. For example, we are required to have our budget, capital expenditure program and borrowing program approved by the Government. Through its share ownership, representation on our Board of Directors and role as our regulator, the Government has a strong influence over our operations and our dividend policy. At the same time, we play a significant role in Russia’s financial system and economy. According to our analyses, we accounted for approximately 20% of federal budget revenues and approximately 10% of foreign exchange earnings of the Russian Federation in 2003. See “Risk Factors—Risks Relating to our Business—The Government has exercised, and can be expected to continue to exercise, a strong influence over our operations.”

### **Strategy**

Our main strategic objective is to maintain and strengthen our position as a leading gas company, both domestically and globally, by continuing to adapt to a rapidly changing business environment. To achieve this objective, we plan to:

- meet our production targets, including achieving our natural gas production target of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030;
- ensure the effective, reliable and balanced supply of gas to Russian customers; and
- fulfill our long-term export contracts and inter-governmental agreements on gas supply.

To implement these plans, we have developed a number of strategic priorities, including:

**Developing new cost-effective sources of supply from our existing reserves base to replace production declines in our largest fields.** Based on (i) our current export contract portfolio, (ii) anticipated future demand and prices domestically, and (iii) our reserves base, we believe that achieving annual natural gas production of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030 is strategically optimal. In light of expected continuing production declines from three of our large west Siberian fields (Urengoi, Yamburg and Medvezhye), which accounted for approximately 61.8% of our total natural gas production in 2003, but only 35.9% of our total combined ABC1 natural gas reserves as of December 31, 2003, we intend to continue to invest in developing new production. Production from the Zapolyarnoye field began in 2001 and reached approximately 36.8 bcm in 2002 and 67.5 bcm in 2003. We intend to invest \$18.0 billion in 2004 and 2005 in developing the Zapolyarnoye field to full capacity, after which its production should reach 100 bcm per year. We also intend to invest in new production from our other western and eastern Siberian, Far Eastern and southern Russian deposits, the Yamal Peninsula and also in off-shore fields, including the Obshchaya Bay. See “—Reserves and Production—Development Activities.” To develop and maintain this production as efficiently as possible, we intend to work closely with international energy service companies and local institutes, both of which are essential to ensuring the best use of the latest technologies.

**Purchasing gas from Central Asia.** To help maintain our natural gas sales while production from our mature fields declines and new fields are being developed, we have signed long-term agreements to purchase natural gas from Turkmenistan and Uzbekistan. Purchases from GTK Turkmenneftegaz, the state oil and gas company of Turkmenistan, are expected to be 5-6 bcm in 2004 and may rise to 6-7 bcm in 2005 and up to 10 bcm in 2006. Depending on available transportation capacity, these purchases could reach 60-70 bcm in 2007 and 70-80 bcm annually from 2009 to 2028. Purchases from Uzbekistan totaled 1.3 bcm in 2003, are expected to rise to 7 bcm in 2004 and up to 10 bcm annually from 2005 to 2012.

**Further developing transportation infrastructure to meet growing demand for gas and increase our flexibility in delivering gas to export and domestic markets.** We expect demand for natural gas in our core export market—Europe—to grow and for our European export obligations to grow accordingly. In order to integrate our production sites into our pipeline network and to continue to meet our contractual export obligations, we are developing new pipelines, such as the Zapolyarnoye-Urengoi pipeline, the northern areas of the Tyumen region-Torzhok (SRTO-Torzhok) pipeline, Pochinki-Izobilnoye-North Stavropolskoye underground gas storage facility pipeline and the Yamal-Europe (Torzhok-Poland) pipeline.

The Zapolyarnoye-Urengoi pipeline will increase the pipeline capacity from the Zapolyarnoye field to our existing pipeline network. The SRTO-Torzhok pipeline will become part of an operating multi-line

gas transportation system and enhance our ability to export natural gas through the Yamal-Europe pipeline and to customers in the northwestern regions of Russia. The natural gas pipeline from Pochinki to Izobilnoye and the North Stavropolskoye underground gas storage facility forms part of the Russia-Turkey natural gas pipeline system, and will enable us to deliver "clean" natural gas from the Nadym-Pur-Taz region through the Blue Stream pipeline. The Yamal-Europe project helps us to meet our contractual obligations to supply natural gas to Europe and to diversify export routes. Connecting the Yamal-Europe pipeline to the existing natural gas transportation network in Germany allows for the full integration of this pipeline into the European gas transportation network.

We have also announced plans to develop the North European pipeline, from northwest Russia (under the Baltic Sea) to the German shore and onwards through The Netherlands to the United Kingdom, with capacity of approximately 20 bcm per year. Market research and planning for this project is currently underway. We are also currently analyzing opportunities in Asian and other markets and the potential desirability of further investments in gas transportation infrastructure, including for liquified natural gas ("LNG"), to meet anticipated demand growth and market opportunities in China, Japan, the United States and elsewhere.

**Enhancing our refining capabilities.** Our long-term refining strategy is to enhance our competitive position in Russia, the FSU and Europe, in particular through our subsidiary Sibur, one of Russia's leading petrochemicals companies. We plan to modernize our gas processing and refining facilities at Sibur and elsewhere in order to increase our production of refined products overall (and our refining throughput) as well as the depth of our refining, allowing us to produce higher margin products.

**Enhancing profitability by capitalizing on the profitable and growing European export markets, while increasing cash generation from domestic and FSU sales.** In the first nine months of 2003, net sales of natural gas to Europe represented 29.7% of our total gas sales volumes and 66.2% of our net gas sales revenues. We expect to continue to increase our export sales volumes under our export contracts, thus contributing to our profitability. In addition, we intend to continue our current efforts to improve the profitability of our domestic sales by lobbying the Government for price increases and by improving payment discipline from domestic and FSU customers.

**Continuing to develop strategic partnerships, both in Russia and internationally.** We have entered into various strategic partnerships, both domestically and abroad, and are continually seeking new opportunities to maximize the value of our assets through these relationships. We have entered into cooperation agreements with Rosneft, including agreements for the development of the significant Shtokmanovskoye and Prirazlomnoye fields and, in conjunction with Surgutneftegaz, for the development of gas and oil fields and an integrated natural gas supply system in eastern Siberia and the Republic of Sakha (Yakutia). We have also entered into a strategic partnership agreement with LUKOIL, which produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries from 2002 to 2005. Under this agreement, we concluded a framework agreement in March 2003 according to which LUKOIL will sell us gas that it processes at its Nakhodkinskii field, an agreement in June 2003 on the development of hydrocarbon deposits in the Caspian Sea and a further agreement in October 2003 with respect to purchasing gas produced at the Nakhodkinskii field. We have established a joint venture, WINGAS GmbH ("WINGAS"), with BASF AG ("BASF"), that owns pipelines in Germany and allows us to access the German market further downstream than by merely delivering gas at the border. We anticipate entering into strategic agreements with other domestic and international energy companies in the future.

**Building our research and development capabilities to ensure low-cost development, production and transportation of our gas to increasingly competitive markets.** We continue to invest in research and development in a number of scientific and technical areas. In general, our research and development focuses on expanding our mineral resource base, developing hydrocarbon deposits in new regions (for example, the Ob-Taz Estuary, Arctic offshore fields and the Yamal Peninsula), maintaining the reliability of the UGSS, ensuring production in fields that are being developed, optimizing financial, investment and pricing policies and increasing ecological and industrial safety. We are focusing on several specific projects, including researching how to extract natural gas cost-effectively from the Yamal Peninsula fields and increasing the efficiency of gas transportation via our pipelines. We are also focusing on developing and implementing new technologies by which to deliver our gas, including LNG, which could provide access to U.S. and Asian markets.

**Improving corporate governance and protecting shareholders' rights by introducing best-practice management techniques and increased levels of transparency.** At our 2002 general meeting of shareholders, we approved a new corporate governance charter outlining procedures for the protection of the rights of our shareholders, including our major shareholder, the Russian Federation, as well as our minority shareholders. In addition, our Board of Directors adopted resolutions on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) OAO Gazprom shares, or interests or participations that OAO Gazprom or its subsidiaries hold in other companies, (ii) loans or other borrowings by OAO Gazprom having a value of greater than 0.3% of OAO Gazprom's unconsolidated balance sheet assets determined under Russian accounting principles and (iii) purchases or disposals by OAO Gazprom or its subsidiaries of its assets having a value greater than 0.3% of its unconsolidated balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors. We are now in the process of adopting similar procedures at our subsidiaries. We have also launched several initiatives to measure more accurately and improve our operating and financial performance, including programs related to optimizing domestic sales (including increasing cash collection), increasing internal controls over budget planning and execution, deployment of investment capital and debt management and increasing control over our subsidiaries. Finally, we intend to continue our efforts with respect to increasing transparency through ongoing publication of interim and year-end IFRS financial information, improved levels of disclosure for public market financings and improved relations with our public shareholders. In general, we seek to instill in our managers a sense of personal responsibility for the success of our business.

### **History and Privatization**

Prior to 1991, the Russian gas industry was regulated by the Ministry of the Gas Industry. State-owned concern "Gazprom," which was formed in 1991, was the successor to the Ministry of the Gas Industry. This state-owned concern formed the basis for our transformation into a joint stock company in accordance with Presidential Decree No. 1333 of November 5, 1992 "On the Transformation of the State Gas Concern Gazprom into Russian Joint Stock Company Gazprom" ("Decree No. 1333") and Resolution of the Council of Ministers of the Government of the Russian Federation No. 138 of February 17, 1993 "On the Establishment of Russian Joint Stock Concern Gazprom" ("Order No. 138"). Decree No. 1333 made us responsible for ensuring the efficient operation and development of the UGSS. Decree No. 1333 and the Presidential Decree of the Russian Federation No. 2116 of December 6, 1993 made us responsible for natural gas exports through Gazexport, our wholly-owned foreign trade subsidiary.

Decree No. 1333 charged us with the following principal tasks:

- ensuring a reliable supply of natural gas to customers in Russia and to foreign customers, and supplying gas abroad under inter-governmental and inter-state agreements;
- conducting a coordinated technical and investment policy for maintaining and further developing the UGSS;
- controlling the operation of the UGSS;
- financing and constructing natural gas pipelines and high pressure outlets to service areas of Russia where natural gas was previously unavailable; and
- providing access for any independent producer of natural gas to the UGSS in proportion to the amount of natural gas produced by such independent producer in Russia, subject to Government regulation of the natural gas price mechanism.

Our functions as owner of the UGSS and providing access to the UGSS are now regulated in accordance with the Federal Law No. 69 FZ dated March 31, 1999 "On Gas Supply in the Russian Federation" (the "Gas Supply Law").

The Council of Ministers of the Russian Federation approved our original Charter in Order No. 138, and we were registered as an open joint stock company on February 25, 1993. In 1993 and 1994 the Government issued us with licenses pursuant to the Subsoil Resources Law of 1992, granting us rights to exploit hydrocarbon reserves.

Decree No. 1333 provided for the transfer to us of 100% of the share capital of enterprises comprising the UGSS, controlling equity stakes (not less than 51%) in a number of other entities that had been reorganized into joint stock companies, the interests of State Gas Concern "Gazprom" in Russian and foreign enterprises, and other assets of State Gas Concern "Gazprom," the privatization of which was not

restricted. Decree No. 1333 also provided for all rights and obligations of State Gas Concern "Gazprom" to inure to our benefit, including its rights to use underground deposits and natural resources, as well as its rights and obligations under contracts. Gas producing enterprises Yakutgazprom and Norilskgazprom, which had been part of State Gas Concern "Gazprom," were reorganized into separate joint stock companies independent from us.

Decree No. 1333, Directive No. 58-rp of the President of the Russian Federation dated January 26, 1993, our privatization plan and certain other legislative acts issued by the President and the Government provided for:

- 15.0% of our shares to be sold by closed subscription to employees and the management of the enterprises comprising the reorganized UGSS;
- 33.9% of our shares to be sold to Russian individuals in return for privatization vouchers (of which 0.87% has not been sold and remains within federal ownership);
- 40.0% of our shares to be fixed for three years in federal ownership;
- 1.1% of our shares to be transferred to joint stock company "Rosgazifikatsiya" (a supplier of natural gas to end consumers); and
- 10.0% of our shares to be purchased by us before June 1, 1993 at nominal value in exchange for privatization vouchers and to be placed in the securities market within one year to finance the development of natural gas fields.

Presidential Decree of the Russian Federation No. 399 of March 20, 1996 extended by a further three years the original period during which 40% of our shares were to be retained in federal ownership. Presidential Decree of the Russian Federation No. 887 of July 25, 1998 reduced the percentage of our shares to be retained in federal ownership to 35%, in anticipation of the sale of 5% of our shares. The Government subsequently sold 2.5% of our shares to Ruhrgas through a privatization auction in December 1998. Although our privatization plan envisaged the sale of the other 2.5% in the second quarter of 1999, these shares were not sold and continue to be owned by the Government.

The Gas Supply Law states that at least 35% of the UGSS owner's shares (i.e., Gazprom) must be retained in federal ownership for an indefinite period of time and may only be disposed of pursuant to federal law. These shares, together with the 0.87% of our shares not placed during the privatization program in 1993 and 1994 and the 2.5% of our shares not sold in the second quarter of 1999, comprise the 38.37% of our shares currently directly held by the state.

### **Corporate Structure**

We operate through a number of direct and indirect wholly- or majority-owned subsidiaries. In addition, we hold direct and indirect equity interests of between 21% and 50% in a number of other entities. All of our active consolidated subsidiaries have been re-registered in the Unified State Register of Legal Persons. Our subsidiaries include natural gas production subsidiaries; natural gas transportation subsidiaries; marketing subsidiaries; and subsidiaries responsible for a number of other activities, including technical supervision of our pipeline systems, oil and gas well drilling, research and development, data processing, banking and procurement.

We do not separately identify segments within our Group as we operate as an integrated business. However, information about our business can be analyzed based on five segments: (i) exploration and production (referred to in the notes to our financial statements as "production"); (ii) transportation; (iii) refining; (iv) marketing (referred to in the notes to our financial statements as "distribution"); and (v) other (which includes banking activities).

*Head office.* Our head office, located in Moscow, exercises a substantial degree of managerial and financial control over the operations of our subsidiaries. Head office functions include strategy, planning, external financing, financial reporting, allocation of financial resources and supervision of principal areas of operations, such as construction, drilling, production, transportation, some natural gas sales in Russia, and sales in the FSU and equipment procurement.

The dispatch management center, based at our head office, continuously monitors, controls and manages our natural gas transportation system throughout Russia. We also process operational information, including data on produced and transported natural gas volumes, at our head office. Our head office is also responsible for internal financial reporting for the preparation of consolidated accounts and for the monitoring of our cash receipts and cash requirements.

*Exploration and Production.* We operate our production segment through our production subsidiaries, which develop and operate our natural gas fields and related natural gas processing facilities. Exploration and drilling operations are primarily carried out by our wholly-owned subsidiary, Burgaz, which acts as both a direct service provider and a general contractor. In addition, we participate in a number of exploration and production projects and joint ventures with Russian and foreign partners. See “—Reserves and Production—Projects and Alliances in Reserves and Production.”

*Transportation.* We have a total of 19 wholly-owned natural gas transportation subsidiaries, of which six also produce and/or process natural gas. Our natural gas transportation subsidiaries are responsible for the transportation of natural gas along trunk pipelines and for the delivery of natural gas within their respective regions. As discussed more fully below, beginning in the late 1990s, we began acquiring interests in regional gas distribution companies, which own and operate medium- and low-pressure pipelines that transport gas to end consumers. In addition, we participate in a number of natural gas transportation joint ventures involving foreign partners. See “—Transportation—International Projects and Alliances for Transportation.”

*Refining.* We operate our refining segment principally through our subsidiaries, some of which are also engaged in natural gas production and transportation activities and engage in refining activities principally to remove corrosive substances from the natural gas they produce and to prepare it for transportation, as well as through Sibur. In January 2001 we acquired 50.7% of the voting shares of Sibur, one of Russia’s leading petrochemicals companies. In April 2003 we established control over a number of petrochemicals companies, some of which held interests in Sibur, increasing our interest in Sibur to 75.7%. In September 2003 we acquired an additional 2.4% interest in Sibur. See “—Refining—Sibur.”

*Marketing.* We export our products through our wholly-owned trading subsidiary, Gazexport. We sell our products domestically, through our wholly-owned subsidiary Mezhrefiongaz and the 43 regional trade houses in Russia that we control (out of a total of 53 regional trade houses). Our customers are large industrial consumers, regional gas distribution companies and household consumers. In addition, we participate in a number of marketing joint ventures involving foreign partners. See “—Marketing—International Projects and Alliances in Marketing.”

*Other.* We are engaged in various non-core activities that support our business. These activities include technical supervision of the pipeline system, construction activities supporting the operation of the UGSS, research and development and non-core production activities such as the production of construction and telecommunications equipment. We also own Gazprombank, Russia’s third largest bank as measured by total assets and capital, which meets most of our domestic banking needs (other than borrowings); Gazfund, the largest private pension fund in Russia, which we use to provide pension services to our employees; and Sogaz, an insurance company that provides us with our insurance coverage. We also own various other businesses that are not related to our core operations. These include Gazprom-Media, a holding company that owns various media production and distribution channels, other media companies and various other agricultural, civil, construction, medical care, insurance and telecommunications activities.

## **Reserves and Production**

We are the world’s largest producer of natural gas, and of hydrocarbons generally. Our major reserves and production areas are western Siberia, southern Russia, the Volga region and northern European Russia. As of December 31, 2003, we had Russian reserves system ABC1 reserves of 28.0 tcm of natural gas, 1,279.8 million tons (9.4 bbls) of gas condensate and 569.1 million tons (4.2 bbls) of crude oil, for a total of 178,390.2 mmboe.

Based on an evaluation of 19 of our fields (21 deposits) conducted by DeGolyer and MacNaughton under SPE International Standards, we had 16.8 tcm (594.8 tcf) of proved natural gas reserves, 1.9 tcm of probable natural gas reserves and 18.7 tcm of combined proved and probable natural gas reserves as of December 31, 2002. These 21 fields also contained proved reserves of 374.9 million tons (2,748.0 mmbbls) of gas condensate and 7.7 million tons (56.2 mmbbls) of crude oil and probable reserves of 140.9 million tons (1,032.8 mmbbls) of gas condensate and 98.8 million tons (724.1 mmbbls) of crude oil as of December 31, 2002. Gas condensate reserve data included in this Offering Circular include other gas liquid reserves. See Appendix A.

The 19 fields (21 deposits) evaluated by DeGolyer and MacNaughton accounted for approximately 89% of our combined ABC1 natural gas reserves, approximately 92% of our combined ABC1 gas condensate reserves and approximately 64% of our combined ABC1 crude oil reserves as of December

31, 2002. We believe that the fields evaluated by DeGolyer and MacNaughton are likely to contain most of our reserves that would be deemed proved or probable upon a full evaluation of our upstream properties according to SPE International Standards.

As of March 31, 2004, our licenses held by OAO Gazprom and our wholly-owned subsidiaries included 36 for exploration and assessment with terms of up to five years (without development rights), 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years and with remaining terms of mostly between 18 and 23 years, and 74 exploration and production licenses with initial terms of 20 to 25 years and with remaining terms of mostly between 11 and 23 years. We are in material compliance with all of our subsoil licenses.

In 2003, we produced 540.2 bcm (19,078 bcf) of natural gas, 10.2 million tons (74.9 mmbls) of gas condensate and 802,800 tons (5.9 mmbls) of crude oil, for a total of a 3,259.7 mmboe, as compared to 521.9 bcm of natural gas, 9.9 million tons (72.6 mmbls) of gas condensate and 706,400 tons (5.2 mmbls) of crude oil, for a total of 3,149.6 mmboe, in 2002. We plan to achieve annual natural gas production of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030. We have also entered into a number of strategic alliances and joint ventures with major western and Russian oil and gas companies to develop fields in the Barents Sea, the Caspian Sea, western Siberia, China and the Persian Gulf (South Pars).

The following table sets forth certain data for our production segment for the periods indicated:

	For the year ended or as at December 31,		
	2002	2001	2000
<b>Total natural gas production</b> (bcm).....	521.9	512.0	523.2
<b>Depreciation</b> (million RR) .....	28,436	30,023	28,172
<b>Capital Expenditure</b> (million RR) .....	78,248	70,898	59,453
<b>Total Assets</b> (million RR).....	623,155	536,126	536,667

#### *Reserves*

We estimate our hydrocarbon reserves in accordance with the Russian reserves system. We have also had the reserves in most of our major fields evaluated since 1997 according to SPE International Standards by DeGolyer and MacNaughton, an independent petroleum engineering consulting firm, and this has yielded estimates of our proved and probable reserves.

The Russian reserves system differs significantly from SPE International Standards, in particular with respect to the manner in which and the extent to which commercial factors are taken into account in calculating reserves, as described more fully below.

#### *Russian Reserves System*

The estimation of reserves of natural gas, gas condensate and crude oil can be broken down into two components: (i) geological reserves, or the quantities of natural gas, gas condensate and crude oil contained in the subsoil and (ii) extractable reserves, or the portion of geological reserves whose extraction from the subsoil as of the date the reserves are calculated is economically efficient given market conditions and rational use of modern extraction equipment and technologies and taking into account compliance with the requirements of subsoil and environmental protection.

The Russian reserves system is based solely on an analysis of geological attributes. Explored reserves are represented by categories A, B, and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. Natural gas reserves in categories A, B and C1 are considered to be fully extractable. For reserves of oil and gas condensate, a predicted coefficient of extraction is calculated based on geological and technical factors. We have included in this Offering Circular only information about our explored reserves, or reserves in categories A, B and C1.

*Category A* reserves are calculated on the part of a deposit drilled in accordance with an approved development project for the oil or natural gas field. They represent reserves that have been analyzed in sufficient detail to define comprehensively the type, shape and size of the deposit; the level of hydrocarbon saturation; the reservoir type; the nature of changes in the reservoir characteristics; the hydrocarbon saturation of the productive strata of the deposit; the content and characteristics of the hydrocarbons; and the major features of the deposit that determine the conditions of its development (mode of operations, well productivity, strata pressure, natural gas, gas condensate and oil balance, hydro- and piezo-conductivity and other features).

*Category B* represents the reserves of a deposit (or portion thereof), the oil or gas content of which has been determined on the basis of commercial flows of oil or gas obtained in wells at various hypsometric depths. The type, shape and size of the deposit; the effective oil and gas saturation depth and type of the reservoir; the nature of changes in the reservoir characteristics; the oil and gas saturation of the productive strata of the deposit; the composition and characteristics of oil, gas and gas condensate under in-situ and standard conditions and other parameters; and the major features of the deposit that determine the conditions of its development have been studied in sufficient detail to draw up a project to develop the deposit.

Category B reserves are computed for a deposit (or a portion thereof) that has been drilled in accordance with either a trial industrial development project in the case of a natural gas field or an approved technological development scheme in the case of an oil field.

*Category C1* represents the reserves of a deposit (or of a portion thereof) whose oil or gas content has been determined on the basis of commercial flows of oil or gas obtained in wells (with some of the wells having been probed by a formation tester) and positive results of geological and geophysical exploration of non-probed wells.

The type, shape and size of the deposit and the formation structure of the oil- and gas-bearing reservoirs have been determined from the results of drilling exploration and production wells and by those geological and geophysical exploration techniques that have been field-tested for the applicable area. The lithological content, reservoir type and characteristics, oil and gas saturation, oil displacement ratio and effective oil and gas saturation depth of the productive strata have been studied based on drill cores and geophysical well exploration materials. The composition and characteristics of oil, gas and gas condensate under in-situ and standard conditions have been studied on the basis of well testing data. In the case of an oil and gas deposit, the commercial potential of its oil-bearing fringe has been determined. Well productivity, hydro- and piezo-conductivity of the stratum, stratum pressures and oil, gas and gas condensate temperatures and yields have been studied on the basis of well testing and well exploration results. The hydro-geological and geocryological conditions have been determined on the basis of well drilling results and comparisons with neighboring explored fields.

Category C1 reserves are computed on the basis of results of geological exploration work and production drilling and must have been studied in sufficient detail to yield data from which to draw up either a trial industrial development project in the case of a natural gas field or a technological development scheme in the case of an oil field.

For a description of C2, C3, D1 and D2 reserves and resources, see "Overview of the Russian Gas Industry and Its Regulation—Classification of Reserves."

#### *SPE International Standards*

While the Russian reserves system focuses on the actual physical presence of hydrocarbons in geological formations, and reserves are estimated based on the probability of such physical presence, SPE International Standards take into account not only the probability that hydrocarbons are physically present in a given geological formation but also the economic viability of recovering the reserves (including such factors as exploration and drilling costs, ongoing production costs, transportation costs, taxes, prevailing prices for the products, and other factors that influence the economic viability of a given deposit).

Under SPE International Standards, reserves are classified as "proved," "probable" and "possible," based on both geological and commercial factors. We have included in this Offering Circular information about our proved and probable reserves based on the evaluations of our fields by DeGolyer and MacNaughton.

*Proved reserves* include reserves that are confirmed with a high degree of certainty through an analysis of the development history and/or volume method analysis of the relevant geological and engineering data. Proved reserves are those that, based on the available evidence and taking into account technical and economic factors, have a better than 90% chance of being produced.

*Probable reserves* are those reserves in which hydrocarbons have been located within the geological structure with a lesser degree of certainty because fewer wells have been drilled and/or certain operational tests have not been conducted. Probable reserves are those reserves that, on the available evidence and taking into account technical and economic factors, have a better than 50% chance of being produced.

An evaluation of proved and probable natural gas reserves naturally involves multiple uncertainties. The accuracy of any reserves evaluation depends on the quality of available information and engineering

and geological interpretation. Based on the results of drilling, testing and production after the audit date, reserves may be significantly restated upwards or downwards. Changes in the price of natural gas, gas condensate or oil may also affect our proved and probable reserves estimates, as well as estimates of our future net revenues and net present worth, because the reserves are evaluated, and the future net revenues and net present worth are estimated, based on prices and costs as of the audit date.

#### *Differences between SPE International Standards and SEC Standards*

DeGolyer and MacNaughton has conducted evaluations of our fields using SPE International Standards, which differ in certain material respects from SEC Standards. The principal differences include the following:

*Certainty of Existence.* Under SPE International Standards, reserves in undeveloped drilling sites that are located more than one well location from a commercial producing well may be classified as proved reserves if there is "reasonable certainty" that they exist. Under SEC Standards, it must be "demonstrated with certainty" that reserves exist before they may be classified as proved reserves. In their evaluations of our proved reserves, DeGolyer and MacNaughton has applied the stricter SEC Standards with respect to certainty of existence.

*Duration of License.* Under SPE International Standards, proved reserves are projected to the economic production life of the evaluated fields. Under SEC Standards, oil and gas deposits may not be classified as proved reserves if they will be recovered after the expiration of a current license period unless the license holder has the right to renew the license and there is a demonstrated history of license renewal. The Subsoil Resources Law provides that a license holder may request an extension of an existing license where extractable reserves remain upon the expiration of the primary term of the license, provided that the license holder is in material compliance with the license. In addition, we prepare and submit for government approval development plans for our fields based on the economic life of the field, even where this life exceeds the primary term of the associated license. We are currently in material compliance with our licenses, and intend to request to extend them to the full economic lives of the associated fields upon the expiration of their primary terms. We have also recently extended the terms of five of our production licenses to the end of the economic lives of the fields. While we believe that our licenses will be extended on our request as they expire, the absence of an absolute legal right to extension and a significant demonstrated history of extension makes it uncertain whether extractable reserves we plan to recover only after the expiration of a current license period may be considered proved reserves under SEC Standards. We understand that the SEC staff has not provided definitive guidance on whether in these circumstances such extractable reserves could be considered proved under SEC Standards.

Accordingly, information relating to our estimated proved natural gas, gas condensate and oil reserves included in this Offering Circular is not necessarily indicative of information that would be reported under SEC Standards. In addition, SEC Standards do not permit the presentation of reserves other than proved reserves.

These differences could potentially cause the amount of estimated proved natural gas, gas condensate and oil reserves reported by us in future periods under SEC Standards to be lower than would otherwise be reported under SPE International Standards. A relative decrease in the amount of estimated proved developed natural gas, gas condensate and oil reserves reported by us could, if material, affect the amount of depreciation and depletion expense, impairment charges or certain other financial information derived from or relating thereto reported by us in our consolidated financial statements in future periods.

#### *Our Reserves*

We estimate that we had combined ABC1 reserves of 28.0 tcm of natural gas, 1,279.8 million tons (9.4 bbls) of gas condensate and 569.1 million tons (4.2 bbls) of crude oil, for a total of 178,390.2 mmboe as of December 31, 2003. Our wholly-owned production subsidiaries held mineral resource licenses at December 31, 2003 for 26.0 tcm of combined ABC1 natural gas reserves, while associated companies held licenses for another 4.1 tcm of combined ABC1 natural gas reserves (of which 2.0 tcm was attributable to us in proportion to our actual shareholding). This included 1.1 tcm of natural gas reserves owned by enterprises in which we owned more than 50% (with our proportionate share equaling 0.7 tcm) and 3.0 tcm owned by enterprises in which we own 50% or less (with our proportionate share equaling 1.3 tcm). Our total combined ABC1 natural gas reserves represent approximately 60% of the total combined ABC1 natural gas reserves in Russia. Most of our reserves are concentrated in the very large Yamburgskoye, Bovanenkovskoye, Urengoiskoye, Zapolyarnoye, Astrakhanskoye, Kharasaveiskoye, Medvezhye and Orenburgskoye fields, each with combined ABC1 natural gas reserves of at least 500 bcm. Approximately

half of our combined ABC1 natural gas reserves are in Cenomanian deposits, which are characterized by low bedding depth, high delivery rates of wells and dry natural gas.

The following tables show our total combined ABC1 natural gas, gas condensate and crude oil reserves as of December 31, 2003, 2002, 2001 and 2000.

All reserves amounts in the table below are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures unless otherwise noted.

	As of December 31,			
	2003	2002	2001	2000
<b>Total reserves</b>	<b>Combined ABC1</b>			
Natural Gas (bcm) . . . . .	28,006	28,159	28,147	28,890
Gas Condensate (million tons) . . . . .	1,280	1,283	1,291	1,274
(mmbbls) . . . . .	9,381	9,407	9,460	9,335
Crude Oil (million tons) . . . . .	569	562	571	593
(mmbbls) . . . . .	4,172	4,122	4,184	4,345

The following tables show our combined ABC1 and proved and probable natural gas, gas condensate and crude oil reserves in the areas evaluated by DeGolyer and MacNaughton as of December 31, 2002, 2001 and 2000. As of December 31, 2002, approximately 97% of the proved and probable reserves evaluated in accordance with SPE International Standards were located in western Siberia, and the remaining 3% were located in the Orenburg and Astrakhan Regions.

The correlation between A, B and C1 natural gas reserves and proved and probable natural gas reserves may differ in the fields that have not yet been evaluated by DeGolyer and MacNaughton. Moreover, the correlation may vary at different times for the same fields.

All reserves amounts shown in the table below are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures unless otherwise noted.

Notes:

- (1) Data presented includes only those elements of the fields included by DeGolyer and MacNaughton in their evaluations of 19 fields (21 deposits), 17 fields (18 deposits) and 17 fields (18 deposits) as of December 31, 2002, 2001 and 2000, respectively.
- (2) Data presented here includes 90% of the reserves of the West Tarkosalinsk field. We do not hold a production license for this field; however, we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (3) Data presented here includes 100% of the reserves of the Gubkinskoye field, though we only hold a 51% proportionate interest through our subsidiary Purgaz. When we estimate our combined ABC1 natural gas reserves, we include only 51% of the reserves of the Gubkinskoye field as our reserves.
- (4) Data presented here includes 49% of the reserves of the Yuzhno-Russkoye field. The license for this field is held by Severneftegazprom, in which we held a 49% interest as of December 31, 2002.
- (5) Amounts differ from those provided in the DeGolyer and MacNaughton letter attached as Appendix A because in this Offering Circular we use a conversion rate from metric tons to barrels of 1 ton = 7.33 barrels. Amounts in barrels provided in the DeGolyer and MacNaughton letter are calculated based on the specific gravities of each field.

The following table sets out our combined ABC1 and proved and probable natural gas reserves in our major fields as of December 31, 2002, 2001 and 2000. All of our major fields, with the exception of the Shtokmanovskoye field, were included in the fields evaluated by DeGolyer and MacNaughton.

The correlation between A, B and C1 natural gas reserves and proved and probable reserves may differ in the fields that have not yet been evaluated by DeGolyer and MacNaughton. Moreover, the correlation may vary at different times for the same fields.

All reserves shown in the table below and evaluated by DeGolyer and MacNaughton are held by our wholly-owned subsidiaries.

Notes:

- (1) Data presented includes only those elements of the fields included by DeGolyer & MacNaughton in their evaluations as of December 31, 2002, 2001 and 2000, respectively.
- (2) Data presented includes natural gas extractable from the crude oil portion, and as of December 31, 2002, the Achimov deposit of the Urengoi skoye field. The Achimov deposit was not included in the evaluations by DeGolyer and MacNaughton prior to 2002.
- (3) As a result of our participation with Rosneft and other parties in a joint activity for the development of the Shtokmanovskoye field, we included in our combined ABC1 reserves 62% of the reserves of this field as of December 31, 2002. We include 100% of the reserves of the Shtokmanovskoye field in our combined ABC1 reserves for the periods ended December 31, 2001 and 2000, respectively. See "—Projects and Alliances in Reserves and Production—Shtokmanovskoye and Prirazlomnoye fields."

The following table sets out our total combined ABC1 natural gas, gas condensate and crude oil reserves as of the dates indicated. All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures, unless otherwise noted.

Notes:

- (1) As a result of our participation with Rosneft and other parties in a joint activity for the development of the Shtokmanovskoye and Prirazlomnoye fields, we included in our combined ABC1 reserves 50% of the reserves of these fields as of December 31, 2003, 62% of the reserves of these fields as of December 31, 2002 and 100% of the reserves of these fields for prior periods. See “—Projects and Alliances in Reserves and Production—Shtokmanovskoye and Prirazlomnoye fields.”
- (2) Totals may not add due to rounding.

The following table sets out by major field our combined ABC1 natural gas reserves as of December 31, 2003 and 2002. All reserves amounts are given in proportion to our actual shareholding in non-wholly-owned subsidiaries, equity basis companies and joint ventures, unless otherwise noted.

	<u>As of December 31,</u>	
	<u>2003</u>	<u>2002</u>

<b>Total for named fields.....</b>	<b>24,171.1</b>	<b>24,930.1</b>

Notes:

- (1) As a result of our participation in a joint activity with Rosneft and other parties for the development of the Shtokmanovskoye field, we included in our combined ABC1 reserves 62% of the reserves of this field as of December 31, 2002 and 50% of the reserves of the Shtokmanovskoye field as of December 31, 2003. See “—Projects and Alliances in Reserves and Production—Shtokmanovskoye and Prirazlomnoye fields.”

In the period from December 31, 2002 through December 31, 2003, our combined ABC1 natural gas reserves, excluding the effects of the change in our interest in the Shtokmanovskoye field, increased by approximately 162 bcm.

#### *Licenses*

As of March 31, 2004, our principal licenses held by OAO Gazprom and our wholly-owned subsidiaries included:

- 36 exploration and assessment licenses with terms of up to five years (without development rights);
- 16 combined hydrocarbon exploration, assessment and production licenses with initial terms of 25 years, and with remaining terms of mostly between 18 and 23 years; and
- 74 production licenses with initial terms of 20 to 25 years, and with remaining terms of mostly between 11 and 23 years.

We also hold other licenses through our non-wholly-owned subsidiaries.

The following table sets out which of our wholly-owned subsidiaries holds these licenses, and the number and type of licenses each of them held as of March 31, 2004.

	Type of License <sup>(1)</sup>			Total
	Exploration and Assessment	Exploration, Assessment and Production	Production	
Gazprom.....	6	2	0	8
Astrakhangazprom.....	0	1	1	2
Kaspiygazprom.....	0	7	0	7

Urengoiغازprom.....	2	0	3	5
Yamburggazdobycha.....	0	1	2	3
Principal Subsoil Users.....	36	16	74	126

(1) Licenses are categorized by type in accordance with the official indexing established at the time the license is issued. In practice, while a license may be officially indexed as a production license, it may also authorize exploration and assessment activities.

None of the licenses for our major fields expires prior to 2012. Ten production licenses held by Kubangazprom, accounting for combined ABC1 natural gas reserves of approximately 3 bcm, expire between 2005 and 2011. These licenses may be extended upon their scheduled expiration, as described more fully below. We have recently extended the terms of five production licenses held by Kubangazprom to the end of the economic lives of the fields.

In accordance with federal legislation, licenses are issued by the federal subsoil management authority jointly with the authority of the relevant constituent entity of the Russian Federation. Most of our hydrocarbon exploration, assessment and production licenses were granted in 1993 through 1996 in accordance with the Subsoil Resources Law, as well as regulatory acts issued in 1992 that govern the licensing and use of the subsoil. The principal negotiations in obtaining licenses involve the timing for bringing fields on stream. The timing we propose is generally accepted.

The term of a license may be extended at the initiative of the license holder where the license holder complies with the terms of the license and where the development of the field requires completion or liquidation. The licenses impose certain obligations on us to provide employment, develop local infrastructure, pay local and federal taxes and meet certain requirements relating to environmental matters. Licenses may be suspended or revoked if we fail to comply with their terms. See "Overview of the Russian Gas Industry and Its Regulation—Russian Regulation." We believe we are in substantial compliance with the terms of all of our material subsoil licenses (although minor technical breaches may have occurred such as untimely submission of materials for official evaluation and preparation of development documents) and we expect to extend existing licenses at their scheduled expiration. In accordance with current legislation, we plan to request to extend our licenses that currently have a fixed term to the end of the economic life of the field. As of the date of this Offering Circular, there have been no suspensions of production as a result of decisions by the relevant federal and regional authorities. See "Risk Factors—Risks Relating to our Business—Our licenses may be suspended, amended or terminated prior to the end of their terms, and we may not be able to obtain or maintain various permits and authorizations."

#### *Exploration Activities*

We are continually engaged in the exploration for new deposits of natural gas. This involves geological and seismic exploration in our existing license areas and fields, as well as exploration work in prospective new fields.

Approximately 75% of the 69 exploration and appraisal wells we completed from 2000 through 2003 have yielded discoveries or positive appraisals confirming our estimates regarding hydrocarbons in place.

In 2003, we completed 20 exploration and appraisal wells, of which 16 yielded discoveries or positive appraisals confirming estimates of hydrocarbons in place. Our current exploration strategy is to focus on the exploration of new fields and natural gas-bearing horizons in close proximity to fields that have already been developed and have processing and transportation infrastructure. We believe that this strategy will allow us to maximize the percentage of successful drilling at as low a cost as possible and to minimize the investment required for processing and implementation.

In 2003 we opened three new fields in western Siberia and the Krasnodar region. We have estimated the total hydrocarbon reserves of two of these fields to be 4.9 mtoe, and we are currently estimating the reserves of the third field. We are currently conducting exploration activities in eastern Siberia, the republics of Bashkortostan, Dagestan and Komi, and Astrakhan, Orenburg, and Stavropol regions. The Government is also currently considering a development and exploration program for eastern Siberia in which we would be responsible for coordinating the development of natural gas fields and transportation infrastructure in the region.

Our total expenditures on exploration activities in 2003 were RR7.8 billion, and we plan to invest RR12.7 billion roubles in exploration activities in 2004. The intensification of our exploration activities is intended to enable us to increase our reserves base in our principal gas producing regions and aid in the formation of a unified system of gas production, transport and gas supply in eastern Siberia and the Far East. Our exploration activities will be concentrated in the Nadym-Pur-Taz region (including the Obsk waters and Tazovskaya Bay), on the Yamal peninsula, in the Barents and Karsk Seas, in Krasnoyarsk Krai, the Republic of Sakha (Yakutia), Irkutsk Oblast and other regions following receipt of licenses for the development of fields.

The following table sets out data by geographic region on the exploration wells we completed in the periods indicated:

#### *Production Activities*

We produce natural gas, gas condensate and crude oil from fields located in various regions of the Russian Federation.

*Natural Gas.* In 2003, we produced 540.2 bcm of natural gas (521.9 bcm in 2002) and accounted for approximately 87.1% of the natural gas produced in Russia by volume. In the nine months ended September 30, 2003 we produced 395.7 bcm of natural gas (380.2 bcm in the nine months ended September 30, 2002). Our production of natural gas in 2002 represented the first annual increase in our production since 1999. We plan to achieve and maintain annual production of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030.

*Gas Condensate.* We produced 10.2 million tons (74.9 mmbbls) of gas condensate in 2003 (9.9 million tons (72.6 mmbbls) in 2002). In the nine months ended September 30, 2003 we produced approximately 7.5 million tons (55.2 mmbbls) of gas condensate (7.3 million tons (53.3 mmbbls) in the nine months ended September 30, 2002). In recent years we have commissioned new gas condensate fields, including new areas at the Yamburgskoye field and we intend to continue to increase our gas condensate production, particularly in the Yamburgskoye and Astrakhanskoye fields. We also brought the Yen-Yakhinskoye field on stream during 2003.

*Crude oil.* In 2003, we produced approximately 802,800 tons (5.9 mmbbls) of crude oil (706,400 tons (5.2 mmbbls) in 2002). In the nine months ended September 30, 2003 we produced approximately 595,200 tons (4.4 mmbbls) of crude oil (527,100 tons (3.9 mmbbls) in the nine months ended September 30, 2002).

Our main production regions are as follows:

*Western Siberia region (Urals federal district).* This is our main natural gas production region and is characterized by severe weather conditions. There are 12 active natural gas, gas condensate and crude oil fields in the Nadym-Pur-Taz region of western Siberia. Our wholly-owned production subsidiaries Nadymgazprom, Urengoi-gazprom, Yamburggazdobycha and Noyabrskgazdobycha operate in this region, as does Purgaz, of which we own 51% and have a proportionate share in its output. These companies together accounted for 92.6% of our natural gas, 51.0% of our gas condensate and 62.2% of our crude oil production in 2003, and 92.5% of our natural gas, 51.4% of our gas condensate and 72.1% of our crude oil production in 2002. Four of our leading fields, Medvezhye, Urengoi-skoye, Yamburgskoye and Zapolyar-noye, are located in this region.

*Northern European Russia (Northwestern federal district).* This region is characterized by severe weather conditions and has four active gas condensate fields which accounted for 0.5% of our natural gas and 3.3% of our gas condensate production in 2003, and 0.6% of our natural gas and 3.8% of our gas condensate production in 2002. The operating production company for this region is Severgazprom.

*Southern Russia (Southern federal district).* This area is comprised of two regions, Astrakhan Oblast and the northern Caucasus. The Astrakhan region contains one active gas condensate field, Astrakhan-skoye, which accounted for 2.1% of our natural gas and 38.4% of our gas condensate production in 2002, and 2.1% of our natural gas and 39.0% of our gas condensate production in 2003. The operating company for this field is Astrakhangazprom. These 57 fields in the northern Caucasus region accounted for 0.4% of our natural gas and 0.5% of our gas condensate production in 2003, and 0.4% of our natural gas and 1.3% of our gas condensate production in 2002. This production is carried out by Kubangazprom and Kavkaztransgaz.

*South Ural region (Privolzhski federal district).* There is one active oil and gas condensate field, Orenburgskoye, in the South Ural region which accounted for 3.7% of our natural gas, 2.7% of our gas condensate and 23.9% of our crude oil production in 2003, and 4.1% of our natural gas, 3.2% of our gas condensate and 27.2% of our crude oil production in 2002. The operating company for this field is Orenburggazprom, which produces, processes and transports natural gas.

*Southwestern Siberia (Siberian federal district).* Our subsidiary Vostokgazprom, of which we own 83.8% and have a 100% share in its production, produces natural gas from two gas fields in this area. In 2003, this area accounted for 0.7% of our natural gas, 3.6% of our gas condensate and 0.8% of our crude oil production, and in 2002 it accounted for 0.3% of our natural gas, 1.9% of our gas condensate and 0.8% of our crude oil production, including our share of production by Vostokgazprom starting from the second quarter of 2002.

The following table sets out certain production data by region for our wholly-owned and certain other subsidiaries for the periods indicated. Most of our production activities are conducted through wholly-owned subsidiaries.

## Notes:

- (1) Includes 90% of the production at the West Tarkosalinsk field. We do not hold a production license for this field, but we have entered into an agreement with Purneftegazgeologia, the holder of the production license, pursuant to which we receive 90% of the production from the field in exchange for developing it.
- (2) Includes our 51% share in natural gas produced at the Gubkinskoye field subsequent to the consolidation of Purgaz into our consolidated financial statements. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisitions and Dispositions."
- (3) Constitutes 100% of the output of Vostokgazprom. We are entitled to 100% of the output of Vostokgazprom, though we hold only an 83.8% interest. Vostokgazprom commenced production in the second quarter of 2002.
- (4) Totals may not add due to rounding.

*Major Producing Fields*

The following tables set out certain production and other information for our major producing fields in the periods indicated. The fields accounted for 84.4%, 85.6%, 87.2%, 88.1% and 88.2% of our total natural gas production in the nine months ended September 30, 2003 and 2002 and the years ended December 31, 2002, 2001 and 2000, respectively. The production licenses for these fields are held by wholly-owned subsidiaries.

Note:

(1) Totals may not add due to rounding.

#### *Production Costs*

Our production costs largely reflect the geological composition of the hydrocarbon deposit under production as well as the cost of operating and maintaining the supporting infrastructure in the surrounding region.

Current production costs at three of our leading fields, Medvezhye, Urengoiyskoye and Yamburgskoye, will likely increase because we will be required to use more expensive extraction techniques to compensate for declining pressure in the deposits and to extract natural gas from deeper, more geologically complex deposits. Production costs at our fields in the Yamal Peninsula are also expected to be high. Our strategy is to mitigate these higher costs of production through the development and use of new technologies and through the low costs of production at our Zapolyarnoye field due to the geological structure of its deposit and the proximity of the field to existing supporting infrastructure.

#### *Development Activities*

We are engaged in developing new fields for commercial production and aim to achieve annual natural gas production of 560 bcm by 2010, increasing to 580-590 bcm by 2020 and 610-630 bcm by 2030. The development of our fields involves drilling and completing production wells, installing units for

processing of natural gas for transportation and installing booster compressor stations to compensate for the loss of pressure in our fields with declining production.

The following table sets out data by region on the development wells we drilled in the period from 2000 to 2002 and for the nine months ended September 30, 2003 and 2002, respectively:

	For the year ended December 31,			
	2003	2002	2001	2000
Western Siberia (Urals federal district) . . . . .	245	176	117	39
Northern European Russia (Northwestern federal district) . . . . .	0	0	0	0
Southern Russia (Southern federal district) . . . . .	15	6	6	1
South Ural region (Privolzhski federal district) . . . . .	5	5	5	0
Eastern Siberia (Siberian federal district) . . . . .	7	0	—	—
<b>Total</b> . . . . .	<u>272</u>	<u>187</u>	<u>128</u>	<u>40</u>

There is typically a lag time of several years between discovery and development of a field. Our strategy is to develop fields only when required to meet our production plans.

The Urengoiskoye, Yamburgskoye and Medvezhye fields in the Nadym-Pur-Taz region of western Siberia have historically accounted for the bulk of our production. Production from these three leading fields has been declining in recent years and will continue to decline significantly in the years ahead as we deplete the natural gas deposits in these fields. See “Risk Factors—Risks Relating to our Business—If we fail to develop our undeveloped fields, our production levels will decline materially” and “—Production Activities.” To achieve and maintain our targeted production levels, we plan to bring our Zapolyarnoye field to its targeted production level of 100 bcm per year, to finalize the completion of the Etypurovskoye field and the Kharvutinskoye and Aneryakhinskoye areas of the Yamburgskoye field and to commence development of the Pestsovoye field no later than 2008. After 2008, we plan to maintain our production level by bringing on stream the Valanginian layer of the Zapolyarnoye field, the Yuzhno-Russkoye field and the Bovanenkovskoye or Kharasaveiskoye fields of the Yamal peninsula.

We expect our gas condensate and crude oil production to increase as we increase natural gas production from the lower layers of our fields, which generally have higher proportions of gas condensate and crude oil.

We are currently engaged in significant development projects including:

*Zapolyarnoye field.* This field is located adjacent to our main producing fields in the Nadym-Pur-Taz region and we are currently developing its Cenomanian layer, which is characterized by low bedding depth, high delivery rates of wells and dry natural gas. The field commenced commercial production in the third quarter of 2001. We commissioned the third gas treatment plant at the field in December 2003, and plan to bring it to its design capacity of 32.5 bcm annually by late 2004. Annual production from the field is expected to reach its maximum of 100 bcm annually starting in 2005. We plan to invest a further RR18.0 billion in developing the Zapolyarnoye field in 2004 and 2005. Development of the Zapolyarnoye field will partially compensate for the declining production in our mature fields and the overall decrease in our natural gas production in western Siberia.

*Yubileinoe field.* This field has been under development since 1993. In 2003, production from the field was 19.5 bcm, as compared to 17.6 bcm in 2002. We expect the field to achieve its full production capacity of 20 bcm annually starting in 2004. We plan additional investments in the development of the field to be RR0.4 billion.

*Kharvutinskoye area of the Yamburgskoye gas condensate field.* This area is located in the Nadym-Pur-Taz region. It was brought on stream in 1996 and produced 7.9 bcm of natural gas in 2003, as compared to 8.6 bcm in 2002. We have made it a high priority to increase gas production in this area to 29 bcm by 2009, and have planned for capital investments of RR25.2 billion from 2004 through 2007 for this project.

*Pestsovoye field.* The Pestsovoye field is located in western Siberia. We plan to bring it on stream in 2004, and it is expected to reach its planned annual production capacity of 27.5 bcm of natural gas per year in 2007. We plan to invest RR21.0 billion from 2004 through 2007 in developing this field.

*Aneryakhinskoye area of the Yamburgskoye field.* This field is located in western Siberia. We anticipate bringing it on stream in 2004, and it is expected to reach its planned production capacity of 10 bcm of natural gas per year by 2008. We plan to invest RR17.5 billion from 2004 through 2008 in developing this field.

*Yen-Yakhinskoye field.* This field is located in western Siberia. The field was brought on stream in December 2003, and its total production in 2003 was 0.02 bcm of natural gas. We anticipate that this field will produce 5 bcm of natural gas annually from 2007. We plan further investment in developing the field of RR8.8 billion from 2004 through 2007.

*Vyngayakhinskoye and Etyurovskoye fields.* These fields are located in western Siberia. The Vyngayakhinskoye field came on stream in 2003, producing 0.8 bcm of natural gas, and we estimate that it will produce 5 bcm of natural gas per year starting in 2004. The Etyurovskoye field will be brought on stream in 2004, and we anticipate that it will produce 15 bcm of natural gas annually by 2006. We plan capital investment of RR6.6 billion in developing these two fields from 2004 through 2006.

#### *Regional Development Priorities*

We are also currently engaged in planning for future development in various regions of Russia, both on our own and in conjunction with other parties. We expect that these projects will enable us to sustain and increase our production in order to meet our annual production targets.

We are currently focusing our activities in the following regions:

*Yamal Peninsula.* The Yamal Peninsula is located to the north of, and is characterized by harsher climatic conditions than, the Nadym-Pur-Taz region. At the end of 2002, the 11 natural gas and 15 crude oil and gas condensate fields in the Yamal Peninsula region had combined ABC1 reserves of 10.4 tcm of natural gas, 228.3 million tons of gas condensate and 291.8 million tons of crude oil, of which 5.8 tcm of natural gas and 100 million tons of gas condensate are in the region's largest fields, the Bovanenkovskoye and Kharasaveiskoye gas condensate fields and the Novoportovskoye oil field. We hold production licenses for the Bovanenkovskoye and Kharasaveiskoye gas condensate fields and the Novoportovskoye oil field. The natural gas production potential of the Yamal Peninsula's fields is estimated at 250 bcm per year for natural gas and a total of 10 to 12 million tons of liquid hydrocarbons. We anticipate that the production of natural gas from these fields will help us to reach our long-term production targets starting from 2010. On the order of the President and Prime Minister of the Russian Federation, in conjunction with the Yamal-Nenets regional administration we developed a "Program for Comprehensive Commercial Development of Hydrocarbon Deposits on the Yamal Peninsula and under its Adjacent Waters" and submitted the plan to the Ministry of Energy of the Russian Federation and other Russian government agencies in April 2002. This plan sets forth a state policy for investment, construction, taxation and legal support for the development of the resources in the Yamal Peninsula, and the parameters for its implementation of this program are currently being finalized with the Ministry of Industry and Energy.

We are currently focusing our work in the Yamal Peninsula on development of the Bovanenkovskoye field. We are preparing a feasibility study to invest in the completion of the Bovanenkovskoye field and in natural gas transportation infrastructure. Based on the results of that study, we will determine the sequence of commissioning of new facilities and the dynamics of natural gas production at the field; assess the principal transport routes and plans for the construction of trunk gas pipelines given natural gas production in the Nadym-Pur-Taz region by us and by independent producers; analyze existing infrastructure; and develop our investment priorities and plans to provide for development of both the Bovanenkovskoye field as well as subsequent development of the Kharasaveiskoye field. We plan to revise the "Program for Comprehensive Commercial Development of Hydrocarbon Deposits on the Yamal Peninsula and under its Adjacent Waters" in 2005 to take account of these plans.

*Eastern Siberia and the Far East.* Eastern Siberia and the Far East contain significant unexploited natural gas reserves, estimated at up to 6.6 tcm. The most significant reserves are in the Kovykta and Chyandinskoye fields, with estimated reserves of 2 tcm and 1.24 tcm, respectively. Other significant fields in the region include the Yurubcheno-Tokhomskoye and Sobinsko-Paiginskoye fields, the Sakhalin-I and Sakhalin-II projects and parts of the Sakhalin shelf fields. In this region, we currently hold a license for the Sobinski area of the Sobinsko-Paiginskoye field.

On July 16, 2002, the Government issued Decision No. 975-r appointing us to coordinate the implementation of a program for creating in eastern Siberia and the Far East a unified natural gas production, transportation and supply system taking into account eventual gas exports to China and other Asian-Pacific countries. On March 13, 2003, the Government issued a decision outlining the general principles for this program, and we are currently engaged in developing plans for the implementation of this program. In accordance with this program our subsidiary Krasnoyarskgazprom has received a license to develop the Sobinski area of the Sobinsko-Paiginskoye field, and is currently conducting geological exploration activities. In November 2003, our Board of Directors resolved that our future plans for the

development of reserves in the region should focus on participating in tenders and auctions for the exploration and development of hydrocarbon resources in Irkutsk Oblast, Khabarovsk Krai, Krasnoyarsk Krai, the Republic of Sakha (Yakutia) and Sakhalin Oblast, collaborating with other participants in the gas market in the region and developing a gas supply network for end users of natural gas. We have also formed a consortium with Rosneft and Surgutneftegaz to develop projects in this region. See “—Projects and Alliances in Reserves and Production—Rosneft and Surgutneftegaz.”

*Shtokmanovskoye and Prirazlomnoye fields.* The Shtokmanovskoye field is an off-shore natural gas field located in the Barents Sea northwest of the Yamal Peninsula, and the Prirazlomnoye field is an offshore oil field in the Pechora Sea.

We are developing these fields in a joint activity with Rosneft, Rosshelf (our subsidiary) and Sevmorneftegaz, a joint venture in which Rosshelf and Rosneft-Purneftegaz, a subsidiary of Rosneft, each have a 50% stake. Sevmorneftegaz holds a production license for the Prirazlomnoye and Shtokmanovskoye fields. Our current beneficial interest in this joint activity is 50%, and we and Rosneft have equal obligations for financing the projects conducted by this joint activity. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisition and Dispositions.” The Shtokmanovskoye field is being developed within the framework of a development plan that calls for a planned eventual annual production of 70 bcm of natural gas. We estimate that this development project will require investments of U.S.\$11.0 billion. The terms of the license require that development of the field begin by 2010. We are considering the possibility of producing LNG as part of the first phase of development of the Shtokmanovskoye field, and are currently conducting discussions on cooperation with various international companies in the production of LNG.

Plans for the development of the Prirazlomnoye field contemplate maximum annual production of 6.58 million tons (48.2 mmbbls) of crude oil with total investment of more than U.S.\$1 billion through 2012 in order to bring the field to its full production capacity. It is planned to complete construction of an offshore oil platform in 2005, with the first production to begin by the end of 2005.

#### *Projects and Alliances in Reserves and Production*

*Rosneft and Surgutneftegaz.* We concluded an agreement with Rosneft and Surgutneftegaz in December 2003 to cooperate in the development of natural gas and crude oil fields and to develop an integrated natural gas supply system in eastern Siberia and the Republic of Sakha (Yakutia), and we are currently establishing working groups with respect to specific projects to be undertaken in the context of this agreement. The projects undertaken by the members of the consortium, each of which will be organized on an individual basis under the consortium’s unified management committee, are also to be coordinated with regional social and economic development programs in eastern Siberia and the Republic of Sakha (Yakutia). Development projects will be conducted in conjunction with the regional administrations and the joint social-economic development program of Eastern Siberia and the Republic of Sakha (Yakutia) for oil and gas fields.

*Rosneft.* We entered into a framework agreement with Rosneft in October 2001 to create a joint venture company for the development of the Kharampurskoye, Vyngayakhinskoye, Etyurovskoye, Prirazlomnoye and Shtokmanovskoye fields, and work is currently being conducted in accordance with the terms of this agreement. See “—Regional Development Priorities—Shtokmanovskoye and Prirazlomnoye fields.” We and Rosneft have equal responsibility for financing projects conducted by this joint activity. See “Management’s Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisitions and Dispositions.”

*LUKOIL.* In November 2002, we entered into a strategic partnership agreement with LUKOIL, which produces natural gas at fields in western Siberia that are located close to our major natural gas fields. The agreement provides, *inter alia*, for cooperation in oil and gas projects in Russia and other countries from 2002 to 2005. Under this agreement, we concluded a framework agreement in March 2003, according to which LUKOIL will sell us gas it processes at its Nakhodkinskii gas field and a further agreement with respect to our purchasing gas produced at the Nakhodkinskii gas field in October 2003. Starting from the fourth quarter of 2005, our purchases will total approximately 8 bcm in 2006. LUKOIL is constructing a connecting gas pipeline from the Nakhodkinskii field to the Yamburg compressor station, from where we will transport the gas to the final customers. The agreement also provides a formula for the prices that we are to pay for our purchases of gas from the Nakhodkinskii field, with a minimum of US\$22.50 per mcm of gas exclusive of VAT.

In June 2003 we concluded a founding agreement on the organization of OOO TsentrcaspNeftegaz (“TsentrcaspNeftegaz”), a joint venture in which we and LUKOIL each hold a 50% stake. The joint

venture has been established under the parameters of a protocol to the treaty between Russia and Kazakhstan on the demarcation of the seabed in the northern part of the Caspian Sea. TsentrCaspNeftegaz will be authorized to act on behalf of the Russian Federation for the development of the Central geological structure in the Caspian Sea together with ZAO NK KazMunaiGaz on behalf of Kazakhstan in a joint venture in which each of the participants will hold a 50% stake. The Central geological structure is located within the Russian sector of the Caspian Sea, 150 kilometers to the east of Makhachkala. According to estimates by LUKOIL, this structure contains 521.1 million tons (3,819.7 mmbbls) of extractable oil reserves and 91.7 bcm of oil gas. TsentrCaspNeftegaz and KazMunaiGaz are currently holding discussions on an agreement for the joint development of the Central geological structure.

*Central Asia.* As part of our strategy to maintain our natural gas sales while production from our mature fields declines, we have signed agreements to purchase natural gas from Uzbekistan and Turkmenistan. In December 2002 we signed an agreement with NKKh Uzbekneftegaz that provides for cooperation in purchasing natural gas in Uzbekistan, producing gas in Uzbekistan under the terms of a production sharing agreement, conducting diagnostic assessments of trunk pipelines, and modernizing gas transport capacity. In 2003, we concluded an agreement to purchase natural gas from Uzbekistan between 2003 and 2012, and we started purchases from Uzbekistan in May 2003. Purchases from Uzbekistan totaled 1.3 bcm in 2003, are expected to rise to 7 bcm in 2004 and up to 10 bcm annually from 2005 to 2012. Together with NKKh Uzbekneftegaz and the government of the Republic of Uzbekistan, we are also currently conducting feasibility studies for the development of hydrocarbon fields in the Ustyurt region of Uzbekistan, and in April 2004 we signed an agreement with NKKh Uzbekneftegaz for the development of the Shakhpathy field in Uzbekistan on the basis of a production sharing agreement.

In April 2003, the Presidents of Russia and Turkmenistan concluded an agreement on cooperation in the gas sector for 25 years, which came into force from January 1, 2004. Pursuant to this agreement we have agreed with GTK Turkmenneftegaz are expected to be 5-6 bcm in 2004 and may rise to 6-7 bcm in 2005 and 10 bcm in 2006. Depending on the capacity resulting from the reconstruction of the Central Asia-Center transportation system, these purchases could reach 60-70 bcm in 2007 and 70-80 bcm annually from 2009 to 2028. The initial price for this gas is U.S.\$44 per mcm, of which 50% will be paid in cash and 50% in the form of technological equipment and services through 2006.

In May 2003 we concluded an agreement with the government of Kyrgyzstan on collaboration in the gas industry. This agreement provides for joint activities in rebuilding, constructing and operating the gas transportation system in Kyrgyzstan; joint exploration and development of hydrocarbon reserves; providing services to the Kyrgyz gas transportation system; and reconstructing the underground gas storage system in Kyrgyzstan. The Kyrgyz authorities have also authorized the transfer to us in trust management the state's 85.16% stake in AO Kyrgyzneftegaz without a tender, and we are currently considering the terms of this arrangement.

While the purchases of natural gas from Turkmenistan and Uzbekistan are expected to constitute a significant proportion of our total sales volumes in the coming years, they are expected to decline in importance when we bring on stream new production fields after 2008, and particularly when we bring the fields in the Yamal Peninsula on-stream from 2010. In order to ensure the availability of adequate transport capacity for the natural gas that we purchase, we have concluded agreements to transport natural gas from Turkmenistan through Uzbekistan and Kazakhstan, and we are currently conducting negotiations on arrangements for the transit of natural gas from Uzbekistan through Kazakhstan. We are also engaged in activities to reconstruct and expand the natural gas transportation network in Central Asia. See "Transportation—International Projects and Alliances for Transportation."

*Wintershall.* Under a strategic alliance agreement with BASF (see "Transportation—International Projects and Alliances for Transportation"), we prepared a feasibility study for the joint development of the Achimovsk formations of the Urengoiskoye field jointly with Wintershall AG ("Wintershall"), a wholly-owned subsidiary of BASF. In July 2003 we concluded a framework agreement and constitutive documents on the creation of a joint venture between Gazprom and Wintershall for this project. Under this agreement, we established a joint venture in which we and Wintershall each have a 50% interest, Achimgaz, to develop the first experimental section of the Achimovsk layer of the Urengoiskoye gas and condensate field. At its plateau production levels we expect this section to produce approximately 8.3 bcm of gas and 2.8 million tons (20.5 mmbbls) of gas condensate annually, and a total of approximately 200 bcm of gas and 40 million tons (293.2 mmbbls) of gas condensate over its 43-year productive life. Developing this section will require approximately U.S.\$700 million in capital investment. The approximately U.S.\$90 million required for the pilot phase of the project will be financed by Wintershall, including detailed engineering work and experimental-industrial exploitation of the first part. If this first phase is successful,

industrial development of the field will begin. Our investment is expected to be financed from profits generated by the project. We will purchase gas and gas condensate produced by Achimgaz in order to secure an export route for this production, with prices to be determined on a formula based on the price of natural gas on the border between Germany and Poland and on natural gas prices in the Yamal-Nenets autonomous region.

*South Pars.* Since 1997, we have been involved in a project to develop the second and third phases of the South Pars field, located in the Iranian segment of the Persian Gulf, with a total cost of more than U.S.\$2 billion. We hold a 30% interest in the project. Our partners in this project are Total, which holds a 40% interest, and Petronas, which holds a 30% interest.

A contract with the National Iranian Oil Company (“NIOC”) provided for the construction and installation of two off-shore production platforms, drilling 20 exploration wells, laying two off-shore pipelines extending 105 km from the coast and construction of an on-shore gas processing facility. The construction of these facilities has been completed, and the gas production complex is now operational. NIOC started to make payments to the project partners for this work in the second quarter of 2002, with such payments scheduled to continue through 2009. The consortium partners continue to provide general technical assistance to NIOC in exploiting the facilities. When such technical assistance has been completed, project operations are to be transferred to NIOC, with the possibility for further technical assistance to be provided in a separate contract.

The U.S. Department of State has issued a determination that the investment made by our partners and us in Iran’s South Pars gas and condensate field constituted activity that is covered by the Iran and Libya Sanctions Act and, at the same time, communicated its decision to waive sanctions under Section 9(c) of the Sanctions Act with respect to such investment. The waiver applies to activities in the South Pars field only, and not to any other activities we may conduct in Iran. See “Risk Factors—Risks Relating to Our Business—Violations of existing international or U.S. sanctions could subject us to penalties that could have an adverse effect on us.”

### Transportation

We own and operate the UGSS, a single, centrally-controlled system for natural gas preparation, transportation and storage. In 2002, we transported 637.1 bcm of natural gas, and in 2003 we transported 674.1 bcm of natural gas. Transportation for third parties accounted for approximately 81.2 bcm, or 12.7%, of the natural gas transported by us, and generated RR18,028 million in revenue for us in 2002. Transportation for third parties accounted for RR20,421 million in revenue in the nine months ended September 30, 2003.

The following table sets out certain data for our transportation segment for the periods indicated:

	As of or for the year ended December 31,		
	2002	2001	2000
<b>Total volume transported (bcm)</b> .....	637.1	630.6	633.5
<b>of which for third parties (bcm)</b> .....	81.2	81.3	97.7
<b>Depreciation (million RR)</b> .....	58,051	62,533	61,377
<b>Capital expenditures (million RR)</b> .....	81,019	77,295	56,978
<b>Total Assets (million RR)</b> .....	1,212,772	1,240,431	1,246,366

The UGSS includes the world’s largest high-pressure trunk pipeline system, with over 151,600 km of pipelines (not including connecting pipelines). Gas transportation is powered by 263 compressor stations with a total capacity of approximately 43,600 MW. To help handle seasonal and other peak demand, we maintain 24 underground natural gas storage facilities with a storage capacity of approximately 62.0 bcm.

In Russia, the UGSS transports natural gas an average distance of approximately 2,400 km for domestic consumption and 3,400 km for export. Our dispatch management center, located in Moscow, controls and manages the UGSS and all natural gas transportation in Russia.

Our pipeline system transports natural gas principally from large western Siberian fields westward toward the more heavily populated regions of Russia, certain FSU countries and Europe. Other parts of the pipeline system originate in the natural gas fields of the southern Russia-Volga region, including the Orenburgskoye and Astrakhanskoye fields. Several large pipeline systems enter Russia from Kazakhstan, transporting natural gas from fields in Turkmenistan, Uzbekistan and Kazakhstan. In 2003, we concluded agreements to purchase and transport significant volumes of natural gas from Turkmenistan and Uzbekistan. See “—Reserves and Production—Projects and Alliances in Reserves and Production—Central Asia.”

Our transportation segment is highly integrated to ensure reliable natural gas deliveries to distributors, export customers and consumers. The high level of integration of our pipeline network is achieved through the use of multiple and parallel pipelines, inter-connectors and underground storage facilities. In most cases, the extensive branching structure of the UGSS, together with the availability of spare pipeline throughput capacity, enables us to re-route or to increase natural gas flow in case of an emergency. We believe that within the past ten years there have not been any significant supply interruptions to our customers, despite several pipeline failures, as a result of the use of available spare transportation capacity within the UGSS and by releasing gas from our gas storage system.

#### *Organization of Transportation Activities*

Our gas transportation activities are conducted through specialized regional gas transportation subsidiaries, regional gas distribution companies and gas storage facilities. Our dispatch management center, located in Moscow, controls and manages the UGSS and all natural gas transportation in Russia.

*High pressure trunk pipeline.* Our high-pressure trunk pipeline transports natural gas from production areas to refining facilities and other gas consumers. We operate and service this pipeline on a regional basis through our 19 wholly-owned gas transportation subsidiaries, which are responsible for the exploitation and maintenance of our high-pressure trunk gas pipelines, gas transit and deliveries of gas to regional gas distribution companies and for export. The trunk pipeline consists of multiple parallel lines of large diameter pipes (defined as pipes with diameters of 1,420 mm, 1,220 mm and 1,020 mm).

We are continually working to improve the UGSS. In 2002, we approved an investment program to refurbish a number of gas transportation facilities by the end of 2006. The main objectives of this program include:

- ensuring the supply of our projected volumes of gas, especially from the Nadym-Pur-Taz region, to both our domestic and export markets;
- ensuring the reliability of gas transportation and supply to gas consumers in Russia;
- improving industrial and ecological safety measures; and
- ensuring the efficiency of the transportation system through energy saving measures, optimizing our utilization of the system and lowering maintenance costs.

We anticipate that by 2006 this program to refurbish our gas transportation facilities will increase our gas transportation throughput capacity in the UGSS by 15 bcm per year, increase our gas export throughput capacity by 5 bcm per year, decrease the UGSS internal use of gas by 5 bcm per year and decrease hazardous emissions, including 45,000 tons per year of nitric oxides, in comparison to the corresponding amounts in 2001. We have already reduced our hazardous emissions, including by 1.73 million tons of carbon monoxide and by 4,200 tons of nitric oxides, in 2003 in comparison to 2002.

We expect the program to require investments of RR230.6 billion from its inception in 2002 through 2006, of which RR155.7 billion or 67.5% is for restructuring key technological facilities, such as compressor stations and pipelines, and RR74.9 billion or 32.5% on restructuring support systems facilities, such as our energy, water supply, communications and electrochemical protection infrastructure.

*Storage.* We operate a network of 24 underground storage facilities in order to help smooth seasonal fluctuations in the demand for gas, and we are currently constructing two new underground gas storage facilities. During peak heating periods, we supply approximately 20% of total deliveries of gas to Russian consumers, and in periods of extreme cold this may reach 30%. By the start of the 2003/2004 heating season, we had stored 62.0 bcm of market-grade natural gas in our underground storage facilities, as well as an additional 8.5 bcm, 2.8 bcm and 2.3 bcm of natural gas in underground storage facilities in Ukraine, Germany and Latvia, respectively, under our storage lease agreements for these facilities.

We are currently implementing a program to increase our underground storage capacity by reconstructing and expanding our existing facilities and commission new gas storage sites. By the start of the 2004/2005 heating season, we expect that this program will enable us to increase our storage capacity by 1.65 bcm and to increase our average daily outflows from storage to 470.6 mcm, from 454.6 mcm in the 2003/2004 heating season. By the 2006/2007 heating season, we plan to have increased our daily outflow capacity to 550 mcm. Our aggregate investment in storage facilities in 2003, including operational drilling, amounted to RR6.3 billion, and we plan to invest a further RR7.1 billion in 2004 and a total of RR19.9 billion in 2005 and 2006.

*Investment in Transportation Infrastructure.* For 2004, we have budgeted capital expenditures of RR103.4 billion on our transportation and storage system, of which RR20.1 billion is for refurbishment

of compressor stations, existing pipelines and system-wide facilities, and the balance of which will be dedicated to the expansion of the pipeline system.

We outsource a significant amount of our pipeline construction work to third-party contractors through a tender process, and we are seeking to increase this amount in the next several years. Our tender committee awards contracts subject to tender to the most competitive bidder. Sroytransgaz has been a successful bidder for a large number of our construction projects, due to the competitive terms that it has offered and its historical experience of successful cooperation with us. See "Certain Transactions."

