The oil and natural gas industry is subject to extensive controls and regulations imposed by various levels of government. Outlined below are some of the more significant aspects of the legislation, regulations and agreements governing the oil and gas industry. All current legislation is a matter of public record and Forte is unable to predict what additional legislation or amendments may be enacted. It is not expected that any of these controls or regulations will affect the operations of Forte in a manner materially different than they would affect other oil and gas companies of similar size.

Pricing and Marketing - Oil

In Canada, producers of oil negotiate sales contracts directly with oil purchasers, with the result that the market determines the price of oil. The price depends in part on oil quality, prices of competing fuels, distance to market, the value of refined products and the supply/demand balance. Oil exports may be made pursuant to export contracts with terms not exceeding one year in the case of light crude, and not exceeding two years in the case of heavy crude, provided that an order approving any such export has been obtained from the National Energy Board ("**NEB**"). Any oil export to be made pursuant to a contract of longer duration (to a maximum of 25 years) requires an exporter to obtain an export licence from the NEB and the issue of such a licence requires the approval of the Governor in Council.

Pricing and Marketing - Natural Gas

In Canada, the price of natural gas sold in interprovincial and international trade is determined by negotiation between buyers and sellers. Natural gas exported from Canada is subject to regulation by the NEB and the Government of Canada. Exporters are free to negotiate prices and other terms with purchasers, provided that the export contracts continue to meet certain criteria prescribed by the NEB and the Government of Canada. Natural gas exports for a term of less than two years or for a term of two to 20 years (in quantities of not more than 30,000 m^3/day), must be made pursuant to an NEB order. Any natural gas export to be made pursuant to a contract of longer duration (to a maximum of 25 years) or a larger quantity requires an exporter to obtain an export licence from the NEB and the issue of such a licence requires the approval of the Governor in Council.

The governments of Alberta, British Columbia and Saskatchewan also regulate the volume of natural gas which may be removed from those provinces for consumption elsewhere based on such factors as reserve availability, transportation arrangements and market considerations.

The North American Free Trade Agreement ("NAFTA")

On January 1, 1994, NAFTA became effective among the governments of Canada, the United States of America and Mexico. NAFTA carries forward most of the material energy terms contained in the Canada U.S. Free Trade Agreement. In the context of energy resources, Canada continues to remain free to determine whether exports to the United States of America or Mexico will be allowed provided that any export restrictions do not: (i) reduce the proportion of energy resource exported relative to domestic use (based upon the proportion prevailing in the most recent 36 month period), (ii) impose an export price higher than the domestic price, and (iii) disrupt normal channels of supply. All three countries are prohibited from imposing minimum export or import price requirements.

NAFTA contemplates the reduction of Mexican restrictive trade practices in the energy sector and prohibits discriminatory border restrictions and export taxes. NAFTA also contemplates clearer disciplines on regulators to ensure fair implementation of any regulatory changes and to minimize disruption of contractual arrangements, which is important for Canadian natural gas exports.

Royalties and Incentives

In addition to federal regulation, each province has legislation and regulations which govern land tenure, royalties, production rates, environmental protection and other matters. The royalty regime is a significant factor in the profitability of oil and natural gas production. Royalties payable on production from lands other than Crown lands are determined by negotiations between the mineral owner and the lessee. Crown royalties are determined by government regulation and are generally calculated as a percentage of the value of the gross production, and the rate of royalties payable generally depends in part on prescribed reference prices, well productivity, geographical location, field discovery date and the type or quality of the petroleum product produced.

From time to time the governments of Canada, Alberta, British Columbia and Saskatchewan have established incentive programs which have included royalty rate reductions, royalty holidays and tax credits for the purpose of encouraging oil and natural gas exploration or enhanced planning projects.

Regulations made pursuant to the Alberta Mines and Minerals Act provide various incentives for exploring and developing oil reserves in Alberta. Oil produced from horizontal extensions commenced at least five years after the well was originally spudded may also qualify for a royalty reduction. A 24 month, 8,000 m^3 exemption is available to production from a well that has not produced for a 12 month period, if resuming production after February 1, 1993. As well, oil production from eligible new field and new pool wildcat wells and deeper pool test wells spudded or deepened after September 30, 1992 is entitled to a 12 month royalty exemption (to a maximum of $1 million). Oil produced from low productivity wells, enhanced recovery schemes (such as injection wells) and experimental projects is also subject to royalty reductions.

The Alberta government has also introduced a Third Tier Royalty with a base rate of 10% and a rate cap of 25% for oil pools discovered after September 30, 1992. The new oil royalty reserved to the Crown has a base rate of 10% and a rate cap of 30%. The old oil royalty reserved to the Crown has a base rate of 10% and a rate cap of 35%.

In the Province of Alberta, the royalty reserved to the Crown in respect of natural gas production, subject to various incentives, is between 15% and 30%, in the case of new gas, and between 15% and 35%, in the case of old gas, depending upon a prescribed or corporate average reference price. Natural gas produced from qualifying exploratory gas wells spudded or deepened after July 31, 1985 and before June 1, 1988 is eligible for a royalty exemption for a period of 12 months, up to a prescribed maximum amount. Natural gas produced from qualifying intervals in eligible gas wells spudded or deepened to a depth below 2,500 metres is also subject to a royalty exemption, the amount of which depends on the depth of the well.

In Alberta, a producer of oil or natural gas is entitled to a credit on qualified oil and gas production against the royalties payable to the Crown by virtue of the ARTC program. The ARTC program is based on a price sensitive formula, and the ARTC rate varies between 75%, at prices for oil below $100 per m^3, and 25%, at prices above $210 per m^3. The ARTC rate is applied to a maximum of $2,000,000 of Alberta Crown royalties payable for each producer or associated group of producers. Crown royalties on production from producing properties acquired from corporations claiming maximum entitlement to ARTC will generally not be eligible for ARTC. The rate is established quarterly based on the average "par price", as determined by the Alberta Department of Energy for the previous quarterly period.

On December 22, 1997, the Alberta government announced that it was conducting a review of the ARTC program with the objective of setting out better targeted objectives for a smaller program and to deal with administrative difficulties. On August 30, 1999, the Alberta government announced that it would not be reducing the size of the program but that it would introduce new rules to reduce the number of persons who qualify for the program. The new rules will preclude companies that pay less than $10,000 in royalties per year and non corporate entities from qualifying for the program.

Producers of oil and natural gas in the province of British Columbia are also required to pay annual rental payments in respect of Crown leases and royalties and freehold production taxes in respect of oil and gas produced from Crown and freehold lands, respectively. The amount payable as a royalty in respect of oil depends on the vintage of the oil (whether it was produced from a pool discovered before or after October 31, 1975), the quantity of oil produced in a month and the value of the oil. Oil produced from newly discovered pools may be exempt from the

payment of a royalty for the first 36 months of production. The royalty payable on natural gas is determined by a sliding scale based on a reference price which is the greater of the amount obtained by the producer and a prescribed minimum price. Gas produced in association with oil has a minimum royalty of 8% while the royalty in respect of other gas may not be less than 15%.

On May 30, 2003, the Ministry of Energy and Mines for the province of British Columbia announced an Oil and Gas Development Strategy for the Heartlands ("**Strategy**"). The Strategy is a comprehensive program to address road infrastructure, targeted royalties, and regulatory reduction and British Columbia service sector opportunities. In addition, the Strategy will result in economic and employment opportunities for communities in British Columbia's heartlands.

Some of the financial incentives in the Strategy include:

1. royalty credits of up to $10 million annually towards the construction, upgrading and maintenance of road infrastructure in support of resource exploration and development. Funding will be contingent upon an equal contribution from industry; and

2. changes to provincial royalties: new royalty rates for low productivity natural gas to enhance marginally economic resources plays, royalty credits for deep gas exploration to locate new sources of natural gas, and royalty credits for summer drilling to expand the drilling season.

In Saskatchewan, for Crown royalty and freehold production tax purposes, crude oil is considered either "heavy oil", "southwest designated oil" or "non-heavy oil other than southwest designated oil". The conventional royalty and production tax classifications ("fourth tier oil" introduced October 1, 2002, "third tier oil", "new oil" or "old oil") of oil production are applicable to each of the three crude oil types. The Crown royalty and freehold production tax structure for crude oil is price sensitive and varies between the base royalty rates of 5% for all "fourth tier oil" to 20% for "old oil". Marginal royalty rates are 30% for all "fourth tier oil" to 45% for "old oil".

Natural gas is considered either "non-associated gas" or "associated gas". The royalty and production tax classifications of gas production ("fourth tier gas" introduced October 1, 2002, "third tier gas", "new gas" and "old gas") are applicable to each of the two gas types. The Crown royalty and freehold production tax for gas is price sensitive and varies between the base royalty rate of 5% for "fourth tier gas" and 20% for "old gas". The marginal royalty rates are between 30% for "fourth tier gas" and 45% for "old gas".

On October 1, 2002 a number of changes were made to the royalty and tax regime in Saskatchewan as follows:

1. a new Crown royalty and freehold production tax regime applicable to associated natural gas (gas produced from oil wells) that is gathered for use or sale was introduced. The royalty/tax will be payable on associated natural gas produced from an oil well that exceeds approximately 65,000 m^3 in a month;

2. a modified system of incentive volumes and maximum royalty/tax rates applicable to the initial production from oil wells and gas wells with a finished drilling date on or after October 1, 2002 was introduced. The incentive volumes are applicable to various well types and are subject to a maximum royalty rate of 2.5% and a freehold production tax rate of zero per cent; and

3. the elimination of the re-entry and short section horizontal oil well royalty/tax categories was implemented. All horizontal oil wells with a finished drilling date on or after October 1, 2002 will receive the "fourth tier" royalty/tax rates and new incentive volumes.

Oil and natural gas royalty holidays and reductions for specific wells reduce the amount of Crown royalties paid by Forte to the provincial governments. In Alberta, the ARTC program provides a rebate on Alberta Crown royalties paid in respect of eligible producing properties. Both of these incentives have the effect of increasing the net income of Forte.

Land Tenure

Crude oil and natural gas located in the western provinces is owned predominantly by the respective provincial governments. Provincial governments grant rights to explore for and produce oil and natural gas pursuant to leases, licences and permits for varying terms from two years and on conditions set forth in provincial legislation including requirements to perform specific work or make payments. Oil and natural gas located in such provinces can also be privately owned and rights to explore for and produce such oil and natural gas are granted by lease on such terms and conditions as may be negotiated.

Canadian Environmental Regulation

The oil and natural gas industry is currently subject to environmental regulation pursuant to provincial and federal legislation. Environmental legislation provides for restrictions and prohibitions on releases or emissions of various substances produced or utilized in association with certain oil and gas industry operations. In addition, legislation requires that well and facility sites be abandoned and reclaimed to the satisfaction of provincial authorities. A breach of such legislation may result in the imposition of fines and penalties.

In Alberta, environmental compliance has been governed by the Alberta Environmental Protection and Enhancement Act ("**AEPEA**") since September 1, 1993. In addition to replacing a variety of older statutes which related to environmental matters, the AEPEA also imposes certain new environmental responsibilities on oil and natural gas operators in Alberta and in certain instances also imposes greater penalties for violations.

British Columbia's Environmental Assessment Act became effective June 30, 1995. This legislation rolls the previous processes for the review of major energy projects into a single environmental assessment process which contemplates public participation in the environmental review.

LEGAL PROCEEDINGS

There are no legal proceedings material to Forte to which Forte is a party or any of its properties are subject, nor are there any such proceedings known to be contemplated.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the only contract entered into by Forte within the two years immediately prior to the date hereof which can reasonably be regarded as presently material to Forte is the Forte Arrangement Agreement.

AUDITORS, TRANSFER AGENT AND REGISTRAR

The auditors of the Corporation are Deloitte & Touche LLP, Chartered Accountants, 3000, 700 – 2nd Street S.W., Calgary, Alberta, T2P 0S7.

Forte, at its principal office in Calgary, Alberta, is currently the transfer agent and registrar of the Forte Common Shares and the Forte Performance Shares. Upon completion of the Forte Arrangement, Computershare Trust Company of Canada, at its principal offices in Calgary, Alberta and Toronto, Ontario, will be the transfer agent and registrar of the Denison Oil Common Shares.

Auditors' Report

To the Directors of
Forte Oil Corporation:

We have audited the balance sheets of **Forte Oil Corporation** as at December 31, 2002 and 2001, and the statements of income (loss) and retained earnings (deficit) and of cash flows for the year ended December 31, 2002 and for the period from date of incorporation on May 8, 2001 to December 31, 2001. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2002 and 2001 and the results of its operations and its cash flows for the year ended December 31, 2002 and for the period from date of incorporation on May 8, 2001 to December 31, 2001 in accordance with Canadian generally accepted accounting principles.

Calgary, Alberta
March 7, 2003, except for Note 10, which
is dated January 28, 2004

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

1. ORGANIZATION

Forte Oil Corporation (the "Company") was incorporated under the laws of the Province of Alberta by Articles of Incorporation dated May 8, 2001 as 933181 Alberta Ltd. On July 13, 2001, Articles of Amendment were filed to change the Company's name to Forte Oil Corporation. The Company began operations on July 1, 2001 and is engaged in the exploration and development of petroleum and natural gas properties.

2. SIGNIFICANT ACCOUNTING POLICIES

The financial statements have been prepared in accordance with Canadian generally accepted accounting principles. Management makes estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements, and revenues and expenses during the reporting period. Actual results can differ from those estimates.

Capital assets

The Company follows the full cost method of accounting for petroleum and natural gas operations, whereby all costs of exploring for and developing petroleum and natural gas properties and related reserves are capitalized into a single Canadian cost centre. Such costs include land acquisition costs, costs of drilling both productive and non-productive wells, geological and geophysical expenditures, well equipment and certain other overhead expenditures related to exploration.

Capitalized costs, including tangible well equipment, are depleted using the unit-of-production method based on estimated proven reserves of petroleum and natural gas before royalties. Unproven properties are excluded from the depletion calculation until quantities of proven reserves or impairment can be determined. Depreciation of office equipment is computed using the diminishing-balance method at an annual rate of 25%.

Gains or losses on the sale or disposition of petroleum and natural gas properties are not recognized except under circumstances which result in a major revision of the depletion rate.

2. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Capital assets (Continued)

The Company annually applies a "ceiling test" to capitalized costs to ensure that such costs do not exceed future net revenues from estimated production of proven reserves, using prices and costs in effect at the Company's period end and the costs of unproven properties less impairment. Future net revenues are calculated after deducting general and administrative costs, financing costs and income taxes. Undeveloped land is evaluated separately for impairment.

Joint ventures

Substantially, all of the Company's exploration and development activities are conducted jointly with others and accordingly, the financial statements reflect only the Company's proportionate interest in such activities.

Future site restoration and abandonment costs

The Company estimates the total future site restoration and abandonment costs required to comply with current legislation and industry practices. The Company makes a provision for future site restoration and abandonment costs based on the unit-of-production method. The provision is included in depletion and depreciation in the statement of income (loss) and retained earnings (deficit). Expenditures are charged against the accumulated site restoration liability as incurred.

Cash and deposits

Cash and deposits include investments with a maturity of three months or less when purchased.

Income taxes

The Company follows the liability method of accounting for income taxes. Under this method, future income tax assets and liabilities are measured based upon temporary differences between the carrying values of assets and liabilities and their tax bases. Income tax expense (recovery) is computed based on the change during the year in the future income tax assets and liabilities. Effects of changes in tax laws and tax rates are recognized when substantially enacted.

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

2. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Flow-through shares

The Company has financed a portion of its exploration and development activities through the issue of flow-through shares. Under the terms of the flow-through share agreements, the tax attributes of the related expenditures are renounced to the subscribers. Share capital is reduced and future income tax liability is increased by the estimated cost of the renounced tax deductions at the time shares are issued.

Revenue recognition

Revenue from the sale of oil and gas is recognized based on volume delivered at contractual delivery points and rates. The costs associated with the delivery, including operating and maintenance costs, transportation and production-based royalty expenses, are recognized in the same period in which the related revenue is earned and recorded.

Financial instruments

The Company may enter into financial instruments to hedge against adverse fluctuations in foreign exchange rates, electricity rates, interest rates and commodity prices. Payments or receipts on financial instruments that are designated and effective as hedges are recognized in income concurrently with the hedged transaction. If the hedge of an anticipated future transaction is terminated or if a hedge ceases to be effective, the gain or loss at that date is deferred and recognized concurrently with the anticipated transaction. Subsequent changes in the value of the financial instrument are reflected in income. Any financial instrument that does not constitute a hedge is recorded at fair value with any resulting gain or loss reflected in income.

Stock-based compensation

The Company has a stock-based compensation plan as described in Note 5. No compensation expense is recognized for stock options granted to employees and directors. Consideration paid by employees and directors on the exercise of stock options is recorded as share capital. For stock options issued on or after January 1, 2002, the fair values are determined and the impact on earnings is disclosed as pro forma information in Note 5.

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

2. SIGNIFICANT ACCOUNTING POLICIES (Continued)

Per share amounts

Per share amounts are calculated using the total weighted average number of common shares outstanding during the period. Diluted per share calculations reflect the exercise or conversion of potentially dilutive securities at the later of the date of grant of such securities or the beginning of the period. The Company computes diluted earnings per share using the treasury stock method to determine the dilutive effect of stock options.

3. CAPITAL ASSETS

	September 30, 2003 $	December 31, 2002 $	December 31, 2001 $
	(Unaudited)		
Petroleum and natural gas properties	36,920,096	18,124,915	1,439,919
Office furniture and equipment	94,656	55,734	34,835
	37,014,752	18,180,649	1,474,754
Accumulated depletion and depreciation	4,796,941	901,941	4,354
	32,217,811	17,278,708	1,470,400

The Company capitalized general and administrative costs of $417,587 and $439,489 for the nine months ended September 30, 2003 and 2002 respectively (December 31, 2002 - $549,033 and December 31, 2001 - $166,435) relating to exploration and development activity. Costs attributed to undeveloped land of $3,300,000 and $402,682 for the nine months ended September 30, 2003 and 2002 respectively (December 31, 2002 - $3,698,000 and December 31, 2001 - $Nil) have been excluded from the calculation of depletion and depreciation. The Company used period end prices of $38.78 per barrel for crude oil and $5.43 per mcf for gas in its ceiling test calculation at September 30, 2003 (December 31, 2002 - $43.00 per barrel for crude oil and $6.50 per mcf for gas), which resulted in no impairment of accumulated costs. At September 30, 2003 and 2002, site restoration expense of $780,000 and $120,000 respectively (December 31, 2002 - $291,125 and December 31, 2001 - $Nil) was included in depletion and depreciation expense. The total future estimated site restoration cost at September 30, 2003 was $5,747,000 (December 31, 2002 - $4,331,000) and these costs are expected to be incurred over the next 10 to 15 years. The Company incurred site restoration costs of $41,262 and $20,591 during the nine months ended September 30, 2003 and 2002 (December 31, 2002 - $32,822 and December 31, 2001 - $Nil).

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

4. REVOLVING BANK LOAN

At September 30, 2003, the Company had a demand revolving credit facility of $13.25 million of which $11,149 had been drawn down (December 31, 2002 - $823,164), which is secured by a general security agreement. Interest is payable at the bank prime rate plus 0.4%. The credit facility reduces by an amount of $250,000 each month until it reaches a limit of $12.0 million.

5. SHARE CAPITAL

Authorized

The Company is authorized to issue an unlimited number of common shares. The Company is also authorized to issue an unlimited number of First preferred shares and Second preferred shares as well as 3,500,000 First preferred shares, Series I.

	September 30, 2003		December 31, 2002		December 31, 2001

		16,064,682		15,667,404		14,448,921

The First preferred, Series I shares are convertible on a one-for-one basis into common shares of the Company if certain performance targets are met. These performance targets include measures of cash flow per share, share price or rate of return in the event of a sale of the Company. The performance targets are measured over a three and five year term. If the targets are not met prior to August 28, 2006, the conversion rights attached to the First preferred, Series I shares will expire.

In 2002, 998,700 flow-through common shares were issued at $2.25 per share. As at September 30, 2003, all amounts required to be expended under the flow-through agreement had been made.

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

Under the Company's stock option plan, the Company may grant options to directors and employees up to 10% of the issued and outstanding common shares. Under the plan, options vest 1/3 annually over a three year period and an option's maximum term is five years.

A summary of the status of the stock option plan as of September 30, 2003, December 31, 2002 and 2001, and changes during the periods then ended, is presented below:

	September 30, 2003		December 31, 2002		December 31, 2001	
	Number of Shares	Exercise Price	Number of Shares	Exercise Price	Number of Shares	Exercise Price
Outstanding, beginning of period	885,000	1.00	325,000	1.00	-	-
Granted	125,000	1.60	685,000	1.00	325,000	1.00
Cancelled	(125,000)	1.00	(125,000)	1.00	-	-
Outstanding, end of period	885,000	1.08	885,000	1.00	325,000	1.00
Exercisable, end of period	320,000	1.16	66,666	1.00	-	-

The following table summarizes information about stock options outstanding at September 30, 2003:

Exercise Price $	Number of Shares Outstanding	Weighted Average Remaining Life (Years)	Number of Shares Exercisable
1.00	200,000	3.08	133,332
1.00	150,000	3.83	50,000
1.00	410,000	4.08	136,668
1.60	125,000	4.50	-
	885,000		320,000

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

5. SHARE CAPITAL (Continued)

The following table summarizes information about stock options outstanding at December 31, 2002.

Exercise Price $	Number of Shares Outstanding	Weighted Average Remaining Life (Years)	Number of Shares Exercisable
1.00	200,000	3.83	66,000
1.00	150,000	4.58	-
1.00	535,000	4.83	-
	885,000		66,000

During 2002, the Company issued Agent's Options to purchase 400,000 common shares at a price of $1 per share, which expire August 28, 2003. These options were exercised August 28, 2003.

The Company has adopted the Canadian Institute of Chartered Accountants recommendations on stock-based compensation and has elected to account for stock-based compensation using intrinsic values. When using intrinsic values, compensation costs are not recognized in the financial statements for stock options and performance warrants granted to employees and directors when issued at market value.

For fiscal years beginning on or after January 1, 2002, Canadian accounting standards require disclosure of the impact on earnings using the fair-value method for stock options issued on or after January 1, 2002. No expense has been recorded in the financial statements, nor disclosed, for performance warrants issued on or after January 1, 2002 due to the contingent nature of their vesting. If the fair-value method for stock options had been used, the Company's net income (loss) and net income (loss) per share for the nine month periods ended September 30, 2003 and 2002 and the year ended December 31, 2002 would be as follows:

5. SHARE CAPITAL (Continued)

(thousands, except per share data)	Nine Months Ended September 30, 2003	Nine Months Ended September 30, 2002	Year Ended December 31, 2002
Compensation costs	$9,000	$13,474	$21,059
Net income:			
As reported	$504,987	$72,096	$385,296
Pro forma	$495,987	$58,622	$364,237
Net income per share:			
As reported - Basic	$0.03	$0.01	$0.03
- Diluted	$0.03	$0.00	$0.02
Pro forma - Basic	$0.03	$0.00	$0.02
- Diluted	$0.02	$0.00	$0.02

The weighted average fair value of stock options granted during the nine months ended September 30, 2003 was $0.04 per stock option. The fair value of each stock option granted during the nine months ended September 30, 2003 is estimated on the date of grant using the Black-Scholes option-pricing model with the weighted average assumptions for grants as follows:

	Nine Months Ended September 30, 2003
Risk free interest rate	4.0%
Expected lives (years)	5.0
Dividend per share	$Nil

The Company is a private company and as a result there is no quoted market value for the Company's shares. The expected volatility for the nine months ended September 30, 2003 was assumed to be Nil.

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

6. PROVISION FOR INCOME TAXES

The provision for future income taxes varies from the amounts that would be computed by applying the effective Canadian federal and provincial income tax rates to the income (loss) before income taxes as follows:

	Nine Month Period Ended September 30,		Year Ended December 31,	Period Ended December 31,
	2003 $	2002 $	2002 $	2001 $
	(Unaudited)	(Unaudited)		
Income (loss) before income taxes	1,092,987	160,096	777,128	(43,149)
Corporate income tax rate	38.5%	42.12%	42.12%	42.62%
	420,800	67,432	327,326	(18,390)
Increase from				
Non-deductible crown charges	339,263	19,452	32,751	222
Other non-deductible expenses	1,155	1,116	1,755	575
Rate reductions	(173,218)	-	-	-
Future income tax expense (recovery)	588,000	88,000	361,832	(17,593)

The major components of the future income tax asset at September 30, 2003 using a combined federal and provincial rate of 38.5% (December 31, 2002 - 42.12% and December 31, 2001 - 42.62%), are as follows:

	September 30, 2003		December 31, 2002		December 31, 2001	
	Amount $	Future Income Taxes $	Amount $	Future Income Taxes $	Amount $	Future Income Taxes $
Temporary differences:						
Future income tax liability						
Carrying value of capital assets in excess of tax bases	5,053,226	1,945,492	3,515,546	1,480,748	213,389	90,947
Future income tax assets						
Share issue costs	(533,350)	(205,340)	(749,981)	(315,892)	(835,726)	(356,187)
Non-capital losses carried forward	(837,032)	(322,257)	(795,254)	(334,961)	(379,394)	(161,698)
	(1,370,382)	(527,597)	(1,545,235)	(650,853)	(1,215,120)	(517,885)
Net future income tax liability (asset)	3,682,844	1,417,895	1,970,311	829,895	(1,001,731)	(426,938)

At September 30, 2003, the Company had non-capital losses of $837,032 (December 31, 2002 - $795,254 and December 31, 2001 - $334,915) available for deduction against future years' income, which expire in 2009 and 2010.

6. PROVISION FOR INCOME TAXES (Continued)

During the second quarter of 2003, the Federal and Alberta taxation authorities substantially enacted a five year income tax rate reduction. The Company recorded a reduction of $173,218 in future income taxes for the current period as a result of these changes.

7. FINANCIAL INSTRUMENTS

The Company's cash and deposits, accounts receivable, accounts payable and accrued liabilities and revolving bank loan constitute financial instruments. The fair values of these financial instruments approximate their carrying amount due to the short-term maturity of these financial instruments.

The Company is exposed to credit related losses in the event of default by counterparties to financial instruments. The Company does not expect the counterparty to its forward sales contracts to fail to meet its obligations because of its investment grade credit quality. The Company's accounts receivable are with customers in the oil and gas industry and are subject to normal industry credit risks.

The foreign currency risk is the risk that a variation in exchange rates between the Canadian dollar and the U.S. dollar will affect the price the Company receives for its sale of crude oil, natural gas and natural gas liquids.

The Company's revolving bank loan bears interest at bank prime plus 0.4%. The interest rate risk is the risk that the bank prime rate may fluctuate in the future.

The Company's revenues are generated from the sale of crude oil, natural gas and natural gas liquids. The prices for these commodities are subject to considerable risk of fluctuation due to various factors, including changes to world supply and demand, local supply and demand and geopolitical issues.

The Company has entered into, as at September 30, 2003, the following forward sales contracts to hedge its crude oil price risk, which expire in 2003:

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

7. FINANCIAL INSTRUMENTS (Continued)

Forward sales contracts

Product	Volume Per Day	Price US$	Delivery Point	Term
Crude Oil	500	25.03	WTI	Jan. 1, 2004 to June 30, 2004
Crude Oil	100	38.34	WTI	Jan. 1, 2004 to March 30, 2004
Crude Oil	100	25.81	WTI	July 1, 2003 to June 30, 2004
Crude Oil	300	35.72	WTI	July 1, 2004 to Sept. 30, 2004
Crude Oil	100	25.80	WTI	Jan. 1, 2003 to Dec. 31, 2003
Crude Oil	100	25.10	WTI	Jan. 1, 2003 to Dec. 31, 2003
Crude Oil	200	25.03	WTI	Nov. 1, 2002 to Oct. 31, 2003
Crude Oil	100	25.85	WTI	Aug. 1, 2002 to Jul. 31, 2003
Crude Oil	100	29.31	WTI	Aug. 1, 2003 to Dec. 31, 2003
Crude Oil	200	28.53	WTI	Nov. 1, 2003 to Dec. 31, 2003

The above contracts are financial contracts that are intended to be settled financially each month. Any gain or loss is included in revenue received for the Company's crude oil sales for the corresponding month. If the contracts were settled on September 30, 2003 and December 31, 2002, there would be losses of $333,540 and $300,893 respectively.

8. COMMITMENTS AND GUARANTEES

Office lease

The initial term of the Company's lease for office space expires on May 1, 2004. Principal repayments required in the next year is as follows:

	$
2004	**40,000**

Guarantees and contingencies

The Company has various guarantees and indemnifications in place in the ordinary course of business, none of which, as assessed by management, are expected to have a significant impact on the Company's financial statements or operations.

FORTE OIL CORPORATION

Notes to the Financial Statements

(Information as at September 30, 2003 and for the nine months ended September 30, 2003 and 2002 is unaudited)

9. CHANGES IN NON-CASH WORKING CAPITAL

	Nine Month Period Ended September 30,		Year Ended December 31,	Period Ended December 31,
	2003	2002	2002	2001
	$	$	$	$
Accounts receivable	(605,695)	(452,039)	(2,185,968)	(54,409)
Accounts payable and accrued liabilities	2,995,099	1,556,360	1,471,607	108,972
	2,389,404	1,104,321	(714,361)	54,563

10. SUBSEQUENT EVENT

On January 28, 2004, the Company entered into a Arrangement Agreement ("Arrangement") with Denison Energy Inc. ("Denison") and certain other parties under which the oil and gas assets of Denison and Forte will be combined. For each Forte share owned, Forte shareholders will receive .894 shares (representing approximately 80%) of a newly formed public company, Denison Oil Corporation, created for this purpose. The transaction will be accounted for as a reverse takeover by Forte. The Arrangement is subject to regulatory, judicial, and shareholder approvals.

Auditors' Report

To the Directors of Forte Oil Corporation:

We have audited the accompanying statement of revenue and operating expenses of the Red Earth Properties for the eleven months ended November 30, 2002 and for each of the years in the two-year period ended December 31, 2001. This information is the responsibility of the management of Forte Oil Corporation. Our responsibility is to express an opinion on this financial information based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial information is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial information. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial information.

In our opinion, this statement presents fairly, in all material aspects, the revenue and operating expenses of the Red Earth Properties described in Note 1 for the eleven months ended November 30, 2002 and for each of the years in the two-year period ended December 31, 2001 in accordance with Canadian generally accepted accounting principles.

Notes to the Statement of Revenue and Operating Expenses of the Red Earth Properties For the Eleven Months Ended November 30, 2002 and the Years Ended December 31, 2001 and 2000

1. BASIS OF PRESENTATION

Under an agreement effective as of December 2, 2002, Forte Oil Corporation ("Forte") acquired a working interest in certain petroleum and natural gas properties in Western Canada (the "Red Earth Properties").

This statement has been derived from financial information provided by the vendor of the Red Earth Properties and relates only to the working interests in such properties that were acquired by Forte.

These statements include only those revenue and operating expenses that are directly related to the Red Earth Properties commencing with the date these properties were acquired by the vendor and do not include any expenses related to general and administrative costs, interest, income and capital taxes or any provisions related to depletion, depreciation or future site restoration and abandonment.

2. SIGNIFICANT ACCOUNTING POLICIES

(a) Revenue

Oil sales are recorded when title to the commodities passes to the purchaser.

(b) Operating expenses

Operating expenses include all costs related to the lifting, gathering, transporting and processing of oil.

Auditors' Report

To the Directors of Forte Oil Corporation:

We have audited the accompanying statement of revenue and operating expenses of the Carson Properties for each of the years in the three-year period ended December 31, 2002. This information is the responsibility of the management of Forte Oil Corporation. Our responsibility is to express an opinion on this financial information based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial information is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial information. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial information.

In our opinion, this statement presents fairly, in all material aspects, the revenue and operating expenses of the Carson Properties described in Note 1 for each of the years in the three-year period ended December 31, 2002 in accordance with Canadian generally accepted accounting principles.

1. BASIS OF PRESENTATION

Under an agreement effective as of July 1, 2003, Forte Oil Corporation ("Forte") acquired a working interest in certain petroleum and natural gas properties in Western Canada (the "Carson Properties").

This statement has been derived from financial information provided by the vendor of the Carson Properties and relates only to the working interests in such properties that were acquired be Forte.

These statements include only those revenue and operating expenses that are directly related to the Carson Properties commencing with the date these properties were acquired by the vendor and do not include any expenses related to general and administrative costs, interest, income and capital taxes or any provisions related to depletion, depreciation or future site restoration and abandonment.

2. SIGNIFICANT ACCOUNTING POLICIES

(a) Revenue

Oil sales are recorded when title to the commodities passes to the purchaser.

(b) Operating expenses

Operating expenses include all costs related to the lifting, gathering, transporting and processing of oil.

AUDITORS' CONSENT

We have read the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 28, 2004 under Section 182 of the Business Corporations Act (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc.("Dension Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc.("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mine Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated January 28, 2004 under Section 193 of the Business Corporations Act (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd., Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned Information Circular of our report to the Directors of Forte on the balance sheets of the Company as at December 31, 2002 and 2001 and the statements of income (loss) and retained earnings (deficit) and of cash flows for the year ended December 31, 2002 and for the period from date of incorporation on May 8, 2001 to December 31, 2001. Our report is dated March 7, 2003, except for Note 10 which is dated January 28, 2004.

We consent to the use in the above-mentioned Information Circular of our report dated January 26, 2004 on the statement of revenue and operating expenses of the Red Earth Properties for the eleven month period ended November 30, 2002 and for each of the years in the two-year period ended December 31, 2001.

We also consent to the use in the above-mentioned Information Circular of our report dated January 26, 2004 on the statement of revenue and operating expenses of the Carson Properties for each of the years in the three-year period ended December 31, 2002.

NOTICE TO READER

As at the date hereof, Denison Oil has not carried on any active business. Pursuant to the Denison Arrangement, Denison Resources, a wholly owned subsidiary of Denison Oil, will acquire the Petroleum and Natural Gas Assets from Denison Energy effective on the Denison Effective Date. Historical Information contained herein as information regarding the operations and assets of Denison Energy refers to the Petroleum and Natural Gas Assets that will be indirectly transferred to Denison Oil. The disclosure in this Exhibit has been prepared assuming that the acquisition of the Petroleum and Natural Gas Assets is completed. *This Exhibit does not give effect to the Forte Arrangement.* For information regarding Denison Oil's business after the Forte Arrangement, see Exhibit "N" – "Information Concerning Denison Oil After the Forte Arrangement."

Unless otherwise defined in this Exhibit, all capitalized words and phrases used in this Exhibit have the meaning given to such words and phrases in the "Glossary of Terms" in the Information Circular. See also the information under "Cautionary Statement Concerning Forward-Looking Statements" in the Information Circular for special information about Denison Oil's use of forward-looking information.

ABBREVIATIONS

Oil and Natural Gas Liquids	
bbl or bbls	barrel or barrels
mbbls	thousand barrels
bbls/d	barrels of oil per day
NGLs	natural gas liquids

Natural Gas	
mcf	thousand cubic feet
mmcf	million cubic feet
bcf	billion cubic feet
mcf/d	thousand cubic feet per day
mmcf/d	million cubic feet per day
MMBTU	million British Thermal Units

Other

AECO	means EnCana Corp.'s natural gas storage facility at Suffield, Alberta, the Western Canadian Sedimentary Basin natural gas pricing benchmark.
BOE	means barrel of oil equivalent, using a conversion factor of 6 mcf of natural gas being equivalent to one barrel of oil, unless otherwise specified. The conversion factor used to convert natural gas to oil equivalent is not necessarily based upon either energy or price equivalents at this time.
BOE/d	barrels of oil equivalent per day, using a conversion factor of 6 mcf of natural gas being equivalent to one barrel of oil.
MBOE	means thousand barrels of oil equivalent.
WTI	means West Texas Intermediate.

CONVERSION

The following table sets forth certain conversions between Standard Imperial Units and the International System of Units (or metric units).

To Convert From	To	Multiply by
Mcf	cubic metres	28.174
cubic metres	cubic feet	35.494
Bbls	cubic metres	0.159
Feet	metres	0.305
Metres	feet	3.281
Miles	kilometres	1.609
Kilometres	miles	0.621
Acres	hectares	0.405
Hectares	acres	2.471

RESERVES DEFINITIONS

The following definitions and guidelines have been prepared by the Standing Committee on Reserves Definitions of the CIM (Petroleum Society). Further information is contained in Section 5.4 of Volume 1 of the *COGE Handbook* (First Edition, June 30, 2002). Readers should consult the *COGE Handbook* for additional explanation and guidance. Certain other terms used in this prospectus have the meanings assigned to them in National Instrument 51-101 and accompanying Companion Policy 51-101CP, adopted by the Canadian securities regulatory authorities.

Reserves Categories

Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.

Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.

Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.

Development and Production Status

Each of the reserves categories (proved, probable and possible) may be divided into developed and undeveloped categories:

Developed reserves are those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (for example, when compared to the cost of drilling a well) to put the reserves on production. The developed category may be subdivided into producing and non-producing.

Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut-in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.

Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut-in, and the date of resumption of production is unknown.

Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (for example, when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

Levels of Certainty for Reported Reserves

The qualitative certainty levels referred to in the definitions above are applicable to individual reserves entities (which refers to the lowest level at which reserves calculations are performed) and to reported reserves (which refers to the highest-level sum of individual entity estimates for which reserves estimates are presented). Reported reserves should target the following levels of certainty under a specific set of economic conditions:

- at least a 90 percent probability that the quantities actually recovered will equal or exceed the estimated proved reserves;
- at least a 50 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable reserves; and
- at least a 10 percent probability that the quantities actually recovered will equal or exceed the sum of the estimated proved plus probable plus possible reserves.

GLOSSARY OF TERMS

In this Exhibit, the following capitalized terms have the meanings set forth below. Unless otherwise defined below or elsewhere in this Exhibit, capitalized terms used in this Exhibit have the meaning given to such words and phrases in the "Glossary of Terms" in the Information Circular.

"**API**" means the American Petroleum Institute.

"**°API**" is an indication of the specific gravity of crude oil measured on the API gravity scale. Liquid petroleum with a specific gravity of 28 ° API or higher is generally referred to as light crude oil;

"**Board of Directors**" or "**Board**" means the board of directors of Denison Oil.

"**GLJ**" means Gilbert Laustsen Jung Associates Ltd., Petroleum Consultants.

"**GLJ Reserve Report**" means the evaluation report prepared by GLJ dated January 9, 2004 and effective as of October 1, 2003, respecting the Countess and Lubicon properties, which are being acquired by Denison Resources pursuant to the Petroleum and Natural Gas Conveyance Agreement.

"**Information Circular**" means the management information circular to which this Exhibit is attached.

"**Martin & Brusset**" means Martin & Brusset Associates, Petroleum Consultants.

"**Martin & Brusset Report**" means the evaluation report prepared by Martin & Brusset dated January 9, 2004 and effective as of October 1, 2003, respecting the Knappen, Meekwap, Skiff and Smiley properties, which are being acquired by Denison Resources pursuant to the Petroleum and Natural Gas Conveyance Agreement.

Words importing the singular include the plural and vice versa and words importing any gender include all genders.

In this Exhibit, references to "dollars" and "$" are to the currency of Canada, unless otherwise indicated.

DENISON OIL CORPORATION

Denison Oil was incorporated under the ABCA on January 21, 2004 in order to take part in the Denison Arrangement. The head office of Denison Oil is currently located at Atrium on Bay, 320 - 40 Dundas Street West, Toronto, Ontario, M5G 2C2, and the registered office of Denison Oil is located c/o Blake, Cassels & Graydon LLP, 3500, 855 - 2nd Street S.W., Calgary, Alberta T2P 4J8.

Denison Oil is a wholly owned subsidiary of Denison Energy and currently has no operations. Denison Oil holds all the shares of two subsidiaries, Denison Resources and 1087215 Alberta Ltd. Denison Resources in turn holds all the shares of Denison Resources Holding Corporation, also incorporated under the ABCA. Denison Resources Holding Corporation and Denison Resources have entered into the Partnership Agreement to establish the Partnership. The Partnership currently has no assets other than the initial cash contribution by each of its partners, and has not carried on any operations to date.

As part of the Denison Arrangement, Denison Energy will transfer all of the Petroleum and Natural Gas Assets to Denison Resources, and Denison Resources will assume all of the PNG Liabilities and issue Denison Resources Common Shares to Denison Energy. Denison Resources will then contribute the Petroleum and Natural Gas Assets to the Partnership, in exchange for which the Partnership will assume all of the PNG Liabilities and issue Partnership Units to Denison Resources. Denison Energy will exchange each of its shares of Denison Resources for 1/5 of a share of Denison Oil, and will distribute its shares of Denison Oil to Denison Energy's shareholders on the basis of 1/5 of a common share of Denison Oil for each Denison Energy Common Share. See "The Denison Plan of Arrangement" in the Information Circular for more detailed information on the transactions that form the Denison Arrangement.

Following the Denison Arrangement, Denison Oil will indirectly hold all of the assets comprising Denison Energy's existing Canadian oil and natural gas exploration and development business, consisting of oil and natural gas properties located in the Countess, Lubicon, Meekwap, Skiff and Knappen areas of Alberta and the Smiley area of Saskatchewan, together with related facilities, and approximately 9,494 gross (6,732 net) hectares of undeveloped land in those provinces.

See "Narrative Description of the Business" below for a more detailed description of Denison Energy's existing business and properties.

It is anticipated that following completion of the Denison Arrangement, Denison Oil will complete the Forte Arrangement. As a result of the Forte Arrangement, Denison Oil will become the owner of all of the outstanding common shares of Forte, and the holders of Forte Common Shares before the Forte Arrangement will, in the aggregate, own approximately 80% of Denison Oil's issued and outstanding common shares following completion of the Forte Arrangement. See "The Forte Plan of Arrangement" in the Information Circular for a description of the terms of the proposed Forte Arrangement and Exhibit "N" – "Information Concerning Denison Oil After the Forte Arrangement" for information regarding the business of Denison Oil following completion of the Forte Arrangement.

GENERAL DEVELOPMENT OF THE BUSINESS

Denison Oil has not carried on any active business since its incorporation. In connection with the Denison Arrangement, Denison Resources will enter into the Petroleum and Natural Gas Conveyance Agreement with Denison Energy and the Contribution Agreement with the Partnership. The Petroleum and Natural Gas Conveyance Agreement provides that Denison Energy will transfer the Petroleum and Natural Gas Assets to Denison Resources. In consideration for the Petroleum and Natural Gas Assets, Denison Resources will assume all of the PNG liabilities and will issue to Denison Energy the number of Denison Resources Common Shares equal to the number of Denison Energy Common Shares issued and outstanding on the Arrangement Record Date. The Contribution Agreement provides that Denison Resources will contribute the Petroleum and Natural Gas Assets to the Partnership. In consideration for the Petroleum and Natural Gas Assets, the Partnership will assume all of the PNG liabilities from Denison Resources and will issue to Denison Resources the number of Partnership units representing the fair market value of the Partnership Units based on a price of $1,000 per Partnership Unit. Denison Energy will exchange each of its Denison Resources Common Shares for 1/5 of a Denison Oil Common Share, and will distribute its shares of Denison Oil to Denison Energy's Shareholders on the basis of 1/5 of a Denison Oil Common

Share for each Denison Energy Common Share. Denison Oil will be Denison Resources, direct parent, and Denison Oil will have, following completion of the Denison Arrangement, the same shareholders as Denison Energy has immediately before the Denison Arrangement is completed.

As a result of the Denison Arrangement, Denison Oil will own all of the assets associated with Denison Energy's Canadian oil and natural gas division.

Trends

There are a number of trends that have been developing in the oil and gas industry during the past two years that appear to be shaping the near future of the business and that may affect Denison Oil's business. These trends are described under the heading "Background – Trends" in Exhibit "L" to the Information Circular – "Information Concerning Forte Oil Corporation".

NARRATIVE DESCRIPTION OF THE BUSINESS

General

Following the completion of the Plan of Arrangement, Denison Oil will be an oil and natural gas company engaged in the exploration for, and the acquisition, development and production of, oil and natural gas reserves primarily in the Western Canadian Sedimentary Basin. Denison Oil, through its subsidiary Denison Resources, will continue to own and operate the properties associated with Denison Energy's existing oil and gas division, following completion of the Denison Arrangement.

Background of Denison Energy's Oil and Natural Gas Business

In 2000, as part of its efforts to re-establish a presence in the oil and natural gas business in western Canada, Denison Energy entered into a farm-in and joint venture agreement with Flatland Exploration Ltd., a private company, for oil exploration in southeastern Saskatchewan. The first well under that agreement was drilled near Carlyle and was completed as a successful horizontal oil well. This well was placed on production in the fourth quarter of 2000. A second well, drilled on a different structure, was dry.

Denison Energy continued with the exploration program in Saskatchewan through the first part of 2001, participating in the drilling of four (two net) wells. Three of these wells were completed as oil wells on the Freemantle structure to the west of Carlyle. The fourth well at Freemantle was dry and was converted to a water disposal well. A battery, 50% owned by Denison Energy, capable of processing and treating the production from the three producing wells and disposing of the water associated with the production, was installed at the Freemantle field.

Late in the first quarter of 2001, Denison Energy purchased a 50% interest in the Countess oil field ("Countess"), and its three producing oil wells, located east of Calgary. The remaining 50% interest in Countess was then owned by Innovative Energy Ltd. ("Innovative"), who was also the operator of the Countess field. Following the Countess acquisition, Denison Energy farmed–in on Innovative's land at Knappen, in southern Alberta near the U.S. border, and drilled a successful natural gas well.

As a result of the successful association with Innovative, Denison Energy purchased all of the issued and outstanding shares of Innovative in the fourth quarter of 2001 for a combination of cash, the issuance of shares from treasury and the assumption of debt. Innovative was wound up into Denison Energy on December 31, 2001.

Denison Energy continued the expansion of its oil and gas activities throughout 2002 and the first nine months of 2003 through a combination of acquisitions, farm-ins and drilling. Production for 2002 averaged 564 BOE/d, which was 458% higher than that in 2001, and was composed of 58% oil. Production in 2003 increased further to an average of 641 BOE/d, and was composed of 63% oil.

The Countess field, now 100% owned by Denison Energy, is Denison Energy's principal area of operation, with production currently at approximately 280 BOE/d and originating from both the Ostracod and the Basal Quartz formations at approximately 1,300 metres depth. Denison Energy drilled five wells at Countess in 2002 and 2003,

with three wells completed and on production as oil wells, one standing gas well and the fifth well was converted to a water disposal well for water produced at the site, thereby reducing Denison Energy's operating costs. The battery installed at Countess has been sized to enable it to custom treat fluids for other operators in the area.

Denison Energy's gas operations are focused mainly on the Knappen and Aden areas in southern Alberta. The first Knappen well was drilled successfully in 2001, and entered production in early 2002. This well, which had produced approximately 215 BOE/d in the second quarter of 2002, was suspended in the middle of the year due to high water production. A second well, drilled in the fourth quarter of 2002 to evaluate several zones in this gas field identified by a seismic survey, was completed at a depth of 850 metres as a Mississippian gas well. Denison Energy also participated in another successful natural gas well at Knappen in which it holds a 38.5% interest. Two other 100% owned gas wells were drilled and completed in the adjacent Aden area. Insufficient pipeline capacity in the Knappen and Aden areas had delayed these wells from being put into production. All but one of these wells has been tied in, with Denison Energy's share of production averaging 125 BOE/d in December 2003.

In September of 2002, Denison Energy acquired a majority working interest in the Skiff producing oil property located in southeastern Alberta, for which Denison Energy is now the operator. Efforts are currently underway to reinstate the waterflood program, which had been operated successfully for several years before being suspended in 2000. Since initiating this waterflood program, the production rate has increased by 29 BOE/d. Denison Energy expects that these efforts will appreciably increase the reserves and the production rate in this field. There is also potential on these lands for the development of shallow gas production. Denison Energy has continued to acquire additional working interests in this core area.

A new oil discovery, in which Denison Energy holds a 100% working interest, was made at Lubicon, located northwest of Edmonton, and placed on production in December of 2002 at a rate of 100 BOE/d. This well was connected by pipeline to a third party's facilities late in the first quarter of 2003 and is currently producing approximately 30 BOE/d.

Denison Energy also drilled a successful gas well, which was 100% owned by Denison Energy, at Bow Island located in southeastern Alberta. However, Denison Energy was not able to put this well on stream due to lack of pipeline capacity. The Corporation sold this property in April of 2003 for in excess of $950,000.

Denison Energy also has production from its 50% working interest in one Bakken sour gas well at Smiley near Kindersley, Saskatchewan, and from its 1% unit interest in oil production at Meekwap, Alberta. On September 1, 2003 Denison Energy acquired the remaining 50% interest in the Whiteside/Smiley area of Saskatchewan, including the sour natural gas well at Smiley, for $600,000, adding 572 mmcf of natural gas reserves and 245 mcf/d of production.

In October of 2003, Denison Energy disposed of its Carlyle and Freemantle, Saskatchewan assets for $255,000. The proved and probable reserves associated with these assets were estimated to be 9,000 bbls.

Denison Energy's 2003 revenue from its oil and gas division was $8.7 million, an increase of 43% over 2002 revenue of $6.1 million. Average selling price per BOE increased from $29.72 to $36.98 in 2003. Oil and natural gas operating costs were $8.61 per BOE in 2003 compared to $7.28 in 2002. Field netback increased by approximately 34% from $15.24 per BOE to $20.39 per BOE in 2003.

OIL AND GAS OPERATIONAL INFORMATION

Operating History

The following table shows Denison Energy's daily average production, unit prices and netbacks received and capital expenditures incurred for each of the following periods:

	2003				2002				2001			
	Quarter Ending				Quarter Ending				Quarter Ending			
	Dec. 31	Sept. 30	June 30	March 31	Dec. 31	Sept. 30	June 30	Mar. 31	Dec. 31	Sept. 30	June 30	Mar. 31
Daily Production												
Oil[1] (bbl)	367	386	417	457	383	270	369	298	162	107	81	24
Natural Gas (mcf)	1,641	1,488	1,398	1,091	1,208	1,100	2,050	1,302	548	89	54	8
Total (BOE)	641	634	650	639	584	453	711	515	253	122	90	25

Spending ($ thousands)												
Acquisition	6	563	126	170	1,216	0	0	0	5,750	0	2,170	240
Dispositions	(255)	0	0	(944)	0	0	0	0	0	0	0	0
Explore and Drill	110	643	345	1,353	3,159	1,409	1,462	21	1,550	660	390	380
Facilities	63	79	273	445	363	305	482	364	2,020	190	0	0
Total	(76)	1,285	744	1,024	4,738	1,714	1,944	385	9,320	850	2,560	620

Notes:

(1) Natural gas liquids have been included with oil production amounts due to immaterial volumes produced.

(2) Operating costs are expenses incurred in the operation of producing properties and include contract field operation and supervision, power, fuel, chemicals, repairs and maintenance, property taxes, surface lease rentals, trucking, water disposal, processing and treating fees and other similar costs associated with the production of petroleum products.

Drilling Activity

The following table sets forth information with respect to all wells in which Denison Energy participated during the years ending December 31, 2003, 2002 and 2001:

	Year Ending					
	December 31, 2003		December 31, 2002		December 31, 2001	
	Gross	Net	Gross	Net	Gross	Net
Oil Wells	0.0	0.0	3.0	2.0	5.0	3.5
Gas Wells	1.0	1.0	5.0	4.4	1.0	1.0
Dry and Abandoned Wells	5.0	4.1	6.0	4.8	2.0	1.5
Total Wells	6.0	5.1	14.0	11.2	8.0	6.0

A number of leasing and farm-in possibilities are being reviewed and plans are being developed to drill both exploration and development wells on company-owned land in 2004.

Oil and Natural Gas Wells

The following table summarizes, as at December 31, 2003, Denison Energy's interests (including both working and carried interests) in producing wells. Although many wells produce both oil and natural gas, a well is categorized as an oil well or a natural gas well based upon the proportion of oil or natural gas production.

	Producing Wells				
	Oil		Natural Gas		
	Gross[1]	Net[2]	Gross[1]	Net[2]	Processing Facilities
Countess, Alberta	6.0	6.0	--	--	Yes
Lubicon, Alberta	1.0	1.0	--	--	No
Meekwap, Alberta	18.0	0.2	--	--	Yes
Skiff, Alberta	25.0	17.7	2.0	1.1	Yes
Knappen, Alberta	--	--	4.0	2.3	Yes
Smiley, Saskatchewan	--	--	1.0	1.0	Yes
Total	50.0	24.9	7.0	4.4	

Notes:
(1) "Gross" wells means the total number of producing wells in which Denison Energy has an interest.
(2) "Net" wells means the interest of Denison Energy in such wells obtained by multiplying each gross well by Denison Energy's proportional working interest therein.

Land Holdings

The following table sets forth Denison Energy's holdings in oil and natural gas land at September 30, 2003 excluding royalty interests.

	Oil and Natural Gas Holdings[1] (hectares)	
	Gross[2]	Net[3]
Developed	6,825	4,723
Undeveloped	9,494	6,732

Notes:
(1) "Holdings" includes working interests and carried interests.
(2) "Gross" refers to the total area in which Denison Energy has an interest.
(3) "Net" refers to the gross area multiplied by Denison Energy's working interests.

Denison Energy expects its rights to explore on approximately 728 net acres (consisting of 715 net acres attributable to working interest lands and 13 net acres attributable to royalty interest lands) to expire prior to December 31, 2004.

Abandonment and Reclamation Costs

In connection with its operations, Denison Energy will incur abandonment and reclamation costs for surface leases, wells, facilities and pipelines. Denison Energy estimates such costs by using industry standard methods. Equipment prices were obtained by using the Petroleum Accounting Society of Canada manual and abandonment costs were determined from past work experience and are based on 55.6 net wells on which Denison Energy expects to incur such costs. Denison Energy anticipates that abandonment and reclamation costs will exceed the estimated salvage value of the equipment by $286,000 on an undiscounted basis and $54,000 discounted at 10%. Denison Energy anticipates that approximately $9,000 will be incurred in the next three financial years for abandonment and reclamation costs. None of this amount was included in the calculation of future net revenue in the tables under "Summary of Oil and Gas Reserves and Net Present Values of Future Net Revenue". Abandonment and reclamation obligations relating to Denison Energy's oil and natural gas operations will be assumed by Denison Resources in connection with the Denison Arrangement.

Tax Horizon

Denison Energy will not be required to pay cash income taxes for the year ended December 31, 2003. Based on tax pools and certain assumptions on the date hereof, Denison Energy anticipates that there will not be any cash taxes payable by Denison Oil during the life of the proved reserves.

Costs Incurred

In the year ended December 31, 2003, Denison Energy expended a total of $0.87 million on property acquisitions (including $0.73 million for proved properties and $0.14 million for unproved properties), as well as $2.45 million

in exploration costs and $0.86 million for development costs. Denison Energy also made property dispositions for the year ended December 31, 2003 of $1.20 million.

Oil and Gas Marketing

Denison Energy's production is sold at a price based on Edmonton Light crude with adjustments for quality and transportation. This price generally follows the trends in WTI, an internationally recognized reference price. Natural gas is sold to a marketer that purchases gas from a number of small producers and resells to major consumers. Natural gas prices are based on the AECO price for Alberta gas. As, internationally, oil and gas prices are generally in U.S. dollars, fluctuations in the exchange rate also affect Denison Energy's revenue. None of Denison Energy's oil and gas production is currently hedged.

Following the events of September 11, 2001, the WTI price dropped to a low of US $17.50 by mid–November of 2001. Since then, oil prices have risen to 12–year highs early in 2003 before softening as a result of the developments with the war in Iraq. Prices by the end of the third quarter were near US $30.

Since the Edmonton Light price, which forms the base on which Denison Energy's crude is sold, generally follows the WTI price, it is expected to average in the low to mid-Cdn$30 range for 2004.

Natural gas prices are largely dependent on gas storage levels and the discovery of new gas reserves in North America are not keeping pace with consumption. Gas prices are again increasing in anticipation of another very cold winter. The lack of pipeline capacity to move gas to market is also a contributing factor affecting prices.

OIL AND NATURAL GAS RESERVES

GLJ and Martin & Brusset (the "Engineers"), each independent petroleum engineering firms, have evaluated Denison Energy's crude oil, NGLs and natural gas reserves in accordance with National Instrument 51-101, adopted by the Canadian securities regulatory authorities, in reports dated January 9, 2004 and effective October 1, 2003 (the "Engineering Reports"). The GLJ Report evaluated Denison Energy's Countess and Lubicon properties and the Martin & Brusset Report evaluated Denison Energy's Knappen, Meekwap, Skiff and Smiley properties. Each of the reports used GLJ's January 1, 2004 price forecasts. The constant price cases contained herein were extracted from separate reports prepared by GLJ and Martin & Brusset dated January 28 and 26, 2004, respectively, which were based upon the Engineering Reports that used forecast prices and costs.

In preparing their Engineering Reports, the Engineers obtained basic information from Denison Energy, which included production and land data, well information, geological information, reservoir studies, estimates of on-stream dates, contract information, current hydrocarbon product prices, operating cost data, capital budget forecasts, financial data and future operating plans. Other engineering, geological or economic data required to conduct the evaluation and upon which the Engineering Reports are based was obtained from public records, other operators and from each of the Engineer's non-confidential files. Information concerning the extent and character of ownership of Denison Energy's interests and the accuracy of all factual data supplied to the Engineers by third parties was accepted by the Engineers as represented and neither title searches nor field inspections were conducted.

The following is a summary, as at October 1, 2003, of the crude oil, NGLs and natural gas reserves attributable to Denison Energy's properties and the present worth value of the estimated future net cash flows associated with such reserves, based on forecast and constant price and cost assumptions. The tables summarize the data contained in the evaluations and as a result may contain slightly different numbers than the evaluations due to rounding. **All future cash flows are stated before provision for income taxes. It should not be assumed that the present worth of estimated future cash flows shown below is representative of the fair market value of the reserves. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserve estimates of Denison Energy's crude oil, NGLs and natural gas reserves provided herein are estimates only and there is no guarantee that the estimated reserves will be recovered. Actual reserves may be greater than or less than the estimates provided herein. Actual future net cash flows may differ significantly from those estimated due to, but not limited to, the following:**

- **production rates may differ from those estimated both in terms of timing and amount;**

- **future prices and economic conditions may differ from those used in calculating reserves; and**
- **future production and development expenses will be determined by future events.**

The information presented below is drawn from the Engineering Reports and was compiled from the Engineering Reports by Denison Energy. Neither of the Engineers participated in or reviewed the compilation of this information for the purposes of the presentation of reserves in this Exhibit.

SUMMARY OF OIL AND GAS RESERVES AND NET PRESENT VALUES OF FUTURE NET REVENUE As of October 1, 2003

Constant Prices and Costs

Total Proved Plus Probable Reserves	14,211	9,817	9,328	8,710	7,892

Notes:

1. (a) "Gross Reserves" are defined as the applicable working interest share of the remaining total recoverable reserves associated with the acreage of interest, before deduction of any royalties.
   (b) "Net Reserves" are defined as the applicable working interest share and/or royalty interest share of the remaining reserves, less all royalties and interests owned by others.
   (c) "Net Present Value of Future Net Revenue" is income derived from the future sale of net reserves of oil, pipeline gas, and by-products less all capital and operating costs, except that no allowance has been made for well abandonment and lease reclamation costs upon depletion of the reserves, unless otherwise stated.
   (d) "Probable Reserves" generally reflect incremental recoveries based on better performance on producing oil and gas properties and reserves associated with "behind casing" gas. "Proved Developed Non-Producing Reserves" are primarily gas reserves from wells suspended in 2003, due to pipeline capacity, that are scheduled to resume production after September 30, 2003 as a result of increased pipeline capacity.

2. Outlined below are the constant and forecast price and cost assumptions utilized in preparing the Engineering Reports as of October 1, 2003. Each of Martin & Brusset and GLJ used GLJ's price forecast, effective January 1, 2004, is set out in the table below. Actual prices, as used in their report of Denison Energy's reserves, have been adjusted for quality and transportation:

Constant Prices and Costs

Year	CRUDE OIL WTI Cushing Oklahoma ($US/bbl)	Edmonton Par Price 40° API ($Cdn/bbl)	Cromer Medium 29.3° API ($Cdn/bbl)	NATURAL GAS AECO Gas Price ($Cdn/MMBTU)	NATURAL GAS Saskatchewan Spot Price ($Cdn/MMBTU)	PENTANES PLUS FOB Field Gate ($Cdn/bbl)	INFLATION RATE (%/Yr)	EXCHANGE RATE(1) ($US/$Cdn)
2003 and Thereafter	32.52	40.81	34.81	6.09	5.98	38.31	0	0.7738

Note:

(1) Exchange rate used to generate the benchmark reference prices in this table.

Forecast Prices and Costs(1)

Year	CRUDE OIL WTI Cushing Oklahoma ($US/bbl)	Edmonton Par Price 40° API ($Cdn/bbl)	Cromer Medium 29.3° API ($Cdn/bbl)	NATURAL GAS AECO Gas Price ($Cdn/MMBTU)	NATURAL GAS Saskatchewan Spot Price ($Cdn/MMBTU)	PENTANES PLUS FOB Field Gate ($Cdn/bbl)	INFLATION RATES(2) (%/Yr)	EXCHANGE RATES(3) ($US/$Cdn)
2003	30.96	43.51	37.26	6.66	6.68	44.01	2.8	0.721
2004	29.00	37.75	31.75	5.85	5.75	38.25	1.5	0.750
2005	26.00	33.75	28.75	5.15	5.05	34.25	1.5	0.750
2006	25.00	32.50	28.50	5.00	4.90	33.00	1.5	0.750
2007	25.00	32.50	28.50	5.00	4.90	33.00	1.5	0.750
2008	25.00	32.50	28.50	5.00	4.90	33.00	1.5	0.750
Thereafter	25.00	32.50	28.50	5.00	4.90	33.00	1.5	0.750

Notes:

(1) Pricing assumption supplied by GLJ effective January 1, 2004.
(2) Inflation rates used for forecasting prices and costs.
(3) Exchange rates used to generate the benchmark reference prices in this table.

3. The total capital costs, net to Denison Energy, necessary to achieve the estimated future proved and probable future net revenues, are estimated to be $0.3 million.

4. Based on average third quarter 2003 production rates, Denison Energy's proved reserve life index is 4.2 years and 3.2 years for natural gas and oil, respectively. The corresponding proved plus probable reserve life indexes for natural gas and oil are 5.5 and 4.8 years, respectively.

5. Denison Energy has approximately 75 MBOE of proved plus probable reserves which are capable of production but which, as of October 1, 2003, were not on production. These reserves have generally been non-producing for two years and have been shut in due to lack of pipeline capacity. One well resumed production in December, 2003, leaving one well to be tied in.

Undiscounted Total Future Net Revenue

The following tables describe the undiscounted total future net revenue of Denison Energy's oil and natural gas reserves as of October 1, 2003, using both constant and forecast prices and costs.

Constant Prices and Costs

Reserves Category	Revenue	Royalties	Operating Costs	Development Costs	Well Abandonment Costs	Future Net Revenue Before Income Taxes
				(in $ thousands)		
Proved Reserves	28,854	5,894	8,114	130	--	14,685
Proved Plus Probable Reserves	40,416	7,288	12,423	320	--	20,513

Forecast Prices and Costs

Reserves Category	Revenue	Royalties	Operating Costs	Development Costs	Well Abandonment Costs	Future Net Revenue Before Income Taxes
				(in $ thousands)		
Proved Reserves	24,873	5,398	8,490	135	--	11,013
Proved plus Probable Reserves	34,536	6,664	13,687	330	--	14,212

Estimated 2003 and 2004 Production

The following table describes the Engineers' estimated volume of gross average daily production for the fourth quarter of 2003 and the year 2004 in preparing the estimated net present values of future net revenue under the heading "Summary of Oil and Gas Reserves and Net Present Values of Future Net Revenue" above. For actual 2003 production, see "Oil and Gas Operational Information – Operating History".

Product Type	Estimated Fourth Quarter 2003 Production	Estimated 2004 Production
Crude Oil		
Light and medium oil (bbls/d)	350	291
Heavy oil (bbls/d)	--	--
Total crude oil (bbls/d)	350	291
Natural gas liquids (bbls/d)	3	2
Total liquids (bbls/d)	353	293
Natural gas (Mcf/d)	1,386	1,276
Total (BOE/d)	583	505

The Engineers estimate that average production from the Countess property will be 300 BOE/d in the fourth quarter 2003 (consisting of 223 bbls/d of crude oil and NGLs and 462 Mcf/d of natural gas) and 231 BOE/d in the year 2004 (consisting of 175 bbls/d of crude oil and NGLs and 334 Mcf/d of natural gas).

Future Development Costs

The following table summarizes the amount of development costs of Denison Energy deducted in the estimation of future net revenue in the foregoing tables.

	Constant Prices and Costs		Forecast Prices and Costs			
	Proved Reserves		Proved Reserves		Proved Plus Probable Reserves	
Year	Undiscounted	Discounted at 10%/year	Undiscounted	Discounted at 10%/year	Undiscounted	Discounted at 10%/year
2003	--	--	--	--	--	--
2004	$65,000	$59,000	$66,000	$59,000	$260,000	$174,000
2005	--	--	--	--	--	--
2006	--	--	--	--	--	--
2007	$65,000	$47,000	$69,000-	$51,000	70,000	52,000
2008	--	--	--	--	--	--
TOTAL	$130,000	$106,000	$135,000	$110,000	$330,000	$226,000

Denison Energy anticipates that the future development costs necessary for the production of its current reserves will be financed through internally-generated cash flow.

Reconciliation of Gross Reserves by Principal Product Type

A reconciliation of Denison Energy's reserves to reflect the changes from December 31, 2002 to October 1, 2003, using forecast prices and costs, is shown in the table below:

	LIGHT AND MEDIUM CRUDE OIL AND NGLs			HEAVY OIL			NATURAL GAS

SELECTED FINANCIAL INFORMATION AND MANAGEMENT'S DISCUSSION AND ANALYSIS

General

Included elsewhere herein are (i) audited financial statements of the Oil and Gas Division of Denison Energy for each of the years in the three year period ended December 31, 2002 and unaudited financial statements for the nine-month period ended September 30, 2003 and 2002 and (ii) unaudited pro forma financial information of Denison Oil giving effect to the Denison Arrangement as at and for the nine months ended September 30, 2003 and for the year ended December 31, 2002.

The following should be read in conjunction with the financial statements, the accounting policies included therein and the other related notes contained elsewhere in the Information Circular.

The following table is a summary of selected financial information for the Oil and Gas Division of Denison Energy for the periods indicated. The following information should be read in conjunction with the audited financial statements of the Oil and Gas Division of Denison Energy for each of the years in the three year period ended December 31, 2002 and the unaudited financial statements for the nine-month period ended September 30, 2003 and 2002.

	Nine Months Ended September 30,		Year Ended December 31,		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)	(audited)	(audited)	(audited)
Income Statement Data					
Revenue	$ 6,745	$4,323	$6,142	$1,267	$ --
Expenses	18,421	4,070	5,940	1,009	190
Earnings (loss) before income taxes	(11,676)	253	202	258	(190)
Income tax expense (recovery)	--	--	--	--	--
Net earnings (loss) for the period	$(11,676)	$ 253	$ 202	$ 258	$(190)

For selected financial information of Denison Oil giving effect to the Denison Arrangement and the Forte Arrangement, see "Selected Financial Information" in Exhibit "N" to the Information Circular.

Management's Discussion and Analysis

For management's discussion and analysis of financial conditions and results of operations relating to the oil and natural gas operations of Denison Energy in 2001 and 2002 and for the period ended September 30, 2003, refer to the heading "Oil and Gas Division" in "Management's Discussion and Analysis Regarding Denison Energy" in Exhibit "O" to the Information Circular.

CAPITALIZATION

As at the date hereof, the sole shareholder of Denison Oil is Denison Energy. Denison Energy owns one (1) Denison Oil Common Share having a stated capital of $2001. For a description of the share capital of Denison Oil, see "Description of Share Capital" below.

For pro forma information relating to Denison Oil after giving effect to the Denison Arrangement, see the Unaudited Pro Forma Balance Sheet of Denison Oil Corporation, attached as Appendix B to this Exhibit, and for pro forma information relating to Denison Oil after giving effect to the Forte Arrangement, see Appendix A to Exhibit "N" – Denison Oil Corporation Pro Forma Financial Statements.

DESCRIPTION OF SHARE CAPITAL

The authorized share capital of Denison Oil consists of an unlimited number of Denison Oil Common Shares, an unlimited number of Denison Oil First Preferred Shares, 3,500,000 Denison Oil Performance Shares and an unlimited number of Denison Oil Second Preferred Shares. Immediately following completion of the Denison Arrangement, there will be approximately 3,734,111 Denison Oil Common Shares and no preferred shares or performance shares, outstanding.

Please see "Description of Share Capital" in Exhibit "N" – "Information Concerning Denison Oil After the Denison Arrangement", for a description of each of the Denison Oil Common Shares, Denison Oil First Preferred Shares, including the Denison Oil Performance Shares and Denison Oil Second Preferred Shares.

Prior Sales

On January 21, 2004, Denison Oil issued one Denison Oil Common Share to Denison Energy at a price of $2001 to facilitate Denison Oil's organization.

DIRECTORS AND OFFICERS

The following table sets out the names and municipalities of residence of each of the current directors and officers of Denison Oil, their current positions and offices with Denison Oil, the number of Denison Oil Common Shares beneficially owned or controlled after given effect to the Denison Arrangement, and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Position with Denison Oil	Number of Denison Oil Common Shares Beneficially Owned or Controlled after Giving Effect to the Denison Arrangement[(1)]	Present Occupation During the Last Five Years
T. E. Craig Bamford Pickering, Ontario	Interim Chief Financial Officer	0 0.0%	Vice President, Finance and Chief Financial Officer, Denison Energy
James S. Blair Calgary, Alberta	Director	4.857 0.1%	President and Chief Executive Officer, ExAlta Energy Inc. since 2002; Director of Denison Energy since 2002. Prior thereto, Senior Vice President and Chief Operating Officer of Husky Energy Inc. (an integrated energy company).
E. Peter Farmer Toronto, Ontario	Interim Chief Executive Officer	85,198 2.3%	President and Chief Executive Officer, Denison Energy
Gregory S. Fletcher Calgary, Alberta	Director	750 0.0%	President, Sierra Energy Inc. (oil and gas development and production company); Director of Denison Energy

Notes:

(1) Based on the number of Denison Energy Common Shares held by each individual listed above as at January 28, 2004, as if these were the holdings of such individual at the Denison Effective Date.

The officers and directors of Denison Oil, as a group, will beneficially own or exercise control over, directly or indirectly, 90,805 equity shares, representing approximately 2.4% of the outstanding equity shares upon completion of the Denison Arrangement and before giving effect to the Forte Arrangement.

All of the directors and officers of Denison Oil have previously served in similar capacities with Denison Energy. The term of office of each of the directors of Denison Oil will expire at the next annual meeting of the holders of Denison Oil Common Shares or until the resignation of such directors. If the Forte Arrangement is completed, Mr. Farmer will resign as a director and as Interim Chief Executive Officer of Denison Oil, and Mr. Bamford will resign as Interim Chief Financial Officer, and that new directors and officers will be appointed to the Board. See "The Forte Plan of Arrangement" in the Information Circular and "Directors and Officers of Denison Oil" in Exhibit "N" – "Information Regarding Denison Oil After the Forte Arrangement" for a description of the proposed directors and officers of Denison Oil following the Forte Arrangement.

Denison Oil's board will have no committees prior to the completion of the Denison Arrangement.

MANAGEMENT

The following is a brief description of the directors and senior officers of Denison Oil before giving effect to the Forte Arrangement.

James S. Blair, Director

Mr. Blair has served as director of Denison Energy since May of 2002. Mr. Blair is President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in western Canada, offshore eastern Canada and Asia. Mr. Blair is a director

of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta. His studies concentrated on resource economics and international trade.

E. Peter Farmer, Interim President and Chief Executive Officer

Mr. Farmer is the President and Chief Executive Officer of Denison Energy. Mr. Farmer joined Denison Energy in June 1985 as General Counsel and Secretary and later served as Vice President General Counsel and Secretary before his appointment as President and Chief Executive Officer in March 1997. Prior to joining Denison Energy, Mr. Farmer practiced law with the firm of Beechie and Kerr and served as Counsel for Avco Financial Services and Union Enterprises Ltd. Mr. Farmer completed his B.A. at Queen's University in 1971 and received his LL.B. from the University of Windsor Ontario in 1974.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison Energy since May of 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. and prior to 1997 he was President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

T. E. Craig Bamford, Interim Chief Financial Officer

Mr. Bamford has served as Vice President Finance and Chief Financial Officer of Denison Energy since October 2000. Mr. Bamford joined Denison Energy in 1982 and has held numerous positions with the Corporation, including Controller. Mr. Bamford is a Chartered Accountant and holds a B.B.A. from Wilfred Laurier University.

PERSONNEL

As at the date of the Information Circular, Denison Oil has no employees. After giving effect to the Denison Arrangement and before giving effect to the Forte Arrangement, Denison Oil expects to have approximately 5 employees at its office in Calgary.

INTEREST OF MANAGEMENT IN MATERIAL TRANSACTIONS

Other than as disclosed in the Information Circular, none of the directors, officers or principal shareholders of Denison Oil, and no associate or affiliate of any of them, has or has had any material interest in any transaction which materially affects Denison Oil or any of its subsidiaries or affiliates.

PRINCIPAL SHAREHOLDERS

After giving effect to the Denison Arrangement and before giving effect to the Forte Arrangement, to the best of the knowledge of the directors and officers of Denison Oil, no persons will own, directly or indirectly, or exercise control or discretion over Denison Oil Common Shares carrying more than 10% of the votes attached to all of the issued and outstanding Denison Oil Common Shares.

COMPENSATION OF EXECUTIVE OFFICERS AND DIRECTORS

Compensation of Executive Officers and Directors

To date, Denison Oil has not carried on any active business and has not completed a fiscal year of operations. No compensation has been paid by Denison Oil to its executive officers or directors and none will be paid until after the Denison Arrangement and Forte Arrangement have been completed. See Exhibit "N" – "Information Regarding Denison Oil After the Forte Arrangement" for a description of the compensation of Denison Oil's officers following the Forte Arrangement.

Employment Agreements

Denison Oil has no employment agreements with any of its executives.

INDEBTEDNESS OF EXECUTIVE OFFICERS AND DIRECTORS

At no time since the formation of Denison Oil was there any indebtedness of any director or officer, or any associate of any such director or officer, to Denison Oil or to any other entity which is, or at any time since the formation of Denison Oil has been, the subject of a guarantee, support agreement, letter of credit or other similar arrangement or understanding provided by Denison Oil.

STOCK OPTION PLAN

Denison Oil does not have a stock option plan. If the Forte Arrangement is completed, Denison Oil will adopt the Denison Oil Stock Option Plan, attached as Exhibit "Q" to the Information Circular and described under the heading "Stock Options" in Exhibit "N" to the Information Circular.

RISK FACTORS

Industry Risks

There are many risks inherent in the oil and gas industry which even a combination of experience, knowledge and careful evaluation may not be able to overcome.

The success of Denison Oil will depend on its ability to develop and exploit efficiently its existing properties, and select and acquire suitable additional producing properties or undeveloped exploration prospects. The marketability of any oil and natural gas product, acquired or discovered by Denison Oil will be affected by numerous factors beyond the control of Denison Oil. These factors include market fluctuations, the world price of crude oil, the continental price of natural gas, the supply and demand for oil and natural gas, the proximity and capacity of oil and natural gas pipelines and processing equipment and government regulations, including regulations relating to prices, taxes, royalties, land tenure, allowable production, the import and export of oil and natural gas and environmental protection, and any changes to such agreement regulations, the impact of inflation on costs and the fluctuations in exchange rates. The effect of these factors cannot be accurately predicted.

Hazards such as unusual or unexpected geological formations, pressures, blow-outs, fires or other conditions may be encountered in drilling and operating wells. Denison Oil will have the benefit of insurance maintained by it; however, Denison Oil may become liable for damages arising from pollution, blowouts or other hazards against which it cannot insure or against which it may elect not to insure because of high premium costs or other reasons. Oil and gas production operations are also subject to all of the risks typically associated with such operations, including premature decline of reservoirs and invasion of water into formations, which may hinder economic production.

Competition

The oil and natural gas industry is highly competitive. Denison Oil competes for reserve acquisitions, exploration leases, licences and concessions, capital to finance such activities and skilled industry personnel with a substantial

number of other oil and natural gas companies, many of which have significantly greater financial and personnel resources than Denison Oil. Denison Oil's competitors include major integrated oil and natural gas companies and numerous other independent oil and natural gas companies and individual producers and operators. Denison Oil's ability to increase reserves in the future will depend on its ability to select and acquire suitable producing properties or prospects for exploratory drilling. Competitive factors in the distribution and marketing of oil and natural gas include price and methods and reliability of delivery.

Denison Oil's ability to successfully bid on and acquire additional property rights, to discover reserves, to participate in drilling opportunities and to identify and enter into commercial arrangements with customers will be dependent upon developing and maintaining close working relationships with its future industry partners and joint operators and its ability to select and evaluate suitable properties and to consummate transactions in a highly competitive environment.

Prices, Markets and Marketing

The marketability and price of oil and natural gas that may be acquired or discovered by Denison Oil will be affected by numerous factors beyond its control. Denison Oil's ability to market its natural gas may depend upon its ability to acquire space on pipelines that deliver natural gas to commercial markets. Denison Oil may also be affected by deliverability uncertainties related to the proximity of its reserves to pipelines and processing facilities, and related to operational problems with such pipelines and facilities as well as extensive government regulation relating to price, taxes, royalties, land tenure, allowable production, the export of oil and natural gas and many other aspects of the oil and natural gas business.

Both oil and natural gas prices are unstable and are subject to fluctuation. Any material decline in prices could result in a reduction of Denison Oil's net production revenue. The economics of producing from some wells acquired or drilled by Denison Oil may change as a result of lower commodity prices, which could result in a reduction in the volumes of Denison Oil's economic reserves. Denison Oil might also elect not to produce from certain wells at lower prices. All of these factors could result in a material decrease in Denison Oil's net future production revenue, causing a reduction in its oil and gas acquisition, development and exploration activities. In addition, bank borrowings available to Denison Oil are in part determined by Denison Oil's borrowing base. A sustained material decline in prices from historical average prices could reduce the borrowing base, therefore reducing the bank credit available to Denison Oil which could require that a portion, or all, of Denison Oil's bank debt be repaid.

Canadian Government Regulation

The oil and natural gas industry is subject to extensive controls and regulations imposed by various levels of government. It is not expected that any of these controls or regulations will affect the operations of Denison Oil in a manner materially different than they would affect other oil and gas service companies of similar size.

Environmental Risks and Environmental Regulation

All phases of the oil and natural gas business present environmental risks and hazards and are subject to environmental regulation pursuant to a variety of international conventions and federal, provincial and municipal laws and regulations. Environmental legislation provides for, among other things, restrictions and prohibitions on spills, releases or emissions of various substances produced or utilized in association with oil and natural gas operations. The legislation also requires that wells and facility sites be operated, maintained, abandoned and reclaimed to the satisfaction of applicable regulatory authorities. Compliance with such legislation can require significant expenditures and a breach of such legislation may result in the imposition of fines and penalties, the suspension or revocation of necessary licenses or authorizations, and civil liability for pollution damage, some of which may be material.

Environmental legislation is evolving in a manner expected to result in stricter standards and enforcement, larger fines and liability and potentially increased capital expenditures and operating costs. The discharge of oil, natural gas or other pollutants into the air, soil or water may give rise to liabilities to governments and third parties and may require Denison Oil to incur costs to remedy such discharge. No assurance can be given that environmental laws will not result in a curtailment of production or a material increase in the costs of production, development or

exploration activities or otherwise adversely affect Denison Oil's financial condition, results of operations or prospects.

Reserves Replacement

Denison Oil's future oil and natural gas reserves, production, and cash flows to be derived therefrom are highly dependent on Denison Oil successfully acquiring or discovering new reserves. Without the continual addition of new reserves, any existing reserves Denison Oil may have at any particular time and the production therefrom will decline over time as such existing reserves are exploited. There can be no assurance that Denison Oil's future exploration and development efforts will result in the discovery and development of additional commercial accumulations of oil and natural gas.

Recovery and Reserve Estimates

The recovery and reserve estimates of Denison Oil's oil and gas reserves provided for herein are estimates only and there is no guarantee that the estimated reserves will be recovered. In general, estimates of economically recoverable oil and natural gas reserves and the future net cash flows therefrom are based upon a number of factors and assumptions, all of which may vary considerably from actual results. Denison Oil's actual production, revenues, taxes and development and operating expenses and results will vary from estimates contained in the evaluations, and such variations could be material. Actual reserves may be greater or less than the estimates. Denison Oil has used both constant and escalated price and costs assumptions in calculating reserve quantities as required by securities disclosure legislation and policies in Canada.

Seasonality/Weather

The activities in the oilfield services industry are subject to a degree of seasonality. Operating activities within the Canadian service industry are generally lower in April and May, during spring break-up, and tend to increase in the fall and peak in the winter months of November through March. Additionally, volatility in the weather and temperature not only within these seasons, but year round as well, can create additional unpredictability in rig utilization rates and operational results for entities such as Denison Oil.

Title to Assets

Although title reviews may be conducted prior to the purchase of oil and natural gas producing properties or the commencement of drilling wells, such reviews do not guarantee or certify that an unforeseen defect in the chain of title will not arise to defeat Denison Oil's claim which could result in a reduction of the revenue received by Denison Oil.

Insurance

Denison Oil's involvement in the exploration for and development of oil and natural gas properties may result in Denison Oil becoming subject to liability for pollution, blow-outs, property damage, personal injury or other hazards. Although Denison Oil maintains insurance in accordance with industry standards to address such risks, such insurance has limitations on liability that may not be sufficient to cover the full extent of such liabilities. In addition, such risks may not in all circumstances be insurable or, in certain circumstances, Denison Oil may elect not to obtain insurance to deal with specific risks due to the high premiums associated with such insurance or to other reasons. The payment of any such uninsured liabilities would reduce the funds available to Denison Oil. The occurrence of a significant event against which Denison Oil is not fully insured, or the insolvency of the insurer of such an event, could have a material adverse effect on Denison Resources' financial position, results of operations or prospects.

Conflicts of Interest

Certain of the directors of Denison Oil may be engaged and will continue to be engaged in certain business interests on their own behalf and on behalf of other companies, and situations may arise where the directors and officers may be in direct competition with Denison Oil. Conflicts of interest, which arise will be subject to and governed by the procedures prescribed by the ABCA.

Reliance on Management and Key Employees

The success of Denison Oil will be largely dependent upon the performance, experience and expertise of management, and certain key employees, and its continued success will be dependent upon its ability to attract and retain experienced management and key employees. Denison Oil does not have in place key man insurance on management.

Reliance on Operators

To the extent Denison Oil is not the operator of its oil and natural gas properties, Denison Oil will be dependent on such operators for the timing of activities related to such properties and will largely be unable to direct or control the activities of the operators.

Permits and Licenses

The operations of Denison Oil may require licenses and permits from various governmental authorities. There can be no assurance that Denison Oil will be able to obtain all necessary licenses and permits that may be required to carry out exploration for and development of its properties and projects.

Additional Funding Requirements

Denison Oil anticipates that it will make substantial capital expenditures for the acquisition, exploration, development and production of oil and natural gas reserves in the future.

Denison Oil's cash flow may not be sufficient to fund its ongoing activities and implement its business plan. From time to time, Denison Oil may require additional financing in order to carry out its oil and natural gas acquisition, exploration and development activities. There can be no assurance that debt or equity financing or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to Denison Oil. Moreover, future activities may require Denison Oil to alter its capitalization significantly.

Failure to obtain such financing on a timely basis could cause Denison Oil to forfeit its interest in certain properties, miss certain acquisition opportunities and reduce or terminate its operations, and may have a material adverse effect on Denison Oil's financial condition, results of operations or prospects.

Availability of Drilling Equipment and Access

Oil and natural gas exploration and development activities are dependent on the availability of drilling and related equipment in the particular areas where such activities will be conducted. Demand for such limited equipment or access restrictions may affect the availability of such equipment to Denison Oil and may delay exploration and development activities. To the extent Denison Oil is not the operator of its oil and gas properties, Denison Oil will be dependent on such operators for the timing of activities related to such properties and will be largely unable to direct or control the activities of the operators.

Absence of Dividends

Denison Oil does not anticipate that cash dividends will be paid on Denison Oil Common Shares in the foreseeable future since Denison Oil currently intends to retain any future earnings to finance the expansion and development of its business. The declaration and payment in the future of any cash dividends will be at the discretion of Denison Oil's Board of Directors and will depend upon the earnings, capital requirements and financial position of Denison Oil, future loan covenants, general economic conditions and other pertinent factors. No assurance can be given that Denison Oil will pay any dividends in the future or with respect to the amount of any such dividends.

Commodity and Currency Hedging

From time to time, Denison Oil may enter into agreements to receive fixed prices on its oil and natural gas production to offset the risk of revenue losses if commodity prices decline. However, if commodity prices increase beyond the levels set in such agreements, Denison Oil will not benefit from such increases. Similarly, from time to time, Denison Oil may enter into agreements to fix the exchange rate of Canadian to United States dollars in order to offset the risk of revenue losses if the Canadian dollar increases in value compared to the United States dollar. However, if the Canadian dollar declines in value compared to the United States dollar, Denison Oil will not benefit from such a fluctuation exchange rate.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". Denison Oil's exploration and production facilities and other operations and activities will emit greenhouse gases which may subject Denison Oil to such legislation regulating emissions of greenhouse gases. The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and natural gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 37: *Climate Change and Emissions Management Act*, may require the reduction of emissions from Denison Oil's operations and facilities. The direct or indirect costs of these regulations may adversely affect Denison Oil's financial condition, results of operations or prospects.

INDUSTRY CONDITIONS

The oil and natural gas industry is subject to extensive controls and regulations governing its operations (including land tenure, exploration, development, production, refining, transportation and marketing) imposed by legislation enacted by various levels of government and with respect to pricing and taxation of oil and natural gas by agreements among the governments of the Canada and Alberta, all of which should be carefully considered by investors in the oil and gas industry. It is not expected that any of these controls or regulations will affect the operations of Denison Oil in a manner materially different than they would affect other oil and gas companies of similar size. All current legislation is a matter of public record and Denison Oil is unable to predict what additional legislation or amendments may be enacted. Outlined below are some of the principal aspects of legislation, regulations and agreements governing the oil and gas industry.

Pricing and Marketing - Oil

Producers of oil negotiate sales contracts directly with oil purchasers, with the result that the market determines the price of oil. Such price depends in part on oil quality, price of competing oil, distance to market and the value of refined products. Canadian oil exporters are also entitled to enter into export contracts and export oil provided that, for contracts which do not exceed one year in the case of light crude oil and two years in the case of heavy crude oil, an export order must be obtained from the National Energy Board of Canada prior to the export. Any export pursuant to a contract of longer duration must be made pursuant to a National Energy Board export licence and Governor in Council approval.

Pricing and Marketing – Natural Gas

The price of natural gas sold in intra-provincial and inter-provincial trade is determined by negotiation between buyers and sellers. Natural gas exported from Canada is subject to regulation by the National Energy Board and the government of Canada. The price received by Denison Oil depends, in part, on the prices of competing natural gas and other substitute fuels, access to downstream transportation, distance to markets, length of the contract term, weather conditions, the supply and demand balance and other contractual terms. Exporters are free to negotiate prices with purchasers, provided that the export contracts must continue to meet certain criteria prescribed by the National Energy Board and the government of Canada. As is the case with oil, natural gas exports from Canada for a term of less than two years must be made pursuant to a National Energy Board order and in the case of exports for a longer duration, pursuant to a National Energy Board licence and Governor in Council approval.

The government of Alberta also regulates the volume of natural gas which may be removed from the province for consumption elsewhere.

The North American Free Trade Agreement

On January 1, 1994 the North American Free Trade Agreement ("NAFTA") among the governments of Canada, the United States and Mexico became effective. NAFTA carries forward most of the material energy terms contained in the Canada-U.S. Free Trade Agreement. In the context of energy resources, Canada continues to remain free to determine whether exports to the U.S. or Mexico will be allowed provided that the restrictions are otherwise justified under certain provisions of the General Agreement on Tariffs and Trade and then only if any export restrictions do not: (i) reduce the proportion of the energy resource exported relative to the total supply of energy resource (based upon the proportions prevailing in the most recent 36 months); (ii) impose an export price higher than the domestic price; or (iii) disrupt normal channels of supply. All three countries are prohibited from imposing minimum export or import price requirements.

NAFTA contemplates the reduction of Mexican restrictive trade practices in the energy sector and prohibits discriminatory border restrictions and export taxes. The agreement also contemplates clearer disciplines on regulators to avoid discriminatory actions and to minimize disruption of contractual arrangements.

Provincial Royalties and Incentives

In addition to federal regulation, each province has legislation and regulations which govern land tenure, royalties, production rates, environmental protection and other matters. The royalty regime is a significant factor in the profitability of oil and natural gas production. Royalties payable on production from lands other than Crown lands are determined by negotiations between the mineral owner and the lessee. Crown royalties are determined by governmental regulation and are generally calculated as a percentage of the value of the gross production, and the rate of royalties payable generally depends in part on well productivity, geographical location, field discovery data and the type or quality of the petroleum product produced.

From time to time the governments of Canada and Alberta have established incentive programs which have included royalty rate reductions, royalty holidays and tax credits for the purpose of encouraging oil and natural gas production and enhanced production projects.

In Alberta, a producer of oil or natural gas is entitled to a credit against the royalties payable to the Crown by virtue of the ARTC program. The ARTC rate is based on a price-sensitive formula and varies between 75 percent for prices at or below the royalty tax credit reference price of $100 per cubic meter decreasing to 25 percent for prices above the royalty tax credit reference price of $210 per cubic meter. The ARTC rate will be applied to a maximum annual amount of $2,000,000 of Alberta Crown royalties payable for each producer or associated group of producers. Crown royalties on production from producing properties acquired from corporations claiming maximum entitlements to ARTC will generally not be eligible for ARTC. The rate is established quarterly based on the average par price, as determined by the Alberta Department of Energy.

On October 13, 1992, the Alberta government announced major changes to its royalty structure and permanent incentives for exploring and developing oil and gas reserves. The significant changes announced which remain in force include the following: (i) the first wells drilled in new oil pools discovered on or after October 1, 1992 will have a permanent one year oil royalty holiday, subject to a $1,000,000 cap and a reduced royalty rate thereafter; (ii) reduction of royalties on pre-October 1, 1992 production of oil and gas; (iii) incentives by way of royalty holidays and reduced royalties on reactivated, low productivity and horizontal re-entry of vertical oil wells; (iv) introduction of separate par pricing for light, medium and heavy oil; and (v) modification of the royalty formula structure to provide for sensitivity to price fluctuations.

Environmental Regulation

The oil and natural gas industry is currently subject to environmental regulations pursuant to United States and Canadian state, provincial and federal legislation. Environmental legislation provides for restrictions and prohibitions on releases or emissions of various substances produced in association with certain oil and gas industry operations. In addition, legislation requires that well and facility sites be abandoned and reclaimed to the

satisfaction of provincial and state authorities. A breach of such legislation may result in the imposition of fines and penalties, the suspension or revocation of necessary licenses and civil liability. Environmental legislation in Alberta has been consolidated into the *Environmental Protection and Enhancement Act* (Alberta) which took effect on September 1, 1993. The *Environmental Protection and Enhancement Act* (Alberta) imposes stricter environmental standards, requires more stringent compliance and reporting and significantly increases penalties for non-compliance.

Exports from Canada

In order to export oil or natural gas from Canada, certain approvals are required from the National Energy Board and the Government of Canada. The approval(s) required are dependent on the hydrocarbon substance being exported and the length of the proposed export arrangement.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the only material contracts entered into by Denison Energy, or which will be entered into by Denison Oil pursuant to the Denison Arrangement since its incorporation, which can be reasonably regarded as presently material to the business of Denison Oil are the following:

1. The Denison Arrangement Agreement;
2. The Forte Arrangement Agreement;
3. The Partnership Agreement;
4. The Petroleum and Natural Gas Asset Conveyance Agreement; and
5. The Contribution Agreement.

Copies of these agreements may be inspected at the head office of Denison Oil at Atrium on Bay, 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 3C2 and at the offices of Blake, Cassels & Graydon LLP at suite 3500, East Tower, Bankers Hall, 855 – 2nd Street SW, Calgary, Alberta, T2P 4J8 during normal business hours from the date of the Information Circular until 30 days following completion of the Denison Arrangement.

LEGAL MATTERS

Denison Oil has not commenced active operations as at the day of this Information Circular. To the knowledge of the management of Denison Oil, it is not a party to any legal proceedings. However in connection with the completion of the Denison Arrangement, Denison Oil has provided certain indemnities in favour of Denison Energy in connection with the transfer of the Petroleum and Natural Gas Assets and PNG Liabilities. One matter for which Denison Oil provided an indemnity to Denison Energy is an ongoing claim before the Alberta Court against a predecessor entity of Denison Energy by Oilhawk Resources Ltd. The claim is fully insured and being handled by Denison Energy's insurer, which insurance shall be assumed by Denison Oil upon completion of the Denison Arrangement.

EXPERTS

Certain legal matters in connection with the Denison Arrangement will be passed upon on behalf of Denison Oil by Blake, Cassels & Graydon LLP. Except as disclosed herein, as of the date hereof, partners and associates of Blake, Cassels & Graydon hold none of the outstanding Denison Energy Common Shares. PricewaterhouseCoopers LLP audited certain of the financial statements of Denison Oil included in this Exhibit M. Except as disclosed herein, as of the date hereof, employees of PricewaterhouseCoopers LLP hold none of the outstanding Denison Energy Common Shares. The authors of the Engineering Reports, as at the date hereof, hold none of the outstanding Denison Energy Common Shares.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of Denison Oil are Deloitte and Touche LLP, Chartered Accountants, Suite 3000, 700- 2nd Street SW Calgary Alberta T2P 0S7.

Computershare Trust Company of Canada, at its principal offices in Toronto, Ontario and Calgary, Alberta will be the registrar and transfer agent for the common shares of Denison Oil.

APPENDIX A

FINANCIAL STATEMENTS OF THE OIL AND GAS DIVISION OF DENISON ENERGY INC.

Auditors' Report

To The Directors of Denison Energy Inc.

We have audited the accompanying balance sheet of the Oil and Gas Division of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000, and the consolidated statements of earnings, changes in divisional equity and cash flows for the years then ended. These financial statements are the responsibility of Denison Energy's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Oil and Gas Division of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

(Signed) "PricewaterhouseCoopers LLP"

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

1. BASIS OF PRESENTATION AND GOING CONCERN

These financial statements have been being prepared by management to segregate the Canadian assets, liabilities, revenues and expenses of the oil and gas division (the "Oil and Gas Division") of Denison Energy Inc. ("Denison Energy"). The Oil and Gas Division is involved in the exploration and development of oil and gas properties and the production and sale of oil and natural gas in Alberta and Saskatchewan and is managed from a divisional office in Calgary. Certain comparative figures have been reclassified to conform with the presentation adopted. Stock option expenses relating to stock options issued by Denison Energy and interest on bank indebtedness have been allocated to this division. No administration expense has been allocated for corporate purposes to this division as materially all such expenses were met by the Division's administrative office in Calgary. Income tax expense has been calculated at the effective tax rate for the Oil and Gas Division as if it had been a separate taxable entity, but no cash tax payments have been recorded as actual cash taxes up to September 30, 2003 have been fully sheltered by tax deductions available to Denison Energy.

These financial statements have been prepared on the going concern basis. As at December 31, 2002 the division had net current liabilities of $6,051.

If the proposed corporate transactions described in note 10 are completed successfully, the Division will receive cash up to a maximum of $1,344 to be applied against the Division's bank debt and upon completion of the transaction with Forte will also gain access to additional funding.

In the event that the proposed transactions are not completed as described in Note 10, the ability of the Division to meet its liabilities and obligations as they fall due in the future, including the scheduled reduction of the bank credit facility as described in note 10 (e), will depend on the ability of the Division to obtain access to additional credit.

Management are reasonably confident in the successful completion of the proposed transactions and therefore believe that the going concern basis is appropriate. Accordingly, the financial statements do not reflect adjustments, which could be material, to the carrying value of assets and liabilities, the reported revenues and expenses and balance sheet classifications that would be necessary were the going concern presumption inappropriate.

These financial statements should be read in conjunction with the historical consolidated financial statements of Denison Energy.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Nature of Operations
The Oil and Gas Division commenced exploration activities in 2000 and production in 2001. Current production is from the 100% owned Countess field near Calgary, the Smiley gas field in Saskatchewan and various joint venture interests in other Alberta oil and gas properties.

Basis of Preparation
These consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles. The preparation of financial statements in conformity with Canadian generally accepted accounting principles, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent liabilities as of the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. The most significant estimates are related to the economic lives and recoverability of oil

and gas assets, the provisions for decommissioning and reclamation, future income taxes and the evaluation of contingent liabilities. Actual results could differ materially from those estimates. The summary of

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

significant accounting policies below describes the accounting methods and practices that have been used in the preparation of these consolidated financial statements. This summary is presented to assist the reader in interpreting the statements contained herein.

Consolidation Principles
The consolidated financial statements include the accounts of the Oil and Gas Division of Denison Energy Inc. The division's interests in its oil and gas joint ventures are accounted for using the proportionate consolidation method. Under this method, the dvision includes its proportionate share of assets, liabilities, revenues and expenses.

Revenue Recognition
Oil and gas revenues are recognized when title passes from the Oil and Gas Division to its customer. Royalty revenue is recognized when earned under the respective agreement.

Cash and Cash Equivalents
Cash and cash equivalents consist of cash and short-term investments with original maturities not exceeding 90 days and are stated at cost, which approximates market value.

Property, Plant and Equipment
Oil and Gas Properties, Plant and Equipment
The Oil and Gas Division's oil and gas properties, plant and equipment are carried at the lower of cost and net recoverable amount. All costs associated with the exploration for and the development of oil and gas properties are capitalized providing the total capitalized cost does not exceed the net recoverable amount. All costs of the Oil and Gas Division's oil and gas property, plant and equipment are capitalized in one producing cost centre. Depletion is provided on capitalized costs in this producing cost centre by the units of production method based on estimated proven reserves.

Oil and Gas Property Evaluations
Net recoverable amount is the aggregate of estimated undiscounted future net revenues from proven reserves less operating, administration, financing and income tax expense. Estimated future net revenues are determined using year-end prices. The Oil and Gas Division periodically reviews the costs associated with preproduction stage cost centres to determine whether costs are likely to be recovered. Any unrecoverable amount is written off against earnings.

Other Property, Plant and Equipment
Other property, plant and equipment are amortized according to the straight-line method based on their estimated useful lives, which range from three to twenty years.

Decommissioning and Site Restoration Cost
Estimated decommissioning and site restoration costs of resource properties are accrued and charged to operations using the unit of production method. Provisions with respect to site restoration are calculated on a discounted basis and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the provision for site restoration. The Oil and Gas Division's activities are subject to various governmental laws and regulations related to the protection of the environment. The Oil and Gas Division has made, and continues to make, expenditures in order to comply with or exceed such laws and regulations. The Oil and Gas Division is continuously updating its decommissioning and site restoration cost estimates. Such estimates are, however, subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when applicable.

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Future Income Taxes
The Oil and Gas Division follows the asset and liability method of accounting for future income taxes as if it were a separate taxable entity. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are determined based on temporary timing differences between the financial reporting and tax bases of assets and liabilities, and are measured using the substantively enacted tax rates and laws that are expected to apply when the differences are expected to reverse. The benefit of tax losses which are available to be carried forward are recognized as assets to the extent that they are more likely than not to be recoverable from future taxable income.

Financial Instruments
The carrying amounts for cash and short-term deposits, accounts receivable, prepaid expenses, accounts payable and accrued liabilities on the balance sheets approximate fair value because of the limited term of these instruments. Fair value estimates are made at the balance sheet date, based on relevant market information and information about the financial instrument.

Stock Option Plan
In 2002 Denison Energy adopted prospectively the requirements of the CICA handbook section 3470, "Stock Based Compensation and Other Stock Based Payments." As encouraged by section 3470, Denison Energy adopted the fair value based method to account for stock-based transactions with directors, and eligible employees for options granted in 2002. The value is recognized over the applicable vesting period as an increase in compensation expense and contributed surplus to the equity of Denison Energy. When the options are exercised, the proceeds received by Denison Energy, together with the amount in contributed surplus will be credited to Common Share capital of Denison Energy. For options granted prior to January 1, 2002 Denison Energy continues to follow the accounting policy under which no expense is recognized for these stock options. When these options are exercised, the proceeds received by the Denison Energy will be recorded as Common Share capital of Denison Energy. Stock option expense has been allocated from Denison Energy to the Oil and Gas Division in respect of options granted to employees of the division. Such expense is recorded in the Statements of Earnings (Loss).

