NEWS RELEASE

St. Jude Intersects More Gold in Burkina Faso Including 36 Meters of 2.75 g/t

Vancouver, May 10, 2005 - St. Jude Resources Ltd. (SJD-TSX.V) is pleased to announce interim results from the ongoing diamond drill program on the Goulagou deposit in Burkina Faso. This program is a combination of infill and exploration drilling designed to enable the company to calculate its own resource estimate. Previously, a considerable amount of exploration and drilling had been carried out by Channel Resources Limited ("CRL"), and Placer Dome. After 22,869 meters of drilling in 421 holes, CRL reported an inferred resource of 774,700 ounces. However this resource was prepared prior to the enactment of N.I. 43-101 and therefore should not be relied upon. Once the current drill program has been completed, the company will have sufficient data to commission an independent resource calculation that will be N.I. 43-101 compliant. St. Jude considers these new results to be significant in that they extend the boundaries of the deposit both down dip and on strike. A table of significant results follows:

HOLE	AZIMUTH	DIP	COORDINATES		FROM-TO (m)	WIDTH (m)	GRADE (g/t)
			North (m)	East (m)			
SJG-134	180	-60	1505275	576760	102-104	2	1.19

Metallurgical Testing Returns Excellent Results

The company is also pleased to report results from ongoing metallurgical studies being carried out at McClelland Labs in Reno, Nevada. Results from the column leach tests indicate excellent gold recoveries, averaging 85%+ after 43 days, with 95% of the final recoveries leaching out of the samples in 15 days or less. Once the final metallurgical report has been completed and all of the results are in from the current phase of drilling, the company expects to be in a position to fast track the pre-feasibility and feasibility studies. Although further metallurgical testing will be carried out, at the present time, the company is confident that the Goulagou/Rounga project is amenable to low cost, open pit heap leach processing. Further results will be reported as they are received.

St. Jude's exploration program is under the direct supervision of George A. Flach, B.Sc., P.Geo., who is the qualified person responsible for the design and management of the drill program.

St. Jude is a leading West African explorer focused on the discovery and development of high quality gold deposits. The company's West African projects now cover over 2,900 sq. km. (716,605 acres) on one of the richest and most productive gold belts. With an experienced exploration team, financial resources, new discoveries and several advanced exploration targets, St. Jude is well positioned to continue its strong growth.

NEWS RELEASE

St. Jude Goulagou/Rounga Project

Vancouver, May 17, 2005 - On May 10, 2005, St. Jude Resources Ltd. (SJD-TSX.V) announced new drill results from its Goulagou/Rounga project in Burkina Faso, along with a summary of metallurgical test results. At that time, it was pointed out that a previous operator, Channel Resources Limited ("CRL"), and Placer Dome Inc. had carried out 22,869 meters of drilling in 421 holes, and that CRL had previously reported an inferred resource of 774,700 ounces. For greater clarification, St. Jude wishes to confirm that this historical resource estimate was calculated prior to the inception of N.I. 43-101. No independent verification of this historical data by a Qualified Person has been performed, and the company has not completed sufficient exploration to verify the CRL resource estimate. St. Jude has been working on this project for over two years, and all of our exploration results to date, correlate well with the CRL and Placer Dome data. This leads the company to believe that the exploration carried out by CRL and Placer Dome was done in a professional and diligent manner and is therefore relevant. Because this historical resource estimate was prepared prior to N.I. 43-101, it should not be relied upon.

Encouraged by the latest drill results and metallurgical testing, St. Jude is immediately undertaking a pre-feasibility study. This study will be carried out under the guidance of Mr. W. Ken Midan, P.Eng., a senior mining engineer and company director with over 35 years international mining experience. Mr. Midan has a proven track record in delivering feasibility studies, mine designs and completing construction on time and within budgets. Design work will be carried out by the independent consulting firm of GBM Mineral Engineering Consultants. The Goulagou/Rounga project is a 487 sq. km. licence located in northwest Burkina Faso. Most of the company's exploration to date has been carried out at the GG1 and GG2 deposits however, the property hosts several other prospective targets.