*Age and Maintenance*

Construction of our gas pipeline system commenced nearly 60 years ago with the first Saratov-Moscow pipeline, and most of our gas pipeline system was constructed from 1970 to 1990. The age of the pipeline system, as of December 31, 2003, is shown in the table below (not including connecting pipelines):

<u>Years Since Construction</u>	<u>Length (km)</u>	<u>% of total</u>
Up to 10 years .....	21,800	14
11-20 years.....	57,800	38
21-33 years.....	45,700	30
Over 33 years .....	<u>26,300</u>	<u>18</u>
Total.....	<u>151,600</u>	<u>100</u>

We carry out annual capital repairs and preventative maintenance to improve the reliability of gas supply, technological and environmental safety and the efficiency of gas distribution. Maintenance work is preceded by gas pipeline inspections achieved through various means. In 2003, we inspected approximately 20,000 km of pipelines with in-the-pipe probes and checked approximately 26,700 km of trunk gas lines using electric measurements. As a result of these diagnostic checks, we undertook repairs to approximately 1,500 km of pipelines and 212 underwater crossings. As a result of such pipeline repairs and an improvement in the technology of our pipeline, the incidence of faults that involve interruptions or restrictions of gas supply dropped from 0.58 per 1,000 km of pipeline in 1985 to 0.21 per 1,000 km in 2002 and 0.18 per 1,000 km in 2003. We believe that the current level of diagnostic activities is optimal for the present usage of our pipeline system. As the pipeline system ages, we plan to increase the level of our diagnostic activities.

*Gas Transportation Balance*

Natural gas flows into our trunk pipelines from our own production, from the production of independent and Central Asian producers, and withdrawals from underground storage. Natural gas flows from our trunk pipelines to customers in Europe, the FSU and Russia and to our underground storage facilities. After accounting for operational requirements of the pipeline system and other technical factors, total inflows are equal to total outflows in a particular period.

The pipeline system consumed approximately 51.3 bcm of natural gas in 2003, 88% of which was used to power its operations and the rest of which was accounted for by technological losses, including gas lost during maintenance work on the pipelines.

The following table sets forth data on the natural gas balance of the UGSS for the periods indicated (including natural gas in transit from Central Asia):

<u>Gas Balance Items</u>	<u>For the year ended December 31,</u>			
	<u>2003</u>	<u>2002</u>	<u>2001</u>	<u>2000</u>
	(bcm)			
<b>Total gas supplies, including</b> .....	<b>674.1</b>	<b>637.1</b>	<b>630.6</b>	<b>633.5</b>
Our gas production and purchases by our subsidiaries <sup>(1)(2)</sup> .....	525.2	510.6	499.0	510.1
Gas from independent suppliers, including purchases by OAO Gazprom and gas in transit from Central Asia.....	95.2	79.6	77.4	68.2
Withdrawals from underground storage <sup>(3)</sup> .....	42.8	40.4	48.3	53.3
Decrease in natural gas volume within UGSS pipelines <sup>(4)</sup> .....	10.2	5.9	5.2	1.2
Other technical factors.....	0.7	0.6	0.7	0.7
<b>Total deliveries, including</b> .....	<b>674.1</b>	<b>637.1</b>	<b>630.6</b>	<b>633.5</b>
Additions to underground storage.....	56.3	45.7	46.8	60.3
Deliveries to customers in Russia.....	327.0	319.1	317.5	308.4
Deliveries to Europe.....	134.7	129.4	127.0	129.0
Deliveries to FSU countries.....	94.2	88.8	88.0	87.1
Technological needs and transportation system issues <sup>(5)</sup> .....	51.3	47.7	45.7	47.1
Increase in natural gas volume within UGSS pipelines <sup>(4)</sup> .....	10.6	6.4	5.6	1.6

Notes:

- (1) Amounts are less than yearly total production because some of the natural gas we produce is used for the operations of booster compressor stations and in northern cities near our fields and thus does not enter the UGSS.
- (2) Includes our share of the production of Purgaz and deliveries to the UGSS by Vostokgazprom after their consolidation into our consolidated financial statements from April 1, 2002.
- (3) Includes gas of independent suppliers.
- (4) Represents changes in the volume of gas contained within the UGSS pipeline network.
- (5) Includes own consumption required to run natural gas compressor stations plus technological losses, including gas lost during repair work.

*Natural Gas Transit through Ukraine and Belarus*

All of the natural gas we export outside the FSU (except Finland and in part to Turkey) is transported outside of Russia through pipelines maintained by other countries, primarily Ukraine. We pay transit fees for the use of these pipelines. The negotiations of these fees and access to these pipelines are important elements of our export business, and transit fees are a significant element of the natural gas price to end users in Europe. See “—Marketing.” Natural gas is transported to the western, central and eastern European markets primarily through the system of trunk pipelines from Urengoi to Uzhgorod.

A significant portion of the natural gas we export outside the FSU is transported through pipelines in Belarus. We are currently engaged in negotiations with Belarus with respect to the terms of our participation in a joint venture with Beltransgaz, transit fees and prices for the supply of natural gas. In January 2004, pending completion of these negotiations, we largely stopped selling natural gas to customers in Belarus. See “—Marketing—The FSU.” Our transit of gas to the countries in Europe through the pipeline network in Belarus, including the Yamal-Europe pipeline, has not been affected. See “Risk Factors—Risks Relating to our Business—We face certain operational risks which may result in losses and additional expenditures.”

*Third-party Access to the UGSS*

Since 1998, independent Russian suppliers have been granted non-discriminatory access to existing UGSS capacity. We provide independent suppliers with access to the UGSS subject to the following requirements:

- availability of spare transport capacity for the time period proposed by the independent supplier;
- quality and technical parameters of the natural gas supplies;
- availability of input connections from suppliers and output connections to consumers and natural gas recovery and quality control stations; and
- availability of natural gas supplies and relevant customer demand for the proposed time period.

In 2003, independent gas suppliers supplied approximately 16.4% of the natural gas transported through the UGSS, as compared to 12.7% in 2002. These amounts included gas in transit from Central Asia on behalf of other parties. Itera was the largest third-party user of the UGSS in 2002 and 2003, accounting for 71 bcm or 87.4% of such volumes in 2002 and 25 bcm in the nine months ended September 30, 2003. In January 2003, Eural Trans Gas ("ETG") commenced sales of Central Asian gas to customers in Europe through our pipeline system, and accounted for 25 bcm of the third-party gas we transported in the nine months ended September 30, 2003.

We currently transport gas from Turkmenistan to Ukraine in accordance with intergovernmental agreements between Turkmenistan and Ukraine that extend through 2006. In the context of these agreements, ETG was appointed by the Ukrainian government to serve as the operator on behalf of NAK Naftogaz Ukrainy for deliveries of natural gas from Turkmenistan to Ukraine. ETG takes delivery of the natural gas at the border of Turkmenistan with Uzbekistan and Kazakhstan, and in December 2002 concluded a contract with us on the transit of its gas through Uzbekistan, Kazakhstan and Russia to the border with Ukraine. The transit of this gas through Uzbekistan and Kazakhstan is on the basis of contracts that we have concluded with the gas transportation companies in these countries. In August 2003, we also guaranteed a loan to ETG for U.S.\$227 million in order to facilitate the timely payment to us by ETG of certain obligations in respect of our agreements for the transit of this gas from Turkmenistan to Ukraine.

Our gas transport sales were RR20.4 billion and RR12.4 billion for the nine months ended September 30, 2003 and 2002, respectively, and RR18.0 billion for the year ended December 31, 2002 and RR18.2 billion for the year ended December 31, 2001. Most of the third-party natural gas we transported through the UGSS during this period was for Itera and was transported under U.S. dollar-denominated contracts. A significant portion of this gas was sourced from Central Asia, for which the tariffs are unregulated.

Tariffs charged to unaffiliated third parties for the transportation of natural gas through our trunk pipelines are established by the Federal Energy Commission, now the Federal Tariffs Service ("FTS"), and have recently been adjusted for fluctuations in the level of regulated wholesale prices for natural gas (which are also established by the FTS).

Tariffs charged to third parties from August 1, 2003 for the transport of natural gas produced in Russia are set forth below:

- RR16.56 (RR13.80 prior to August 1, 2003) per mcm per 100 km (not including VAT) for shipments to consumers located within the customs territory of the Russian Federation and member states of the Customs Union Agreement (Belarus, Kazakhstan, Kyrgyzstan, Russia and Tajikistan); and
- U.S.\$0.92 per mcm per 100 km (not including VAT) to be paid in RR at the exchange rate of the Central Bank of the Russian Federation as of the date of payment for shipments to consumers located outside the customs territory of the Russian Federation and member states of the Customs Union Agreement.

#### *Projects for the Development of the UGSS*

*SRTO-Torzhok Pipeline.* We are planning to construct a gas pipeline from the Urengoi field, in the northern regions of the Tyumen Oblast ("SRTO"), to Torzhok, one of the junctions in our trunk pipeline system. This pipeline will become part of an operating multi-line gas transportation system and enhance our ability to export natural gas through the Yamal-Europe pipeline and to customers in the northwestern region of Russia. When completed, the pipeline will be 2,700 kilometers long and include 12 compressor stations with total power of 849 MW, connected with our existing production and transportation infrastructure. We plan to commission the pipeline in stages through 2007, and in 2003 we constructed 68.1 km of looping to our existing pipelines and started construction on three compressor stations. We estimate that construction this pipeline will require total investment of approximately RR230 billion, including RR38.9 billion in 2004.

*Zapolyarnoye-Urengoi Pipeline.* In order to ensure that we have adequate gas transportation capacity from the Zapolyarnoye field, we are constructing a three-line trunk gas pipeline with a total annual capacity of 100 bcm between Zapolyarnoye and Urengoi and the 288 MW Purtazovskaia compressor station. Two lines of this pipeline are already in operation, as well as 192 MW of capacity at the Purtazovskaia compressor station. We expect to complete the third line and bring the Purtazovskaia compressor station to full capacity by the end of 2004. We plan to invest RR5.9 billion in completing construction of this pipeline in 2004.

*Pochinki-Izobilnoye-North Stavropolskoye Underground Gas Storage Pipeline.* The natural gas pipeline from Pochinki to Izobilnoye and the North Stavropolskoye underground gas storage facility forms part of the Russia-Turkey natural gas pipeline system. This pipeline will enable us to deliver "clean" natural gas from the Nadym-Pur-Taz region through the Blue Stream pipeline instead of more chemically active natural gas from Central Asia. When completed, this pipeline will be 1,250 kilometers long and include eight compressor stations. The section of the pipeline from Frolovo to Izobilnoye and two compressor stations have already been commissioned, and it is planned to complete construction in 2005. We plan additional investment in this pipeline of RR4.5 billion in 2004.

### *International Projects and Alliances for Transportation*

#### *Blue Stream Project*

In alliance with ENI, we have constructed a gas trunk pipeline from Russia under the Black Sea to Turkey. We estimate that annual volumes of natural gas exports along this pipeline will reach 16 bcm starting in 2010. The Italian engineering firm Saipem, partly owned by ENI, laid the undersea pipeline. Construction of the Blue Stream Project is now substantially complete, and commercial deliveries to Turkey commenced in February 2003.

The pipeline from Russia to Turkey is approximately 760 km long, of which about 390 km runs under the Black Sea. The onshore section of the Blue Stream Project is connected to the existing Gazprom pipeline network through a pipeline from Frolovo to Izobilnoye, which was commissioned in 1998.

In November 1998, we entered into a memorandum of understanding with ENI to participate on an equal basis in the Blue Stream Pipeline Company B.V., a special purpose vehicle for the construction, ownership and operation of a natural gas transportation system from Dzubga in Russia (including the nearby Beregovaya compressor station) to Samsun in Turkey (the "Offshore Section"). We and ENI each have a 50% stake in the Blue Stream Pipeline Company B.V., which receives transportation tariffs for the gas transported through the Offshore Section, and we and ENI share these proceeds in proportion to our respective ownership interests. This system is connected to our existing pipeline network through a new pipeline running from Izobilnoye to Beregovaya (the "Onshore Section"). The Onshore Section and the Offshore Section together constitute the Blue Stream Project.

The total construction cost of the Offshore and Onshore Sections of the Blue Stream Project was approximately U.S.\$3.3 billion. The value of the turnkey contract for the construction of the Offshore Section of the pipeline and the Beregovaya compressor station was approximately U.S.\$1.7 billion.

To arrange for our share of the third-party financing required for the Blue Stream Project, we and the Blue Stream Pipeline Company B.V. entered into three loan agreements secured by export receivables with consortia of western European and Japanese banks. The total amount of financing provided by these facilities is U.S.\$1.76 billion. For these facilities, we act as borrower and/or as guarantor for the Blue Stream Pipeline Company B.V. The financing also benefits from guarantees provided by the national export credit agencies of the lending banks' respective countries. The remainder of the financing for the Offshore Section of the Blue Stream Project was covered by the contributions of Gazprom, SNAM (ENI's subsidiary) and a U.S.\$866 million loan provided to the Blue Stream Pipeline Company B.V. under the guarantee of SNAM. The remainder of the financing required for the Onshore Section of the Blue Stream Project was provided from our own resources, including a euro 250 million loan that we received in February from a consortium of international banks led by Bayerische Hypo-und Vereinsbank AG.

In March 2003, Botas, the Turkish offtaker, halted deliveries through the Blue Stream pipeline, in part due to an excess domestic supply of natural gas in Turkey resulting from an economic downturn. Following discussions, we resumed shipments of gas through Blue Stream in early August 2003. In November 2003, we resolved all the outstanding disagreements. Total deliveries of gas to Turkey through the Blue Stream pipeline in 2003 were 1.3 bcm, and we expect to deliver approximately 4 bcm through the Blue Stream pipeline in 2004.

#### *Yamal-Europe Pipeline Project*

We are proceeding with the Yamal-Europe project in order to continue to meet our contractual obligations to supply natural gas to Europe and to diversify our export routes. Connecting the Yamal-Europe pipeline to the existing natural gas transportation network in Germany allows for the full integration of this pipeline into the European gas network.

The Yamal-Europe pipelines are being constructed in such a way that it will be possible to utilize some of the segments and pumping station capacity in connection with existing gas transportation facilities as market demands require before the entire system comes on line.

During the first stage of development, the pipeline will transport natural gas from existing and new fields of the Nadym-Pur-Taz area of the Tyumen region. In the future, gas will be supplied from the Bovanenskoye field on the Yamal Peninsula.

The projected annual capacity for the first trunk pipeline is approximately 33 bcm. The initial section of the gas pipeline is currently in operation. This portion of the pipeline, which includes four compressor stations, extends approximately 1,230 km from the Smolensk compressor station through Belarus and Poland and connects with the STEGAL pipeline in Germany. The completed facilities account for approximately 60% of the pipeline's potential capacity. Gas supplies via the Yamal-Europe pipeline started on November 7, 1999. In 2003 and 2002, 21.0 bcm and 18.1 bcm of natural gas, respectively, were transported through the pipeline. The German section of the pipeline is owned by WINGAS, our joint venture with Wintershall. The Polish section is owned by EuRoPol GAZ S.A. ("EuRoPolGAZ"), a joint venture in which we participate with PGNiG S.A. (a 100% state-owned Polish gas company), and Gaztrading (a Polish gas company). We own the sections of the pipeline in Belarus and Russia.

We expect that construction of three additional compressor stations in Poland will be completed by 2006, further increasing the pipeline's capacity. Completing these compressor stations will require total investment of approximately U.S.\$300 million from 2004 through 2006. We also plan to complete the construction of compressor stations on the portion from Torzhok to the Polish border in 2005. We have planned capital investments of RR11.6 billion to complete construction of the portion of the pipeline from Torzhok to the Polish border in 2004 and 2005. Torzhok is a key pipeline junction north of Moscow where several of our trunk pipelines converge.

We are currently constructing a pipeline from the northern regions of the Tyumen Oblast to Torzhok pipeline, which will enable us to increase the reliability of deliveries of gas from the Nadym-Pur-Taz region to the Yamal-Europe pipeline as we bring on-stream the Yamal gas fields, as discussed above under "—Projects for the Development of the UGSS—SRTO—Torzhok Pipeline." We are deciding, based on demand for natural gas in western Europe and the economic efficiency of exporting gas in this manner, whether to construct a second Yamal-Europe trunk pipeline.

#### *North European Pipeline Project*

We are currently engaged in market research and planning for the North European pipeline project. Construction of this pipeline would help to diversify and to provide flexibility in our export gas routes; increase our capacity to supply gas to western Europe in order to fulfill long-term and future export contracts; and directly connect our gas transportation system in Russia with the gas transportation system in the EU.

The pipeline would have an annual capacity of about 20 bcm of natural gas and would run undersea for 1,189 km from Vyborg, Russia to Germany and then to The Netherlands and United Kingdom, either through an additional offshore pipeline or along the current European gas pipeline network. We anticipate that construction of the pipeline will take approximately four years. As the pipeline will run offshore directly from Russia to Germany, it will avoid the political and economic risks related to the reliability of transit deliveries through third countries. The anticipated total cost of constructing the North European pipeline is approximately U.S.\$5.7 billion, though this will depend on the specific route chosen. The EU has designated the project a high priority European project in the Trans-European Gas Network, which is expected to help us secure long-term financing for the project. Major oil and gas companies such as BP, Fortum Corporation, Gazunie, Royal Dutch/Shell, Ruhrgas, Total and Wintershall have expressed interest in participating in this project.

In January 2004 the Government of the Russian Federation instructed the Ministry of Energy of the Russian Federation to provide for preparation of the necessary documentation for the construction of the North European pipeline project with our participation. We are currently conducting negotiations with potential foreign partners, developing financing plans and engaging in other preparatory activities. We plan to make a decision about investment and the start of construction of the North European pipeline in the fourth quarter of 2004.

#### *United Kingdom Interconnector Pipeline*

In 1994, we acquired 10% of the capacity of the Interconnector pipeline, a pipeline connecting Belgium and the United Kingdom that allows for gas flow in both directions, as a result of our

participation in Interconnector (UK) Limited. As a result of our 10% stake, our current annual capacities in the Interconnector pipeline are 2.0 bcm of natural gas from the United Kingdom to continental Europe and 0.85 bcm, increasing to 2.2 bcm from the end of 2005, of natural gas from continental Europe to the United Kingdom. In February 2004 we applied to participate in an additional expansion of the capacity in the flow from Europe to the United Kingdom. When this expansion is completed in December 2006, two additional compressor stations will increase the total capacity from Europe to the United Kingdom by 7 bcm annually, of which our share will be 2.7 bcm, bringing our total capacity in this direction to 4.9 bcm. By participating in the expansion, we will be committed to pay for the additional capacity allocated to us.

Our capacity in the Interconnector pipeline is operated under an agency agreement by our subsidiary Zarubezhgaz Management und Beteiligungsgesellschaft GmbH ("ZMB"), which leases our capacity to other parties. We also make use of our Interconnector pipeline capacity to engage in spot trading opportunities on European gas markets. See "—Marketing—Europe—Western Europe."

#### *West-East Project in China*

On July 4, 2002, together with Shell and ExxonMobil, we signed a framework agreement with Petro China on creating a joint venture on the West-East pipeline project across China. The project envisages the production of natural gas in the Sintszyan-Uigur region in China, the construction of a pipeline of approximately 4,000 km in length to Shanghai and the sale of gas in the eastern Chinese market. The first stage of this project would provide for the production and transport of approximately 12 bcm of natural gas annually.

Negotiations on the terms of the joint venture for the construction and operation of the pipeline as well as on the conclusion of gas production sharing agreements and on the establishment of a unified trading company that will be responsible for gas sales to consumers are currently suspended due to concerns in China about the marketing to end users of gas transported through the pipeline.

#### *Ukraine Gas Transportation System*

In October 2002, the Russian and Ukrainian governments concluded an agreement on strategic cooperation in the gas industry that provided for the creation of an international consortium to improve the reliability, security and stability of the Ukrainian gas transport system; to make more efficient use of existing gas transportation and storage capacity in Ukraine; and to invest in the modernization and growth of the Ukrainian gas transportation system. Pursuant to this agreement, we entered into an agreement in October 2002 with Naftogaz Ukrainy to create a joint company to pursue these objectives. Following initial technical analysis, the parties determined that the initial projects would include construction of a new pipeline from Novoposkov to Uzhgorod (and with particular emphasis on the section from Bogochany to Uzhgorod) and the management of the gas transport system in Ukraine on a concession basis. We are now preparing the necessary documentation in order to implement these projects.

#### *Transbalkan Pipeline Project*

To increase natural gas supplies to the Balkan states, we have worked in association with various national companies on the expansion and modernization of the existing pipeline network in Ukraine, Romania and Bulgaria.

Gastransit, a joint Russian-Ukrainian-Turkish venture in which we have a 37% direct stake and an indirect stake through our 45% interest in Turusgaz, has implemented a program to expand transit capacity within Ukraine. The first stage, a compressor station at Tarutino within the operating transit gas pipeline Ananiev-Tiraspol-Izmail was put into operation in 2001. The compressor station was constructed with the use of an EBRD loan and equity funds of shareholders (including Gazprom funds in the amount of U.S.\$9.62 million). The second phase, consisting of loopings within the Ananiev-Tiraspol-Izmail gas pipeline, was constructed with the use of an additional EBRD loan and, subordinated to it, loans from Gastransit shareholders (including Gazprom funds in the amount of U.S.\$8.1 million). The construction and expansion of transit capacities within Bulgaria and Romania have also been completed. The construction was carried out with Romanian and Bulgarian funds and a commodities credit from Gazprom.

This project has increased the throughput of the pipelines at the border with Turkey to up to 14 bcm per year to help ensure our contractual volumes of supply of Russian gas to the Balkan countries and Turkey.

### *Cooperation with Wintershall*

In 1990, we entered into a long-term cooperation agreement with Wintershall, on the basis of which WINGAS was organized in 1993. We hold a 35% stake in WINGAS, and Wintershall holds a 65% stake. WINGAS has participated in the construction of and owns the following system of trunk pipelines:

*STEGAL Pipeline.* The STEGAL gas pipeline was completed in 1992. The pipeline is 323 km long and has a design capacity of 12 bcm per year. It passes through Germany and connects the MIDAL gas pipeline with the Czech natural gas pipeline system.

*MIDAL Pipeline.* Built in 1993, the MIDAL Pipeline has a total length of 642 km. Its capacity is 13 bcm per year. It goes through the territory of Germany and connects a natural gas storage facility at Emden (on the border with The Netherlands) with a BASF chemical plant in Ludwigshafen.

*WEDAL Pipeline.* The 314 km WEDAL pipeline became operational at the end of 1998, linking the WINGAS pipeline network with the Belgian pipeline system and the Interconnector pipeline. Initially, the WEDAL pipeline was designed to transport gas produced in the United Kingdom under contracts between WINGAS, British Gas and Conoco and to provide WINGAS with a secure supply of gas from diverse transportation sources. Gas supplies from continental Europe to the United Kingdom may also be carried through the Interconnector pipeline.

*YAGAL Pipeline.* At the end of 1999, the 340 km YAGAL pipeline, with a design capacity of 29 bcm per year, was put into operation. This pipeline connects the Yamal-Europe pipeline with the STEGAL pipeline. The completion of this pipeline enabled us to expand our supplies of natural gas to European countries and improved the reliability and flexibility of supplies of Russian natural gas to the European market.

### *Central Asia*

We have concluded long-term strategic cooperation agreements with respect to purchases of natural gas in Central Asia. See “—Reserves and Production—Projects and Alliances in Reserves and Production—Central Asia.” In addition, we are considering joint projects to assess, modernize and increase the gas transport capacity in the region and to promote cooperation in gas transportation between Russia, Kazakhstan, Kyrgyzstan, Turkmenistan and Uzbekistan.

The gas transportation system “Central Asia—Center” connects Turkmenistan, Uzbekistan, Kazakhstan and Russia. It currently has an annual capacity of approximately 50 bcm, below its design capacity of approximately 68.8 bcm annually. Additional investment in repairs and modernization is required to increase throughput from the current level. We have conducted a feasibility study for further investment in this system in order to increase annual throughput to 90 bcm, and in 2004 we plan to analyze instrumentation and control data. We are also considering possibilities for the extension of the “Central Asia—Center” pipeline system, both along the existing corridor through Uzbekistan and by bypassing Uzbekistan. One scenario that would increase annual capacity to 80 bcm along the existing corridor would require total investment of U.S.\$3 billion, approximately one-third for rebuilding the existing system and two-thirds for new construction. We are currently planning for our participation in this project on both a bilateral and multilateral basis.

Our 2004 investment program provides for RR500 million of investment in developing the “Central Asia—Center” in Uzbekistan, and we are considering the appropriate use of these funds. We also expect to make a further assessment of investment in the transportation infrastructure in Turkmenistan in late 2004, after we receive the results of an independent evaluation of natural gas reserves that is being conducted in Turkmenistan.

### **Refining**

Our refining operations consist of the operations of our six principal wholly-owned refining facilities and additional refining capacity held by various other subsidiaries, including our majority-owned subsidiary Sibur.

Our refining facilities process natural gas for pipeline transportation, stabilize gas condensate and refine natural gas, gas condensate and crude oil into refined products. Our six integrated refineries conduct processing, stabilizing and refining of natural gas, gas condensate and crude oil in order to remove hazardous and corrosive substances from natural gas and unstabilized gas condensate and produce a broad range of products. In the year ended December 31, 2003, excluding Sibur we processed and refined

39.7 bcm of natural gas and 17.2 million tons (125.7 mmbbls) of unstabilized gas condensate and crude oil, for a total of 359.4 mmboe, as compared to 39.3 bcm of natural gas and 16.9 million tons (123.9 mmbbls) of gas condensate and crude oil, for a total of 355.2 mmboe, in the year ended December 31, 2002. Of these totals, our own production accounted for 33.7 bcm of natural gas and 10.2 million tons (74.7 mmbbls) of gas condensate and crude oil, for a total of 273.0 mmboe, in the year ended December 31, 2003 and 34.1 bcm of natural gas and 10.0 million tons (73.1 mmbbls) of gas condensate and crude oil, for a total of 273.9 mmboe, in the year ended December 31, 2002.

Our total annual processing and refining capacity, excluding Sibur, as of December 31, 2003 was 51.0 bcm of natural gas and 20.8 million tons (152.5 mmbbls) of gas condensate and crude oil, as compared to 49.5 bcm of natural gas and 20.8 million tons (152.5 mmbbls) of gas condensate and crude oil as of December 31, 2002. We sell our refined products domestically and in the FSU and Europe.

We operate our refining segment through Astrakhangazprom, Kubangazprom, Orenburggazprom, Severgazprom, Surgutgazprom and Urengogazprom, which are wholly-owned subsidiaries that combine refining with either production or transportation, as well as our majority-owned subsidiaries Sibur and Vostokgazprom. As of January 1, 2003, we centralized the operations of our refining segment, excluding Sibur. We discontinued the practice of selling our raw products to and then purchasing refined products from the refineries in favor of tolling arrangements with our refineries according to which we pay for refining and processing services of raw materials that we have purchased from our production subsidiaries and transported to the refining facilities. We expect that these changes will result in considerable tax savings and the centralization of our cash flows.

Our natural gas and gas condensate refineries are sophisticated plants that combine chemical facilities with petroleum processing and refining facilities. Each of our refineries is directly linked to gas or gas condensate fields, and among their principal functions is to process natural gas and gas condensate produced at our Astrakhanskoye and Orenburgskoye fields for transportation via our trunk pipelines. Our refineries produce such products as dry market-grade natural gas, stabilized gas condensate, liquefied natural gas, technical carbon, diesel fuel and motor gasoline from natural gas and gas condensate. Some of our plants have implemented unique technologies for treating natural gas with a high sulfur content (for example, the Astrakhan plant treats natural gas with hydrogen sulfide and carbon dioxide content of 15-25%), and produce odorants, technical carbon and gaseous and liquified helium.

We plan to increase our processing of gas condensate and crude oil and more fully to utilize our excess processing and refining capacity, both through our majority-owned subsidiary Sibur and by partnering with western oil companies to further develop certain of our gas condensate fields. See “—Reserves and Production—Projects and Alliances in Reserves and Production.” We also plan to increase the depth of our refining activities. For example, we plan to increase our annual production of automobile gasoline and jet fuel at our wholly-owned facilities to 2.6 million tons and 240,000 tons, respectively, by 2006.

From 2004 through 2006, we plan to invest approximately RR11.6 billion to reconstruct and refurbish equipment at our wholly-owned natural gas and gas condensate refineries. We intend to increase the amount of gas condensate and crude oil we refine in western Siberia from approximately 6 million tons (44.0 mmbbls) in 2003 to 11.0 million tons (80.6 mmbbls) per year starting from 2007. We also anticipate increasing our initial processing of gas condensate and crude oil to 7.5 million tons (55.0 mmbbls) per year from 2007.

The following table sets forth total hydrocarbon feedstock input at our refining facilities, excluding Sibur's, for the periods indicated. Unstabilized gas condensate and oil that has been processed may be further refined in one or more stages.

	Year ended December 31,			
	2003	2002	2001	2000
Natural gas (bcm).....	39.7	39.3	38.7	40.1
of which third-party product .....	6.0	5.2	4.0	4.8

of which from third-party inputs .....	44.4	53.4	71.9	13.1
Methanol (thousand tons) <sup>(1)</sup> .....	753.0	333.2	—	—

Note:

(1) All production from our own feedstock.

The following are our major refineries:

*Astrakhan Gas Refinery.* This refinery is operated by our subsidiary Astrakhangazprom. It is an integrated refinery, the first stage of which came on-stream in 1986 and the second in 1997. The Astrakhan Gas Refinery processes natural gas with a high sulfur content and gas condensate extracted from the Astrakhan gas condensate field and it receives all of its feedstock from this field. The plant comprises two lines, with a total annual capacity of 12.0 bcm of natural gas and an annual gas condensate stabilization capacity of 7.3 million tons (53.5 mmbbls). In 2003, the refinery processed 11.4 bcm of natural gas and 4.0 million tons (29.3 mmbbls) of unstable gas condensate. All of the raw material inputs in this period consisted of our own production. The refinery's products include dry market-grade natural gas that is fed into trunk pipelines; natural gas-derived sulfur; motor gasoline; diesel fuel; furnace fuel oil; and industrial-grade propane/butane mixture. As part of our strategy to deepen our feedstock processing, we

plan to build polyethylene production facilities that will enhance the overall efficiency of the Astrakhan refinery. We plan to invest RR7.3 billion from 2004 through 2006 to develop and refurbish this refinery.

*Orenburg Gas Refinery and Orenburg Helium Plant.* Our Orenburg gas chemical complex consists of two facilities, the Orenburg Gas Refinery and the Orenburg Helium Plant, both of which are operated by our subsidiary Orenburggazprom.

The Orenburg Gas Refinery processes natural gas with a high sulfur content and gas condensate. The first stage of this plant became operational in 1974, the second in 1977 and the third in 1978. The refinery has an annual capacity of 37.5 bcm of natural gas and a capacity of 6.2 million tons (45.4 mmbbls) of gas condensate per year. The refinery's products include dry market-grade natural gas; stabilized gas condensate; liquefied natural gas; multi-component hydrocarbon distillate (MHD); natural gas-derived sulfur; and odorants.

The Orenburg Helium Plant is one of Russia's largest producers of helium. The first stage of the plant became operational in 1978, the second in 1979 and the third in 1981. The facility has an annual capacity of 15 bcm of natural gas. The Orenburg Helium Plant conducts further refining of the output of the Orenburg Gas Refinery. The plant's products include dry market-grade natural gas; gaseous and liquefied helium; ethane; multi-component hydrocarbon distillate (MHD); and liquefied natural gas.

In 2003, the Orenburg gas chemical complex processed a total of 26.1 bcm of natural gas and 5.4 million tons (39.6 mmbbls) of gas condensate and crude oil. Our production accounted for 20.1 bcm of natural gas and 0.5 million tons (3.7 mmbbls) of gas condensate and crude oil input in 2003, with the balance of the natural gas supplied primarily from the Karachaganak field in Kazakhstan. See "—Projects and Alliances in Refining—Karachaganak Gas Processing." We plan to invest RR1.6 billion from 2004 through 2006 in developing and refurbishing this processing complex.

*Sosnogorsky Gas Refinery.* This refinery is operated by our subsidiary Severgazprom. It came on-stream in 1946 and has an annual capacity of 1.5 bcm of natural gas and 1.25 million tons (9.2 mmbbls) of unstable gas condensate per year. In 2003, the refinery processed 1.4 bcm of natural gas and 332,100 tons (2.4 mmbbls) of gas condensate and crude oil. All of the raw material inputs in this period consisted of our own production. The refinery's products include dry market-grade natural gas; liquefied gas; stabilized gas condensate; motor gasoline; and technical carbon. From 2000 through 2003, the refinery was refurbished both with internally generated funds from Severgazprom and with borrowings of euro 108 million, which were used for the reconstruction of the refinery's gas refining facilities. We plan to invest RR500 million from 2004 through 2006 to reconstruct the refinery's facilities. In 2004 we plan to commission additional refining capacity of 1.5 bcm of natural gas per year and to significantly increase the depth of feedstock processing and the percentage of liquefied gas, such as propane and butane, that we can extract from natural gas.

*Urengoi Consolidate Stabilization Plant and Surgut Condensate Stabilization Plant.* Our western Siberian processing and refining complex consists of two facilities, the Urengoi Condensate Preparation Plant and the Surgut Condensate Stabilization Plant.

The Urengoi Condensate Preparation Plant is operated by our subsidiary Urengoigazprom. The first stage of this plant came on-stream in 1985 and the second in 2001. The plant's main function is to prepare condensate for transportation to the Surgut Condensate Stabilization Plant. With the completion of the second stage, the plant now has an annual capacity of 12 million tons (88.0 mmbbls) of gas condensate. The plant had a throughput of 6.0 million tons (44.0 mmbbls) of gas condensate in 2003, of which 4.9 million tons (35.9 mmbbls) was our own production. The plant's products include de-ethanized gas condensate (which is used as feedstock for the Surgut Condensate Stabilization Plant); motor gasoline; diesel fuel; liquified gas; and stabilized condensate. We have budgeted investments of RR800 million from 2004 through 2006 to overhaul the facility.

The Surgut Condensate Stabilization Plant is operated by our subsidiary Surgutgazprom. It processes a crude oil and gas condensate mixture produced from the western Siberian fields and came on-stream in 1985. It has an annual capacity of approximately 8 million tons (58.6 mmbbls) of de-ethanized condensate. In 2003, the plant processed 5.7 million tons (41.8 mmbbls) of gas condensate and crude oil, of which 3.8 million tons (27.9 mmbbls) was our own production. The refinery's products include stabilized condensate; motor gasoline; and diesel fuel; liquefied gases; and pentane-hexane fraction.

A bottleneck may occur at the Urengoi Condensate Preparation Plant and Surgut Condensate Stabilization Plant in the next several years as more independent producers utilize the Surgut Condensate Stabilization Plant, as the Surgut Condensate Stabilization Plant has relatively less additional capacity

than does the Urengoi Condensate Preparation Plant, which provides it with feedstock. To mitigate this risk, we have budgeted investment expenditures of RR1.4 billion from 2004 through 2006 to further develop the capacity of the Surgut Condensate Stabilization Plant.

### Sibur

Sibur is one of the leading Russian petrochemicals companies. According to Sibur's management estimates, Sibur accounted for 48% of the production of synthetic rubber, 47% of the production of tires, 18% of the production of polyethylene, 35% of the production of polypropylene and 31% of the production of liquified gases in Russia in 2003. Sibur's output is used in the production of plastics, high-octane gasoline and other products in the automotive, agricultural, construction and aerospace industries.

We currently control 78.1% of the voting shares of Sibur. We initially acquired 50.7% of the voting shares of Sibur in January 2001, gained control of an additional 25% in April 2003 through the acquisition of several petrochemicals companies, some of which held interests in Sibur, and acquired a further 2.4% in September 2003. We are currently conducting negotiations for increasing our ownership in Sibur.

In early 2002, as a result of bankruptcy proceedings initiated by us, a Russian court imposed external management over Sibur. The imposition of external management contributed to the decline in Sibur's production in 2002. In September 2002, Sibur reached an amicable settlement agreement with its creditors which was subsequently approved by a court, and Sibur emerged from bankruptcy. Under the settlement agreement, Sibur's debts were restructured with repayment to occur over a period of eight years starting in 2004. The present value of this restructured debt as of September 30, 2003 and December 31, 2002 was RR3.3 billion and RR10.4 billion, respectively.

Sibur organizes its refining activities in several technological stages, at each stage supplying petrochemical enterprises (primarily its subsidiaries) with feedstock for processing and receiving in return finished products. After each stage a portion of the product is sold to consumers, while the remainder is retained for further refining.

We supply approximately half of Sibur's hydrocarbon feedstock. The following table sets forth total hydrocarbon feedstock input at Sibur for the years ended December 31, 2003, 2002, 2001 and 2000.

	Year ended December 31,			
	2003	2002	2001	2000
	(thousand tons)			
Short hydrocarbon fractions and liquified gas.....	3,572	2,842	3,482	3,112
Oil and gas condensate .....	89	251	1,348	1,754
Gasoline fractions.....	857	566	674	452
Other raw materials.....	440	237	113	340
<b>Total</b> .....	<b>4,958</b>	<b>3,896</b>	<b>5,617</b>	<b>5,658</b>

The following table sets forth Sibur's total production in the years ended December 31, 2003, 2002, 2001 and 2000.

	Year ended December 31,			
	2003	2002	2001	2000
	(thousand tons, unless otherwise indicated)			
LNG .....	2,481	1,667	2,130	1,603
Monomers and monomer fractions.....	1,788	1,106	899	704
Synthetic rubber .....	519	314	464	297
Polymers .....	370	220	359	264
Products of organic synthesis.....	660	332	538	230
Fuel and components.....	405	408	911	1,072
Tires (thousands of units).....	17,578	3,394	15,458	10,500

Sibur sells its production in Russia and abroad, in particular to China, Finland and the Baltic states. We are evaluating the Chinese market for petrochemical products, as the management of Sibur considers this market to present significant opportunities based on the current rate of economic growth in China and the increasing demand for petrochemical products. Exports to China account for a substantial portion of Sibur's total exports. Sibur's principal exports to China are synthetic rubber, polymer products, spirits (included in the table above under "products of organic synthesis") and methyl-tert-butyl-ether (included in the table above under "fuel and components").

We plan to restructure Sibur to create a vertically integrated refining company that will engage in the full cycle of natural gas processing and manufacturing, ranging from the production of natural gas and liquid hydrocarbons to the processing of natural gas for transportation to the production of complex refined petroleum products such as tire rubber. Through 2010, we intend to focus on restructuring the indebtedness of Sibur, improving Sibur's financial management and investing in Sibur's production facilities, many of which require renovation. We are currently working with Sibur on preparing an agreement on restructuring its remaining debt to us, which we expect will occur on terms similar to those agreed in September 2002. Sibur has planned capital investments of RR8.4 billion in 2004 to modernize and expand its production facilities.

#### *Projects and Alliances in Refining*

*Karachaganak Gas Processing.* KazRosGaz, in which we hold a 50% stake, currently purchases up to 7 bcm annually of natural gas produced at the Karachaganak field in Kazakhstan from the field operator, Karachaganak Petroleum Operating. We process this gas at our Orenburg Gas Refinery and sell it in Kazakhstan and elsewhere. In our role as a shareholder in KazRosGaz, we and Karachaganak Petroleum Operating are discussing a long-term agreement on delivery of up to 8 bcm of natural gas produced at Karachaganak to the Orenburg Gas Refinery starting from 2005, with the possibility for further increases in volume. Securing these supplies of gas to the Orenburg Gas Refinery will enable us to modernize the facility and to increase its capacity. We have estimated the investment expenditures for the first stage and processing to be RR3.2 billion.

*Novy Urengoi Chemical Complex.* The technical plan for the Novy Urengoi Chemical Complex was designed in cooperation with Salzgitter Anlagenbau and Linde, with some participation by BASF. Most of the equipment necessary to build the Novy Urengoi Chemical Complex in western Siberia was delivered in 1997. The Novy Urengoi Chemical Complex, which is not yet operational, is designed to process 1.62 million tons of de-ethanized natural gas per year, yielding 340,000 tons of ethylene to be used as feedstock for 300,000 tons of high pressure polyethylene, and is also designed to produce annually up to 280,000 tons of long distillate of light hydrocarbons, as well as up to 920,000 tons of methane gas. We have planned to invest approximately RR20.3 billion in completing this facility from 2004 through 2006, but we have not yet obtained financing for these investments.

#### **Marketing**

We are the world's largest exporter of natural gas. We export natural gas (as well as gas condensate, crude oil, oil products and liquefied oil gas) through our wholly-owned subsidiary, Gazexport. We also sell these products domestically to industrial consumers, to regional gas distribution companies and, through our own regional gas distribution companies, to other end consumers. In 2002, our net sales of natural gas to Europe were RR335,115 million; our net sales of natural gas to the FSU were RR51,069 million; and our net sales of natural gas in Russia were RR142,854 million. In the nine months ended September 30, 2003, our sales of natural gas in Europe net of VAT and customs duties were RR316,516 million; our sales of natural gas to the FSU net of VAT and customs duties were RR32,817 million; and our sales of natural gas in Russia net of excise tax and VAT were RR128,839 million.

We are currently the only supplier of Russian natural gas to Europe. Our exports to Europe also accounted for approximately 27.4% of the volume of natural gas we sold in 2002 and for 63.3% of our natural gas net sales revenues in 2002 and for 29.7% of the volume of natural gas we sold and for 66.2% of our net natural gas net sales revenues in the nine months ended September 30, 2003. We supplied 20% of the volume of natural gas consumed in western Europe and 61% of the volume of natural gas consumed in central and eastern Europe in 2002 according to the CEDIGAZ—"Natural Gas in the World—2002" (July 2003). In 2002, we delivered 128.6 bcm of natural gas to Europe, of which western Europe accounted for approximately 87.1 bcm and central and eastern Europe for approximately 41.4 bcm. In the nine months ended September 30, 2003, we delivered 102.9 bcm of natural gas to Europe. Germany, Italy, Turkey and France were our largest export markets in Europe. We are actively seeking to increase our European export efficiency and have entered into various joint ventures abroad, such as WINGAS in Germany and Gasum in Finland. See "—International Projects and Alliances in Marketing." These joint ventures allow us to capture a margin from sales further downstream in the markets we serve in addition to receiving export proceeds from deliveries at the borders of the markets we serve.

In 2002, we sold approximately 298.0 bcm of natural gas, constituting substantially all of the natural gas consumed, in Russia, and 42.6 bcm of natural gas, constituting approximately 50% of the volume of

natural gas consumed, in six FSU countries, Belarus, Estonia, Latvia, Lithuania, Moldova and Ukraine. In the nine months ended September 30, 2003, we supplied approximately 212.8 bcm of natural gas in Russia and 31.3 bcm, in the FSU. Ukraine and Belarus are the largest consumers of the volume of natural gas we supply to the FSU.

The following table sets out by volume our natural gas sales by geographical market for the periods indicated:

Gas Sales	For the nine months ended September 30,		For the year ended December 31,		
	2003	2002	2002	2001	2000
			(bcm)		
Russia .....	212.8	197.5	298.0	300.8	307.6
FSU .....	31.3	32.2	42.6	39.6	42.3
Europe .....	102.9	95.9	128.6	127.0	129.0
<b>Total</b> .....	<u>347.0</u>	<u>325.6</u>	<u>469.2</u>	<u>467.4</u>	<u>478.9</u>

### *The Natural Gas Market*

Natural gas is gaining an increasing share of the world energy market, in part because it is an effective and environmentally clean fuel. According to the BP Statistical Review of World Energy (June 2003) (the "BP Review"), natural gas consumption, as a percentage of energy consumption in western Europe, has increased in recent years and is expected to continue to increase. This is primarily due to the growth in natural gas-fired power generating capacity, an increase in the use of natural gas for residential consumption (particularly in central and eastern Europe), a decline in the attractiveness of nuclear power, and environmental considerations (which have reduced the attractiveness of fuels such as coal). In 2002, natural gas consumption accounted for approximately 22.9% of primary energy consumption in western Europe and approximately 23.6% in central and eastern Europe.

The following table sets forth primary energy and natural gas consumption in our principal markets for 1992, 1997 and 2002 as well as the percentage of natural gas consumed as a proportion of primary energy consumption in such markets for such years:

	2002	1997	1992
	(mtoe, except for percentages)		
<b>Western Europe<sup>(1)</sup></b>			
Energy consumption <sup>(2)</sup> .....	1,612.6	1,546.4	1,463.9
Gas consumption .....	368.8	315.6	245.8
Gas consumption as a percentage of primary energy consumption <sup>(3)</sup> .....	<u>22.9%</u>	<u>20.4%</u>	<u>16.8%</u>
<b>Central and Eastern Europe<sup>(4)</sup></b>			
Energy consumption .....	228.6	247.1	245.9
Gas consumption .....	53.9	54.1	52.0
Gas consumption as a percentage of primary energy consumption .....	<u>23.6%</u>	<u>21.9%</u>	<u>21.1%</u>
<b>FSU (except Russia)<sup>(5)</sup></b>			
Energy consumption .....	284.6	285.3	420.2

Notes:

- (1) Defined for the purposes of this table to consist of Austria, Belgium, Denmark, Finland, France, Germany, Greece, Iceland, Luxembourg, Republic of Ireland, Italy, The Netherlands, Norway, Portugal, Spain, Sweden, Switzerland, Turkey and the United Kingdom.
- (2) Energy consumption comprises commercially traded fuels only.
- (3) Oil, gas, nuclear, hydroelectric and coal.
- (4) Defined for the purposes of this table to consist of Bulgaria, Czech Republic, Hungary, Poland, Romania and Slovakia.
- (5) Defined for the purposes of this table to consist of Azerbaijan, Belarus, Kazakhstan, Lithuania, Turkmenistan, Ukraine and Uzbekistan.

According to the BP Review, natural gas consumption in western Europe represented 16.2% of worldwide natural gas consumption in 2002 (13.4% in 1992). In the period from 1992 through 2002, the proportion of natural gas to primary energy consumption in western Europe rose from 16.8% to 22.9%. According to the International Energy Agency, this trend is expected to continue.

### *Europe*

Our exports to Europe accounted for approximately 27.4% of the volume of natural gas we sold in 2002 and for 63.3% of our natural gas net sales revenues in 2002 and for 29.7% of the volume of natural gas we sold and for 66.2% of our natural gas net sales revenues in the nine months ended September 30, 2003. In 2002, we sold 128.6 bcm of natural gas to Europe (127.0 bcm in 2001), and in the nine months ended September 30, 2003 we sold 102.9 bcm of natural gas to Europe (95.9 bcm in the nine months ended September 30, 2002). We expect to increase our exports to Europe in 2004 to approximately 140 bcm.

We export natural gas to Europe mostly pursuant to long-term contracts, which generally include the following terms:

- price-setting mechanisms that are based on prices for competing forms of energy such as oil products and, to some extent, coal;
- price adjustment clauses pursuant to which the formulae for determining the price of natural gas under the contracts can be reviewed and adjusted once every three years if market conditions have changed;
- clauses that prevent unilateral termination except in instances of prolonged force majeure;
- extension clauses which provide for the automatic extension of the contract upon expiration unless one of the parties objects; and
- “take-or-pay” provisions that provide that (i) off-takers who have purchased less than the minimum contracted-for annual volume of natural gas at year’s end are required to pay for some portion (but generally not all) of the shortfall and (ii) such payment is credited to the off-taker if, in a subsequent year, the off-taker purchases more than the minimum contracted-for volume of natural gas.

We are paid in U.S. dollars and euro for the natural gas we sell in western Europe. Currently, between 40% and 45% of our European net sales are denominated in euro.

Certain of our contracts contain “destination clauses” that prohibit the re-export of natural gas that is purchased from us by the importer. We received a request for information from the European Commission with respect to this clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission’s original position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We have, for example, found such a solution with one of our off-takers, and are negotiating alternatives with several other off-takers. We will no longer include such clauses in new contracts.

During the next nine years, beginning mainly in 2008, export contracts accounting for almost one third of the volume of natural gas we currently export to Europe will expire. More than half of these volumes are under contracts that will expire in 2012.

We believe that our contracts that are scheduled to expire will be renewed. We are currently negotiating for the extension of long-term contracts that expire after 2008 with, among others, Ruhrgas, OMV and Wintershall Erdgas Handelshaus (“WIEH”), a joint venture with Wintershall. These contracts relate to aggregate minimum natural gas volumes of approximately 22 bcm per year. Our new contracts will not contain destination clauses. See “—Western Europe.”

### Western Europe

The following table sets out our natural gas export volumes to western European countries for the periods indicated:

<u>Country</u>	<u>For the year ended</u> <u>December 31,</u>			
	<u>2003<sup>(1)</sup></u>	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>

<b>Total<sup>(2)</sup></b> .....	<b><u>89.0</u></b>	<b><u>87.1</u></b>	<b><u>86.6</u></b>	<b><u>90.4</u></b>

Notes:

- (1) Management estimates. The information in this table does not include natural gas volumes that are purchased and then resold by some Gazexport subsidiaries, for example in connection with the exchange operations described below.
- (2) Totals may not add due to rounding.

We have delivered natural gas to western Europe since the late 1960s, providing us with a significant amount of commercial experience in the region. Acting through Gazexport, we supply natural gas to our western European customers on the basis of long-term contracts, the initial terms of which are generally 20 years or longer. Outstanding long-term supply contracts with major western European customers have remaining terms of between four and 19 years.

Currently, our principal western European customers are Ruhrgas (Germany), ENI (Italy), Gaz de France (France), Botas (Turkey), OMV (Austria) and our joint ventures in Germany, WINGAS, in which we have a 35% stake, and WIEH, in which we have a 50% stake.

One of our fastest growing export markets in recent years has been Turkey. While domestic economic difficulties have reduced Turkish demand in 2003, we still believe that the Turkish gas market has significant long-term growth potential. According to statistics compiled by Botas, Turkey's state-owned gas company, natural gas consumption in Turkey amounted to approximately 17.6 bcm in 2002, of which our exports accounted for 11.8 bcm, or 67.0%, compared to consumption of approximately 16.4 bcm in 2001 and 14.6 bcm in 2000, of which our exports accounted for 11.1 and 10.3 bcm, or 67.7% and 69.9%, respectively. Our natural gas exports to Turkey are delivered via the Transbalkan Pipeline through Ukraine, Romania and Bulgaria and the Blue Stream pipeline under the Black Sea that links Russia directly with the Turkish market. Deliveries through Blue Stream were temporarily halted from March to August 2003 due to a disagreement with Botas. In November 2003, we resolved all the outstanding disagreements. Total deliveries of gas to Turkey through the Blue Stream pipeline in 2003 were 1.3 bcm, and we expect to deliver approximately 4 bcm through the Blue Stream pipeline in 2004. See "—Transportation—International Projects and Alliances for Transportation—Blue Stream Project."

Since 1998, we have negotiated a number of agreements, some of which extended our existing contracts, including contracts with: Ruhrgas (Germany) under which we have a maximum annual delivery obligation of 22.6 bcm annually through 2008, falling to 15.2 bcm annually through 2020, and with whom we have entered into a second contract for possible further deliveries of 1.5 bcm through 2010; Gaz de France, under which we have a maximum annual delivery obligation of 8.0 bcm annually through 2015; Gasunie (The Netherlands), under which we will have a maximum annual delivery obligation of 4.0 bcm during its plateau period through 2021; and WINGAS (Germany), under which we will have a maximum annual delivery obligation of 4.0 bcm through 2023. Export volumes under our western European export contracts are usually expressed as a range, the lower end of which establishes the benchmark for the take-or-pay obligation and the upper end of which establishes our maximum annual delivery obligation. We are also seeking to expand our position in spot trading markets in Europe both independently and through our partners and affiliated companies.

We also participate in spot-market trading of natural gas in the United Kingdom, through our capacity in the Interconnector pipeline, and in Belgium. These transactions are conducted by Gazprom UK Trading Ltd. and WINGAS. See “—Transportation—International Projects and Alliances for Transportation—United Kingdom Interconnector Pipeline.”

We receive natural gas for sale on spot markets through exchange operations with our traditional trading partners in Europe. In September 2003, Gazexport, WINGAS, ZMB and Gazprom UK Trading entered into an agreement under which they plan to supply to the United Kingdom market up to 8 bcm by 2010 on a spot market basis. This contract supplemented a framework agreement on short-term gas trading between Gazexport and WINGAS that was concluded in November 2002. Gazexport, Gaz de France and Gazprom UK Trading also concluded a framework agreement on spot market deliveries to the United Kingdom market in November 2003, and pursuant to this agreement contracts for the delivery of 0.82 bcm of natural gas were concluded in 2004. Additional sales on spot markets will be made in cooperation with Ruhrgas.

The table below shows the volumes we sold on a spot market basis in the United Kingdom and Belgium.

	<u>(bcm)</u>
2000 .....	0.26
2001 .....	0.30
2002 .....	1.74
2003 .....	2.15

Western European gas markets are undergoing significant restructuring. In particular, the Gas Directive, adopted in August 1998 and subsequently replaced by the new Gas Directive, adopted in June 2003, seeks to deregulate and liberalize the EU gas market by introducing greater competition into the market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening transmission and distribution infrastructure to third parties and establishing fair tariffs for third-party use of natural gas transportation infrastructure and greater transparency of transportation and distribution costs by unbundling of the accounts for gas transportation, distribution and storage. The new Gas Directive will increase competition in European gas markets as a greater number of suppliers gain access to the natural gas infrastructure.

The adoption of the new Gas Directive in June 2003 has accelerated these deregulatory processes. Starting from July 1, 2004, all non-household gas consumers are to be able to select the gas supplier, and from July 1, 2007 this selection is to be extended to all natural gas consumers. The new Gas Directive also provides for regulated access by all parties to the gas transportation and gas distribution systems in the EU member states on the basis of published tariffs applicable to all gas suppliers, thereby increasing competition in the EU gas market. See “—Competition—Western Europe.”

#### *Central and Eastern Europe*

We enjoy a dominant position in supply to the central and eastern European gas markets for historical, economic, political and geographic reasons. The following table sets out our natural gas export volumes to central and eastern European countries for the periods indicated:

<u>Country</u>	<u>For the year ended</u> <u>December 31,</u>			
	<u>2003<sup>(1)</sup></u>	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>
	<u>(bcm)</u>			
Bosnia .....	0.2	0.2	0.1	0.3
Bulgaria .....	2.9	2.8	3.3	3.2
Croatia .....	0.6	1.2	1.2	1.2
Czech Republic .....	7.4	7.4	7.5	7.5
FYROM .....	0.1	0.1	0.1	0.1
Hungary .....	10.4	9.1	8.0	6.5
Poland .....	7.4	7.1	7.5	6.8
Romania .....	5.1	3.5	2.9	3.2
Serbia and Montenegro .....	1.9	1.7	1.7	1.2

Slovenia .....	0.7	0.6	0.6	0.7
<b>Total<sup>(2)</sup></b> .....	<b><u>43.9</u></b>	<b><u>41.4</u></b>	<b><u>40.4</u></b>	<b><u>38.6</u></b>

Notes:

- (1) Management estimates. The information in this table does not include natural gas volumes that are purchased and then resold by some Gazexport subsidiaries, for example in connection with the exchange operations described above.
- (2) Totals may not add due to rounding.

We face similar competitive pressures in central and eastern Europe from the liberalization of the natural gas market to those that we face in western Europe. These competitive pressures will be enhanced as more countries in the region join the European Union and further privatize state-owned natural gas companies and we face increased competition from other suppliers of natural gas. Despite the steps taken by central and eastern European countries to diversify their sources of gas supplies, as a result of historical and economic factors, including the geographic proximity of central and eastern European markets to Russia, we believe that we will retain our historical role as the largest supplier of gas to central and eastern Europe.

In recent years, we have adopted a policy of negotiating medium-term and long-term contracts with our central and eastern European customers and gradually introducing western European contract terms into these contracts. Most of our central and eastern Europe export contracts now contain terms similar to those discussed above. See “—Europe.”

We supply natural gas in central and eastern Europe to state-owned natural gas distribution companies and in certain countries to joint ventures in which we participate in gas marketing and distribution. We are also considering the acquisition of additional gas marketing and distribution assets in the region.

#### *The FSU*

Our exports to the FSU accounted for approximately 9.1% of the volume of natural gas we sold and 9.7% of our natural gas net sales revenues in 2002 and 9.0% of the volume of natural gas we sold and 6.9% of our natural gas net sales revenues in the nine months ended September 30, 2003. In 2002, we sold 42.6 bcm of natural gas to the FSU (39.6 bcm in 2001), and in the nine months ended September 30, 2003 we sold 31.3 bcm of natural gas to the FSU (32.2 bcm in the nine months ended September 30, 2002). The following table sets out our natural gas export volumes to FSU countries for the periods indicated:

<u>Country</u>	<u>For the year ended</u> <u>December 31,</u>			
	<u>2003<sup>(1)</sup></u>	<u>2002<sup>(1)</sup></u>	<u>2001<sup>(1)</sup></u>	<u>2000<sup>(1)</sup></u>
	(bcm)

Belarus.....	10.2	10.2	11.6	10.8
Estonia.....	0.9	0.7	0.7	0.6
Georgia.....	0.3	—	—	—
Latvia.....	1.2	1.1	1.1	1.0
Lithuania.....	2.9	2.4	2.2	2.0
Moldova.....	2.4	2.1	2.1	1.8
Ukraine.....	<u>26.0</u>	<u>26.0</u>	<u>21.9</u>	<u>26.1</u>
<b>Total<sup>(2)</sup></b> .....	<b><u>44.1</u></b>	<b><u>42.6</u></b>	<b><u>39.6</u></b>	<b><u>42.3</u></b>

#### Notes:

(1) Management estimates.

(2) Totals may not add due to rounding.

Current annual contract prices for the natural gas we supply to FSU countries (other than to Belarus) are higher than current Russian domestic prices but lower than the prices we realize on sales to Europe.

Since 1999 we have limited our export supplies to certain FSU countries to avoid further exposure to non-paying customers. However, we expect these markets to recover. We plan to supply approximately 49.5 bcm of natural gas annually to the FSU through 2005, decreasing to approximately 45.8 bcm annually by 2010. In 2000, we signed long-term contracts with consumers in the Baltic States, which have historically maintained low levels of arrears, to supply a total of 25.5 bcm of natural gas between 2000 and 2005. We recently prolonged our gas supply contracts with customers in Estonia, Latvia and Lithuania through 2015.

Gas deliveries to Ukraine, Belarus and Moldova are made pursuant to contracts with the national natural gas companies Naftogaz Ukrainy, Beltransgaz and Moldovagaz, respectively. These contracts are negotiated annually pursuant to intergovernmental agreements. The contracts set out price parameters for the natural gas being sold and transit rates for natural gas through the relevant country. Sales to FSU countries are made directly by OAO Gazprom.

Ukraine, our largest FSU customer, is traversed by major pipeline routes from the natural gas fields of western Siberia to export markets in Europe. Ukraine is also the source of substantial amounts of our industrial supplies, such as pipes and construction equipment. Currently, we are dependent on Ukraine for the transit of substantially all our natural gas sold in western Europe. In fulfillment of an intergovernmental agreement between Russia and Ukraine, in June 2002 we concluded an agreement with Ukraine on the transit of at least 110 bcm annually across Ukraine to Europe through 2013. Our projects to expand out transportation routes, including the Yamal-Europe pipeline, which is nearing completion, the Blue Stream pipeline, which is substantially completed, and the proposed North European pipeline under the Baltic Sea, will reduce our dependence on Ukraine for the transportation of natural gas to western Europe (including Turkey). See “—Transportation—International Projects and Alliances for Transportation.” Moreover, Ukraine is dependent on us to meet its domestic natural gas requirements. This interdependence is taken into account in negotiations over a number of matters, including the terms of payment for natural gas supplied by us and transit fees charged by Ukraine.

Under an intergovernmental agreement concluded in 2002 between the Russian Government and the government of Belarus on expanding cooperation in the gas sector, the Belarussian gas company Beltransgaz was to be converted into an open joint stock company and we were to participate in a joint venture with Beltransgaz for the supply and transportation of natural gas in Belarus. However, we have not yet reached an agreement on the terms of our participation in this joint venture and the valuation of the assets of Beltransgaz. As a result, we have sought to conclude separate agreements with Belarus for the supply and transit of natural gas, with specified rates for both the supply of natural gas and the provision of transportation services. We have not yet reached an agreement on these proposals, and Belarus instead sought for us to continue supplies of natural gas to on our prior terms, which were equivalent to prices for household consumers in price zone five in Russia. As a result of the failure to reach an agreement on these matters, we largely stopped selling natural gas to customers in Belarus in January 2004. Our transit of gas to the countries in Europe through the pipeline network in Belarus, including the Yamal-Europe pipeline, has not been affected. See “—Transportation—Natural Gas Transit through Ukraine and Belarus.”

Natural gas has been supplied to Belarus on a commercial basis since January 2004 by Itera and TransNafta, and Sibur has also agreed to supply natural gas to Belarus on a commercial basis. However, Belarus has not signed long-term contracts for further deliveries of gas from these or other suppliers. The volumes being supplied to Belarus under the present arrangements are significantly below consumption requirements, and as a result Belarus may experience gas supply stoppages or shortages. We are currently seeking to conclude agreements with Belarus for the supply and transit of gas on a contractual basis.

The failure of a number of FSU customers to pay us for supplies of natural gas has resulted in substantial debts to us. As of September 30, 2003 and December 31, 2002, accounts receivable due from FSU countries for sales of natural gas were RR65,203 million and RR64,121 million, respectively (including VAT but excluding charges for late payment). This included amounts due from customers in Ukraine of RR42,226 million, Belarus of RR2,433 million and Moldova of RR19,668 million as of September 30, 2003, as compared to amounts due from customers in Ukraine of RR41,633 million, Belarus of RR3,733 million and Moldova of RR17,206 million as of December 31, 2002. These also represent our largest natural gas markets in the FSU. In June 2000, we limited deliveries of natural gas to Ukrainian customers to those deliveries required to pay for transit services through Ukraine, although since 2001 we have made some sales of gas to Ukrainian customers on a commercial basis. Since 2000, no further debts for the non-payment of gas delivered to Ukraine have accrued.

We are also taking specific measures to reduce arrears for payments of natural gas owed by FSU customers. In 2000, Moldova restructured a portion of its debt to us by issuing U.S.\$90 million worth of sovereign notes with a repayment schedule over seven years. In 2001, we cancelled indebtedness to us for gas supplied in 1997 in exchange for equity in Moldovagaz valued at U.S.\$60 million. An amount of U.S.\$276 million owed by Ukraine was set off against delivery of military hardware to the Ministry of Defense of the Russian Federation. In consideration of this delivery of military hardware, we received tax credits in an amount equal to the amount owed to us by Ukraine. In October 2001, the Russian Government signed agreements with the Cabinet of Ministers of Ukraine and with the Government of Moldova that provided for the restructuring of Ukraine's and Moldova's remaining debt for previously supplied natural gas in the amounts of U.S.\$1.4 billion and U.S.\$0.9 billion, respectively. According to the agreement between the Russian Government and the Cabinet of Ministers of Ukraine, Naftogaz Ukrainy is to transfer Eurobonds maturing between 2004 and 2013 to us in full settlement of these remaining

obligations. We are currently engaged in discussions to resolve certain outstanding tax and legal issues in connection with such settlement. We are also currently conducting negotiations on the restructuring of Moldova's remaining debt to us.

*Russia*

In 2002, we sold 298.0 bcm of natural gas, representing 63.5% of our total natural gas sales volumes and 27% of our natural gas net sales revenues in 2002. In the nine months ended September 30, 2003, we sold 212.8 bcm of natural gas in Russia, representing 61.3% of our total natural gas sales volumes and 26.9% of our natural gas net sales revenues.

*Domestic Market Conditions.* The Government regulates natural gas prices for the gas that we sell but does not regulate the prices of crude oil or coal (or the price of natural gas sold by independent producers). As a result, the regulated price of natural gas in 2004 is approximately 85% of the price of power-generating coal, and approximately 35% of the price of fuel oil as referenced against one toe.

The result of the regulation of natural gas at below market prices has been a shift in Russia toward increased use of natural gas compared with other sources of energy. Russia has the world's most gas-intensive economy. In contrast to many other major industrial economies where gas is primarily used for household consumption, natural gas in Russia is used principally for electricity generation and in the metallurgical and chemical industries. We believe that households accounted for 17% of the volume of the natural gas that we supplied in Russia in 2003, while industrial users, electricity generation, federal budget and municipal organizations and other non-household consumers accounted for 83% of the volume of the natural gas that we supplied in Russia in 2003.

Specific wholesale prices fixed by the Federal Energy Commission of Russia (the "FEC") or, from March 12, 2004, the FTS, are differentiated between household and industrial consumers, as well as along seven price bands among which prices vary based on relative distance from the gas production region.

Wholesale prices for natural gas supplied to industrial consumers in the Russian Federation are higher than wholesale prices for natural gas supplied to household consumers. In addition, excise tax applied to sales to industrial consumers prior to January 1, 2004 but not to sales to household consumers.

The following table sets forth the regulated nominal wholesale natural gas prices for industrial consumers in the Russian Federation in each price band for the periods indicated in nominal RR per thousand cubic meters, including excise tax (for periods prior to January 1, 2004) but excluding VAT. The excise tax was approximately 15%, but was abolished from January 1, 2004.

Price bands	From Nov. 1,	From May 1,	From Jan. 20,	From Feb. 15,	From July 1,	From Jan. 1,	From Jan. 1,

Weighted average .....	312	373	440	528	607	732	873

The total price paid by industrial consumers for natural gas includes the regulated wholesale price, a transportation tariff and a marketing and sales services fee. The wholesale price, which was established by the FEC and is now established by the FTS, is paid to us, and prior to January 1, 2004 included the 15% excise tax applicable to sales to industrial consumers. The transportation tariffs, which were also established by the FEC and now by the FTS, but which vary by region, are paid to the regional gas distribution companies that transport the gas through their medium- and low-pressure pipelines to the industrial consumers, and the marketing and sales service fees, which were also set by the FEC, and are now established by the FTS, are paid to the regional trade houses.

The following table sets forth the regulated nominal wholesale gas prices for household consumers in the Russian Federation in each price band for the periods indicated in nominal RR per mcm (excluding VAT).

Price bands	From Nov. 1, 1999	From May 1, 2000	From Mar. 1, 2001	From Feb. 15, 2002	From Aug. 1, 2002	From Feb. 1, 2003	From Jan. 1, 2004
	(nominal RR per mcm)

Weighted average.....	200	231	289	347	402	495	595

The total price paid by household consumers for natural gas is established by the regional authorities and covers the regulated wholesale price for household consumers, a transportation tariff and a marketing and sales services fee. In some cases, the total price may also cover a utilities or municipal maintenance fee. The wholesale price, which was established by the FEC and is now established by the FTS, is paid to us. The transportation tariffs, which were also established by the FEC and now by the FTS, but which vary by region, are paid to the regional gas distribution companies that transport the gas through their medium- and low-pressure pipelines to the household consumers, and the marketing and sales services fees, which were also set by the FEC, and are now established by the FTS, are paid to the regional trade houses.

The pricing structure for household consumers is complicated by a variety of factors. These include the existence of multiple price sub-categories (for example, pensioners and war veterans pay discounted prices); the lack of metering devices on individual apartments (gas fees are generally included as part of the monthly rent); and the fact that certain customers cannot be cut off for non-payment because of legal and technical constraints.

From late 1996 through 1999, regulated gas prices remained stable. Since 2000, the Government has adjusted gas prices on an annual basis. The Government increased gas prices by an average of 20% for 2003 for both industrial consumers and household consumers by raising the price of gas for industrial consumers by 20% from January 1, 2003 and for household consumers by 23% from February 1, 2003. Prices for both industrial and household consumers were increased by a further 20% from January 1, 2004. In 2003, average wholesale prices for household consumers were 32.4% lower than those charged to industrial consumers, and in 2004 average wholesale prices for household consumers are 31.8% lower than those charged to industrial consumers.

The Government has also acknowledged that domestic gas prices remain low, notwithstanding that prices increased at a faster rate than inflation from 2002. We annually propose increases in the regulated price of natural gas. For example, we have proposed an increase of 16% in domestic gas prices for 2005 and 22% for 2006 (in each case excluding inflation, which is estimated at 10% in 2005 and 9.6% in 2006). In March 2004 the Ministry of Economic Development and Trade proposed price increases of 20% for 2005, 11% for 2006 and 8% for 2007 (in each case including expected inflation). The final decision on regulated gas prices for 2005 will be made by the Government. We have also proposed to increase the number of wholesale price zones from seven to eleven, in order to reflect actual transportation costs to regions that are more distant from production fields, and to introduce seasonal variation in gas prices, in order to smooth demand and transportation requirements.

The Russian Energy Strategy for the period through 2020 (as approved by the Government in May 2003 and signed by the Prime Minister of the Russian Federation in September 2003) includes estimates of long-term dynamics of gas prices required in order to achieve targeted levels of gas production. These average prices are forecast at U.S.\$40-41 in 2006 and U.S.\$59-64 in 2010 per mcm, excluding VAT. The Russian Energy Strategy also provides for a gradual shift to the sale of gas at market prices in order to facilitate self-financing by gas market participants and a more objective estimation of demand for gas. As a first step towards the sale of gas at market prices, together with independent producers we have prepared proposals on organizing open tenders for the sale at market prices of certain quantities of gas

(determined by the Government) at market prices. Such sales would help to test and develop market relationships and provide a foundation for the further development of this market, ultimately leading to the creation of a gas market in Russia in which prices and volumes are determined by market forces.

*Domestic Sales.* We sell our products domestically through our wholly-owned subsidiary Mezhrefiongaz and the 43 regional trade houses in Russia that we control (out of a total of 53 regional trade houses). Our customers are large industrial consumers, regional gas distribution companies and household consumers. We also sell natural gas to the remaining key regional trade houses, which we do not control.

Our sales to household customers have increased as we have gained influence over regional gas distribution companies. Beginning in the late 1990s, we began acquiring interests through debt for equity swaps in regional gas distribution companies. The regional gas distribution companies own and operate medium and low-pressure pipelines that transport gas to end consumers. As of December 31, 2003, we had controlling interests in 114, and non-controlling interests in an additional 71, of the approximately 320 regional gas distribution companies in Russia.

Our acquisitions of controlling interests in the regional gas distribution companies have enabled us to capture the transportation tariffs that are payable to them in respect of the transportation services they provide, as described above. In addition, part of our strategy has been to remove regional gas distribution companies from the marketing chain. In the past, some regional gas distribution companies purchased gas from the regional trade houses and marketed and sold it to end users. We have implemented a strategy according to which the regional trade houses contract directly with and collect payments from the end customers, including households. Nearly all of the regional trade houses now operate on this basis.

We also recently tested a strategy to streamline our domestic marketing operations by removing Mezhrefiongaz from the marketing chain, allowing us to sell gas directly through our 43 regional trade houses. We hoped that removing Mezhrefiongaz from the marketing chain would result in cost and tax savings and increase the efficiency of our marketing. As part of this strategy, starting from January 2003 on a trial basis we concluded 15 contracts to sell gas directly to our regional marketing subsidiaries. Following an evaluation of the results of this test, we discontinued this program in late 2003.

In the past several years, we have shifted from long-term domestic gas supply contracts with terms of up to ten years (subject to annual delivery volume adjustments) to one year gas supply contracts with our industrial customers and regional gas distribution companies. These contracts require customers to make full payment (excluding any advance deposits) for the natural gas they received on or before the tenth or fifteenth day of the month immediately following the month of delivery. The contracts may contain penalty terms for late payment and customers' supplies of natural gas may be restricted and eventually stopped if non-payment continues. In addition, surcharges may be levied for gas supplied in excess of the contracted-for daily quotas (50% in winter and 10% in summer).

*Delayed Payments for Gas Deliveries in Russia.* During the early and mid-1990s, natural gas prices rose rapidly for all domestic customers, partly to keep pace with high inflation and partly to reflect the much higher prices received from exports to Europe. The sharp rise in price led to an increase in non-payment by Russian customers and settlement in forms other than cash. The increase in the price of natural gas had a particularly pronounced negative impact on the power generating industry, which accounted for most of the non-payments.

From 1999 through 2002, we improved our cash collection dramatically for natural gas delivered to Russian consumers. This was due generally to the improvement of the Russian economy and more specifically to our cooperation with consumers and administrations of various Russian regions. As of September 30, 2003, gross accounts receivable for natural gas supplied to Russian customers amounted to RR40,933 billion, compared to RR47,768 billion as of December 31, 2002 and RR56,073 billion as of December 31, 2001 (including Russian VAT but excluding late payment charges). Most of the accounts receivable for natural gas supplied to Russian customers is in respect of customers in southern Russia, including in Chechnya, Dagestan and the Saratov and Stavropol regions. During 2002, we received approximately 79% of payments for domestic gas sales in cash, and 21% in other forms, almost all of which constituted promissory notes. For the nine months ended September 30, 2003, we received approximately 80% of payments for domestic gas sales in cash and the remainder in other forms, almost all of which constituted promissory notes. We have also significantly shortened the average maturity of the promissory notes that we receive in such transactions.