(b) **Write-down of oil and gas properties (unaudited)**
In September 2003 the Oil and Gas Division recorded a write-down of its Canadian oil and gas properties by $12,000,000. This write-down was calculated using September 30, 2003 oil and natural gas prices and updated reserve reports for its oil and gas properties.

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

4. BANK INDEBTEDNESS

As at December 31, 2002 Denison Energy had a borrowing facility of up to $6,000,000. Subsequent to year-end, as a result of the fact that substantial proven gas reserves are awaiting pipeline allocation and the short production history of two new wells, this borrowing facility was reduced to $5,300,000 as at September 30, 2003. This facility is subject to an annual review and is repayable from oil and gas cash flows. This facility bears interest at Canadian bank prime (which was 4.5% on December 31, 2002) plus 0.5% and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin.

5. DECOMMISSIONING AND SITE RESTORATION

As at September 30, 2003, the Oil and Gas Division has estimated future removal and site restoration costs to be $147,000, (2002-$115,000, December 31, 2002 $121,000, 2001-$90,000, 2000- $nil) for abandoning its Canadian oil and gas wells and facilities.

6. INCOME TAXES

The Oil and Gas Division is not a separate taxable entity. Any current or future income tax liability arising in respect of the division is sheltered by tax deductions available and recorded at the corporate level. The following provides tax information concerning the division assuming it is a separate tax entity. Federal large corporation tax is computed at the corporate level and not allocated to this division. A reconciliation of the combined Canadian federal and provincial income tax rate to Denison Energy's effective rate of income and resource taxes is as follows:

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(a) A reconciliations of the combined Canadian federal and provincial income tax rates to Denison Energy's effective rate of income, if recorded, and resource taxes is as follows:

	For the Period Ended September 30	For the Year Ended December 31		
	2003	2002	2001	2000
	(unaudited)			(in thousands)
Earnings (loss) before income taxes	**$ (11,676)**	$ 202	$ 258	$ (190)
Combined federal and provincial income tax rate	**36.75%**	39.24%	42.12%	44.62%
Computed income tax expense (recovery)	**$ (4,291)**	$ 79	$ 109	(85)
Increase (decrease) in taxes resulting from:				
Resource allowance	**(162)**	(370)	(103)	—
Deductions utilized by other divisions	**169**	90	999	(85)
Income tax expense (recovery) Oil and Gas Division	**(4,284)**	(201)	1,005	—
Adjustment at corporate level	**4,284**	201	(1,005)	—
Consolidated income tax expense (recovery)	$ —	$ —	$ —	$ —
Entries attributable to divisional equity:				
Acquisition of Innovative Energy Inc.	**$ —**	$ —	$ (261)	$ —
Issue of flow-through shares	**—**	2,131	—	—
	$ —	$ —	$ —	$ —

(b) Sources of temporary differences:

	For the Period Ended September 30	For the Year Ended December 31		
	2003	2002	2001	2000
	(unaudited)			(in thousands)
Property, plant and equipment	**$ 2,649**	$ (1,622)	$ 254	$ 1,090
Provision for reclamation	**51**	38	29	—
Other including losses	**—**	—	63	—
Net future income tax asset (liability)	**$ 2,700**	$ (1,584)	$ 346	$ 1,090

At September 30, 2003, the Oil and Gas Division had tax pools of $7,800,000 in excess of the accounting carrying value of the assets. The Oil and Gas Division has not recorded a future tax asset with respect to these temporary differences.

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

7. OTHER CHANGES IN WORKING CAPITAL

Other changes in working capital consist of:

	As at September 30		As at December 31		
	2003	2002	**20(**	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Accounts receivable	**$ (258)**	$ 18	**$ (524)**	$ (156)	$ —
Prepaid expenses	**81**	(103)	**(195)**	(11)	—
Accounts payable and accrued Liabilities	**(1,950)**	(1,233)	**1,292**	1,429	46
	$ (2,127)	$ (1,318)	**$ 573**	$ 1,262	$ 46

8. ACQUISITION OF INNOVATIVE ENERGY LTD.

Effective November 8, 2001 Denison Energy acquired 100% of Innovative Energy Ltd. of Calgary. The acquisition has been accounted for as a purchase and accordingly these financial statements include Innovative's results from November 8, 2001 onward. The estimated fair value of net assets acquired on November 8, 2001 from Innovative Energy Ltd. and the consideration paid, were as follows:

Net assets acquired	As at November 8, 2001
Assets	(in thousands)
Accounts receivable	**$ 533**
Oil and gas property, plant and equipment	**5,597**
	6,130
Liabilities	
Bank indebtedness	**2,285**
Accounts payable and accrued liabilities	**913**
Provision for site restoration	**82**
	3,280
Net assets acquired	**$ 2,850**
Consideration	
Cash	**$ 1,916**
Non cash	
Issue of 386,880 Common Shares of Denison Energy net of issue costs of $33,000	**934**
Total consideration	**$ 2,850**

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

9. CONTINGENT LIABILITIES AND COMMITMENTS

(a) From time to time the Oil and Gas Division is involved in various legal actions in the ordinary course of business. In the opinion of management, the aggregate amount of any potential liability is not expected to have a material adverse effect on the Oil and Gas Division's financial position or results.

(b) In July 2002, Denison Energy raised $5,000,000 through the issue of 1,428,571 flow-through common shares. The Oil and Gas Division has spent the proceeds of this issue on Canadian Exploration Expenditures. As at September 30, 2003 the entire amount had been spent.

(c) The division's lease commitments under an operating leases for premises are 2003 - $115,000, 2004 - $88,000, 2005 - $7,000 and 2006 - $7,000.

10. SUBSEQUENT EVENTS

(a) Denison Energy, Denison Mines Inc. ("Denison Mines"), Tenwest Uranium Limited ("Tenwest"), Denison Resources Inc. ("Denison Resources"), Denison Oil Corporation ("Denison Oil"), Denison Resources Partnership ("the Partnership"), Denison Mines Holding Corporation ("Mine Holdco") and E. Peter Farmer have entered into an arrangement agreement to implement an arrangement (the "Denison Arrangement") by way of a plan of arrangement under section 182 of the *Business Corporations Act* (Ontario) pursuant to which Denison Energy's mining assets and related liabilities will be transferred to Denison Mines and Denison Energy's Canadian petroleum and natural gas assets and related liabilities will be transferred to Denison Resources, a wholly-owned subsidiary of Denison Oil. Denison Energy shareholders will receive, as consideration for the exchange of their Denison Energy common shares, common shares in the capital of Denison Oil, common shares in the capital of Denison Mines and a new class of common shares in the capital of Denison Energy. As a result of the Denison Arrangement, Denison Energy's shareholders will initially hold all of the shares in three separate publicly traded companies, Denison Energy, Denison Mines and Denison Oil. The Denison Arrangement is subject to regulatory, judicial and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

(b) Pursuant to the Denison Arrangement there will be an effective consolidation of the common shares of Denison Energy on a one for twenty-one basis. In addition, Denison Energy has agreed that immediately following the completion of the Denison Arrangement described in note 10 (a) above, it will issue the number of common shares equal to 45% of the outstanding common shares (after giving effect to such share issuance) to Matco Capital Ltd. ("Matco") and/or other parties designated by Matco at a purchase price of $7.35 per Common Share after giving effect to the above consolidation.

(c) Denison Energy, Forte Oil Corporation ("Forte"), 1087215 Alberta Ltd. ("Subco"), Denison Resources, the Partnership, Denison Mines and Denison Oil have entered into an arrangement agreement to implement an arrangement (the "Forte Arrangement") by way of plan of arrangement under section 193 of the *Business Corporations Act* (Alberta), pursuant to which Forte will amalgamate with Subco, a wholly-owned subsidiary of Denison Oil, Forte securityholders will exchange their Forte securities for securities of Denison Oil, and Denison Oil will exchange its securities of Subco for securities of the amalgamated corporation. Following completion of the Forte Arrangement, Forte will be a wholly-owned subsidiary of Denison Oil, and Denison Oil shall be owned as to approximately 80% by Forte shareholders and approximately 20% by Denison Energy shareholders. The Forte Arrangement is subject to regulatory, judicial and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

The Oil and Gas Division of Denison Energy Inc.
Notes to Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(d) Following the receipt of revised reserve reports in October, 2003 the borrowing facility described in note 4 has been revised and now requires a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 by March 31, 2004. Denison Energy has agreed to apply to the extent necessary, net sales proceeds from disposition of any Canadian oil and gas asset together with net proceeds from any share issue attributable to oil and gas assets or stock option proceeds attributable to the Oil and Gas Division to reduce this facility to $3,200,000.

Auditors' Consent

We refer to the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc. ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mines Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 193 of the *Business Corporations Act* (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd and Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned information circular of our report to the Directors of Denison Energy Inc. on the financial statements of the Oil and Gas division of Denison Energy Inc. for the years ended December 31, 2002, 2001 and 2000. Our report is dated February 28, 2003, except as it relates to Notes 1 and 10 of the above-mentioned financial statements, for which it is dated January 29, 2004.

APPENDIX B

PRO FORMA FINANCIAL STATEMENTS OF DENISON OIL CORPORATION

Denison Oil Corporation

Pro Forma Financial Statements

(Unaudited)

Nine Months Ended September 30, 2003 and year ended December 31, 2002

(expressed in Canadian dollars)

COMPILATION REPORT ON PRO FORMA FINANCIAL STATEMENTS

To the Directors of
Denison Oil Corporation

We have read the accompanying unaudited pro forma balance sheet of Denison Oil Corporation ("Denison Oil" or the "Corporation") as at September 30, 2003 and the unaudited pro forma income statements for the nine months then ended and for the year ended December 31, 2002, and have performed the following procedures:

1. Compared the figures in the columns captioned "Denison Oil Corporation Incorporation Balance Sheet" to the audited balance sheet as at January 21, 2004.

2. Compared the figures in the columns captioned "Amounts Transferred from Oil and Gas Division of Denison Energy Inc." to the unaudited carve-out financial statements of the oil and gas division ("Denison Resources") as at September 30, 2003 and for the nine months then ended, and the audited carve-out financial statements of the oil and gas division for the year ended December 31, 2002, respectively, and found them to be in agreement.

3. Made enquiries of certain officials of Denison Oil, its subsidiary Denison Resources and its parent, Denison Energy Inc., who have responsibility for financial and accounting matters about:

   (a) the basis for determination of the pro forma adjustments; and
   (b) whether the pro forma financial statements comply as to form in all material respects with Securities Acts of the various Provinces of Canada (the "Acts").

   The officials:

   (a) described to us the basis for determination of the pro forma adjustments, and
   (b) stated that the pro forma statements comply as to form in all material respects with the Acts.

4. Read the notes to the pro forma statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.

5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Pro Forma Denison Oil Corporation." as at September 30, 2003 and for the nine months then ended, and for the year ended December 31, 2002, and found the amounts in these columns to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit

or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

Denison Oil Corporation

Notes to the Pro Forma Consolidated Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002

(expressed in Canadian dollars)

1. Basis of presentation

These unaudited pro forma consolidated financial statements of Denison Oil Corporation ("Denison Oil") have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in the Management Information Circular and Proxy Statement (the "Information Circular") of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 with respect to two proposed plans of arrangement (as described below) involving Denison Energy and its shareholders and optionholders. These unaudited pro forma consolidated financial statements have been prepared from the historical financial carve-out statements of the Canadian oil and gas division of Denison Energy together with other information available to Denison Energy and Denison Oil management.

Denison Energy Inc., Tenwest Uranium Limited, Denison Mines Inc., ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources'), Denison Resources Partnership (the "Partnership"), Denison Mine Holding Corporation and E. Peter Farmer have entered into an arrangement agreement to implement an arrangement (the "Denison Arrangement") by way of a plan of arrangement pursuant to section 182 of the *Business Corporations Act* (Ontario). This arrangement will transfer the mining and environmental services assets and related liabilities of Denison Energy to Denison Mines and the Canadian oil and gas assets and related liabilities of Denison Energy to Denison Resources, a wholly-owned subsidiary of Denison Oil. Denison Energy will hold the option to purchase all of the issued and outstanding shares of an oil field services company. Denison Energy shareholders will receive, as consideration for the exchange of their Denison Energy common shares, common shares in the capital of Denison Oil, common shares in the capital of Denison Mines, and a new class of common shares in the capital of Denison Energy. As a result of the Denison Arrangement, Denison Energy's shareholders will initially hold all of the shares in three publicly traded companies, Denison Energy, Denison Mines and Denison Oil. The Denison Arrangement is subject to regulatory, judicial and securityholder approval and, subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

Denison Energy, Denison Resources, the Partnership, Forte Oil Corporation ("Forte"), 1087215 Alberta Ltd. ("Subco"), Denison Mines and Denison Oil have entered into an arrangement agreement to implement an arrangement (the "Forte Arrangement") by way of a plan of arrangement under section 193 of the *Business Corporations Act* (Alberta), pursuant to which Forte will amalgamate with Subco, a wholly-owned subsidiary of Denison Oil. Forte securityholders will exchange their Forte securities for securities of Denison Oil, and Denison Oil will exchange its securities of Subco for securities of the amalgamated corporation. Following completion of the Forte Arrangement, Forte will be a wholly-owned subsidiary of Denison Oil, and Denison Oil shall be owned as to approximately 80% by Forte shareholders and approximately 20% by Denison Energy shareholders. The Forte Arrangement is subject to regulatory, judicial and shareholder approval and subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

These pro forma consolidated financial statements reflect the impact of the Denison Arrangement on Denison Oil but do not reflect the impact of the Forte Arrangement. Separate pro forma statements have been prepared to reflect the impact of the Forte Arrangement.

Denison Oil Corporation

Notes to the Pro Forma Consolidated Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002

(expressed in Canadian dollars)

These pro forma consolidated financial statements are not necessarily indicative of the results that would actually have occurred if the events reflected herein had been in effect on the dates indicated or of the results that may be obtained in the future.

The pro forma consolidated financial statements should be read in conjunction with the December 31, 2002 audited carve-out financial statements and unaudited carve-out financial statements for the nine month period ended September 30, 2003 of the Oil and Gas Division of Denison Energy and the unaudited pro forma financial statements of Denison Energy for the nine months ended September 30, 2003 and year ended December 31, 2002.

Certain financial statement items have been reclassified for comparative purposes.

After the Denison Arrangement is complete, and assuming the Forte Arrangement is complete, Forte's financial statements will account for the acquisition of Denison Energy's oil and gas assets and related liabilities as set out in the Pro Forma Financial Statement of Forte.

2. Pro forma adjustments and assumptions

The pro forma consolidated balance sheet gives effect to the proposed transactions as if they occurred as at September 30, 2003 and the pro forma consolidated statements of earnings give effect to the proposed transactions as if they occurred on January 1, 2002.

The accounting policies used in the preparation of these pro forma financial statements are in accordance with those disclosed in Denison Energy's audited consolidated financial statements for the year ended December 31, 2002.

These pro forma financial statements give effect to the following transactions, assumptions and adjustments.

(a) Pursuant to the Denison Arrangement, Denison Energy transfers the assets and related liabilities of its oil and gas division to Denison Resources, the wholly-owned subsidiary of Denison Oil, and receives shares of Denison Oil pursuant to the Denison Arrangement as outlined in note 4. As a result, the net equity ($4,186,000) of the Oil and Gas Division of Denison Energy Inc. is reclassified to Common Stock of Denison Oil.

(b) Following completion of the Subscription, $1,000,000 will be applied to reduce bank indebtedness being transferred to Denison Resources. The bank indebtedness will also be reduced by $334,000 from proceeds from the exercise of Denison Energy Options after January 12, 2004. On a pro forma basis if this repayment had occurred on January 1, 2002 interest would have been reduced by $66,000 in 2002 and $50,000 in the nine months ended September 30, 2003.

(c) The results for the year ended December 31, 2002 and nine months ended September 30, 2003 have been restated on a pro forma basis to show the impact of income taxes. At January 1, 2002, Denison Energy's future tax liability attributable to its oil and gas division was $1,785,000. If the oil and gas division had been a separate entity, it would have recorded a recovery of $201,000 in 2002 and $1,584,000 in the nine months ended September 30, 2003. At September 30, 2003, the oil and gas division had unused deductions

(expressed in Canadian dollars)

for tax of $7,800,000 in excess of the corresponding net book value, for which a potential future tax asset of $2,700,000 has not been recorded in these financial statements. After completion of the Denison Arrangement and Forte Arrangement, the management of Forte will be required to review the resulting tax position and make a determination of the tax balances to be reported in the opening balance sheet of the resulting corporation.

(d) On closing of the Forte Arrangement, the consolidated working capital deficiency of Denison Oil, including bank indebtedness (the "Net Debt"), cannot be more than $3,100,000. At September 30, 2003, after the adjustment described in 3(a) above, Denison Oil has net debt of $3,646,000. It is expected that cash flow between September 30, 2003 and closing will reduce the net debt below $3,100,000. Forte has agreed that Denison Oil may pay expenses relating to the Arrangement in an amount not to exceed the difference between Net Debt and $3,100,000. As this amount is contingent on events between now and closing, no amount has been recorded in these financial statements.

On closing Denison Oil will place $200,000 in escrow for 60 days following which a statement will be prepared calculating the Adjusted Net Debt (as defined in the Forte Agreement). To the extent that the Adjusted Net Debt is less than $3,100,000, Forte will instruct the escrow agent to reimburse to Denison Mines for any remaining balance in the escrow account.

3. Bank Indebtedness

As at September 30, 2003, Denison Energy Inc. had a borrowing facility of up to $5,300,000. Following the receipt of revised reserve reports in October of 2003, the borrowing facility was revised and now requires a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 by March 31, 2004. Denison Energy has agreed to apply net sales proceeds from the disposition of any Canadian oil and gas asset together with net proceeds from any share issuance attributable to the oil and gas assets or stock option proceeds attributable to the oil and gas assets to the extent necessary to reduce this facility to $3,200,000. This facility is subject to an annual review and is repayable from oil and gas cash flows and as discussed above. This facility bears interest at Canadian bank prime (which was 4.25% on January 21, 2004) plus 0.5% on the first $3,200,000 and 1.5% on the balance and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin.

4. Share Capital and Earnings per share

The authorized share capital of Denison Oil consists of an unlimited number of Common Shares, an unlimited number of First Preferred Shares, an unlimited number of Second Preferred Shares and 3,500,000 First Preferred Shares, Series 1.

As a result of the Forte Arrangement, existing shareholders of Denison Energy will receive one-fifth of one share of Denison Oil for each Denison Energy share now held.

Denison Oil Corporation

Notes to the Pro Forma Consolidated Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002

(expressed in Canadian dollars)

	Number of Common Shares
Number of Denison Energy Shares outstanding on September 30, 2003	17,705,724
Assumed exercise of 964,833 Denison Energy Options	964,833
Pro Forma September 30, 2003	18,670,557
Number of shares to be assumed issued to existing Denison shareholders as a result of the Forte Arrangement	3,734,111

The above table excludes the potential impact of the exercise of 97,500 Denison Energy options at a price of $7.60. Earnings per share have been calculated immediately before the Forte Arrangement, after giving effect to the effective one for five share consolidation, These statements should be read in conjunction with the Pro Forma Financial Statements of Denison Oil Corporation which are provided elsewhere in this Information Circular.

5. Proposed Stock Option Plan

Denison Oil has adopted the Forte Resources Stock Option Plan to take effect on the effective date of the Forte Arrangement. No options have been issued under this plan so no stock option expense has been incorporated in the proforma earnings statements.

Auditors' Consent

We refer to the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc. ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mines Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 193 of the *Business Corporations Act* (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd and Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned information circular of our compilation report to the Directors of Denison Energy on the unaudited pro forma balance sheet of Denison Oil as at September 30, 2003 and on the unaudited pro forma income statements for the nine month period ended September 30, 2003 and the year ended December 31, 2002. Our report is dated January 29, 2004.

AUDITORS' REPORT

To the Directors of Denison Oil Corporation:

We have audited the balance sheet of Denison Oil Corporation as at January 21, 2004. This financial statement is the responsibility of Denison Oil Corporation's management. Our responsibility is to express an opinion on this financial statement based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statement is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures of the financial statement. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall presentation of the financial statement.

In our opinion, the balance sheet statement presents fairly, in all material respects, the financial position of Denison Oil Corporation as at January 21, 2004 in accordance with Canadian generally accepted accounting principles.

DENISON OIL CORPORATION
NOTES TO BALANCE SHEET
AS AT JANAURY 21, 2004

1. INCORPORATION AND FINANCIAL PRESENTATION

Denison Oil Corporation ("Denison Oil") was incorporated pursuant to the *Business Corporations Act* (Alberta) on January 21, 2004. Denison Oil has not carried on an active business since incorporation. The balance sheet has been prepared in accordance with Canadian generally accepted accounting principles.

2. SHARE CAPITAL

a. Authorized

The authorized capital of Denison Oil consists of an unlimited number of Common Shares, an unlimited number of First Preferred Shares, an unlimited number of Second Preferred Shares and 3,500,000 First Preferred Shares, Series 1.

b. Issued

	Number of Shares	Consideration
Common Shares		
Issued upon initial organization on January 21, 2004	1	$2.001
Balance as of January 21, 2004	1	$2.001

3. SUBSEQUENT EVENTS

a. Denison Energy Inc. ("Denison Energy"), TenWest Uranium Limited, Denison Mines Inc. ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mine Holding Corporation and E. Peter Farmer entered into an Arrangement Agreement dated January 28, 2004 to implement an arrangement (the "Denison Arrangement") by way of plan of arrangement under Section 182 of the *Business Corporations Act* (Ontario), pursuant to which Denison Energy's existing mining assets and related liabilities will be transferred to Denison Mines and Denison Energy's existing Canadian petroleum and natural gas assets and related liabilities will be transferred to Denison Resources, a wholly-owned subsidiary of Denison Oil. Denison Energy shareholders will receive, as consideration for the exchange of their Denison Energy common shares, common shares in the capital of Denison Oil, common shares in the capital of Denison Mines and a new class of common shares in the capital of Denison Energy. As a result of the Denison Arrangement, Denison Energy's shareholders will initially hold all of the shares in three separate publicly traded companies, Denison Energy, Denison Mines and Denison Oil. The Denison Arrangement is subject to regulatory, judicial and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed on or about March 5, 2004.

b. Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd. ("Subco") Forte Oil Corporation ("Forte") and Denison Mines entered into an Arrangement Agreement dated January 28, 2004 to implement an arrangement (the "Forte Arrangement") by way of plan of arrangement under Section 193 of the *Business Corporations Act* (Alberta), pursuant to which Forte will amalgamate with Subco, a wholly-owned subsidiary of Denison Oil, Forte security holders will exchange their Forte securities for securities of Denison Oil, and Denison Oil will exchange its securities of Subco for securities of the amalgamated corporation. Following completion of the Forte Arrangement, Forte will be a wholly-owned subsidiary of Denison Oil, and Denison Oil will be owned as to approximately 80% by Forte shareholders and approximately 20% by Denison Energy shareholders. The Forte Arrangement is subject to regulatory, judicial

and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed on or about March 5, 2004.

AUDITORS' CONSENT

We have read the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 28, 2004 under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc.("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc.("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mine Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated Janaury 28, 2004 under Section 193 of the *Business Corporations Act* (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd. and Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned Information Circular of our report to the Directors of Denison Oil on the balance sheet of Denison Oil as at January 21, 2004. Our report is dated January 28, 2004.

ABBREVIATIONS

In this Exhibit N, the abbreviations set forth below have the following meanings:

Oil and Natural Gas Liquids

Bbl	barrel
Bbls	barrels
Mbbls	thousand barrels
Mmbbls	million barrels
Mstb	1,000 stock tank barrels
Bbls/d	barrels per day
bopd	barrels of oil per day
NGLs	natural gas liquids
STB	standard tank barrels

Natural Gas

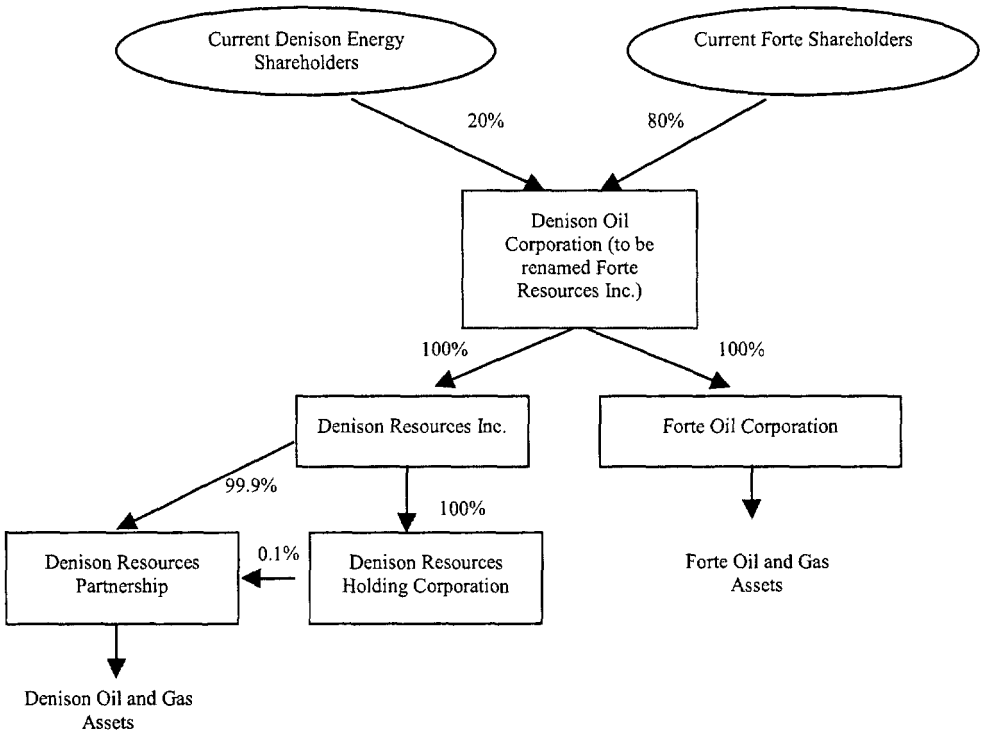
Mcf	thousand cubic feet
Mmcf	million cubic feet
Mcf/d	thousand cubic feet per day
Mmcf/d	million cubic feet per day
Mmbtu	million British Thermal Units
Bcf	billion cubic feet
GJ	gigajoule

Other

AECO	EnCana Corp.'s natural gas storage facility located at Suffield, Alberta.
API	American Petroleum Institute
°API	an indication of the specific gravity of crude oil measured on the API gravity scale. Liquid petroleum with a specified gravity of 28° API or higher is generally referred to as light crude oil.
ARTC	Alberta Royalty Tax Credit
boe	barrel of oil equivalent of natural gas and crude oil on the basis of 1 boe for 6 Mcf of natural gas (this conversion factor is an industry accepted norm and is not based on either energy content or current prices).
boe/d	barrels of oil equivalent per day
m^3	cubic metres
Mboe	1,000 barrels of oil equivalent
$000s	thousands of dollars
WTI	West Texas Intermediate, the reference price paid in U.S. dollars at Cushing, Oklahoma for crude oil of standard grade at standard temperature and pressure

CONVERSION

The following table sets forth certain standard conversions from Standard Imperial Units to the International System of Units (or metric units).



To Convert From	To	Multiply By
Mcf	Cubic metres	28.174
Cubic metres	Cubic feet	35.494
Bbls	Cubic metres	0.159
Cubic metres	Bbls oil	6.290
Feet	Metres	0.305
Metres	Feet	3.281
Miles	Kilometres	1.609
Kilometres	Miles	0.621
Acres	Hectares	0.405
Hectares	Acres	2.471

Capitalized words and phrases used in this Exhibit but not defined shall have the same meanings herein as in the Glossary of Terms provided in the Information Circular to which this Exhibit is attached. All dollar amounts herein are in Canadian dollars, unless otherwise indicated.

BACKGROUND

Denison Oil was incorporated under the ABCA on January 21, 2004 in order to take part in the Denison Arrangement and the Forte Arrangement. At the effective time of the Forte Arrangement, Forte will amalgamate with Denison Oil's wholly-owned subsidiary, Subco, and the continuing corporation will become a wholly-owned subsidiary of Denison Oil. Denison Oil will be renamed "Forte Resources Inc.".

Subsequent to the completion of the Forte Arrangement, Denison Oil's corporate structure will be as follows:

For further information concerning Denison Oil's corporate structure and its subsidiaries, both prior to and subsequent to the Denison Arrangement and the Forte Arrangement, see "Denison Resources Inc." set forth in Exhibit M to this Information Circular and "The Reorganization – Overview" in the body of this Information Circular.

For information respecting the general business development of Forte and the general development of the oil and gas business of Denison Energy, which will be acquired by Denison Oil pursuant to the Denison Arrangement, see "Background – General Development of the Business" set forth in Exhibit L to this Information Circular and "General Development of the Business" and "Narrative Description of the Business" set forth in Exhibit M to this Information Circular.

SELECTED FINANCIAL INFORMATION

The following table sets forth certain unaudited pro forma consolidated financial information for Forte and the Denison Energy Petroleum and Natural Gas Assets as at and for the nine months ended September 30, 2003 after giving effect to the Forte Arrangement from January 1, 2003. The results of operations for the nine months ended September 30, 2003 also include revenue and expenses from Forte's Carson properties on a pro forma basis for the same period. The Carson properties were acquired by Forte effective July 1, 2003. The following information should be read in conjunction with the Forte and Denison Energy Petroleum and Natural Gas Assets financial

statements set forth in Exhibit L and Exhibit M to this Information Circular, respectively, and the pro forma financial statements set forth in Appendix A to this Exhibit.

	Forte	Denison Energy Petroleum and Natural Gas Assets	Pro Forma Combined

Average Daily Production[3]			
Natural Gas (Mcf/d)	958	1,327	2,285
Crude Oil and NGLs (Bbls/d)	1,102	420	1,522
Total (boe/d)	1,262	641	1,903
Average Sales Price[3]			
Natural Gas ($/Mcf)	5.02	6.64	5.96
Crude Oil and NGLs ($/Bbl)	39.72	37.82	39.20

Notes:

(1) As at September 30, 2003.

(2) As at October 1, 2003 based on escalating cost and price assumptions and reflecting gross reserves before deduction of royalties. See "Description of the Business and Operations - Reserves" and "Narrative Description of the Business – Oil and Natural Gas Reserves" in Exhibits L and M to this Information Circular, respectively.

(3) Average daily production and average sales prices are for the nine months ending September 30, 2003.

For detailed information respecting the principal properties, oil and gas reserves, reserves reconciliation, undeveloped land holdings, wells, production history, prices received, capital expenditures, drilling history and marketing of each of Denison Energy (the oil and gas assets of which will be acquired by Denison Oil pursuant to the Denison Arrangement) and Forte, see "Narrative Description of the Business" set forth in Exhibit M to this Information Circular and "Description of the Business and Operations" set forth in Exhibit L to this Information Circular, respectively.

DESCRIPTION OF SHARE CAPITAL

The authorized share capital of Denison Oil consists of an unlimited number of Denison Oil Common Shares, an unlimited number of first preferred shares ("**Denison Oil First Preferred Shares**"), an unlimited number of second preferred shares ("**Denison Oil Second Preferred Shares**") and 3,500,000 Denison Oil Performance Shares. Immediately subsequent to the completion of the Denison Arrangement and the Forte Arrangement, there will be 18,394,549 Denison Oil Common Shares, 2,682,000 Denison Oil Performance Shares and no Denison Oil Second Preferred Shares issued and outstanding. In addition, there will be an aggregate of 791,190 Denison Oil Common Shares reserved for issuance upon the exercise of Denison Oil options and an aggregate of 2,682,000 Denison Oil Common Shares reserved for issuance upon the conversion of Denison Oil Performance Shares. See "Pro Forma Consolidated Capitalization".

The following is a summary of the rights, privileges, restrictions and conditions attaching to each class of shares of Denison Oil.

Denison Oil Common Shares

The holders of Denison Oil Common Shares are entitled to notice of, to attend and to vote at any meeting of the shareholders of Denison Oil (other than meetings of a class or series of shares of Denison Oil other than the Denison Oil Common Shares as such) and to one vote per share on a ballot.

The holders of Denison Oil Common Shares are entitled to receive dividends as and when declared by the Board of Directors of Denison Oil on the Denison Oil Common Shares as a class, subject to prior satisfaction of all preferential rights to dividends attached to all shares of other classes of shares of Denison Oil ranking in priority to the Denison Oil Common Shares in respect of dividends.

The holders of Denison Oil Common Shares are entitled in the event of any liquidation, dissolution or winding-up of Denison Oil, whether voluntary or involuntary, or any other distribution of the assets of Denison Oil among its shareholders for the purpose of winding-up its affairs, and subject to prior satisfaction of all preferential rights to return of capital on dissolution attached to all shares of other classes of shares of Denison Oil ranking in priority to the Denison Oil Common Shares in respect of return of capital on dissolution, to share rateably, together with the holders of shares of any class of shares of Denison Oil ranking equally with the Denison Oil Common Shares in respect of return of capital, in such assets of Denison Oil as are available for distribution.

Denison Oil First Preferred Shares

The Denison Oil First Preferred Shares may at any time or from time to time be issued in one or more series. Before any shares of a particular series are issued, the directors of Denison Oil must, by resolution, fix the number of shares that will form such series and must, subject to the limitations set out in Denison Oil's Articles, by resolution fix the designation, rights, privileges, restrictions and conditions to be attached to the Denison Oil First Preferred Shares of such series, including, but without in any way limiting or restricting the generality of the foregoing, the rate, amount or method of calculation of dividends thereon, the time and place of payment of dividends, the consideration for and the terms and conditions of any purchase for cancellation, retraction or redemption thereof, conversion or exchange rights (if any), and whether into or for securities of Denison Oil or otherwise, the voting rights attached thereto (if any), the terms and conditions of any share purchase or retirement plan or sinking fund, and restrictions on the payment of dividends on any shares other than Denison Oil First Preferred Shares or payment in respect of capital on any shares in the capital of Denison Oil or creation or issue of debt or equity securities; the whole subject to filing Articles of Amendment setting forth a description of such series including the designation, rights, privileges, restrictions and conditions attached to the shares of such series. Notwithstanding the foregoing, the directors of Denison Oil may at any time or from time to time change the rights, privileges, restrictions and conditions attached to unissued shares of any series of Denison Oil First Preferred Shares, subject to filing Articles of Amendment setting forth the changes in rights, privileges, restrictions and conditions attached to the shares of such series.

The Denison Oil First Preferred Shares of each series must rank on a parity with the Denison Oil First Preferred Shares of every other series with respect to accumulated dividends and return of capital. The Denison Oil First Preferred Shares shall be entitled to a preference over the Denison Oil Second Preferred Shares and the Denison Oil Common Shares and over any other shares of Denison Oil ranking junior to the Denison Oil First Preferred Shares with respect to priority in the payment of dividends and in the distribution of assets in the event of the liquidation, dissolution or winding-up of Denison Oil, whether voluntary or involuntary, or any other distribution of the assets of Denison Oil among its shareholders for the purpose of winding-up its affairs. If any cumulative dividends or amounts payable on a return of capital are not paid in full, the Denison Oil First Preferred Shares of all series shall participate rateably in respect of such dividends, including accumulations, if any, in accordance with the sums that would be payable on such shares if all such dividends were declared and paid in full, and in respect of any repayment of capital in accordance with the sums that would be payable on such repayment of capital if all sums so payable were paid in full; provided, however, that in the event of there being insufficient assets to satisfy in full all such claims as aforesaid, the claims of the holders of the Denison Oil First Preferred Shares with respect to repayment of capital shall first be paid and satisfied and any assets remaining thereafter shall be applied towards the payment in satisfaction of claims in respect of dividends. The Denison Oil First Preferred Shares of any series may also be given such other preferences not inconsistent with Denison Oil's Articles over the Denison Oil Second Preferred Shares and the Denison Oil Common Shares and any other shares ranking junior to the Denison Oil First Preferred Shares as may be determined in the case of each such series of Denison Oil First Preferred Shares.

The rights, privileges, restrictions and conditions attaching to the Denison Oil First Preferred Shares as a class may be added to, changed or removed but only with the approval of the holders of the Denison Oil First Preferred Shares given as specified in Denison Oil's Articles.

Denison Oil Performance Shares

1. The holders of the Denison Oil Performance Shares are not entitled (except as expressly provided in the ABCA) to receive notice of or to attend any meeting of the shareholders of Denison Oil and are not entitled to vote at such meeting.

2. The holders of the Denison Oil Performance Shares are not entitled to dividends.

3. No dividend can be declared or paid on any class of shares of Denison Oil if it would result in the realizable value of the assets of Denison Oil, net of liabilities which exist at the relevant time, being less than the aggregate of the Redemption Amount (as hereinafter defined) of all of the issued and outstanding Denison Oil Performance Shares.

4. In the event of a liquidation, dissolution or winding up of Denison Oil or any other distribution by way of repayment of capital, the holders of the Denison Oil Performance Shares are entitled to receive an amount equal to the Redemption Amount per share prior to any payment or distribution to any other class of shares of Denison Oil. The Denison Oil Performance Shares are not entitled to share any further in the distribution of the property or assets of Denison Oil except to the extent described above.

5. Any Denison Oil Performance Shares which are outstanding on August 29, 2006 shall automatically be redeemed for cancellation without the consent of the holders thereof at an amount equivalent to $0.00001 per such share (the "**Redemption Amount**").

6. Prior to August 29, 2004, one half of the issued and outstanding Denison Oil Performance Shares shall automatically convert into Denison Oil Common Shares, subject to the provisions described below, on the basis of one Denison Oil Common Share for each Denison Oil Performance Share provided that the Denison Oil Performance Shares shall only be convertible from and after the earlier of:

(a) the date that Denison Oil achieves cash flow per fully diluted Denison Oil Common Share (including, for greater clarity, the deemed conversion of the Denison Oil Performance Shares) for four consecutive prior fiscal quarters resulting in a one year cash flow per fully diluted Denison Oil Common Share (calculated in accordance with industry standards and the nature of Denison Oil's business) of $0.56 per share; or

(b) if Denison Oil becomes a company listed on a stock exchange, the date that the weighted average trading price of the Denison Oil Common Shares is greater than $2.24 per Denison Oil Common Share (basic) for 20 consecutive trading days on such exchange.

7. Prior to the automatic redemption referred to in paragraph 5 above, and following August 28, 2004, any outstanding Denison Oil Performance Shares shall automatically convert into Denison Oil Common Shares, subject to the provisions described below, on the basis of one Denison Oil Common Share for each Denison Oil Performance Share provided that the Denison Oil Performance Shares shall only be convertible from and after the earlier of:

(a) the date that Denison Oil achieves cash flow per fully diluted Denison Oil Common Share (including, for greater clarity, the deemed conversion of the Denison Oil Performance Shares) for four consecutive prior fiscal quarters resulting in a one year cash flow per fully diluted Denison Oil Common Share (calculated in accordance with industry standards and the nature of Denison Oil's business) of $1.23 per share; or

(b) if Denison Oil becomes a company listed on a stock exchange, the date that the weighted average trading price of the Denison Oil Common Shares is greater than $3.36 per Denison Oil Common Share (basic) for 20 consecutive trading days on such exchange.

8. If Denison Oil shall:

(a) declare a dividend or make a distribution on its outstanding Denison Oil Common Shares payable in Denison Oil Common Shares;

(b) divide its outstanding Denison Oil Common Shares into a greater number of shares; or

(c) consolidate its outstanding Denison Oil Common Shares into a smaller number of shares;

then the conversion basis referred to in clauses 6 and 7 above shall be proportionately adjusted effective immediately after the record date determined for the purposes of such dividend, distribution, subdivision or consolidation. In the case of events referred to in (a) and (b) above, the conversion basis shall be increased in proportion to the increase to the number of outstanding Denison Oil Common Shares resulting from such dividend, distribution or subdivision and, in the case of the events referred to in (c) above, the conversion basis shall be decreased in proportion to the decrease in the number of outstanding shares resulting from such consolidation.

9. In the case of any reclassification or change (other than changes resulting only from consolidation or subdivision) of the Denison Oil Common Shares, each Denison Oil Performance Share shall, after such reclassification, or change, be convertible into the number of Denison Oil Common Shares or other securities or property of Denison Oil, to which a holder of the number of Denison Oil Performance Shares would have been issued if such Denison Oil Performance Shares had been converted immediately prior to such reclassification or change would have been entitled upon such reclassification or change.

10. In the case of a change of control of Denison Oil which is to occur by way of takeover bid, arrangement, share sale, amalgamation, consolidation or merger of Denison Oil with or into any other corporation, or in the case of any sale of the properties and assets of Denison Oil as or substantially as an entirety to any other corporation (collectively, the "**Transaction**"), for a period commencing seven (7) days prior to the closing of the Transaction and extending to the date of the closing of the Transaction, the holders of Denison Oil Performance Shares shall have the right to convert all outstanding Denison Oil Performance Shares into Denison Oil Common Shares on the basis of one Denison Oil Common Share for each Denison Oil Performance Share provided that the Net Realized Equity Value per fully diluted share (including, for greater clarity, the deemed conversion of the Denison Oil Performance Shares) is greater than $(1.15)^n$ where n equals the number of years (or partial years) since August 28, 2001. Net Realized Equity Value shall be defined as the net cash liquidation value of Denison Oil.

Denison Oil Second Preferred Shares

The Denison Oil Second Preferred Shares may at any time or from time to time be issued in one or more series. Before any shares of a particular series are issued, the directors of Denison Oil shall, by resolution, fix the number of shares that will form such series and shall, subject to the limitations set out in Denison Oil's Articles, by resolution, fix the designation, rights, privileges, restrictions and conditions to be attached to the Denison Oil Second Preferred Shares of such series. The rights, privileges, restrictions and conditions attaching to the Denison Oil Second Preferred Shares as a class are in all respects the same as the rights, privileges, restrictions and conditions attaching to the Denison Oil First Preferred Shares as a class, provided, however, that the Denison Oil First Preferred Shares are accorded the preferences over the Denison Oil Second Preferred Shares described above under the heading "Denison Oil First Preferred Shares".

DIRECTORS AND OFFICERS OF DENISON OIL

Subject to election of the directors as nominated by management of Denison Energy as described under "Other Matters to be Considered at the Denison Meeting – Forte Arrangement Resolution – Election of Directors of Denison Oil" in the body of this Information Circular, the following table sets forth the name, municipality of residence and positions for each of the proposed directors and officers of Denison Oil upon completion of the Forte Arrangement, together with their principal occupations during the past five years and the number of Denison Oil Common Shares and the percentage of the total issued and outstanding Denison Oil Common Shares that will be owned by them, directly or indirectly, or over which control or direction will be exercised by them, after giving

effect to the Forte Arrangement. The directors of Denison Oil shall hold office until the next annual meeting of Denison Oil shareholders or until their respective successors have been duly elected or appointed.

Name and Municipality of Residence	Position	Principal Occupation During the Last Five Years	Number of Denison Oil Common Shares Beneficially Owned or Controlled After Giving Effect to the Forte Arrangement[3]
Thomas J. MacKay[2] Millarville, Alberta	Chairman, Chief Executive Officer and a Director	Mr. MacKay has been the Chairman and Chief Executive Officer of Forte since June 2001. Prior thereto, he was the Chairman and Chief Executive Officer of Forte Energy Ltd. from 1997 to April 2001.	461,751 (2.5%)
Douglas N. Baker[1] [2] Calgary, Alberta	President, Chief Financial Officer and a Director	Mr. Baker has been the President and Chief Financial Officer of Forte since June 2001. Prior thereto, he was the President and Chief Financial Officer of Forte Energy Ltd. from 1997 to April 2001.	461,751 (2.5%)
W. Peter Comber[1] [2] Toronto, Ontario	Director	Mr. Comber has been a Managing Director of Barrantagh Investment Management Inc. (formerly McCutcheon Comber Investment Management Inc.), an investment counselling firm, since August 1999.	67,050 (0.4%)
David V. Richards[1] [2] Calgary, Alberta	Director	Mr. Richards has been the Managing Director of Network Capital Inc., an investment management company, since 1998.	64,547 (0.4%)
R. Bruce Hammond Calgary, Alberta	Senior Vice-President and Chief Operating Officer	Mr. Hammond has been the Senior Vice-President and Chief Operating Officer of Forte since June 2001. Prior thereto, he was the Vice-President and Chief Operating Officer of Forte Energy Ltd. from 1997 to April 2001.	461,751 (2.5%)
James S. Blair[4] Calgary, Alberta	Director	Mr. Blair is the President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Prior thereto, Mr. Blair was Senior Vice-President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy–related company until January 2002.	4,857 (0.0%)
Gregory S. Fletcher[4] Calgary, Alberta	Director	Mr. Fletcher is an independent businessman involved in the oil and gas industry in Western Canada. He is currently the President of Sierra Energy Inc., a private oil and gas company that he founded in 1997.	750 (0.0%)

Notes:
(1) Members of the Audit Committee.
(2) Members of the Reserves Committee.
(3) Includes shares held by spouses of the respective directors and officers.
(4) Messrs. Blair and Fletcher were appointed as directors of Denison Oil on January 21, 2004.

After giving effect to the Forte Arrangement the directors and officers of Denison Oil, as a group, will beneficially own, directly or indirectly, or exercise control or direction over, 1,991,807 Denison Oil Common Shares representing, in aggregate, approximately 10.8% of the issued and outstanding Denison Oil Common Shares. In addition, Messrs. MacKay, Baker and Hammond will own an aggregate of 2,682,000 Denison Oil Performance Shares and Messrs. Comber and Richards will own options to purchase an aggregate of 178,800 Denison Oil Common Shares.

For a brief description of the backgrounds of Messrs. MacKay, Baker, Comber, Richards and Hammond, see "Directors and Officers" set forth in Exhibit L to this Information Circular. For a brief description of the backgrounds of Messrs. Blair and Fletcher, see the following.

James S. Blair, Director

Mr. Blair has served as a director of Denison Energy since May 2002. Mr. Blair is the President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in Western Canada, offshore Eastern Canada and Asia. Mr. Blair is a director of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison Energy since May 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in Western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently the President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also the President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. Prior to 1997, he was the President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also the Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company, and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

PRO FORMA CONSOLIDATED CAPITALIZATION

The following table sets forth the consolidated capitalization of Forte as at September 30, 2003 and the pro-forma consolidated capitalization of Denison Oil as at September 30, 2003 after giving effect to the completion of the Forte Arrangement. See the pro forma financial statements attached as Appendix A to this Exhibit.

	Forte[1]	Pro Forma[2][3][6][7]
	As at September 30, 2003 (unaudited)	As at September 30, 2003 after giving effect to the Forte Arrangement (unaudited)
Bank Debt	$11,148,860	$14,663,000
Share Capital		
Forte Common Shares	$16,064,682 (16,398,700 shares)	-
Forte Performance Shares	$30 (3,000,000 shares)	-
Denison Oil Common Shares	-	$23,119,000 (18,394,549 shares)[4][5]
Denison Oil Performance Shares	-	$30 (2,682,000 shares)

Notes:
(1) See "Capitalization" in Exhibit L – Information Concerning Forte Oil Corporation.
(2) See the pro forma financial statements attached as Appendix A to this Exhibit.

(3) The pro forma information presented includes the accounts of Forte as well as certain transactions to be completed pursuant to the Denison Arrangement, including the spin out of the oil and gas operations of Denison Energy to Denison Resources and a share of certain cash proceeds in the amount of $1,334,000 to be received by Denison Resources, which will be applied to reduce bank debt. Subsequent to the completion of the Forte Arrangement, both the Amalgamated Corporation and Denison Resources will be wholly-owned subsidiaries of Denison Oil.

(4) Denison Oil will have 18,394,549 Denison Oil Common Shares issued and outstanding subsequent to the completion of the Denison Arrangement and the Forte Arrangement, 3,734,111 of which will be issued to the Denison Energy Shareholders pursuant to the Denison Arrangement and 14,660,438 of which will be issued to the holders of the Forte Common Shares pursuant to the Forte Arrangement. These figures assume that there are no dissenting Denison Energy Shareholders or Forte Shareholders, that there are 17,705,724 Denison Energy Common Shares (3,541,145 post-Denison Arrangement) issued and outstanding on September 30, 2003 and that 964,833 (192,966 post-Denison Arrangement) Denison Energy Options are exercised pursuant to the Denison Arrangement.

(5) Denison Oil will have reserved for issuance 791,190 Denison Oil Common Shares issuable on exercise of Denison Oil options and 2,682,000 Denison Oil Common Shares issuable on conversion of Denison Oil Performance Shares.

(6) These figures are after transaction costs.

(7) As at September 30, 2003, on a pro forma basis, Denison Oil would have had retained earnings of $865,000 and a provision for abandonment and site restoration of $1,139,000.

The Forte Arrangement will be accounted for as a reverse takeover whereby Forte is deemed to be the acquiror of Denison Resources because, subsequent to the completion of the Forte Arrangement, approximately 80% of the Denison Oil Common Shares will be held by the former holders of the Forte Common Shares.

PRINCIPAL HOLDERS OF SECURITIES

To the knowledge of the directors and senior officers of Forte, as at the date hereof but after giving effect to the Forte Arrangement, no person or company will beneficially own, directly or indirectly, or exercise control or direction over, voting securities of Denison Oil carrying more than 10% of the voting rights attached to any class of voting securities of Denison Oil other than the following:

Name	Denison Oil Common Shares after Giving Effect to the Forte Arrangement	
	Number of Shares	Percentage of Class
Spindrift Partners LP	2,136,588[1]	11.6%
Spindrift Investors (Bermuda) LP	1,972,236[1]	10.7%

Notes:

(1) Control of these shares may be attributed to Wellington Management Company, LLP, which shares the power to direct the disposition of the securities pursuant to an investment management agreement with the shareholder.

(2) Based on information provided to Forte by the holders.

STOCK OPTIONS

In connection with the Denison Arrangement, Denison Energy Shareholders will be asked to consider and approve the adoption of the Denison Oil Stock Option Plan. The Denison Oil Stock Option Plan will provide for the granting of options to purchase Denison Oil Common Shares to officers, directors, employees and consultants and other service providers of Denison Oil and its subsidiaries. The Denison Oil Stock Option Plan will be administered by the Board of Directors of Denison Oil or a committee of the Board of Directors appointed from time to time for such purpose. Options may be granted at the discretion of the board or a committee thereof in such number as may be determined at the time of grant, provided that the number of Denison Oil Common Shares reserved for issuance on exercise of all options outstanding under the Denison Oil Stock Option Plan at any time shall not exceed the greater of (i) 2,000,000; and if permitted by the stock exchanges on which the Denison Oil Common Shares are listed, (ii) 10% of the number of Denison Oil Common Shares outstanding from time to time.

The number of options granted, the vesting of options and the exercise price of options is fixed by the Board of Directors, or a committee thereof, at the time of grant, provided that: (i) the maximum term of the option may not exceed five years from the date of grant; and (ii) the exercise price of any option may not be less than the current

market price of the Denison Oil Common Shares, being the closing trading price per Denison Oil Common Share on the TSX on the last day immediately prior to the date of grant that the Denison Oil Common Shares traded (and further subject to the discretion of the Board of Directors and the policies of the TSX).

On the effective date of the Forte Arrangement, each Forte Option will become an option to purchase the number of Denison Oil Common Shares determined by multiplying the number of Forte Common Shares subject to such Forte option by 0.894, at an exercise price per Denison Oil Common Share equal to the exercise price per share of such Forte option divided by 0.894. Such options will be deemed to have been granted under the Denison Oil Stock Option Plan. Otherwise, the term, exerciseability and all other terms and conditions of the Forte options in effect on the effective date of the Forte Arrangement shall govern the Forte Options so converted.

As a result of the foregoing, subsequent to the completion of the Forte Arrangement, Denison Oil will have outstanding options pursuant to the Denison Oil Stock Option Plan to purchase an aggregate of 791,190 Denison Oil Common Shares as set forth in the following table.

Group (Number of Persons)	Number of Shares Under Option	Date of Grant	Date of Expiry	Exercise Price per Share
Executive Officers (3 persons)	0	N/A	N/A	N/A
Directors[1] (2 persons)	178,800	October 6, 2001	October 6, 2006	$1.12
Employees/Consultants[2] (7 persons)	134,100	July 16, 2002	July 16, 2007	$1.12
	366,540	November 5, 2002	November 5, 2007	$1.12
	111,750	February 27, 2003	February 27, 2008	$1.79
Total	791,190			

Notes:
(1) Directors who are not also executive officers.
(2) Employees/Consultants who are not also executive officers or directors.

DIVIDEND POLICY

Denison Oil has not paid any dividends on the outstanding Denison Oil Common Shares. The Board of Directors of Denison Oil will determine the actual timing, payment and amount of dividends, if any, that may be paid by Denison Oil from time to time based upon, among other things, the cash flow, results of operations and financial conditions of Denison Oil, the need for funds to finance ongoing operations and other business considerations as the Board of Directors of Denison Oil considers relevant.

PRICE RANGE AND TRADING VOLUME OF DENISON OIL COMMON SHARES

There is currently no published or public market for either the Denison Oil Common Shares or the Denison Oil Performance Shares.

It is a condition to the completion of the Forte Arrangement that the TSX or the TSXV, as the case may be, shall have consented to the Forte Arrangement (if required) and shall have conditionally approved the listing thereon of the Denison Oil Common Shares to be issued pursuant to the Forte Arrangement and issuable upon the conversion of the Denison Oil Performance Shares, subject to compliance with the usual requirements of the TSX or the TSXV, as the case may be. Listing of the Denison Oil Common Shares on the TSX or the TSXV, as the case may be, will be subject to Denison Oil meeting the original listing requirements of the TSX or the TSXV, as the case may be. Forte believes that Denison Oil will meet the listing requirements of the TSX upon the completion of the Forte Arrangement, however **there can be no assurance that the Denison Oil Common Shares will be listed on the TSX, the TSXV or any other stock exchange.**

RISK FACTORS

An investment in Denison Oil should be considered highly speculative due to the nature of Denison Oil's involvement in the exploration for, and the acquisition, development, production and marketing of, oil and natural gas reserves and its current stage of development. Oil and gas operations involve many risks which even a combination of experience and knowledge and careful evaluation may not be able to overcome. There is no assurance that further commercial quantities of oil and natural gas will be discovered or acquired by Denison Oil.

For a description of certain risk factors relating to the oil and gas businesses being carried on by Forte and Denison Energy, all of which would be applicable to Denison Oil if the Forte Arrangement is completed, see "Risk Factors" in Exhibit L to this Information Circular and "Risk Factors" in Exhibit M to this Information Circular.

INDUSTRY CONDITIONS

The oil and gas industry is subject to extensive controls and regulations imposed by various levels of government. For a discussion of certain industry conditions affecting the oil and gas industry generally, see "Industry Conditions" set forth in Exhibit L to this Information Circular.

AUDITORS, TRANSFER AGENT AND REGISTRAR

The auditors of Denison Oil are, and will be after completion of the Forte Arrangement, Deloitte & Touche LLP, Chartered Accountants, 3000, 700 – 2nd Street S.W., Calgary, Alberta, T2P 0S7. The transfer agent and registrar for the Denison Oil Common Shares will be Computershare Trust Company of Canada at its principal offices in Calgary, Alberta and Toronto, Ontario.

APPENDIX A
DENISON OIL CORPORATION PRO FORMA FINANCIAL STATEMENTS

Compilation Report on Pro Forma Financial Statements

To the Directors of Denison Oil Corporation and Forte Oil Corporation:

We have read the accompanying unaudited pro forma consolidated balance sheet of Denison Oil Corporation ("Denison Oil") as at September 30, 2003 and the unaudited pro forma consolidated statements of operations for the nine months ended September 30, 2003 and for the year ended December 31, 2002, and have performed the following procedures:

1. Compared the figures in the column captioned "Denison Oil" to the audited balance sheet of Denison Oil Corporation as at January 21, 2004 and found them to be in agreement.
2. Compared the figures in the columns captioned "Forte" to the unaudited financial statements of Forte Oil Corporation ("Forte") as at September 30, 2003 and for the nine months then ended and the audited financial statements of Forte for the year ended December 31, 2002, respectively, and found them to be in agreement.
3. Compared the figures in the columns captioned "Denison Energy PNG Assets" to the unaudited statements of The Oil and Gas Division of Denison Energy Inc. as at September 30, 2003 and for the nine months ended September 30, 2003 and the audited statements of The Oil and Gas Division of Denison Energy Inc. for the year ended December 31, 2002, respectively, and found them to be in agreement.
4. Compared the figures in the columns captioned "Red Earth Properties" to the audited statement of revenue and operating expenses of the Red Earth Properties for the eleven months ended November 30, 2002 and found them to be in agreement.
5. Compared figures in the columns captioned "Carson Properties" to the unaudited statement of revenue and operating expenses of the Carson Properties for the six months ended June 30, 2003 and the audited statement of revenue and operating expenses of the Carson Properties for the year ended December 31, 2002, respectively, and found them to be in agreement.
6. Made enquiries of certain officials of Forte who have responsibility for financial and accounting matters about:
    a) The basis for determination of the pro forma adjustments; and
    b) Whether the unaudited pro forma consolidated financial statements comply as to form in all material respects with regulatory requirements of various Securities Commissions and similar regulatory authorities in Canada.

    The officials:

    a) Described to us the basis for determination of the pro forma adjustments; and
    b) Stated that the unaudited pro forma consolidated statements comply as to form in all material respects with regulatory requirements of various Securities Commissions and similar regulatory authorities in Canada
7. Read the notes to the unaudited pro forma consolidated statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.
8. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Forte", "Denison Energy PNG Assets", "Carson Properties" and "Red Earth Properties" as at September 30, 2003 and for the nine months ended September 30, 2003 and for the year ended December 31, 2002, and found the amounts in the column captioned "Pro forma consolidated" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the unaudited pro forma consolidated financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

1. BASIS OF PRESENTATION

The accompanying unaudited pro forma consolidated financial statements of Denison Oil Corporation ("Denison Oil") have been prepared by management of Forte Oil Corporation ("Forte') in accordance with Canadian generally accepted accounting principles. These unaudited pro forma consolidated financial statements have been prepared for inclusion in the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison") dated January 29, 2004 ("Circular") relating to the re-organization of Denison Energy Inc. including the spin out of the oil and gas operations to a new company, Denison Resources Inc. ("Denison Arrangement"). As part of this re-organization and pursuant to an Arrangement Agreement dated January 28, 2003 between Forte, Denison and certain other related parties ("Forte Arrangement"), the shareholders of Forte will exchange their shares for common shares of Denison Oil, a newly formed corporation which is to be listed on the TSX on completion of the arrangements, on the basis of .894 shares for each Forte share, and following the Denison Arrangement the shareholders of Denison Resources Inc.(" Denison Resources") will exchange their shares of Denison Resources for shares of Denison Oil on a share-for-share basis. Forte is a private oil and gas company and pursuant to the Denison Arrangement, the shareholders of Denison will receive shares of three different companies, one of which is Denison Resources which will own the oil and gas assets of Denison in Western Canada and following a 5-for-1 share consolidation will have 3,734,111 shares outstanding. Both Forte and Denison are engaged in the business of acquisition, exploration, development and production of petroleum and natural gas properties in Western Canada. The continuing public entity after the completion of the arrangements will be re-named from Denison Oil Corporation to Forte Resources Inc.

The unaudited pro forma consolidated balance sheet of Denison Oil as at September 30, 2003 and the unaudited pro forma consolidated statements of operations of Denison Oil for the nine months ended September 30, 2003 and the year ended December 31, 2002 ("the Pro Forma Financial Statements") have been prepared from information derived from the following (all as included in the accompanying Circular):

- Unaudited financial statements of Forte as at and for the nine months ended September 30, 2003 and the audited consolidated financial statements of Forte as at and for the year ended December 31, 2002;
- Unaudited statements of The Oil and Gas Division of Dension Energy Inc. ("Denison Energy PNG Assets") as at and for the nine months ended September 30, 2003 and the audited statement of operations of the Denison Energy PNG Assets for the year ended December 31, 2002;
- Unaudited statement of revenue and operating expenses of the Carson Properties for the six months ended June 30, 2003 and audited statement of revenue and operating expenses of the Carson Properties for the year ended December 31, 2002 (Forte acquired these properties effective, July 1, 2003);

1. BASIS OF PRESENTATION (Continued)

- Audited statement of revenue and operating expenses of the Red Earth Properties for the eleven months ended November 30, 2002 (Forte acquired these properties on December 2, 2002); and
- Audited balance sheet of Denison Oil as at January 21, 2004.

In the opinion of management of Forte, these Pro Forma Financial Statements include all material adjustments necessary for fair presentation in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). The unaudited pro forma consolidated balance sheet gives effect to the proposed transactions and assumptions as if they had occurred at the balance sheet date while the unaudited pro forma consolidated statements of operations give effect to the proposed transactions and assumptions as if they had occurred at Janaury 1, 2002. The Pro Forma Financial Statements are not necessarily indicative of the results of operations that would have occurred for the nine month period ended September 30, 2003 and the year ended December 31, 2002 or for future years. In preparing these Pro Forma Financial Statements, no adjustments have been made to reflect operating synergies and general and administrative cost savings that may result from combining the operations of Forte, except for certain general and administrative expenses, which relate to the operation of the Denison Energy PNG Assets as a separate division. The Denison Arrangement and the Forte Arrangement are subject to regulatory and shareholder approval. As a result, there is no assurance that the arrangements will be completed.

The accounting policies used in the preparation of the Pro Forma Financial Statements are consistent with those used by Forte in the audited financial statements as at and for the year ended December 31, 2002. The Pro Forma Financial Statements should be read in conjunction with the above noted financial statements or financial information of the Denison Oil, Forte, Denison Energy PNG Assets, Red Earth Properties and Carson Properties.

2. PROPOSED TRANSACTIONS AND ASSUMPTIONS

(a) Purchase of Denison Resources (Denison Energy PNG Assets)

On January 28, 2004, Forte and Denison and certain related companies entered into an Amalgamation Agreement (the "Agreement") whereby the shareholders of Forte and Denison will exchange their common shares for common shares of Denison Oil. Upon conclusion of the transaction, the initial Board of Directors of Denison Oil will consist of four Forte directors and two Denison directors. The transaction has been accounted for in the Pro Forma Financial Statements as an acquisition of the Denison Resources (comprising the Denison Energy PNG Assets and liabilities) by Forte ("reverse-takeover") as the shareholders of Forte will own approximately 80% of the new combined entity.

The unaudited pro forma consolidated balance sheet of Denison Oil as at September 30, 2003 gives effect to the acquisition of the Denison Resources by Forte as if it had occurred on September 30, 2003. The total outstanding number of common shares of Denison Resources is assumed to be 3,734,111 at September 30, 2003, after giving effect to the exercise of 190,700 common share purchase options and a consolidation of shares on a five-for-one basis. The total outstanding number of common shares and share purchase options of Denison Oil at September 30, 2003 is assumed to be 14,660,438 and 791,190 respectively, after giving effect to the exchange of each Forte share for .894 shares of Denison Oil pursuant to the Forte Arrangement. Denison Oil is assumed to acquire all the outstanding common shares of Denison Resources in exchange for 3,734,111 common shares of the Company. The values assigned to the net assets of Denison Resources acquired are as follows:

	(000's) $
Net assets acquired:	
Current assets	1,598
Petroleum and natural gas properties	10,998
Current liabilities, including Forte transaction costs	(1,880)
Future site restoration costs	(147)
Bank debt	(3,514)
	7,055
Consideration:	
Common shares (3,734,111 shares)	6,905
Acquisition costs	150
	7,055

2. PROPOSED TRANSACTIONS AND ASSUMPTIONS (Continued)

The allocation of the purchase price will be finalized after the arrangements are approved and the fair values of the assets and liabilities acquired have been determined. Accordingly, the above allocation could be subject to change. The purchase price allocation takes into account certain proceeds in the amount of $1,334,000 which are to be received by Denison Resources under the Denison Arrangement and which are to be used to reduce bank debt. The attributable value assigned to the shares issued has been based on Forte management's estimate of the fair value of the Denison Energy PNG Assets.

(b) Depreciation, depreciation and amortization

Depletion, depreciation and amortization, including site restoration, has been calculated on a consolidated basis incorporating the assigned values to the Denison Energy PNG Assets determined in the purchase allocation, and property costs related to the Carson Properties and the Red Earth Properties.

(c) Interest

Interest expense for the period ended September 30, 2003 and interest income for the year ended December 31, 2002 have been adjusted to reflect the increase in bank loans and other loans related to the acquisition of the Carson Properties, the Red Earth Properties and the Denison Energy PNG Assets.

(d) General and administrative

General and administrative costs have been increased to provide for the additional costs associated with the Company being a public company following the arrangements, and any costs related to the Denison Energy PNG Assets operating as a division of Denison have been reduced.

(e) Future income taxes

The provision for future income taxes has been adjusted to reflect all of the above assumptions.

3. PRO FORMA SHARE CAPITAL

(a) Authorized

Unlimited number of common shares without nominal or par value
Unlimited number of preferred shares issuable in series

(b) Common shares issued and outstanding

	Number of Shares	Amount (000's) $
Shares held by Forte shareholders as at September 30, 2003	16,398,700	16,064
Share consolidation (.894-to-1)	(1,738,262)	-
	14,660,438	16,064
Shares to be issued to Denison shareholders	3,734,111	7,055
	18,394,549	23,119

The number of shares of Denison Oil to be issued to Denison shareholders is comprised of the following:

	Number of Shares
Shares held by Denison shareholders as at September 30, 2003	17,705,724
Shares issued on conversion of share purchase options	964,833
Share consolidation on a 5-for-1 basis	(14,936,446)
	3,734,111

(c) Performance shares and options

Pursuant to the arrangements, 3,000,000 First preferred, Series 1 shares are exchanged for 2,682,000 preferred performance shares of Denison Oil, under the same terms and conditions and 885,000 share purchase options of Forte are exchanged for 791,190 share purchase options of Denison Oil with similar terms and conditions.

3. PRO FORMA SHARE CAPITAL (Continued)

(d) Per share amounts

The following weighted average number of shares are based on the weighted average number of Forte shares for the relevant periods plus common shares issued in Note 2 (a) as if they were issued at the beginning of the relevant periods ended:

	September 30, 2003	December 31, 2002
Basic	18,096,261	17,144,111
Diluted	21,090,547	21,909,597

SUMMARY

The following is a summary of Denison Energy's business after the Reorganization on the assumption that Denison Energy exercises the Calfrac Option and should be read together with the more detailed information and financial data and statements contained elsewhere in this exhibit and in the Information Circular.

Please refer to the Glossary in this exhibit for an explanation of certain terms used in this exhibit and in this summary.

Except as otherwise indicated, all of the disclosure in this exhibit is made on the basis that the Reorganization will be completed. Following completion of the Reorganization, the independent members of the Board of Directors of Denison Energy will consider whether Denison Energy should exercise the Calfrac Option or pursue alternative business opportunities. The Board of Directors is currently not aware of any business opportunities available to Denison Energy other than the Calfrac Option.

For this reason, the disclosure contained in this exhibit provides information regarding Calfrac's business and assumes in certain cases that Denison Energy will exercise the Calfrac Option. There can be no assurance that Denison Energy will exercise the Calfrac Option or that Calfrac's oilfield services business described herein will become Denison Energy's business following the Reorganization.

Denison Energy

Introduction

Denison Energy is considering changing the focus of its business to the oilfield services business. Denison Energy's business focuses on resource-related interests that includes interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the Reorganization, the Canadian petroleum and natural gas assets of Denison Energy will be transferred to, and the related liabilities will be assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison Energy will be transferred to, and the related liabilities will be assumed by, Denison Mines Inc. Following the Reorganization, Denison Energy will hold no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd. and certain income tax attributes, and will have retained certain claims and liabilities. See "The Reorganization" in the Information Circular for illustrations of the structure of Denison Energy before and after the Reorganization, the Public Offering and the Acquisition.

Denison Energy has filed a preliminary prospectus with respect to the Public Offering to provide financing which will enable Denison Energy to exercise the option to acquire the shares of Calfrac, should Denison Energy so determine, and complete the transformation of Denison Energy to an oilfield services provider.

The Calfrac Option

Pursuant to the Calfrac Option, the shareholders of Calfrac granted Denison Energy an irrevocable option to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Calfrac Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised Denison Energy that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting the net debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million.

The purchase price pursuant to the Calfrac Option is payable, at the option of Denison Energy, in cash or a combination of cash and Common Shares. If Denison Energy elects to pay a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. No portion of the net purchase price may be paid by the issuance of Common Shares unless the Public Offering has closed and the Common Shares issuable pursuant to the Public Offering have been issued and delivered unconditionally to the subscribers under the Public Offering.

If the Reorganization and the Public Offering are completed, Denison Energy anticipates exercising the Calfrac Option and paying the net purchase price to the shareholders of Calfrac by the issuance of Common Shares and the payment of approximately $28.8 million in cash.

Calfrac

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal ("NGC"), which is often referred to as coalbed methane.

Management of Calfrac has advised Denison Energy that it believes that the combination of increasing demand for natural gas in North America and the declining rates of gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management of Calfrac believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fractures.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. NGC appears to have significant potential as an energy source and could result in additional demand for Calfrac's fracturing services. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; and (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services.

Calfrac was formed in 1999 by Ronald P. Mathison, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts. For the nine month period ending September 30, 2003, Calfrac had: (i) revenue of $108.5 million; (ii) income before interest, taxes, depreciation and amortization of $27.4 million; (iii) income before taxes of $19.1 million; and (iv) net income of $12.3 million.

Corporate Strategy

If the Reorganization and the acquisition of all of the shares of Calfrac occurs, Denison Energy's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic

fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Denison Energy believes that, if the acquisition of all the shares of Calfrac occurs, the following business strengths will enhance Denison Energy's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management

Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event Denison Energy completes the acquisition of all of the shares of Calfrac.

Experienced, Interested Board

Denison Energy's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in Denison Energy.

Continuous Growth in Business

Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 45%, and net income increasing annually by a minimum of 29%, with an average of 42%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations

If the acquisition of all of the shares of Calfrac occurs, Denison Energy will be an oilfield service provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, Denison Energy intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building

Calfrac's management recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology

Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed

proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows it to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization

Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

Selected Financial Information

The following table presents a summary of historical financial data for Calfrac for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of Calfrac at each of these dates and for the periods then ended. The following table also presents a summary of the unaudited pro forma consolidated balance sheet of Denison Energy as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of Denison Energy for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of Common Shares for net proceeds of approximately $111.6 million pursuant to the Public Offering; (iii) the completion of the Acquisition by way of the issuance of Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the unaudited pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro forma financial statements of Denison Energy. All financial information with respect to Denison Energy and Calfrac has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

The following data should be read along with "Management's Discussion and Analysis Regarding Calfrac" and the financial statements and related notes of Calfrac included in this exhibit. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of Denison Energy included in this exhibit.

	$187,043						

Notes:

(1) Derived from the audited financial statements.

(2) EBITDA, in respect of Denison Energy, represents revenue after operating expenses, selling and general and administrative expenses, stock option expense and write-down of oil and gas properties, but before depreciation, depletion and amortization, amortization of intangibles, interest and income tax. EBITDA, in respect of Calfrac, represents income before interest, taxes, depreciation and amortization. EBITDA is not a term that is approved under Canadian GAAP, as the calculation of EBITDA is not always used consistently by reporting issuers. Accordingly, EBITDA, as the term is used herein, may not be comparable to EBITDA as reported by other entities. EBITDA is presented because it is frequently used by security analysts and others in evaluating companies and their ability to service debt.

(3) If the acquisition of all the shares of Calfrac occurs, Denison Energy will have non-capital losses and unclaimed expenditures, in aggregate, equal to approximately $224.6 million for federal tax purposes and approximately $172.9 million for Alberta provincial tax purposes.

The Public Offering

On January 22, 2004, Denison Energy filed a preliminary prospectus dated January 20, 2004 with respect to an offering of Common Shares following completion of the Reorganization. Denison Energy is seeking to raise gross proceeds of $120 million. If the Public Offering proceeds, the net proceeds to Denison Energy are estimated to be $111.6 million, after deducting the Underwriters' fee of $6.6 million and expenses of the Public Offering, which are estimated by Denison Energy to be approximately $1.8 million.

The net proceeds of the Public Offering are anticipated to be used by Denison Energy as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac; and (iii) approximately $24.4 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac.

It is expected to be a condition of the underwriting agreement with respect to the Public Offering that at the time of the closing of the Public Offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The underwriting agreement is also expected to contain a provision that if the Public Offering is completed, but the Acquisition is not completed, Denison Energy must call a special meeting of its shareholders within 90 days of the completion of the Public Offering to determine the appropriate use of the proceeds of the Public Offering.

Risk Factors

Ownership of Denison Energy's securities after the Reorganization should be considered speculative due to the nature of Denison Energy's business and its stage of development. Denison Energy is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of the Reorganization, the Public Offering and the acquisition of Calfrac. If such acquisition is not completed, the success of this change in business strategy cannot be assured. Although Denison Energy does not have a history of paying dividends on its Existing Shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. There are additional risks associated with an investment in these securities relating to: volatility of industry conditions, seasonality, alternatives to and changing demand for petroleum products, dependence on major customers, government regulation, sourcing of raw materials, pricing and availability of raw materials, Kyoto Protocol, operating risks and insurance, key personnel, competition in the industry, currency exchange risk, the absence of current business and anticipated acquisition of Calfrac, liabilities related to current or prior operations and additional financing. In assessing the risks of ownership of the Common Shares, shareholders must rely upon the ability and integrity of the management of Denison Energy following the Acquisition. Shareholders should consult their own professional advisors to assess the income tax, legal and other aspects of ownership of the Common Shares. See "Risk Factors".

GLOSSARY

In this exhibit, unless the context otherwise requires, the following words and phrases have the meanings set forth below:

"**ABCA**" means the *Business Corporations Act* (Alberta).

"**Acquisition**" means the acquisition by Denison Energy of all of the issued and outstanding shares of Calfrac pursuant to the Calfrac Option.

"**Amalgamation**" means the amalgamation of Denison Energy with Calfrac pursuant to section 184 of the ABCA.

"**Arrangement**" means the arrangement of Denison Energy pursuant to section 182 of the OBCA.

"**Arrangement Agreement**" means the arrangement agreement among Denison Energy, Tenwest Uranium Limited, Denison Mines Inc., Denison Resources Inc., Denison Oil Corporation, Denison Resources Partnership, Denison Mine Holding Corporation and E. Peter Farmer, as amended from time to time.

"**Calfrac**" means Calfrac Well Services Ltd.

"**Calfrac Option**" means the Calfrac Option agreement among Calfrac, Matco Investments (on behalf of itself and the other shareholders of Calfrac) and Denison Energy granting an irrevocable option to Denison Energy to purchase all of the issued and outstanding shares of Calfrac for an aggregate purchase price of approximately $227.5 million less the net debt of Calfrac, which is anticipated to be approximately $83.6 million for these purposes.

"**Calfrac USA**" means Calfrac Well Services Corp., a wholly owned subsidiary of Calfrac.

"**ChemErgy**" means ChemErgy Ltd.

"**Cogema**" means Cogema Resources Inc.

"**Common Shares**" means the common shares in the capital of Denison Energy following the Arrangement.

"**Consolidation**" means the consolidation of 21 Existing Shares of Denison Energy into one Common Share pursuant to the Arrangement.

"**Continuance**" means the continuance of Denison Energy as an Alberta corporation under section 188 of the ABCA.

"**Denison Energy**" means Denison Energy Inc.

"**DJ Basin**" means the Denver-Julesburg Basin in Colorado.

"**Existing Shares**" means the common shares in the capital of Denison Energy as currently constituted.

"**Information Circular**" means the management information circular of Denison Energy delivered to Denison Energy's shareholders in order to approve the Reorganization, to which this exhibit is attached.

"**Matco**" means Matco Capital Ltd., a corporation controlled by Matco Investments.

"**Matco Investments**" means Matco Investments Ltd., a private investment corporation.

"**NGC**" means natural gas from coal, also known as coalbed methane or "CBM".

"**OBCA**" means the *Business Corporations Act* (Ontario).

"**Public Offering**" means the proposed public offering of Common Shares by Denison Energy following completion of the Reorganization to raise gross proceeds of $120 million.

"**Reorganization**" means the Arrangement, the Continuance, the Subscription and certain related transactions, collectively.

"**Subscription**" means the subscription to be completed by Denison Energy following the Arrangement pursuant to which Denison Energy will issue Common Shares to Matco or a group of investors designated by Matco for aggregate gross proceeds of approximately $5.3 million.

"**Tax Act**" means the *Income Tax Act* (Canada).

"**TSX**" means the Toronto Stock Exchange.

"**Underwriters**" means Peters & Co. Limited, FirstEnergy Capital Corp. and RBC Dominion Securities Inc.

Unless otherwise indicated, references herein to "$" or "dollars" are to Canadian dollars.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this exhibit constitute forward-looking statements. When used in this document, the words "may", "would", "could", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect", and similar expressions, as they relate to Denison Energy, are intended to identify forward-looking statements. Such statements reflect Denison Energy's current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this exhibit under the heading "Risk Factors", "Selected Financial Information" and "Management's Discussion and Analysis Regarding Calfrac". Many factors could cause Denison Energy's actual results, performance or achievements to vary from those described in this exhibit. Should one or more of these risks or uncertainties materialize, or should assumptions underlying forward-looking statements prove incorrect, actual results may vary materially from those described in this exhibit as intended, planned, anticipated, believed, estimated or expected. Denison Energy does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this exhibit contains forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding Denison Energy's ability to maintain Calfrac's competitive position;
- expectations regarding Denison Energy's ability to raise capital;
- treatment under governmental regulatory regimes;
- commodity prices; and
- exercise of the Calfrac Option.

Denison Energy's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this exhibit:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- liabilities and risks associated with Denison Energy's current or prior operations;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

Except as otherwise indicated, all of the disclosure in this exhibit is made on the basis that the Reorganization will be completed. Following completion of the Reorganization and the Public Offering, the independent members of the Board of Directors of Denison Energy will consider whether Denison Energy should exercise the Calfrac Option or pursue alternative business opportunities. The Board of Directors is currently not aware of any business opportunities available to Denison Energy other than the Calfrac Option.

For this reason, the disclosure contained in this exhibit provides information regarding Calfrac's business and assumes in certain cases that Denison Energy will exercise the Calfrac Option. There can be no assurance that Denison Energy will exercise the Calfrac Option or that Calfrac's oilfield services business described herein will become Denison Energy's business following the Reorganization.

DENISON ENERGY INC.

Denison Energy is considering changing the focus of its business to the oilfield services business. Denison Energy's current business focuses on resource related interests that includes interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the Arrangement, Denison Energy will dispose of these interests. See "The Reorganization" in the Information Circular. The completion of the Public Offering will provide financing which will enable Denison Energy to exercise the Calfrac Option, should Denison Energy so determine, and complete the transformation of Denison Energy to an oilfield services provider.

Corporate Strategy

If the Acquisition occurs, Denison Energy's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Denison Energy believes that, if the Acquisition occurs, the following business strengths will enhance Denison Energy's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management

Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event Denison Energy completes the Acquisition.

Experienced, Interested Board

Denison Energy's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in Denison Energy.

Continuous Growth in Business

Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 45%, and net income increasing annually by a minimum of 29%, with an average of 42%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations

If the Acquisition occurs, Denison Energy will be an oilfield service provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, Denison Energy intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building

Management of Calfrac recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology

Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for its customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows Calfrac to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization

Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

The Acquisition

The Calfrac Option

Pursuant to the Calfrac Option, the shareholders of Calfrac granted an irrevocable option to Denison Energy to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Calfrac Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised Denison Energy that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million. The following table illustrates the estimated net purchase price payable by Denison Energy to the shareholders of Calfrac in the event Denison Energy exercises the Calfrac Option:

		(in millions)
Purchase price	$	227.5
Established net debt as at December 30, 2003		(25.2)
Estimated debt assumed after December 30, 2003		(58.4)
Estimated net purchase price	**$**	**143.9**

The net purchase price pursuant to the Calfrac Option is payable, at the option of Denison Energy, in cash or a combination of cash and Common Shares. If Denison Energy elects to pay in a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. The Calfrac Option may be exercised by Denison Energy during the period commencing on the date the Public Offering is completed, or, in the event of payment only in cash, the date upon which Denison Energy is a party to binding agreements that would enable it to exercise the Calfrac Option, and ending on the earlier of the seventh day thereafter and March 26, 2004. The Calfrac Option may not be exercised except on an all cash basis unless the Public Offering has closed and the Common Shares issuable pursuant to the Public Offering have been issued and delivered unconditionally to the purchasers under the Public Offering.

If the Reorganization and the Public Offering are completed, Denison Energy anticipates exercising the Calfrac Option and paying the net purchase price to the shareholders of Calfrac by the issuance of Common Shares representing 80% of the net purchase price and the payment of approximately $28.8 million in cash, representing the remaining 20% of the purchase price. Each of Messrs. Mathison, Lambert, Ramsay, Dibb and Roberts, directly and indirectly, will receive an amount proportionate to his respective shareholdings of the approximately $28.8 million that Denison Energy anticipates paying to the shareholders of Calfrac as the cash portion of the net purchase price of the Acquisition. The balance of the purchase price of the Acquisition of approximately $115.1 million is anticipated to be paid by the issuance of Common Shares at an attributed price per share equal to the Public Offering price per share.

The Public Offering

On January 22, 2004, Denison Energy filed a preliminary prospectus dated January 20, 2004 with respect to an offering of Common Shares following completion of the Reorganization. Denison Energy is seeking to raise gross proceeds of $120 million. If the Public Offering proceeds, the net proceeds to Denison Energy are estimated to be $111.6 million, after deducting the Underwriters' fee of $6.6 million and expenses of the Public Offering, which are estimated by Denison Energy to be approximately $1.8 million.

The net proceeds of the Public Offering are anticipated to be used by Denison Energy as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac; and (iii) approximately $24.4 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac.

It is expected to be a condition of the underwriting agreement with respect to the Public Offering that at the time of the closing of the Public Offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The underwriting agreement is also expected to contain a provision that if the Public Offering is completed, but the Acquisition is not completed, Denison Energy must call a special meeting of its shareholders within 90 days of the completion of the Public Offering to determine the appropriate use of the proceeds of the Public Offering.

Amalgamation, Name Change and Additional Directors

If the Acquisition is completed, the Amalgamation and a name change will be effected. Pursuant to the Amalgamation, Calfrac, as a wholly owned subsidiary of Denison Energy following completion of the Acquisition, will be amalgamated on a vertical short form basis. In connection with the Amalgamation, the name of Denison Energy will be changed to Calfrac's name, Calfrac Well Services Ltd.

Following the Reorganization, all of Denison Energy's officers and all but three of Denison Energy's directors are expected to resign. At that time, three independent members of Denison Energy's board, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little, are expected to continue as directors of Denison Energy and are expected to

be joined on the board by Ronald P. Mathison and Martin A. Lambert. It is expected that Martin A. Lambert will be appointed the Interim Chief Executive Officer of Denison Energy and David M. McGoey will be appointed the Interim Chief Financial Officer of Denison Energy. If the Acquisition is completed, it is expected that Douglas R. Ramsay and R. Timothy Swinton will be appointed as additional directors of Denison Energy and the officers disclosed under "Directors and Officers of Denison Energy" and "Management" will be appointed, at which time it is expected that Mr. Lambert and Mr. McGoey will resign as Interim Chief Executive Officer and Interim Chief Financial Officer of Denison Energy, respectively, but Mr. Lambert will continue to act as a director of Denison Energy.

BUSINESS OF CALFRAC

Denison Energy is considering changing the focus of its business to the oilfield services business and, in this regard, anticipates acquiring Calfrac pursuant to the Calfrac Option. Calfrac provides oilfield services designed to increase the production of hydrocarbons from wells drilled for exploration and production companies throughout western Canada and in the Rocky Mountain region of the United States.

Fracturing Services

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies, which services accounted for approximately 92% of Calfrac's total revenue in the first nine months of 2003. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone within a reservoir to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone.

Conventional Hydraulic Fracturing

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fracture.

A considerable amount of technology is incorporated into the design of the fracturing fluid, which normally consists of proprietary chemicals which are combined with a base fluid. The final fluid can be gelled, emulsified or foamed and can be preceded by acid. In Canada, most fluids are energized by the introduction of liquid carbon dioxide or nitrogen gas. In addition to the complex chemical technology used for making the fracturing fluid, the fracturing process involves considerable engineering knowledge and experience to design the fracturing process to maximize the performance of the well. Each fracture is individually designed to take account of the specific temperatures, pressures, formation permeability and reservoir fluids expected in the producing zone in which fracturing will be performed. Calfrac's engineering staff provides technical evaluation and job design recommendations as an integral element of its fracturing service to the customer.

Hydraulic fracturing services involve the use of sophisticated equipment specifically designed and constructed for hydraulic fracturing. A complement or "spread" of equipment required to perform a conventional hydraulic fracturing job normally consists of the following:

- a blender to blend chemicals, base fluid and proppant into specific mixes of fracturing fluids;
- one or more high horsepower fracturing pumpers, with the number dependent upon the pumping pressure and rate required for the fracture;
- a chemical additive unit to hold and deliver each chemical in controllable quantities in order to blend the fracturing fluid; Calfrac often incorporates this unit into its blenders to increase efficiency and reduce the "footprint" of the spread at a particular well location;
- an iron truck or trailer used for transporting and rigging up the high-pressure lines or "iron" that connect the various components of the fracture spread and wellhead;

- a computer van equipped with monitoring, data recording, satellite communication and remote pumper controls to monitor and control the treatment and also record the data related to each phase of the fracture;
- one or more pumpers to pump the energizer (carbon dioxide or nitrogen); and
- various equipment to transport, store and deliver the proppant and energizer.

The traditional or stage fracture procedure for stimulating a multi-zone well involves numerous trips to the well location with each trip stimulating only one or two of the zones. In recent years, procedures have been developed so that all of the zones for a particular well can be fractured in just one trip to the well location. This procedure, using snubbing units for deeper, more highly pressurized wells and coiled tubing rigs for shallower wells, involves moving the target zone up or down the wellbore by raising or lowering tubing and requires the use of specialized tools that can isolate the target zone for treatment. The ability to complete the fracturing services for a multi-zone well in one trip to the well location has become increasingly attractive to customers, as it reduces the traffic to the well location and the resulting disturbance to the landowners and allows the well to be brought into production more quickly. In addition, this procedure simplifies the coordination of the logistics of the fracturing completion.

Fracturing for Natural Gas Found in Coal

Calfrac has identified the market niche of supplying hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada as one in which it seeks to be the leading provider.

NGC is often referred to as coalbed methane. In the United States, NGC production has increased from 0.2 billion cubic feet per day prior to 1990 to 4.4 billion cubic feet per day in 2002, representing approximately 8% of the total natural gas production in the United States.

Alberta and British Columbia have vast coal resources that may be a potential source of significant commercial quantities of NGC and this natural gas source has the potential to make a significant contribution to western Canada's future energy supply. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

NGC is referred to as an "unconventional" form of natural gas. NGC is produced by reducing the pressure in a coal seam to enable the methane gas to flow through fractures, or cleats, in the coal into the wellbore. The natural gas then flows up to the surface. When few natural fractures exist, producers may use hydraulic fracturing to create channels in the coal.

Natural gas found in coal is generally "sweet" not "sour" gas, as it does not contain hydrogen sulphide. NGC is generally 85% to 95% pure methane, with small amounts of carbon dioxide and nitrogen. NGC is generally produced at lower pressures than conventional natural gas and is generally of a nature that is near-pipeline quality when produced, requiring minimal processing.

A key challenge to NGC production in Alberta is the generally low permeability of coals with the highest natural gas concentrations (eg., coal located in the Mannville formations) and the moderate to low natural gas concentrations of higher permeability coals (eg., coal located in the Horseshoe Canyon and Ardley formations). Coal located in the Horseshoe Canyon formations is relatively shallow and may contain approximately 20 individual thin coal seams with interbedded shale and sandstone zones, which often contain natural gas. These zones are attractive multi-zone completion targets for producers of natural gas. Most importantly, these coal seams are dry and therefore produce no water. These coal seams are also found in areas where existing well, natural gas plant and pipeline infrastructure currently exists, which reduces production costs. Alberta's first commercial NGC production projects are located in the Horseshoe Canyon formation in south-central Alberta.

As a result of its extensive involvement in various pilot projects evaluating the viability of NGC production in western Canada, Calfrac, along with its customers, has developed an unconventional method of fracturing NGC wells performing multi-zone fractures through coiled tubing by pumping nitrogen gas, without the use of proppant, fluid or chemicals.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. Reliable information on the number of NGC wells drilled in Alberta in 2003 is not readily available. However, Calfrac has received information from the National Energy Board and the Alberta Energy and Utilities Board that approximately 300 to 500 NGC wells were drilled in Alberta in 2003, representing 2.7% to 4.5% of the 11,067 natural gas wells drilled in Alberta in 2003. Calfrac hydraulically fractured 224 of these wells, representing approximately 8% of Calfrac's aggregate fracturing revenue in 2003 compared to approximately 2% in 2002. The National Energy Board has predicted that the pace of NGC extraction will increase steadily to 1,200 wells being drilled in 2005.

Stimulation and Other Well Services

Calfrac provides stimulation and other well services to exploration and production companies in western Canada. Revenues from well stimulation services accounted for 8% of Calfrac's total revenue for the first nine months of 2003 and 9% of Calfrac's total revenue in 2002.

Coiled Tubing Services

Calfrac injects coiled tubing into wells to perform various well-servicing operations. Coiled tubing consists of continuous, high pressure, flexible, small diameter steel pipe in various lengths up to several thousand meters mounted on a reel on a truck or trailer. Coiled tubing units are often used together with the appropriate support equipment to pump nitrogen, acid or air in order to remove unwanted corrosive acids, solids, gels and fluids from the wellbore and producing zone. Coiled tubing units can also be used to set and remove tools, perform well abandonments and set siphon or velocity strings, which promote the production of natural gas without the accumulation of fluid in the wellbore.

Acidizing Services

Acidizing involves pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids.

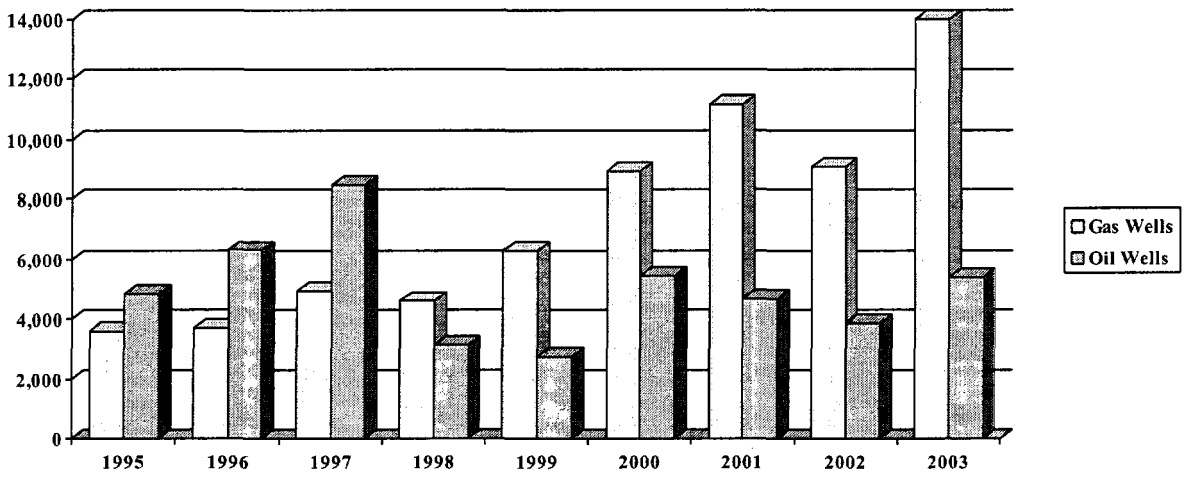
Nitrogen Services

Nitrogen is added to acid blends to provide additional energy to assist in the clean out of unwanted materials and sediments in order to enhance the well flow rate. Nitrogen is also used for removing fluids from wellbores, purging vessels and pressure testing operations. Nitrogen services are used principally in applications supporting Calfrac's coiled tubing and fracturing services. Nitrogen is often pumped into the wellbore to improve safely the recovery of introduced or produced fluids, while reducing the potential for damaging the formation.

Customer Base

Calfrac's customer base consists of in excess of 150 oil and gas exploration and production companies, ranging from large multinational companies to small private companies. Calfrac has established and maintains a number of key relationships with active customers.

Notwithstanding Calfrac's significant customer base, the majority of Calfrac's revenue comes from two large customers. These two customers provided 57% of Calfrac's revenue in the first eleven months of 2003. The largest of these customers provided 50% of Calfrac's revenue in the first eleven months of 2003 and 57% of Calfrac's revenue in 2002. No other customer provided in excess of 5% of total revenue in either of these periods. See "Risk Factors – Dependence on Major Customers" for additional information in respect of Calfrac's customers.



Demand for Hydraulic Fracturing Services

Denison Energy believes that the combination of increasing demand for natural gas in North America and the declining rates of natural gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The

majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

The number of natural gas wells completed each year is believed by management to be a good indicator of the potential level of fracturing activity. The chart below illustrates the substantial increase in the number of natural gas wells completed each year since 1995, from 3,614 in 1995 to 13,944 wells in 2003, as the number of natural gas wells completed has become a larger proportion of the total number of wells completed each year in western Canada.

Wells Completed In Western Canada[(1)]

Note:
(1) Source: Nickle's Daily Oil Bulletin

Although Calfrac provides fracturing services to all segments of the oil and gas industry, it has historically focused on the shallow natural gas well segment located in southern and eastern Alberta. For the past five years, the average depth of the wells completed in Canada has averaged less than 1,100 metres (Nickle's Daily Oil Bulletin). Wells of this depth are generally classified as shallow and are located mainly in southern and eastern Alberta. This segment is and, management believes will continue to be, an important and consistent source of revenue to Calfrac. For this reason, Calfrac first commenced operations from a base in Medicine Hat.

Competition and Marketing Strategy

If the Acquisition occurs, Denison Energy's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the DJ Basin.

Each of the markets in which Calfrac participates is highly competitive. Fracturing services are generally provided to exploration and production companies through a competitive bid process for either individual wells or multi-well projects. Successful bids are the result of high customer satisfaction from past services provided and business relationships. Calfrac has developed extensive client contacts and built strong personal relationships with customers. Exploration and production companies also enter into agreements with service companies to provide fracturing services for multiple wells for periods of, generally, up to two years. However, these agreements seldom

contain binding commitments for a minimum amount of fracturing work. Based on its expertise in providing hydraulic fracturing services and its strong business relations with its two most important customers, Calfrac has entered into four multi-year agreements with these customers to provide fracturing services to them, with three of these agreements providing a minimum quantity of fracturing services to be provided by Calfrac during the term thereof.

Calfrac believes that it provides superior service to customers through its experienced management and work force, unique chemical technology and modern and innovative equipment. Calfrac's management has extensive experience and strong business relationships in the oilfield service industry in western Canada and, as a result of a flat management structure, is actively involved in the daily operations of Calfrac.

Intellectual Property

Calfrac's research and development efforts are focused on providing specific solutions to the challenges experienced by oil and gas exploration and production companies when fracturing and stimulating wells. Calfrac's success in hydraulic fracturing has been facilitated by its ability to provide propriety blends of chemicals that, together with its technical expertise and innovative equipment, result in customers' wells being more productive.

Calfrac conducts a significant amount of its research and development in conjunction with ChemErgy, a company in which Calfrac has a 30% ownership interest. ChemErgy is engaged in research and development relating to new systems and chemicals in connection with oilfield services. ChemErgy also supplies chemical products and provides quality control and logistical services for the products supplied. In accordance with an exclusive relationship agreement between Calfrac and ChemErgy, ChemErgy is required to supply products to and perform research and development for Calfrac on an exclusive basis and Calfrac is required to acquire all of the chemical products used in its business from ChemErgy. The exclusive relationship agreement with ChemErgy will terminate on May 31, 2011 and the agreement will be automatically renewed for one year renewal terms unless terminated with notice by either party. ChemErgy operates a fully-equipped laboratory in Calgary staffed with chemical engineers, chemists and technicians who are experienced in developing technologies to be used in oilfield operations and implementing these procedures in the field.

Where possible, Calfrac and ChemErgy undertake to protect intellectual property which they develop through joint applications for patent protection. Calfrac and ChemErgy currently have two patents pending on chemical systems used to deliver fracturing services.

Facilities, Equipment and Personnel

Calfrac provides hydraulic fracturing and well stimulation services from its corporate head office in Calgary and four field stations located in Medicine Hat, Red Deer and Grande Prairie, Alberta, and in Platteville, Colorado.

Calfrac owns a significant complement of fracturing equipment which, as at December 31, 2003, includes nine conventional fracturing spreads, incorporating 20 fracturing pumpers rated to a total of 45,000 horsepower, and one NGC fracturing spread with eight high rate nitrogen pumpers. Calfrac's well stimulation equipment includes two combination nitrogen-acid pumpers, two acid pumpers, two deep coiled tubing units and eight shallow coiled tubing units. Calfrac's total fleet of 132 large vehicles is comprised of 37 trucks with mounted equipment and 95 tractor/trailer units. Calfrac is currently constructing a tenth conventional and a second NGC fracturing spread, both of which are expected to be operational in the first half of 2004.

As at December 31, 2003, Calfrac employed 342 people in Canada and Calfrac USA employed 40 people. None of the employees of Calfrac or Calfrac USA are unionized.

DIRECTORS AND OFFICERS OF DENISON ENERGY

The following table sets out the names and municipalities of residence of those individuals that are expected to be the directors and officers of Denison Energy in the event Denison Energy completes the Reorganization, the Public Offering and the Acquisition, together with their proposed positions and offices with Denison Energy and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Position with Denison Energy	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
Ronald P. Mathison[1][3] Calgary, Alberta	Chairman and a Director	Proposed	President of Matco Investments Ltd. (a private investment company); prior to 1999, Principal, Peters & Co. Limited.
Douglas R. Ramsay Calgary, Alberta	Chief Executive Officer and a Director	Proposed[4]	President and Chief Executive Officer of Calfrac.
Gordon A. Dibb Calgary, Alberta	Chief Financial Officer	Proposed[4]	Executive Vice President and Chief Financial Officer of Calfrac.
Robert S. Roberts Calgary, Alberta	Chief Operating Officer	Proposed[4]	Senior Vice President and Chief Operating Officer of Calfrac.
James S. Blair Calgary, Alberta	Director	May 8, 2002	President and Chief Executive Officer, ExAlta Energy Inc. (an independent private oil and gas exploration and development company) since 2002. Prior thereto, Senior Vice President and Chief Operating Officer, Husky Energy Inc. (an integrated energy company).
Gregory S. Fletcher[1] Calgary, Alberta	Director	May 8, 2002	President, Sierra Energy Inc. (a private energy company).
Martin A. Lambert[2] Calgary, Alberta	Interim Chief Executive Officer and a Director	Proposed	Partner, Bennett Jones LLP (a law firm). Prior to May 2000, Chief Executive Officer and a partner, Bennett Jones LLP.
Paul F. Little[2] King City, Ontario	Director	May 15, 1997	President, Westover Investments, Inc. (a private investment company). Prior to 2000, principal, Gornitzki, Thompson & Little (merchant bank) from 1986 to 1999.
R. Timothy Swinton[1][3] Calgary, Alberta	Director	Proposed	President of Western Provinces Resources Ltd. (a private investment company) since 1997; Executive Chairman of IPEC Ltd. (a Canadian pipeline and oilfield construction company) from 1999 to 2001; prior thereto Chairman and Chief Executive Officer of Kenting Energy Services Inc. (a public oilfield services company) in 1997.
David M. McGoey Calgary, Alberta	Interim Chief Financial Officer	Proposed	Chief Financial Officer of Ross Smith Energy Group (a private engineering consulting firm) since 1998; President of David M. McGoey Professional Corporation since 1992; Chief Financial Officer of Securex Limited (a public company in the security monitoring industry) since 2003; Chief Financial Officer of Torode Realty Ltd. (a public mineral exploration company) since 2003; and Chief Financial Officer of Tristone Capital LLC (a private investment company) from 2001 to 2002.

Notes:
(1) Member or proposed member of Audit Committee.
(2) Member or proposed member of Corporate Governance Committee.
(3) Member or proposed member of Compensation Committee.

(4) It is anticipated Messrs. Ramsay, Dibb and Roberts will be appointed as officers of Denison Energy in the event Denison Energy completes the Reorganization, the Public Offering and the Acquisition.