Pursuant to various Government regulations, we do not have the right to cut natural gas deliveries to a number of categories of consumers, including hospitals, household utilities (such as water and electricity suppliers), military and state telecommunication organizations, and other consumers whose activities are vital for Russia's national security and environmental safety.

### *International Projects and Alliances in Marketing*

*WIEH Marketing Arrangement.* In 1990, we and BASF agreed to undertake the joint marketing of natural gas and to build and operate a network of trunk gas pipelines in Germany. See “Transportation—International Projects and Alliances in Transportation.”

We and Wintershall AG (a wholly-owned subsidiary of BASF) each have a 50% shareholding in the trading company WIEH. WIEH purchases its natural gas supplies exclusively from Gazexport under long-term contracts. We have concluded two long-term natural gas supply contracts with WIEH for a total annual volume of 13.9 bcm. WIEH sells gas to WINGAS, Verbundnetzgas, a major natural gas distributor in eastern Germany (of which ZGG, a wholly-owned subsidiary of Gazexport, owns approximately 5%) and BASF. WINGAS sells gas to municipal undertakings, gas utilities and major industrial consumers. We have also concluded two long-term natural gas supply contracts directly with WINGAS for a total annual volume of 5.8 bcm during the plateau period. In 2003, under these contracts we supplied 17.2 bcm (14.4 bcm in 2002) of natural gas to WINGAS and WIEH for sale in Germany and other western European countries.

*Beltransgaz privatization.* The Belarussian parliament is in the process of privatizing Beltransgaz, the Belarussian state-owned gas transportation and distribution company. Under the auspices of an agreement between the Government of the Russian Federation and the government of Belarus on expanding cooperation in the gas sector, we have held negotiations with the government of Belarus for the creation of a joint gas transportation organization and the formation of a joint venture with Beltransgaz. We have been unable to reach an agreement with the government of Belarus on the terms of our participation in a joint venture. See “—The FSU.”

*SPP privatization.* Approximately 80% of Russian natural gas supplied to Western Europe passes through the gas transit pipelines in Slovakia, and Slovensky Plinarensky Priemysel A.S. (“SPP”) has a monopoly over transportation, storage and distribution of gas in Slovakia. SPP owns and operates gas pipeline networks with a total length of 2,268 km and an annual throughput of 93 bcm as well as storage in Slovakia and Czech Republic with a total capacity of 1.8 bcm. In March 2002, Ruhrgas and Gaz de France participated in a tender for the privatization of a 49% interest in SPP, and paid U.S.\$2,765 million for the privatized shares. We hold an option, which expires in July 2004, to acquire a one-third interest in the privatized stake currently held by Ruhrgas and Gaz de France. In February 2004 we reached an agreement with Ruhrgas and Gaz de France on adjustments to the terms of our option in SPP that take account of the appreciation of the euro, and we are currently finalizing a feasibility study and developing a strategy for our participation in SPP.

*Romanian Gas Distribution.* We are currently considering participating in the privatization of the Romanian gas distribution and transportation companies Distrigas Sud and Distrigas Nord, in order to improve our access to the end users of natural gas, to improve the marketing base for the gas that we export and to increase our presence in gas distribution in markets that we believe will have increasing gas consumption on a medium- and long-term basis. We have reached an agreement to form a consortium with Marco Industries B.V. to participate in the privatization of Distrigas Sud and Distrigas Sud, and another European energy company may also join this consortium. In March 2004, we made a nonbinding bid to participate in the privatization tender.

*Baltic region.* We have acquired interests in several natural gas companies in the Baltic region. Our interests in these companies enables us to improve their operational efficiency, to stabilize the gas markets in these countries and to increase our foreign currency earnings.

We have been a shareholder in the Estonian gas company AO Eesti Gaas since 1993, and currently hold a 37.0% interest. Eesti Gaas engages primarily in marketing and transportation of gas through gas transportation pipelines and the development and modernization of Estonia’s gas transportation system.

We have been a shareholder in the Latvian gas company AO Latvias Gaze since 1997, and currently hold 25% plus one share. We are considering the acquisition of an additional 9% interest in Latvias Gaze. Latvias Gaze engages primarily in supplying and marketing natural and liquified gas in Latvia, and also operates the gas transportation system within Latvia.

In March 2004, we acquired a 34% interest in AO Lietuvos Dujos for RR1,020 million. Lietuvos Dujos engages primarily in the distribution and transportation of natural gas in Lithuania.

*KazRosGaz.* In implementation of an intergovernmental agreement between Russia and Kazakhstan in the gas sector concluded in November 2001, with ZAO NK KazMunaiGaz we formed the joint venture ZAO KazRosGaz to purchase and market natural gas, process it at gas processing plants in Russia, among other activities. Since September 2002, KazRosGaz has been purchasing gas from the Karachaganakskoye field, and in 2004 it began delivering natural gas from Central Asia to customers in

Azerbaijan. KazRosGaz also purchases gas and delivers it to our Orenburg Gas Refinery. See “Refining—Projects and Alliances in Refining—Karachaganak Gas Processing.”

*Other Joint Ventures.* In addition to our activities in Germany, we have established joint ventures to transport and market natural gas in other European markets. In certain countries, our subsidiaries or affiliates also distribute natural gas. We have begun to implement our strategy of acquiring equity participations in gas transportation companies and gas marketing companies, which was a success in Germany, in other European markets. The following table summarizes the main natural gas transportation and marketing joint ventures in which we participated in European markets other than Germany as at December 31, 2003:

<u>Country</u>	<u>Entity</u>	<u>Interest</u>	<u>Joint Venture Partner</u>	<u>Description</u>
Austria . . . . .	Gas und Warenhandels-gesellschaft GmbH	50%	OMV	Gas marketing, gas trading and general trading company
Bulgaria . . . . .	Overgaz Inc.	50%	AO Overgaz Holding	Marketing of Russian natural gas in Balkan countries
Estonia . . . . .	AO Eesti Gaas	37%	Ruhrgas AG, Fortum Corporation, Itera- Latvia, other shareholders	Marketing of natural gas, development of Estonia’s gas transportation networks
Finland . . . . .	Gasum Oy	25%	Fortum Corporation, Ruhrgas, the State of Finland, other Finnish companies	Gas transportation and marketing
	NordGaz Oy	50%	Fortum Corporation	Transportation of natural gas and operation of gas transportation network
France . . . . .	Fragaz	50%	Gaz de France	Gas distribution and general trading activities
Greece . . . . .	Prometheus Gas	50%	Copelouzos	Gas marketing and construction of gas transportation systems
Hungary . . . . .	Panrusgaz	40%	MOL	Gas marketing and distribution
Italy . . . . .	Promgaz	50%	ENI	Gas marketing and distribution
Latvia . . . . .	AO Latvias Gaze	25%	Itera-Latvia, Ruhrgas Energie Beteiligungs, E.ON Energie AG, the State of Latvia, other shareholders	Marketing of natural gas and liquefied gas, development and modernization of Latvia’s natural gas and services industries
Lithuania . . . . .	Stella Vitae	30%	Auri, other shareholders	Marketing of gas, crude oil and refined products
Poland . . . . .	EuRoPol GAZ S.A.	48%	PGNiG S.A.	Transportation, construction, ownership and operation of the Polish section of the Yamal-Europe project
	Gas Trading	16%	PGNiG S.A., Bartimpex S.A., WIEH, Wenglokoks	Gas marketing, liquified gas trading
Slovakia . . . . .	Slovrusgaz	50%	SPP	Gas transportation and marketing, general trading business
Turkey . . . . .	Turusgaz	45%	Botas International Ltd., Gama Industrial Plants Manufacturing and Erection Corp.	Gas marketing

We and our subsidiaries also own stakes in companies located in Armenia, Belarus, Kazakhstan, Moldova, The Netherlands, Serbia and Montenegro, Ukraine and the United Kingdom.

## Competition

The oil and gas industry is currently subject to several important influences that impact the industry's competitive landscape. These include the following:

*Consolidation.* In the past few years, the strategic and competitive landscape of oil and gas markets have been transformed by mergers and acquisitions, driven mainly by aspirations for greater profits and intensified competition to capture the growing potential of new, attractive business opportunities.

*Technological Advances.* Technological innovations in the oil and gas industry have improved the technical-economic performance in finding and developing hydrocarbon resources. Active and effective application of advanced technology has helped to improve geologic exploration success rates, to increase field life and recovery rates from existing fields and to reduce full project cycle costs. In general, there is comparable access to technology across the industry, and to achieve our strategic and financial goals, we will seek to compete by applying available technology to complex projects.

*Environmental and Social Concerns.* Oil and gas companies worldwide are also facing increasing demands to conduct their operations consistent with environmental protection and social goals. Investors, customers and governments are more actively following companies' performance with respect to environmental responsibility, human rights and development of alternative and renewable fuel resources. As a result, we expect competition to intensify in the markets we serve.

### Europe

The table below shows the proportion of European natural gas supply attributable to each supplier of natural gas to the European market in 2002.

<u>Country</u>	<u>% of European Natural Gas Supply in 2002</u>
Russia (Gazprom).....	25.5
United Kingdom.....	20.1
The Netherlands.....	14.0
Norway.....	12.9
Algeria.....	10.9
Germany.....	4.2
Italy.....	2.9
Denmark.....	1.7
Nigeria.....	1.5
Other.....	6.3

Source: CEDIGAZ—"Natural Gas in the World—2002" (July 2003).

### Western Europe

Natural gas supplies to western Europe have outpaced demand in the past several years and, according to specialists from the International Energy Agency, this trend will continue until 2007-2008. As a result, we anticipate exporting natural gas to western Europe at close to the minimum amounts defined in our export contracts over this period. Over the long-term, however, production in the countries of western Europe will continue to decline due to the depletion of explored natural gas reserves in the region and imports from Russia, Algeria and Norway are likely to increase in importance as a proportion of consumption.

Western European gas markets are undergoing significant restructuring. In particular, the Gas Directive, adopted in August 1998 and subsequently replaced by the new Gas Directive, adopted in June 2003, seeks to deregulate and liberalize the EU gas market by introducing greater competition into the market and reducing gas prices for the end-user. The Gas Directive seeks to accomplish these objectives by opening up transmission and distribution infrastructure to third parties and establishing fair tariffs for third-party use of natural gas transportation infrastructure and greater transparency of transportation and distribution costs by unbundling of the accounts for gas transportation, distribution and storage. The new Gas Directive will increase competition in European gas markets as a greater number of suppliers gain access to the natural gas infrastructure.

The adoption of the new Gas Directive in June 2003 has accelerated these deregulatory processes. Starting from July 1, 2004, all non-household gas consumers are to be able to select the gas supplier, and from July 1, 2007 this selection is to be extended to all natural gas consumers. The June 2003 Gas Directive also provides for regulated access by all parties to the gas transportation and gas distribution systems in the EU member states on the basis of published tariffs applicable to all gas suppliers, thereby increasing competition in the EU gas market. Because of the distance of our natural gas fields from consumers in Europe, it is difficult for us to engage in spot transactions involving physical settlement. We believe, however, that natural gas is likely to continue to be supplied under long-term export contracts, both because long-term contracts provide a stable supply of natural gas to Europe during a period of declining local production and because long-term supply contracts are essential in enabling us to finance investment in our natural gas exploration and development. We expect that the substantial gas reserves owned by Gazprom will support our competitive position as a major supplier of natural gas to the western European market. We also intend to build on our current position and experience in spot trading to take advantage of the new opportunities that may develop in the course of the restructuring of European natural gas markets.

We received a request for information from the European Commission with respect to the destination clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission's original position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We have, for example, found such a solution with ENI, and are negotiating alternatives with several other offtakers. We will no longer include such clauses in new contracts.

In response to the changes in the European market that have been brought about by the Gas Directive and that are expected to result from the new Gas Directive, we have entered into a number of marketing joint ventures and we now have joint ventures in, among other countries, Austria, Finland, France, Germany, Hungary and Italy. See “—Marketing—International Projects and Alliances in Marketing.”

Developed reserves and production of natural gas and crude oil in western Europe are expected to decline in the next several years. For example, production of natural gas in the United Kingdom is expected to decrease by 2005 and, accordingly, its imports will increase to keep pace with the growth of demand. According to estimates by EC experts, the dependence of EU member states on imports of gas from third-party countries will grow from 40% in 2000 to 70% in 2020, which may lead to increased demand for Russian gas.

#### *Central and Eastern Europe*

The competitive pressures we face in central and eastern Europe are similar to those we face in western Europe, namely a liberalization of the natural gas market, privatization of natural gas companies and competition from other suppliers. As a result of existing historical and economic factors, as well as the geographical proximity of central and eastern European markets to Russia, we still consider ourselves to be the main supplier of gas to countries in this region. Despite the steps taken by central and eastern European countries to diversify their sources of gas supplies, we believe we will retain our role as the leading supplier of gas to central and eastern Europe.

#### *Russia and the FSU*

In Russia, we face competition from other crude oil and natural gas suppliers, in particular from independent suppliers in Russia. In the FSU, we face competition from independent suppliers in Russia and natural gas producing companies in Turkmenistan, Kazakhstan and Uzbekistan. Since April 1998, independent Russian suppliers have been granted non-discriminatory access to existing UGSS capacity in Russia. The independent suppliers (the largest of which include Eural Trans Gas, Itera, OAO NOVATEK, OOO Orensal and OAO Tsentrrusgaz) have historically been, and continue to be, our competitors. In our view, this position is mainly a result of the Government's policy of offering preferential terms for gas sales by such independent suppliers (for example, the low transportation tariff set by the Federal Energy Commission for transportation of natural gas through the UGSS). Additionally, such independent suppliers can generally be more flexible than we can be with respect to the contractual terms and conditions that they can offer to customers in Russia and the FSU, as they are not bound by the same strict regulatory requirements that apply to us. See “Overview of the Russian Gas Industry and its Regulation—Russian Regulation.”

In 2003, the independent suppliers accounted for 16.3% of natural gas transported through the UGSS, as compared to approximately 12.7% in 2002. However, the competitive position of alternative suppliers is limited by the relatively small size of their reserves base, relatively high costs of production and their dependence on access to our transportation network.

### **Research and Development**

We have pursued a policy of investing in research and development in a number of scientific and technical areas. In general, our research and development focuses on:

- economically efficient ways to develop newly discovered fields in regions such as the Obshk-Tazovskaya Bay, the Yamal Peninsula, the Barents Shelf and the Karsk Sea, eastern Siberia and the Russian Far East that are characterized by difficult climatic and geological conditions;
- maintaining production from existing fields with declining reserves;
- creating technology for the effective development of small natural gas fields and non-traditional resources, for example methane from coal fields;
- creating technology for the production, transportation and utilization of low-pressure natural gas reserves that remain in the earth during the final stages of gas field development;
- developing technology for the production and transportation of liquified gas and liquified natural gas;
- developing a diagnostic system, technical funds and a new generation of technology and equipment for maintaining the dependability and effectiveness of the UGSS; and
- creating energy-saving technology and equipment, and developing a comprehensive energy-saving scientific-technical program.

### **Support Activities**

Because of the broad geographic range of our core business, the remoteness of our fields and the relatively undeveloped infrastructure in the regions in which we produce natural gas, we operate our own electricity generation and communications operations as well as various other activities, such as food processing and procurement and transportation (including auto transport and aviation), to support the activities of the employees who work in the exploration, production, and transport of our gas.

We currently operate approximately 84,000 km of electricity transmission lines as well as approximately 1,700 electric power stations with a total capacity of 1.58 million kW. We produced approximately 1.4 billion kWh of electricity in 2003, compared to 1.3 billion kWh and 1.2 billion kWh in 2002 and 2001, respectively. Our own production of electricity accounts for only 7% of our total consumption, which totaled approximately 17.5 billion kWh in 2003. OOO Gazpromenergo, our wholly-owned subsidiary that manages our construction and maintenance of power stations and electrical lines, received permission to purchase electrical energy on the Russian wholesale spot electricity market starting from January 1, 2004. As a result of these purchases, we expect that expenses for the purchase of electricity by our subsidiaries will decrease by 10-15% over the next two years. We have also acquired interests in OAO Mosenergo and RAO UES. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisitions and Dispositions."

We operate an extensive internal communications network, which we maintain and operate in conjunction with the UGSS to help ensure the technical reliability and safety of the UGSS. The network consists of a ground-based network and a satellite system. As of December 31, 2003, the ground-based network included 84,800 km of cable communication lines, 20,500 km of multi-channel radio lines and 719 automated telephone stations with a total capacity of 282,500 numbers. The satellite system consists of the "Yamal-100" and two "Yamal-200" satellites and 116 land-earth satellite stations that transmit to and receive signals from the satellites. The Yamal-200 satellites were placed into orbit in November 2003, and have resulted in a seven-fold increase in the capacity of our communications system. Our own requirements will utilize approximately 25% of the total capacity of these satellites, with the balance being used by Government structures and leased by telecommunications companies. We have been expanding our telecommunications network in conjunction with our production and transportation projects, including the Zapolyarnoye field and construction of the Blue Stream, SRTO—Torzhok and Pochinki—Izobilnoye pipelines.

We also engage in various other activities that support our main business, including insurance and banking. We also own the largest non-state pension fund in Russia, Gazfund, which we use to provide pension services for our employees.

### *Insurance*

Exploration for and production, refining and transportation of natural gas, gas condensate and crude oil is hazardous. Natural disasters, operator error or other occurrences can result in oil spills, blowouts, cratering, gas leaks and fires, equipment failure and loss of well control, which can injure or kill people, damage or destroy wells and production facilities, and damage property and the environment.

We are insured through our wholly-owned insurance subsidiary Sogaz, which in turn reinsures approximately 95% of the coverage it provides to us through the international reinsurance market, mainly with western insurance companies. The premiums for the insurance that we obtain through Sogaz are generally consistent with market rates. Our insurance coverage falls into five principal categories: (i) insurance of fixed assets owned or leased by OAO Gazprom, including pipelines, compressor and gas distribution stations, gas processing plants, wells and production equipment and production and non-production buildings; (ii) insurance of the natural gas we transport through the UGSS in Russia; (iii) insurance of liabilities arising out of legal obligation to pay for damages to third parties and environmental damages resulting from malfunctions in our industrial facilities; (iv) insurance of the work and materials used in conducting repairs at our production facilities; and (v) insurance for the civil liabilities of our automobiles, in accordance with legislation that came into effect during 2003. We do not carry insurance for environmental damage arising from accidents on our property, business interruption insurance or insurance against terrorist attacks. We only carry such insurance for risks faced by OAO Gazprom and our principal subsidiaries, and as a result do not have full insurance for all of our plant facilities. See "Risk Factors—Risks Relating to our Business—We face certain operational risks which may result in losses and additional expenditures."

### *Gazprombank*

Gazprombank, Russia's third largest bank as measured by total assets and capital, services a majority of our banking needs (other than borrowings). Gazprombank was founded in 1990 with the primary goal of improving the quality and effectiveness of financial services to us and the Russian gas industry as a whole. Gazprombank's principal services comprise lending, deposit taking, securities and foreign exchange trading and trade finance. Gazprombank also generates income from providing settlement services for interregional payments for gas supplies, plastic card operations, depository and custodial services and servicing financings for us. Since its founding, Gazprombank has developed a network of 31 branch offices and 103 regional offices located throughout the Russian Federation. The bank also has shareholdings in nine other banks, which extends its network to approximately 270 banking offices in 50 regions of Russia, four regions of Belarus and Hungary. Its network extends to the principal regions where gas is extracted, produced and transported and to many of the largest financial and industrial centers in the Russian Federation.

Most of Gazprombank's funding is from, and most of its credit exposures are to us. Gazprombank's activities are closely linked to our requirements and pricing is determined accordingly.

Gazprombank had total assets under IFRS as recorded in its audited IFRS consolidated financial statements as of December 31, 2002 of U.S.\$4,937 million, of which transactions with our group accounted for U.S.\$2,770 million, and total liabilities of U.S.\$4,104 million, of which transactions with our group accounted for U.S.\$1,782 million. As of September 30, 2003, according to its unaudited IFRS consolidated financial statements Gazprombank had total assets of U.S.\$6,942 million, of which transactions with our group accounted for U.S.\$2,762 million, and total liabilities of U.S.\$5,886 million, of which transactions with our group accounted for U.S.\$2,458 million. As of December 31, 2002, transactions of Gazprombank with members of our group accounted for U.S.\$3,159 million (60%) of Gazprombank's total gross exposures (including assets and off-balance sheet commitments), and as of September 30, 2003 transactions of Gazprombank with members of our group accounted for U.S.\$3,117 million (44%) of Gazprombank's total gross exposures (including assets and off-balance sheet commitments).

As of December 31, 2002, approximately 69% of Gazprombank's total loans outstanding were either directly to, or were guaranteed by, members of our group and 58% of its current accounts and deposits were due to our group, as compared to 58% of total loans and 57% of current accounts and deposits as of September 30, 2003 (as well as of both dates a significant additional portion due to one of our associated

companies, Gazenergoprombank). A majority of its trade finance activity also related to us and most of its securities trading activities were in respect of our shares. The decline in the relative volume of loans to members of our group is attributable to Gazprombank's efforts to diversify its customer base in order to comply with Central Bank exposure limitations, though such loans as of September 30, 2003 still exceeded these limits. Gazprombank's principal outside customers include enterprises in the engineering, petrochemicals, transport, precious metals and precious stones, food processing, high technology machinery, pension fund and insurance sectors.

### **Non-Core Businesses**

In addition to the support activities described above, we have investments in various other businesses that are not related to our core operations. Such investments mainly represent equity holdings which have been received in the course of privatization (e.g. interests in agricultural, civil, construction and medical care enterprises) or acquired either through debt for equity swaps (e.g. stakes in regional utility companies) or directly for strategic and other considerations. One of our larger non-core businesses is Gazprom-Media, our subsidiary that manages our investments in a number of media holding companies, including NTV, Russia's largest independent TV channel. Following successful litigation to enforce a share pledge that was given as collateral for the guarantee by us of loans to Media-MOST, which was at the time NTV's parent company, as of December 31, 2002 we had a controlling interest of 95.6% in NTV and controlling interests in a number of other media companies. In October 2002, we signed a framework agreement to sell non-controlling interests in several media companies, including NTV, to Evrofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of Media-Most to us. As a result, our interest in NTV has been reduced to 65.3%. Under the framework agreement, Evrofinance Group is to contribute cash and these acquired interests into a new media holding company, of which we will own 51% and Evrofinance the balance. Our contribution into the new holding company will comprise our interests in certain of our media subsidiaries. These transactions were scheduled to be completed by the end of 2003, but as a result of the ongoing restructuring of Media-MOST they are now expected to be completed by the middle of 2004.

### **Health, Safety and Environment**

Our operations in Russia are subject to a number of environmental laws and regulations. These laws govern, among other things, regulations on the composition of emissions into the atmosphere, wastewater discharges and discharges to the sea, the use, handling and disposal of hazardous substances and wastes, soil and groundwater contamination and employee health and safety. As we are a production company, environmental liability risks are inherent in our operations. See "Risk Factors—Risks Relating to our Business—As an energy company we face significant environmental risks" and "Overview of the Russian Gas Industry and its Regulation—Russian Regulation—Environmental Requirements."

We also have an impact on the surrounding environment in the ordinary course of our business activities. However, we believe that our operations are generally in compliance with applicable environmental regulations.

We have developed and continue to improve a system for monitoring harmful leaks, water contamination, and the quality of air, water and soil in the Russian regions in which the UGSS infrastructure is located. In a number of regions this system has become an integral part of the Russian Federation's unified State Ecological Monitoring System. We have conducted an audit at seven of our principal subsidiaries in accordance with International Standard ISO 14000, a widely recognized set of environmental standards developed by the International Organization for Standardization, a nongovernmental body composed of national standard making bodies from over 140 countries. We intend to conduct such an audit of our other principal subsidiaries and to confirm that our environmental protection management system as a whole is ISO 14000 compliant.

In 2002, the General Prosecutor issued a report identifying several instances in which we were not in compliance with Russian environmental regulations. We have now brought our practices in line with the regulations.

To date, we have not had any serious accidents that have had a significant environmental impact.

Russian environmental legislation establishes a "pay-to-pollute" regime now administered by the Federal Service for Surveillance in the Sphere of Ecology and Environmental Use and regional

authorities. In accordance with this regime, we make statutory payments to ecological funds and state authorities for environmental pollution. We paid (in nominal RR amounts) RR75.8 million in 2000; RR119.0 million in 2001; RR83.2 million in 2002 and RR143.3 million in 2003. We have also paid (in nominal RR amounts) the following environmental penalties: RR0.8 million in 2000; RR0.8 million in 2001; RR0.8 million in 2002; and RR0.5 million in 2003 relating to environmental protection. Forthcoming changes in environmental legislation are expected to eliminate the "pay-to-pollute" regime in favor of increasing punitive payments for environmental violations. Since we paid only a small amount in environmental penalties, we anticipate that the environmental protection payments we make will decrease overall with the enactment of this new legislation.

Our balance sheet, prepared in accordance with IFRS, contains provisions for environmental payments (which take into account probable liabilities that can be reasonably estimated). Such provisions have been made in accordance with what we believe is a reasonable and prudent policy that takes into account payments made in prior years, among other factors. However, in Russia in particular, federal, regional and local authorities may enforce existing laws and regulations more strictly than they have done in the past and may impose stricter environmental standards or higher levels of fines and penalties for violations than those now in effect. Accordingly, we are unable to estimate the future financial impact of our environmental obligations with a high degree of certainty. However, we do not expect environmental obligations to have a material adverse effect on our future financial condition.

We have one trade union, the Gazprom Inter-Regional Trade Union Organization of the Oil, Gas and Construction Employees of the Russian Federation, to which 89.8% of our employees belonged as of December 31, 2003. We have entered into a tariff agreement with the union for 2004 through 2006 which, among other things, sets forth our health and safety procedures. Compliance with these obligations is monitored by the trade union. On the basis of a package of social and labor-related, organizational and technical, health-care and preventive, and sanitary and hygienic measures, we have developed and operate a unified labor protection and industrial safety management system and our subsidiary companies and organizations are developing labor protection agreements and financing their activities. Our obligations with respect to employee health and safety procedures did not change materially under our new agreement with the union, which replaced an agreement that expired at the end of 2003.

### **Litigation and Investigations**

We are from time to time the subject of legal proceedings and other investigations in the ordinary course of our business.

In 2001, we received a request for information from the European Commission with respect to the destination clause in our contract with an Italian off-taker, under which the Italian off-taker is prevented from re-exporting gas that it purchases from us. The European Commission's original position was that the inclusion of destination clauses violated EU legislation. During the course of consultations with us, the European Commission modified its position and recognized the need to find alternatives to destination clauses that are economically viable for suppliers of natural gas. We no longer include such clauses in new contracts.

OAO ANGK Neftegaspostavka ("Neftegaspostavka") has filed two claims against us resulting from our refusal to grant Neftegaspostavka access to our pipelines, allegedly in breach of anti-monopoly regulation. The first claim, relating to claims arising in 1999, resulted in a judgment against us of RR177 million. The second claim, relating to claims arising in 2000, initially resulted in a judgment against us by the Moscow City Arbitration Court of RR726 million, reduced to RR480 million in September 2003. This judgment was dismissed and the claim against us rejected on appeal in March 2004. In general, OAO Gazprom remains confident that it conducts its operations, including making its pipelines available for third party use, in compliance with applicable anti-monopoly regulations.

Rosgazifikatsiya filed a claim against SR-DRAGA (our share registrar) to recover damages in the amount of RR717.2 million as a result of the alleged negligent performance of its obligations as a registrar in relation to one specific share transfer of 50 million of our shares that were owned by Rosgazifikatsiya in 2000. Under Russian law, we are liable for the actions of our registrar and accordingly were joined as a codefendant to the claim. The court of first instance ordered SR-DRAGA to pay RR539 million in settlement of the claim. After appeals by SR-DRAGA the Federal Arbitration Court of the Moscow Region overturned the decision of the court of first instance. Rosgazifikatsiya appealed the decision to the Supreme Arbitration Court, which remanded it for a new review in the court of first instance. Rosgazifikatsiya subsequently abandoned this suit. On appeal by the Ministry for Property Relations,

the Higher Arbitration Court referred the matter for further review in the appellate court. . A decision has not been announced. We believe the claims to be without merit and are vigorously defending against them.

On March 31, 2003, the Ministry of the Russian Federation for Antimonopoly Policy and Support of Entrepreneurship (the "MAP") issued a decision finding conduct by Gazprom, Mezhrefiongaz and three regional trade houses to have violated the Federal Law "On Competition and the Limitation of Monopolistic Activities in Trading Markets." The MAP found that the regional gas marketing companies had encouraged consumers to accept more expensive gas purchased on the electronic spot trading market, rather than available gas at the lower regulated prices. See "Marketing—Russia—Domestic Market Conditions." As a result of these activities, Lipetskreiongaz, Kirovregiongaz and Chuvashregiongaz temporarily suspended their participation in electronic gas trading. The MAP also found that we had established internal gas transportation tariffs (i.e., tariffs for gas transported from one company to another within our consolidated group) higher than those prescribed by the FEC. We were ordered to set our internal transportation tariffs at the rates established by the FEC, and we have now fully complied with this order.

On January 15, 2004, the MAP issued a decision finding that OAO Gazprom, Mezhrefiongaz and the FEC had engaged in activities that limited competition in the household gas distribution market in the Krasnodar region. Our gas marketing subsidiaries refused to enter into gas supply agreements with regional gas distribution companies and instead entered into gas supply agreements directly with households, and the FEC delayed the review of tariffs for gas transportation by these regional gas distribution companies. The MAP ordered the cessation of these violations. Mezhrefiongaz has appealed the decision in the Moscow City Arbitration Court, and a hearing occurred on April 8, 2004. The decision is expected to be forthcoming.

We initially held a 51% stake in Nortgaz, a company that holds licenses for the development of the North Urengoiskoye field, through our subsidiary Urengoigazprom. Our initial stake was reduced to 0.5% in 2001 as a result of a court decision invalidating our participation in a share issuance by Nortgaz in 1999 on the basis that the value of the property that we contributed to the company had not been approved by the Nortgaz Board of Directors. We are currently attempting to reacquire the Nortgaz shares we lost as a result of this prior decision through further court actions. A hearing on the reorganization of ZAO Nortgaz into OOO Nortgaz is scheduled to occur in the Yamal-Nenets Arbitration Court. We are currently considering settlement proposals from Nortgaz that would restore control over Nortgaz to our subsidiary Urengoigazprom.

The Prosecutor of the Tomsk region filed suit against the regional administration and the regional Committee for Natural Resources seeking to invalidate the 1995 order by the Tomsk Oblast Geological Committee reregistering a production license for the Myldzhinskoye Field from OAO Tomskneft VNK to OAO Tomskgaz ("Tomskgaz") and the subsequent 1998 transfer of the license from Tomskgaz to its wholly-owned subsidiary OAO Tomskgazprom. We owned Tomskgaz jointly with OAO Tomskneft VNK and OAO VNK, and from 1996 through 2002 held a controlling interest in Tomskgaz. While this claim was dismissed in October 2002, this judgment was reversed and the case remanded for a new trial on appeal in January 2003. On appeal, the court again rejected the request to invalidate the transfer of the license to Tomskgaz and OAO Tomskgazprom.

We are currently involved in a dispute over ZAO Stimul, an oil company in Russia. In connection with this dispute, Victory Oil B.V. commenced an arbitration in New York on March 22, 2004 under the auspices of the American Arbitration Association against OAO Gazprom and its wholly-owned subsidiary OOO Orenburggazprom seeking U.S.\$200 million for alleged breach of a June 22, 2000 Investment Agreement between Victory Oil B.V., OOO Orenburggazprom, ZAO Stimul, and Avalon International L.C. OAO Gazprom is not a party to the Investment Agreement, but is alleged to bear responsibility for the breach under theories of agency and alter ego. We intend to defend these allegations vigorously.

These proceedings and investigations have not had, and are not expected to have, individually or in the aggregate, a material adverse effect on our business, operations and financial condition or on our ability to service our payment obligations under the Notes.

**Employees**

For the years ending December 31, 2002, 2001 and 2000, we had a weighted average of approximately 301 thousand, 304 thousand and 306 thousand employees, respectively.

We have one trade union to which 89.8% of our employees belonged as of December 31, 2003. We have never experienced any strikes, work stoppages, labor disputes or actions that have affected the operation of our business and we consider our relationship with our employees to be good.

## MANAGEMENT

The current members of our Board of Directors are as follows:

<u>Name</u>	<u>Position</u>	<u>Year of Birth</u>	<u>Term expires</u>
D. Medvedev	Chairman of the Board of Directors; Head of the Presidential Administration of the Russian Federation	1965	June 27, 2004
A. Miller	Deputy Chairman of the Board of Directors; Chairman of the Management Committee	1962	June 27, 2004
A. Ananenkov	Deputy Chairman of the Management Committee	1952	June 27, 2004
B. Bergmann	Chairman of the Management Committee of Ruhrgas	1943	June 27, 2004
B. Fedorov	Head of the political movement "Russia, Ahead!"	1958	June 27, 2004
F. Gazizullin	Former Minister of Property Relations of the Russian Federation	1946	June 27, 2004
G. Gref	Minister for Economic Development and Trade of the Russian Federation	1964	June 27, 2004
V. Khristenko	Minister for Industry and Energy of the Russian Federation	1957	June 27, 2004
A. Levistskaya	First Deputy Head of the Secretariat of the Presidential Administration of the Russian Federation	1954	June 27, 2004
M. Sereda	Head of Gazprom's Management Committee Office	1970	June 27, 2004
I. Yusufov	Former Minister of Energy of the Russian Federation	1956	June 27, 2004

The current members of our Management Committee are as follows:

<u>Name</u>	<u>Position</u>	<u>Year of Birth</u>	<u>Term expires</u>
A. Miller	Chairman of the Management Committee; Deputy Chairman of the Board of Directors	1962	May 29, 2006
A. Ananenkov	Deputy Chairman of the Management Committee	1952	December 16, 2006
E. Vasilieva	Deputy Chairman of the Management Committee; Chief Accountant	1959	November 26, 2006
N. Guslisty	Deputy Chairman of the Management Committee	1933	September 26, 2007
Y. Komarov	Deputy Chairman of the Management Committee	1945	August 20, 2008
A. Ryazanov	Deputy Chairman of the Management Committee	1953	November 26, 2006
S. Ushakov	Deputy Chairman of the Management Committee	1952	April 17, 2008
B. Yurlov	Former Deputy Chairman of the Management Committee	1948	June 19, 2007
M. Akselrod	Management Committee Member (Capital Construction)	1946	November 26, 2006
B. Budzulyak	Management Committee Member (Gas Transportation System)	1946	June 18, 2006
K. Chuichenko	Management Committee Member (Legal)	1965	September 26, 2007
V. Golubev	Management Committee Member; General Director of OOO Gazkomplektimpex	1952	April 17, 2008
V. Ilyushin	Management Committee Member (Relationships with Regional Authorities)	1947	September 26, 2007
A. Kruglov	Acting Deputy Chairman of the Management Committee; Head of Department of Finance and Economics	1969	June 19, 2007
A. Medvedev	Management Committee Member; General Director of Gazexport	1955	September 26, 2007
O. Pavlova	Management Committee Member (Property Management)	1953	January 5, 2009
V. Podyuk	Management Committee Member (Gas, Gas Condensate and Oil Production)	1946	September 26, 2007
V. Rusakova	Management Committee Member (Strategy and Development)	1953	September 4, 2008
K. Seleznev	Management Committee Member (Marketing, Gas and Liquid Hydrocarbon Processing)	1974	September 26, 2007

## **Director Biographies**

*D. Medvedev.* Dmitri Anatolievich Medvedev has been the Chairman of our Board of Directors since June 2002. Previously, Mr. Medvedev was the Chairman of the Board of Directors from June 2000 through June 2001 and our Deputy Chairman of the Board of Directors of the Company from June 2001 through June 2002. Mr. Medvedev is Deputy Head of the Presidential Administration of the Russian Federation (since 2003). He was First Deputy Head of the Presidential Administration of the Russian Federation (2000-2003), Deputy Head of the Presidential Administration of the Russian Federation (1999-2000), Deputy Head of the Administration of the Government of the Russian Federation (1999) and an assistant at St. Petersburg State University (1990-1999).

*A. Miller.* Alexei Borisovich Miller has been the Deputy Chairman of our Board of Directors since June 2002 and the Chairman of our Management Committee since May 2001. He was appointed to his position as Chairman of the Management Committee by the Government of the Russian Federation, our major shareholder. Mr. Miller is also Chairman of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002) and a member of the Board of Directors of Closed Joint Stock Company Russian Company for the Reclamation of the Shelf (since May 2002). Mr. Miller was deputy Minister of Energy of the Russian Federation (2000-2001); Chairman of the Supervisory Council of Joint Stock Company EuRoPol GAZ (March-June 2002); Chairman of the Management Committee of Joint Stock Company Nord Transgaz (2001-2002); Chairman of the Board of Directors of Open Joint Stock Company Vostokgazprom (2001-2002); and General Director of the Open Joint Stock Company Baltiiskaya Truboprovodnaya Sistema (Baltic Pipeline System) (1999-2000).

*A. Ananenkov.* Alexander Georgievich Ananenkov has been a member of our Board of Directors since June 2002 and the Deputy Chairman of our Management Committee since December 2001. Mr. Ananenkov is also Chairman of the Board of Directors of Open Joint Stock Company Vostokgazprom (since May 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since April 2000); and a member of the Board of Directors of Open Joint Stock Company Zapsibcombank (since April 1997). Mr. Ananenkov was General Director of Yamburggazdobycha from 1997 through 2001.

*B. Bergmann.* Burckhard Bergmann has been a member of our Board of Directors since 2000. He is elected to the Board by Ruhrgas AG, one of our major shareholders. Mr. Bergmann has been the Chairman of the Executive Board of Ruhrgas AG since June 2001, and was previously Deputy Chairman. He is also a member of numerous supervisory boards, including the Supervisory Board of Allianz Lebensversicherungs-AG and as the Chairman of the Supervisory Board of VNG-Verbundnetz Gas AG and Mittel-Europäische Gasleitungsgesellschaft mbH.

*B. Fedorov.* Boris Grigorievich Fedorov has been a member of our Board of Directors since July 2000. He is also a member of the supervisory board of the Savings Bank of Russia (since July 1999). Mr. Fedorov was a member of the Board of Directors of Russian Joint Stock Company UES (1999-2001); Chairman of the Board of Directors of Unified Financial Group (through 1998); and Chairman of the Board of Directors of Vostok-Zapad Bank from (1997-1998). He also serves as Head of the political movement "Russia, Ahead!"

*F. Gazizullin.* Farit Rafikovich Gazizullin has been a member of our Board of Directors since June 1998. He was the Chairman of our Board of Directors from June 1998 through June 1999. Mr. Gazizullin is also a member of the Board of Directors of Open Joint Stock Company FSK UES (since January 2002) and a member of the Board of Directors of Open Joint Stock Company SO-TsDU UES (since June 2002). Mr. Gazizullin was the Minister for Property Relations of the Russian Federation (2000-2004); Minister for State Property of the Russian Federation (1998-2000); Deputy Chairman of the Government of the Russian Federation—Minister for the State Property of the Russian Federation (1997-1998); and First Deputy Chairman of the State Committee for Property of the Russian Federation and the First Deputy Minister for the State Property of the Russian Federation (1996-1997).

*G. Gref.* German Oskarovich Gref has served as a member of our Board of Directors since June 1999. From 1998-2000 he was First Deputy Minister for State Property of the Russian Federation. Since 2000 he has served as Minister for Economic Development and Trade of the Russian Federation.

*V. Khristenko.* Victor Borisovich Khristenko has been a member of our Board of Directors since 2000. Mr. Khristenko has been the Minister for Industry and Energy of the Russian Federation since March 2004. In 1998 he served as Deputy Prime Minister of the Russian Federation. From 1998 to 1999 he served as First Deputy Minister of Finance of the Russian Federation. In 1999 he was acting state-secretary of the First Deputy Minister of Finance of the Russian Federation. From 1999 to 2000 he served as First

Deputy Prime Minister of the Russian Federation. From 2000 through 2004 he served as Deputy Prime Minister of the Russian Federation, including serving as Acting Prime Minister from February 24, 2004 to March 5, 2004.

*A. Levistskaya.* Alexandra Yurievna Levistskaya has been a member of our Board of Directors since 2001. She is the First Deputy Head of the Management Secretariat of the Presidential Administration of the Russian Federation (since June 2000). She was the assistant to the Head of the Administration of the President of the Russian Federation (1999-2000); President of the Federal Stock Corporation (1998-1999); and Director of the Department for Administrative Questions and the Executive Director of Open Joint Stock Company Federalnaya Fondovaya Corporatsiya (Federal Stock Corporation) (1995-1998).

*M. Sereda.* Mikhail Leonidovich Sereda has been a member of our Board of Directors since June 2002 and Head of our Administration of our Management Committee since July 2001. Mr. Sereda is also a member of the Board of Directors of Joint Stock Company Global Bank for Values Circulation (since August 2001); a member of the Supervisory Board of Wintershal Erdgaz Handelshaus GmbH (since March 2002); a member of the Supervisory Board of WINGAS GmbH (since March 2002); a member of the Board of Directors of Gazprom UK Ltd. (since April 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002); a member of the Board of Directors of Open Joint Stock Company Vostokgazprom (since June 2002); and the Managing Director of Limited Liability Company Gazprom Finance B.V. (since July 2002). Mr. Sereda was the Deputy Head for Economy of Branch BTS of Open Joint Stock Company Verhnevolzhskie Magistralnye Nefteprovody (Verhnevolzhskie Trunk Pipelines) (May-July 2001); Deputy General Director for Finance of Open Joint Stock Company Baltic Pipeline System (then Branch BTS of Open Joint Stock Company Verhnevolzhskie Magistralnye Nefteprovody (Verhnevolzhskie Trunk Pipelines) (1999-2001).

*I. Yusufov.* Igor Khanukovich Yusufov has been a member of our Board of Directors since June 2003. He served as Minister of Energy of the Russian Federation from 2001 through March 2004. He previously served as General Director of the Russian Agency for Government Reserves.

#### **Management Committee Biographies**

*A. Miller.* See “—Director Biographies.”

*A. Ananekov.* See “—Director Biographies.”

*E. Vasilieva.* Elena Alexandrovna Vasilieva has been a Deputy Chairman of our Management Committee, and our Chief Accountant since September 2001. Ms. Vasilieva is also a member of the Board of Directors of Open Joint Stock Company Lazurnaya (since June 2002); a member of the Board of Directors of Closed Joint Stock Company Yamalgazinvest (since June 2002); a member of the Board of Directors of Joint Stock Bank Gazprombank (since June 2002); a member of the Board of Directors of Gazprom UK Ltd. (since April 2002); and a member of the Supervisory Board of Slavrusgaz (since November 2002). Ms. Vasilieva previously the Chief Accountant of Open Joint Stock Company Baltic Pipeline System and the Chief Accountant of Branch BTS of Open Joint Stock Company Verhnevolzhskie Trunk Pipelines (1999-2001).

*N. Guslisty.* Nikolai Nikiforovich Guslisty has been a member and Deputy Chairman of our Management Committee since April 1997. He is also Chairman of the Board of Directors of Limited Liability Company Gazprommedstrakh (since April 1998) and Chairman of the Board of Directors of Commercial Bank Olimpiiskii (since February 1998). Mr. Guslisty was Chairman of the Boards of Directors of Limited Liability Company Volgogradneftemash and of Open Joint Stock Company Lazurnaya (1996-2002); and was a member of the management and General Director of PKP Gazcompromselstroi (1997).

*Y. Komarov.* Yuri Alexandrovich Komarov has been a Deputy Chairman of the Management Committee since 2002 and a member of the Management Committee since 1998. He also served as head of the department for foreign affairs from 1998 to 2002. Mr. Komarov is the Chairman of the Board of Directors at Closed Joint Stock Company Gaztransit; Chairman of the Board of Directors of Joint Stock Company Yugrosgaz; Chairman of the Board of Directors of Closed Joint Stock Company Zarubezhneftegaz; and a member of the Management Committee of BSPC.

*A. Ryazanov.* Alexander Nikolaevich Ryazanov has been a Deputy Chairman of our Management Committee since November 2001. He also serves as Chairman of the Board of Directors of Joint Stock Company Sibur; as Chairman of the Board of Directors of Joint Stock Company Volgogradneftemash; as Chairman of the Board of Directors of Joint Stock Company Salavatnefteorgsyntez; as a member of the Supervisory Committee of Joint Stock Company Gazum; and as a member of the Board of Directors of

Joint Stock Company Zapsibgazprom. Mr. Ryazanov served as a delegate to and Deputy Chairman of the Property Committee of the State Duma of the Federal Assembly of the Russian Federation from December 1999 through November 2001. He was a delegate to the legislative body of Tyumen region and a deputy of the legislative body of Khanty-Mansiisk autonomous region (1999); and General Director of Open Joint Stock Company Surgutskii Gazopererabatyvayushii Zavod (Surgut Gas-Processing Plant) (1994-1999).

*S. Ushakov.* Sergey Konstantinovich Ushakov was born in 1952 in Leningrad and graduated from Leningrad State University in 1974. Mr. Ushakov has been a member of our Management Committee and General Director of the Security Service of OAO Gazprom since February 2003. He was Deputy Director of the Federal Protection Services from 2002 until February 2003 and was employed by the Directorate of the Federal Securities Service for St. Petersburg and the St. Petersburg region from 1974 until 2002.

*B. Yurlov.* Boris Dmitrievich Yurlov was the Deputy Chairman of our Management Committee from June 2002 through April 2004. Mr. Yurlov was previously Deputy and subsequently First Deputy Manager of Affairs of the President of the Russian Federation (2000-2002) and Director of the Department of Project Financing of the Savings Bank of Russia (1998-2000).

*M. Akselrod.* Mikhail Arkadievich Akselrod has been a member of our Management Committee and Head of our Department of Capital Construction and Transportation since April 2002 and Head of our Department of Investments and Construction since September 2001. Mr. Akselrod also serves as Chairman of the Board of Directors of Closed Joint Stock Company Informgazinvest (since August 2002); Chairman of the Board of Directors of Closed Joint Stock Company Yamalgazinvest (since July 2002); a member of the Board of Directors of Limited Liability Company Gazpromrazvitie (since October 2002); General Director of Closed Joint Stock Company Gazpromstroieniengineering (since October 2002); Chairman of the Board of Directors of the Closed Joint Stock Company Kostromatrubinvest (since April 2002); Chairman of the Board of Directors of Open Joint Stock Company Spetsavtotrans (since June 2002); Chairman of the Board of Directors of Open Joint Stock Company Tsentr-gaz (since April 2002); a member of the Board of Directors of Open Joint Stock Company Druzhba (since June 2002); a member of the Board of Directors of Open Joint Stock Company Zapsibgazprom (since May 2002); a member of the Board of Directors of Open Joint Stock Company Zavod po Proizvodstvu Trub Bolshogo Diametra (since May 2002); Chairman of the Board of Directors of Open Joint Stock Company Krasnodargazstroii (since May 2002); a member of the Management of Joint Stock Company Turusgaz (since February 2002); and General Director of Closed Joint Stock Company Gazpromstroieniengineering (since June 2002). He was the Deputy Director (1999-2000), Director for Investments and Constructions of Lenenergo (2000-2001) and Director for Use of Stations (2001) of Open Joint Stock Company Lenenergo; and President of Company Trade House Yappilya (from 1995-1999).

*B. Budzulyak.* Bogdan Vladimirovich Budzulyak has been a member of our Management Committee since 1993 and Head of our Department of Gas Transportation, Underground Storage and Utilization since 2001. He also previously served as Head of our Department of Gas Transportation and Utilization. Mr. Budzulyak is also a member of the Administrative Council of Joint Stock Company Promgas (Italy); Chairman of the Administrative Council of Joint Stock Company Overgas Inc. (Bulgaria); Chairman of the Administrative Council of Joint Stock Company Topenergy (Bulgaria); a member of the Management Committee of Joint Stock Company Panrusgas (Hungary); a member of the Supervisory Council of Joint Stock Company EuRoPol GAZ (Poland); the Chairman of the Board of Directors of Closed Joint Stock Company Gaztelekom; Chairman of the Board of Directors of Open Joint Stock Company Gazcom; Chairman of the Board of Directors of Limited Liability Company Gazpromenergo; a member of the Board of Directors of Open Joint Stock Company Vostokgazprom; Chairman of the Board of Directors of Open Joint Stock Company Tomskgazprom; the Chairman of the Board of Directors of Closed Joint Stock Company Iskra-Avigaz; a member of the Board of Directors of Closed Joint Stock Company Yamalgazinvest; Chairman of the Board of Directors of Closed Joint Stock Company AKB Moskovskii Vekselnyi Bank; Chairman of the Board of Directors of Open Joint Stock Company Global Exchange Russian Gas; and Chairman of the Board of Directors of Closed Joint Stock Company Trade House Rus-gaz.

*K. Chuichenko.* Konstantin Anatolievich Chuichenko has been a member of our Management Committee since September 2002 and Head of the Legal Department since May 2001. Mr. Chuichenko is also Chairman of the Board of Directors of Closed Joint Stock Company Gazpromstroieniengineering; a member of the Board of Directors of Closed Joint Stock Company TNT-Teleset (since July 2002); Chairman of the Board of Directors of Open Joint Stock Company Gazprom-Media (since July 2002); Chairman of the Board of Directors of Open Joint Stock Company Zapsibgazprom (since May 2002); a

member of the Board of Directors of Open Joint Stock Company Lazurnaya (since June 2002); a member of the Board of Directors of Open Joint Stock Company Gazprommedstrakh (since June 2002); and a member of the Moscow branch of the International St. Petersburg Bar Association (1997-2001).

*V. Golubev.* Valeri Alexandrovich Golubev has been a member of our Management Committee since June 2003. Since February 2003 he has also served as the General Director of Limited Liability Company Gazkomplektimpex. From 2002 to 2003 he served as the representative of the Legislative Assembly of the Leningrad Region in the Federal Council of the Federal Assembly of the Russian Federation. He has also been the Chairman of the Tourism Committee of the St. Petersburg Administration (1999 to 2002) and Head of the Vasileostrovski Administrative District of St. Petersburg (1993 to 1999).

*V. Ilyushin.* Viktor Vasilievich Ilyushin has been a member of our Management Committee since 1997 and the Department Head of our Department for Relationships with Regions of the Russian Federation since 1998. Mr. Ilyushin is also a member of the Board of Directors of Joint Stock Company Gazprommedstrakh (since June 2002).

*A. Kruglov.* Andrei Vyacheslavovich Kruglov has been a member of our Management Committee since 2002 and Head of our Department of Finance and Economics since 2003. He has also been Acting Deputy Chairman of the Management Committee since April 2004. Mr. Kruglov is also a member of the Boards of Directors of Open Joint Stock Company Sibur (since June 2002) and of Joint Stock Company Global Bank for Value Circulation (since September 2002). He was Head of our Department of Corporate Finance (2002-2003); Deputy Director of OOO Invest-In (2001-2002); Head of Group of Financial and Credit Cooperation of the Department of Technical Cooperation with Foreign Countries and International Organizations of the Managing Department for Foreign Economic Cooperation of the Department for Foreign Trade and Investments of the Managing Department for Foreign Economic Cooperation of St. Petersburg Administration (1995 to 2001); and an inspector of management of the international operations of BNP-Dresdner Bank (Russia) (1994 to 1995).

*A. Medvedev.* Alexander Ivanovich Medvedev has been a member of our Management Committee since 2002. He is the General Director of Limited Liability Company Gazexport. Mr. Medvedev was the Director of Company IMAG GmbH (1997, 1998-2002) and Vice-President of Open Joint Stock Company Vostochnaya Neftyanaya Companiya (1997-1998).

*O. Pavlova.* Olga Petrovna Pavlova has been a member of our Management Committee since 2004 and Head of our Department Property Management and Corporate Relations since 2003. Previously, she served as Deputy Head of the Economic Management of the Presidential Administration of the Russian Federation (2002-2003) and Senior Lecturer of the Department of Civil Law at St. Petersburg State University (1999-2002).

*V. Podyuk.* Vasili Grigorievich Podyuk has been a member of our Management Committee and Head of our Department for Gas, Gas Condensate and Oil Production since August 1997. He is also a member of the Board of Directors of Open Joint Stock Company Commercial Bank Severgazbank (since April 2002) and a member of the Board of Directors of Closed Joint Stock Company Informgazinvest (since June 2002). Mr. Podyuk was a member of the Board of Directors of Open Joint Stock Company Sibur (2001-2002); a member of the Board of Directors of Gazprom UK Ltd. (1999-2002); and Chairman of the Supervisory Council of Open Joint Stock Company Cherepovetskii Azot (2000-2001).

*V. Rusakova.* Vlada Vilorikovna Rusakova has been a member of our Management Committee since 2003, and Head of our Department of Planning Growth, Science and the Environment since 2002. She was Head of our Department for Forecasting Growth Strategies (1998-2002). She also serves as chair of the board of directors of OAO Promgaz; a member of the boards of directors of AO Latvias Gaze and OAO Krasnoyarskgazprom; and a member of the Management Committee of AO Nord Transgaz, all since 2003.

*K. Seleznev.* Kirill Gennadievich Seleznev has been a member of our Management Committee since September 2002 and is Head of our Department for Marketing and Processing of Gas and Liquid Hydrocarbons. He is also Chairman of the Board of Directors of Closed Joint Stock Company Armrosgazprom (since June 2002); Chairman of the Board of Directors of Closed Joint Stock Company Sevmorneftegaz (since August 2002); a member of the Board of Directors of Joint Stock Company Latvias Gaze (since June 2002); a member of the Board of Directors of Sibur (since June 2002); a member of the Board of Directors of Rosshelf (since May 2002); and a member of the Board of Directors of Open Joint Stock Company Druzhba (since June 2002). He was Deputy Head of the Management Apparatus and assistant to the Chairman of the Management Committee of Gazprom (2001 to 2002); Head of the

Tax Group of the Open Joint Stock Company Baltic Pipeline System (2000 to 2001); Chief Specialist of the Group for the Coordination of Investment Activities of Open Joint Stock Company St. Petersburg Sea Port (1999 to 2000); and leading Securities Specialist of the Stock Operations Department of Open Joint Stock Company Investment and Finance Group Management-Investments-Development (1998-1999).

### **Description of our Management**

In accordance with the Joint Stock Companies Law and our Charter, we are governed by our General Meeting of Shareholders, Board of Directors, Management Committee and the Management Committee Chairman. The General Meeting of Shareholders is our highest governing body and, among other things, elects our Board of Directors. In practice, our Board of Directors is responsible for formulating our strategy and the Management Committee is responsible for implementing the strategy and managing the Company on a day-to-day basis.

#### *General Meeting of Shareholders*

The General Meeting of Shareholders takes place annually, usually in June. The following decisions can be taken only by the General Meeting of Shareholders: amendments to the Charter, the reorganization or liquidation of the Company, the election of the members of our Board of Directors and Audit Commission, determination of the quantity, category, nominal price, number of authorized shares, increases in the charter capital (where such decision is reserved for the General Meeting of Shareholders by law and by the Charter), reduction of the charter capital, approval of the annual report and annual accounts, approval of large transactions and transactions that involve interested parties (in accordance with the terms of Chapters X and XI of the Joint Stock Companies Law).

#### *Board of Directors*

The Board of Directors is responsible for the general management of our activities. The Board of Directors must consist of a minimum of nine persons; at present, it has 11. Six members of the Board of Directors hold positions in the Government or in the Presidential Administration. The Chairman of the Management Committee, a member of the Management Committee and a member of our administration were all elected to the Board of Directors.

The powers of our Board of Directors include the following: to determine the priorities of our operations; to approve annual budgets; to call General Meetings of Shareholders and to determine the agenda for such meetings; to determine the record date for General Meetings of Shareholders and for the payment of dividends; to increase our charter capital (except where such increase is within the competence of the General Meeting of Shareholders); to issue bonds or other securities in accordance with the Joint Stock Companies Law; to appoint our executive bodies (i.e., the Management Committee and the Chairman of the Management Committee); to decide on early termination of the powers of these bodies; to nominate candidates for the position of Deputy Chairman of the Management Committee; to determine the remuneration of the Chairman and members of the Management Committee; to recommend the size of dividends; to use the reserve and other funds; to create branch and representative offices; to specify the means of effecting transactions; to adopt decisions on certain major transactions and certain "interested party" transactions (except such major or interested party transactions, the approval of which is within the competence of the General Meeting of Shareholders); and to establish the terms of cooperation with subsidiaries and organizations of which Gazprom holds stock and equity participations.

Members of the Board of Directors are elected by the shareholders through a system of cumulative voting until the next annual General Meeting of Shareholders and may be re-elected any number of times. The General Meeting of Shareholders may also terminate the authority of all members of the Board of Directors. Members of the Management Committee may not comprise more than one-quarter of the Board of Directors and there must be at least nine Directors at all times. The Chairman of the Board of Directors is elected by the members of the Board of Directors by a majority vote of all members of the Board of Directors and may be re-elected at any time by a special resolution requiring at least a two-thirds majority. The Chairman of the Management Committee cannot simultaneously serve as the Chairman of the Board of Directors.

#### *Management Committee*

The Management Committee and the Chairman of the Management Committee manage our day-to-day affairs. The Chairman and members of the Management Committee are appointed by the

Board of Directors for a term of five years. The Board of Directors has the right to terminate the authority of any Management Committee members as well as the Chairman of the Management Committee.

The competence of the Management Committee includes: (i) development of forward-looking plans and principal programs, including our annual budget and investment programs, preparation of reports on the implementation of those programs for submission to our Board of Directors; (ii) organization of gas flow management and management of the UGSS; (iii) organizing control over the development of our current and prospective plans and programs; (iv) securing the organization and reliability of our bookkeeping accounts and the timely preparation of the annual report and other financial reports; and (v) presenting information about our activities for the use of shareholders, creditors, and the media.

The Management Committee meets at least twice every month in accordance with a schedule which is approved by the Chairman of the Management Committee.

#### *Chairman of the Management Committee*

The Chairman of the Management Committee has authority to act in our name without power of attorney, present our interests, approve staff, issue orders and decrees, give instructions to be carried out by all the employees of Gazprom, and issue internal documents with respect to the current activities with the exception of internal documents which are within the competence of our other management organs.

### **Additional Information about our Directors and Management Committee Members**

#### *Directors' and Officers' Compensation*

Our shareholders determine the compensation of directors at each General Meeting of Shareholders. Our Charter does not contain any provisions directly relating to the power of directors to approve remuneration (including pensions or other benefits) for themselves or any other member of our Board of Directors.

In the year ended December 31, 2003, we paid compensation (salaries and pensions) to our directors and members of the Management Committee of RR222.5 million, as compared to RR128.0 million in the year ended December 31, 2002.

#### *Share Ownership of Directors, Management Committee Members and Employees*

The aggregate direct ownership of shares by the members of our Management Committee and Board of Directors was 0.013% and 0.003%, respectively, at September 30, 2003.

## SHAREHOLDING STRUCTURE

As of September 30, 2003 our charter capital was RR118,367,564,500, consisting of 23,673,512,900 shares with a nominal value of RR5 each.

Pursuant to Government Resolution No. 654 of May 30, 1997, our shares are traded in Russia on the Moscow Stock Exchange, the St. Petersburg Stock Exchange, the Yekaterinburg Stock Exchange and the Siberian Stock Exchange.

We have held shareholders' meetings since 1995. The number of our shareholders has decreased from 1,030,002 in 1995 to approximately 477,059 as at December 31, 2003.

Presidential Decree of the Russian Federation No. 529 of May 28, 1997 limited foreign equity participation in the Company to 9% of our shares. Presidential Decree of the Russian Federation No. 943 of August 10, 1998 authorized the sale of a further 5% of our shares to foreign shareholders. Only 2.5% out of the 5% authorized has been sold, and therefore the current level of foreign equity participation is currently 11.5%. The Gas Supply Law also limits foreign shareholdings in our charter capital to 20%.

In 1996, we placed shares representing 1.98% of our charter capital on the foreign markets in the form of American Depositary Shares ("ADS"). Due to the restrictions on foreign equity ownership that prevent the purchase of our shares by foreign participants in the domestic market, the issue of ADSs created a dual market in our shares, with the ADSs trading at a substantial premium over our shares in the domestic market. In 1999, Ruhrgas acquired 1% of our shares in the form of ADSs. Between December 2000 and January 2001 an additional 1.44% of our shares were sold to foreign investors in the form of ADSs. As of September 30, 2003, 4.42% of our shares are held in the form of ADSs. Our ADSs are currently listed on the London Stock Exchange. In April 2001, President Putin established a working group to examine ways in which to liberalize the current dual market in our shares.

The following table summarizes our shareholding structure as at September 30, 2003:

<u>Shareholders</u>	<u>%</u>
Russian Federation <sup>(1)</sup> .....	38.37
Our subsidiaries <sup>(2)</sup> .....	17.33
Foreign shareholders other than our subsidiaries <sup>(3)</sup> .....	6.92
Other <sup>(4)</sup> .....	<u>37.38</u>
Total .....	<u><u>100.00</u></u>

Notes:

- (1) Six of the 11 members of our Board of Directors are representatives of the state.
- (2) Includes (i) 4.58% held by Gazprom Finance B.V., Gazprom's wholly-owned financial vehicle, which shareholding is intended to be used to secure Gazprom's liabilities and issue derivative financial instruments; and (ii) 4.65% held by the Gazprom pension fund. Our subsidiaries are entitled to vote the shares they own. Changes in the ownership of our shares by our subsidiaries can occur as a result of trading activity conducted in the ordinary course of business by certain of our subsidiaries.
- (3) Includes Ruhrgas holdings of (i) 2.5% of Gazprom shares acquired through a privatization auction which was held pursuant to Presidential Decree No. 1316 of October 31, 1998; and (ii) 1% in the form of ADSs.
- (4) Includes shares held by our employees.

## CERTAIN TRANSACTIONS

### Interested Party Transactions under Russian Law

Russian law requires a company that enters into transactions with certain types of its affiliates that are referred to as “interested party transactions” to comply with special approval procedures. Under Russian law, an “interested party” includes (i) members of the board of directors or the collegial executive body of the company, (ii) the CEO of the company (including a managing organization or manager), (iii) any person that owns, together with that person’s affiliates, at least 20% of the company’s voting shares or (iv) a person who on legal grounds has the right to give mandatory instructions to the company, if any of the above listed persons, or a close relative or affiliate of such person, is:

- a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction;
- the owner of at least 20% of the shares in a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction; or
- a member of the board of directors or the collegial executive body or the CEO of a company that is a party to a transaction with the company, whether directly or as a representative or intermediary, or a beneficiary of the transaction or an officer of the managing organization of such company.

Transactions between members of a consolidated corporate group may be considered to be interested party transactions in certain circumstances, even when the companies involved are wholly-owned by the parent company.

Under applicable Russian law, interested party transactions are to be approved by a majority of the disinterested independent members of the board of directors or the shareholders of the company. Where all the directors are interested, or are not independent, or if the subject matter of the transaction exceeds 2% of the balance sheet assets of the company determined under Russian accounting principles (with certain exceptions for share placements), a majority vote of the disinterested shareholders of the company is required. The consequence of not having obtained the appropriate approval is that the transaction in question may be declared invalid upon a claim by the company or any of its shareholders.

The Joint Stock Companies Law has contained an implicit requirement that interested party transactions be approved since it was enacted in 1996. Under Russian law, the lack of advance approval makes such a transaction voidable, but not void. However, certain judicial practice indicated that *post factum* approval of interested party transactions could be sufficient. In certain circumstances, such as when an interested party transaction is entered into between companies within our Group, the transaction will not always be submitted to the boards of directors of the companies for advance approval. In 2000, 2001 and 2002, the Board of Directors of OAO Gazprom approved certain transactions after, rather than before, they were consummated, and since 1996 the Board of Directors has never recognized any such transaction to be contrary to OAO Gazprom’s interests or denied approval thereof *post factum*. Following the revisions to the Joint Stock Companies Law that came into effect on January 1, 2002 and which explicitly require an advance approval of interested party transactions, the judicial practice in this regard has also changed. In November 2003, the Highest Arbitration Court of the Russian Federation ruled that an interested party transaction must be approved before it is entered into. Thus, we have now limited the practice of seeking *post factum* approvals and now, where possible, seek to approve interested party transactions in advance.

The Joint Stock Companies Law also provides for the right of the general shareholders meeting of a company to approve interested party transactions up to a maximum amount to be specified by such approval. Such transactions may be entered into by the company and a specified interested party in the ordinary course of business during the period between such general shareholders meeting and the annual general shareholders meeting. We may decide to use such procedures for approval of certain interested party transactions. We have put in place procedures to monitor our interested party transactions, including keeping a register of all such transactions and maintaining a quarterly-updated database of information provided to us by our managers and directors about companies in which they or their families hold positions on management bodies or have equity interests.

In addition, our Board of Directors adopted a resolution on September 27, 2002 whereby all transactions, whether with interested parties or not, involving (i) OAO Gazprom shares, or interests or

participations that OAO Gazprom or its subsidiaries hold in other companies; (ii) loans or other borrowings by OAO Gazprom having a value of greater than 0.3% of OAO Gazprom's unconsolidated balance sheet assets determined under Russian accounting principles; and (iii) purchases or disposals by OAO Gazprom or its subsidiaries of its assets having a value greater than 0.3% of its unconsolidated balance sheet assets determined under Russian accounting principles require prior approval by our Board of Directors.

The foregoing information relates to transactions and agreements entered into by our parent company, OAO Gazprom. Our subsidiaries are subject to the same (or similar) legal requirements regarding the approval of interested party transactions.

#### **Transactions with the Government of the Russian Federation**

The Government directly owns 38.37% of our issued shares and has a voting majority on our Board of Directors. See "Business—Marketing—Russia—Delayed Payments for Gas Deliveries in Russia" and "Risk Factors—Risks Relating to our Business—The Government has exercised, and can continue to be expected to exercise, a strong influence over our operations." In the normal course of our business, we sell gas to the Government and certain Government-owned or -controlled entities. The price at which we sell gas to these entities is the same regulated price at which we sell gas to other domestic consumers. Some of these entities fall into the category of consumers whom we are prevented from disconnecting pursuant to Government regulation.

#### **Transactions with Stroytransgaz**

Certain former members of our Board of Directors and members of their families own or owned significant shareholdings in Stroytransgaz. In the mid-1990s, Stroytransgaz acquired about 5% of our shares as part of the settlement of a debt owed by us to Stroytransgaz for various construction services. The shares we transferred to Stroytransgaz were part of a 10% block of our shares that we and our subsidiary Gazfund acquired from the Government in 1995 for nominal value using privatization vouchers. This nominal value was used as the basis for determining the number of shares to be transferred to Stroytransgaz in respect of the debt we owed them for the construction services they provided. We subsequently challenged this transaction with Stroytransgaz and reached an understanding for the return of 4.83% of our shares. These shares were held jointly by three of our subsidiaries and Stroytransgaz pursuant to a joint activity agreement under which we had the right to vote the shares. As a result of our agreement with Stroytransgaz, in March 2003 Stroytransgaz transferred its stake in the joint activity to our subsidiary Gazprominvestholding in exchange for the Gazprom promissory notes with a face value of RR5,719 million and payable in January 2004 that we had contributed to the joint activity. We subsequently acquired 25.9% of the ordinary shares of Stroytransgaz for consideration of RR3,335 million, consisting primarily of investments and cash, in April 2003. In August 2003, we acquired 0.2% of the ordinary shares and 15.54% of the preferred shares in Stroytransgaz for RR152 million. In the normal course of business, we enter into transactions with Stroytransgaz for the construction of pipelines in the Russian Federation which we outsource to third-party contractors through a tender process. Stroytransgaz has been a successful bidder in a large number of these tenders. Stroytransgaz rendered construction services to us in the amounts of RR32,278 million in 2002 and RR39,963 million in 2001, and RR20,083 million and RR26,863 million in the nine months ended September 30, 2003 and 2002, respectively.

#### **Transactions with Interprokom**

Family members of certain former members of our Board of Directors and a member of the Management Committee own significant interests in OOO Interprokom ("Interprokom").

Interprokom acts as our agent in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. Interprokom acted as an agent in our acquisition of RR8,021 million and RR11,611 million of equipment during 2002 and 2001, respectively, and for RR1,177 million and RR6,154 million in the nine months ended September 30, 2003 and 2002, respectively. Commissions paid to Interprokom amounted to RR113 million and RR107 million during 2002 and 2001, respectively, and to RR42 million and RR88 million in the nine months ended September 30, 2003 and 2002 respectively.

Gazprombank, our principal banking subsidiary, had outstanding import letters of credit issued on behalf of Interprokom and sub-contractors of Interprokom in the amount of RR2,492 million, RR6,982 million and RR9,751 million as of September 30, 2003, December 31, 2002 and 2001, respectively. These import letters of credit are issued to third-party suppliers in connection with the purchase of equipment by Interprokom on our behalf.

### **Transactions with Itera**

Beginning around 1997, under our previous management, we entered into a number of transactions with Itera, a company that operates as an independent supplier of gas in Russia and the FSU. Certain of these transactions were questioned by some of our minority shareholders. The transactions involved acquisitions by Itera of interests in certain of our gas fields, tax arrangements involving Itera in the Yamal-Nenets and Nadym-Pur-Taz regions of Russia, purchases of gas from Itera, the transportation of gas owned by Itera through the UGSS, loans to Itera and guarantees of Itera indebtedness. In early 2001, our Board of Directors appointed our independent auditors, PricewaterhouseCoopers, to examine certain aspects of our financial and operating activities and, in particular, our operating relationship with Itera. PricewaterhouseCoopers presented its report (the "Report") at a meeting of our Board of Directors in July 2001. Partly as a result of the Report, we intensified our asset reacquisition program through which we have reacquired assets from Itera. See "Management's Discussion and Analysis of Financial Condition and Results of Operations—Certain Acquisitions and Dispositions—Our asset reacquisition program."

## FACILITY AGREEMENT

*The following is the text of the Facility Agreement that has been entered into between us and the Issuer. In the context of each Series of Notes and the corresponding Loan, this Facility Agreement should be read in conjunction with, and is qualified in its entirety by, the relevant Loan Supplement for such Series and Loan.*

**This Facility Agreement is made on 22 September 2003 between:**

- (1) **OPEN JOINT STOCK COMPANY GAZPROM**, a company established under the laws of the Russian Federation whose registered office is at 16 Nametkina Street, 117884 Moscow, Russian Federation ("**Gazprom**"); and
- (2) **GAZ CAPITAL S.A.**, a société anonyme established under the laws of Luxembourg whose registered office is at 2, Boulevard Konrad Adenauer L-1115 Luxembourg, registered with the Register of Commerce and Companies, Luxembourg under number B - 95071 (the "**Lender**").

**Whereas**, the Lender has at the request of Gazprom agreed to make available to Gazprom a loan facility in the maximum amount of the Programme Limit (as defined below) on the terms and subject to the conditions of this Agreement, as amended and supplemented in relation to each Loan by a Loan Supplement dated the Closing Date substantially in the form set out in the Schedule hereto (each, a "**Loan Supplement**");

**Whereas**, it is intended that, concurrently with the extension of any Loan under this loan facility, the Lender will issue certain loan participation notes in the same nominal amount and bearing the same rate of interest as such Loan; and

**Whereas**, it has been agreed in the Principal Trust Deed (as defined below) that if following the assignment by the Lender of its rights and obligations under any Loan Agreement, the Trustee or any person receiving payments under the direction of the Trustee in accordance with Clause 2.8 of the Principal Trust Deed is no longer a resident of a state with which the Russian Federation has a double taxation treaty providing for a zero withholding tax rate on income in the form of interest, then the Trustee shall use its best endeavours (using its powers under the Principal Trust Deed) to select a new trustee or co-trustee, appoint an agent or nominee, delegate any of its functions or take such other measures that it deems advisable or necessary so that payments obtain the benefit of a zero withholding tax rate on payments in the form of interest.