The officers of Denison Energy currently include E. Peter Farmer, President and Chief Executive Officer, T. E. Craig Bamford, Vice President, Finance and Chief Financial Officer, Donald C. Campbell, Vice President, Marketing and Special Projects and Donna J. Gallant, Counsel and Secretary. Each of these officers is expected to resign effective upon the completion of the Reorganization, at which time Martin A. Lambert is expected to be appointed as Interim Chief Executive Officer and David M. McGoey is expected to be appointed as Interim Chief Financial Officer. In the event that the Reorganization, the Public Offering and the Acquisition are completed, it is anticipated that the board of directors will appoint Messrs. Ramsay, Dibb and Roberts as Chief Executive Officer and President, Chief Financial Officer and Executive Vice President, and Chief Operating Officer and Senior Vice President, respectively and that Mr. Lambert will continue to act as a director of Denison Energy.

Each of Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has entered into an employment agreement dated September 1, 1999 with Calfrac. Each of these agreements has an initial five year term that expires on September 1, 2004 and provides that each year thereafter, the term will automatically renew for a successive one-year renewal term, unless either party gives written notice to the contrary. Each of these agreements contains provisions in favour of Calfrac (i) prohibiting the disclosure by each of Messrs. Ramsay, Dibb and Roberts of any confidential information related to Calfrac's business, and (ii) prohibiting each of Messrs. Ramsay, Dibb and Roberts from competing with Calfrac, or soliciting the employees or customers of Calfrac, for two years from the termination of his employment with Calfrac. These employment agreements also provide that in the event of a change of control of Calfrac, each of Messrs. Ramsay, Dibb and Roberts has the right at any time within six months of the change of control to terminate his employment with Calfrac. If any of Messrs. Ramsay, Dibb or Roberts exercises this right, or if Calfrac terminates the employment of any of Messrs. Ramsay, Dibb or Roberts following a change of control, such officer is entitled to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

In addition, each of Messrs. Ramsay, Dibb and Roberts has entered into an agreement with Calfrac whereby he has waived any change of control or other rights he may have pursuant to his employment agreement provided that the Reorganization and the Acquisition occur as described herein. These agreements also provide that, in the event that a change of control occurs other than on the basis contemplated herein, each of such officers is entitled to exercise his right to terminate his employment and receive the severance payment described above. In addition, in such circumstances, each of such officers may elect not to receive the severance payment, and in consideration therefore, the officer will be released and discharged from the non-competition restrictions of his employment agreement.

Six additional officers and key employees of Calfrac have each signed an agreement with Calfrac providing that each employee will continue his employment with Calfrac or Denison Energy, as applicable, until at least June 30, 2004 under such employee's current employment terms. In the event that either or both Mr. Mathison or Mr. Ramsay resign or are terminated as Chairman or Chief Executive Officer, respectively, of either Calfrac or Denison Energy, as applicable, on or prior to June 30, 2004, the employee may elect to terminate his employment prior to June 30, 2004 and will receive a termination payment equal to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

The term of office of each of the directors of Denison Energy will expire at the next annual meeting of the shareholders.

MANAGEMENT

The following is a brief description of the proposed directors and senior officers of Denison Energy in the event that the Reorganization, the Public Offering and the Acquisition are completed.

Ronald P. Mathison, Director and Chairman

Mr. Mathison is the President and Chief Executive Officer of Matco Investments, a private investment company specializing in the restructuring of financially troubled companies as well as providing capital and management expertise to such companies. Mr. Mathison has extensive experience in restructuring and financing corporations in both the public and private markets. Until October 2000, Mr. Mathison was a director of Peters & Co. Limited, an

investment firm specializing in the oil and gas industry, and prior to 1999 was also a principal of Peters & Co. Limited's corporate finance department. Prior thereto, Mr. Mathison and two other individuals formed the nucleus of Peters & Co. Capital, a private merchant banking entity that is widely associated with numerous successful restructurings of oil and gas and oil and gas service companies. Mr. Mathison received a B.Comm. (Honours) from the University of Manitoba in 1979 and obtained his Chartered Accountant designation in 1982. Mr. Mathison also holds the designation of Chartered Business Valuator, obtained in 1989, and of Chartered Financial Analyst, obtained in 1990. Mr. Mathison is the sole shareholder of Matco Investments, which controls Matco. Mr. Mathison is the Chairman of Hawker Resources Inc. Mr. Mathison was a founder of Calfrac and has been the Chairman of Calfrac since its formation in 1999.

Douglas R. Ramsay, President and Chief Executive Officer

Mr. Ramsay was a founder of Calfrac and has been the President and Chief Executive Officer of Calfrac since its formation in 1999. Mr. Ramsay has an extensive background in the oil industry. Prior to 1994, Mr. Ramsay was the President of Canadian Fracmaster Ltd. where he spent 12 years enhancing the overall presence of Fracmaster Ltd. in Canada and worldwide. Previous industry experience as a Project Manager for Delta Consultants, Drilling and Completions Foreman for Dome Petroleum Corp. and Service Supervisor for BJ Well Services Company has contributed to Mr. Ramsay's overall knowledge of the industry.

Mr. Ramsay holds a diploma in Petroleum Technology from Southern Alberta Institute of Technology and is a certified Registered Engineering Technologist.

Gordon A. Dibb, Executive Vice President and Chief Financial Officer

Mr. Dibb was a founder of Calfrac and has been the Executive Vice President and Chief Financial Officer of Calfrac since its formation in 1999. Mr. Dibb has over 20 years of oilfield service industry experience in a senior financial capacity, having worked as executive Vice President Business Development for Trace Exploration, Vice President Finance and Chief Financial Officer for Artisan Corporation, Vice President Administration for Nabors Drilling International Limited, Chief Operating Officer for Destiny Resource Services Corp. and Vice President Finance for Nabors Drilling Ltd. Mr. Dibb also has experience in South Africa working in other industries.

Mr. Dibb is a Chartered Accountant, qualified in both South Africa and Canada, and a member of the Alberta Institute of Chartered Accountants.

Robert S. Roberts, Senior Vice President and Chief Operating Officer

Mr. Roberts was a founder of Calfrac and has been the Senior Vice President and Chief Operating Officer of Calfrac since its formation in 1999. Mr. Roberts has significant industry experience with over 35 years in the pumping service industry. Mr. Roberts previously held senior management positions with Fracmaster Ltd. in its Canadian, United States, South American, Middle East and Russian Operations. Prior to 1996, Mr. Roberts was the Executive Vice President of Fracmaster Ltd.

James S. Blair, Director

Mr. Blair has served as director of Denison Energy since May of 2002. Mr. Blair is President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in western Canada, offshore eastern Canada and Asia. Mr. Blair is a director of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta. His studies concentrated on resource economics and international trade.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison Energy since May of 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. and prior to 1997 he was President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

Martin A. Lambert, Director and Interim Chief Executive Officer

Mr. Lambert is a partner with the Bennett Jones LLP law firm, having served as Chief Executive Officer of the firm from 1996 to 2000. Mr. Lambert has been widely recognized as one of Canada's leading merger and acquisitions lawyers, including having recently been named by the National Post as one of Canada's top 30 deal makers, and is a senior member of the firm's mergers and acquisitions team. Mr. Lambert's directorships include Oil States International Inc. and zed.i solutions.inc, both oilfield services firms, as well as Hawker Resources Inc. and Bear Creek Energy Ltd., both oil and gas exploration and production companies. Mr. Lambert's family holding corporation, Mountain Moon Capital Inc., is a shareholder of Matco. Mr. Lambert is expected to be appointed Interim Chief Executive Officer of Denison Energy upon completion of the Reorganization and is expected to resign such position upon the anticipated appointment of Douglas Ramsay as Chief Executive Officer. Mr. Lambert is expected to continue to act as a director of Denison Energy.

Paul F. Little, Director

Mr. Little has served as a director of Denison Energy since May of 1997. Mr. Little is President of Westover Investments Inc., an investment company. From 1986 to 1999 he was a principal of the Toronto-based merchant bank, Gornitzki, Thompson & Little and President of GTL Securities Inc., a related securities dealer. Mr. Little serves on a number of other public company boards including The Nautilus Group, Inc., Medisystem Technologies, Inc., Pason Systems, Inc. and World Point Terminals, Inc. He is Chairman of Echelon General Insurance Company, a private company, and is a member of the Board of Visitors of the Graziadio School of Business at Pepperdine University. Mr. Little is a Chartered Accountant and holds an M.B.A. from the University of British Columbia.

R. Timothy Swinton, Director

Mr. Swinton has extensive experience in the oilfield services industry. He is currently Chairman of NQL Drilling Tools Inc., a position he has held since 2003, and a director of Anderson Energy Ltd., a private oil and natural gas exploration and production company. Since June 1997, Mr. Swinton has been President of Western Provinces Resources Ltd, a private investment company. From 1999 to 2001, he was the Executive Chairman of IPEC Ltd., a Canadian pipeline and oilfield construction company. Prior thereto, Mr. Swinton was Chairman and Chief Executive Officer of Kenting Energy Services Inc., and Chairman, President and Chief Executive Officer of EnServ Corporation. Mr. Swinton has also served on the boards of directors of a number of energy services and other energy-related public companies, including Koch Pipelines Canada Limited, Enserco Energy Service Company Inc. and Anderson Exploration Ltd.

David M. McGoey, Interim Chief Financial Officer

Mr. McGoey is the Chief Financial Officer at Ross Smith Energy Group, a private engineering consulting firm, a position he has held since 1998. Mr. McGoey is President of David M. McGoey Professional Corporation since 1992 and Chief Financial Officer of each of Securex Limited (since 2003) and Torode Realty Ltd. (since 2003). Mr. McGoey was also Chief Financial Officer of Tristone Capital LLC from 2001 to 2002. He has been a Chartered Accountant for over 20 years, a Certified Public Accountant for three years and has over 20 years of public accounting experience. Mr. McGoey is a director of Destiny Resource Services Corp. Mr. McGoey is expected to be appointed Interim Chief Financial Officer of Denison Energy upon completion of the Reorganization and is

expected to resign upon the anticipated appointment of Mr. Gordon Dibb as Chief Financial Officer of Denison Energy.

PRINCIPAL SHAREHOLDERS

To the best of the knowledge of the directors and officers of Denison Energy, the following table sets forth the shareholdings of those persons who are the direct or indirect beneficial owners of or exercise control or direction over 10% or more of any class of voting shares of Denison Energy as at the date hereof and after giving effect to the Reorganization, the Public Offering and the Acquisition:

Shareholder	Designation of Class	Type of Ownership	% of Class after giving effect to the Reorganization	% of Class after giving effect to the Public Offering and the Acquisition
Matco Investments[1]	Common	Beneficial	45%[2]	(3)

Notes:
(1) To the knowledge of Denison Energy, the only shareholder holding, directly or indirectly, greater than 10% of the outstanding shares of Matco Investments is Ronald Mathison, who is proposed to be the Chairman and a director of Denison Energy.
(2) Includes the Common Shares to be acquired by Matco pursuant to the Subscription. To the knowledge of Denison Energy, the only entities with an interest of greater than 10% in Matco are Matco Investments and Mountain Moon Capital Inc. To the knowledge of Denison Energy, the only shareholders holding, directly or indirectly, greater than 10% of Mountain Moon Capital Inc. are members of the immediate family of Martin Lambert, a proposed director of Denison Energy.
(3) Not included because the number of Common Shares to be issued pursuant to the Share Subscription, the Public Offering and the Acquisition has not been determined.

CAPITALIZATION OF DENISON ENERGY

The following table sets forth the consolidated capitalization of Denison Energy as at December 31, 2002, as at September 30, 2003 and as at September 30, 2003 after giving effect to the Reorganization, the Public Offering and the Acquisition and the other transactions described in the notes to the unaudited pro forma financial statements (collectively, the "Transactions"):

	Authorized	Outstanding as at December 31, 2002 (audited)[1]	Outstanding as at September 30, 2003 (unaudited)	Outstanding as at September 30, 2003 after giving effect to the Transactions (unaudited)
Long-term debt	nil	$43,558,000	$43,097,000	$8,206,000
Common Shares[2]	unlimited	$5,568,000	$5,568,000	$89,410,000[3][4]

Notes:
(1) Derived from the audited financial statements of Denison Energy.
(2) As part of the Arrangement, the stock option plan of Denison Energy will be terminated and no stock options will be outstanding.
(3) Assuming that pursuant to the Subscription, Denison Energy will issue Common Shares for gross proceeds of approximately $5.3 million.
(4) Assuming that the Calfrac Option is exercised and that the purchase price is paid by the issuance of Common Shares and approximately $28.8 million in cash.

CORPORATE HISTORY

Denison Energy

Denison Energy is the continuing corporation formed by the amalgamation under the laws of the Province of Ontario of Denison Mines Limited and Stanrock Uranium Mines Limited pursuant to articles of amalgamation filed on February 12, 1973. Denison Energy amended its articles on July 26, 1983 to create a class of 24 million preferred shares issuable in series, of which 6 million 9¾% Cumulative Redeemable Preferred Shares Series A (the "**Preferred Shares Series A**") were issued on August 8, 1983. On March 2, 1984 Denison Energy amended its articles to create an unlimited number of Class A Voting Participating Shares without par value ("**Class A Shares**") and an unlimited number of Class B Non-Voting Participating Shares without par value ("**Class B Shares**"), and each issued and outstanding common share was changed into one Class A Share and one Class B Share. On March

7, 1985, Denison Energy issued 7 million 9½% Cumulative Redeemable Preferred Shares Series B (the "**Preferred Shares Series B**"). On June 22, 1992, Denison Energy amended its articles to provide for a minimum of three and a maximum of fifteen directors.

Effective December 21, 1995, the articles were amended: to create an unlimited number of Existing Shares; to provide that Denison Energy was no longer authorized to issue Preferred Shares Series A, Preferred Shares Series B ("**Preferred Shares**"), Class A Shares or Class B Shares; to delete the rights, privileges, restrictions and conditions of the Preferred Shares, Class A and Class B Shares; and to provide that, after giving effect to the foregoing, Denison Energy was authorized to issue an unlimited number of Existing Shares. Effective December 21, 1995, each Preferred Share was reclassified into 25 Existing Shares, and each Class A Share and each Class B Share was reclassified into one common share.

Effective May 24, 2002, the articles were amended to change the name of Denison Energy from Denison Mines Limited to Denison Energy Inc., and to implement a share consolidation on the basis of one Existing Share for each 20 pre-consolidation common shares.

Calfrac

Calfrac was incorporated under the provisions of the ABCA on June 28, 1999 as "836570 Alberta Ltd." and changed its name to "Calfrac Well Services Ltd." by way of articles of amendment filed on September 28, 1999. Calfrac is the continuing corporation formed by the amalgamation under the ABCA of 850288 Alberta Ltd. and Calfrac pursuant to articles of amalgamation filed on January 1, 2000.

Calfrac's head office is located at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 and its registered office is located at Suite 751, 815 – 8th Avenue S.W., Calgary, Alberta T2P 3P2.

Calfrac has one wholly owned subsidiary, Calfrac USA, incorporated in the state of Colorado, United States on May 24, 2001. Calfrac USA provides fracturing and work-over services to oil and gas customers in the Rocky Mountain area of the United States.

Calfrac also owns 30% of the issued and outstanding shares of ChemErgy.

General Development of the Business of Calfrac

Calfrac was a private corporation founded in June 1999 by Messrs. Mathison, Ramsay, Dibb and Roberts. Calfrac commenced operations in August 1999 from its field station in Medicine Hat, Alberta with a coiled tubing unit. On September 2, 1999, Calfrac successfully completed its first hydraulic fracturing treatment.

In December 1999, Calfrac acquired all of the issued and outstanding shares of Calfrac Limited, which company completed the acquisition of all of the issued and outstanding shares and warrants of DynaFrac Well Services Inc. ("DynaFrac") on December 22, 2000. DynaFrac subsequently distributed its assets and liabilities to Calfrac Limited and was dissolved on December 27, 2001. Calfrac Limited distributed all of its assets and liabilities to Calfrac and was subsequently dissolved on December 28, 2001. Calfrac acquired a two-pumper spread, a shallow coiled tubing unit, a high rate nitrogen pumper and four acid pumpers through its indirect acquisition of DynaFrac.

On November 10, 1999, 850288 Alberta Ltd., a wholly owned subsidiary of Calfrac, acquired two deep and one shallow coiled tubing units, two combination nitrogen-acid pumpers and other support equipment from the Coiled Tubing Division of Serval Corporation. On January 1, 2000, 850288 Alberta Ltd. and Calfrac were amalgamated. Calfrac's second and third spreads of fracturing equipment became operational in December 1999. At this time, Calfrac acquired a small facility in Red Deer, which became functional as a field facility in January 2000.

In February 2000, Calfrac acquired 851350 Alberta Ltd. in exchange for the issuance of 2,125,000 shares of Calfrac. 851350 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to provide the fracturing services required under this agreement, Calfrac constructed a new spread of fracturing equipment specifically designed to stimulate the customer's shallow natural gas wells, which equipment constituted Calfrac's fourth spread of fracturing equipment.

During the last half of 2000, Calfrac added another fleet of fracturing equipment to constitute its fifth spread of fracturing equipment. In October 2000, Calfrac leased premises in Grande Prairie to establish a field station to facilitate the expansion of operations into northern Alberta and British Columbia.

During the summer of 2001, Calfrac commissioned its sixth spread of fracturing equipment. At this time, Calfrac also constructed and commenced operations with two additional coiled tubing units designed for shallow well operations but with more powerful compressors than its then existing equipment.

In April 2001, Calfrac acquired 851355 Alberta Ltd. in exchange for the issuance of 2,390,625 shares of Calfrac. 851355 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to satisfy its obligations under this contract, Calfrac constructed its seventh spread of fracturing equipment.

In February 2002, Calfrac expanded its operations into the United States by leasing a field office in Platteville, Colorado. Although Calfrac provided fracturing services to oil and gas exploration and production companies in Montana in late 2001, the establishment of operations at Platteville, Colorado was Calfrac's first significant presence in the United States. At this time, Calfrac negotiated a one-year fracturing agreement with a major oil and gas exploration and production company, which agreement provided for a three-year right of first refusal for the majority of fracturing work of the customer in the Rocky Mountain area of the United States. During 2002, Calfrac provided fracturing services to customers located in Colorado, New Mexico and Wyoming. In 2003, most of Calfrac's U.S. operations were conducted in the DJ Basin and North Piceance Basin of Colorado.

In November 2002, Calfrac completed the construction of a new field facility on land owned by Calfrac in Red Deer, Alberta. In late 2002 and early 2003, Calfrac completed construction of two additional fracturing spreads, its eighth and ninth spreads of fracturing equipment, and its first spread of equipment specifically designed to fracture NGC.

Calfrac completed construction of a coiled tubing rig designed specifically to perform fracturing through coiled tubing in early 2003. In addition, due to the increasing requirement to use coiled tubing rigs in conventional and NGC fracture jobs, Calfrac signed an 18-month contract in March 2003 with a major supplier of coiled tubing rig services in Alberta. Calfrac has a right of first refusal on five out of seven coiled tubing rigs used for fracturing operated by this supplier. Upon termination of this contract at the end of September 2004, Calfrac may exercise its option to renew the agreement for an additional year or to purchase three of the coiled tubing rigs.

In April 2003, Calfrac negotiated a two year fracturing contract with a major explorer and developer of NGC with a term that commenced on June 1, 2003 and will expire at the earlier of May 31, 2005 or on the date that Calfrac has fractured 300 wells for the customer. In order to satisfy its obligations under this contract, Calfrac has developed and commissioned unique fracturing equipment specifically designed to fracture NGC wells, including the first quint nitrogen pumpers that have been built for use in the fracturing of NGC by any fracturing company. This equipment is expected to be operational in early 2004.

In May 2003, Calfrac signed a fracturing agreement with its most significant customer in the Rocky Mountain region in the United States. This agreement will expire upon the earlier of December 31, 2004 or the completion of 500 fracturing jobs for the customer.

Calfrac also purchased four shallow coiled tubing units from private companies in 2003. These acquisitions increased Calfrac's equipment fleet of shallow coiled tubing units to eight units. Three additional fracture pumpers were also added to Calfrac's equipment in 2003.

SELECTED FINANCIAL INFORMATION

Selected Financial Information of Denison Energy

The following table presents a summary of historical financial data for Denison Energy for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of Denison Energy at each of these dates and for the periods then ended, as well as the unaudited pro forma consolidated balance sheet of Denison Energy as at September 30, 2003 and the unaudited pro

forma consolidated statements of earnings of Denison Energy for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of Common Shares for net proceeds of approximately $111.6 million pursuant to the Public Offering; (iii) the completion of the Acquisition by way of the issuance of Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of Denison Energy as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro form financial statements of Denison Energy.

The following data should be read along with "Management's Discussion and Analysis Regarding Denison Energy" and the financial statements and related notes of Denison Energy included in this exhibit. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of Denison Energy included in this exhibit.

All financial information with respect to Denison Energy has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING DENISON ENERGY

The following management's discussion and analysis of financial condition and results of operations relates to the activities of Denison Energy prior to the proposed transformation of Denison Energy to an oilfield services provider and does not reflect the Reorganization, the Public Offering or the Acquisition. The following management's discussion and analysis of financial condition and results of operations should be read in conjunction with the audited financial statements of Denison Energy as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements as at and for the nine months ended September 30, 2003 and 2002.

Segmented Information

The following table summarizes selected historical financial information related to Denison Energy and its operations for the periods indicated. Denison Energy has recently completed the Reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison Energy were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison Energy were transferred to, and the related liabilities were assumed by, Denison Mines Inc. Denison Energy holds no material assets, other than the Calfrac Option and certain income tax attributes, and has retained certain claims and liabilities.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

Mining Division

The McClean Lake Joint Venture is on target to produce 6 million pounds of uranium from McClean Lake during 2003. Denison Energy's 22.5% share of production for the nine months ended September 30, 2003 totaled 1,082,000 pounds compared with 1,133,000 pounds in the corresponding period of 2002.

During the first nine months of 2003 compared to the corresponding period of 2002, costs of the mining division of Denison Energy were adversely affected by an increase in operating costs of 7% and foreign exchange losses of $650,000. Costs of the mining division of Denison Energy in 2002 were favourably affected by a one-time adjustment of $540,000.

Denison Energy delivers uranium under a variety of contracts with various pricing formulas, the timing and mix of which varies from quarter to quarter. Since the timing of deliveries is at the selection of the customer, the year-to-year comparisons may not be meaningful. Uranium sales volumes delivered in the nine months ended September 30, 2003 were 66% of annual sales volumes compared to 63% during the same period of 2002. Sales volumes in the fourth quarter will be 34% of annual sales volumes.

The average realized Canadian dollar exchange rate relative to the U.S. dollar for the conversion of the U.S. dollar proceeds from uranium sales appreciated from $1.551 for the nine months ended September 30, 2002 to $1.412 for the corresponding period of 2003. This has had a significant negative effect on the revenue and earnings from Denison Energy's mining operations.

Oil and Gas Division

As part of the Reorganization, new oil and gas reserve reports were completed by independent consultants. These reports substantially decreased Denison Energy's oil and gas reserves, resulting in the significant write-down of the carrying value of these assets.

For the nine months ending September 30, 2003, production averaged 641 barrels of oil equivalent ("boe") per day (at a 6:1 gas to oil conversion rate) compared to 558 boe per day for the equivalent period of 2002.

Denison Energy sold its 50% interest in the Carlyle oil producing property (12 boe per day) in southeastern Saskatchewan effective October 1, 2003 for $255,000. Denison Energy also acquired the remaining 50% interest (37 boe per day) in the Smiley gas producing property in Saskatchewan for $600,000.

The two wells drilled in the third quarter in the Aden area for gas were unsuccessful and were abandoned. New gas pipeline capacity, which was anticipated to be available by September, was delayed to November.

During the first nine months of 2003, capital spending totaled approximately $4.0 million including the acquisition of additional interests in the Skiff oil property and the drilling of 6.0 gross (5.1 net) wells, resulting in 1.0 gross (1.0 net) standing gas well in the Evi area and 5.0 gross (4.1 net) dry and abandoned wells. This compares with capital spending of $4.0 million in the first nine months of 2002 for the drilling of 5.0 gross (4.0 net) wells resulting in 2.0 gross (1.0 net) oil wells and 3.0 gross (3.0 net) wells which were dry and abandoned.

In April of 2003, a gas well located in the Bow Island area that had been drilled and completed in the fourth quarter of 2002 at a cost of approximately $350,000, but shut-in pending available pipeline capacity, was sold by Denison Energy. The proceeds of $944,000 from this sale were credited against property, plant and equipment resulting in no recognition of a gain on this transaction.

Environmental Services Division

During the third quarter of 2003, Denison Environmental Services obtained a new contract for the operation of the Kam Kotia water treatment facility, and continued to provide services under its contract for environmental monitoring and maintenance of the closed mine sites of Denison Energy and Rio Algom Ltd. at Elliot Lake and under its contract for project management for the decommissioning of the Hope Brook mine in Newfoundland. Denison Environmental Services was also active in decommissioning work in northern Ontario at the old Munroe mine and is commencing work on the decommissioning of the High Falls generating facility and on the Shebandowan mill complex.

Year Ended December 31, 2002 Compared to Year Ended December 31, 2001

Mining Division

In 2002, Denison Energy's uranium sales volume increased by approximately 16% over the 2001 sales volume. The margin on sales decreased by 17%. In both 2002 and 2001, Denison Energy chose to build strategic inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. Denison Energy's uranium sales are under eleven different long-term contracts with utilities in the United States and the Far East covering approximately all of Denison Energy's production at nominal rates in 2003 and 2004 and a large part of the production currently forecast to 2010. These contracts have various durations and contain a variety of pricing formulas. In 2003, preliminary indications from customers are that uranium deliveries will be 11% in Q1, 47% in Q2, 7% in Q3 and 35% in Q4.

In February 2002, the mining of the Sue C pit was completed recovering 36.5 million pounds of uranium into stockpiles, up 33% from amounts originally anticipated for Sue C. As a result of this increased recovery, amortization rates for mining and processing costs were reduced in mid 2001 and mining related cash costs were reduced from $4.9 million in 2001 to $1.8 million in 2002.

In 2002, mill unit operating costs continued to decline, even though the volume of ore milled in 2002 increased by approximately 25% over 2001 as the ore grade was gradually reduced during the year from an average grade of 3.10% U3O8 in 2001 to 2.29% in 2002. It is planned to reduce the milling grade to 2.12%, approximately the grade of the ore in the stockpile, to optimize milling costs over the next four years.

In 2002 definitive agreements were signed enabling the Cigar Lake joint venture to process its ore at the McClean Lake mill. All Cigar Lake ore will be leached at the McClean Lake mill following which the pregnant aqueous solution will be divided between the McClean Lake and Rabbit Lake facilities for processing into uranium concentrates. It is anticipated that toll milling could begin at McClean Lake as late as 2006.

Denison Energy pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison Energy also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act. The Saskatchewan government also imposes a tiered royalty which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison Energy has not paid tiered royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years.

In 2002, Denison Energy spent $0.4 million (2001 - $0.6 million, 2000 - $0.7 million) at its Elliot Lake facility. Spending, primarily on monitoring and water treatment, is expected to be reduced in 2003 and 2004 and continue to decline marginally thereafter. All spending is paid for from the Elliot Lake Reclamation Trust, which had a balance of $1.6 million at December 31, 2002. This balance with interest earned thereon is expected to be adequate to fund all monitoring and treatment costs through to December 31, 2008. Future expenditures will consist of ongoing site monitoring of both the Denison Energy and Stanrock Tailings Management Facilities and treating the water runoff from the Stanrock property for as long as 25 to 50 years. The balance of the total provision for $8.0 million represents the estimated present value of maintenance, monitoring and water treatment.

Retirees from Denison Energy's Elliot Lake mine are entitled to certain medical and dental benefits and life insurance. At December 31, 2002 the liability recorded in the consolidated balance sheet was $10.5 million dollars.

The actuarial report on this liability as of September 30, 2002 estimates that the actuarial liability is approximately $5.7 million. The surplus of $4.8 million, net of interest on the unfunded $5.7 million liability, is being credited to income over the average 12.5 year average life expectancy of this retiree group.

Environmental Services Division

Denison Environmental Services continued to provide services under a five-year contract (commenced April 1, 2001), including monitoring effluent treatment, maintenance, data storage and reporting activities for closed mine sites for Denison Energy and Rio Algom in the Elliot Lake area and under a contract for at least 30 months (commenced September of 2001) to act as primary project manager for the Hope Brook mine decommissioning in Newfoundland. A significant portion of the business of the division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2002 this was not the case due to reduced mine construction. Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. New mine construction has been low in the last few years and as a result Denison Energy wrote down its inventory of mining equipment held for resale by $433,000.

Oil and Gas Division

In 2002, Canadian oil and gas activities continued to expand. Oil and gas revenues from Denison Energy's operations in Alberta and Saskatchewan increased by $4.9 million, to $6.2 million from $1.3 million in 2001. Successful producing property acquisitions and new production added by Denison Energy's exploration program, combined with increases in commodity prices, all contributed to the increase in oil and gas revenue in 2002. In 2001, Denison Energy received the final $1.5 million of its royalty income from the Villano oil field in Ecuador. Earnings from Greece in 2002 related to a reduction in the provision for closure and in 2000 are from final sale of oil in tanks.

Production volumes have steadily grown from 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) in December 2000 to 438 barrels per day in December 2001 to 648 barrels per day in December 2002. Insufficient pipeline capacity prevented four new Knappen and Aden gas wells from being put into production in 2002. Some pipeline capacity became available in February 2003. Production increased by 458% in 2002 over the previous year and averaged 330 bbls/d for oil and 1.4 mmcf/d for gas. Denison Energy's core property, located in the Countess area of Alberta, accounted for approximately 67% of 2002 production. In 2002, Denison Energy received an average selling price of $35.81 per bbl and $3.54 per mcf for oil and gas, respectively. The price received for oil and gas increased approximately 22% and 12%, respectively, from the prior year. Denison Energy's oil price is referenced to an Edmonton light sweet price adjusted for quality differentials and transportation to determine the realized price. Denison Energy's gas production is sold pursuant to spot sales contracts and Denison Energy receives a price referenced to AECO delivery point. Denison Energy did not enter into any hedging transactions in 2002.

Royalties include payments made to the Crown, freehold owners and third party overriding royalty participants. During 2002, oil and gas royalties were approximately 24% of revenue compared with 19% in the prior year. Countess production is subject to freehold royalties varying from 20% to 27% while other properties are subject to Crown and overriding royalty interests.

Production expenses were $7.28 per boe in 2002. Production expenses increased approximately 14% per boe from 2001. During August and September, Denison Energy performed an extensive work over program at its Countess area that involved the battery and all of the producing wells. As a result, production expenses in the Countess area, for those two months, averaged $11.15 per boe.

Capital expenditures in 2002 totaled $8.8 million. Denison Energy acquired, for $1.2 million, interests varying from 12.5% to 100% in the Skiff producing oil property located in the Conrad area of southeastern Alberta and plans are underway to reinstate pressure maintenance and thereby more effectively exploit this field. Seismic, drilling and facility expenditures in 2002 increased approximately 42%, to $7.4 million, from $5.2 million in the prior year. Approximately $2.6 million of this spending for exploration drilling was financed from proceeds of a $5.0 million flow-through share issue of Existing Shares. At December 31, 2002, $2.4 million remained to be spent on eligible Canadian Exploration Expenses prior to August 2004. Capital expenditures in 2001 totaled $13.4 million, including $5.6 million for the acquisition of Innovative Energy Inc.

In 2002, Denison Energy's depletion and depreciation provision averaged $9.36 per boe for the year and was $12.54 per boe for the fourth quarter. The increased fourth quarter depletion rate reflects the unfavourable results of Denison Energy's higher risk exploration program in the later part of the year and the industry's trend in 2002 towards higher finding and development costs. Depletion and depreciation charges are calculated on a unit of production method and are based on total proven reserves with a conversion of six thousand cubic feet of gas being equivalent to one barrel of oil. The 2002 depletion calculation includes $805,000 of future capital expenditures to develop Denison Energy's reserves and excludes $69,000 of unproven properties relating to undeveloped land.

Year Ended December 31, 2001 Compared to Year Ended December 31, 2000

Mining Division

Pursuant to its agreement with another participant, Denison Energy was entitled to 2.1 million pounds from the first 4.54 million pounds produced by the McClean Lake Joint Venture and thereafter its 22.5% equity share. Production commenced on June 22, 1999 and commercial levels of production were achieved on November 1, 2001. In 2000, 812,500 pounds were used to repay concentrate borrowed from a third party in previous years.

In 2001, Denison Energy's sales volume of uranium was very similar to 2000. During the year, Denison Energy chose to build inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. During 2001, Denison Energy's uranium sales were under eleven different long-term contracts with utilities in the United States and the Far East. These contracts have various durations and contain a variety of pricing formulas. Volumes delivered in 2000 were significantly higher than 1999. Revenue from sales in 1999, prior to achievement of commercial production, was offset against costs capitalized during the start-up phase.

In 2001, mill operating costs continued to decline and the mill operated continuously, except for vacation and Christmas shutdowns. This followed a shutdown of the mill in the last two months of 2000 as the operator made several modifications to increase the efficiency of the mill.

Denison Energy pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison Energy also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act.

Prior to 2001, Saskatchewan also levied a graduated uranium royalty tax of 4% to 50% of earnings after the recovery of capital. Retroactive to January 1, 2001, the Saskatchewan government amended its uranium royalty regulations to replace this graduated royalty based upon an earnings calculation with a tiered royalty system which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison Energy has not paid graduated royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years. As uranium sales revenue and not net earnings now drive Saskatchewan uranium royalties, this expense is now deducted in computing earnings subject to income taxes.

Environmental Services Division

In 2001, two new long-term contracts significantly contributed to an increase in the revenue for the Environmental Services Division from $1.8 to $3.0 million. This division was also active in both 2000 and 2001 in several smaller projects. In 1999, substantially all revenue was from the reclamation of Algoma Steel's iron ore mine, the last 10% of which was completed in 2000. Revenues from asset sales discussed below, were $0.1 million in 2001, down significantly from $0.6 million in 2000 and $1.0 million in 1999. In late 2000, demand dropped significantly for used mine and mill equipment. In 2001, losses declined to close to the break even from a loss of $0.3 million in 2000.

A significant portion of the business of the Environmental Services Division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2001 this was not the case due to reduced mine construction. In 2000, asset sales generated revenues for Denison Energy of $0.6 million (1999 - $1.0 million). Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. In the last half of 2001, overall demand for mine equipment declined

significantly. At the end of 2001, Denison Energy had equipment for sale with a book value of $483,000 with an estimated resale value in excess of $725,000.

Oil and Gas Division

During 2001, Denison Energy purchased a 50% interest in the Countess oil field in south central Alberta for $2 million and 100% of the shares of Innovative Energy Ltd. for $4.9 million consisting of the assumption of $2 million of debt, $1.9 million in cash and $1.0 million by the issuance of treasury shares.

A 50% working interest was earned in four wells drilled in southeastern Saskatchewan of which three were completed as oil wells and the fourth well, which was dry, was converted to a water disposal well. Facilities were installed to process the production from these three producing oil wells.

In Alberta, Denison Energy participated with Innovative Energy Inc. in the drilling of four wells, which produced two oil wells at Countess and a new gas discovery at Knappen in southern Alberta. The remaining dry well was abandoned and another previously suspended oil well was converted into a water disposal well at Countess. Processing facilities were constructed at Countess and went into operation in the fourth quarter.

Due to unanticipated delays in obtaining the necessary regulatory approvals to transfer Innovative Energy Inc.'s wells and facilities to Denison Energy and recommence production, the two new wells at Countess and the Knappen gas well were delayed until February 2002 before entering sustained commercial production.

Oil and gas production increased during 2001 from about 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) at the beginning of the year to 438 boe per day in December. Production had increased further to 650 boe per day by the end of February 2002 and was continuing to increase as the Knappen well was increasing to its planned production rate of 2 million cubic feet per day.

During the first quarter of 2001, Denison Energy earned the final $1.5 million of its royalty from the Villano oil field in Ecuador, which totaled $11.7 million over the period 1999 to 2001.

Interest Expense

During 2002, Denison Energy incurred interest expense of $3,239,000 (2001 - $4,448,000, 2000 - $5,981,000) including $2,798,000 (2001 - $4,186,000, 2000 - $5,623,000) on its McClean Lake loan. No interest was capitalized in 2000, 2001 or 2002. Interest expense was reduced in 2002 as a result of loan principal repayments and lower Canadian Prime rates. Interest expense was reduced in 2001 as a result of lower Canadian Prime rates and the renegotiation of Denison Energy's McClean Lake loan to enable Denison Energy to apply surplus cash to reduce loan principal and subsequently reborrow these funds.

Income Taxes

Denison Energy is currently not subject to cash income taxes in any jurisdiction, however, it is subject to the federal large corporations tax, which the 2003 federal budget proposed to phase out over the next five years. Denison Energy has substantial unclaimed capital cost allowance, and other deductions which fully shelter it from federal and Saskatchewan income taxes and for which no future tax asset is recorded on the balance sheet. As a result its tax provision currently includes Ontario income taxes and federal large corporations taxes. The Ontario government has passed legislation under which Ontario income tax rates will be reduced from 12% currently to 8% in 2005. As a result of this rate reduction together with a higher expected future allocation of taxable income to other provinces, Denison Energy reduced its future taxes payable balance by $2.0 million in 2001. Reference is made to note 8(a) of the consolidated financial statements of Denison Energy included in this exhibit, which identifies the major components of the variation in Denison Energy's effective tax rate from the normal Canadian tax rate.

Note 8(b) of the consolidated financial statements of Denison Energy included in this exhibit sets out details of Denison Energy's temporary differences between accounting and tax and non-capital loss balances available to shelter future income tax liabilities. Denison Energy has an overall future tax liability in Ontario but does not expect to be cash taxable for several years. All temporary differences have been incorporated as part of the computation of its future Ontario tax liability of $300,000 at December 31, 2002. Denison Energy has not recorded a future tax

asset for temporary differences available to shelter its federal and agreeing province income tax liability. In the three years ended December 31, 2002, Denison Energy was able to shelter its income tax expense with previously unclaimed temporary differences arising subsequent to its comprehensive revaluation of assets, following its reorganization in 1995. Any future utilization of temporary differences existing before 1995 will be charged to retained earnings to reduce income tax expense in the period. As at December 31, 2002 Denison Energy has over $200 million of temporary differences and loss carry-forwards, the potential benefit of which has not been set up as a future tax asset for federal and Saskatchewan income taxes. The future recoverability of a future tax asset for a resource company is largely a function of future commodity price level forecasts.

Capital Resources and Liquidity

At September 30, 2003, Denison Energy had the ability to redraw $3.2 million under the McClean Lake loan and $0.9 million on its other credit lines. Denison Energy's obligations under the McClean Lake loan are being assumed by Denison Mines Inc. at the effective time of the Reorganization.

The amount available under the credit line secured by Denison Energy's oil and gas assets has been reviewed with the lender following receipt of the new oil and gas reserve reports obtained as part of the restructuring process. At September 30, 2003, $4.8 million of the $5.5 million line had been drawn. Denison Energy intends to pay its credit line for the oil and gas business. The credit line will be replaced by a new facility in which Denison Resources Inc. will be the borrower.

During the third quarter of 2003, Denison Energy completed the exploration expenditures fulfilling its obligations arising from the flow through share issue in August 2002.

Impact of Future Accounting Developments

The Accounting Policies of Denison Energy are described in note 1 to the consolidated financial statements of Denison Energy included in this exhibit. Prospectively, effective January 1, 2002, Denison Energy implemented CICA Handbook Section 3870, *Stock-Based Compensation and Other Stock-Based Compensation Payments*. As a result, Denison Energy is amortizing the imputed cost of 520,000 stock options issued during 2003 (and 75,000 stock options issued in 2002) as compensation expense over their vesting period and has included $9,000 in corporate expenses for the year ended December 31, 2002 and reported $292,000 in stock option expenses for the nine months ended September 30, 2003. See Note 9 to the consolidated financial statements of Denison Energy included in this exhibit.

The CICA has recently released the following accounting standards, which Denison Energy will be implementing no later than fiscal 2004.

CICA Handbook Section 3063, Impairment of Long-Lived Assets

Each year Denison Energy prepares an impairment test on its mining and oil and gas assets. Section 3063 applies only to its mining assets. This new handbook section requires that if a mining asset's value is impaired it be written down to its fair value rather than management's best estimate of future undiscounted cash flows. A preliminary review indicates that implementation of this new requirement will have no impact on Denison Energy.

CICA Handbook Section 3110, *Asset Retirement Obligations*

This standard requires that the fair value of the disposal cost of an asset be capitalized as part of property, plant and equipment when the asset initially is constructed. In subsequent periods, Denison Energy then is required to recognize "interest" on the liability and adjust the carrying value of the asset and liability for changes in estimates of the amount or timing of underlying future cash flows. Upon initial implementation, this new standard will require Denison Energy to restate the value of property, plant and equipment for its mining and oil and gas assets and the related liability, but will not have an impact on disclosure related to its decommissioned Elliot Lake mine-site.

Risks and Uncertainties

See "Risk Factors" and "Legal Proceedings" for a discussion of risks and uncertainties.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING CALFRAC

The following management's discussion and analysis of financial condition and results of operations of Calfrac has been prepared by Calfrac and should be read in conjunction with the audited financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements of Calfrac as at and for the nine months ended September 30, 2003 and 2002.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

In general, western Canadian oilfield activity was higher in 2003 with 10,227 natural gas wells being completed to the end of September 2003 versus 9,068 for the full year of 2002. In early 2003, Calfrac brought into operation two additional fracture spreads, one coiled tubing rig used for fracturing operations and one NGC spread. During the second and third quarters of 2003, four shallow coiled tubing units were purchased.

Revenue

Consolidated revenues for the nine months ended September 30, 2003 increased by 64% amounting to $108.5 million compared to $66.1 million for the same period of 2002. All of this increase occurred in Canada where revenue increased by 82% to $97.5 million in 2003 from $53.5 million in 2002. This increase in Canadian revenue is attributable to the combination of increased oilfield activity and the larger fleet of equipment that Calfrac had available. In the beginning of June 2003, Calfrac commenced services on its first long-term NGC contract. To the end of September 2003, this contract had contributed an additional $4.5 million to revenue.

Revenue from U.S. operations declined 13% to $10.99 million for the nine months ended September 30, 2003 compared to $12.6 million during the same period of 2002. Not only did the types of hydraulic fractures change with a reduction of per job revenue, but certain contract negotiations were only finalized in May 2003, resulting in a slow start to Calfrac's U.S. operations in 2003.

Operating Expenses

Operating expenses for the nine months ended September 30, 2003 increased 64% to $72.4 million compared to $44.1 million during the same period of 2002. On a consolidated basis, gross margins for the first nine months of 2003 at 33% of revenue were virtually identical to the same period of 2002. However, there were large differences in geographical operations. In Canada, gross margins improved to 35.1% of revenue from 32.1% of revenue in the same period of 2002, mainly due to increased oilfield activity and improving prices from July 2003. However, the reduction in oilfield activity and changes in the method of fracturing in the DJ Basin impacted Calfrac's U.S. operations in 2003 and gross margins declined to 15.6% of revenue for the first nine months of 2003 from 34.7% of revenue for the same period of 2002. Due to the change in the method of fracturing, which requires more equipment and fewer customized chemicals, it is unlikely that gross margins from Calfrac's U.S. operations can be increased to the same levels achieved in 2002.

Selling, General and Administrative Expenses ("SG&A")

SG&A increased 55% to $8.2 million for the first nine months of 2003 from $5.3 million in the same period of 2002. The largest components of SG&A are salaries and the incentive bonus provisions. Increases in the number of employees will increase the cost of both salaries and the incentive bonus provisions.

The incentive bonus provision in SG&A covers all eligible employees, including operational staff. The amount of this provision is dependent on the excess of income before tax over a threshold rate of return calculated on average capital employed, subject to a maximum bonus level set for each employee. However, as both 2002 and 2003 bonuses were being provided at maximum, the increase in 2003 is largely attributable to an increased number of employees in 2003. Notwithstanding the above, as a percentage of revenue, SG&A dropped to 7.5% in the nine months ended September 30, 2003 compared to 8.0% in the same period of 2002.

Other Expenses, Interest Expense and Depreciation

Other expenses consist mainly of foreign exchange losses incurred in 2003 on cash and receivables denominated in U.S. funds. Interest and depreciation expenses have increased in 2003 due to additional borrowings and amortization resulting from the increased amount of equipment brought into operation in 2003.

Income Taxes

In the first nine months of 2003 a reduction in tax rates reduced income tax by 2% as a percentage of income before taxes. However, the increase in income before taxes from $10.9 million in the first nine months of 2002 to $19.1 million in the same period of 2003 increased the gross income tax expense by 65.6% to $6.8 million for the first nine months of 2003.

Net Income

Net income for the nine months ended September 30, 2003 was 11.3% of revenue, up from the 10.3% of revenue earned over the same period of 2002. This increase was mainly attributable to the increase in revenue and to a lesser extent to the increase in gross margins.

Year Ended December 31, 2002 Compared to the Year Ended December 31, 2001

In general, western Canadian activity declined with 9,068 gas wells being completed in 2002 compared to 11,174 gas wells in 2001. However, Calfrac expanded its operations into the U.S. during 2002 and added additional equipment. As a result, Calfrac was able to record significantly improved results in 2002 compared to 2001.

Revenue

In 2002, Calfrac increased consolidated revenues by 42% to $96 million. The commencement of U.S. operations contributed 58% of this increase. The remaining increase in total revenue was attributable to Canadian operations in southeast Alberta.

Operating Expenses and SG&A

Although as a percentage of revenue, gross margins declined to 32.6% in 2002 versus 36.4% earned in 2001, the gross margins increased by 27% to $31.2 million in 2002 from $24.6 million in 2001. U.S. operations provided 67%, or $4.4 million of this increase. The decline in the percentage of revenue of gross margins in 2002 was caused by downward pricing pressures resulting from lower industry activity and a greater proportion of shallow gas operations.

SG&A increased, both as a percentage of revenue and in absolute terms, in 2002, to 7.7% and $7.4 million from 7.4% and $5.0 million in 2001. The increase was attributable to the additional infrastructure required by Calfrac to commence U.S. operations and to continue to expand Canadian operations.

Interest Expense and Depreciation

Depreciation increased in 2002 compared to 2001 due to the acquisition of additional equipment. In both 2001 and 2002, interest expense declined slightly due to a decline in interest rates and the fact that additional financing for new equipment occurred late in 2002.

Income Tax

Due to the reduction in the tax rates and the inclusion of U.S. taxes, income taxes in 2002 were 37.4% of income before taxes compared to 40.6% in 2001. In 2001, Calfrac used the last of the non-capital income tax losses incurred by Dynafrac Well Services Ltd. to reduce current taxes.

Net Income

Net income for 2002 increased in absolute terms but was a smaller percentage of revenue in 2002 (10.4%) compared to that in 2001 (11.5%). This decline was attributable to reduction in gross margin percentages noted above and to the fact that current taxes in 2001 were reduced by the remaining non-capital income tax losses.

Year Ended December 31, 2001 Compared to the Year Ended December 31, 2000

In general, western Canadian oilfield activity improved in 2001, with 11,174 gas wells being completed compared to 8,933 gas wells in 2000. In the second half of 2001, Calfrac added two fracturing spreads and two shallow gas coiled tubing units to its fleet of operating equipment.

Revenue

Revenue increased 47% in 2001 compared to 2000 to $67.5 million in 2001 from $45.8 million in 2000. The increase was attributable to increased oilfield activity, the availability of additional equipment and the establishment of a permanent base in Grande Prairie, Alberta.

Operating Expenses and SG&A

Gross margin in 2001 was 36.4% of revenue, which was an improvement over the 31.9% in 2000. This increase was attributable to increased oilfield activity and the higher margins earned on northern work performed from the newly established Grande Prairie base in Alberta.

SG&A increased in 2001 to 7.4% of revenue, compared to 7.2% of revenue in 2000. The increase was due to additional infrastructure required to support the growth in equipment and revenue and the fact that 2001 bonus provisions rose to maximum levels due to the growth of income before income tax.

Interest and Depreciation

Interest expense in 2001 was virtually the same as in 2000, due to the pay-out in 2001 of two bank loans and that the new loans for additional equipment were only incurred in the second half of 2001. The increase in depreciation in 2001 resulted from a full year of depreciation on equipment acquired in the second half of 2000 and six months of depreciation on equipment acquired in the second half of 2001.

Income Tax

Income taxes increased to 40.6% of income before taxes in 2001 compared to 16.8% in 2000. In 2000, both current and deferred income taxes were substantially reduced by non-capital income tax losses brought forward from Dynafrac Well Services Ltd. In 2001, the remainder of these losses were used to reduce current income taxes but had little effect on the combined income tax provision.

Net Income

Net income in 2001 was 11.5% of revenue, lower than the 12.3% of revenue earned in 2000. The reduction in 2001 was caused by the fact that, as discussed above, results for 2000 were largely sheltered from income taxes by tax losses carried forward. In absolute terms, net income increased to $7.8 million in 2001 from $5.7 million in 2000.

Capital Resources and Liquidity

As at September 30, 2003, Calfrac had working capital of $3.7 million. As at December 31, 2002, Calfrac had working capital of the amount of $3.0 million over that portion of demand debt due to be repaid in 2003.

As at September 30, 2003, Calfrac had an unutilized operating loan facility of $5.0 million and an undrawn revolving equipment term loan in the amount of $7.5 million. Calfrac invested approximately $20 million in capital

assets during the nine months ended September 30, 2003 and approximately $22 million during the year ended December 31, 2002.

Calfrac has committed to approximately $11 million of expenditures for capital equipment that will become operational in the first half of 2004. These expenditures include approximately $5 million on new equipment ordered for fracturing operations in the United States, $3 million on new equipment for fracturing operations in Canada, $2 million on new NGC equipment and $1 million to complete the construction of a new warehouse on Calfrac's property in Grande Prairie, Alberta and to install a new accounting system in Calgary.

Calfrac has historically had sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flows and its bank line and expects to be able to do the same in 2004.

Risk and Uncertainties

See "Risk Factors" for a discussion of risks and uncertainties.

DIVIDENDS

Although neither Calfrac nor Denison Energy has a history of paying dividends on its common shares, the board of directors of Denison Energy following the Acquisition may make a determination to pay dividends in the future if circumstances permit. Any decision to pay dividends will be made by the board of directors of Denison Energy on the basis of Denison Energy's earnings, financial requirements and other conditions existing at the time.

EXECUTIVE COMPENSATION

The compensation of the proposed officers and directors of Denison Energy after completion of the Acquisition will be determined by the board of directors after the completion of the Acquisition.

The following executive compensation disclosure relates to the officers and directors of Denison Energy prior to the transformation of Denison Energy to an oilfield services provider. See "Directors and Officers of Denison Energy" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most highly compensated executive officers of Denison Energy (the "named executive officers"), with compensation in excess of $100,000 in 2003.

		Annual Compensation			Long-Term Compensation	
Name and Principal Position	Year	Salary ($)	Bonus ($)	Other Annual Compensation[1] ($)	Securities Under Options Granted	All Other Compensation ($)
E. Peter Farmer	2003	360,000	--	46,615[2]	235,000	--
President and Chief	2002	360,000	--	43,839[3]	--	--
Executive Officer	2001	340,000	145,000	37,017[4]	125,000	--
Donald C. Campbell	2003	185,000	--	28,409[2]	29,000	--
Vice President, Marketing	2002	185,000	--	27,610[3]	--	--
and Special Projects	2001	180,000	7,500	28,981[4]	15,000	--
T. E. Craig Bamford	2003	150,000	--	22,377[2]	20,000	--
Vice President, Finance	2002	142,500	--	21,207[3]	--	--
and Chief Financial Officer	2001	135,000	5,000	19,728[4]	25,000	--

Donna J. Gallant	2002	95,548	--	--	--	--
Counsel and Secretary	2001	103,125	--	--	--	--

Notes:
(1) Denison Energy has a retirement savings arrangement whereby Denison Energy contributes to an employee's registered retirement savings plan an amount equal to 3% of salary and a possible further amount to match employee contributions up to a 7% limit depending on the employee's age and years of employment. This arrangement is expected to terminate upon completion of the Arrangement.
(2) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $36,000 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,250 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $9,065 for Mr. Farmer; $8,850 for Mr. Campbell; and $8,784 for Mr. Bamford.
(3) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $33,600 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,384 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $8,921 for Mr. Farmer; $8,494 for Mr. Campbell; and $8,652 for Mr. Bamford.
(4) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $27,674 for Mr. Farmer; $18,000 for Mr. Campbell; and $10,238 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total, amounting to: $8,097 for Mr. Farmer; $9,735 for Mr. Campbell; and $8,364 for Mr. Bamford.

Stock Options

The following table sets forth the grants of options to the named executive officers of Denison Energy during the fiscal year ended December 31, 2003:

Option Grants During The Most Recently Completed Financial Year[1]

Name	Securities Under Options Granted (#)	% Total Options Granted to Employees in Financial Year	Exercise or Base Price ($/Security)	Market Value of Securities Underlying Options/SARs on the date of Grant ($/Security)	Expiration Date[1]
E. Peter Farmer	235,000	45.1	2.22	2.22	--
Donald C. Campbell	20,000	3.8	2.22	2.22	--
T. E. Craig Bamford	20,000	3.8	2.22	2.22	--
Donna J. Gallant	2,500	--	2.22	2.22	--

Note:
(1) The Stock Option Plan of Denison Energy will be terminated as part of the Arrangement and no stock options will be outstanding.

The following table sets forth each exercise of stock options in the year ended December 31, 2003, and the year-end value of unexercised stock options for any named executive officer holding such options. The Stock Option Plan of Denison Energy will be terminated as part of the Arrangement and no stock options will be outstanding.

Aggregate Stock Option Exercises During Year Ended December 31, 2003 and Year End Stock Option Values[1]

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized ($)	Unexercised Stock Options at Year End (#) Exercisable/Unexercisable	Value of Unexercised In-The-Money Options At Year End ($) Exercisable/Unexercisable[2]
E. Peter Farmer	--	--	165,000/235,000	564,200/888,300
Donald C. Campbell	--	--	31,667/13,333	111,000/50,399
T. E. Craig Bamford	--	--	36,667/13,333	127,601/50,399
Donna J. Gallant	--	--	15,833/1,667	45,899/6,301

Notes:
(1) The Stock Option Plan of Denison Energy will be terminated as part of the Arrangement and no stock options will be outstanding.
(2) The closing price at year-end on the TSX of the Existing Shares of Denison Energy(on a pre-consolidation basis) was $6.00.
(3) In connection with the Reorganization, all options have been vested.

Compensation of Directors

Denison Energy pays fees to each director in the amount of $6,000 per year and pays to each director a fee of $400 for each meeting of the board of directors the director attends and $400 for each meeting of a committee of the board

of directors the director attends. During the fiscal year ended December 31, 2003, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little were each granted 15,000 options to purchase Existing Shares of Denison. For each grant, the options vest at the rate of one-third each year commencing on April 30, 2004 and the exercise price is $2.30.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed herein, none of the directors, officers or principal shareholders of Denison Energy, Calfrac or Matco Investments and no associate or affiliate of any of them, has or has had any material interest in any transaction which materially affects Denison Energy.

There are potential conflicts of interest to which the directors and officers of Denison Energy will be subject in connection with the operations of Denison Energy. In particular, certain of the directors and officers of Denison Energy are involved in managerial and/or director positions with other oilfield services providers whose operations may, from time to time, be in direct competition with those of Denison Energy or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of Denison Energy. See "Directors and Officers of Denison Energy". Conflicts, if any, will be subject to the procedures and remedies available under the ABCA. The ABCA provides that, in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise permitted by the ABCA.

DESCRIPTION OF SHARE CAPITAL

Denison Energy is authorized to issue an unlimited number of Existing Shares. As part of the Arrangement, the Existing Shares will be removed from Denison Energy's articles of incorporation as a class of securities that Denison Energy is authorized to issue, and a new class of common shares, the Common Shares, will replace the Existing Shares. The Arrangement will provide that each Existing Share will be exchanged with Denison Energy for one twenty-first (1/21) of a Common Share. Following the Arrangement, Denison Energy will be authorized to issue an unlimited number of Common Shares. The holders of Common Shares will be entitled to receive notice of, and to one vote per share at, every meeting of shareholders of Denison Energy, to receive such dividends as the board of directors declares and to share equally in the assets of Denison Energy remaining upon the liquidation of Denison Energy after the creditors of Denison Energy have been satisfied.

PRIOR SALES

Denison Energy has issued the following equity securities in the 12 month period prior to the date of the Information Circular:

Date of Issuance	Number of Existing Shares	Issue Price Per Share
December 12, 2003 to January 29, 2004	538,833 Existing Shares[1]	$2.40[2]

Notes:

(1) Issued on the exercise of stock options.

(2) The stock options that were exercised between December 12, 2003 and January 29, 2004 had exercise prices ranging from $2.22 to $3.15 per Existing Share of Denison Energy. The aggregate proceeds from the issuance of the 538,833 Existing Shares of Denison Energy upon the exercise of the stock options was approximately $1,295,284 for an average issue price per share of $2.40.

PRICE RANGE AND TRADING VOLUME

The Existing Shares are listed on the TSX under the trading symbol "DEN". The following table sets forth the reported high and low sale prices and the trading volume for the pre-consolidation common shares of Denison Energy and the Existing Shares for each of the periods indicated before giving effect to the Consolidation.

	High ($)	Low ($)	Volume
2002			
First Quarter	0.18	0.13	33,290,010
Second Quarter[1]	4.25	0.16	30,928,730
Third Quarter	3.48	1.80	939,910
Fourth Quarter	2.47	1.80	942,600
2003			
First Quarter	2.80	2.02	962,210
Second Quarter	2.84	2.05	1,318,180
Third Quarter	2.72	2.10	1,367,520
Fourth Quarter[2]	6.60	2.36	9,621,560
2004			
January (to January 29)	6.58	5.22	2,643,300

Notes:
(1) On May 24, 2002, Denison Energy consolidated its common shares on a 20 for one basis.
(2) The closing price of the Existing Shares on December 30, 2003, the last trading day prior to the announcement of the Reorganization was $6.60.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the following are the only contracts entered into by Denison Energy or Calfrac within the two-year period preceding the date of this exhibit which may reasonably be regarded as material to Denison Energy after giving effect to the Reorganization:

1. The Calfrac Option between Denison Energy, Matco Investments and Calfrac dated as of December 30, 2003 granting the option to Denison Energy to acquire all the shares of Calfrac.

2. The Arrangement Agreement providing for the Arrangement and granting the indemnities described under "Risk Factors – Liabilities from Prior Operations".

3. Assignment and Novation Agreement dated December 29, 2003 between Denison Energy, Denison Mines Inc., the federal government and the Ontario provincial government.

4. Confirmation Agreement dated December 29, 2003 between Denison Energy, the federal government, the Ontario provincial government and Matco.

Copies of these contracts may be inspected at Denison Energy's registered office during normal business hours until the closing of the Public Offering.

RISK FACTORS

Ownership of Denison Energy's securities, in the event that the Reorganization and the Acquisition are completed, should be considered speculative in light of Denison Energy's stage of development after the Reorganization and the fact that Denison Energy is considering a change of business, and the nature of such business. Such change is dependent upon the completion of the Reorganization , the Public Offering and the Acquisition. If the Acquisition is not completed, the success of this change in business strategy cannot be assured. Denison Energy's shareholders should consider carefully the risk factors set out below and should carefully review and consider all other information contained in this exhibit.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline

and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that expected trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. The spring thaw makes the ground unstable and less capable of supporting heavy weights. Consequently, municipalities and transportation departments enforce road bans that restrict the movement of heavy equipment, thereby reducing well servicing activity levels. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues.

There is greater demand for fracturing and well stimulation services in the winter season when the occurrence of freezing permits the movement and operation of heavy equipment. Activities tend to increase in the fall and peak in the winter months of November through March. However, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the severity of the Canadian winters. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 57% of Calfrac's revenue in the first eleven months of 2003. The largest of these customers provided 50% of Calfrac's revenue in the first eleven months of 2003 and 57% of Calfrac's revenue in 2002. This customer was also an equity shareholder of Calfrac during these time periods, but recently disposed of its equity interest. Calfrac has advised Denison Energy that it has historically maintained an excellent relationship with this customer and that Calfrac has no reason to believe that there will be any change to this relationship in the future. Calfrac has three multi-year agreements to provide fracturing services to this customer which expire from June 2004 to August 2005, two of which include minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance, and anticipates that it will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from Denison Energy's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of

a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of Denison Energy to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield employees is high, and the supply is limited. The unexpected loss of Denison Energy's key personnel or the inability to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact Denison Energy's net revenue.

Absence of Current Business and Acquisition of Calfrac

Following the Reorganization, Denison Energy will hold no material assets, other than the Calfrac Option and certain income tax attributes, and will retain certain claims and liabilities of Denison Energy including expenses incurred by Denison Energy in respect of the Reorganization, certain quantifiable liabilities and certain retained legal proceedings (estimated in aggregate to be approximately $4.5 million) and other expenses incurred by Denison Energy including those incurred in connection with the Public Offering and the Acquisition. See "Legal Proceedings". If the Reorganization and the Public Offering are completed, Denison Energy anticipates exercising the Calfrac Option and acquiring Calfrac and all liabilities, including environmental liabilities, of Calfrac. Although Denison Energy is not aware of any material liabilities relating to Calfrac, it is possible that liabilities may arise in the future which could have a material adverse effect on Denison Energy.

Corporate Matters

To date, Denison Energy has not paid any dividends on its outstanding Existing Shares. The board of directors of Denison Energy may make a determination to pay dividends on its new Common Shares in the future if circumstances permit.

Additional Financing

There is no guarantee that Denison Energy will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of Common Shares or securities convertible into Common Shares from Denison Energy's treasury, control of Denison Energy may change and shareholders may suffer dilution to their investment. Denison Energy's activities may also be financed partially or wholly with debt, which may increase Denison Energy's debt levels above industry standards. The level of Denison Energy's indebtedness from time to time could impair Denison Energy's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the proposed directors and officers of Denison Energy are also directors and officers of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as officers and directors of Denison Energy and as officers and directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the ABCA.

There may be situations in which the interests of the proposed directors and management of, and consultants to, Denison Energy may conflict with those of Denison Energy. Certain members of the proposed management will not be engaged by Denison Energy on a full-time basis and are currently involved, and will continue to be involved, in other entities, businesses and activities, some of which are described herein and all of which will place varying and conflicting demands on their time and attention. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to Denison Energy. Any conflicts will be resolved in accordance with the provisions of the ABCA and other applicable laws.

Liabilities Related to Current Operations

From time to time, there may be legal proceedings pending or threatened against Denison Energy relating to the existing business of Denison Energy. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of Denison Energy following the Reorganization and the Calfrac Acquisition. See "Legal Proceedings" for a description of the legal proceedings currently against Denison Energy.

In connection with the Arrangement, the Canadian petroleum and natural gas assets of Denison Energy will be transferred to, and the related liabilities will be assumed by, Denison Resources Inc. and the mining leases and mining environmental services related assets of Denison Energy will be transferred to, and the related liabilities will be assumed by, Denison Mines Inc. In accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. will provide an indemnity to Denison Energy. Denison Resources Inc. will indemnify Denison Energy for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison Energy transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. will provide an indemnity to Denison Energy for all claims or losses relating to liabilities relating to Denison Energy's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity to be provided by Denison Resources Inc. and for matters related to specific liabilities retained by Denison Energy. See "Legal Proceedings".

Despite the indemnity to be provided to Denison Energy by each of Denison Resources Inc. and Denison Mines Inc., it is possible that Denison Energy may be found responsible for claims or losses relating to the assets and liabilities to be transferred from Denison Energy to each of Denison Resources Inc. and Denison Mines Inc. in connection with the Arrangement. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by Denison Energy. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of Denison Energy's operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. Denison Energy cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against Denison Energy or affecting the business of

Denison Energy or any legal or regulatory proceedings that may relate to Denison Energy's ownership or operation of assets prior to the completion of the Arrangement.

Denison Mines Inc. will assume the liabilities and obligations of Denison Energy under a loan from Cogema, one of Denison Energy's joint venture partners. Most of the productive assets of Denison Mines Inc. will be part of the security granted in favour of Cogema for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan-based mining projects will be dedicated to the loan's repayment. In addition, the original operating license for the McClean Lake facility, where substantially all of Denison Mines Inc.'s uranium will be produced, has been challenged and is currently subject to a hearing at the Federal Court of Appeal. See Note 11(a) of the Notes to the Consolidated Financial Statements of Denison Energy included herein. The impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to Denison Energy cannot be determined at this time.

Claims and liabilities may arise against Denison Energy after the Reorganization and the Calfrac Acquisition as a result of Denison Energy having been an owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison Energy, Denison Mines Inc., the federal government and the Ontario provincial government, Denison Energy agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison Energy's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison Energy, the federal government, the Ontario provincial government and Matco, the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison Energy's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by Denison Energy after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue Denison Energy for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. Denison Energy is not aware of any such statutory offense having occurred. The confirmation agreement among Denison Energy, the federal government, the Ontario provincial government and Matco does not limit persons other than the federal government and the Ontario provincial government from making any claims against Denison Energy in respect of Denison Energy's ownership and operation of the Elliot Lake mining facility.

Failure to Realize Benefits of the Reorganization and Calfrac Acquisition

Denison Energy has entered into the Denison Arrangement Agreement to enhance value for Denison Energy Shareholders, by allowing management to focus solely on the oilfield services business, if the Calfrac Acquisition proceeds, thereby facilitating the ability of Denison Energy to develop within its business sector and to raise future financing for its oilfield services activities. The specific merits of the Reorganization and the Calfrac Acquisition that the Board considered in reaching their decision to recommend the Denison Arrangement to the Denison Energy Shareholders are set out in the Information Circular under the heading "The Reorganization - Background to the Reorganization and Potential Calfrac Acquisition". There is no guarantee that Denison Energy will realize these anticipated benefits of the Reorganization and Calfrac Acquisition.

LEGAL PROCEEDINGS

Various legal proceedings are pending against Denison Energy. Other than those described below, Denison Energy considers all such pending proceedings, comprised primarily of labour and employment claims related to Denison Energy's former oil and gas operations in Greece, to be routine litigation incidental to Denison Energy's business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters will be subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., as applicable, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". Denison Energy believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of Denison Energy (assuming the completion of the Reorganization, the Public Offering and the Acquisition). However, Denison Energy cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against Denison Energy or affecting the business of Denison Energy or any legal or regulatory proceedings that may relate to Denison Energy's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this exhibit or any that may arise in the future

will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of Denison Energy.

Greek Operations

In September 2002, the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of Denison Energy, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Greek Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Greek Court of Appeal has been appealed by the employees to the Supreme Court of Greece. A hearing of the Supreme Court is not expected until at least mid 2004. The impact on Denison Energy of any adverse decision in this appeal cannot be determined at this time.

In September 2003, the Supreme Court of Greece issued a ruling that another former employee of the Greek subsidiary of Denison Energy be compensated for certain vacation days and referred two other compensation matters back for consideration at a new trial at the Court of Appeals of Athens. A hearing date at the Court of Appeals has been set for April 27, 2004. Another set of employees of the Greek subsidiary has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This decision is being appealed but no appeal date has been set. The dollar impact on Denison Energy of any adverse decision in these actions cannot be determined.

Greek Tax Appeal

The appeal by the Greek tax authorities of a decision in favour of the Greek subsidiary of Denison Energy regarding a penalty for incorrectly maintaining books and data regarding the Greek operations in the amount of approximately $130,000 was heard on January 14, 2004. A decision is expected within the next six months.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of Denison Energy by OilHawk Resources Ltd. The claim is fully insured and being handled by Denison Energy's insurer.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. Denison Energy believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

Claims in respect of Calfrac

Calfrac is not involved in and Denison Energy is not aware of any present or pending legal proceedings against Calfrac or in respect of its assets.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of Denison Energy are PricewaterhouseCoopers LLP, Chartered Accountants.

Computershare Trust Company of Canada is expected to be the registrar and transfer agent for the Common Shares.

INTEREST OF EXPERTS

None of Blake, Cassels & Graydon LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of Denison Energy or of any associate or affiliate of Denison Energy. Blake, Cassels & Graydon LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of Denison Energy and its associates and affiliates.

Audit Report of PricewaterhouseCoopers LLP and Audited Financial Statements of Denison Energy for each of the years in the three year period ended December 31, 2002 and Unaudited Financial Statements of Denison Energy for the nine months ended September 30, 2002 and 2003. ..... O-62

Financial Statements of Calfrac

Audit Report of PricewaterhouseCoopers LLP and audited financial statements of Calfrac for each of the years in the three year period ended December 31, 2002 and unaudited financial statements of Calfrac for the nine months ended September 30, 2002 and 2003..... O-83

Denison Energy Inc.

Pro Forma Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002
(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

COMPILATION REPORT ON PRO FORMA FINANCIAL STATEMENTS

To the Directors of
Denison Energy Inc.

We have read the accompanying unaudited pro forma balance sheet of Denison Energy Inc. (the "Company") as at September 30, 2003 and unaudited pro forma income statements for the nine months then ended and for the year ended December 31, 2002, and have performed the following procedures.

1. Compared the figures in the columns captioned "Denison Energy Inc." to the unaudited financial statements of the Company as at September 30, 2003 and for the nine months then ended, and the audited financial statements of the Company for the year ended December 31, 2002, respectively, and found them to be in agreement.

2. Compared the figures in the columns captioned "Calfrac Well Services Ltd." to the unaudited financial statements of Calfrac Well Services Ltd. as at September 30, 2003 and for the nine months then ended and the audited financial statements of Calfrac Well Services Ltd. for the year ended December 31, 2002, respectively, and found them to be in agreement.

3. Made enquiries of certain officials of the Company who have responsibility for financial and accounting matters about:

   (a) the basis for determination of the pro forma adjustments; and
   (b) whether the pro forma financial statements comply as to form in all material respects with Securities Acts of the various Provinces of Canada (the "Acts").

   The officials:

   (a) described to us the basis for determination of the pro forma adjustments, and
   (b) stated that the pro forma statements comply as to form in all material respects with the Acts.

4. Read the notes to the pro forma statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.

5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Denison Energy Inc." and "Calfrac Well Services Ltd." as at September 30, 2003 and for the nine months then ended, and for the year ended December 31, 2002, and found the amounts in the column captioned "Pro forma consolidated" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

Denison Energy Inc.

Notes to the Pro Forma Consolidated Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

1. Basis of presentation

These unaudited pro forma consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in the information circular of Denison Energy Inc. (the "Company") dated February 2, 2004 relating to the reorganization of the Company. These unaudited pro forma consolidated financial statements are based on the historical financial statements of the Company and Calfrac Well Services Ltd. ("Calfrac"), together with other information available to the Company's management.

These unaudited pro forma consolidated financial statements reflect the arrangement of the Company pursuant to section 182 of the Business Corporations Act (Ontario) (the "Arrangement") expected to become effective in March 2004 and the subscription for common shares by Matco Capital Ltd. for aggregate proceeds of $5,347 expected to be completed in March 2004 pursuant to an agreement dated December 30, 2003 (the "Subscription"), each entered into by the Company prior to the issue and sale of common shares (the "Offering"). These unaudited pro forma consolidated financial statements have been prepared to give effect to the acquisition of all of the shares of Calfrac for cash consideration of $28,780 and the issuance of common shares to the current shareholders of Calfrac as consideration for their Calfrac shares pursuant to the exercise of an option granted to the Company by the shareholders of Calfrac on December 30, 2003 (the "Purchase Option") (collectively, the "Proposed Transactions").

These unaudited pro forma consolidated financial statements also reflect certain financing agreements entered into by Calfrac subsequent to September 30, 2003.

These unaudited pro forma consolidated financial statements are not necessarily indicative of the results that would actually have occurred if the events reflected herein had been in effect on the dates indicated or of the results that may be obtained in the future.

These unaudited pro forma consolidated financial statements should be read in conjunction with the December 31, 2002 audited consolidated financial statements and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of Calfrac and the audited consolidated financial statements for the year ended December 31, 2002 and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of the Company.

Certain financial statement items have been reclassified for comparative purposes.

After the Arrangement, the Subscription, the Offering and the acquisition of Calfrac, future financial statements of the Company will reflect the financial results of Calfrac with Calfrac historical financial information shown as the comparative figures.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

2. **Pro forma adjustments and assumptions**

The pro forma consolidated balance sheet gives effect to the Proposed Transactions as if they occurred as at September 30, 2003 and the pro forma consolidated statements of earnings give effect to the Proposed Transactions as if they occurred on January 1, 2002.

The accounting policies used in the preparation of these unaudited pro forma consolidated financial statements are in accordance with those disclosed in the Company's and Calfrac's audited consolidated financial statements for the year ended December 31, 2002.

These unaudited pro forma consolidated financial statements give effect to the following transactions, assumptions and adjustments:

(a) The Company collects $2,353 from the assumed exercise of 964,833 stock options at prices ranging from $2.22 to $3.15 per share. It is assumed that $334 will be retained by the Company, $1,685 transferred to Denison Mines Inc. and $334 applied against the bank indebtedness of Denison Resources Inc.;

(b) The Company transfers its mining and environmental services businesses to Denison Mines Inc. and its Canadian oil and gas business to Denison Resources Inc. and distributes the common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) to its existing shareholders, pursuant to the Arrangement;

(c) The outstanding common shares of the Company are consolidated on a twenty-one for one basis, pursuant to the Arrangement;

(d) The Company issues common shares pursuant to the Subscription for approximate gross proceeds of $5,347;

(e) The net proceeds of the Offering of common shares by the Company amount to $111,600. Transaction and issuance costs of $8,400 are assumed to have been incurred. For these costs, applying an effective tax rate of 33% provides for the recognition of a future income tax asset ("FITA") in the amount of $2,772 with the remaining $5,628 of the costs reducing the common share balance;

(f) The Company exercises the Purchase Option to acquire Calfrac for common shares at an ascribed value of $115,120 and $28,780 of cash raised through the Offering.

The Company's exercise of the Purchase Option allows the currently unrecognized existing tax pools of the Company to be recognized as a FITA. This transaction has been treated for accounting purposes as required in the Canadian

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

Institute of Chartered Accountants Emerging Issues Committee Abstract #110, which takes into account the relevant status of the Company after the transactions stated in 2(b) above.

With tax pool amounts of approximately $224,000 federally and approximately $173,000 provincially and an effective tax rate of 33%, $73,000 is recognized as a FITA. The fair value of the tax pools acquired of $11,000, established by an earlier arm's length transaction, is credited to common stock. The difference of $62,000 between the FITA recognized and the fair value of the tax pools is recorded as a deferred credit.

For the year ended December 31, 2002 and the nine month period ended September 30, 2003, the existing current income tax expense and the increase from the reduction of interest expense and increase in interest income in 2(h) will be eliminated by the tax pool value now recognized;

(g) Calfrac assumes a debt obligation of $58,437 incurred in connection with an acquisition of 4,289,844 Calfrac shares prior to the acquisition of the shares of Calfrac. The creditor is entitled to demand payment of the obligation following a change of control of Calfrac, which occurs with the Company's closing of the Purchase Option. It is assumed that the creditor demands payment and that proceeds from the Offering in the amount of $58,437 are paid to satisfy the obligation. The 4,289,844 Calfrac shares are cancelled and the payment is treated as a proportionate return of capital in the amount of $4,454 and a distribution of retained earnings in the amount of $53,983;

(h) Proceeds from the Offering are used to pay $26,035 of the pre-existing Calfrac bank debt. The principal amount of the debt at January 1, 2002 was $7,837. It is assumed that the unused proceeds earned interest income at the average bank rate for the period. The repayment of this debt reduces interest expense in 2002 by $490 and for the nine month period ended September 30, 2003 by $1,087;

(i) Reduction of liabilities with the cash from the Subscription in the amount of $1,000 of the Company's bank indebtedness, $1,610 of Ontario tax liability and additional transaction costs of $1,348; and

(j) As approved by the shareholders as part of the Arrangement, the deficit of $46,777 will be reduced to zero with corresponding reductions in contributed surplus of $927 to zero and common shares of $45,850 to $89,410.

Denison Energy Inc.

Notes to the Pro Forma Consolidated Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

3. Earnings per share

The authorized share capital of the Company is an unlimited number of common shares, without nominal or par value.

The Earnings per share is not known because the number and price of the common shares to be issued pursuant to the Subscription and the Offering has not been determined.

Auditors' Consent

We refer to the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc. ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mines Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 193 of the *Business Corporations Act* (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd and Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned information circular of our compilation report to the Directors of Denison Energy on the unaudited pro forma balance sheet of Denison Energy as at September 30, 2003 and on the unaudited pro forma income statements for the nine month period ended September 30, 2003 and the year ended December 31, 2002. Our report is dated January 29, 2004.

Auditors' Report

To The Directors of Denison Energy Inc.

We have audited the consolidated balance sheets of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000, and the consolidated statements of earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2002, December 31, 2001 and December 31, 2000 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

(Signed) "PricewaterhouseCoopers LLP"

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

1. NATURE OF OPERATIONS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Change of Name
On May 24, 2002 the Corporation filed Articles of Amendment that effective that day changed the corporation's name from Denison Mines Limited to Denison Energy Inc.

Nature of Operations
The Corporation operates in the mining, oil and gas and environmental service sectors. Mining activities include a 22.5% interest in the McClean Lake uranium property and mill in northern Saskatchewan, where uranium production reached commercial levels in November 1999, a 19.96% interest in the Midwest uranium deposit and mineral evaluation and exploration. Oil and gas activities consist primarily of the exploration for and production of oil and natural gas in Western Canada, where the Corporation resumed operations in late 2000 and has expanded through both exploration and acquisitions including the Innovative acquisition described in note 12. The Corporation also holds oil and gas exploration acreage in Greece. Environmental services activities include mine decommissioning services and monitoring of closed mine sites.

Basis of Presentation
The consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles. The preparation of financial statements, in conformity with Canadian generally accepted accounting principles, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent liabilities as of the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. The most significant estimates are related to the economic lives and recoverability of mining and oil and gas assets, the provisions for decommissioning and reclamation, post-employment benefits, future income taxes and the evaluation of contingent liabilities. Actual results could differ materially from those estimates. The summary of significant accounting policies below describes the accounting methods and practices that have been used in the preparation of these consolidated financial statements. This summary is presented to assist the reader in interpreting the statements contained herein.

Certain comparative figures for prior periods have been reclassified to conform with the presentation adopted in these financial statements. This reclassification has no impact on net earnings or retained earnings.

Consolidation Principles
The consolidated financial statements include the accounts of the Corporation and its subsidiaries. The Corporation's interests in the McClean Lake and Midwest uranium joint ventures and its oil and gas joint ventures are accounted for using the proportionate consolidation method. Under this method, the Corporation includes its proportionate share of assets, liabilities, revenues and expenses.

Revenue Recognition
Mining and oil and gas revenue are recognized when title passes from the Corporation to its customer. Revenue on decommissioning contracts is recognized using the percentage of completion method, where sales, earnings and unbilled accounts receivable are recorded as related costs are incurred. Earnings rates are adjusted periodically as a result of revisions to projected contract revenues and estimated costs of completion. Losses, if any, are recognized fully when first anticipated. Royalty revenue is recognized when earned under the respective agreement.

Cash and Cash Equivalents
Cash and cash equivalents consist of cash and short-term investments with original maturities not exceeding 90 days and are stated at cost, which approximates market value.

Marketable Securities
Marketable securities are recorded at the lower of cost or net realizable value.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Inventories and Prepaid Expenses
Uranium concentrates, assets purchased for resale, supplies and ore in stockpiles are recorded at the lower of average cost and net realizable value. Inventory of ore in stockpiles consists of actual costs to remove overburden and mine ore together with the amortization of open pit mining equipment and is charged to production using the units of production method.

Property, Plant and Equipment
Mining Property, Deferred Exploration and Development Costs
Exploration costs and property acquisition costs are expensed as incurred unless it is determined that a project contains economically recoverable reserves, in which case all such costs relating to that project for the current and subsequent years are capitalized. Pre-production costs, net of revenue during the start-up phase, are capitalized as development costs until the project is capable of sustained operations at commercial production levels. Capitalized mining property, deferred exploration and development costs are amortized using the unit of production method over the expected life of the mine after commercial production levels are attained.

Mine Buildings, Plant and Equipment
Mine buildings, plant and equipment are recorded at cost. Mine buildings, plant and equipment are amortized to estimated residual value over the shorter of the life of the mine, or specific period that the mill or other specific asset will be utilized, using the units of production method. When assets are retired or sold, the resulting gains or losses are reflected in current earnings.

Mining Property Evaluations
The carrying values of mining, exploration and development properties and related mine buildings and equipment are periodically assessed by management to determine whether the net recoverable amount exceeds the carrying value of the project. Any unrecoverable amount is written off against earnings. The net recoverable amount represents future undiscounted cash flows determined using proven, probable and expected reserves and estimated selling prices which reflect both historical prices and expected future selling prices, less operating, capital, financing and reclamation costs.

Oil and Gas Properties, Plant and Equipment
The Corporation's oil and gas properties, plant and equipment are carried at the lower of cost and net recoverable amount. All costs associated with the exploration for and the development of oil and gas properties are capitalized providing the total capitalized cost does not exceed the net recoverable amount. All costs of the Corporation's oil and gas property, plant and equipment are capitalized in one producing cost centre. Depletion is provided on capitalized costs in this producing cost centre by the units of production method based on estimated proven reserves.

Oil and Gas Property Evaluations
Net recoverable amount is the aggregate of estimated undiscounted future net revenues from proven reserves less operating, administration, financing and income tax expense. Estimated future net revenues are determined using year-end prices. The Corporation periodically reviews the costs associated with preproduction stage cost centres to determine whether costs are likely to be recovered. Any unrecoverable amount is written off against earnings.

Other Property, Plant and Equipment
Other property, plant and equipment are amortized according to the straight-line method based on their estimated useful lives, which range from three to twenty years.

Capitalization of Interest
Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Decommissioning and Site Restoration Cost
Estimated decommissioning and site restoration costs of resource properties are accrued and charged to operations using the unit of production method. Provisions with respect to site restoration include long-term treatment and monitoring costs of a longer term nature and are calculated on a discounted basis and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related decommissioning and site restoration liability. The Corporation's resource activities are subject to various governmental laws and regulations related to the protection of the environment. The Corporation has made and continues to make expenditures in order to comply with or exceed such laws and regulations. The Corporation is continuously updating its decommissioning and site restoration cost estimates. Such estimates are, however, subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when applicable.

Deferred Reorganization Costs
Expenditures incurred to implement a proposed plan of arrangement have been deferred pending completion of the transaction.

Post Employment Benefits
The Corporation provides dental, supplemental health care and life insurance benefits, but not pensions, to its former Canadian employees who retired on immediate pension from active service prior to 1997. The estimated cost of providing these benefits is actuarially determined using the projected benefits method and was accrued over the service life of this retiree group. The most recent actuarial valuation of this obligation was performed as of September 30, 2002. The interest cost on this unfunded liability and the surplus are being amortized over the remaining lives of this retiree group.

Future Income Taxes
The Corporation follows the asset and liability method of accounting for future income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are determined based on temporary timing differences between the financial reporting and tax bases of assets and liabilities, and are measured using the substantively enacted tax rates and laws that are expected to apply when the differences are expected to reverse. The benefit of tax losses which are available to be carried forward are recognized as assets to the extent that they are more likely than not to be recoverable from future taxable income. Benefits which are recognized in respect of tax deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995 are credited directly to retained earnings and benefits which are recognized in respect of tax deductions which arose subsequent to the comprehensive revaluation of the Corporation's assets are credited to net earnings. The Canadian federal large corporation tax on capital is included in the provision for income taxes.

Translation of Foreign Currencies
Monetary assets and liabilities and non-monetary items carried at market value are translated into Canadian dollars at the period-end exchange rate. Other non-monetary items and revenues and expenses are translated at approximate rates in effect at the dates of the transactions, except depletion and amortization which are translated at the same rate as the related assets.

Financial Instruments
The carrying amounts for cash and short-term deposits, accounts receivable, inventories and prepaid expenses, accounts payable and accrued liabilities on the balance sheets approximate fair value because of the limited term of these instruments. The fair market value of long-term debt approximates book value unless otherwise disclosed. Fair value estimates are made at the balance sheet date, based on relevant market information and information about the financial instrument.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Stock Option Plans

In 2002 the Corporation adopted prospectively the requirements of the CICA handbook section 3470, "Stock-Based Compensation and Other Stock Based Payments." As encouraged by section 3470, the Corporation has adopted the fair value based method to account for stock-based transactions with directors, and eligible employees for options granted in 2002. The value is recognized over the applicable vesting period as an increase in compensation expense and contributed surplus. When the options are exercised, the proceeds received by the Corporation, together with the amount in contributed surplus will be credited to Common Share capital. For options granted prior to January 1, 2002 the Corporation continues to follow the accounting policy under which no expense is recognized for these stock options. When these options are exercised, the proceeds received by the Corporation will be recorded as Common Share capital.

Earnings per share

Basic earnings per Common Share are computed by dividing net earnings by the weighted average number of Common Shares outstanding during the period. Diluted per share amounts are calculated giving effect to the potential dilution that would occur if securities or other contracts to issue Common Shares were exercised or converted to Common Shares. The treasury stock method is used to determine the dilutive effect of stock options and other dilutive instruments. The treasury stock method assumes that proceeds received from exercise of in-the-money stock options are used to repurchase Common Shares at the prevailing market rate.

2. INVENTORIES AND PREPAID EXPENSES

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Uranium concentrate	**$ 11,782**	$ 11,063	$ 8,046	$ 7,064	$ 593
Inventory of ore in stockpiles	**10,970**	15,383	14,522	18,246	18,628
Mine supplies	**1,375**	1,396	1,405	1,543	1,978
Mining equipment acquired for resale	**—**	483	—	483	409
Prepaid expenses	**620**	773	831	291	113
	24,747	29,098	24,804	27,627	21,721
Less: Non-current portion - Inventory of ore in Stockpiles	**7,456**	10,550	9,689	13,413	11,743
Current portion inventories and prepaid Expenses	**$ 17,291**	$ 18,548	$ 15,115	$ 14,214	$ 9,978

Stockpiles include inventory from two open pit mining areas at the McClean Lake minesite where mining was completed in February 2002. Ore from these stockpiles will be processed over several years.

3. PROPERTY, PLANT AND EQUIPMENT

(a) The net property, plant and equipment balance consists of:

	As at September 30			
	2003			2002
	Cost	**Accumulated depletion and amortization**	**Net**	Net
	(unaudited and in thousands)			
Mining				
McClean Lake / Midwest uranium projects	**$ 130,421**	**$ 24,454**	**$ 105,967**	$ 111,618
Oil and Gas	**25,819**	**16,620**	**9,199**	16,376
Environmental Services	**620**	**238**	**382**	368
	$ 156,860	**$ 41,312**	**$ 115,548**	$ 128,362

Denison Energy Inc.

Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	As at December 31				
	2002			2001	2000
	Cost	**Accumulated depletion and amortization**	**Net**	Net	Net
					(in thousands)
Mining					
McClean Lake/Midwest uranium Projects	**$ 130,261**	**$ 19,537**	**$ 110,724**	$ 116,082	$ 121,514
Oil and Gas	**22,715**	**2,268**	**20,447**	13,559	550
Environmental Services	**547**	**194**	**353**	337	304
	$ 153,523	**$ 21,999**	**$ 131,524**	$ 129,978	$ 122,368

(b) The Corporation has a 22.5% interest in the McClean Lake mine and mill and a 19.96% interest in the Midwest uranium project, both located in northern Saskatchewan. The McClean Lake mill achieved commercial production levels on November 1, 1999 and has been constructed to process ore from the McClean Lake mine as well as other deposits. A toll milling agreement has been signed with the participants in the Cigar Lake Joint Venture that provides for the processing of a substantial portion of the future output of that mine at the McClean Lake mill, for which the owners of the McClean Lake mill will receive a toll milling fee. In determining the amortization rate for the McClean Lake mill, the Corporation has reduced the amount to be amortized by its expected share of future toll milling revenue.

(c) **Write-down of oil and gas properties (unaudited)**
In September 2003 the Corporation recorded a write-down of its Canadian oil and gas properties by $12,000,000. This write-down was calculated using September 30, 2003 oil and natural gas prices and updated reserve reports for its oil and gas properties.

4. BANK INDEBTEDNESS

As at December 31, 2002 the Corporation had a borrowing facility of up to $6,000,000. Subsequent to year-end, as a result of the fact that substantial proven gas reserves are awaiting pipeline allocation and the short production history of two new wells, this borrowing facility was reduced to $5,300,000 as at September 30, 2003. This facility is subject to an annual review and is repayable from oil and gas cash flows and as discussed in note 13(e). This facility bears interest at Canadian bank prime (which was 4.5% on December 31, 2002) plus 0.5% and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin and not pledged under the facilities described in notes 5(b) and 5(c).

5. LONG-TERM DEBT

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) The McClean Lake loan from Cogema Resources Inc. finances the Corporation's share of the costs of development and operation of the McClean Lake mine and mill and Midwest uranium project. This loan is secured only by the Corporation's interest in the McClean Lake mine and mill and the Midwest uranium project. The Corporation's share of net cash flow from McClean Lake uranium sales is dedicated to the loan's repayment. The Corporation has the right to prepay portions of the loan facility and redraw amounts prepaid, including interest savings from amounts prepaid, on 45 days' notice. As at September 30, 2003, the Corporation had the ability to redraw $3,208,000. Interest on this loan is payable at Canadian bank prime plus 1%. The loan is currently scheduled to mature on December 31, 2005, but will be extended to December 31, 2010 if, prior to December 31, 2005, a production decision is made to develop the Midwest uranium project. Any principal balance outstanding at maturity is repayable at 20% per annum. It is not possible to determine the fair value of the McClean Lake loan.

(c) Other long-term debt of $1,610,000 as at September 30, 2003 is repayable over two years up to August 31, 2005 in annual installments plus interest which approximates Canadian bank prime. Principal payments in the next two years are: 2004 - $761,000 and 2005 - $849,000.

(d) The Corporation has a line of credit for $300,000 from a Canadian Chartered Bank. This line of credit bears interest at Canadian bank prime and is secured by a short-term deposit. At September 30, 2003, $26,000 was drawn against this line of credit, which is repayable on demand.

(e) Interest expense on long-term debt was as follows:

	Nine months ended September 30		For the year ended December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
McClean Lake loan	**$ 2,148**	$ 2,093	$ 2,798	$ 4,186	$ 5,623
Other long-term debt	**90**	94	117	246	89
	$ 2,238	$ 2,187	$ 2,915	$ 4,432	$ 5,712

6. POST EMPLOYMENT BENEFITS

The Corporation's post employment benefits accrual includes life insurance for each of its former Canadian employees who retired on immediate pension prior to 1997, together with the future cost of medical and dental benefits as set out in the group policies. The amount accrued is based on estimates provided by the plan administrator which are based on past experience, limits on coverage included in the plan and other assumptions including a growth in medical cost of up to 13% initially, decreasing over five years to 8% per annum and a growth in dental costs of 6% per annum, subject to limits set out in the group policies.

The Corporation's post employment benefit plan is not funded. Changes in the accrued benefit obligation are as follows:

	Nine months ended September 30		For the year ended December 31	
	2003	**2002**	2002	2001
	(unaudited)	**(unaudited)**		(in thousands)

Benefits paid	**(200)**	**(279**	(455)	(482)
Interest cost	**252**	**220**	335	350
Accrued benefit obligation – end of year	**5,766**	**5,775**	5,714	5,834
Unamortized initial transitional surplus	**4,454**	**4,847**	4,749	5,142
	10,220	**10,622**	10,463	10,976
Less: Current portion included in accounts payable	**400**	**425**	400	500
	$ 9,820	**$ 10,197**	$ 10,063	$ 10,476

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

The unamortized initial transitional surplus is being amortized over the expected 12.5 year (as of September 2002) average life expectancy of this retiree group.

7. DECOMMISSIONING AND SITE RESTORATION

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Elliot Lake					
Elliot Lake mine site restoration accrual *(note 7b))*	**$ 7,681**	$ 8,059	$ 7,984	$ 8,418	$ 9,045
Less: Balance in Elliot Lake Reclamation Trust Fund *(note 7(b))*	**1,342**	1,421	1,606	1,761	2,132
	6,339	6,638	6,378	6,657	6,913
Less: Current portion included in accounts payable	**350**	400	400	425	600
	5,989	6,238	5,978	6,232	6,313
McClean Lake uranium operations *(note 7(c))*	**584**	479	498	388	–
Canadian oil and gas *(note 7(d))*	**147**	115	122	90	–
	$ 6,720	$ 6,832	$ 6,598	$ 6,710	$ 6,313

(b) The Corporation's Elliot Lake uranium mine closed in 1992 and capital works to decommission this site were completed in 1997. The remaining provision is for the estimated cost of monitoring the Tailings Management Areas at the Denison and Stanrock sites and for treatment of water discharged from these areas. The Corporation conducts its activities at both the Denison and Stanrock sites pursuant to decommissioning licenses issued by the Canadian Nuclear Safety Commission. The above accrual represents the Corporation's best estimate of the future reclamation cost based on assumptions as to levels of treatment which will be required in the future. The financial effect of future changes, if any, in requirements, laws, regulations and operating assumptions may be significant, and will be recognized if and when applicable.

Pursuant to a Reclamation Funding Agreement, effective June 30, 1994, with the Governments of Canada and Ontario, the Corporation was required to deposit 90% of its cash flow, after deducting permitted expenses, into the Reclamation Trust Fund. A subsequent agreement with the governments provides for the suspension of the Corporation's obligation to deposit 90% of its cash flow into the Reclamation Trust, provided the Corporation maintains a balance in the Reclamation Trust equal to estimated reclamation spending for the succeeding six calendar years. Withdrawals from this trust fund can only be made with the approval of the Governments of Canada and Ontario, to fund Elliot Lake site restoration costs. The Corporation believes that the current Reclamation Trust balance will be adequate to fund these costs through 2008.

(c) In addition the McClean Lake operation is subject to environmental regulations as set out by Saskatchewan Environment and the Canadian Nuclear Safety Commission. As required by Saskatchewan Environment, the operator of the McClean Lake joint venture has arranged Letters of Credit securing future decommissioning and reclamation liabilities. The Corporation has agreed to indemnify the operator for its proportionate share of any loss incurred up to a maximum amount of $7,755,000.

(d) The Corporation has estimated future removal and site restoration costs of $957,000 at September 30, 2003 (December 31, 2002 - $325,000, December 31, 2001 - $278,000, December 31, 2000 - $182,000) for abandoning its Canadian oil and gas wells and facilities.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

8. INCOME TAXES

(a) Since the Corporation operates in three industrial and geographic segments, its income is subject to varying rates of taxation. A reconciliation of the combined Canadian federal and provincial income tax rate to the Corporation's effective rate of income and resource taxes is as follows:

	For the Year Ending December 31		
	2002	2001	2000
Earnings before income taxes	**$ 2,929**	$ 3,214	$ 9,449
Combined federal and provincial income tax rate	**43.50%**	43.04%	44.60%
Computed income tax expense	**$ 1,274**	$ 1,383	$ 4,214
Increase (decrease) in taxes resulting from:			
Benefit of previously unrecognized federal and provincial tax pools	**(1,198)**	(1,307)	(3,043)
Resource allowance	**(81)**	(61)	(587)
Reduction in Ontario income tax rate due to lower income allocation to Ontario	**—**	(2,000)	—
Adjustments relating to other years	**(469)**	—	—
Other	**(78)**	195	(401)
Ontario income tax recovery	**(552)**	(1,790)	183
Federal large corporation tax	**413**	286	235
Income tax recovery	**$ (139)**	(1,504)	$ 418

(b) The Corporation uses the asset and liability method of accounting for the tax effect of temporary differences between the carrying amount and tax bases of the Corporation's assets and liabilities. Temporary differences arise when the realization of an asset or the settlement of a liability would give rise to either an increase or decrease in the Corporation's income taxes payable for the year or a later period. The Corporation's future tax liability arises in computing its Ontario tax liability, from the deduction of temporary differences, principally capital cost allowance, Canadian exploration and development expenses of $30 million more for tax than accounting, less the future tax reduction expected from the utilization of non-capital losses of $20 million which expire in 2006. As at December 31, 2002, the Corporation has not recognized the future tax benefits for both Federal and Saskatchewan tax purposes, from the future utilization of non-capital loss carry forwards of $21 million expiring in 2006 or temporary tax differences in excess of book values of $208 million that it can carry forward to shelter future Federal and Saskatchewan income tax liabilities. Of this amount, $97 million relates to deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995. In 2002, the Corporation was able to offset its entire Federal and Saskatchewan income tax expense against these unrecognized tax deductions.

9. SHAREHOLDERS' EQUITY

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Common stock *(note 9(b))*	**$ 5,568**	$ 5,568	$ 5,568	$ 935	$ 1
Common Share Purchase Warrants *(note 9(c))*	**—**	—	—	688	688
Contributed Surplus *(note 9(c))*	**1,229**	928	937	240	240
Retained Earnings	**67,621**	81,086	81,647	78,579	73,861
	$ 74,418	$ 87,582	$ 88,152	$ 80,442	$ 74,790

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) Common Stock

Authorized
The authorized share capital consists of an unlimited number of Common Shares.

Issued
Changes in issued Common Shares were as follows:

	Number of Shares	$ (in thousands)
Balance as of December 31, 2000 and 1999	**15,893,560**	$ 1
Shares issued on acquisition of Innovative Energy Inc. net of issued cost of $33,000 (note 12)	**386,880**	934
Balance as of December 31, 2001	**16,280,440**	935
Purchase and cancellation of fractional Common Shares resulting from one for 20 share consolidation	**(3,287)**	(12)
Issue of flow-through Common Shares net of $355,000 issue Costs	**1,428,571**	4,645
Balance as of September 30, 2003, December 31, 2002 and September 30, 2002	**17,705,724**	$ 5,568

All Common Stock balances have been restated to reflect a one for 20 share consolidation, which became effective on May 24, 2002. Prior period earnings per share have been calculated to give effect to this share consolidation as if the share consolidation had been effective at the beginning of the earliest period presented.

(c) Contributed Surplus and Common Share Purchase Warrants

	Nine months ended September 30		For the year ended December 31		
	2003 (unaudited)	2002 (unaudited)	2002	2001	2000 (in thousands)
Balance – beginning of period	**$ 937**	$ 240	$ 240	$ 240	$ 240
Expiry of 549,550 Common Share Purchase Warrants on July 18, 2002	**–**	688	688	–	–
Common Share Stock Options expensed (note 9(d))	**292**	–	9	–	–
Balance – end of period	**$ 1,229**	$ 928	$ 937	$ 240	$ 240

(d) Stock Option Plan
The Corporation has issued stock options pursuant to a Stock Option Plan, approved by shareholders in 1996, under which the Board of Directors may issue up to 2,384,000 Common Shares to directors, eligible employees and service providers. Under this plan the exercise price of each option equals the market price of the Corporation's stock on the date of the grant. The issued options vest in installments on the anniversary of their grant, except that all options outstanding vest immediately on a takeover. Options expire if unexercised after ten years. A summary of the status of the Corporation's stock options issued under this plan as at September 30, 2003, December 31, 2002, 2001 and 2000 and changes during the periods and years ending on those dates is presented below:

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	For the nine months ended September 30, 2003 (unaudited)		For the year ended December 31, 2002		For the year ended December 31, 2001		For the year ended December 31, 2000

Options exercisable at period end	483,833		775,708		626,650		450,150	

The following table summarizes information about stock options outstanding at September 30, 2003:

	Options Outstanding (unaudited)			Options Exercisable (unaudited)	
Range of Exercisable Prices	Number Outstanding Sept. 30, 2003	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Sept 30, 2003	Weighted-Average Exercise Price
$7.60	97,500	2.7	$ 7.60	97,500	$ 7.60
$2.22 to $3.15	1,022,500	7.0	$ 2.45	385,833	$ 2.45
$2.22 to $7.60	1,120,000	6.9	$ 2.89	483,333	$ 3.47

The following table summarizes information about stock options outstanding at December 31, 2002:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Dec. 31, 2002	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Dec. 31, 2002	Weighted-Average Exercise Price
$7.20 to $7.80	450,250	3.4	$ 7.62	450,250	$ 7.62
$2.31 to $3.15	552,000	8.3	$ 2.60	325,458	$ 2.60
$2.31 to $7.80	1,002,250	5.6	$ 4.85	775,708	$ 4.85

In 2002, the Corporation adopted prospectively CICA handbook section 3870, "Stock-based Compensation and Other Stock-Based Payments". The compensation expense associated with this stock option series has been calculated using the Black-Scholes option-pricing model and $9,000 has been expensed in 2002 and $292,000 in the nine months ended September 30, 2003. The pricing model assumes a 10-year term, expected Common Stock price volatility of 67% and a weighted average life of 10 years and a weighted average risk-free interest rate of 5.4% and an assumption that dividends are reinvested in the Corporation. These options have a ten-year term, with vesting periods ranging from one to four years of the grant date.