**Now it is hereby agreed** as follows:

### **1 Definitions and Interpretation**

#### **1.1 Definitions**

In this Agreement (including the recitals), the following terms shall have the meanings indicated:

"**Account**" means an account in the name of the Lender with the Principal Paying Agent as specified in the relevant Loan Supplement.

"**Affiliates**" of any specified Person means any other Person, directly or indirectly, controlling or controlled by or under direct or indirect control by such specified Person. For the purposes of this definition, "control" when used with respect to any Person means the power to direct the management and policies of such Person, directly or indirectly, whether through the ownership of voting securities, by contract or otherwise; and the terms "controlling" and "controlled" have meanings correlative to the foregoing.

"**Agency Agreement**" means the paying agency agreement relating to the Programme dated 22 September 2003 between the Lender, Gazprom, the Trustee and the agents named therein.

"**Arrangers**" mean Deutsche Bank AG London and UBS Limited or any additional or replacement arranger appointed, and excluding any Arranger whose appointment has terminated pursuant to the Dealer Agreement.

"**Business Day**" means (save in relation to Clause 4) a day (other than a Saturday or Sunday) on which (a) banks and foreign exchange markets are open for business generally in the relevant place of payment, and (b) if on that day a payment is to be made in a Specified Currency other than euro hereunder, where payment is to be made by transfer to an account maintained with a bank in the Specified Currency, foreign exchange transactions may be carried on in the Specified

Currency in the principal financial centre of the country of such Specified Currency and (c) if on that day a payment is to be made in euro hereunder, a day on which the TARGET System is operating and (d) in relation to a Loan corresponding to a Series of Notes to be sold pursuant to Rule 144A under the Securities Act, banks and foreign exchange markets are open for business generally in New York City.

**“Calculation Agent”** means, in relation to a Loan, Deutsche Bank AG London or any person named as such in the relevant Loan Supplement or any successor thereto.

**“Closing Date”** means the date specified as such in the relevant Loan Supplement.

**“Consolidated Net Tangible Assets”** means the total of all assets less (i) total liabilities, (ii) goodwill, trade names, trade marks, service marks, patents, licences, organisational expenses, research and development expenses, unamortised debt discount and expense, unamortised deferred charges and all other like intangible assets, (iii) all write-ups of fixed assets, net of accumulated depreciation thereon, after the most recent consolidated balance sheet of Gazprom and its consolidated Subsidiaries immediately preceding the relevant Closing Date prepared in accordance with IFRS, as consistently applied, other than any revaluation supported by an independent appraisal completed by an appropriately qualified firm, and disregarding, for the avoidance of doubt, any restatement for changes in the general purchasing power of the Rouble in accordance with IFRS 29 “Financial Reporting in Hyperinflationary Economics” and (iv) preferred stock, if any, all as set forth on the most recent consolidated balance sheet of Gazprom and its consolidated Subsidiaries prepared in accordance with IFRS, as consistently applied.

**“Day Count Fraction”** has the meaning specified in the relevant Loan Supplement.

**“Dealer Agreement”** means the dealer agreement relating to the Programme dated 22 September 2003 between the Lender, Gazprom, the Arrangers and the other dealers appointed pursuant to it.

**“Dollars”, “\$” and “U.S.\$”** means the lawful currency of the United States of America.

**“Encumbrance”** means any mortgage, charge, pledge, lien (other than a lien arising solely by operation of law which is discharged within 45 days of arising) or other security interest securing any obligation of any Person or any other type of preferential arrangement (including any title transfer and retention arrangement) having a similar effect.

**“Environmental Law”** means any applicable law in any jurisdiction in which any member of the Group conducts business which relates to the pollution or protection of the environment or harm to or the protection of human health or the health of animals or plants.

**“euro” or “€”** means the lawful currency of the member states of the European Union that adopted the single currency in accordance with the Treaty of Rome, as amended.

**“Event of Default”** has the meaning assigned to such term in sub-clause 11.1 hereof.

**“Financial Indebtedness”** means any obligation for the payment of money in any currency, other than an obligation for the payment of money in the lawful currency for the time being of the Russian Federation payable to any person domiciled, resident or having its head office or principal place of business in the Russian Federation, whether sole, joint or several, and whether actual or contingent, in respect of:

- (a) moneys borrowed or raised (including the capitalised value of obligations under financial leases and hire purchase agreements and deposits, but excluding moneys raised by way of the issue of share capital (whether or not for a cash consideration) and any premium on such share capital) and interest and other charges thereon or in respect thereof;
- (b) any liability under any debenture, bond, note, loan stock or other security or under any acceptance or documentary credit, bill discounting or note purchase facility or any similar instrument;
- (c) any liability in respect of the deferred acquisition cost of property, assets or services to the extent payable after the time of acquisition or possession thereof by the party liable, but not including any such liability in respect of normal trade credit for a period not exceeding six months for goods or services supplied;
- (d) any liability under any interest rate or currency hedging agreement;

- (e) any liability under or in respect of any bonding facility, guarantee facility or similar facility; and
- (f) (without double counting) any guarantee or other assurance against financial loss in respect of such moneys borrowed or raised, interest, charges or other liability (whether the person liable in respect of such moneys borrowed or raised, interest, charges or other liability is or is not a member of the Group),

but not where the same relates to or is in connection with any Project Financing.

**“Fixed Rate Loan”** means a Loan specified as such in the relevant Loan Supplement.

**“Floating Rate Loan”** means a Loan specified as such in the relevant Loan Supplement.

**“Gazprom Account”** means an account in the name of Gazprom as specified in the relevant Loan Supplement for receipt of Loan funds.

**“Gazprom Agreements”** means this Agreement, the Agency Agreement, the Dealer Agreement and together with, in relation to each Loan, the relevant Subscription Agreement and Loan Supplement.

**“Group”** means Gazprom and its Subsidiaries taken as a whole.

**“IFRS”** means the International Financial Reporting Standards issued by the International Accounting Standards Board (as amended, supplemented or re-issued from time to time).

**“Interest Payment Date”** means the dates specified as such in the relevant Loan Supplement.

**“Interest Period”** means each period beginning on (and including) an Interest Payment Date and ending on (but excluding) the next Interest Payment Date.

**“Lead Manager(s)”** means the Relevant Dealer(s) specified as such in the relevant Subscription Agreement.

**“Lender Agreements”** means the Dealer Agreement, this Agreement, the Agency Agreement, the Principal Trust Deed and together with, in relation to each Loan, the relevant Subscription Agreement, Loan Supplement and Supplemental Trust Deed.

**“Loan”** means each loan to be made pursuant to, and on the terms specified in this Agreement and the relevant Loan Supplement and includes each Fixed Rate Loan and Floating Rate Loan.

**“Loan Agreement”** means this Agreement and (unless the context requires otherwise), in relation to a Loan means this Agreement as amended and supplemented by the relevant Loan Supplement.

**“Material Adverse Effect”** means a material adverse effect on (a) the financial condition or operations of Gazprom or its Principal Subsidiaries or (b) Gazprom’s ability to perform its obligations under a Loan Agreement or (c) the validity, legality or enforceability of a Loan Agreement or the rights or remedies of the Lender under a Loan Agreement.

**“Notes”** means the loan participation notes that may be issued from time to time by the Lender under the Programme in Series, each Series corresponding to a Loan and in relation to a Loan as defined in the relevant Loan Supplement.

**“Noteholder”** means, in relation to a Note, the person in whose name such Note is registered in the register of the noteholders (or in the case of joint holders, the first named holder thereof).

**“Officer’s Certificate”** means a certificate signed by an officer of Gazprom who shall be the principal executive officer, principal accounting officer or principal financial officer of Gazprom.

**“Opinion of Counsel”** means a written opinion from international legal counsel being acceptable to the Lender.

**“Permitted Encumbrance”** means:

- (i) any Encumbrance existing on the date of the relevant Loan Agreement;
- (ii) any Encumbrance existing on any property, income or assets of any corporation at the time such corporation becomes a Subsidiary of Gazprom and not created in contemplation of such event, provided that no such Encumbrance shall extend to any other property, income or assets of such corporation or the Group;

- (iii) any Encumbrance on any property, income or assets of any corporation existing at the time such corporation is merged or consolidated with or into Gazprom or any Subsidiary of Gazprom and not created in contemplation of such event, provided that no such Encumbrance shall extend to any other property, income or assets of the Group;
- (iv) any Encumbrance on any property or assets securing Financial Indebtedness of Gazprom or any Subsidiary incurred or assumed for the purpose of financing all or part of the cost of acquiring, purchasing, constructing or developing such property or assets, provided that no such Encumbrance shall extend to any other property or assets of the Group, the principal amount of the Financial Indebtedness secured by such Encumbrance shall not exceed the cost of acquiring, purchasing, constructing or developing such property or assets, and such Encumbrance attaches to such property or assets concurrently with or within 90 days after the acquisition or purchase, or the commencement of the construction or development, thereof;
- (v) any Encumbrance on any property or assets securing Financial Indebtedness of Gazprom or any Subsidiary incurred or assumed for the purpose of financing all or part of the cost of repairing or refurbishing such property or assets, provided that no such Encumbrance shall extend to any other property or assets of the Group, the principal amount of the Financial Indebtedness secured by such Encumbrance shall not exceed the cost of such repairs or refurbishments, and such Encumbrance attaches to such property or assets concurrently with or within 90 days after the commencement of such repairs or refurbishments;
- (vi) any Encumbrance existing on any property, income or assets prior to the acquisition thereof by Gazprom or any Subsidiary and not created in contemplation of such acquisition, provided that no such Encumbrance shall extend to any other property, income or assets of the Group;
- (vii) any Encumbrance on the property, income or assets of any Subsidiary securing intercompany Financial Indebtedness of such Subsidiary owing to Gazprom or another Subsidiary;
- (viii) any Encumbrance securing Financial Indebtedness incurred in connection with a Project Financing if the Encumbrance is solely on the property, income, assets or revenues of the project for which the financing was incurred;
- (ix) any Encumbrance securing Financial Indebtedness not exceeding 50 per cent. of Gazprom's Consolidated Net Tangible Assets at any time of determination;
- (x) any Encumbrance arising out of the refinancing, extension, renewal or refunding of any Financial Indebtedness of Gazprom or any Subsidiary secured by any Permitted Encumbrance, provided that such Financial Indebtedness is not increased and, if the property, income or assets securing any such Financial Indebtedness are changed in connection with any such refinancing, extension, renewal or refunding, the value of the property, income or assets securing such Financial Indebtedness is not increased;
- (xi) any Encumbrance over any goods or products, or documents, insurance policies or sale contracts in relation to any goods or products, arising in the ordinary course of trading in connection with the provision of a letter of credit or any similar transaction where such Encumbrance secures only so much of the acquisition cost or selling price (and amounts incidental thereto) of such goods or products which is required to be paid within 120 days after the date upon which liability in respect of the same was first incurred; and
- (xii) a right of set-off, right to combine accounts or any analogous right which any bank or other financial institution may have relating to any credit balance of any member of the Group.

**"Person"** means any individual, corporation, partnership, limited liability company, joint venture, association, joint-stock company, company, firm, trust, organisation, government, or any agency or political subdivision thereof or any other entity, whether or not having a separate legal personality.

**"Potential Event of Default"** means any event which is, or after notice or passage of time or both would be, an Event of Default.

**“Principal Subsidiary”** means at any relevant time a Subsidiary of Gazprom:

- (i) whose total assets or gross revenues (or, where the Subsidiary in question prepares consolidated accounts, whose total consolidated assets or gross consolidated revenues, as the case may be) represent not less than 5 per cent. of the total consolidated assets or the gross consolidated revenues of Gazprom and its Subsidiaries, all as calculated by reference to the then latest audited accounts (or consolidated accounts as the case may be) (in each case, produced on the basis of IFRS, consistently applied) of such Subsidiary and the then latest audited consolidated accounts of Gazprom (produced on the basis of IFRS, consistently applied) and its consolidated Subsidiaries; or
- (ii) to which is transferred all or substantially all the assets and undertaking of a Subsidiary which immediately prior to such transfer is a Principal Subsidiary.

**“Principal Trust Deed”** means the principal trust deed dated 22 September 2003 between the Lender and the Trustee.

**“Programme”** means the programme for the issuance of loan participation notes.

**“Programme Limit”** means U.S.\$5,000,000,000 or its equivalent in other currencies, being the maximum aggregate principal amount of Notes that may be issued and outstanding at any time under the Programme as may be increased in accordance with the Dealer Agreement.

**“Project Financing”** means any financing of all or part of the costs of the acquisition, construction, development or operation of any asset or project if the person or persons providing such financing expressly agrees to limit its recourse solely to the asset or project financed and the revenues derived from such asset or project as the principal source of repayment for the moneys advanced.

**“Rate of Interest”** has the meaning assigned to such term in the relevant Loan Supplement.

**“Relevant Time”** means, in relation to a payment in a Specified Currency, the time in the principal financial centre of such Specified Currency and, in relation to a payment in euro, Brussels time.

**“Repayment Date”** means the date specified as such in the relevant Loan Supplement.

**“Roubles”** means the lawful currency of the Russian Federation.

**“Same-Day Funds”** means funds for payment, in the Specified Currency as the Lender may at any time determine to be customary for the settlement of international transactions in the principal financial centre of the country of the Specified Currency or, as the case may be, euro funds settled through the TARGET System or such other funds for payment in euro as the Lender may at any time determine to be customary for the settlement of international transactions in Brussels of the type contemplated hereby.

**“Series”** means a series of Notes that (except in respect of the first payment of interest and their issue price) have identical terms on issue and are expressed to have the same series number.

**“Side Letter”** means the letter specified as such in the relevant Loan Supplement.

**“Specified Currency”** means the currency specified as such in the relevant Loan Supplement.

**“Subscription Agreement”** means the agreement specified as such in the relevant Loan Supplement.

**“Subsidiary”** means, with respect to any Person, (i) any corporation, association or other business entity of which at least 50 per cent. of the total voting power entitled (without regard to the occurrence of any contingency) to vote in the election of directors, managers or trustees thereof is at the time owned or controlled, directly or indirectly, by such Person or one or more of the other Subsidiaries of such Person (or any combination thereof) and (ii) any partnership (a) the sole general partner or the managing general partner of which is such Person or a Subsidiary of such person or (b) the only general partners of which are such Person or of one or more Subsidiaries of such Person (or any combination thereof).

**“Supplemental Trust Deed”** means a supplemental trust deed in respect of a Series of Notes which constitutes and secures, *inter alia*, such Series dated the relevant Closing Date and made between the Lender and the Trustee (substantially in the form set out in Schedule 10 of the Principal Trust Deed).

**“TARGET System”** means the Trans-European Automated Real-Time Gross Settlement Express Transfer (TARGET) System or any successor thereof.

“**Taxes**” means any taxes (including interest or penalties thereon) which are now or at any time hereafter imposed, assessed, charged, levied, collected, demanded, withheld or claimed by the Russian Federation, Luxembourg or any taxing authority thereof or therein provided, however, that for the purposes of this definition the references to Luxembourg shall, upon the occurrence of the Relevant Event (as this term is defined in the Trust Deed), be deemed to be references to the jurisdiction in which the Trustee is domiciled for tax purposes; and the term “**Taxation**” shall be construed accordingly.

“**Trust Deed**” means the trust deed specified as such in the relevant Loan Supplement.

“**Trustee**” means Deutsche Bank Trust Company Americas, as trustee under the Trust Deed and any successor thereto as provided thereunder.

“**Warranty Date**” means the date hereof, the date of each Loan Supplement, each Closing Date, each date on which the Offering Circular or any of the Lender Agreements is amended, supplemented or replaced and each date on which the Programme Limit is increased.

## **1.2 Other Definitions**

Unless the context otherwise requires, terms used in this Agreement which are not defined in this Agreement but which are defined in the Principal Trust Deed, the Notes, the Agency Agreement or the Dealer Agreement shall have the meanings assigned to such terms therein.

## **1.3 Interpretation**

Unless the context or the express provisions of this Agreement otherwise require, the following shall govern the interpretation of this Agreement:

**1.3.1** All references to “Clause” or “sub-clause” are references to a Clause or sub-clause of this Agreement.

**1.3.2** The terms “hereof”, “herein” and “hereunder” and other words of similar import shall mean the relevant Loan Agreement as a whole and not any particular part hereof.

**1.3.3** Words importing the singular number include the plural and vice versa.

**1.3.4** All references to “taxes” include all present or future taxes, levies, imposts and duties of any nature and the terms “tax” and “taxation” shall be construed accordingly.

**1.3.5** The table of contents and the headings are for convenience only and shall not affect the construction hereof.

**1.3.6** Any reference herein to a document being in “agreed form” means that the document in question has been agreed between the proposed parties thereto, subject to any amendments that the parties may agree upon prior to the Issue Date.

## **2 Loans**

### **2.1 Loans**

On the terms and subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, the Lender hereby agrees to make available to Gazprom Loans up to the total aggregate amount equal to the Programme Limit.

### **2.2 Purpose**

The proceeds of each Loan will be used for general corporate purposes, but the Lender shall not be concerned with the application thereof.

### **2.3 Separate Loans**

It is agreed that with respect to each Loan, all the provisions of this Facility Agreement and the Loan Supplement shall apply *mutatis mutandis* separately and independently to each such Loan and the expressions “**Account**”, “**Closing Date**”, “**Day Count Fraction**”, “**Interest Payment Date**”, “**Loan Agreement**”, “**Notes**”, “**Rate of Interest**”, “**Repayment Date**”, “**Specified Currency**”, “**Subscription Agreement**” and “**Trust Deed**”, together with all other terms that relate to

such a Loan shall be construed as referring to those of the particular Loan in question and not of all Loans unless expressly so provided, so that each such Loan shall be made pursuant to this Facility Agreement and the relevant Loan Supplement, together comprising the Loan Agreement in respect of such Loan and that, unless expressly provided, events affecting one Loan shall not affect any other.

### **3 Drawdown**

#### **3.1 Drawdown**

On the terms and subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, on the Closing Date thereof the Lender shall make a Loan to Gazprom and Gazprom shall make a single drawing in the full amount of such Loan.

#### **3.2 Loan Fees and Expenses**

In consideration of the Lender making a Loan to Gazprom, Gazprom hereby agrees that it shall, two Business Days before each Closing Date, pay to the Lender, in Same-Day Funds, an amount equal to the reimbursable expenses incurred by the Lender in a total amount to be specified in the relevant Loan Supplement.

#### **3.3 Disbursement**

Subject to the conditions set forth herein and, as the case may be, in each Loan Supplement, on each Closing Date the Lender shall transfer the amount of the relevant Loan to the Gazprom Account specified in the relevant Loan Supplement.

#### **3.4 Programme Fees and Expenses**

In consideration of the Lender establishing and maintaining the Programme and agreeing to make Loans to Gazprom, Gazprom shall pay on demand to the Lender each year an amount to reimburse the Lender for its expenses relating to its management and operation in servicing the Loans as set forth to Gazprom in an invoice from the Lender.

### **4 Interest**

#### **4.1 Rate of Interest for Fixed Rate Loans**

Each Fixed Rate Loan bears interest on its outstanding principal amount from (and including) the Interest Commencement Date at the rate(s) per annum (expressed as a percentage) equal to the applicable Rate of Interest.

If a Fixed Amount or a Broken Amount is specified in the relevant Loan Supplement, the amount of interest payable on each Interest Payment Date will amount to the Fixed Amount or, if applicable, the Broken Amount so specified and in the case of the Broken Amount will be payable on the particular Interest Payment Date(s) specified in the relevant Loan Supplement.

#### **4.2 Payment of Interest for Fixed Rate Loans**

Interest at the Rate of Interest shall accrue on each Fixed Rate Loan from day to day, starting from (and including) the Interest Commencement Date and thereafter from (and including) each Interest Payment Date, to (but excluding) the next Interest Payment Date and shall be paid in arrear not later than 10.00 a.m. (Relevant Time) one Business Day prior to each Interest Payment Date.

#### **4.3 Interest for Floating Rate Loans**

**4.3.1 Interest Payment Dates:** Each Floating Rate Loan bears interest on its outstanding principal amount from (and including) the Interest Commencement Date and thereafter from (and including) each Interest Payment Date, to (but excluding) the next Interest Payment Date at the rate per annum (expressed as a percentage) equal to the applicable Rate of Interest, such interest being payable in arrear not later than 10.00 a.m. (Relevant

Time) one Business Day prior to each Interest Payment Date. Such Interest Payment Date(s) is/are either shown in the relevant Loan Supplement as Specified Interest Payment Date(s) or, if no Specified Interest Payment Date(s) is/are shown in the relevant Loan Supplement, Interest Payment Date shall mean each date which falls the number of months or other period shown in the relevant Loan Supplement as the Interest Period after the preceding Interest Payment Date or, in the case of the first Interest Payment Date, after the Interest Commencement Date.

**4.3.2** *Business Day Convention:* If any date referred to in the relevant Loan Supplement that is specified to be subject to adjustment in accordance with a Business Day Convention would otherwise fall on a day that is not a Business Day, then, if the Business Day Convention specified is (A) the Floating Rate Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event (x) such date shall be brought forward to the immediately preceding Business Day and (y) each subsequent such date shall be the last Business Day of the month in which such date would have fallen had it not been subject to adjustment, (B) the Following Business Day Convention, such date shall be postponed to the next day that is a Business Day, (C) the Modified Following Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event such date shall be brought forward to the immediately preceding Business Day or (D) the Preceding Business Day Convention, such date shall be brought forward to the immediately preceding Business Day.

**4.3.3** *Rate of Interest for Floating Rate Loans:* The Rate of Interest in respect of Floating Rate Loans for each Interest Accrual Period shall be determined in the manner specified in the relevant Loan Supplement and the provisions below relating to either ISDA Determination or Screen Rate Determination shall apply, depending upon which is specified in the relevant Loan Supplement.

(i) ISDA Determination for Floating Rate Loans

Where ISDA Determination is specified in the relevant Loan Supplement as the manner in which the Rate of Interest is to be determined, the Rate of Interest for each Interest Accrual Period shall be determined by the Calculation Agent as a rate equal to the relevant ISDA Rate. For the purposes of this sub-paragraph (i), “**ISDA Rate**” for an Interest Accrual Period means a rate equal to the Floating Rate that would be determined by the Calculation Agent under a Swap Transaction under the terms of an agreement incorporating the ISDA Definitions and under which:

- (a) the Floating Rate Option is as specified in the relevant Loan Supplement;
- (b) the Designated Maturity is a period specified in the relevant Loan Supplement; and
- (c) the relevant Reset Date is the first day of that Interest Accrual Period unless otherwise specified in the relevant Loan Supplement.

For the purposes of this sub-paragraph (i), “**Floating Rate**”, “**Calculation Agent**”, “**Floating Rate Option**”, “**Designated Maturity**”, “**Reset Date**” and “**Swap Transaction**” have the meanings given to those terms in the ISDA Definitions.

(ii) Screen Rate Determination for Floating Rate Loans

Where Screen Rate Determination is specified in the relevant Loan Supplement as the manner in which the Rate of Interest is to be determined, the Rate of Interest for each Interest Accrual Period shall be determined by the Calculation Agent at or about the Relevant Time on the Interest Determination Date in respect of such Interest Accrual Period in accordance with the following:

- (a) if the Primary Source for Floating Rate is a Page, subject as provided below, the Rate of Interest shall be:
  - (I) the Relevant Rate (where such Relevant Rate on such Page is a composite quotation or is customarily supplied by one entity); or

(II) the arithmetic mean of the Relevant Rates of the persons whose Relevant Rates appear on that Page,

in each case appearing on such Page at the Relevant Time on the Interest Determination Date;

- (b) if the Primary Source for the Floating Rate is Reference Banks or if sub-paragraph (a)(I) applies and no Relevant Rate appears on the Page at the Relevant Time on the Interest Determination Date or if sub-paragraph (a)(II) above applies and fewer than two Relevant Rates appear on the Page at the Relevant Time on the Interest Determination Date, subject as provided below, the Rate of Interest shall be the arithmetic mean of the Relevant Rates that each of the Reference Banks is quoting to leading banks in the Relevant Financial Centre at the Relevant Time on the Interest Determination Date, as determined by the Calculation Agent; and
- (c) if paragraph (b) above applies and the Calculation Agent determines that fewer than two Reference Banks are so quoting Relevant Rates, subject as provided below, the Rate of Interest shall be the arithmetic mean of the rates per annum (expressed as a percentage) that the Calculation Agent determines to be the rates (being the nearest equivalent to the Benchmark) in respect of a Representative Amount of the Specified Currency that at least two out of five leading banks selected by the Calculation Agent in the principal financial centre of the country of the Specified Currency or, if the Specified Currency is euro, in Europe as selected by the Calculation Agent (the “**Principal Financial Centre**”) are quoting at or about the Relevant Time on the date on which such banks would customarily quote such rates for a period commencing on the Effective Date for a period equivalent to the Specified Duration (I) to leading banks carrying on business in Europe, or (if the Calculation Agent determines that fewer than two of such banks are so quoting to leading banks in Europe) (II) to leading banks carrying on business in the Principal Financial Centre; except that, if fewer than two of such banks are so quoting to leading banks in the Principal Financial Centre, the Rate of Interest shall be the Rate of Interest determined on the previous Interest Determination Date (after readjustment for any difference between any Margin, Rate Multiplier or Maximum or Minimum Rate of Interest applicable to the preceding Interest Accrual Period and to the relevant Interest Accrual Period).

#### **4.4 Accrual of Interest**

Interest shall cease to accrue on each Loan on the due date for repayment unless payment is improperly withheld or refused, in which event interest shall continue to accrue (as well after as before judgment) at the applicable Rate of Interest to but excluding the date on which payment in full of the principal thereof is made.

#### **4.5 Margin, Maximum/Minimum Rates of Interest, Rate Multipliers and Rounding**

- 4.5.1** If any Margin or Rate Multiplier is specified in the relevant Loan Supplement (either (x) generally, or (y) in relation to one or more Interest Accrual Periods), an adjustment shall be made to all Rates of Interest, in the case of (x), or the Rates of Interest for the specified Interest Accrual Periods, in the case of (y), calculated in accordance with Clause 4.3 above by adding (if a positive number) or subtracting the absolute value (if a negative number) of such Margin or multiplying by such Rate Multiplier, subject always to the next paragraph.
- 4.5.2** If any Maximum or Minimum Rate of Interest is specified in the relevant Loan Supplement, then any Rate of Interest shall be subject to such maximum or minimum, as the case may be.
- 4.5.3** For the purposes of any calculations required pursuant to a Loan Agreement (unless otherwise specified), (x) all percentages resulting from such calculations shall be rounded, if necessary, to the nearest one hundred-thousandth of a percentage point (with halves

being rounded up), (y) all figures shall be rounded to seven significant figures (with halves being rounded up) and (z) all currency amounts that fall due and payable shall be rounded to the nearest unit of such currency (with halves being rounded up), save in the case of yen, which shall be rounded down to the nearest yen. For these purposes “unit” means the lowest amount of such currency that is available as legal tender in the country or countries of such currency.

#### 4.6 **Calculations**

The amount of interest payable in respect of any Loan for any period shall be calculated by multiplying the product of the Rate of Interest and the outstanding principal amount of such Loan by the Day Count Fraction, unless an Interest Amount (or a formula for its calculation) is specified in the relevant Loan Supplement in respect of such period, in which case the amount of interest payable in respect of such Loan for such period shall equal such Interest Amount (or be calculated in accordance with such formula). Where any Interest Period comprises two or more Interest Accrual Periods, the amount of interest payable in respect of such Interest Period shall be the sum of the amounts of interest payable in respect of each of those Interest Accrual Periods.

#### 4.7 **Determination and Publication of Rates of Interest and Interest Amounts**

As soon as practicable after the Relevant Time on each Interest Determination Date or such other time on such date as the Calculation Agent may be required to calculate any rate or amount, obtain any quotation or make any determination or calculation, it shall determine such rate and calculate the Interest Amounts in respect of such Floating Rate Loan for the relevant Interest Accrual Period, obtain such quotation or make such determination or calculation, as the case may be, and cause the Rate of Interest and the Interest Amounts for each Interest Period and the relevant Interest Payment Date to be notified to Gazprom, the Trustee, the Lender, each of the Paying Agents and any other Calculation Agent appointed in respect of such Floating Rate Loan that is to make a further calculation upon receipt of such information. Where any Interest Payment Date or Interest Period Date is subject to adjustment pursuant to Clause 4.3.2, the Interest Amounts and the Interest Payment Date so published may subsequently be amended (or appropriate alternative arrangements made with the consent of Gazprom and the Lender by way of adjustment) without notice in the event of an extension or shortening of the Interest Period. If such Floating Rate Loan becomes due and payable under Clause 11, the accrued interest and the Rate of Interest payable in respect of such Floating Rate Loan shall nevertheless continue to be calculated as previously in accordance with this Clause but no publication of the Rate of Interest or the Interest Amount so calculated need be made unless the Lender otherwise requires. The determination of any rate or amount, the obtaining of each quotation and the making of each determination or calculation by the Calculation Agent(s) shall (in the absence of manifest error) be final and binding upon all parties.

#### 4.8 **Determination or Calculation by Trustee**

If the Calculation Agent does not at any time for any reason determine or calculate the Rate of Interest for an Interest Period or any Interest Amount in relation to a Floating Rate Loan, the Lender and Gazprom agree that such determination or calculation may be made by or at the direction of the Trustee as set out in the conditions of the corresponding Series of Notes.

#### 4.9 **Definitions**

In this Clause 4, unless the context otherwise requires, the following defined terms shall have the meanings set out below:

“**Benchmark**” has the meaning specified in the relevant Loan Supplement;

“**Business Day**” means:

- (i) in the case of a currency other than euro, a day (other than a Saturday or Sunday) on which commercial banks and foreign exchange markets settle payments in the principal financial centre for such currency; and/or
- (ii) in the case of euro, a day on which the TARGET system is operating (a “**TARGET Business Day**”); and/or

- (iii) in the case of a currency and/or one or more Business Centres a day (other than a Saturday or a Sunday) on which commercial banks and foreign exchange markets settle payments in such currency in the Business Centre(s) or, if no currency is indicated, generally in each of the Business Centres.

“**Day Count Fraction**” means, in respect of the calculation of an amount of interest on any Note for any period of time (from and including the first day of such period to but excluding the last) (whether or not constituting an Interest Period, the “**Calculation Period**”):

- (i) if “**Actual/365**” or “**Actual/Actual-ISDA**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 365 (or, if any portion of that Calculation Period falls in a leap year, the sum of (A) the actual number of days in that portion of the Calculation Period falling in a leap year divided by 366 and (B) the actual number of days in that portion of the Calculation Period falling in a non-leap year divided by 365);
- (ii) if “**Actual/365 (Fixed)**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 365;
- (iii) if “**Actual/360**” is specified in the relevant Loan Supplement, the actual number of days in the Calculation Period divided by 360;
- (iv) if “**30/360**”, “**360/360**” or “**Bond Basis**” is specified in the relevant Loan Supplement, the number of days in the Calculation Period divided by 360 (the number of days to be calculated on the basis of a year of 360 days with 12 30-day months (unless (a) the last day of the Calculation Period is the 31st day of a month but the first day of the Calculation Period is a day other than the 30th or 31st day of a month, in which case the month that includes that last day shall not be considered to be shortened to a 30-day month, or (b) the last day of the Calculation Period is the last day of the month of February, in which case the month of February shall not be considered to be lengthened to a 30-day month));
- (v) if “**30E/360**” or “**Eurobond Basis**” is specified in the relevant Loan Supplement, the number of days in the Calculation Period divided by 360 (the number of days to be calculated on the basis of a year of 360 days with 12 30-day months, without regard to the date of the first day or last day of the Calculation Period unless, in the case of a Calculation Period ending on the Maturity Date, the Maturity Date is the last day of the month of February, in which case the month of February shall not be considered to be lengthened to a 30-day month); and
- (vi) if “**Actual/Actual-ISMA**” is specified in the relevant Loan Supplement:
  - (a) If the Calculation Period is equal to or shorter than the Determination Period during which it falls, the number of days in the Calculation Period divided by the product of (x) the number of days in such Determination Period and (y) the number of Determination Periods normally ending in any year; and
  - (b) if the Calculation Period is longer than one Determination Period, the sum of:
    - (I) the number of days in such Calculation Period falling in the Determination Period in which it begins divided by the product of (1) the number of days in such Determination Period and (2) the number of Determination Periods normally ending in any year; and
    - (II) the number of days in such Calculation Period falling in the next Determination Period divided by the product of (1) the number of days in such Determination Period and (2) the number of Determination Periods normally ending in any year

where:

“**Determination Period**” means the period from and including a Determination Date in any year to but excluding the next Determination Date.

“**Determination Date**” means the date specified in the relevant Loan Supplement or, if none is so specified, the Interest Payment Date.

“**Effective Date**” means, with respect to any Floating Rate to be determined on an Interest Determination Date, the date specified as such in the relevant Loan Supplement or, if none is so specified, the first day of the Interest Accrual Period to which such Interest Determination Date relates.

**“Interest Accrual Period”** means the period beginning on (and including) the Interest Commencement Date and ending on (but excluding) the first Interest Period Date and each successive period beginning on (and including) an Interest Period Date and ending on (but excluding) the next succeeding Interest Period Date.

**“Interest Amount”** means the amount of interest payable, and in the case of Fixed Rate Loans, means the Fixed Amount or Broken Amount, as the case may be.

**“Interest Commencement Date”** means the Closing Date or such other date as may be specified in the relevant Loan Supplement.

**“Interest Determination Date”** means, with respect to a Rate of Interest and Interest Accrual Period, the date specified as such in the relevant Loan Supplement or, if none is so specified, (i) the first day of such Interest Accrual Period if the Specified Currency is Sterling or (ii) the day falling two Business Days in London for the Specified Currency prior to the first day of such Interest Accrual Period if the Specified Currency is neither Sterling nor euro or (iii) the day falling two TARGET Business Days prior to the first day of such Interest Accrual Period if the Specified Currency is euro.

**“Interest Period”** means the period beginning on (and including) the Interest Commencement Date and ending on (but excluding) the first Interest Payment Date and each successive period beginning on (and including) an Interest Payment Date and ending on (but excluding) the next succeeding Interest Payment Date.

**“Interest Period Date”** means each Interest Payment Date unless otherwise specified hereon.

**“ISDA Definitions”** means the 2000 ISDA Definitions, as published by the International Swaps and Derivatives Association, Inc., unless otherwise specified in the relevant Loan Supplement.

**“Page”** means such page, section, caption, column or other part of a particular information service (including, but not limited to, Reuters Markets 3000 (**“Reuters”**) and Moneyline Telerate (**“Moneyline Telerate”**)) as may be specified for the purpose of providing a Relevant Rate, or such other page, section, caption, column or other part as may replace it on that information service or on such other information service, in each case as may be nominated by the person or organisation providing or sponsoring the information appearing there for the purpose of displaying rates or prices comparable to that Relevant Rate.

**“Reference Banks”** means the institutions specified as such in the relevant Loan Supplement or, if none, four major banks selected by the Calculation Agent in the interbank market (or, if appropriate, money, swap or over-the-counter index options market) that are most closely connected with the Benchmark (which, if EURIBOR is the relevant Benchmark, shall be Europe).

**“Relevant Financial Centre”** means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the financial centre as may be specified as such in the relevant Loan Supplement or, if none is so specified, the financial centre with which the relevant Benchmark is most closely connected (which, in the case of EURIBOR, shall be Europe) or, if none is so connected, London.

**“Relevant Rate”** means the Benchmark for a Representative Amount of the Specified Currency for a period (if applicable or appropriate to the Benchmark) equal to the Specified Duration commencing on the Effective Date.

**“Relevant Time”** means, with respect to any Interest Determination Date, the local time in the Relevant Financial Centre specified in the relevant Loan Supplement or, if no time is specified, the local time in the Relevant Financial Centre at which it is customary to determine bid and offered rates in respect of deposits in the Specified Currency in the interbank market in the Relevant Financial Centre and for this purpose “local time” means, with respect to Europe as a Relevant Financial Centre, 11.00 hours, Brussels time.

**“Representative Amount”** means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the amount specified as such in the relevant Loan Supplement or, if none is specified, an amount that is representative for a single transaction in the relevant market at the time.

**“Specified Duration”** means, with respect to any Floating Rate to be determined in accordance with a Screen Rate Determination on an Interest Determination Date, the duration specified in

the relevant Loan Supplement or, if none is specified, a period of time equal to the relative Interest Accrual Period, ignoring any adjustment pursuant to Clause 4.3.2.

#### **4.10 Calculation Agent and Reference Banks**

The Lender shall procure that there shall at all times be specified no less than four Reference Banks (or such other number as may be required) with offices in the Relevant Financial Centre and appointed one or more Calculation Agents if provision is made for them hereon and for so long as any amount remains outstanding under a Loan Agreement. If any Reference Bank (acting through its relevant office) is unable or unwilling to continue to act as a Reference Bank, then the Lender shall (with the prior approval of Gazprom) appoint another Reference Bank with an office in the Relevant Financial Centre to act as such in its place. Where more than one Calculation Agent is appointed in respect of a Loan, references in the relevant Loan Agreement to the Calculation Agent shall be construed as each Calculation Agent performing its respective duties under the relevant Loan Agreement. If the Calculation Agent is unable or unwilling to act as such or if the Calculation Agent fails duly to establish the Rate of Interest for an Interest Period or Interest Accrual Period or to calculate any Interest Amount, or to comply with any other requirement, the Lender shall (with the prior approval of Gazprom) appoint a leading bank or investment banking firm engaged in the interbank market (or, if appropriate, money, swap or over-the-counter index options market) that is most closely connected with the calculation or determination to be made by the Calculation Agent (acting through its principal London office or any other office actively involved in such market) to act as such in its place. The Calculation Agent may not resign its duties without a successor having been appointed as aforesaid. Both Gazprom and the Lender agree that such successor Calculation Agent will be appointed on the terms of the Agency Agreement in relation to each particular Series.

### **5 Repayment and Prepayment**

#### **5.1 Repayment**

Except as otherwise provided herein and in the applicable Loan Supplement, Gazprom shall repay each Loan not later than 10.00 a.m. (Relevant Time) one Business Day prior to the Repayment Date therefor.

#### **5.2 Special Prepayment**

If, as a result of the application of or any amendments to or change in the double tax treaty between the Russian Federation and Luxembourg or the laws or regulations of the Russian Federation or Luxembourg or of any political sub-division thereof or any authority therein or the enforcement of the security provided for in any Trust Deed, Gazprom would thereby be required to make or increase any payment due pursuant to any Loan Agreement as provided in sub-clauses 6.2 or 6.3, or if (for whatever reason) Gazprom would have to or has been required to pay additional amounts pursuant to Clause 8, then Gazprom may (without premium or penalty), upon not less than 10 days' notice to the Lender (which notice shall be irrevocable), prepay the relevant Loan in whole (but not in part) on any Interest Payment Date, in the case of a Floating Rate Loan, or at any time, in the case of a Fixed Rate Loan.

#### **5.3 Illegality**

If, at any time after the date of the relevant Loan Supplement, by reason of the introduction of, or any change in any applicable law or regulation or regulatory requirement or directive of any agency of any state the Lender reasonably determines (such determination being accompanied by an Opinion of Counsel with the cost of such Opinion of Counsel being borne solely by Gazprom) that it is or would be unlawful or contrary to such applicable law, regulation, regulatory requirement or directive for the Lender to allow all or part of the relevant Loan or the corresponding Series of Notes to remain outstanding or for the Lender to maintain or give effect to any of its obligations in connection with the relevant Loan Agreement and/or to charge or receive or to be paid interest at the rate then applicable to such Loan, then upon notice by the Lender to Gazprom in writing (setting out in reasonable detail the nature and extent of the relevant circumstances), Gazprom and the Lender shall consult in good faith as to a basis which

eliminates the application of such circumstances; provided, however, that the Lender shall be under no obligation to continue such consultation if a basis has not been determined within 30 days of the date on which it so notified Gazprom. If such a basis has not been determined within the 30 days, then upon notice by the Lender to Gazprom in writing, Gazprom shall prepay such Loan in whole (but not in part) on the next Interest Payment Date therefor, in the case of a Floating Rate Loan, or, in the case of a Fixed Rate Loan, on such date as the Lender shall certify to be necessary to comply with such requirements.

#### **5.4 Payment of Other Amounts**

If a Loan is to be prepaid by Gazprom pursuant to any of the provisions of Clauses 5.2 or 5.3, Gazprom shall, simultaneously with such prepayment, pay to the Lender accrued interest thereon to the date of actual receipt of payment by the Lender and all other sums payable by Gazprom pursuant to the relevant Loan Agreement.

#### **5.5 Provisions Exclusive**

Gazprom may not voluntarily prepay any Loan except in accordance with the express terms of the relevant Loan Agreement. Any amount prepaid may not be reborrowed.

### **6 Payments**

#### **6.1 Making of Payments**

All payments of principal and interest to be made by Gazprom under each Loan Agreement shall be made to the Lender not later than 10.00 a.m. (Relevant Time) one Business Day prior to each Interest Payment Date or the Repayment Date (as the case may be) in Same-Day Funds to the relevant Account. The Lender agrees with Gazprom that it will not deposit any other monies into such Account and that no withdrawals shall be made from such Account other than as provided for and in accordance with the relevant Trust Deed and the Paying Agency Agreement.

#### **6.2 No Set-Off, Counterclaim or Withholding; Gross-Up**

All payments to be made by Gazprom under each Loan Agreement shall be made in full without set-off or counterclaim and (except to the extent required by law) free and clear of and without deduction for or on account of any Taxes. If Gazprom shall be required by applicable law to make any deduction or withholding from any payment under a Loan Agreement for or on account of any Taxes, it shall increase any payment due under such Loan Agreement to such amount as may be necessary to ensure that the Lender receives a net amount in the Specified Currency equal to the full amount which it would have received had payment not been made subject to such Taxes, shall account to the relevant authorities for the relevant amount of such Taxes so withheld or deducted within the time allowed for such payment under the applicable law and shall deliver to the Lender without undue delay evidence satisfactory to the Lender of such deduction or withholding and of the accounting therefor to the relevant taxing authority. If the Lender pays any amount in respect of such Taxes, Gazprom shall reimburse the Lender in the Specified Currency for such payment on demand. For the avoidance of doubt, this Clause 6.2 is without prejudice to the obligation of the Lender to use its best endeavours to obtain a certificate from the competent authorities in Luxembourg pursuant to Clause 10.7.1.

#### **6.3 Withholding on Notes**

If the Lender notifies Gazprom (setting out in reasonable detail the nature and extent of the obligation with such evidence as Gazprom may reasonably require) that it has become obliged to make any withholding or deduction for or on account of any Taxes from any payment which it is obliged to make under or in respect of a Series of Notes in circumstances where the Lender is required to pay additional amounts pursuant to Condition 8 of such Series of Notes, Gazprom agrees to pay to the Lender, not later than 10:00am (Relevant Time) one Business Day prior to the date on which payment is due to the Noteholders of such Series in Same-Day Funds to the relevant Account, such additional amounts as are equal to the said additional amounts which the Lender must pay pursuant to Condition 8 of such Series of Notes; provided, however, that the Lender shall immediately upon receipt from any Paying Agent of any sums paid pursuant to this

provision, to the extent that the Noteholders of such Series, as the case may be, are not entitled to such additional amounts pursuant to the Conditions of such Series of Notes, repay such additional amounts to Gazprom (it being understood that neither the Lender, nor the Principal Paying Agent nor any Paying Agent shall have any obligation to determine whether any Noteholder of such Series is entitled to such additional amount).

#### **6.4 Reimbursement**

To the extent that the Lender subsequently obtains or uses any tax credit or allowance or other reimbursements relating to a deduction or withholding with respect to which Gazprom has made a payment pursuant to this Clause 6 or obtains any reimbursement from the Trustee pursuant to the terms of any Trust Deed, it shall pay to Gazprom so much of the benefit it received as will leave the Lender in substantially the same position as it would have been had no additional amount been required to be paid by Gazprom pursuant to this Clause 6 or had no reimbursement been paid to the Lender pursuant to such Trust Deed; provided, however, that the question of whether any such benefit has been received, and accordingly, whether any payment should be made to Gazprom, the amount of any such payment and the timing of any such payment, shall be determined solely by the Lender. The Lender shall use its best endeavours to obtain any credits or refunds available to it, and the Lender shall disclose to Gazprom any information regarding its tax affairs or computations requested by Gazprom and notify Gazprom of any tax credit or allowance or other reimbursement it receives from the Trustee pursuant to such Trust Deed.

#### **6.5 Mitigation**

If at any time either party hereto becomes aware of circumstances which would or might, then or thereafter, give rise to an obligation on the part of Gazprom to make any deduction, withholding or payment as described in sub-clauses 6.2 or 6.3, then, without in any way limiting, reducing or otherwise qualifying the Lender's rights, or Gazprom's obligations, under such Clauses, such party shall promptly upon becoming aware of such circumstances notify the other party, and, thereupon the parties shall consider and consult with each other in good faith with a view to finding, agreeing upon and implementing a method or methods by which any such obligation may be avoided or mitigated and, to the extent that both parties can do so without taking any action which in the reasonable opinion of such party is prejudicial to its own position, take such reasonable steps as may be reasonably available to it to avoid such obligation or mitigate the effect of such circumstances. Gazprom agrees to reimburse the Lender for all properly incurred costs and expenses (including but not limited to legal fees) incurred by the Lender in connection with this Clause.

### **7 Conditions Precedent**

#### **7.1 Documents to be Delivered**

The obligation of the Lender to make each Loan shall be subject to the receipt by the Lender on or prior to the relevant Closing Date of evidence that the persons mentioned in sub-clauses 14.10.5 and 14.10.6 hereof have agreed to receive process in the manner specified therein.

#### **7.2 Further Conditions**

The obligation of the Lender to make each Loan shall be subject to the further conditions precedent that as of the relevant Closing Date (a) the representations and warranties made and given by Gazprom in Clause 9 shall be true and accurate as if made and given on such Closing Date with respect to the facts and circumstances then existing, (b) no event shall have occurred and be continuing that constitutes, or that, with the giving of notice or the lapse of time, or both, would constitute, an Event of Default, (c) Gazprom shall not be in breach of any of the terms, conditions and provisions of the relevant Loan Agreement, (d) the relevant Subscription Agreement, Trust Deed and the Paying Agency Agreement shall have been executed and delivered, and the Lender shall have received the full amount of the proceeds of the issue of the corresponding Series of Notes pursuant to such Subscription Agreement and (e) the Lender shall have received in full the amount referred to in sub-clauses 3.2 and 3.4, if due and payable, above, as specified in the relevant Loan Supplement.

## **8 Change in Law or Increase in Cost**

### **8.1 Compensation**

In the event that after the date of a Loan Agreement there is any change in or introduction of any tax, law, regulation, regulatory requirement or official directive (whether or not having the force of law but, if not having the force of law, the observance of which is in accordance with the generally accepted financial practice of financial institutions in the country concerned) or in the interpretation or application thereof by any person charged with the administration thereof, which:

- 8.1.1** subjects or will subject the Lender to any Taxes with respect to payments of principal of or interest on such Loan or any other amount payable under such Loan Agreement (other than any Taxes payable by the Lender on its overall net income or any Taxes referred to in sub-clauses 6.2 or 6.3); or
- 8.1.2** increases or will increase the taxation of or changes or will change the basis of taxation of payments to the Lender of principal of or interest on such Loan or any other amount payable under such Loan Agreement (other than any such increase or change which arises by reason of any increase in the rate of tax payable by the Lender on its overall net income or as a result of any Taxes referred to in sub-clauses 6.2 or 6.3); or
- 8.1.3** imposes or will impose on the Lender any other condition affecting such Loan Agreement or such Loan,

and if as a result of any of the foregoing:

- (i) the cost to the Lender of making, funding or maintaining such Loan is increased; or
- (ii) the amount of principal, interest or other amount payable to or received by the Lender under such Loan Agreement is reduced; or
- (iii) the Lender makes any payment or foregoes any interest or other return on or calculated by reference to the gross amount of any sum receivable by it from Gazprom hereunder or makes any payment or foregoes any interest or other return on or calculated by reference to the gross amount of such Loan, then subject to the following, and in each such case:
  - (a) the Lender shall, as soon as practicable after becoming aware of such increased cost, reduced amount or payment made or foregone, give written notice to Gazprom, together with a certificate signed by two directors of the Lender or by any person empowered by the board of directors of the Lender to sign on behalf of the Lender describing in reasonable detail the introduction or change or request which has occurred and the country or jurisdiction concerned and the nature and date thereof and demonstrating the connection between such introduction, change or request and such increased cost, reduced amount or payment made or foregone, and setting out in reasonable detail the basis on which such amount has been calculated, and all relevant supporting documents evidencing the matters set out in such Notes; and
  - (b) Gazprom, in the case of clauses (i) and (iii) above, shall on demand by the Lender, pay to the Lender such additional amount as shall be necessary to compensate the Lender for such increased cost, and, in the case of clause (ii) above, at the time the amount so reduced would otherwise have been payable, pay to the Lender such additional amount as shall be necessary to compensate the Lender for such reduction, payment or foregone interest or other return,

provided that this sub-clause 8.1 will not apply to or in respect of any matter for which the Lender has already been compensated under sub-clauses 6.2 or 6.3.

## **8.2 Mitigation**

In the event that the Lender becomes entitled to make a claim pursuant to sub-clause 8.1:

- 8.2.1** the Lender shall consult in good faith with Gazprom and shall use reasonable efforts (based on the Lender's reasonable interpretation of any relevant tax, law, regulation, requirement, official directive, request, policy or guideline) to reduce, in whole or in part, Gazprom's obligations to pay any additional amount pursuant to such sub-clause; and
- 8.2.2** Gazprom may, only in accordance with Clause 17 of the Principal Trust Deed (including with the consent of the Trustee thereunder), require the substitution of the Lender as lender under the relevant Loan Agreement(s) and as issuer of the corresponding Series of Notes,

except that nothing in this sub-clause 8.2 shall obligate the Lender to incur any costs or expenses in taking any action hereunder unless Gazprom agrees to reimburse the Lender such costs or expenses.

## **9 Representations and Warranties**

### **9.1 Gazprom's Representations and Warranties**

Gazprom does, and on each Warranty Date shall be deemed to, represent and warrant to the Lender as follows, to the intent that such shall form the basis of each Loan Agreement:

- 9.1.1** Gazprom is duly organised and incorporated and validly existing under the laws of the Russian Federation and has the power and legal right to own its property, to conduct its business as currently conducted and to enter into and to perform its obligations under each Loan Agreement and to borrow Loans; Gazprom has taken all necessary corporate, legal and other action required to authorise the borrowing of Loans on the terms and subject to the conditions of each Loan Agreement and to authorise the execution and delivery of each Loan Agreement and all other documents to be executed and delivered by it in connection with each Loan Agreement, and the performance of each Loan Agreement in accordance with its terms.
- 9.1.2** The Loan Agreement, including each Loan Supplement in relation thereto, has been duly executed and delivered by Gazprom and constitutes a legal, valid and binding obligation of Gazprom enforceable in accordance with its terms, subject to applicable bankruptcy, insolvency, moratorium and similar laws affecting creditors' rights generally, and subject, as to enforceability, (i) to general principles of equity (regardless of whether enforcement is sought in a proceeding in equity or at law); (ii) with respect to the enforceability of a judgment whether there is a treaty in force relating to the mutual recognition of foreign judgments; and (iii) to the fact that the gross-up provisions contained in sub-clause 6.2 or 6.3 may not be enforceable under Russian law.
- 9.1.3** The execution, delivery and performance of each Loan Agreement, including each Loan Supplement in relation thereto, by Gazprom will not conflict with or result in any breach or violation of (i) any law or regulation or any order of any governmental, judicial or public body or authority in the Russian Federation, (ii) the constitutive documents, rules and regulations of Gazprom or (iii) any agreement or other undertaking or instrument to which Gazprom is a party or which is binding upon Gazprom or any of its assets, nor result in the creation or imposition of any Encumbrance on any of its assets pursuant to the provisions of any such agreement or other undertaking or instrument.
- 9.1.4** All consents, authorisations or approvals of, or filings with, any governmental, judicial or public bodies or authorities of the Russian Federation required by Gazprom in connection with the execution, delivery, performance, legality, validity, enforceability, and, subject to Russian legal requirements, admissibility in evidence of each Loan Agreement have been obtained or effected and are in full force and effect.
- 9.1.5** No event has occurred that constitutes, or that, with the giving of notice or the lapse of time, or both, would constitute, an Event of Default or a default under any agreement or instrument evidencing any Financial Indebtedness of Gazprom, and no such event will occur upon the making of a Loan.

- 9.1.6** Except as disclosed in the offering circular dated 22 September 2003 relating to the Programme (the “**Offering Circular**”) there are no judicial, arbitral or administrative actions, proceedings or claims pending or, to the knowledge of Gazprom, threatened, against Gazprom or any of its Principal Subsidiaries, the adverse determination of which could have a Material Adverse Effect.
- 9.1.7** Except for Encumbrances of the types referred to in the definition of Permitted Encumbrances in sub-clause 1.1 hereof, Gazprom and each of its Principal Subsidiaries has the right of ownership (as that expression is defined under the laws of the Russian Federation) to its property free and clear of all Encumbrances which if existing could have a Material Adverse Effect and Gazprom’s obligations under the Loans will rank at least *pari passu* with all its other unsecured and unsubordinated Financial Indebtedness (apart from any obligations mandatorily preferred by law).
- 9.1.8** The most recent audited consolidated financial statements of Gazprom:
- (i) were prepared in accordance with IFRS, as consistently applied; and
  - (ii) save as disclosed therein, present fairly in all material respects the assets and liabilities as at that date and the results of operations of Gazprom during the relevant financial year.
- 9.1.9** Except as disclosed in the Offering Circular, there has been no material adverse change since the date of the last audited consolidated financial statements of Gazprom in the financial condition, results of business operations or prospects of Gazprom or the Group taken as a whole.
- 9.1.10** The execution, delivery and enforceability of each Loan Agreement is not subject to any tax, duty, fee or other charge, including, without limitation, any registration or transfer tax, stamp duty or similar levy, imposed by or within the Russian Federation or any political subdivision or taxing authority thereof or therein.
- 9.1.11** Neither Gazprom nor its property has any right of immunity from suit, execution, attachment or other legal process on the grounds of sovereignty or otherwise in respect of any action or proceeding relating in any way to each Loan Agreement.
- 9.1.12** Gazprom is in compliance in all material respects with all applicable provisions of law except where failure to be so in compliance would not have a Material Adverse Effect.
- 9.1.13** Neither Gazprom, nor any of its Principal Subsidiaries has taken any corporate action nor, to the best of the knowledge and belief of Gazprom, have any other steps been taken or legal proceedings started or threatened in writing against Gazprom or any of its Principal Subsidiaries for its or their bankruptcy, winding-up, dissolution, external administration or re-organisation (whether by voluntary arrangement, scheme of arrangement or otherwise) or for the appointment of a receiver, administrator, administrative receiver, conservator, custodian, trustee or similar officer of it or of any or all of its or their assets or revenues.
- 9.1.14** There are no strikes or other employment disputes against Gazprom which are pending or, to Gazprom’s knowledge, threatened in writing which could have a Material Adverse Effect.
- 9.1.15** In any proceedings taken in the Russian Federation in relation to each Loan Agreement, the choice of English law as the governing law of each Loan Agreement and any arbitration award obtained in England pursuant to Clause 14.10 in relation to each Loan Agreement will be recognised and enforced in the Russian Federation after compliance with the applicable procedural rules and all other legal requirements in Russia.
- 9.1.16** Subject to sub-clause 10.7.1, under the laws of the Russian Federation, it will not be required to make any deduction or withholding from any payment it may make hereunder.
- 9.1.17** Its execution of each Loan Agreement will constitute, and its exercise of its rights and performance of its obligations thereunder will constitute, private and commercial acts done and performed for private and commercial purposes.
- 9.1.18** It has no overdue tax liabilities which could have a Material Adverse Effect other than those which it has disclosed to the Lender prior to the date hereof or which it is contesting in good faith.

**9.1.19** All licences, consents, examinations, clearances, filings, registrations and authorisations which are or may be necessary to enable Gazprom and any of its Principal Subsidiaries to own its assets and carry on its business are in full force and effect and, if not, the absence of which could not have a Material Adverse Effect.

**9.1.20** With respect to the offer and sale of Notes pursuant to each Subscription Agreement:

- (i) solely with respect to Notes comprising a Rule 144A Series, neither Gazprom nor any of its affiliates (as defined in Rule 405 under the Securities Act), nor any person acting on its or their behalf (other than the Dealers (as defined in the Dealer Agreement), on behalf of which Gazprom makes no undertaking) (i) has made offers or sales of any security, or solicited offers to buy, or otherwise negotiated in respect of, any security, under circumstances that would require the registration of the Notes or the corresponding Loan (collectively, the "**Securities**") under the Securities Act; or (ii) has engaged in any form of general solicitation or general advertising (within the meaning of Regulation D under the Securities Act) in connection with any offer or sale of the Securities in the United States; and
- (ii) neither Gazprom nor any of its affiliates (as defined in Rule 405 under the Securities Act), nor any person acting on its or their behalf (other than the Dealers (as defined in the Dealer Agreement), on behalf of which Gazprom makes no undertaking) (i) has engaged or will engage in any directed selling efforts (as defined in Regulation S under the Securities Act ("**Regulation S**")) and Gazprom, its Affiliates and any persons acting on its or their behalf have complied and will comply with the offering restrictions requirement of Regulation S.

**9.1.21** Gazprom, and each of its Principal Subsidiaries, are in compliance with all Environmental Law except where failure to do so could not have a Material Adverse Effect.

## **9.2 Lender's Representations and Warranties**

The Lender represents and warrants to Gazprom as follows:

**9.2.1** The Lender is duly incorporated under the laws of and is a resident for Luxembourg taxation purposes in Luxembourg and has full power and capacity to execute the Lender Agreements and to undertake and perform the obligations expressed to be assumed by it herein and therein and the Lender has taken all necessary action to approve and authorise the same.

**9.2.2** The execution of the Lender Agreements and the undertaking and performance by the Lender of the obligations expressed to be assumed by it herein and therein will not conflict with, or result in a breach of or default under, the laws of Luxembourg or the constitutive documents, rules and regulations of the Lender or any agreement or instrument to which it is a party or by which it is bound or in respect of indebtedness in relation to which it is a surety.

**9.2.3** The Lender Agreements constitute legal, valid and binding obligations of the Lender.

**9.2.4** All authorisations, consents and approvals required by the Lender for or in connection with the execution of the Lender Agreements, the performance by the Lender of the obligations expressed to be undertaken by it herein and therein have been obtained and are in full force and effect.

**9.2.5** So long as any amount remains outstanding under a Loan Agreement, it will comply with the provisions of Clause 14.14 of the Principal Trust Deed.

## **10 Covenants**

So long as any amount remains outstanding under a Loan Agreement:

### **10.1 Negative Pledge**

Neither Gazprom nor any Principal Subsidiary will create or permit to subsist any Encumbrance (other than a Permitted Encumbrance) upon or in respect of any of its undertakings, property, income, assets or revenues, present or future, to secure any Financial Indebtedness unless, at the

same time or prior thereto, Gazprom's obligations hereunder are secured equally and rateably therewith or benefit from such other security or other arrangement, as the case may be, in each case to the satisfaction of the Trustee.

#### **10.2 Maintenance of Authorisations**

Gazprom shall take all necessary action to obtain, and do or cause to be done all things reasonably necessary to ensure the continuance of, all consents, licences, approvals and authorisations, and make or cause to be made all registrations, recordings and filings, which may at any time be required to be obtained or made in the Russian Federation for the execution, delivery or performance of such Loan Agreement or for the validity or enforceability thereof.

#### **10.3 Mergers**

Gazprom shall not, without the prior written consent of the Lender, enter into any reorganisation (whether by way of a merger, accession, division, separation or transformation, as these terms are construed by applicable Russian legislation), or participate in any other type of corporate reconstruction and Gazprom shall ensure that no Principal Subsidiary enters into any reorganisation (whether by way of a merger, accession, division, separation or transformation as these terms are construed by applicable Russian legislation), or participates in any other type of corporate reconstruction if such reorganisation or other type of corporate reconstruction could have a material adverse effect on Gazprom's ability to perform its obligations under such Loan Agreement or the validity or enforceability of such Loan Agreement or the rights or remedies of the Lender under such Loan Agreement.

#### **10.4 Disposals**

Gazprom shall not and Gazprom shall ensure that no member of the Group shall, without the prior written consent of the Lender, (disregarding (i) sales of stock in trade in the ordinary course of business and assignments of or other arrangements over the rights or revenues arising from contracts for the sale of gas, gas condensate, crude oil or any other hydrocarbon products, (ii) any lease or related transaction and (iii) dispositions of assets or rights not related to the extraction, production, transportation, marketing or supply of gas) sell, transfer or otherwise dispose of, by one or more transactions or series of transactions (whether related or not), the whole or any part of its revenues or its assets (which for the avoidance of doubt excludes payments of cash, or other consideration, for the acquisition of any asset on normal commercial terms) which have an aggregate value in excess of U.S.\$1,000,000,000 or the equivalent thereof to a person that is not a member of the Group.

#### **10.5 Maintenance of Property**

Gazprom and any Principal Subsidiaries will cause all property used in the carrying on by it of its business for the time being to be kept in good repair and working order as, in the judgment of Gazprom or any Principal Subsidiary, may be reasonably necessary so that the business may be carried on and the failure to keep such property in such condition would have a Material Adverse Effect.

#### **10.6 Payment of Taxes and Other Claims**

Gazprom shall pay or discharge or cause to be paid or discharged, before the same shall become overdue, all taxes, assessments and governmental charges levied or imposed upon, or upon the income, profits or property of Gazprom; provided that Gazprom shall not be required to pay or discharge or cause to be paid or discharged any such tax, assessment, charge or claim (a) whose amount, applicability or validity is being contested in good faith by appropriate proceedings and for which adequate reserves in accordance with IFRS as consistently applied or other appropriate provision has been made or (b) whose amount, together with all such other unpaid or undischarged taxes, assessments, charges and claims, does not in the aggregate exceed U.S.\$100,000,000.

## **10.7 Withholding Tax Exemption**

**10.7.1** The Lender shall use its best endeavours to provide Gazprom no later than 10 Business Days before the first Interest Payment Date with respect to the first Loan made pursuant to this Agreement (and thereafter as soon as possible at the beginning of each calendar year but not later than 10 Business Days prior to the first Interest Payment Date in that year) with a certificate, issued and certified by the competent Luxembourg authorities, confirming that the Lender is resident in Luxembourg, provided that the Lender shall not be liable for any failure to provide, or any delays in providing, such residency certificate as a result of any action or inaction of the competent Luxembourg authorities, but shall notify Gazprom without delay about any such failure or delay with a written description of the actions taken by the Lender to obtain such residency certificate. In the event that the Lender has not complied with its duty to use best endeavours as set out in this sub-clause, Gazprom has a right of recourse against the Lender in respect of such non compliance. Such certificate shall be appropriately apostilled and a certified translation supplied.

**10.7.2** Gazprom and the Lender agree that, should the Russian legislation regulating the procedure for obtaining an exemption from Russian income tax withholding change then the procedure referred to in sub-clause 10.7.1 will be deemed changed accordingly.

## **10.8 Maintenance of Insurance**

Gazprom and any Principal Subsidiary shall keep those of their properties which are of an insurable nature insured with insurers who implement good business practices and are believed by Gazprom or such Principal Subsidiary, as the case may be, to be responsible against loss or damage to the extent that property of similar character is usually so insured by corporations in the same jurisdictions similarly situated.

## **10.9 Reports**

**10.9.1** Gazprom will furnish to the Lender commencing with the year ending 31 December 2002, within 9 months of the relevant year-end audited annual financial statements prepared in accordance with IFRS as consistently applied, including a report thereon by Gazprom's certified independent accountants.

**10.9.2** On each Interest Payment Date, Gazprom shall deliver to the Lender a written notice in the form of an Officer's Certificate stating whether any Potential Event of Default or Event of Default has occurred and, if it has occurred and shall be continuing, what action Gazprom is taking or proposes to take with respect thereto.

**10.9.3** Gazprom will on request of the Lender provide the Lender with such further information, other than information which Gazprom determines in good faith to be confidential, about the business and financial condition of Gazprom and its Subsidiaries as the Lender may require (including pursuant to Clauses 14.5 and 14.12 of the Principal Trust Deed).

## **10.10 Compliance with Terms of Trust Deed**

The Lender agrees that it will observe and comply with its obligations set out in the relevant Trust Deed and will not agree to any amendment to the terms of such Trust Deed without prior consultation, if reasonably practicable, with Gazprom. In addition, the Lender agrees that it will only exercise its power to appoint a new Trustee pursuant to Clause 26.1 of the Principal Trust Deed with the consent of Gazprom (such consent not to be unreasonably withheld or delayed).

## **11 Events of Default**

### **11.1 Events of Default**

If one or more of the following events of default (each, an "**Event of Default**") shall occur and be continuing, the Lender shall be entitled to the remedies set forth in sub-clause 11.3:

**11.1.1** Gazprom fails to pay within three Business Days any amount payable under a Loan Agreement as and when such amount becomes payable in the currency and in the manner

specified therein, provided that such default will not be an Event of Default if (i) it occurs by reason only of administrative or technical difficulties affecting the transfer of the funds due from Gazprom, (ii) Gazprom issued the appropriate transfer and payment instructions in sufficient time to permit the transfer and payment of the amount due to be made on its due date and (iii) the Lender receives from Gazprom that amount within six Business Days after the due date for payment.

- 11.1.2** Gazprom fails to perform or observe any of its other obligations under a Loan Agreement and (except where in any such case that failure is not capable of remedy when no such notices as is hereinafter mentioned will be required) that failure continues for the period of 30 days (or such longer period as the Lender may permit) next following the submission by the Lender to Gazprom of notice in writing requesting the same to be remedied.
- 11.1.3** Any representation or warranty of Gazprom or any statement deemed to be made by Gazprom in a Loan Agreement or in any other document, certificate or notice delivered to the Lender in connection with such Loan Agreement or the issue of the corresponding Series of Notes proves to have been inaccurate, incomplete or misleading in any material respect at the time it was made or repeated or deemed to have been made or repeated.
- 11.1.4** Gazprom or any Principal Subsidiary (i) fails to pay any of its Financial Indebtedness as and when such Financial Indebtedness becomes payable, taking into account any applicable grace period or (ii) fails to perform or observe any covenant or agreement to be performed or observed by it contained in any other agreement or in any instrument evidencing any of its Financial Indebtedness if, as a result of such failure, any other party to such agreement or instrument is entitled to exercise, and has not irrevocably waived, the right to accelerate the maturity of any amount owing thereunder; provided, that the total amount of such Financial Indebtedness unpaid or capable of being accelerated exceeds U.S.\$20,000,000 (or its equivalent in another currency); provided however that this sub-clause 11.1.4 shall not apply to foreign currency Financial Indebtedness owed to Russian Persons.
- 11.1.5** Gazprom or any Principal Subsidiary commences negotiations with its creditors generally with a view to the general readjustment or rescheduling of its indebtedness or makes a general assignment for the benefit of or a composition with its creditors generally; provided that in the case of a Principal Subsidiary the same could have a Material Adverse Effect.
- 11.1.6** Gazprom or any Principal Subsidiary takes any corporate action or any order is made by a competent court for its winding-up, dissolution, external administration or re-organisation whether by way of voluntary arrangement, scheme of arrangement or otherwise or for the appointment of a liquidator, receiver, administrator, administrative receiver, conservator, custodian, trustee or similar officer of it or of all or a material part of its revenues and assets.
- 11.1.7** Gazprom or any Principal Subsidiary (i) fails or is unable to pay its debts generally as they become due or (ii) commences a voluntary case in bankruptcy or any other action or proceeding for any other relief under any law affecting creditors' rights as is similar to bankruptcy law, or (iii) a bankruptcy (insolvency) petition in respect of Gazprom or any Principal Subsidiary is accepted by any competent court and bankruptcy proceedings are initiated by such competent court, or any action is brought in and accepted by any competent court for the liquidation of Gazprom or any Principal Subsidiary or a Russian federal law that provides for the liquidation of Gazprom as operator of the Unified Gas Supply System is adopted and comes into effect.
- 11.1.8** Any governmental authorisation necessary for the performance of any obligation of Gazprom under a Loan Agreement fails to be in full force and effect.
- 11.1.9** Any governmental authority or court takes any action that has a material adverse effect on Gazprom's ability to perform its obligations under a Loan Agreement or the validity or enforceability of a Loan Agreement or the rights or remedies of the Lender under a Loan Agreement.

**11.1.10** Any execution or distress is levied against, or an encumbrancer takes possession of, the whole or any material part of, the assets of Gazprom or any event occurs which under the laws of any jurisdiction has a similar or analogous effect and the same could have a Material Adverse Effect unless such execution, distress, enforcement of an Encumbrance or similar or analogous event is being contested in good faith by Gazprom and is not removed, paid out, stayed or discharged within 30 days of such execution, distress being levied, taking of possession or similar or analogous act, as the case may be.

**11.1.11** The aggregate amount of unsatisfied final judgments, decrees or orders of courts of competent jurisdiction or other appropriate and competent law-enforcement bodies for the payment of money against Gazprom and its Principal Subsidiaries in the aggregate exceeds U.S.\$25,000,000, or the equivalent thereof in any other currency or currencies and there is a period of 30 days following the entry thereof during which such judgment, decree or order is not appealed, discharged, waived or the execution thereof stayed and such default continues for ten days after the notice specified in sub-clause 11.2.

**11.1.12** Any seizure, compulsory acquisition, expropriation, nationalisation or renationalisation after the date of a Loan Agreement by or under the authority of a government authority of all or part (the book value of which is fifteen per cent. (15 per cent.) or more of the book value of the whole) of the assets or all or more than fifteen per cent. (15 per cent.) of the voting or non-voting shares of Gazprom or any Principal Subsidiary is made by any person.

**11.1.13** Gazprom or any of its Principal Subsidiaries ceases to carry on the principal business it carries on at the date of a Loan Agreement.

**11.1.14** At any time it is or becomes unlawful for Gazprom to perform or comply with any or all of its obligations under a Loan Agreement or any of such obligations (subject as provided in sub-clause 9.1.2) are not, or cease to be, legal, valid, binding and enforceable.

**11.1.15** Any event occurs which under the laws of any relevant jurisdiction has an analogous effect to any of the events referred to in any of the foregoing paragraphs.

## **11.2 Notice of Default**

Gazprom shall deliver to the Lender and the Trustee, within 30 days after becoming aware thereof, written notice of any event which is a Potential Event of Default or an Event of Default, its status and what action Gazprom is taking or proposes to take with respect thereto.

## **11.3 Default Remedies**

If any Event of Default shall occur and be continuing, the Lender may, by notice in writing to Gazprom, (a) declare the obligations of the Lender under the relevant Loan Agreement to be immediately terminated, whereupon such obligations shall terminate, and (b) declare all amounts payable under such Loan Agreement by Gazprom that would otherwise be due after the date of such termination to be immediately due and payable, whereupon all such amounts shall become immediately due and payable, all without diligence, presentment, demand of payment, protest or notice of any kind, which are all expressly waived by Gazprom; provided, however, that if any event of any kind referred to in sub-clause 11.1.7 occurs, the obligations of the Lender under such Loan Agreement shall immediately terminate, and all amounts payable under such Loan Agreement by Gazprom that would otherwise be due after the occurrence of such event shall become immediately due and payable, all without diligence, presentment, demand of payment, protest or notice of any kind, which are all especially waived by Gazprom.

## **11.4 Rights Not Exclusive**

The rights provided for in each Loan Agreement are cumulative and are not exclusive of any other rights, powers, privileges or remedies provided by law.

## **12 Indemnity**

### **12.1 Indemnification**

Gazprom undertakes to the Lender that if the Lender or any director, officer, employee or agent (other than the Principal Paying Agent or any of the Paying Agents) of the Lender (each an

“**Indemnified Party**”) incurs any loss, liability, cost, claim, charge, expense (including all legal fees properly incurred) demand or damage (a “**Loss**”) which may be properly incurred in respect of a Loan Agreement (or enforcement thereof), and/or the issuance, constitution, sale, listing and/or enforcement of the corresponding Series of Notes and/or the Notes of such Series being outstanding (excluding a Loss that is the subject of the undertakings contained in Clauses 8 and 13 and sub-clause 14.6 of this Agreement (it being understood that the Lender may not recover twice in respect of the same Loss)) Gazprom shall pay to the Indemnified Party on demand an amount equal to such Loss (as evidenced by an invoice distributed to Gazprom by the Lender in accordance with sub-clause 14.4) unless, in any such case, such Loss was either caused by such Indemnified Parties’ negligence or wilful misconduct or arose out of a breach of the representations and warranties of the Lender contained herein or in the Dealer Agreement; provided that this sub-clause 12.1 will not apply to or in respect of any Taxes with respect to payments of principal and interest on the Loan or any other amount payable under such Loan Agreement.

## **12.2 Independent Obligation**

Sub-clause 12.1 constitutes a separate and independent obligation of Gazprom from its other obligations under or in connection with each Loan Agreement or any other obligations of Gazprom in connection with the issuance of Notes by the Lender and shall not affect, or be construed to affect, any other provision of a Loan Agreement or any such other obligations.

## **12.3 Evidence of Loss**

A certificate of the Lender, supported by relevant documentation, setting forth the amount of losses, expenses and liabilities described in sub-clause 12.1 and specifying in full detail the basis therefor shall be prima facie evidence of the amount of such losses, expenses and liabilities.

## **12.4 Survival**

The obligations of Gazprom pursuant to sub-clauses 6.2, 6.3 and 12.1 shall survive the execution and delivery of each Loan Agreement and the drawdown and repayment of the relevant Loan, in each case by Gazprom.

## **13 Expenses**

### **13.1 Reimbursement of Front-end Expenses for the Extension of the Loan by the Lender**

Gazprom shall, pursuant to sub-clause 3.2 hereof and the relevant Loan Supplement, reimburse the Lender in the Specified Currency for all reasonable costs and expenses incurred by the Lender in connection with the negotiation, preparation and execution of each Loan Agreement and all related documents and other expenses connected with the extension of each Loan, including, without limitation, the fees and expense of its counsel.

### **13.2 Payment of Ongoing Expenses**

In addition, Gazprom hereby agrees to pay to the Lender on demand in the Specified Currency all ongoing commissions, costs, fees and expenses (including, without limitation, enforcement costs), payable by the Lender under or in respect of the Lender Agreements and the letter entered into between Gazprom, the Lender, the Trustee and the Agents dated 22 September 2003 in respect of the Programme (the “**Fee Side Letter**”). Gazprom shall also pay the Lender for any indemnification or other payment obligations of the Lender under or in respect of the Agency Agreement, Trust Deed and/or the Fee Side Letter (other than the obligation of the Lender to make payments of principal, interest or additional amounts in respect of the corresponding Series of Notes). Payments to the Lender referred to in this sub-clause 13.2 shall be made by Gazprom at least two Business Days before the relevant payment is to be made or expense incurred.

## **14 General**

### **14.1 Evidence of Debt**

The entries made in the relevant Account shall, in the absence of manifest error, constitute prima facie evidence of the existence and amounts of Gazprom’s obligations recorded therein.

## **14.2 Stamp Duties**

**14.2.1** Gazprom shall pay all stamp, registration and documentary taxes or similar charges (if any) imposed on Gazprom by any person in the Russian Federation, Luxembourg or the United States of America which may be payable or determined to be payable in connection with the execution, delivery, performance, enforcement, or admissibility into evidence of any Loan Agreement and shall indemnify the Lender against any and all costs and expenses which may be incurred or suffered by the Lender with respect to, or resulting from, delay or failure by Gazprom to pay such taxes or similar charges.

**14.2.2** Gazprom agrees that if the Lender incurs a liability to pay any stamp, registration and documentary taxes or similar charges (if any) imposed by any person in the Russian Federation, the United States of America or Luxembourg which may be payable or determined to be payable in connection with the execution, delivery, performance, enforcement, or admissibility into evidence of any Loan Agreement and any documents related thereto as well as Notes of corresponding Series and any documents related thereto, Gazprom shall repay the Lender on demand an amount equal to such stamp or other documentary taxes or duties and shall indemnify the Lender against any and all costs and expenses connected with the payment of such amounts.

## **14.3 Waivers**

No failure to exercise and no delay in exercising, on the part of the Lender or Gazprom, any right, power to privilege under any Loan Agreement and no course of dealing between Gazprom and the Lender shall operate as a waiver thereof, nor shall any single or partial exercise of any right, power or privilege preclude any other or further exercise thereof, or the exercise of any other right, power or privilege. The rights and remedies provided in each Loan Agreement are cumulative and not exclusive of any rights, or remedies provided by applicable law.

## **14.4 Notices**

All notices, requests, demands or other communications to or upon the respective parties to each Loan Agreement shall be given or made in the English language by telex or otherwise in writing and shall be deemed to have been duly given or made at the time of delivery, if delivered by hand or courier or if sent by facsimile transmission or by airmail, to the party to which such notice, request, demand or other communication is required or permitted to be given or made under such Loan Agreement addressed as follows:

### **14.4.1** if to Gazprom:

Open Joint Stock Company Gazprom  
16 Nametkina Street  
117884 Moscow  
Russian Federation

Telecopier: (7 095) 719 8352  
Attention: Corporate Finance Department

### **14.4.2** if to the Lender:

Gaz Capital S.A.  
2, Boulevard Konrad Adenauer  
L-1115 Luxembourg

Telecopier: (352) 421 22 243  
Attention: The Directors

or to such other address or telecopier number as any party may hereafter specify in writing to the other.

## **14.5 Assignment**

**14.5.1** Each Loan Agreement shall inure to the benefit of and be binding upon the parties, their respective successors and any permitted assignee or transferee of some or all of a party's rights or obligations under such Loan Agreement. Any reference in a Loan Agreement to

any party shall be construed accordingly and, in particular, references to the exercise of rights and discretions by the Lender, following the enforcement of the security and/or assignment referred to in sub-clause 14.5.3 below, shall be references to the exercise of such rights or discretions by the Trustee (as Trustee). Notwithstanding the foregoing, the Trustee shall not be entitled to participate in any discussions between the Lender and Gazprom or any agreements of the Lender or Gazprom pursuant to sub-clauses 6.4 or 6.5 or Clause 8.

**14.5.2** Gazprom shall not assign or transfer all or any part of its rights or obligations hereunder to any other party.

**14.5.3** The Lender may not assign or transfer, in whole or in part, any of its rights and benefits or obligations under any Loan Agreement except (i) the charge by way of first fixed charge granted by the Lender in favour of the Trustee (as Trustee) of the Lender's rights and benefits under such Loan Agreement and (ii) the absolute assignment by the Lender to the Trustee of certain rights, interests and benefits under such Loan Agreement, in each case, pursuant to Clause 6 of the relevant Supplemental Trust Deed.

#### **14.6 Currency Indemnity**

To the fullest extent permitted by law, the obligation of Gazprom in respect of any amount due in the Specified Currency under a Loan Agreement shall, notwithstanding any payment in any other currency (whether pursuant to a judgment or otherwise), be discharged only to the extent of the amount in the Specified Currency that the Lender may, in accordance with normal banking procedures, purchase with the sum paid in such other currency (after any premium and costs of exchange) on the Business Day immediately following the day on which the Lender receives such payment. If the amount in the Specified Currency that may be so purchased for any reason falls short of the amount originally due (the "**Due Amount**"), Gazprom hereby agrees to indemnify and hold harmless the Lender against any deficiency in the Specified Currency. Any obligation of Gazprom not discharged by payment in the Specified Currency shall, to the fullest extent permitted by applicable law, be due as a separate and independent obligation and, until discharged as provided the relevant Loan Agreement, shall continue in full force and effect. If the amount in the Specified Currency that may be purchased exceeds that Due Amount the Lender shall promptly pay the amount of the excess to Gazprom.

#### **14.7 Prescription**

Subject to the Lender having received the principal amount thereof or interest thereon from Gazprom, the Lender shall forthwith repay to Gazprom the principal amount or the interest amount thereon, respectively, of any Series of Notes upon such Series of Notes becoming void pursuant to Condition 11 of such Notes.

#### **14.8 Contracts (Rights of Third Parties) Act 1999**

A person who is not a party to a Loan Agreement has no right under the Contracts (Rights of Third Parties) Act 1999 to enforce any term of such Loan Agreement.

#### **14.9 Choice of Law**

Each Loan Agreement shall be governed by, and construed in accordance with, the laws of England.

#### **14.10 Jurisdiction**

**14.10.1** For the exclusive benefit of the other party, each of Gazprom and the Lender hereby irrevocably agrees that the courts of England shall have jurisdiction to settle any disputes which may arise out of or in connection with any Loan Agreement and that accordingly any suit, action or proceeding (collectively, "**Proceedings**") arising out of or in connection with such Loan Agreement may be brought in such courts.

**14.10.2** Each of the parties irrevocably waives any objection which it may now or hereafter have to the laying of the venue of any Proceedings in any such court referred to in this Clause

14 and any claim that any such Proceedings have been brought in an inconvenient forum and further irrevocably agrees that a final and conclusive judgment in any Proceedings brought in the English courts with competent jurisdiction shall be conclusive and binding and may be enforced in the courts of any other jurisdiction.

**14.10.3** Nothing contained in any Loan Agreement shall limit the right of any party to take Proceedings against another party in any other court of competent jurisdiction to the extent permitted by any applicable law, nor shall the taking of Proceedings in connection with such Loan Agreement in one or more jurisdictions preclude the taking of Proceedings in any other jurisdiction or in any other court of competent jurisdiction in connection with such Loan Agreement to the extent permitted by any applicable law.

**14.10.4** Each of the parties hereby agrees that, at the option of the other party, any dispute, controversy, claim or cause of action brought by any party against another party or arising out of or relating to any Loan Agreement may be settled by arbitration in accordance with the Rules of the London Court of International Arbitration, which rules are deemed to be incorporated by reference into this Clause. The place of arbitration shall be London, England and the language of the arbitration shall be English. The number of arbitrators shall be three, each of whom shall be disinterested in the dispute or controversy, shall have no connection with any party thereto and shall be an attorney experienced in international securities transactions. Each party shall nominate an arbitrator, who, in turn, shall nominate the Chairman of the Tribunal. If a dispute, claim controversy or cause of action shall involve more than two parties, the parties thereto shall attempt to align themselves in two sides (i.e. claimant and respondent) each of which shall appoint an arbitrator as if there were only two sides to such dispute, claim controversy or cause of action. If such alignment and appointment shall not have occurred within twenty (20) calendar days after the initiating party serves the arbitration demand or if a Chairman has not been selected within thirty (30) calendar days of the selection of the second arbitrator, the Arbitration Court of the London Court of International Arbitration shall appoint the three arbitrators or the Chairman, as the case may be. The parties and the Arbitration Court may appoint arbitrators from among the nationals of any country, whether or not a party is a national of that country. The arbitrators shall have no authority to award punitive or other punitive type damages and may not, in any event, make any ruling, finding or award that does not conform to the terms and conditions of this Agreement.

Fees of the arbitration (excluding each party's preparation, travel, attorneys' fees and similar costs) shall be borne in accordance with the decision of the arbitrators. The decision of the arbitrators shall be final, binding and enforceable upon the parties and judgment upon any award rendered by the arbitrators may be entered in any court having jurisdiction thereof. In the event that the failure of a party to comply with the decision of the arbitrators requires any other party to apply to any court for enforcement of such award, the non-complying party shall be liable to the other for all costs of such litigation, including reasonable attorneys' fees.

**14.10.5 Lender's Process Agent:** The Lender agrees that the process by which any Proceedings in England are begun may be served on it by being delivered to Deutsche Bank Luxembourg S.A., c/o Deutsche Bank AG London, Winchester House, 1 Great Winchester Street, London EC2N 2DB or its other principal place of business in England for the time being or at any other address for the time being at which process may be served on such person in accordance with Part XXIII of the Companies Act 1985 (as modified or re-enacted from time to time). If such person is not or ceases to be effectively appointed to accept service of process on the Lender's behalf, the Lender shall, on the written demand of Gazprom, appoint a further person in England to accept service of process on its behalf and, failing such appointment within 15 days, Gazprom shall be entitled to appoint such a person by written notice to the Lender. Nothing in this Clause shall affect the right of Gazprom to serve process in any other manner permitted by law.

**14.10.6 Gazprom's Process Agent:** Gazprom agrees that the process by which any Proceedings in England are begun may be served on it by being delivered to Gazprom (U.K.) Limited at 35 Vine Street, London EC3N 2AA or its other principal place of business in England for the time being or at any other address for the time being at which process may be served on such person in accordance with Part XXIII of the Companies Act 1985 (as modified or

re-enacted from time to time). If such person is not or ceases to be effectively appointed to accept service of process on Gazprom's behalf, Gazprom shall, on the written demand of the Lender, appoint a further person in England to accept service of process on its behalf and, failing such appointment within 15 days, the Lender shall be entitled to appoint such a person by written notice to Gazprom. Nothing in this Clause shall affect the right of the Lender to serve process in any other manner permitted by law.

**14.11 Counterparts**

Each Loan Agreement may be executed in any number of counterparts and all of such counterparts taken together shall be deemed to constitute one and the same agreement.

**14.12 Language**

The language which governs the interpretation of each Loan Agreement is the English language.

**14.13 Amendments**

Except as otherwise provided by its terms, each Loan Agreement may not be varied except by an agreement in writing signed by the parties.

**14.14 Partial Invalidity**

The illegality, invalidity or unenforceability to any extent of any provision of each Loan Agreement under the law of any jurisdiction shall affect its legality, validity or enforceability in such jurisdiction to such extent only and shall not affect its legality, validity or enforceability under the law of any other jurisdiction, nor the legality, validity or enforceability of any other provision.

**IN WITNESS WHEREOF**, the parties hereto have caused this Facility Agreement to be executed on the date first written above.

**Schedule  
Form of Loan Supplement**

**This Loan Supplement is made on • between:**

- (1) **GAZ CAPITAL S.A.**, a société anonyme established under the laws of Luxembourg whose registered office is at 2, Boulevard Konrad Adenauer L-1115 Luxembourg, registered with the Register of Commerce and Companies, Luxembourg under number B - 95071 (the "**Lender**"); and
- (2) **OPEN JOINT STOCK COMPANY GAZPROM**, a company established under the laws of the Russian Federation whose registered office is at 16 Nametkina Street, 117884 Moscow, Russian Federation ("**Gazprom**").

**Whereas:**

- (A) Gazprom has entered into a facility agreement dated 22 September 2003 (the "**Facility Agreement**") with the Lender in respect of Gazprom's U.S.\$5,000,000,000 Programme for the Issuance of Loan Participation Notes (the "**Programme**").
- (B) Gazprom proposes to borrow • (the "**Loan**") and the Lender wishes to make such Loan on the terms set out in the Facility Agreement and this Loan Supplement.

**It is agreed as follows:**

**1 Definitions**

Capitalised terms used but not defined in this Loan Supplement shall have the meaning given to them in the Facility Agreement save to the extent supplemented or modified herein. The Schedule forms part of this Loan Supplement and shall have effect accordingly.

**2 Additional Definitions**

For the purpose of this Loan Supplement, the following expressions used in the Facility Agreement shall have the following meanings:

"**Account**" means the account in the name of the Lender with the Principal Paying Agent (account number •, •);

["**Calculation Agent**" means Deutsche Bank AG London;]

"**Closing Date**" means •;

"**Gazprom Account**" means the account in the name of Gazprom (account number •);

"**Loan Agreement**" means the Facility Agreement as amended and supplemented by this Loan Supplement;

"**Notes**" means • [• per cent.][Floating Rate] Loan Participation Notes due • issued by the Lender as Series • under the Programme;

"**Repayment Date**" means • [*amend as required for Floating Rate Notes*];

"**Specified Currency**" means •;

"**Subscription Agreement**" means an agreement between the Lender, Gazprom and • dated • relating to the Notes; and

"**Trust Deed**" means the Principal Trust Deed between the Lender and the Trustee dated 22 September 2003 as amended and supplemented by a Supplemental Trust Deed dated • constituting and securing the Notes.

**3 Incorporation by Reference**

Except as otherwise provided, the terms of the Facility Agreement shall apply to this Loan Supplement as if they were set out herein and the Facility Agreement shall be read and construed, only in relation to the Loan constituted hereby, as one document with this Loan Supplement.

**4 The Loan**

**4.1 Drawdown**

Subject to the terms and conditions of the Loan Agreement, the Lender agrees to make the Loan on the Closing Date to Gazprom and Gazprom shall make a single drawing in the full amount of the Loan.

## 4.2. Interest

The Loan is a [Fixed Rate][Floating Rate] Loan. Interest shall be calculated, and the following terms used in the Facility Agreement shall have the meanings, as set out below:

### 4.2.1 Fixed Rate Loan Provisions

[Applicable/Not Applicable]  
(If not applicable, delete the remaining sub-paragraphs of this paragraph)

- (i) Interest Commencement Date ●
- (ii) Rate[(s)] of Interest: ● per cent. per annum [payable [annually/semi-annually] in arrear
- (iii) Interest Payment Date(s): ● in each year [adjusted in accordance with [specify Business Day Convention and any applicable Business Centre(s) for the definition of "Business Day"]/not adjusted]
- (iv) Fixed Amount[(s)]: ● per ● in principal amount
- (v) Broken Amount: [Insert particulars of any initial or final broken interest amounts which do not correspond with the Fixed Amount [(s)] and the Interest Payment Date(s) to which they relate]
- (vi) Day Count Fraction (Clause 4.9): ● (Day count fraction should be Actual/Actual-ISMA for all fixed rate loans other than those denominated in U.S. dollars, unless specified)
- (vii) Determination Date(s) (Clause 4.9): ● in each year. [Insert regular interest payment dates, ignoring issue date or maturity date in the case of a long or short first or last interest period]\*\*
- (viii) Other terms relating to the method of calculating interest for Fixed Rate Loans: [Not Applicable/give details]

### 4.2.2 Floating Rate Loan Provisions

[Applicable/Not Applicable] (If not applicable, delete the remaining sub-paragraphs of this paragraph)

- (i) Interest Commencement Date ●
- (ii) Interest Period(s): ●
- (iii) Specified Interest Payment Dates: ●
- (iv) Business Day Convention: [Floating Rate Business Day Convention/Following Business Day Convention/Modified Following Business Day Convention/Preceding Business Day Convention/other (give details)]
- (v) Business Centre(s) (Clause 4.9): ●
- (vi) Manner in which the Rate(s) of Interest is/are to be determined: [Screen Rate Determination/ISDA Determination/other (give details)]

\*\* Only to be completed for a Loan where Day Count Fraction is Actual/Actual-ISMA.

- (vii) Interest Period Date(s): [Not Applicable/specify dates]
- (viii) Party responsible for calculating the Rate(s) of Interest and Interest Amount(s) (if not the Calculation Agent): ●
- (ix) Screen Rate Determination (Clause 4.3.3):
- Relevant Time: ●
  - Interest Determination Date: [●/TARGET] Business Days in [specify city] for [specify currency] prior to [the first day in each Interest Accrual Period/each Interest Payment Date]
  - Primary Source for Floating Rate: [Specify relevant screen page or "Reference Banks"]
  - Reference Banks (if Primary Source is "Reference Banks"): [Specify four]
  - Relevant Financial Centre: [The financial centre most closely connected to the Benchmark—specify if not London]
  - Benchmark: [LIBOR, LIBID, LIMEAN, EURIBOR or other benchmark]
  - Representative Amount: [Specify if screen or Reference Bank quotations are to be given in respect of a transaction of a specified notional amount]
  - Effective Date: [Specify if quotations are not to be obtained with effect from commencement of Interest Accrual Period]
  - Specified Duration: [Specify period for quotation if not duration of Interest Accrual Period]
- (x) ISDA Determination (Clause 4.3):
- Floating Rate Option: ●
  - Designated Maturity: ●
  - Reset Date: ●
  - ISDA Definitions: (if different from those set out in the Conditions) ●
- (xi) Margin(s): [+/–] ● per cent. per annum
- (xii) Minimum Rate of Interest: ● per cent. per annum
- (xiii) Maximum Rate of Interest: ● per cent. per annum
- (xiv) Day Count Fraction (Clause 4.9): ●
- (xv) Rate Multiplier: ●

(xvi) Fall back provisions, rounding provisions, denominator and any other terms relating to the method of calculating interest on Floating Rate Loans, if different from those set out in the Facility Agreement: ●]

**5 Fees and Expenses**

Pursuant to Clause 3.2 of the Facility Agreement and in consideration of the Lender making the Loan to Gazprom, Gazprom hereby agrees that it shall, two Business Days before the Closing Date, pay to the Lender, in Same-Day Funds, the amount of the reimbursable expenses incurred by the Lender in connection with such Loan, [which expenses shall include the amount of all of the commissions, fees, costs and expenses as set forth in sub-clause [5.1] of the Subscription Agreement, paragraphs 1 and 4 of the Fee Side Letter and sub-clauses 3.2 and 13.1 of the Facility Agreement] pursuant to an invoice submitted by the Lender to Gazprom in the total amount of ●.

**6 Governing Law**

This Loan Supplement shall be governed by and construed in accordance with English law.

This Loan Supplement has been entered into on the date stated at the beginning.

## TERMS AND CONDITIONS OF THE NOTES

*The following is the text of the Terms and Conditions of the Notes, which contain summaries of certain provisions of the Trust Deed, and which (subject to completion and amendment in accordance with the provisions of the relevant Pricing Supplement) will be attached to the Notes in definitive form, if issued, and (subject to the provisions thereof) apply to the Global Notes representing each Series. Either (i) the full text of these terms and conditions together with the relevant provisions of the Pricing Supplement or (ii) these terms and conditions as so completed, amended, supplemented or varied (and subject to simplification by the deletion of non-applicable provisions), shall be endorsed on such Notes. All capitalised terms that are not defined in these Conditions will have the meanings given to them in the relevant Pricing Supplement. Those definitions will be endorsed on the definitive Notes. References in the Conditions to "Notes" are to the Notes of one Series only, not to all Notes that may be issued under the Programme.*

The Notes are constituted by, are subject to, and have the benefit of, a supplemental trust deed dated the Issue Date specified hereon (the "**Supplemental Trust Deed**") supplemental to a trust deed (as amended or supplemented as at the Issue Date, the "**Principal Trust Deed**") dated 22 September 2003, each made between Gaz Capital S.A. (the "**Issuer**") and Deutsche Bank Trust Company Americas (the "**Trustee**", which expression shall include any trustee or trustees for the time being under the Trust Deed) as trustee and successors thereof for the holders of the Notes (the "**Noteholders**"). The Principal Trust Deed and the Supplemental Trust Deed as modified from time to time in accordance with the provisions therein contained and any deed or other document expressed to be supplemental thereto, as from time to time so modified, are together referred to as the "**Trust Deed**".

The Issuer has authorised the creation, issue and sale of the Notes for the sole purpose of financing a loan (the "**Loan**") as specified hereon to Open Joint Stock Company Gazprom (the "**Borrower**"). The Issuer and the Borrower have recorded the terms of the Loan in a facility agreement (the "**Facility Agreement**") dated 22 September 2003, as supplemented on the Issue Date specified hereon by a loan supplement (the "**Loan Supplement**") each between the Issuer and the Borrower (together, the "**Loan Agreement**").

In each case where amounts of principal, interest and additional amounts (if any) are stated herein or in the Trust Deed to be payable in respect of the Notes, the obligations of the Issuer to make any such payment shall constitute an obligation only to account to the Noteholders on each date upon which such amounts of principal, interest and additional amounts (if any) are due in respect of the Notes, for an amount equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the Loan Agreement.

The Issuer has charged by way of first fixed charge in favour of the Trustee certain of its rights and interests as lender under the Loan Agreement (other than any rights and benefits constituting Reserved Rights (as defined in the Trust Deed)) as security for its payment obligations in respect of the Notes and under the Trust Deed (the "**Charge**") and has assigned absolutely certain other rights under the Loan Agreement to the Trustee (the "**Assigned Rights**" and together with the Charge, the "**Security Interests**"). In certain circumstances, the Trustee can (subject to it being indemnified and/or secured to its satisfaction) be required by Noteholders holding at least one quarter of the principal amount of the Notes outstanding or by an Extraordinary Resolution (as defined in the Trust Deed) of the Noteholders to exercise certain of its powers under the Trust Deed (including those arising under the Assigned Rights).

The Notes have the benefit of, and payments in respect of the Notes will be made (subject to the receipt of the relevant funds from the Borrower) pursuant to, a paying agency agreement (the "**Agency Agreement**") dated 22 September 2003 and made between the Issuer, Deutsche Bank Luxembourg S.A. as paying agent and Luxembourg registrar, Deutsche Bank Trust Company Americas as paying agent and U.S. registrar (together with Deutsche Bank Luxembourg S.A. in such capacity, each a "**Registrar**", which expressions shall include any successors), Deutsche Bank AG London as the principal paying agent (the "**Principal Paying Agent**") and calculation agent and Deutsche Bank AG London and Deutsche Bank Luxembourg S.A. as transfer agents (the "**Transfer Agents**"), which expressions shall include any additional or successor transfer agents), the Borrower and the Trustee.

Copies of the Trust Deed, the Loan Agreement, the Agency Agreement and the Pricing Supplement are available for inspection at the principal office of the Trustee being, at the date hereof, at Winchester House, 1 Great Winchester Street, London EC2N 2DB, at the specified office of the Principal Paying Agent and at the specified office of the Paying Agent in Luxembourg.

The statements contained in these Terms and Conditions include summaries or restatements of, and are subject to, the detailed provisions of the Trust Deed, the Pricing Supplement, the Loan Agreement

(the form of which is scheduled to and incorporated in the Trust Deed) and the Agency Agreement. Noteholders are entitled to the benefit of, are bound by, and are deemed to have notice of, all the provisions thereof.

## **1 Status**

The sole purpose of the issue of the Notes is to provide the funds for the Issuer to finance the Loan. The Notes constitute the obligation of the Issuer to apply the proceeds from the issue of the Notes solely for financing the Loan and to account to the Noteholders for an amount equivalent to sums of principal, interest and additional amounts (if any) actually received by or for the account of the Issuer pursuant to the Loan Agreement.

The Trust Deed provides that payments in respect of the Notes equivalent to the sums actually received by or for the account of the Issuer by way of principal, interest or additional amounts (if any) pursuant to the Loan Agreement will be made pro rata among all Noteholders, on the date of, and in the currency of, and subject to the conditions attaching to, the equivalent payment pursuant to the Loan Agreement. The Issuer shall not be liable to make any payment in respect of the Notes other than as expressly provided herein and in the Trust Deed. As provided therein, neither the Issuer nor the Trustee shall be under any obligation to exercise in favour of the Noteholders any rights of set-off or of banker's lien or to combine accounts or counterclaim that may arise out of other transactions between the Issuer and the Borrower.

Noteholders have notice of, and have accepted, these Terms and Conditions, the Pricing Supplement and the contents of the Trust Deed and the Loan Agreement, and have hereby accepted that:

- 1.1** neither the Issuer nor the Trustee makes any representation or warranty in respect of, or shall at any time have any responsibility for, or, save as otherwise expressly provided in the Trust Deed or in paragraph 1.6 below, liability or obligation in respect of the performance and observance by the Borrower of its obligations under the Loan Agreement or the recoverability of any sum of principal or interest (or any additional amounts) due or to become due from the Borrower under the Loan Agreement;
- 1.2** neither the Issuer nor the Trustee shall at any time have any responsibility for, or obligation or liability in respect of, the financial condition, creditworthiness, affairs, status or nature of the Borrower;
- 1.3** neither the Issuer nor the Trustee shall at any time be liable for any representation or warranty or any act, default or omission of the Borrower under or in respect of the Loan Agreement;
- 1.4** neither the Issuer nor the Trustee shall at any time have any responsibility for, or liability or obligation in respect of, the performance and observance by the Principal Paying Agent, any of the Paying Agents, the Registrar or the Transfer Agent of their respective obligations under the Agency Agreement;
- 1.5** the financial servicing and performance of the terms of the Notes depend solely and exclusively upon performance by the Borrower of its obligations under the Loan Agreement and its covenant to make payments under the Loan Agreement and its credit and financial standing. The Borrower has represented and warranted to the Issuer in the Loan Agreement that the Loan Agreement constitutes a legal, valid and binding obligation of the Borrower; and
- 1.6** the Issuer and the Trustee shall be entitled to rely on a certificate signed by a duly authorised officer of the Borrower confirming that the Borrower is complying with its obligations under the Loan Agreement and shall not otherwise be responsible for investigating any aspect of the Borrower's performance in relation thereto and, subject as further provided in the Trust Deed, the Trustee will not be liable for any failure to make the usual or any investigations which might be made by a security holder in relation to the property which is the subject of the Trust Deed and held by way of security for the Notes, and shall not be bound to enquire into or be liable for any defect or failure in the right or title of the Issuer to the assigned property whether such defect or failure was known to the Trustee or might have been discovered upon examination or enquiry or whether capable of remedy or not, nor will it have any liability for the enforceability of the security created by the Security Interests whether as a result of any failure, omission or defect in registering or filing or otherwise protecting or perfecting such security; the Trustee has no responsibility for the value of such security.

Under the Trust Deed, the obligations of the Issuer in respect of the Notes rank *pari passu* and rateably without any preference among themselves.

In the event that the payments under the Loan Agreement are made by the Borrower to, or to the order of, the Trustee or (subject to the provisions of the Trust Deed) the Principal Paying Agent, they will *pro tanto* satisfy the obligations of the Issuer in respect of the Notes.

Save as otherwise expressly provided herein and in the Trust Deed, no proprietary or other direct interest in the Issuer's right under or in respect of the Loan Agreement or the Loan exists for the benefit of the Noteholders. Subject to the terms of the Trust Deed, no Noteholder will have any entitlement to enforce the Loan Agreement or direct recourse to the Borrower except through action by the Trustee pursuant to the Assigned Rights granted to the Trustee in the Trust Deed. Neither the Issuer nor, following the enforcement of the Security Interests created in the Trust Deed, the Trustee shall be required to take proceedings to enforce payment under the Loan Agreement unless it has been indemnified and/or secured by the Noteholders to its satisfaction.

## **2 Form, Denomination and Title**

The Notes will be issued in fully registered form, and in the Specified Denomination shown hereon or integral multiples thereof, without interest coupons; provided that the Rule 144A Notes shall be held in amounts of not less than U.S.\$100,000.

A Note issued under the Principal Trust Deed may be a Fixed Rate Note, a Floating Rate Note, a combination of the foregoing or any other kind of Note, depending upon the Interest and Redemption/Payment Basis specified hereon.

## **3 Register, Title and Transfers**

The Registrar will maintain a register (the "**Register**") in respect of the Notes in accordance with the provisions of the Agency Agreement. In these Conditions the "holder" of a Note means the person in whose name such Note is for the time being registered in the Register (or, in the case of a joint holding, the first named thereof) and "Noteholder" shall be construed accordingly. A Note will be issued to each Noteholder in respect of its registered holding.

The holder of each Note shall (except as otherwise required by law) be treated as the absolute owner of such Note for all purposes (whether or not it is overdue and regardless of any notice of ownership, trust or any other interest therein, any writing on the Note relating thereto (other than the endorsed form of transfer) or any notice of any previous loss or theft of such Note) and no person shall be liable for so treating such holder.

A Note may be transferred upon surrender of the relevant Note, with the endorsed form of transfer duly completed, at the specified office of the Registrar or at the specified office of the Transfer Agent, together with such evidence as the Registrar or the Transfer Agent may reasonably require to prove the title of the transferor and the authority of the individuals who have executed the form of transfer. Where not all the Notes represented by the surrendered Note are the subject of the transfer, a new Note in respect of the balance of the Note will be issued to the transferor.

Subject to the last paragraph of this Condition, within five business days of the surrender of a Note in accordance with the immediately preceding paragraph above, the Registrar will register the transfer in question and deliver a new Note to each relevant holder at its specified office or (at the request and risk of such relevant holder) by uninsured first class mail (airmail if overseas) to the address specified for the purpose by such relevant holder. In this paragraph, "business day" means a day on which commercial banks are open for business (including dealings in foreign currencies) in the city where the Registrar has its specified office.

The transfer of a Note will be effected without charge but against such indemnity as the Registrar may require in respect of any tax or other duty of whatsoever nature which may be levied or imposed in connection with such transfer.

Noteholders may not require transfers to be registered during the period of 15 days ending on the due date for any payment of principal or interest in respect of the Notes.

## **4 Restrictive Covenants**

As provided in the Trust Deed, so long as any of the Notes remains outstanding (as defined in the Trust Deed), the Issuer will not, without the prior written consent of the Trustee, agree to any amendments to or any modification or waiver of, or authorise any breach or proposed breach of, the

terms of the Loan Agreement and will act at all times in accordance with any instructions of the Trustee from time to time with respect to the Loan Agreement, except as otherwise expressly provided in the Loan Agreement. Any such amendment, modification, waiver or authorisation made with the consent of the Trustee shall be binding on the Noteholders and, unless the Trustee agrees otherwise, any such amendment or modification shall be notified by the Issuer to the Noteholders in accordance with Condition 14.

Save as provided above, so long as any Note remains outstanding, the Issuer, without the prior written consent of the Trustee shall not, *inter alia*, incur any other indebtedness for borrowed moneys, engage in any other business (other than acquiring and holding the Charged Property in respect of each Series issuing Notes, entering into Loans and performing any act incidental to or necessary in connection with the foregoing), declare any dividends, have any subsidiaries or employees, purchase, own, lease or otherwise acquire any real property (including office premises or like facilities), consolidate or merge with any other person or convey or transfer its properties or assets substantially as an entity to any person (otherwise than as contemplated in these conditions and the Trust Deed), issue any shares, give any guarantee or assume any other liability, or subject to the laws of Luxembourg, petition for any winding-up or bankruptcy.

## 5 Interest

- (a) **Interest on Fixed Rate Notes:** Each Fixed Rate Note bears interest on its outstanding principal amount from (and including) the Interest Commencement Date at the rate(s) per annum (expressed as a percentage) equal to the Rate(s) of Interest specified hereon which shall be equal to the rate per annum at which interest under the Loan accrues. Accordingly, on each Interest Payment Date the Issuer shall account to the Noteholders for an amount equivalent to amounts of interest under the Loan received by or for the account of the Issuer pursuant to the Loan Agreement.

If a Fixed Coupon Amount or a Broken Amount is specified hereon, the amount of interest payable on each Interest Payment Date will amount to the Fixed Coupon Amount or, if applicable, the Broken Amount so specified and in the case of the Broken Amount will be payable on the particular Interest Payment Date(s) specified hereon.

- (b) **Interest on Floating Rate Notes:**
- (i) *Interest Payment Dates:* Each Floating Rate Note bears interest on its outstanding nominal amount from (and including) the Interest Commencement Date at the rate per annum (expressed as a percentage) equal to the Rate of Interest specified hereon, which shall be equal to the rate per annum at which interest under the Loan accrues, such interest being payable in arrear on each Interest Payment Date. Such Interest Payment Date(s) is/are either shown hereon as Specified Interest Payment Dates or, if no Specified Interest Payment Date(s) is/are shown hereon, Interest Payment Date shall mean each date which falls the number of months or other period shown hereon as the Interest Period after the preceding Interest Payment Date or, in the case of the first Interest Payment Date, after the Interest Commencement Date. Accordingly, on each such date, the Issuer shall account to the Noteholders for an amount equivalent to amounts of interest under the Loan received by or for the account of the Issuer pursuant to the Loan Agreement.
- (ii) *Business Day Convention:* If any date referred to in these Conditions that is specified to be subject to adjustment in accordance with a Business Day Convention would otherwise fall on a day that is not a Business Day, then, if the Business Day Convention specified is (A) the Floating Rate Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event (x) such date shall be brought forward to the immediately preceding Business Day and (y) each subsequent such date shall be the last Business Day of the month in which such date would have fallen had it not been subject to adjustment, (B) the Following Business Day Convention, such date shall be postponed to the next day that is a Business Day, (C) the Modified Following Business Day Convention, such date shall be postponed to the next day that is a Business Day unless it would thereby fall into the next calendar month, in which event such date shall be brought forward to the immediately preceding Business Day or (D) the Preceding Business Day Convention, such date shall be brought forward to the immediately preceding Business Day.

- (iii) *Rate of Interest for Floating Rate Notes:* The Rate of Interest in respect of Floating Rate Notes for each Interest Accrual Period shall be determined in the manner specified hereon and as set out in the Loan Agreement.
- (c) **Accrual of Interest:** Interest shall cease to accrue on each Note on the due date for redemption unless, upon due presentation, payment is improperly withheld or refused, in which event interest shall continue to accrue (as well after as before judgment) at the Rate of Interest in the manner provided in this Condition 5 to the Relevant Date (as defined in Condition 8).
- (d) **Calculations:** The amount of interest payable in respect of any Note for any period shall be calculated by multiplying the product of the Rate of Interest and the outstanding nominal amount of such Note by the Day Count Fraction as specified hereon and in the Loan Agreement, unless an Interest Amount (or a formula for its calculation) is specified in respect of such period, in which case the amount of interest payable in respect of such Note for such period shall equal such Interest Amount (or be calculated in accordance with such formula). Where any Interest Period comprises two or more Interest Accrual Periods, the amount of interest payable in respect of such Interest Period shall be the sum of the amounts of interest payable in respect of each of those Interest Accrual Periods.
- (e) **Publication of Rates of Interest and Interest Amounts:** As soon as practicable after calculating or determining the Rate of Interest and the Interest Amounts for each Interest Period and the relevant Interest Payment Date as set out in the Loan Agreement, the Calculation Agent shall cause such Rate of Interest and Interest Amounts to be notified to the Trustee, the Issuer, Gazprom, each of the Paying Agents, the Noteholders, any other Calculation Agent appointed in respect of the Notes that is to make a further calculation upon receipt of such information and, if the Notes are listed on a stock exchange and the rules of such exchange or other relevant authority so require, such exchange or other relevant authority as soon as possible after their determination but in no event later than (i) the commencement of the relevant Interest Period, if determined prior to such time, in the case of notification to such exchange of a Rate of Interest and Interest Amount, or (ii) in all other cases, the fourth Business Day after such determination. Where any Interest Payment Date or Interest Period Date is subject to adjustment pursuant to Condition 5(b)(ii), the Interest Amounts and the Interest Payment Date so published may subsequently be amended (or appropriate alternative arrangements made with the consent of the Trustee by way of adjustment) without notice in the event of an extension or shortening of the Interest Period. If the Notes become due and payable under Clause 11 of the Facility Agreement, the accrued interest and the Rate of Interest payable in respect of the Notes shall nevertheless continue to be calculated as previously in accordance with this Condition but no publication of the Rate of Interest or the Interest Amount so calculated need be made unless the Trustee otherwise requires. The determination of any rate or amount, the obtaining of each quotation and the making of each determination or calculation by the Calculation Agent(s) shall (in the absence of manifest error) be final and binding upon all parties.
- (f) **Determination or Calculation by Trustee:** If the Calculation Agent does not at any time for any reason determine or calculate the Rate of Interest for an Interest Period or any Interest Amount pursuant to the Loan Agreement, the Trustee shall do so (or shall appoint an agent on its behalf to do so) and such determination or calculation shall be deemed to have been made by the Calculation Agent. In doing so, the Trustee shall apply the foregoing provisions of this Condition, with any necessary consequential amendments, to the extent that, in its opinion, it can do so, and, in all other respects it shall do so in such manner as it shall deem fair and reasonable in all the circumstances.

## 6 Redemption

Unless previously prepaid or repaid pursuant to Clause 5.2 or 5.3 of the Facility Agreement, the Borrower will be required to repay the Loan on its Repayment Date (as defined in the Loan Agreement) and, subject to such repayment, as set forth in the Loan Agreement, all the Notes then remaining outstanding will on that date be redeemed or repaid by the Issuer in the relevant Specified Currency on the Maturity Date specified hereon at their Final Redemption Amount (which, unless otherwise specified hereon, is 100 per cent. of the principal amount thereof).

If the Loan should become repayable (and be repaid) pursuant to the Loan Agreement prior to its Repayment Date, all Notes then remaining outstanding will thereupon become due and redeemable or repayable at their Early Redemption Amount (which, unless otherwise specified hereon is par together with interest accrued to the date of redemption) and the Issuer will endeavour to give not less than eight days' notice thereof to the Trustee and the Noteholders in accordance with Condition 14.

To the extent that the Issuer receives amounts of principal, interest or other amounts (other than amounts in respect of the Reserved Rights) following acceleration of the Loan pursuant to Clause 11 of the Loan Agreement, the Issuer shall pay an amount equal to and in the same currency as such amounts on the Business Day following receipt of such amounts, subject as provided in Condition 7.

The Issuer, subject to the Borrower's written consent (which consent shall not be unreasonably withheld or delayed), may compel any beneficial owner of Notes initially sold pursuant to Rule 144A under the U.S. Securities Act of 1933 (the "**Securities Act**") to sell its interest in such Notes, or may sell such interest on behalf of such holder, if such holder is a U.S. person that is not a qualified institutional buyer (as defined in Rule 144A under the Securities Act) and a qualified purchaser (as defined in Section 2(a)(51) of the U.S. Investment Company Act of 1940).

## 7 **Payments and Agents**

Payments of principal shall be made against presentation and surrender of the relevant Notes at the specified office of the Principal Paying Agent or at the specified office of any Transfer Agent or of the Registrar and in the manner provided in the paragraph below.

Interest shall be paid to the person shown on the Register at the close of business on the fifteenth day before the due date for payment thereof (the "**Record Date**"). Payments of interest shall be made in the Specified Currency by cheque drawn on a bank in the principal financial centre for the Specified Currency or, in the case of euro, in a city in which banks have access to the TARGET System (a "**Bank**") and mailed to the holder (or to the first named of joint holders) of such Note at its address appearing in the Register. Upon application by the holder to the specified office of the Registrar or any Transfer Agent before the Record Date, such payment of interest may be made by transfer to an account in the relevant currency maintained by the payee with a Bank, or by transfer to an account in the Specified Currency maintained by the payee with, a Bank in the principal financial centre of such Specified Currency or in the case of euro, a Bank specified by the payee or at the option of the payee, by a euro-cheque and (in the case of interest payable on redemption) upon surrender of the relevant Notes at the specified office of the Principal Paying Agent or at the specified office of the Transfer Agent.

All payments in respect of the Notes are subject in all cases to any applicable fiscal or other laws and regulations, but without prejudice to the provisions of Condition 8. No commissions or expenses shall be charged to the Noteholders in respect of such payments.

If the due date for payments of interest or principal is not a business day, a Noteholder shall not be entitled to payment of the amount due until the next following business day and shall not be entitled to any further interest or other payment in respect of any such delay. In this paragraph, "**business day**" means a day (other than a Saturday or a Sunday) on which banks and foreign exchange markets are open for business in the relevant place of presentation, in such jurisdictions as shall be specified as "**Financial Centres**" hereon, and (i) (in the case of a payment in a currency other than euro) where payment is to be made by transfer to an account maintained with a bank in the relevant currency, on which foreign exchange transactions may be carried on in the relevant currency in the principal financial centre of the country of such currency or (ii) (in the case of a payment in euro) which is a TARGET Business Day.

The names of the initial Paying Agents and their initial specified offices are set out below. The Agency Agreement provides that the Issuer may at any time, with the prior written approval of the Trustee, vary or terminate the appointment of the Principal Paying Agent or any of the Paying Agents, and appoint additional or other paying agents provided that (i) so long as the Notes are listed on any stock exchange or admitted to listing by any other relevant authority, there will be a paying agent and transfer agent with a specified office in such place as may be required by the rules and regulations of the relevant stock exchange or other relevant authority and (ii) a Paying Agent with a specified office in a European Union member state that will not be obliged to withhold or

deduct tax pursuant to any European Union Directive on the taxation of savings implementing the conclusions of the ECOFIN Council meeting of 26–27 November 2000 or any law implementing or complying with or introduced in order to conform to such Directive. Any such variation, termination or appointment shall only take effect (other than in the case of insolvency, when it shall be of immediate effect) after not more than 45 days' and not less than 30 days' notice thereof shall have been given to the Noteholders in accordance with Condition 14.

In addition, if the due date for redemption or repayment of a Note is not an Interest Payment Date, interest accrued from the preceding Interest Payment Date or, as the case may be, from the Issue Date as specified hereon shall be payable only as and when actually received by or for the account of the Issuer pursuant to the Loan Agreement.

Save as otherwise directed by the Trustee at any time after any of the Security Interests created in the Trust Deed becomes enforceable, the Issuer will, pursuant to Clause 6 of the Agency Agreement require the Borrower to make all payments of principal and interest to be made pursuant to the Loan Agreement to the Principal Paying Agent to an account in the name of the Issuer (the "Account"). Under the Charge, the Issuer will charge by way of first fixed charge all the rights, title and interest in and to all sums of money then or in the future deposited in the Account in favour of the Trustee for the benefit of the Noteholders.

## 8 Taxation

All payments in respect of the Notes by or on behalf of the Issuer will be made without deduction or withholding for or on account of any present or future taxes or duties of whatever nature imposed or levied by or on behalf of the Russian Federation or Luxembourg or any authority thereof or therein having the power to tax, unless the deduction or withholding of such taxes or duties is required by law.

In such event, the Issuer shall make such additional payments as shall result in the receipt by the Noteholders of such amount as would have been received by them if no such withholding or deduction had been required but only to the extent and only at such time as the Issuer receives an equivalent amount from the Borrower under the Loan Agreement. To the extent that the Issuer receives a lesser additional amount from the Borrower, the Issuer will account to each Noteholder for an additional amount equivalent to a pro rata proportion of such additional amount (if any) as is actually received by, or for the account of, the Issuer pursuant to the Loan Agreement on the date of, in the currency of, and subject to any conditions attaching to the payment of such additional amount to the Issuer provided that no such additional amount will be payable in respect of any Note:

- 8.1 to a Noteholder who (a) is able to avoid such deduction or withholding by satisfying any statutory requirements or by making a declaration of non-residence or other claim for exemption to the relevant tax authority; or (b) is liable for such taxes or duties by reason of his having some connection with the Russian Federation or Luxembourg other than the mere holding of such Note or the receipt of payments in respect thereof;
- 8.2 in respect of a Note presented for payment of principal more than 30 days after the Relevant Date except to the extent that such additional payment would have been payable if such Note had been presented for payment on such 30th day;
- 8.3 where such withholding or deduction is imposed on a payment to an individual and is required to be made pursuant to any European Union Directive on the taxation of savings implementing the conclusions of the ECOFIN Council meeting of 26-27 November 2000 or any law implementing or complying with, or introduced in order to conform to, such Directive; or
- 8.4 in respect of a Note presented for payment by or on behalf of a Noteholder who would have been able to avoid such withholding or deduction by presenting the relevant Note to another Paying Agent in a Member State of the European Union.

As used herein, "Relevant Date" (i) means the date on which any payment under the Loan Agreement first becomes due but (ii) if the full amount payable by the Borrower has not been received by, or for the account of, the Issuer pursuant to the Loan Agreement on or prior to such date, it means the date on which such moneys shall have been so received and notice to that effect shall have been duly given to the Noteholders by or on behalf of the Issuer in accordance with Condition 14.

Any reference herein or in the Trust Deed to payments in respect of the Notes shall be deemed also to refer to any additional amounts which may be payable in accordance with the Trust Deed and this Condition 8 or any undertaking given in addition thereto or in substitution therefor pursuant to the Trust Deed.

## **9 Enforcement**

The Trust Deed provides that only the Trustee may pursue the remedies under the general law, the Trust Deed or the Notes to enforce the rights of the Noteholders and no Noteholder will be entitled to pursue such remedies unless the Trustee (having become bound to do so in accordance with the terms of the Trust Deed) fails or neglects to do so within a reasonable period and such failure or neglect is continuing.

At any time after the occurrence of an Event of Default (as defined in the Facility Agreement) or of a Relevant Event (as defined in the Trust Deed), the Trustee may, at its discretion and without notice and shall, if requested to do so by Noteholders owning 25 per cent. in aggregate principal amount of the Notes outstanding, or if directed to do so by an Extraordinary Resolution and, in either case, subject to it being secured and/or indemnified to its satisfaction, declare all amounts payable under the Loan Agreement by the Borrower to be due and payable (in the case of an Event of Default), or enforce the security created in the Trust Deed in favour of the Trustee (in the case of a Relevant Event). Upon repayment of the Loan following an Event of Default and a declaration as provided herein, the Notes will be redeemed or repaid at their principal amount together with interest accrued to the date fixed for redemption and thereupon shall cease to be outstanding.

## **10 Meetings of Noteholders; Modification of Notes, Trust Deed and Loan Agreement; Waiver; Substitution of the Issuer**

The Trust Deed contains provisions for convening meetings of Noteholders to consider any matter affecting their interests, including any modification of, or any arrangement in respect of, the Notes, the Loan Agreement or the Trust Deed. Noteholders will vote pro rata according to the principal amount of their Notes. Special quorum provisions apply for meetings of Noteholders convened for the purpose of amending certain terms concerning, *inter alia*, the amount payable on, and the currency of payment in respect of, the Notes and the amounts payable and currency of payment under the Loan Agreement. Any resolution duly passed at a meeting of Noteholders will be binding on all the Noteholders, whether present or not.

The Trustee may agree, without the consent of the Noteholders, to any modification of the Notes and the Trust Deed or, following the creation of the Security Interests, the Loan Agreement which in the opinion of the Trustee is of a formal, minor or technical nature, is made to correct a manifest error or is not materially prejudicial to the interests of the Noteholders.

The Trustee may also waive or authorise or agree to the waiving or authorising of any breach or proposed breach by the Issuer of the Terms and Conditions of the Notes or the Trust Deed or, following the creation of the Security Interests, by the Borrower of the terms of the Loan Agreement, or determine that any event which would or might otherwise give rise to a right of acceleration under the Loan Agreement shall not be treated as such, if, in the opinion of the Trustee, to do so would not be materially prejudicial to the interests of the Noteholders (as a class). Any such modification, waiver or authorisation shall be binding on the Noteholders and, unless the Trustee agrees otherwise, any such modification shall be promptly notified to the Noteholders.

The Trust Deed contains provisions to the effect that the Issuer may, and at the request of the Borrower shall, having obtained the consent of the Borrower (if such substitution is not to be made at the request of the Borrower) and the Trustee (which latter consent may be given without the consent of the Noteholders) and having complied with such reasonable requirements as the Trustee may direct in the interests of the Noteholders, substitute any entity in place of the Issuer as creditor under the Loan Agreement, as issuer and principal obligor in respect of the Notes and as principal obligor under the Trust Deed, subject to the relevant provisions of the Trust Deed and the substitute's rights under the Loan Agreement being charged and assigned, respectively, to the Trustee as security for the payment obligations of the substitute obligor under the Trust Deed and the Notes.

In connection with the exercise of any of its powers, trusts, authorities or discretions, the Trustee shall have regard to the interests of the Noteholders as a class and, in particular, shall not have

regard to the consequences of such exercise for individual Noteholders resulting from their being for any purpose domiciled or resident in, or otherwise connected with, or subject to the jurisdiction of, any particular territory. No Noteholder is entitled to claim from the Issuer or the Trustee any indemnification or payment in respect of any tax consequence of any such exercise upon individual Noteholders.

#### **11 Prescription**

Notes will become void unless presented for payment of principal within 10 years (in the case of principal) or five years (in the case of interest) from the due date for payment in respect thereof.

#### **12 Indemnification of Trustee**

The Trust Deed contains provisions for the indemnification of the Trustee and for its relief from responsibility, including provisions relieving it from taking proceedings to enforce payment unless indemnified to its satisfaction. The Trustee is entitled to enter into contracts or transactions with the Issuer and/or the Borrower and any entity related to the Issuer and/or the Borrower without accounting for any profit, fees, corresponding interest, discounts or share of brokerage earned, arising or resulting from any such contract or transactions.

The Trustee's responsibilities are solely those of trustee for the Noteholders on the terms of the Trust Deed. Accordingly, the Trustee makes no representations and assumes no responsibility for the validity or enforceability of the Loan Agreement or the security created in respect thereof or for the performance by the Issuer of its obligations under or in respect of the Notes and the Trust Deed or by the Borrower in respect of the Loan Agreement.

#### **13 Replacement of Notes**

If any Note shall become mutilated, defaced, lost, stolen or destroyed it may, subject to all applicable laws and regulations and stock exchange requirements, be replaced at the specified office of the Registrar in Luxembourg or at the specified office of the Paying Agent in Luxembourg on payment of such costs, expenses, taxes and duties as may be incurred in connection therewith and on such terms as to evidence, security and indemnity and otherwise as may reasonably be required by or on behalf of the Issuer or the Trustee. Mutilated or defaced Notes must be surrendered before replacements will be issued.

#### **14 Notices**

All notices to the Noteholders shall be deemed to have been duly given if (i) posted to such holders at their respective addresses as shown on the Register and (ii) so long as the Notes are listed on the Luxembourg Stock Exchange and the rules of that exchange so require, published in a daily newspaper of general circulation in Luxembourg approved by the Trustee, currently expected to be the *Luxemburger Wort*. Any such notice shall be deemed to have been given on the first date on which both conditions shall have been met.

In case by reason of any other cause it shall be impracticable to publish any notice to holders of Notes as provided above, then such notification to such holders as shall be given with the approval of the Trustee shall constitute sufficient notice to such holders for every purpose hereunder.

#### **15 Further Issues**

The Issuer may from time to time, without the consent of the Noteholders, create and issue further Notes having the same terms and conditions as the Notes in all respects (or in all respects except for the amount and the date of the first payment of interest) so as to be consolidated and form a single series with the Notes. Such further Notes shall be constituted by a deed supplemental to the Trust Deed between the Issuer and the Trustee. The Trust Deed contains provisions for convening a single meeting of Noteholders and the holders of Notes of other series in certain circumstances where the Trustee so decides. In relation to any further issue which is to be consolidated and form a single series with the Notes, the Issuer will enter into a loan agreement supplemental to the Loan Agreement with the Borrower on substantially the same terms as the Loan Agreement (or in all respects except for the amount and the date of the first payment of interest on the further Notes). The Issuer will provide a further fixed charge in favour of the Trustee in respect of certain of its

rights and interests under such loan agreement and will assign absolutely certain of its rights under such loan agreement which will secure both the Notes and such further Notes and which will supplement the Security Interests in relation to the existing Notes of such Series.

**16 Contracts (Rights of Third Parties) Act 1999**

No person shall have any right to enforce any term or condition of the Notes under the Contracts (Rights of Third Parties) Act 1999.

**17 Governing Law**

The Notes, the Agency Agreement and the Trust Deed are governed by, and shall be construed in accordance with, English law. The Issuer has submitted in the Trust Deed to the exclusive jurisdiction of the courts of England and has appointed an agent for the service of process in England. For the avoidance of doubt, the provisions of articles 86 to 94-8 of the Luxembourg law of 10 August 1915, as amended, on commercial companies are excluded.

## GAZ CAPITAL S.A.

Gaz Capital S.A. was incorporated as a société anonyme on July 23, 2003 for an unlimited duration with limited liability under the laws of the Grand Duchy of Luxembourg. Its Articles of Incorporation have been published in the Mémorial, Recueil des Sociétés et Associations on August 21, 2003. It is registered with the Register of Commerce and Companies, Luxembourg under number B-95071.

Its registered office is located at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg.

Gaz Capital S.A.'s subscribed share capital amounts to euro 31,000 divided into 31 registered shares with a par value of euro 1,000 each. All of the shares are fully paid up. Thirty shares are owned by Stichting Gaz Capital and one share by Stichting Participatie DITC Amsterdam.

Gaz Capital S.A. has a Board of Directors, currently consisting of three directors. The directors at present are:

- Rolf Caspers, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg,
- Peter Dickinson, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg, and
- Vincent de Rycke, banker, having his professional address at 2, Boulevard Konrad Adenauer, L-1115 Luxembourg.

Deutsche Bank Luxembourg S.A. is the domiciliation agent of Gaz Capital S.A. Its duties include the provision of certain administrative and related services. Its appointment may be terminated and it may retire upon 2 months' prior notice subject to the appointment of an alternative domiciliation agent.

The corporate object of Gaz Capital S.A., as described in Article 3 of its Articles of Incorporation, is:

- the issue of Notes and other debt securities under a program for the issuance of loan participation notes for the purpose of financing loans to Open Joint Stock Company Gazprom;
- the granting of loans to Open Joint Stock Company Gazprom;
- the granting of security interests over its assets to a trustee in relation to the issuance of the loan participation notes; and,
- the making of deposits at banks or with other depositaries.

Gaz Capital S.A. may carry out any transactions, whether commercial or financial which are directly or indirectly connected with its corporate objective at the exclusion of any banking activity.

In general Gaz Capital S.A. may carry out any operation which it may deem useful or necessary in the accomplishment and the development of its corporate purpose.

Elpers & Co Réviseurs d'entreprises S.à r.l., having its registered office at 11, Boulevard du Prince Henri, L-1724 Luxembourg has been appointed to act as statutory auditors to Gaz Capital S.A.

### Capitalization

The following table sets forth the unaudited capitalization of Gaz Capital S.A. as at the date of this Offering Circular:

	<u>€</u>
Share capital (issued 31 Ordinary Shares of €1,000 each) .....	31,000
Series 1 Notes (issued on September 22, 2003) .....	1,000,000,000
Total Capitalization .....	<u>1,000,031,000</u>

Other than as detailed above, Gaz Capital S.A. does not have any loan capital, borrowings or contingent liabilities.

### Financial Statements

Since Gaz Capital S.A.'s sole payment obligation in respect of a Series of Notes is to make certain payments as and when payments on the corresponding Loan are received pursuant to the relevant Loan Agreement, financial information relating to Gaz Capital S.A. is not included in this Offering Circular.

## TRANSFER RESTRICTIONS

### Rule 144A Notes

Each purchaser of Rule 144A Notes within the United States, by accepting delivery of this Offering Circular and the Notes, will be deemed to have represented, agreed and acknowledged that:

- (1) It is (a) a qualified institutional buyer within the meaning of Rule 144A (a "QIB") that is also a qualified purchaser as defined in Section 2(a)(51) of the Investment Company Act (a "QP"), (b) not a broker-dealer which owns and invests on a discretionary basis less than U.S.\$25 million in securities of unaffiliated issuers, (c) not a participant-directed employee plan, such as a 401(k) plan, (d) acting for its own account, or for the account of another QIB that is also a QP, (e) not formed for the purpose of investing in the Issuer, and (f) aware, and each beneficial owner of such Notes has been advised, that the sale of such Notes to it is being made in reliance on Rule 144A.
- (2) It will, (a) along with each account for which it is purchasing, hold and transfer beneficial interests in the Rule 144A Notes in a principal amount that is not less than U.S.\$100,000 and (b) provide notice of these transfer restrictions to any subsequent transferees. In addition, they understand that the Issuer may receive a list of participants holding positions in its securities from one or more book-entry depositories.
- (3) It understands that the Rule 144A Notes have not been and will not be registered under the Securities Act and may not be offered, sold, pledged or otherwise transferred except (a) in accordance with Rule 144A to a person that it and any person acting on its behalf reasonably believe is a QIB that is also a QP purchasing for its own account or for the account of a QIB that is also a QP, (b) in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S under the Securities Act, in each case in accordance with any applicable securities laws of any State of the United States.
- (4) It understands that the Issuer has the power under the Trust Deed to compel any beneficial owner of Rule 144A Notes that is a U.S. person and is not a QIB and a QP to sell its interest in the Rule 144A Notes, or may sell such interest on behalf of such owner. The Issuer has the right to refuse to honour the transfer of an interest in the Rule 144A Notes to a U.S. person who is not a QIB and a QP.
- (5) It understands that the Rule 144A Notes, unless otherwise agreed between the Issuer and the Trustee in accordance with applicable law, will bear a legend to the following effect:

THIS NOTE AND THE LOAN IN RESPECT HEREOF HAVE NOT BEEN AND WILL NOT BE REGISTERED UNDER THE U.S. SECURITIES ACT OF 1933 (THE "SECURITIES ACT") OR WITH ANY SECURITIES REGULATORY AUTHORITY OF ANY STATE OR OTHER JURISDICTION OF THE UNITED STATES AND MAY NOT BE OFFERED, SOLD, PLEDGED OR OTHERWISE TRANSFERRED EXCEPT (1) IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT ("RULE 144A") TO A PERSON THAT THE HOLDER AND ANY PERSON ACTING ON ITS BEHALF REASONABLY BELIEVE IS A QUALIFIED INSTITUTIONAL BUYER WITHIN THE MEANING OF RULE 144A (A "QIB") THAT IS ALSO A QUALIFIED PURCHASER AS DEFINED IN THE INVESTMENT COMPANY ACT OF 1940 (A "QP") THAT (A) IS NOT A BROKER-DEALER WHICH OWNS AND INVESTS ON A DISCRETIONARY BASIS LESS THAN U.S.\$25 MILLION IN SECURITIES OF UNAFFILIATED ISSUERS, (B) IS NOT A PARTICIPANT-DIRECTED EMPLOYEE PLAN, SUCH AS A 401(K) PLAN, (C) WAS NOT FORMED FOR THE PURPOSE OF INVESTING IN THE ISSUER OF THIS NOTE, (D) IS ACQUIRING THIS NOTE FOR ITS OWN ACCOUNT OR FOR THE ACCOUNT OF A QIB THAT IS ALSO A QP, IN A PRINCIPAL AMOUNT THAT IS NOT LESS THAN U.S.\$100,000, (E) UNDERSTANDS THAT THE ISSUER MAY RECEIVE A LIST OF PARTICIPANTS HOLDING POSITIONS IN ITS SECURITIES FROM ONE OR MORE BOOK-ENTRY DEPOSITORIES AND (F) WILL PROVIDE NOTICE OF THE TRANSFER RESTRICTIONS TO ANY SUBSEQUENT TRANSFEREE, OR (2) IN AN OFFSHORE TRANSACTION IN ACCORDANCE WITH RULE 903 OR RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, IN EACH CASE IN ACCORDANCE WITH ANY APPLICABLE SECURITIES LAWS OF ANY STATE OF THE UNITED STATES. TRANSFER IN VIOLATION OF THE FOREGOING WILL BE OF NO FORCE OR EFFECT, WILL BE VOID *AB INITIO*, AND WILL NOT OPERATE TO TRANSFER ANY RIGHTS TO

THE TRANSFEREE, NOTWITHSTANDING ANY INSTRUCTIONS TO THE CONTRARY TO THE ISSUER OF THIS NOTE, THE TRUSTEE OR ANY INTERMEDIARY. THE ISSUER HAS THE RIGHT UNDER THE TRUST DEED TO COMPEL ANY BENEFICIAL OWNER THAT IS A U.S. PERSON AND IS NOT A QIB AND A QP TO SELL ITS INTEREST IN THIS NOTE, OR MAY SELL SUCH INTEREST ON BEHALF OF SUCH BENEFICIAL OWNER. THE ISSUER HAS THE RIGHT TO REFUSE TO HONOUR A TRANSFER OF AN INTEREST IN THIS NOTE TO A U.S. PERSON WHO IS NOT A QIB AND A QP. THE ISSUER HAS NOT BEEN AND WILL NOT BE REGISTERED UNDER THE INVESTMENT COMPANY ACT OF 1940.

- (6) It is not an employee benefit plan as described in Section 3(3) of the United States Employee Retirement Income Security Act of 1974, as amended ("ERISA") and it will not sell or otherwise transfer any such Note or interest to any person without first obtaining this same foregoing representation and warranty from that person.
- (7) It acknowledges that the Issuer, Gazprom, the Registrar, the Dealers and their affiliates, and others will rely upon the truth and accuracy of the above acknowledgements, representations and agreements and agrees that, if any of the acknowledgements, representations or agreements deemed to have been made by it by its purchase of Rule 144A Notes is no longer accurate, it shall promptly notify the Issuer, Gazprom and the Dealers. If it is acquiring any Notes as a fiduciary or agent for one or more investor accounts, it represents that it has sole investment discretion with respect to each of those accounts and that it has full power to make the above acknowledgements, representations and agreements on behalf of each account.
- (8) It understands that the Rule 144A Notes will be evidenced by a global Note (the "Rule 144A Global Note"). Before any interest in the Rule 144A Global Note may be offered, sold, pledged or otherwise transferred to a person who takes delivery in the form of an interest in the Regulation S Global Note, it will be required to provide a Transfer Agent with a written certification (in the form provided in the Paying Agency Agreement) as to compliance with applicable securities laws.

**Prospective purchasers are hereby notified that sellers of the Notes may be relying on the exemption from the provisions of Section 5 of the Securities Act provided by Rule 144A.**

#### **Regulation S Notes**

Each purchaser of Regulation S Notes outside the United States and each subsequent purchaser of Regulation S Notes in resales prior to the expiration of the distribution compliance period, by accepting delivery of this Offering Circular and the Regulation S Notes, will be deemed to have represented, agreed and acknowledged that:

- (1) It is, or at the time Regulation S Notes are purchased will be, the beneficial owner of such Regulation S Notes and (a) it is not a U.S. person and it is located outside the United States (within the meaning of Regulation S) and (b) it is not an affiliate of the Issuer, Gazprom or a person acting on behalf of such an affiliate.
- (2) It understands that the Regulation S Notes have not been and will not be registered under the Securities Act and, prior to the expiration of the distribution compliance period, it will not offer, sell, pledge or otherwise transfer such Notes except (a) in accordance with Rule 144A to a person that it and any person acting on its behalf reasonably believes is a QIB that is also a QP purchasing for its own account or the account of a QIB that is also a QP or (b) in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S, in each case in accordance with any applicable securities laws of any State of the United States.
- (3) It understands that the Regulation S Notes will be evidenced by a global Note (the "Regulation S Global Note"). Before any interest in the Regulation S Global Note may be offered, sold, pledged or otherwise transferred to a person who takes delivery in the form of an interest in the Rule 144A Global Note, it will be required to provide a Transfer Agent with a written certification (in the form provided in the Paying Agency Agreement) as to compliance with applicable securities laws.
- (4) It is not an employee benefit plan as described in Section 3(3) of ERISA and it will not sell or otherwise transfer any such Note or interest to any person without first obtaining this same foregoing representation and warranty from that person.

- (5) It acknowledges that the Issuer, Gazprom, the Registrar, the Dealers and their affiliates and others will rely upon the truth and accuracy of the above acknowledgements, representations and agreements and agree that, if any of the acknowledgements, representations or agreements deemed to have been made by it by its purchase of Notes is no longer accurate, it shall promptly notify the Issuer, Gazprom and the Dealers. If it is acquiring any Notes as a fiduciary or agent for one or more investor accounts, it represents that it has sole investment discretion with respect to each of those accounts and that it has full power to make the above acknowledgements, representations and agreements on behalf of each account.

## CLEARING AND SETTLEMENT

### The Global Notes

Each Series of Notes will be evidenced on issue by a Regulation S Global Note deposited with, and registered in the name of a nominee for, a common depository for Euroclear and Clearstream, Luxembourg and, in the case of Rule 144A Notes, a Rule 144A Global Note deposited with a custodian for, and registered in the name of Cede & Co. as nominee of, DTC.

Beneficial interests in a Regulation S Global Note may be held only through Euroclear or Clearstream, Luxembourg at any time. See “—Book-Entry Procedures for the Global Notes.” By acquisition of a beneficial interest in a Regulation S Global Note, the purchaser thereof will be deemed to represent, among other things, that it is not a U.S. person, and that, if it determines to transfer such beneficial interest prior to the expiration of the 40 day distribution compliance period, it will transfer such interest only to a person whom the seller reasonably believes (a) to be a non-U.S. person in an offshore transaction in accordance with Rule 903 or Rule 904 of Regulation S or (b) to be a person who takes delivery in the form of an interest in a Rule 144A Global Note (if applicable). See “Transfer Restrictions.” Beneficial interests in a Rule 144A Global Note may only be held through DTC at any time. See “—Book-Entry Procedures for the Global Notes.” By acquisition of a beneficial interest in a Rule 144A Global Note, the purchaser thereof will be deemed to represent, among other things, that it is a QIB that is also a QP and that, if in the future it determines to transfer such beneficial interest, it will transfer such interest in accordance with the procedures and restrictions contained in the Trust Deed. See “Transfer Restrictions.”

Beneficial interests in each Global Note will be subject to certain restrictions on transfer set forth therein and in the Trust Deed, and with respect to Rule 144A Notes, as set forth in Rule 144A, and the Notes will bear the legends set forth thereon regarding such restrictions set forth under “Transfer Restrictions.” A beneficial interest in a Regulation S Global Note may be transferred to a person who takes delivery in the form of an interest in a Rule 144A Global Note in denominations greater than or equal to the minimum denominations applicable to interests in a Rule 144A Global Note and only upon receipt by the Registrar of a written certification (in the form provided in the Paying Agency Agreement) to the effect that the transferor reasonably believes that the transferee is a QIB that is also a QP and that such transaction is in accordance with any applicable securities laws of any state of the United States or any other jurisdiction. Beneficial interests in a Rule 144A Global Note may be transferred to a person who takes delivery in the form of an interest in a Regulation S Global Note only upon receipt by the Registrar of a written certification (in the form provided in the Paying Agency Agreement) from the transferor to the effect that the transfer is being made to a non-U.S. person and in accordance with Regulation S.

Any beneficial interest in a Regulation S Global Note that is transferred to a person who takes delivery in the form of an interest in a Rule 144A Global Note will, upon transfer, cease to be an interest in the Regulation S Global Note and become an interest in the Rule 144A Global Note, and, accordingly, will thereafter be subject to all transfer restrictions and other procedures applicable to beneficial interests in the Rule 144A Global Note for as long as it remains such an interest. Any beneficial interest in a Rule 144A Global Note that is transferred to a person who takes delivery in the form of an interest in a Regulation S Global Note will, upon transfer, cease to be an interest in the Rule 144A Global Note and become an interest in the Regulation S Global Note and, accordingly, will thereafter be subject to all transfer restrictions and other procedures applicable to beneficial interests in the Regulation S Global Note for so long as it remains such an interest. No service charge will be made for any registration of transfer or exchange of Notes, but the Registrar may require payment of a sum sufficient to cover any tax or other governmental charge payable in connection therewith. Except in the limited circumstances described below, owners of beneficial interests in Global Notes will not be entitled to receive physical delivery of certificated Notes in definitive form (the “Definitive Notes”). The Notes are not issuable in bearer form.

### Amendments to Conditions

Each Global Note contains provisions that apply to the Notes that they represent, some of which modify the effect of the above Terms and Conditions of the Notes. The following is a summary of those provisions:

- *Payments.* Payments of principal and interest in respect of Notes evidenced by a Global Note will be made against presentation for endorsement by the Principal Paying Agent and, if no

further payment falls to be made in respect of the relevant Notes, surrender of such Global Note to or to the order of the Principal Paying Agent or such other Paying Agent as shall have been notified to the relevant Noteholders for such purpose. A record of each payment so made will be endorsed in the appropriate schedule to the relevant Global Note, which endorsement will be *prima facie* evidence that such payment has been made in respect of the relevant Notes.

- *Notices.* So long as any Notes are evidenced by a Global Note and such Global Note is held by or on behalf of a clearing system, notices to Noteholders may be given by delivery of the relevant notice to that clearing system for communication by it to entitled account holders in substitution for delivery thereof as required by the Terms and Conditions of such Notes provided that for so long as the Notes are listed on the Luxembourg Stock Exchange and the rules of the Luxembourg Stock Exchange so require, notices will also be published in a leading newspaper having general circulation in Luxembourg (which is expected to be the *Luxemburger Wort*).
- *Meetings.* The holder of each Global Note will be treated as being one person for the purposes of any quorum requirements of, or the right to demand a poll at, a meeting of Noteholders and in any such meeting as having one vote in respect of Notes for which the relevant Global Note may be exchangeable.
- *Trustee Powers.* In considering the interests of Noteholders while the Global Notes are held on behalf of a clearing system, the Trustee, to the extent it considers it appropriate to do so in the circumstances, may have regard to any information provided to it by such clearing system or its operator as to the identity (either individually or by category) of its accountholders with entitlements to each Global Note and may consider such interests as if such accountholders were the holders of any Global Note.
- *Cancellation.* Cancellation of any Note required by the Terms and Conditions of the Notes to be cancelled will be effected by reduction in the principal amount of the applicable Global Note.