(e) Earnings Per Share Data

Prior period earnings per share calculations give effect to the share consolidation described in note 9(b) as if the share consolidation had been effective at the beginning of the period presented.

The calculation of basic earnings per share is based on the weighted average number of shares outstanding during the year in the amount of 16,879,892 (2001 - 15,949,737) Common Shares.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

The calculation of diluted earnings per share takes into consideration the potential issue of shares under Stock Options and, in 2001, Common Share Purchase Warrants where the strike price is below the average Common Share price for the year. The number of dilutive options in 2002 is 314,204 (2001 – 412,500). In 2002, 688,046 (2001 – 514,750) Stock Options and in 2002 0, (2001 550,000) Common Share Purchase Warrants have been excluded from the calculation of diluted earnings per share as the exercise price is greater than the average Common Share price in the year.

10. OTHER CHANGES IN WORKING CAPITAL

Other changes in working capital consist of:

	As at September 30		As at December 31		
(in thousands)	**2003 (unaudited)**	2002 (unaudited)	**2002**	2001	2000
Accounts receivable	**$ 8,384**	$ 8,700	**$ 567**	$ 868	$ 10,701
Inventories and prepaid expenses	**57**	(1,471)	**2,390**	6,164)	349
Less amortization of ore milled from Stockpiles	**(3,5**	(4,057)	**(4,912)**	(5,863)	(6,272)
Accounts payable and accrued liabilities	**(2,3**	(5,240)	**(1,891)**	(49)	(33,248)
Current taxes payable	—	—	—	—	513
	$ 2,551	$ (2,068)	**$ (3,846**	$ (11,208)	$ (27,957)

11. CONTINGENT LIABILITIES AND COMMITMENTS

(a) On September 23, 2002 The Federal Court of Canada, Trial Division, quashed the original McClean Lake facility operating license issued in 1999. That license had been superceded and the facility has continued to operate under the new four-year operating license issued in August 2001. The Trial Division decision has been appealed by both the federal regulator of the facility, the Canadian Nuclear Safety Commission ("CNSC") and by the operator and majority owner of the facility, Cogema Resources Inc. The Province of Saskatchewan and First Nations and Métis groups have intervened in support of the appeal. The Federal Court of Appeal granted a stay of the Trial Division decision pending the outcome of the appeal.

The Trial Division decision quashed the original 1999 operating license on the basis that the *Canadian Environmental Assessment Act* was not complied with. Specifically, the project was subject to a lengthy public process under legislation that was replaced by the *Canadian Environmental Assessment Act*. The Trial Division decision creates a significant amount of uncertainty about the rules applicable to obtaining the necessary approvals for the operation of the McClean Lake facility.

While the outcome of the appeal process cannot be determined, the Corporation believes that ultimately the Trial Division decision will be nullified through the appeal process or by the completion of further regulatory requirements. An application for a new license for the McClean Lake facility has been filed with the CNSC. Pending the appeal of the decision, the stay granted by the Federal Court of Appeal eliminates the risk of a stoppage in production at McClean Lake. The Corporation believes that with the continuing efforts of all interested parties, a shut down of the McClean Lake facility is unlikely. The impact of an unfavourable decision cannot be determined at this time.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) In September 2002 the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of Denison's former employees, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In unanimously rejecting the lower court decision, the Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments are required to be made. These former employees have further appealed this Court of Appeal decision to the Supreme Court of Greece. The Corporation believes that this appeal will be unsuccessful. The impact of an unfavourable decision cannot be determined at this time.

(c) The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has:

(i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at the Corporation's decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and
(ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land.

The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

(d) The Corporation is involved in various other legal actions in the course of business. In the opinion of management, the aggregate amount of any potential liability is not expected to have a material adverse effect on the Corporation's financial position or results.

(e) In July 2002, the Corporation raised $5,000,000 through the issue of 1,428,571 flow-through Common Shares. As at September 30, 2003 the Corporation had spent the proceeds of this issue on Canadian Exploration Expenditures and has no further commitment.

(f) The Corporation's lease commitments under two operating leases for premises are 2003 - $223,000, 2004 - $196,000, 2005 - $25,000 and 2006 - $7,000.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

12. ACQUISITION OF INNOVATIVE ENERGY LTD.

Effective November 8, 2001 the Corporation acquired 100% of Innovative Energy Ltd. of Calgary. The acquisition has been accounted for as a purchase and accordingly these financial statements include Innovative's results from November 8, 2001 onward. The estimated fair value of net assets acquired on November 8, 2001 from Innovative Energy Ltd. and the consideration paid, were as follows:

	As at November 8, 2001
Net assets acquired	
Assets	(in thousands)
Current assets	**$ 533**
Oil and gas property, plant and equipment	**5,597**
	6,130
Liabilities	
Bank indebtedness	**2,285**
Other current liabilities	**913**
Provision for site restoration	**82**
	3,280
Net assets acquired	**$ 2,850**
Consideration	
Cash	**$ 1,916**
Non cash	
Issue of 386,880 Common Shares net of issue costs of $33,000	**934**
Total consideration	**$ 2,850**

13. SUBSEQUENT EVENTS

(a) Denison Energy, Denison Mines Inc. ("Denison Mines"), Tenwest Uranium Limited ("Tenwest"), Denison Resources Inc. ("Denison Resources"), Denison Oil Corporation ("Denison Oil"), Denison Resources Partnership ("the Partnership"), Denison Mines Holding Corporation ("Mine Holdco") and E. Peter Farmer have entered into an arrangement agreement to implement an arrangement (the "Denison Arrangement") by way of a plan of arrangement under section 182 of the *Business Corporations Act* (Ontario) pursuant to which Denison Energy's mining assets and related liabilities will be transferred to Denison Mines and Denison Energy's Canadian petroleum and natural gas assets and related liabilities will be transferred to Denison Resources, a wholly-owned subsidiary of Denison Oil. Denison Energy shareholders will receive, as consideration for the exchange of their Denison Energy common shares, common shares in the capital of Denison Oil, common shares in the capital of Denison Mines and a new class of common shares in the capital of Denison Energy. As a result of the Denison Arrangement, Denison Energy's shareholders will initially hold all of the shares in three separate publicly traded companies, Denison Energy, Denison Mines and Denison Oil. The Denison Arrangement is subject to regulatory, judicial and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) Pursuant to the Denison Arrangement, each of Denison Energy's shareholders will receive in exchange for each Denison Energy Common Share held, one common share of Denison Mines, 1/5 of one common share of Denison Oil and 1/21 of one new common share of Denison Energy. Denison Energy has agreed that immediately following the completion of the Denison Arrangement described in note 13 (a) above, it will issue the number of Common Shares equal to 45% of the outstanding Common Shares (after giving effect to such share issuance) to Matco Capital Ltd. ("Matco") and other parties designated by Matco at a purchase price of $7.35 per Common Share after giving effect to the above consolidation.

(c) Denison Energy has entered into an agreement with Calfrac Well Services Ltd. ("Calfrac") pursuant to which the shareholders of Calfrac have granted Denison Energy an option to purchase all of the shares of Calfrac following the completion of the Denison Arrangement described in note 13 (a) and the Matco subscription described in note 13 (b) for an aggregate purchase price of $227.5 million less debt. Denison Energy has the option to pay the purchase price in cash or in a combination of cash and Common Shares, provided that if Denison Energy pays the purchase price by the issuance of Common Shares, the Common Shares must make up not less than 80% of the purchase price. In connection with Denison Energy's business plans, including the potential acquisition of Calfrac, Denison Energy is currently contemplating a public offering of common shares to raise approximately $120 million.

(d) Denison Energy, Forte Oil Corporation ("Forte"), 1087215 Alberta Ltd. ("Subco"), Denison Resources, the Partnership, Denison Mines and Denison Oil have entered into an arrangement agreement to implement an arrangement (the "Forte Arrangement") by way of plan of arrangement under section 193 of the *Business Corporations Act* (Alberta), pursuant to which Forte will amalgamate with Subco, a wholly-owned subsidiary of Denison Oil, Forte securityholders will exchange their Forte securities for securities of Denison Oil, and Denison Oil will exchange its securities of Subco for securities of the amalgamated corporation. Following completion of the Forte Arrangement, Forte will be a wholly-owned subsidiary of Denison Oil, and Denison Oil shall be owned as to approximately 80% by Forte shareholders and approximately 20% by Denison Energy shareholders. The Forte Arrangement is subject to regulatory, judicial and shareholder approval and, subject to the receipt of such approvals, is anticipated to be completed in early March of 2004.

(e) Following the receipt of revised reserve reports in October, 2003, the borrowing facility described in note 4 has been revised and now requires a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 by March 31, 2004. Denison Energy has agreed to apply net sales proceeds from disposition of any Canadian oil and gas asset together with net proceeds from any share issue attributable to oil and gas assets or stock option proceeds attributable to oil and gas assets to reduce this facility.

14. SEGMENTED INFORMATION

Operations are in the following industries:

Mining	- primarily involves mining, milling and sale of uranium concentrates and exploration and development of mineral properties.
Oil and Gas	- exploration, development, production and sale of oil and natural gas and receipt of royalty revenue.
Environmental Services	- mine decommissioning services and monitoring of decommissioned sites for third parties.

Information for the nine months ended September 30, 2003 and September 30, 2002 are as follows:

Auditors' Consent

We refer to the Management Information Circular and Proxy Statement of Denison Energy Inc. ("Denison Energy") dated January 29, 2004 ("Information Circular") relating to an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, TenWest Uranium Limited, Denison Mines Inc. ("Denison Mines"), Denison Oil Corporation ("Denison Oil"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership ("Partnership"), Denison Mines Holding Corporation and E. Peter Farmer and an arrangement by way of a Plan of Arrangement dated January 29, 2004 under Section 193 of the *Business Corporations Act* (Alberta) involving Denison Energy, Denison Resources, Denison Oil, Partnership, 1087215 Alberta Ltd and Forte Oil Corporation ("Forte") and Denison Mines. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned information circular of our report to the Directors of Denison Energy Inc. on the consolidated financial statements of Denison Energy Inc. for the years ended December 31, 2002, 2001 and 2000. Our report is dated February 28, 2003, except as it relates to Note 13 of the above-mentioned financial statements, for which it is dated January 29, 2004.

Consolidated Financial Statements
September 30, 2003, December 31, 2002 and 2001

March 18, 2003

Auditors' Report

To the Directors of
Calfrac Well Services Ltd.

We have audited the consolidated balance sheets of **Calfrac Well Services Ltd.** as at December 31, 2002 and 2001 and the consolidated statements of operations and retained earnings and cash flows for each of the years in the three year period ended December 31, 2002. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2002 and 2001 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2002 in accordance with Canadian generally accepted accounting principles.

(Signed) "PricewaterhouseCoopers LLP"

Calfrac Well Services Ltd.

Notes to Consolidated Financial Statements
September 30, 2003, December 31, 2002 and 2001

(Information as at and for the period ended September 30, 2003 is unaudited)

1 Description of business and basis of presentation

Calfrac Well Services Ltd. (the "company") is a private company originally incorporated under the Business Corporation Act (Alberta) on June 28, 1999. It amalgamated with 850288 Alberta Ltd. on January 1, 2000. The company has established oilfield operations in Red Deer, Alberta, Grand Prairie, Alberta and Medicine Hat, Alberta as well as the United States and offers stimulation services to the oil and gas industry including fracturing, acidizing and coiled tubing services.

2 Summary of significant accounting policies

The financial statements of the company have been prepared by management in accordance with Canadian generally accepted accounting principles. Because a precise determination of many assets and liabilities is dependent upon future events, the preparation of financial statements necessarily involves the use of estimates and approximations which have been made using careful judgement. The financial statements have, in management's opinion, been properly prepared within reasonable limits of materiality and within the framework of the significant accounting policies summarized below:

a) Principles of consolidation

These financial statements include the accounts of Calfrac Well Services Ltd. and its wholly owned subsidiary, Calfrac Well Services Corp. Calfrac Well Services Corp. was incorporated in the United States during 2001 and commenced operations in the last quarter of 2001.

b) Foreign currency translation

The financial accounts of the subsidiary are translated into Canadian currency using the temporal method of translation. Under the temporal method, monetary denominated items are translated at the rate of exchange at the balance sheet date while non-monetary items are translated at the historical rate applicable on the date of the transaction giving rise to the non-monetary balance. Revenues and expenses are translated at the monthly average exchange rates. Gains or losses in translation are recognized in income as they occur.

c) Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and short-term investments maturing within 90 days.

d) Marketable securities

Marketable securities are carried at the lower of cost and market value.

e) Inventory

Inventory consists of chemicals and proppants used to stimulate wells and is stated at the lower of cost, determined on a first-in, first-out basis and net realizable value.

(Information as at and for the period ended September 30, 2003 is unaudited)

f) Capital assets

Capital assets are recorded at cost and are depreciated over their estimated economic useful lives using the straight-line method at the following annual rates:

Field equipment	10 years
Buildings	20 years
Shop, office and other equipment	5 years
Computers and computer software	3 years
Leasehold improvements	Term of the lease

g) Income taxes

The company follows the liability method of determining income taxes where future income taxes are determined based on temporary differences between the tax bases of assets or liabilities and their carrying amounts in the financial statements.

h) Revenue recognition

Revenue is recognized as services are rendered and products are provided.

i) Stock-based compensation plans

The company does not recognize compensation cost for its stock-based compensation; therefore, no stock-based compensation expense is recorded either on granting or exercise of stock options. Consideration paid by employees, officers or directors on the exercise of stock options is recorded as share capital.

j) Goodwill

Goodwill, which represents the excess of cost over the fair value of net assets acquired, is assessed by the company for impairment at least annually. The impairment test is carried out in two steps. In the first step, the carrying amount is compared with its fair value. When the fair value exceeds its carrying amount, goodwill is considered not to be impaired and performance of the second step of the impairment test is unnecessary. The second step compares the implied fair value of the goodwill with its carrying amount to measure the amount of the impairment loss, if any.

(Information as at and for the period ended September 30, 2003 is unaudited)

3 Capital assets

	As at December 31, 2002		
	Cost $	Accumulated depreciation and amortization $	Net $
Assets under construction	2,118,063	-	2,118,063
Field equipment	69,090,154	13,881,380	55,208,774
Buildings	2,934,357	9,734	2,924,623
Land	1,250,000	-	1,250,000
Shop, office and other equipment	863,744	303,044	560,700

4 Intangible assets

	As at December 31,	
	2002 $	2001 $
Intangible asset	1,239,127	1,239,127
Accumulated amortization	(689,219)	(391,511)
	549,908	847,616

(Information as at and for the period ended September 30, 2003 is unaudited)

On February 23, 2000, the company acquired 100% of the outstanding shares of 851350 Alberta Ltd. ("851350") in exchange for 2,125,000 common shares valued at $1 per share. 851350 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851350, this contract was assigned to Calfrac Well Services Ltd. and 851350 was dissolved on March 1, 2000. $654,325 of the purchase price is being amortized over the four year life of the contract. $1,470,675 has been identified as having an indefinite life and has been classified as goodwill.

On April 5, 2001, the company acquired 100% of the outstanding shares of 851355 Alberta Ltd. ("851355") in exchange for 2,390,625 common shares valued at $1 per share. 851355 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851355, this contract was assigned to Calfrac Well Services Ltd. and 851355 was dissolved on April 10, 2001. $584,802 of the purchase price is being amortized over the four year life of the contract. $1,805,823 has been identified as having an indefinite life and has been classified as goodwill.

As a consequence of the transactions described above, the oil and gas producer acquired a significant minority interest in the company. For the nine months ended September 30, 2003, the company provided services to the oil and gas producer in the amount of $56,952,697 (September 30, 2002 –$28,690,951; December 31, 2002 – $56,270,727; 2001 – $16,137,002; 2000 – $7,523,493). At September 30, 2003 the oil and gas producer owed the company $11,916,589 (December 31, 2002 – $12,261,137; 2001 – $3,765,236). The company's transactions with the oil and gas producer were in the normal course and have been measured at the exchange amount.

5 Bank loans

	As at December 31,	
	2002	**2001**
	$	**$**
Loan bearing interest at prime plus 1% requiring payment of accrued interest monthly plus a fixed principal payment of $60,000 per month, secured by charges on specific equipment.	2,400,000	-
Loan bearing interest at prime plus 1%.	-	6,999
	34,242,987	22,958,906

In 2002, the company implemented the Canadian Instituted of Chartered Accountants ("CICA") pronouncement EIC #122. The pronouncement requires that bank debt that is callable on demand be reclassified as a current liability. This presentation has been adopted for December 31, 2002 with prior periods reclassified to conform to this presentation.

Effective September 2003, the company renegotiated the terms of these loans to remove the demand feature. Accordingly, at September 30, 2003, these loans have been reflected as long-term, with the current portion of long-term debt reflected accordingly. In November 2003, the loans were amalgamated under one loan facility.

As at September 30, 2003, the company had an unutilized operating loan facility of $5 million and an undrawn revolving equipment term loan in the amount of $7.5 million.

Scheduled principal repayments required in each year to retire the bank loans and long-term debt (see note 6) as at September 30, 2003 are as follows:

	$
2004	11,526,158
2005	10,190,006
2006	6,731,606
2007	4,719,917
2008	3,020,472
Thereafter	2,745,786
	38,933,945

Calfrac Well Services Ltd.

6 Long-term debt

	As at December 31,	
	2002	**2001**
	$	**$**
Debenture bearing interest at 8.95% requiring payment of accrued interest monthly plus a fixed principal payment of $53,575 per month, secured by charges on specific equipment.	2,249,850	2,892,750
Non-interest bearing unsecured loan requiring a fixed principal payment of $37,595 per annum.	136,985	-
	2,386,835	2,892,750
Less: Current portion	(680,495)	(642,900)
	1,706,340	2,249,850

7 Income taxes

The following table summarizes the temporary differences that give rise to the future tax liability at December 31:

	As at December 31,	
	2002	**2001**
	$	**$**
Capital assets	6,841,722	4,668,318
Bonus payable	(858,621)	(430,102)
Deferred financing costs	(56,344)	(82,760)
Other	(30,619)	(33,640)
	5,896,138	4,121,816

(Information as at and for the period ended September 30, 2003 is unaudited)

The provision for income taxes in the statement of operations and retained earnings varies from the amount that would be computed by applying the expected tax rate of 42.1% (2001 – 42.6%; 2000 – 43.6%) to income before income taxes. The principal reasons for differences between such expected income tax expense and the amount actually recorded are as follows:

	Years ended December 31,		
	2002 **$**	**2001** **$**	**2000** **$**
Income before tax	16,014,378	13,063,975	6,851,178
Income tax rate	42.1%	42.6%	43.6%
Computed expected income tax expense	6,742,053	5,565,253	2,897,114
Increase (decrease) in income taxes resulting from			
Manufacturing and processing – lower effective tax rate	(879,281)	(674,101)	(422,033)
Non-deductible expenses	177,781	127,800	87,713
Future income tax benefit from tax rate reduction	(87,787)	-	-
U.S. – lower effective tax rate	(38,676)	-	-
Utilization of loss carryforwards not previously recognized	-	-	(1,376,739)
Other	(8,367)	201,732	(127,446)
Large corporations tax	84,000	78,000	91,781
	5,989,723	5,298,684	1,150,390

Calfrac Well Services Ltd.

Notes to Consolidated Financial Statements
September 30, 2003, December 31, 2002 and 2001

(Information as at and for the period ended September 30, 2003 is unaudited)

Stock options

The company issued 265,625 stock options to senior executives on August 15, 2003 with an exercise price of $1 per share. The stock options granted vest immediately and expire in five years. Stock options vested may be exercised at any time between the date on which it becomes exercisable and the end of the stock option's term.

Stock-based compensation costs

Effective January 1, 2002, Canadian generally accepted accounting principles require disclosure of impact on net earnings using the fair value method for stock options issued on or after January 1, 2002. If the fair value method had been used, the company's net income would approximate the following pro-forma amounts:

	September 30, 2003 $
Stock-based compensation costs	828,750
Net income for the period	
As reported	12,312,786
Pro-forma	11,484,036

The stock-based compensation costs are recognized over the vesting period of the stock options granted.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes option pricing model, minimum value method, based on the following:

	September 30, 2003
Fair value of stock options granted (per common share)	$3.12
Risk-free interest rate	3.0
Expected life (years)	0.5
Expected volatility	0%
Dividends paid	-

(Information as at and for the period ended September 30, 2003 is unaudited)

9 Commitments

The company leases property (premises), equipment and vehicles under agreements requiring aggregate minimum payment over the next five years, from December 31, 2002, as follows:

	$
2003	2,199,932
2004	1,848,807
2005	734,610
2006	616,612
2007	540,265

10 Financial instruments

The company's financial instruments that are included in the consolidated balance sheet are comprised of cash, marketable securities, accounts receivable, long-term receivable, all current liabilities and long-term debt.

a) Fair values of financial assets and liabilities

The fair values of financial instruments that are included in the consolidated balance sheet, except marketable securities, bank loans and long-term debt approximate their carrying amounts due to the short-term maturity of those instruments. The carrying value of marketable securities approximates quoted market value. The fair value of the bank loans and long-term debt is not materially different from its carrying amounts since the interest rates approximate a market rate of interest.

b) Credit risk

A substantial portion of the company's accounts receivable are with customers in the oil and gas industry and are subject to normal industry credit risks.

c) Interest rate risk

The company is exposed to interest rate cash flow risk on debt subject to floating interest rates.

AUDITORS' CONSENT

We have read the information circular of Denison Energy Inc. (the "Corporation") dated January 29, 2004 relating to the reorganization of the Corporation. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned information circular of our report to the directors of Calfrac Well Services Ltd. ("Calfrac") on the consolidated balance sheets of Calfrac as at December 31, 2002 and 2001 and the statements of operations and retained earnings and cash flows for each of the years in the three-year period ended December 31, 2002. Our report is dated March 18, 2003.

EXHIBIT P
DENISON MINES STOCK OPTION PLAN

DENISON MINES INC.
STOCK OPTION PLAN

1. PURPOSE OF PLAN

1.1 The purpose of the Plan is to assist directors, officers, employees and consultants (as permitted by applicable law) of the Corporation and any Subsidiary to participate in the growth and development of the Corporation and its Subsidiaries by providing such persons with the opportunity, through share options, to acquire an increased proprietary interest in the Corporation.

2. DEFINED TERMS

In the Plan, the following terms shall have the following meanings, respectively:

2.1 "**Acquiror**" means any person, group of persons or persons acting jointly or in concert, or persons associated or affiliated within the meaning of the *Business Corporations Act* (Ontario) with any such person, group of persons or any of such persons acting jointly or in concert;

2.2 "**Board**" means the board of directors of the Corporation or, if established and duly authorized to act, the Executive Committee or another Committee of the board of directors of the Corporation;

2.3 "**Business Day**" means any day, other than a Saturday or a Sunday, on which the Exchange is open for trading;

2.4 "**Control Change**" has the meaning given to it in Section 8.1;

2.5 "**Control Change Period**" means the twelve month period following the Effective Date of a Control Change;

2.6 "**Corporation**" means Denison Mines Inc.;

2.7 "**Effective Date**" means the date upon which a Control Change occurs;

2.8 "**Eligible Person**" means any director, officer, employee or consultant (as permitted by applicable law) of the Corporation or any Subsidiary;

2.9 "**Exchange**" means the Toronto Stock Exchange or any other exchange on which the Shares are or may be listed and posted for trading from time to time provided that if the Corporation's Shares are listed on more than one exchange, then Exchange shall mean the principal exchange upon which the Corporation's Shares are trading based on the volume of Shares traded on an annual basis;

2.10 "**Incumbent Director**" means any member of the board of directors of the Corporation who was a member of the board of directors of the Corporation immediately prior to the Effective Date of a Control Change;

2.11 "**Insider**" means:

(i) an insider as defined under Section 1(1) of the *Securities Act* (Ontario), other than a person who falls within that definition solely by virtue of being a director or senior officer of a Subsidiary; and

(ii) an associate as defined under Section 1(1) of the *Securities Act* (Ontario) of any person who is an insider by virtue of (i) above;

2.12 "**Market Price**" at any date in respect of the Shares shall be the market price on which the Shares traded on the Exchange at closing on the day immediately preceding the relevant date or if the

Shares are not then listed and posted for trading on an Exchange at such price as may be determined by the Board, acting reasonably;

2.13 "**Option**" means an option to purchase Shares granted under the Plan;

2.14 "**Option Price**" means the price per share at which Shares may be purchased under the Option, as the same may be adjusted from time to time in accordance with Article 8;

2.15 "**Optionee**" means an Eligible Person to whom an Option has been granted;

2.16 "**Person**" means an individual, a corporation, a partnership, an unincorporated association or organization, a trust, a government or department or agency thereof and the heirs, executors, administrators or other legal representatives of an individual and an associate or affiliate of any thereof as such terms are defined in the *Business Corporations Act* (Ontario);

2.17 "**Plan**" means this stock option plan, as amended from time to time;

2.18 "**Share Compensation Arrangement**" means any stock option, stock option plan, stock appreciation right, employee stock purchase plan or any other compensation or incentive mechanism involving the issuance or potential issuance of Shares, including a share purchase from treasury which is financially assisted by the Corporation by way of a loan, guarantee or otherwise;

2.19 "**Shares**" means the common shares of the Corporation, or, in the event of an adjustment contemplated by Article 8, such other shares or securities to which an Optionee may be entitled upon the exercise of an Option as a result of such adjustment; and

2.20 "**Subsidiary**" means any subsidiary of the Corporation within the meaning of the *Business Corporations Act* (Ontario).

3. ADMINISTRATION OF THE PLAN

3.1 The Plan shall be administered by the Board.

3.2 The Board shall have the power, where consistent with the general purpose and intent of the Plan and subject to the specific provisions of the Plan:

(i) to establish policies and to adopt rules and regulations for carrying out the purposes, provisions and administration of the Plan;

(ii) to interpret and construe the Plan and to determine all questions arising out of the Plan and any Option granted pursuant to the Plan, and any such interpretation, construction or termination made by the Board shall be final, binding and conclusive for all purposes;

(iii) to determine which Eligible Persons are granted Options and to grant Options;

(iv) to determine the number of Shares covered by each Option;

(v) to determine the Option Price;

(vi) to determine the time or times when Options will be granted and exercisable;

(vii) to determine if the Shares that are subject to an Option will be subject to any restrictions upon the exercise of such Option; and

(viii) to prescribe the form of the instruments relating to the grant, exercise and other terms of Options.

4. SHARES SUBJECT TO PLAN

4.1 Options may be granted in respect of authorized and unissued Shares, provided that the aggregate number of Shares reserved for issuance under this Plan, subject to adjustment or increase of such number pursuant to the provisions of Section 8, shall not exceed 3,000,000 Shares. Shares in respect of which Options are not exercised shall be available for subsequent Options under the Plan. No fractional shares may be purchased or issued under the Plan.

5. ELIGIBILITY, GRANT AND TERMS OF OPTIONS

5.1 Options may be granted to directors, officers, employees or consultants (as permitted by applicable law) of the Corporation or of any Subsidiary of the Corporation.

5.2 Subject as herein and as otherwise specifically provided for in this Plan, the number of Shares subject to each Option, the Option Price, the expiration date of each Option, the extent to which each Option is exercisable from time to time during the term of the Option and other terms and conditions relating to each such Option shall be determined by the Board; provided, however, that if no specific determination is made by the Board with respect to any of the following matters, each Option shall, subject to any other specific provisions of the Plan, contain the following terms and conditions:

(i) the period during which an Option shall be exercisable shall not exceed ten years from the date the Option is granted to the Optionee; and

(ii) subject to Section 6.2, the terms of any Option granted may restrict the exercise of the Option prior to the expiry of any designated period and may limit the number of Shares in respect of which the Option may be exercised (or the proportion of the Shares subject to the Option in respect of which the Option may be exercised) on or before a specified date or specified dates.

5.3 The Option Price on Shares that are subject to any Option shall in no circumstances be lower than the Market Price on the date of grant.

5.4 The total number of Shares to be optioned to any Optionee under this Plan shall not exceed 5% of the issued and outstanding Shares at the date of the grant of the Option.

5.5 The maximum number of Shares which may be reserved for issuance to Insiders under the Plan shall be 10% of the Shares outstanding at the time of the grant less the aggregate number of Shares reserved for issuance to Insiders under any other Share Compensation Arrangement.

5.6 The maximum number of Shares which may be issued to Insiders under the Plan within a one year period shall be 10% of the Shares outstanding at the time of the issuance, excluding Shares issued under the Plan or any other Share Compensation Arrangement over the preceding one year period. The maximum number of Shares which may be issued to any one Insider under the Plan or any other Share Compensation Arrangement within a one year period shall be 5% of the Shares outstanding at the time of the issuance, excluding Shares issued to such Insider under the Plan or any other Share Compensation Arrangement over the preceding one year period.

5.7 Any entitlement to acquire Shares granted pursuant to the Plan or any other Share Compensation Arrangement prior to the Optionee becoming an Insider shall be excluded for the purposes of the limits set out in 5.5 and 5.6 above.

5.8 An Option is personal to the Optionee and is non-assignable.

5.9 At the sole and absolute discretion of the Board, the Board may permit an Optionee;

(i) to surrender Options which are exercisable pursuant to Section 5.2 and to receive from the Corporation cash in an amount equal to the excess of the Market Price at the time of surrender over the exercise price, times the number of Options surrendered; or

(ii) to surrender Options which are exercisable pursuant to Section 5.2 and to receive from the Corporation that number of Shares determined by dividing the excess of the Market Price over the exercise price, times the number of Options surrendered by the market price of the Shares.

Any such surrendered Options shall expire and terminate on receipt of cash or Shares in accordance with the foregoing.

6. TERMINATION OF EMPLOYMENT

6.1 Subject to Section 6.2 hereof and to any express resolution passed by the Board with respect to any Option, an Option, and all rights to purchase Shares pursuant thereto, shall expire and terminate immediately upon the Optionee ceasing to be a director, officer or full-time employee or consultant of the Corporation or of any Subsidiary.

6.2 Notwithstanding Section 6.1, if, for any reason whatsoever (other than termination of an employee by the Corporation or any Subsidiary for cause) before the expiry (in accordance with the terms thereof) of an Option held by an Optionee who is a director, officer, employee or consultant, such Optionee ceases to be at least one of a director, officer, employee or consultant, including termination by reason of the death of the Optionee, such Option may, subject to the terms thereof and any other terms of the Plan, be exercised by the Optionee, or, if the Optionee is deceased, by the legal personal representative(s) of the estate of the Optionee, as follows:

(i) during the first 60 days following the date of death of the Optionee, if the Optionee dies;

(ii) at any time within 60 days from the date notice of termination of the employment of the Optionee is given to the Optionee by the Corporation or any Subsidiary if the Corporation or any Subsidiary is terminating the Optionee's employment; or

(iii) at any time within 60 days from the date notice of termination of the employment of the Optionee is given to the Corporation or any Subsidiary by the Optionee if the Optionee is terminating his employment,

but in either case, prior to the expiry of the Option in accordance with the terms thereof. For the purposes of this Section 6.2, no unvested Option shall vest following the date of death of an Optionee or the date notice is provided in accordance with Subsections 6.2(b) or (c). For the purposes of Sections 6.2 and 6.3, directors, officers and consultants shall be deemed to be employed by the Corporation or a Subsidiary, as applicable.

6.3 Options shall not be affected by any change of employment of the Optionee or by the Optionee ceasing to be a director where the Optionee continues to be employed on a full-time basis by, or continues to be a director, officer or consultant of, the Corporation or any Subsidiary.

7. EXERCISE OF OPTIONS

7.1 Subject to the provisions of the Plan, an Option may be exercised from time to time by delivery to the Corporation at its head office of a written notice of exercise addressed to the Secretary of the Corporation specifying the number of Shares with respect to which the Option is being exercised and accompanied by payment in full of the Option Price of the Shares to be purchased. Certificates for such Shares shall be issued and delivered to the Optionee within a reasonable time following the receipt of such notice and payment.

7.2 Notwithstanding any of the provisions contained in the Plan or in any Option, the Corporation's obligation to issue Shares to an Optionee pursuant to the exercise of an Option shall be subject to:

(i) completion of such registration or other qualification of such Shares or obtaining approval of such governmental authority as the Corporation shall determine to be necessary or advisable in connection with the authorization, issuance or sale thereof;

(ii) the listing of such Shares on any stock exchange on which the Shares may then be listed if applicable; and

(iii) the receipt from the Optionee of such representations, agreements and undertakings, including as to future dealings in such Shares, as the Corporation or its counsel determines to be necessary or advisable in order to safeguard against the violation of the securities laws of any jurisdiction.

In this connection the Corporation shall, to the extent necessary, take all reasonable steps to obtain such approvals, registrations and qualifications as may be necessary for the issuance of such Shares in compliance with applicable securities laws and for the listing of such Shares on any stock exchange on which the Shares are then listed.

8. CONTROL CHANGE AND CERTAIN ADJUSTMENTS

8.1 Notwithstanding any other provision of this Plan, in the event of:

(i) the direct or indirect acquisition by an Acquiror of voting securities of the Corporation (whether through the acquisition of previously issued and outstanding voting securities, or of voting securities that have not been previously issued, or any combination thereof and whether on a one time basis or cumulatively) that represent the right to cast more than thirty-five percent of the votes attaching to all shares in the capital of the Corporation which may be cast to elect directors of the Corporation, provided that the Acquiror was not approved by the Incumbent Directors;

(ii) the direct or indirect acquisition by an Acquiror of voting securities of the Corporation (whether through the acquisition of previously issued and outstanding voting securities, or of voting securities that have not been previously issued, or any combination thereof and whether on a one time basis or cumulatively) that represent the right to cast up to and including fifty percent of the votes attaching to all shares in the capital of the Corporation which may be cast to elect directors of the Corporation, except where the Incumbent Directors continue to constitute a majority of the board of directors of the Corporation during the Control Change Period;

(iii) the direct or indirect acquisition by an Acquiror of voting securities of the Corporation (whether through the acquisition of previously issued and outstanding voting securities, or of voting securities that have not been previously issued, or any combination thereof and whether on a one time basis or cumulatively) that represent the right to cast more than fifty percent of the votes attaching to all shares in the capital of the Corporation which may be cast to elect directors of the Corporation;

(iv) the shareholders of the Corporation approve an amalgamation, arrangement, merger or other consolidation of the Corporation with another corporation pursuant to which the shareholders of the Corporation immediately prior thereto do not immediately thereafter own shares of the successor or continuing corporation which entitles them to cast more than fifty percent of the votes attaching to all shares in the capital of the successor or continuing corporation which may be cast to elect directors of that corporation;

(v) a liquidation, dissolution or winding-up of the Corporation; or

(vi) a sale, lease or other disposition of all or substantially all of the assets of the Corporation;

(herein referred to as a "Control Change") then notwithstanding that at the Effective Date the Optionee may not be entitled to all of the Shares granted by the Option, the Optionee shall be entitled to exercise the Options to the full amount of the Shares remaining subject to the Option at that time within sixty (60) days of the Effective Date.

8.2 Appropriate adjustments as regards Options granted or to be granted, in the number of Shares optioned and in the Option Price, shall be made by the Board to give effect to adjustments in the number of Shares of the Corporation resulting from subdivisions, consolidations or reclassifications of the Shares of the Corporation, the payment of stock dividends by the Corporation (other than dividends in the ordinary course) or other relevant changes in the capital stock of the Corporation or the amalgamation or merger of the Corporation with or into any other entity. The appropriate adjustment in any particular circumstance shall be conclusively determined by the Board in its sole discretion, subject to approval by the Shareholders of the Corporation and to acceptance by the Exchange, respectively, if applicable.

9. ACCOUNTS AND STATEMENTS

9.1 The Corporation shall maintain records of the details of each Option granted to each Optionee under the Plan. Upon request therefor from an Optionee and at such other times as the Corporation shall determine, the Corporation shall furnish the Optionee with a statement setting forth details of his Options. Such statement shall be deemed to have been accepted by the Optionee as correct unless written notice to the contrary is given to the Corporation within 10 days after such statement is given to the Optionee.

10. NOTICES

10.1 Any payment, notice, statement, certificate or other instrument required or permitted to be given to an Optionee or any person claiming or deriving any rights through him shall be given by:

(i) delivering it personally to the Optionee or the person claiming or deriving rights to him, as the case may be; or

(ii) mailing it, postage paid (provided that the postal service is then in operation) or delivering it to the address which is maintained for the Optionee in the Corporation's or the Subsidiary's (as the case may be) personnel records.

10.2 Any payment, notice, statement, certificate or instrument required or permitted to be given to the Corporation shall be given by mailing it, postage prepaid (provided that the postal service is then in operation) or delivering it to the Corporation at the following address:

Denison Mines Inc.
Atrium on Bay
40 Dundas Street W., Suite 320
Toronto, Ontario M5G 2C2
Attention: President

10.3 Any payment, notice, statement, certificate or instrument referred to in Sections 11.1 or 11.2, if delivered, shall be deemed to have been given or delivered, on the date on which it was delivered or, if mailed (provided that the postal service is then in operation), shall be deemed to have been given or delivered on the second business day following the date on which it was mailed.

11. SHAREHOLDER AND REGULATORY APPROVAL

11.1 The Plan shall be subject to the approval of the shareholders of the Corporation to be given by a resolution passed at a meeting of the shareholders of the Corporation in accordance with the

Business Corporations Act (Ontario) and to acceptance by the Exchange. Any Options granted prior to such approval and acceptance shall be conditional upon such approval and acceptance being given and no such Options may be exercised unless and until such approval and acceptance is given.

12. AMENDMENT OR DISCONTINUANCE OF PLAN

12.1 The Board may amend (subject to any necessary regulatory approvals) or discontinue the Plan at any time; provided, however, no such amendment may be made, without the consent of the Optionee, which would alter or impair any Option previously granted to an Optionee under the Plan.

13. MISCELLANEOUS

13.1 The holder of an Option shall not have any rights as a shareholder of the Corporation with respect to any of the Shares covered by such Option until such holder shall have exercised such Option in accordance with the terms of the Plan and the issuance of the Shares by the Corporation.

13.2 Nothing in the Plan or any Option shall confer upon any Optionee any right to continue in the employment of or the retainer by the Corporation or any Subsidiary of the Corporation or affect in any way the right of the Corporation or any such Subsidiary to terminate his employment or retainer at any time; nor shall anything in the plan or any Option be deemed or construed to constitute an agreement, or an expression of intent, on the part of the Corporation or any such Subsidiary to extend the employment or retainer of any Optionee beyond the time that he would normally be retired pursuant to the provisions of any present or future retirement plan of the Corporation or any Subsidiary or any present or future retirement policy of the Corporation or any Subsidiary, or beyond the time at which he would otherwise be retired pursuant to the provisions of any contract of employment or retainer with the Corporation or any Subsidiary.

13.3 To the extent required by law or regulatory policy or necessary to allow Shares issued on exercise of an Option to be free of resale restrictions, the Corporation shall report the grant, exercise or termination of the Option to the Exchange if the Corporation's Shares are then listed and the appropriate securities regulatory authorities.

13.4 This Plan shall be construed and interpreted in accordance with the laws of Ontario.

13.5 If any provision of this Plan is determined to be void, the remaining provisions shall be binding as though the void parts were deleted.

EXHIBIT Q
DENISON OIL STOCK OPTION PLAN

FORTE RESOURCES INC.
SHARE OPTION PLAN

1. **Purpose of Plan**

The purpose of this plan (the "**Plan**") is to develop the interest of officers, directors and employees of Forte Resources Inc. (the "**Corporation**") and its subsidiaries and other persons who provide ongoing management or consulting services to the Corporation or its subsidiaries in the growth and development of the Corporation by providing them with the opportunity through share purchase options to acquire an increased proprietary interest in the Corporation.

2. **Administration**

The Plan shall be administered by the Board of Directors of the Corporation, or if appointed, by a special committee of directors appointed from time to time by the Board of Directors of the Corporation (such committee, or if no such committee is appointed, the Board of Directors of the Corporation is hereinafter referred to as the "**Committee**") pursuant to rules of procedure fixed by the Board of Directors.

3. **Granting of Options**

The Committee may from time to time designate directors, officers or employees of the Corporation and its subsidiaries or any other Insider of or Service Provider to the Corporation and its subsidiaries (collectively, the "**Optionees**") to whom options ("**Options**") to purchase common shares ("**Common Shares**") of the Corporation may be granted and the number of Common Shares to be optioned to each and may grant such Options, provided that the number of Common Shares reserved for issuance on exercise of all Options outstanding under the Plan at any time shall not exceed the greater of: (i) 2,000,000; and, if permitted by the stock exchanges on which the Common Shares are listed, (ii) 10% of the number of Common Shares outstanding from time to time (collectively, the "**Common Share Maximum**") shall, subject to adjustment as set forth in Section 8 and as hereinafter provided;

Subject to all necessary regulatory approvals, the Common Share Maximum, once in effect, may be increased by the Board of Directors with the approval of the shareholders of the Corporation as required by the stock exchanges upon which the Common Shares are then listed.

4. **Vesting**

The Committee may, in its sole discretion, determine the time during which Options shall vest and the method of vesting, or that no vesting restriction shall exist, and in the absence of any determination by the Committee, the vesting shall be as to one third of the number of Options granted on each anniversary date of the date of grant over the following three years.

5. **Exercise Price**

The exercise price (the "**Exercise Price**") of any Option shall be fixed by the Committee when such Option is granted, provided that from and after the date that the Common Shares are listed on a stock exchange (the "**Exchange**"), such price shall not be less than the current market price (the "**Current Market Price**") of the Common Shares, which, subject to any requirements of any stock exchange to the contrary, shall mean the closing trading price per Common Share on the Exchange on the last day immediately prior to the date of grant that the Common Shares traded (or if the Common Shares are listed on more than one stock exchange, on such stock exchange as may be designated by the Committee for such purpose); provided that if the Committee in its sole discretion determines that such closing trading price would not be representative of the market price of the Common Shares, then Current Market Price shall mean the weighted average price per share for Common Shares for five (5) consecutive trading days ending on the last trading day preceding the date of grant on which there was a closing price on the Exchange; the weighted average price shall be determined by dividing the aggregate sale price of all Common Shares sold

on the Exchange during the said five (5) consecutive trading days by the total number of Common Shares so sold. The Board of Directors of the Corporation are authorized to amend the mechanism by which the Current Market Price may be calculated at any time, in order to comply with the requirements of any stock exchange on which the Common Shares are listed.

6. **Option Terms**

The period during which an Option is exercisable shall, subject to the provisions of the Plan requiring acceleration of rights of exercise, be such period as may be determined by the Committee at the time of grant provided that no Option may be exercised beyond five (5) years from the date of grant. Each Option shall, among other things, contain provisions to the effect that the Option shall be personal to the Optionee and shall not be assignable. In addition, each Option shall provide that:

(a) upon the death of the Optionee, the option shall terminate on the date determined by the Committee which shall not be more than twelve months from the date of death and, in the absence of any determination by the Committee, will be the date that is six months following the date of death; and

(b) if the Optionee shall no longer be a director or officer of, be in the employ of or be providing ongoing management or consulting services to the Corporation, the Option shall terminate on the expiry of the period (the "**Termination Date**") not in excess of six months prescribed by the Committee at the time of grant, following the date that the Optionee ceases to be a director, officer or employee of the Corporation, or ceases to provide ongoing management or consulting services to the Corporation, as the case may be and, in the absence of any determination by the Committee, will be 90 days following the Termination Date;

provided that the number of Common Shares that the Optionee (or his heirs or successors) shall be entitled to purchase until the Termination Date shall be the number of Common Shares which the Optionee was entitled to purchase on the date of death or the date the Optionee ceased to be an officer, director or employee of, or ceased providing ongoing management or consulting services to, the Corporation, as the case may be.

7. **Exercise of Option**

Subject to the provisions of the Plan, an Option may be exercised from time to time by delivery to the Corporation at its head office or such other place as may be specified by the Corporation, of a written notice of exercise specifying the number of Common Shares with respect to which the Option is being exercised and accompanied by payment in full of the purchase price of the shares then being purchased.

8. **Alterations in Shares and Accelerated Vesting**

(a) Appropriate adjustments in the number of Common Shares optioned and in the Exercise Price, as regards Options granted or to be granted, may be made by the Committee in its discretion to give effect to adjustments in the number of Common Shares resulting subsequent to the approval of the Plan by the Committee from subdivisions, consolidations or reclassifications of the Common Shares, the payment of stock dividends by the Corporation or other relevant changes in the capital of the Corporation.

(b) Take over Bid: If while any option is outstanding a take over bid (as defined in the *Securities Act* (Ontario)) which is not exempt from the take over bid requirements of Part XX of the *Securities Act* (Ontario) (or its replacement or successor provisions) shall be made for all or substantially all of the Common Shares of the Corporation, each optionee's options to purchase Common Shares which have not otherwise vested shall be deemed to have vested, the optionee shall have the right to exercise the option to purchase all of the Common Shares which have not been previously purchased on exercise of any outstanding options and which have vested (including those which

have vested in accordance with the foregoing), but any such option not otherwise vested and deemed only to have vested in accordance with the foregoing may only be exercised for the purposes of tendering to such take over bid. If for any reason any such Common Shares are not so tendered or, if tendered, are not, for any reason taken up and paid for by the offeree pursuant to the take over bid, any such Common Shares so purchased by the optionee shall be and shall be deemed to be cancelled and returned to the treasury of the Corporation, and shall be added back to the number of Common Shares, if any, remaining unexercised under the option (and shall thus be available for exercise of the option in accordance with the terms thereof) and upon presentation of the Corporation of share certificates representing such Common Shares properly endorsed for transfer back to the Corporation, the Corporation shall refund to the optionee all consideration paid by him or her in the initial purchase thereof. In the event that such take over bid is made and the Common Shares are taken up and paid for pursuant to such take over bid, the Corporation shall have the right to satisfy any obligation to the optionee in respect of any options not exercised prior to such taking up and paying, by paying to the optionee (subject to applicable withholding tax), in cash, the difference between the exercise price of all unexercised options granted and the fair market value of the securities to which the optionee would be entitled upon exercise of all unexercised options on such date, which determination of fair market value shall be made by the Board, or any committee thereof specifically designated by the Board to be responsible therefore, and any reasonable determination made by the said Board or committee shall be binding and conclusive. Upon payment as aforesaid, the option agreement and option shall terminate and the optionee shall cease to have any further rights thereunder effective immediately prior to the offeror pursuant to such takeover bid taking up and paying for Common Shares pursuant to the take over bid.

(c) Change of Control: In the event of a Change of Control occurring, each optionee's options which have not otherwise vested in accordance with their terms shall immediately vest and be exercisable, notwithstanding the other terms of the options.

9. **Option Agreements**

A written agreement will be entered into between the Corporation and each Optionee to whom an Option is granted hereunder, which agreement will set out the number of Common Shares subject to Option, the Exercise Price, provisions as to vesting and expiry and any other terms approved by the Committee, all in accordance with the provisions of this Plan. The agreement will be in such form as the Committee may from time to time approve or authorize the officers of the Corporation to enter into and may contain such terms as may be considered necessary in order that the Option will comply with this Plan, any provisions respecting Options in the income tax or other laws in force in any country or jurisdiction of which the person to whom the Option is granted may from time to time be a resident or citizen and the rules of any regulatory body having jurisdiction over the Corporation.

10. **Regulatory Authorities Approvals**

The Plan shall be subject to the approval, if required, of any stock exchange on which the Common Shares are listed for trading. If the Common Shares are listed on a stock exchange, any Options granted after such listing and prior to such approval shall be conditional upon such approval being given and no such Options may be exercised unless such approval, if required, is given.

11. **Amendment or Discontinuance of the Plan**

The Committee may amend or discontinue the Plan at any time, provided that no such amendment may, without the consent of the Optionee, alter or impair any Option previously granted to an Optionee under the Plan and provided further that any amendment to the Plan will be subject to receipt of all necessary regulatory approvals.

12. **Common Shares Duly Issued**

Common Shares issued upon the exercise of an Option granted hereunder will be validly issued and allotted as fully paid and non assessable upon receipt by the Corporation of the Exercise Price therefore in accordance with the terms of the Option and the issuance of Common Shares thereunder will not require a resolution or approval of the Board of Directors of the Corporation.

13. **Definitions**

In this Plan, capitalized terms not otherwise defined in this Plan have the following meanings:

(a) "**Associate**" has the meaning ascribed thereto by the *Securities Act* (Ontario) as from time to time amended, supplemented or re enacted;

(b) "**Change of Control**" means any of the following:

(i) the sale by the Corporation of all of the assets of the Corporation or substantially all of the assets of the Corporation;

(ii) the acquisition by any Person (whether from the Corporation or from any other Person) of Common Shares or other securities of the Corporation having rights of purchase, conversion or exchange into Common Shares of the Corporation which together with securities of the Corporation held by such Person, together with Persons acting jointly or in concert (as those terms are defined by the *Securities Act* (Alberta)) with such Person, exceeds 51% of the issued and outstanding Common Shares of the Corporation, (assuming, for either test, the purchase, conversion or exchange of such other securities, whether then purchasable, convertible or exchangeable or not, into the highest number of Common Shares of the Corporation, such Person or Persons would be entitled to); or

(iii) the amalgamation or merger of the Corporation with or into any one or more other corporations (other than: (a) an amalgamation or merger of the Corporation with or into a subsidiary (as such term is defined in the *Alberta Business Corporations Act*) of the Corporation; or (b) an amalgamation or merger of the Corporation unanimously recommended by the Board of Directors provided that the former holders of Common Shares receive, in the aggregate and in their capacities as such, shares of the amalgamated or merged Corporation having attached thereto not less than 51% of the votes attached to all shares of such amalgamated or merged Corporation);

(iv) the election at a meeting of the Corporation's shareholders of that number of persons which would represent a majority of the Board of Directors as directors of the Corporation, who are not included in the slate for election as directors proposed to the Corporation's shareholders by management of the Corporation;

(v) the completion of any transaction or the first of a series of transactions which would have the same or similar effect as any transaction or series of transactions referred to in subsections (i), (ii), (iii) or (iv) referred to above; or

(vi) a determination by the Board of Directors that there has been a change, whether by way of a change in the holding of the Common Shares of the Corporation, in the ownership of the Corporation's assets or by any other means, as a result of which any person or group of persons acting jointly or in concert is in a position to exercise effective control of the Corporation.

(c) "**Insider**" of the Corporation means:

(i) an insider as defined in the *Securities Act* (Ontario) as from time to time amended, supplemented or re enacted, other than a person who falls within that definition solely by virtue of being a director or senior officer of a subsidiary of the Corporation, and

(ii) an Associate of any person who is an insider by virtue of paragraph i.;

(d) "**Outstanding Common Shares**" at the time of any share issuance or grant of Options means the number of Common Shares that are outstanding immediately prior to the share issuance or grant of Options in question on a non diluted basis, excluding Common Shares issued pursuant to Share Compensation Arrangements over the preceding one year period, or such other number as may be determined under the applicable rules and regulations of all regulatory authorities to which the Corporation is subject, including The Toronto Stock Exchange;

(e) "**Person**" includes an individual, partnership, association, body corporate, trustee, executor, administrator, legal representative and any national, provincial, state or municipal government;

(f) "**Service Provider**" means:

(i) an employee or Insider of the Corporation or of any of its subsidiaries; and

(ii) any other person or company engaged to provide on going management or consulting services for the Corporation or any entity controlled by the Corporation;

(g) "**Share Compensation Agreement**" means a stock option, stock option plan, employee stock purchase plan or any other compensation or incentive mechanism involving the issuance or potential issuance of shares to one or more Service Providers, including a share purchase from treasury which is financially assisted by the Corporation by way of a loan, guarantee or otherwise; and

(h) "**subsidiary**" has the meaning assigned thereto under the *Securities Act* (Ontario) as from time to time amended, supplemented or re enacted.

14. **Effective Date**

DENISON ENERGY INC.

INSTRUMENT OF PROXY
(OPTIONHOLDERS)
FOR THE SPECIAL MEETING OF SHAREHOLDERS AND OPTIONHOLDERS

TO BE HELD ON WEDNESDAY, MARCH 3, 2004

The undersigned optionholder of Denison Energy Inc. (the "**Corporation**" or "**Denison Energy**") hereby appoints E. Peter Farmer, of the City of Toronto, in the Province of Ontario, President of the Corporation, or failing him, Donna J. Gallant, of the City of Toronto, in the Province of Ontario, Secretary of the Corporation, or instead of either of the foregoing, _____, as proxyholder of the undersigned, with full power of substitution, to attend, act and vote for and on behalf of the undersigned at the special meeting of the optionholders of the Corporation (the "**Denison Meeting**") to be held on Wednesday, March 3, 2004 at 10:30 A.M. (Toronto time) at the Metro Toronto Convention Centre, 255 Front Street West, Room 203B, Toronto, Ontario and at any adjournment thereof, and on every ballot that may take place in consequence thereof to the same extent and with the same powers as if the undersigned were personally present at the Denison Meeting with authority to vote at the said proxyholder's discretion, except as otherwise specified below. Capitalized terms used in this proxy that are not defined herein have the meanings given to such terms in the Information Circular dated January 29, 2004 accompanying this proxy (the "**Information Circular**").

Without limiting the general powers hereby conferred, the undersigned hereby directs the said proxyholder to vote the options represented by this Instrument of Proxy in the following manner (check (√) the appropriate box):

1. FOR or AGAINST (and if no specification is made, FOR) a special resolution, the full text of which is set forth as Exhibit "B" to the Information Circular, approving an arrangement under Section 182 of the *Business Corporations Act* (Ontario) involving Denison Energy, its shareholders and optionholders, as more particularly described in the Information Circular;

This Instrument of Proxy is solicited on behalf of the management of the Corporation. The options represented by this Instrument of Proxy will be voted and, where the optionholder has specified a choice with respect to the above matters, will be voted as directed above or, if no direction is given, will be voted in favour of the above matters.

Each optionholder has the right to appoint a proxyholder other than the persons designated above, who need not be an optionholder or shareholder, to attend and to act for and on the behalf of such optionholder at the Meeting. To exercise such right, the names of the nominees of management should be crossed out and the name of the optionholders' appointee should be legibly printed in the blank space provided.

USE OF PROCEEDS

The net proceeds to the Corporation from this offering are estimated to be $116.3 million, after deducting the Underwriters' fee of $6.875 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.9 million.

The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac in connection with the recent repurchase of the interest of an equity shareholder of Calfrac; and (iii) approximately $29.1 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac.

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.

DIRECTORS AND OFFICERS OF THE CORPORATION

The following table sets out the names and municipalities of residence of those individuals that are the current directors and officers of the Corporation and the proposed directors and officers of the Corporation in the event the Corporation completes this offering and the Acquisition, together with their positions and offices with the Corporation and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
Ronald P. Mathison[1][3] *Calgary, Alberta*	Chairman and a Director	March 8, 2004	President of Matco Investments Ltd. (a private investment company); prior to 1999, Principal, Peters & Co. Limited.
Douglas R. Ramsay *Calgary, Alberta*	Chief Executive Officer and a Director	Proposed[4]	President and Chief Executive Officer of Calfrac.
Gordon A. Dibb *Calgary, Alberta*	Chief Financial Officer	—[4]	Executive Vice President and Chief Financial Officer of Calfrac.
Robert S. Roberts *Calgary, Alberta*	Chief Operating Officer	—[4]	Senior Vice President and Chief Operating Officer of Calfrac.
James S. Blair *Calgary, Alberta*	Director	May 8, 2002	President and Chief Executive Officer, ExAlta Energy Inc. (an independent private oil and gas exploration and development company) since 2002. Prior thereto, Senior Vice President and Chief Operating Officer, Husky Energy Inc. (an integrated energy company).
Gregory S. Fletcher[1] *Calgary, Alberta*	Director	May 8, 2002	President, Sierra Energy Inc. (a private energy company).
Martin A. Lambert[2] *Calgary, Alberta*	Interim Chief Executive Officer and a Director	March 8, 2004	Partner, Bennett Jones LLP (a law firm). Prior to May 2000, Chief Executive Officer and a partner, Bennett Jones LLP.

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
Paul F. Little[2] *King City, Ontario*	Director	May 15, 1997	President, Westover Investments, Inc. (a private investment company). Prior to 2000, principal, Gornitzki, Thompson & Little (merchant bank) from 1986 to 1999.
R. Timothy Swinton[1][3] *Calgary, Alberta*	Director	Proposed	President of Western Provinces Resources Ltd. (a private investment company) since 1997; Executive Chairman of IPEC Ltd. (a Canadian pipeline and oilfield construction company) from 1999 to 2001; prior thereto Chairman and Chief Executive Officer of Kenting Energy Services Inc. (a public oilfield services company) in 1997.
David M. McGoey *Calgary, Alberta*	Interim Chief Financial Officer	March 8, 2004	Chief Financial Officer of Ross Smith Energy Group (a private engineering consulting firm) since 1998; President of David M. McGoey Professional Corporation since 1992; Chief Financial Officer of Securex Limited (a public company in the security monitoring industry) since 2003; Chief Financial Officer of CMQ Resources Inc. (a public mineral exploration company) since 2003; and Chief Financial Officer of Tristone Capital LLC (a private investment company) from 2001 to 2002.

Notes:

(1) Member or proposed member of Audit Committee.
(2) Member of Corporate Governance Committee.
(3) Member or proposed member of Compensation Committee.
(4) It is anticipated Messrs. Ramsay, Dibb and Roberts will be appointed as officers of the Corporation in the event the Corporation completes this offering and the Acquisition.

Prior to March 8, 2004, the officers of Denison included E. Peter Farmer, President and Chief Executive Officer, T. E. Craig Bamford, Vice President, Finance and Chief Financial Officer, Donald C. Campbell, Vice President, Marketing and Special Projects, and Donna J. Gallant, Counsel and Secretary. Each of these officers resigned on March 8, 2004 effective upon the completion of the Reorganization, at which time Martin A. Lambert was appointed as Interim Chief Executive Officer and David M. McGoey was appointed as Interim Chief Financial Officer. In the event that this offering and the Acquisition are completed, it is anticipated that the board of directors will appoint Messrs. Ramsay, Dibb and Roberts as Chief Executive Officer and President, Chief Financial Officer and Executive Vice President, and Chief Operating Officer and Senior Vice President, respectively, and that Mr. Lambert will continue to act as a director of the Corporation.

Each of Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has entered into an employment agreement dated September 1, 1999 with Calfrac. Each of these agreements has an initial five year term that expires on September 1, 2004 and provides that each year thereafter, the term will automatically renew for a successive one-year renewal term, unless either party gives written notice to the contrary. Each of these agreements contains provisions in favour of Calfrac (i) prohibiting the disclosure by each of Messrs. Ramsay, Dibb and Roberts of any confidential information related to Calfrac's business, and (ii) prohibiting each of Messrs. Ramsay, Dibb and Roberts from competing with Calfrac, or soliciting the employees or customers of Calfrac, for two years from the termination of his employment with Calfrac. These employment agreements also provide that in the event of a change of control of Calfrac, each of Messrs. Ramsay, Dibb and Roberts has the right at any time within six months of the change of control to terminate his employment with Calfrac. If any of Messrs. Ramsay, Dibb or Roberts exercises this right, or if Calfrac terminates the employment of any of Messrs. Ramsay, Dibb or Roberts following a

News releases disclosing the nature and substance of the material changes are attached hereto as Appendices "A", "B" and "C" and were issued on March 23, 2004 and March 24, 2004.

4. Summary of Material Change:

On March 23, 2004, Denison Energy Inc. (now "Calfrac Well Services Ltd.") announced the completion of its previously announced public offering of 8,064,520 common shares at a price of $15.50 per common share for gross proceeds of approximately $125 million.

On March 23, 2004, Denison Energy Inc. announced that the independent committee of its board of directors had determined to exercise a previously announced option to purchase all of the shares of Calfrac Well Services Ltd. for an aggregate purchase price of approximately $227.5 million, less indebtedness of approximately $83.6 million, for a net purchase price of approximately $143.9 million.

On March 24, 2004, Denison Energy Inc. completed the previously announced acquisition of Calfrac Well Services Ltd., a private corporation. Immediately following the acquisition, Denison Energy Inc. amalgamated with Calfrac Well Services Ltd. and changed its name to "Calfrac Well Services Ltd.".

5. Full Description of Material Change:

Details of the transactions are provided in the news releases dated March 23, 2004 and March 24, 2004, copies of which are attached hereto as Appendix "A", "B" and "C".

APPENDIX "A"

DENISON ENERGY INC.
COMPLETES EQUITY OFFERING

CALGARY, March 23, 2004 – Denison Energy Inc. (TSX: **DEI**) today completed its previously announced public offering of 8,064,520 common shares at a price of $15.50 per common share for gross proceeds of approximately $125 million. After completion of the offering, Denison Energy has 9,680,238 common shares outstanding. The underwriting syndicate was led by Peters & Co. Limited and included FirstEnergy Capital Corp. and RBC Dominion Securities Inc.

The common shares have not been, and will not be, registered under the United States Securities Act of 1933 and may not be offered or sold in the United States without an exemption from the applicable registration requirements. This news release shall not constitute an offer to sell or the solicitation of an offer to buy the common shares in the United States.

For further information: David M. McGoey, Chief Financial Officer, Telephone: (403) 294-6497, Fax: (403) 294-9112.

ADVISORY: The Toronto Stock Exchange has neither approved nor disapproved of the information contained herein. Certain information regarding the company, including management's assessment of future plans and operations, may constitute forward-looking statements under applicable securities law and necessarily involve risks associated with oil and gas exploration, production, marketing and transportation such as loss of market, volatility of prices, currency fluctuations, imprecision of reserve estimates, environmental risks, competition from other producers and ability to access sufficient capital from internal and external sources; as a consequence, actual results may differ materially from those anticipated. The company assumes no obligation to update the forward-looking statements or to update the reasons why actual results could differ from those contemplated by the forward-looking statements.

APPENDIX "B"

DENISON ENERGY INC.
EXERCISES OPTION TO ACQUIRE CALFRAC WELL SERVICES LTD.

CALGARY, March 23, 2004 – Denison Energy Inc. (TSX: **DEI**) announces that the independent committee of its board of directors has determined to exercise a previously announced option to purchase all of the shares of Calfrac Well Services Ltd. for an aggregate purchase price of approximately $227.5 million, less indebtedness of approximately $83.6 million, for a net purchase price of approximately $143.9 million.

Denison Energy will pay the net purchase price by issuing 7,427,039 common shares and making a cash payment of $28,779,760.87 to the shareholders of Calfrac. The funding required to finance the cash portion of the purchase price was obtained through the previously announced public offering of 8,064,520 common shares at a price of $15.50 per common share for gross proceeds of approximately $125 million. The net proceeds of such offering of approximately $116.3 million, after deducting the underwriters' fees and expenses of the offering, will to be used by Denison Energy as follows: (i) approximately $28.8 million to pay the above-mentioned 20% of the purchase price of the shares of Calfrac; (ii) approximately $58.4 million to repay indebtedness of Calfrac; and (iii) approximately $29.1 million will be added to working capital and used for general corporate purposes.

The closing of the acquisition of Calfrac is expected to occur on March 24, 2004. Denison Energy will immediately thereafter merge with and change its name to Calfrac Well Services Ltd. and commence trading under the trading symbol CFW with 17,107,277 common shares outstanding.

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

For further information: David M. McGoey, Chief Financial Officer, Telephone: (403) 294-6497, Fax: (403) 294-9112.

ADVISORY: The Toronto Stock Exchange has neither approved nor disapproved of the information contained herein. Certain information regarding the company, including management's assessment of future plans and operations, may constitute forward-looking statements under applicable securities law and necessarily involve risks associated with oil and gas exploration, production, marketing and transportation such as loss of market, volatility of prices, currency fluctuations, imprecision of reserve estimates, environmental risks, competition from other producers and ability to access sufficient capital from internal and external sources; as a consequence, actual results may differ materially from those anticipated. The company assumes no obligation to update the forward-looking statements or to update the reasons why actual results could differ from those contemplated by the forward-looking statements.

APPENDIX "C"

CALFRAC WELL SERVICES LTD.
COMPLETES TRANSACTION AND NAME CHANGE

CALGARY, March 24, 2004 – Calfrac Well Services Ltd. (formerly Denison Energy Inc.) has completed the previously announced acquisition of the private Calfrac Well Services Ltd. Immediately following the acquisition, Denison Energy merged with the private Calfrac and changed its name to "Calfrac Well Services Ltd.". The common shares of the corporation are currently trading under the symbol "DEI" and are expected to commence trading under the new trading symbol "CFW" on Monday, March 29, 2004.

The net purchase price of approximately $143.9 million ($227.5 million less indebtedness of $83.6 million) was paid by Calfrac issuing 7,427,039 common shares and making a cash payment of approximately $28.8 million. After completion of the acquisition, Calfrac has 17,107,277 common shares outstanding on both a basic and fully diluted basis.

In connection with the acquisition, the board of directors of the corporation has been enhanced. Calfrac is pleased to announce that Douglas R. Ramsay and R. Timothy Swinton have joined the board in addition to Ronald P. Mathison, James S. Blair, Gregory S. Fletcher, Martin A. Lambert and Paul F. Little. The corporation has also constituted an Audit Committee, Corporate Governance Committee and Compensation Committee.

The board of directors has also appointed Douglas R. Ramsay as Chief Executive Officer, Gordon A. Dibb as Chief Financial Officer and Robert S. Roberts as Chief Operating Officer. Each of Messrs. Ramsay, Dibb and Roberts is a founder of Calfrac and has held a similar position with Calfrac since 1999. Several additional officers were appointed to positions similar to those they held with Calfrac prior to the transaction.

The formation of Calfrac completes the change of the focus of the business of Denison Energy to the oilfield services business. Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

1. Reporting Issuer:

Denison Energy Inc. ("Denison Energy")

2. Date of Material Change:

March 8, 2004

3. Press Release:

A press release was issued on March 9, 2004. A copy of the press release is attached hereto.

4. Summary of Material Change:

Denison Energy has completed its previously announced reorganization pursuant to a plan of arrangement. As a result, Denison Energy has transferred its uranium mining and environmental services business and its Canadian petroleum and natural gas business. Denison Energy's shareholders are entitled to receive, for each common share of Denison Energy held, one common share of Denison Mines Inc.; $^1/_5$ of one common share of Forte Resources Inc. and $^1/_{21}$ of the new class of commons shares of Denison Energy.

Denison Energy completed its previously announced private placement to an investor group led by Matco Capital Ltd. ("Matco"). The private placement raised approximately $5.3 million and results in Matco holding an approximate 45% stake in Denison Energy following the transaction.

5. Full Description of Material Change:

On March 8, 2004 Denison Energy completed its previously announced reorganization of Denison Energy's businesses pursuant to a plan of arrangement under the *Business Corporations Act* (Ontario) (the "Arrangement"), which was approved by its shareholders at a meeting held March 3, 2004, the Ontario Superior Court of Justice on March 5, 2004 and the Toronto Stock Exchange. Pursuant to the Arrangement, Denison Energy transferred all of the assets and liabilities associated with its mining and environmental

services business to its former subsidiary, Denison Mines Inc., and Denison Energy transferred all of the assets and liabilities associated with its Canadian oil and natural gas business to Denison Resources Inc., which is wholly-owned by Denison Energy's former subsidiary, Denison Oil Corporation (now Forte Resources Inc.).

Shares of each of Denison Mines Inc. and Forte Resources Inc. are being distributed to Denison Energy's existing shareholders, and Denison Energy's common shares have been consolidated on a one-for-21 basis. As a result, for every common share in Denison Energy held on or prior to March 8, 2004, Denison Energy's shareholders are entitled to receive, for each common share of Denison Energy held prior to the effective time of the Arrangement, one common share in Denison Mines Inc.; $^{1}/_{5}$ of one common share of Forte Resources Inc.; and $^{1}/_{21}$ of the new class of common shares of Denison Energy.

Denison Energy has completed a previously announced share subscription agreement with an investor group led by Matco, a private company controlled by Matco Investments Ltd. of Calgary, Alberta. The investor group was issued 727,073 newly issued common shares at a subscription price of $7.35 per share, for total proceeds of $5,345,522.70. The subscription occurred immediately following the completion of the Arrangement. Matco now owns approximately 45% of the outstanding shares of Denison Energy. Gregory S. Fletcher, James S. Blair and Paul F. Little continue as members of Denison Energy's board of directors and have been joined by Ronald P. Mathison and Martin A. Lambert, both of Calgary, Alberta.

Press Release www.denisonmines.com

FOR IMMEDIATE RELEASE Trading symbol: DEN-T

DENISON REORGANIZATION COMPLETED

TORONTO, March 9, 2004 – Denison Energy Inc. ("Denison ") (currently **DEN** - TSX) is very pleased to announce that it has received a certificate of arrangement to complete the previously announced Denison Reorganization, which was approved by over 97% of the shareholders voting at the meeting on March 3, 2004 and by the Superior Court of Justice of Ontario on March 5, 2004. As a result of the Denison Reorganization, Denison has transferred its uranium mining and environmental services business to its former subsidiary Denison Mines Inc., and transferred its Canadian petroleum and natural gas business to its former subsidiary Denison Oil Corporation. Shares of each of Denison Mines Inc. and Denison Oil Corporation are being distributed to Denison's existing shareholders, and Denison Energy's common shares have been consolidated on a one-for-21 basis. Denison Energy has completed the proposed share issuance to an investor group led by Matco Capital Ltd. Denison Energy now maintains certain limited assets and liabilities associated with Denison's former businesses as well as an option to purchase Calfrac Well Services Ltd. Denison Energy expects to file a final prospectus in respect of the issuance of $125 million of common shares on or about March 12, 2004.

The proposed arrangement between Denison Oil Corporation and Forte Oil Corporation is expected to be completed today. Following completion of this arrangement, Denison Oil Corporation will be renamed "Forte Resources Inc."

As a result, for every common share in Denison Energy Inc. held on or prior to March 8, 2004, Denison's shareholders are entitled to receive, for each common share of Denison held:

1 common share in Denison Mines Inc;
1/5 of one common share in Forte Resources Inc.; and
1/21 of the new class of common shares in Denison Energy Inc.

Denison is mailing a letter of transmittal to its current shareholders to allow the shareholders to submit their former Denison Energy common shares in exchange for the shares listed above.

Denison previously announced that it expected that trading on the Toronto Stock Exchange (TSX) of the shares of the three separate companies would commence on or about March 10, 2004. Denison now expects that upon satisfying the listing conditions of the TSX, trading of the three separate companies will commence on or about March 12, 2004, with Denison Mines Inc. trading under the symbol "DEN", Denison Energy Inc. trading under the symbol "DEI" and Forte Resources Inc. trading under the symbol "FRZ".

FORM 27

SECURITIES ACT

MATERIAL CHANGE REPORT
UNDER SECTION 75(2) OF THE SECURITIES ACT (ONTARIO)

1. Reporting Issuer:

Denison Energy Inc.

2. Date of Material Change:

December 30, 2003

3. Press Release:

Two press releases were issued on December 31, 2003.

4. Summary of Material Change:

On December 30, 2003 Denison Energy Inc. ("Denison Energy") entered into agreements to carry out a restructuring process. The restructuring will involve a reorganization of Denison Energy's businesses pursuant to a plan of arrangement under the *Business Corporations Act* (Ontario)(the "Arrangement") under which (a) Denison Energy will transfer all of the assets and liabilities associated with its mining and environmental services business to a recently formed subsidiary, Denison Mines Inc. ("Denison Mines"), (b) Denison Energy will transfer all of the assets and liabilities associated with its oil and natural gas business to another newly formed subsidiary, Denison Resources Inc. ("Denison Resources") and (c) Denison Energy will transfer all of the shares of Denison Mines and Denison Resources to its existing shareholders on the basis of one Denison Mines common share and one Denison Resources common share for each existing Denison Energy common share. As a result of the Arrangement, Denison Energy's common shareholders will own shares in each of Denison Energy, Denison Mines and Denison Resources.

On the completion of the Arrangement, Denison Energy will complete a private placement to an investor group led by Matco Capital Ltd. ("Matco"). The private placement will raise approximately $5.4 million and will result in Matco holding a 45% stake in Denison Energy following the transaction.

Denison Energy has been granted an option to purchase all the outstanding shares of Calfrac Well Services Ltd. ("Calfrac") following completion of the restructuring, for a total price, including assumed debt, of approximately $227.5 million. Calfrac is a private oil and gas services company based in Calgary, Alberta.

An Information Circular will be mailed to shareholders in January 2004 for a special shareholders meeting scheduled for early March 2004. It is expected that the Arrangement and the share subscription will be completed in early March, and that Denison Energy will determine whether to exercise the option to purchase Calfrac before the end of March 2004.

5. Full Description of Material Change:

The Arrangement proposes the transfer of substantially all of Denison Energy's mining and environmental services-related assets and liabilities to Denison Mines, and substantially all of its oil and natural gas related assets and liabilities to Denison Resources. Following the asset transfers, the common shares of Denison Mines and Denison Resources will be distributed to Denison Energy's common shareholders on the basis of one Denison Mines common share and one Denison Resources common share for each share held of Denison Energy. Upon completion of the Arrangement, Denison Energy's shareholders will hold all of the shares of each of Denison Energy, Denison Mines and Denison Resources.

Following the Arrangement, Denison Mines will be managed by Denison Energy's current Toronto-based management team. Denison Resources has entered into exclusive negotiations with a private oil and gas company ("PrivateCo") that may lead to a combination of PrivateCo with Denison Resources. The combined entity, if the business combination is successfully concluded, will have a significantly larger oil and gas reserve and production base than Denison Resources, an experienced management team and a portfolio of exploration projects. Additional information will be provided relating to these negotiations as it becomes available. Denison Mines, Denison Resources and Denison Energy will continue as separately traded public companies.

A special meeting of Denison Energy shareholders is expected to be held in early March 2004 to consider and approve the Arrangement. Following the approval of the Arrangement by Denison Energy's shareholders and the court, shares in Denison Mines and Denison Resources will be distributed to Denison Energy's shareholders as of a record date to be determined. Each of Denison Mines and Denison Resources will become a reporting issuer under applicable Canadian securities laws.

Denison Energy has entered into a share subscription agreement with an investor group led by Matco, a private company controlled by Matco Investments Ltd. of Calgary, Alberta. The investor group has agreed to subscribe for approximately 15,350,000 newly issued common shares at a subscription price of $0.35 per share, for total proceeds of approximately $5.4 million. The subscription will occur immediately following the completion of the Arrangement. Following the subscription, Matco will own 45% of the outstanding shares of Denison Energy. Gregory S. Fletcher, James S. Blair and Paul F. Little will continue as members of Denison Energy's board of directors and will be joined by Ronald P. Mathison and Martin A. Lambert, both of Calgary, Alberta. Denison Energy has agreed not to solicit other transactions and has granted Matco certain pre-emptive rights if other offers are received for similar transactions by Denison Energy. The share subscription agreement provides that if the subscription is not completed under

certain circumstances, either Denison or Matco, as the case may be, is required to pay the other a fee of $500,000.

Denison Energy has also entered into an option agreement with Calfrac and the shareholders of Calfrac, a privately held Alberta-based oil and gas services company. Under the option agreement, Denison Energy has been granted the option, following completion of the Arrangement, the share subscription and the satisfaction of certain other conditions, to purchase all of the shares of Calfrac from Calfrac's existing shareholders. The independent members of Denison Energy's board will determine, following completion of the Arrangement and the share subscription, whether to exercise the option to purchase the Calfrac shares.

The aggregate purchase price of Calfrac is $227.5 million, including the assumption of debt. The purchase price is based on 5.35 times Calfrac's estimated 2003 earnings before interest, taxes, depreciation and amortization (EBITDA) of $42.5 million. The purchase price is not subject to adjustment based on actual EBITDA or other results.

Calfrac is engaged in the provision of specialized oil and gas services to major and independent oil and gas exploration and development companies throughout western Canada and the Rocky Mountain region of the United States. The services provided by Calfrac include hydraulic fracturing and well stimulation services using coiled tubing, carbon dioxide, nitrogen and acidizing.

If Denison Energy decides to exercise the option to purchase Calfrac, it is permitted under the option agreement to pay the purchase price for the Calfrac shares with cash or in a combination of cash and shares.

Implementation of the Arrangement and the share subscription are subject to approval by Denison Energy's shareholders by special resolution at the shareholders' meeting to be held in early March 2004. Denison Energy's shareholders will also be asked at the meeting to authorize the issuance of shares to Calfrac's shareholders as part of the purchase price for Calfrac should the option be exercised, together with related matters.

The Arrangement is also subject to receipt of all required regulatory and exemptive relief and third party approvals, including the approval of the Toronto Stock Exchange ("TSX"), the Ontario Superior Court of Justice, and certain of Denison Energy's joint venture partners. The Arrangement is also conditional on the common shares of Denison Energy continuing to be listed on the TSX and the common shares of each of Denison Mines and Denison Resources being listed on either the TSX or the TSX Venture Exchange.

The Board of Directors of Denison Energy has unanimously approved the Arrangement and the share subscription. The Board of Directors has concluded that the transaction is in the best interests of Denison Energy's shareholders and has unanimously resolved to recommend that shareholders vote in favour of the Arrangement and share subscription at the shareholders meeting. FirstEnergy Capital Corp. is acting as Denison Energy's financial advisor in connection with the transaction and has provided the Board with its opinion that the consideration to be received by Denison Energy's shareholders in

connection with the Arrangement and the share subscription is fair, from a financial point of view, to Denison Energy's shareholders.

Denison Energy expects that it will mail an information circular relating to the shareholder meeting to shareholders in late January 2004, with the shareholder meeting to be held in early March 2004. Denison Energy expects to obtain all of the necessary approvals to complete the Arrangement and share subscription in early March 2004, and if the Calfrac option is exercised, to complete the acquisition of Calfrac before the end of March 2004.

6. Reliance on Section 75(3) of the Act:

Not applicable.

7. Omitted Information:

No information has been omitted.

Press Release www.denisonenergy.com

FOR IMMEDIATE RELEASE Trading symbol: DEN-T

Denison Announces Restructuring and Option to Purchase Calfrac Well Services Ltd.

TORONTO, December 31, 2003 – Denison Energy Inc. ("Denison Energy") is pleased to announce that it has entered into agreements to implement the previously announced restructuring of its existing businesses by way of a plan of arrangement (the "Arrangement").

Summary Of The Arrangement

- The mining and environmental services assets and liabilities will be transferred to a wholly owned subsidiary, Denison Mines Inc. ("Denison Mines"). Denison Mines will continue to be managed by Denison Energy's Toronto-based officers.

- The Canadian oil and gas assets will be transferred to a wholly owned subsidiary, Denison Resources Inc. ("Denison Resources"). Denison Resources has entered into exclusive negotiations with a private oil and gas company ("PrivateCo") that may lead to a combination of PrivateCo with Denison Resources. The combined entity, if the business combination is successfully concluded, will have a significantly larger oil and gas reserve and production base than Denison Resources and an experienced management team. Additional information regarding these negotiations will be provided as it becomes available.

- The shares of Denison Mines and Denison Resources will be distributed to Denison Energy's shareholders. Denison Mines, Denison Resources and Denison Energy will continue as separately traded public companies.

- On the completion of the distribution of the Denison Mines and Denison Resources shares, Denison Energy will complete a private placement to an investor group led by Matco Capital Ltd. ("Matco"). The private placement will raise approximately $5.4 million and will result in Matco holding a 45 percent stake in Denison Energy following the transaction. James S. Blair, Gregory S. Fletcher and Paul F. Little, currently directors

of Denison Energy, will continue as directors of Denison Energy and will be joined on the board by Ronald P. Mathison and Martin A. Lambert, both of Calgary, Alberta.

- Denison Energy has been granted an option to purchase all the outstanding shares of Calfrac Well Services Ltd. ("Calfrac") following completion of the restructuring, for a total price, including assumed debt, of approximately $227.5 million. Calfrac is a substantial private oil and gas services company based in Calgary, Alberta.

- An Information Circular will be mailed to shareholders in January 2004 for a Special Shareholders Meeting scheduled for early March 2004.

Reasons For The Restructuring

Denison Energy believes the creation of a separate dedicated uranium mining company and a separate oil and gas company will enhance shareholder value and allow management of each of the resulting companies to more closely focus on their respective businesses. The implementation of the Arrangement is intended to provide such a focus.

Denison Mines will be one of only two Canadian publicly traded companies that are primarily involved in the uranium mining and production business. The Arrangement will also provide Denison Energy shareholders with additional investment choices and flexibility. Denison Energy also believes that the involvement of Matco Capital Ltd. as a key investor in Denison Energy going forward will provide Denison Energy and its shareholders with accretive growth opportunities, including the option to purchase Calfrac, which have the potential of changing Denison Energy into a leading publicly traded oil and gas services company.

The Plan Of Arrangement

The Board of Directors of Denison Energy has approved the proposed Arrangement and related transactions. The Arrangement proposes the transfer of substantially all of Denison Energy's mining and environmental services related assets and liabilities to Denison Mines, and substantially all of its oil and natural gas related assets and liabilities to Denison Resources. Following the asset transfers, the common shares of Denison Mines and Denison Resources will be distributed to Denison Energy's common shareholders on the basis of one Denison Mines common share and one Denison Resources common share for each share held of Denison Energy.

Following the Arrangement, Denison Mines will be managed by Denison Energy's current Toronto-based management team. Denison Resources has entered into exclusive negotiations with a private oil and gas company ("PrivateCo") that may lead to a combination of PrivateCo with Denison Resources. The combined entity, if the business combination is successfully concluded, will have a significantly larger oil and gas reserve and production base than Denison Resources, an experienced management team and a portfolio of exploration projects. Additional information will be provided relating to these negotiations as it becomes available. Denison Mines, Denison Resources and Denison Energy will continue as separately traded public companies. Denison Mines, Denison Energy and Denison Resources will each hold substantial tax pools. A summary of certain pro forma data for each of Denison Mines and Denison Resources after giving effect to the Arrangement is presented at the end of this release.

A special meeting of Denison Energy shareholders is expected to be held in early March 2004 to consider and approve the Arrangement. Following the approval of the Arrangement by Denison Energy's shareholders and the court, shares in Denison Mines and Denison Resources will be distributed to Denison shareholders as of a record date to be determined. Each of Denison Mines and Denison Resources will become a reporting issuer under applicable Canadian securities laws.

Share Subscription

Denison Energy has also entered into a share subscription agreement with an investor group led by Matco, a private company controlled by Matco Investments Ltd. of Calgary, Alberta. The investor group has agreed to subscribe for approximately 15,350,000 newly issued common shares at a subscription price of $0.35 per share, for total proceeds of approximately $5.4 million. The subscription will occur immediately following the completion of the Arrangement. Following the subscription, Matco will own 45% of the outstanding shares of Denison Energy. Gregory S. Fletcher, James S. Blair and Paul F. Little will continue as members of Denison Energy's board of directors and will be joined by Ronald P. Mathison and Martin A. Lambert, both of Calgary, Alberta. Denison Energy has agreed not to solicit other transactions and has granted Matco certain pre-emptive rights if other offers are received for similar transactions by Denison Energy. The share subscription agreement provides that if the subscription is not completed under certain circumstances, either Denison or Matco, as the case may be, is required to pay the other a fee of $500,000.

Option To Acquire Calfrac Well Services Ltd.

In connection with the restructuring, Denison Energy has also entered into an option agreement with the shareholders of Calfrac Well Services Ltd., a privately held Alberta based oil and gas services company. Under the option agreement, Denison Energy has been granted the option, following completion of the Arrangement, the share subscription and the satisfaction of certain other conditions, to purchase all of the shares of Calfrac from Calfrac's existing shareholders. The independent members of Denison Energy's board will determine, following completion of the Arrangement and the share subscription, whether to exercise the option to purchase the Calfrac shares.

The aggregate purchase price of Calfrac is $227.5 million, including the assumption of debt. The purchase price is based on 5.35 times the estimated 2003 earnings before interest, taxes, depreciation and amortization (EBITDA) of $42.5 million. The purchase price is not subject to adjustment based on actual EBITDA or other results.

If Denison Energy decides to exercise the option, it is permitted under the option agreement to pay the purchase price for the Calfrac shares with cash or in a combination of cash and shares.

Description Of Calfrac's Business

Calfrac is engaged in the provision of specialized oil and gas services to major and independent oil and gas exploration and development companies throughout western Canada and the Rocky Mountain region of the United States. The services provided by Calfrac include

hydraulic fracturing and well stimulation services using coiled tubing, carbon dioxide, nitrogen and acidizing.

Terms And Conditions

Implementation of the Arrangement and the share subscription are subject to approval by Denison Energy's shareholders by special resolution at the shareholders' meeting to be held in early March 2004, the exact date of which will be determined and announced shortly. Denison Energy's shareholders will also be asked at the meeting to authorize the acquisition of Calfrac and the issuance of shares to Calfrac's shareholders as part of the purchase price for Calfrac should the option be exercised, together with related matters such as a consolidation of Denison Energy's shares, a change in Denison Energy's name should the Calfrac acquisition proceed, and to approve certain other matters, including new stock option plans for Denison Mines and Denison Resources.

The Arrangement is also subject to receipt of all required regulatory and exemptive relief and third party approvals, including the approval of the Toronto Stock Exchange ("TSX"), the Ontario Superior Court of Justice, and certain of Denison Energy's joint venture partners. The Arrangement is also conditional on the common shares of Denison Energy continuing to be listed on the TSX and the common shares of each of Denison Mines and Denison Resources being listed on either the TSX or the TSX Venture Exchange.

Denison Energy Directors Recommend Shareholders Approve The Transaction

The Board of Directors of Denison Energy has unanimously approved the Arrangement and the share subscription. The Board of Directors has concluded that the transaction is in the best interests of Denison Energy's shareholders and has unanimously resolved to recommend that shareholders vote in favour of the Arrangement and share subscription at the meeting. FirstEnergy Capital Corp. is acting as Denison Energy's financial advisor in connection with the transaction and has provided the Board with its opinion that the consideration to be received by Denison Energy's shareholders in connection with the Arrangement and the share subscription, is fair, from a financial point of view, to Denison Energy's shareholders.

Timing And Execution Of The Plan Of Arrangement

Denison Energy expects that it will mail an information circular relating to the shareholder meeting to shareholders in January, with the shareholder meeting to be held in early March 2004. Denison Energy expects to obtain all of the necessary approvals to complete the Arrangement and share subscription in early March 2004, and if the Calfrac option is exercised, to complete the acquisition of Calfrac before the end of March 2004.

About Denison Energy Inc.

Denison Energy Inc. is a Canadian company with resource-related interests. Denison's interests include a 22.5% interest in the McClean Lake uranium facility, a 19.96% interest in the Midwest uranium project (both of which are located in northern Saskatchewan), an environmental services consulting business serving the North American mining industry, various interests in oil and gas exploration and development properties in Alberta and Saskatchewan and mineral exploration projects in Ontario and western Canada.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. The securities offered under this short form prospectus have not been and will not be registered under the United States Securities Act of 1933, as amended, or any state securities laws. Accordingly, the securities offered hereby may not be offered or sold in the United States or to U.S. persons unless an exemption from such registration is available. This short form prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the securities offered hereby within the United States. See "Plan of Distribution".

Short Form Prospectus

New Issue

August 20, 2004

$28,400,000
1,000,000 Common Shares

Calfrac Well Services Ltd. ("Calfrac" or the "Corporation") is offering 1,000,000 common shares of the Corporation (the "Offered Shares") at a price of $28.40 per share pursuant to this short form prospectus (the "Offering").

The common shares of the Corporation are listed on the Toronto Stock Exchange (the "TSX") under the symbol "CFW". On August 19, 2004 the closing price of the common shares of the Corporation on the TSX was $31.00. The offering price per Offered Share of $28.40 was determined by negotiation between the Corporation and Peters & Co. Limited on its own behalf and on behalf of FirstEnergy Capital Corp., RBC Dominion Securities Inc., CIBC World Markets Inc. and Sprott Securities Inc. (the "Underwriters"). The TSX has conditionally approved the listing of the Offered Shares. Listing is subject to the Corporation fulfilling all the requirements of the TSX on or before November 8, 2004.

In the opinion of counsel, based on the legislation in effect on the date of this short form prospectus, the Offered Shares are eligible investments as set forth under the heading "Eligibility for Investment".

Price: $28.40 per Common Share

	Price to Public	Underwriters' Fee	Net Proceeds to Corporation
Per Offered Share	$28.40	$1.278	$27.122
Total	$28,400,000	$1,278,000	$27,122,000

The Underwriters, as principals, conditionally offer the Offered Shares, subject to prior sale, if, as and when issued by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution", subject to approval of certain legal matters on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP. In connection with the distribution of the Offered Shares, the Underwriters may engage in market stabilization activities. See "Plan of Distribution".

Subscriptions for the Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. Closing of the Offering is anticipated to occur on or about August 31, 2004, but in any event not later than October 4, 2004.

GLOSSARY

In this short form prospectus, unless the context otherwise requires, the following words and phrases have the meaning set forth below:

"**Calfrac**" or "**Corporation**" means the continuing corporation formed by the amalgamation under the *Business Corporations Act* (Alberta) of Denison and CWSL pursuant to articles of amalgamation filed on March 24, 2004;

"**CWSL**" means Calfrac Well Services Ltd. as it existed from the date of its incorporation in March 1999 until its amalgamation with Denison on March 24, 2004; and

"**Denison**" means Denison Energy Inc. prior to its amalgamation with CWSL on March 24, 2004.

All dollar amounts in this short form prospectus are in Canadian dollars unless otherwise stated.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this short form prospectus, and in certain documents incorporated by reference into this short form prospectus, constitute forward-looking statements. These statements relate to future events or the Corporation's future performance. All statements other than statements of historical fact may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "continue", "estimate", "expect, "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. The Corporation believes that the expectations reflected in those forward looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in, or incorporated by reference into, this short form prospectus should not be unduly relied upon. These statements speak only as of the date of this short form prospectus or as of the date specified in the documents incorporated by reference into this short form prospectus, as the case may be. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this short form prospectus and the documents incorporated by reference contain forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding the Corporation's ability to maintain its competitive position;
- expectations regarding the Corporation's ability to raise capital;
- treatment under governmental regulatory regimes; and
- commodity prices.

The Corporation's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this short form prospectus:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;
- liabilities and risks associated with prior operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

DOCUMENTS INCORPORATED BY REFERENCE

Information has been incorporated by reference in this short form prospectus from documents filed with securities commissions or similar authorities in Canada. Copies of the documents incorporated herein by reference may be obtained on request without charge from the Corporate Secretary of Calfrac at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 (telephone: (403) 266-6000). For the purpose of the Province of Quebec, this simplified prospectus contains information to be completed by consulting the permanent information record. A copy of the permanent information record may be obtained from the Corporate Secretary of Calfrac at the above-mentioned address and telephone number.

The following documents of the Corporation are specifically incorporated by reference in this short form prospectus:

(a) the annual information form dated May 18, 2004;

(b) the comparative financial statements of Denison, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the shareholders of Denison ;

(c) the comparative financial statements of CWSL, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the directors of CWSL, at pages F-32 to F-47 of the long form prospectus of Denison dated March 10, 2004;

(d) management's discussion and analysis of financial condition and results of operations of Denison for the fiscal year ended December 31, 2003;

(e) the comparative unaudited interim consolidated financial statements for the three month period ended March 31, 2004;

(f) management's discussion and analysis of financial condition and results of operations of Calfrac for the three months ended March 31, 2004 and 2003 and for the years ended December 31, 2003 and 2002;

(g) the comparative unaudited interim consolidated financial statements for the six month period ended June 30, 2004;

(h) management's discussion and analysis of financial condition and results of operations for the six month period ended June 30, 2004;

(i) the information circular dated May 18, 2004, except the sections entitled "Report on Executive Compensation", "Performance Graph" and "Statement of Corporate Governance Practices";

(j) the unaudited pro forma consolidated financial statements of Denison, together with the notes thereto and the compilation report thereon, at pages F-2 to F-11 of the long form prospectus of Denison dated March 10, 2004;

(k) the material change report dated January 9, 2004 relating to (i) the proposed reorganization of Denison by way of plan of arrangement and the transfer of all of the assets and liabilities associated with Denison's mining and environmental services business and oil and natural gas business to Denison Mines Inc. and Denison Resources Inc., respectively, and the transfer of all of the shares of Denison Mines Inc. and Denison Resources Inc. to its existing shareholders; (ii) a private placement financing in connection with the reorganization; and (iii) a purchase option granted to Denison to purchase all of the outstanding shares of CWSL following completion of the reorganization;

(l) the material change report dated March 15, 2004 relating to the completion of the previously announced reorganization and private placement; and

(m) the material change report dated April 1, 2004 relating to the completion of a public offering by way of long form prospectus of 8,064,520 common shares for gross proceeds of approximately $125 million, the exercise of the option held by Denison to purchase all of the shares of CWSL, the amalgamation of the two entities and the name change from "Denison Energy Inc." to "Calfrac Well Services Ltd.";

provided that these documents are not incorporated by reference to the extent their contents are modified or superseded by a statement contained in this short form prospectus or in any other subsequently filed document that also is, or is deemed to be, incorporated by reference in this short form prospectus.

Any material change reports (except confidential material change reports), financial statements and information circulars (excluding those portions that are not required pursuant to National Instrument 44-101 to be incorporated by reference herein) filed by the Corporation after the date of this short form prospectus and before the termination of the distribution are deemed to be incorporated by reference in this short form prospectus.

Modification

The second paragraph under the heading "General Development of the Business – Prior Business of the Corporation" in the annual information form of the Corporation dated May 18, 2004 is modified to read as follows:

> "Information regarding the businesses transferred to Denison Mines Inc. and Denison Oil Corporation may be found in Exhibits K and M, respectively, to the Management Information Circular of Denison dated January 29, 2004".

THE CORPORATION

Calfrac Well Services Ltd. is the continuing corporation formed by the amalgamation under the *Business Corporations Act* (Alberta) of Denison Energy Inc. and Calfrac Well Services Ltd. pursuant to articles of amalgamation filed on March 24, 2004. The head office of the Corporation is located at 411 – 8th Avenue S.W., Calgary, Alberta, T2P 1E3, and the registered office is located at 4500, 855 - 2nd Street S.W., Calgary, Alberta, T2P 4K7.

BUSINESS OF THE CORPORATION

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal, which is often referred to as coalbed methane.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services; (iv) carbon dioxide services, which act as an energizer in fracturing fluid to enhance well clean up and as a base fluid for fracturing; and (v) cementing services which involve pumping a cement mixture down a well to act as a seal and provide structural support to steel pipe or casing within the well.

USE OF PROCEEDS

The estimated net proceeds received by the Corporation from this Offering, before deducting the estimated expenses of the Offering, will be $27,122,000. The net proceeds will be used by the Corporation to fund capital expenditures of approximately $25,000,000, primarily relating to the addition of several fracturing spreads to Calfrac's existing fleet of equipment. The remainder of the proceeds will be added to working capital.

CONSOLIDATED CAPITALIZATION OF THE CORPORATION

The following table sets forth the consolidated capitalization of the Corporation as at June 30, 2004, both before and after giving effect to the Offering.

	Authorized	Outstanding as at June 30, 2004 before giving effect to the Offering	Outstanding as at June 30, 2004 after giving effect to the Offering
		(unaudited)	(unaudited)
Long-term debt[(1)]	nil	$4,994,000	$4,994,000
Common Shares[(2)]	unlimited	$109,138,000 (17,107,277 shares)	$136,010,000 (18,107,277 shares)

Notes:

(1) Calfrac has a $15 million line of credit from a Canadian chartered bank that bears interest at the bank's prime rate. The line of credit is undrawn at the date hereof, but is reduced by $1.75 million in letters of credit issued by the bank on Calfrac's behalf. Calfrac's credit facilities also include a revolving $25 million loan that has not been drawn upon as of the date hereof. Amounts drawn on the loan bear interest at the bank's prime rate plus 0.625% and are repayable over a 60-month term.

(2) At the annual and special meeting of shareholders held on June 21, 2004, the shareholders approved the implementation of a stock option plan. As of the date hereof, no options have been granted; however, the Board of Directors of the Corporation has approved the granting of 400,000 options to employees. The options will vest over a period of three years and are anticipated to be granted in the third quarter of 2004. The Corporation has also approved the granting of 30,000 deferred stock units to non-management directors and 17,000 performance stock units to its three most senior officers. The stock units will vest one year from the date of grant and are anticipated to be granted in the third quarter of 2004.

As at December 31, 2003, Denison had 17,717,057 common shares outstanding. After December 31, 2003 and prior to March 8, 2004, Denison issued 953,500 common shares upon the exercise of stock options. On March 8, 2004, the outstanding common shares of Denison were consolidated on a 21 for 1 basis, resulting in 888,645 common shares being outstanding. Also on March 8, 2004, Denison issued 727,073 common shares for gross proceeds of

approximately $5.3 million. On March 23, 2004, Denison issued 8,064,520 common shares pursuant to a long form prospectus dated March 10, 2004 for gross proceeds of approximately $125 million. On March 24, 2004, Denison issued 7,427,039 common shares to the former shareholders of CWSL in connection with the acquisition by Denison of all of the outstanding shares of CWSL.

DESCRIPTION OF SHARE CAPITAL

Authorized Capital

The Corporation is authorized to issue an unlimited number of common shares.

Common Shares

The holders of common shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

PLAN OF DISTRIBUTION

Under an agreement dated August 10, 2004 (the "Underwriting Agreement") between the Corporation and the Underwriters, the Corporation has appointed the Underwriters as the sole and exclusive agents of the Corporation to offer the Offered Shares for sale, subject to the terms and conditions contained therein, at a price of $28.40 per Offered Share. The Underwriters have agreed that if less than all of the Offered Shares are sold by the Underwriters as agents, the Underwriters shall purchase, as principals, all of the Offered Shares not sold by the Underwriters as agents at the same price per Offered Share. Closing of the Offering is anticipated to occur on or about August 31, 2004, or on such later date as may be agreed upon by the Corporation and the Underwriters, but in any event not later than October 4, 2004 (subject to the termination right described below). The Corporation has agreed to pay the Underwriters a fee equal to $1.278 per Offered Share purchased by the Underwriters. The offering price per Offered Share was determined by negotiation between the Corporation and the Underwriters. All fees payable to the Underwriters will be paid on account of services rendered in connection with the Offering and will be paid out of the general funds of the Corporation.

The obligations of the Underwriters under the Underwriting Agreement are several and not joint and several, and may be terminated at their discretion upon the occurrence of certain stated events. The Underwriters are, however, obligated to take up and pay for all of the Offered Shares if any Offered Shares are purchased under the Underwriting Agreement.

Pursuant to policy statements of certain securities commissions, the Underwriters may not, during the period of distribution under this short form prospectus, bid for or purchase common shares of the Corporation. The foregoing restriction is subject to certain exceptions, on the condition that the bid or purchase not be engaged in for the purpose of creating actual or apparent trading activity in, or raising the price of, the common shares. These exceptions include a bid or purchase permitted under the by-laws and rules of the TSX relating to market stabilization and passive market-making activities and a bid or purchase made for and on behalf of a customer where the order was not solicited during the period of distribution. In connection with the Offering, and subject to the foregoing and to applicable law, the Underwriters may over-allot or effect transactions that stabilize or maintain the market price of the common shares at levels other than those that might otherwise prevail on the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares offered hereby have not been and will not be registered under the *United States Securities Act of 1933* (the "1933 Act") or any securities or "blue sky" laws of any of the states of the United States. Accordingly, the Offered Shares may not be offered or sold within the United States or to U.S. persons except in accordance with an exemption from the registration requirements of the 1933 Act provided by Rule 144A or in accordance with any other available exemption from registration under the 1933 Act. In addition, the Underwriting Agreement provides that the Underwriters will offer and sell securities outside the United States to any U.S. person only in accordance with Regulation S under the 1933 Act.

This short form prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares offered hereby in the United States. In addition, until 40 days after the announcement of the Offering, an offer or sale of the Offered Shares within the United States by any dealer, whether or not participating in the Offering, may violate the registration requirement of the 1933 Act if such offer or sale is made otherwise than in accordance with Rule 144A under the 1933 Act or in accordance with any other available exemption from registration under the 1933 Act.

The Corporation has agreed to indemnify the Underwriters and their affiliates and their respective directors, officers, employees and agents against certain liabilities.

The Corporation has agreed that it will not, without the prior consent of Peters & Co. Limited, on behalf of the Underwriters, pursuant to the Underwriting Agreement, which consent may not be unreasonably withheld, directly or indirectly, issue, sell, offer to sell, grant any option for the sale of, or otherwise dispose of any common shares or any securities convertible or exercisable into common shares (other than pursuant to the Corporation's stock option plan or the grant of deferred stock units or performance stock units and the issuance of common shares on the exercise thereof), agree to become bound to do so, or disclose to the public any intention to do so at any time prior to 90 days after the closing of the Offering.

The TSX has conditionally approved the listing of the Offered Shares. Listing is subject to the Corporation fulfilling all the requirements of the TSX on or before November 8, 2004.

RISK FACTORS

The securities offered hereby should be considered highly speculative due to the Corporation's recent change of business and the nature of such business as well as the Corporation's present stage of development. A prospective investor should consider carefully the risk factors set out below. In addition, prospective investors should carefully review and consider all other information contained and incorporated by reference in this short form prospectus before making an investment decision.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that anticipated trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter, when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. The duration of this period, commonly referred to as the "spring breakup", has a direct impact on the level of Calfrac's activities. Spring breakup occurs earlier in the year in southeastern Alberta than it does in northern Alberta and British Columbia. The timing and duration of spring breakup are dependant on weather patterns but it generally occurs in April and May. Additionally, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the

severity of the Canadian winters. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 55.5% of Calfrac's revenue for the six-month period ended June 30, 2003 and 55.2% for the six-month period ended June 30, 2004. The largest of these customers provided 49.7% of Calfrac's revenue for the six-month period ended June 30, 2003 and 49.4% of Calfrac's revenue for the six-month period ended June 30, 2004. Prior to December 23, 2003 this customer was also an equity shareholder of Calfrac. Calfrac has historically maintained an excellent relationship with this customer and has no reason to believe that there will be any change to this relationship in the future. Calfrac has two multi-year agreements to provide fracturing services to this customer which expire in August 2005 and December 2004, one of which includes minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance and will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Tax Matters

The Corporation has estimated tax pools of approximately $220 million for federal income tax purposes and $170 million for provincial income tax purposes. These amounts include non-capital losses of approximately $66 million, of which $27 million is expected to expire on December 31, 2004 and the remaining $39 million is expected to expire on December 31, 2008. The final amount of these tax pools will be determined when all of Denison's tax filings are completed.

The amount of the future tax asset and deferred tax credit in respect of the income tax pools available to the Corporation were estimated as some of the tax returns for the relevant period have yet to be prepared and filed. The income tax rates used to calculate the amount of the asset are based on available information on future income tax rates. The income tax authorities have not yet assessed or audited any of these pools.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from the Corporation's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Liabilities from Prior Operations

From time to time, there may be legal proceedings pending or threatened against the Corporation relating to the business of Denison prior to its reorganization and subsequent acquisition of CWSL. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation. See "Legal Proceedings" for a description of the legal proceedings currently against the Corporation in connection with the prior business of Denison.

In connection with the reorganization of Denison by way of plan of arrangement (the "Arrangement"), the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison

Resources Inc. (now Forte Resources Inc.) and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. and each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Legal Proceedings".

Despite the indemnity provided to the Corporation by each of Denison Resources Inc. and Denison Mines Inc., it is possible that the Corporation may be found responsible for claims or losses relating to the assets and liabilities transferred from Denison to each of Denison Resources Inc. and Denison Mines Inc. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by the Corporation. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of Denison's former operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. The Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against Denison or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to Denison's prior ownership or operation of assets.

Denison Mines Inc. has assumed the liabilities and obligations of Denison under a loan from Cogema Resources Inc., one of Denison's former joint venture partners. Most of the productive assets of Denison Mines Inc. are part of the security granted in favour of Cogema Resources Inc. for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan based mining projects is dedicated to the loan's repayment. The impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to Denison cannot be determined at this time.

Claims and liabilities may arise against the Corporation as a result of Denison being a prior owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison, Denison Mines Inc., the federal government and the Ontario provincial government, Denison agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison, the federal government, the Ontario provincial government and Matco Capital Ltd., the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by the Corporation after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue the Corporation for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. The Corporation is not aware of any such statutory offense having occurred. The confirmation agreement among Denison, the federal government, the Ontario provincial government and Matco Capital Ltd. does not limit persons other than the federal government and the Ontario provincial government from making any claims against the Corporation in respect of Denison's ownership and operation of the Elliot Lake mining facility.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of the Corporation to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield employees is high, and the supply is limited. The unexpected loss of the Corporation's key personnel or the inability to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a service provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect its business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact the Corporation's net revenue.

Corporate Matters

To date, the Corporation has not paid any dividends on its outstanding common shares. The board of directors of the Corporation may make a determination to pay dividends in the future if circumstances permit.

Additional Financing

There is no guarantee that the Corporation will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of common shares or securities convertible into common shares from the Corporation's treasury, control of the Corporation may change and shareholders may suffer dilution to their investment. The Corporation's activities may also be financed partially or wholly with debt, which may increase the Corporation's debt levels above industry standards. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the directors of the Corporation are also directors of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as directors of the Corporation and as directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the *Business Corporations Act* (Alberta).

There may be situations in which the interests of the directors and management of, and consultants to, the Corporation may conflict with those of the Corporation. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to the Corporation. Any conflicts will be resolved in accordance with the provisions of the *Business Corporations Act* (Alberta) and other applicable laws.

ELIGIBILITY FOR INVESTMENT

In the opinion of Bennett Jones LLP, counsel to Calfrac, and Stikeman Elliott LLP, counsel to the Underwriters (collectively, "Counsel"), subject to compliance with the prudent investment standards and general investment provisions of the following statutes (and, where applicable, the regulations thereunder) and, in certain cases, subject to the satisfaction of additional requirements relating to investment or lending policies, procedures or goals, and, in

certain circumstances, the filing of such policies, procedures or goals, the Offered Shares are not, at the date hereof, precluded as investments under or by the following statutes:

Insurance Companies Act (Canada)
Trust and Loan Companies Act (Canada)
Cooperative Credit Associations Act (Canada)
Pension Benefits Standards Act, 1985 (Canada)
Pension Benefits Standards Act (British Columbia)
Financial Institutions Act (British Columbia)
Alberta Heritage Savings Trust Fund Act (Alberta)
Employment Pension Plans Act (Alberta)
Insurance Act (Alberta)
Loan and Trust Corporations Act (Alberta)
The Pension Benefits Act, 1992 (Saskatchewan)
The Insurance Act (Manitoba)
The Pension Benefits Act (Manitoba)
The Trustee Act (Manitoba)
Loan and Trust Corporations Act (Ontario)
Pension Benefits Act (Ontario)
Trustee Act (Ontario)
an Act respecting insurance (Québec) (in respect of an insurer, as defined therein, incorporated under the laws of the Province of Québec, other than a guarantee fund)
an Act respecting trust companies and savings companies (Québec) (for a trust company investing its own funds and deposits it receives or a savings company, as defined therein, which invests its own funds)
Supplemental Pension Plans Act (Québec)

In the opinion of Counsel, provided the common shares of the Corporation are listed on a prescribed stock exchange at the relevant time and subject to the provisions of any particular plan, the Offered Shares will be a qualified investment, within the meaning of the Tax Act, for trusts governed by registered retirement savings plans, registered education savings plans, registered retirement income funds and deferred profit sharing plans. In the opinion of Counsel, based upon certain representations of the Corporation, the Offered Shares, if issued on the date hereof, would not constitute "foreign property" for the purposes of Part XI of the Tax Act.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby will be passed upon on behalf of Calfrac by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP.

LEGAL PROCEEDINGS

Various legal proceedings are pending against the Corporation in relation to Denison's prior operations. The Corporation considers all such pending proceedings, comprised primarily of labour and employment claims related to Denison's former oil and gas operations in Greece, as described below, to be routine litigation incidental to Denison's prior business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters are subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., respectively, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". The Corporation believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of the Corporation. However, the Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this short form prospectus or any that may arise in the future will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation.

Greek Operations

In September 2002, the Athens Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of Denison, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Athens Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Athens Court of Appeal has been appealed by the employees to the Supreme Court of Greece. The hearing in the

Supreme Court has been scheduled for November 8, 2005. The impact on the Corporation of any adverse decision in this appeal cannot be determined at this time.

Another set of employees of the Greek subsidiary of Denison has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This ruling was appealed and the appeal was heard on May 21, 2004 but no decision has been rendered. A third set of employees filed claims in 1999 with respect to their termination and severance. After several adjournments a hearing has been scheduled for December 2, 2004. The dollar impact on the Corporation of any adverse decision in these actions cannot be determined.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of Denison by OilHawk Resources Ltd. The claim is fully insured and being handled by the Corporation's insurer. Denison Resources Inc. (now Forte Resources Inc.) has also provided an indemnity to the Corporation pursuant to the Arrangement.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts. Denison Mines Inc. has provided an indemnity to the Corporation pursuant to the Arrangement.

Mining Claim

A letter was received by the Corporation from the Attorney General of the State of Maine claiming compensation relating to mining activities conducted 35 years ago in Blue Hill, Maine. Denison Mines Inc. has advised the Corporation in writing that it will indemnify it against any adverse consequences arising from this claim. In the financial statements prepared for Denison Mines Inc. at June 30, 2004, management expressed an opinion that it believes it has no liability related to the costs of any clean up of the contamination, however, future litigation on the matter cannot be ruled out.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of the Corporation are PricewaterhouseCoopers LLP, Chartered Accountants, Suite 3100, Petro-Canada Centre, 111 – 5th Avenue S.W., Calgary, Alberta, T2P 5L3.

Computershare Trust Company of Canada is the registrar and transfer agent for the Common Shares at is principal offices in Calgary, Alberta and Toronto, Ontario.

INTEREST OF EXPERTS

None of Bennett Jones LLP, Stikeman Elliott LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of the Corporation or of any associate or affiliate of the Corporation. Bennett Jones LLP and the officers and partners thereof as a group (excluding Martin A. Lambert, a partner of Bennett Jones LLP who is a director of the Corporation), and Stikeman Elliott LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of the Corporation and its associates and affiliates. Mr. Lambert's personal family holding company, Mountain Moon Capital Inc., is a shareholder of Matco Capital Ltd., which beneficially owns approximately 674,423 or 3.94% of the common shares of the Corporation prior to giving effect to the Offering.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITORS' CONSENT

We have read the short form prospectus of Calfrac Well Services Ltd. dated August 20, 2004 relating to the sale and issuance of 1,000,000 common shares of the Corporation. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use through incorporation by reference in the above-mentioned short form prospectus of our report dated April 15, 2004 to the shareholders of Denison on the consolidated balance sheets of Denison as at December 31, 2003 and 2002 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended, and to the use through incorporation by reference in the above-mentioned prospectus of our compilation report dated March 10, 2004 to the directors of Denison on the unaudited pro forma consolidated balance sheet of Denison at September 30, 2003 and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine month period ended September 30, 2003.

A copy of this preliminary short form prospectus has been filed with the securities regulatory authorities in each of the provinces of Canada but has not yet become final for the purpose of the sale of securities. Information contained in this preliminary short form prospectus may not be complete and may have to be amended. The securities may not be sold until a receipt for the short form prospectus is obtained from the securities regulatory authorities.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. The securities offered under this short form prospectus have not been and will not be registered under the United States Securities Act of 1933, as amended, or any state securities laws. Accordingly, the securities offered hereby may not be offered or sold in the United States or to U.S. persons unless an exemption from such registration is available. This short form prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the securities offered hereby within the United States. See "Plan of Distribution".

Preliminary Short Form Prospectus

New Issue **August 12, 2004**

$28,400,000

1,000,000 Common Shares

Calfrac Well Services Ltd. ("Calfrac" or the "Corporation") is offering 1,000,000 common shares of the Corporation (the "Offered Shares") at a price of $28.40 per share pursuant to this short form prospectus (the "Offering").

The common shares of the Corporation are listed on the Toronto Stock Exchange (the "TSX") under the symbol "CFW". On August 9, 2004, the last trading day before the announcement of the Offering, the closing price of the common shares of the Corporation on the TSX was $29.40. The offering price per Offered Share of $28.40 was determined by negotiation between the Corporation and Peters & Co. Limited on its own behalf and on behalf of FirstEnergy Capital Corp., RBC Dominion Securities Inc., CIBC World Markets Inc. and Sprott Securities Inc. (the "Underwriters"). The Corporation has applied to list the Offered Shares on the TSX. Listing will be subject to the Corporation fulfilling the applicable listing requirements of the TSX.

In the opinion of counsel, based on the legislation in effect on the date of this short form prospectus, the Offered Shares are eligible investments as set forth under the heading "Eligibility for Investment".

Price: $28.40 per Common Share

	Price to Public	Underwriters' Fee	Net Proceeds to Corporation
Per Offered Share	$28.40	$1.278	$27.122
Total	$28,400,000	$1,278,000	$27,122,000

The Underwriters, as principals, conditionally offer the Offered Shares, subject to prior sale, if, as and when issued by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution", subject to approval of certain legal matters on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP. In connection with the distribution of the Offered Shares, the Underwriters may engage in market stabilization activities. See "Plan of Distribution".

Subscriptions for the Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. Closing of the Offering is anticipated to occur on or about August 31, 2004, but in any event not later than October 4, 2004.

GLOSSARY

In this short form prospectus, unless the context otherwise requires, the following words and phrases have the meaning set forth below:

"**Calfrac**" or "**Corporation**" means the continuing corporation formed by the amalgamation under the *Business Corporations Act* (Alberta) of Denison and CWSL pursuant to articles of amalgamation filed on March 24, 2004;

"**CWSL**" means Calfrac Well Services Ltd. as it existed from the date of its incorporation in March 1999 until its amalgamation with Denison on March 24, 2004; and

"**Denison**" means Denison Energy Inc. prior to its amalgamation with CWSL on March 24, 2004.

All dollar amounts in this short form prospectus are in Canadian dollars unless otherwise stated.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this short form prospectus, and in certain documents incorporated by reference into this short form prospectus, constitute forward-looking statements. These statements relate to future events or the Corporation's future performance. All statements other than statements of historical fact may be forward-looking statements. Forward-looking statements are often, but not always, identified by the use of words such as "seek", "anticipate", "plan", "continue", "estimate", "expect, "may", "will", "project", "predict", "potential", "targeting", "intend", "could", "might", "should", "believe" and similar expressions. These statements involve known and unknown risks, uncertainties and other factors that may cause actual results or events to differ materially from those anticipated in such forward-looking statements. The Corporation believes that the expectations reflected in those forward looking statements are reasonable but no assurance can be given that these expectations will prove to be correct and such forward-looking statements included in, or incorporated by reference into, this short form prospectus should not be unduly relied upon. These statements speak only as of the date of this short form prospectus or as of the date specified in the documents incorporated by reference into this short form prospectus, as the case may be. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this short form prospectus and the documents incorporated by reference contain forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding the Corporation's ability to maintain its competitive position;
- expectations regarding the Corporation's ability to raise capital;
- treatment under governmental regulatory regimes; and
- commodity prices.

The Corporation's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this short form prospectus:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;

- liabilities and risks associated with prior operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

DOCUMENTS INCORPORATED BY REFERENCE

Information has been incorporated by reference in this short form prospectus from documents filed with securities commissions or similar authorities in Canada. Copies of the documents incorporated herein by reference may be obtained on request without charge from the Corporate Secretary of Calfrac at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 (telephone: (403) 266-6000). For the purpose of the Province of Quebec, this simplified prospectus contains information to be completed by consulting the permanent information record. A copy of the permanent information record may be obtained from the Corporate Secretary of Calfrac at the above-mentioned address and telephone number.

The following documents of the Corporation are specifically incorporated by reference in this short form prospectus:

(a) the annual information form dated May 18, 2004;

(b) the comparative financial statements of Denison, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the shareholders of Denison ;

(c) the comparative financial statements of CWSL, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the directors of CWSL, at pages F-32 to F-47 of the long form prospectus of Denison dated March 10, 2004;

(d) management's discussion and analysis of financial condition and results of operations of Denison for the fiscal year ended December 31, 2003;

(e) the comparative unaudited interim consolidated financial statements for the three month period ended March 31, 2004;

(f) management's discussion and analysis of financial condition and results of operations of Calfrac for the three months ended March 31, 2004 and 2003 and for the years ended December 31, 2003 and 2002;

(g) the comparative unaudited interim consolidated financial statements for the six month period ended June 30, 2004;

(h) management's discussion and analysis of financial condition and results of operations for the six month period ended June 30, 2004;

(i) the information circular dated May 18, 2004, except the sections entitled "Report on Executive Compensation", "Performance Graph" and "Statement of Corporate Governance Practices";

(j) the unaudited pro forma consolidated financial statements of Denison, together with the notes thereto and the compilation report thereon, at pages F-2 to F-11 of the long form prospectus of Denison dated March 10, 2004;

(k) the material change report dated January 9, 2004 relating to (i) the proposed reorganization of Denison by way of plan of arrangement and the transfer of all of the assets and liabilities associated with Denison's mining and environmental services business and oil and natural gas business to Denison Mines Inc. and Denison Resources Inc., respectively, and the transfer of all of the shares of Denison Mines Inc. and Denison Resources Inc. to its existing shareholders; (ii) a private placement financing in connection with the reorganization; and (iii) a purchase option granted to Denison to purchase all of the outstanding shares of CWSL following completion of the reorganization;

(l) the material change report dated March 15, 2004 relating to the completion of the previously announced reorganization and private placement; and

(m) the material change report dated April 1, 2004 relating to the completion of a public offering by way of long form prospectus of 8,064,520 common shares for gross proceeds of approximately $125 million, the exercise of the option held by Denison to purchase all of the shares of CWSL, the amalgamation of the two entities and the name change from "Denison Energy Inc." to "Calfrac Well Services Ltd.";

provided that these documents are not incorporated by reference to the extent their contents are modified or superseded by a statement contained in this short form prospectus or in any other subsequently filed document that also is, or is deemed to be, incorporated by reference in this short form prospectus.

Any material change reports (except confidential material change reports), financial statements and information circulars (excluding those portions that are not required pursuant to National Instrument 44-101 to be incorporated by reference herein) filed by the Corporation after the date of this short form prospectus and before the termination of the distribution are deemed to be incorporated by reference in this short form prospectus.

Modification

The second paragraph under the heading "General Development of the Business – Prior Business of the Corporation" in the annual information form of the Corporation dated May 18, 2004 is modified to read as follows:

> "Information regarding the businesses transferred to Denison Mines Inc. and Denison Oil Corporation may be found in Exhibits K and M, respectively, to the Management Information Circular of Denison dated January 29, 2004".

THE CORPORATION

Calfrac Well Services Ltd. is the continuing corporation formed by the amalgamation under the *Business Corporations Act* (Alberta) of Denison Energy Inc. and Calfrac Well Services Ltd. pursuant to articles of amalgamation filed on March 24, 2004. The head office of the Corporation is located at 411 – 8th Avenue S.W., Calgary, Alberta, T2P 1E3, and the registered office is located at 4500, 855 - 2nd Street S.W., Calgary, Alberta, T2P 4K7.

BUSINESS OF THE CORPORATION

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal, which is often referred to as coalbed methane.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services; (iv) carbon dioxide services, which act as an energizer in fracturing fluid to enhance well clean up and as a base fluid for fracturing; and (v) cementing services which involve pumping a cement mixture down a well to act as a seal and provide structural support to steel pipe or casing within the well.

USE OF PROCEEDS

The estimated net proceeds received by the Corporation from this Offering, before deducting the estimated expenses of the Offering, will be $27,122,000. The net proceeds will be used by the Corporation to finance its proposed capital expenditures and for general corporate purposes.

CONSOLIDATED CAPITALIZATION OF THE CORPORATION

The following table sets forth the consolidated capitalization of the Corporation as at June 30, 2004, both before and after giving effect to the Offering.

	Authorized	Outstanding as at June 30, 2004 before giving effect to the Offering	Outstanding as at June 30, 2004 after giving effect to the Offering
		(unaudited)	(unaudited)
Long-term debt	nil	$4,994,000	$4,994,000
Common Shares[1][2]	unlimited	$109,138,000 (17,107,277 shares)	$137,538,000 (18,107,277 shares)

Notes:

(1) At the annual and special meeting of shareholders held on June 21, 2004, the shareholders approved the implementation of a stock option plan. As of the date hereof, no options have been granted; however, the Board of Directors of the Corporation has approved the granting of 400,000 options to employees. The options will vest over a period of three years and are anticipated to be granted in the third quarter of 2004. The Corporation has also approved the granting of 30,000 deferred stock units to non-management directors and 17,000 performance stock units to its three most senior officers. The stock units will vest one year from the date of grant and are anticipated to be granted in the third quarter of 2004.

(2) Calfrac has a $15 million line of credit from a Canadian chartered bank that bears interest at the bank's prime rate. The line of credit is undrawn at the date hereof, but is reduced by $1.75 million in letters of credit issued by the bank on Calfrac's behalf. Calfrac's credit facilities also include a revolving $25 million loan that has not been drawn upon as of the date hereof. Amounts drawn on the loan bear interest at the bank's prime rate plus 0.625% and are repayable over a 60-month term.

As at December 31, 2003, Denison had 17,717,057 common shares outstanding. After December 31, 2003 and prior to March 8, 2004, Denison issued 953,500 common shares upon the exercise of stock options. On March 8, 2004, the outstanding common shares of Denison were consolidated on a 21 for 1 basis, resulting in 888,645 common shares being outstanding. Also on March 8, 2004, Denison issued 727,073 common shares for gross proceeds of approximately $5.3 million. On March 23, 2004, Denison issued 8,064,520 common shares pursuant to a long form prospectus dated March 10, 2004 for gross proceeds of approximately $125 million. On March 24, 2004, Denison

issued 7,427,039 common shares to the former shareholders of CWSL in connection with the acquisition by Denison of all of the outstanding shares of CWSL.

DESCRIPTION OF SHARE CAPITAL

Authorized Capital

The Corporation is authorized to issue an unlimited number of common shares.

Common Shares

The holders of common shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

PLAN OF DISTRIBUTION

Under an agreement dated August 10, 2004 (the "Underwriting Agreement") between the Corporation and the Underwriters, the Corporation has appointed the Underwriters as the sole and exclusive agents of the Corporation to offer the Offered Shares for sale, subject to the terms and conditions contained therein, at a price of $28.40 per Offered Share. The Underwriters have agreed that if less than all of the Offered Shares are sold by the Underwriters as agents, the Underwriters shall purchase, as principals, all of the Offered Shares not sold by the Underwriters as agents at the same price per Offered Share. Closing of the Offering is anticipated to occur on or about August 31, 2004, or on such later date as may be agreed upon by the Corporation and the Underwriters, but in any event not later than October 4, 2004 (subject to the termination right described below). The Corporation has agreed to pay the Underwriters a fee equal to $1.278 per Offered Share purchased by the Underwriters. The offering price per Offered Share was determined by negotiation between the Corporation and the Underwriters. All fees payable to the Underwriters will be paid on account of services rendered in connection with the Offering and will be paid out of the general funds of the Corporation.

The obligations of the Underwriters under the Underwriting Agreement are several and not joint and several, and may be terminated at their discretion upon the occurrence of certain stated events. The Underwriters are, however, obligated to take up and pay for all of the Offered Shares if any Offered Shares are purchased under the Underwriting Agreement.

Pursuant to policy statements of certain securities commissions, the Underwriters may not, during the period of distribution under this short form prospectus, bid for or purchase common shares of the Corporation. The foregoing restriction is subject to certain exceptions, on the condition that the bid or purchase not be engaged in for the purpose of creating actual or apparent trading activity in, or raising the price of, the common shares. These exceptions include a bid or purchase permitted under the by-laws and rules of the TSX relating to market stabilization and passive market-making activities and a bid or purchase made for and on behalf of a customer where the order was not solicited during the period of distribution. In connection with the Offering, and subject to the foregoing and to applicable law, the Underwriters may over-allot or effect transactions that stabilize or maintain the market price of the common shares at levels other than those that might otherwise prevail on the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares offered hereby have not been and will not be registered under the *United States Securities Act of 1933* (the "1933 Act") or any securities or "blue sky" laws of any of the states of the United States. Accordingly, the Offered Shares may not be offered or sold within the United States or to U.S. persons except in accordance with an exemption from the registration requirements of the 1933 Act provided by Rule 144A or in accordance with any other available exemption from registration under the 1933 Act. In addition, the Underwriting Agreement provides that the Underwriters will offer and sell securities outside the United States to any U.S. person only in accordance with Regulation S under the 1933 Act.

This short form prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares offered hereby in the United States. In addition, until 40 days after the announcement of the Offering, an offer or sale of the Offered Shares within the United States by any dealer, whether or not participating in the Offering, may violate the registration requirement of the 1933 Act if such offer or sale is made otherwise than in accordance with Rule 144A under the 1933 Act or in accordance with any other available exemption from registration under the 1933 Act.

The Corporation has agreed to indemnify the Underwriters and their affiliates and their respective directors, officers, employees and agents against certain liabilities.

The Corporation has agreed that it will not, without the prior consent of Peters & Co. Limited, on behalf of the Underwriters, pursuant to the Underwriting Agreement, which consent may not be unreasonably withheld, directly or indirectly, issue, sell, offer to sell, grant any option for the sale of, or otherwise dispose of any common shares or any securities convertible or exercisable into common shares (other than pursuant to the Corporation's stock option plan or the grant of deferred stock units or performance stock units and the issuance of common shares on the exercise thereof), agree to become bound to do so, or disclose to the public any intention to do so at any time prior to 90 days after the closing of the Offering.

The Corporation has applied to list the Offered Shares on the TSX. Listing will be subject to the Corporation fulfilling all of the listing requirements of the TSX.

RISK FACTORS

The securities offered hereby should be considered highly speculative due to the Corporation's recent change of business and the nature of such business as well as the Corporation's present stage of development. A prospective investor should consider carefully the risk factors set out below. In addition, prospective investors should carefully review and consider all other information contained and incorporated by reference in this short form prospectus before making an investment decision.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that anticipated trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter, when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. The duration of this period, commonly referred to as the "spring breakup", has a direct impact on the level of Calfrac's activities. Spring breakup occurs earlier in the year in southeastern Alberta than it does in northern Alberta and British Columbia. The timing and duration of spring breakup are dependant on

weather patterns but it generally occurs in April and May. Additionally, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the severity of the Canadian winters. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 55.5% of Calfrac's revenue for the six-month period ended June 30, 2003 and 55.2% for the six-month period ended June 30, 2004. The largest of these customers provided 49.7% of Calfrac's revenue for the six-month period ended June 30, 2003 and 49.4% of Calfrac's revenue for the six-month period ended June 30, 2004. Prior to December 23, 2003 this customer was also an equity shareholder of Calfrac. Calfrac has historically maintained an excellent relationship with this customer and has no reason to believe that there will be any change to this relationship in the future. Calfrac has two multi-year agreements to provide fracturing services to this customer which expire in August 2005 and December 2004, one of which includes minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance and will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Tax Matters

The Corporation has estimated tax pools of approximately $220 million for federal income tax purposes and $170 million for provincial income tax purposes. These amounts include non-capital losses of approximately $66 million, of which $27 million is expected to expire on December 31, 2004 and the remaining $39 million is expected to expire on December 31, 2008. The final amount of these tax pools will be determined when all of Denison's tax filings are completed.

The amount of the future tax asset and deferred tax credit in respect of the income tax pools available to the Corporation were estimated as some of the tax returns for the relevant period have yet to be prepared and filed. The income tax rates used to calculate the amount of the asset are based on available information on future income tax rates. The income tax authorities have not yet assessed or audited any of these pools.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from the Corporation's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Liabilities from Prior Operations

From time to time, there may be legal proceedings pending or threatened against the Corporation relating to the business of Denison prior to its reorganization and subsequent acquisition of CWSL. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation. See "Legal Proceedings" for a description of the legal proceedings currently against the Corporation in connection with the prior business of Denison.

In connection with the reorganization of Denison by way of plan of arrangement (the "Arrangement"), the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc. (now Forte Resources Inc.) and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. and each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Legal Proceedings".

Despite the indemnity provided to the Corporation by each of Denison Resources Inc. and Denison Mines Inc., it is possible that the Corporation may be found responsible for claims or losses relating to the assets and liabilities transferred from Denison to each of Denison Resources Inc. and Denison Mines Inc. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by the Corporation. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of Denison's former operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. The Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against Denison or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to Denison's prior ownership or operation of assets.

Denison Mines Inc. has assumed the liabilities and obligations of Denison under a loan from Cogema Resources Inc., one of Denison's former joint venture partners. Most of the productive assets of Denison Mines Inc. are part of the security granted in favour of Cogema Resources Inc. for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan based mining projects is dedicated to the loan's repayment. The impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to Denison cannot be determined at this time.

Claims and liabilities may arise against the Corporation as a result of Denison being a prior owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison, Denison Mines Inc., the federal government and the Ontario provincial government, Denison agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison, the federal government, the Ontario provincial government and Matco Capital Ltd., the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by the Corporation after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue the Corporation for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. The Corporation is not aware of any such statutory offense having occurred. The confirmation agreement among Denison, the federal government, the Ontario provincial government and Matco Capital Ltd. does not limit persons other than the federal government and the Ontario provincial government from making any claims against the Corporation in respect of Denison's ownership and operation of the Elliot Lake mining facility.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of the Corporation to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield employees is high, and the supply is limited. The unexpected loss of the Corporation's key personnel or the inability to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a service provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect its business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact the Corporation's net revenue.

Corporate Matters

To date, the Corporation has not paid any dividends on its outstanding common shares. The board of directors of the Corporation may make a determination to pay dividends in the future if circumstances permit.

Additional Financing

There is no guarantee that the Corporation will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of common shares or securities convertible into common shares from the Corporation's treasury, control of the Corporation may change and shareholders may suffer dilution to their investment. The Corporation's activities may also be financed partially or wholly with debt, which may increase the Corporation's debt levels above industry standards. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the directors of the Corporation are also directors of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as directors of the Corporation and as directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the *Business Corporations Act* (Alberta).

There may be situations in which the interests of the directors and management of, and consultants to, the Corporation may conflict with those of the Corporation. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to the Corporation. Any conflicts will be resolved in accordance with the provisions of the *Business Corporations Act* (Alberta) and other applicable laws.

ELIGIBILITY FOR INVESTMENT

In the opinion of Bennett Jones LLP, counsel to Calfrac, and Stikeman Elliott LLP, counsel to the Underwriters (collectively, "Counsel"), subject to compliance with the prudent investment standards and general investment provisions of the following statutes (and, where applicable, the regulations thereunder) and, in certain cases, subject to the satisfaction of additional requirements relating to investment or lending policies, procedures or goals, and, in certain circumstances, the filing of such policies, procedures or goals, the Offered Shares are not, at the date hereof, precluded as investments under or by the following statutes:

Insurance Companies Act (Canada)
Trust and Loan Companies Act (Canada)
Cooperative Credit Associations Act (Canada)
Pension Benefits Standards Act, 1985 (Canada)
Pension Benefits Standards Act (British Columbia)
Financial Institutions Act (British Columbia)
Alberta Heritage Savings Trust Fund Act (Alberta)
Employment Pension Plans Act (Alberta)
Insurance Act (Alberta)
Loan and Trust Corporations Act (Alberta)
The Pension Benefits Act, 1992 (Saskatchewan)
The Insurance Act (Manitoba)
The Pension Benefits Act (Manitoba)
The Trustee Act (Manitoba)
Loan and Trust Corporations Act (Ontario)
Pension Benefits Act (Ontario)
Trustee Act (Ontario)
an Act respecting insurance (Québec) (in respect of an insurer, as defined therein, incorporated under the laws of the Province of Québec, other than a guarantee fund)
an Act respecting trust companies and savings companies (Québec) (for a trust company investing its own funds and deposits it receives or a savings company, as defined therein, which invests its own funds)
Supplemental Pension Plans Act (Québec)

In the opinion of Counsel, provided the common shares of the Corporation are listed on a prescribed stock exchange at the relevant time and subject to the provisions of any particular plan, the Offered Shares will be a qualified investment, within the meaning of the Tax Act, for trusts governed by registered retirement savings plans, registered education savings plans, registered retirement income funds and deferred profit sharing plans. In the opinion of Counsel, based upon certain representations of the Corporation, the Offered Shares, if issued on the date hereof, would not constitute "foreign property" for the purposes of Part XI of the Tax Act.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby will be passed upon on behalf of Calfrac by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP.

LEGAL PROCEEDINGS

Various legal proceedings are pending against the Corporation in relation to Denison's prior operations. The Corporation considers all such pending proceedings, comprised primarily of labour and employment claims related to Denison's former oil and gas operations in Greece, as described below, to be routine litigation incidental to Denison's prior business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters are subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., respectively, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". The Corporation believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of the Corporation. However, the Corporation cannot predict the

outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this short form prospectus or any that may arise in the future will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation.

Greek Operations

In September 2002, the Athens Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of Denison, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Athens Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Athens Court of Appeal has been appealed by the employees to the Supreme Court of Greece. The hearing in the Supreme Court has been scheduled for November 8, 2005. The impact on the Corporation of any adverse decision in this appeal cannot be determined at this time.

Another set of employees of the Greek subsidiary of Denison has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This ruling was appealed and the appeal was heard on May 21, 2004 but no decision has been rendered. A third set of employees filed claims in 1999 with respect to their termination and severance. After several adjournments a hearing has been scheduled for December 2, 2004. The dollar impact on the Corporation of any adverse decision in these actions cannot be determined.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of Denison by OilHawk Resources Ltd. The claim is fully insured and being handled by the Corporation's insurer. Denison Resources Inc. (now Forte Resources Inc.) has also provided an indemnity to the Corporation pursuant to the Arrangement.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts. Denison Mines Inc. has provided an indemnity to the Corporation pursuant to the Arrangement.

Mining Claim

A letter was received by the Corporation from the Attorney General of the State of Maine claiming compensation relating to mining activities conducted 35 years ago in Blue Hill, Maine. Denison Mines Inc. (a company formed from the reorganization of Denison prior to their acquisition of Calfrac and now unrelated to Calfrac) has advised the Corporation in writing that it will indemnify it against any adverse consequences arising from this claim. In the financial statements prepared for Denison Mines Inc. at March 31, 2004, management expressed an opinion that the aggregate amount of any potential liability arising from this claim is expected to be immaterial.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of the Corporation are PricewaterhouseCoopers LLP, Chartered Accountants, Suite 3100, Petro-Canada Centre, 111 – 5th Avenue S.W., Calgary, Alberta, T2P 5L3.

Computershare Trust Company of Canada is the registrar and transfer agent for the Common Shares at is principal offices in Calgary, Alberta and Toronto, Ontario.

INTEREST OF EXPERTS

None of Bennett Jones LLP, Stikeman Elliott LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of the Corporation or of any associate or affiliate of the Corporation. Bennett Jones LLP and the officers and partners thereof as a group (excluding Martin A. Lambert, a partner of Bennett Jones LLP who is a director of the Corporation), and Stikeman Elliott LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of the Corporation and its associates and affiliates. Mr. Lambert's personal family holding company, Mountain Moon Capital Inc., is a shareholder of Matco Capital Ltd., which beneficially owns approximately 674,423 or 3.94% of the common shares of the Corporation prior to giving effect to the Offering.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITORS' CONSENT

We have read the short form prospectus of Calfrac Well Services Ltd. (the "Company") dated August •, 2004 relating to the sale and issuance of 1,000,000 common shares of the Company. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use through incorporation by reference in the above-mentioned short form prospectus of our report dated April 15, 2004 to the shareholders of Denison on the consolidated balance sheets of Denison as at December 31, 2003 and 2002 and the consolidated statements of earnings and retained earnings and cash flows for the years then ended.

CERTIFICATE OF THE CORPORATION

Dated: August 12, 2004

This short form prospectus, together with the documents incorporated herein by reference, constitutes full, true and plain disclosure of all material facts relating to the securities offered by this prospectus as required by the securities legislation of British Columbia, Alberta, Saskatchewan, Manitoba, Ontario, New Brunswick, Prince Edward Island, Nova Scotia and Newfoundland and Labrador. For the purposes of the Province of Quebec, this simplified prospectus, as supplemented by the permanent information record, contains no misrepresentation that is likely to affect the value or the market price of the securities to be distributed.

PROSPECTUS

New Issue

March 10, 2004

DENISON ENERGY INC.

$125,000,060
8,064,520 Common Shares

Denison Energy Inc. ("Denison" or the "Corporation") is offering 8,064,520 of its Common Shares (the "Offered Shares") at a price of $15.50 per share pursuant to this prospectus.

The offering price per Offered Share of $15.50 was determined by negotiation between Denison and Peters & Co. Limited, on its own behalf and on behalf of FirstEnergy Capital Corp. and RBC Dominion Securities Inc. (collectively, the "Underwriters").

In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Price: $15.50 per Common Share

	Price to the Public	Underwriters' Fee	Net Proceeds to the Corporation
Per Common Share	$15.50	$0.8525	$14.6475
Total	$125,000,060	$6,875,003	$118,125,057

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business and the success of this change cannot be assured. The Corporation does not have a history of paying dividends on its common shares. However, the board of directors may make a determination to pay dividends in the future if circumstances permit. Subscribers must rely upon the ability and integrity of the management of the Corporation. See "Risk Factors".

The Corporation has recently completed a reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd., has certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. — The Reorganization".

The Underwriters conditionally offer the Offered Shares, subject to prior sale, if, as and when issued by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution", subject to approval of certain legal matters on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP. In connection with the distribution of the Offered Shares, the Underwriters may engage in market stabilization activities. See "Plan of Distribution".

The common shares of Denison that are currently issued and outstanding are listed on the Toronto Stock Exchange (the "TSX") under the symbol "DEN". On March 9, 2004, the closing price of the common shares of Denison on the TSX, which does not reflect the reorganization of Denison into three separately traded companies, was $6.40. The TSX has conditionally approved the listing of the Offered Shares subject to fulfilling all of the requirements of such exchange, at which time the Common Shares will trade on the TSX under the symbol "DEI".

Subscriptions for the Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. It is expected that the closing of this offering will take place on or about March 23, 2004, and in any event not later than April 21, 2004.

SUMMARY

The following is a summary of the principal features of this offering and should be read together with the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the Glossary for an explanation of certain terms used in this prospectus and in this summary.

The Corporation

Introduction

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource-related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the reorganization of Denison, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. As at the date hereof, the Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd. and certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. – The Reorganization" for illustrations of the structure of Denison before and after the Reorganization, this offering and the Acquisition.

The completion of this offering will provide financing which will enable the Corporation to exercise the option to acquire the shares of Calfrac, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted Denison an irrevocable option to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million.

The net purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. No portion of the net purchase price may be paid by the issuance of Common Shares unless this offering has closed and the Common Shares issuable pursuant to this offering have been issued and delivered unconditionally to the subscribers under this offering.

If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of 7,427,039 Common Shares and the payment of approximately $28.8 million in cash.

Calfrac

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal ("NGC"), which is often referred to as coalbed methane.

The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fractures.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. NGC appears to have significant potential as an energy source and could result in additional demand for Calfrac's fracturing services. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; and (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services.

Calfrac was formed in 1999 by Ronald P. Mathison, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts. For the year ended December 31, 2003, Calfrac had: (i) revenue of approximately $156.6 million; (ii) income before interest, taxes, depreciation and amortization of approximately $41.8 million; (iii) income before taxes of approximately $30.6 million; and (iv) net income of approximately $19.6 million.

Corporate Strategy

If the acquisition of all of the shares of Calfrac occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the acquisition of all the shares of Calfrac occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac, and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the acquisition of all of the shares of Calfrac.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 50%, and net income increasing annually by a minimum of 29%, with an average of 51%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the acquisition of all of the shares of Calfrac occurs, the Corporation will be an oilfield services provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Calfrac's management recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows it to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

Selected Financial Information

The following table presents a summary of historical financial data for Calfrac for the years ended December 31, 2003, 2002 and 2001 and for the nine months ended September 30, 2003 derived from the financial statements of Calfrac at each of these dates and for the periods then ended. The following table also presents a summary of the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of 8,064,520 Common Shares for net proceeds of approximately $116.25 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of 7,427,039 Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the unaudited pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of Calfrac as at and for the years ended December 31, 2003, 2002 and 2001 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro forma financial statements of the Corporation. All financial information with respect to the Corporation and Calfrac has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

The following data should be read along with "Management's Discussion and Analysis Regarding Calfrac" and the financial statements and related notes of Calfrac included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

Notes:

(1) Derived from the audited financial statements.

(2) EBITDA, in respect of the Corporation, represents revenue after operating expenses, selling and general and administrative expenses, stock option expense and write-down of oil and gas properties, but before depreciation, depletion and amortization, amortization of intangibles, interest and income tax. EBITDA, in respect of Calfrac, represents income before interest, taxes, depreciation and amortization. EBITDA is not a term that is approved under Canadian GAAP, as the calculation of EBITDA is not always used consistently by reporting issuers. Accordingly, EBITDA, as the term is used herein, may not be comparable to EBITDA as reported by other entities. EBITDA is presented because it is frequently used by security analysts and others in evaluating companies and their ability to service debt.

(3) If the acquisition of all the shares of Calfrac occurs, the Corporation will have non-capital losses and unclaimed expenditures, in aggregate, equal to approximately $224.6 million for federal tax purposes and approximately $172.9 million for Alberta provincial tax purposes.

The Offering

Offering Price	$15.50 per Offered Share
Offered Shares	8,064,520 Common Shares
Closing	The closing of this offering is anticipated to occur on or about March 23, 2004, and in any event not later than April 21, 2004.
Use of Proceeds	The net proceeds to the Corporation from this offering are estimated to be $116.3 million, after deducting the Underwriters' fee of $6.875 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.9 million. The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac in connection with the recent repurchase of the interest of an equity shareholder of Calfrac; and (iii) approximately $29.1 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac. It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.
Eligibility for Investment	In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, provided the Common Shares are listed on a prescribed stock exchange at the time of closing of this offering, the Offered Shares will, on closing, be qualified investments within the meaning of the Tax Act for trusts governed by registered retirement savings plans, registered retirement income funds, registered education savings plans and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing, constitute "foreign property" under the Tax Act. See "Eligibility for Investment". In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on the closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Risk Factors

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of this offering and the acquisition of Calfrac. If such acquisition is not completed, the success of this change in business strategy cannot be assured. Although the Corporation does not have a history of paying dividends on its common shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. There are additional risks associated with an investment in these securities relating to: volatility of industry conditions, seasonality, alternatives to and changing demand for petroleum products, dependence on major customers, government regulation, sourcing of raw materials, pricing and availability of raw materials, Kyoto Protocol, operating risks and insurance, liability for prior operations, key personnel, competition in the industry, currency exchange risk, the absence of current business and anticipated acquisition of Calfrac and additional financing. In assessing the risks of an investment in the Offered Shares, subscribers must rely upon the ability and integrity of the management of the Corporation. **Subscribers should consult their own professional advisors to assess the income tax, legal and other aspects of an investment in the Offered Shares. See "Risk Factors".**

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below:

"**ABCA**" means the *Business Corporations Act* (Alberta);

"**Acquisition**" means the acquisition by the Corporation of all of the issued and outstanding shares of Calfrac pursuant to the Purchase Option;

"**Amalgamation**" means the amalgamation of the Corporation with Calfrac pursuant to section 184 of the ABCA;

"**Arrangement**" means the arrangement of the Corporation pursuant to section 182 of the OBCA;

"**Arrangement Agreement**" means the arrangement agreement among Denison, Tenwest Uranium Limited, Denison Mines Inc., Denison Resources Inc., Denison Oil Corporation, Denison Resources Partnership, Denison Mine Holding Corporation and E. Peter Farmer, as amended from time to time;

"**Calfrac**" means Calfrac Well Services Ltd.;

"**Calfrac USA**" means Calfrac Well Services Corp., a wholly owned subsidiary of Calfrac;

"**ChemErgy**" means ChemErgy Ltd.;

"**Cogema**" means Cogema Resources Inc.;

"**Common Shares**" means the common shares of the Corporation following the Arrangement;

"**Consolidation**" means the consolidation of 21 common shares of Denison into one Common Share pursuant to the Arrangement;

"**Continuance**" means the continuance of Denison as an Alberta corporation under section 188 of the ABCA;

"**Corporation**" or "**Denison**" means Denison Energy Inc.;

"**DJ Basin**" means the Denver-Julesburg Basin in Colorado;

"**Matco**" means Matco Capital Ltd., a corporation controlled by Matco Investments;

"**Matco Investments**" means Matco Investments Ltd., a private investment corporation;

"**NGC**" means natural gas from coal, also known as coalbed methane or "CBM";

"**OBCA**" means the *Business Corporations Act* (Ontario);

"**Offered Shares**" means the Common Shares offered pursuant to this prospectus;

"**Purchase Option**" means the purchase option agreement among Calfrac, Matco Investments (on behalf of itself and the other shareholders of Calfrac) and Denison granting an irrevocable option to Denison to purchase all of the issued and outstanding shares of Calfrac for an aggregate purchase price of approximately $227.5 million less the net debt of Calfrac, which is anticipated to be approximately $83.6 million for these purposes;

"**Reorganization**" means the Arrangement, the Subscription, the Continuance and certain related transactions, collectively;

"**Subscription**" means the subscription completed by the Corporation following the Arrangement pursuant to which the Corporation issued 727,073 Common Shares to Matco and investors designated by Matco for aggregate gross proceeds of approximately $5.3 million;

"**Tax Act**" means the *Income Tax Act* (Canada);

"**TSX**" means the Toronto Stock Exchange;

"**Underwriters**" means Peters & Co. Limited, FirstEnergy Capital Corp. and RBC Dominion Securities Inc.; and

"**Underwriting Agreement**" means the underwriting agreement dated March 10, 2004 among the Corporation and the Underwriters with respect to this offering.

Unless otherwise indicated, references herein to "$" or "dollars" are to Canadian dollars.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward-looking statements. When used in this document, the words "may", "would", "could", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect", and similar expressions, as they relate to the Corporation, are intended to identify forward-looking statements. Such statements reflect the Corporation's current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this prospectus under the heading "Risk Factors", "Selected Financial Information" and "Management's Discussion and Analysis Regarding Calfrac". Many factors could cause the Corporation's actual results, performance or achievements to vary from those described in this prospectus. Should one or more of these risks or uncertainties materialize, or should assumptions underlying forward-looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this prospectus contains forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding the Corporation's ability to maintain Calfrac's competitive position;
- expectations regarding the Corporation's ability to raise capital;
- treatment under governmental regulatory regimes;
- commodity prices; and
- exercise of the Purchase Option.

The Corporation's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this prospectus:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;
- liabilities and risks associated with prior operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource-related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the Arrangement, Denison has disposed of these interests. See "– The Reorganization – The Arrangement". The completion of this offering will provide financing which will enable the Corporation to exercise the Purchase Option, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

Corporate Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the Acquisition occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac, and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the Acquisition.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 50%, and net income increasing annually by a minimum of 29%, with an average of 51%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the Acquisition occurs, the Corporation will be an oilfield services provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Management of Calfrac recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows Calfrac to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

The Acquisition

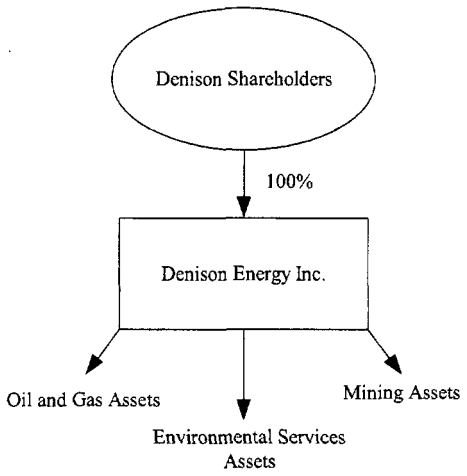
The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted an irrevocable option to Denison to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million. The following table illustrates the estimated net purchase price payable by the Corporation to the shareholders of Calfrac in the event the Corporation exercises the Purchase Option:

	(in millions)
Purchase price	$ 227.5
Established net debt as at December 30, 2003	(25.2)
Estimated debt assumed after December 30, 2003	(58.4)
Estimated net purchase price	**$ 143.9**

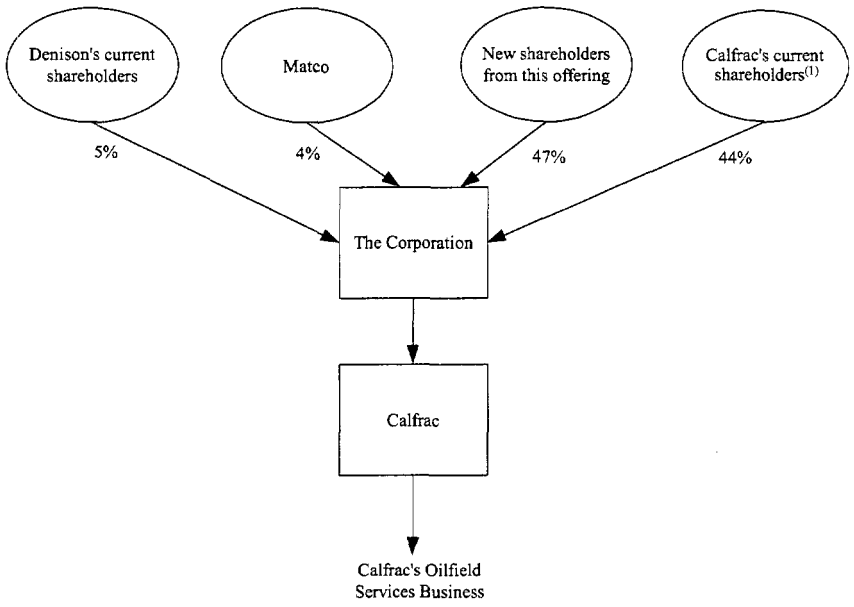
The net purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay in a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. The Purchase Option may be exercised by the Corporation during the period commencing on the date this offering is completed, or, in the event of payment only in cash, the date upon which the Corporation is a party to binding agreements that would enable it to exercise the Purchase Option, and ending on the earlier of the seventh day thereafter and March 26, 2004. The Purchase Option may not be exercised except on an all cash basis unless this offering has closed and the Common Shares issuable pursuant to this offering have been issued and delivered unconditionally to the subscribers under this offering.

If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of 7,427,039 Common Shares, representing 80% of the net purchase price, and the payment of approximately $28.8 million in cash, representing the remaining 20% of the purchase price. Each of Messrs. Mathison, Lambert, Ramsay, Dibb and Roberts, directly and indirectly, will receive



an amount proportionate to his shareholdings of the approximately $28.8 million that the Corporation anticipates paying to the shareholders of Calfrac as the cash portion of the net purchase price of the Acquisition. The balance of the purchase price of the Acquisition of approximately $115.1 million is anticipated to be paid by the issuance of Common Shares at an attributed price per share equal to the price of the Offered Shares.

The Reorganization



Pursuant to the Arrangement completed on March 8, 2004, Denison was restructured into three publicly traded companies, being: (i) Denison Mines Inc., a uranium mining and mining–related environmental services company; (ii) Denison Oil Corporation (the parent of Denison Resources Inc.), an oil and gas exploration and development company; and (iii) the Corporation, which holds the Purchase Option and certain other retained assets, has certain income tax attributes held by Denison prior to the Arrangement, and has retained certain claims and liabilities.

The following diagrams illustrate the structure of each of: (i) Denison before the Reorganization; and (ii) the Corporation after the Reorganization, this offering and the Acquisition.

Before the Reorganization

After the Reorganization, this Offering and the Acquisition

Note:
(1) Calfrac's current shareholders include Matco Investments. See "Principal Shareholders".

The Arrangement

The Arrangement resulted in:

- the amalgamation of Denison with Tenwest Uranium Limited, a wholly owned subsidiary of Denison;
- the transfer of all of Denison's Canadian petroleum and natural gas assets to Denison Resources Inc. and the assumption by Denison Resources Inc. of all liabilities of Denison related to such assets;
- the transfer of all of Denison's mining assets and mining environmental services related assets to Denison Mines Inc. and the assumption by Denison Mines Inc. of all liabilities relating to such assets;
- the distribution to each shareholder of Denison of common shares of each of Denison Oil Corporation (the parent of Denison Resources Inc.) and Denison Mines Inc.;
- the Corporation holding no material assets, other than the Purchase Option, having certain income tax attributes, and retaining certain claims and liabilities incurred prior to, or in connection with, the Arrangement. These claims and liabilities of the Corporation include expenses incurred by the Corporation in respect of the Reorganization, this offering and the Acquisition, certain quantifiable liabilities (estimated at approximately $4.5 million) and certain retained legal proceedings. See "Legal Proceedings";
- 21 pre-consolidation common shares of Denison being exchanged for one Common Share. The Consolidation reduced the number of outstanding common shares of Denison, after giving effect to the Arrangement, but prior to the Subscription, to approximately 888,645 Common Shares; and
- in accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses in respect of liabilities relating to the Canadian petroleum and natural

gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison Energy Inc.'s business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Risk Factors – Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of any claims arising from the prior business of the Corporation, including the retained legal proceedings, will not, individually or in the aggregate, have a material adverse effect on the Corporation (assuming the completion of this offering and the Acquisition).

The Subscription and Additional Directors

Following implementation of the Arrangement, Matco and investors designated by Matco acquired 727,073 Common Shares from treasury (representing 45% of the total number of issued and outstanding Common Shares after giving effect to the Subscription) at a subscription price of $7.35 per share for total proceeds to the Corporation of approximately $5.3 million.

On March 8, 2004, all of Denison's officers and all but three of Denison's directors resigned. At that time, three independent members of Denison's board, James S. Blair, Gregory S. Fletcher and Paul F. Little, continued as directors of the Corporation and were joined on the board by Ronald P. Mathison and Martin A. Lambert. Also on March 8, 2004, Martin A. Lambert was appointed the Interim Chief Executive Officer of the Corporation and David M. McGoey was appointed the Interim Chief Financial Officer of the Corporation.

Continuance

Also following implementation of the Arrangement, pursuant to the Continuance, the Corporation ceased to be a corporation incorporated under and governed by the OBCA and became a corporation continued under and governed by the ABCA.

Amalgamation, Name Change and Additional Directors

If the Acquisition is completed, the Amalgamation and a name change will be effected. Pursuant to the Amalgamation, Calfrac, as a wholly owned subsidiary of the Corporation following completion of the Acquisition, will be amalgamated on a vertical short form basis. In connection with the Amalgamation, the name of the Corporation will be changed to Calfrac's name, Calfrac Well Services Ltd.

If the Acquisition is completed, it is expected that Douglas R. Ramsay and R. Timothy Swinton will be appointed as additional directors of the Corporation, the officers disclosed under "Directors and Officers of the Corporation" and "Management" will be appointed, Mr. Lambert and Mr. McGoey will resign as Interim Chief Executive Officer and Interim Chief Financial Officer of the Corporation, respectively, and Mr. Lambert will continue to act as a director of the Corporation.

BUSINESS OF CALFRAC

Denison is considering changing the focus of its business to the oilfield services business and, in this regard, anticipates acquiring Calfrac pursuant to the Purchase Option. Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

Fracturing Services

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies, which services accounted for approximately 93% of Calfrac's revenue in 2003 and 91% of Calfrac's revenue in 2002. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone

within a reservoir to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone.

Conventional Hydraulic Fracturing

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fracture.

A considerable amount of technology is incorporated into the design of the fracturing fluid, which normally consists of proprietary chemicals which are combined with a base fluid. The final fluid can be gelled, emulsified or foamed and can be preceded by acid. In Canada, most fluids are energized by the introduction of liquid carbon dioxide or nitrogen gas. In addition to the complex chemical technology used for making the fracturing fluid, the fracturing process involves considerable engineering knowledge and experience to design the fracturing process to maximize the performance of the well. Each fracture is individually designed to take account of the specific temperatures, pressures, formation permeability and reservoir fluids expected in the producing zone in which fracturing will be performed. Calfrac's engineering staff provides technical evaluation and job design recommendations as an integral element of its fracturing service to the customer.

Hydraulic fracturing services involve the use of sophisticated equipment specifically designed and constructed for hydraulic fracturing. A complement or "spread" of equipment required to perform a conventional hydraulic fracturing job normally consists of the following:

- a blender to blend chemicals, base fluid and proppant into specific mixes of fracturing fluids;
- one or more high horsepower fracturing pumpers, with the number dependent upon the pumping pressure and rate required for the fracture;
- a chemical additive unit to hold and deliver each chemical in controllable quantities in order to blend the fracturing fluid; Calfrac often incorporates this unit into its blenders to increase efficiency and reduce the "footprint" of the spread at a particular well location;
- an iron truck or trailer used for transporting and rigging up the high-pressure lines or "iron" that connect the various components of the fracture spread and wellhead;
- a computer van equipped with monitoring, data recording, satellite communication and remote pumper controls to monitor and control the treatment and also record the data related to each phase of the fracture;
- one or more pumpers to pump the energizer (carbon dioxide or nitrogen); and
- various equipment to transport, store and deliver the proppant and energizer.

The traditional or stage fracture procedure for stimulating a multi-zone well involves numerous trips to the well location with each trip stimulating only one or two of the zones. In recent years, procedures have been developed so that all of the zones for a particular well can be fractured in just one trip to the well location. This procedure, using snubbing units for deeper, more highly pressurized wells and coiled tubing rigs for shallower wells, involves moving the target zone up or down the wellbore by raising or lowering tubing and requires the use of specialized tools that can isolate the target zone for treatment. The ability to complete the fracturing services for a multi-zone well in one trip to the well location has become increasingly attractive to customers, as it reduces the traffic to the well location and the resulting disturbance to the landowners and allows the well to be brought into production more quickly. In addition, this procedure simplifies the coordination of the logistics of the fracturing completion.

Fracturing for Natural Gas Found in Coal

Calfrac has identified the market niche of supplying hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada as one in which it seeks to be the leading provider.

NGC is often referred to as coalbed methane. In the United States, NGC production has increased from 0.2 billion cubic feet per day prior to 1990 to 4.4 billion cubic feet per day in 2002, representing approximately 8% of the total natural gas production in the United States.

Alberta and British Columbia have vast coal resources that may be a potential source of significant commercial quantities of NGC and this natural gas source has the potential to make a significant contribution to western Canada's future energy supply. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

NGC is referred to as an "unconventional" form of natural gas. NGC is produced by reducing the pressure in a coal seam to enable the methane gas to flow through fractures, or cleats, in the coal into the wellbore. The natural gas then flows up to the surface. When few natural fractures exist, producers may use hydraulic fracturing to create channels in the coal.

Natural gas found in coal is generally "sweet" not "sour" gas, as it does not contain hydrogen sulphide. NGC is generally 85% to 95% pure methane, with small amounts of carbon dioxide and nitrogen. NGC is generally produced at lower pressures than conventional natural gas and is generally of a nature that is near-pipeline quality when produced, requiring minimal processing.

A key challenge to NGC production in Alberta is the generally low permeability of coals with the highest natural gas concentrations (e.g., coal located in the Mannville formations) and the moderate to low natural gas concentrations of higher permeability coals (e.g., coal located in the Horseshoe Canyon and Ardley formations). Coal located in the Horseshoe Canyon formations is relatively shallow and may contain approximately 20 individual thin coal seams with interbedded shale and sandstone zones, which often contain natural gas. These zones are attractive multi-zone completion targets for producers of natural gas. Most importantly, these coal seams are dry and therefore produce no water. These coal seams are also found in areas where existing well, natural gas plant and pipeline infrastructure currently exists, which reduces production costs. Alberta's first commercial NGC production projects are located in the Horseshoe Canyon formation in south-central Alberta.

As a result of its extensive involvement in various pilot projects evaluating the viability of NGC production in western Canada, Calfrac, along with its customers, has developed an unconventional method of fracturing NGC wells performing multi-zone fractures through coiled tubing by pumping nitrogen gas, without the use of proppant, fluid or chemicals.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. Reliable information on the number of NGC wells drilled in Alberta in 2003 is not readily available. However, Calfrac has received information from the National Energy Board and the Alberta Energy and Utilities Board that approximately 300 to 500 NGC wells were drilled in Alberta in 2003, representing 2.7% to 4.5% of the 11,067 natural gas wells drilled in Alberta in 2003. Calfrac hydraulically fractured 224 of these wells, representing approximately 8% of Calfrac's aggregate fracturing revenue in 2003 compared to approximately 2% in 2002. The National Energy Board has predicted that the pace of NGC extraction will increase steadily to 1,200 wells being drilled in 2005.

Stimulation and Other Well Services

Calfrac provides stimulation and other well services to exploration and production companies in western Canada. Revenues from well stimulation services accounted for 7% of Calfrac's revenue in 2003 and 9% of Calfrac's revenue in 2002.

Coiled Tubing Services

Calfrac injects coiled tubing into wells to perform various well-servicing operations. Coiled tubing consists of continuous, high pressure, flexible, small diameter steel pipe in various lengths up to several thousand meters mounted on a reel on a truck or trailer. Coiled tubing units are often used together with the appropriate support equipment to pump nitrogen, acid or air in order to remove unwanted corrosive acids, solids, gels and fluids from

the wellbore and producing zone. Coiled tubing units can also be used to set and remove tools, perform well abandonments and set siphon or velocity strings, which promote the production of natural gas without the accumulation of fluid in the wellbore.

Acidizing Services

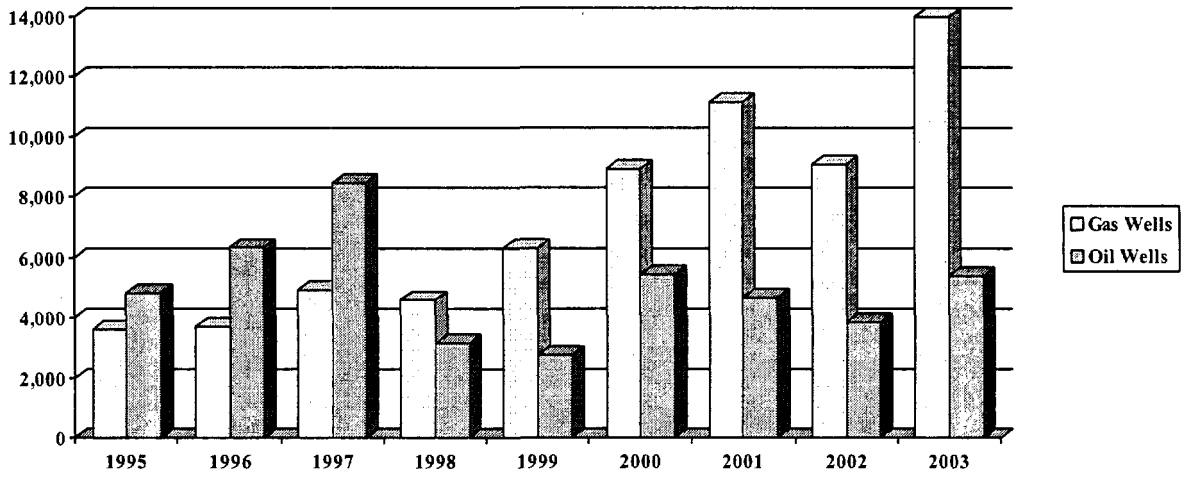
Acidizing involves pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids.

Nitrogen Services

Nitrogen is added to acid blends to provide additional energy to assist in the clean out of unwanted materials and sediments in order to enhance the well flow rate. Nitrogen is also used for removing fluids from wellbores, purging vessels and pressure testing operations. Nitrogen services are used principally in applications supporting Calfrac's coiled tubing and fracturing services. Nitrogen is often pumped into the wellbore to improve safely the recovery of introduced or produced fluids, while reducing the potential for damaging the formation.

Customer Base

Calfrac's customer base consists of in excess of 150 oil and gas exploration and production companies, ranging from large multinational companies to small private companies. Calfrac has established and maintains a number of key relationships with active customers.



Notwithstanding Calfrac's significant customer base, the majority of Calfrac's revenue comes from two large customers. These two customers provided 59% of Calfrac's revenue in 2003. The largest of these customers provided 52% of Calfrac's revenue in 2003 and 57% of Calfrac's revenue in 2002. No other customer provided in excess of 5% of revenue in either of these periods. See "Risk Factors – Dependence on Major Customers" for additional information in respect of Calfrac's customers.

Demand for Hydraulic Fracturing Services

The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of natural gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

The number of natural gas wells completed each year is believed by management to be a good indicator of the potential level of fracturing activity. The chart below illustrates the substantial increase in the number of natural gas wells completed each year since 1995, from 3,614 in 1995 to 13,944 wells in 2003, as the number of natural gas wells completed has become a larger proportion of the total number of wells completed each year in western Canada.

Wells Completed In Western Canada[(1)]

Note:
(1) Source: Nickle's Daily Oil Bulletin

Although Calfrac provides fracturing services to all segments of the oil and gas industry, it has historically focused on the shallow natural gas well segment located in southern and eastern Alberta. For the past five years, the average depth of the wells completed in Canada has averaged less than 1,100 metres (Nickle's Daily Oil Bulletin). Wells of this depth are generally classified as shallow and are located mainly in southern and eastern Alberta. This segment is, and management believes will continue to be, an important and consistent source of revenue to Calfrac. For this reason, Calfrac first commenced operations from a base in Medicine Hat.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. See "Risk Factors – Seasonality".

Competition and Marketing Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the DJ Basin.

Each of the markets in which Calfrac participates is highly competitive. Fracturing services are generally provided to exploration and production companies through a competitive bid process for either individual wells or multi-well projects. Successful bids are the result of high customer satisfaction from past services provided and business relationships. Calfrac has developed extensive client contacts and built strong personal relationships with

customers. Exploration and production companies also enter into agreements with service companies to provide fracturing services for multiple wells for periods of, generally, up to two years. However, these agreements seldom contain binding commitments for a minimum amount of fracturing work. Based on its expertise in providing hydraulic fracturing services and its strong business relations with its two most important customers, Calfrac has entered into four multi-year agreements with these customers to provide fracturing services to them, with three of these agreements providing a minimum quantity of fracturing services to be provided by Calfrac during the term thereof.

Calfrac believes that it provides superior service to customers through its experienced management and work force, unique chemical technology and modern and innovative equipment. Calfrac's management has extensive experience and strong business relationships in the oilfield service industry in western Canada and, as a result of a flat management structure, is actively involved in the daily operations of Calfrac.

Intellectual Property

Calfrac's research and development efforts are focused on providing specific solutions to the challenges experienced by oil and gas exploration and production companies when fracturing and stimulating wells. Calfrac's success in hydraulic fracturing has been facilitated by its ability to provide proprietary blends of chemicals that, together with its technical expertise and innovative equipment, result in customers' wells being more productive.

Calfrac conducts a significant amount of its research and development in conjunction with ChemErgy, a company in which Calfrac has a 30% ownership interest. ChemErgy is engaged in research and development relating to new systems and chemicals in connection with oilfield services. ChemErgy also supplies chemical products and provides quality control and logistical services for the products supplied. In accordance with an exclusive relationship agreement between Calfrac and ChemErgy, ChemErgy is required to supply products to and perform research and development for Calfrac on an exclusive basis and Calfrac is required to acquire all of the chemical products used in its business from ChemErgy. The exclusive relationship agreement with ChemErgy will terminate on May 31, 2011 and will be automatically renewed for one year renewal terms unless terminated with notice by either party. ChemErgy operates a fully-equipped laboratory in Calgary staffed with chemical engineers, chemists and technicians who are experienced in developing technologies to be used in oilfield operations and implementing these procedures in the field.

Where possible, Calfrac and ChemErgy undertake to protect intellectual property which they develop through joint applications for patent protection. Calfrac and ChemErgy currently have two patents pending on chemical systems used to deliver fracturing services.

Facilities, Equipment and Personnel

Calfrac provides hydraulic fracturing and well stimulation services from its corporate head office in Calgary and four field stations located in Medicine Hat, Red Deer and Grande Prairie, Alberta, and in Platteville, Colorado.

Calfrac owns a significant complement of fracturing equipment which, as at December 31, 2003, includes nine conventional fracturing spreads, incorporating 20 fracturing pumpers rated to a total of 45,000 horsepower, and one NGC fracturing spread with eight high rate nitrogen pumpers. Calfrac's well stimulation equipment includes two combination nitrogen-acid pumpers, two acid pumpers, two deep coiled tubing units and eight shallow coiled tubing units. Calfrac's total fleet of 132 large vehicles is comprised of 37 trucks with mounted equipment and 95 tractor/trailer units. Calfrac is currently constructing a tenth conventional and a second NGC fracturing spread, both of which are expected to be operational in the first half of 2004.

As at December 31, 2003, Calfrac employed 342 people in Canada and Calfrac USA employed 40 people. None of the employees of Calfrac or Calfrac USA are unionized.

change of control, such officer is entitled to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

In addition, each of Messrs. Ramsay, Dibb and Roberts has entered into an agreement with Calfrac whereby he has waived any change of control or other rights he may have pursuant to his employment agreement provided that the Reorganization and the Acquisition occur as described herein. These agreements also provide that, in the event that a change of control occurs other than on the basis contemplated herein, each of such officers is entitled to exercise his right to terminate his employment and receive the severance payment described above. In addition, in such circumstances, each of such officers may elect not to receive the severance payment, and in consideration therefor, the officer will be released and discharged from the non-competition restrictions of his employment agreement.

Six additional officers and key employees of Calfrac have each signed an agreement with Calfrac providing that each employee will continue his employment with Calfrac or the Corporation, as applicable, until at least June 30, 2004 under such employee's current employment terms. In the event that either or both Mr. Mathison or Mr. Ramsay resign or are terminated as Chairman or Chief Executive Officer, respectively, of either Calfrac or the Corporation, as applicable, on or prior to June 30, 2004, the employee may elect to terminate his employment prior to June 30, 2004 and will receive a termination payment equal to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

As at March 8, 2004, the officers and directors of the Corporation, as a group, beneficially own, directly or indirectly, 697,732 Common Shares. Assuming that they do not subscribe for any of the Offered Shares, the officers and directors of the Corporation and the persons proposed to be officers and directors of the Corporation, after giving effect to the Acquisition, as a group, will own or exercise control over approximately 44% of the outstanding Common Shares in the event of completion of this offering and the Acquisition (on the basis that the net purchase price is paid by the issuance of 7,427,039 Common Shares and the payment of approximately $28.8 million in cash).

The term of office of each of the directors of the Corporation will expire at the next annual meeting of the shareholders.

MANAGEMENT

The following is a brief description of the current directors and senior officers of the Corporation and the proposed directors and senior officers in the event that this offering and the Acquisition are completed.

Ronald P. Mathison, Director and Chairman

Mr. Mathison is the President and Chief Executive Officer of Matco Investments, a private investment company specializing in the restructuring of financially troubled companies as well as providing capital and management expertise to such companies. Mr. Mathison has extensive experience in restructuring and financing corporations in both the public and private markets. Until October 2000, Mr. Mathison was a director of Peters & Co. Limited, an investment firm specializing in the oil and gas industry, and prior to 1999 was also a principal of Peters & Co. Limited's corporate finance department. Prior thereto, Mr. Mathison and two other individuals formed the nucleus of Peters & Co. Capital, a private merchant banking entity that is widely associated with numerous successful restructurings of oil and gas and oil and gas service companies. Mr. Mathison received a B.Comm. (Honours) from the University of Manitoba in 1979 and obtained his Chartered Accountant designation in 1982. Mr. Mathison also holds the designation of Chartered Business Valuator, obtained in 1989, and of Chartered Financial Analyst, obtained in 1990. Mr. Mathison is the sole shareholder of Matco Investments, which controls Matco. Mr. Mathison is the Chairman of Hawker Resources Inc. Mr. Mathison was a founder of Calfrac and has been the Chairman of Calfrac since its formation in 1999.

Douglas R. Ramsay, Director, President and Chief Executive Officer

Mr. Ramsay was a founder of Calfrac and has been the President and Chief Executive Officer of Calfrac since its formation in 1999. Mr. Ramsay has an extensive background in the oil industry. Prior to 1994, Mr. Ramsay was the

President of Canadian Fracmaster Ltd. where he spent 12 years enhancing the overall presence of Fracmaster Ltd. in Canada and worldwide. Previous industry experience as a Project Manager for Delta Consultants, Drilling and Completions Foreman for Dome Petroleum Corp. and Service Supervisor for BJ Well Services Company has contributed to Mr. Ramsay's overall knowledge of the industry.

Mr. Ramsay holds a diploma in Petroleum Technology from Southern Alberta Institute of Technology and is a certified Registered Engineering Technologist.

Gordon A. Dibb, Executive Vice President and Chief Financial Officer

Mr. Dibb was a founder of Calfrac and has been the Executive Vice President and Chief Financial Officer of Calfrac since its formation in 1999. Mr. Dibb has over 20 years of oilfield service industry experience in a senior financial capacity, having worked as executive Vice President Business Development for Trace Exploration, Vice President Finance and Chief Financial Officer for Artisan Corporation, Vice President Administration for Nabors Drilling International Limited, Chief Operating Officer for Destiny Resource Services Corp. and Vice President Finance for Nabors Drilling Ltd. Mr. Dibb also has experience in South Africa working in other industries.

Mr. Dibb is a Chartered Accountant, qualified in both South Africa and Canada, and a member of the Alberta Institute of Chartered Accountants.

Robert S. Roberts, Senior Vice President and Chief Operating Officer

Mr. Roberts was a founder of Calfrac and has been the Senior Vice President and Chief Operating Officer of Calfrac since its formation in 1999. Mr. Roberts has significant industry experience with over 35 years in the pumping service industry. Mr. Roberts previously held senior management positions with Fracmaster Ltd. in its Canadian, United States, South American, Middle East and Russian Operations. Prior to 1996, Mr. Roberts was the Executive Vice President of Fracmaster Ltd.

James S. Blair, Director

Mr. Blair has served as a director of Denison since May of 2002. Mr. Blair is President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in western Canada, offshore eastern Canada and Asia. Mr. Blair is a director of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta. His studies concentrated on resource economics and international trade.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison since May of 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. and prior to 1997 he was President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

Martin A. Lambert, Director and Interim Chief Executive Officer

Mr. Lambert is a partner with the Bennett Jones LLP law firm, having served as Chief Executive Officer of the firm from 1996 to 2000. Mr. Lambert has been widely recognized as one of Canada's leading merger and acquisitions lawyers, including having recently been named by the National Post as one of Canada's top 30 deal makers, and is a senior member of the firm's mergers and acquisitions team. Mr. Lambert's directorships include Oil States International Inc. and zed.i solutions.inc, both oilfield services firms, as well as Hawker Resources Inc. and Bear Creek Energy Ltd., both oil and gas exploration and production companies. Mr. Lambert's family holding corporation, Mountain Moon Capital Inc., is a shareholder of Matco. Mr. Lambert was appointed Interim Chief Executive Officer of the Corporation on March 8, 2004 and is expected to resign such position upon the anticipated appointment of Douglas Ramsay as Chief Executive Officer. Mr. Lambert is expected to continue to act as a director of the Corporation.

Paul F. Little, Director

Mr. Little has served as a director of Denison since May of 1997. Mr. Little is President of Westover Investments Inc., an investment company. From 1986 to 1999 he was a principal of the Toronto-based merchant bank, Gornitzki, Thompson & Little and President of GTL Securities Inc., a related securities dealer. Mr. Little serves on a number of other public company boards including The Nautilus Group, Inc., Medisystem Technologies, Inc., Pason Systems, Inc. and World Point Terminals, Inc. He is Chairman of Echelon General Insurance Company, a private company, and is a member of the Board of Visitors of the Graziadio School of Business at Pepperdine University. Mr. Little is a Chartered Accountant and holds an M.B.A. from the University of British Columbia.

R. Timothy Swinton, Director

Mr. Swinton has extensive experience in the oilfield services industry. He is currently Chairman of NQL Drilling Tools Inc., a position he has held since 2003, and a director of Anderson Energy Ltd., a private oil and natural gas exploration and production company. Since June 1997, Mr. Swinton has been President of Western Provinces Resources Ltd, a private investment company. From 1999 to 2001, he was the Executive Chairman of IPEC Ltd., a Canadian pipeline and oilfield construction company. Prior thereto, Mr. Swinton was Chairman and Chief Executive Officer of Kenting Energy Services Inc., and Chairman, President and Chief Executive Officer of EnServ Corporation. Mr. Swinton has also served on the boards of directors of a number of energy services and other energy-related public companies, including Koch Pipelines Canada Limited, Enserco Energy Service Company Inc. and Anderson Exploration Ltd.

David M. McGoey, Interim Chief Financial Officer

Mr. McGoey is the Chief Financial Officer at Ross Smith Energy Group, a private engineering consulting firm, a position he has held since 1998. Mr. McGoey is President of David M. McGoey Professional Corporation since 1992 and Chief Financial Officer of each of Securex Limited (since 2003) and CMQ Resources Inc. (since 2003). Mr. McGoey was also Chief Financial Officer of Tristone Capital LLC from 2001 to 2002. He has been a Chartered Accountant for over 20 years, a Certified Public Accountant for three years and has over 20 years of public accounting experience. Mr. McGoey is a director of Destiny Resource Services Corp. Mr. McGoey was appointed Interim Chief Financial Officer of the Corporation on March 8, 2004 and is expected to resign upon the anticipated appointment of Mr. Gordon Dibb as Chief Financial Officer of the Corporation.

PRINCIPAL SHAREHOLDERS

To the best of the knowledge of the directors and officers of the Corporation, the following table sets forth the shareholdings of those persons who are the direct or indirect beneficial owners of or exercise control or direction over 10% or more of any class of voting shares of the Corporation as at the date hereof and after giving effect to this offering and the Acquisition:

Shareholder	Designation of Class	Type of Ownership	Number of Shares	% of Class	Number of Shares After Giving Effect to this Offering and the Acquisition[1][2]	% of Class After Giving Effect to this Offering and the Acquisition[1][2]
Matco Investments	Common	Beneficial	674,423	42%	4,488,965 [3][4]	26%

Notes:

(1) Assuming the Purchase Option is exercised and the purchase price is paid by the issuance of 7,427,039 Common Shares and the payment of approximately $28.8 million in cash, Matco Investments will acquire an additional 3,814,542 Common Shares pursuant to the Acquisition.

(2) Assuming the named entity does not acquire additional Common Shares pursuant to this offering.

(3) Includes 788,730 Common Shares held indirectly by Ronald P. Mathison, Chairman and a director of the Corporation. To the knowledge of the Corporation, the only shareholder holding, directly or indirectly, greater than 10% of the outstanding shares of Matco Investments is Mr. Mathison.

(4) Includes 674,423 Common Shares acquired by Matco pursuant to the Subscription. To the knowledge of the Corporation, the only entities with an interest of greater than 10% in Matco are Matco Investments and Mountain Moon Capital Inc. To the knowledge of the Corporation, the only shareholders holding, directly or indirectly, greater than 10% of Mountain Moon Capital Inc. are members of the immediate family of Martin Lambert, a director of the Corporation.

PLAN OF DISTRIBUTION

Under an agreement dated March 10, 2004 (the "Underwriting Agreement") among the Corporation and each of the Underwriters, the Underwriters have agreed to act as, and the Corporation has appointed the Underwriters as the sole and exclusive agents of the Corporation to offer the Offered Shares for sale, subject to the terms and conditions contained therein, at a price of $15.50 per share. The Underwriters have agreed that if less than all of the Offered Shares are sold by the Underwriters as agents, the Underwriters shall purchase, as principals, all of the Offered Shares not sold by the Underwriters as agents at the same price per share. Pursuant to the Underwriting Agreement, closing of this offering is to occur on or about March 23, 2004, but in any event not later than April 21, 2004. The purchase price of $15.50 per Offered Share is payable by the Underwriters to the Corporation against delivery of the Offered Shares. The Corporation has agreed to pay the Underwriters a commission of 5.5% of the gross proceeds or $0.8525 per Offered Share. The obligations of the Underwriters under the Underwriting Agreement are several and may be terminated at their discretion on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events. The Underwriters are, however, obligated to take up and pay for all Offered Shares if any are purchased under the Underwriting Agreement.

The TSX has conditionally approved the listing of the Offered Shares subject to the Corporation fulfilling all of the requirements of such exchange, at which time the Common Shares, which are currently traded on the TSX under the symbol "DEN", will trade under the symbol "DEI".

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering. In this event, the Corporation would prepare and send to shareholders an information circular that contains prospectus level disclosure regarding the proposed use of the proceeds of this offering.

Pursuant to policy statements of certain securities commissions, the Underwriters may not, throughout the period of distribution under this prospectus, bid for or purchase Common Shares. The foregoing restriction is subject to exceptions, including a bid or purchase permitted under the rules of the TSX relating to market stabilization and passive market making activities and a bid or purchase made for or on behalf of a customer where the order was not solicited during the period of distribution, provided that the bid or purchase was not engaged in for the purpose of creating actual or apparent trading in, or raising the price of, the Common Shares. In connection with this offering, and subject to the foregoing, the Underwriters may effect transactions which stabilize or maintain the market price of the Common Shares at levels other than those which might otherwise prevail in the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any securities or "blue sky" laws of any of the states of the United States. Accordingly, the Offered Shares may not be offered or sold within the United States or to U.S. persons unless an exemption from registration is available.

This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares in the United States. In addition, until 40 days after the announcement of this offering, an offer or sale of the Offered Shares within the United States by any dealer, whether or not participating in the offering, may violate the registration requirement of the U.S. Securities Act if such offer or sale is made otherwise than in accordance with an available exemption from registration under the U.S. Securities Act.

The Corporation has agreed that it will not, without the prior consent of the lead Underwriter pursuant to the Underwriting Agreement, which consent may not be unreasonably withheld, authorize, issue or sell any Common Shares or any securities giving the right to acquire Common Shares (other than the Offered Shares, the Common Shares to be issued pursuant to the Acquisition and securities issued in connection with an arm's length acquisition of assets or an arm's length acquisition of or merger, consolidation or amalgamation with any company or companies), or agree or announce any intention to do so, at any time prior to 120 days after the closing of this offering. In addition, each of Matco Investments, Matco, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has agreed that it or he will not, without the prior consent of the lead underwriter, which consent is not to be unreasonably withheld, sell or otherwise dispose of any Common Shares received pursuant to the Acquisition at any time prior to two years after the closing of this offering. Upon the expiry of such two year period, these shareholders will be entitled to sell or otherwise dispose of 40% of such Common Shares. Thereafter, the remaining 60% of the Common Shares held by such shareholders may be sold or otherwise disposed of in equal installments upon the expiry of six and twelve months, respectively.

CAPITALIZATION OF THE CORPORATION

The following table sets forth the consolidated capitalization of the Corporation as at December 31, 2002, as at September 30, 2003 and as at September 30, 2003 after giving effect to the Reorganization, this offering and the Acquisition and the other transactions described in the notes to the unaudited pro forma financial statements (collectively, the "Transactions"):

	Authorized	Outstanding as at December 31, 2002 (audited)[1]	Outstanding as at September 30, 2003 (unaudited)	Outstanding as at September 30, 2003 after giving effect to the Transactions (unaudited)
Long-term debt	nil	$43,558,000	$43,097,000	$8,206,000
Common Shares[2]	unlimited	$5,568,000 (17,705,724 shares)[3]	$5,568,000 (17,705,724 shares)[3]	$94,176,000 (17,107,277 shares)[4][5][6]

Notes:

(1) Derived from the audited financial statements of Denison.
(2) On March 8, 2004, the stock option plan of Denison was terminated and no stock options are currently outstanding.
(3) Prior to giving effect to the Consolidation.
(4) After giving effect to the Consolidation.
(5) Pursuant to the Subscription, the Corporation issued 727,073 Common Shares for gross proceeds of approximately $5.3 million.
(6) Assuming that the Purchase Option is exercised and that the purchase price is paid by the issuance of 7,427,039 Common Shares and approximately $28.8 million in cash.

CORPORATE HISTORY

Denison

Denison is the continuing corporation formed by the amalgamation under the OBCA of Denison Mines Limited and Stanrock Uranium Mines Limited pursuant to articles of amalgamation filed on February 12, 1973. Denison

amended its articles on July 26, 1983 to create a class of 24 million preferred shares issuable in series, of which 6 million 9¾% Cumulative Redeemable Preferred Shares Series A (the "Preferred Shares Series A") were issued on August 8, 1983. On March 2, 1984 Denison amended its articles to create an unlimited number of Class A Voting Participating Shares without par value ("Class A Shares") and an unlimited number of Class B Non-Voting Participating Shares without par value ("Class B Shares"), and each issued and outstanding common share was changed into one Class A Share and one Class B Share. On March 7, 1985, Denison issued 7 million 9½% Cumulative Redeemable Preferred Shares Series B (the "Preferred Shares Series B"). On June 22, 1992, Denison amended its articles to provide for a minimum of three and a maximum of fifteen directors.

Effective December 21, 1995, the articles were amended: to create an unlimited number of new common shares; to provide that Denison was no longer authorized to issue Preferred Shares Series A, Preferred Shares Series B ("Preferred Shares"), Class A Shares or Class B Shares; to delete the rights, privileges, restrictions and conditions of the Preferred Shares, Class A and Class B Shares; and to provide that, after giving effect to the foregoing, Denison was authorized to issue an unlimited number of common shares. Effective December 21, 1995, each Preferred Share was reclassified into 25 common shares, and each Class A Share and each Class B Share was reclassified into one common share.

Effective May 24, 2002, the articles were amended to change the name of Denison from Denison Mines Limited to Denison Energy Inc., and to implement a share consolidation on the basis of one new common share for each 20 pre-consolidation common shares.

The head office and registered office of Denison is located at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2. If this offering and the Acquisition are completed, the head and registered offices of Calfrac will become the head and registered offices of Denison.

Calfrac

Calfrac was incorporated under the provisions of the ABCA on June 28, 1999 as "836570 Alberta Ltd." and changed its name to "Calfrac Well Services Ltd." by way of articles of amendment filed on September 28, 1999. Calfrac is the continuing corporation formed by the amalgamation under the ABCA of 850288 Alberta Ltd. and Calfrac pursuant to articles of amalgamation filed on January 1, 2000.

Calfrac's head office is located at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 and its registered office is located at Suite 751, 815 – 8th Avenue S.W., Calgary, Alberta T2P 3P2.

Calfrac has one wholly owned subsidiary, Calfrac USA, incorporated in the state of Colorado, United States on May 24, 2001. Calfrac USA provides fracturing and work-over services to oil and gas customers in the Rocky Mountain area of the United States.

Calfrac also owns 30% of the issued and outstanding shares of ChemErgy.

General Development of the Business of Calfrac

Calfrac was a private corporation founded in June 1999 by Messrs. Mathison, Ramsay, Dibb and Roberts. Calfrac commenced operations in August 1999 from its field station in Medicine Hat, Alberta with a coiled tubing unit. On September 2, 1999, Calfrac successfully completed its first hydraulic fracturing treatment.

In December 1999, Calfrac acquired all of the issued and outstanding shares of Calfrac Limited, which company completed the acquisition of all of the issued and outstanding shares and warrants of DynaFrac Well Services Inc. ("DynaFrac") on December 22, 2000. DynaFrac subsequently distributed its assets and liabilities to Calfrac Limited and was dissolved on December 27, 2001. Calfrac Limited distributed all of its assets and liabilities to Calfrac and was subsequently dissolved on December 28, 2001. Calfrac acquired a two-pumper spread, a shallow coiled tubing unit, a high rate nitrogen pumper and four acid pumpers through its indirect acquisition of DynaFrac.

On November 10, 1999, 850288 Alberta Ltd., a wholly owned subsidiary of Calfrac, acquired two deep and one shallow coiled tubing units, two combination nitrogen-acid pumpers and other support equipment from the Coiled Tubing Division of Serval Corporation. On January 1, 2000, 850288 Alberta Ltd. and Calfrac were amalgamated.

Calfrac's second and third spreads of fracturing equipment became operational in December 1999. At this time, Calfrac acquired a small facility in Red Deer, which became functional as a field facility in January 2000.

In February 2000, Calfrac acquired 851350 Alberta Ltd. in exchange for the issuance of 2,125,000 shares of Calfrac. 851350 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to provide the fracturing services required under this contract, Calfrac constructed a new spread of fracturing equipment specifically designed to stimulate the customer's shallow natural gas wells, which equipment constituted Calfrac's fourth spread of fracturing equipment.

During the last half of 2000, Calfrac added another fleet of fracturing equipment to constitute its fifth spread of fracturing equipment. In October 2000, Calfrac leased premises in Grande Prairie to establish a field station to facilitate the expansion of operations into northern Alberta and British Columbia.

During the summer of 2001, Calfrac commissioned its sixth spread of fracturing equipment. At this time, Calfrac also constructed and commenced operations with two additional coiled tubing units designed for shallow well operations but with more powerful compressors than its then existing equipment.

In April 2001, Calfrac acquired 851355 Alberta Ltd. in exchange for the issuance of 2,390,625 shares of Calfrac. 851355 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to satisfy its obligations under this contract, Calfrac constructed its seventh spread of fracturing equipment.

In February 2002, Calfrac expanded its operations into the United States by leasing a field office in Platteville, Colorado. Although Calfrac provided fracturing services to oil and gas exploration and production companies in Montana in late 2001, the establishment of operations at Platteville, Colorado was Calfrac's first significant presence in the United States. At this time, Calfrac negotiated a one-year fracturing agreement with a major oil and gas exploration and production company, which agreement provided for a three-year right of first refusal for the majority of fracturing work of the customer in the Rocky Mountain area of the United States. During 2002, Calfrac provided fracturing services to customers located in Colorado, New Mexico and Wyoming. In 2003, most of Calfrac's U.S. operations were conducted in the DJ Basin and North Piceance Basin of Colorado.

In November 2002, Calfrac completed the construction of a new field facility on land owned by Calfrac in Red Deer, Alberta. In late 2002 and early 2003, Calfrac completed construction of two additional fracturing spreads, its eighth and ninth spreads of fracturing equipment, and its first spread of equipment specifically designed to fracture NGC.

Calfrac completed construction of a coiled tubing rig designed specifically to perform fracturing through coiled tubing in early 2003. In addition, due to the increasing requirement to use coiled tubing rigs in conventional and NGC fracture jobs, Calfrac signed a three year contract in February 2004 with a major supplier of coiled tubing rig services in Alberta. Calfrac has a right of first refusal on six out of seven coiled tubing rigs used for fracturing operated by this supplier in 2004 and thereafter for all seven coiled tubing rigs. Calfrac has the option to renew the contract for an additional year on each anniversary of the contract date commencing in February 2006.

In April 2003, Calfrac negotiated a two year fracturing contract with a major explorer and developer of NGC with a term that commenced on June 1, 2003 and will expire at the earlier of May 31, 2005 or on the date that Calfrac has fractured 300 wells for the customer. In order to satisfy its obligations under this contract, Calfrac has developed and commissioned unique fracturing equipment specifically designed to fracture NGC wells, including the first quint nitrogen pumpers that have been built for use in the fracturing of NGC by any fracturing company. This equipment is expected to be operational in early 2004.

In May 2003, Calfrac signed a fracturing agreement with its most significant customer in the Rocky Mountain region in the United States. This agreement will expire upon the earlier of December 31, 2004 or the completion of 500 fracturing jobs for the customer.

Calfrac also purchased four shallow coiled tubing units from private companies in 2003. These acquisitions increased Calfrac's equipment fleet of shallow coiled tubing units to eight units. Three additional fracture pumpers were also added to Calfrac's equipment in 2003.

SELECTED FINANCIAL INFORMATION

Selected Financial Information of the Corporation

The following table presents a summary of historical financial data for the Corporation for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended, as well as the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of 8,064,520 Common Shares for net proceeds of approximately $116.25 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of 7,427,039 Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro forma financial statements of the Corporation.

The following data should be read along with "Management's Discussion and Analysis Regarding Denison" and the financial statements and related notes of the Corporation included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

All financial information with respect to the Corporation has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

Selected Historical Quarterly Financial Data of Denison

The following table presents selected unaudited historical financial data of Denison for each of the fiscal quarters of 2002 and 2001.

	2002 (unaudited) (in thousands, except per share data)				2001 (unaudited) (in thousands, except per share data)			
	Three Month Period Ended March 31	Three Month Period Ended June 30 [1]	Three Month Period Ended September 30 [1]	Three Month Period Ended December 31 [1]	Three Month Period Ended March 31	Three Month Period Ended June 30	Three Month Period Ended September 30	Three Month Period Ended December 31
Revenue	$4,763	$10,735	$8,961	$13,507	$4,787	$6,165	$4,540	$16,572
Net earnings (loss):								
Total	$484	$440	$1,583	$561	$895	($978)	$608	$4,193
Net earnings (loss) per Common Share [2]								
Basic	$0.03	$0.03	$0.09	$0.03	$0.06	($0.07)	$0.04	$0.27
Diluted	$0.03	$0.03	$0.09	$0.03	$0.06	($0.07)	$0.04	$0.26

Notes:

(1) Earnings per share calculations give effect to the 20 for one share consolidation which was effective May 24, 2002, as if the share consolidation had been effective at the beginning of the period presented.

(2) Based on the weighted average number of common shares outstanding in the applicable period.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING DENISON

The following management's discussion and analysis of financial condition and results of operations relates to the activities of Denison prior to the proposed transformation of Denison to an oilfield services provider and does not reflect the Reorganization, this offering or the Acquisition. *The following management's discussion and analysis of financial condition and results of operations should be read in conjunction with the audited financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements as at and for the nine months ended September 30, 2003 and 2002.*

Segmented Information

The following table summarizes selected historical financial information related to the Corporation and its operations for the periods indicated. The Corporation has recently completed the Reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and has retained certain claims and liabilities.

	Nine Months Ended September 30,		Year Ended December 31,		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)	(audited)[1] (in millions)	(audited)[1]	(audited)[1]
Revenue					
Mining	$15.8	$17.9	$28.5	$26.2	$27.7
Environmental	2.6	2.2	3.3	3.0	1.8
Oil and Gas	6.7	4.3	6.2	2.8	10.3
	$25.2	$24.5	$38.0	$32.0	$39.8
Net Earnings (loss)					
Mining	$(0.3)	$3.3	$4.9	$3.5	$0.5
Environmental Services	0.2	0.1	(0.5)	0.0	(0.3)

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

Mining Division

The McClean Lake Joint Venture is on target to produce 6 million pounds of uranium from McClean Lake during 2003. Denison's 22.5% share of production for the nine months ended September 30, 2003 totaled 1,082,000 pounds compared with 1,133,000 pounds in the corresponding period of 2002.

During the first nine months of 2003 compared to the corresponding period of 2002, costs of the mining division of Denison were adversely affected by an increase in operating costs of 7% and foreign exchange losses of $650,000. Costs of the mining division of Denison in 2002 were favourably affected by a one-time adjustment of $540,000.

Denison delivers uranium under a variety of contracts with various pricing formulas, the timing and mix of which varies from quarter to quarter. Since the timing of deliveries is at the selection of the customer, the year-to-year comparisons may not be meaningful. Uranium sales volumes delivered in the nine months ended September 30, 2003 were 66% of annual sales volumes compared to 63% during the same period of 2002. Sales volumes in the fourth quarter will be 34% of annual sales volumes.

The average realized Canadian dollar exchange rate relative to the U.S. dollar for the conversion of the U.S. dollar proceeds from uranium sales appreciated from $1.551 for the nine months ended September 30, 2002 to $1.412 for the corresponding period of 2003. This has had a significant negative effect on the revenue and earnings from Denison's mining operations.

Oil and Gas Division

As part of the Reorganization, new oil and gas reserve reports were completed by independent consultants. These reports substantially decreased Denison's oil and gas reserves, resulting in the significant write-down of the carrying value of these assets.

For the nine months ending September 30, 2003, production averaged 641 barrels of oil equivalent ("boe") per day (at a 6:1 gas to oil conversion rate) compared to 558 boe per day for the equivalent period of 2002.

Denison sold its 50% interest in the Carlyle oil producing property (12 boe per day) in southeastern Saskatchewan effective October 1, 2003 for $255,000. Denison also acquired the remaining 50% interest (37 boe per day) in the Smiley gas producing property in Saskatchewan for $600,000.

The two wells drilled in the third quarter in the Aden area for gas were unsuccessful and were abandoned. New gas pipeline capacity, which was anticipated to be available by September, was delayed to November.

During the first nine months of 2003, capital spending totaled approximately $4.0 million including the acquisition of additional interests in the Skiff oil property and the drilling of 6.0 gross (5.1 net) wells, resulting in 1.0 gross (1.0 net) standing gas well in the Evi area and 5.0 gross (4.1 net) dry and abandoned wells. This compares with capital spending of $4.0 million in the first nine months of 2002 for the drilling of 5.0 gross (4.0 net) wells resulting in 2.0 gross (1.0 net) oil wells and 3.0 gross (3.0 net) wells which were dry and abandoned.

In April of 2003, a gas well located in the Bow Island area that had been drilled and completed in the fourth quarter of 2002 at a cost of approximately $350,000, but shut-in pending available pipeline capacity, was sold by Denison. The proceeds of $944,000 from this sale were credited against property, plant and equipment resulting in no recognition of a gain on this transaction.

Environmental Services Division

During the third quarter of 2003, Denison Environmental Services obtained a new contract for the operation of the Kam Kotia water treatment facility, and continued to provide services under its contract for environmental monitoring and maintenance of the closed mine sites of Denison and Rio Algom Ltd. at Elliot Lake and under its contract for project management for the decommissioning of the Hope Brook mine in Newfoundland. Denison Environmental Services was also active in decommissioning work in northern Ontario at the old Munroe mine and is commencing work on the decommissioning of the High Falls generating facility and on the Shebandowan mill complex.

Year Ended December 31, 2002 Compared to Year Ended December 31, 2001

Mining Division

In 2002, Denison's uranium sales volume increased by approximately 16% over the 2001 sales volume. The margin on sales decreased by 17%. In both 2002 and 2001, Denison chose to build strategic inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. Denison's uranium sales are under eleven different long-term contracts with utilities in the United States and the Far East covering approximately all of Denison's production at nominal rates in 2003 and 2004 and a large part of the production currently forecast to 2010. These contracts have various durations and contain a variety of pricing formulas. In 2003, preliminary indications from customers are that uranium deliveries will be 11% in Q1, 47% in Q2, 7% in Q3 and 35% in Q4.

In February 2002, the mining of the Sue C pit was completed recovering 36.5 million pounds of uranium into stockpiles, up 33% from amounts originally anticipated for Sue C. As a result of this increased recovery, amortization rates for mining and processing costs were reduced in mid 2001 and mining related cash costs were reduced from $4.9 million in 2001 to $1.8 million in 2002.

In 2002, mill unit operating costs continued to decline, even though the volume of ore milled in 2002 increased by approximately 25% over 2001 as the ore grade was gradually reduced during the year from an average grade of 3.10% U_3O_8 in 2001 to 2.29% in 2002. It is planned to reduce the milling grade to 2.12%, approximately the grade of the ore in the stockpile, to optimize milling costs over the next four years.

In 2002 definitive agreements were signed enabling the Cigar Lake joint venture to process its ore at the McClean Lake mill. All Cigar Lake ore will be leached at the McClean Lake mill following which the pregnant aqueous solution will be divided between the McClean Lake and Rabbit Lake facilities for processing into uranium concentrates. It is anticipated that toll milling could begin at McClean Lake as early as late 2006.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act. The Saskatchewan government also imposes a tiered royalty which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison has not paid tiered royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years.

In 2002, Denison spent $0.4 million (2001 - $0.6 million, 2000 - $0.7 million) at its Elliot Lake facility. Spending, primarily on monitoring and water treatment, is expected to be reduced in 2003 and 2004 and continue to decline marginally thereafter. All spending is paid for from the Elliot Lake Reclamation Trust, which had a balance of $1.6 million at December 31, 2002. This balance with interest earned thereon is expected to be adequate to fund all monitoring and treatment costs through to December 31, 2008. Future expenditures will consist of ongoing site monitoring of both the Denison and Stanrock Tailings Management Facilities and treating the water runoff from the Stanrock property for as long as 25 to 50 years. The balance of the total provision for $8.0 million represents the estimated present value of maintenance, monitoring and water treatment.

Retirees from Denison's Elliot Lake mine are entitled to certain medical and dental benefits and life insurance. At December 31, 2002 the liability recorded in the consolidated balance sheet was $10.5 million dollars. The actuarial report on this liability as of September 30, 2002 estimates that the actuarial liability is approximately $5.7 million. The surplus of $4.8 million, net of interest on the unfunded $5.7 million liability, is being credited to income over the average 12.5 year average life expectancy of this retiree group.

Environmental Services Division

Denison Environmental Services continued to provide services under a five-year contract (commenced April 1, 2001), including monitoring effluent treatment, maintenance, data storage and reporting activities for closed mine sites for Denison and Rio Algom in the Elliot Lake area and under a contract for at least 30 months (commenced September of 2001) to act as primary project manager for the Hope Brook mine decommissioning in Newfoundland. A significant portion of the business of the division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2002 this was not the case due to reduced mine construction. Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. New mine construction has been low in the last few years and as a result Denison wrote down its inventory of mining equipment held for resale by $433,000.

Oil and Gas Division

In 2002, Canadian oil and gas activities continued to expand. Oil and gas revenues from Denison's operations in Alberta and Saskatchewan increased by $4.9 million, to $6.2 million from $1.3 million in 2001. Successful producing property acquisitions and new production added by Denison's exploration program, combined with increases in commodity prices, all contributed to the increase in oil and gas revenue in 2002. In 2001, Denison received the final $1.5 million of its royalty income from the Villano oil field in Ecuador. Earnings from Greece in 2002 related to a reduction in the provision for closure and in 2000 are from final sale of oil in tanks.