### **Exchange for Definitive Notes**

#### *Exchange*

Each Global Note will be exchangeable, free of charge to the holder, in whole but not in part, for Notes in definitive form if: (i) a Global Note is held by or on behalf of a clearing system and such clearing system is closed for business for a continuous period of 14 days (other than by reason of holidays, statutory or otherwise) or announces an intention permanently to cease business or does in fact do so, by the holder giving notice to the Registrar or any Transfer Agent or (ii) if the Issuer would suffer a material disadvantage in respect of the Notes as a result of a change in the laws or regulations (taxation or otherwise) of any jurisdiction referred to in Condition 8 which would not be suffered were the Notes in definitive form and a notice to such effect signed by two directors of the Issuer or by any person(s) empowered by the board of directors of the Issuer to sign on behalf of the Issuer is delivered to the Trustee, by the Issuer giving notice to the Registrar or the Transfer Agent and the Noteholders of its intention to exchange the relevant Global Note for Definitive Notes on or after the Exchange Date (as defined below) specified in the notice.

The Registrar will not register the transfer of, or exchange of interests in, a Global Note for Definitive Notes for a period of 15 calendar days ending on the date for any payment of principal or interest in respect of the Notes.

“Exchange Date” means a day falling not later than 90 days after that on which the notice requiring exchange is given and on which banks are open for business in the city in which the specified office of the Registrar or the Transfer Agent is located.

#### *Delivery*

In such circumstances, the relevant Global Note shall be exchanged in full for Definitive Notes and the Issuer will, at the cost of the Borrower (but against such indemnity as the Registrar or any relevant Transfer Agent may require in respect of any tax or other duty of whatever nature which may be levied or imposed in connection with such exchange), cause sufficient Definitive Notes to be executed and delivered to the Registrar for completion, authentication and dispatch to the relevant Noteholders. A person having an interest in a Global Note must provide the Registrar with (a) a written order containing

instructions and such other information as the Issuer and the Registrar may require to complete, execute and deliver such Notes and (b) in the case of a Rule 144A Global Note only, a fully completed, signed certification substantially to the effect that the exchanging holder is not transferring its interest at the time of such exchange or, in the case of simultaneous sale pursuant to Rule 144A, a certification that the transfer is being made in compliance with the provisions of Rule 144A to a QIB that is also a QP. Definitive Notes issued in exchange for a beneficial interest in a Rule 144A Global Note shall bear the legend applicable to transfers pursuant to Rule 144A, as set out under "Transfer Restrictions."

#### *Legends*

The holder of a Definitive Note may transfer the Notes evidenced thereby in whole or in part in the applicable minimum denomination by surrendering it at the specified office of the Registrar or any Transfer Agent, together with the completed form of transfer thereon. Upon the transfer, exchange or replacement of a Rule 144A Definitive Note bearing the legend referred to under "Transfer Restrictions," or upon specific request for removal of the legend on a Rule 144A Definitive Note, the Issuer will deliver only Rule 144A Definitive Notes that bear such legend, or will refuse to remove such legend, as the case may be, unless there is delivered to the Issuer and the Registrar such satisfactory evidence, which may include an opinion of counsel, as may reasonably be required by the Issuer that neither the legend nor the restrictions on transfer set forth therein are required to ensure compliance with the provisions of the Securities Act and the Investment Company Act.

#### **Book-Entry Procedures for the Global Notes**

For each Series of Notes evidenced by both a Regulation S Global Note and a Rule 144A Global Note, custodial and depository links are to be established between DTC, Euroclear and Clearstream, Luxembourg to facilitate the initial issue of the Notes and cross-market transfers of the Notes associated with secondary market trading. See "—Book-Entry Ownership—Settlement and Transfer of Notes."

#### *Euroclear and Clearstream, Luxembourg*

Euroclear and Clearstream, Luxembourg each hold securities for their customers and facilitate the clearance and settlement of securities transactions through electronic book-entry transfer between their respective accountholders. Indirect access to Euroclear and Clearstream, Luxembourg is available to other institutions which clear through or maintain a custodial relationship with an accountholder of either system. Euroclear and Clearstream, Luxembourg provide various services including safekeeping, administration, clearance and settlement of internationally-traded securities and securities lending and borrowing. Euroclear and Clearstream, Luxembourg also deal with domestic securities markets in several countries through established depository and custodial relationships. Euroclear and Clearstream, Luxembourg have established an electronic bridge between their two systems across which their respective customers may settle trades with each other. Their customers are worldwide financial institutions including underwriters, securities brokers and dealers, banks, trust companies and clearing corporations. Investors may hold their interests in such Global Notes directly through Euroclear or Clearstream, Luxembourg if they are accountholders ("Direct Participants") or indirectly ("Indirect Participants" and together with Direct Participants, "Participants") through organisations which are accountholders therein.

#### *DTC*

DTC has advised the Issuer as follows: DTC is a limited purpose trust company organized under the laws of the State of New York, a "banking organization" under the laws of the State of New York, a member of the U.S. Federal Reserve System, a "clearing corporation" within the meaning of the New York Uniform Commercial code and a "clearing agency" registered pursuant to the provisions of Section 17A of the U.S. Securities Exchange Act of 1934 (the "Exchange Act"). DTC was created to hold securities for its Participants and facilitate the clearance and settlement of securities transactions between Participants through electronic computerized book-entry changes in accounts of its Participants, thereby eliminating the need for physical movement of certificates. Participants include securities brokers and dealers, banks, trust companies, clearing corporations and certain other organisations. Indirect access to DTC is available to others, such as banks, securities brokers, dealers and trust companies, that clear through or maintain a custodial relationship with a DTC Direct Participant, either directly or indirectly.

Investors may hold their interests in Rule 144A Global Notes directly through DTC if they are Direct Participants in the DTC system, or as Indirect Participants through organisations which are Direct Participants in such system.

DTC has advised the Issuer that it will take any action permitted to be taken by a holder of Notes only at the direction of one or more Direct Participants and only in respect of such portion of the aggregate principal amount of the relevant Rule 144A Global Notes as to which such Participant or Participants has or have given such direction. However, in the circumstances described under "Exchange for Definitive Notes," DTC will surrender the relevant Rule 144A Global Notes for exchange for individual Rule 144A Definitive Notes (which will bear the legend applicable to transfers pursuant to Rule 144A).

### **Book-Entry Ownership**

#### *Euroclear and Clearstream, Luxembourg*

The Regulation S Global Note representing Regulation S Notes of any Series will have an ISIN and a Common Code and will be registered in the name of a nominee for, and deposited with a common depository on behalf of, Euroclear and Clearstream, Luxembourg.

#### *DTC*

The Rule 144A Global Note representing Rule 144A Notes of any Series will have a CUSIP number and will be deposited with a custodian (the "Custodian") for and registered in the name of Cede & Co. as nominee of, DTC. The Custodian and DTC will electronically record the principal amount of the Notes held within the DTC System.

#### *Relationship of Participants with Clearing Systems*

Each of the persons shown in the records of Euroclear, Clearstream, Luxembourg or DTC as the holder of a Note evidenced by a Global Note must look solely to Euroclear, Clearstream, Luxembourg or DTC (as the case may be) for his share of each payment made by the Issuer to the holder of such Global Note and in relation to all other rights arising under the Global Note, subject to and in accordance with the respective rules and procedures of Euroclear, Clearstream, Luxembourg or DTC (as the case may be). The Issuer expects that, upon receipt of any payment in respect of Notes evidenced by a Global Note, the common depository by whom such Note is held, or nominee in whose name it is registered, will immediately credit the relevant participants' or accountholders' accounts in the relevant clearing system with payments in amounts proportionate to their respective beneficial interests in the principal amount of the relevant Global Note as shown on the records of the relevant clearing system or its nominee. The Issuer also expects that payments by Direct Participants in any clearing system to owners of beneficial interests in any Global Note held through such Direct Participants in any clearing system will be governed by standing instructions and customary practices. Save as aforesaid, such persons shall have no claim directly against the Issuer in respect of payments due on the Notes for so long as the Notes are evidenced by such Global Note and the obligations of the Issuer will be discharged by payment to the registered holder, as the case may be, of such Global Note in respect of each amount so paid. None of the Issuer, the Trustee or any Agent will have any responsibility or liability for any aspect of the records relating to or payments made on account of ownership interests in any Global Note or for maintaining, supervising or reviewing any records relating to such ownership interests.

#### *Settlement and Transfer of Notes*

Subject to the rules and procedures of each applicable clearing system, purchases of Notes held within a clearing system must be made by or through Direct Participants, which will receive a credit for such Notes on the clearing system's records. The ownership interest of each actual purchaser of each such Note (the "Beneficial Owner") will in turn be recorded on the Direct and Indirect Participants' records. Beneficial Owners will not receive written confirmation from any clearing system of their purchase, but Beneficial Owners are expected to receive written confirmations providing details of the transaction, as well as periodic statements of their holdings, from the Direct or Indirect Participant through which such Beneficial Owner entered into the transaction.

Transfers of ownership interests in Notes held within the clearing system will be affected by entries made on the books of Participants acting on behalf of Beneficial Owners. Beneficial Owners will not receive certificates representing their ownership interests in such Notes, unless and until interests in any Global Note held within a clearing system are exchanged for Definitive Notes.

No clearing system has knowledge of the actual Beneficial Owners of the Notes held within such clearing system and their records will reflect only the identity of the Direct Participants to whose accounts

such Notes are credited, which may or may not be the Beneficial Owners. The Participants will remain responsible for keeping account of their holdings on behalf of their customers. Conveyance of notices and other communications by the clearing systems to Direct Participants, by Direct Participants to Indirect Participants, and by Direct Participants and Indirect Participants to Beneficial Owners will be governed by arrangements among them, subject to any statutory or regulatory requirements as may be in effect from time to time.

The laws of some jurisdictions may require that certain persons take physical delivery in definitive form of securities. Consequently, the ability to transfer interests in a Global Note to such persons may be limited. Because DTC can only act on behalf of Direct Participants, who in turn act on behalf of Indirect Participants, the ability of a person having an interest in a Rule 144A Global Note to pledge such interest to persons or entities that do not participate in DTC, or otherwise take actions in respect of such interest, may be affected by a lack of physical certificate in respect of such interest.

#### *Trading between Euroclear and/or Clearstream, Luxembourg Participants*

Secondary market sales of book-entry interests in the Notes held through Euroclear or Clearstream, Luxembourg to purchasers of book-entry interests in the Notes held through Euroclear or Clearstream, Luxembourg will be conducted in accordance with the normal rules and operating procedures of Euroclear and Clearstream, Luxembourg and will be settled using the procedures applicable to conventional Eurobonds.

#### *Trading between DTC Participants*

Secondary market sales of book-entry interests in the Notes between DTC participants will occur in the ordinary way in accordance with DTC rules and will be settled using the procedures applicable to United States corporate debt obligations in DTC's Same-Day Funds Settlement ("SDFS") system in same-day funds, if payment is effected in U.S. Dollars, or free of payment, if payment is not effected in U.S. Dollars. Where payment is not effected in U.S. Dollars, separate payment arrangements outside DTC are required to be made between the DTC participants.

#### *Trading between DTC seller and Euroclear/Clearstream, Luxembourg purchaser*

When book-entry interests in Notes are to be transferred from the account of a DTC participant holding a beneficial interest in a Rule 144A Global Note to the account of a Euroclear or Clearstream, Luxembourg accountholder wishing to purchase a beneficial interest in a Regulation S Global Note (subject to the certification procedures provided in the Paying Agency Agreement), the DTC participant will deliver instructions for delivery to the relevant Euroclear or Clearstream, Luxembourg accountholder to DTC by 12 noon, New York time, on the settlement date. Separate payment arrangements are required to be made between the DTC participant and the relevant Euroclear or Clearstream, Luxembourg participant. On the settlement date, the custodian of the Rule 144A Global Note will instruct the Registrar to (i) decrease the amount of Notes registered in the name of Cede & Co. and evidenced by the Rule 144A Global Note of the relevant class and (ii) increase the amount of Notes registered in the name of the nominee of the common depositary for Euroclear and Clearstream, Luxembourg and evidenced by the Regulation S Global Note. Book-entry interests will be delivered free of payment to Euroclear or Clearstream, Luxembourg, as the case may be, for credit to the relevant accountholder on the first business day following the settlement date.

#### *Trading between Euroclear/Clearstream, Luxembourg seller and DTC purchaser*

When book-entry interests in the Notes are to be transferred from the account of a Euroclear or Clearstream, Luxembourg accountholder to the account of a DTC participant wishing to purchase a beneficial interest in a Rule 144A Global Note (subject to the certification procedures provided in the Paying Agency Agreement), the Euroclear or Clearstream, Luxembourg participant must send to Euroclear or Clearstream, Luxembourg delivery free of payment instructions by 7:45 p.m., Brussels or Luxembourg time, one business day prior to the settlement date. Euroclear or Clearstream, Luxembourg, as the case may be, will in turn transmit appropriate instructions to the common depositary for Euroclear and Clearstream, Luxembourg and the Registrar to arrange delivery to the DTC participant on the settlement date. Separate payment arrangements are required to be made between the DTC participant and the relevant Euroclear or Clearstream, Luxembourg accountholder, as the case may be. On the settlement date, the common depositary for Euroclear and Clearstream, Luxembourg will (a) transmit

appropriate instructions to the custodian of the Rule 144A Global Note who will in turn deliver such book-entry interests in the Notes free of payment to the relevant account of the DTC participant and (b) instruct the Registrar to (i) decrease the amount of Notes registered in the name of the nominee of the common depository for Euroclear and Clearstream, Luxembourg and evidenced by a Regulation S Global Note; and (ii) increase the amount of Notes registered in the name of Cede & Co. and evidenced by a Rule 144A Global Note.

Although Euroclear, Clearstream, Luxembourg and DTC have agreed to the foregoing procedures in order to facilitate transfers of beneficial interest in Global Notes among participants and accountholders of Euroclear, Clearstream, Luxembourg and DTC, they are under no obligation to perform or continue to perform such procedure, and such procedures may be discontinued at any time. None of the Issuer, the Trustee or any Agent will have the responsibility for the performance by Euroclear, Clearstream, Luxembourg or DTC or their respective Direct or Indirect Participants of their respective obligations under the rules and procedures governing their operations.

#### *Pre-issue Trades Settlement*

It is expected that delivery of Notes will be made against payment therefor on the Closing Date thereof, which could be more than three business days following the date of pricing. Under Rule 15c6-1 under the Exchange Act, trades in the United States secondary market generally are required to settle within three business days (T+3), unless the parties to any such trade expressly agree otherwise. Accordingly, purchasers who wish to trade Notes in the United States on the date of pricing or the next succeeding business days until three days prior to the relevant Closing Date will be required, by virtue of the fact the Notes initially will settle beyond T+3, to specify an alternate settlement cycle at the time of any such trade to prevent a failed settlement. Settlement procedures in other countries will vary. Purchasers of Notes may be affected by such local settlement practices, and purchasers of Notes between the relevant date of pricing and the relevant Closing Date should consult their own advisors.

## SUBSCRIPTION AND SALE

### Summary of Dealer Agreement

Subject to the terms and on the conditions contained in a Dealer Agreement dated September 22, 2003 (the "Dealer Agreement") between the Issuer, Gazprom, the Permanent Dealers and the Arrangers, the Notes will be offered from time to time by the Issuer to the Permanent Dealers or such other Dealers as may be appointed from time to time in respect of any Series of Notes pursuant to the Dealer Agreement. Any agreement for the sale of Notes will, *inter alia*, make provision for the form and terms and conditions of the relevant Notes, whether the placement of the Notes is underwritten or sold on an agency basis only, the price at which such Notes will be purchased by the Dealers and the commissions or other agreed deductibles (if any) which are payable or allowable by the Issuer in respect of such purchase and the form of any indemnity to the Dealers against certain liabilities in connection with the offer and sale of the relevant Notes. The Notes may be resold at prevailing market prices, or at prices related thereto, at the time of such resale, as determined by the Relevant Dealer. The Dealer Agreement also provides for Notes to be issued in syndicated Series that may be jointly and severally underwritten by two or more Dealers.

Each of the Issuer and Gazprom has agreed to indemnify the Dealers against certain losses, as set out in the Dealer Agreement. The Dealer Agreement entitles the Dealers to terminate any agreement that they make to subscribe for the Notes in certain circumstances prior to payment for such Notes being made to the Issuer.

### Selling Restrictions

#### *United States*

The Notes and the corresponding Loans have not been and will not be registered under the Securities Act, the securities laws of any State or other jurisdiction of the United States or the securities laws of any other jurisdiction. Each Dealer has agreed, and each further Dealer appointed under the Programme will be required to agree, that:

- the Notes may not be offered or sold within the United States or to, or for the account or benefit of, U.S. persons except pursuant to an exemption from the registration requirements of the Securities Act or in transactions not subject to those registration requirements; and
- except as permitted by the Dealer Agreement it will not offer or sell the Notes of any Series (i) as part of their distribution at any time or (ii) otherwise until 40 days after the completion of the distribution of the Series of which such Notes are a part, as determined and certified to the Principal Paying Agent by such Dealer (or, in the case of such Series of Notes sold to or through more than one Dealer on a syndicated basis, by any Dealer acting as lead manager), within the United States or to, or for the account or benefit of, U.S. persons, and it will have sent to each Dealer to which it sells Notes (other than a sale pursuant to Rule 144A) during the distribution compliance period a confirmation or other notice setting forth the restrictions on offers and sales of the Notes within the United States or to, or for the account or benefit of, U.S. persons.

Terms used in this section have the meanings given to them by Regulation S.

Notes offered and sold outside the United States to non-U.S. persons may be sold in reliance on Regulation S. The Dealer Agreement provides that the Dealers may directly or through their respective U.S. broker-dealer affiliates arrange for the offer and resale of Notes within the United States only to persons whom they reasonably believe are QIBs and QPs who can represent that (a) they are QPs who are QIBs within the meaning of Rule 144A; (b) they are not broker-dealers who own and invest on a discretionary basis less than U.S.\$25 million in securities of unaffiliated issuers; (c) they are not a participant-directed employee plan, such as a 401(k) plan; (d) they are acting for their own account, or the account of another QIB who is a QP; (e) they are not formed for the purpose of investing in the Issuer; (f) each account for which they are purchasing will hold and transfer at least U.S.\$100,000 in principal amount of Notes at any time; and (g) they will provide notice of the transfer restrictions set forth in this offering circular to any subsequent transferees.

In addition, until 40 days after commencement of the offering of any identifiable Series of Notes, an offer or sale of such Notes within the United States by a dealer that is not participating in the offering of such Series of Notes may violate the registration requirements of the Securities Act, if such offer or sale is made otherwise than in accordance with Rule 144A.

This Offering Circular has been prepared by the Issuer for use in connection with the offer and sale of the Notes outside the United States, the resale of the Notes in the United States and for the listing of Notes on the Luxembourg Stock Exchange. The Issuer and the Dealers reserve the right to reject any offer to purchase the Notes, in whole or in part, for any reason. This Offering Circular does not constitute an offer to any person in the United States or to any U.S. person other than any QIB who is also a QP and to whom an offer has been made directly by one of the Dealers or its U.S. broker-affiliate. Distribution of this Offering Circular by any non-U.S. person outside the United States or by any QIB/QP in the United States to any U.S. person or to any other person within the United States, other than any QIB/QP and those persons, if any, retained to advise such non-U.S. person or QIB/QP with respect thereto, is unauthorized and any disclosure without the prior written consent of the Issuer of any of its contents to any such U.S. person or other person within the United States, other than any QIB/QP and those persons, if any, retained to advise such non-U.S. person or QIB/QP, is prohibited.

#### *United Kingdom*

Each Dealer has represented and agreed that (i) in relation to any Notes which have a maturity of one year or more, it has not offered or sold and prior to the expiry of the period of six months from the Issue Date thereof will not offer or sell any Notes to persons in the United Kingdom except to persons whose ordinary activities involve them in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of its business or otherwise in circumstances which have not resulted and will not result in an offer to the public in the United Kingdom within the meaning of the Public Offers of Securities Regulations 1995 (as amended), (ii) in relation to any Notes which have a maturity of less than one year, (a) it is a person whose ordinary activities involve it in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of its business and (b) it has not offered or sold and will not offer or sell any Notes other than to persons whose ordinary activities involve them in acquiring, holding, managing or disposing of investments (as principal or agent) for the purposes of their businesses or who it is reasonable to expect will acquire, hold, manage or dispose of investments (as principal or agent) for the purposes of their businesses where the issue of the Notes would otherwise constitute a contravention of section 19 of the Financial Services and Markets Act 2000 (the “FSMA”) by the Issuer, (iii) it has only communicated or caused to be communicated and will only communicate or cause to be communicated any invitation or inducement to engage in investment activity (within the meaning of section 21 of the FSMA) received by it in connection with the issue or sale of any Notes in circumstances in which section 21(1) of the FSMA does not apply to the Issuer, and (iv) it has complied and will comply with all applicable provisions of the FSMA with respect to anything done by it in relation to the Notes in, from or otherwise involving the United Kingdom.

#### *Russian Federation*

Each Dealer has represented and agreed that it has not offered or sold or otherwise transferred and will not offer or sell or otherwise transfer as part of their initial distribution or at any time thereafter any Notes to or for the benefit of any persons (including legal entities) resident, incorporated, established or having their usual residence in the Russian Federation or to any person located within the territory of the Russian Federation unless and to the extent otherwise permitted under Russian law.

#### *Luxembourg*

Each Dealer has represented and agreed that no public offerings or sales of the Notes or any distribution of any offering material relating to the Notes will or may be made in or from Luxembourg, except for the Notes in respect of which the requirements of Luxembourg law concerning public offerings of securities in Luxembourg have been fulfilled. A listing on the Luxembourg Stock Exchange of the Notes does not necessarily imply that a public offering in Luxembourg has been authorized.

#### *Republic of Italy*

Each Dealer has represented to and agreed with the Issuer, Gazprom and each other Dealer that offers of Notes in the Republic of Italy (“Italy”) have not been and will not be registered with the *Commissione Nazionale per le Società e la Borsa* (“CONSOB”) pursuant to Italian securities legislation and, accordingly, that it has not offered, and will not offer, any Notes in Italy in a solicitation to the public at large (*sollecitazione all’investimento*) within the meaning of Article 1, paragraph 1, letter (t) of Legislative Decree no. 58 of 24 February 1998, that such Notes shall not be placed, sold and/or offered, either in primary or in the secondary market, to individuals resident in Italy and that sales of Notes in Italy will only be:

- negotiated on an individual basis with “Professional Investors” (*operatori qualificati*), as defined under Article 31, paragraph 2, of CONSOB Regulation no. 11522 of 1 July 1998, as amended;
- effected in compliance with Article 129 of the Legislative Decree no. 385 of 1 September 1993 and the implementing instructions of the Bank of Italy, pursuant to which the issue or offer of securities in Italy is subject to prior notification to the Bank of Italy, unless an exemption, depending inter alia on the amount of the issue and the characteristics of the securities, applies;
- effected in accordance with any other Italian securities, tax and exchange control and other applicable laws and regulations and any other applicable requirement or limitation which may be imposed by CONSOB or the Bank of Italy; and
- made by an investment firm, bank or financial intermediary permitted to conduct such activities in Italy in accordance with the relevant provisions of Italian law.

Where Notes of any Series are intended for distribution in the Republic of Italy, the minimum denomination of any such Series should be €100,000 or equivalent and integral multiples of €1,000 thereafter, unless otherwise agreed with the Bank of Italy.

### **General**

Each Dealer has agreed that it has, to the best of its knowledge and belief, complied and will comply with applicable laws and regulations in each jurisdiction in which they offer, sell or deliver Notes or distribute this Offering Circular (and any amendments thereof and supplements thereto) or any other offering or publicity material relating to the Notes, the Issuer or Gazprom.

These selling restrictions may be modified by the agreement of the Issuer, Gazprom and the Dealers following a change in a relevant law, regulation or directive. Any such modification will be set out in the Pricing Supplement issued in respect of the issue of Notes to which it relates or in a supplement to this Offering Circular.

## TAXATION

*Prospective purchasers of the Notes are advised to consult their own tax advisors as to the consequences under the tax laws of the country of which they are residents of a purchase of Notes, including, but not limited to, the consequences of the receipt of interest and the sale or redemption of Notes. The following is a general description of certain tax laws relating to each Series of Notes and the corresponding Loan as in effect on the date hereof and does not purport to be a comprehensive discussion of the tax treatment of the Notes.*

### **Russian Federation**

The following is a summary of certain Russian tax considerations relevant to the purchase, ownership and disposition of Notes by non-resident holders, including information regarding the taxation of payments on any corresponding Loan. The summary is based on the laws of Russia in effect on the date of this Offering Circular. The summary does not seek to address the applicability of, and procedures in relation to, taxes levied by regions, municipalities or other non-federal level authorities of Russia, nor does the summary seek to address the availability of double tax treaty relief in respect of the Notes, or practical difficulties involved in obtaining such double tax treaty relief.

Prospective investors should consult their own tax advisors regarding the tax consequences of investing in the Notes in their own particular circumstances. No representation with respect to the Russian tax consequences to any particular holder is made hereby.

Many aspects of Russian tax law are subject to significant uncertainty. Further, the substantive provisions of Russian tax law applicable to financial instruments may be subject to more rapid and unpredictable change and inconsistency than in jurisdictions with more developed capital markets and taxation systems. In this regard, the interpretation and application of such provisions will in practice rest substantially with local tax inspectorates.

For the purposes of this summary, a “non-resident holder” means an individual actually present in Russia for an aggregate period of less than 183 days in a given calendar year (excluding days of arrival into Russia, but including days of departure from Russia) or a legal person or organization in each case not organized under Russian law which purchases, holds and disposes of the Notes otherwise than through its permanent establishment in Russia.

The Russian tax treatment of interest payments made by Gazprom to the Issuer under any Loan Agreement may affect the holders of the Notes. See “—Taxation of interest on the Loan.”

### *Non-resident holders*

A non-resident holder will not be subject to any Russian taxes in respect of the purchase or ownership of the Notes or interest payments on the Notes received from the Issuer.

A non-resident holder also generally should not be subject to any Russian taxes in respect of a redemption, sale or other disposition of the Notes outside of Russia, provided that the proceeds of such disposition are not received from a source within Russia.

In the event that proceeds of a disposition of Notes are received from a source within Russia, a non-resident holder that is a legal person or organisation should not be subject to any Russian taxation in respect of the proceeds, provided that no portion thereof is attributable to accrued interest. There is some residual uncertainty regarding the treatment of the portion of such proceeds, if any, that is attributable to accrued interest, and such portion may be taxed at a rate of 20%, even if the disposal results in a capital loss. Non-resident holders that are legal persons or organisations should consult their own tax advisors with respect to this possibility. Withholding tax on interest may be reduced or eliminated in accordance with the provisions of an applicable double taxation treaty. Advance treaty relief should be available, subject to the requirements of Russian law.

A non-resident holder who is an individual will generally be subject to tax at a rate of 30%, subject to any available double tax treaty relief, in respect of gain from a disposition of Notes if the proceeds are received from a source within Russia. In this regard, if the Notes are disposed of to a resident of Russia and payment is made within or from Russia, the proceeds of such disposition are likely to be regarded as received from a Russian source. The tax may be withheld at source of payment or if the tax is not withheld, then the non-resident individual may be liable to pay the tax. There is some uncertainty regarding the treatment of the portion of proceeds attributable to accrued interest. Subject to reduction

or elimination under provisions of an applicable tax treaty related to interest income, proceeds attributable to accrued interest may be taxed at a rate of 30 percent, even if the disposal results in a capital loss. There is also a risk that gain realized on a disposition of the Notes may be affected by changes in the exchange rates between the currency of acquisition of the Notes, the currency of sale and roubles.

In order to use the double taxation treaty relief an individual should provide appropriate documentary proof of tax payments made outside of Russia on income with respect of which treaty benefits are claimed. Because of uncertainties regarding the form and procedures for providing such documentary proof, individuals in practice may not be able to obtain advance relief on receipt of proceeds from a source within Russia and obtaining a refund can be extremely difficult. Non-resident holders who are physical persons should consult their own tax advisors with respect to this possibility.

#### *Resident holders*

A holder of a Note, who is an individual resident in Russia for tax purposes or a legal person or organization, which is not a non-resident in Russia, is subject to all applicable Russian taxes in respect of gains from a disposition of the Notes and interest received on the Notes.

#### *Taxation of interest on the Loan*

In general, payments of interest on borrowed funds by a Russian entity to a non-resident legal person are subject to Russian withholding tax at the rate of 20%, absent reduction or elimination pursuant to the terms of an applicable double tax treaty. Based on professional advice it has received, Gazprom believes that payments of interest on any Loan should not be subject to withholding tax under the terms of the double tax treaty between Russia and Luxembourg. However, there can be no assurance that such relief will be obtained. In addition, if interest under such Loan becomes payable to the Trustee pursuant to the Trust Deed, any benefit of the double tax treaty between Russia and Luxembourg will cease and payments of interest could be subject to Russian withholding tax.

Prior to January 1, 2002, a claim for treaty relief from Russian withholding tax was subject to preliminary approval by the Russian tax authorities after review of relevant contracts. As of January 1, 2002, such preliminary approval form and contract disclosure to the Russian tax authorities is no longer required. As a result of this procedure, the Russian tax authorities may review the Bank's eligibility for treaty relief in greater detail during tax audits.

If payments under any Loan are subject to any withholding of Russian tax (as a result of which the Issuer would reduce payments under the relevant Series of Notes in the amount of such withholding), Gazprom is obliged (subject to certain conditions) to increase payments as may be necessary so that the net payments received by the Noteholders will be equal to the amounts they would have received in the absence of such withholding. It should be noted, however, that tax gross-up provisions may not be enforceable under Russian law. If Gazprom is obliged to increase payments, it may, subject to certain conditions, prepay such Loan in full. In such case, all outstanding Notes would be redeemable at par with accrued interest.

VAT is not applied to the rendering of financial services involving the provision of a loan in monetary form. Therefore, no VAT will be payable in Russia on any payment of interest or principal in respect of the Loan.

#### **European Union**

The Council of the European Union has adopted a new directive regarding the taxation of savings income on June 3, 2003. Subject to a number of important conditions being met, Member States will be required from January 1, 2005 to provide to the tax authorities of another Member State details of payments of interest (or other similar income) paid by a person within its jurisdiction to or for the benefit of an individual resident in that other Member State, except that Belgium, Luxembourg and Austria will instead operate a withholding system for a transitional period in relation to such payments.

#### **United States**

The following discussion summarizes certain U.S. federal income tax considerations that may be relevant to you if you invest in Notes and are a U.S. holder. You will be a U.S. holder if you are an individual who is a citizen or resident of the United States, a U.S. domestic corporation, or any other

person that is subject to U.S. federal income tax on a net income basis in respect of an investment in the Notes. This summary deals only with U.S. holders that hold Notes as capital assets. It does not address considerations that may be relevant to you if you are an investor that is subject to special tax rules, such as a bank, thrift, real estate investment trust, regulated investment company, insurance company, dealer in securities or currencies, trader in securities or commodities that elects mark to market treatment, person that will hold Notes as a hedge against currency risk or as a position in a "straddle" or conversion transaction, tax-exempt organization or a person whose "functional currency" is not the U.S. dollar.

This summary is based on laws, regulations, rulings and decisions now in effect, all of which may change. Any change could apply retroactively and could affect the continued validity of this summary.

You should consult your tax adviser about the tax consequences of holding Notes, including the relevance to your particular situation of the considerations discussed below, as well as the relevance to your particular situation of state, local or other tax laws.

#### *Payments or Accruals of Interest*

Payments or accruals of "qualified stated interest" (as defined below) on a Note will be taxable to you as ordinary interest income at the time that you receive or accrue such amounts (in accordance with your regular method of tax accounting). If you use the cash method of tax accounting and you receive payments of interest pursuant to the terms of a Note in a currency other than U.S. dollars (a "foreign currency"), the amount of interest income you will realize will be the U.S. dollar value of the foreign currency payment based on the exchange rate in effect on the date you receive the payment, regardless of whether you convert the payment into U.S. dollars. If you are an accrual-basis U.S. holder, the amount of interest income you will realize will be based on the average exchange rate in effect during the interest accrual period (or with respect to an interest accrual period that spans two taxable years, at the average exchange rate for the partial period within the taxable year). Alternatively, as an accrual-basis U.S. holder, you may elect to translate all interest income on foreign currency-denominated Notes at the spot rate on the last day of the accrual period (or the last day of the taxable year, in the case of an accrual period that spans more than one taxable year) or on the date that you receive the interest payment if that date is within five business days of the end of the accrual period. If you make this election, you must apply it consistently to all debt instruments from year to year and you cannot change the election without the consent of the Internal Revenue Service. If you use the accrual method of accounting for tax purposes, you will recognize foreign currency gain or loss on the receipt of a foreign currency interest payment if the exchange rate in effect on the date the payment is received differs from the rate applicable to a previous accrual of that interest income. This foreign currency gain or loss will be treated as ordinary income or loss, but generally will not be treated as an adjustment to interest income received on the Note.

#### *Purchase, Sale and Retirement of Notes*

Initially, your tax basis in a Note generally will equal the cost of the Note to you. Your basis will increase by any amounts that you are required to include in income under the rules governing original issue discount and market discount, and will decrease by the amount of any amortized premium and any payments other than qualified stated interest made on the Note. (The rules for determining these amounts are discussed below.) If you purchase a Note that is denominated in a foreign currency, the cost to you (and therefore generally your initial tax basis) will be the U.S. dollar value of the foreign currency purchase price on the date of purchase calculated at the exchange rate in effect on that date. If the foreign currency Note is traded on an established securities market and you are a cash-basis taxpayer (or if you are an accrual-basis taxpayer that makes a special election), you will determine the U.S. dollar value of the cost of the Note by translating the amount of the foreign currency that you paid for the Note at the spot rate of exchange on the settlement date of your purchase. The amount of any subsequent adjustments to your tax basis in a Note in respect of foreign currency-denominated original issue discount, market discount and premium will be determined in the manner described below. If you convert U.S. dollars into a foreign currency and then immediately use that foreign currency to purchase a Note, you generally will not have any taxable gain or loss as a result of the conversion or purchase.

When you sell or exchange a Note, or if a Note that you hold is retired, you generally will recognize gain or loss equal to the difference between the amount you realize on the transaction (less any accrued qualified stated interest, which will be subject to tax in the manner described above under "Payments or Accruals of Interest") and your tax basis in the Note. If you sell or exchange a Note for a foreign currency, or receive foreign currency on the retirement of a Note, the amount you will realize for U.S. tax purposes

generally will be the dollar value of the foreign currency that you receive calculated at the exchange rate in effect on the date the foreign currency Note is disposed of or retired. If you dispose of a foreign currency Note that is traded on an established securities market and you are a cash-basis U.S. holder (or if you are an accrual-basis holder that makes a special election), you will determine the U.S. dollar value of the amount realized by translating the amount at the spot rate of exchange on the settlement date of the sale, exchange or retirement.

The special election available to you if you are an accrual-basis taxpayer in respect of the purchase and sale of foreign currency Notes traded on an established securities market, which is discussed in the two preceding paragraphs, must be applied consistently to all debt instruments from year to year and cannot be changed without the consent of the Internal Revenue Service.

Except as discussed below with respect to market discount and foreign currency gain or loss, the gain or loss that you recognize on the sale, exchange or retirement of a Note generally will be capital gain or loss. The gain or loss on the sale, exchange or retirement of a Note will be long-term capital gain or loss if you have held the Note for more than one year on the date of disposition. Net long-term capital gain recognized by an individual U.S. holder generally will be subject to tax at a lower rate than net short-term capital gain or ordinary income. The ability of U.S. holders to offset capital losses against ordinary income is limited.

Despite the foregoing, the gain or loss that you recognize on the sale, exchange or retirement of a foreign currency Note generally will be treated as ordinary income or loss to the extent that the gain or loss is attributable to changes in exchange rates during the period in which you held the Note. This foreign currency gain or loss will not be treated as an adjustment to interest income that you receive on the Note.

Gain realized on the sale of a Note will generally be treated as U.S. source income and therefore the use of foreign tax credits relating to any non-U.S. tax imposed upon such sale may be limited.

#### *Original Issue Discount*

If we issue Notes at a discount from their stated redemption price at maturity, and the discount is equal to or more than the product of one-fourth of one percent (0.25%) of the stated redemption price at maturity of the Notes multiplied by the number of full years to their maturity, the Notes will be "Original Issue Discount Notes." The difference between the issue price and the stated redemption price at maturity of the Notes will be the "original issue discount." The "issue price" of the Notes will be the first price at which a substantial amount of the Notes are sold to the public (*i.e.*, excluding sales of Notes to underwriters, placement agents, wholesalers, or similar persons). The "stated redemption price at maturity" will include all payments under the Notes other than payments of qualified stated interest. The term "qualified stated interest" generally means stated interest that is unconditionally payable in cash or property (other than debt instruments issued by the Issuer) at least annually during the entire term of a Note at a single fixed interest rate or, subject to certain conditions, based on one or more interest indices.

If you invest in an Original Issue Discount Note, you generally will be subject to the special tax accounting rules for original issue discount obligations provided by the Internal Revenue Code and certain U.S. Treasury regulations. You should be aware that, as described in greater detail below, if you invest in an Original Issue Discount Note, you generally will be required to include original issue discount in ordinary gross income for U.S. federal income tax purposes as it accrues, although you may not yet have received the cash attributable to that income.

In general, and regardless of whether you use the cash or the accrual method of tax accounting, if you are the holder of an Original Issue Discount Note with a maturity greater than one year, you will be required to include in ordinary gross income the sum of the "daily portions" of original issue discount on that Note for all days during the taxable year that you own the Note. The daily portions of original issue discount on an Original Issue Discount Note are determined by allocating to each day in any accrual period a ratable portion of the original issue discount allocable to that period. Accrual periods may be any length and may vary in length over the term of an Original Issue Discount Note, so long as no accrual period is longer than one year and each scheduled payment of principal or interest occurs on the first or last day of an accrual period. If you are the initial holder of the Note, the amount of original issue discount on an Original Issue Discount Note allocable to each accrual period is determined by:

- (i) multiplying the "adjusted issue price" (as defined below) of the Note at the beginning of the accrual period by a fraction, the numerator of which is the annual yield to maturity (defined below) of the Note and the denominator of which is the number of accrual periods in a year; and

- (ii) subtracting from that product the amount (if any) payable as qualified stated interest allocable to that accrual period.

In the case of an Original Issue Discount Note that is a floating rate Note, both the “annual yield to maturity” and the qualified stated interest will be determined for these purposes as though the Note will bear interest in all periods at a fixed rate generally equal to the rate that would be applicable to interest payments on the Note on its date of issue or, in the case of some floating rate Notes, the rate that reflects the yield that is reasonably expected for the Note. (Additional rules may apply if interest on a floating rate Note is based on more than one interest index.) The “adjusted issue price” of an Original Issue Discount Note at the beginning of any accrual period will generally be the sum of its issue price (including any accrued interest) and the amount of original issue discount allocable to all prior accrual periods, reduced by the amount of all payments other than any qualified stated interest payments on the Note in all prior accrual periods. All payments on an Original Issue Discount Note (other than qualified stated interest) will generally be viewed first as payments of previously accrued original issue discount (to the extent of the previously accrued discount), with payments considered made from the earliest accrual periods first, and then as a payment of principal. The “annual yield to maturity” of a Note is the discount rate (appropriately adjusted to reflect the length of accrual periods) that causes the present value on the issue date of all payments on the Note to equal the issue price. As a result of this “constant yield” method of including original issue discount income, the amounts you will be required to include in your gross income if you invest in an Original Issue Discount Note denominated in U.S. dollars generally will be lesser in the early years and greater in the later years than amounts that would be includible on a straight-line basis.

You generally may make an irrevocable election to include in income your entire return on a Note (*i.e.*, the excess of all remaining payments to be received on the Note, including payments of qualified stated interest, over the amount you paid for the Note) under the constant yield method described above. If you purchase Notes at a premium or market discount and if you make this election, you will also be deemed to have made the election (discussed below under the “Premium” and “Market Discount”) to amortize premium or to accrue market discount currently on a constant yield basis in respect of all other premium or market discount bonds that you hold.

In the case of an Original Issue Discount Note that is also a foreign currency Note, you should determine the U.S. dollar amount includible as original issue discount for each accrual period by (i) calculating the amount of original issue discount allocable to each accrual period in the foreign currency using the constant yield method described above and (ii) translating that foreign currency amount at the average exchange rate in effect during that accrual period (or, with respect to an interest accrual period that spans two taxable years, at the average exchange rate for each partial period). Alternatively, you may translate the foreign currency amount at the spot rate of exchange on the last day of the accrual period (or the last day of the taxable year, for an accrual period that spans two taxable years) or at the spot rate of exchange on the date of receipt, if that date is within five business days of the last day of the accrual period, provided that you have made the election described above under “Payments or Accruals of Interest.” Because exchange rates may fluctuate, if you are the holder of an Original Issue Discount Note that is also a foreign currency Note, you may recognize a different amount of original issue discount income in each accrual period than would be the case if you were the holder of an otherwise similar Original Issue Discount Note denominated in U.S. dollars. Upon the receipt of an amount attributable to original issue discount (whether in connection with a payment of an amount that is not qualified stated interest or the sale or retirement of the Original Issue Discount Note), you will recognize ordinary income or loss measured by the difference between the amount received (translated into U.S. dollars at the exchange rate in effect on the date of receipt or on the date of disposition of the Original Issue Discount Note, as the case may be) and the amount accrued (using the exchange rate applicable to such previous accrual).

If you purchase an Original Issue Discount Note outside of the initial offering at a cost less than its remaining redemption amount (*i.e.*, the total of all future payments to be made on the Note other than payments of qualified stated interest), or if you purchase an Original Issue Discount Note in the initial offering at a price other than the Note’s issue price, you generally will also be required to include in gross income the daily portions of original issue discount, calculated as described above. However, if you acquire an Original Issue Discount Note at a price greater than its adjusted issue price, you will be entitled to reduce your periodic inclusions of original issue discount to reflect the premium paid over the adjusted issue price.

Floating rate Notes generally will be treated as “variable rate debt instruments” under the OID Regulations. Accordingly, the stated interest on a Floating Rate Note generally will be treated as

“qualified stated interest” and such a Note will not have OID solely as a result of the fact that it provides for interest at a variable rate. If a floating rate Note does not qualify as a “variable rate debt instrument,” the Note will be subject to special rules that govern the tax treatment of debt obligations that provide for contingent payments. We will provide a detailed description of the tax considerations relevant to U.S. holders of any such Notes in the pricing supplement.

#### *Short-Term Notes*

The rules described above will also generally apply to Original Issue Discount Notes with maturities of one year or less (“short-term Notes”), but with some modifications.

First, the original issue discount rules treat none of the interest on a short-term Note as qualified stated interest, but treat a short-term Note as having original issue discount. Thus, all short-term Notes will be Original Issue Discount Notes. Except as noted below, if you are a cash-basis holder of a short-term Note and you do not identify the short-term Note as part of a hedging transaction you will generally not be required to accrue original issue discount currently, but you will be required to treat any gain realized on a sale, exchange or retirement of the Note as ordinary income to the extent such gain does not exceed the original issue discount accrued with respect to the Note during the period you held the Note. You may not be allowed to deduct all of the interest paid or accrued on any indebtedness incurred or maintained to purchase or carry a short-term Note until the Maturity of the Note or its earlier disposition in a taxable transaction. Notwithstanding the foregoing, if you are a cash-basis U.S. holder of a short-term Note, you may elect to accrue original issue discount on a current basis (in which case the limitation on the deductibility of interest described above will not apply). A U.S. holder using the accrual method of tax accounting and some cash method holders (including banks, securities dealers, regulated investment companies and certain trust funds) generally will be required to include original issue discount on a short-term Note in gross income on a current basis. Original issue discount will be treated as accruing for these purposes on a ratable basis or, at the election of the holder, on a constant yield basis based on daily compounding.

Second, regardless of whether you are a cash-basis or accrual-basis holder, if you are the holder of a short-term Note you may elect to accrue any “acquisition discount” with respect to the Note on a current basis. Acquisition discount is the excess of the remaining redemption amount of the Note at the time of acquisition over the purchase price. Acquisition discount will be treated as accruing ratably or, at the election of the holder, under a constant yield method based on daily compounding. If you elect to accrue acquisition discount, the original issue discount rules will not apply.

Finally, the market discount rules described below will not apply to short-term Notes.

#### *Premium*

If you purchase a Note at a cost greater than the Note’s remaining redemption amount, you will be considered to have purchased the Note at a premium, and you may elect to amortize the premium as an offset to interest income, using a constant yield method, over the remaining term of the Note. If you make this election, it generally will apply to all debt instruments that you hold at the time of the election, as well as any debt instruments that you subsequently acquire. In addition, you may not revoke the election without the consent of the Internal Revenue Service. If you elect to amortize the premium, you will be required to reduce your tax basis in the Note by the amount of the premium amortized during your holding period. Original Issue Discount Notes purchased at a premium will not be subject to the original issue discount rules described above. In the case of premium on a foreign currency Note, you should calculate the amortization of the premium in the foreign currency. Premium amortization deductions attributable to a period reduce interest income in respect of that period, and therefore are translated into U.S. dollars at the rate that you use for interest payments in respect of that period. Exchange gain or loss will be realized with respect to amortized premium on a foreign currency Note based on the difference between the exchange rate computed on the date or dates the premium is amortized against interest payments on the Note and the exchange rate on the date the holder acquired the Note. If you do not elect to amortize premium, the amount of premium will be included in your tax basis in the Note. Therefore, if you do not elect to amortize premium and you hold the Note to Maturity, you generally will be required to treat the premium as capital loss when the Note matures.

#### *Market Discount*

If you purchase a Note at a price that is lower than the Note’s remaining redemption amount (or in the case of an Original Issue Discount Note, the Note’s adjusted issue price), by 0.25% or more of the

remaining redemption amount (or adjusted issue price), multiplied by the number of remaining whole years to maturity, the Note will be considered to bear "market discount" in your hands. In this case, any gain that you realize on the disposition of the Note generally will be treated as ordinary interest income to the extent of the market discount that accrued on the Note during your holding period. In addition, you may be required to defer the deduction of a portion of the interest paid on any indebtedness that you incurred or continued to purchase or carry the Note. In general, market discount will be treated as accruing ratably over the term of the Note, or, at your election, under a constant yield method. You must accrue market discount on a foreign currency Note in the specified currency. The amount that you will be required to include in income in respect of accrued market discount will be the U.S. dollar value of the accrued amount, generally calculated at the exchange rate in effect on the date that you dispose of the Note.

You may elect to include market discount in gross income currently as it accrues (on either a ratable or constant yield basis), in lieu of treating a portion of any gain realized on a sale of the Note as ordinary income. If you elect to include market discount on a current basis, the interest deduction deferral rule described above will not apply. If you do make such an election, it will apply to all market discount debt instruments that you acquire on or after the first day of the first taxable year to which the election applies. The election may not be revoked without the consent of the Internal Revenue Service. Any accrued market discount on a foreign currency Note that is currently includible in income will be translated into U.S. dollars at the average exchange rate for the accrual period (or portion thereof within the holder's taxable year).

#### *Indexed Notes and Other Notes Providing for Contingent Payments*

Special rules govern the tax treatment of debt obligations that provide for contingent payments ("contingent debt obligations"). These rules generally require accrual of interest income on a constant yield basis in respect of contingent debt obligations at a yield determined at the time of issuance of the obligation, and may require adjustments to these accruals when any contingent payments are made. We will provide a detailed description of the tax considerations relevant to U.S. holders of any contingent debt obligations in the pricing supplement.

#### *Information Reporting and Backup Withholding*

The paying agent must file information returns with the United States Internal Revenue Service in connection with Note payments made to certain United States persons. If you are a United States person, you generally will not be subject to United States backup withholding tax on such payments if you provide your taxpayer identification number to the paying agent. You may also be subject to information reporting and backup withholding tax requirements with respect to the proceeds from a sale of the Notes. If you are not a United States person, you may have to comply with certification procedures to establish that you are not a United States person in order to avoid information reporting and backup withholding tax requirements.

### **Luxembourg**

#### *Luxembourg tax residency of the Noteholders*

A Noteholder will not become resident, or be deemed to be resident, in Luxembourg by reason only of the holding of the Notes, or the execution, performance, delivery and/or enforcement of the Notes.

#### *Withholding tax*

Under Luxembourg tax law currently in effect, there is no withholding tax for Luxembourg resident and non-resident Noteholders on payments of interest (including accrued but unpaid interest). There is also no Luxembourg withholding tax payable on payments received upon redemption, repurchase or upon a repayment of the principal of the Notes.

A Luxembourg withholding tax on payments to individual Noteholders (resident in another EU country than Luxembourg) may in the future be required to be made pursuant to European Council Directive 2003/48/EC or any other European Union Directive implementing the conclusions of the ECOFIN Council meeting of 26-27 November 2000 on the taxation of savings income or any law implementing or complying with, or introduced in order to conform to, such Directive.

It is expected that as from January 1, 2005 a 10% Luxembourg withholding tax may be introduced for interest payments made to Luxembourg individual residents.

## *Taxation of the Noteholders*

### *Taxation of Luxembourg non-residents*

Noteholders who are non-residents of Luxembourg and who have neither a permanent establishment nor a fixed base of business in Luxembourg with which the holding of the Notes is connected are not liable to any Luxembourg income tax, whether they receive payments of principal, payments of interest (including accrued but unpaid interest), payments received upon redemption or repurchase of the Notes, or realize capital gains on the sale of any Notes.

### *Taxation of Luxembourg residents - General*

Noteholders who are residents of Luxembourg, or non-resident Noteholders who have a permanent establishment or a fixed base of business in Luxembourg with which the holding of the Notes is connected, must, for income tax purposes, include any interest received in their taxable income. They will not be liable to any Luxembourg income tax on repayment of principal.

### *Luxembourg resident individuals*

Luxembourg resident individual Noteholders or non-resident Noteholders who have a fixed base of business with which the holding of the Notes is connected are not subject to taxation on capital gains upon the disposal of the Notes, unless the disposal of the Notes precedes the acquisition of the Notes or the Notes are disposed of within six months of the date of acquisition of these Notes. Upon a repurchase or redemption of the Notes, individual Luxembourg resident Noteholders or non-resident Noteholders who have a fixed base of business with which the holding of the Notes is connected must however include the portion of the repurchase or redemption price corresponding to accrued but unpaid interest in their taxable income.

### *Luxembourg resident companies*

Luxembourg resident companies (*société de capitaux*) Noteholders or foreign entities of the same type which have a permanent establishment in Luxembourg with which the holding of the Notes is connected, must include in their taxable income the difference between the sale or redemption price (including accrued but unpaid interest) and the lower of the cost or book value of the Notes sold or redeemed.

### *Luxembourg resident companies benefiting from a special tax regime*

Noteholders who are holding companies subject to the law of July 31, 1929 or undertakings for collective investment subject to the law of December 20, 2002 are tax exempt entities in Luxembourg, and are thus not subject to any Luxembourg tax (i.e., corporate income tax, municipal business tax and net wealth tax).

### *Net Wealth Tax*

Luxembourg net wealth tax will not be levied on a Noteholder, unless (i) such holder is a Luxembourg resident or (ii) such Notes are attributable to an enterprise or part thereof which is carried on in Luxembourg through a permanent establishment or a permanent representative or (iii) such Notes are attributable to a fixed base of business in Luxembourg of the Noteholder.

### *Other Taxes*

There is no Luxembourg registration tax, stamp duty or any other similar tax or duty payable in Luxembourg by Noteholders as a consequence of the issuance of the Notes, nor will any of these taxes be payable as a consequence of a subsequent transfer, repurchase or redemption of the Notes.

There is no Luxembourg value added tax payable in respect of payments in consideration for the issuance of the Notes or in respect of the payment of interest or principal under the Notes or the transfer of the Notes. Luxembourg value added tax may, however, be payable in respect of fees charged for certain services rendered to the Issuer, if for Luxembourg value added tax purposes such services are rendered or are deemed to be rendered in Luxembourg and an exemption from Luxembourg value added tax does not apply with respect to such services.

No gift, estate or inheritance taxes is levied on the transfer of the Notes upon death of a Noteholder in cases where the deceased was not a resident of Luxembourg for inheritance tax purposes.

## **CERTAIN ERISA CONSIDERATIONS**

The U.S. Employee Retirement Income Security Act of 1974, as amended (“ERISA”) imposes fiduciary standards and certain other requirements on employee benefit plans subject thereto (collectively, “ERISA Plans”), including collective investment funds, separate accounts, and other entities or accounts whose underlying assets are treated as assets of such plans pursuant to the U.S. Department of Labor “plan assets” regulation, 29 CFR Section 2510.3-101 (the “Plan Assets Regulation”) and on those persons who are fiduciaries with respect to ERISA Plans.

Under a “look-through rule” set forth in the Plan Assets Regulation, if an ERISA Plan or a plan that is not subject to ERISA but that is subject to Section 4975 of the Code invests in an “equity interest” of an entity and no other exception applies, the plan’s assets include both the equity interest and an undivided interest in each of the entity’s underlying assets. This rule will only apply where equity participation in an entity by benefit plan investors is “significant”. Equity participation by benefit plan investors is significant if 25% or more of the value of any class of equity interest in the entity is held by benefit plan investors. An equity interest does not include debt (as determined by applicable local law) which does not have substantial equity features. The term “benefit plan investor” includes (a) an employee benefit plan (as defined in Section 3(3) of ERISA) whether or not subject to ERISA, (b) a plan described in Section 4975 of the Code (other than a governmental or church plan described in Section 4975(g)(2) or (3) of the Code) that is subject to Section 4975 of the Code, or (c) any entity whose underlying assets include “plan assets” by reason of any such plan’s investment in the entity. Where the value of an interest in an entity relates solely to identified property of the entity, that property is treated as the sole property of a separate entity.

The Issuer believes that the Notes should be treated as debt rather than equity for purposes of the Plan Assets Regulation. There can be no assurance, however, that the U.S. Department of Labor would not take a contrary view. Further, the Issuer will not be able to monitor the Noteholders’ possible status as benefit plan investors. Accordingly, the Notes are not permitted to be acquired by any benefit plan investor.

**BY ITS PURCHASE AND HOLDING OF A NOTE OR ANY INTEREST THEREIN, THE PURCHASER AND/OR HOLDER THEREOF AND EACH TRANSFEREE WILL BE DEEMED TO HAVE REPRESENTED AND WARRANTED AT THE TIME OF ITS PURCHASE AND THROUGHOUT THE PERIOD THAT IT HOLDS SUCH NOTE OR INTEREST THEREIN, THAT (1) IT IS NOT A BENEFIT PLAN INVESTOR (AS DEFINED IN THE PLAN ASSETS REGULATIONS) AND (2) IT WILL NOT SELL OR OTHERWISE TRANSFER ANY SUCH NOTE OR INTEREST TO ANY PERSON WITHOUT FIRST OBTAINING THIS SAME FOREGOING REPRESENTATION AND WARRANTY FROM THAT PERSON.**

## FORM OF PRICING SUPPLEMENT

The form of Pricing Supplement that will be issued in respect of each Series, subject only to the deletion of non-applicable provisions, is set out below:

Pricing Supplement dated ●

### Open Joint Stock Company GAZPROM

Issue of [Aggregate Principal Amount of Series] [Title of Loan Participation Notes]  
by Gaz Capital S.A.  
for the purpose of financing a Loan to Open Joint Stock Company GAZPROM  
under a **U.S.\$5,000,000,000 Programme for the Issuance of Loan Participation Notes**

This document constitutes the Pricing Supplement relating to the issue of Notes described herein. Terms used herein shall be deemed to be defined as such for the purposes of the Conditions set forth in the Offering Circular dated 26 April 2004 [and the supplemental Offering Circular dated ●]. This Pricing Supplement contains the final terms of the Notes and must be read in conjunction with such Offering Circular [as so supplemented].

*[The following alternative language applies if the first Series of an issue which is being increased was issued under an Offering Circular with an earlier date.]*

Terms used herein shall be deemed to be defined as such for the purposes of the Conditions (the “**Conditions**”) set forth in the Offering Circular dated ●. This Pricing Supplement contains the final terms of the Notes and must be read in conjunction with the Offering Circular dated [current date] [and the supplemental Offering Circular dated ●], save in respect of the Conditions which are extracted from the Offering Circular dated ● and are attached hereto.]

*[Include whichever of the following apply or specify as “Not Applicable” (N/A). Note that the numbering should remain as set out below, even if “Not Applicable” is indicated for individual paragraphs or sub-paragraphs. Italics denote directions for completing the Pricing Supplement.]*

- |   |  |   |
|---|--|---|
| 1 | (i) Issuer:  | Gaz Capital S.A.  |
|   | (ii) Borrower:   | Open Joint Stock Company GAZPROM  |
| 2 | Series Number:   | ●   |
|   | [(If fungible with an existing Series, details of that Series, including the date on which the Notes become fungible.) | ●]  |
| 3 | Specified Currency:  | ●   |
| 4 | Aggregate Principal Amount:  | ●   |
| 5 | (i) Issue Price:   | ● per cent. of the Aggregate Principal Amount [plus accrued interest from [insert date] (in the case of fungible issues only, if applicable)] |
|   | (ii) [Net proceeds:  | ● (Required only for listed issues)]  |
| 6 | Specified Denominations:   | ●*  |
| 7 | (i) Issue Date:  | ●   |
|   | (ii) Interest Commencement Date:   | ●   |
| 8 | Maturity Date:   | [specify date or (for Floating Rate Notes) Interest Payment Date falling in or nearest to the relevant month and year]                        |

\* Notes (including Notes denominated in sterling) in respect of which the issue proceeds are to be accepted by the Issuer in the United Kingdom or whose issue otherwise constitutes a contravention of section 19 of the FSMA and which have a maturity of less than one year must have a minimum redemption value of £100,000 (or its equivalent in other currencies).

- 9 Interest Basis: [● per cent. Fixed Rate]  
[Floating Rate]  
(further particulars specified below)
- 10 Redemption/Payment Basis: Redemption at par
- 11 Change of Interest or Redemption/Payment Basis: [*Specify details of any provision for convertibility of Notes into another interest or redemption/payment basis*]
- 12 Status and Form of the Notes: Senior, Registered
- 13 Listing: [Luxembourg/Other  
(specify)/None]
- 14 Method of distribution: [Syndicated/Non-syndicated]
- 15 Financial Centres (Condition 7): ●
- 16 Loan: ●

**PROVISIONS RELATING TO INTEREST PAYABLE UNDER THE LOAN**

- 17 Fixed Rate Note Provisions: [Applicable/Not Applicable] (*if not applicable, delete the remaining sub-paragraphs of this paragraph*)
- (i) Rate [(s)] of Interest: ● per cent. per annum payable  
[annually/semi-annually] in arrear
- (ii) Interest Payment Date(s): ● in each year [adjusted in accordance with  
[specify Business Day Convention and any applicable Business Centre(s) for the definition of "Business Day"]/not adjusted]
- (iii) Fixed Coupon Amount [(s)]: ● per ● in principal amount
- (iv) Broken Amount: [*Insert particulars of any initial or final broken interest amounts which do not correspond with the Fixed Coupon Amount [(s)] and the Interest Payment Date(s) to which they relate*]
- (v) Day Count Fraction (Condition 5): ●  
(*Day count fraction should be Actual/Actual-ISMA for all fixed rate issues other than those denominated in U.S. dollars, unless the client requests otherwise*)
- (vi) Determination Date(s) (Condition 5): ● in each year. [*Insert regular interest payment dates, ignoring issue date or maturity date in the case of a long or short first or last coupon*]\*\*
- (vii) Other terms relating to the method of calculating interest for Fixed Rate Notes: [Not Applicable/give details]
- 18 Floating Rate Note Provisions: [Applicable/Not Applicable] (*if not applicable, delete the remaining sub-paragraphs of this paragraph*)
- (i) Interest Period(s): ●
- (ii) Specified Interest Payment Dates: ●
- (iii) Business Day Convention: [Floating Rate Business Day Convention/  
Following Business Day Convention/Modified  
Following Business Day Convention/ Preceding  
Business Day/Convention/other (*give details*)]

\*\* Only to be completed for an issue where Day Count Fraction is Actual/Actual-ISMA.

- (iv) Business Centre(s): ●
- (v) Manner in which the Rate(s) of Interest is/ are to be determined: [Screen Rate Determination/ISDA Determination/other *(give details)*]
- (vi) Interest Period Date(s): [Not Applicable/*specify dates*]
- (vii) Party responsible for calculating the Rate(s) of Interest and Interest Amount(s) (if not the Calculation Agent): ●
- (viii) Screen Rate Determination: As set out in the attached Loan Supplement
- (ix) ISDA Determination: As set out in the attached Loan Supplement
- (x) Margin(s): [+/-] ● per cent. per annum
- (xi) Minimum Rate of Interest: ● per cent. per annum
- (xii) Maximum Rate of Interest: ● per cent. per annum
- (xiii) Day Count Fraction (Condition 5): ●
- (xiv) Rate Multiplier: ●
- (xv) Fall back provisions, rounding provisions, denominator and any other terms relating to the method of calculating interest on Floating Rate Loans, if different from those set out in the Conditions: ●

#### **PROVISIONS RELATING TO REDEMPTION**

- 19** Final Redemption Amount of each Note: [● per Note of ● specified denomination/Other]
- 20** Early Redemption Amount(s) of each Note payable if the Loan should become repayable under the Loan Agreement prior to the Maturity Date: [Principal Amount/Other]

#### **GENERAL PROVISIONS APPLICABLE TO THE NOTES**

- 21** Other terms or special conditions:<sup>1</sup> [Not Applicable/*give details*]

#### **DISTRIBUTION**

- 22** (i) If syndicated, names of Managers: [Not Applicable/*give names*]
- (ii) Stabilising Agent (if any): [Not Applicable/*give name*]
- (iii) Dealer's Commission: ●
- 23** If non-syndicated, name of Dealer: [Not Applicable/*give name*]
- 24** Additional selling restrictions: [Not Applicable/*give details*]

#### **OPERATIONAL INFORMATION**

- 25** ISIN Code: ●
- 26** Common Code: ●
- 27** Any clearing system(s) other than Euroclear and Clearstream, Luxembourg and the relevant identification number(s): [Not Applicable/*give name(s) and number(s)*]
- 28** The Agents appointed in respect of the Notes are: ●

## GENERAL

- 29 Additional steps that may only be taken following approval by an Extraordinary Resolution in accordance with Condition 10: [Not Applicable/give details]
- 30 The aggregate principal amount of Notes issued has been translated into U.S. dollars at the rate of ●, producing a sum of (for Notes not denominated in U.S. dollars): [Not Applicable/U.S.\$●]

## [LISTING APPLICATION

This Pricing Supplement comprises the final terms required to list the issue of Notes described herein pursuant to the U.S.\$5,000,000,000 Programme for the Issuance of Loan Participation Notes of Gazprom.]

## [STABILISING

In connection with this issue, [*insert name of Stabilising Agent*] (the "Stabilising Agent") or any person acting for him may over-allot or effect transactions with a view to supporting the market price of the Notes at a level higher than that which might otherwise prevail for a limited period. However, there may be no obligation on the Stabilising Agent or any agent of his to do this. Such stabilising, if commenced, may be discontinued at any time, and must be brought to an end after a limited period.]

## [MATERIAL ADVERSE CHANGE STATEMENT

[Except as disclosed in this document, there/There]<sup>2</sup> has been no significant change in the financial or trading position of the Issuer, Gazprom or of the Group since [*insert date of last audited accounts or interim accounts (if later)*] and no material adverse change in the financial position or prospects of the Issuer, Gazprom or of the Group since [*insert date of last published annual accounts.*]

## RESPONSIBILITY

The Issuer and Gazprom accept responsibility for the information contained in this Pricing Supplement which, when read together with the Offering Circular [and the supplemental Offering Circular] referred to above, contains all information that is material in the context of the issue of the Notes.

1. If full terms and conditions are to be used, please add the following here:

"The full text of the Conditions which apply to the Notes [and which will be endorsed on the Notes in definitive form] are set out in [the Annex hereto], which Conditions replace in their entirety those appearing in the Offering Circular for the purposes of these Notes and such Conditions will prevail over any other provision to the contrary."

The first set of bracketed words is to be deleted where there is a permanent global Note instead of Notes in definitive form. The full Conditions should be attached to and form part of the pricing supplement.

2. If any change is disclosed in the Pricing Supplement, it will require approval by the Stock Exchanges. Consideration should be given as to whether or not such disclosure should be made by means of a supplemental Offering Circular rather than in a Pricing Supplement.

[The final form of Loan Supplement will be attached]

## GENERAL INFORMATION

- (1) The establishment of the Programme was approved by a resolution of the Management Board of Gazprom on July 31, 2003 and by a resolution of the Board of Directors of the Issuer on September 8, 2003, and the update of the programme was approved by a resolution of the Board of Directors of the Issuer on April 23, 2004. Gazprom and the Issuer will obtain all necessary consents, approvals and authorizations in Russia and Luxembourg in connection with any Loan and the issue and performance of the corresponding Series of Notes.
- (2) In connection with the application to list the Notes issued under the Programme on the Luxembourg Stock Exchange, a legal notice relating to the issue of the Notes and copies of the Articles of Association of the Issuer will be deposited with the Register of Commerce and Companies in Luxembourg where such documents may be examined and copies obtained.
- (3) The Luxembourg Stock Exchange has allocated the number 12887 to the Programme for listing purposes.
- (4) No consents, approvals, authorizations or orders of any regulatory authorities are required by the Issuer under the laws of Luxembourg for the maintaining of any Loan or for the issue and performance of the corresponding Series of Notes.
- (5) Except as disclosed in this Offering Circular, there has been no significant change in the financial or trading position or prospects of Gazprom or the Group since December 31, 2002 and no material adverse change in the financial or trading position or prospects of Gazprom or of the Group since December 31, 2002.
- (6) Except as disclosed in this Offering Circular, neither Gazprom nor any of its subsidiaries is involved in any litigation or arbitration proceedings relating to claims or amounts that are material in the context of the issue of the Notes nor, so far as Gazprom is aware, is any such litigation or arbitration pending or threatened.
- (7) For so long as any Series of Notes is outstanding, copies in English of the latest annual report and consolidated annual accounts of Gazprom (Gazprom's 2003 consolidated annual accounts prepared according to IFRS are expected to be published in or about July 2004) and the latest interim consolidated unaudited financial information of Gazprom prepared according to IFRS and the latest consolidated and unconsolidated audited annual accounts of Gazprom prepared according to Russian Accounting Regulations may be obtained free of charge, and copies of the Trust Deed in respect of the Notes (including the forms of the Global Notes and Definitive Notes), the Paying Agency Agreement and the relevant Loan Agreement will be available for inspection, at the specified offices of the Trustee and the Paying Agent in Luxembourg during normal business hours.
- (8) Gazprom publishes interim consolidated unaudited condensed financial statements, prepared in accordance with IAS 34, for the three month period ended March 31, the six-month period ended June 30 and for the nine-month period ended September 30 in each year. Gazprom does not publish audited or unaudited interim or year-end consolidated or non-consolidated financial statements prepared in accordance with U.S. GAAP.
- (9) Certain information with respect to Gazprom's natural gas, gas condensate and crude oil reserves associated with Gazprom's natural gas, gas condensate and crude oil properties is derived from the reports of DeGolyer and MacNaughton, an internationally recognized firm of independent reservoir engineers, dated December 31, 2002, and has been included herein upon the authority of said firm as experts with respect to the matters covered by such report and in giving such report.
- (10) Each of Gazprom and the Issuer has agreed that, for so long as any Notes are "restricted securities" within the meaning of Rule 144(a)(3) under the Securities Act, Gazprom or the Issuer will, during any period in which it is neither subject to Section 13 or 15(d) of the Exchange Act nor exempt from reporting pursuant to Rule 12g3-2(b) thereunder, provide to any holder or beneficial owner of such restricted securities or to any prospective purchaser of such restricted securities designated by such holder or beneficial owner or to the Trustee for delivery to such holder, beneficial owner or prospective purchaser, in each case upon the request of such holder, beneficial owner, prospective purchaser or Trustee, the information required to be provided by Rule 144A(d)(4) under the Securities Act.
- (11) The Notes have been accepted for clearance through Euroclear, Clearstream, Luxembourg and DTC. The Common Code and the International Securities Identification Number (ISIN) and (where applicable) the CUSIP number and the identification number for any other relevant clearing system for each Series of Notes will be set out in the relevant Pricing Supplement. In addition, application may be made to have Rule 144A Notes designated as eligible for trading in PORTAL.

## OVERVIEW OF THE RUSSIAN GAS INDUSTRY AND ITS REGULATION

*The information set forth in this section is based on publicly available information.*

### General

The Russian natural gas industry developed during the Soviet era and expanded rapidly after the discovery in the 1960s of significant reserves in the exceptionally large natural gas fields of western Siberia. Russia experienced a profound crisis in the early 1990s as a result of the dissolution of the Soviet Union, suffering a decline in industrial production and GDP.

Between 1990 and 1999, the Government's policies on natural gas industry structure and prices kept demand for natural gas and natural gas production relatively stable in comparison to demand for other energy sources over the same period, such as oil and coal. Total natural gas production declined by only 7.6% over the period, whereas the production of oil and coal declined by 41.7% and 36.7%, respectively. Moreover there has been a shift away from the use of oil and coal in favor of natural gas over the period, primarily because domestic natural gas prices have been kept at a low level.

Since the dissolution of the Soviet Union, the oil and coal industries have been restructured into several regional enterprises whereas the natural gas industry (including production, refining, transportation and sales) has remained unified.

### Classification of Reserves

Russian methods for calculating and classifying reserves differ from generally accepted practices in the United States and other countries. Reserves which are calculated using different methods cannot be accurately reconciled.

#### *Categories of reserves and potential and forecasted oil and natural gas resources*

Natural gas, gas condensate and oil reserves are categorized under the Russian reserves system based on their physical presence in a deposit. Explored reserves are represented by categories A, B and C1; preliminary estimated reserves are represented by category C2; potential resources are represented by category C3; and forecasted resources are represented by the categories D1 and D2. For a description of categories A, B and C1, see "Business—Reserves and Production."

**Category C2** reserves are preliminary estimated reserves of a deposit calculated on the basis of geological and geophysical research of unexplored sections of deposits adjoining sections of a field containing reserves of higher categories and of untested deposits of explored fields. The shape, size, structure, level, reservoir types, content and characteristics of the hydrocarbon deposit are determined in general terms based on the results of the geological and geophysical exploration and information on the more fully explored portions of a deposit. Category C2 reserves are used to determine the development potential of a field and to plan geological, exploration and production activities.

**Category C3** resources are prospective reserves prepared for the drilling of (i) traps within the oil-and-gas bearing area, delineated by geological and geophysical exploration methods tested for such area and (ii) the formation of explored fields which have not yet been exposed by drilling. The form, size and stratification conditions of the assumed deposit are estimated from the results of geological and geophysical research. The thickness, reservoir characteristics of the formations, the composition and the characteristics of hydrocarbons are assumed to be analogous to those for explored fields. Category C3 resources are used in the planning of prospecting and exploration work in areas known to contain other reserve bearing fields.

**Category D1** resources are calculated based on the results of regional geological, geophysical and geochemical research and by analogy with explored fields within the region being evaluated. Category D1 resources are reserves in lithological and stratigraphic series that are evaluated within the boundaries of large regional structures confirmed to contain commercial reserves of oil and gas.

**Category D2** resources are calculated using assumed parameters on the basis of general geological concepts and by analogy with other, better studied regions with explored oil and gas fields. Category D2 resources are reserves in lithological and stratigraphic series that are evaluated within the boundaries of large regional structures not yet confirmed to contain commercial reserves of oil and gas. The prospects for these series to prove to be oil-and-gas-bearing are evaluated based on geological, geophysical and geochemical research.

The evaluation of gas reserves in newly discovered natural gas or oil-and-gas deposits is carried out under the Russian reserves system using the volume method. The volume method determines the volume of reserves by examining the filtration and capacitive parameters of the deposit based on (i) the area of the deposit; (ii) the effective depth of hydrocarbon saturation; and (iii) the porousness of the deposit and the level of saturation of the hydrocarbons, taking into account thermobaric conditions.

The evaluation of natural gas reserves in deposits already under development is carried out under the Russian reserves system using both the volume method and the material balance method. The material balance method takes into account temporal changes in the effective reservoir pressure as a result of the extraction of the hydrocarbons and the resultant influx of water.