Production volumes have steadily grown from 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) in December 2000 to 438 barrels per day in December 2001 to 648 barrels per day in December 2002. Insufficient pipeline capacity prevented four new Knappen and Aden gas wells from being put into production in 2002. Some pipeline capacity became available in February 2003. Production increased by 458% in 2002 over the previous year and averaged 330 bbls/d for oil and 1.4 mmcf/d for gas. Denison's core property, located in the Countess area of Alberta, accounted for approximately 67% of 2002 production. In 2002, Denison received an average selling price of $35.81 per bbl and $3.54 per mcf for oil and gas, respectively. The price received for oil and gas increased approximately 22% and 12%, respectively, from the prior year. Denison's oil price is referenced to an Edmonton light sweet price adjusted for quality differentials and transportation to determine the realized price. Denison's gas production is sold pursuant to spot sales contracts and Denison receives a price referenced to AECO delivery point. Denison did not enter into any hedging transactions in 2002.

Royalties include payments made to the Crown, freehold owners and third party overriding royalty participants. During 2002, oil and gas royalties were approximately 24% of revenue compared with 19% in the prior year. Countess production is subject to freehold royalties varying from 20% to 27% while other properties are subject to Crown and overriding royalty interests.

Production expenses were $7.28 per boe in 2002. Production expenses increased approximately 14% per boe from 2001. During August and September, Denison performed an extensive work over program at its Countess area that involved the battery and all of the producing wells. As a result, production expenses in the Countess area, for those two months, averaged $11.15 per boe.

Capital expenditures in 2002 totaled $8.8 million. Denison acquired, for $1.2 million, interests varying from 12.5% to 100% in the Skiff producing oil property located in the Conrad area of southeastern Alberta and plans are underway to reinstate pressure maintenance and thereby more effectively exploit this field. Seismic, drilling and facility expenditures in 2002 increased approximately 42%, to $7.4 million, from $5.2 million in the prior year. Approximately $2.6 million of this spending for exploration drilling was financed from proceeds of a $5.0 million flow-through share issue of common shares. At December 31, 2002, $2.4 million remained to be spent on eligible Canadian Exploration Expenses prior to August 2004. Capital expenditures in 2001 totaled $13.4 million, including $5.6 million for the acquisition of Innovative Energy Inc.

In 2002, Denison's depletion and depreciation provision averaged $9.36 per boe for the year and was $12.54 per boe for the fourth quarter. The increased fourth quarter depletion rate reflects the unfavourable results of Denison's higher risk exploration program in the later part of the year and the industry's trend in 2002 towards higher finding and development costs. Depletion and depreciation charges are calculated on a unit of production method and are based on total proven reserves with a conversion of six thousand cubic feet of gas being equivalent to one barrel of oil. The 2002 depletion calculation includes $805,000 of future capital expenditures to develop Denison's reserves and excludes $69,000 of unproven properties relating to undeveloped land.

Year Ended December 31, 2001 Compared to Year Ended December 31, 2000

Mining Division

Pursuant to its agreement with another participant, Denison was entitled to 2.1 million pounds from the first 4.54 million pounds produced by the McClean Lake Joint Venture and thereafter its 22.5% equity share. Production commenced on June 22, 1999 and commercial levels of production were achieved on November 1, 2001. In 2000, 812,500 pounds were used to repay concentrate borrowed from a third party in previous years.

In 2001, Denison's sales volume of uranium was very similar to 2000. During the year, Denison chose to build inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. During 2001, Denison's uranium sales were under eleven different long-term contracts with utilities in the United States and the Far East. These contracts have various durations and contain a variety of pricing formulas. Volumes delivered in 2000 were significantly higher than 1999. Revenue from sales in 1999, prior to achievement of commercial production, was offset against costs capitalized during the start-up phase.

In 2001, mill operating costs continued to decline and the mill operated continuously, except for vacation and Christmas shutdowns. This followed a shutdown of the mill in the last two months of 2000 as the operator made several modifications to increase the efficiency of the mill.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act.

Prior to 2001, Saskatchewan also levied a graduated uranium royalty tax of 4% to 50% of earnings after the recovery of capital. Retroactive to January 1, 2001, the Saskatchewan government amended its uranium royalty regulations to replace this graduated royalty based upon an earnings calculation with a tiered royalty system which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which

approximate capital costs. Denison has not paid graduated royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years. As uranium sales revenue and not net earnings now drive Saskatchewan uranium royalties, this expense is now deducted in computing earnings subject to income taxes.

Environmental Services Division

In 2001, two new long-term contracts significantly contributed to an increase in the revenue for the Environmental Services Division from $1.8 to $3.0 million. This division was also active in both 2000 and 2001 in several smaller projects. In 1999, substantially all revenue was from the reclamation of Algoma Steel's iron ore mine, the last 10% of which was completed in 2000. Revenues from asset sales discussed below, were $0.1 million in 2001, down significantly from $0.6 million in 2000 and $1.0 million in 1999. In late 2000, demand dropped significantly for used mine and mill equipment. In 2001, losses declined to close to the break even from a loss of $0.3 million in 2000.

A significant portion of the business of the Environmental Services Division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2001 this was not the case due to reduced mine construction. In 2000, asset sales generated revenues for Denison of $0.6 million (1999 - $1.0 million). Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. In the last half of 2001, overall demand for mine equipment declined significantly. At the end of 2001, Denison had equipment for sale with a book value of $483,000 with an estimated resale value in excess of $725,000.

Oil and Gas Division

During 2001, Denison purchased a 50% interest in the Countess oil field in south central Alberta for $2 million and 100% of the shares of Innovative Energy Ltd. for $4.9 million consisting of the assumption of $2 million of debt, $1.9 million in cash and $1.0 million by the issuance of treasury shares.

A 50% working interest was earned in four wells drilled in southeastern Saskatchewan of which three were completed as oil wells and the fourth well, which was dry, was converted to a water disposal well. Facilities were installed to process the production from these three producing oil wells.

In Alberta, Denison participated with Innovative Energy Inc. in the drilling of four wells, which produced two oil wells at Countess and a new gas discovery at Knappen in southern Alberta. The remaining dry well was abandoned and another previously suspended oil well was converted into a water disposal well at Countess. Processing facilities were constructed at Countess and went into operation in the fourth quarter.

Due to unanticipated delays in obtaining the necessary regulatory approvals to transfer Innovative Energy Inc.'s wells and facilities to Denison and recommence production, the two new wells at Countess and the Knappen gas well were delayed until February 2002 before entering sustained commercial production.

Oil and gas production increased during 2001 from about 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) at the beginning of the year to 438 boe per day in December. Production had increased further to 650 boe per day by the end of February 2002 and was continuing to increase as the Knappen well was increasing to its planned production rate of 2 million cubic feet per day.

During the first quarter of 2001, Denison earned the final $1.5 million of its royalty from the Villano oil field in Ecuador, which totaled $11.7 million over the period 1999 to 2001.

Interest Expense

During 2002, Denison incurred interest expense of $3,239,000 (2001 - $4,448,000, 2000 - $5,981,000) including $2,798,000 (2001 - $4,186,000, 2000 - $5,623,000) on its McClean Lake loan. No interest was capitalized in 2000, 2001 or 2002. Interest expense was reduced in 2002 as a result of loan principal repayments and lower Canadian

Prime rates. Interest expense was reduced in 2001 as a result of lower Canadian Prime rates and the renegotiation of Denison's McClean Lake loan to enable Denison to apply surplus cash to reduce loan principal and subsequently reborrow these funds.

Income Taxes

Denison is currently not subject to cash income taxes in any jurisdiction, however, it is subject to the federal large corporations tax, which the 2003 federal budget proposed to phase out over the next five years. Denison has substantial unclaimed capital cost allowance, and other deductions which fully shelter it from federal and Saskatchewan income taxes and for which no future tax asset is recorded on the balance sheet. As a result its tax provision currently includes Ontario income taxes and federal large corporations taxes. Reference is made to note 8(a) of the consolidated financial statements of Denison included in this prospectus, which identifies the major components of the variation in Denison's effective tax rate from the normal Canadian tax rate.

Note 8(b) of the consolidated financial statements of Denison included in this prospectus sets out details of Denison's temporary differences between accounting and tax and non-capital loss balances available to shelter future income tax liabilities. Denison has an overall future tax liability in Ontario but does not expect to be cash taxable for several years. All temporary differences have been incorporated as part of the computation of its future Ontario tax liability of $300,000 at December 31, 2002. Denison has not recorded a future tax asset for temporary differences available to shelter its federal and agreeing province income tax liability. In the three years ended December 31, 2002, Denison was able to shelter its income tax expense with previously unclaimed temporary differences arising subsequent to its comprehensive revaluation of assets, following its reorganization in 1995. Any future utilization of temporary differences existing before 1995 will be charged to retained earnings to reduce income tax expense in the period. As at December 31, 2002 Denison has over $200 million of temporary differences and loss carry-forwards, the potential benefit of which has not been set up as a future tax asset for federal and Saskatchewan income taxes. The future recoverability of a future tax asset for a resource company is largely a function of future commodity price level forecasts.

Capital Resources and Liquidity

At September 30, 2003, Denison had the ability to redraw $3.2 million under the McClean Lake loan and $0.9 million on its other credit lines. Denison's obligations under the McClean Lake loan are being assumed by Denison Mines Inc. at the effective time of the Reorganization.

The amount available under the credit line secured by Denison's oil and gas assets has been reviewed with the lender following receipt of the new oil and gas reserve reports obtained as part of the restructuring process. At September 30, 2003, $4.8 million of the $5.5 million line had been drawn. Denison intends to pay its credit line for the oil and gas business. The credit line will be replaced by a new facility in which Denison Resources Inc. will be the borrower.

During the third quarter of 2003, Denison completed the exploration expenditures fulfilling its obligations arising from the flow through share issue in August 2002.

In the event that this offering and the Acquisition are completed, the Corporation anticipates that it will have sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flow and its bank line.

Impact of Future Accounting Developments

The Accounting Policies of Denison are described in note 1 to the consolidated financial statements of Denison included in this prospectus. Prospectively, effective January 1, 2002, Denison implemented CICA Handbook Section 3870, *Stock-Based Compensation and Other Stock-Based Compensation Payments*. As a result, Denison is amortizing the imputed cost of 520,000 stock options issued during 2003 (and 75,000 stock options issued in 2002) as compensation expense over their vesting period and has included $9,000 in corporate expenses for the year ended

December 31, 2002 and reported $292,000 in stock option expenses for the nine months ended September 30, 2003. See Note 9 to the consolidated financial statements of Denison included in this prospectus.

The CICA has recently released the following accounting standards, which the Corporation will be implementing no later than fiscal 2004.

CICA Handbook Section 3063, *Impairment of Long-Lived Assets*

Each year the Corporation prepares an impairment test on its mining and oil and gas assets. Section 3063 applies only to its mining assets. This new handbook section requires that if a mining asset's value is impaired it be written down to its fair value rather than management's best estimate of future undiscounted cash flows. A preliminary review indicates that implementation of this new requirement will have no impact on the Corporation.

CICA Handbook Section 3110, *Asset Retirement Obligations*

This standard requires that the fair value of the disposal cost of an asset be capitalized as part of property, plant and equipment when the asset initially is constructed. In subsequent periods, the Corporation then is required to recognize "interest" on the liability and adjust the carrying value of the asset and liability for changes in estimates of the amount or timing of underlying future cash flows. Upon initial implementation, this new standard will require the Corporation to restate the value of property, plant and equipment for its mining and oil and gas assets and the related liability, but will not have an impact on disclosure related to its decommissioned Elliot Lake mine-site.

Risks and Uncertainties

See "Risk Factors" and "Legal Proceedings" for a discussion of risks and uncertainties.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING CALFRAC

The following management's discussion and analysis of financial condition and results of operations of Calfrac has been prepared by Calfrac and should be read in conjunction with the audited financial statements of Calfrac as at and for the years ended December 31, 2003, 2002, and 2001.

Review of Operations

Year ended December 31, 2003 Compared to Year Ended December 31, 2002

In general, western Canadian oilfield activity was higher in 2003 with 13,944 natural gas wells being completed in 2003 versus 9,068 in 2002. In early 2003, Calfrac brought into operation two additional fracture spreads, one coiled tubing rig used for fracturing operations and one NGC spread. During the second and third quarters of 2003, four shallow coiled tubing units were purchased.

Revenue

Consolidated revenues for the year ended December 31, 2003 increased by 63% amounting to $156.6 million compared to $96.1 million for the same period of 2002. All of this increase occurred in Canada where revenue increased by 74% to $141.5 million in 2003 from $81.2 million in 2002. This increase in Canadian revenue is attributable to the combination of increased oilfield activity and the larger fleet of equipment that Calfrac had available. In the beginning of June 2003, Calfrac commenced services on its first long-term NGC contract. To the end of December 2003, NGC work produced 8% of total revenue compared to 2% of total revenue to 2002.

Revenue from U.S. operations declined 8% to $15.4 million for the year ended December 31, 2003 compared to $16.8 million during 2002. Not only did the types of hydraulic fractures change with a reduction of per job revenue, but certain contract negotiations were only finalized in May 2003, resulting in a slow start to Calfrac's U.S. operations in 2003.

Operating Expenses

Operating expenses for 2003 increased by 60% to $103.5 million compared to $64.8 million during the same period of 2002. On a consolidated basis, gross margins for 2003 at 34% of revenue were slightly better than 33% earned during 2002. However, there were large differences in geographical operations. In Canada, gross margins improved to 35% of revenue from 32% of revenue in 2002, mainly due to increased oilfield activity and improving prices from July 2003. However, the reduction in oilfield activity and changes in the method of fracturing in the DJ Basin impacted Calfrac's U.S. operations in 2003 and gross margins declined to 19% of revenue for 2003 from 32% of revenue for 2002. Due to the change in the method of fracturing, which requires more equipment and fewer customized chemicals, it is unlikely that gross margins from Calfrac's U.S. operations can be increased to the same levels achieved in 2002 in the near future.

Selling, General and Administrative Expenses ("SG&A")

SG&A increased 46% to $10.8 million for 2003 from $7.4 million in 2002. The largest components of SG&A are salaries and the incentive bonus provisions. Increases in the number of employees will increase the cost of both salaries and the incentive bonus provisions.

The incentive bonus provision in SG&A covers all eligible employees, including operational staff. The amount of this provision is dependent on the excess of income before tax over a threshold rate of return calculated on average capital employed, subject to a maximum bonus level set for each employee. However, as both 2002 and 2003 bonuses were being provided at maximum, the increase in 2003 is largely attributable to an increased number of employees in 2003. Notwithstanding the above, as a percentage of revenue, SG&A dropped to 6.9% in 2003 compared to 7.7% in 2002.

Other Expenses, Interest Expense and Depreciation

Other expenses consist mainly of foreign exchange losses incurred in 2003 on cash and receivables denominated in U.S. funds. Interest and depreciation expenses have increased in 2003 due to additional borrowings and amortization resulting from the increased amount of equipment brought into operation in 2003.

Income Taxes

In 2003 a reduction in tax rates reduced income tax by 1.6% as a percentage of income before taxes. However, the increase in income before taxes to $30.6 million in 2003 from $16.0 million in 2002 increased the gross income tax expense by 83% to $11.0 million in 2003.

Net Income

Net income for 2003 was 12.6% of revenue, up from the 10.4% of revenue earned over the same period of 2002. This increase was mainly attributable to the increase in revenue and to a lesser extent to the increase in gross margins.

Year Ended December 31, 2002 Compared to Year Ended December 31, 2001

In general, western Canadian activity declined with 9,068 gas wells being completed in 2002 compared to 11,174 gas wells in 2001. However, Calfrac expanded its operations into the U.S. during 2002 and added additional equipment. As a result, Calfrac was able to record significantly improved results in 2002 compared to 2001.

Revenue

In 2002, Calfrac increased consolidated revenues by 42% to $96 million. The commencement of U.S. operations contributed 58% of this increase. The remaining increase in total revenue was attributable to Canadian operations in southeast Alberta.

Operating Expenses and SG&A

Although as a percentage of revenue, gross margins declined to 32.6% in 2002 versus 36.4% earned in 2001, the gross margins increased by 27% to $31.2 million in 2002 from $24.6 million in 2001. U.S. operations provided 67%, or $4.4 million of this increase. The decline in the percentage of revenue of gross margins in 2002 was caused by downward pricing pressures resulting from lower industry activity and a greater proportion of shallow gas operations.

SG&A increased, both as a percentage of revenue and in absolute terms, in 2002, to 7.7% and $7.4 million from 7.4% and $5.0 million in 2001. The increase was attributable to the additional infrastructure required by Calfrac to commence U.S. operations and to continue to expand Canadian operations.

Interest Expense and Depreciation

Depreciation increased in 2002 compared to 2001 due to the acquisition of additional equipment. In both 2001 and 2002, interest expense declined slightly due to a decline in interest rates and the fact that additional financing for new equipment occurred late in 2002.

Income Tax

Due to the reduction in the tax rates and the inclusion of U.S. taxes, income taxes in 2002 were 37.4% of income before taxes compared to 40.6% in 2001. In 2001, Calfrac used the last of the non-capital income tax losses incurred by Dynafrac Well Services Ltd. to reduce current taxes.

Net Income

Net income for 2002 increased in absolute terms but was a smaller percentage of revenue in 2002 (10.4%) compared to that in 2001 (11.5%). This decline was attributable to reduction in gross margin percentages noted above and to the fact that current taxes in 2001 were reduced by the remaining non-capital income tax losses.

Capital Resources and Liquidity

As at December 31, 2003, Calfrac had working capital of $6.8 million. As at December 31, 2002, Calfrac had working capital of the amount of $3.0 million over that portion of demand debt due to be repaid in 2003.

As at December 31, 2003, Calfrac had an unutilized operating loan facility of $5.0 million and an undrawn revolving equipment term loan in the amount of $7.5 million. Calfrac invested approximately $24.6 million in capital assets during the year ended December 31, 2003 and approximately $22.3 million during the year ended December 31, 2002.

Calfrac has committed to approximately $11 million of expenditures for capital equipment that will become operational in the first half of 2004. These expenditures include approximately $5 million on new equipment ordered for fracturing operations in the United States, $3 million on new equipment for fracturing operations in Canada, $2 million on new NGC equipment and $1 million to complete the construction of a new warehouse on Calfrac's property in Grande Prairie, Alberta and to install a new accounting system in Calgary.

Calfrac has historically had sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flow and its bank line and expects to be able to do the same in 2004.

Risk and Uncertainties

See "Risk Factors" for a discussion of risks and uncertainties.

DIVIDENDS

Although the Corporation does not have a history of paying dividends on its common shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. Any decision to pay dividends will be made by the board of directors of the Corporation on the basis of the Corporation's earnings, financial requirements and other conditions existing at the time.

EXECUTIVE COMPENSATION

The compensation of the proposed officers and directors of the Corporation after completion of the Acquisition will be determined by the board of directors after the completion of the Acquisition.

The following executive compensation disclosure relates to the officers and directors of Denison prior to the proposed transformation of Denison to an oilfield services provider. See "Directors and Officers of the Corporation" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most highly compensated executive officers of Denison (the "named executive officers"), with compensation in excess of $100,000 in 2003.

		Annual Compensation			Long-Term Compensation	
Name and Principal Position	Year	Salary ($)	Bonus ($)	Other Annual Compensation[1] ($)	Securities Under Options Granted	All Other Compensation ($)
E. Peter Farmer	2003	360,000	-	46,615[2]	235,000	-
President and Chief	2002	360,000	-	43,839[3]	-	-
Executive Officer	2001	340,000	145,000	37,017[4]	125,000	-
Donald C. Campbell	2003	185,000	-	28,409[2]	20,000	-
Vice President, Marketing	2002	185,000	-	27,610[3]	-	-
and Special Projects	2001	180,000	7,500	28,981[4]	15,000	-
T. E. Craig Bamford	2003	150,000	-	22,377[2]	20,000	-
Vice President, Finance	2002	142,500	-	21,207[3]	-	-
and Chief Financial Officer	2001	135,000	5,000	19,728[4]	25,000	-
Donna J. Gallant	2003	113,389	-	-	2,500	-
Counsel and Secretary	2002	95,548	-	-	-	-
	2001	103,125	-	-	-	-

Notes:

(1) Prior to March 8, 2004 Denison had a retirement savings arrangement whereby Denison would contribute to an employee's registered retirement savings plan an amount equal to 3% of salary and a possible further amount to match employee contributions up to a 7% limit depending on the employee's age and years of employment. Effective March 8, 2004 this arrangement was terminated.

(2) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $36,000 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,250 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $9,065 for Mr. Farmer; $8,850 for Mr. Campbell; and $8,784 for Mr. Bamford.

(3) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $33,600 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,384 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $8,921 for Mr. Farmer; $8,494 for Mr. Campbell; and $8,652 for Mr. Bamford.

(4) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $27,674 for Mr. Farmer; $18,000 for Mr. Campbell; and $10,238 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total, amounting to: $8,097 for Mr. Farmer; $9,735 for Mr. Campbell; and $8,364 for Mr. Bamford.

Stock Options

The following table sets forth the grants of options to the named executive officers of Denison during the fiscal year ended December 31, 2003:

Option Grants During The Most Recently Completed Financial Year[1]

Name	Securities Under Options Granted (#)	% Total Options Granted to Employees in Financial Year	Exercise or Base Price ($/Security)	Market Value of Securities Underlying Options/SARs on the date of Grant ($/Security)	Expiration Date[1]
E. Peter Farmer	235,000	45.1	2.22	2.22	-
Donald C. Campbell	20,000	3.8	2.22	2.22	-
T. E. Craig Bamford	20,000	3.8	2.22	2.22	-
Donna J. Gallant	2,500	-	2.22	2.22	-

Note:
(1) The Stock Option Plan of Denison has been terminated as at March 8, 2004 and no stock options are outstanding.

The following table sets forth each exercise of stock options in the year ended December 31, 2003, and the year-end value of unexercised stock options for any named executive officer holding such options. The Stock Option Plan of Denison has been terminated as at March 8, 2004 and no stock options are outstanding.

Aggregate Stock Option Exercises During Year Ended December 31, 2003 and Year End Stock Option Values[1]

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized ($)	Unexercised Stock Options at Year End (#) Exercisable/Unexercisable	Value of Unexercised In-The-Money Options At Year End ($) Exercisable/Unexercisable[2]
E. Peter Farmer	-	-	165,000/235,000	564,200/888,300
Donald C. Campbell	-	-	31,667/13,333	111,000/50,399
T. E. Craig Bamford	-	-	36,667/13,333	127,601/50,399
Donna J. Gallant	-	-	15,833/1,667	45,899/6,301

Notes:
(1) The Stock Option Plan of Denison was terminated on March 8, 2004 and no stock options are outstanding.
(2) The closing price at year-end on the TSX of the common shares of Denison (on a pre-consolidation basis) was $6.00.
(3) In connection with the Reorganization, all options have been vested.

Compensation of Directors

Prior to March 8, 2004, Denison paid fees to each director in the amount of $6,000 per year and paid to each director a fee of $400 for each meeting of the board of directors the director attended and $400 for each meeting of a committee of the board of directors the director attended. During the fiscal year ended December 31, 2003, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little were each granted 15,000 options to purchase common shares of Denison. For each grant, the options vest at the rate of one-third each year commencing on April 30, 2004 and the exercise price is $2.30.

The following executive compensation disclosure relates to the officers and directors of Calfrac for the periods indicated and prior to the Acquisition. See "Directors and Officers of the Corporation" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most highly compensated executive officers of Calfrac (the "named executive officers"), with compensation in excess of $100,000 in 2003.

		Annual Compensation			Long-Term Compensation	
Name and Principal Position	Year	Salary ($)	Bonus ($)	Other Annual Compensation[1] ($)	Securities Under Options Granted	All Other Compensation ($)
Douglas R. Ramsay	2003	195,000	195,000	-	-	-
President and Chief	2002	136,500	136,500	-	-	-
Executive Officer	2001	124,000	124,000	-	-	-
Gordon A. Dibb	2003	165,000	165,000	-	-	-
Executive Vice President	2002	131,500	131,500	-	-	-
and Chief Financial Officer	2001	124,000	124,000	-	-	-
Robert S. Roberts	2003	165,000	165,000	-	-	-
Senior Vice President and	2002	131,500	131,500	-	-	-
Chief Operating Officer	2001	124,000	124,000	-	-	-
Dwight M. Bobier	2003	145,600	145,600	-	-	-
Vice President, Technical	2002	120,300	120,300	-	-	-
Services	2001	114,160	114,160	-	-	-
John L. Grisdale	2003	143,150	143,150	-	-	-
Vice President, Business	2002	123,992	123,992	-	-	-
Development	2001	-	-	-	-	-

Notes:

(1) Perquisites and other personal benefits received in 2003, 2002 and 2001 did not exceed the lesser of $50,000 and 10% of the total annual salary and bonus for the named executive officers in any of those years.

(2) On August 15, 2003, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts were granted 132,812, 33,203 and 33,203 options to acquire common shares of Calfrac at an exercise price of $1.00 per share, respectively, all of which were exercised on December 18, 2003.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed elsewhere in this prospectus, none of the directors, officers or principal shareholders of the Corporation, Calfrac or Matco Investments, and no associate or affiliate of any of them, has or has had any material interest in any transaction which materially affects the Corporation. See "Denison Energy Inc.", "Directors and Officers of the Corporation" and "Principal Shareholders".

There are potential conflicts of interest to which the directors and officers of the Corporation will be subject in connection with the operations of the Corporation. In particular, certain of the directors and officers of the Corporation are involved in managerial and/or director positions with other oilfield services providers whose operations may, from time to time, be in direct competition with those of the Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of the Corporation. See "Directors and Officers of the Corporation". Conflicts, if any, will be subject to the procedures and remedies available under the ABCA. The ABCA provides that, in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise permitted by the ABCA.

DESCRIPTION OF SHARE CAPITAL

The Corporation is authorized to issue an unlimited number of Common Shares. The holders of Common Shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

PRIOR SALES

The Corporation has issued the following equity securities in the 12 month period prior to the date of this prospectus:

Date of Issuance	Number of Common Shares	Issue Price Per Share
December 12, 2003 to March 3, 2004	964,833 common shares[1]	$2.44[2]
March 8, 2004	727,073 Common Shares[3]	$7.35

Notes:

(1) Issued on the exercise of stock options, which occurred prior to the Consolidation.

(2) The stock options that were exercised between December 12, 2003 and March 3, 2004 had exercise prices ranging from $2.22 to $3.15 per common share of Denison. The aggregate proceeds from the issuance of the 964,833 common shares of Denison upon the exercise of the stock options were approximately $2.35 million for an average issue price per share of $2.44.

(3) Issued pursuant to the Subscription, which occurred after the Consolidation.

PRICE RANGE AND TRADING VOLUME

The Common Shares are currently listed on the TSX under the trading symbol "DEN". Once the requirements of the TSX have been fulfilled, the Common Shares will commence trading under the symbol "DEI". The following table sets forth the reported high and low sale prices and the trading volume for the common shares for each of the periods indicated before giving effect to the Consolidation.

	High ($)	Low ($)	Volume
2002			
First Quarter	0.18	0.13	33,290,010
Second Quarter[1]	4.25	0.16	30,928,730
Third Quarter	3.48	1.80	939,910
Fourth Quarter	2.47	1.80	942,600
2003			
First Quarter	2.80	2.02	962,210
Second Quarter	2.84	2.05	1,318,180
Third Quarter	2.72	2.10	1,367,520
October	2.73	2.45	473,130
November	4.00	2.36	1,737,160
December[2]	6.60	3.60	6,977,070
2004			
January	6.75	5.22	2,758,270
February	6.40	4.88	1,761,003
March (to March 9)[3]	6.73	5.85	1,304,400

Notes:

(1) On May 24, 2002, Denison consolidated its common shares on a 20 for one basis.

(2) The closing price of the common shares on December 30, 2003, the last trading day prior to the announcement of the Arrangement and the Subscription, and prior to giving effect to the Consolidation, was $6.60.

(3) The sale prices and trading volumes do not reflect the reorganization of Denison into three separately traded companies.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the following are the only contracts entered into by the Corporation or Calfrac within the two-year period preceding the date of this prospectus which may reasonably be regarded as presently material:

1. The Underwriting Agreement dated March 10, 2004 between the Corporation and the Underwriters. See "Plan of Distribution".

2. The Purchase Option between Denison, Matco Investments and Calfrac dated as of December 30, 2003 granting the option to Denison to acquire all the shares of Calfrac.

3. The Arrangement Agreement providing for the Arrangement and granting the indemnities described under "Risk Factors – Liabilities from Prior Operations".

4. Assignment and Novation Agreement dated December 29, 2003 between Denison, Denison Mines Inc., the federal government and the Ontario provincial government.

5. Confirmation Agreement dated December 29, 2003 between Denison, the federal government, the Ontario provincial government and Matco.

Copies of these Agreements may be inspected at the Corporation's registered office during normal business hours during the period of distribution of the Offered Shares.

RISK FACTORS

An investment in the securities offered hereby should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of this offering and the Acquisition. If the Acquisition is not completed, the success of this change in business strategy cannot be assured. A prospective investor should consider carefully the risk factors set out below. In addition, prospective investors should carefully review and consider all other information contained in the prospectus before making an investment decision and consult their own experts where necessary.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that expected trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter, when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. The duration of this period, commonly referred to as the "spring breakup", has a direct impact on the level of Calfrac's activities. Spring breakup occurs earlier in the year in southeastern Alberta than it does in northern Alberta and British Columbia. The timing and duration of spring breakup are dependant on weather patterns but it generally occurs in April and May. Additionally, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the severity of the Canadian winters. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 59% of Calfrac's revenue in 2003. The largest of these customers provided 52% of Calfrac's revenue in 2003 and 57% of Calfrac's revenue in 2002. This customer was also an equity shareholder of Calfrac during these time periods, but recently disposed of its equity interest. Calfrac has advised the Corporation that it has historically maintained an excellent relationship with this customer and that Calfrac has no reason to believe that there will be any change to this relationship in the future. Calfrac has three multi-year agreements to provide fracturing services to this customer which expire from June 2004 to August 2005, two of which include minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's

operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance, and anticipates that it will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from the Corporation's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Liabilities from Prior Operations

From time to time, there may be legal proceedings pending or threatened against the Corporation relating to the prior business of the Corporation. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation. See "Legal Proceedings" for a description of the legal proceedings currently against the Corporation.

In connection with the Arrangement, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc. and the mining leases and mining environmental services related assets of the Corporation were transferred to, and the related liabilities were assumed by, Denison Mines Inc. In accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Legal Proceedings".

Despite the indemnity provided to the Corporation by each of Denison Resources Inc. and Denison Mines Inc., it is possible that the Corporation may be found responsible for claims or losses relating to the assets and liabilities transferred from the Corporation to each of Denison Resources Inc. and Denison Mines Inc. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by the Corporation. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of the Corporation's former operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. The Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets.

Denison Mines Inc. has assumed the liabilities and obligations of the Corporation under a loan from Cogema, one of Denison's former joint venture partners. Most of the productive assets of Denison Mines Inc. are part of the security granted in favour of Cogema for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan based mining projects is dedicated to the loan's repayment. In addition, the original operating license for the McClean Lake facility, where substantially all of Denison Mine Inc.'s uranium is produced, has been challenged and is currently subject to a hearing at the Federal Court of Appeal. See Note 11(a) of the Notes to the Consolidated Financial Statements of Denison included herein. The impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to the Corporation cannot be determined at this time.

Claims and liabilities may arise against the Corporation as a result of Denison being a prior owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison, Denison Mines Inc., the federal government and the Ontario provincial government, Denison agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison, the federal government, the Ontario provincial government and Matco, the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by the Corporation after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue the Corporation for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. The board of directors of the Corporation is not aware of any such statutory offense having occurred. The confirmation agreement among Denison, the federal government, the Ontario provincial government and Matco does not limit persons other than the federal government and the Ontario provincial government from making any claims against the Corporation in respect of Denison's ownership and operation of the Elliot Lake mining facility.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of the Corporation to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield

employees is high, and the supply is limited. The unexpected loss of the Corporation's key personnel or the inability to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact the Corporation's net revenue.

Absence of Current Business and Acquisition of Calfrac

The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and retains certain claims and liabilities of the Corporation including expenses incurred by the Corporation in respect of the Reorganization, certain quantifiable liabilities and certain retained legal proceedings (estimated in aggregate to be approximately $4.5 million) and other expenses incurred by the Corporation including those incurred in connection with this offering and the Acquisition. See "Legal Proceedings". It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering. If this offering is completed, the Corporation anticipates exercising the Purchase Option and acquiring Calfrac and all liabilities, including environmental liabilities, of Calfrac. Although the Corporation is not aware of any material liabilities relating to Calfrac, it is possible that liabilities may arise in the future which could have a material adverse effect on the Corporation.

Corporate Matters

To date, the Corporation has not paid any dividends on its outstanding common shares. The board of directors of the Corporation may make a determination to pay dividends in the future if circumstances permit.

Additional Financing

There is no guarantee that the Corporation will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of common shares or securities convertible into common shares from the Corporation's treasury, control of the Corporation may change and shareholders may suffer dilution to their

investment. The Corporation's activities may also be financed partially or wholly with debt, which may increase the Corporation's debt levels above industry standards. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the proposed directors and officers of the Corporation are also directors and officers of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as officers and directors of the Corporation and as officers and directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the ABCA.

There may be situations in which the interests of the proposed directors and management of, and consultants to, the Corporation may conflict with those of the Corporation. Certain members of the proposed management will not be engaged by the Corporation on a full-time basis and are currently involved, and will continue to be involved, in other entities, businesses and activities, some of which are described herein and all of which will place varying and conflicting demands on their time and attention. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to the Corporation. Any conflicts will be resolved in accordance with the provisions of the ABCA and other applicable laws.

Significant Shareholder

In the event that this offering and the Acquisition are completed, Matco Investments will directly or indirectly own approximately 27% of the issued and outstanding Common Shares. Consequently, Matco Investments will be in a position to significantly influence the outcome of corporate actions requiring shareholder approval, including: electing members of the Corporation's board of directors; adopting amendments to the Corporation's charter documents; and approving a merger or consolidation, liquidation or sale of all or substantially all of the Corporation's assets.

ELIGIBILITY FOR INVESTMENT

In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, subject to compliance with the prudent investment standards and general investment provisions of the following statutes (and, where applicable, the regulations thereunder) and, in certain cases, subject to the satisfaction of additional requirements relating to investment or lending policies, procedures or goals, and, in certain circumstances, the filing of such policies, procedures or goals, the Offered Shares are not, at the date hereof, precluded as investments under or by the following statutes:

Insurance Companies Act (Canada)
Trust and Loan Companies Act (Canada)
Cooperative Credit Associations Act (Canada)
Pension Benefits Standards Act, 1985 (Canada)
Pension Benefits Standards Act (British Columbia)
Financial Institutions Act (British Columbia)
Alberta Heritage Savings Trust Fund Act (Alberta)
Employment Pension Plans Act (Alberta)
Insurance Act (Alberta)
Loan and Trust Corporations Act (Alberta)
The Pension Benefits Act, 1992 (Saskatchewan)
The Insurance Act (Manitoba)
The Pension Benefits Act (Manitoba)
The Trustee Act (Manitoba)
Loan and Trust Corporations Act (Ontario)
Pension Benefits Act (Ontario)
Trustee Act (Ontario)
an Act respecting insurance (Québec) (in respect of an insurer, as defined therein, incorporated under the laws of the Province of Québec, other than a guarantee fund)
an Act respecting trust companies and savings companies (Québec) (for a trust company investing its own funds and deposits it receives or a savings company, as defined therein, which invests its own funds)
Supplemental Pension Plans Act (Québec)

Provided the Common Shares are listed on a prescribed stock exchange at the relevant time, the Offered Shares will on closing of this offering be a qualified investment, within the meaning of the Tax Act, for trusts governed by registered retirement savings plans, registered education savings plans, registered retirement income funds and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing of this offering, constitute "foreign property" under the Tax Act.

LEGAL PROCEEDINGS

Various legal proceedings are pending against the Corporation. Other than those described below, the board of directors of the Corporation considers all such pending proceedings, comprised primarily of labour and employment claims related to the Corporation's former oil and gas operations in Greece, to be routine litigation incidental to the Corporation's business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters are subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., as applicable, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of the Corporation (assuming the completion of this offering and the Acquisition). However, the Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this prospectus or any that may arise in the future will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation.

Greek Operations

In September 2002, the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of the Corporation, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Greek Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Greek Court of Appeal has been appealed by the employees to the Supreme Court of Greece. A hearing of the Supreme Court is not expected until at least the first quarter of 2005. The impact on the Corporation of any adverse decision in this appeal cannot be determined at this time.

In September 2003, the Supreme Court of Greece issued a ruling that another former employee of the Greek subsidiary of the Corporation be compensated for certain vacation days and referred two other compensation matters back for consideration at a new trial at the Court of Appeals of Athens. A hearing date at the Court of Appeals has been set for April 27, 2004. Another set of employees of the Greek subsidiary has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This decision is being appealed but no appeal date has been set. The dollar impact on the Corporation of any adverse decision in these actions cannot be determined.

Greek Tax Appeal

The appeal by the Greek tax authorities of a decision in favour of the Greek subsidiary of the Corporation regarding a penalty for incorrectly maintaining books and data regarding the Greek operations in the amount of approximately $130,000 was heard on January 14, 2004. A decision is expected within the next six months.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of the Corporation by OilHawk Resources Ltd. The claim is fully insured and being handled by the Corporation's insurer.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

Claims in respect of Calfrac

Calfrac is not involved in and the Corporation is not aware of any present or pending legal proceedings against Calfrac or in respect of its assets.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby have been passed upon on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of the Corporation are PricewaterhouseCoopers LLP, Chartered Accountants, Suite 3000, Toronto-Dominion Centre, 77 King Street West, Toronto, Ontario M5K 1G8.

Computershare Trust Company of Canada is the registrar and transfer agent for the Common Shares at is principal offices in Calgary, Alberta and Toronto, Ontario.

INTEREST OF EXPERTS

None of Bennett Jones LLP, Stikeman Elliott LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of the Corporation or of any associate or affiliate of the Corporation. Bennett Jones LLP and the officers and partners thereof as a group (other than Mr. Lambert, a partner of Bennett Jones LLP who is a director of the Corporation), and Stikeman Elliott LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of the Corporation and its associates and affiliates. Mr. Lambert's personal family holding company, Mountain Moon Capital Inc., is a shareholder of Matco, which after giving effect to the Subscription will beneficially own approximately 674,423 or 42% of the Common Shares prior to giving effect to this offering and the Acquisition and approximately 4% of the Common Shares after giving effect to this offering and the Acquisition.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITORS' CONSENTS

Consent Regarding The Corporation

We have read the prospectus of Denison Energy Inc. (the "Corporation") dated March 10, 2004 relating to the sale and issuance of 8,064,520 Common Shares of the Corporation. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned prospectus of our report dated February 28, 2003 (except for note 13 which is as of March 10, 2004) to the directors of the Corporation on the consolidated balance sheets of the Corporation as at December 31, 2002, 2001 and 2000 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended, and to the use in the above-mentioned prospectus of our compilation report dated March 10, 2004 on the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and for the nine-month period ended September 30, 2003.

2. Audit Report of PricewaterhouseCoopers LLP and audited financial statements of the Corporation for each of the years in the three year period ended December 31, 2002 and unaudited financial statements of the Corporation for the nine months ended September 30, 2002 and 2003 ..... F-12

Financial Statements of Calfrac

1. Audit Report of PricewaterhouseCoopers LLP and audited financial statements of Calfrac for each of the years in the three year period ended December 31, 2003 and unaudited financial statements of Calfrac for the nine months ended September 30, 2003 ..... F-32

Denison Energy Inc.

Pro Forma Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002
(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

COMPILATION REPORT ON PRO FORMA FINANCIAL STATEMENTS

To the Directors of
Denison Energy Inc.

We have read the accompanying unaudited pro forma balance sheet of Denison Energy Inc. (the "Company") as at September 30, 2003 and unaudited pro forma income statements for the nine months then ended and for the year ended December 31, 2002, and have performed the following procedures.

1. Compared the figures in the columns captioned "Denison Energy Inc." to the unaudited financial statements of the Company as at September 30, 2003 and for the nine months then ended, and the audited financial statements of the Company for the year ended December 31, 2002, respectively, and found them to be in agreement.

2. Compared the figures in the columns captioned "Calfrac Well Services Ltd." to the unaudited financial statements of Calfrac Well Services Ltd. as at September 30, 2003 and for the nine months then ended and the audited financial statements of Calfrac Well Services Ltd. for the year ended December 31, 2002, respectively, and found them to be in agreement.

3. Made enquiries of certain officials of the Company who have responsibility for financial and accounting matters about:

   (a) the basis for determination of the pro forma adjustments; and
   (b) whether the pro forma financial statements comply as to form in all material respects with Securities Acts of the various Provinces of Canada (the "Acts").

   The officials:

   (a) described to us the basis for determination of the pro forma adjustments, and
   (b) stated that the pro forma statements comply as to form in all material respects with the Acts.

4. Read the notes to the pro forma statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.

5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Denison Energy Inc." and "Calfrac Well Services Ltd." as at September 30, 2003 and for the nine months then ended, and for the year ended December 31, 2002, and found the amounts in the column captioned "Pro forma consolidated" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

See accompanying notes to the unaudited pro forma consolidated financial statements.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

1. **Basis of presentation**

These unaudited pro forma consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in the prospectus of Denison Energy Inc. (the "Company") dated March 10, 2004 relating to the issue and sale of 8,064,520 common shares (the "Offering"). These unaudited pro forma consolidated financial statements are based on the historical financial statements of the Company and Calfrac Well Services Ltd. ("Calfrac"), together with other information available to the Company's management.

These unaudited pro forma consolidated financial statements reflect the arrangement of the Company pursuant to section 182 of the Business Corporations Act (Ontario) (the "Arrangement") that became effective on March 8, 2004 and the subscription for 727,073 common shares by Matco Capital Ltd. for approximate aggregate proceeds of $5,347 on March 8 2004 pursuant to an agreement dated December 30, 2003 (the "Subscription"), each entered into by the Company prior to the issue and sale of common shares pursuant to the Offering. These unaudited pro forma consolidated financial statements have been prepared to give effect to the acquisition of all of the shares of Calfrac for cash consideration of $28,780 and the issuance of 7,427,039 common shares to the current shareholders of Calfrac as consideration for their Calfrac shares pursuant to the exercise of an option granted to the Company by the shareholders of Calfrac on December 30, 2003 (the "Purchase Option") (collectively, the "Proposed Transactions").

These unaudited pro forma consolidated financial statements also reflect certain financing agreements entered into by Calfrac subsequent to September 30, 2003.

These unaudited pro forma consolidated financial statements are not necessarily indicative of the results that would actually have occurred if the events reflected herein had been in effect on the dates indicated or of the results that may be obtained in the future.

These unaudited pro forma consolidated financial statements should be read in conjunction with the December 31, 2002 audited consolidated financial statements and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of Calfrac and the audited consolidated financial statements for the year ended December 31, 2002 and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of the Company.

Certain financial statement items have been reclassified for comparative purposes.

After the Arrangement, the Subscription, the Offering and the acquisition of Calfrac, future financial statements of the Company will reflect the financial results of Calfrac with Calfrac historical financial information shown as the comparative figures.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

2. **Pro forma adjustments and assumptions**

The pro forma consolidated balance sheet gives effect to the Proposed Transactions as if they occurred as at September 30, 2003 and the pro forma consolidated statements of earnings give effect to the Proposed Transactions as if they occurred on January 1, 2002.

The accounting policies used in the preparation of these unaudited pro forma consolidated financial statements are in accordance with those disclosed in the Company's and Calfrac's audited consolidated financial statements for the year ended December 31, 2002.

These unaudited pro forma consolidated financial statements give effect to the following transactions, assumptions and adjustments:

(a) The Company collects $2,353 from the assumed exercise of 964,833 stock options at prices ranging from $2.22 to $3.15 per share. It is assumed that $334 will be retained by the Company, $1,685 transferred to Denison Mines Inc. and $334 applied against the bank indebtedness of Denison Resources Inc.;

(b) The Company transfers its mining and environmental services businesses to Denison Mines Inc. and its Canadian oil and gas business to Denison Resources Inc. and distributes the common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) to its existing shareholders, pursuant to the Arrangement;

(c) The outstanding common shares of the Company are consolidated on a twenty-one for one basis, pursuant to the Arrangement;

(d) The Company issues 727,073 common shares at $7.35 per share pursuant to the Subscription for approximate gross proceeds of $5,347;

(e) The net proceeds of the Offering of 8,064,520 common shares by the Company amounts to $116,250. Transaction and issuance costs of $8,750 are assumed to have been incurred. For these costs, applying an effective tax rate of 33% provides for the recognition of a future income tax asset ("FITA") in the amount of $2,888 with the remaining $5,862 of the costs reducing the common share balance;

(f) The Company exercises the Purchase Option to acquire Calfrac for 7,427,039 common shares at an ascribed value of $115,119 and $28,780 of cash raised through the Offering.

The Company's exercise of the Purchase Option allows the currently unrecognized existing tax pools of the Company to be recognized as a FITA. This

transaction has been treated for accounting purposes as required in the Canadian Institute of Chartered Accountants Emerging Issues Committee Abstract #110, which takes into account the relevant status of the Company after the transactions stated in 2(b) above.

With tax pool amounts of approximately $224,000 federally and approximately $173,000 provincially and an effective tax rate of 33%, $73,000 is recognized as a FITA. The fair value of the tax pools acquired of $11,000, established by an earlier arm's length transaction, is credited to common stock. The difference of $62,000 between the FITA recognized and the fair value of the tax pools is recorded as a deferred credit.

For the year ended December 31, 2002 and the nine month period ended September 30, 2003, the existing current income tax expense and the increase from the reduction of interest expense and increase in interest income in 2(h) will be eliminated by the tax pool value now recognized;

(g) Calfrac assumes a debt obligation of $58,437 incurred in connection with an acquisition of 4,289,844 Calfrac shares prior to the acquisition of the shares of Calfrac. The creditor is entitled to demand payment of the obligation following a change of control of Calfrac, which occurs with the Company's closing of the Purchase Option. It is assumed that the creditor demands payment and that proceeds from the Offering in the amount of $58,437 are paid to satisfy the obligation. The 4,289,844 Calfrac shares are cancelled and the payment is treated as a proportionate return of capital in the amount of $4,454 and a distribution of retained earnings in the amount of $53,983;

(h) Proceeds from the Offering are used to pay $26,035 of the pre-existing Calfrac bank debt. The principal amount of the debt at January 1, 2002 was $7,837. It is assumed that the unused proceeds earned interest income at the average bank rate for the period. The repayment of this debt reduces interest expense in 2002 by $490 and for the nine month period ended September 30, 2003 by $1,087;

(i) Reduction of liabilities with the cash from the Subscription in the amount of $1,000 of the Company's bank indebtedness, $1,610 of Ontario tax liability and additional transaction costs of $1,348; and

(j) As approved by the shareholders as part of the Arrangement, the deficit of $46,777 will be reduced to zero with corresponding reductions in contributed surplus of $927 to zero and common shares of $45,850 to $94,176.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

3. Earnings per share

The authorized share capital of the Company is an unlimited number of common shares, without nominal or par value.

The issued capital and related recorded values after giving effect to the Proposed Transactions including the twenty-one for one share consolidation as described in 2(c) above is set out below:

	Number of Common Shares	Amount $	Note
On completion of Proposed Transactions Described above			
Denison shareholders			
As of December 31, 2002	842,701	5,568	
As per exercise of options	45,944	3,226	2(a)
As per Subscription	727,073	5,347	2(d)
Public shareholders	8,064,520	119,138	2(e)
Calfrac shareholders	7,427,039	14,342	2(f)

Tax pool recognition		11,000	2(f)
Cancellation of Calfrac shares		(4,454)	2(g)
Deficit elimination		(45,850)	2(j)
	17,107,277	94,176	

Auditors' Report

To The Directors of Denison Energy Inc.

We have audited the consolidated balance sheets of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000, and the consolidated statements of earnings, retained earnings and cash flows for the years then ended. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2002, December 31, 2001 and December 31, 2000 and the results of its operations and its cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

(Signed) "*PricewaterhouseCoopers LLP*"

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

1. NATURE OF OPERATIONS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Change of Name
On May 24, 2002 the Corporation filed Articles of Amendment that effective that day changed the corporation's name from Denison Mines Limited to Denison Energy Inc.

Nature of Operations
The Corporation operates in the mining, oil and gas and environmental service sectors. Mining activities include a 22.5% interest in the McClean Lake uranium property and mill in northern Saskatchewan, where uranium production reached commercial levels in November 1999, a 19.96% interest in the Midwest uranium deposit and mineral evaluation and exploration. Oil and gas activities consist primarily of the exploration for and production of oil and natural gas in Western Canada, where the Corporation resumed operations in late 2000 and has expanded through both exploration and acquisitions including the Innovative acquisition described in note 12. The Corporation also holds oil and gas exploration acreage in Greece. Environmental services activities include mine decommissioning services and monitoring of closed mine sites.

Basis of Presentation
The consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles. The preparation of financial statements, in conformity with Canadian generally accepted accounting principles, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent liabilities as of the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. The most significant estimates are related to the economic lives and recoverability of mining and oil and gas assets, the provisions for decommissioning and reclamation, post-employment benefits, future income taxes and the evaluation of contingent liabilities. Actual results could differ materially from those estimates. The summary of significant accounting policies below describes the accounting methods and practices that have been used in the preparation of these consolidated financial statements. This summary is presented to assist the reader in interpreting the statements contained herein.

Certain comparative figures for prior periods have been reclassified to conform with the presentation adopted in these financial statements. This reclassification has no impact on net earnings or retained earnings.

Consolidation Principles
The consolidated financial statements include the accounts of the Corporation and its subsidiaries. The Corporation's interests in the McClean Lake and Midwest uranium joint ventures and its oil and gas joint ventures are accounted for using the proportionate consolidation method. Under this method, the Corporation includes its proportionate share of assets, liabilities, revenues and expenses.

Revenue Recognition
Mining and oil and gas revenue are recognized when title passes from the Corporation to its customer. Revenue on decommissioning contracts is recognized using the percentage of completion method, where sales, earnings and unbilled accounts receivable are recorded as related costs are incurred. Earnings rates are adjusted periodically as a result of revisions to projected contract revenues and estimated costs of completion. Losses, if any, are recognized fully when first anticipated. Royalty revenue is recognized when earned under the respective agreement.

Cash and Cash Equivalents
Cash and cash equivalents consist of cash and short-term investments with original maturities not exceeding 90 days and are stated at cost, which approximates market value.

Marketable Securities
Marketable securities are recorded at the lower of cost or net realizable value.

Inventories and Prepaid Expenses
Uranium concentrates, assets purchased for resale, supplies and ore in stockpiles are recorded at the lower of average cost and net realizable value. Inventory of ore in stockpiles consists of actual costs to remove overburden and mine ore together with the amortization of open pit mining equipment and is charged to production using the units of production method.

Property, Plant and Equipment
Mining Property, Deferred Exploration and Development Costs
Exploration costs and property acquisition costs are expensed as incurred unless it is determined that a project contains economically recoverable reserves, in which case all such costs relating to that project for the current and subsequent years are capitalized. Pre-production costs, net of revenue during the start-up phase, are capitalized as development costs until the project is capable of sustained operations at commercial production levels. Capitalized mining property, deferred exploration and development costs are amortized using the unit of production method over the expected life of the mine after commercial production levels are attained.

Mine Buildings, Plant and Equipment
Mine buildings, plant and equipment are recorded at cost. Mine buildings, plant and equipment are amortized to estimated residual value over the shorter of the life of the mine, or specific period that the mill or other specific asset will be utilized, using the units of production method. When assets are retired or sold, the resulting gains or losses are reflected in current earnings.

Mining Property Evaluations
The carrying values of mining, exploration and development properties and related mine buildings and equipment are periodically assessed by management to determine whether the net recoverable amount exceeds the carrying value of the project. Any unrecoverable amount is written off against earnings. The net recoverable amount represents future undiscounted cash flows determined using proven, probable and expected reserves and estimated selling prices which reflect both historical prices and expected future selling prices, less operating, capital, financing and reclamation costs.

Oil and Gas Properties, Plant and Equipment
The Corporation's oil and gas properties, plant and equipment are carried at the lower of cost and net recoverable amount. All costs associated with the exploration for and the development of oil and gas properties are capitalized providing the total capitalized cost does not exceed the net recoverable amount. All costs of the Corporation's oil and gas property, plant and equipment are capitalized in one producing cost centre. Depletion is provided on capitalized costs in this producing cost centre by the units of production method based on estimated proven reserves.

Oil and Gas Property Evaluations
Net recoverable amount is the aggregate of estimated undiscounted future net revenues from proven reserves less operating, administration, financing and income tax expense. Estimated future net revenues are determined using year-end prices. The Corporation periodically reviews the costs associated with preproduction stage cost centres to determine whether costs are likely to be recovered. Any unrecoverable amount is written off against earnings.

Other Property, Plant and Equipment
Other property, plant and equipment are amortized according to the straight-line method based on their estimated useful lives, which range from three to twenty years.

Capitalization of Interest
Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Decommissioning and Site Restoration Cost
Estimated decommissioning and site restoration costs of resource properties are accrued and charged to operations using the unit of production method. Provisions with respect to site restoration include long-term treatment and monitoring costs of a longer term nature and are calculated on a discounted basis and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related decommissioning and site restoration liability. The Corporation's resource activities are subject to various governmental laws and regulations related to the protection of the environment. The Corporation has made and continues to make expenditures in order to comply with or exceed such laws and regulations. The Corporation is continuously updating its decommissioning and site restoration cost estimates. Such estimates are, however, subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when applicable.

Deferred Reorganization Costs
Expenditures incurred to implement a proposed plan of arrangement have been deferred pending completion of the transaction.

Post Employment Benefits
The Corporation provides dental, supplemental health care and life insurance benefits, but not pensions, to its former Canadian employees who retired on immediate pension from active service prior to 1997. The estimated cost of providing these benefits is actuarially determined using the projected benefits method and was accrued over the service life of this retiree group. The most recent actuarial valuation of this obligation was performed as of September 30, 2002. The interest cost on this unfunded liability and the surplus are being amortized over the remaining lives of this retiree group.

Future Income Taxes
The Corporation follows the asset and liability method of accounting for future income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are determined based on temporary timing differences between the financial reporting and tax bases of assets and liabilities, and are measured using the substantively enacted tax rates and laws that are expected to apply when the differences are expected to reverse. The benefit of tax losses which are available to be carried forward are recognized as assets to the extent that they are more likely than not to be recoverable from future taxable income. Benefits which are recognized in respect of tax deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995 are credited directly to retained earnings and benefits which are recognized in respect of tax deductions which arose subsequent to the comprehensive revaluation of the Corporation's assets are credited to net earnings. The Canadian federal large corporation tax on capital is included in the provision for income taxes.

Translation of Foreign Currencies
Monetary assets and liabilities and non-monetary items carried at market value are translated into Canadian dollars at the period-end exchange rate. Other non-monetary items and revenues and expenses are translated at approximate rates in effect at the dates of the transactions, except depletion and amortization which are translated at the same rate as the related assets.

Financial Instruments
The carrying amounts for cash and short-term deposits, accounts receivable, inventories and prepaid expenses, accounts payable and accrued liabilities on the balance sheets approximate fair value because of the limited term of these instruments. The fair market value of long-term debt approximates book value unless otherwise disclosed. Fair value estimates are made at the balance sheet date, based on relevant market information and information about the financial instrument.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Stock Option Plans

In 2002 the Corporation adopted prospectively the requirements of the CICA handbook section 3470, "Stock-Based Compensation and Other Stock Based Payments." As encouraged by section 3470, the Corporation has adopted the fair value based method to account for stock-based transactions with directors, and eligible employees for options granted in 2002. The value is recognized over the applicable vesting period as an increase in compensation expense and contributed surplus. When the options are exercised, the proceeds received by the Corporation, together with the amount in contributed surplus will be credited to Common Share capital. For options granted prior to January 1, 2002 the Corporation continues to follow the accounting policy under which no expense is recognized for these stock options. When these options are exercised, the proceeds received by the Corporation will be recorded as Common Share capital.

Earnings per share

Basic earnings per Common Share are computed by dividing net earnings by the weighted average number of Common Shares outstanding during the period. Diluted per share amounts are calculated giving effect to the potential dilution that would occur if securities or other contracts to issue Common Shares were exercised or converted to Common Shares. The treasury stock method is used to determine the dilutive effect of stock options and other dilutive instruments. The treasury stock method assumes that proceeds received from exercise of in-the-money stock options are used to repurchase Common Shares at the prevailing market rate.

2. INVENTORIES AND PREPAID EXPENSES

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Uranium concentrate	**$ 11,782**	$ 11,063	$ 8,046	$ 7,064	$ 593
Inventory of ore in stockpiles	**10,970**	15,383	14,522	18,246	18,628
Mine supplies	**1,375**	1,396	1,405	1,543	1,978
Mining equipment acquired for resale	**—**	483	—	483	409
Prepaid expenses	**620**	773	831	291	113
	24,747	29,098	24,804	27,627	21,721
Less: Non-current portion - Inventory of ore in Stockpiles	**7,456**	10,550	9,689	13,413	11,743
Current portion inventories and prepaid Expenses	**$ 17,291**	$ 18,548	$ 15,115	$ 14,214	$ 9,978

Stockpiles include inventory from two open pit mining areas at the McClean Lake minesite where mining was completed in February 2002. Ore from these stockpiles will be processed over several years.

3. PROPERTY, PLANT AND EQUIPMENT

(a) The net property, plant and equipment balance consists of:

	As at September 30			
	2003			2002
	Cost	**Accumulated depletion and amortization**	**Net**	Net
	(unaudited and in thousands)			
Mining				
McClean Lake / Midwest uranium projects	**$ 130,421**	**$ 24,454**	**$ 105,967**	$ 111,618
Oil and Gas	**25,819**	**16,620**	**9,199**	16,376
Environmental Services	**620**	**238**	**382**	368
	$ 156,860	**$ 41,312**	**$ 115,548**	$ 128,362

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	As at December 31				
	2002			2001	2000
	Cost	**Accumulated depletion and amortization**	**Net**	Net	Net
					(in thousands)
Mining					
McClean Lake/Midwest uranium Projects	**$ 130,261**	**$ 19,537**	**$ 110,724**	$ 116,082	$ 121,514
Oil and Gas	**22,715**	**2,268**	**20,447**	13,559	550
Environmental Services	**547**	**194**	**353**	337	304
	$ 153,523	**$ 21,999**	**$ 131,524**	$ 129,978	$ 122,368

(b) The Corporation has a 22.5% interest in the McClean Lake mine and mill and a 19.96% interest in the Midwest uranium project, both located in northern Saskatchewan. The McClean Lake mill achieved commercial production levels on November 1, 1999 and has been constructed to process ore from the McClean Lake mine as well as other deposits. A toll milling agreement has been signed with the participants in the Cigar Lake Joint Venture that provides for the processing of a substantial portion of the future output of that mine at the McClean Lake mill, for which the owners of the McClean Lake mill will receive a toll milling fee. In determining the amortization rate for the McClean Lake mill, the Corporation has reduced the amount to be amortized by its expected share of future toll milling revenue.

(c) **Write-down of oil and gas properties (unaudited)**
In September 2003 the Corporation recorded a write-down of its Canadian oil and gas properties by $12,000,000. This write-down was calculated using September 30, 2003 oil and natural gas prices and updated reserve reports for its oil and gas properties.

4. BANK INDEBTEDNESS

As at December 31, 2002 the Corporation had a borrowing facility of up to $6,000,000. Subsequent to year-end, as a result of the fact that substantial proven gas reserves are awaiting pipeline allocation and the short production history of two new wells, this borrowing facility was reduced to $5,300,000 as at September 30, 2003. This facility is subject to an annual review and is repayable from oil and gas cash flows and as discussed in note 13(e). This facility bears interest at Canadian bank prime (which was 4.5% on December 31, 2002) plus 0.5% and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin and not pledged under the facilities described in notes 5(b) and 5(c).

5. LONG-TERM DEBT

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
McClean Lake loan (note 5(b))	**$ 44,250**	$ 50,086	$ 51,962	$ 60,724	$ 59,316
Other long-term debt (note 5(c))	**1,610**	2,308	2,308	2,937	3,392
	45,860	52,394	54,270	63,661	62,708
Less: Current portion	**2,763**	3,605	10,712	11,961	11,086
	$ 43,097	$ 48,789	$ 43,558	$ 51,700	$ 51,622

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) The McClean Lake loan from Cogema Resources Inc. finances the Corporation's share of the costs of development and operation of the McClean Lake mine and mill and Midwest uranium project. This loan is secured only by the Corporation's interest in the McClean Lake mine and mill and the Midwest uranium project. The Corporation's share of net cash flow from McClean Lake uranium sales is dedicated to the loan's repayment. The Corporation has the right to prepay portions of the loan facility and redraw amounts prepaid, including interest savings from amounts prepaid, on 45 days' notice. As at September 30, 2003, the Corporation had the ability to redraw $3,208,000. Interest on this loan is payable at Canadian bank prime plus 1%. The loan is currently scheduled to mature on December 31, 2005, but will be extended to December 31, 2010 if, prior to December 31, 2005, a production decision is made to develop the Midwest uranium project. Any principal balance outstanding at maturity is repayable at 20% per annum. It is not possible to determine the fair value of the McClean Lake loan.

(c) Other long-term debt of $1,610,000 as at September 30, 2003 is repayable over two years up to August 31, 2005 in annual installments plus interest which approximates Canadian bank prime. Principal payments in the next two years are: 2004 - $761,000 and 2005 - $849,000.

(d) The Corporation has a line of credit for $300,000 from a Canadian Chartered Bank. This line of credit bears interest at Canadian bank prime and is secured by a short-term deposit. At September 30, 2003, $26,000 was drawn against this line of credit, which is repayable on demand.

(e) Interest expense on long-term debt was as follows:

	Nine months ended September 30		For the year ended December 31		
	2003 (unaudited)	2002 (unaudited)	2002	2001	2000 (in thousands)
McClean Lake loan	**$ 2,148**	$ 2,093	$ 2,798	$ 4,186	$ 5,623
Other long-term debt	**90**	94	117	246	89
	$ 2,238	$ 2,187	$ 2,915	$ 4,432	$ 5,712

6. POST EMPLOYMENT BENEFITS

The Corporation's post employment benefits accrual includes life insurance for each of its former Canadian employees who retired on immediate pension prior to 1997, together with the future cost of medical and dental benefits as set out in the group policies. The amount accrued is based on estimates provided by the plan administrator which are based on past experience, limits on coverage included in the plan and other assumptions including a growth in medical cost of up to 13% initially, decreasing over five years to 8% per annum and a growth in dental costs of 6% per annum, subject to limits set out in the group policies.

The Corporation's post employment benefit plan is not funded. Changes in the accrued benefit obligation are as follows:

	Nine months ended September 30		For the year ended December 31	
	2003	**2002**	2002	2001
	(unaudited)	**(unaudited)**		(in thousands)
Accrued benefit obligation – beginning of year	**$ 5,714**	**$ 5,834**	$ 5,834	$ 5,966
Benefits paid	**(200)**	**(279)**	(455)	(482)
Interest cost	**252**	**220**	335	350
Accrued benefit obligation – end of year	**5,766**	**5,775**	5,714	5,834
Unamortized initial transitional surplus	**4,454**	**4,847**	4,749	5,142
	10,220	**10,622**	10,463	10,976
Less: Current portion included in accounts payable	**400**	**425**	400	500
	$ 9,820	**$ 10,197**	$ 10,063	$ 10,476

The unamortized initial transitional surplus is being amortized over the expected 12.5 year (as of September 2002) average life expectancy of this retiree group.

7. DECOMMISSIONING AND SITE RESTORATION

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Elliot Lake					
Elliot Lake mine site restoration accrual *(note 7b))*	**$ 7,681**	$ 8,059	$ 7,984	$ 8,418	$ 9,045
Less: Balance in Elliot Lake Reclamation Trust Fund *(note 7(b))*	**1,342**	1,421	1,606	1,761	2,132
	6,339	6,638	6,378	6,657	6,913
Less: Current portion included in accounts payable	**350**	400	400	425	600
	5,989	6,238	5,978	6,232	6,313
McClean Lake uranium operations *(note 7(c))*	**584**	479	498	388	—
Canadian oil and gas *(note 7(d))*	**147**	115	122	90	—
	$ 6,720	$ 6,832	$ 6,598	$ 6,710	$ 6,313

(b) The Corporation's Elliot Lake uranium mine closed in 1992 and capital works to decommission this site were completed in 1997. The remaining provision is for the estimated cost of monitoring the Tailings Management Areas at the Denison and Stanrock sites and for treatment of water discharged from these areas. The Corporation conducts its activities at both the Denison and Stanrock sites pursuant to decommissioning licenses issued by the Canadian Nuclear Safety Commission. The above accrual represents the Corporation's best estimate of the future reclamation cost based on assumptions as to levels of treatment which will be required in the future. The financial effect of future changes, if any, in requirements, laws, regulations and operating assumptions may be significant, and will be recognized if and when applicable.

Pursuant to a Reclamation Funding Agreement, effective June 30, 1994, with the Governments of Canada and Ontario, the Corporation was required to deposit 90% of its cash flow, after deducting permitted expenses, into the Reclamation Trust Fund. A subsequent agreement with the governments provides for the suspension of the Corporation's obligation to deposit 90% of its cash flow into the Reclamation Trust, provided the Corporation maintains a balance in the Reclamation Trust equal to estimated reclamation spending for the succeeding six calendar years. Withdrawals from this trust fund can only be made with the approval of the Governments of Canada and Ontario, to fund Elliot Lake site restoration costs. The Corporation believes that the current Reclamation Trust balance will be adequate to fund these costs through 2008.

(c) In addition the McClean Lake operation is subject to environmental regulations as set out by Saskatchewan Environment and the Canadian Nuclear Safety Commission. As required by Saskatchewan Environment, the operator of the McClean Lake joint venture has arranged Letters of Credit securing future decommissioning and reclamation liabilities. The Corporation has agreed to indemnify the operator for its proportionate share of any loss incurred up to a maximum amount of $7,755,000.

(d) The Corporation has estimated future removal and site restoration costs of $957,000 at September 30, 2003 (December 31, 2002 - $325,000, December 31, 2001 - $278,000, December 31, 2000 - $182,000) for abandoning its Canadian oil and gas wells and facilities.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

8. INCOME TAXES

(a) Since the Corporation operates in three industrial and geographic segments, its income is subject to varying rates of taxation. A reconciliation of the combined Canadian federal and provincial income tax rate to the Corporation's effective rate of income and resource taxes is as follows:

	For the Year Ending December 31		
	2002	2001	2000
Earnings before income taxes	**$ 2,929**	$ 3,214	$ 9,449
Combined federal and provincial income tax rate	**43.50%**	43.04%	44.60%
Computed income tax expense	**$ 1,274**	$ 1,383	$ 4,214
Increase (decrease) in taxes resulting from:			
Benefit of previously unrecognized federal and provincial tax pools	**(1,198)**	(1,307)	(3,043)
Resource allowance	**(81)**	(61)	(587)
Reduction in Ontario income tax rate due to lower income allocation to Ontario	**—**	(2,000)	—
Adjustments relating to other years	**(469)**	—	—
Other	**(78)**	195	(401)
Ontario income tax recovery	**(552)**	(1,790)	183
Federal large corporation tax	**413**	286	235
Income tax recovery	**$ (139)**	(1,504)	$ 418

(b) The Corporation uses the asset and liability method of accounting for the tax effect of temporary differences between the carrying amount and tax bases of the Corporation's assets and liabilities. Temporary differences arise when the realization of an asset or the settlement of a liability would give rise to either an increase or decrease in the Corporation's income taxes payable for the year or a later period. The Corporation's future tax liability arises in computing its Ontario tax liability, from the deduction of temporary differences, principally capital cost allowance, Canadian exploration and development expenses of $30 million more for tax than accounting, less the future tax reduction expected from the utilization of non-capital losses of $20 million which expire in 2006. As at December 31, 2002, the Corporation has not recognized the future tax benefits for both Federal and Saskatchewan tax purposes, from the future utilization of non-capital loss carry forwards of $21 million expiring in 2006 or temporary tax differences in excess of book values of $208 million that it can carry forward to shelter future Federal and Saskatchewan income tax liabilities. Of this amount, $97 million relates to deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995. In 2002, the Corporation was able to offset its entire Federal and Saskatchewan income tax expense against these unrecognized tax deductions.

9. SHAREHOLDERS' EQUITY

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Common stock *(note 9(b))*	**$ 5,568**	$ 5,568	$ 5,568	$ 935	$ 1
Common Share Purchase Warrants *(note 9(c))*	**—**	—	—	688	688
Contributed Surplus *(note 9(c))*	**1,229**	928	937	240	240
Retained Earnings	**67,621**	81,086	81,647	78,579	73,861
	$ 74,418	$ 87,582	$ 88,152	$ 80,442	$ 74,790

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) Common Stock

Authorized
The authorized share capital consists of an unlimited number of Common Shares.

Issued
Changes in issued Common Shares were as follows:

	Number of Shares	$ (in thousands)
Balance as of December 31, 2000 and 1999	**15,893,560**	$ 1
Shares issued on acquisition of Innovative Energy Inc. net of issued cost of $33,000 (note 12)	**386,880**	934
Balance as of December 31, 2001	**16,280,440**	935
Purchase and cancellation of fractional Common Shares resulting from one for 20 share consolidation	**(3,287)**	(12)
Issue of flow-through Common Shares net of $355,000 issue Costs	**1,428,571**	4,645
Balance as of September 30, 2003, December 31, 2002 and September 30, 2002	**17,705,724**	$ 5,568

All Common Stock balances have been restated to reflect a one for 20 share consolidation, which became effective on May 24, 2002. Prior period earnings per share have been calculated to give effect to this share consolidation as if the share consolidation had been effective at the beginning of the earliest period presented.

(c) Contributed Surplus and Common Share Purchase Warrants

	Nine months ended September 30		For the year ended December 31		
	2003 (unaudited)	2002 (unaudited)	2002	2001	2000 (in thousands)
Balance – beginning of period	**$ 937**	$ 240	$ 240	$ 240	$ 240
Expiry of 549,550 Common Share Purchase Warrants on July 18, 2002	**–**	688	688	–	–
Common Share Stock Options expensed (note 9(d))	**292**	–	9	–	–
Balance – end of period	**$ 1,229**	$ 928	$ 937	$ 240	$ 240

(d) Stock Option Plan
The Corporation has issued stock options pursuant to a Stock Option Plan, approved by shareholders in 1996, under which the Board of Directors may issue up to 2,384,000 Common Shares to directors, eligible employees and service providers. Under this plan the exercise price of each option equals the market price of the Corporation's stock on the date of the grant. The issued options vest in installments on the anniversary of their grant, except that all options outstanding vest immediately on a takeover. Options expire if unexercised after ten years. A summary of the status of the Corporation's stock options issued under this plan as at September 30, 2003, December 31, 2002, 2001 and 2000 and changes during the periods and years ending on those dates is presented below:

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	For the nine months ended September 30, 2003 (unaudited)		For the year ended December 31, 2002		For the year ended December 31, 2001		For the year ended December 31, 2000	
	Shares	**Weighted Average Exercise Price**	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price
Outstanding beginning of period	**1,002,250**	**$ 4.85**	927,250	$ 5.04	559,750	$ 6.65	624,250	$ 6.65
Granted	**520,500**	**2.31**	75,000	$ 2.49	367,500	$ 2.60	—	$ 6.65
Forfeited	**(402,750)**	**6.99**	—	—	—	—	(64,500)	—
Outstanding end of period	**1,120,000**	$ 2.90	1,002,250	$ 4.85	927,250	$ 5.04	559,750	$ 6.65
Options exercisable at period end	483,833		775,708		626,650		450,150	

The following table summarizes information about stock options outstanding at September 30, 2003:

	Options Outstanding (unaudited)			Options Exercisable (unaudited)	
Range of Exercisable Prices	Number Outstanding Sept. 30, 2003	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Sept 30, 2003	Weighted-Average Exercise Price
$7.60	97,500	2.7	$ 7.60	97,500	$ 7.60
$2.22 to $3.15	1,022,500	7.0	$ 2.45	385,833	$ 2.45
$2.22 to $7.60	1,120,000	6.9	$ 2.89	483,333	$ 3.47

The following table summarizes information about stock options outstanding at December 31, 2002:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Dec. 31, 2002	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Dec. 31, 2002	Weighted-Average Exercise Price
$7.20 to $7.80	450,250	3.4	$ 7.62	450,250	$ 7.62
$2.31 to $3.15	552,000	8.3	$ 2.60	325,458	$ 2.60
$2.31 to $7.80	1,002,250	5.6	$ 4.85	775,708	$ 4.85

In 2002, the Corporation adopted prospectively CICA handbook section 3870, "Stock-based Compensation and Other Stock-Based Payments". The compensation expense associated with this stock option series has been calculated using the Black-Scholes option-pricing model and $9,000 has been expensed in 2002 and $292,000 in the nine months ended September 30, 2003. The pricing model assumes a 10-year term, expected Common Stock price volatility of 67% and a weighted average life of 10 years and a weighted average risk-free interest rate of 5.4% and an assumption that dividends are reinvested in the Corporation. These options have a ten-year term, with vesting periods ranging from one to four years of the grant date.

(e) Earnings Per Share Data

Prior period earnings per share calculations give effect to the share consolidation described in note 9(b) as if the share consolidation had been effective at the beginning of the period presented.

The calculation of basic earnings per share is based on the weighted average number of shares outstanding during the year in the amount of 16,879,892 (2001 - 15,949,737) Common Shares.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

The calculation of diluted earnings per share takes into consideration the potential issue of shares under Stock Options and, in 2001, Common Share Purchase Warrants where the strike price is below the average Common Share price for the year. The number of dilutive options in 2002 is 314,204 (2001 – 412,500). In 2002, 688,046 (2001 – 514,750) Stock Options and in 2002 0, (2001 550,000) Common Share Purchase Warrants have been excluded from the calculation of diluted earnings per share as the exercise price is greater than the average Common Share price in the year.

10. OTHER CHANGES IN WORKING CAPITAL

Other changes in working capital consist of:

	As at September 30		As at December 31		
(in thousands)	**2003 (unaudited)**	2002 (unaudited)	**2002**	2001	2000

Accounts payable and accrued liabilities	**(2,338)**	(5,240)	**(1,891)**	(49)	(33,248)
Current taxes payable	—	—	—	—	513
	$ 2,551	$ (2,068)	**$ (3,846)**	$ (11,208)	$ (27,957)

11. CONTINGENT LIABILITIES AND COMMITMENTS

(a) On September 23, 2002 The Federal Court of Canada, Trial Division, quashed the original McClean Lake facility operating license issued in 1999. That license had been superceded and the facility has continued to operate under the new four-year operating license issued in August 2001. The Trial Division decision has been appealed by both the federal regulator of the facility, the Canadian Nuclear Safety Commission ("CNSC") and by the operator and majority owner of the facility, Cogema Resources Inc. The Province of Saskatchewan and First Nations and Métis groups have intervened in support of the appeal. The Federal Court of Appeal granted a stay of the Trial Division decision pending the outcome of the appeal.

The Trial Division decision quashed the original 1999 operating license on the basis that the *Canadian Environmental Assessment Act* was not complied with. Specifically, the project was subject to a lengthy public process under legislation that was replaced by the *Canadian Environmental Assessment Act*. The Trial Division decision creates a significant amount of uncertainty about the rules applicable to obtaining the necessary approvals for the operation of the McClean Lake facility.

While the outcome of the appeal process cannot be determined, the Corporation believes that ultimately the Trial Division decision will be nullified through the appeal process or by the completion of further regulatory requirements. An application for a new license for the McClean Lake facility has been filed with the CNSC. Pending the appeal of the decision, the stay granted by the Federal Court of Appeal eliminates the risk of a stoppage in production at McClean Lake. The Corporation believes that with the continuing efforts of all interested parties, a shut down of the McClean Lake facility is unlikely. The impact of an unfavourable decision cannot be determined at this time.

(b) In September 2002 the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of Denison's former employees, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In unanimously rejecting the lower court decision, the Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments are required to be made. These former employees have further appealed this Court of Appeal decision to the Supreme Court of Greece. The Corporation believes that this appeal will be unsuccessful. The impact of an unfavourable decision cannot be determined at this time.

(c) The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has:

(i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at the Corporation's decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and
(ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land.

The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

(d) The Corporation is involved in various other legal actions in the course of business. In the opinion of management, the aggregate amount of any potential liability is not expected to have a material adverse effect on the Corporation's financial position or results.

(e) In July 2002, the Corporation raised $5,000,000 through the issue of 1,428,571 flow-through Common Shares. As at September 30, 2003 the Corporation had spent the proceeds of this issue on Canadian Exploration Expenditures and has no further commitment.

(f) The Corporation's lease commitments under two operating leases for premises are 2003 - $223,000, 2004 - $196,000, 2005 - $25,000 and 2006 - $7,000.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

12. ACQUISITION OF INNOVATIVE ENERGY LTD.

Effective November 8, 2001 the Corporation acquired 100% of Innovative Energy Ltd. of Calgary. The acquisition has been accounted for as a purchase and accordingly these financial statements include Innovative's results from November 8, 2001 onward. The estimated fair value of net assets acquired on November 8, 2001 from Innovative Energy Ltd. and the consideration paid, were as follows:

	As at November 8, 2001
Net assets acquired	(in thousands)
Assets	
Current assets	**$ 533**
Oil and gas property, plant and equipment	**5,597**
	6,130
Liabilities	
Bank indebtedness	**2,285**
Other current liabilities	**913**
Provision for site restoration	**82**
	3,280
Net assets acquired	**$ 2,850**
Consideration	
Cash	**$ 1,916**
Non cash	
Issue of 386,880 Common Shares net of issue costs of $33,000	**934**
Total consideration	**$ 2,850**

13. SUBSEQUENT EVENTS

(a) On December 30, 2003 the Corporation entered into an arrangement agreement (the "Denison Arrangement") providing for a plan of arrangement pursuant to section 182 of the *Business Corporations Act* (Ontario) involving the Corporation, Denison Mines Inc. ("Denison Mines"), Tenwest Uranium Limited ("Tenwest"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership (the "Partnership"), Denison Mines Holding Corporation ("Mine Holdco") and E. Peter Farmer. The Denison Arrangement was approved by shareholders of the Corporation on March 3, 2004 and was completed on March 8, 2004.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) On March 8, 2004, in accordance with the terms of the Denison Arrangement, Denison Mines acquired the mining and environmental services assets of the Corporation and assumed all liabilities, including environmental liabilities, related to the mining assets of the Corporation. As part of the above transaction, Denison Mines also acquired the assets of the Corporation's wholly owned subsidiary, Tenwest. Further, Denison Resources acquired the Canadian oil and gas assets of the Corporation and assumed all liabilities, including environmental liabilities related to the Canadian oil and gas assets of the Corporation. At this time, each of the Corporation's shareholders received in exchange for each common share of the Corporation held prior to the completion of the Denison Arrangement, one common share of Denison Mines, 1/5 of one common share of Denison Oil (the parent of Denison Resources) and 1/21 of one new common share of the Corporation.

Immediately following the completion of the Denison Arrangement described in note 13 (a) above, the Corporation issued 727,073 Common Shares equal to 45% of the outstanding Common Shares (after giving effect to such share issuance) to Matco Capital Ltd. ("Matco") and other parties designated by Matco at a purchase price of $7.35 per Common Share after giving effect to the above exchange.

(c) The Corporation has entered into an agreement with Calfrac Well Services Ltd. ("Calfrac") and its shareholders pursuant to which the shareholders of Calfrac have granted the Corporation an option to purchase all of the shares of Calfrac following the completion of the Denison Arrangement described in note 13 (a) and the Matco subscription described in note 13 (b) for an aggregate purchase price of $227.5 million less debt. The Corporation has the option to pay the purchase price in cash or in a combination of cash and Common Shares, provided that if the Corporation pays the purchase price by the issuance of Common Shares, the Common Shares must make up not less than 80% of the purchase price. On March 10, 2004 the Corporation entered into an underwriting agreement to raise net proceeds of $118,125,057 through the issuance of 8,064,520 Common Shares.

(d) On January 28, 2004, the Corporation, Forte Oil Corporation ("Forte"), 1087215 Alberta Ltd. ("Subco"), Denison Resources, the Partnership, Denison Mines and Denison Oil (the parent of Denison Resources) entered into an arrangement agreement (the "Forte Arrangement") to implement an arrangement (the "Forte Arrangement") by way of plan of arrangement under section 193 of the *Business Corporations Act* (Alberta). The Forte Arrangement was approved by shareholders of the Corporation on March 3, 2004 and was completed on March 9, 2004.

Pursuant to the Forte Arrangement, Forte amalgamated with Subco, a wholly-owned subsidiary of Denison Oil (the parent of Denison Resources), Forte securityholders exchanged their Forte securities for securities of Denison Oil, and Denison Oil exchanged its securities of Subco for securities of the amalgamated corporation. Upon completion of the Forte Arrangement, Forte became a wholly-owned subsidiary of Denison Oil, and Denison Oil became owned as to approximately 80% by Forte shareholders and approximately 20% by the Corporation's shareholders.

(e) Following the receipt of revised reserve reports in October, 2003, the borrowing facility described in note 4 has been revised to require a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 by March 31, 2004. The Corporation agreed to apply net sales proceeds from disposition of any Canadian oil and gas asset together with net proceeds from any share issue attributable to oil and gas assets or stock option proceeds attributable to oil and gas assets to reduce this facility and the remaining balance on this facility on March 9, 2004 was refinanced by Denison Oil on closing of the Forte Arrangement described in note 13(d).

14. SEGMENTED INFORMATION

Operations are in the following industries:

Mining	- primarily involves mining, milling and sale of uranium concentrates and exploration and development of mineral properties.
Oil and Gas	- exploration, development, production and sale of oil and natural gas and receipt of royalty revenue.
Environmental Services	- mine decommissioning services and monitoring of decommissioned sites for third parties.

Information for the nine months ended September 30, 2003 and September 30, 2002 are as follows:

Auditors' Report

To the Directors of
Calfrac Well Services Ltd.

We have audited the consolidated balance sheets of **Calfrac Well Services Ltd.** as at December 31, 2003 and 2002 and the consolidated statements of operations and retained earnings and cash flows for each of the years in the three year period ended December 31, 2003. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2003 and 2002 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2003 in accordance with Canadian generally accepted accounting principles.

1 Description of business and basis of presentation

Calfrac Well Services Ltd. (the "company") is a private company originally incorporated under the Business Corporation Act (Alberta) on June 28, 1999. It amalgamated with 850288 Alberta Ltd. on January 1, 2000. The company has established oilfield operations in Red Deer, Alberta, Grand Prairie, Alberta and Medicine Hat, Alberta as well as the United States and offers stimulation services to the oil and gas industry including fracturing, acidizing and coiled tubing services.

2 Summary of significant accounting policies

The financial statements of the company have been prepared by management in accordance with Canadian generally accepted accounting principles. Because a precise determination of many assets and liabilities is dependent upon future events, the preparation of financial statements necessarily involves the use of estimates and approximations which have been made using careful judgement. The financial statements have, in management's opinion, been properly prepared within reasonable limits of materiality and within the framework of the significant accounting policies summarized below:

a) Principles of consolidation

These financial statements include the accounts of Calfrac Well Services Ltd. and its wholly owned subsidiary, Calfrac Well Services Corp. Calfrac Well Services Corp. was incorporated in the United States during 2001 and commenced operations in the last quarter of 2001.

b) Foreign currency translation

The financial accounts of the subsidiary are translated into Canadian currency using the temporal method of translation. Under the temporal method, monetary denominated items are translated at the rate of exchange at the balance sheet date while non-monetary items are translated at the historical rate applicable on the date of the transaction giving rise to the non-monetary balance. Revenues and expenses are translated at the monthly average exchange rates. Gains or losses in translation are recognized in income as they occur.

c) Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and short-term investments with original maturities within 90 days.

d) Marketable securities

Marketable securities are carried at the lower of cost and market value.

e) Inventory

Inventory consists of chemicals, carbon dioxide, nitrogen and proppants used to stimulate wells and is stated at the lower of cost, determined on a first-in, first-out basis and net realizable value.

(Information as at and for the period ended September 30, 2003 is unaudited)

f) Capital assets

Capital assets are recorded at cost and are depreciated over their estimated economic useful lives using the straight-line method at the following annual rates:

Field equipment	10 years
Buildings	20 years
Shop, office and other equipment	5 years
Computers and computer software	3 years
Leasehold improvements	Term of the lease

g) Income taxes

The company follows the liability method of determining income taxes where future income taxes are determined based on temporary differences between the tax bases of assets or liabilities and their carrying amounts in the financial statements.

h) Revenue recognition

Revenue is recognized as services are rendered and when delivery occurs for products..

i) Stock-based compensation plans

The company does not recognize compensation cost for its stock-based compensation; therefore, no stock-based compensation expense is recorded either on granting or exercise of stock options. Consideration paid by employees, officers or directors on the exercise of stock options is recorded as share capital.

j) Goodwill

Goodwill represents the excess of cost over the fair value of net assets acquired. Intangible assets are recognized apart from goodwill and are amortized over their estimated useful lives. Goodwill and intangible assets are assessed by the company for impairment at least annually. The impairment test is carried out in two steps. In the first step, the carrying amount is compared with its fair value. When the fair value exceeds its carrying amount, goodwill is considered not to be impaired and performance of the second step of the impairment test is unnecessary. The second step compares the implied fair value of the goodwill with its carrying amount to measure the amount of the impairment loss, if any.

(Information as at and for the period ended September 30, 2003 is unaudited)

	252	550

(Information as at and for the period ended September 30, 2003 is unaudited)

On February 23, 2000, the company acquired 100% of the outstanding shares of 851350 Alberta Ltd. ("851350") in exchange for 2,125,000 common shares valued at $1 per share. 851350 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851350, this contract was assigned to Calfrac Well Services Ltd. and 851350 was dissolved on March 1, 2000. $654,325 of the purchase price is being amortized over the four year life of the contract. $1,470,675 has been identified as having an indefinite life and has been classified as goodwill.

On April 5, 2001, the company acquired 100% of the outstanding shares of 851355 Alberta Ltd. ("851355") in exchange for 2,390,625 common shares valued at $1 per share. 851355 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851355, this contract was assigned to Calfrac Well Services Ltd. and 851355 was dissolved on April 10, 2001. $584,802 of the purchase price is being amortized over the four year life of the contract. $1,805,823 has been identified as having an indefinite life and has been classified as goodwill.

As a consequence of the transactions described above, the oil and gas producer acquired a significant minority interest in the company. The company provided services to the oil and gas producer as follows:

(in thousands of Canadian dollars)	Nine months ended September 30, 2003 $	Years ended December 31, 2003 $	2002 $	2001 $
Revenue				
Canada	46,048	61,507	39,492	15,812
United States	10,905	15,341	16,779	325
	56,953	76,848	56,271	16,137

At the end of the period, the oil and gas producer owed the company the following:

(in thousands of Canadian dollars)	Nine months ended September 30, 2003 $	Years ended December 31, 2003 $	2002 $
Accounts receivable			
Canada	9,275	5,420	8,538
United States	2,642	1,601	3,723
	11,917	7,021	12,261

The company's transactions with the oil and gas producer were in the normal course and have been measured at the exchange amount.

(Information as at and for the period ended September 30, 2003 is unaudited)

5 Bank loans and long-term debt

(in thousands of Canadian dollars)	As at December 31,	
	2003	**2002**
	$	**$**
Loan bearing interest at prime plus 0.82% requiring payment of accrued interest monthly plus a fixed principal payment of $580,000 per month, secured by charges on specific equipment.	24,456	-
Bankers acceptance bearing interest at 5.3% plus stamping fees of 1.5% requiring blended monthly payments of $166,975, secured by charges on specific equipment.	3,170	4,895
Loan bearing interest at prime plus 0.75% requiring payment of accrued interest monthly plus a fixed principal payment of $15,556 per month, secured by charges on land and buildings.	2,613	2,800
Bankers acceptance bearing interest at 5.31% plus stamping fee of 1.75% requiring blended monthly payments of $119,870, secured by charges on specific equipment.	2,256	3,488
Debenture bearing interest at 8.95% requiring payment of accrued interest monthly plus a fixed principal payment of $53,575 per month, secured by charges on specific equipment.	1,607	2,250
Bankers acceptance bearing interest at 6.39% plus stamping fees of 1.5% requiring blended monthly payments of $146,168, secured by charges on specific equipment.	859	2,475
Loan bearing interest at 6% requiring blended monthly payments of $25,212, secured by charges on specific equipment.	833	-
Non-interest bearing unsecured loan requiring a fixed principal payment of $37,595 per annum.	99	137
Loan bearing interest at prime plus 0.75% requiring payment of accrued interest monthly plus a fixed principal payment of $236,150 per month, secured by charges on specific equipment.	-	11,780
Loan bearing interest at prime plus 1% requiring payment of accrued interest monthly plus a fixed principal payment of $125,000 per month, secured by charges on specific equipment.	-	6,404
Loan bearing interest at prime plus 1% requiring payment of accrued interest monthly plus a fixed principal payment of $60,000 per month, secured by charges on specific equipment.	-	2,400
	35,893	36,629
Current portion of long-term debt	(12,112)	(680)
Bank debt (current)	-	(34,243)
	23,781	1,706

In 2002, the company implemented the Canadian Instituted of Chartered Accountants ("CICA") pronouncement EIC #122. The pronouncement requires that bank debt that is callable on demand be reclassified as a current liability. This presentation was adopted for December 31, 2002 with prior periods reclassified to conform to this presentation.

(Information as at and for the period ended September 30, 2003 is unaudited)

Effective September 2003, the company renegotiated the terms of the loans to remove the demand feature. Accordingly, at September 30, 2003, these loans have been classified as long-term, with the current portion of long-term debt reflected accordingly.

As at December 31, 2003, the company had an unutilized operating loan facility of $5 million and an undrawn revolving equipment term loan in the amount of $7.5 million.

Scheduled principal repayments required in each year to retire the bank loans and long-term debt as at December 31, 2003 are as follows:

(in thousands of Canadian dollars)	$
2004	12,113
2005	10,328
2006	7,761
2007	3,763
2008	187
Thereafter	1,741
	35,893

6 Income taxes

The following table summarizes the temporary differences that give rise to the future tax liability at December 31:

(in thousands of Canadian dollars)	As at December 31,	
	2003 $	2002 $
Capital assets	8,682	6,842
Bonus payable	(817)	(859)
Deferred financing costs	(53)	(56)
Other	(291)	(31)
	7,521	5,896

(Information as at and for the period ended September 30, 2003 is unaudited)

The provision for income taxes in the statement of operations and retained earnings varies from the amount that would be computed by applying the expected tax rate of 36.8% (2002 – 42.1%; 2001 – 42.6%) to income before income taxes. The principal reasons for differences between such expected income tax expense and the amount actually recorded are as follows:

(in thousands of Canadian dollars)	Years ended December 31,		
	2003 $	**2002 $**	**2001 $**
Income before tax	30,611	16,014	13,064
Income tax rate	36.8%	42.1%	42.6%
Computed expected income tax expense	11,246	6,742	5,565
Increase (decrease) in income taxes resulting from			
Manufacturing and processing – lower effective tax rate	(535)	(879)	(674)
Non-deductible expenses	187	178	128
Future income tax benefit from tax rate reduction	(126)	(88)	-
Foreign tax rate differentials	(32)	(39)	-
Other	162	(8)	202
Large corporations tax	60	84	78
	10,962	5,990	5,299

7 Capital stock

Authorized
Unlimited number of common shares
Unlimited number of first and second preferred shares

Common shares issued and outstanding

(in thousands of Canadian dollars)	**Number of shares**	**Amount $**
Balance – December 31, 2000	10,625,000	10,625
Issued shares for acquisition of 851355 Alberta Ltd. (note 4)	2,390,625	2,391
Issued shares for cash	430,000	1,075
Repurchased shares for cash	(8,000)	(20)

Issued shares for cash	20,200	60
Balance – December 31, 2002	13,457,825	14,131
Issued shares for cash	90,250	324
Issued shares on exercise of stock options	265,625	265
Balance – December 31, 2003	13,813,700	14,720

(Information as at and for the period ended September 30, 2003 is unaudited)

Stock options

The company issued 265,625 stock options to senior executives on August 15, 2003 with an exercise price of $1 per share. The stock options granted vest immediately and expire in five years. Stock options vested may be exercised at any time between the date on which it becomes exercisable and the end of the stock option's term. All stock options were exercised by December 31, 2003.

Stock-based compensation costs

Effective January 1, 2002, Canadian generally accepted accounting principles require disclosure of impact on net earnings using the fair value method for stock options issued on or after January 1, 2002. If the fair value method had been used, the company's net income would approximate the following pro-forma amounts:

(in thousands of Canadian dollars)	December 31, 2003 $
Stock-based compensation costs	829
Net income for the period	
As reported	19,649
Pro-forma	18,820

The stock-based compensation costs are recognized over the vesting period of the stock options granted.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes option pricing model, minimum value method, based on the following:

	December 31, 2003
Fair value of stock options granted (per common share)	$3.12
Risk-free interest rate	3.04%
Expected life (years)	0.5
Expected volatility	0%
Dividends paid	-

8 Commitments

The company leases property (premises), equipment and vehicles under agreements requiring aggregate minimum payment over the next five years, from December 31, 2003, as follows:

(in thousands of Canadian dollars)	$
2004	2,410
2005	1,163
2006	683
2007	540
2008	568
Thereafter	2,190

(Information as at and for the period ended September 30, 2003 is unaudited)

9 Financial instruments

The company's financial instruments that are included in the consolidated balance sheet are comprised of cash, marketable securities, accounts receivable, all current liabilities and long-term debt.

a) Fair values of financial assets and liabilities

The fair values of financial instruments that are included in the consolidated balance sheet, except marketable securities, bank loans and long-term debt approximate their carrying amounts due to the short-term maturity of those instruments. The carrying value of marketable securities approximates quoted market value. The fair value of the bank loans and long-term debt is not materially different from its carrying amounts since the interest rates approximate a market rate of interest.

b) Credit risk

A substantial portion of the company's accounts receivable are with customers in the oil and gas industry and are subject to normal industry credit risks.

c) Interest rate risk

The company is exposed to interest rate cash flow risk on debt subject to floating interest rates. The company's effective interest rate for the year ended December 31, 2003 was 6.06% (December 31, 2002 – 6.28%; December 31, 2001 –7.57%).

Interim Chief Financial Officer

On behalf of the Board of Directors

(Signed) "*Gregory S. Fletcher*"
Director

(Signed) "*James S. Blair*"
Director

CERTIFICATE OF THE UNDERWRITERS

DATED: March 10, 2004

To the best of our knowledge, information and belief, the foregoing constitutes full, true and plain disclosure of all material facts relating to the securities offered by this prospectus as required by the *Securities Act* (British Columbia), by Part 9 of the *Securities Act* (Alberta), by Part XI of *the Securities Act, 1988* (Saskatchewan), by Part VII of the *Securities Act* (Manitoba), by Part XV of the *Securities Act* (Ontario), by Section 64 of the *Securities Act* (Nova Scotia), by Section 13 of the *Security Frauds Prevention Act* (New Brunswick), by Part II of the *Securities Act* (Prince Edward Island), by Part XIV of the *Securities Act* (Newfoundland and Labrador), and the respective regulations thereunder. To our knowledge, this prospectus, as required by the *Securities Act* (Quebec) and the regulations thereunder, does not contain any misrepresentation that is likely to affect the value or the market price of the securities to be distributed.

PETERS & CO. LIMITED
(Signed) "*Michael J. Tims*"

FIRSTENERGY CAPITAL CORP.
(Signed) "*Nicholas J. Johnson*"

RBC DOMINION SECURITIES INC.
(Signed) "*Robert D. Hallett*"

A copy of this amended and restated preliminary prospectus has been filed with the securities regulatory authorities in each of the provinces of Canada but has not yet become final for the purpose of the sale of securities. Information contained in this amended and restated preliminary prospectus may not be complete and may have to be amended. The securities may not be sold until a receipt for the prospectus is obtained from the securities regulatory authorities.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. This prospectus constitutes a public offering of securities only in those jurisdictions where such securities may be lawfully offered for sale and therein only by persons permitted to sell such securities. These securities have not been and will not be registered under the United States Securities Act of 1933, as amended. Accordingly, except to the extent exempt from such registration requirements, these securities may not be offered or sold in the United States and this prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of these securities within the United States. See "Plan of Distribution".

AMENDED AND RESTATED PRELIMINARY PROSPECTUS

New Issue

February 11, 2004

DENISON ENERGY INC.

$125,000,000
Common Shares

Denison Energy Inc. ("Denison" or the "Corporation") is offering ● of its Common Shares (the "Offered Shares") at a price of $ ● per share pursuant to this prospectus.

The offering price per Offered Share of $ ● was determined by negotiation between Denison and Peters & Co. Limited, on its own behalf and on behalf of FirstEnergy Capital Corp. and RBC Dominion Securities Inc. (collectively, the "Underwriters").

In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Price: $ ● per Common Share

	Price to the Public	Underwriters' Fee	Net Proceeds to the Corporation
Per Common Share	$ ●	$ ●	$ ●
Total	$125,000,000	$6,875,000	$118,125,000

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business and the success of this change cannot be assured. The Corporation does not have a history of paying dividends on its common shares. However, the board of directors may make a determination to pay dividends in the future if circumstances permit. Subscribers must rely upon the ability and integrity of the management of the Corporation. See "Risk Factors".

The Corporation has recently completed a reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd., has certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. — The Reorganization".

Except as otherwise indicated, all of the disclosure in this amended and restated preliminary prospectus is made on the basis that the Reorganization (as defined herein) has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

The Underwriters conditionally offer the Offered Shares, subject to prior sale, if, as and when issued by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution", subject to approval of certain legal matters on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP. In connection with the distribution of the Offered Shares, the Underwriters may engage in market stabilization activities. See "Plan of Distribution".

The common shares of Denison that are currently issued and outstanding are listed on the Toronto Stock Exchange (the "TSX") under the symbol "DEN". On February 10, 2004, the closing price of the common shares of Denison on the TSX was $6.30.

Subscriptions for the Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. It is expected that the closing of this offering will take place on or about March ● , 2004, and in any event not later than March ● , 2004.

SUMMARY

The following is a summary of the principal features of this offering and should be read together with the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the Glossary for an explanation of certain terms used in this prospectus and in this summary.

Except as otherwise indicated, all of the disclosure in this amended and restated preliminary prospectus is made on the basis that the Reorganization has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

The Corporation

Introduction

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource-related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the reorganization of Denison, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. As at the date hereof, the Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd. and certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. – The Reorganization" for illustrations of the structure of Denison before and after the Reorganization, this offering and the Acquisition.

The completion of this offering will provide financing which will enable the Corporation to exercise the option to acquire the shares of Calfrac, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted Denison an irrevocable option to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million.

The net purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. No portion of the net purchase price may be paid by the issuance of Common Shares unless this offering has closed and the Common Shares issuable pursuant to this offering have been issued and delivered unconditionally to the subscribers under this offering.

If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of • Common Shares and the payment of approximately $28.8 million in cash.

Calfrac

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal ("NGC"), which is often referred to as coalbed methane.

The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fractures.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. NGC appears to have significant potential as an energy source and could result in additional demand for Calfrac's fracturing services. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; and (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services.

Calfrac was formed in 1999 by Ronald P. Mathison, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts. For the year ended December 31, 2003, Calfrac had: (i) revenue of approximately $156.6 million; (ii) income before interest, taxes, depreciation and amortization of approximately $41.8 million; (iii) income before taxes of approximately $30.6 million; and (iv) net income of approximately $19.6 million.

Corporate Strategy

If the acquisition of all of the shares of Calfrac occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the acquisition of all the shares of Calfrac occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac, and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of

Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the acquisition of all of the shares of Calfrac.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 50%, and net income increasing annually by a minimum of 29%, with an average of 51%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the acquisition of all of the shares of Calfrac occurs, the Corporation will be an oilfield services provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Calfrac's management recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows it to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

Selected Financial Information

The following table presents a summary of historical financial data for Calfrac for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of Calfrac at each of these dates and for the periods then ended. The following table also presents a summary of unaudited financial data for the year ended December 31, 2003 and the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of • Common Shares for net proceeds of approximately $116.25 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of • Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the unaudited pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro forma financial statements of the Corporation. All financial information with respect to the Corporation and Calfrac has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

The following data should be read along with "Management's Discussion and Analysis Regarding Calfrac" and the financial statements and related notes of Calfrac included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

Notes:

(1) Derived from the audited financial statements.