### **Russian Regulation**

The Russian legal system's rapid evolution during the last ten years is particularly evident in the context of natural gas industry regulation. Below is a brief overview of some key aspects of the current regulatory regime for the natural gas industry.

The regulation of legal and economic relations in the Russian natural gas industry is based on the following legislation: the Constitution of the Russian Federation, the Civil Code, the Subsoil Resources Law, the Natural Monopoly Law, the Gas Supply Law and the Federal Law "On the Continental Shelf of the Russian Federation" No. 187-FZ dated November 30, 1995. The most important recent piece of legislation is the Gas Supply Law, which establishes a regulatory framework for natural gas supply in the Russian Federation.

Under the Gas Supply Law, Russian federal authorities have jurisdiction over natural gas supplies, including, *inter alia*, the development and implementation of Government policy on natural gas supply; the regulation of strategic natural gas reserves; control over the industrial and environmental safety of the natural gas supply systems; meteorological support; and standardization and certification.

The Government (i) sets the projected natural gas production levels and the sales balance in Russia; (ii) determines the level of natural gas prices and natural gas transportation tariffs; (iii) regulates natural gas deliveries; (iv) sets procedures for providing independent organizations with access to the natural gas transportation and distribution networks; and (v) defines the categories of customers to whom natural gas deliveries cannot be restricted or suspended.

Prior to March 12, 2004, the Ministry of Energy was responsible for the practical implementation of Government fuel and energy industry policy and the coordination of the activities of the federal executive bodies. The Ministry of Energy was abolished from March 12, 2004, the effective date of Decree of the President of the Russian Federation No. 314 of March 9, 2004 ("Decree No. 314"). The rule-making authority of the former Ministry of Energy has now been transferred to the newly established Ministry of Industry and Energy, while the law enforcement authority and the functions of providing state services and property management have been transferred to the newly established Federal Energy Agency. The functions and authority of the newly established governmental bodies are, in accordance with the decree, to be specified in the Provisions on such bodies that are to be issued by the Government within two months from the effective date of Decree No. 314.

Prior to the effective date of Decree No. 314, the Ministry of Natural Resources of the Russian Federation was responsible for regulating the exploration, use and protection of natural resources and for licensing the exploration and production of subsoil resources. Since the effective date of Decree No. 314, the control and surveillance functions of the Ministry of Natural Resources have been transferred to the newly established Federal Service for Surveillance in the Sphere of Ecology and Environmental Use, and the law enforcement functions of the Ministry, as well as its functions of providing state services and of property management related to subsoil use have been transferred to the newly established Federal Agency for Subsoil Use. The functions and authority of the newly established governmental bodies are, in accordance with the decree, to be specified in the provisions on such bodies that are to be issued by the Government within two months from the effective date of Decree No. 314.

The Constitution of the Russian Federation stipulates that the use of subsoil is under the joint jurisdiction of the federal and regional authorities.

Under the Gas Supply Law, regional governing authorities have substantial power to regulate projects related to the exploration of oil and natural gas fields and the transportation and refining of oil and natural gas. In cooperation with the successor to the Ministry of Natural Resources with respect to licensing, which is to be determined by the Government in accordance with Decree No. 314, regional

authorities grant licenses for the exploration and production of subsoil resources (except for subsoil plots located in Russia's internal waters, territorial seas or on its continental shelf which fall under exclusive federal jurisdiction). Regional authorities usually also have jurisdiction over land use, environmental, employee health and safety, social security and certain financial regulations. The relationship between the relevant federal, regional and local authorities, as well as between any one natural gas company and such authorities, has a significant impact on the conditions under which a natural gas company can operate in any particular region.

### *Subsoil Licensing*

In 1992, the Subsoil Resources Law introduced a licensing system governing the study, exploration and production of natural resources from the subsoil in Russia. Until 1995, licenses for fields where exploration and production was already in process were granted without a tender offer. Licenses for new fields and subsoil plots, however, were awarded through auctions or tenders conducted by the governing body of the relevant regional government and the Ministry of Natural Resources. The most important criterion for granting the license at these auctions was the lump sum amount the bidder was prepared to pay for the right to use the subsoil, but technical, environmental, safety and national security factors were also taken into consideration.

In certain instances, such as upon the enactment of production sharing agreements between the development company, investors and regional and federal governments, the Subsoil Resources Law allows for licenses to be issued without a tender procedure.

Licensing agreements for subsoil use identify the terms and conditions for the use of the subsoil, the rights and obligations of the licensee and the manager of the subsoil plot and the level of payments. There are usually three parties to any licensing agreement: the regional authority of the region where the field is located, the Ministry of Natural Resources and the licensee.

There are several types of licenses applicable to the study, exploration and production of natural resources including: (i) licenses for geological exploration and assessment of the subsoil plot; (ii) licenses for the production of natural resources; and (iii) combined licenses for exploration, assessment and production of natural resources. Under the Subsoil Resources Law, licenses are granted for the term stipulated in the license. Prior to January 2000, exploration and assessment licenses could have a maximum term of five years, production licenses a maximum term of 20 years, and combined exploration, assessment and production licenses a maximum term of 25 years. After the enactment of amendments to the Subsoil Resources Law in January 2000, exploration and assessment licenses still may have a maximum term of five years; production licenses may have a short one-year term or a term of the expected operational life of the field based on a feasibility study report; and combined exploration, assessment and production licenses can also be issued for the term of the expected operational life of the field based on a feasibility study report. In practice, production licenses continue in many cases to be issued for 20 years and combined exploration, assessment and production licenses for 25 years. Furthermore, in practice, while a license may be officially indexed as a production license, it may also authorize exploration and assessment activities. The Subsoil Resources Law allows the license holder to request an extension of the existing license in order to complete either the development of the field or the procedures necessary to vacate the land once the exploitation of the subsoil is complete, provided such user complies with the terms and conditions of the license. Indefinite term licenses are provided for the construction and operation of waste burial facilities, and underground storage facilities.

Licenses granted in accordance with the Subsoil Resources Law cannot be sold or transferred to another entity except in limited circumstances, such as to a spin-off company or a subsidiary in which the licensee has a 50% or greater share. Generally, a license cannot be held by more than one legal entity.

Under a licensing agreement, the licensee makes a number of commitments. For example, the licensee agrees to bring the field on stream by a certain date; to extract an agreed volume of natural resources each year; to keep environmental pollutants within specified limits; and to clean up environmental contamination. When the license expires, the licensee must return the relevant land, at its own expense, to a condition which is adequate for future use. The licensee can be fined or the license can be revoked in the event that it remains unused for a period of time, as a result of repeated or significant breaches of the law or the conditions of the license, upon the occurrence of a direct threat to the lives or health of people working or residing in an area where licensed activities are carried on, or upon the occurrence of *force majeure* events.

Although most of the conditions set out in a license are based on mandatory rules contained in Russian law, there are a number of provisions in a licensing agreement which are negotiated between the parties.

The holder of an exploration, assessment and production license is subject to a quarterly natural resources production tax, which for natural gas is calculated as a percentage of the value of the resources extracted. The rate for the production of gas changed to a fixed rate of RR107 per mcm of gas produced from January 1, 2004, from 16.5% of the regulated price of gas per unit volume of natural gas production.

A holder of a license for exploration and assessment of hydrocarbons is to make quarterly payments for the use of the subsoil based on the total area of its allotment and a rate ranging from RR120 to RR360 per square meter. Fees for combined exploration, assessment and production licenses are negotiated by the parties to each license.

These payments for subsoil are in addition to relevant tax obligations applicable to the license holder in accordance with general tax legislation.

### *The Unified Gas Supply System*

The UGSS is defined by the Gas Supply Law as a centrally managed, technologically and economically regulated system of gas production, transportation, storage and supply.

Gazprom is currently the owner of the UGSS. Under the Gas Supply Law the owner of the UGSS has a number of responsibilities, including ensuring a reliable supply of natural gas within Russia; maintaining and developing the UGSS network; monitoring the function of UGSS facilities; ensuring the natural gas supply agreements entered into by Russia; procuring the use of equipment and processes for power-saving and environmental safety in the UGSS; ensuring industrial safety within the UGSS; and disaster management.

The Gas Supply Law does not permit the division of the UGSS or the liquidation of its owner without the consent of the Government. The Gas Supply Law also regulates the ownership of shares in the company which owns the UGSS. In particular, foreign persons and companies are not permitted to own more than 20% of the owner's issued ordinary shares and at least 35% of the owner's issued ordinary shares must be owned by the Government. The sale or any other transfer of title of such owner's shares can only be carried out if a federal law is issued permitting such sale or transfer.

### *Transportation and Supply of Gas*

The relationship between natural gas suppliers and off-takers is governed by the Regulation on Natural Gas Supplies within the territory of the Russian Federation approved by Government Resolution No. 162 dated February 5, 1998.

A right of priority to enter into natural gas supply agreements is given to off-takers that purchase natural gas for the Government, utility, consumers and households, and to certain off-takers wishing to extend their existing natural gas supply agreements.

In accordance with Government Resolution No. 858 dated July 14, 1997, Gazprom is obliged to provide independent suppliers with access to its natural gas transportation system in Russia. This requirement is subject to the availability of spare capacity in the natural gas transportation system, natural gas from independent suppliers being of sufficient quality and the availability of connecting and branch pipelines to consumers.

In accordance with the Gas Supply Law, consumers are obliged to pay for natural gas supplies and transportation services. If consumers fail to make such payments, suppliers have the right to limit or suspend natural gas supplies to such consumers in accordance with specific procedures provided for by a number of Government resolutions. The Government of the Russian Federation has, however, issued a number of resolutions (e.g., Government Resolution No. 1 dated January 5, 1998 and Government Resolution No. 364 dated May 29, 2002) regulating the restriction or suspension of supplies to certain customers. These consumers include, *inter alia*, medical institutions, military units, nuclear plants, communication organizations and certain vital utilities.

### *Prices and Tariffs*

Gas prices and transportation tariffs in Russia are regulated by the Natural Monopoly Law and the Gas Supply Law as well as by a number of supplemental Government resolutions. Government

Resolution No. 1021 "On State Regulation of Gas Prices and Tariffs for Gas Transportation in the Territory of the Russian Federation" dated December 29, 2000, as amended ("Resolution No. 1021"), sets out the main provisions relating to natural gas prices and transportation tariffs.

Prior to the effective date of Decree No. 314, the Federal Energy Commission of the Russian Federation ("FEC"), and after the effective date of Decree No. 314 the Federal Service for Tariffs ("FTS") regulates natural monopolies and establishes and regulates natural gas prices and tariffs. Decree No. 314 transfers the control and surveillance functions in the sphere of regulation of natural monopolies to the Federal Antimonopoly Service. In accordance with Resolution No. 1021, the FEC, or its successor, establishes the level of:

- wholesale natural gas prices;
- tariffs for gas transportation services through trunk pipelines for independent organizations;
- tariffs for gas transportation through pipelines owned by independent gas transportation organizations;
- tariffs for gas transportation through supply networks; and
- payments for the supply and marketing services rendered by gas distribution companies to end-users.

#### *Environmental Requirements*

Russian environmental legislation establishes a "pay-to-pollute" regime administered by the Ministry of Natural Resources and local authorities. Starting from March 12, 2004, the Federal Service for Surveillance in the Sphere of Ecology and Environmental Use was created under the auspices of the Ministry of Natural Resources (as well as the Federal Agency for Subsoil Use), and the control and surveillance functions of the Ministry of Natural Resources were transferred to this service. The authority responsible for administering the "pay-to-pollute" regime is also the Federal Service for Surveillance in the Sphere of Ecology and Environmental Use. Fees are assessed for both pollution within the limits agreed on emissions and effluents and for pollution in excess of these limits. There are additional fines for certain other breaches of environmental regulations. The environmental protection legislation contains an obligation to make compensation payments to the budget for all environmental losses caused by pollution. In the event of a dispute concerning losses caused by breaches of environmental laws and regulations, the prosecutor's office or other authorized governmental bodies may bring suit, though there is no private right of action. Courts may impose clean-up obligations subject to the agreement of the parties in lieu of or in addition to imposing fines.

Exploration licenses and production licenses generally require certain environmental commitments. Although such commitments may be stringent in a particular license, the penalties for failing to comply and clean-up requirements are generally low.

#### *Regulating the Activities of Natural Monopolies*

The Natural Monopoly Law defines "natural monopoly" as a condition of the commodities market in which the demand for products is satisfied more effectively in the absence of competition and in which another product cannot readily be substituted for the monopoly product. The Natural Monopoly Law sets out, *inter alia*, a regime for the regulation of entities which have a natural monopoly over natural gas transportation. It also established an authority (prior to the effective date of Decree No. 314, the FEC) which supervises:

- transactions involving the acquisition by a natural monopoly entity of title to (or the rights to use) assets where the value of such assets exceeds 10% of the natural monopoly entity's own capital (as calculated in accordance with its latest audited balance sheet). Such transactions may not be related to the industry of the natural monopoly entity;
- investments whose value exceeds 10% of the natural monopoly entity's own capital (as calculated in accordance with its latest audited balance sheet). Such investments may not be related to the industry of the natural monopoly entity; and
- sales, leases or other transactions, whereby the natural monopoly entity disposes of assets used in the industry that it monopolizes where the value of such assets exceeds 10% of the value of the natural monopoly entity's own capital (as calculated in accordance with its latest audited balance sheet).

Pursuant to Decree No. 314, the FEC is being reorganized into a newly created Federal Service for Tariffs (the "FTS"). In accordance with this Decree, the rule-making authority previously held by the FEC has been transferred to the Ministry of Economy and Trade and the control and surveillance functions previously held by the FEC have been transferred to the Federal Antimonopoly Service (the "FAS"), and the FTS has been charged with the authority to set tariffs that previously belonged to the former Ministry for Antimonopoly Policy and Support of Entrepreneurship and the Ministry of Economic Development and Trade. Until further regulation defines the precise functions and the scope of authority given to the FTS, the FAS and the other governmental bodies that are effected by this decree, it is unclear which federal governmental body will supervise the activities set forth in the Natural Monopoly Law.

The relevant authority can penalize a natural monopoly entity and insist that it take certain actions if the entity breaches the Natural Monopoly Law. The relevant authority may also access information on a natural monopoly entity, whether it be held by such entity itself, Government bodies or local authorities.

The principal methods of regulating the activities of natural monopolies by relevant supervising authorities are:

- price regulation; and
- identifying consumers entitled to obligatory services and setting natural monopoly minimum supply levels for such consumers (with a view to protecting the rights and legal interests of citizens, state security, the environment and cultural values).

As a natural monopoly entity, Gazprom must submit ongoing reports on its activities and drafts of capital investment plans to the relevant supervisory authority pursuant to the Natural Monopoly Law. Such supervisory authority has the right (i) to implement, amend or suspend the Natural Monopoly Law regulations; (ii) to instruct natural monopoly entities to enter into contracts with those consumers entitled to obligatory service; (iii) to make amendments to existing contracts; (iv) to transfer revenues from activities which contravene the Natural Monopoly Law to the federal budget; and (v) to fine natural monopoly entities for violations of the Natural Monopoly Law.

### **Energy Charter Treaty**

The Energy Charter ("EC") was conceived at a meeting of the European Council in June 1990 as a means to strengthen the relationship which existed in the energy sector between the USSR, the countries of central and eastern Europe and the countries of western Europe. The EC was officially adopted in December 1991. It is a political declaration on co-operation between east and west in the energy sector and is not legally binding on any of its parties. At present, the EC has been signed by 52 countries, including the countries of the European Union.

In December 1994, following three years of negotiations, the general intentions contained in the EC were put into a legally binding form, the Energy Charter Treaty (the "ECT"). As of January 2003, the ECT had been signed by 52 countries, including Russia and the member states of the EU, and had been ratified by 47 countries.

The main objectives of the ECT are to: (i) provide a stable energy supply; (ii) provide effective production, processing, transportation, distribution and consumption of energy resources; (iii) assist in the development of the European energy market and the improvement of the global energy market through implementing principles of non-discriminatory access and free market pricing; and (iv) legally protect the interests of energy-related companies and entities on issues relating to investments, transit, trade and dispute resolution procedures.

Although Russia signed the ECT in December 1994, the State Duma has not yet ratified it, in part due to concerns regarding the impact of the ECT on pipeline access. Although Russia has not ratified the ECT, it is a member of the Energy Charter Conference and participates in the Energy Charter Secretariat's day-to-day activities.

### **European Union Gas Directive**

On June 22, 1998, the European Parliament and the Council of the European Union adopted a directive on common rules for the internal market in natural gas (the "Gas Directive"). The Directive came into force on August 10, 1998, and member states were required to implement its provisions by August 2000. A new Gas Directive was adopted in June 2003, replacing the prior Gas Directive.

The Gas Directive has established common rules for the transmission, distribution, supply and storage of natural gas. The new Gas Directive sets out rules for the organization of the natural gas sector

(including liquefied natural gas), access to the market, the operation of transmission and distribution systems, and the criteria and procedures for authorizing the transmission, distribution, supply and storage of natural gas. The new Gas Directive provides that all non-household customers have the right to choose their supplier no later than July 1, 2004, with all customers to have this right by July 1, 2007. Member states may accelerate the rate at which they open their markets.

The implementation of the Gas Directive has already led to significant structural changes in the European natural gas market. The Gas Directive is bringing about a significant liberalization of the European natural gas market, which goes further than the Directive's minimum requirements. Even prior to the adoption of the new Gas Directive almost 80% of the total EU market was opened up to competition.

Russia is the largest supplier of natural gas for western Europe, followed by Norway and the United Kingdom. Current EU projections show that in order to meet demand for natural gas and to compensate for the decline in the production of natural gas within the EU, there will be an increasing dependence upon imports from outside the EU. The electricity industry and other sectors of the economy are increasingly using natural gas because of its favorable ecological characteristics, which has increased demand.

As a result of the liberalization of the EU's natural gas market, short-term contracts and single transactions involving natural gas have become more popular. In time, this may have a significant effect on the state of the market. The long-term "take-or-pay" contracts, under which most of Europe's natural gas is supplied by Gazprom and other traditional exporters, however, provide for secure and stable natural gas supplies while at the same time balancing the interests of both exporters and importers. Such contracts are also the main element of major natural gas export financing projects, which provide producers with capital needed for investments and exploration. As a result, it is unlikely that long-term natural gas contracts will be replaced by spot market transactions.

## GLOSSARY OF SELECTED TERMS

“bbls” .....	Billions of barrels
“bcm” .....	Billion cubic meters, as measured under one atmosphere of pressure at 20°C
“Blue Stream Project” .....	The construction and operation by Gazprom, in alliance with key Italian natural gas purchaser and distributor ENI, of a new natural gas trunk pipeline from Russia via the Black Sea to Turkey
“Board of Directors” .....	Gazprom’s board of directors consisting of 11 members and appointed pursuant to the Joint Stock Companies Law and the Charter
“boe” .....	Barrel of oil equivalent
“central and eastern Europe” .....	For the purposes of this Offering Circular: Bosnia, Bulgaria, Croatia, Czech Republic, former Yugoslav Republic of Macedonia (“FYROM”), Hungary, Poland, Romania, Serbia and Montenegro, Slovakia and Slovenia
“Central Bank” .....	Central Bank of the Russian Federation
“Charter” .....	Gazprom’s Charter of May 31, 1996, as amended
“Constitution” .....	The constitution of the Russian Federation adopted on December 12, 1993
“EBRD” .....	European Bank for Reconstruction and Development
“Energy Charter Treaty” .....	Treaty between European states, the main objective of which is to assist in the development of the European energy market
“EU” .....	European Union
“Eurasian Economic Union” .....	Those states that have ratified the “Treaty on the Establishment of the Eurasian Economic Union” of October 10, 2000, currently Belarus, Kazakhstan, Kyrgyzstan, Russia and Tajikistan
“Europe” .....	For the purposes of this Offering Circular, central and eastern Europe and western Europe
“FEC” .....	Federal Energy Commission of the Russian Federation, established pursuant to Government Decree No. 960 dated August 13, 1996 and which was responsible, inter alia, for regulating domestic gas prices, transportation tariffs and natural resources monopoly activities prior to the effective date of Decree No. 314 and the functions of which have since been transferred to the Federal Service for Tariffs
“FSU” .....	Excluding Russia, the countries which formerly comprised the Soviet Union: Armenia, Azerbaijan, Belarus, Estonia, Georgia, Kazakhstan, Kyrgyzstan, Latvia, Lithuania, Moldova, Tajikistan, Turkmenistan, Ukraine and Uzbekistan
“Gas Directive” .....	A directive adopted by the European Parliament and the Council, which came into force in August 1998, and replaced by a new Gas Directive in June 2003, with the purpose of establishing common rules for the organization and functioning of the European natural gas market
“General Meeting of Shareholders” ..	Gazprom’s highest authority in accordance with its Charter, with exclusive power over various aspects of Gazprom’s management

“IFRS” .....	International Financial Reporting Standards, including International Accounting Standards (“IAS”) and Interpretations issued by the International Accounting Standards Board
“International Energy Agency” .....	A forum with 26 member countries that serves as a forum in which to share energy information, coordinate energy policies and to cooperate in the development of energy programs, and is an authoritative source for energy statistics worldwide
“kW” .....	Kilowatts
“LNG” .....	Liquefied Natural Gas
“Management Committee” .....	An executive body of Gazprom, which along with the Management Committee Chairman, manages Gazprom’s day-to-day affairs and implements the strategic plans of the Board of Directors
“mcf” .....	Million cubic feet
“mcm” .....	Thousand cubic meters, as measured under one atmosphere of pressure at 20°C
“mtoe” .....	Million metric tons of oil equivalent
“mmbbls” .....	Millions of barrels
“mmcm” .....	Million cubic meters, as measured under one atmosphere of pressure
“State Duma” .....	Lower chamber of the Russian parliament
“tcm” .....	Trillion cubic meters, as measured under one atmosphere of pressure at 20°C
“toe” .....	Metric ton of oil equivalent
“ton” .....	One metric ton

## AUDITORS' REPORT

To the Shareholders of OAO Gazprom

1. We have audited the accompanying consolidated balance sheets of OAO Gazprom and its subsidiaries (the "Group") as of 31 December 2002 and 2001, and the related consolidated statements of income, of cash flows and of changes in shareholders' equity for each of the years then ended. These financial statements are the responsibility of the Group's management. Our responsibility is to express an opinion on the consolidated financial statements based on our audit.
2. We conducted our audits in accordance with International Standards on Auditing. Those Standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audit provides a reasonable basis for our opinion.
3. In our opinion, the accompanying consolidated financial statements present fairly, in all material respects, the financial position of the Group as of 31 December 2002 and 2001, and the results of its operations and its cash flows for the years then ended in accordance with International Financial Reporting Standards.
4. Without qualifying our opinion, we draw your attention to Note 30 to the consolidated financial statements. The Government of the Russian Federation is the principal shareholder of the Group and governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

Moscow, Russian Federation  
20 June 2003

## **OAO GAZPROM**

### **NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

#### **1 NATURE OF OPERATIONS**

OAO Gazprom and its subsidiaries (the "Group") operate one of the largest gas pipeline systems in the world and are responsible for substantially all gas production and high pressure gas transportation in the Russian Federation. The Group is a major exporter of gas to European countries.

The Group is involved in the following principal activities:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas; and
- Distribution—domestic and export sale of gas.

The weighted average number of full time employees during 2002, 2001 and 2000 was 301 thousand, 304 thousand and 306 thousand, respectively.

#### **2 ECONOMIC ENVIRONMENT IN THE RUSSIAN FEDERATION**

Whilst there have been improvements in the economic situation in the Russian Federation in recent years, the country continues to display some characteristics of an emerging market. These characteristics include, but are not limited to, the existence of a currency that is not freely convertible in most countries outside of the Russian Federation, restrictive currency controls, and relatively high inflation.

The prospects for future economic stability in the Russian Federation are largely dependent upon the effectiveness of economic measures undertaken by the Government, together with legal, regulatory, and political developments.

#### **3 BASIS OF PRESENTATION**

These consolidated financial statements are prepared in accordance with, and comply with, International Financial Reporting Standards ("IFRS"), including International Accounting Standards and Interpretations issued by the International Accounting Standards Board.

The Group companies maintain their statutory financial statements in accordance with the Regulation on Accounting and Reporting of the Russian Federation ("RAR") or the accounting regulations of the country in which the particular Group company is resident. The Group's financial statements are based on the statutory records, with adjustments and reclassifications recorded in the financial statements for the purpose of fair presentation in accordance with IFRS.

The consolidated financial statements of the Group are prepared under the historical cost convention except as described in Note 4. The preparation of consolidated financial statements in conformity with IFRS requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from these estimates.

The adjustments and reclassifications made to the statutory accounts for the purpose of IFRS presentation include the restatement of balances and transactions for changes in the general purchasing power of the Russian Rouble ("RR") in accordance with IAS 29, "Financial Reporting in Hyperinflationary Economies" ("IAS 29"). IAS 29 requires that financial statements prepared in the currency of a hyperinflationary economy be stated in terms of the measuring unit current at the balance sheet date. The restatement was calculated from the conversion factors derived from the Russian Federation Consumer Price Index, published by the Russian State Committee on Statistics ("Goscomstat"), and from indices obtained from other published sources for years prior to 1992.

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 3 BASIS OF PRESENTATION—(continued)

The indices used to restate the consolidated financial statements, based on 1988 prices (1988=100) for the five years to 31 December 2002, and the respective conversion factors used are:

<u>Year</u>	<u>Index</u>	<u>Conversion Factor</u>
1998 .....	1,216,400	2.24
1999 .....	1,661,481	1.64
2000 .....	1,995,937	1.37
2001 .....	2,371,572	1.15
2002 .....	2,730,154	1.00

The significant guidelines followed in restating the consolidated financial statements are:

- all amounts are stated in terms of the measuring unit current as of 31 December 2002;
- monetary assets and liabilities are not restated because they are already expressed in terms of the monetary unit current as of 31 December 2002;
- non-monetary assets and liabilities (items which are not expressed in terms of the monetary unit current as of 31 December 2002) and shareholders' equity, including the share capital, are restated by applying the relevant conversion factors;
- all items in the consolidated statements of income and of cash flows are restated by applying appropriate conversion factors;
- the effect of inflation on the Group's net monetary position is included in the consolidated statement of income as a net monetary gain or loss; and
- comparative amounts for 2001 and 2000 are restated using the conversion factor 1.15 and 1.37, respectively, in order to state them in terms of the monetary unit current as of 31 December 2002.

The consolidated statement of income includes net monetary gains of RR 31,380, RR 33,513 and RR 60,332 for the years ended 31 December 2002, 2001 and 2000, respectively, because on average the Group had net monetary liabilities in the three years.

As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from 1 January 2003 the Group will no longer apply the provisions of IAS 29.

#### Reclassifications

Certain reclassifications have been made to prior year balances to conform to the current year presentation.

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies followed by the Group are set out below.

##### 4.1 Group accounting

##### Subsidiary undertakings

Subsidiary undertakings in which the Group, directly or indirectly, has an interest of more than 50% of the voting rights or is otherwise able to exercise control over the operations have been consolidated.

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

The consolidated financial statements of the Group reflect the results of operations of any subsidiaries acquired from the date control is established. Subsidiaries are no longer consolidated from the date from which control ceases. All intercompany transactions, balances and unrealized surpluses and deficits on transactions between group companies have been eliminated. Separate disclosure is made of minority interests. Acquisitions of subsidiaries are recorded in accordance with the purchase accounting method.

Minority interest at the balance sheet date represents the minority shareholders' portion of the pre-acquisition carrying amount of the identifiable assets and liabilities of the subsidiary at the acquisition date, and the minorities' portion of movements in equity since the date of the combination. Minority interest is presented separately from liabilities and shareholders' equity.

##### **Associated undertakings**

Associated undertakings are undertakings over which the Group has significant influence, but which it does not control. Generally significant influence occurs when the Group has between 20% and 50% of the voting rights. Associated undertakings are accounted for using the equity method.

The equity method involves recognising in the statement of income the Group's share of the associated undertakings' profit or loss for the year, less dividends received. Unrealised gains on transactions between the Group and its associated undertakings are eliminated to the extent of the Group's interest in the associated undertakings; unrealised losses are also eliminated unless the transaction provides evidence of an impairment of the asset transferred.

The Group's interest in each associated undertaking is carried in the balance sheet at an amount that reflects cost, including the goodwill at acquisition, plus its share of profit and losses. Provisions are recorded for any impairment in value.

Equity accounting is discontinued when the carrying amount of the investment in an associated undertaking reaches zero, unless the Group has incurred obligations or guaranteed obligations in respect of the associated undertaking.

##### **4.2 Investments**

The Group classified its investments into the following categories: trading, held-to-maturity and available-for-sale.

Investments that are acquired principally for the purpose of generating a profit from short-term fluctuations in price are classified as trading investments and included in current assets. Investments with fixed maturity that the management of the Group companies has the intent and ability to hold to maturity are classified as held-to-maturity and are included in non-current assets. There were no such investments as of 31 December 2002, 2001 and 2000. Investments intended to be held for an indefinite period of time, which may be sold in response to needs for liquidity or changes in fair value, are classified as available-for-sale. These are included in non-current assets unless management has the expressed intention of holding the investments for less than 12 months from the balance sheet date or unless they will need to be sold to raise operating capital, in which case they are included in current assets. Management determines the appropriate classification of its investments at the time of the purchase and re-evaluates such designation on a regular basis.

All purchases and sales of investments are recognized on the trade date, which is the date that the Group commits to purchase or sell the financial asset. Cost of purchase includes transaction costs. Trading and available-for-sale investments are subsequently re-measured to fair value. Available-for-sale investments principally comprise non-marketable equity securities, for which it is not possible to obtain current market quotes. For these investments, fair value is estimated based on the market price of similar financial assets or estimated future discounted cash flows. For other investments traded in active markets, fair value is determined by reference to the current market value at the close of business on the reporting date.

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

Realized gains and losses arising from sale and unrealized gains and losses arising from changes in the fair value of trading and available-for-sale investments are included in the statement of income in the period in which they arise.

Prior to the adoption of IAS 39 the Group had valued its marketable equity securities at the lower of cost restated to the equivalent purchasing power of the Rouble at the reporting date on the basis of indices included in Note 3, or market value. Long-term investments were reflected at cost restated to the equivalent purchasing power at the reporting date. Provision for impairment was only made where, in the opinion of the Group's management, there was a diminution in value, which was other than temporary. On disposal of an investment, the difference between the net disposal proceeds and the carrying amount was charged or credited to the consolidated statement of operations.

Changes in the fair value of trading and available-for-sale investments are recorded in the statement of income within operating expenses and gains and losses on available-for-sale investments, respectively.

In the statement of cash flow, purchases and sales of trading investments are classified as operating activities.

#### 4.3 Goodwill

Any excess of the cost of an acquisition over the fair value of the Group's share of the identifiable net assets of the acquired subsidiary or associated undertaking at the date of acquisition is recorded as goodwill. Goodwill on acquisition of subsidiary undertakings is included in other long-term assets. Goodwill on acquisition of associated undertakings is included in investments in associated undertakings. Goodwill is amortised using the straight-line method over the shorter of its estimated useful life or 20 years.

#### 4.4 Joint ventures

Joint ventures are contractual agreements whereby two or more parties undertake economic activity, which is subject to joint control. Joint ventures are accounted for using the equity method.

#### 4.5 Cash and cash equivalents

Cash comprises cash on hand and demand deposits. Cash equivalents comprise short-term investments which are readily converted to cash and have an original maturity of three months or less. Restricted cash balances comprise balances of cash and cash equivalents which are restricted as to withdrawal under the terms of certain borrowings or under banking regulations. Restricted cash balances are excluded from cash in the consolidated statement of cash flows.

#### 4.6 Accounts receivable

Trade receivables are carried at original invoice amount less provision made for impairment of these receivables. The provision for impairment of trade receivables is established if there is objective evidence that the Group will not be able to collect all amounts due according to the original terms of the receivables or if collection is not anticipated for a long period of time. The amount of the provision is the difference between the carrying amount and the recoverable amount, being the present value of expected cash flows, discounted at the market rate of interest for similar borrowers at the date of origination of the receivable.

#### 4.7 Inventories

Inventories are valued at the lower of net realisable value and cost. Cost of inventory is determined on the weighted average basis. The cost of finished goods and work in progress comprises raw material, direct labour, other direct costs and related production overhead (based on normal operating capacity) but excludes borrowing costs. Net realisable value is the estimated selling price in the ordinary course of business, less selling expenses.

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

##### 4.8 Property, plant and equipment

Property, plant and equipment are carried at historical cost of acquisition or construction after deduction of accumulated depreciation.

Gas and oil exploration and production activities are accounted for in accordance with the successful efforts method. Under the successful efforts method, costs of successful development and exploratory wells are capitalised. Costs of unsuccessful exploratory wells are expensed upon determination that the well does not justify commercial development. Other exploration costs are expensed as incurred.

Major renewals and improvements are capitalised. Maintenance, repairs and minor renewals are expensed as incurred. Minor renewals include all expenditures that do not result in a technical enhancement of the asset beyond its original capability. Gains and losses arising from the disposal of property, plant and equipment are included in the consolidated statement of income as incurred.

Interest costs on borrowings are capitalised as part of the cost of self constructed assets during the period of time that is required to construct and prepare the asset for its intended use. All other borrowing costs are expensed.

The return to a governmental authority of social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation is recorded only upon both the transfer of title to, and termination of operating responsibility for, the social assets. There is no specified timetable for such social assets to be transferred to the governmental authorities, and transfer does not occur until the agreement of both parties is reached. These disposals are considered to be shareholder transactions because they represent a return of assets for the benefit of governmental authorities, as contemplated in the original privatisation arrangements. Consequently, such disposals are accounted for as a charge to shareholders' equity.

Depreciation is calculated on a straight-line basis. Depreciation on wells and production equipment has been calculated on cost, using the straight line method rather than, as is the more generally accepted international industry practice, on the unit-of-production method as the difference is not material. Assets under construction are not depreciated.

The estimated useful lives of the Group's assets are as follows:

	<u>Years</u>
Pipelines .....	33
Wells and production equipment .....	12-40
Machinery and equipment .....	10-18
Buildings .....	30-40
Roads .....	20-40
Social assets .....	10-40

##### 4.9 Impairment of assets

At each balance sheet date management assess whether there is any indication that the recoverable value of the Group's assets has declined below the carrying value. When such a decline is identified, the carrying amount is reduced to the recoverable amount. The amount of the reduction is recorded in the consolidated statement of income in the period in which the reduction is identified. An impairment loss recognised for an asset in prior years is reversed if there has been a change in the estimates used to determine the asset's recoverable amount.

##### 4.10 Borrowings

Borrowings are recognised initially at the fair value of the proceeds received which is determined using the prevailing market rate of interest for a similar instrument, if significantly different from the

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

transaction price, net of transaction costs incurred. In subsequent periods, borrowings are recognised at amortised cost, using the effective yield method; any difference between fair value of the proceeds (net of transaction costs) and the redemption amount is recognised as interest expense over the period of the borrowings.

##### 4.11 Deferred tax

Deferred tax assets and liabilities are calculated in respect of temporary differences using a balance sheet liability method. Deferred tax assets and liabilities are recorded for all temporary differences arising between the tax basis of assets and liabilities and their carrying values for financial reporting purposes. A deferred tax asset is recorded only to the extent that it is probable that taxable profit will be available against which the deferred tax asset will be realised or if it can be offset against existing deferred tax liabilities. Deferred tax assets and liabilities are measured at tax rates that are expected to apply to the period when the asset is realized or the liability is settled, based on tax rates that have been enacted or substantively enacted at the balance sheet date.

##### 4.12 Foreign currency transactions

Monetary assets and liabilities held by the Group as of 31 December 2002, 2001 and 2000, and denominated in foreign currencies are translated into Roubles at the exchange rate prevailing at that date. Foreign currency transactions are accounted for at the exchange rates prevailing at the date of the transactions. Gains and losses resulting from the settlement of such transactions and from the translation of monetary assets and liabilities denominated in foreign currencies are recognised as exchange gains or losses in the consolidated statement of income.

The balance sheets of foreign subsidiaries and associated undertakings are translated into Roubles at the exchange rate prevailing at the reporting date. Statements of income of foreign entities are translated at average exchange rates for the year. Exchange differences arising on the translation of the net assets of foreign subsidiaries and associated undertakings are recognised as translation differences and included in shareholders' equity.

The official US dollar to RR exchange rates, as determined by the Central Bank of the Russian Federation, were 31.78, 30.14 and 28.16 as of 31 December 2002, 2001 and 2000, respectively. The official Euro to RR exchange rates, as determined by the Central Bank of the Russian Federation, were 33.11, 26.49 and 26.14 as of 31 December 2002, 2001 and 2000, respectively.

Exchange restrictions and currency controls exist relating to converting the RR into other currencies. The RR is not freely convertible in most countries outside of the Russian Federation.

##### 4.13 Provisions for liabilities and charges

Provisions, including provisions for environmental liabilities and asset retirement obligations, are recognised when the Group has a present legal or constructive obligation as a result of past events, and it is probable that an outflow of resources will be required to settle the obligation, and a reliable estimate of the amount of the obligation can be made. As obligations are determined, they are recognised immediately based on the present value of the expected future cash flows arising from the obligations.

##### 4.14 Shareholders' equity

###### Treasury shares

Where the Group companies purchase the Group's equity share capital, the consideration paid including any attributable transaction costs net of income taxes is deducted from total shareholders' equity as treasury shares until they are re-sold. Where such shares are subsequently sold, any

## OA O GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

consideration received is included in shareholders' equity. Treasury shares are recorded at weighted average cost. The gains (losses) arising from treasury share transactions are recognised as a movement in the consolidated statement of changes in shareholders' equity, net of associated costs including taxation.

##### Dividends

Dividends are recognised as a liability and deducted from shareholders' equity at the balance sheet date only if they are declared before or on the balance sheet date.

##### 4.15 Revenue recognition

Sales are recognised for financial reporting purposes when products are delivered to customers and title passes and are stated net of VAT, excise taxes and other similar compulsory payments. Gas transportation sales are recognised when transportation services have been provided, as evidenced by delivery of gas in accordance with the contract.

Natural gas prices and gas transportation tariffs in the Russian Federation are established by the Federal Energy Commission. Export gas prices for sales to European countries are indexed mainly to oil product prices as stipulated in long-term contracts. Export gas prices for sales to Former Soviet Union countries are generally based on one-year fixed price contracts.

Revenues are measured at the fair value of the consideration received or receivable. When the fair value of consideration received cannot be measured reliably, the revenue is measured at the fair value of the goods or services given up.

##### 4.16 Mutual cancellation and other non-cash transactions

A significant portion of accounts receivable arising from sales are settled either through a chain of non-cash transactions (mutual cancellations), sometimes involving several enterprises, or other non-cash settlements. Non-cash settlements include promissory notes which are negotiable debt obligations. A portion of operations, including capital expenditures, is also transacted by mutual cancellations or other non-cash settlements.

Approximately, 18%, 18% and 22% of accounts receivable from gas sales settled during the years ended 31 December 2002, 2001 and 2000, respectively, were settled via mutual settlements or other non-cash settlements.

Promissory notes are issued by the Group entities as payment instruments. The promissory notes carry a fixed date of repayment and the supplier can sell them in the over-the-counter secondary market. Promissory notes issued by the Group are recorded initially at the fair value of the consideration received or the fair value of the note, which is determined using the prevailing market rate of interest for a similar instrument. In subsequent periods, promissory notes are stated at amortised cost using the effective yield method. Any difference between the fair value of the consideration (net of transaction costs) and the redemption amount is recognised as interest expense over the period of the promissory note.

The Group's short-term promissory notes payable had average interest rates ranging from 12.0% to 25.0%, from 12.0% to 28.0% and from 11.0% to 58.0% for the years ended 31 December 2002, 2001 and 2000, respectively. The Group's long-term promissory notes payable had average interest rates ranging from 15.0% to 26.0%, from 22.0% to 26.5% and from 8.0% to 32.0% for the years ended 31 December 2002, 2001 and 2000, respectively.

The Group also accepts promissory notes from its customers (both issued by customers and third parties) as a settlement of receivables. Promissory notes issued by customers are recorded in the same manner as accounts receivable originated by the Group. Promissory notes issued by other third parties are recorded as available-for-sale investments.

##### 4.17 Interest

Interest income and expense are recognised in the statement of income for all interest bearing instruments on an accrual basis using the effective yield method. Interest income includes nominal interest

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)

and accrued discount and premium. When loans become doubtful of collection, they are written down to their recoverable amounts and interest income is thereafter recognised based on the rate of interest that was used to discount the future cash flows for the purpose of measuring the recoverable amount.

##### 4.18 Research and development

Research expenditure is recognised as an expense as incurred. Costs incurred on development projects are recognised as intangible assets (within other long-term assets) to the extent that such expenditure is expected to generate future economic benefits. Other development expenditures are recognised as an expense as incurred. However, development costs previously recognised as an expense are not recognised as an asset in a subsequent period if the asset recognition criteria are subsequently met.

##### 4.19 Pension and other post-retirement benefits

The Group operates a defined benefit plan. Pension costs are recognised using the projected unit credit method. The cost of providing pensions is charged to operating expenses within the consolidated statement of income so as to spread the regular cost over the service lives of employees. The pension obligation is measured at the present value of the estimated future cash outflows using interest rates of government securities, which have the terms to maturity approximating the terms of the related liability. Actuarial gains and losses are recognised over the average remaining service lives of employees.

The Group owns and controls NPF Gazfund, which administers the Group's defined benefit plan. Members of Group's management are trustees of NPF Gazfund. The assets of NPF Gazfund primarily consist of shares of OAO Gazprom. The parent/subsidiary relationship between the Group and NPF Gazfund means that the assets held by NPF Gazfund do not meet the definition of plan assets and are, therefore, recognized in the consolidated balance sheet as treasury shares or other investments, as appropriate.

In the normal course of business the Group contributes to the Russian Federation State pension plan on behalf of its employees. Mandatory contributions to the State pension plan, which is a defined contribution plan, are expensed when incurred and are included within staff costs in operating expenses. The cost of providing other discretionary post-retirement obligations (including constructive obligations) is charged to the consolidated statement of income so as to spread the regular cost over the service lives of employees.

##### 4.20 Financial instruments

The Group adopted IAS 39 "Financial Instruments: Recognition and Measurement" as of 1 January 2001. The financial effects of adopting IAS 39 are disclosed in Note 19.

Financial instruments carried on the balance sheet include cash and cash equivalent balances, investments, receivables, promissory notes, accounts payable and borrowings. The particular recognition and measurement methods adopted are disclosed in the individual policy statements associated with each item.

##### *Accounting for derivative financial instruments*

As part of trading activities, primarily by the banking subsidiaries, the Group is also party to derivative financial instruments including forward and options contracts in foreign exchange and precious metals. The Group's policy is to measure these instruments at fair value, with resultant gains or losses being reported within the consolidated statement of income. Derivatives are not accounted for as hedges.

##### *Fair value disclosure*

The fair value of accounts receivable for disclosure purposes is estimated by discounting the value of expected cash flows at the market rate of interest for similar borrowers at the reporting date.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES—(continued)**

The fair value of financial liabilities and other financial instruments (except if publicly quoted) for disclosure purposes is estimated by discounting the future contractual cash flows at the current market interest rate available to the Group for similar financial instruments.

The fair value of publicly quoted financial instruments for disclosure purposes are estimated based on current market value at the close of business on the reporting date.

**5 SEGMENT INFORMATION**

Management does not separately identify segments within the Group as it operates as a vertically integrated business with substantially all external sales generated by the gas distribution business. However, following the practice suggested by IAS 14, "Segment Reporting", Revised 1997 ("IAS 14") for vertically integrated businesses, information can be analysed based on the following business segments:

- Production — exploration and production of gas and other hydrocarbons;
- Refining — processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation — transportation of gas;
- Distribution — domestic and export sale of gas; and
- Other — other activities, including banking.

The inter-segment revenues mainly consist of:

- Production — sale of gas to the Distribution segment and sale of hydrocarbons to the Refining segment;
- Refining — sale of refined products to other segments;
- Transport — rendering transportation services to the Distribution segment; and
- Distribution — sale of gas to the Transport segment for operational needs.

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**5 SEGMENT INFORMATION—(continued)**

Internal transfer prices are established by the management of the Group with the objective of providing for the specific medium and long-term funding requirements of the individual subsidiaries within each segment. Prices are determined on the basis of the statutory accounting reports of the individual subsidiaries on a cost plus basis.

Included within unallocated expenses are corporate expenses, including provision for the impairment of other investments and guarantees.

Substantially all of the Group's operating assets are located in the Russian Federation. Gas sales to different geographical regions are disclosed in Note 22.

**6 CASH AND CASH EQUIVALENTS**

Balances included within cash and cash equivalents in the consolidated balance sheet represent cash on hand and balances with banks. Included within restricted cash are balances of cash and cash equivalents totalling RR 38,637, RR 39,450 and RR 44,447 as of 31 December 2002, 2001 and 2000, respectively, which are restricted as to withdrawal under the terms of certain borrowings. In addition, restricted cash comprises cash balances of RR 6,956, RR 6,770 and RR 6,826 as of 31 December 2002, 2001 and 2000, respectively, in subsidiary banks, which are restricted as to withdrawal under banking regulations.

**7 SHORT-TERM INVESTMENTS**

	31 December		
	2002	2001	2000
Trading investments .....	14,143	15,182	18,360
Available-for-sale investments .....	14,752	16,184	14,435
	28,895	31,366	32,795

Trading investments primarily comprise marketable equity and debt securities held by the Group's banking subsidiaries with a view to generating short-term profits.

Available-for-sale investments primarily comprise promissory notes of third parties and maturing within twelve months of the balance sheet date or other debt and equity securities intended for sale within twelve months of the balance sheet date.

During the year ended 31 December 2002, RR 6,205 of short-term investments of OAO AKB National Reserve Bank were deconsolidated (see Note 28).

**8 ACCOUNTS RECEIVABLE AND PREPAYMENTS**

	31 December		
	2002	2001	2000
Trade receivables (net of impairment provision of RR 94,541, RR 109,341 and RR 95,577 as of 31 December 2002, 2001 and 2000, respectively) .....	113,990	153,997	232,344
Prepayments and advances (net of impairment provision of RR 7,206, RR 12,682 and RR 7,392 as of 31 December 2002, 2001 and 2000, respectively) .....	34,026	42,183	36,909
Other receivables (net of impairment provision of RR 25,459, RR 28,124 and RR 20,714 as of 31 December 2002, 2001 and 2000, respectively) .....	44,026	61,591	67,408
	192,042	257,771	336,661

**OA0 GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**8 ACCOUNTS RECEIVABLE AND PREPAYMENTS—(continued)**

The fair value of accounts receivable, excluding prepayments and advances, is RR 148,399 and RR 165,425 as of 31 December 2002 and 2001, respectively.

RR 62,173, RR 81,846 and RR 108,730 of trade receivables, net of impairment provision, are denominated in foreign currencies, mainly US dollar and Euro, as of 31 December 2002, 2001 and 2000, respectively.

As of 31 December 2002, 2001 and 2000, other receivables include RR 24,843, RR 40,786 and RR 30,639, respectively, relating to the operations of AB Gazprombank (ZAO) and OAO AKB National Reserve Bank (OAO AKB National Reserve Bank was included only at 31 December 2001 and 2000 — see Note 28). These balances mainly represent deposits with other banks and loans issued to customers at commercial rates based on credit risks and maturities.

As of 31 December 2002 the average year-end interest rate on banking deposits and loans ranged from 9.2% to 21.4% on balances denominated in Russian Roubles and from 2.0% to 13.0% on balances denominated in foreign currencies. As of 31 December 2001 the average year-end interest rate on banking deposits and loans ranged from 12.6% to 21.2% on balances denominated in Russian Roubles and from 2.3% to 15.0% on balances denominated in foreign currencies. As of 31 December 2000 the average year-end interest rate on banking deposits and loans ranged from 4.7% to 23.6% on balances denominated in Russian Roubles and from 4.9% to 11.5% on balances denominated in foreign currencies

As of 31 December 2002, 2001 and 2000, AB Gazprombank (ZAO) had pledged deposits with banks and other financial institutions of RR 7,736, RR 8,570 and RR 11,590, respectively. These are pledged as collateral for borrowings received by OAO Gazprom and credit exposures of Altanos Ertekeforgalmi Bank Rt (“AEB”) (see Note 30).

The fair value of banking deposits and loans approximate the carrying values, as the majority are short-term in nature and at commercial rates.

As of 31 December 2002 other receivables included US dollar denominated loans of RR 7,303 issued by the Group’s subsidiaries Gazprom Finance BV and AB Gazprombank (ZAO) to OOO Lotsman (see Note 33). The loans are due to be repaid in March 2003 and bear interest of 5% and 12.5% per annum, respectively. As of 31 December 2001 and 2000 there were no loans outstanding to OOO Lotsman.

**9 INVENTORIES**

	31 December		
	2002	2001	2000
Gas .....	45,826	37,812	34,191
Materials and supplies (net of an obsolescence provision of RR 11,792, RR 15,303 and RR 15,304 as of 31 December 2002, 2001 and 2000 respectively) .....	35,724	37,086	40,261
Goods for resale (net of an obsolescence provision of RR 1,195, RR 883 and RR 1,204 as of 31 December 2002, 2001 and 2000, respectively) .....	4,061	6,722	5,948
Refined products .....	2,950	3,845	572
	88,561	85,465	80,972

Inventories carried at net realisable value primarily relate to materials and supplies.

**OA0 GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)**

**10 PROPERTY, PLANT AND EQUIPMENT—(continued)**

At each balance sheet date management assesses whether there is any indication that the recoverable value has declined below the carrying value of the property, plant and equipment. As a result of management's assessment of the recoverable amount, assets under construction are presented net of a provision for impairment of RR 95,570, RR 102,453 and RR 95,954 at 31 December 2002, 2001 and 2000, respectively. The provision for impairment of assets under construction primarily relates to projects that have been indefinitely suspended.

For the year ended 31 December 2001, disposals include RR 15,674 related to the disposal of OAO Lebedinsky GOK (see Note 28).

Included in additions above is capitalized interest of RR 13,012, RR 18,857 and RR 21,527 for the years ended 31 December 2002, 2001 and 2000, respectively. Capitalization rates of 7.2%, 7.3% and 8.2% were used representing the weighted average actual borrowing cost of the relevant borrowings for the years ended 31 December 2002, 2001 and 2000, respectively.

Included in the property, plant and equipment above are fully depreciated assets which are still in service with the gross cost of RR 637,970, RR 589,436 and RR 317,498 as of 31 December 2002, 2001 and 2000, respectively. Included in additions are non-cash additions of RR 42,639, RR 49,133 and RR 65,119 for the years ended 31 December 2002, 2001 and 2000, respectively.

Depreciation includes RR 746, RR 657 and RR 1,042 for the years ended 31 December 2002, 2001 and 2000, respectively, which is considered a cost of self-constructed assets and thus capitalized rather than expensed in the consolidated statement of income. RR 19,979, RR 14,751 and RR 12,704 of depreciation for the years ended 31 December 2002, 2001 and 2000, respectively, is capitalized as a component of gas inventories and will be expensed in the consolidated statement of income when the gas is sold.

Included in the property, plant and equipment are social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation with a net book value of RR 40,526, RR 44,487 and RR 49,849 as of 31 December 2002, 2001 and 2000, respectively.

The Group's gas fields are operated under licenses granted by federal and local authorities. These licenses to develop and extract hydrocarbons expire between 2012 and 2019, however they may be extended. Management expects to extend the existing licenses on properties expected to produce hydrocarbons subsequent to their current expiration dates. Because of the expected renewals, the assets are depreciated over their useful lives even if this is beyond the end of the current license.

as of 31 December 2002, unless otherwise stated)

#### 12 OTHER LONG-TERM INVESTMENTS

	31 December		
	2002	2001	2000
South Pars (net of provision for impairment of RR 2,038, RR 2,038 and nil as of 31 December 2002, 2001 and 2000 respectively) .....	22,930	19,566	15,925
Joint ventures (net of provision for impairment of RR 5,383, RR 4,954 and RR 6,467 as of 31 December 2002, 2001 and 2000, respectively)...	2,354	2,088	2,612
Available-for-sale investments (net of provision for impairment of RR 23,796, RR 13,971 and RR 7,727 as of 31 December 2002, 2001 and 2000, respectively).....	<u>12,868</u>	<u>15,768</u>	<u>17,799</u>
	<u>38,152</u>	<u>37,422</u>	<u>36,336</u>

South Pars is a jointly controlled contractual arrangement with Total South Pars and Parsi International Ltd. established in 1997 to provide services to National Iranian Oil Company in relation to development of South Pars oil and gas field in Iran. Under the terms of agreement OAO Gazprom has a 30% interest in this arrangement.

During the year ended 31 December 2002, RR 9,335 of other long-term investments of OAO AKB National Reserve Bank were deconsolidated (see Note 28).

Available for sale investments at 31 December 2001 and 2000 include the Group's 14.3% interest in ZAO Media-Most. This interest in ZAO Media-Most was acquired in November 1999 via the settlement of a ZAO Media-Most debt to the Group. ZAO Media-Most is a holding company owing interests in a number of mass media companies (see Note 28).

#### 13 OTHER LONG-TERM ASSETS

	31 December		
	2002	2001	2000

as of 31 December 2002, unless otherwise stated)

#### 14 ACCOUNTS PAYABLE AND ACCRUED CHARGES—(continued)

Other payables include RR 19,634, RR 13,584 and RR 18,927 related to the operations of the Group's banking subsidiaries as of 31 December 2002, 2001 and 2000, respectively. These balances mainly represent amounts due to the banks' customers with terms at commercial rates, varying by maturity of deposit, ranging from 2.2% to 12.5% per annum as of 31 December 2002, from 0.7% to 12.6% per annum as of 31 December 2001, and from 3.6% to 11.6% per annum as of 31 December 2000.

In the years ended 31 December 2002 and 2001 approximately 31% and 41% of the Group's settlements of accounts payable and accrued charges were settled via non-cash settlements.

RR 2,182 and RR 1,098 of trade payables are denominated in foreign currency, mainly the US dollar, at 31 December 2002 and 2001, respectively.

#### 15 TAXES PAYABLE

	31 December		
	2002	2001	2000
Excise tax .....	28,052	39,282	46,496
Tax penalties and interest .....	12,411	23,063	45,885
Road users tax .....	4,400	6,414	14,538
Net VAT .....	3,885	1,127	29,614
Profit tax .....	3,027	533	11,298
Royalty and mineral restoration taxes .....	336	7,160	10,889
Other taxes .....	6,209	7,748	9,992
	<u>58,320</u>	<u>85,327</u>	<u>168,712</u>
Less: long term portion of restructured tax liabilities .....	<u>(10,592)</u>	<u>(21,957)</u>	<u>(12,110)</u>
	<u>47,728</u>	<u>63,370</u>	<u>156,602</u>

Substantially all accrued taxes above, except restructured tax liabilities (see below) incur interest at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (21% and 25% per annum as of 31 December 2002 and 2001, respectively, and the refinancing rate decreased from 28% to 25% in November 2000). Interest does not accrue on tax penalties and interest.

The long-term portion of restructured tax liabilities comprise various taxes, penalties and interest payable to the Russian Government which were previously past due and which have been restructured following the application of Government Resolution dated 3 September 1999 No.1002. During 2002, 2001 and 2000 the Group negotiated the restructuring of its tax liabilities. The Group's current restructuring agreements presume payments of outstanding restructured taxes over a period of ten years, in accordance with agreed payment schedules.

The restructuring resulted in the recognition of a gain recorded in the consolidated statement of income as part of net monetary effects and financing items in the amount of RR 1,349, RR 21,526 and RR 23,037 for the years ended 31 December 2002, 2001 and 2000, respectively (see Note 24). The gain is based on the difference between the estimated fair value of the new restructuring agreement (based on discounted future cash flows) and the carrying amount of the old payables. Failure to pay the restructured taxes as they become due would result in reinstatement of the original liability.

The amortization of the discount on restructured taxes is recorded within interest expense and amounted to RR 4,650, RR 3,513 and RR 2,396 for the years ended 31 December 2002, 2001 and 2000, respectively.

**OAO GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)**

**15 TAXES PAYABLE—(continued)**

The long-term portion of restructured tax liabilities has the following maturity profile:

	31 December		
	2002	2001	2000
Between one and two years .....	6,615	4,598	3,112
Between two and five years.....	14,675	6,977	9,316
After five years .....	702	45,767	20,323
	21,992	57,342	32,751
Less: unamortized discount on restructured taxes.....	(11,400)	(35,385)	(20,641)
	<u>10,592</u>	<u>21,957</u>	<u>12,110</u>

The total amortised cost of restructured tax liabilities were RR 13,071, RR 24,943 and RR 12,110 as of 31 December 2002, 2001 and 2000, respectively.

Interest on restructured tax liabilities is accrued quarterly based on outstanding restructured tax liabilities, applying the refinancing rate of the Central Bank of the Russian Federation. RR 6,622, RR 7,949 and RR 14,257 of the restructured tax liabilities as of 31 December 2002, 2001 and 2000, respectively, accrue interest at one-tenth of the official rate of the Central Bank of the Russian Federation as of the date of the Government Resolution (5.5% p.a.).

During the year ended 31 December 2002 some of the Group's subsidiaries became eligible to extinguish one half of restructured tax interest and penalties. The additional gain recorded upon extinguishment of restructured tax interest and penalties is recorded in the consolidated statement of income as a part of net monetary effects and financing items in the amount of RR 9,435 for the year ended 31 December 2002 (see Note 24). The amortisation of the respective discount is recorded within interest expense and amounted to RR 2,734 for the year ended 31 December 2002.

In 2001 excise tax rate for gas sales to CIS countries was reduced from 30% to 15%, effective from 1 January 2001.

**16 SHORT-TERM BORROWINGS AND CURRENT PORTION OF LONG-TERM BORROWINGS**

	31 December		
	2002	2001	2000
Short-term borrowings:			
RR denominated borrowings .....	11,134	38,581	38,475
Foreign currency denominated borrowings .....	75,926	63,496	50,698
	87,060	102,077	89,173
Current portion of long-term borrowings (see Note 17) .....	97,763	91,013	63,889
	<u>184,823</u>	<u>193,090</u>	<u>153,062</u>

Short-term RR denominated borrowings had average interest rates ranging from 5.0% to 20.1%, from 5.0% to 25.0% and from 17.0% to 37.0% for the years ended 31 December 2002, 2001, 2000 respectively. Short-term foreign currency denominated borrowings had average interest rates ranging from 5.0% to 15.5%, from 6.5% to 16.0% and from 7.0% to 18.0% for the years ended 31 December 2002, 2001 and 2000, respectively.

In 2002 OAO Gazprom placed RR 5,000 of bonds due 3 November 2005 with an interest rate of 15% payable every 6 months and a put option on 14 November 2003. The fair value of the put option is RR 43 as of 31 December 2002.

Included within the current portion of long-term borrowings as of 31 December 2001 is an interest free loan provided by RAO UES with a fair value of RR 8,754 and nominal value of RR 10,140. The loan

as of 31 December 2002, unless otherwise stated)

#### 17 LONG-TERM BORROWINGS—(continued)

Due for repayment:	31 December		
	2002	2001	2000
Between one and two years.....	92,378	92,063	66,525
Between two and five years.....	132,010	124,826	176,455
After five years .....	<u>24,215</u>	<u>20,524</u>	<u>37,255</u>
	<u>248,603</u>	<u>237,413</u>	<u>280,235</u>

Long-term borrowings include fixed rate loans with a carrying value of RR 120,134, RR 71,294 and RR 44,119, and fair value of RR 120,010, RR 68,243 and RR 38,782 as of 31 December 2002, 2001 and 2000, respectively. All other long-term borrowings have variable interest rates linked to LIBOR, and the carrying amounts approximate fair value.

The group does not have formal hedging arrangements to mitigate its foreign exchange risk or interest rate risk.

The weighted average effective interest rates at the balance sheet date were as follows:

	31 December		
	2002	2001	2000
Fixed rate RR denominated long-term borrowings.....	15.01%	16.15%	14.95%
Fixed rate foreign currency denominated long-term borrowings .....	8.14%	7.84%	5.54%
Variable rate foreign currency denominated long-term borrowings.....	4.68%	6.33%	7.38%

As of 31 December 2002, 2001 and 2000 loans and borrowings of RR 192,918 and RR 184,243 and RR 301,753 respectively, inclusive of current portion of long-term borrowings, are secured by revenues from export supplies of gas to Europe.

The Group has no subordinated debt and no debt that may be converted into an equity interest in the Group.

As of 31 December 2002 long-term bank borrowings included loans from Salomon Brothers AG received in 2002 in connection with the issuance of USD 500 million of Loan Participation Notes due 2007 with an interest rate of 9.125% and of USD 700 million of Loan Participation Notes due 2009, with an interest rate of 10.5%. The Notes were issued by, but without recourse to, Salomon Brothers AG with the sole purpose of financing a loan to OAO Gazprom. The USD 700 million Loan Participation Notes have a put option due on 21 October 2005. The fair value of the put option is RR 766 as of 31 December 2002.

As of 31 December 2001 other long-term borrowings include RR 3,207 of coupon documentary bearer bonds issued by OAO Gazprom in 1999. The issue amounted to 3.0 million bonds, each with a nominal value of 1,000 roubles and a due date of 15 April 2003. During the years 2000 and 2001, the Group repurchased 577 thousand bonds. As of 31 December 2002 the bonds were resold to external parties and are included within short-term borrowings. The total liability recorded in respect of the bonds excludes the unamortized discount related to future periods.

#### 18 PROFIT TAX

Before 1 January 2001 the Group accrued profit tax at rates of 30.0% and 38.0% on profits from non-banking and banking activities, respectively, computed in accordance with the Russian tax legislation. Following the enactment of new tax rates on 1 January 2001, the Group accrued current profit tax at the rate of 35% and 43% on profits from non-banking and banking activities, correspondingly, for the year ended 31 December 2001.

In August 2001 the Profit tax chapter of the Tax Code was enacted, which changed the profit tax rate to 24% on profits for non-banking and banking activities. This rate became effective starting from 1 January 2002.

**ОАО GAZPROM**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**18 PROFIT TAX—(continued)**

Profit before profit tax for financial reporting purposes is reconciled to profit tax expense as follows:

	Year ended 31 December		
	2002	2001	2000
Profit before profit tax and minority interest.....	165,754	231,729	210,901
Theoretical tax charge at a statutory rate (24%, 35% and 30% for the years ended 31 December 2002, 2001 and 2000, respectively) .....	(39,781)	(81,105)	(63,270)
Tax effect of items which are not deductible or assessable for taxation purposes:			
Inflationary effects .....	(63,278)	(101,338)	(52,608)
Non-deductible expenses.....	(40,665)	(40,535)	(23,041)
Statutory tax concessions.....	—	13,721	27,013
Other non-temporary differences.....	7,592	8,167	(40,959)
Effect of increase in taxable base due to statutory revaluation .....	—	—	316,299
Effect of change in tax rate .....	—	(12,101)	19,159
Profit tax (expense) benefit.....	<u>(136,132)</u>	<u>(213,191)</u>	<u>182,593</u>

Inflationary effects principally include the impact of inflation on shareholders' equity, deferred tax assets and liabilities at the beginning of the reporting period and current tax expense.

Profit tax expense in the consolidated statement of income is stated net of RR 35, RR 950 and RR 1,121 of tax attributable to gains arising on treasury share transactions for the year ended 31 December 2002, 2001 and 2000 respectively (see Note 4).

Differences between the recognition criteria in Russian statutory taxation regulations and IFRS give rise to certain temporary differences between the carrying value of certain assets and liabilities for financial reporting purposes and for profit tax purposes. The tax effect of the movement on these temporary differences is recorded at the rate of 24%, 35% and 30% for the years ended 31 December 2002, 2001 and 2000, respectively.

	31 December 2002	Differences recognition and reversals	Effect of changes in tax legislation	Effect of deconsoli- dation of NRB	31 December 2001	Differences recogni- tion and reversals	Effect of changes in tax legislation	31 December 2000
<b>Tax effects of taxable temporary differences:</b>								
Property, plant and equipment.....	(67,005)	(74,436)	(30,171)	—	37,602	(118,098)	(15,388)	171,088
Accounts receivable .....	—	—	19,727	—	(19,727)	7,166	9,041	(35,934)
Investments .....	(4,407)	(6,741)	—	3,276	(942)	(291)	431	(1,082)
Inventories .....	(1,855)	(803)	—	—	(1,052)	5,087	(1,363)	(4,776)
Impairment provision for accounts receivable .....	—	—	—	—	—	—	(4,824)	4,824
	<u>(73,267)</u>	<u>(81,980)</u>	<u>(10,444)</u>	<u>3,276</u>	<u>15,881</u>	<u>(106,136)</u>	<u>(12,103)</u>	<u>134,120</u>
Tax losses carryforward ...	10,248	10,248	—	—	—	—	—	—
<b>Total net deferred tax (liabilities) assets .....</b>	<u><b>(63,019)</b></u>	<u><b>(71,732)</b></u>	<u><b>(10,444)</b></u>	<u><b>3,276</b></u>	<u><b>15,881</b></u>	<u><b>(106,136)</b></u>	<u><b>(12,103)</b></u>	<u><b>134,120</b></u>

Deferred tax assets and liabilities arise mainly from differences in the taxable and financial reporting bases of property, plant and equipment and accounts receivable. These differences for property, plant and equipment are historically due to the fact that a significant proportion of the tax base is based upon independent appraisals, the most recent of which was recognised as of 1 January 2001, while the financial reporting base is historical cost restated for changes in the general purchasing power of the RR.

## OA0 GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 18 PROFIT TAX—(continued)

Following the enactment of Chapter 25 "Profit tax" of the Russian Federation Tax Code on 1 January 2002, the profit tax regulations allowed for different tax depreciation lives for different groups of property, plant and equipment. In accordance with the tax regulations, the Group recognised shorter tax depreciation lives effective 1 January 2002, resulting in increased tax depreciation and a RR 30,171 increase in the deferred tax liability attributable to property, plant and equipment as of 31 December 2002.

The revised tax depreciation lives also gave rise to current period tax losses in the statutory books of OAO Gazprom. Statutory entities can carry forward tax losses generated in an individual period for ten years, subject to a maximum utilization of 30% of the total amount of taxable profit each year. This resulted in a recognition of a deferred tax asset of RR 10,248 as of 31 December 2002, as management believes it is probable that these losses will be realized through offset against future taxable profit.

The deferred tax liability attributable to accounts receivable balances reversed in the year ended 31 December 2002 principally as a result of the change in the underlying tax legislation, effective 1 January 2002, to recognize sales revenue for profit tax purposes on an accrual rather than a cash basis.

The difference between the amount of temporary differences recognition and reversals for the year ended 31 December 2002 and respective deferred profit tax expense recognised in the consolidated statement of income for the year ended 31 December 2002 arises from transactions with treasury shares and is recognised in the consolidated statement of changes in shareholders' equity.

In the context of the Group's current structure, tax losses and current tax assets of the different companies may not be set off against current tax liabilities and taxable profits of other companies and, accordingly, taxes may accrue even where there is a net consolidated tax loss. Therefore, a deferred tax asset of one company of the Group is not offset against a deferred tax liability of another company. As at 31 December 2002 deferred tax assets in the amount of RR 9,835 have not been recorded for the deductible temporary differences for which it is not probable that sufficient taxable profit will be available to allow the benefit of that deferred tax asset to be utilised.

The temporary differences associated with undistributed earnings of subsidiaries amount to RR 105,453, RR 54,674 and RR 50,168 as of 31 December 2002, 2001 and 2000, respectively. A deferred tax liability on these temporary differences was not recognized because management controls the timing of the reversal of the temporary differences and believes that they will not reverse in the foreseeable future.

#### 19 FINANCIAL INSTRUMENTS

##### Available-for-sale investments: amounts reported in the statement of income

The Group adopted IAS 39 at 1 January 2001. The impact on shareholders' equity at 1 January 2001 was a net gain of RR 627 in retained earnings for the re-measurement of available-for-sale securities, stated at fair value as of 1 January 2001.

	31 December	
	2002	2001
Unrealized fair value losses, net . . . . .	(4,828)	(1,211)
Realized gains on sale, net. . . . .	1,099	218
Losses on available-for-sale investments, net . . . . .	(3,729)	(993)

##### Derivative financial instruments

As of 31 December 2002 the Group's banking subsidiaries had outstanding contracts to purchase and sell precious metals and foreign currencies at the market price at the date of maturity. The Group expects to settle these contracts in the normal course of business. These instruments are generally traded in an over-the-counter market with professional market counterparties on standardized contractual terms and conditions.

**ОАО ГАЗПРОМ**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**19 FINANCIAL INSTRUMENTS—(continued)**

The following table provides an analysis of the Group's position and fair value of derivatives outstanding as of the end of the reporting period.

	31 December			
	2002		2001	
	Notional principal	Fair value	Notional principal	Fair value
Deliverable securities forward contracts .....	951	1,013	708	708
Deliverable forward currency contracts .....	651	655	4,062	4,071
Deliverable forward precious metal contracts .....	—	—	2,359	2,429
Written foreign currency option contracts .....	—	—	11,667	11,667
Total .....	<u>1,602</u>	<u>1,668</u>	<u>18,796</u>	<u>18,875</u>

As of 31 December 2001 the Group had outstanding forward foreign exchange contracts with Russian and foreign banks whereby it had agreed to buy or sell Russian Roubles in exchange for another currency at an exchange rate agreed to at the date of the contract. Some of these contracts were entered into prior to 17 August 1998 and matured during 1998, but had not yet been settled. The Group has been able to settle outstanding contracts with some counterparties and any resultant gains or losses have been recorded in the consolidated statement of income.

The Civil Code of the Russian Federation stipulates a three-year period for commencing action to enforce contracts. This period expired during 2001. On the basis of legal advice regarding the enforceability of these contracts under Russian law, market practices and the activities of other participants in the derivatives market in Russia, as well as a significant passage of time, management believes these contracts with domestic banks were no longer legally enforceable, and no losses will arise for the Group as a result of these contracts. Management has therefore not recorded any liabilities in respect of these contracts with domestic banks in the consolidated financial statements. Liabilities recorded under these contracts before 2001, amounting to RR 9,340, were released and recorded as derivative gains within operating expenses for the year ended 31 December 2001. The remaining written foreign currency option contracts with the principal amount of RR 11,667 at 31 December 2001 were due mostly by the Group banking subsidiary OAO AKB National Reserve Bank to foreign customers. In July 2002 the Group sold a 37% interest in the bank (see Note 28) and, accordingly, as of 31 December 2002 did not include the results of bank's operations into the Group's consolidated financial statements.

**20 PROVISIONS FOR LIABILITIES AND CHARGES**

	Note	31 December		
		2002	2001	2000
Provision for pension obligations .....		19,386	13,921	10,715
Provision for environmental liabilities .....	31	2,368	1,377	6,114
Provision for guarantees .....		—	—	11,918
Other .....		<u>235</u>	<u>4,749</u>	<u>17,282</u>
		21,989	20,047	46,029
Less: current portion of provisions for liabilities and charges .....		—	—	<u>(11,918)</u>
		<u>21,989</u>	<u>20,047</u>	<u>34,111</u>

During the year ended 31 December 2002, RR 4,129 of provisions for liabilities and charges of OAO AKB National Reserve Bank were deconsolidated (see Note 28).

Total expenses associated with pension obligations are included within operating expenses in the consolidated statement of income and amount to RR 5,813, RR 3,525 and RR 1,662 for years ended 31 December 2002, 2001 and 2000, respectively.

**ОАО ГАЗПРОМ**

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

**20 PROVISIONS FOR LIABILITIES AND CHARGES—(continued)**

The amounts recognized in the balance sheet are as follows:

	<u>31 December</u>	
	<u>2002</u>	<u>2001</u>
Present value of obligations (unfunded) .....	49,034	24,899
Unrecognised actuarial losses .....	(28,095)	(10,978)
Unrecognised past service cost .....	(1,553)	—
Net liability .....	<u>19,386</u>	<u>13,921</u>

The amounts recognized in the statement of income are as follows:

	<u>Year ended 31 December</u>	
	<u>2002</u>	<u>2001</u>
Current service cost .....	1,261	1,613
Interest cost .....	3,392	1,912
Net actuarial losses .....	434	—
Vested prior service cost .....	726	—
Net expense recognised in the statement of income .....	<u>5,813</u>	<u>3,525</u>

Movements in the net liability recognised in the balance sheet are as follows:

	<u>Year ended 31 December</u>	
	<u>2002</u>	<u>2001</u>
Net liability at the beginning of the reporting period .....	13,921	10,714
Net expense recognised in the income statement .....	5,813	3,525
Benefits paid .....	(348)	(318)
Net liability at the end of the reporting period .....	<u>19,386</u>	<u>13,921</u>

Principal actuarial assumptions used (expressed as weighted average):

	<u>Year ended 31 December</u>	
	<u>2002</u>	<u>2001</u>
Discount rate (real) .....	5%	8%
Future salary increases (real) .....	2%	2%
Employees average remaining working life (years) .....	19	17

**21 SHAREHOLDERS' EQUITY**

**Share capital**

Share capital authorised, issued and paid in totals RR 325,194 as of 31 December 2002, 2001 and 2000, and consists of 23.7 billion ordinary shares, each with a historical par value of RR 5.

**Dividends**

In 2002, the Group accrued and paid total dividends in the nominal amount of RR 0.44 per share in respect of 2001. In 2001, the Group accrued and paid final dividends for the year ended 31 December 2000 in the nominal amount of RR 0.23 per share. In 2000, the Group accrued and paid total dividends in the

## **OAO GAZPROM**

#### **21 SHAREHOLDERS' EQUITY—(continued)**

nominal amount of RR 0.19 per share (including interim dividends in the amount of RR 0.08 per share as well as final dividends in respect of 1999, in the amount of RR 0.11 per share).

In 2003 the Board of Directors recommended payment of a final dividend for the year ended 31 December 2002 in the amount of RR 0.40 per share. Because this decision of the Group management was reached after the balance sheet date and is subject to approval of the General shareholders meeting, the final dividend proposed in respect of 2002 has not been recognised in the consolidated balance sheet. If approved, the final dividend of RR 9,469 (including income tax on dividends in the amount of RR 667) will be paid prior to 31 December 2003.

#### **Treasury shares**

As of 31 December 2002, 2001 and 2000, subsidiaries of OAO Gazprom held 3,841, 2,672 and 2,684 million of the ordinary shares of OAO Gazprom. The Group controls the voting rights of these shares.

In September 2002 the Group entered into an agreement with OAO Stroytransgaz to establish a joint activity which was formally established in October 2002. The Group contributed promissory notes of OAO Gazprom with a fair value of RR 4,759 (face value RR 5,719) payable in January 2004 and OAO Stroytransgaz contributed 1,144 million of ordinary shares of OAO Gazprom. Voting rights for the ordinary shares of OAO Gazprom, held by the joint activity are controlled by the Group (see Note 33). Accordingly, as of 31 December 2002, the Group's contribution into the joint activity with OAO Stroytransgaz was classified as investment in treasury shares, and classified as a deduction from shareholders' equity.

#### **Retained earnings and other reserves**

Included in retained earnings and other reserves are the effects of the cumulative restatement to the equivalent purchasing power of the Rouble as of 31 December 2002. Also, retained earnings and other reserves include translation differences of RR 2,052, RR (1,532) and RR 857 arising on the translating of the net assets of foreign subsidiaries and associated undertakings for the years ended 31 December 2002, 2001 and 2000, respectively.

Other reserves include a statutory fund for social assets, created at the time of privatisation in accordance with Russian legislation. From time to time, the Group negotiates to return certain of these assets to governmental authorities, and this process may continue. Social assets with a net book value of RR 2,133, RR 5,360 and RR 7,414 have been transferred to governmental authorities during the years ended 31 December 2002, 2001 and 2000, respectively. These transactions have been recorded as a reduction of retained earnings and other reserves.

The statutory accounting reports of the parent company, OAO Gazprom, are the basis for profit distribution and other appropriations. The basis of distribution is defined by legislation as the current year net profit, as calculated in accordance with RAR. The statutory profit for the parent company was RR 53,513, RR 85,292 and RR 64,168 for 2002, 2001 and 2000, respectively. However, the legislation and other statutory laws and regulations dealing with profit distribution are open to legal interpretation and accordingly management believes at present it would not be appropriate to disclose an amount for the distributable reserves in these consolidated financial statements.

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**22 SALES**

	<u>Year ended 31 December</u>		
	<u>2002</u>	<u>2001</u>	<u>2000</u>
Gas sales (including excise tax and net of VAT and custom duties) to customers in:			
Russian Federation.....	159,642	133,187	117,975
Former Soviet Union (excluding Russian Federation).....	61,506	56,221	80,014
Europe .....	<u>433,085</u>	<u>520,647</u>	<u>544,879</u>
Gross sales of gas .....	654,233	710,055	742,868
Excise tax .....	<u>(125,195)</u>	<u>(123,213)</u>	<u>(121,909)</u>
Net sales of gas .....	529,038	586,842	620,959
Sales of gas condensate and oil and gas products (net of sales taxes) ....	56,647	74,640	40,497
Gas transportation sales .....	18,028	18,226	36,560
Other revenues .....	<u>40,974</u>	<u>33,259</u>	<u>40,526</u>
	<u>644,687</u>	<u>712,967</u>	<u>738,542</u>

Gas sales (net of VAT and excise tax) to customers in Russia include sales made to the regional trade houses of 222 billion cubic meters (bcm) and 141 bcm, or RR 94,117 and RR 56,568 for 2001 and 2000, respectively. For 2001 sales were made to the regional trade houses at prices approximately 4% below regulated prices set for sales to final customers in Russia.

In 2002, the Group took control of certain regional trade houses. Following their consolidation, beginning in 2002 the Group incurred excise tax on domestic sales in the amount of RR 14,469 for the year ended 31 December 2002 (see Note 28).

A significant part of the natural gas sold by the Group in Europe is transported through the territory of Ukraine. The existing contract with the major customer in Ukraine, the Group's largest FSU customer, stipulates that transit services provided to the Group in Ukraine are settled by gas sales. For the years ended 31 December 2002, 2001 and 2000 net gas sales to Ukraine in settlement of transit services were RR 33,442 (26.2 bcm), RR 27,440 (21.9 bcm) and RR 30,338 (22.6 bcm), respectively.

Gas transportation sales (net of VAT) are primarily comprised of sales to companies of the Itera Group totalling RR 13,920 (61 bcm), RR 15,936 (64 bcm) and RR 29,750 (71 bcm) for the years ended 31 December 2002, 2001 and 2000, respectively. Trade receivables in respect of gas transportation services supplied to the Itera Group amounted to RR 4,029, RR 11,994 and RR 14,798 as of 31 December 2002, 2001 and 2000, respectively. The Itera Group is a producer and distributor of gas in the Russian Federation and other former Soviet Union countries.

**23 OPERATING EXPENSES**

	<b>Year ended 31 December</b>		
	<b>2002</b>	<b>2001</b>	<b>2000</b>
Transit costs.....	102,632	95,105	106,781
Depreciation .....	93,454	99,868	96,191
Staff costs.....	65,717	59,456	59,441
Materials.....	47,310	59,602	44,863
Taxes other than on income .....	43,975	46,289	56,176
Repairs and maintenance .....	24,218	21,552	17,550
Cost of goods for resale, including refined products .....	17,900	21,085	1,777
Impairment provision for accounts receivable.....	17,411	35,070	36,119
Electricity.....	13,449	11,430	11,072
Processing services .....	13,226	12,595	—
Purchased gas .....	9,957	7,466	12,137
Social expenses .....	7,013	6,088	3,481
Losses on disposal of property, plant and equipment .....	6,405	5,849	14,229
Insurance .....	5,825	4,147	1,334
Pension expense .....	5,813	3,525	2,582
Research and development.....	4,464	4,360	5,834
Impairment provision for investments and other long-term assets .....	—	2,550	30,578
Release of provision on forward foreign exchange contracts .....	—	(9,340)	(3,874)
(Release of) provision for impairment of assets under construction.....	(6,884)	6,503	34,188
Other.....	24,828	13,643	25,887
	<u>496,713</u>	<u>506,843</u>	<u>556,346</u>

During the year ended 31 December 2000, the Group purchased 9.0 bcm of Turkmenian gas from Itera LLC for RR 16,781. No gas was purchased from Itera LLC in 2002 and 2001. Additionally, in 2001 various Group subsidiaries purchased 1.4 bcm of gas from Itera Group companies for RR 740.

Due to changes in the tax legislation of the Russian Federation, effective 1 January 2001, accounts receivable written off are subject to VAT. For the year ended 31 December 2001, this resulted in a charge of RR 11,861 related to VAT on accounts receivable balances written off during the period. The charge is included within the impairment provision for accounts receivable.

Taxes other than on income consist of:

	<b>Year ended 31 December</b>		
	<b>2002</b>	<b>2001</b>	<b>2000</b>
Mineral severance tax .....	20,485	—	—
Road users tax.....	10,369	9,924	28,951
Property tax.....	9,371	9,563	5,944
Royalty tax.....	—	12,633	10,329
Mineral restoration tax .....	—	9,090	5,189
Other taxes .....	<u>3,750</u>	<u>5,079</u>	<u>5,763</u>
	<u>43,975</u>	<u>46,289</u>	<u>56,176</u>

Taxes other than on income included in operating expenses are computed as follows:

- Effective 1 January 2002, the royalty and mineral restoration taxes were abolished and replaced by a mineral severance tax. The rate of mineral severance tax is 16.5% of the value of gas produced from gas condensate fields and RR 340 per ton of oil and gas condensate produced from

**ОАО ГАЗПРОМ**

**NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)**

**(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)**

**23 OPERATING EXPENSES—(continued)**

oil and gas condensate fields. The latter rate is subject to adjustments depending on fluctuations of oil price and the RR exchange rate;

- Road users tax is charged on sales of Group entities; changes in legislation effective 1 January 2001 reduced the road users tax from 2.5% to 1.0% and abolished the housing fund tax. An additional RR 2,261 of road users' tax was accrued in 2002 in respect of unpaid accounts receivable as of 31 December 2002 as the tax is abolished from 1 January 2003;
- Property tax is imposed at a maximum rate of 2.0% on the average annual net book value of fixed assets, intangible assets, inventory and (effective from 1 January 2001) on assets under construction which were not completed within contracted terms. Legislation provides for the exclusion of trunk pipelines from the taxable base;
- In 2001 royalty tax was imposed at rates ranging from 6.0% to 16.0% of the sales value of gas and other hydrocarbons produced. The actual rates of the tax were dictated in field licenses and were based on various factors;
- In 2001 mineral restoration tax was charged at the rate of 10.0% of the sales value of gas and other hydrocarbons sold by the production subsidiaries paid. Under legislation, in 2001 up to 100% of mineral restoration tax assessments could have been offset by a sum equal to the value of certain exploration works performed and paid for by the Group. In 2001 and 2000 the Group recovered 32.4% and 39.9% of mineral restoration tax assessments using this provision.

All taxes and rates discussed above are calculated based on amounts recorded in accordance with Russian statutory accounting regulations.

**24 GAINS ON AND EXTINGUISHMENT OF RESTRUCTURED LIABILITIES**

	<i>Note</i>	<u>31 December</u>		
		<u>2002</u>	<u>2001</u>	<u>2000</u>
Gain on extinguished restructured tax liabilities.....		9,435	—	—
Gain on restructured other liabilities.....		3,124	1,596	—
Gain on restructured tax liabilities.....	15	1,349	21,526	23,037
		13,908	23,122	23,037

During 2002 an amicable agreement was signed by ОАО АК Сибур with its creditors to restructure its liabilities (see Note 28). The present value of RR and foreign currency denominated liabilities, discounted at 17.1% and 8.7%, respectively, is RR 10,373. The resulting decrease is accounted for as an extinguishment of liability and the gain of RR 3,124 has been recognised in the consolidated statement of income. The increase of the carrying amount of the liability in subsequent years, as a result of the accretion of the discount, will be recognised in the statement of income as an interest expense.

#### **OAO AKB National Reserve Bank**

In connection with changes in RF Federal law No.208-FZ of 26 December 1995 "On Joint Stock Companies", effective from 1 January 2002, the Group was not able to exercise its conversion rights on preference shares in OAO AKB National Reserve Bank. At the same time, the Group lost majority representation on the Board of Directors and no longer exercised control over the activities of the bank. Accordingly, effective 1 January 2002 the Group's investment in the bank was classified as an investment in an associated undertaking. In July 2002, in accordance with the decision of the Board of Directors, the Group disposed of 37.0% of ordinary shares and all of its preference shares in OAO AKB National Reserve Bank with total carrying value of RR 1,979, in exchange for consideration consisting of promissory notes issued by OAO AKB National Reserve Bank with a fair value of RR 364 payable in June 2003, and 50 million of ordinary shares of OAO Gazprom. As of the date of the transaction ordinary shares of OAO Gazprom were traded at RR 30.6 per share (in nominal roubles). No gain or loss resulted from the disposal of the Group's interest in OAO AKB National Reserve Bank. Following the transaction, the Group retains a 3.0% interest in OAO AKB National Reserve Bank, which is recorded within other long-term investments.

#### **Rosshelf**

The Rosshelf joint activity was established to develop the Prirazlomnoye and Shtokmanovskoye fields in the Barents Sea. OAO Gazprom and its subsidiary ZAO Rosshelf had 99.1% and 0.9% interest in the project, respectively. In October 2002 OAO Gazprom and its subsidiary ZAO Rosshelf signed an amendment to the Rosshelf joint activity agreement that provided for an additional participant – ZAO Sevmorneftegaz. ZAO Sevmorneftegaz is a company jointly controlled by ZAO Rosshelf and OAO Rosneft-Purneftegaz. Under the agreement ZAO Sevmorneftegaz will make a non-cash contribution valued at RR 4,334 in exchange for a 48.9% interest in the Rosshelf joint activity (see Note 33).

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 28 SUBSIDIARY UNDERTAKINGS (continued)

##### OAD Vostokgazprom

In April 2002 the Group acquired an additional 32.8% of the voting shares of its production subsidiary OAD Vostokgazprom, increasing its interest from 51.0% to 83.8%. The consideration of RR 2 settled in cash approximates the fair value of purchased assets.

##### OAD Zapsibgazprom

In April 2002 the Federal Securities Commission cancelled the registration of additional stock issued by OAD Zapsibgazprom, a subsidiary of the Group. As a result, the Group increased its interest in the charter capital of OAD Zapsibgazprom from 34.0% to 51.1%.

In December 2002 the Group disposed of its 12% interest in OAD Arcticgas with a carrying value of RR 1 in exchange for 25.6% interest in OAD Zapsibgazprom and additional cash consideration of USD 2.95 million, increasing its interest in the ordinary share capital of OAD Zapsibgazprom from 51.1% to 76.7%. No significant gain or loss resulted from this transaction.

##### Media companies

Effective 1 January 2002 the Group's interests in media companies were reclassified from short-term available-for-sale investments to subsidiary undertakings as management announced its intention to operate these companies as subsidiaries rather than dispose of them. The media companies do not materially impact the financial position of the Group.

In July 2002 the Group acquired additional interests in ZAO Media-Most, in OAD TV Company NTV and in other media subsidiaries. Additionally, the Group acquired payables and promissory notes to third parties due by these companies. The consideration was partially settled in cash and partially through the forgiveness of debt owed to OAD Gazprom. As a result of this transaction the Group increased its interest in OAD TV Company NTV from 65.0% to 95.6% and in ZAO Media-Most from 14.3% to 38.6%. The Group has also increased its controlling interests in the other media subsidiaries. The transaction also provided for the Group to receive a further 39.6% interest in ZAO Media-Most but as of 31 December 2002 this interest was under arrest and the Group did not control the voting rights for these shares. As of 31 December 2002 ZAO Media Most was under liquidation and accordingly, the Group classified its 38.6% interest as other long-term investments.

In October 2002 the Group signed a framework agreement to sell non-controlling interests in several media companies, including OAD TV Company NTV, to Eurofinance Group (as nominee), the consideration for which is to be partially settled in cash and partially through the settlement of certain debt obligations of ZAO Media-Most and its media companies. The disposed interests primarily comprised those acquired in July 2002. As a result, the Group's interest in OAD TV Company NTV reduced to 65.3%. Under the framework agreement, Eurofinance Group shall contribute cash and these acquired interests into a new media holding company, which will be controlled and majority-owned by OAD Gazprom. The Group's contribution into the new holding company will comprise the remaining interests in its media subsidiaries. The transactions are expected to close in the third quarter of 2003. Management does not believe that the financial effect of these transactions will be material to the Group. As of 31 December 2002 the Group continues to hold a controlling interest in the above media companies.

##### ZAO Purgaz

In April 2002 the Group completed the repurchase of 32.0% of the shares in ZAO Purgaz from Itera pursuant to the repurchase option provided by a share purchase agreement dated 10 February 1999. As a result, the Group's interest in ZAO Purgaz increased from 19.0% to 51.0%. ZAO Purgaz has a licence for the development of the Gubkinskoye gas field in western Siberia. In connection with the acquisition of these ZAO Purgaz shares, the Group paid Itera RR 33 thousand in cash and financed ZAO Purgaz repaying RR 6,594 of original financing provided by Itera to ZAO Purgaz to finance development work. The consideration approximated the fair value of the incremental interest in the net assets acquired.

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

#### 28 SUBSIDIARY UNDERTAKINGS (continued)

##### OAO AK Sibur

In January 2001 the Group acquired 51% of the voting shares of OAO AK Sibur. OAO AK Sibur is a leading seller of petrochemical products in Russia, it is also involved in light hydrocarbons processing. The consideration of RR 3,015 was settled by a combination of cash, promissory notes of Group companies and other securities.

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Cash paid.....	863
Promissory notes of Group companies.....	1,365
Shares in other investments.....	787
Total purchase consideration.....	3,015
Fair value of identifiable net assets acquired.....	<u>(1,130)</u>
Goodwill.....	<u>1,885</u>

Other than for short-term investments, the fair value of the net assets approximated the book value of the net assets acquired.

The net cash flow arising from the acquisition is as follows:

Total purchase consideration.....	<u>3,015</u>
Less:	
Cash and cash equivalents acquired.....	(1,200)
Promissory notes of the Group companies.....	(1,365)
Shares in other investments.....	<u>(787)</u>
Net cash received on acquisition.....	<u>(337)</u>

OAO AK Sibur is one of the founders of OAO Gazsibcontract with a 45% interest in the charter capital. As a result of acquiring OAO AK Sibur the Group's effective share in the charter capital of OAO Gazsibcontract increased from 51% to 74%.

In December 2001 the Group subsidiary OAO AK Sibur purchased interests in the following companies:

<u>Companies (subsidiaries and associated undertakings)</u>	<u>Purchased interest as of 31 December 2001 (%)</u>
OAO Kemerovsky Azot.....	75
OAO Kautchuk.....	100
OAO Uralorgsintez.....	51
OAO Volzhsky AKZ.....	51
OAO Sibur-Tyumen.....	42
OAO Stirol.....	42

Interests in the above companies, all of which are involved in the petrochemical industry in the Russian Federation, were purchased from OOO IT. Total fair value of consideration paid to OOO IT was RR 7,472, of which RR 4,250 was attributable to acquired subsidiaries. The Group management is currently unable to assess whether the transaction with OOO IT is a related party transaction or if OOO IT is a related company to former management of OAO AK Sibur.

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 28 SUBSIDIARY UNDERTAKINGS (continued)

Details of net assets acquired and goodwill are as follows:

Purchase consideration:

Promissory notes of OAO AK Sibur's related parties and contractors at fair value .....	4,250
Total purchase consideration .....	4,250
Less fair value of identifiable net assets acquired .....	(1,442)
Goodwill at acquisition .....	2,808
Less goodwill impaired .....	(2,808)
Unamortised goodwill as of 31 December 2001 .....	—

In the first quarter of 2002 external supervision was introduced in respect of OAO AK Sibur under decision of the arbitration court. The arbitration court has cancelled the decision on placement of additional stock issue as a result of which OAO Gazprom could have lost control over OAO AK Sibur. As a result, OAO Gazprom maintains control over OAO AK Sibur.

On 10 September 2002 the creditors' meeting approved an amicable settlement agreement, which was subsequently approved by the court. The agreement provides for the restructuring and rescheduling of OAO AK Sibur's debts generally over a period of 8 years with first payments due in 2004.

#### Regional trade houses

Commencing in 1999 the Group has been participating in the creation of regional trade houses involved in the distribution of gas in Russia. In 2002 the interest of the Group in the majority of such companies increased from 20% to 51% of their share capital and these companies were consolidated.

#### Lebedinsky GOK

In January 2001 the Group exchanged a 57% interest in Lebedinsky GOK and a 17% interest in Oskolsky EMK for a 48% interest in ZAO Gazmetall. ZAO Gazmetall is a metallurgical holding company with controlling interests in Lebedinsky GOK and Oskolsky EMK. As the Group intends to sell its shares of ZAO Gazmetall, the investment has been classified as an available-for-sale investment. During the third quarter of 2001 management revalued the investment in ZAO Gazmetall to its estimated current market value of RR 2,302 recognising the net effect of revaluation in gains and losses on available-for-sale securities in the consolidated statement of operations. In March 2002 the Group made an agreement to sell its 48% interest in ZAO Gazmetall for USD 70 million. In accordance with the agreement the buyer of the above shares is OAO Oskolsky Metallurgical Plant, a subsidiary of ZAO Gazmetall.

#### Sovfintrade

In August 2001 the Group participated in the fourth stock issue of ZAO AKB Sovfintrade and as a result, the Group's interest in the bank's share capital increased from 65% to 94%, including 26% held by AB Gazprombank (ZAO).

#### Gazavtomatika

In 2001 the Group's interest in OAO Gazavtomatika decreased from 51% to 49% as the Group did not participate in an additional share issue by OAO Gazavtomatika. However, due to the fact that the Group continued to exercise control over activities of the above company, it was still considered as subsidiary.

#### 30 RELATED PARTIES

For the purpose of these financial statements, parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial or operational decisions as defined by IAS 24 "Related Party Disclosures". In considering each possible related party relationship attention is directed to the substance of the relationship, not merely the legal form.

Related parties may enter into transactions which unrelated parties might not, and transactions between related parties may not be effected on the same terms, conditions and amounts as transactions between unrelated parties.

The nature of the related party relationships for those related parties with whom the Group entered into significant transactions or had significant balances outstanding as of 31 December 2002, 2001 and 2000 are detailed below.

##### Government

The Government of the Russian Federation is the principal shareholder of the Group, directly owns approximately 38.37% of the issued shares of the Group. Government representatives also have the majority of seats on the Board of Directors. As of 31 December 2002 the subsidiaries of the Group held 16.2% of OAO Gazprom shares, through which they are entitled to vote as owners. Governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

As a condition of privatisation in 1992, the Government imposed an obligation on the Group to provide an uninterrupted supply of gas to customers in the Russian Federation at government controlled prices.

##### Directors' remuneration

OAO Gazprom paid to members of the Board of Directors and Management Committee salary and bonuses of approximately RR 143, RR 84 and RR 77 for the years ended 31 December 2002, 2001 and 2000, respectively. The salary and bonuses of members of the Board of Directors is subject to approval by the General Meeting of Shareholders. Salary and bonus compensation paid to members of the Management Committee is determined by the terms of annual employment contracts.

##### Associated undertakings

Included within associated undertakings (see Note 11) is the loan receivable from EuRoPol GAZ S.A., in the amount of RR 27,344, RR 31,117 and RR 32,067 as of 31 December 2002, 2001 and 2000, respectively, issued by AB Gazprombank (ZAO), a subsidiary of the Group, at an interest rate of LIBOR + 2.6 %. Also included within associated undertakings as a component of the carrying amount are USD denominated receivables from EuRoPol GAZ S.A. of RR 8,555, RR 12,495 and RR 16,584 as of 31 December 2002, 2001 and 2000, respectively.

Associated undertakings include a loan receivable from WINGAS GmbH, in the amount of RR 14,331, RR 13,732 and RR 17,728 as of 31 December 2002, 2001 and 2000, respectively. The interest

#### 30 RELATED PARTIES—(continued)

rates vary for different loan tranches. As of 31 December 2002 the aggregate effective interest rate for the loan receivable from WINGAS GmbH was 5.56%.

Included within accounts receivable are accounts receivable from Group associates (excluding EuRoPol GAZ S.A.) in the amount of RR 15,767, RR 17,571 and RR 15,127 as of 31 December 2002, 2001 and 2000, respectively.

During periods ended 31 December 2002, 2001 and 2000 the Group sold gas to its associated undertakings in the amount of RR 74,068, RR 84,821 and RR 74,450, respectively.

Gas is sold to associated undertakings, except for that sold to AO Moldovagaz, on the basis of long-term contracts, at index prices based on world oil and gas prices. Gas prices per thousand cubic meters for such sales ranged from USD 67 to USD 131, from USD 75 to USD 144 and from USD 64 to USD 133 in the year ended 31 December 2002, 2001 and 2000, respectively. Gas is sold to AO Moldovagaz based on annual contracts with fixed prices. Prices of gas per thousand cubic meters sold to Moldova amounted to USD 80 in the year ended 31 December 2002, 2001 and 2000, respectively.

The Group's impairment provision on accounts receivable included RR 14,914, RR 14,378 and RR 16,232 in respect of amounts due from AO Moldovagaz as of 31 December 2002, 2001 and 2000, respectively.

In 2002 the Group purchased gas from ZAO KazRosGaz for RR 140 at USD 28 per tcm. In 2001 and 2000 no gas was purchased from ZAO KazRosGaz.

In addition, the Group purchased gas transportation services from certain of the associated undertakings, principally EuRoPol GAZ S.A., which amounted to RR 13,795, RR 10,098 and RR 11,703 for the year ended 31 December 2002, 2001 and 2000, respectively. The cost of these services was determined based on prices of gas sold to these companies.

As of 31 December 2001, the Group had accounts payable for the contribution to charter capital due to ZAO ArmrosGazprom of USD 126 million (RR 3,798). The Group settled the accounts payable in October 2002.

#### ОАО АК Сибур

A substantial portion of ОАО АК Сибур's transactions were executed with related parties. ОАО АК Сибур's related party transactions are mainly with its associated undertakings listed below:

ОАО Омскшина	ОАО Voltair-Prom
ОАО Сибур-Нефтеkhим	ОАО Voltair
ОАО Сибур-Тюмен	ОАО Томский НКХЗ
ОАО Тобольский НКХК	ОАО Воронежский синтез каучук
ООО Тogliatti-Каучук	ОАО Ярославский Шинный завод

Operating expenses .....	(31,191)	(66,695)
Net loss .....	<u>(3,732)</u>	<u>(23,703)</u>

#### OAO Stroytransgaz

OAO Stroytransgaz is a major Russian constructor of pipelines, compressor stations and oil refineries. In the normal course of business, the Group enters into transactions with OAO Stroytransgaz for the construction of pipelines in the Russian Federation on the basis of the results of tenders. During years ended 31 December 2002, 2001 and 2000 transactions with OAO Stroytransgaz were entered into under contracts which had been executed by certain prior representatives of the Group's Board of Directors and members of their families who at that time owned significant shareholdings in OAO Stroytransgaz.

OAO Stroytransgaz rendered construction services for the Group in the amounts of RR 32,278, RR 39,963 and RR 32,397 for the year ended 31 December 2002, 2001 and 2000, respectively. As of 31 December 2002, 31 December 2001 and 31 December 2000, the Group had advances and receivables due from OAO Stroytransgaz in the amounts of RR 6,276, RR 8,507 and RR 2,320, respectively. As of 31 December 2002, 31 December 2001 and 31 December 2000, the Group had accounts payable to OAO Stroytransgaz in respect of construction of RR 10,911, RR 18,610 and RR 12,463, respectively. As of 31 December 2001 and 31 December 2000 receivable due from OAO Stroytransgaz in connection with finance arrangements for construction for the Group undertaken by OAO Stroytransgaz in amount of RR 4,050 and RR 8,016, respectively, net of an impairment provision in the amount of nil, was included within other long-term assets.

#### AEB

In 2002, 2001 and 2000 the Group obtained short-term loans from AEB, an associated undertaking of AB Gazprombank (ZAO), for the total amount of RR 4,530 (9.0% interest), RR 3,385 (14.8% interest) and RR 3,366 (12.5%), respectively.

#### OOO Interprokom

During the years ended 31 December 2002, 2001 and 2000, respectively, transactions with OOO Interprokom were entered into under contracts which had been executed by certain prior members of the Board of Directors and a member of the Management Committee of the Company and members of their families who at that time or currently own significant interests in OOO Interprokom.

OOO Interprokom acts as an agent for the Group in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. OOO Interprokom acted as an agent in the

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 30 RELATED PARTIES—(continued)

Group's acquisition of RR 8,021, RR 11,611 and RR 6,311 of equipment year ended 31 December 2002, 2001 and 2000, respectively. As of 31 December 2002, 2001 and 2000, the Group had advances and receivables due from ООО Interprom in the amount of RR 877, RR 650 and RR 3,350, respectively. Commission paid to ООО Interprom amounted to RR 113, RR 107 and RR 83 for year ended 31 December 2002, 2001 and 2000, respectively. As of 31 December 2002, 2001 and 2000, the Group had accounts payable to ООО Interprom in respect of equipment supplies of RR 5,265, RR 8,708 and RR 6,965, respectively.

AB Gazprombank (ZAO), the Group's principal banking subsidiary, had outstanding import letters of credit issued on behalf of ООО Interprom and sub-contractors of ООО Interprom in the amount of RR 6,982, RR 9,751 and RR 11,086 as of 31 December 2002, 2001 and 2000 and, respectively. These import letters of credit are issued to third party suppliers in connection with the purchase of equipment by ООО Interprom on behalf of the Group.

#### 31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS

##### Operating environment

The operations and earnings of the Group continue, from time to time and in varying degrees, to be affected by political, legislative, fiscal and regulatory developments, including those related to environmental protection, in the Russian Federation. Due to the capital-intensive nature of the industry, the Group is also subject to physical risks of various kinds. The nature and frequency of these developments and events associated with these risks as well as their effect on future operations and earnings, are not predictable.

##### Legal proceedings

The Group is a party to certain legal proceedings arising in the ordinary course of business. Additionally, the Group is subject to various environmental laws regarding handling, storage, and disposal of certain products and is subject to regulation by various governmental authorities. In the opinion of management, there are no current legal proceedings or other claims outstanding which could have a material adverse effect on the result of operations or financial position of the Group.

##### Taxation

Russian tax legislation is subject to varying interpretations and frequent changes. Further, the interpretation of tax legislation by tax authorities as applied to the transactions and activity of the Group may not coincide with that of management. As a result, transactions may be challenged by tax authorities and the Group may be assessed additional taxes, penalties and interest, which can be significant. Under Russian legislation, penalties are levied at 20% of the tax amount underpaid and interest is charged at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (see Note 15). The Group's tax records remain open to review by the tax and customs authorities with respect to tax liabilities for three years.

##### Group changes

The Group is continuing to be subject to reform initiatives in the Russian Federation and in some of its export markets and the future direction and effects of any reforms are the subject of political considerations. Potential reforms in the structure of the Group, tariff setting policies, settlements of outstanding debts by governmental entities, and other government initiatives could each have a significant, but undeterminable, effect on enterprises operating in the Group.

##### Environmental matters

The enforcement of environmental regulation in the Russian federation is evolving and the enforcement posture of government authorities is continually being reconsidered. The Group periodically

## OAO GAZPROM

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble  
as of 31 December 2002, unless otherwise stated)

#### 31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS—(continued)

evaluates its obligations under environmental regulations. As obligations are determined, they are recognised immediately. Potential liabilities which might arise as a result of stricter enforcement of existing regulations, civil litigation or changes in legislation or regulation cannot be reasonably estimated, but could be material. In the current enforcement climate under existing legislation, the Group management believes that there are no significant liabilities for environmental damage, other than amounts that have been accrued in the consolidated financial statements.

#### Social commitments

The Group significantly contributes to the maintenance and upkeep of the local infrastructure and the welfare of its employees in the areas of its production operations, including contributions toward the construction, development and maintenance of housing, hospitals, transport services, recreation and other social needs.

#### Financial guarantees

	31 December		
	2002	2001	2000
Outstanding guarantees issued on behalf of :			
BSPC .....	37,258	21,890	—
Interconnector (UK) Limited .....	34,963	38,167	38,521
Itera Group companies .....	3,088	4,486	6,466
Albustan Investments Ltd .....	2,843	—	—
ZAO Media-Most .....	—	—	10,073
OAO AK Sibur .....	—	—	6,213
Other .....	9,555	15,741	7,055
	87,707	80,284	68,328
Less: provision for guarantees .....	—	—	(11,918)
	87,707	80,284	56,410

Included in financial guarantees are amounts denominated in USD of USD 2,634 million, USD 2,119 million and USD 1,659 as of 31 December 2002, 2001 and 2000, respectively.

In April 2000, credit facilities were provided to BSPC, an associated undertaking (see Note 11), by a group of Italian and Japanese banks for the amount of RR 71,233 (USD 2,053 million) for the construction of the offshore portion of the Blue Stream pipeline. In 2001, the Group was obligated to provide guarantees on behalf of BSPC in respect of RR 39,152 (USD 1,187) related to these credit facilities. As of 31 December 2002 and 2001, BSPC had borrowed RR 37,258 (USD 1,172 million) and RR 21,890 (USD 631 million), respectively, of these credit facilities which were guaranteed by the Group, pursuant to its obligation.

The Group provided guarantees on behalf of Interconnector (UK) Limited in connection with equipment and fixed assets leased for the construction of the Interconnector gas pipeline linking the United Kingdom to Continental Europe. The Group has a 10% interest in Interconnector (UK) Limited.

Line "Other" includes mainly guarantees issued by subsidiaries under contracts for purchasing equipment, construction and installation works. As of 31 December 2002 and 2001 this balance includes guarantees issued by OAO AK Sibur to third parties of RR 2,572 and RR 7,723, respectively.

#### Capital commitments

In the normal course of business, the Group has entered into contracts for the purchase of property, plant and equipment. The Board has approved a capital expenditure budget for 2003 of RR 179,800 including RR 73,840 in respect of capital expenditures related to the Yamal project.

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 31 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS—(continued)

##### Supply commitments

The Group has entered into long-term supply contracts for periods ranging from 5 to 20 years with various companies operating in Europe. The volumes and prices in these contracts are subject to change due to various contractually defined factors. As of 31 December 2002 no loss is expected to result from these long-term commitments.

##### Loan commitments

As of 31 December 2002, 2001 and 2000 the Group banking subsidiary AB Gazprombank (ZAO) had undrawn loan commitments related to credit facilities issued to external customers in amounts of RR 6,959, RR 2,804 and RR 867 respectively.

#### 32 FINANCIAL RISK FACTORS

The Group's activities expose it to a variety of financial risks, including the effects of: changes in debt and equity market prices, foreign currency exchange rates and interest rates. The Group's overall risk management focuses on the unpredictability of financial markets and seeks to reduce potential adverse effects on the financial performance of the Group.

##### Foreign exchange risk

The Group operates internationally and is exposed to foreign exchange risk arising from various currency exposures primarily with respect to the US dollar and the Euro.

In an operational sense, the Group's exposure to foreign exchange risk is reduced by the existence of both costs (principally transit expenses) and income denominated in foreign currency. Similarly, the Group has significant receivables denominated in foreign currency, which in effect act as a partial economic hedge against similarly denominated liabilities, principally long-term borrowings.

The Group has investments in foreign entities (see Notes 11 and 28), whose net assets are exposed to currency translation risk. Currency exposure of the net assets of the subsidiaries is reduced primarily through borrowings denominated in Euro. Exchange differences on the euro loans are recognized in the statement of income.

##### Interest rate risk

The Group borrows long-term debt principally at variable (LIBOR referenced) rates. Currently the Group does not operate a formal management programme focusing on the unpredictability of financial markets or seeking to minimize potential adverse effects on the financial performance of the Group. The Group has no significant interest-bearing assets.

##### Credit risk

Financial instruments, which potentially subject the Group to concentrations of credit risk primarily consist of accounts receivable including promissory notes. Credit risks related to accounts receivable are systematically monitored and are considered when impairment provisions are created. A significant portion of the Group's accounts receivable are from local gas distribution companies and energy companies. Although collection of these receivables could be influenced by governmental and other economic factors affecting these industries, management believes there is no significant risk of losses to the Group, other than to the extent to which provision for impairment of receivables has already been made.

##### Commodity risk

Revenues generated by the transportation and distribution segments depend on volumes and commodity prices, both of which can be affected by the prices of natural gas and other hydrocarbons. A

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 32 FINANCIAL RISK FACTORS—(continued)

decline in energy prices could result in a decrease in net income and cash flows. An extended period of low prices could precipitate a decrease in development activities and could cause a decrease in the volume of reserves available for transportation and processing through the Group's systems or facilities and ultimately impact the Group's ability to deliver under its contractual obligations.

#### 33 POST BALANCE SHEET EVENTS

##### Financial investments

###### *Petrochemical companies*

In the third quarter of 2002 the Group signed agreements to acquire additional interests in a number of Russian petrochemical companies, the majority of which were already affiliated with OAO AK Sibur. The consideration to be paid is expected to consist primarily of long-term promissory notes which mature in 2005 with nominal value of RR 19,494. The fair value of the consideration has not yet been determined. As of 31 December 2002 the Group did not complete the majority of transactions and therefore did not control the voting rights associated with the additional interests. In April 2003, following the completion of the legal procedures the Group established control over majority of these companies and thereby increased its controlling interest in the charter capital of OAO AK Sibur from 50.7% to 75.7%. The management believes that the Group will not incur any substantial cash outflow in connection with these acquisitions.

###### *OAO Severneftegazprom*

In February 2003 the Group acquired a 51.0% additional interest in OAO Severneftegazprom from the Itera group at their nominal value (RR 102 thousand) and increased its interest in the share capital of OAO Severneftegazprom to 100%. At the same time the Group sold to Itera Group a 10.0% interest in OAO Sibirsky Oil and Gas Company at its carrying value of RR 2.55 plus a 7.8% interest in OAO Tarkosaleneftegaz at its total carrying value of RR 356. Management believes that the carrying value of consideration paid approximated the fair values of the Group's interest in the net assets acquired. OAO Severneftegazprom, a production company, holds a license for the development of the Yuzhno-Russkoye field.

###### *ZAO Agrochemical Corporation Azot*

In February 2003 the Group sold its 40.1% interest in the share capital of ZAO Agrochemical Corporation Azot at its carrying value of RR 394. The shares were sold to the other shareholders of Azot as a result of the latter taking advantage of the pre-emptive purchase rights. Management believes that fair values of the shares being exchanged approximated the contract amounts. In April 2003 the Group re-acquired 33.9% interest for RR 333. Additionally, in May 2003 the Group reached an agreement with the shareholders of ZAO Agrochemical Corporation Azot to acquire an additional 52.64% interest in ZAO Agrochemical Corporation Azot for RR 606.

###### *Rosshelf*

In February 2003 ZAO Sevmorneftegaz made its non-cash contribution valued of RR 4,334 in exchange for a 48.9% interest in the Rosshelf joint activity (see Note 28). The effect of this transaction was to decrease OAO Gazprom's direct and indirect interest in the Rosshelf joint activity from 99.6% to 62.9%. Management does not believe that the financial effect of these transactions is material to the Group. As a result of the transaction OAO Gazprom and ZAO Rosshelf will have 48.7% and 2.4% direct interests in the joint activity, respectively.

###### *OAO Stroytransgaz*

In March 2003 OAO Stroytransgaz terminated its participation in the joint activity agreement with the Group (see Note 21) in return for promissory notes contributed by the Group into this joint activity in October 2002. As a result, the Group now owns (as well as votes) the treasury shares owned by the joint activity.

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED FINANCIAL STATEMENTS—(Continued)

(In millions of Russian Roubles in terms of the equivalent purchasing power of the Rouble as of 31 December 2002, unless otherwise stated)

#### 33 POST BALANCE SHEET EVENTS—(continued)

In April 2003 the Group acquired 25.9% of the ordinary shares of OAO Stroytransgaz. The consideration with the fair value RR 3,335 included investments, promissory notes and cash.

##### Accounts receivable and prepayments

In March 2003 OOO Lotsman repaid in cash the amounts due under loans issued by the Group's subsidiaries in 2002 (see Note 8).

##### Borrowings

In January 2003 OAO Gazprom received a loan from Deutsche Bank AG of USD 200 million for a two year period at an interest rate of 9.1% per annum.

In February 2003 OAO Gazprom signed a loan agreement with BNP Paribas Bank of Euro 200 million for one year period at an interest rate of 9.8% per annum.

In February 2003 OAO Gazprom received a loan from Morgan Stanley Bank AG in connection with the issuance of USD 1.75 billion Loan Participation Notes due 2013 at an interest rate of 9.625% per annum.

In March and April 2003 OAO Gazprom received a loan from DEPFA Investment Bank Ltd of USD 500 million due 2008 at an interest rate of 9.8% per annum.

In May 2003 ZGG, a Group subsidiary in Germany, repaid the outstanding balance of the loan payable to an international banking consortium totalling Euro 318 million. At the same time ZGG received another loan from a different consortium totalling Euro 280 million. The new loan bears interest at six-month EURIBOR plus margin. The margin can vary from 1% to 2% depending on the debt service cover ratio. As of the date of the borrowing receipt the interest rate was 4.2% per annum. The loan will be repaid from October 2003 to October 2007 (similar to the replaced loan).

##### Treasury shares

In March 2003, the Group entered into purchase agreements with OOO Lotsman and OOO Prom-Invest to acquire 286 million ordinary shares of OAO Gazprom for cash consideration of RR 7,635 (USD 0.85 per share).

In May 2003 the Group entered into a sale agreement with an affiliate of Ruhrgas AG to sell 117 million ordinary shares of OAO Gazprom for cash consideration of RR 3,109 (USD 0.86 per share).

## **ОАО ГАЗПРОМ**

### **NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION (UNAUDITED)**

**(In millions of Russian Roubles)**

#### **1 NATURE OF OPERATIONS**

ОАО Gazprom and its subsidiaries (the "Group") operate one of the largest gas pipeline systems in the world and are responsible for substantially all gas production and high pressure gas transportation in the Russian Federation. The Group is also a major exporter of gas to other European countries.

The Group is involved in the following principal activities:

- Production—exploration and production of gas and other hydrocarbons;
- Refining—processing of gas condensate and other hydrocarbons, and sales of other hydrocarbon products;
- Transportation—transportation of gas; and
- Distribution—domestic and export sale of gas.

The gas business is subject to seasonal fluctuations with peak demand in the first and fourth quarters of each year. The volumes of gas shipped during the three and nine months ended 30 September 2003 represented approximately 18% and 74%, respectively, of annual volumes shipped to customers in the year ended 31 December 2002.

#### **2 ECONOMIC ENVIRONMENT IN THE RUSSIAN FEDERATION**

Whilst there have been improvements in the economic situation in the Russian Federation in recent years, the country continues to display some characteristics of an emerging market. These characteristics include, but are not limited to, the existence of a currency that is not freely convertible in most countries outside of the Russian Federation, restrictive currency controls, and relatively high inflation.

The prospects for future economic stability in the Russian Federation are largely dependent upon the effectiveness of economic measures undertaken by the government, together with legal, regulatory, and political developments.

#### **3 BASIS OF PRESENTATION**

The interim condensed financial information is prepared in accordance with International Accounting Standard 34 "Interim financial reporting" ("IAS 34"). These financial statements should be read together with the consolidated financial statements for the year ended 31 December 2002 prepared in accordance with International Financial Reporting Standards ("IFRS"). The Group subsidiaries and associated undertakings maintain their statutory financial statements in accordance with the Regulation on Accounting and Reporting of the Russian Federation ("RAR") or the accounting regulations of the country in which the particular Group company is resident. The financial statements of the Group's subsidiaries and associated undertakings resident in the Russian Federation, which account for substantially all the assets and liabilities of the Group, are based on their statutory records, which are maintained under the historical cost convention with adjustments and reclassifications recorded in the financial statements for the purpose of proper preparation in accordance with IAS 34. Similar adjustments are recorded in the financial statements in respect of Group companies not resident in the Russian Federation.

The preparation of consolidated interim condensed financial information in conformity with IAS 34 requires management to make estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses, and the disclosure of contingent assets and liabilities. Actual results could differ from those estimates.

Prior to 1 January 2003 the adjustments and reclassifications made to the statutory records for the purpose of presentation in accordance with IFRS included the restatement of balances and transactions for the changes in the general purchasing power of the RR in accordance with IAS 29 ("Financial Reporting in Hyperinflationary Economies"). IAS 29 requires that the financial information prepared in the currency of a hyperinflationary economy be stated in terms of the measuring unit current at the

## ОАО ГАЗПРОМ

### NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION (UNAUDITED)—(Continued)

(In millions of Russian Roubles)

#### 3 BASIS OF PRESENTATION—(continued)

balance sheet date. As the characteristics of the economic environment of the Russian Federation indicate that hyperinflation has ceased, effective from 1 January 2003 the Group no longer applies the provisions of IAS 29. Accordingly, no adjustments for the effects of changes in general purchasing power have been made for the three and nine months ended 30 September 2003.

Corresponding figures, for the three and nine months ended 30 September 2002, were restated for the changes in the general purchasing power of the RR as of 31 December 2002. The restatement was calculated using the conversion factors derived from the Russian Federation Consumer Price Index (“CPI”), published by the Russian State Committee on Statistics (“Goscomstat”), and from indices obtained from other sources for years prior to 1992. The indices used to restate corresponding figures, based on 1988 prices (1988 = 100) for the five years ended 31 December 2002, and the respective conversion factors, are:

<u>Year</u>	<u>Index</u>	<u>Conversion Factor</u>
31 December 1998 .....	1,216,400	2.24
31 December 1999 .....	1,661,481	1.64
31 December 2000 .....	1,995,937	1.37
31 December 2001 .....	2,371,572	1.15
30 September 2002 .....	2,618,690	1.04
31 December 2002 .....	2,730,154	1.00

The main guidelines followed in restating the corresponding figures were:

- All corresponding amounts were stated in terms of the measuring unit current as of 31 December 2002;
- Monetary assets and liabilities held as of 31 December 2002 were not restated because they were already expressed in terms of the monetary unit current as of 31 December 2002;
- Non-monetary assets and liabilities (those balance sheet items that were not expressed in terms of the monetary unit current as of 31 December 2002) and components of shareholders' equity were restated from their historical cost by applying the change in the general price index from the date the non-monetary item originated to 31 December 2002;
- All items in the statement of operations and cash flows were restated by applying the change in the general price index from the dates when the items were initially transacted to 31 December 2002;
- Gains or losses that arose as a result of holding monetary assets and liabilities for the reporting periods ended 30 September 2002 were included in the statement of operations as a monetary gain or loss.

The US dollar to RR exchange rates were 30.61 and 31.78 as of 30 September 2003 and 31 December 2002, respectively. The Euro to RR exchange rates were 35.08 and 33.11 as of 30 September 2003 and 31 December 2002, respectively.

#### 4 SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The principal accounting policies followed by the Group are consistent with those disclosed in the financial statements for the year ended 31 December 2002.

#### 5 SEGMENT INFORMATION

Management does not separately identify segments within the Group as it operates as a vertically integrated business with substantially all external sales generated by the gas distribution business. However, following the practice suggested by IAS 14, “Segment Reporting”, Revised 1997 (“IAS 14”) for vertically integrated businesses, information can be presented based on the following business segments:

**ОАО ГАЗПРОМ**

**NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL

Internal transfer prices are established by the management of the Group with the objective of providing for the specific funding requirements of the individual subsidiaries within each segment. Prices are determined on the basis of the statutory accounting reports of the individual subsidiaries on a cost plus basis. The change in inter-segment sales and expenses by segment in the three and nine months ended 30 September 2003 is primarily due to changes in internal transfer prices.

#### 9 PROPERTY, PLANT AND EQUIPMENT—(continued)

Assets under construction are presented net of a provision for impairment of RR 99,493 and RR 95,570 as of 30 September 2003 and 31 December 2002, respectively.

Included in the property, plant and equipment are social assets (such as rest houses, housing, schools and medical facilities) vested to the Group at privatisation with a net book value of RR 37,635 and RR 40,526 as of 30 September 2003 and 31 December 2002, respectively.

#### 10 INVESTMENTS IN ASSOCIATED UNDERTAKINGS

Notes	30 September 2003	31 December 2002
20 EuRoPol GAZ S.A. ....	34,156	38,502
20 WINGAS GmbH. ....	20,430	21,360
20 OAO Stroytransgaz. ....	3,488	—
ZAO Armrosgazprom .....	3,146	3,276
Other .....	18,840	21,737
	<u>80,060</u>	<u>84,875</u>

Associated undertakings are presented net of provision for impairment of RR 11,012 and RR 8,767 as of 30 September 2003 and 31 December 2002, respectively.

In February 2003 the Group sold a 40.1% interest in the share capital of ZAO Agrochemical Corporation Azot at its carrying value of RR 394 for cash, reducing the Group's interest to 6.3%. The shares were sold to the other shareholders of ZAO Agrochemical Corporation Azot as a result of the latter taking advantage of the pre-emptive purchase rights. In April 2003 a part of this transaction was cancelled by an agreement of the parties. As a result the Group received back a 33.9% interest in ZAO Agrochemical Corporation Azot and returned RR 333 of the cash received in February 2003. In July 2003 the Group acquired an additional 7.2% interest in ZAO Agrochemical Corporation Azot at par value from the existing shareholders. The consideration of RR 71 was paid in cash and approximates the fair value of purchased net assets. Accordingly, as of 30 September 2003 the Group had a 47.4% interest in ZAO Agrochemical Corporation Azot, which was included in other investments in associated undertakings.

In April 2003 the Group completed the acquisition of a 25.9% interest in OAO Stroytransgaz and accordingly the Group's investment was classified as an investment in an associated undertaking. The consideration paid, with an aggregated fair value of RR 3,336, consisted primarily of investments and cash. The fair value of consideration paid approximated the fair value of net assets acquired. In August 2003 the Group acquired 15.54% of preferred shares and an additional 0.2% of ordinary shares in OAO Stroytransgaz for RR 152. OAO Stroytransgaz is a major Russian constructor of pipelines, compressor stations and refineries.

	<u>306,235</u>	<u>248,603</u>

Long-term borrowings include fixed rate loans with a carrying value of RR 191,718 and RR 141,568 as of 30 September 2003 and 31 December 2002, respectively. Other long-term borrowings generally have variable interest rates linked to LIBOR.

**14 PROFIT TAX**

Differences between the recognition criteria in Russian statutory taxation regulations and IFRS give rise to certain temporary differences between the carrying value of certain assets and liabilities for financial reporting purposes and for profit tax purposes. The tax effect of the movement on these temporary differences is recorded at the statutory rate of 24%.

	<u>30 September 2003</u>	<u>Differences, recognition and reversals</u>	<u>31 December 2002</u>
<b>Tax effects of taxable temporary differences:</b>			
Property, plant and equipment .....	86,559	19,554	67,005
Investments .....	4,030	(377)	4,407
Inventories .....	<u>2,267</u>	<u>412</u>	<u>1,855</u>
	<b>92,856</b>	<b>19,589</b>	<b>73,267</b>
<b>Tax effects of deductible temporary differences:</b>			
Tax losses carry forward .....	<u>(5,498)</u>	<u>4,750</u>	<u>(10,248)</u>
<b>Total net deferred tax liabilities .....</b>	<b><u>87,358</u></b>	<b><u>24,339</u></b>	<b><u>63,019</u></b>

Deferred tax assets and liabilities arise mainly from differences in the taxable and financial reporting bases of property, plant and equipment. These differences for property, plant and equipment are historically due to the fact that a significant proportion of the tax basis is based upon independent appraisals, the most recent of which was recognised as of 1 January 2001, while the financial reporting basis is historical cost restated for changes in the general purchasing power of the RR to 31 December 2002 (see Note 3).

Following the enactment of Chapter 25 "Profit tax" of the Russian Federation Tax Code on 1 January 2002, the profit tax regulations allowed for different tax depreciation lives for different groups of property, plant and equipment. In accordance with the tax regulations, the Group recognized shorter tax depreciation lives effective 1 January 2002, resulting in increased tax depreciation and a RR 30,171 increase in the deferred tax liability attributable to property, plant and equipment as of 31 December 2002. The Group initially recognized tax effect of the assessment of the revised tax depreciation lives for property, plant and equipment in the three months ended 30 September 2002 when such an assessment was completed by the Group.

The revised tax depreciation lives also gave rise to current period tax losses in the statutory books of OAO Gazprom in 2002. Statutory entities can carry forward tax losses generated in an individual period for ten years, subject to a maximum utilization of 30% of the total amount of taxable profit each

## OAO GAZPROM

### NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION (UNAUDITED)—(Continued)

(In millions of Russian Roubles)

#### 14 PROFIT TAX—(continued)

year. This resulted in a recognition of a deferred tax asset of RR 5,498 and RR 10,248 as of 30 September 2003 and 31 December 2002, respectively. RR 19,792 of tax losses carry forward were utilised in the nine months ended 30 September 2003. Management believes it is probable that tax losses will continue to be realized through offset against future taxable profit.

#### 15 SHAREHOLDERS' EQUITY

##### Share capital

Share capital authorised and issued totals RR 325,194 as of 30 September 2003 and 31 December 2002 and consists of 23.7 billion ordinary shares, each with a historical par value of RR 5.

##### Dividends

During the nine months ended 30 September 2003 the Group accrued final dividends for the year ended 31 December 2002 in the amount of RR 0.40 per share.

##### Treasury shares

As of 30 September 2003 and 31 December 2002, subsidiaries of OAO Gazprom held ordinary shares of OAO Gazprom totalling 4,102 million and 3,841 million, respectively. The Group controls the voting rights of these shares.

As of 31 December 2002 voting rights for the ordinary shares of OAO Gazprom, held by a joint activity with OAO Stroytransgaz were controlled by the Group in accordance with the specific terms of the joint activity agreement. Accordingly, as of 31 December 2002, the Group's investment in the joint activity was recorded as an investment in treasury shares, classified as a deduction from shareholders' equity. In March 2003 OAO Stroytransgaz terminated its participation in the joint activity agreement with the Group in return for promissory notes contributed by the Group into this joint activity. As a result, the Group now owns and controls the votes for 1,144 million treasury shares held by the joint activity.

**NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL  
INFORMATION (UNAUDITED)—(Continued)**

**(In millions of Russian Roubles)**

**16 SALES—(continued)**

The Itera Group is a producer and distributor of gas in the Russian Federation and other former Soviet Union countries. Gas transportation sales (net of VAT) to companies of the Itera Group amounted to RR 1,976 (6 bcm) and RR 5,518 (25 bcm) for the three and nine months ended 30 September 2003, respectively, and RR 3,155 (14 bcm) and RR 10,351 (46 bcm) for the three and nine months ended 30 September 2002, respectively. Trade receivables in respect of gas transportation services supplied to the Itera Group amounted to RR 2,443 and RR 3,356 as of 30 September 2003 and 31 December 2002, respectively.

The Group also had gas sales in the Russian Federation (including excise tax and net of VAT) to companies of the Itera Group amounting to RR 809 (2 bcm) and RR 2,878 (5 bcm) for the three and nine months ended 30 September 2003, and nil for the three and nine months ended 30 September 2002, respectively. Trade receivables in respect of gas sales to the Itera Group amounted to RR 812 and RR 347 as of 30 September 2003 and 31 December 2002, respectively.

Eural Trans Gas, incorporated in Hungary, was established to sell Central Asian gas to customers in Europe. Gas transportation sales to Eural Trans Gas, which commenced in January 2003, amounted to RR 3,075 (8 bcm) and RR 10,745 (25 bcm) in the three and nine months ended 30 September 2003, respectively. Trade receivables in respect of gas transportation services supplied to Eural Trans Gas amounted to RR 3,985 and nil as of 30 September 2003 and 31 December 2002, respectively.

	(3,430)	2,024	(1,011)	(15,128)

**18 EARNINGS PER SHARE**

Earnings per share have been calculated by dividing the net profit for the period by the weighted average number of shares outstanding during the period, excluding the average number of ordinary shares purchased by the Group and held as treasury shares (see Note 15).

The weighted average number of shares outstanding was 19.7 and 21.0 billion for the nine months ended 30 September 2003 and 2002, respectively.

**19 SUBSIDIARY UNDERTAKINGS**

Principal subsidiaries of the Group remain unchanged since 31 December 2002 except for the changes disclosed below.

**OAD Severneftegazprom**

In February 2003 the Group acquired a 51.0% additional interest in OAD Severneftegazprom from the Itera Group at the nominal value of the shares (RR 102 thousand) for cash and thereby increased its interest in the share capital of OAD Severneftegazprom to 100%. In connection with the acquisition of this interest, the Group paid RR 369 in cash to the Itera Group to settle the amount owed by

## OAD GAZPROM

### NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL INFORMATION (UNAUDITED)—(Continued)

(In millions of Russian Roubles)

#### 19 SUBSIDIARY UNDERTAKINGS—(continued)

OAD Severneftegazprom to finance development work. OAD Severneftegazprom, a production company, holds a license for the development of the Yuzhno-Russkoye field. OAD Severneftegazprom was accounted for as subsidiary from the date on which control was obtained. At the same time the Group sold to Itera Group a 10.0% interest in OAD Sibirsky Oil and Gas Company at its carrying value of RR 2.55 plus a 7.8% interest in OAD Tarkosalenftegaz at its carrying value of RR 356 for cash. Management have assessed that the fair value of consideration paid approximated the fair value of the underlying net assets received.

#### Joint activity with OAD NK Rosneft

The joint activity was established to develop the Arctic shelf (Prirazlomnoye and Schtokmanovskoye fields) in the Barents Sea. From inception OAD Gazprom and its subsidiary ZAO Rosshelf had 99.1% and 0.9% direct interests in the joint activity, respectively. In October 2002 OAD Gazprom and its subsidiary ZAO Rosshelf signed an amendment to the joint activity agreement that provided for an additional participant – ZAO Sevmorneftegaz. ZAO Sevmorneftegaz is a company jointly controlled by ZAO Rosshelf and OAD NK Rosneft-Purneftegaz, a subsidiary of OAD NK Rosneft. Under the agreement, in February 2003 ZAO Sevmorneftegaz made a non-cash contribution valued at RR 4,334 thus obtaining a 48.9% interest in the jointly controlled assets of the joint activity. As a result of the transaction OAD Gazprom and ZAO Rosshelf had 48.7% and 2.4% direct interests in the joint activity, respectively, and the Group's total effective interest decreased from 99.6% to 62.9%. In July 2003 OAD NK Rosneft signed an agreement to acquire a 49.95% direct interest in the joint activity for USD 136 million to be paid in cash or by settlement of the loan payable by ZAO Sevmorneftegaz to OAD NK Rosneft. The effect of this transaction was to decrease the Group's total effective interest in the joint activity from 62.9% to 48.85% and to establish joint control of the assets of the joint activity between the Group and OAD NK Rosneft.

#### Petrochemical companies

In the third quarter of 2002 the Group signed agreements to acquire additional interests in a number of Russian petrochemical companies, the majority of which were already affiliated with OAD AK Sibur. In April 2003, following the completion of legal procedures the Group established control over majority of these companies and thereby increased its controlling interest in the share capital of OAD AK Sibur from 50.7% to 75.7%. The consideration was provisionally agreed to consist primarily of long-term promissory notes with a nominal value of RR 17,824 and an estimated fair value of approximately RR 6,770, of which RR 4,662 related to companies consolidated in the three months ended 30 June 2003. In September 2003 the Group acquired an additional 2.4% interest in AK Sibur for RR 102. Fair values of the identifiable assets and liabilities of these companies have been determined on a provisional basis and might be subject to subsequent adjustments over the period to 31 December 2004. Any adjustments are not expected to be material to the Group's consolidated financial statements. Management does not believe there will be material goodwill arising from the transaction.

#### 20 RELATED PARTIES

Parties are considered to be related if one party has the ability to control the other party or exercise significant influence over the other party in making financial and operating decisions as defined by IAS 24 "Related Party Disclosures". In considering each possible related party relationship attention is directed to the substance of the relationship, not merely the legal form.

#### Government

The Government of the Russian Federation is the principal shareholder of the Group and directly owns approximately 38.37% of the issued shares of the Group. State representatives also have the majority of seats on the Board of Directors. As of 30 September 2003 the subsidiaries of the Group held 17.33% of OAD Gazprom shares, through which they are entitled to vote as owners. Governmental economic and social policies affect the Group's financial position, results of operations and cash flows.

**OA0 GAZPROM**  
**NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL**  
**INFORMATION (UNAUDITED)—(Continued)**

**(In millions of Russian Roubles)**

**20 RELATED PARTIES—(continued)**

As a condition of privatisation in 1992, the Government imposed an obligation on the Group to provide an uninterrupted supply of gas to customers in the Russian Federation at government controlled prices.

**Associated undertakings**

Included within associated undertakings (see Note 10) is the loan receivable from EuRoPol GAZ S.A., in the amount of RR 25,331 and RR 27,344 as of 30 September 2003 and 31 December 2002, respectively, issued by AB Gazprombank (ZAO), a subsidiary of the Group, at an interest rate of LIBOR + 2.6%. Also included within associated undertakings (see Note 10) as a component of the carrying amount are USD and Euro denominated long-term receivables from EuRoPol GAZ S.A. of RR 4,518 and RR 8,555 as of 30 September 2003 and 31 December 2002, respectively.

Associated undertakings (see Note 10) include a Euro denominated loan receivable from WINGAS GmbH, in the amount of RR 14,830 and RR 14,331 as of 30 September 2003 and 31 December 2002, respectively. The interest rates vary for different loan tranches. As of 30 September 2003 and 31 December 2002 the aggregate effective interest rate for the loan receivable from WINGAS GmbH was 4.5% and 5.6%, respectively.

Included within accounts receivable (see Note 7) are accounts receivable from Group associates (excluding long-term portion of EuRoPol GAZ S.A. receivables) in the amount of RR 18,477 and RR 17,746 as of 30 September 2003 and 31 December 2002, respectively.

During the three and nine months ended 30 September 2003 the Group recorded sales of gas to its associates in the amount of RR 20,382 and RR 66,616, respectively, and during the three and nine months ended 30 September 2002 in the amount of RR 20,443 and RR 54,526, respectively.

Gas is sold to associates, except for that sold to AO Moldovagaz, on the basis of long-term contracts, at index prices based on world oil and gas prices. Gas prices per thousand cubic meters for such sales ranged from USD 68 to USD 155 and from USD 67 to USD 151 in the nine months ended 30 September 2003 and 2002, respectively. Gas is sold to AO Moldovagaz based on annual contracts with fixed prices. Prices of gas per thousand cubic meters sold to Moldova amounted to USD 80 in the nine months ended 30 September 2003 and 2002.

The Group's impairment provision on accounts receivable included RR 22,448 and RR 24,191 in respect of amounts due mainly from AO Moldovagaz and from Progress Gaz Trading as of 30 September 2003 and 31 December 2002, respectively.

In addition, the Group purchased gas transportation services from certain of the associated undertakings, principally EuRoPol GAZ S.A., which amounted to RR 6,757 and RR 14,988 for the three and nine months ended 30 September 2003, and RR 2,443 and RR 7,767 for the three and nine months ended 30 September 2002, respectively. The cost of these services was determined based on prices of gas sold to these companies.

Included within accounts payable are accounts payable to the Group's associated undertakings for purchased gas transportation services in the amount of RR 6,422 and RR 1,782 as of 30 September 2003 and 31 December 2002, respectively.

*OA0 Stroytransgaz*

In the normal course of business, the Group enters into transactions with OA0 Stroytransgaz for the construction of pipelines in the Russian Federation on the basis of the results of tenders. During the three and nine months ended 30 September 2003 and 2002 transactions with OA0 Stroytransgaz were entered into under contracts, which had been executed by certain prior representatives of the Group's Board of Directors and members of their families. At the time these contracts were executed those members of the Board of Directors and members of their families owned an interest in OA0 Stroytransgaz.

**OAD GAZPROM**  
**NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL**  
**INFORMATION (UNAUDITED)—(Continued)**

**(In millions of Russian Roubles)**

**20 RELATED PARTIES—(continued)**

OAD Stroytransgaz rendered construction services for the Group in the amounts of RR 5,351 and RR 20,083 for the three and nine months ended 30 September 2003, and RR 8,401 and RR 26,863 for the three and nine months ended 30 September 2002, respectively. As of 30 September 2003 and 31 December 2002, the Group had advances and receivables due from OAD Stroytransgaz in the amounts of RR 1,579 and RR 6,276, respectively. As of 30 September 2003 and 31 December 2002, the Group had accounts payable to OAD Stroytransgaz in respect of construction of RR 11,442 and RR 10,911, respectively.

**OAD AK Sibur**

A substantial portion of OAD AK Sibur's transactions were executed with related parties. Prior to acquisition of additional interests in a number of these companies, OAD AK Sibur's related party transactions were mainly with the then associated undertakings (see Note 19).

**OOO Interprokom**

During the three and nine months ended 30 September 2003 and 2002 transactions with OOO Interprokom were entered into under contracts which had been executed by certain prior members of the Board of Directors and a member of the Management Committee of the Company and members of their families who at that time owned significant interests in OOO Interprokom.

OOO Interprokom acts as an agent for the Group in the acquisition of equipment and is remunerated for those services based on a fixed commission percentage. OOO Interprokom acted as an agent in the Group's acquisition of equipment in the amount of RR 255 and RR 1,177 in the three and nine months ended 30 September 2003, and RR 1,864 and RR 6,154 in the three and nine months ended 30 September 2002, respectively. As of 30 September 2003 and 31 December 2002, the Group had advances and receivables due from OOO Interprokom in the amount of RR 576 and RR 669, respectively. Commissions paid to OOO Interprokom amounted to RR 14 and RR 42 in the three and nine months ended 30 September 2003, and RR 28 and RR 88 for the three and nine months ended 30 September 2002, respectively. As of 30 September 2003 and 31 December 2002, the Group had accounts payable to OOO Interprokom in respect of equipment supplies of RR 2,492 and RR 6,621, respectively.

AB Gazprombank (ZAO), the Group's principal banking subsidiary, had outstanding import letters of credit issued on behalf of OOO Interprokom and sub-contractors of OOO Interprokom in the amount of RR 2,492 and RR 6,982 as of 30 September 2003 and 31 December 2002, respectively. These import letters of credit are issued to third party suppliers in connection with the purchase of equipment by OOO Interprokom on behalf of the Group.

**21 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS**

**Taxation**

Russian tax legislation is subject to varying interpretations and frequent changes. Further, the interpretation of tax legislation by tax authorities applied to the transactions and activity of the Group may not coincide with that of management. As a result, transactions may be challenged by tax authorities and the Group may be assessed additional taxes, penalties and interest, which can be significant. Under Russian legislation, penalties are levied at 20% of the tax amount underpaid and interest is charged at a rate of 1/300 of the refinancing rate of the Central Bank of the Russian Federation per day (the refinancing rate as of 30 September 2003 was 16.0%). The Group's tax records remain open to review by the tax and customs authorities with respect to tax liabilities for three years.

**Financial guarantees**

The Group had outstanding issued guarantees to third parties in the amount of RR 89,996 and RR 87,707 (including guarantees denominated in USD of USD 2,616 million and USD 2,634 million) as of 30 September 2003 and 31 December 2002, respectively.

**NOTES TO THE IFRS CONSOLIDATED INTERIM CONDENSED FINANCIAL**  
**INFORMATION (UNAUDITED)—(Continued)**

(In millions of Russian Roubles)

**21 COMMITMENTS, CONTINGENCIES AND OPERATING RISKS—(continued)**

No provisions were recorded within provisions for liabilities and charges as of 30 September 2003 and 31 December 2002, respectively, in respect of the outstanding issued guarantees.

	<b>30 September 2003</b>	<b>31 December 2002</b>
Outstanding guarantees issued on behalf of:		
BSPC .....	38,846	37,258
Interconnector (UK) Limited .....	33,673	34,963
Eural Trans Gas .....	6,949	—
Albustan Investments Ltd .....	2,552	2,843
Itera Group companies .....	1,844	3,088
Other .....	6,132	9,555
	<b>89,996</b>	<b>87,707</b>

In April 2000, credit facilities were provided to BSPC, an associated undertaking, by a group of Italian and Japanese banks for the amount of RR 71,233 (USD 2,053 million) for the construction of the offshore portion of the Blue Stream pipeline. In 2001, the Group was obligated to provide guarantees on behalf of BSPC in respect of RR 39,152 (USD 1,187) related to these credit facilities. As of 30 September 2003 and 31 December 2002 BSPC had borrowed RR 38,846 and RR 37,258 (USD 1,269 million and USD 1,172 million), respectively, of these credit facilities, which were guaranteed by the Group, pursuant to its obligation, including the amounts of interest of RR 2,510 and RR 213 (USD 82 million and USD 6 million), respectively.

In August 2003 credit facilities in the amount of USD 227 million were provided to Eural Trans Gas by Vnesheconombank and guaranteed by the Group. The guarantee extends through December 2007. The credit facilities are for the purchase of natural gas in Central Asia which is then sold to the Group.

Line "Other" includes mainly guarantees issued by subsidiaries under contracts for purchasing equipment, construction and installation works. As of 30 September 2003 and 31 December 2002 this balance includes guarantees issued by OAO AK Sibur to third parties of RR 406 and RR 2,572, respectively.

**22 POST BALANCE SHEET EVENTS**

**Borrowings**

In October 2003 AB Gazprombank (ZAO) issued USD 750 million of eurobonds due 2008 at an interest rate of 7.25%.

In November 2003 the Group signed a loan agreement with Commerzbank of USD 300 million due 2009 at an interest rate of LIBOR + 2.75% per annum.

## APPENDIX A—DEGOLYER AND MACNAUGHTON LETTER

DEGOLYER AND MACNAUGHTON  
4925 GREENVILLE AVENUE, SUITE 400  
ONE ENERGY SQUARE  
DALLAS, TEXAS 75206

April 14, 2004

OA0 Gazprom  
16A, Nametkina Street  
117884, Moscow B-420  
Russia

Gentlemen:

DeGolyer and MacNaughton has prepared estimates, as of December 31, 2002, of the extent and value of the proved and probable natural gas, oil, condensate, gas liquids, and sulfur reserves of certain fields in Russia owned or controlled by OA0 Gazprom (Gazprom). These estimates will be presented in forthcoming reports being prepared for Gazprom by DeGolyer and MacNaughton listed in Attachment I, to this letter and are referred to collectively as "the Reports". The 21 fields evaluated are located in western Siberia and the Volga-Ural Province of Russia and include the following:

Astrakhan	Urengoi Oil
Bovanenko	Viengapursk
Gubkinsk	West Tarkosalinsk
Kharasevai	Yamburg
Komsomolsk	Yamsovieyskoye
Medvezhye	Yen-Yakha
North Urengoi	Yeti-Purovskoye
Novy Port	Yubileyne
Orenburg	Yuzhno Russkoye
Urengoi	Zapolarnoye
Urengoi (Achimov)	

The estimated proved and probable gas, oil, condensate, gas liquids, and sulfur reserves owned or controlled by Gazprom, as of December 31, 2002, in the fields evaluated in the Reports, expressed in millions of cubic meters ( $10^6\text{m}^3$ ) and millions of cubic feet ( $10^6\text{ft}^3$ ), or thousands of metric tons ( $10^3\text{mt}$ ) and thousands of barrels ( $10^3\text{bbl}$ ), or thousands of metric tons ( $10^3\text{mt}$ ) and thousands of U.S. tons ( $10^3\text{U.S.t}$ ) are summarized below:

	English Units Gazprom Separator Gas

Notes:

1. There has been no adjustment applied to the value of probable reserves to account for risk.
2. Future net revenue and present worth include the value of sulfur reserves from the Astrakhan field, as shown in Attachment II
3. The values shown for the Gubkinsk field and total include revenues attributable to the 49-percent interest in the field not owned by Gazprom.
4. In preparation of these estimates, future income tax expenses have been taken into account at the field level and for transportation of gas for export.

The estimates of reserves, future net revenue, and present worth of future net revenue summarized are subject to the definitions, assumptions, qualifications, explanations, and conclusions expressed in the Reports. These summaries should be considered in view of the conditions of the Reports and are susceptible to being misunderstood apart from the Reports.

Very truly yours,

*DeGolyer and MacNaughton*