(2) EBITDA, in respect of the Corporation, represents revenue after operating expenses, selling and general and administrative expenses, stock option expense and write-down of oil and gas properties, but before depreciation, depletion and amortization, amortization of intangibles, interest and income tax. EBITDA, in respect of Calfrac, represents income before interest, taxes, depreciation and amortization. EBITDA is not a term that is approved under Canadian GAAP, as the calculation of EBITDA is not always used consistently by reporting issuers. Accordingly, EBITDA, as the term is used herein, may not be comparable to EBITDA as reported by other entities. EBITDA is presented because it is frequently used by security analysts and others in evaluating companies and their ability to service debt.

(3) If the acquisition of all the shares of Calfrac occurs, the Corporation will have non-capital losses and unclaimed expenditures, in aggregate, equal to approximately $224.6 million for federal tax purposes and approximately $172.9 million for Alberta provincial tax purposes.

The Offering

Offering Price	$• per Offered Share
Offered Shares	• Common Shares
Closing	The closing of this offering is anticipated to occur on March •, 2004, and in any event not later than March •, 2004.
Use of Proceeds	The net proceeds to the Corporation from this offering are estimated to be $116.3 million, after deducting the Underwriters' fee of $6.875 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.9 million. The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac in connection with the recent repurchase of the interest of an equity shareholder of Calfrac; and (iii) approximately $29.1 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac. It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.
Eligibility for Investment	In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, provided the Common Shares are listed on a prescribed stock exchange at the time of closing of this offering, the Offered Shares will, on closing, be qualified investments within the meaning of the Tax Act for trusts governed by registered retirement savings plans, registered retirement income funds, registered education savings plans and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing, constitute "foreign property" under the Tax Act. See "Eligibility for Investment". In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on the closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Risk Factors

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of this offering and the acquisition of Calfrac. If such acquisition is not completed, the success of this change in business strategy cannot be assured. Although the Corporation does not have a history of paying dividends on its common shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. There are additional risks associated with an investment in these securities relating to: volatility of industry conditions, seasonality, alternatives to and changing demand for petroleum products, dependence on major customers, government regulation, sourcing of raw materials, pricing and availability of raw materials, Kyoto Protocol, operating risks and insurance, liability for prior operations, key personnel, competition in the industry, currency exchange risk, the absence of current business and anticipated acquisition of Calfrac and additional financing. In assessing the risks of an investment in the Offered Shares, subscribers must rely upon the ability and integrity of the management of the Corporation. **Subscribers should consult their own professional advisors to assess the income tax, legal and other aspects of an investment in the Offered Shares. See "Risk Factors".**

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below:

"**ABCA**" means the *Business Corporations Act* (Alberta);

"**Acquisition**" means the acquisition by the Corporation of all of the issued and outstanding shares of Calfrac pursuant to the Purchase Option;

"**Amalgamation**" means the amalgamation of the Corporation with Calfrac pursuant to section 184 of the ABCA;

"**Arrangement**" means the arrangement of the Corporation pursuant to section 182 of the OBCA;

"**Arrangement Agreement**" means the arrangement agreement among Denison, Tenwest Uranium Limited, Denison Mines Inc., Denison Resources Inc., Dension Oil Corporation, Denison Resources Partnership, Denison Mine Holding Corporation and E. Peter Farmer, as amended from time to time;

"**Calfrac**" means Calfrac Well Services Ltd.;

"**Calfrac USA**" means Calfrac Well Services Corp., a wholly owned subsidiary of Calfrac;

"**ChemErgy**" means ChemErgy Ltd.;

"**Cogema**" means Cogema Resources Inc.;

"**Common Shares**" means the common shares of the Corporation following the Arrangement;

"**Consolidation**" means the consolidation of 21 common shares of Denison into one Common Share pursuant to the Arrangement;

"**Continuance**" means the continuance of Denison as an Alberta corporation under section 188 of the ABCA;

"**Corporation**" or "**Denison**" means Denison Energy Inc.;

"**DJ Basin**" means the Denver-Julesburg Basin in Colorado;

"**Matco**" means Matco Capital Ltd., a corporation controlled by Matco Investments;

"**Matco Investments**" means Matco Investments Ltd., a private investment corporation;

"**NGC**" means natural gas from coal, also known as coalbed methane or "CBM";

"**OBCA**" means the *Business Corporations Act* (Ontario);

"**Offered Shares**" means the Common Shares offered pursuant to this prospectus;

"**Purchase Option**" means the purchase option agreement among Calfrac, Matco Investments (on behalf of itself and the other shareholders of Calfrac) and Denison granting an irrevocable option to Denison to purchase all of the issued and outstanding shares of Calfrac for an aggregate purchase price of approximately $227.5 million less the net debt of Calfrac, which is anticipated to be approximately $83.6 million for these purposes;

"**Reorganization**" means the Arrangement, the Continuance, the Subscription and certain related transactions, collectively;

"**Subscription**" means the subscription completed by the Corporation following the Arrangement pursuant to which the Corporation issued • Common Shares to Matco and investors designated by Matco for aggregate gross proceeds of approximately $5.3 million;

"**Tax Act**" means the *Income Tax Act* (Canada);

"**TSX**" means the Toronto Stock Exchange;

"**Underwriters**" means Peters & Co. Limited, FirstEnergy Capital Corp. and RBC Dominion Securities Inc.; and

"**Underwriting Agreement**" means the underwriting agreement dated •, 2004 among the Corporation and the Underwriters with respect to this offering.

Unless otherwise indicated, references herein to "$" or "dollars" are to Canadian dollars.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward-looking statements. When used in this document, the words "may", "would", "could", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect", and similar expressions, as they relate to the Corporation, are intended to identify forward-looking statements. Such statements reflect the Corporation's current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this prospectus under the heading "Risk Factors", "Selected Financial Information" and "Management's Discussion and Analysis Regarding Calfrac". Many factors could cause the Corporation's actual results, performance or achievements to vary from those described in this prospectus. Should one or more of these risks or uncertainties materialize, or should assumptions underlying forward-looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this prospectus contains forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding the Corporation's ability to maintain Calfrac's competitive position;
- expectations regarding the Corporation's ability to raise capital;
- treatment under governmental regulatory regimes;
- commodity prices; and
- exercise of the Purchase Option.

The Corporation's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this prospectus:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;
- liabilities and risks associated with prior operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

Except as otherwise indicated, all of the disclosure in this amended and restated preliminary prospectus is made on the basis that the Reorganization has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

DENISON ENERGY INC.

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource-related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the Arrangement, Denison has disposed of these interests. See "– The Reorganization – The Arrangement". The completion of this offering will provide financing which will enable the Corporation to exercise the Purchase Option, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

Corporate Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the Acquisition occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac, and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the Acquisition.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 50%, and net income increasing annually by a minimum of 29%, with an average of 51%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the Acquisition occurs, the Corporation will be an oilfield services provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Management of Calfrac recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows Calfrac to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

The Acquisition

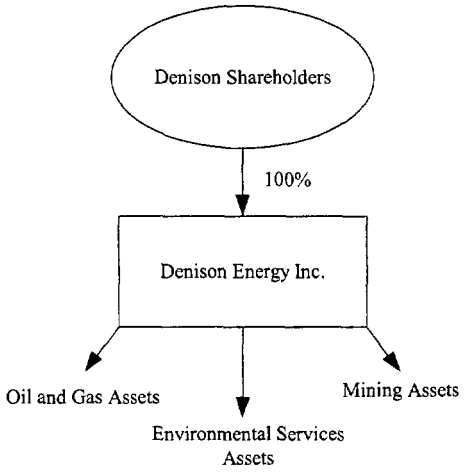
The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted an irrevocable option to Denison to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million. The following table illustrates the estimated net purchase price payable by the Corporation to the shareholders of Calfrac in the event the Corporation exercises the Purchase Option:

	(in millions)
Purchase price	$ 227.5
Established net debt as at December 30, 2003	(25.2)
Estimated debt assumed after December 30, 2003	(58.4)
Estimated net purchase price	**$ 143.9**

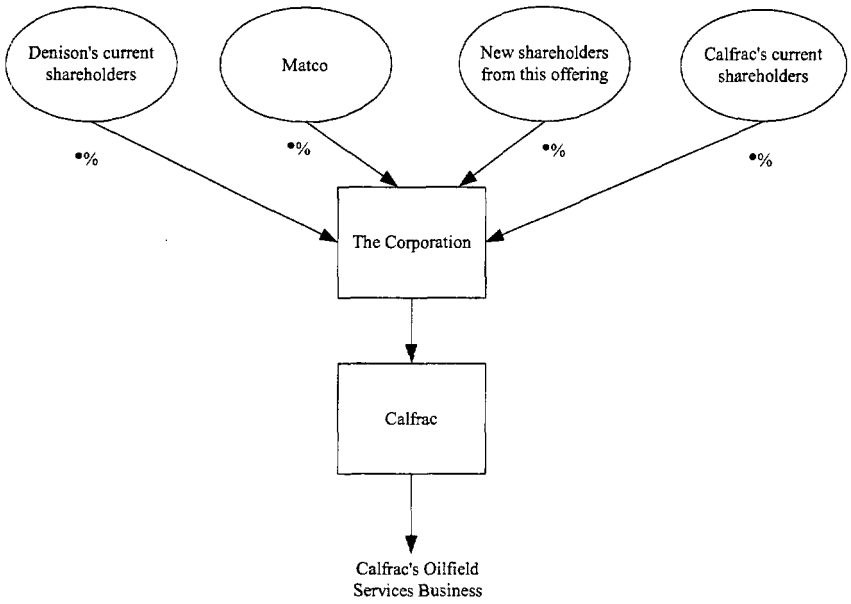
The net purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay in a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. The Purchase Option may be exercised by the Corporation during the period commencing on the date this offering is completed, or, in the event of payment only in cash, the date upon which the Corporation is a party to binding agreements that would enable it to exercise the Purchase Option, and ending on the earlier of the seventh day thereafter and March 26, 2004. The Purchase Option may not be exercised except on an all cash basis unless this offering has closed and the Common

Shares issuable pursuant to this offering have been issued and delivered unconditionally to the subscribers under this offering.



If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of • Common Shares, representing 80% of the net purchase price, and the payment of approximately $28.8 million in cash, representing the remaining 20% of the purchase price. Each of Messrs. Mathison, Lambert, Ramsay, Dibb and Roberts, directly and indirectly, will receive an amount proportionate to his shareholdings of the approximately $28.8 million that the Corporation anticipates paying to the shareholders of Calfrac as the cash portion of the net purchase price of the Acquisition. The balance of the purchase price of the Acquisition of approximately $115.1 million is anticipated to be paid by the issuance of Common Shares at an attributed price per share equal to the price of the Offered Shares.

The Reorganization



Pursuant to the Reorganization completed on March •, 2004, Denison was restructured into three publicly traded companies, being: (i) Denison Mines Inc., a uranium mining and mining–related environmental services company; (ii) Denison Oil Corporation (the parent of Denison Resources Inc.), an oil and gas exploration and development company; and (iii) the Corporation, which holds the Purchase Option and certain other retained assets, has certain income tax attributes held by Denison prior to the Reorganization, and has retained certain claims and liabilities.

The following diagrams illustrate the structure of each of: (i) Denison before the Reorganization; and (ii) the Corporation after the Reorganization, this offering and the Acquisition.

Before the Reorganization

After the Reorganization, this Offering and the Acquisition

The Arrangement

The Arrangement resulted in:

- the amalgamation of Denison with Tenwest Uranium Limited, a wholly owned subsidiary of Denison;
- the transfer of all of Denison's Canadian petroleum and natural gas assets to Denison Resources Inc. and the assumption by Denison Resources Inc. of all liabilities of Denison related to such assets;
- the transfer of all of Denison's mining assets and mining environmental services related assets to Denison Mines Inc. and the assumption by Denison Mines Inc. of all liabilities relating to such assets;
- the distribution to each shareholder of Denison of common shares of each of Denison Oil Corporation (the parent of Denison Resources Inc.) and Denison Mines Inc.;
- the Corporation holding no material assets, other than the Purchase Option, having certain income tax attributes, and retaining certain claims and liabilities incurred prior to, or in connection with, the Arrangement. These claims and liabilities of the Corporation include expenses incurred by the Corporation in respect of the Reorganization, this offering and the Acquisition, certain quantifiable liabilities (estimated at approximately $4.5 million) and certain retained legal proceedings. See "Legal Proceedings";
- 21 pre-consolidation common shares of Denison being exchanged for one Common Share. The Consolidation reduced the number of outstanding common shares of Denison, after giving effect to the Arrangement, but prior to the Subscription, to approximately • Common Shares; and
- in accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses in respect of liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to

Denison Energy Inc.'s business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Risk Factors – Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of any claims arising from the prior business of the Corporation, including the retained legal proceedings, will not, individually or in the aggregate, have a material adverse effect on the Corporation (assuming the completion of this offering and the Acquisition).

Continuance

Pursuant to the Continuance, the Corporation ceased to be a corporation incorporated under and governed by the OBCA and became a corporation continued under and governed by the ABCA.

The Subscription

Following implementation of the Arrangement and the Continuance, Matco acquired • Common Shares from treasury (representing 45% of the total number of issued and outstanding Common Shares after giving effect to the Subscription) at a subscription price of $7.35 per share for total proceeds to the Corporation of approximately $5.3 million.

Amalgamation, Name Change and Additional Directors

If the Acquisition is completed, the Amalgamation and a name change will be effected. Pursuant to the Amalgamation, Calfrac, as a wholly owned subsidiary of the Corporation following completion of the Acquisition, will be amalgamated on a vertical short form basis. In connection with the Amalgamation, the name of the Corporation will be changed to Calfrac's name, Calfrac Well Services Ltd.

On March •, 2004, all of Denison's officers and all but three of Denison's directors resigned. At that time, three independent members of Denison's board, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little, continued as directors of the Corporation and were joined on the board by Ronald P. Mathison and Martin A. Lambert. Also on March •, 2004, Martin A. Lambert was appointed the Interim Chief Executive Officer of the Corporation and David M. McGoey was appointed the Interim Chief Financial Officer of the Corporation. If the Acquisition is completed, it is expected that Douglas R. Ramsay and R. Timothy Swinton will be appointed as additional directors of the Corporation, the officers disclosed under "Directors and Officers of the Corporation" and "Management" will be appointed, Mr. Lambert and Mr. McGoey will resign as Interim Chief Executive Officer and Interim Chief Financial Officer of the Corporation, respectively, and Mr. Lambert will continue to act as a director of the Corporation.

BUSINESS OF CALFRAC

Denison is considering changing the focus of its business to the oilfield services business and, in this regard, anticipates acquiring Calfrac pursuant to the Purchase Option. Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

Fracturing Services

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies, which services accounted for approximately 93% of Calfrac's revenue in 2003 and 91% of Calfrac's revenue in 2002. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone within a reservoir to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone.

Conventional Hydraulic Fracturing

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fracture.

A considerable amount of technology is incorporated into the design of the fracturing fluid, which normally consists of proprietary chemicals which are combined with a base fluid. The final fluid can be gelled, emulsified or foamed and can be preceded by acid. In Canada, most fluids are energized by the introduction of liquid carbon dioxide or nitrogen gas. In addition to the complex chemical technology used for making the fracturing fluid, the fracturing process involves considerable engineering knowledge and experience to design the fracturing process to maximize the performance of the well. Each fracture is individually designed to take account of the specific temperatures, pressures, formation permeability and reservoir fluids expected in the producing zone in which fracturing will be performed. Calfrac's engineering staff provides technical evaluation and job design recommendations as an integral element of its fracturing service to the customer.

Hydraulic fracturing services involve the use of sophisticated equipment specifically designed and constructed for hydraulic fracturing. A complement or "spread" of equipment required to perform a conventional hydraulic fracturing job normally consists of the following:

- a blender to blend chemicals, base fluid and proppant into specific mixes of fracturing fluids;
- one or more high horsepower fracturing pumpers, with the number dependent upon the pumping pressure and rate required for the fracture;
- a chemical additive unit to hold and deliver each chemical in controllable quantities in order to blend the fracturing fluid; Calfrac often incorporates this unit into its blenders to increase efficiency and reduce the "footprint" of the spread at a particular well location;
- an iron truck or trailer used for transporting and rigging up the high-pressure lines or "iron" that connect the various components of the fracture spread and wellhead;
- a computer van equipped with monitoring, data recording, satellite communication and remote pumper controls to monitor and control the treatment and also record the data related to each phase of the fracture;
- one or more pumpers to pump the energizer (carbon dioxide or nitrogen); and
- various equipment to transport, store and deliver the proppant and energizer.

The traditional or stage fracture procedure for stimulating a multi-zone well involves numerous trips to the well location with each trip stimulating only one or two of the zones. In recent years, procedures have been developed so that all of the zones for a particular well can be fractured in just one trip to the well location. This procedure, using snubbing units for deeper, more highly pressurized wells and coiled tubing rigs for shallower wells, involves moving the target zone up or down the wellbore by raising or lowering tubing and requires the use of specialized tools that can isolate the target zone for treatment. The ability to complete the fracturing services for a multi-zone well in one trip to the well location has become increasingly attractive to customers, as it reduces the traffic to the well location and the resulting disturbance to the landowners and allows the well to be brought into production more quickly. In addition, this procedure simplifies the coordination of the logistics of the fracturing completion.

Fracturing for Natural Gas Found in Coal

Calfrac has identified the market niche of supplying hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada as one in which it seeks to be the leading provider.

NGC is often referred to as coalbed methane. In the United States, NGC production has increased from 0.2 billion cubic feet per day prior to 1990 to 4.4 billion cubic feet per day in 2002, representing approximately 8% of the total natural gas production in the United States.

Alberta and British Columbia have vast coal resources that may be a potential source of significant commercial quantities of NGC and this natural gas source has the potential to make a significant contribution to western Canada's future energy supply. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

NGC is referred to as an "unconventional" form of natural gas. NGC is produced by reducing the pressure in a coal seam to enable the methane gas to flow through fractures, or cleats, in the coal into the wellbore. The natural gas then flows up to the surface. When few natural fractures exist, producers may use hydraulic fracturing to create channels in the coal.

Natural gas found in coal is generally "sweet" not "sour" gas, as it does not contain hydrogen sulphide. NGC is generally 85% to 95% pure methane, with small amounts of carbon dioxide and nitrogen. NGC is generally produced at lower pressures than conventional natural gas and is generally of a nature that is near-pipeline quality when produced, requiring minimal processing.

A key challenge to NGC production in Alberta is the generally low permeability of coals with the highest natural gas concentrations (e.g., coal located in the Mannville formations) and the moderate to low natural gas concentrations of higher permeability coals (e.g., coal located in the Horseshoe Canyon and Ardley formations). Coal located in the Horseshoe Canyon formations is relatively shallow and may contain approximately 20 individual thin coal seams with interbedded shale and sandstone zones, which often contain natural gas. These zones are attractive multi-zone completion targets for producers of natural gas. Most importantly, these coal seams are dry and therefore produce no water. These coal seams are also found in areas where existing well, natural gas plant and pipeline infrastructure currently exists, which reduces production costs. Alberta's first commercial NGC production projects are located in the Horseshoe Canyon formation in south-central Alberta.

As a result of its extensive involvement in various pilot projects evaluating the viability of NGC production in western Canada, Calfrac, along with its customers, has developed an unconventional method of fracturing NGC wells performing multi-zone fractures through coiled tubing by pumping nitrogen gas, without the use of proppant, fluid or chemicals.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. Reliable information on the number of NGC wells drilled in Alberta in 2003 is not readily available. However, Calfrac has received information from the National Energy Board and the Alberta Energy and Utilities Board that approximately 300 to 500 NGC wells were drilled in Alberta in 2003, representing 2.7% to 4.5% of the 11,067 natural gas wells drilled in Alberta in 2003. Calfrac hydraulically fractured 224 of these wells, representing approximately 8% of Calfrac's aggregate fracturing revenue in 2003 compared to approximately 2% in 2002. The National Energy Board has predicted that the pace of NGC extraction will increase steadily to 1,200 wells being drilled in 2005.

Stimulation and Other Well Services

Calfrac provides stimulation and other well services to exploration and production companies in western Canada. Revenues from well stimulation services accounted for 7% of Calfrac's revenue in 2003 and 9% of Calfrac's revenue in 2002.

Coiled Tubing Services

Calfrac injects coiled tubing into wells to perform various well-servicing operations. Coiled tubing consists of continuous, high pressure, flexible, small diameter steel pipe in various lengths up to several thousand meters mounted on a reel on a truck or trailer. Coiled tubing units are often used together with the appropriate support equipment to pump nitrogen, acid or air in order to remove unwanted corrosive acids, solids, gels and fluids from the wellbore and producing zone. Coiled tubing units can also be used to set and remove tools, perform well abandonments and set siphon or velocity strings, which promote the production of natural gas without the accumulation of fluid in the wellbore.

Acidizing Services

Acidizing involves pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids.

Nitrogen Services

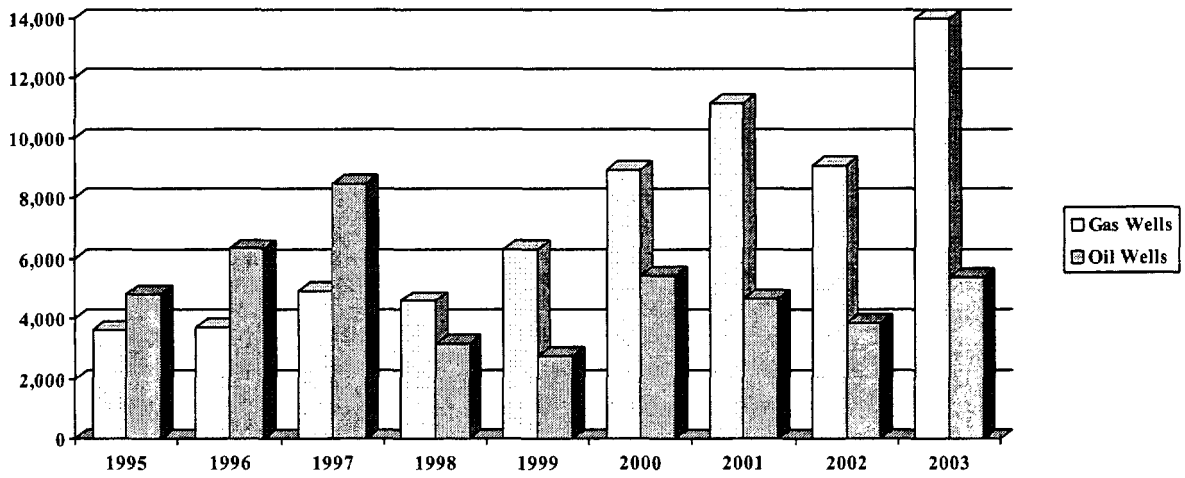
Nitrogen is added to acid blends to provide additional energy to assist in the clean out of unwanted materials and sediments in order to enhance the well flow rate. Nitrogen is also used for removing fluids from wellbores, purging vessels and pressure testing operations. Nitrogen services are used principally in applications supporting Calfrac's coiled tubing and fracturing services. Nitrogen is often pumped into the wellbore to improve safely the recovery of introduced or produced fluids, while reducing the potential for damaging the formation.

Customer Base

Calfrac's customer base consists of in excess of 150 oil and gas exploration and production companies, ranging from large multinational companies to small private companies. Calfrac has established and maintains a number of key relationships with active customers.

Notwithstanding Calfrac's significant customer base, the majority of Calfrac's revenue comes from two large customers. These two customers provided 59% of Calfrac's revenue in 2003. The largest of these customers provided 52% of Calfrac's revenue in 2003 and 57% of Calfrac's revenue in 2002. No other customer provided in excess of 5% of revenue in either of these periods. See "Risk Factors – Dependence on Major Customers" for additional information in respect of Calfrac's customers.

Demand for Hydraulic Fracturing Services



The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of natural gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

The number of natural gas wells completed each year is believed by management to be a good indicator of the potential level of fracturing activity. The chart below illustrates the substantial increase in the number of natural gas wells completed each year since 1995, from 3,614 in 1995 to 13,944 wells in 2003, as the number of natural gas wells completed has become a larger proportion of the total number of wells completed each year in western Canada.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. See "Risk Factors – Seasonality".

Wells Completed In Western Canada[(1)]

Note:
(1) Source: Nickle's Daily Oil Bulletin

Although Calfrac provides fracturing services to all segments of the oil and gas industry, it has historically focused on the shallow natural gas well segment located in southern and eastern Alberta. For the past five years, the average depth of the wells completed in Canada has averaged less than 1,100 metres (Nickle's Daily Oil Bulletin). Wells of this depth are generally classified as shallow and are located mainly in southern and eastern Alberta. This segment is, and management believes will continue to be, an important and consistent source of revenue to Calfrac. For this reason, Calfrac first commenced operations from a base in Medicine Hat.

Competition and Marketing Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the DJ Basin.

Each of the markets in which Calfrac participates is highly competitive. Fracturing services are generally provided to exploration and production companies through a competitive bid process for either individual wells or multi-well projects. Successful bids are the result of high customer satisfaction from past services provided and business relationships. Calfrac has developed extensive client contacts and built strong personal relationships with customers. Exploration and production companies also enter into agreements with service companies to provide fracturing services for multiple wells for periods of, generally, up to two years. However, these agreements seldom contain binding commitments for a minimum amount of fracturing work. Based on its expertise in providing hydraulic fracturing services and its strong business relations with its two most important customers, Calfrac has entered into four multi-year agreements with these customers to provide fracturing services to them, with three of these agreements providing a minimum quantity of fracturing services to be provided by Calfrac during the term thereof.

Calfrac believes that it provides superior service to customers through its experienced management and work force, unique chemical technology and modern and innovative equipment. Calfrac's management has extensive experience and strong business relationships in the oilfield service industry in western Canada and, as a result of a flat management structure, is actively involved in the daily operations of Calfrac.

Intellectual Property

Calfrac's research and development efforts are focused on providing specific solutions to the challenges experienced by oil and gas exploration and production companies when fracturing and stimulating wells. Calfrac's success in hydraulic fracturing has been facilitated by its ability to provide proprietary blends of chemicals that, together with its technical expertise and innovative equipment, result in customers' wells being more productive.

Calfrac conducts a significant amount of its research and development in conjunction with ChemErgy, a company in which Calfrac has a 30% ownership interest. ChemErgy is engaged in research and development relating to new systems and chemicals in connection with oilfield services. ChemErgy also supplies chemical products and provides quality control and logistical services for the products supplied. In accordance with an exclusive relationship agreement between Calfrac and ChemErgy, ChemErgy is required to supply products to and perform research and development for Calfrac on an exclusive basis and Calfrac is required to acquire all of the chemical products used in its business from ChemErgy. The exclusive relationship agreement with ChemErgy will terminate on May 31, 2011 and will be automatically renewed for one year renewal terms unless terminated with notice by either party. ChemErgy operates a fully-equipped laboratory in Calgary staffed with chemical engineers, chemists and technicians who are experienced in developing technologies to be used in oilfield operations and implementing these procedures in the field.

Where possible, Calfrac and ChemErgy undertake to protect intellectual property which they develop through joint applications for patent protection. Calfrac and ChemErgy currently have two patents pending on chemical systems used to deliver fracturing services.

Facilities, Equipment and Personnel

Calfrac provides hydraulic fracturing and well stimulation services from its corporate head office in Calgary and four field stations located in Medicine Hat, Red Deer and Grande Prairie, Alberta, and in Platteville, Colorado.

Calfrac owns a significant complement of fracturing equipment which, as at December 31, 2003, includes nine conventional fracturing spreads, incorporating 20 fracturing pumpers rated to a total of 45,000 horsepower, and one NGC fracturing spread with eight high rate nitrogen pumpers. Calfrac's well stimulation equipment includes two combination nitrogen-acid pumpers, two acid pumpers, two deep coiled tubing units and eight shallow coiled tubing units. Calfrac's total fleet of 132 large vehicles is comprised of 37 trucks with mounted equipment and 95 tractor/trailer units. Calfrac is currently constructing a tenth conventional and a second NGC fracturing spread, both of which are expected to be operational in the first half of 2004.

As at December 31, 2003, Calfrac employed 342 people in Canada and Calfrac USA employed 40 people. None of the employees of Calfrac or Calfrac USA are unionized.

USE OF PROCEEDS

The net proceeds to the Corporation from this offering are estimated to be $116.3 million, after deducting the Underwriters' fee of $6.875 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.9 million.

The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac in connection with the recent repurchase of the interest of an equity shareholder of Calfrac; and (iii) approximately $29.1 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac.

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.

DIRECTORS AND OFFICERS OF THE CORPORATION

The following table sets out the names and municipalities of residence of those individuals that are the current directors and officers of the Corporation and the proposed directors and officers of the Corporation in the event the Corporation completes this offering and the Acquisition, together with their positions and offices with the Corporation and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
Ronald P. Mathison[1][3] *Calgary, Alberta*	Chairman and a Director	March •, 2004	President of Matco Investments Ltd. (a private investment company); prior to 1999, Principal, Peters & Co. Limited.
Douglas R. Ramsay *Calgary, Alberta*	Chief Executive Officer and a Director	Proposed[4]	President and Chief Executive Officer of Calfrac.
Gordon A. Dibb *Calgary, Alberta*	Chief Financial Officer	—[4]	Executive Vice President and Chief Financial Officer of Calfrac.
Robert S. Roberts *Calgary, Alberta*	Chief Operating Officer	—[4]	Senior Vice President and Chief Operating Officer of Calfrac.
James S. Blair *Calgary, Alberta*	Director	May 8, 2002	President and Chief Executive Officer, ExAlta Energy Inc. (an independent private oil and gas exploration and development company) since 2002. Prior thereto, Senior Vice President and Chief Operating Officer, Husky Energy Inc. (an integrated energy company).
Gregory S. Fletcher[1] *Calgary, Alberta*	Director	May 8, 2002	President, Sierra Energy Inc. (a private energy company).
Martin A. Lambert[2] *Calgary, Alberta*	Interim Chief Executive Officer and a Director	March •, 2004	Partner, Bennett Jones LLP (a law firm). Prior to May 2000, Chief Executive Officer and a partner, Bennett Jones LLP.
Paul F. Little[2] *King City, Ontario*	Director	May 15, 1997	President, Westover Investments, Inc. (a private investment company). Prior to 2000, principal, Gornitzki, Thompson & Little (merchant bank) from 1986 to 1999.
R. Timothy Swinton[1][3] *Calgary, Alberta*	Director	Proposed	President of Western Provinces Resources Ltd. (a private investment company) since 1997; Executive Chairman of IPEC Ltd. (a Canadian pipeline and oilfield construction company) from 1999 to 2001; prior thereto Chairman and Chief Executive Officer of Kenting Energy Services Inc. (a public oilfield services company) in 1997.

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
David M. McGoey *Calgary, Alberta*	Interim Chief Financial Officer	March •, 2004	Chief Financial Officer of Ross Smith Energy Group (a private engineering consulting firm) since 1998; President of David M. McGoey Professional Corporation since 1992; Chief Financial Officer of Securex Limited (a public company in the security monitoring industry) since 2003; Chief Financial Officer of CMQ Resources Inc. (a public mineral exploration company) since 2003; and Chief Financial Officer of Tristone Capital LLC (a private investment company) from 2001 to 2002.

Notes:

(1) Member or proposed member of Audit Committee.
(2) Member of Corporate Governance Committee.
(3) Member or proposed member of Compensation Committee.
(4) It is anticipated Messrs. Ramsay, Dibb and Roberts will be appointed as officers of the Corporation in the event the Corporation completes this offering and the Acquisition.

Prior to March •, 2004, the officers of Denison included E. Peter Farmer, President and Chief Executive Officer, T. E. Craig Bamford, Vice President, Finance and Chief Financial Officer, Donald C. Campbell, Vice President, Marketing and Special Projects, and Donna J. Gallant, Counsel and Secretary. Each of these officers resigned on March •, 2004 effective upon the completion of the Reorganization, at which time Martin A. Lambert was appointed as Interim Chief Executive Officer and David M. McGoey was appointed as Interim Chief Financial Officer. In the event that this offering and the Acquisition are completed, it is anticipated that the board of directors will appoint Messrs. Ramsay, Dibb and Roberts as Chief Executive Officer and President, Chief Financial Officer and Executive Vice President, and Chief Operating Officer and Senior Vice President, respectively, and that Mr. Lambert will continue to act as a director of the Corporation.

Each of Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has entered into an employment agreement dated September 1, 1999 with Calfrac. Each of these agreements has an initial five year term that expires on September 1, 2004 and provides that each year thereafter, the term will automatically renew for a successive one-year renewal term, unless either party gives written notice to the contrary. Each of these agreements contains provisions in favour of Calfrac (i) prohibiting the disclosure by each of Messrs. Ramsay, Dibb and Roberts of any confidential information related to Calfrac's business, and (ii) prohibiting each of Messrs. Ramsay, Dibb and Roberts from competing with Calfrac, or soliciting the employees or customers of Calfrac, for two years from the termination of his employment with Calfrac. These employment agreements also provide that in the event of a change of control of Calfrac, each of Messrs. Ramsay, Dibb and Roberts has the right at any time within six months of the change of control to terminate his employment with Calfrac. If any of Messrs. Ramsay, Dibb or Roberts exercises this right, or if Calfrac terminates the employment of any of Messrs. Ramsay, Dibb or Roberts following a change of control, such officer is entitled to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

In addition, each of Messrs. Ramsay, Dibb and Roberts has entered into an agreement with Calfrac whereby he has waived any change of control or other rights he may have pursuant to his employment agreement provided that the Reorganization and the Acquisition occur as described herein. These agreements also provide that, in the event that a change of control occurs other than on the basis contemplated herein, each of such officers is entitled to exercise his right to terminate his employment and receive the severance payment described above. In addition, in such circumstances, each of such officers may elect not to receive the severance payment, and in consideration therefor, the officer will be released and discharged from the non-competition restrictions of his employment agreement.

Six additional officers and key employees of Calfrac have each signed an agreement with Calfrac providing that each employee will continue his employment with Calfrac or the Corporation, as applicable, until at least June 30, 2004 under such employee's current employment terms. In the event that either or both Mr. Mathison or Mr.

Ramsay resign or are terminated as Chairman or Chief Executive Officer, respectively, of either Calfrac or the Corporation, as applicable, on or prior to June 30, 2004, the employee may elect to terminate his employment prior to June 30, 2004 and will receive a termination payment equal to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

As at March •, 2004, the officers and directors of the Corporation, as a group, beneficially own, directly or indirectly, • Common Shares and, assuming that they do not subscribe for any of the Offered Shares, the officers and directors, as a group, will own or exercise control over approximately •% of the outstanding Common Shares in the event of completion of this offering and the Acquisition (on the basis that the net purchase price is paid by the issuance of • Common Shares and the payment of approximately $28.8 million in cash).

The term of office of each of the directors of the Corporation will expire at the next annual meeting of the shareholders.

MANAGEMENT

The following is a brief description of the current directors and senior officers of the Corporation and the proposed directors and senior officers in the event that this offering and the Acquisition are completed.

Ronald P. Mathison, Director and Chairman

Mr. Mathison is the President and Chief Executive Officer of Matco Investments, a private investment company specializing in the restructuring of financially troubled companies as well as providing capital and management expertise to such companies. Mr. Mathison has extensive experience in restructuring and financing corporations in both the public and private markets. Until October 2000, Mr. Mathison was a director of Peters & Co. Limited, an investment firm specializing in the oil and gas industry, and prior to 1999 was also a principal of Peters & Co. Limited's corporate finance department. Prior thereto, Mr. Mathison and two other individuals formed the nucleus of Peters & Co. Capital, a private merchant banking entity that is widely associated with numerous successful restructurings of oil and gas and oil and gas service companies. Mr. Mathison received a B.Comm. (Honours) from the University of Manitoba in 1979 and obtained his Chartered Accountant designation in 1982. Mr. Mathison also holds the designation of Chartered Business Valuator, obtained in 1989, and of Chartered Financial Analyst, obtained in 1990. Mr. Mathison is the sole shareholder of Matco Investments, which controls Matco. Mr. Mathison is the Chairman of Hawker Resources Inc. Mr. Mathison was a founder of Calfrac and has been the Chairman of Calfrac since its formation in 1999.

Douglas R. Ramsay, President and Chief Executive Officer

Mr. Ramsay was a founder of Calfrac and has been the President and Chief Executive Officer of Calfrac since its formation in 1999. Mr. Ramsay has an extensive background in the oil industry. Prior to 1994, Mr. Ramsay was the President of Canadian Fracmaster Ltd. where he spent 12 years enhancing the overall presence of Fracmaster Ltd. in Canada and worldwide. Previous industry experience as a Project Manager for Delta Consultants, Drilling and Completions Foreman for Dome Petroleum Corp. and Service Supervisor for BJ Well Services Company has contributed to Mr. Ramsay's overall knowledge of the industry.

Mr. Ramsay holds a diploma in Petroleum Technology from Southern Alberta Institute of Technology and is a certified Registered Engineering Technologist.

Gordon A. Dibb, Executive Vice President and Chief Financial Officer

Mr. Dibb was a founder of Calfrac and has been the Executive Vice President and Chief Financial Officer of Calfrac since its formation in 1999. Mr. Dibb has over 20 years of oilfield service industry experience in a senior financial capacity, having worked as executive Vice President Business Development for Trace Exploration, Vice President Finance and Chief Financial Officer for Artisan Corporation, Vice President Administration for Nabors Drilling

International Limited, Chief Operating Officer for Destiny Resource Services Corp. and Vice President Finance for Nabors Drilling Ltd. Mr. Dibb also has experience in South Africa working in other industries.

Mr. Dibb is a Chartered Accountant, qualified in both South Africa and Canada, and a member of the Alberta Institute of Chartered Accountants.

Robert S. Roberts, Senior Vice President and Chief Operating Officer

Mr. Roberts was a founder of Calfrac and has been the Senior Vice President and Chief Operating Officer of Calfrac since its formation in 1999. Mr. Roberts has significant industry experience with over 35 years in the pumping service industry. Mr. Roberts previously held senior management positions with Fracmaster Ltd. in its Canadian, United States, South American, Middle East and Russian Operations. Prior to 1996, Mr. Roberts was the Executive Vice President of Fracmaster Ltd.

James S. Blair, Director

Mr. Blair has served as a director of Denison since May of 2002. Mr. Blair is President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in western Canada, offshore eastern Canada and Asia. Mr. Blair is a director of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta. His studies concentrated on resource economics and international trade.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison since May of 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. and prior to 1997 he was President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

Martin A. Lambert, Director and Interim Chief Executive Officer

Mr. Lambert is a partner with the Bennett Jones LLP law firm, having served as Chief Executive Officer of the firm from 1996 to 2000. Mr. Lambert has been widely recognized as one of Canada's leading merger and acquisitions lawyers, including having recently been named by the National Post as one of Canada's top 30 deal makers, and is a senior member of the firm's mergers and acquisitions team. Mr. Lambert's directorships include Oil States International Inc. and zed.i solutions.inc, both oilfield services firms, as well as Hawker Resources Inc. and Bear Creek Energy Ltd., both oil and gas exploration and production companies. Mr. Lambert's family holding corporation, Mountain Moon Capital Inc., is a shareholder of Matco. Mr. Lambert was appointed Interim Chief Executive Officer of the Corporation on March •, 2004 and is expected to resign such position upon the anticipated appointment of Douglas Ramsay as Chief Executive Officer. Mr. Lambert is expected to continue to act as a director of the Corporation.

Paul F. Little, Director

Mr. Little has served as a director of Denison since May of 1997. Mr. Little is President of Westover Investments Inc., an investment company. From 1986 to 1999 he was a principal of the Toronto-based merchant bank,

Gornitzki, Thompson & Little and President of GTL Securities Inc., a related securities dealer. Mr. Little serves on a number of other public company boards including The Nautilus Group, Inc., Medisystem Technologies, Inc., Pason Systems, Inc. and World Point Terminals, Inc. He is Chairman of Echelon General Insurance Company, a private company, and is a member of the Board of Visitors of the Graziadio School of Business at Pepperdine University. Mr. Little is a Chartered Accountant and holds an M.B.A. from the University of British Columbia.

R. Timothy Swinton, Director

Mr. Swinton has extensive experience in the oilfield services industry. He is currently Chairman of NQL Drilling Tools Inc., a position he has held since 2003, and a director of Anderson Energy Ltd., a private oil and natural gas exploration and production company. Since June 1997, Mr. Swinton has been President of Western Provinces Resources Ltd, a private investment company. From 1999 to 2001, he was the Executive Chairman of IPEC Ltd., a Canadian pipeline and oilfield construction company. Prior thereto, Mr. Swinton was Chairman and Chief Executive Officer of Kenting Energy Services Inc., and Chairman, President and Chief Executive Officer of EnServ Corporation. Mr. Swinton has also served on the boards of directors of a number of energy services and other energy-related public companies, including Koch Pipelines Canada Limited, Enserco Energy Service Company Inc. and Anderson Exploration Ltd.

David M. McGoey, Interim Chief Financial Officer

Mr. McGoey is the Chief Financial Officer at Ross Smith Energy Group, a private engineering consulting firm, a position he has held since 1998. Mr. McGoey is President of David M. McGoey Professional Corporation since 1992 and Chief Financial Officer of each of Securex Limited (since 2003) and CMQ Resources Inc. (since 2003). Mr. McGoey was also Chief Financial Officer of Tristone Capital LLC from 2001 to 2002. He has been a Chartered Accountant for over 20 years, a Certified Public Accountant for three years and has over 20 years of public accounting experience. Mr. McGoey is a director of Destiny Resource Services Corp. Mr. McGoey was appointed Interim Chief Financial Officer of the Corporation on March •, 2004 and is expected to resign upon the anticipated appointment of Mr. Gordon Dibb as Chief Financial Officer of the Corporation.

PRINCIPAL SHAREHOLDERS

To the best of the knowledge of the directors and officers of the Corporation, the following table sets forth the shareholdings of those persons who are the direct or indirect beneficial owners of or exercise control or direction over 10% or more of any class of voting shares of the Corporation as at the date hereof and after giving effect to this offering and the Acquisition:

Shareholder	Designation of Class	Type of Ownership	Number of Shares	% of Class	Number of Shares After Giving Effect to this Offering and the Acquisition[1][2]	% of Class After Giving Effect to this Offering and the Acquisition[1][2]
Matco Investments[3][4]	*Common*	Beneficial	•	45%	•	27%

Notes:

(1) Assuming the Purchase Option is exercised and the purchase price is paid by the issuance of • Common Shares and the payment of approximately $28.8 million in cash, Matco Investments will acquire an additional • Common Shares pursuant to the Acquisition.

(2) Assuming the named entity does not acquire additional Common Shares pursuant to this offering.

(3) Includes • Common Shares held personally by Ronald P. Mathison, Chairman and a director of the Corporation. To the knowledge of the Corporation, the only shareholder holding, directly or indirectly, greater than 10% of the outstanding shares of Matco Investments is Mr. Mathison.

(4) Includes • Common Shares acquired by Matco pursuant to the Subscription. To the knowledge of the Corporation, the only entities with an interest of greater than 10% in Matco are Matco Investments and Mountain Moon Capital Inc. To the knowledge of the Corporation, the only shareholders holding, directly or indirectly, greater than 10% of Mountain Moon Capital Inc. are members of the immediate family of Martin Lambert, a director of the Corporation.

PLAN OF DISTRIBUTION

Under an agreement dated •, 2004 (the "Underwriting Agreement") among the Corporation and each of the Underwriters, the Underwriters have agreed to act as, and the Corporation has appointed the Underwriters as the sole and exclusive agents of the Corporation to offer the Offered Shares for sale, subject to the terms and conditions contained therein, at a price of $• per share. The Underwriters have agreed that if less than all of the Offered Shares are sold by the Underwriters as agents, the Underwriters shall purchase, as principals, all of the Offered Shares not sold by the Underwriters as agents at the same price per share. Pursuant to the Underwriting Agreement, closing of this offering is to occur on or about March •, 2004, but in any event not later than March •, 2004. The purchase price of $• per Offered Share is payable by the Underwriters to the Corporation against delivery of the Offered Shares. The Corporation has agreed to pay the Underwriters a commission of 5.5% of the gross proceeds or $• per Offered Share. The obligations of the Underwriters under the Underwriting Agreement are several and may be terminated at their discretion on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events. The Underwriters are, however, obligated to take up and pay for all Offered Shares if any are purchased under the Underwriting Agreement.

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering. In this event, the Corporation would prepare and send to shareholders an information circular that contains prospectus level disclosure regarding the proposed use of the proceeds of this offering.

Pursuant to policy statements of certain securities commissions, the Underwriters may not, throughout the period of distribution under this prospectus, bid for or purchase Common Shares. The foregoing restriction is subject to exceptions, including a bid or purchase permitted under the rules of the TSX relating to market stabilization and passive market making activities and a bid or purchase made for or on behalf of a customer where the order was not solicited during the period of distribution, provided that the bid or purchase was not engaged in for the purpose of creating actual or apparent trading in, or raising the price of, the Common Shares. In connection with this offering, and subject to the foregoing, the Underwriters may effect transactions which stabilize or maintain the market price of the Common Shares at levels other than those which might otherwise prevail in the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any securities or "blue sky" laws of any of the states of the United States. Accordingly, the Offered Shares may not be offered or sold within the United States or to U.S. persons unless an exemption from registration is available.

This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares in the United States. In addition, until 40 days after the announcement of this offering, an offer or sale of the Offered Shares within the United States by any dealer, whether or not participating in the offering, may violate the registration requirement of the U.S. Securities Act if such offer or sale is made otherwise than in accordance with an available exemption from registration under the U.S. Securities Act.

The Corporation has agreed that it will not, without the prior consent of the lead Underwriter pursuant to the Underwriting Agreement, which consent may not be unreasonably withheld, authorize, issue or sell any Common Shares or any securities giving the right to acquire Common Shares (other than the Offered Shares, the Common Shares to be issued pursuant to the Acquisition and securities issued in connection with an arm's length acquisition of assets or an arm's length acquisition of or merger, consolidation or amalgamation with any company or companies), or agree or announce any intention to do so, at any time prior to 90 days after the closing of this offering. In addition, each of Matco Investments, Matco, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has agreed that it or he will not, without the prior consent of the lead underwriter, which consent is not to be unreasonably withheld, sell or otherwise dispose of any Common Shares received pursuant to the Acquisition at any time prior to two years after the closing of this offering. Upon the expiry of such two year period, these

shareholders will be entitled to sell or otherwise dispose of 40% of such Common Shares. Thereafter, the remaining 60% of the Common Shares held by such shareholders may be sold or otherwise disposed of in equal installments upon the expiry of six and twelve months, respectively.

CAPITALIZATION OF THE CORPORATION

The following table sets forth the consolidated capitalization of the Corporation as at December 31, 2002, as at September 30, 2003 and as at September 30, 2003 after giving effect to the Reorganization, this offering and the Acquisition and the other transactions described in the notes to the unaudited pro forma financial statements (collectively, the "Transactions"):

	Authorized	Outstanding as at December 31, 2002 (audited)[1]	Outstanding as at September 30, 2003 (unaudited)	Outstanding as at September 30, 2003 after giving effect to the Transactions (unaudited)
Long-term debt	nil	$43,558,000	$43,097,000	$8,206,000
Common Shares[2]	unlimited	$5,568,000 (17,705,724 shares)[3]	$5,568,000 (17,705,724 shares)[3]	$94,176,000 (• shares)[4][5][6]

Notes:

(1) Derived from the audited financial statements of Denison.

(2) On March •, 2004, the stock option plan of Denison was terminated and no stock options are currently outstanding.

(3) Prior to giving effect to the Consolidation.

(4) After giving effect to the Consolidation.

(5) Pursuant to the Subscription, the Corporation issued • Common Shares for gross proceeds of approximately $5.3 million.

(6) Assuming that the Purchase Option is exercised and that the purchase price is paid by the issuance of • Common Shares and approximately $28.8 million in cash.

CORPORATE HISTORY

Denison

Denison is the continuing corporation formed by the amalgamation under the OBCA of Denison Mines Limited and Stanrock Uranium Mines Limited pursuant to articles of amalgamation filed on February 12, 1973. Denison amended its articles on July 26, 1983 to create a class of 24 million preferred shares issuable in series, of which 6 million 9¾% Cumulative Redeemable Preferred Shares Series A (the "Preferred Shares Series A") were issued on August 8, 1983. On March 2, 1984 Denison amended its articles to create an unlimited number of Class A Voting Participating Shares without par value ("Class A Shares") and an unlimited number of Class B Non-Voting Participating Shares without par value ("Class B Shares"), and each issued and outstanding common share was changed into one Class A Share and one Class B Share. On March 7, 1985, Denison issued 7 million 9½% Cumulative Redeemable Preferred Shares Series B (the "Preferred Shares Series B"). On June 22, 1992, Denison amended its articles to provide for a minimum of three and a maximum of fifteen directors.

Effective December 21, 1995, the articles were amended: to create an unlimited number of new common shares; to provide that Denison was no longer authorized to issue Preferred Shares Series A, Preferred Shares Series B ("Preferred Shares"), Class A Shares or Class B Shares; to delete the rights, privileges, restrictions and conditions of the Preferred Shares, Class A and Class B Shares; and to provide that, after giving effect to the foregoing, Denison was authorized to issue an unlimited number of common shares. Effective December 21, 1995, each Preferred Share was reclassified into 25 common shares, and each Class A Share and each Class B Share was reclassified into one common share.

Effective May 24, 2002, the articles were amended to change the name of Denison from Denison Mines Limited to Denison Energy Inc., and to implement a share consolidation on the basis of one new common share for each 20 pre-consolidation common shares.

The head office and registered office of Denison is located at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2. If this offering and the Acquisition are completed, the head and registered offices of Calfrac will become the head and registered offices of Denison.

Calfrac

Calfrac was incorporated under the provisions of the ABCA on June 28, 1999 as "836570 Alberta Ltd." and changed its name to "Calfrac Well Services Ltd." by way of articles of amendment filed on September 28, 1999. Calfrac is the continuing corporation formed by the amalgamation under the ABCA of 850288 Alberta Ltd. and Calfrac pursuant to articles of amalgamation filed on January 1, 2000.

Calfrac's head office is located at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 and its registered office is located at Suite 751, 815 – 8th Avenue S.W., Calgary, Alberta T2P 3P2.

Calfrac has one wholly owned subsidiary, Calfrac USA, incorporated in the state of Colorado, United States on May 24, 2001. Calfrac USA provides fracturing and work-over services to oil and gas customers in the Rocky Mountain area of the United States.

Calfrac also owns 30% of the issued and outstanding shares of ChemErgy.

General Development of the Business of Calfrac

Calfrac was a private corporation founded in June 1999 by Messrs. Mathison, Ramsay, Dibb and Roberts. Calfrac commenced operations in August 1999 from its field station in Medicine Hat, Alberta with a coiled tubing unit. On September 2, 1999, Calfrac successfully completed its first hydraulic fracturing treatment.

In December 1999, Calfrac acquired all of the issued and outstanding shares of Calfrac Limited, which company completed the acquisition of all of the issued and outstanding shares and warrants of DynaFrac Well Services Inc. ("DynaFrac") on December 22, 2000. DynaFrac subsequently distributed its assets and liabilities to Calfrac Limited and was dissolved on December 27, 2001. Calfrac Limited distributed all of its assets and liabilities to Calfrac and was subsequently dissolved on December 28, 2001. Calfrac acquired a two-pumper spread, a shallow coiled tubing unit, a high rate nitrogen pumper and four acid pumpers through its indirect acquisition of DynaFrac.

On November 10, 1999, 850288 Alberta Ltd., a wholly owned subsidiary of Calfrac, acquired two deep and one shallow coiled tubing units, two combination nitrogen-acid pumpers and other support equipment from the Coiled Tubing Division of Serval Corporation. On January 1, 2000, 850288 Alberta Ltd. and Calfrac were amalgamated.

Calfrac's second and third spreads of fracturing equipment became operational in December 1999. At this time, Calfrac acquired a small facility in Red Deer, which became functional as a field facility in January 2000.

In February 2000, Calfrac acquired 851350 Alberta Ltd. in exchange for the issuance of 2,125,000 shares of Calfrac. 851350 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to provide the fracturing services required under this contract, Calfrac constructed a new spread of fracturing equipment specifically designed to stimulate the customer's shallow natural gas wells, which equipment constituted Calfrac's fourth spread of fracturing equipment.

During the last half of 2000, Calfrac added another fleet of fracturing equipment to constitute its fifth spread of fracturing equipment. In October 2000, Calfrac leased premises in Grande Prairie to establish a field station to facilitate the expansion of operations into northern Alberta and British Columbia.

During the summer of 2001, Calfrac commissioned its sixth spread of fracturing equipment. At this time, Calfrac also constructed and commenced operations with two additional coiled tubing units designed for shallow well operations but with more powerful compressors than its then existing equipment.

In April 2001, Calfrac acquired 851355 Alberta Ltd. in exchange for the issuance of 2,390,625 shares of Calfrac. 851355 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to satisfy its obligations under this contract, Calfrac constructed its seventh spread of fracturing equipment.

In February 2002, Calfrac expanded its operations into the United States by leasing a field office in Platteville, Colorado. Although Calfrac provided fracturing services to oil and gas exploration and production companies in Montana in late 2001, the establishment of operations at Platteville, Colorado was Calfrac's first significant presence in the United States. At this time, Calfrac negotiated a one-year fracturing agreement with a major oil and gas exploration and production company, which agreement provided for a three-year right of first refusal for the majority of fracturing work of the customer in the Rocky Mountain area of the United States. During 2002, Calfrac provided fracturing services to customers located in Colorado, New Mexico and Wyoming. In 2003, most of Calfrac's U.S. operations were conducted in the DJ Basin and North Piceance Basin of Colorado.

In November 2002, Calfrac completed the construction of a new field facility on land owned by Calfrac in Red Deer, Alberta. In late 2002 and early 2003, Calfrac completed construction of two additional fracturing spreads, its eighth and ninth spreads of fracturing equipment, and its first spread of equipment specifically designed to fracture NGC.

Calfrac completed construction of a coiled tubing rig designed specifically to perform fracturing through coiled tubing in early 2003. In addition, due to the increasing requirement to use coiled tubing rigs in conventional and NGC fracture jobs, Calfrac signed an 18-month contract in March 2003 with a major supplier of coiled tubing rig services in Alberta. Calfrac has a right of first refusal on five out of seven coiled tubing rigs used for fracturing operated by this supplier. Upon termination of this contract at the end of September 2004, Calfrac may exercise its option to renew the agreement for an additional year or to purchase three of the coiled tubing rigs.

In April 2003, Calfrac negotiated a two year fracturing contract with a major explorer and developer of NGC with a term that commenced on June 1, 2003 and will expire at the earlier of May 31, 2005 or on the date that Calfrac has fractured 300 wells for the customer. In order to satisfy its obligations under this contract, Calfrac has developed and commissioned unique fracturing equipment specifically designed to fracture NGC wells, including the first quint nitrogen pumpers that have been built for use in the fracturing of NGC by any fracturing company. This equipment is expected to be operational in early 2004.

In May 2003, Calfrac signed a fracturing agreement with its most significant customer in the Rocky Mountain region in the United States. This agreement will expire upon the earlier of December 31, 2004 or the completion of 500 fracturing jobs for the customer.

Calfrac also purchased four shallow coiled tubing units from private companies in 2003. These acquisitions increased Calfrac's equipment fleet of shallow coiled tubing units to eight units. Three additional fracture pumpers were also added to Calfrac's equipment in 2003.

SELECTED FINANCIAL INFORMATION

Selected Financial Information of the Corporation

The following table presents a summary of historical financial data for the Corporation for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended, as well as the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of • Common Shares for net proceeds of approximately $116.25 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of • Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. PricewaterhouseCoopers LLP have not performed an audit but have carried out certain procedures relating to the compilation of the pro forma financial statements of the Corporation.

The following data should be read along with "Management's Discussion and Analysis Regarding Denison" and the financial statements and related notes of the Corporation included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

All financial information with respect to the Corporation has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

Selected Financial Information of Calfrac

The following table presents a summary of historical financial data for Calfrac for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of Calfrac at each of these dates and for the periods then ended. The financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP.

The following data should be read along with "Management's Discussion and Analysis Regarding Calfrac" and the financial statements and related notes of Calfrac included in this prospectus.

All financial information with respect to Calfrac has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

Notes:

(1) Earnings per share calculations give effect to the 20 for one share consolidation which was effective May 24, 2002, as if the share consolidation had been effective at the beginning of the period presented.

(2) Based on the weighted average number of common shares outstanding in the applicable period.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING DENISON

The following management's discussion and analysis of financial condition and results of operations relates to the activities of Denison prior to the proposed transformation of Denison to an oilfield services provider and does not reflect the Reorganization, this offering or the Acquisition. *The following management's discussion and analysis of financial condition and results of operations should be read in conjunction with the audited financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements as at and for the nine months ended September 30, 2003 and 2002.*

Segmented Information

The following table summarizes selected historical financial information related to the Corporation and its operations for the periods indicated. The Corporation has recently completed the Reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and has retained certain claims and liabilities.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

Mining Division

The McClean Lake Joint Venture is on target to produce 6 million pounds of uranium from McClean Lake during 2003. Denison's 22.5% share of production for the nine months ended September 30, 2003 totaled 1,082,000 pounds compared with 1,133,000 pounds in the corresponding period of 2002.

During the first nine months of 2003 compared to the corresponding period of 2002, costs of the mining division of Denison were adversely affected by an increase in operating costs of 7% and foreign exchange losses of $650,000. Costs of the mining division of Denison in 2002 were favourably affected by a one-time adjustment of $540,000.

Denison delivers uranium under a variety of contracts with various pricing formulas, the timing and mix of which varies from quarter to quarter. Since the timing of deliveries is at the selection of the customer, the year-to-year comparisons may not be meaningful. Uranium sales volumes delivered in the nine months ended September 30, 2003 were 66% of annual sales volumes compared to 63% during the same period of 2002. Sales volumes in the fourth quarter will be 34% of annual sales volumes.

The average realized Canadian dollar exchange rate relative to the U.S. dollar for the conversion of the U.S. dollar proceeds from uranium sales appreciated from $1.551 for the nine months ended September 30, 2002 to $1.412 for the corresponding period of 2003. This has had a significant negative effect on the revenue and earnings from Denison's mining operations.

Oil and Gas Division

As part of the Reorganization, new oil and gas reserve reports were completed by independent consultants. These reports substantially decreased Denison's oil and gas reserves, resulting in the significant write-down of the carrying value of these assets.

For the nine months ending September 30, 2003, production averaged 641 barrels of oil equivalent ("boe") per day (at a 6:1 gas to oil conversion rate) compared to 558 boe per day for the equivalent period of 2002.

Denison sold its 50% interest in the Carlyle oil producing property (12 boe per day) in southeastern Saskatchewan effective October 1, 2003 for $255,000. Denison also acquired the remaining 50% interest (37 boe per day) in the Smiley gas producing property in Saskatchewan for $600,000.

The two wells drilled in the third quarter in the Aden area for gas were unsuccessful and were abandoned. New gas pipeline capacity, which was anticipated to be available by September, was delayed to November.

During the first nine months of 2003, capital spending totaled approximately $4.0 million including the acquisition of additional interests in the Skiff oil property and the drilling of 6.0 gross (5.1 net) wells, resulting in 1.0 gross (1.0 net) standing gas well in the Evi area and 5.0 gross (4.1 net) dry and abandoned wells. This compares with capital spending of $4.0 million in the first nine months of 2002 for the drilling of 5.0 gross (4.0 net) wells resulting in 2.0 gross (1.0 net) oil wells and 3.0 gross (3.0 net) wells which were dry and abandoned.

In April of 2003, a gas well located in the Bow Island area that had been drilled and completed in the fourth quarter of 2002 at a cost of approximately $350,000, but shut-in pending available pipeline capacity, was sold by Denison. The proceeds of $944,000 from this sale were credited against property, plant and equipment resulting in no recognition of a gain on this transaction.

Environmental Services Division

During the third quarter of 2003, Denison Environmental Services obtained a new contract for the operation of the Kam Kotia water treatment facility, and continued to provide services under its contract for environmental monitoring and maintenance of the closed mine sites of Denison and Rio Algom Ltd. at Elliot Lake and under its contract for project management for the decommissioning of the Hope Brook mine in Newfoundland. Denison Environmental Services was also active in decommissioning work in northern Ontario at the old Munroe mine and is commencing work on the decommissioning of the High Falls generating facility and on the Shebandowan mill complex.

Year Ended December 31, 2002 Compared to Year Ended December 31, 2001

Mining Division

In 2002, Denison's uranium sales volume increased by approximately 16% over the 2001 sales volume. The margin on sales decreased by 17%. In both 2002 and 2001, Denison chose to build strategic inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. Denison's uranium sales are under eleven different long-term contracts with utilities in the United States and the Far East covering approximately all of Denison's production at nominal rates in 2003 and 2004 and a large part of the production currently forecast to 2010. These contracts have various durations and contain a variety of pricing formulas. In 2003, preliminary indications from customers are that uranium deliveries will be 11% in Q1, 47% in Q2, 7% in Q3 and 35% in Q4.

In February 2002, the mining of the Sue C pit was completed recovering 36.5 million pounds of uranium into stockpiles, up 33% from amounts originally anticipated for Sue C. As a result of this increased recovery, amortization rates for mining and processing costs were reduced in mid 2001 and mining related cash costs were reduced from $4.9 million in 2001 to $1.8 million in 2002.

In 2002, mill unit operating costs continued to decline, even though the volume of ore milled in 2002 increased by approximately 25% over 2001 as the ore grade was gradually reduced during the year from an average grade of 3.10% U_3O_8 in 2001 to 2.29% in 2002. It is planned to reduce the milling grade to 2.12%, approximately the grade of the ore in the stockpile, to optimize milling costs over the next four years.

In 2002 definitive agreements were signed enabling the Cigar Lake joint venture to process its ore at the McClean Lake mill. All Cigar Lake ore will be leached at the McClean Lake mill following which the pregnant aqueous solution will be divided between the McClean Lake and Rabbit Lake facilities for processing into uranium concentrates. It is anticipated that toll milling could begin at McClean Lake as early as late 2006.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act. The Saskatchewan government also imposes a tiered royalty which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison has not paid tiered royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years.

In 2002, Denison spent $0.4 million (2001 - $0.6 million, 2000 - $0.7 million) at its Elliot Lake facility. Spending, primarily on monitoring and water treatment, is expected to be reduced in 2003 and 2004 and continue to decline marginally thereafter. All spending is paid for from the Elliot Lake Reclamation Trust, which had a balance of $1.6 million at December 31, 2002. This balance with interest earned thereon is expected to be adequate to fund all monitoring and treatment costs through to December 31, 2008. Future expenditures will consist of ongoing site monitoring of both the Denison and Stanrock Tailings Management Facilities and treating the water runoff from the Stanrock property for as long as 25 to 50 years. The balance of the total provision for $8.0 million represents the estimated present value of maintenance, monitoring and water treatment.

Retirees from Denison's Elliot Lake mine are entitled to certain medical and dental benefits and life insurance. At December 31, 2002 the liability recorded in the consolidated balance sheet was $10.5 million dollars. The actuarial report on this liability as of September 30, 2002 estimates that the actuarial liability is approximately $5.7 million. The surplus of $4.8 million, net of interest on the unfunded $5.7 million liability, is being credited to income over the average 12.5 year average life expectancy of this retiree group.

Environmental Services Division

Denison Environmental Services continued to provide services under a five-year contract (commenced April 1, 2001), including monitoring effluent treatment, maintenance, data storage and reporting activities for closed mine sites for Denison and Rio Algom in the Elliot Lake area and under a contract for at least 30 months (commenced September of 2001) to act as primary project manager for the Hope Brook mine decommissioning in Newfoundland. A significant portion of the business of the division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2002 this was not the case due to reduced mine construction. Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. New mine construction has been low in the last few years and as a result Denison wrote down its inventory of mining equipment held for resale by $433,000.

Oil and Gas Division

In 2002, Canadian oil and gas activities continued to expand. Oil and gas revenues from Denison's operations in Alberta and Saskatchewan increased by $4.9 million, to $6.2 million from $1.3 million in 2001. Successful producing property acquisitions and new production added by Denison's exploration program, combined with increases in commodity prices, all contributed to the increase in oil and gas revenue in 2002. In 2001, Denison received the final $1.5 million of its royalty income from the Villano oil field in Ecuador. Earnings from Greece in 2002 related to a reduction in the provision for closure and in 2000 are from final sale of oil in tanks.

Production volumes have steadily grown from 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) in December 2000 to 438 barrels per day in December 2001 to 648 barrels per day in December 2002. Insufficient pipeline capacity prevented four new Knappen and Aden gas wells from being put into production in 2002. Some pipeline capacity became available in February 2003. Production increased by 458% in 2002 over the previous year and averaged 330 bbls/d for oil and 1.4 mmcf/d for gas. Denison's core property, located in the Countess area of Alberta, accounted for approximately 67% of 2002 production. In 2002, Denison received an average selling price of $35.81 per bbl and $3.54 per mcf for oil and gas, respectively. The price received for oil and gas increased approximately 22% and 12%, respectively, from the prior year. Denison's oil price is referenced to an Edmonton light sweet price adjusted for quality differentials and transportation to determine the realized price. Denison's gas production is sold pursuant to spot sales contracts and Denison receives a price referenced to AECO delivery point. Denison did not enter into any hedging transactions in 2002.

Royalties include payments made to the Crown, freehold owners and third party overriding royalty participants. During 2002, oil and gas royalties were approximately 24% of revenue compared with 19% in the prior year. Countess production is subject to freehold royalties varying from 20% to 27% while other properties are subject to Crown and overriding royalty interests.

Production expenses were $7.28 per boe in 2002. Production expenses increased approximately 14% per boe from 2001. During August and September, Denison performed an extensive work over program at its Countess area that involved the battery and all of the producing wells. As a result, production expenses in the Countess area, for those two months, averaged $11.15 per boe.

Capital expenditures in 2002 totaled $8.8 million. Denison acquired, for $1.2 million, interests varying from 12.5% to 100% in the Skiff producing oil property located in the Conrad area of southeastern Alberta and plans are underway to reinstate pressure maintenance and thereby more effectively exploit this field. Seismic, drilling and facility expenditures in 2002 increased approximately 42%, to $7.4 million, from $5.2 million in the prior year. Approximately $2.6 million of this spending for exploration drilling was financed from proceeds of a $5.0 million flow-through share issue of common shares. At December 31, 2002, $2.4 million remained to be spent on eligible

Canadian Exploration Expenses prior to August 2004. Capital expenditures in 2001 totaled $13.4 million, including $5.6 million for the acquisition of Innovative Energy Inc.

In 2002, Denison's depletion and depreciation provision averaged $9.36 per boe for the year and was $12.54 per boe for the fourth quarter. The increased fourth quarter depletion rate reflects the unfavourable results of Denison's higher risk exploration program in the later part of the year and the industry's trend in 2002 towards higher finding and development costs. Depletion and depreciation charges are calculated on a unit of production method and are based on total proven reserves with a conversion of six thousand cubic feet of gas being equivalent to one barrel of oil. The 2002 depletion calculation includes $805,000 of future capital expenditures to develop Denison's reserves and excludes $69,000 of unproven properties relating to undeveloped land.

Year Ended December 31, 2001 Compared to Year Ended December 31, 2000

Mining Division

Pursuant to its agreement with another participant, Denison was entitled to 2.1 million pounds from the first 4.54 million pounds produced by the McClean Lake Joint Venture and thereafter its 22.5% equity share. Production commenced on June 22, 1999 and commercial levels of production were achieved on November 1, 2001. In 2000, 812,500 pounds were used to repay concentrate borrowed from a third party in previous years.

In 2001, Denison's sales volume of uranium was very similar to 2000. During the year, Denison chose to build inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. During 2001, Denison's uranium sales were under eleven different long-term contracts with utilities in the United States and the Far East. These contracts have various durations and contain a variety of pricing formulas. Volumes delivered in 2000 were significantly higher than 1999. Revenue from sales in 1999, prior to achievement of commercial production, was offset against costs capitalized during the start-up phase.

In 2001, mill operating costs continued to decline and the mill operated continuously, except for vacation and Christmas shutdowns. This followed a shutdown of the mill in the last two months of 2000 as the operator made several modifications to increase the efficiency of the mill.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act.

Prior to 2001, Saskatchewan also levied a graduated uranium royalty tax of 4% to 50% of earnings after the recovery of capital. Retroactive to January 1, 2001, the Saskatchewan government amended its uranium royalty regulations to replace this graduated royalty based upon an earnings calculation with a tiered royalty system which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison has not paid graduated royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years. As uranium sales revenue and not net earnings now drive Saskatchewan uranium royalties, this expense is now deducted in computing earnings subject to income taxes.

Environmental Services Division

In 2001, two new long-term contracts significantly contributed to an increase in the revenue for the Environmental Services Division from $1.8 to $3.0 million. This division was also active in both 2000 and 2001 in several smaller projects. In 1999, substantially all revenue was from the reclamation of Algoma Steel's iron ore mine, the last 10% of which was completed in 2000. Revenues from asset sales discussed below, were $0.1 million in 2001, down significantly from $0.6 million in 2000 and $1.0 million in 1999. In late 2000, demand dropped significantly for used mine and mill equipment. In 2001, losses declined to close to the break even from a loss of $0.3 million in 2000.

A significant portion of the business of the Environmental Services Division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2001 this was not the case due to reduced mine construction. In 2000, asset sales generated revenues for Denison of $0.6 million (1999 - $1.0 million). Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. In the last half of 2001, overall demand for mine equipment declined significantly. At the end of 2001, Denison had equipment for sale with a book value of $483,000 with an estimated resale value in excess of $725,000.

Oil and Gas Division

During 2001, Denison purchased a 50% interest in the Countess oil field in south central Alberta for $2 million and 100% of the shares of Innovative Energy Ltd. for $4.9 million consisting of the assumption of $2 million of debt, $1.9 million in cash and $1.0 million by the issuance of treasury shares.

A 50% working interest was earned in four wells drilled in southeastern Saskatchewan of which three were completed as oil wells and the fourth well, which was dry, was converted to a water disposal well. Facilities were installed to process the production from these three producing oil wells.

In Alberta, Denison participated with Innovative Energy Inc. in the drilling of four wells, which produced two oil wells at Countess and a new gas discovery at Knappen in southern Alberta. The remaining dry well was abandoned and another previously suspended oil well was converted into a water disposal well at Countess. Processing facilities were constructed at Countess and went into operation in the fourth quarter.

Due to unanticipated delays in obtaining the necessary regulatory approvals to transfer Innovative Energy Inc.'s wells and facilities to Denison and recommence production, the two new wells at Countess and the Knappen gas well were delayed until February 2002 before entering sustained commercial production.

Oil and gas production increased during 2001 from about 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) at the beginning of the year to 438 boe per day in December. Production had increased further to 650 boe per day by the end of February 2002 and was continuing to increase as the Knappen well was increasing to its planned production rate of 2 million cubic feet per day.

During the first quarter of 2001, Denison earned the final $1.5 million of its royalty from the Villano oil field in Ecuador, which totaled $11.7 million over the period 1999 to 2001.

Interest Expense

During 2002, Denison incurred interest expense of $3,239,000 (2001 - $4,448,000, 2000 - $5,981,000) including $2,798,000 (2001 - $4,186,000, 2000 - $5,623,000) on its McClean Lake loan. No interest was capitalized in 2000, 2001 or 2002. Interest expense was reduced in 2002 as a result of loan principal repayments and lower Canadian Prime rates. Interest expense was reduced in 2001 as a result of lower Canadian Prime rates and the renegotiation of Denison's McClean Lake loan to enable Denison to apply surplus cash to reduce loan principal and subsequently reborrow these funds.

Income Taxes

Denison is currently not subject to cash income taxes in any jurisdiction, however, it is subject to the federal large corporations tax, which the 2003 federal budget proposed to phase out over the next five years. Denison has substantial unclaimed capital cost allowance, and other deductions which fully shelter it from federal and Saskatchewan income taxes and for which no future tax asset is recorded on the balance sheet. As a result its tax provision currently includes Ontario income taxes and federal large corporations taxes. The Ontario government has passed legislation under which Ontario income tax rates will be reduced from 12% currently to 8% in 2005. As a result of this rate reduction together with a higher expected future allocation of taxable income to other provinces, Denison reduced its future taxes payable balance by $2.0 million in 2001. Reference is made to note 8(a) of the

consolidated financial statements of Denison included in this prospectus, which identifies the major components of the variation in Denison's effective tax rate from the normal Canadian tax rate.

Note 8(b) of the consolidated financial statements of Denison included in this prospectus sets out details of Denison's temporary differences between accounting and tax and non-capital loss balances available to shelter future income tax liabilities. Denison has an overall future tax liability in Ontario but does not expect to be cash taxable for several years. All temporary differences have been incorporated as part of the computation of its future Ontario tax liability of $300,000 at December 31, 2002. Denison has not recorded a future tax asset for temporary differences available to shelter its federal and agreeing province income tax liability. In the three years ended December 31, 2002, Denison was able to shelter its income tax expense with previously unclaimed temporary differences arising subsequent to its comprehensive revaluation of assets, following its reorganization in 1995. Any future utilization of temporary differences existing before 1995 will be charged to retained earnings to reduce income tax expense in the period. As at December 31, 2002 Denison has over $200 million of temporary differences and loss carry-forwards, the potential benefit of which has not been set up as a future tax asset for federal and Saskatchewan income taxes. The future recoverability of a future tax asset for a resource company is largely a function of future commodity price level forecasts.

Capital Resources and Liquidity

At September 30, 2003, Denison had the ability to redraw $3.2 million under the McClean Lake loan and $0.9 million on its other credit lines. Denison's obligations under the McClean Lake loan are being assumed by Denison Mines Inc. at the effective time of the Reorganization.

The amount available under the credit line secured by Denison's oil and gas assets has been reviewed with the lender following receipt of the new oil and gas reserve reports obtained as part of the restructuring process. At September 30, 2003, $4.8 million of the $5.5 million line had been drawn. Denison intends to pay its credit line for the oil and gas business. The credit line will be replaced by a new facility in which Denison Resources Inc. will be the borrower.

During the third quarter of 2003, Denison completed the exploration expenditures fulfilling its obligations arising from the flow through share issue in August 2002.

In the event that this offering and the Acquisition are completed, the Corporation anticipates that it will have sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flow and its bank line.

Impact of Future Accounting Developments

The Accounting Policies of Denison are described in note 1 to the consolidated financial statements of Denison included in this prospectus. Prospectively, effective January 1, 2002, Denison implemented CICA Handbook Section 3870, *Stock-Based Compensation and Other Stock-Based Compensation Payments*. As a result, Denison is amortizing the imputed cost of 520,000 stock options issued during 2003 (and 75,000 stock options issued in 2002) as compensation expense over their vesting period and has included $9,000 in corporate expenses for the year ended December 31, 2002 and reported $292,000 in stock option expenses for the nine months ended September 30, 2003. See Note 9 to the consolidated financial statements of Denison included in this prospectus.

The CICA has recently released the following accounting standards, which the Corporation will be implementing no later than fiscal 2004.

CICA Handbook Section 3063, *Impairment of Long-Lived Assets*

Each year the Corporation prepares an impairment test on its mining and oil and gas assets. Section 3063 applies only to its mining assets. This new handbook section requires that if a mining asset's value is impaired it be written down to its fair value rather than management's best estimate of future undiscounted cash flows. A preliminary review indicates that implementation of this new requirement will have no impact on the Corporation.

CICA Handbook Section 3110, *Asset Retirement Obligations*

This standard requires that the fair value of the disposal cost of an asset be capitalized as part of property, plant and equipment when the asset initially is constructed. In subsequent periods, the Corporation then is required to recognize "interest" on the liability and adjust the carrying value of the asset and liability for changes in estimates of the amount or timing of underlying future cash flows. Upon initial implementation, this new standard will require the Corporation to restate the value of property, plant and equipment for its mining and oil and gas assets and the related liability, but will not have an impact on disclosure related to its decommissioned Elliot Lake mine-site.

Risks and Uncertainties

See "Risk Factors" and "Legal Proceedings" for a discussion of risks and uncertainties.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING CALFRAC

The following management's discussion and analysis of financial condition and results of operations of Calfrac has been prepared by Calfrac and should be read in conjunction with the audited financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements of Calfrac as at and for the nine months ended September 30, 2003 and 2002.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

In general, western Canadian oilfield activity was higher in 2003 with 10,227 natural gas wells being completed to the end of September 2003 versus 9,068 for the full year of 2002. In early 2003, Calfrac brought into operation two additional fracture spreads, one coiled tubing rig used for fracturing operations and one NGC spread. During the second and third quarters of 2003, four shallow coiled tubing units were purchased.

Revenue

Consolidated revenues for the nine months ended September 30, 2003 increased by 64% amounting to $108.5 million compared to $66.1 million for the same period of 2002. All of this increase occurred in Canada where revenue increased by 82% to $97.5 million in 2003 from $53.5 million in 2002. This increase in Canadian revenue is attributable to the combination of increased oilfield activity and the larger fleet of equipment that Calfrac had available. In the beginning of June 2003, Calfrac commenced services on its first long-term NGC contract. To the end of September 2003, this contract had contributed an additional $4.5 million to revenue.

Revenue from U.S. operations declined 13% to $10.99 million for the nine months ended September 30, 2003 compared to $12.6 million during the same period of 2002. Not only did the types of hydraulic fractures change with a reduction of per job revenue, but certain contract negotiations were only finalized in May 2003, resulting in a slow start to Calfrac's U.S. operations in 2003.

Operating Expenses

Operating expenses for the nine months ended September 30, 2003 increased 64% to $72.4 million compared to $44.1 million during the same period of 2002. On a consolidated basis, gross margins for the first nine months of 2003 at 33% of revenue were virtually identical to the same period of 2002. However, there were large differences in geographical operations. In Canada, gross margins improved to 35.1% of revenue from 32.1% of revenue in the same period of 2002, mainly due to increased oilfield activity and improving prices from July 2003. However, the reduction in oilfield activity and changes in the method of fracturing in the DJ Basin impacted Calfrac's U.S. operations in 2003 and gross margins declined to 15.6% of revenue for the first nine months of 2003 from 34.7% of revenue for the same period of 2002. Due to the change in the method of fracturing, which requires more equipment

and fewer customized chemicals, it is unlikely that gross margins from Calfrac's U.S. operations can be increased to the same levels achieved in 2002.

Selling, General and Administrative Expenses ("SG&A")

SG&A increased 55% to $8.2 million for the first nine months of 2003 from $5.3 million in the same period of 2002. The largest components of SG&A are salaries and the incentive bonus provisions. Increases in the number of employees will increase the cost of both salaries and the incentive bonus provisions.

The incentive bonus provision in SG&A covers all eligible employees, including operational staff. The amount of this provision is dependent on the excess of income before tax over a threshold rate of return calculated on average capital employed, subject to a maximum bonus level set for each employee. However, as both 2002 and 2003 bonuses were being provided at maximum, the increase in 2003 is largely attributable to an increased number of employees in 2003. Notwithstanding the above, as a percentage of revenue, SG&A dropped to 7.5% in the nine months ended September 30, 2003 compared to 8.0% in the same period of 2002.

Other Expenses, Interest Expense and Depreciation

Other expenses consist mainly of foreign exchange losses incurred in 2003 on cash and receivables denominated in U.S. funds. Interest and depreciation expenses have increased in 2003 due to additional borrowings and amortization resulting from the increased amount of equipment brought into operation in 2003.

Income Taxes

In the first nine months of 2003 a reduction in tax rates reduced income tax by 2% as a percentage of income before taxes. However, the increase in income before taxes from $10.9 million in the first nine months of 2002 to $19.1 million in the same period of 2003 increased the gross income tax expense by 65.6% to $6.8 million for the first nine months of 2003.

Net Income

Net income for the nine months ended September 30, 2003 was 11.3% of revenue, up from the 10.3% of revenue earned over the same period of 2002. This increase was mainly attributable to the increase in revenue and to a lesser extent to the increase in gross margins.

Year Ended December 31, 2002 Compared to the Year Ended December 31, 2001

In general, western Canadian activity declined with 9,068 gas wells being completed in 2002 compared to 11,174 gas wells in 2001. However, Calfrac expanded its operations into the U.S. during 2002 and added additional equipment. As a result, Calfrac was able to record significantly improved results in 2002 compared to 2001.

Revenue

In 2002, Calfrac increased consolidated revenues by 42% to $96 million. The commencement of U.S. operations contributed 58% of this increase. The remaining increase in total revenue was attributable to Canadian operations in southeast Alberta.

Operating Expenses and SG&A

Although as a percentage of revenue, gross margins declined to 32.6% in 2002 versus 36.4% earned in 2001, the gross margins increased by 27% to $31.2 million in 2002 from $24.6 million in 2001. U.S. operations provided 67%, or $4.4 million of this increase. The decline in the percentage of revenue of gross margins in 2002 was caused by downward pricing pressures resulting from lower industry activity and a greater proportion of shallow gas operations.

SG&A increased, both as a percentage of revenue and in absolute terms, in 2002, to 7.7% and $7.4 million from 7.4% and $5.0 million in 2001. The increase was attributable to the additional infrastructure required by Calfrac to commence U.S. operations and to continue to expand Canadian operations.

Interest Expense and Depreciation

Depreciation increased in 2002 compared to 2001 due to the acquisition of additional equipment. In both 2001 and 2002, interest expense declined slightly due to a decline in interest rates and the fact that additional financing for new equipment occurred late in 2002.

Income Tax

Due to the reduction in the tax rates and the inclusion of U.S. taxes, income taxes in 2002 were 37.4% of income before taxes compared to 40.6% in 2001. In 2001, Calfrac used the last of the non-capital income tax losses incurred by Dynafrac Well Services Ltd. to reduce current taxes.

Net Income

Net income for 2002 increased in absolute terms but was a smaller percentage of revenue in 2002 (10.4%) compared to that in 2001 (11.5%). This decline was attributable to reduction in gross margin percentages noted above and to the fact that current taxes in 2001 were reduced by the remaining non-capital income tax losses.

Year Ended December 31, 2001 Compared to the Year Ended December 31, 2000

In general, western Canadian oilfield activity improved in 2001, with 11,174 gas wells being completed compared to 8,933 gas wells in 2000. In the second half of 2001, Calfrac added two fracturing spreads and two shallow gas coiled tubing units to its fleet of operating equipment.

Revenue

Revenue increased 47% in 2001 compared to 2000 to $67.5 million in 2001 from $45.8 million in 2000. The increase was attributable to increased oilfield activity, the availability of additional equipment and the establishment of a permanent base in Grande Prairie, Alberta.

Operating Expenses and SG&A

Gross margin in 2001 was 36.4% of revenue, which was an improvement over the 31.9% in 2000. This increase was attributable to increased oilfield activity and the higher margins earned on northern work performed from the newly established Grande Prairie base in Alberta.

SG&A increased in 2001 to 7.4% of revenue, compared to 7.2% of revenue in 2000. The increase was due to additional infrastructure required to support the growth in equipment and revenue and the fact that 2001 bonus provisions rose to maximum levels due to the growth of income before income tax.

Interest and Depreciation

Interest expense in 2001 was virtually the same as in 2000, due to the pay-out in 2001 of two bank loans and that the new loans for additional equipment were only incurred in the second half of 2001. The increase in depreciation in 2001 resulted from a full year of depreciation on equipment acquired in the second half of 2000 and six months of depreciation on equipment acquired in the second half of 2001.

Income Tax

Income taxes increased to 40.6% of income before taxes in 2001 compared to 16.8% in 2000. In 2000, both current and deferred income taxes were substantially reduced by non-capital income tax losses brought forward from

Dynafrac Well Services Ltd. In 2001, the remainder of these losses were used to reduce current income taxes but had little effect on the combined income tax provision.

Net Income

Net income in 2001 was 11.5% of revenue, lower than the 12.3% of revenue earned in 2000. The reduction in 2001 was caused by the fact that, as discussed above, results for 2000 were largely sheltered from income taxes by tax losses carried forward. In absolute terms, net income increased to $7.8 million in 2001 from $5.7 million in 2000.

Capital Resources and Liquidity

As at September 30, 2003, Calfrac had working capital of $3.7 million. As at December 31, 2002, Calfrac had working capital of the amount of $3.0 million over that portion of demand debt due to be repaid in 2003.

As at September 30, 2003, Calfrac had an unutilized operating loan facility of $5.0 million and an undrawn revolving equipment term loan in the amount of $7.5 million. Calfrac invested approximately $20 million in capital assets during the nine months ended September 30, 2003 and approximately $22 million during the year ended December 31, 2002.

Calfrac has committed to approximately $11 million of expenditures for capital equipment that will become operational in the first half of 2004. These expenditures include approximately $5 million on new equipment ordered for fracturing operations in the United States, $3 million on new equipment for fracturing operations in Canada, $2 million on new NGC equipment and $1 million to complete the construction of a new warehouse on Calfrac's property in Grande Prairie, Alberta and to install a new accounting system in Calgary.

Calfrac has historically had sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flow and its bank line and expects to be able to do the same in 2004.

Risk and Uncertainties

See "Risk Factors" for a discussion of risks and uncertainties.

DIVIDENDS

Although the Corporation does not have a history of paying dividends on its common shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. Any decision to pay dividends will be made by the board of directors of the Corporation on the basis of the Corporation's earnings, financial requirements and other conditions existing at the time.

EXECUTIVE COMPENSATION

The compensation of the proposed officers and directors of the Corporation after completion of the Acquisition will be determined by the board of directors after the completion of the Acquisition.

The following executive compensation disclosure relates to the officers and directors of Denison prior to the proposed transformation of Denison to an oilfield services provider. See "Directors and Officers of the Corporation" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most

highly compensated executive officers of Denison (the "named executive officers"), with compensation in excess of $100,000 in 2003.

Name and Principal Position	Year	Annual Compensation			Long-Term Compensation	All Other Compensation ($)
		Salary ($)	Bonus ($)	Other Annual Compensation[1] ($)	Securities Under Options Granted	
E. Peter Farmer	2003	360,000	-	46,615[2]	235,000	-

Notes:

(1) Prior to March •, 2004 Denison had a retirement savings arrangement whereby Denison would contribute to an employee's registered retirement savings plan an amount equal to 3% of salary and a possible further amount to match employee contributions up to a 7% limit depending on the employee's age and years of employment. Effective March •, 2004 this arrangement was terminated.

(2) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $36,000 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,250 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $9,065 for Mr. Farmer; $8,850 for Mr. Campbell; and $8,784 for Mr. Bamford.

(3) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $33,600 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,384 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $8,921 for Mr. Farmer; $8,494 for Mr. Campbell; and $8,652 for Mr. Bamford.

(4) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $27,674 for Mr. Farmer; $18,000 for Mr. Campbell; and $10,238 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total, amounting to: $8,097 for Mr. Farmer; $9,735 for Mr. Campbell; and $8,364 for Mr. Bamford.

Stock Options

The following table sets forth the grants of options to the named executive officers of Denison during the fiscal year ended December 31, 2003:

Option Grants During The Most Recently Completed Financial Year[1]

Name	Securities Under Options Granted (#)	% Total Options Granted to Employees in Financial Year	Exercise or Base Price ($/Security)	Market Value of Securities Underlying Options/SARs on the date of Grant ($/Security)	Expiration Date[1]
E. Peter Farmer	235,000	45.1	2.22	2.22	-
Donald C. Campbell	20,000	3.8	2.22	2.22	-
T. E. Craig Bamford	20,000	3.8	2.22	2.22	-
Donna J. Gallant	2,500	-	2.22	2.22	-

Note:

(1) The Stock Option Plan of Denison has been terminated as at March •, 2004 and no stock options are outstanding.

The following table sets forth each exercise of stock options in the year ended December 31, 2003, and the year-end value of unexercised stock options for any named executive officer holding such options. The Stock Option Plan of Denison has been terminated as at March •, 2004 and no stock options are outstanding.

Aggregate Stock Option Exercises During Year Ended December 31, 2003 and Year End Stock Option Values[1]

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized ($)	Unexercised Stock Options at Year End (#) Exercisable/Unexercisable	Value of Unexercised In-The-Money Options At Year End ($) Exercisable/Unexercisable[2]
E. Peter Farmer	-	-	165,000/235,000	564,200/888,300
Donald C. Campbell	-	-	31,667/13,333	111,000/50,399
T. E. Craig Bamford	-	-	36,667/13,333	127,601/50,399
Donna J. Gallant	-	-	15,833/1,667	45,899/6,301

Notes:

(1) The Stock Option Plan of Denison was terminated on March •, 2004 and no stock options are outstanding.

(2) The closing price at year-end on the TSX of the common shares of Denison (on a pre-consolidation basis) was $6.00.

(3) In connection with the Reorganization, all options have been vested.

Compensation of Directors

Prior to March •, 2004, Denison paid fees to each director in the amount of $6,000 per year and paid to each director a fee of $400 for each meeting of the board of directors the director attended and $400 for each meeting of a committee of the board of directors the director attended. During the fiscal year ended December 31, 2003, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little were each granted 15,000 options to purchase common shares of Denison. For each grant, the options vest at the rate of one-third each year commencing on April 30, 2004 and the exercise price is $2.30.

The following executive compensation disclosure relates to the officers and directors of Calfrac for the periods indicated and prior to the Acquisition. See "Directors and Officers of the Corporation" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most highly compensated executive officers of Calfrac (the "named executive officers"), with compensation in excess of $100,000 in 2003.

		Annual Compensation			Long-Term Compensation

Development	2001	-	-	-	-	-

Notes:

(1) Perquisites and other personal benefits received in 2003, 2002 and 2001 did not exceed the lesser of $50,000 and 10% of the total annual salary and bonus for the named executive officers in any of those years.

(2) On August 15, 2003, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts were granted 132,812, 33,203 and 33,203 options to acquire common shares of Calfrac at an exercise price of $1.00 per share, respectively, all of which were exercised on December 18, 2003.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed elsewhere in this prospectus, none of the directors, officers or principal shareholders of the Corporation, Calfrac or Matco Investments, and no associate or affiliate of any of them, has or has had any material interest in any transaction which materially affects the Corporation. See "Denison Energy Inc.", "Directors and Officers of the Corporation" and "Principal Shareholders".

There are potential conflicts of interest to which the directors and officers of the Corporation will be subject in connection with the operations of the Corporation. In particular, certain of the directors and officers of the Corporation are involved in managerial and/or director positions with other oilfield services providers whose operations may, from time to time, be in direct competition with those of the Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of the Corporation. See "Directors and Officers of the Corporation". Conflicts, if any, will be subject to the procedures and remedies available under the ABCA. The ABCA provides that, in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise permitted by the ABCA.

DESCRIPTION OF SHARE CAPITAL

The Corporation is authorized to issue an unlimited number of Common Shares. The holders of Common Shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

PRIOR SALES

The Corporation has issued the following equity securities in the 12 month period prior to the date of this prospectus:

Date of Issuance	Number of Common Shares	Issue Price Per Share
December 12, 2003 to March •, 2004	964,833 common shares[1]	$2.44[2]
March •, 2004	• Common Shares[3]	$7.35

Notes:

(1) Issued on the exercise of stock options, which occurred prior to the Consolidation.

(2) The stock options that were exercised between December 12, 2003 and March •, 2004 had exercise prices ranging from $2.22 to $3.15 per common share of Denison. The aggregate proceeds from the issuance of the 964,833 common shares of Denison upon the exercise of the stock options were approximately $2.35 million for an average issue price per share of $2.44.

(3) Issued pursuant to the Subscription, which occurred after the Consolidation.

PRICE RANGE AND TRADING VOLUME

The Common Shares are listed on the TSX under the trading symbol "DEN". The following table sets forth the reported high and low sale prices and the trading volume for the common shares for each of the periods indicated before giving effect to the Consolidation.

	High ($)	Low ($)	Volume
2002			
First Quarter	0.18	0.13	33,290,010
Second Quarter[1]	4.25	0.16	30,928,730
Third Quarter	3.48	1.80	939,910
Fourth Quarter	2.47	1.80	942,600
2003			
First Quarter	2.80	2.02	962,210
Second Quarter	2.84	2.05	1,318,180
Third Quarter	2.72	2.10	1,367,520
October	2.73	2.45	473,130
November	4.00	2.36	1,737,160
December[2]	6.60	3.60	6,977,070
2004			
January	6.75	5.22	2,758,270
February (to February 10)	6.39	5.80	658,216

Notes:

(1) On May 24, 2002, Denison consolidated its common shares on a 20 for one basis.

(2) The closing price of the common shares on December 30, 2003, the last trading day prior to the announcement of the Arrangement and the Subscription, and prior to giving effect to the Consolidation, was $6.60.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the following are the only contracts entered into by the Corporation or Calfrac within the two-year period preceding the date of this prospectus which may reasonably be regarded as presently material:

1. The Underwriting Agreement dated •, 2004 between the Corporation and the Underwriters. See "Plan of Distribution".

2. The Purchase Option between Denison, Matco Investments and Calfrac dated as of December 30, 2003 granting the option to Denison to acquire all the shares of Calfrac.

3. The Arrangement Agreement providing for the Arrangement and granting the indemnities described under "Risk Factors – Liabilities from Prior Operations".

4. Assignment and Novation Agreement dated December 29, 2003 between Denison, Denison Mines Inc., the federal government and the Ontario provincial government.

5. Confirmation Agreement dated December 29, 2003 between Denison, the federal government, the Ontario provincial government and Matco.

Copies of these Agreements may be inspected at the Corporation's registered office during normal business hours during the period of distribution of the Offered Shares.

RISK FACTORS

An investment in the securities offered hereby should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of this offering and the Acquisition. If the Acquisition is not completed, the success of this change in business strategy cannot be assured. A prospective investor should consider carefully the risk factors set out below. In addition, prospective investors should carefully review and consider all other information contained in the prospectus before making an investment decision and consult their own experts where necessary.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that expected trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. During the second quarter, when the frost leaves the ground in the spring, many secondary roads are temporarily rendered incapable of supporting the weight of heavy equipment, which results in severe restrictions in the level of fracturing, stimulation and other well services. The duration of this period, commonly referred to as the "spring breakup", has a direct impact on the level of Calfrac's activities. Spring breakup occurs earlier in the year in southeastern Alberta than it does in northern Alberta and British Columbia. The timing and duration of spring breakup are dependant on weather patterns but it generally occurs in April and May. Additionally, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the severity of the Canadian winters. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 59% of Calfrac's revenue in 2003. The largest of these customers provided 52% of Calfrac's revenue in 2003 and 57% of Calfrac's revenue in 2002. This customer was also an equity shareholder of Calfrac during these time periods, but recently disposed of its equity interest. Calfrac has advised the Corporation that it has historically maintained an excellent relationship with this customer and that Calfrac has no reason to believe that there will be any change to this relationship in the future. Calfrac has three multi-year agreements to provide fracturing services to this customer which expire from June 2004 to August 2005, two of which include minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's

operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance, and anticipates that it will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from the Corporation's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Liabilities from Prior Operations

From time to time, there may be legal proceedings pending or threatened against the Corporation relating to the prior business of the Corporation. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation. See "Legal Proceedings" for a description of the legal proceedings currently against the Corporation.

In connection with the Arrangement, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc. and the mining leases and mining environmental services related assets of the Corporation were transferred to, and the related liabilities were assumed by, Denison Mines Inc. In accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Legal Proceedings".

Despite the indemnity provided to the Corporation by each of Denison Resources Inc. and Denison Mines Inc., it is possible that the Corporation may be found responsible for claims or losses relating to the assets and liabilities transferred from the Corporation to each of Denison Resources Inc. and Denison Mines Inc. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by the Corporation. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of the Corporation's former operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. The Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets.

Denison Mines Inc. has assumed the liabilities and obligations of the Corporation under a loan from Cogema, one of Denison's former joint venture partners. Most of the productive assets of Denison Mines Inc. are part of the security granted in favour of Cogema for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan based mining projects is dedicated to the loan's repayment. In addition, the original operating license for the McClean Lake facility, where substantially all of Denison Mine Inc.'s uranium is produced, has been challenged and is currently subject to a hearing at the Federal Court of Appeal. See Note 11(a) of the Notes to the Consolidated Financial Statements of Denison included herein. The impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to the Corporation cannot be determined at this time.

Claims and liabilities may arise against the Corporation as a result of Denison being a prior owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison, Denison Mines Inc., the federal government and the Ontario provincial government, Denison agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison, the federal government, the Ontario provincial government and Matco, the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by the Corporation after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue the Corporation for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. The board of directors of the Corporation is not aware of any such statutory offense having occurred. The confirmation agreement among Denison, the federal government, the Ontario provincial government and Matco does not limit persons other than the federal government and the Ontario provincial government from making any claims against the Corporation in respect of Denison's ownership and operation of the Elliot Lake mining facility.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of the Corporation to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield

employees is high, and the supply is limited. The unexpected loss of the Corporation's key personnel or the inability to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact the Corporation's net revenue.

Absence of Current Business and Acquisition of Calfrac

The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and retains certain claims and liabilities of the Corporation including expenses incurred by the Corporation in respect of the Reorganization, certain quantifiable liabilities and certain retained legal proceedings (estimated in aggregate to be approximately $4.5 million) and other expenses incurred by the Corporation including those incurred in connection with this offering and the Acquisition. See "Legal Proceedings". It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering. If this offering is completed, the Corporation anticipates exercising the Purchase Option and acquiring Calfrac and all liabilities, including environmental liabilities, of Calfrac. Although the Corporation is not aware of any material liabilities relating to Calfrac, it is possible that liabilities may arise in the future which could have a material adverse effect on the Corporation.

Corporate Matters

To date, the Corporation has not paid any dividends on its outstanding common shares. The board of directors of the Corporation may make a determination to pay dividends in the future if circumstances permit.

Additional Financing

There is no guarantee that the Corporation will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of common shares or securities convertible into common shares from the Corporation's treasury, control of the Corporation may change and shareholders may suffer dilution to their

investment. The Corporation's activities may also be financed partially or wholly with debt, which may increase the Corporation's debt levels above industry standards. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the proposed directors and officers of the Corporation are also directors and officers of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as officers and directors of the Corporation and as officers and directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the ABCA.

There may be situations in which the interests of the proposed directors and management of, and consultants to, the Corporation may conflict with those of the Corporation. Certain members of the proposed management will not be engaged by the Corporation on a full-time basis and are currently involved, and will continue to be involved, in other entities, businesses and activities, some of which are described herein and all of which will place varying and conflicting demands on their time and attention. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to the Corporation. Any conflicts will be resolved in accordance with the provisions of the ABCA and other applicable laws.

Significant Shareholder

In the event that this offering and the Acquisition are completed, Matco Investments will directly or indirectly own approximately 27% of the issued and outstanding Common Shares. Consequently, Matco Investments will be in a position to significantly influence the outcome of corporate actions requiring shareholder approval, including: electing members of the Corporation's board of directors; adopting amendments to the Corporation's charter documents; and approving a merger or consolidation, liquidation or sale of all or substantially all of the Corporation's assets.

ELIGIBILITY FOR INVESTMENT

In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, subject to compliance with the prudent investment standards and general investment provisions of the following statutes (and, where applicable, the regulations thereunder) and, in certain cases, subject to the satisfaction of additional requirements relating to investment or lending policies, procedures or goals, and, in certain circumstances, the filing of such policies, procedures or goals, the Offered Shares are not, at the date hereof, precluded as investments under or by the following statutes:

Insurance Companies Act (Canada)
Trust and Loan Companies Act (Canada)
Cooperative Credit Associations Act (Canada)
Pension Benefits Standards Act, 1985 (Canada)
Pension Benefits Standards Act (British Columbia)
Financial Institutions Act (British Columbia)
Alberta Heritage Savings Trust Fund Act (Alberta)
Employment Pension Plans Act (Alberta)
Insurance Act (Alberta)
Loan and Trust Corporations Act (Alberta)
The Pension Benefits Act, 1992 (Saskatchewan)
The Insurance Act (Manitoba)
The Pension Benefits Act (Manitoba)
The Trustee Act (Manitoba)
Loan and Trust Corporations Act (Ontario)
Pension Benefits Act (Ontario)
Trustee Act (Ontario)
an Act respecting insurance (Québec) (in respect of an insurer, as defined therein, incorporated under the laws of the Province of Québec, other than a guarantee fund)
an Act respecting trust companies and savings companies (Québec) (for a trust company investing its own funds and deposits it receives or a savings company, as defined therein, which invests its own funds)
Supplemental Pension Plans Act (Québec)

Provided the Common Shares are listed on a prescribed stock exchange at the relevant time, the Offered Shares will on closing of this offering be a qualified investment, within the meaning of the Tax Act, for trusts governed by registered retirement savings plans, registered education savings plans, registered retirement income funds and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing of this offering, constitute "foreign property" under the Tax Act.

LEGAL PROCEEDINGS

Various legal proceedings are pending against the Corporation. Other than those described below, the board of directors of the Corporation considers all such pending proceedings, comprised primarily of labour and employment claims related to the Corporation's former oil and gas operations in Greece, to be routine litigation incidental to the Corporation's business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters are subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., as applicable, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of the Corporation (assuming the completion of this offering and the Acquisition). However, the Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this prospectus or any that may arise in the future will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation.

Greek Operations

In September 2002, the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of the Corporation, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Greek Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Greek Court of Appeal has been appealed by the employees to the Supreme Court of Greece. A hearing of the Supreme Court is not expected until at least the first quarter of 2005. The impact on the Corporation of any adverse decision in this appeal cannot be determined at this time.

In September 2003, the Supreme Court of Greece issued a ruling that another former employee of the Greek subsidiary of the Corporation be compensated for certain vacation days and referred two other compensation matters back for consideration at a new trial at the Court of Appeals of Athens. A hearing date at the Court of Appeals has been set for April 27, 2004. Another set of employees of the Greek subsidiary has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This decision is being appealed but no appeal date has been set. The dollar impact on the Corporation of any adverse decision in these actions cannot be determined.

Greek Tax Appeal

The appeal by the Greek tax authorities of a decision in favour of the Greek subsidiary of the Corporation regarding a penalty for incorrectly maintaining books and data regarding the Greek operations in the amount of approximately $130,000 was heard on January 14, 2004. A decision is expected within the next six months.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of the Corporation by OilHawk Resources Ltd. The claim is fully insured and being handled by the Corporation's insurer.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

Claims in respect of Calfrac

Calfrac is not involved in and the Corporation is not aware of any present or pending legal proceedings against Calfrac or in respect of its assets.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby have been passed upon on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of the Corporation are PricewaterhouseCoopers LLP, Chartered Accountants, Suite 3000, Toronto-Dominion Centre, 77 King Street West, Toronto, Ontario M5K 1G8.

Computershare Trust Company of Canada is the registrar and transfer agent for the Common Shares at is principal offices in Calgary, Alberta and Toronto, Ontario.

INTEREST OF EXPERTS

None of Bennett Jones LLP, Stikeman Elliott LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of the Corporation or of any associate or affiliate of the Corporation. Bennett Jones LLP and the officers and partners thereof as a group (other than Mr. Lambert, a partner of Bennett Jones LLP who is a director of the Corporation), and Stikeman Elliott LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of the Corporation and its associates and affiliates. Mr. Lambert's personal family holding company, Mountain Moon Capital Inc., is a shareholder of Matco, which after giving effect to the Subscription will beneficially own approximately • or •% of the Common Shares prior to giving effect to this offering and the Acquisition and approximately • or •% of the Common Shares after giving effect to this offering and the Acquisition.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITOR'S CONSENTS

Consent Regarding The Corporation

We have read the prospectus of Denison Energy Inc. (the "Corporation") dated •, 2004 relating to the sale and issuance of • Common Shares of the Corporation. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned prospectus of our report dated February 28, 2003 (except for note 13 which is as of •, 2004) to the directors of the Corporation on the consolidated balance sheets of the Corporation as at December 31, 2002, 2001 and 2000 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended, and to the use in the above-mentioned prospectus of our compilation report dated •, 2004 on the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and for the nine-month period ended September 30, 2003.

To the Directors of
Denison Energy Inc.

We have read the accompanying unaudited pro forma balance sheet of Denison Energy Inc. (the "Company") as at September 30, 2003 and unaudited pro forma income statements for the nine months then ended and for the year ended December 31, 2002, and have performed the following procedures.

1. Compared the figures in the columns captioned "Denison Energy Inc." to the unaudited financial statements of the Company as at September 30, 2003 and for the nine months then ended, and the audited financial statements of the Company for the year ended December 31, 2002, respectively, and found them to be in agreement.

2. Compared the figures in the columns captioned "Calfrac Well Services Ltd." to the unaudited financial statements of Calfrac Well Services Ltd. as at September 30, 2003 and for the nine months then ended and the audited financial statements of Calfrac Well Services Ltd. for the year ended December 31, 2002, respectively, and found them to be in agreement.

3. Made enquiries of certain officials of the Company who have responsibility for financial and accounting matters about:

   (a) the basis for determination of the pro forma adjustments; and
   (b) whether the pro forma financial statements comply as to form in all material respects with Securities Acts of the various Provinces of Canada (the "Acts").

   The officials:

   (a) described to us the basis for determination of the pro forma adjustments, and
   (b) stated that the pro forma statements comply as to form in all material respects with the Acts.

4. Read the notes to the pro forma statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.

5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Denison Energy Inc." and "Calfrac Well Services Ltd." as at September 30, 2003 and for the nine months then ended, and for the year ended December 31, 2002, and found the amounts in the column captioned "Pro forma consolidated" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

See accompanying notes to the unaudited pro forma consolidated financial statements.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

1. Basis of presentation

These unaudited pro forma consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in the prospectus of Denison Energy Inc. (the "Company") dated •, 2004 relating to the issue and sale of • common shares (the "Offering"). These unaudited pro forma consolidated financial statements are based on the historical financial statements of the Company and Calfrac Well Services Ltd. ("Calfrac"), together with other information available to the Company's management.

These unaudited pro forma consolidated financial statements reflect the arrangement of the Company pursuant to section 182 of the Business Corporations Act (Ontario) (the "Arrangement") that became effective on March •, 2004 and the subscription for • common shares by Matco Capital Ltd. for aggregate proceeds of $5,347 on March • 2004 pursuant to an agreement dated December 30, 2003 (the "Subscription"), each entered into by the Company prior to the issue and sale of common shares pursuant to the Offering. These unaudited pro forma consolidated financial statements have been prepared to give effect to the acquisition of all of the shares of Calfrac for cash consideration of $28,780 and the issuance of • common shares to the current shareholders of Calfrac as consideration for their Calfrac shares pursuant to the exercise of an option granted to the Company by the shareholders of Calfrac on December 30, 2003 (the "Purchase Option") (collectively, the "Proposed Transactions").

These unaudited pro forma consolidated financial statements also reflect certain financing agreements entered into by Calfrac subsequent to September 30, 2003.

These unaudited pro forma consolidated financial statements are not necessarily indicative of the results that would actually have occurred if the events reflected herein had been in effect on the dates indicated or of the results that may be obtained in the future.

These unaudited pro forma consolidated financial statements should be read in conjunction with the December 31, 2002 audited consolidated financial statements and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of Calfrac and the audited consolidated financial statements for the year ended December 31, 2002 and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of the Company.

Certain financial statement items have been reclassified for comparative purposes.

After the Arrangement, the Subscription, the Offering and the acquisition of Calfrac, future financial statements of the Company will reflect the financial results of Calfrac with Calfrac historical financial information shown as the comparative figures.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

2. **Pro forma adjustments and assumptions**

The pro forma consolidated balance sheet gives effect to the Proposed Transactions as if they occurred as at September 30, 2003 and the pro forma consolidated statements of earnings give effect to the Proposed Transactions as if they occurred on January 1, 2002.

The accounting policies used in the preparation of these unaudited pro forma consolidated financial statements are in accordance with those disclosed in the Company's and Calfrac's audited consolidated financial statements for the year ended December 31, 2002.

These unaudited pro forma consolidated financial statements give effect to the following transactions, assumptions and adjustments:

(a) The Company collects $2,353 from the assumed exercise of 964,833 stock options at prices ranging from $2.22 to $3.15 per share. It is assumed that $334 will be retained by the Company, $1,685 transferred to Denison Mines Inc. and $334 applied against the bank indebtedness of Denison Resources Inc.;

(b) The Company transfers its mining and environmental services businesses to Denison Mines Inc. and its Canadian oil and gas business to Denison Resources Inc. and distributes the common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) to its existing shareholders, pursuant to the Arrangement;

(c) The outstanding common shares of the Company are consolidated on a twenty-one for one basis, pursuant to the Arrangement;

(d) The Company issues • common shares at $7.35 per share pursuant to the Subscription for approximate gross proceeds of $5,347;

(e) The net proceeds of the Offering of • common shares by the Company amounts to $116,250. Transaction and issuance costs of $8,750 are assumed to have been incurred. For these costs, applying an effective tax rate of 33% provides for the recognition of a future income tax asset ("FITA") in the amount of $2,888 with the remaining $5,862 of the costs reducing the common share balance;

(f) The Company exercises the Purchase Option to acquire Calfrac for • common shares at an ascribed value of $115,120 and $28,780 of cash raised through the Offering.

The Company's exercise of the Purchase Option allows the currently unrecognized existing tax pools of the Company to be recognized as a FITA. This transaction has been treated for accounting purposes as required in the Canadian

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

Institute of Chartered Accountants Emerging Issues Committee Abstract #110, which takes into account the relevant status of the Company after the transactions stated in 2(b) above.

With tax pool amounts of approximately $224,000 federally and approximately $173,000 provincially and an effective tax rate of 33%, $73,000 is recognized as a FITA. The fair value of the tax pools acquired of $11,000, established by an earlier arm's length transaction, is credited to common stock. The difference of $62,000 between the FITA recognized and the fair value of the tax pools is recorded as a deferred credit.

For the year ended December 31, 2002 and the nine month period ended September 30, 2003, the existing current income tax expense and the increase from the reduction of interest expense and increase in interest income in 2(h) will be eliminated by the tax pool value now recognized;

(g) Calfrac assumes a debt obligation of $58,437 incurred in connection with an acquisition of 4,289,844 Calfrac shares prior to the acquisition of the shares of Calfrac. The creditor is entitled to demand payment of the obligation following a change of control of Calfrac, which occurs with the Company's closing of the Purchase Option. It is assumed that the creditor demands payment and that proceeds from the Offering in the amount of $58,437 are paid to satisfy the obligation. The 4,289,844 Calfrac shares are cancelled and the payment is treated as a proportionate return of capital in the amount of $4,454 and a distribution of retained earnings in the amount of $53,983;

(h) Proceeds from the Offering are used to pay $26,035 of the pre-existing Calfrac bank debt. The principal amount of the debt at January 1, 2002 was $7,837. It is assumed that the unused proceeds earned interest income at the average bank rate for the period. The repayment of this debt reduces interest expense in 2002 by $490 and for the nine month period ended September 30, 2003 by $1,087;

(i) Reduction of liabilities with the cash from the Subscription in the amount of $1,000 of the Company's bank indebtedness, $1,610 of Ontario tax liability and additional transaction costs of $1,348; and

(j) As approved by the shareholders as part of the Arrangement, the deficit of $46,777 will be reduced to zero with corresponding reductions in contributed surplus of $927 to zero and common shares of $45,850 to $94,176.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

3. Earnings per share

The authorized share capital of the Company is an unlimited number of common shares, without nominal or par value.

The issued capital and related recorded values after giving effect to the Proposed Transactions including the twenty-one for one share consolidation as described in 2(c) above is set out below:

	Number of Common Shares	Amount $	Note
On completion of Proposed Transactions Described above			
Denison shareholders			
As of December 31, 2002	843,130	5,568	
As per exercise of options	45,944	3,226	2(a)

	•	94,176	

Auditors' Report

To The Directors of Denison Energy Inc.

We have audited the consolidated balance sheets of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000, and the consolidated statements of earnings, retained earnings and cash flows for the years ended December 31, 2002, 2001 and 2000. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2002, December 31, 2001 and December 31, 2000 and the results of its operations and its cash flows for the years ended December 2002, 2001 and 2000 in accordance with Canadian generally accepted accounting principles.

Payments for income and large corporation taxes	**$ 262**	**$ 254**	**$ 531**	$ 286	**$ 219**

The accompanying notes are an integral part of these financial statements.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

1. NATURE OF OPERATIONS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Change of Name
On May 24, 2002 the Corporation filed Articles of Amendment that effective that day changed the corporation's name from Denison Mines Limited to Denison Energy Inc.

Nature of Operations
The Corporation operates in the mining, oil and gas and environmental service sectors. Mining activities include a 22.5% interest in the McClean Lake uranium property and mill in northern Saskatchewan, where uranium production reached commercial levels in November 1999, a 19.96% interest in the Midwest uranium deposit and mineral evaluation and exploration. Oil and gas activities consist primarily of the exploration for and production of oil and natural gas in Western Canada, where the Corporation resumed operations in late 2000 and has expanded through both exploration and acquisitions including the Innovative acquisition described in note 12. The Corporation also holds oil and gas exploration acreage in Greece. Environmental services activities include mine decommissioning services and monitoring of closed mine sites.

Basis of Presentation
The consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles. The preparation of financial statements, in conformity with Canadian generally accepted accounting principles, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent liabilities as of the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. The most significant estimates are related to the economic lives and recoverability of mining and oil and gas assets, the provisions for decommissioning and reclamation, post-employment benefits, future income taxes and the evaluation of contingent liabilities. Actual results could differ materially from those estimates. The summary of significant accounting policies below describes the accounting methods and practices that have been used in the preparation of these consolidated financial statements. This summary is presented to assist the reader in interpreting the statements contained herein.

Certain comparative figures for prior periods have been reclassified to conform with the presentation adopted in these financial statements. This reclassification has no impact on net earnings or retained earnings.

Consolidation Principles
The consolidated financial statements include the accounts of the Corporation and its subsidiaries. The Corporation's interests in the McClean Lake and Midwest uranium joint ventures and its oil and gas joint ventures are accounted for using the proportionate consolidation method. Under this method, the Corporation includes its proportionate share of assets, liabilities, revenues and expenses.

Revenue Recognition
Mining and oil and gas revenue are recognized when title passes from the Corporation to its customer. Revenue on decommissioning contracts is recognized using the percentage of completion method, where sales, earnings and unbilled accounts receivable are recorded as related costs are incurred. Earnings rates are adjusted periodically as a result of revisions to projected contract revenues and estimated costs of completion. Losses, if any, are recognized fully when first anticipated. Royalty revenue is recognized when earned under the respective agreement.

Cash and Cash Equivalents
Cash and cash equivalents consist of cash and short-term investments with original maturities not exceeding 90 days and are stated at cost, which approximates market value.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Inventories and Prepaid Expenses

Uranium concentrates, assets purchased for resale, supplies and ore in stockpiles are recorded at the lower of average cost and net realizable value. Inventory of ore in stockpiles consists of actual costs to remove overburden and mine ore together with the amortization of open pit mining equipment and is charged to production using the units of production method.

Property, Plant and Equipment

Mining Property, Deferred Exploration and Development Costs

Exploration costs and property acquisition costs are expensed as incurred unless it is determined that a project contains economically recoverable reserves, in which case all such costs relating to that project for the current and subsequent years are capitalized. Pre-production costs, net of revenue during the start-up phase, are capitalized as development costs until the project is capable of sustained operations at commercial production levels. Capitalized mining property, deferred exploration and development costs are amortized using the unit of production method over the expected life of the mine after commercial production levels are attained.

Mine Buildings, Plant and Equipment

Mine buildings, plant and equipment are recorded at cost. Mine buildings, plant and equipment are amortized to estimated residual value over the shorter of the life of the mine, or specific period that the mill or other specific asset will be utilized, using the units of production method. When assets are retired or sold, the resulting gains or losses are reflected in current earnings.

Mining Property Evaluations

The carrying values of mining, exploration and development properties and related mine buildings and equipment are periodically assessed by management to determine whether the net recoverable amount exceeds the carrying value of the project. Any unrecoverable amount is written off against earnings. The net recoverable amount represents future undiscounted cash flows determined using proven, probable and expected reserves and estimated selling prices which reflect both historical prices and expected future selling prices, less operating, capital, financing and reclamation costs.

Oil and Gas Properties, Plant and Equipment

The Corporation's oil and gas properties, plant and equipment are carried at the lower of cost and net recoverable amount. All costs associated with the exploration for and the development of oil and gas properties are capitalized providing the total capitalized cost does not exceed the net recoverable amount. All costs of the Corporation's oil and gas property, plant and equipment are capitalized in one producing cost centre. Depletion is provided on capitalized costs in this producing cost centre by the units of production method based on estimated proven reserves.

Oil and Gas Property Evaluations

Net recoverable amount is the aggregate of estimated undiscounted future net revenues from proven reserves less operating, administration, financing and income tax expense. Estimated future net revenues are determined using year-end prices. The Corporation periodically reviews the costs associated with preproduction stage cost centres to determine whether costs are likely to be recovered. Any unrecoverable amount is written off against earnings.

Other Property, Plant and Equipment

Other property, plant and equipment are amortized according to the straight-line method based on their estimated useful lives, which range from three to twenty years.

Capitalization of Interest

Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Decommissioning and Site Restoration Cost
Estimated decommissioning and site restoration costs of resource properties are accrued and charged to operations using the unit of production method. Provisions with respect to site restoration include long-term treatment and monitoring costs of a longer term nature and are calculated on a discounted basis and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related decommissioning and site restoration liability. The Corporation's resource activities are subject to various governmental laws and regulations related to the protection of the environment. The Corporation has made and continues to make expenditures in order to comply with or exceed such laws and regulations. The Corporation is continuously updating its decommissioning and site restoration cost estimates. Such estimates are, however, subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when applicable.

Post Employment Benefits
The Corporation provides dental, supplemental health care and life insurance benefits, but not pensions, to its former Canadian employees who retired on immediate pension from active service prior to 1997. The estimated cost of providing these benefits is actuarially determined using the projected benefits method and was accrued over the service life of this retiree group. The most recent actuarial valuation of this obligation was performed as of September 30, 2002. The interest cost on this unfunded liability and the surplus are being amortized over the remaining lives of this retiree group.

Future Income Taxes
The Corporation follows the asset and liability method of accounting for future income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are determined based on temporary timing differences between the financial reporting and tax bases of assets and liabilities, and are measured using the substantively enacted tax rates and laws that are expected to apply when the differences are expected to reverse. The benefit of tax losses which are available to be carried forward are recognized as assets to the extent that they are more likely than not to be recoverable from future taxable income. Benefits which are recognized in respect of tax deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995 are credited directly to retained earnings and benefits which are recognized in respect of tax deductions which arose subsequent to the comprehensive revaluation of the Corporation's assets are credited to net earnings. The Canadian federal large corporation tax on capital is included in the provision for income taxes.

Translation of Foreign Currencies
Monetary assets and liabilities and non-monetary items carried at market value are translated into Canadian dollars at the period-end exchange rate. Other non-monetary items and revenues and expenses are translated at approximate rates in effect at the dates of the transactions, except depletion and amortization which are translated at the same rate as the related assets.

Financial Instruments
The carrying amounts for cash and short-term deposits, accounts receivable, inventories and prepaid expenses, accounts payable and accrued liabilities on the balance sheets approximate fair value because of the limited term of these instruments. The fair market value of long-term debt approximates book value unless otherwise disclosed. Fair value estimates are made at the balance sheet date, based on relevant market information and information about the financial instrument.

Stock Option Plans

In 2002 the Corporation adopted prospectively the requirements of the CICA handbook section 3470, "Stock-Based Compensation and Other Stock Based Payments." As encouraged by section 3470, the Corporation has adopted the fair value based method to account for stock-based transactions with directors, and eligible employees for options granted in 2002. The value is recognized over the applicable vesting period as an increase in compensation expense and contributed surplus. When the options are exercised, the proceeds received by the Corporation, together with the amount in contributed surplus will be credited to Common Share capital. For options granted prior to January 1, 2002 the Corporation continues to follow the accounting policy under which no expense is recognized for these stock options. When these options are exercised, the proceeds received by the Corporation will be recorded as Common Share capital.

Earnings per share

Basic earnings per Common Share are computed by dividing net earnings by the weighted average number of Common Shares outstanding during the period. Diluted per share amounts are calculated giving effect to the potential dilution that would occur if securities or other contracts to issue Common Shares were exercised or converted to Common Shares. The treasury stock method is used to determine the dilutive effect of stock options and other dilutive instruments. The treasury stock method assumes that proceeds received from exercise of in-the-money stock options are used to repurchase Common Shares at the prevailing market rate.

2. INVENTORIES AND PREPAID EXPENSES

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Uranium concentrate	**$ 11,782**	$ 11,063	$ 8,046	$ 7,064	$ 593
Inventory of ore in stockpiles	**10,970**	15,383	14,522	18,246	18,628
Mine supplies	**1,375**	1,396	1,405	1,543	1,978
Mining equipment acquired for resale	**—**	483	—	483	409
Prepaid expenses	**620**	773	831	291	113
	24,747	29,098	24,804	27,627	21,721
Less: Non-current portion - Inventory of ore in Stockpiles	**7,456**	10,550	9,689	13,413	11,743
Current portion inventories and prepaid Expenses	**$ 17,291**	$ 18,548	$ 15,115	$ 14,214	$ 9,978

Stockpiles include inventory from two open pit mining areas at the McClean Lake minesite where mining was completed in February 2002. Ore from these stockpiles will be processed over several years.

3. PROPERTY, PLANT AND EQUIPMENT

(a) The net property, plant and equipment balance consists of:

	As at September 30			
	2003			2002
	Cost	**Accumulated depletion and amortization**	**Net**	Net
	(unaudited and in thousands)			
Mining				
McClean Lake / Midwest uranium projects	**$ 130,421**	**$ 24,454**	**$ 105,967**	$ 111,618
Oil and Gas	**25,819**	**16,620**	**9,199**	16,376
Environmental Services	**620**	**238**	**382**	368
	$ 156,860	**$ 41,312**	**$ 115,548**	$ 128,362

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	As at December 31				
	2002			2001	2000
	Cost	**Accumulated depletion and amortization**	**Net**	Net	Net
					(in thousands)
Mining					
McClean Lake/Midwest uranium Projects	**$ 130,261**	**$ 19,537**	**$ 110,724**	$ 116,082	$ 121,514
Oil and Gas	**22,715**	**2,268**	**20,447**	13,559	550
Environmental Services	**547**	**194**	**353**	337	304
	$ 153,523	**$ 21,999**	**$ 131,524**	$ 129,978	$ 122,368

(b) As at September 30, 2003 the Corporation has a 22.5% interest in the McClean Lake mine and mill and a 19.96% interest in the Midwest uranium project, both located in northern Saskatchewan. The McClean Lake mill achieved commercial production levels on November 1, 1999 and has been constructed to process ore from the McClean Lake mine as well as other deposits. A toll milling agreement has been signed with the participants in the Cigar Lake Joint Venture that provides for the processing of a substantial portion of the future output of that mine at the McClean Lake mill, for which the owners of the McClean Lake mill will receive a toll milling fee. In determining the amortization rate for the McClean Lake mill, the Corporation has reduced the amount to be amortized by its expected share of future toll milling revenue.

(c) In September 2003 the Corporation recorded a write-down of its Canadian oil and gas properties by $12,000,000. This write-down was calculated using September 30, 2003 oil and natural gas prices and updated reserve reports for its oil and gas properties.

4. BANK INDEBTEDNESS

As at December 31, 2002 the Corporation had a borrowing facility of up to $6,000,000. Subsequent to year-end, as a result of the fact that substantial proven gas reserves are awaiting pipeline allocation and the short production history of two new wells, this borrowing facility was $5,300,000 as at September 30, 2003. This facility is subject to an annual review and is repayable from oil and gas cash flows and as discussed in note 13(d). This facility bears interest at Canadian bank prime (which was 4.5% on December 31, 2002) plus 0.5% and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin and not pledged under the facilities described in notes 5(b) and 5(c).

5. LONG-TERM DEBT

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
McClean Lake loan (note 5(b))	**$ 44,250**	$ 50,086	$ 51,962	$ 60,724	$ 59,316
Other long-term debt (note 5(c))	**1,610**	2,308	2,308	2,937	3,392
	45,860	52,394	54,270	63,661	62,708
Less: Current portion	**2,763**	3,605	10,712	11,961	11,086
	$ 43,097	$ 48,789	$ 43,558	$ 51,700	$ 51,622

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) The McClean Lake loan from Cogema Resources Inc. finances the Corporation's share of the costs of development and operation of the McClean Lake mine and mill and Midwest uranium project. This loan is secured only by the Corporation's interest in the McClean Lake mine and mill and the Midwest uranium project. The Corporation's share of net cash flow from McClean Lake uranium sales is dedicated to the loan's repayment. The Corporation has the right to prepay portions of the loan facility and redraw amounts prepaid, including interest savings from amounts prepaid, on 45 days' notice. As at September 30, 2003, the Corporation has the ability to redraw $3,208,000. Interest on this loan is payable at Canadian bank prime plus 1%. The loan is currently scheduled to mature on December 31, 2005, but will be extended to December 31, 2010 if, prior to December 31, 2005, a production decision is made to develop the Midwest uranium project. Any principal balance outstanding at maturity is repayable at 20% per annum. It is not possible to determine the fair value of the McClean Lake loan.

(c) Other long-term debt of $1,610,000 as at September 30, 2003 is repayable over two years up to August 31, 2005 in annual installments plus interest which approximates Canadian bank prime. Principal payments in the next two years are: 2004 - $761,000 and 2005 - $849,000.

(d) The Corporation has a line of credit for $300,000 from a Canadian Chartered Bank. This line of credit bears interest at Canadian bank prime and is secured by a short-term deposit. At September 30, 2003, $26,000 was drawn against this line of credit.

(e) Interest expense on long-term debt was as follows:

	Nine months ended September 30		For the year ended December 31		
	2003 (unaudited)	2002 (unaudited)	2002	2001	2000 (in thousands)
McClean Lake loan	**$ 2,148**	$ 2,093	$ 2,798	$ 4,186	$ 5,623
Other long-term debt	**90**	94	117	246	89

6. POST EMPLOYMENT BENEFITS

The Corporation's post employment benefits accrual includes life insurance for each of its former Canadian employees who retired on immediate pension prior to 1997, together with the future cost of medical and dental benefits as set out in the group policies. The amount accrued is based on estimates provided by the plan administrator which are based on past experience, limits on coverage included in the plan and other assumptions including a growth in medical cost of up to 13% initially, decreasing over five years to 8% per annum and a growth in dental costs of 6% per annum, subject to limits set out in the group policies.

The Corporation's post employment benefit plan is not funded. Changes in the accrued benefit obligation are as follows:

	Nine months ended September 30		For the year ended December 31	
	2003	**2002**	2002	2001 (in thousands)
Accrued benefit obligation – beginning of year	**$ 5,714**	**$ 5,834**	$ 5,834	$ 5,966
Benefits paid	**(200)**	**(310)**	(455)	(482)
Interest cost	**252**	**251**	335	350
Accrued benefit obligation – end of year	**5,766**	**5,775**	5,714	5,834
Unamortized initial transitional surplus	**4,454**	**4,847**	4,749	5,142
	10,220	**10,622**	10,463	10,976
Less: Current portion included in accounts payable	**400**	**425**	400	500
	$ 9,820	**$ 10,197**	$ 10,063	$ 10,476

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

The unamortized initial transitional surplus is being amortized over the expected 12.5 year (as of September 2002) average life expectancy of this retiree group.

7. DECOMMISSIONING AND SITE RESTORATION

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Elliot Lake					
Elliot Lake mine site restoration accrual *(note 7b))*	**$ 7,681**	$ 8,059	$ 7,984	$ 8,418	$ 9,045
Less: Balance in Elliot Lake Reclamation Trust Fund *(note 7(b))*	**1,342**	1,421	1,606	1,761	2,132
	6,339	6,638	6,378	6,657	6,913
Less: Current portion included in accounts payable	**350**	400	400	425	600
	5,989	6,238	5,978	6,232	6,313
McClean Lake uranium operations *(note 7(c))*	**584**	479	498	388	–
Canadian oil and gas *(note 7(d))*	**147**	115	122	90	–
	$ 6,720	$ 6,832	$ 6,598	$ 6,710	$ 6,313

(b) The Corporation's Elliot Lake uranium mine closed in 1992 and capital works to decommission this site were completed in 1997. The remaining provision is for the estimated cost of monitoring the Tailings Management Areas at the Denison and Stanrock sites and for treatment of water discharged from these areas. The Corporation conducts its activities at both the Denison and Stanrock sites pursuant to decommissioning licenses issued by the Canadian Nuclear Safety Commission. The above accrual represents the Corporation's best estimate of the future reclamation cost based on assumptions as to levels of treatment which will be required in the future. The financial effect of future changes, if any, in requirements, laws, regulations and operating assumptions may be significant, and will be recognized if and when applicable.

Pursuant to a Reclamation Funding Agreement, effective June 30, 1994, with the Governments of Canada and Ontario, the Corporation was required to deposit 90% of its cash flow, after deducting permitted expenses, into the Reclamation Trust Fund. A subsequent agreement with the governments provides for the suspension of the Corporation's obligation to deposit 90% of its cash flow into the Reclamation Trust, provided the Corporation maintains a balance in the Reclamation Trust equal to estimated reclamation spending for the succeeding six calendar years. Withdrawals from this trust fund can only be made with the approval of the Governments of Canada and Ontario, to fund Elliot Lake site restoration costs. The Corporation believes that the current Reclamation Trust balance will be adequate to fund these costs through 2008.

(c) In addition the McClean Lake operation is subject to environmental regulations as set out by Saskatchewan Environment and the Canadian Nuclear Safety Commission. As required by Saskatchewan Environment, the operator of the McClean Lake joint venture has arranged Letters of Credit securing future decommissioning and reclamation liabilities. The Corporation has agreed to indemnify the operator for its proportionate share of any loss incurred up to a maximum amount of $7,755,000.

(d) The Corporation has estimated future removal and site restoration costs of $957,000 at September 30, 2003 (December 31, 2002 - $325,000, December 31, 2001 - $278,000, December 31, 2000 - $182,000) for abandoning its Canadian oil and gas wells and facilities.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

8. INCOME TAXES

(a) Since the Corporation operates in three industrial and geographic segments, its income is subject to varying rates of taxation. A reconciliation of the combined Canadian federal and provincial income tax rate to the Corporation's effective rate of income and resource taxes is as follows:

	For the Year Ended December 31	
	2002	2001
		(in thousands)
Earnings before income taxes	**$ 2,929**	$ 3,214
Combined federal and provincial income tax rate	**43.50%**	43.04%
Computed income tax expense	**$ 1,274**	$ 1,383
Increase (decrease) in taxes resulting from:		
Benefit of previously unrecognized federal and provincial tax pools	**(1,198)**	(1,307)
Resource allowance	**(81)**	(61)
Reduction in Ontario income tax rate due to lower income allocation to Ontario	**—**	(2,000)
Adjustments relating to other years	**(469)**	—
Other	**(78)**	195
Ontario income tax recovery	**(552)**	(1,790)
Federal large corporation tax	**413**	286
Income tax recovery	**$ (139)**	$ (1,504)

(b) The Corporation uses the asset and liability method of accounting for the tax effect of temporary differences between the carrying amount and tax bases of the Corporation's assets and liabilities. Temporary differences arise when the realization of an asset or the settlement of a liability would give rise to either an increase or decrease in the Corporation's income taxes payable for the year or a later period. The Corporation's future tax liability arises in computing its Ontario tax liability, from the deduction of temporary differences, principally capital cost allowance, Canadian exploration and development expenses of $30 million more for tax than accounting, less the future tax reduction expected from the utilization of non-capital losses of $20 million which expire in 2006. As at December 31, 2002, the Corporation has not recognized the future tax benefits for both Federal and Saskatchewan tax purposes, from the future utilization of non-capital loss carry forwards of $21 million expiring in 2006 or temporary tax differences in excess of book values of $208 million that it can carry forward to shelter future Federal and Saskatchewan income tax liabilities. Of this amount, $97 million relates to deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995. In 2002, the Corporation was able to offset its entire Federal and Saskatchewan income tax expense against these unrecognized tax deductions.

9. SHAREHOLDERS' EQUITY

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Common stock *(note 9(b))*	**$ 5,568**	$ 5,568	$ 5,568	$ 935	$ 1
Common Share Purchase Warrants *(note 9(c))*	**—**	—	—	688	688
Contributed Surplus *(note 9(c))*	**1,229**	928	937	240	240
Retained Earnings	**67,621**	81,086	81,647	78,579	73,861
	$ 74,418	$ 87,582	$ 88,152	$ 80,442	$ 74,790

(b) Common Stock

Authorized
The authorized share capital consists of an unlimited number of Common Shares.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Issued

Changes in issued Common Shares were as follows:

	Number of Shares	(in thousands of $)
Balance as of December 31, 2000	**15,893,560**	$ 1
Shares issued on acquisition of Innovative Energy Inc. net of issued cost of $33,000 (note 12(d))	**386,880**	934
Balance as of December 31, 2001	**16,280,440**	935
Purchase and cancellation of fractional Common Shares resulting from one for 20 share consolidation	**(3,287)**	(12)
Issue of flow-through Common Shares net of $355,000 issue Costs	**1,428,571**	4,645
Balance as of September 30, 2003 and December 31, 2002	**17,705,724**	$ 5,568

All Common Stock balances have been restated to reflect a one for 20 share consolidation, which became effective on May 24, 2002. Prior period earnings per share have been calculated to give effect to this share consolidation as if the share consolidation had been effective at the beginning of the earliest period presented.

(c) Contributed Surplus and Common Share Purchase Warrants

	Nine months ended September 30		For the year ended December 31		
			(in thousands)		
	2003	2002	2002	2001	2000
Balance – beginning of period	**$ 937**	$ 240	$ 240	$ 240	$ 240
Expiry at 549,550 Common Share Purchase Warrant on July 18, 2002	**–**	688	688	–	–
Common Share Stock Options expensed (note 9(d))	**292**	–	9	–	–
Balance – end of period	**$ 1,229**	$ 928	$ 937	$ 240	$ 240

(d) Stock Option Plan

The Corporation has issued stock options pursuant to a Stock Option Plan, approved by shareholders in 1996, under which the Board of Directors may issue up to 2,384,000 Common Shares to directors, eligible employees and service providers. Under this plan the exercise price of each option equals the market price of the Corporation's stock on the date of the grant. A portion of the issued options vest on the anniversary of their grant, except that all options outstanding vest immediately on a takeover. Options expire if unexercised after ten years. A summary of the status of the Corporation's stock options issued under this plan as at September 30, 2003, December 31, 2002 and 2001 and changes during the periods and years ending on those dates is presented below:

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	For the nine months ended September 30, 2003 (unaudited)		For the year ended December 31, 2002		For the year ended December 31, 2001	
	Shares	**Weighted Average Exercise Price**	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price
Outstanding beginning of period	**1,002,250**	**$ 4.85**	927,250	$ 5.04	559,750	$ 6.65
Granted	**520,500**	**2.31**	75,000	$ 2.49	367,500	$ 2.60
Forfeited	**402,750**	**6.99**	—	—	—	—
Outstanding end of period	**1,120,000**	$ 2.90	1,002,250	$ 4.85	927,250	$ 5.04
Options exercisable at period end	483,833		775,708		626,650	

The following table summarizes information about stock options outstanding at September 30, 2003:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Sept. 30, 2003	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Sept 30, 2003	Weighted-Average Exercise Price
$7.60	97,500	2.7	$ 7.60	97,500	$ 7.60
$2.22 to $3.15	1,022,500	7.0	$ 2.45	385,833	$ 2.45
$3.15 to $7.60	1,120,000	6.9	$ 2.32	483,333	$ 3.47

The following table summarizes information about stock options outstanding at December 31, 2002:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Dec. 31, 2002	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Dec. 31, 2002	Weighted-Average Exercise Price
$7.20 to $7.80	450,250	3.4	$ 7.62	450,250	$ 7.62
$2.31 to $3.15	552,000	8.3	$ 2.60	325,458	$ 2.60
$3.15 to $7.80	1,002,250	5.6	$ 4.85	775,708	$ 4.85

In 2002, the Corporation adopted prospectively CICA handbook section 3870, "Stock-based Compensation and Other Stock-Based Payments". The compensation expense associated with this stock option series has been calculated using the Black-Scholes option-pricing model and $9,000 has been expensed in 2002 and $292,000 in the nine months ended September 30, 2003. The pricing model assumes a 10-year term, expected Common Stock price volatility of 67% and a weighted average life of 10 years and a weighted average risk-free interest rate of 5.4% and an assumption that dividends are reinvested in the Corporation. These options have a ten-year term, with vesting periods ranging from one to four years of the grant date.

(e) Earnings Per Share Data

Prior period earnings per share calculations give effect to the share consolidation described in note 9(b) as if the share consolidation had been effective at the beginning of the period presented.

The calculation of basic earnings per share is based on the weighted average number of shares outstanding during the year in the amount of 16,879,892 (2001 - 15,949,737) Common Shares.

The calculation of diluted earnings per share takes into consideration the potential issue of shares under Stock Options and, in 2001, Common Share Purchase Warrants where the strike price is below the average Common Share price for the year. The number of dilutive options in 2002 is 314,204 (2001 – 412,500). In 2002, 688,046 (2001– 514,750) Stock Options and in 2002 0, (2001 550,000) Common Share Purchase Warrants have been excluded from the calculation of diluted earnings per share as the exercise price is greater than the average Common Share price in the year.

10. OTHER CHANGES IN WORKING CAPITAL

Other changes in working capital consist of:

	As at September 30		As at December 31		
(in thousands)	**2003 (unaudited)**	2002 (unaudited)	**2002**	2001	2000
Accounts receivable	**$ 8,384**	$ 8,700	**$ 567**	$ 868	$ 10,701
Inventories and prepaid expenses	**57**	(1,471)	**2,390**	(6,164)	349
Less amortization of ore milled from Stockpiles	**(3,552)**	(4,057)	**(4,912)**	(5,863)	(6,272)
Accounts payable and accrued liabilities	**(2,338)**	(5,240)	**(1,891)**	(49)	(33,248)
Current taxes payable	—	—	—	—	513
	$ 2,551	$ 2,068	**$ (3,846)**	$ (11,208)	$ (27,957)

11. CONTINGENT LIABILITIES AND COMMITMENTS

(a) On September 23, 2002 The Federal Court of Canada, Trial Division, quashed the original McClean Lake facility operating license issued in 1999. That license had been superceded and the facility has continued to operate under the new four-year operating license issued in August 2001. The Trial Division decision has been appealed by both the federal regulator of the facility, the Canadian Nuclear Safety Commission ("CNSC") and by the operator and majority owner of the facility, Cogema Resources Inc. The Province of Saskatchewan and First Nations and Métis groups have intervened in support of the appeal. The Federal Court of Appeal granted a stay of the Trial Division decision pending the outcome of the appeal.

The Trial Division decision quashed the original 1999 operating license on the basis that the *Canadian Environmental Assessment Act* was not complied with. Specifically, the project was subject to a lengthy public process under legislation that was replaced by the *Canadian Environmental Assessment Act*. The Trial Division decision creates a significant amount of uncertainty about the rules applicable to obtaining the necessary approvals for the operation of the McClean Lake facility.

While the outcome of the appeal process cannot be determined, the Corporation believes that ultimately the Trial Division decision will be nullified through the appeal process or by the completion of further regulatory requirements. An application for a new license for the McClean Lake facility has been filed with the CNSC. Pending the appeal of the decision, the stay granted by the Federal Court of Appeal eliminates the risk of a stoppage in production at McClean Lake. The Corporation believes that with the continuing efforts of all interested parties, a shut down of the McClean Lake facility is unlikely. The impact of an unfavourable decision cannot be determined at this time.

(b) In September 2002 the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of Denison's former employees, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In unanimously rejecting the lower court decision, the Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments are required to be made. These former employees have further appealed this Court of Appeal decision to the Supreme Court of Greece. The Corporation believes that this appeal will be unsuccessful. The impact of an unfavourable decision cannot be determined at this time.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(c) The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has:

(i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at the Corporation's decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and
(ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land.

The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

(d) The Corporation is involved in various other legal actions in the course of business. In the opinion of management, the aggregate amount of any potential liability is not expected to have a material adverse effect on the Corporation's financial position or results.

(e) In July 2002, the Corporation raised $5,000,000 through the issue of 1,428,571 flow-through Common Shares. The Corporation has spent the proceeds of this issue on Canadian Exploration Expenses. As at June 30, 2003, $996,000 remains to be spent prior to July 30, 2004.

(f) Corporation's lease commitments under two operating leases for premises are 2003 - $223,000, 2004 - $196,000, 2005 - $25,000 and 2006 - $7,000.

12. ACQUISITION OF INNOVATIVE ENERGY LTD.

Effective November 8, 2001 the Corporation acquired 100% of Innovative Energy Ltd. of Calgary. The acquisition has been accounted for as a purchase and accordingly these financial statements include Innovative's results from November 8, 2001 onward. The estimated fair value of net assets acquired on November 8, 2001 from Innovative Energy Ltd. and the consideration paid, were as follows:

	As at November 8, 2001
Net assets acquired	
Assets	(in thousands)
Current assets	**$ 533**
Oil and gas property, plant and equipment	**5,597**
	6,130
Liabilities	
Bank indebtedness	**2,285**
Other current liabilities	**913**
Provision for site restoration	**82**
	3,280
Net assets acquired	**$ 2,850**
Consideration	
Cash	**$ 1,916**
Non cash	
Issue of 386,880 Common Shares net of issue costs of $33,000	**934**
Total consideration	**$ 2,850**

13. SUBSEQUENT EVENTS

(a) On December 30, 2003 the Corporation entered into an agreement that provides for, subject to Shareholder approval, a Plan of Arrangement pursuant to section 182 of the *Business Corporations Act* (Ontario) involving the Corporation, Denison Mines Inc. ("Denison Mines"), Tenwest Uranium Limited ("Tenwest"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership (the "Partnership"), Denison Mine Holding Corporation ("Mine Holdco") and E. Peter Farmer.

Under this proposed Plan of Arrangement, Denison Mines will acquire the mining and environmental services assets of Denison Energy and be engaged in the mining, milling and sale of uranium concentrates and exploration and development of mineral properties and in providing mine decommissioning and monitoring for third parties. Denison Mines will assume all liabilities, including environmental liabilities, related to the mining assets of the Corporation. As part of the above transaction, Denison Mines will also acquire the assets of the Corporation's wholly owned subsidiary, Tenwest Uranium Limited. Further, Denison Resources will acquire the Canadian oil and gas assets of the Corporation and be engaged in the exploration, development, production and sale of oil, natural gas and natural gas liquids. Denison Resources will assume all liabilities, including environmental liabilities related to the Canadian oil and gas assets of the Corporation. The Plan of Arrangement will also result in the consolidation of the common shares of the Corporation on a twenty-one for one basis. The Plan of Arrangement is subject to regulatory, judicial and shareholder approval and is anticipated to be completed in early March 2004.

(b) Pursuant to the Plan of Arrangement, each of the Corporation's shareholders will receive common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) in addition to their one share for the Corporation currently held. After the above is completed, the Plan of Arrangement will result in the consolidation of the Common Shares of the Corporation on a twenty-one for one basis. The Corporation has agreed that immediately following the completion of the Plan of Arrangement described in note 13 (a) above, it will issue the number of Common Shares equal to 45% of the outstanding common shares (after giving effect to such share issuance) to Matco Capital Ltd. ("Matco") and other parties designated by Matco at a purchase price of $7.35 per Common Share after giving effect to the above consolidation.

(c) The Corporation has entered into the Calfrac Option Agreement pursuant to which the shareholders of Calfrac Well Services Ltd. ("Calfrac") have granted the Corporation an option to purchase all of the shares of Calfrac following the completion of the Plan of Arrangement described in note 13 (a) and the Matco subscription described in note 13 (b) for an aggregate purchase price of $227.5 million including assumed debt. The Corporation has the option to pay the purchase price in cash or in a combination of cash and common shares, provided that if the Corporation pays the purchase price by the issuance of common shares, the common shares must make up not less than 80% of the purchase price. In connection with the Corporation's business plans, including the acquisition of Calfrac, the Corporation is currently contemplating a public offering of common shares to raise approximately $120 million.

(d) Following the receipt of revised reserve reports in September, 2003 the borrowing facility described in note 4 has been revised and now requires a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 on March 31, 2004. The Corporation has agreed to apply net sales proceeds from disposition of any Canadian oil and gas asset together with net proceeds from any share issue attributable to oil and gas assets or stock option proceeds attributable to oil and gas assets to reduce this facility.

14. SEGMENTED INFORMATION

Operations are in the following industries:

Mining	- primarily involves mining, milling and sale of uranium concentrates and exploration and development of mineral properties.
Oil and Gas	- exploration, development, production and sale of oil and natural gas and receipt of royalty revenue.
Environmental Services	- mine decommissioning services and monitoring of decommissioned sites for third parties.

Information for the nine months ended September 30, 2003 and September 30, 2002 are as follows:

Auditors' Report

To the Directors of
Calfrac Well Services Ltd.

We have audited the consolidated balance sheets of **Calfrac Well Services Ltd.** as at December 31, 2002 and 2001 and the consolidated statements of operations and retained earnings and cash flows for each of the years in the three year period ended December 31, 2002. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2002 and 2001 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2002 in accordance with Canadian generally accepted accounting principles.

1 Description of business and basis of presentation

Calfrac Well Services Ltd. (the "company") is a private company originally incorporated under the Business Corporation Act (Alberta) on June 28, 1999. It amalgamated with 850288 Alberta Ltd. on January 1, 2000. The company has established oilfield operations in Red Deer, Alberta, Grand Prairie, Alberta and Medicine Hat, Alberta as well as the United States and offers stimulation services to the oil and gas industry including fracturing, acidizing and coiled tubing services.

2 Summary of significant accounting policies

The financial statements of the company have been prepared by management in accordance with Canadian generally accepted accounting principles. Because a precise determination of many assets and liabilities is dependent upon future events, the preparation of financial statements necessarily involves the use of estimates and approximations which have been made using careful judgement. The financial statements have, in management's opinion, been properly prepared within reasonable limits of materiality and within the framework of the significant accounting policies summarized below:

a) Principles of consolidation

These financial statements include the accounts of Calfrac Well Services Ltd. and its wholly owned subsidiary, Calfrac Well Services Corp. Calfrac Well Services Corp. was incorporated in the United States during 2001 and commenced operations in the last quarter of 2001.

b) Foreign currency translation

The financial accounts of the subsidiary are translated into Canadian currency using the temporal method of translation. Under the temporal method, monetary denominated items are translated at the rate of exchange at the balance sheet date while non-monetary items are translated at the historical rate applicable on the date of the transaction giving rise to the non-monetary balance. Revenues and expenses are translated at the monthly average exchange rates. Gains or losses in translation are recognized in income as they occur.

c) Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and short-term investments maturing within 90 days.

d) Marketable securities

Marketable securities are carried at the lower of cost and market value.

e) Inventory

Inventory consists of chemicals and proppants used to stimulate wells and is stated at the lower of cost, determined on a first-in, first-out basis and net realizable value.

(Information as at and for the period ended September 30, 2003 is unaudited)

f) Capital assets

Capital assets are recorded at cost and are depreciated over their estimated economic useful lives using the straight-line method at the following annual rates:

Field equipment	10 years
Buildings	20 years
Shop, office and other equipment	5 years
Computers and computer software	3 years
Leasehold improvements	Term of the lease

g) Income taxes

The company follows the liability method of determining income taxes where future income taxes are determined based on temporary differences between the tax bases of assets or liabilities and their carrying amounts in the financial statements.

h) Revenue recognition

Revenue is recognized as services are rendered and products are provided.

i) Stock-based compensation plans

The company does not recognize compensation cost for its stock-based compensation; therefore, no stock-based compensation expense is recorded either on granting or exercise of stock options. Consideration paid by employees, officers or directors on the exercise of stock options is recorded as share capital.

j) Goodwill

Goodwill, which represents the excess of cost over the fair value of net assets acquired, is assessed by the company for impairment at least annually. The impairment test is carried out in two steps. In the first step, the carrying amount is compared with its fair value. When the fair value exceeds its carrying amount, goodwill is considered not to be impaired and performance of the second step of the impairment test is unnecessary. The second step compares the implied fair value of the goodwill with its carrying amount to measure the amount of the impairment loss, if any.

(Information as at and for the period ended September 30, 2003 is unaudited)

3 Capital assets

	As at December 31, 2002		
	Cost $	Accumulated depreciation and amortization $	Net $

4 Intangible assets

	As at December 31,	
	2002 $	2001 $
Intangible asset	1,239,127	1,239,127
Accumulated amortization	(689,219)	(391,511)
	549,908	847,616

(Information as at and for the period ended September 30, 2003 is unaudited)

On February 23, 2000, the company acquired 100% of the outstanding shares of 851350 Alberta Ltd. ("851350") in exchange for 2,125,000 common shares valued at $1 per share. 851350 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851350, this contract was assigned to Calfrac Well Services Ltd. and 851350 was dissolved on March 1, 2000. $654,325 of the purchase price is being amortized over the four year life of the contract. $1,470,675 has been identified as having an indefinite life and has been classified as goodwill.

On April 5, 2001, the company acquired 100% of the outstanding shares of 851355 Alberta Ltd. ("851355") in exchange for 2,390,625 common shares valued at $1 per share. 851355 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851355, this contract was assigned to Calfrac Well Services Ltd. and 851355 was dissolved on April 10, 2001. $584,802 of the purchase price is being amortized over the four year life of the contract. $1,805,823 has been identified as having an indefinite life and has been classified as goodwill.

As a consequence of the transactions described above, the oil and gas producer acquired a significant minority interest in the company. For the nine months ended September 30, 2003, the company provided services to the oil and gas producer in the amount of $56,952,697 (September 30, 2002 –$28,690,951; December 31, 2002 – $56,270,727; 2001 – $16,137,002; 2000 – $7,523,493). At September 30, 2003 the oil and gas producer owed the company $11,916,589 (December 31, 2002 – $12,261,137; 2001 – $3,765,236). The company's transactions with the oil and gas producer were in the normal course and have been measured at the exchange amount.

	As at December 31,	
	2002	**2001**
	$	**$**
Loan bearing interest at prime plus 1% requiring payment of accrued interest monthly plus a fixed principal payment of $60,000 per month, secured by charges on specific equipment.	2,400,000	-
Loan bearing interest at prime plus 1%.	-	6,999
	34,242,987	22,958,906

In 2002, the company implemented the Canadian Instituted of Chartered Accountants ("CICA") pronouncement EIC #122. The pronouncement requires that bank debt that is callable on demand be reclassified as a current liability. This presentation has been adopted for December 31, 2002 with prior periods reclassified to conform to this presentation.

Effective September 2003, the company renegotiated the terms of these loans to remove the demand feature. Accordingly, at September 30, 2003, these loans have been reflected as long-term, with the current portion of long-term debt reflected accordingly. In November 2003, the loans were amalgamated under one loan facility.

As at September 30, 2003, the company had an unutilized operating loan facility of $5 million and an undrawn revolving equipment term loan in the amount of $7.5 million.

Scheduled principal repayments required in each year to retire the bank loans and long-term debt (see note 6) as at September 30, 2003 are as follows:

	$
2004	11,526,158
2005	10,190,006
2006	6,731,606
2007	4,719,917
2008	3,020,472
Thereafter	2,745,786
	38,933,945

(Information as at and for the period ended September 30, 2003 is unaudited)

6 Long-term debt

	As at December 31,	
	2002	**2001**
	$	**$**
Debenture bearing interest at 8.95% requiring payment of accrued interest monthly plus a fixed principal payment of $53,575 per month, secured by charges on specific equipment.	2,249,850	2,892,750
Non-interest bearing unsecured loan requiring a fixed principal payment of $37,595 per annum.	136,985	-
	2,386,835	2,892,750
Less: Current portion	(680,495)	(642,900)
	1,706,340	2,249,850

7 Income taxes

The following table summarizes the temporary differences that give rise to the future tax liability at December 31:

	As at December 31,	
	2002	**2001**
	$	**$**
Capital assets	6,841,722	4,668,318
Bonus payable	(858,621)	(430,102)

(Information as at and for the period ended September 30, 2003 is unaudited)

The provision for income taxes in the statement of operations and retained earnings varies from the amount that would be computed by applying the expected tax rate of 42.1% (2001 – 42.6%; 2000 – 43.6%) to income before income taxes. The principal reasons for differences between such expected income tax expense and the amount actually recorded are as follows:

	Years ended December 31,		
	2002 **$**	**2001** **$**	**2000** **$**
Income before tax	16,014,378	13,063,975	6,851,178
Income tax rate	42.1%	42.6%	43.6%
Computed expected income tax expense	6,742,053	5,565,253	2,897,114
Increase (decrease) in income taxes resulting from			
Manufacturing and processing – lower effective tax rate	(879,281)	(674,101)	(422,033)
Non-deductible expenses	177,781	127,800	87,713
Future income tax benefit from tax rate reduction	(87,787)	-	-
U.S. – lower effective tax rate	(38,676)	-	-
Utilization of loss carryforwards not previously recognized	-	-	(1,376,739)
Other	(8,367)	201,732	(127,446)
Large corporations tax	84,000	78,000	91,781
	5,989,723	5,298,684	1,150,390

(Information as at and for the period ended September 30, 2003 is unaudited)

Stock options

The company issued 265,625 stock options to senior executives on August 15, 2003 with an exercise price of $1 per share. The stock options granted vest immediately and expire in five years. Stock options vested may be exercised at any time between the date on which it becomes exercisable and the end of the stock option's term.

Stock-based compensation costs

Effective January 1, 2002, Canadian generally accepted accounting principles require disclosure of impact on net earnings using the fair value method for stock options issued on or after January 1, 2002. If the fair value method had been used, the company's net income would approximate the following pro-forma amounts:

	September 30, 2003 $
Stock-based compensation costs	828,750
Net income for the period	
As reported	12,312,786
Pro-forma	11,484,036

The stock-based compensation costs are recognized over the vesting period of the stock options granted.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes option pricing model, minimum value method, based on the following:

	September 30, 2003
Fair value of stock options granted (per common share)	$3.12
Risk-free interest rate	3.04%
Expected life (years)	0.5
Expected volatility	0%
Dividends paid	-

(Information as at and for the period ended September 30, 2003 is unaudited)

9 Commitments

The company leases property (premises), equipment and vehicles under agreements requiring aggregate minimum payment over the next five years, from December 31, 2002, as follows:

	$
2003	2,199,932
2004	1,848,807
2005	734,610
2006	616,612
2007	540,265

10 Financial instruments

The company's financial instruments that are included in the consolidated balance sheet are comprised of cash, marketable securities, accounts receivable, long-term receivable, all current liabilities and long-term debt.

a) Fair values of financial assets and liabilities

The fair values of financial instruments that are included in the consolidated balance sheet, except marketable securities, bank loans and long-term debt approximate their carrying amounts due to the short-term maturity of those instruments. The carrying value of marketable securities approximates quoted market value. The fair value of the bank loans and long-term debt is not materially different from its carrying amounts since the interest rates approximate a market rate of interest.

b) Credit risk

A substantial portion of the company's accounts receivable are with customers in the oil and gas industry and are subject to normal industry credit risks.

c) Interest rate risk

The company is exposed to interest rate cash flow risk on debt subject to floating interest rates.

(Information as at and for the period ended September 30, 2003 is unaudited)

New Issue

January 20, 2004

DENISON ENERGY INC.

$120,000,000
Class A Common Shares

Denison Energy Inc. ("Denison" or the "Corporation") is offering • of its Class A Common Shares (the "Offered Shares") at a price of $• per share pursuant to this prospectus.

The offering price per Offered Share of $• was determined by negotiation between Denison and Peters & Co. Limited, on its own behalf and on behalf of FirstEnergy Capital Corp. and RBC Dominion Securities Inc. (collectively, the "Underwriters").

In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Price: $• per Class A Common Share

	Price to the Public	Underwriters' Fee	Net Proceeds to the Corporation
Per Class A Common Share	$•	$•	$•
Total	$120,000,000	$6,600,000	$113,400,000

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business and the success of this change cannot be assured. The Corporation does not have a history of paying dividends on its Class A Common Shares. However, the board of directors may make a determination to pay dividends in the future if circumstances permit. Subscribers must rely upon the ability and integrity of the management of the Corporation. See "Risk Factors".

The Corporation has recently completed a reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd., has certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. – The Reorganization"

Except as otherwise indicated, all of the disclosure in this preliminary prospectus is made on the basis that the Reorganization (as defined herein) has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

The Underwriters conditionally offer the Offered Shares, subject to prior sale, if, as and when issued by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution", subject to approval of certain legal matters on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP. In connection with the distribution of the Offered Shares, the Underwriters may engage in market stabilization activities. See "Plan of Distribution".

The common shares of Denison that are currently issued and outstanding are listed on the Toronto Stock Exchange (the "TSX") under the symbol "DEN". On January 19, 2004, the closing price of the common shares of Denison on the TSX was $6.10.

Subscriptions for the Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice. It is expected that the closing of this offering will take place on or about March •, 2004, and in any event not later than March •, 2004.

SUMMARY

The following is a summary of the principal features of this offering and should be read together with the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the Glossary for an explanation of certain terms used in this prospectus and in this summary.

Except as otherwise indicated, all of the disclosure in this preliminary prospectus is made on the basis that the Reorganization has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

The Corporation

Introduction

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource-related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the reorganization of Denison, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. As at the date hereof, the Corporation holds no material assets, other than an option to purchase all of the shares of Calfrac Well Services Ltd. and certain income tax attributes, and has retained certain claims and liabilities. See "Denison Energy Inc. – The Reorganization" for illustrations of the structure of Denison before and after the Reorganization, this offering and the Acquisition.

The completion of this offering will provide financing which will enable the Corporation to exercise the option to acquire the shares of Calfrac, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted Denison an irrevocable option to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting the net debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million.

The purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. No portion of the net purchase price may be paid by the issuance of Common Shares unless this offering has closed and the Common Shares issuable pursuant to this offering have been issued and delivered unconditionally to the subscribers under this offering.

If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of • Common Shares and the payment of approximately $28.8 million in cash.

Calfrac

Calfrac provides specialized oilfield services to exploration and production companies designed to increase the production of hydrocarbons from wells drilled throughout western Canada and in the Rocky Mountain region of the United States.

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone. Calfrac provides both conventional hydraulic fracturing and hydraulic fracturing to produce natural gas found in coal ("NGC"), which is often referred to as coalbed methane.

The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fractures.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. NGC appears to have significant potential as an energy source and could result in additional demand for Calfrac's fracturing services. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

Calfrac also provides stimulation and other well services to exploration and production companies in western Canada. These services consist of: (i) coiled tubing services, which involve injecting coiled tubing into wells to perform various well-servicing operations; (ii) acidizing services, which involve pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids; and (iii) nitrogen services which are used principally in applications supporting Calfrac's coiled tubing and fracturing services.

Calfrac was formed in 1999 by Ronald P. Mathison, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts. For the nine month period ending September 30, 2003, Calfrac had: (i) revenue of $108.5 million; (ii) income before interest, taxes, depreciation and amortization of $27.4 million; (iii) income before taxes of $19.1 million; and (iv) net income of $12.3 million.

Corporate Strategy

If the acquisition of all of the shares of Calfrac occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the acquisition of all the shares of Calfrac occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of

Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the acquisition of all of the shares of Calfrac.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 45%, and net income increasing annually by a minimum of 29%, with an average of 42%. Canadian fracturing companies have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the acquisition of all of the shares of Calfrac occurs, the Corporation will be an oilfield service provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Calfrac's management recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for Calfrac's customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows it to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

Selected Financial Information

The following table presents a summary of historical financial data for Calfrac for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of Calfrac at each of these dates and for the periods then ended. The following table also presents a summary of the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of • Common Shares for net proceeds of approximately $111.6 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of • Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the unaudited pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. The pro forma financial statements of the Corporation have not been audited but have been reported on by PricewaterhouseCoopers LLP. All financial information with respect to the Corporation and Calfrac has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

The following data should be read along with "Management's Discussion and Analysis Regarding Calfrac" and the financial statements and related notes of Calfrac included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

Notes:

(1) Derived from the audited financial statements.

(2) EBITDA, in respect of the Corporation, represents revenue after operating expenses, selling and general and administrative expenses, stock option expense and write-down of oil and gas properties, but before depreciation, depletion and amortization, amortization of intangibles, interest and income tax. EBITDA, in respect of Calfrac, represents income before interest, taxes, depreciation and amortization. EBITDA is not a term that is approved under Canadian GAAP, as the calculation of EBITDA is not always used consistently by reporting issuers. Accordingly, EBITDA, as the term is used herein, may not be comparable to EBITDA as reported by other entities. EBITDA is presented because it is frequently used by security analysts and others in evaluating companies and their ability to service debt.

(3) If the acquisition of all the shares of Calfrac occurs, the Corporation will have non-capital losses and unclaimed expenditures, in aggregate, equal to approximately $224.6 million for federal tax purposes and approximately $172.9 million for Alberta provincial tax purposes.

The Offering

Offering Price	$• per Offered Share
Offered Shares	• Common Shares
Closing	The closing of this offering is anticipated to occur on March •, 2004, and in any event not later than March •, 2004.
Use of Proceeds	The net proceeds to the Corporation from this offering are estimated to be $111.6 million, after deducting the Underwriters' fee of $6.6 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.8 million. The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac; and (iii) approximately $24.4 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac. It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.
Eligibility for Investment	In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, provided the Common Shares are listed on a prescribed stock exchange at the time of closing of this offering, the Offered Shares will, on closing, be qualified investments within the meaning of the Tax Act for trusts governed by registered retirement savings plans, registered retirement income funds, registered education savings plans and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing, constitute "foreign property" under the Tax Act. See "Eligibility for Investment". In the opinion of counsel, based on the legislation in effect on the date of this prospectus, the Offered Shares will, on the closing of this offering, be eligible investments as set forth under the heading "Eligibility for Investment".

Risk Factors

An investment in these securities should be considered speculative due to the nature of the Corporation's business and its present stage of development. Denison is considering changing the focus of its business to the oilfield services business. Such change is dependent upon the completion of this offering and the acquisition of Calfrac. If such acquisition is not completed, the success of this change in business strategy cannot be assured. Although the Corporation does not have a history of paying dividends on its Class A Common Shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. There are additional risks associated with an investment in these securities relating to: volatility of industry conditions, seasonality, alternatives to and changing demand for petroleum products, dependence on major customers, government regulation, sourcing of raw materials, pricing and availability of raw materials, Kyoto Protocol, operating risks and insurance, key personnel, competition in the industry, currency exchange risk, the absence of current business and anticipated acquisition of Calfrac, liability for prior operations and additional financing. In assessing the risks of an investment in the Offered Shares, subscribers must rely upon the ability and integrity of the management of the Corporation. **Subscribers should consult their own professional advisors to assess the income tax, legal and other aspects of an investment in the Offered Shares. See "Risk Factors".**

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below:

"**ABCA**" means the *Business Corporations Act* (Alberta);

"**Acquisition**" means the acquisition by the Corporation of all of the issued and outstanding shares of Calfrac pursuant to the Purchase Option;

"**Amalgamation**" means the amalgamation of the Corporation with Calfrac pursuant to section 184 of the ABCA;

"**Arrangement**" means the arrangement of the Corporation pursuant to section 182 of the OBCA;

"**Arrangement Agreement**" means the arrangement agreement among Denison, Tenwest Uranium Limited, Denison Mines Inc., Denison Resources Inc., Denison Resources Partnership, Denison Mine Holding Corporation and E. Peter Farmer, as amended from time to time;

"**Calfrac**" means Calfrac Well Services Ltd.;

"**Calfrac USA**" means Calfrac Well Services Corp., a wholly owned subsidiary of Calfrac;

"**ChemErgy**" means ChemErgy Ltd.;

"**Cogema**" means Cogema Resources Inc.;

"**Common Shares**" means the Class A Common Shares of the Corporation;

"**Consolidation**" means the consolidation of 21 common shares of Denison into one Common Share pursuant to the Arrangement;

"**Continuance**" means the continuance of Denison as an Alberta corporation under section 188 of the ABCA;

"**Corporation**" or "**Denison**" means Denison Energy Inc.;

"**DJ Basin**" means the Denver-Julesburg Basin in Colorado;

"**Matco**" means Matco Capital Ltd., a corporation controlled by Matco Investments;

"**Matco Investments**" means Matco Investments Ltd., a private investment corporation;

"**NGC**" means natural gas from coal, also known as coalbed methane or "CBM";

"**OBCA**" means the *Business Corporations Act* (Ontario);

"**Offered Shares**" means the Common Shares offered pursuant to this prospectus;

"**Purchase Option**" means the purchase option agreement among Calfrac, Matco Investments (on behalf of itself and the other shareholders of Calfrac) and Denison granting an irrevocable option to Denison to purchase all of the issued and outstanding shares of Calfrac for an aggregate purchase price of approximately $227.5 million less the net debt of Calfrac, which is anticipated to be approximately $83.6 million for these purposes;

"**Reorganization**" means the Arrangement, the Continuance, the Subscription and certain related transactions, collectively;

"**Subscription**" means the subscription completed by the Corporation following the Arrangement pursuant to which the Corporation issued • Common Shares to Matco or a group of investors designated by Matco for aggregate gross proceeds of approximately $5.3 million;

"**Tax Act**" means the *Income Tax Act* (Canada);

"**TSX**" means the Toronto Stock Exchange;

"**Underwriters**" means Peters & Co. Limited, FirstEnergy Capital Corp. and RBC Dominion Securities Inc.; and

"**Underwriting Agreement**" means the underwriting agreement dated •, 2004 among the Corporation and the Underwriters with respect to this offering.

Unless otherwise indicated, references herein to "$" or "dollars" are to Canadian dollars.

FORWARD-LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward-looking statements. When used in this document, the words "may", "would", "could", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect", and similar expressions, as they relate to the Corporation, are intended to identify forward-looking statements. Such statements reflect the Corporation's current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this prospectus under the heading "Risk Factors", "Selected Financial Information" and "Management's Discussion and Analysis Regarding Calfrac". Many factors could cause the Corporation's actual results, performance or achievements to vary from those described in this prospectus. Should one or more of these risks or uncertainties materialize, or should assumptions underlying forward-looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected. The Corporation does not intend, and does not assume any obligation, to update these forward-looking statements.

In particular, this prospectus contains forward-looking statements pertaining to the following:

- capital expenditure programs;
- projections of market prices and costs;
- supply and demand for oilfield services;
- expectations regarding the Corporation's ability to maintain Calfrac's competitive position;
- expectations regarding the Corporation's ability to raise capital;
- treatment under governmental regulatory regimes;
- commodity prices; and
- exercise of the Purchase Option.

The Corporation's actual results could differ materially from those anticipated in these forward-looking statements as a result of the risk factors set forth below and elsewhere in this prospectus:

- general economic conditions in Canada and the United States;
- the demand for fracturing and other stimulation services during drilling and completion of oil and gas wells;
- volatility in market prices for oil and natural gas and the effect of this volatility on the demand for oilfield services generally;
- regional competition;
- liabilities and risks, including environmental liabilities and risks, inherent in oil and gas operations;
- sourcing, pricing and availability of raw materials, component parts, equipment, suppliers, facilities, and skilled personnel;
- the ability to integrate technological advances and match advances of competition;
- the availability of capital;
- uncertainties in weather and temperature affecting the duration of the service periods and the activities that can be completed;
- dependence on major customers;
- changes in legislation and the regulatory environment, including uncertainties with respect to implementing the Kyoto protocol;
- liabilities and risks associated with prior operations;
- currency exchange rate risk; and
- the other factors considered under "Risk Factors".

Except as otherwise indicated, all of the disclosure in this preliminary prospectus is made on the basis that the Reorganization has been completed. A final prospectus will not be filed with the securities regulatory authorities, or delivered to prospective subscribers, unless and until such time as the Reorganization has been completed.

DENISON ENERGY INC.

Denison is considering changing the focus of its business to the oilfield services business. Denison's previous business focused on resource related interests that included interests in a uranium processing facility and a uranium mine, an oil and gas business, an environmental services business and both mineral and oil and gas exploration projects. Pursuant to the Arrangement, Denison has disposed of these interests. See "– The Reorganization – The Arrangement". The completion of this offering will provide financing which will enable the Corporation to exercise the Purchase Option, should the Corporation so determine, and complete the transformation of the Corporation to an oilfield services provider.

Corporate Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the Denver-Julesburg Basin in Colorado.

Business Strengths

Management believes that, if the Acquisition occurs, the following business strengths will enhance the Corporation's ability to achieve its business objective of becoming a leading provider of oilfield services to oil and gas exploration and production companies.

Seasoned Management – Each of Mr. Douglas R. Ramsay, the President and Chief Executive Officer of Calfrac, Mr. Gordon A. Dibb, the Executive Vice President and Chief Financial Officer of Calfrac and Mr. Robert S. Roberts, the Senior Vice President and Chief Operating Officer of Calfrac, has extensive industry experience. Mr. Ramsay has over 30 years of experience in the oil and oilfield services industries and was the President of Canadian Fracmaster Ltd. from 1992 to 1994. Mr. Dibb has over 20 years of oilfield services industry experience as a senior financial officer. Mr. Roberts has significant operational industry experience with over 35 years in the pumping services industry. Each of Messrs. Ramsay, Dibb and Roberts was a founder of Calfrac, has been with Calfrac since its formation in 1999 and has agreed to continue in his present capacity in the event the Corporation completes the Acquisition.

Experienced, Interested Board – The Corporation's board of directors will be comprised of individuals with broad backgrounds and demonstrated experience in creating shareholder value. The directors have extensive industry and transactional experience and several of the directors have significant financial stakes in the Corporation.

Continuous Growth in Business – Since it was established in 1999, Calfrac has consistently expanded its market presence with revenue increasing annually by a minimum of 42%, with an average of 45%, and net income increasing annually by a minimum of 29%, with an average of 42%. Canadian fracturing companies, have significantly increased their share of the Canadian market since their entry in the late 1990's, notwithstanding the presence of U.S. based multinational companies.

Core Operations – If the Acquisition occurs, the Corporation will be an oilfield service provider with particular focus on providing hydraulic fracturing services to oil and gas exploration and production companies, with an emphasis on providing responsive and flexible solutions to customers' needs and developing technology to respond to challenges faced by customers in the field. In addition, the Corporation intends to be a leading provider of fracturing services to companies involved in the exploration and production of NGC, which is a potential promising new source of natural gas in Canada.

Client Satisfaction and Relationship Building – Management of Calfrac recognizes that the success of Calfrac's business is based on high levels of customer satisfaction and strong business relationships. Calfrac has experienced field operations staff that are supported by highly qualified technical personnel, which enable Calfrac to develop an understanding of each customer's specific needs, then tailor innovative, practical and cost-effective solutions to meet those needs.

Adoption and Implementation of Technology – Hydraulic fracturing operations are constantly improving through advances in technology, which are intended to translate into cost savings and enhanced production for its customers. A considerable amount of technology is incorporated into the fluid chemistry and the engineering of fracturing programs. Calfrac has developed proprietary fluid technologies that provide fluid viscosities with minimum additives that enhance fracturing fluid recovery. Calfrac has developed highly innovative field equipment which allows Calfrac to combine functions, resulting in less equipment being required at a particular well location, thereby reducing the "footprint" of the equipment. Calfrac has considerable experience with performing concurrent multi-zone hydraulic fractures through coiled tubing rigs or snubbing units, thereby avoiding multiple trips to the well location.

Customer Base and Utilization – Calfrac has two particularly significant customers and in excess of 150 total active customers, comprising a balanced mix of large, intermediate and small oil and gas exploration and production companies. Due to its ability to perform multiple fracturing jobs in one day in each of its operating areas, Calfrac is able to achieve high rates of equipment utilization.

The Acquisition

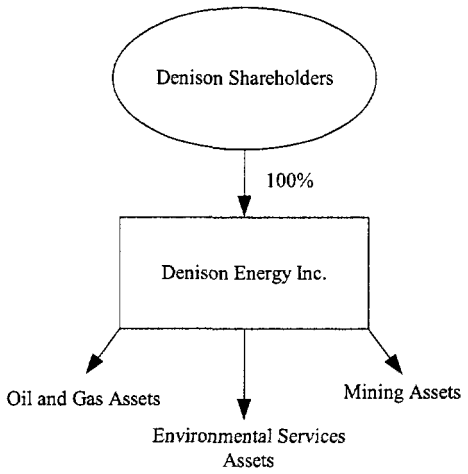
The Purchase Option

Pursuant to the Purchase Option, the shareholders of Calfrac granted an irrevocable option to Denison to purchase all of the shares of Calfrac for an aggregate purchase price of approximately $227.5 million, less: (i) the net debt of Calfrac at December 30, 2003 of approximately $25.2 million, which was established at the date of the Purchase Option; and (ii) the amount of any debt assumed by Calfrac subsequent to December 30, 2003. Calfrac has advised the Corporation that it is anticipated that Calfrac will have assumed additional indebtedness of approximately $58.4 million in connection with the recent purchase of the interest of an equity shareholder of Calfrac. After deducting such debt of Calfrac of approximately $83.6 million, the net purchase price is anticipated to be approximately $143.9 million. The following table illustrates the estimated net purchase price payable by the Corporation to the shareholders of Calfrac in the event the Corporation exercises the Purchase Option:

	(in millions)
Purchase price	$ 227.5
Established net debt as at December 30, 2003	(25.2)
Estimated debt assumed after December 30, 2003	(58.4)
Estimated net purchase price	**$ 143.9**

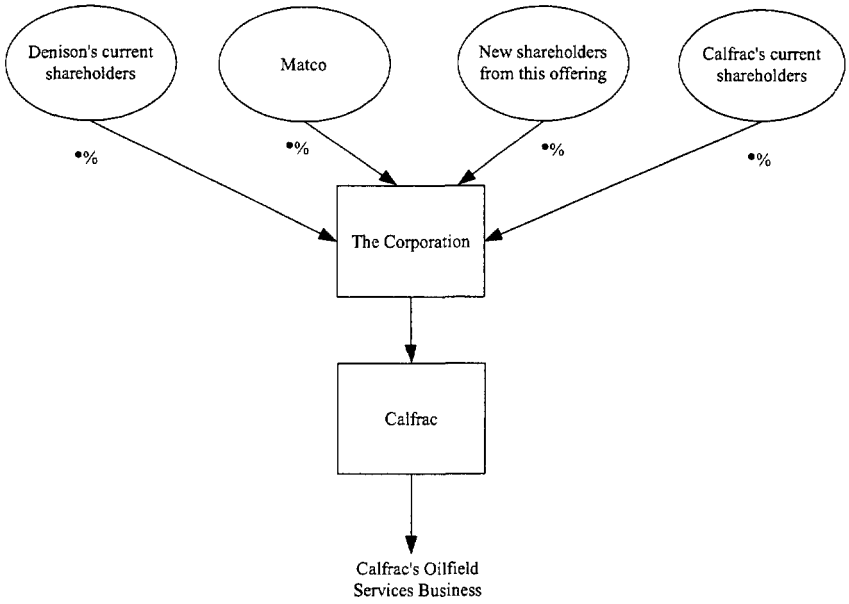
The net purchase price pursuant to the Purchase Option is payable, at the option of the Corporation, in cash or a combination of cash and Common Shares. If the Corporation elects to pay in a combination of cash and Common Shares, the Common Shares must make up not less than 80% of the purchase price. The Purchase Option may be exercised by the Corporation during the period commencing on the date this offering is completed, or, in the event of payment only in cash, the date upon which the Corporation is a party to binding agreements that would enable it to exercise the Purchase Option, and ending on the earlier of the seventh day thereafter and March 26, 2004. The Purchase Option may not be exercised except on an all cash basis unless this offering has closed and the Common

Shares issuable pursuant to this offering have been issued and delivered unconditionally to the purchasers under this offering.



If this offering is completed, the Corporation anticipates exercising the Purchase Option and paying the net purchase price to the shareholders of Calfrac by the issuance of • Common Shares, representing 80% of the net purchase price, and the payment of approximately $28.8 million in cash, representing the remaining 20% of the purchase price. Each of Messrs. Mathison, Lambert, Ramsay, Dibb and Roberts, directly and indirectly, will receive an amount proportionate to his respective shareholdings of the approximately $28.8 million that the Corporation anticipates paying to the shareholders of Calfrac as the cash portion of the net purchase price of the Acquisition. The balance of the purchase price of the Acquisition of approximately $115.1 million is anticipated to be paid by the issuance of Common Shares at an attributed price per share equal to the price of the Offered Shares.

The Reorganization



Pursuant to the Reorganization completed on March •, 2004, Denison was restructured into three publicly traded companies, being: (i) Denison Mines Inc., a uranium mining and mining–related environmental services company; (ii) Denison Oil Corporation (the parent of Denison Resources Inc.), an oil and gas exploration and development company; and (iii) the Corporation, which holds the Purchase Option and certain other retained assets, has certain income tax attributes held by Denison prior to the Reorganization, and has retained certain claims and liabilities.

The following diagrams illustrate the structure of each of: (i) Denison before the Reorganization; and (ii) the Corporation after the Reorganization, this offering and the Acquisition.

Before the Reorganization

After the Reorganization, this Offering and the Acquisition

The Arrangement

The Arrangement resulted in:

- the amalgamation of Denison with Tenwest Uranium Limited, a wholly owned subsidiary of Denison;
- the transfer of all of Denison's Canadian petroleum and natural gas assets to Denison Resources Inc. and the assumption by Denison Resources Inc. of all liabilities of Denison related to such assets;
- the transfer of all of Denison's mining assets and mining environmental services related assets to Denison Mines Inc. and the assumption by Denison Mines Inc. of all liabilities relating to such assets;
- the distribution to each shareholder of Denison of common shares of each of Denison Oil Corporation (the parent of Denison Resources Inc.) and Denison Mines Inc.;
- the Corporation holding no material assets, other than the Purchase Option, having certain income tax attributes, and retaining certain claims and liabilities incurred prior to, or in connection with, the Arrangement. These claims and liabilities of the Corporation include expenses incurred by the Corporation in respect of the Reorganization, this offering and the Acquisition, certain quantifiable liabilities (estimated at approximately $4.5 million) and certain retained legal proceedings. See "Legal Proceedings";
- 21 pre-consolidation common shares of Denison being exchanged for one Common Share. The Consolidation reduced the number of outstanding common shares of Denison, after giving effect to the Arrangement, but prior to the Subscription, to approximately • Common Shares; and
- in accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses in respect of liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to

Denison Energy Inc.'s business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Risk Factors – Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of any claims arising from the prior business of the Corporation, including the retained legal proceedings, will not, individually or in the aggregate, have a material adverse effect on the Corporation (assuming the completion of this offering and the Acquisition).

Continuance

Pursuant to the Continuance, the Corporation ceased to be a corporation incorporated under and governed by the OBCA and became a corporation continued under and governed by the ABCA.

The Subscription

Following implementation of the Arrangement and the Continuance, Matco acquired • Common Shares from treasury (representing 45% of the total number of issued and outstanding Common Shares after giving effect to the Subscription), at a subscription price of $7.35 per share for total proceeds to the Corporation of approximately $5.3 million.

Amalgamation, Name Change and Additional Directors

If the Acquisition is completed, the Amalgamation and a name change will be effected. Pursuant to the Amalgamation, Calfrac, as a wholly owned subsidiary of the Corporation following completion of the Acquisition, will be amalgamated on a vertical short form basis. In connection with the Amalgamation, the name of the Corporation will be changed to Calfrac's name, Calfrac Well Services Ltd.

On March •, 2004, all of Denison's officers and all but three of Denison's directors resigned. At that time, three independent members of Denison's board, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little, continued as directors of the Corporation and were joined on the board by Ronald P. Mathison and Martin A. Lambert. Also on March •, 2004, Martin A. Lambert was appointed the Interim Chief Executive Officer of the Corporation and David M. McGoey was appointed the Interim Chief Financial Officer of the Corporation. If the Acquisition is completed, Douglas R. Ramsay and R. Timothy Swinton will be appointed as additional directors of the Corporation and the officers disclosed under "Directors and Officers of the Corporation" and "Management" will be appointed, at which time, Mr. Lambert and Mr. McGoey will resign as Interim Chief Executive Officer and Interim Chief Financial Officer of the Corporation, respectively, but Mr. Lambert will continue to act as a director of the Corporation.

BUSINESS OF CALFRAC

Denison is considering changing the focus of its business to the oilfield services business and, in this regard, anticipates acquiring Calfrac pursuant to the Purchase Option. Calfrac provides oilfield services designed to increase the production of hydrocarbons from wells drilled for exploration and production companies throughout western Canada and in the Rocky Mountain region of the United States.

Fracturing Services

The principal focus of Calfrac's business is the provision of hydraulic fracturing services to exploration and production companies, which services accounted for approximately 92% of Calfrac's total revenue in the first nine months of 2003. The objective of hydraulic fracturing is to increase the conductivity of an oil or gas zone within a reservoir to the wellbore, thus increasing the flow of hydrocarbons, allowing a greater proportion of hydrocarbons to be extracted or produced from that zone.

Conventional Hydraulic Fracturing

Conventional hydraulic fracturing is accomplished by pumping a viscous fluid with suspended "proppant" (grains of quartz sand or ceramic material) through the wellbore and into the reservoir zone being stimulated. The pumping pressure causes the zone to fracture and accept the fluid and proppant. The fluid is designed to subsequently break, or lose viscosity, and be driven out of the reservoir zone by its pressure, leaving the proppant suspended in the fracture.

A considerable amount of technology is incorporated into the design of the fracturing fluid, which normally consists of proprietary chemicals which are combined with a base fluid. The final fluid can be gelled, emulsified or foamed and can be preceded by acid. In Canada, most fluids are energized by the introduction of liquid carbon dioxide or nitrogen gas. In addition to the complex chemical technology used for making the fracturing fluid, the fracturing process involves considerable engineering knowledge and experience to design the fracturing process to maximize the performance of the well. Each fracture is individually designed to take account of the specific temperatures, pressures, formation permeability and reservoir fluids expected in the producing zone in which fracturing will be performed. Calfrac's engineering staff provides technical evaluation and job design recommendations as an integral element of its fracturing service to the customer.

Hydraulic fracturing services involve the use of sophisticated equipment specifically designed and constructed for hydraulic fracturing. A complement or "spread" of equipment required to perform a conventional hydraulic fracturing job normally consists of the following:

- a blender to blend chemicals, base fluid and proppant into specific mixes of fracturing fluids;
- one or more high horsepower fracturing pumpers, with the number dependent upon the pumping pressure and rate required for the fracture;
- a chemical additive unit to hold and deliver each chemical in controllable quantities in order to blend the fracturing fluid; Calfrac often incorporates this unit into its blenders to increase efficiency and reduce the "footprint" of the spread at a particular well location;
- an iron truck or trailer used for transporting and rigging up the high-pressure lines or "iron" that connect the various components of the fracture spread and wellhead;
- a computer van equipped with monitoring, data recording, satellite communication and remote pumper controls to monitor and control the treatment and also record the data related to each phase of the fracture;
- one or more pumpers to pump the energizer (carbon dioxide or nitrogen); and
- various equipment to transport, store and deliver the proppant and energizer.

The traditional or stage fracture procedure for stimulating a multi-zone well involves numerous trips to the well location with each trip stimulating only one or two of the zones. In recent years, procedures have been developed so that all of the zones for a particular well can be fractured in just one trip to the well location. This procedure, using snubbing units for deeper, more highly pressurized wells and coiled tubing rigs for shallower wells, involves moving the target zone up or down the wellbore by raising or lowering tubing and requires the use of specialized tools that can isolate the target zone for treatment. The ability to complete the fracturing services for a multi-zone well in one trip to the well location has become increasingly attractive to customers, as it reduces the traffic to the well location and the resulting disturbance to the landowners and allows the well to be brought into production more quickly. In addition, this procedure simplifies the coordination of the logistics of the fracturing completion.

Fracturing for Natural Gas Found in Coal

Calfrac has identified the market niche of supplying hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada as one in which it seeks to be the leading provider.

NGC is often referred to as coalbed methane. In the United States, NGC production has increased from 0.2 billion cubic feet per day prior to 1990 to 4.4 billion cubic feet per day in 2002, representing approximately 8% of the total natural gas production in the United States.

Alberta and British Columbia have vast coal resources that may be a potential source of significant commercial quantities of NGC and this natural gas source has the potential to make a significant contribution to western Canada's future energy supply. However, NGC is in the early stages of development in western Canada and it has not yet been determined if significant commercial quantities of NGC can be recovered.

NGC is referred to as an "unconventional" form of natural gas. NGC is produced by reducing the pressure in a coal seam to enable the methane gas to flow through fractures, or cleats, in the coal into the wellbore. The natural gas then flows up to the surface. When few natural fractures exist, producers may use hydraulic fracturing to create channels in the coal.

Natural gas found in coal is generally "sweet" not "sour" gas, as it does not contain hydrogen sulphide. NGC is generally 85% to 95% pure methane, with small amounts of carbon dioxide and nitrogen. NGC is generally produced at lower pressures than conventional natural gas and is generally of a nature that is near-pipeline quality when produced, requiring minimal processing.

A key challenge to NGC production in Alberta is the generally low permeability of coals with the highest natural gas concentrations (eg., coal located in the Mannville formations) and the moderate to low natural gas concentrations of higher permeability coals (eg., coal located in the Horseshoe Canyon and Ardley formations). Coal located in the Horseshoe Canyon formations is relatively shallow and may contain approximately 20 individual thin coal seams with interbedded shale and sandstone zones, which often contain natural gas. These zones are attractive multi-zone completion targets for producers of natural gas. Most importantly, these coal seams are dry and therefore produce no water. These coal seams are also found in areas where existing well, natural gas plant and pipeline infrastructure currently exists, which reduces production costs. Alberta's first commercial NGC production projects are located in the Horseshoe Canyon formation in south-central Alberta.

As a result of its extensive involvement in various pilot projects evaluating the viability of NGC production in western Canada, Calfrac, along with its customers, has developed an unconventional method of fracturing NGC wells performing multi-zone fractures through coiled tubing by pumping nitrogen gas, without the use of proppant, fluid or chemicals.

Calfrac has developed a significant level of expertise and experience in fracturing NGC wells and has become a leading provider of hydraulic fracturing services to customers who stimulate NGC wells. Reliable information on the number of NGC wells drilled in Alberta in 2003 is not readily available. However, Calfrac has received information from the National Energy Board and the Alberta Energy and Utilities Board that approximately 300 to 500 NGC wells were drilled in Alberta in 2003, representing 2.7% to 4.5% of the 11,067 natural gas wells drilled in Alberta in 2003. Calfrac hydraulically fractured 224 of these wells, representing approximately 8% of Calfrac's aggregate fracturing revenue in 2003 compared to approximately 2% in 2002. The National Energy Board has predicted that the pace of NGC extraction will increase steadily to 1,200 wells being drilled in 2005.

Stimulation and Other Well Services

Calfrac provides stimulation and other well services to exploration and production companies in western Canada. Revenues from well stimulation services accounted for 8% of Calfrac's total revenue for the first nine months of 2003 and 9% of Calfrac's total revenue in 2002.

Coiled Tubing Services

Calfrac injects coiled tubing into wells to perform various well-servicing operations. Coiled tubing consists of continuous, high pressure, flexible, small diameter steel pipe in various lengths up to several thousand meters mounted on a reel on a truck or trailer. Coiled tubing units are often used together with the appropriate support equipment to pump nitrogen, acid or air in order to remove unwanted corrosive acids, solids, gels and fluids from the wellbore and producing zone. Coiled tubing units can also be used to set and remove tools, perform well abandonments and set siphon or velocity strings, which promote the production of natural gas without the accumulation of fluid in the wellbore.

Acidizing Services

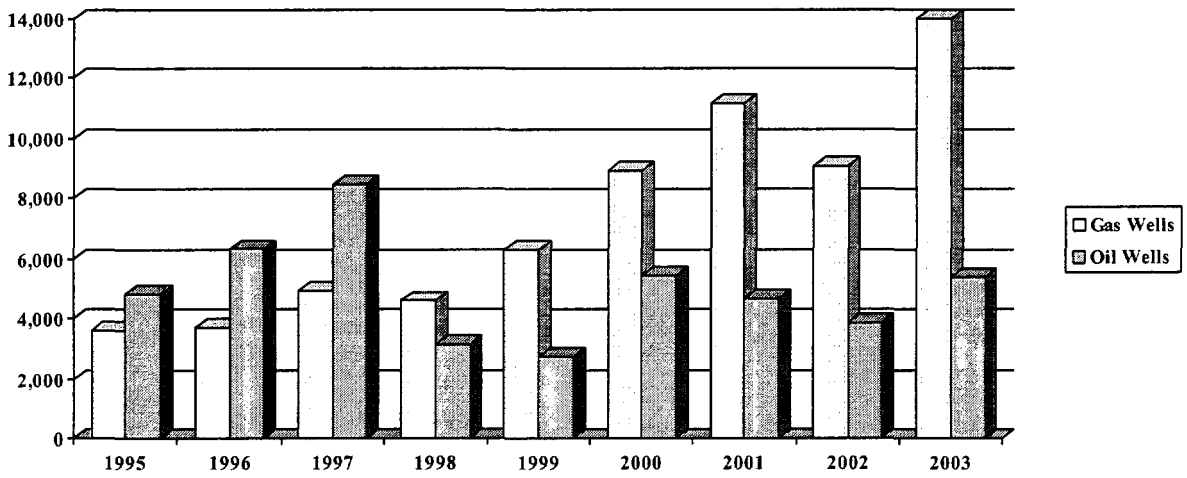
Acidizing involves pumping varying volumes of specially formulated acid blends into producing oil or gas formations to remove unwanted materials and sediments or to dissolve portions of the producing formation in order to enhance the production of hydrocarbons or the disposal of waste fluids.

Nitrogen Services

Nitrogen is added to acid blends to provide additional energy to assist in the clean out of unwanted materials and sediments in order to enhance the well flow rate. Nitrogen is also used for removing fluids from wellbores, purging vessels and pressure testing operations. Nitrogen services are used principally in applications supporting Calfrac's coiled tubing and fracturing services. Nitrogen is often pumped into the wellbore to improve safely the recovery of introduced or produced fluids, while reducing the potential for damaging the formation.

Customer Base

Calfrac's customer base consists of in excess of 150 oil and gas exploration and production companies, ranging from large multinational companies to small private companies. Calfrac has established and maintains a number of key relationships with active customers.



Notwithstanding Calfrac's significant customer base, the majority of Calfrac's revenue comes from two large customers. These two customers provided 57% of Calfrac's revenue in the first eleven months of 2003. The largest of these customers provided 50% of Calfrac's revenue in the first eleven months of 2003 and 57% of Calfrac's revenue in 2002. No other customer provided in excess of 5% of total revenue in either of these periods. See "Risk Factors – Dependence on Major Customers" for additional information in respect of Calfrac's customers.

Demand for Hydraulic Fracturing Services

The Corporation believes that the combination of increasing demand for natural gas in North America and the declining rates of natural gas production in the key producing fields of North America will result in the drilling of additional natural gas wells in order to sustain current production levels and to satisfy the growing demand. The majority of natural gas wells require hydraulic fracturing to stimulate the production of hydrocarbons. Management believes that, as a result of these conditions, the demand for hydraulic fracturing services is likely to increase.

The number of natural gas wells completed each year is believed by management to be a good indicator of the potential level of fracturing activity. The chart below illustrates the substantial increase in the number of natural gas wells completed each year since 1995, from 3,614 in 1995 to 13,944 wells in 2003, as the number of natural gas wells completed has become a larger proportion of the total number of wells completed each year in western Canada.

Wells Completed In Western Canada[(1)]

Note:
(1) Source: Nickle's Daily Oil Bulletin

Although Calfrac provides fracturing services to all segments of the oil and gas industry, it has historically focused on the shallow natural gas well segment located in southern and eastern Alberta. For the past five years, the average depth of the wells completed in Canada has averaged less than 1,100 metres (Nickle's Daily Oil Bulletin). Wells of this depth are generally classified as shallow and are located mainly in southern and eastern Alberta. This segment is and, management believes will continue to be, an important and consistent source of revenue to Calfrac. For this reason, Calfrac first commenced operations from a base in Medicine Hat.

Competition and Marketing Strategy

If the Acquisition occurs, the Corporation's primary ongoing business objective will be to be a leading provider of oilfield services. Calfrac is currently a leading provider of hydraulic fracturing services and well stimulation services to oil and gas exploration and production companies in western Canada and the Rocky Mountain region of the United States. Management will seek to maintain Calfrac's position as the preferred provider to its current major customers, be the preferred provider to start-up oil and gas exploration and production companies, be the leading provider of hydraulic fracturing services to exploration and production companies involved in developing NGC in western Canada, be a significant provider of hydraulic fracturing services to major independent oil and gas exploration and production companies and be the preferred independent provider of hydraulic fracturing services in the DJ Basin.

Each of the markets in which Calfrac participates is highly competitive. Fracturing services are generally provided to exploration and production companies through a competitive bid process for either individual wells or multi-well projects. Successful bids are the result of high customer satisfaction from past services provided and business relationships. Calfrac has developed extensive client contacts and built strong personal relationships with customers. Exploration and production companies also enter into agreements with service companies to provide fracturing services for multiple wells for periods of, generally, up to two years. However, these agreements seldom contain binding commitments for a minimum amount of fracturing work. Based on its expertise in providing hydraulic fracturing services and its strong business relations with its two most important customers, Calfrac has entered into four multi-year agreements with these customers to provide fracturing services to them, with three of these agreements providing a minimum quantity of fracturing services to be provided by Calfrac during the term thereof.

Calfrac believes that it provides superior service to customers through its experienced management and work force, unique chemical technology and modern and innovative equipment. Calfrac's management has extensive experience and strong business relationships in the oilfield service industry in western Canada and, as a result of a flat management structure, is actively involved in the daily operations of Calfrac.

Intellectual Property

Calfrac's research and development efforts are focused on providing specific solutions to the challenges experienced by oil and gas exploration and production companies when fracturing and stimulating wells. Calfrac's success in hydraulic fracturing has been facilitated by its ability to provide propriety blends of chemicals that, together with its technical expertise and innovative equipment, result in customers' wells being more productive.

Calfrac conducts a significant amount of its research and development in conjunction with ChemErgy, a company in which Calfrac has a 30% ownership interest. ChemErgy is engaged in research and development relating to new systems and chemicals in connection with oilfield services. ChemErgy also supplies chemical products and provides quality control and logistical services for the products supplied. In accordance with an exclusive relationship agreement between Calfrac and ChemErgy, ChemErgy is required to supply products to and perform research and development for Calfrac on an exclusive basis and Calfrac is required to acquire all of the chemical products used in its business from ChemErgy. The exclusive relationship agreement with ChemErgy will terminate on May 31, 2011 and, if a change of control of Calfrac has not occurred, is renewable at the option of Calfrac for an additional five year term. If Calfrac does not exercise this option, the agreement will be automatically renewed for one year renewal terms unless terminated with notice by either party. ChemErgy operates a fully-equipped laboratory in Calgary staffed with chemical engineers, chemists and technicians who are experienced in developing technologies to be used in oilfield operations and implementing these procedures in the field.

Where possible, Calfrac and ChemErgy undertake to protect intellectual property which they develop through joint applications for patent protection. Calfrac and ChemErgy currently have two patents pending on chemical systems used to deliver fracturing services.

Facilities, Equipment and Personnel

Calfrac provides hydraulic fracturing and well stimulation services from its corporate head office in Calgary and four field stations located in Medicine Hat, Red Deer and Grande Prairie, Alberta, and in Platteville, Colorado.

Calfrac owns a significant complement of fracturing equipment which, as at December 31, 2003, includes nine conventional fracturing spreads, incorporating 20 fracturing pumpers rated to a total of 45,000 horsepower, and one NGC fracturing spread with eight high rate nitrogen pumpers. Calfrac's well stimulation equipment includes two combination nitrogen-acid pumpers, two acid pumpers, two deep coiled tubing units and eight shallow coiled tubing units. Calfrac's total fleet of 132 large vehicles is comprised of 37 trucks with mounted equipment and 95 tractor/trailer units. Calfrac is currently constructing a tenth conventional and a second NGC fracturing spread, both of which are expected to be operational in the first half of 2004.

As at December 31, 2003, Calfrac employed 342 people in Canada and Calfrac USA employed 40 people. None of the employees of Calfrac or Calfrac USA are unionized.

USE OF PROCEEDS

The net proceeds to the Corporation from this offering are estimated to be $111.6 million, after deducting the Underwriters' fee of $6.6 million and expenses of this offering, which are estimated by the Corporation to be approximately $1.8 million.

The net proceeds of this offering are anticipated to be used by the Corporation as follows: (i) approximately $28.8 million to pay 20% of the purchase price of the shares of Calfrac pursuant to the Acquisition; (ii) approximately $58.4 million to repay the indebtedness assumed by Calfrac; and (iii) approximately $24.4 million will be added to working capital and used for general corporate purposes, which may include the repayment of existing indebtedness of Calfrac.

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed.

DIRECTORS AND OFFICERS OF THE CORPORATION

The following table sets out the names and municipalities of residence of those individuals that are the current directors and officers of the Corporation and the proposed directors and officers of the Corporation in the event the Corporation completes this offering and the Acquisition, together with their positions and offices with the Corporation and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
Ronald P. Mathison[1][3] *Calgary, Alberta*	Chairman and a Director	March •, 2004	President of Matco Investments Ltd. (a private investment company); prior to 1999, Principal, Peters & Co. Limited.
Douglas R. Ramsay *Calgary, Alberta*	Chief Executive Officer and a Director	Nominee[4]	President and Chief Executive Officer of Calfrac.
Gordon A. Dibb *Calgary, Alberta*	Chief Financial Officer	—[4]	Executive Vice President and Chief Financial Officer of Calfrac.
Robert S. Roberts *Calgary, Alberta*	Chief Operating Officer	—[4]	Senior Vice President and Chief Operating Officer of Calfrac.
James S. Blair *Calgary, Alberta*	Director	May 8, 2002	President and Chief Executive Officer, ExAlta Energy Inc. (an independent private oil and gas exploration and development company) since 2002. Prior thereto, Senior Vice President and Chief Operating Officer, Husky Energy Inc. (an integrated energy company).
Gregory S. Fletcher[1] *Calgary, Alberta*	Director	May 8, 2002	President, Sierra Energy Inc. (a private energy company).
Martin A. Lambert[2] *Calgary, Alberta*	Interim Chief Executive Officer and a Director	March •, 2004	Partner, Bennett Jones LLP (a law firm). Prior to May 2000, Chief Executive Officer and a partner, Bennett Jones LLP.
Paul F. Little[2] *King City, Ontario*	Director	May 15, 1997	President, Westover Investments, Inc. (a private investment company). Prior to 2000, principal, Gornitzki, Thompson & Little (merchant bank) from 1986 to 1999.
R. Timothy Swinton[1][3] *Calgary, Alberta*	Director	Nominee	President of Western Provinces Resources Ltd. (a private investment company) since 1997; Executive Chairman of IPEC Ltd. (a Canadian pipeline and oilfield construction company) from 1999 to 2001; prior thereto Chairman and Chief Executive Officer of Kenting Energy Services Inc. (a public oilfield services company) in 1997.
David M. McGoey *Calgary, Alberta*	Interim Chief Financial Officer	March •, 2004	Chief Financial Officer of Ross Smith Energy Group (a private engineering consulting firm) since 1998; President of David M. McGoey Professional Corporation since 1992; Chief Financial Officer of Securex Limited (a public company in the security monitoring

Name and Municipality of Residence	Position with the Corporation	Director or Officer Since	Present Occupation and Positions Held During the Last Five Years
			industry) since 2003; Chief Financial Officer of Torode Realty Ltd. (a public mineral exploration company) since 2003; and Chief Financial Officer of Tristone Capital LLC (a private investment company) from 2001 to 2002.

Notes:

(1) Member or proposed member of Audit Committee.
(2) Member of Corporate Governance Committee.
(3) Member or proposed member of Compensation Committee.
(4) It is anticipated Messrs. Ramsay, Dibb and Roberts will be appointed as officers of the Corporation in the event the Corporation completes this offering and the Acquisition.

Prior to March •, 2004, the officers of Denison included E. Peter Farmer, President and Chief Executive Officer, T. E. Craig Bamford, Vice President, Finance and Chief Financial Officer, Donald C. Campbell, Vice President, Marketing and Special Projects and Donna J. Gallant, Counsel and Secretary. Each of these officers resigned on March •, 2004 effective upon the completion of the Reorganization, at which time Martin A. Lambert was appointed as Interim Chief Executive Officer and David M. McGoey was appointed as Interim Chief Financial Officer. In the event that this offering and the Acquisition are completed, it is anticipated that the board of directors will appoint Messrs. Ramsay, Dibb and Roberts as Chief Executive Officer and President, Chief Financial Officer and Executive Vice President, and Chief Operating Officer and Senior Vice President, respectively. Mr. Lambert will continue to act as a director of the Corporation.

Each of Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts have entered into an employment agreement dated September 1, 1999 with Calfrac. Each of these agreements has an initial five year term that expires on September 1, 2004 and provides that each year thereafter, the term will automatically renew for a successive one-year renewal term, unless either party gives written notice to the contrary. Each of these agreements contains provisions in favour of Calfrac (i) prohibiting the disclosure by each of Messrs. Ramsay, Dibb and Roberts of any confidential information related to Calfrac's business, and (ii) prohibiting each of Messrs. Ramsay, Dibb and Roberts from competing with Calfrac, or soliciting the employees or customers of Calfrac, for two years from the termination of each of their employment with Calfrac. These employment agreements also provide that in the event of a change of control of Calfrac, each of Messrs. Ramsay, Dibb and Roberts has the right at any time within six months of the change of control to terminate his employment with Calfrac. If any of Messrs. Ramsay, Dibb or Roberts exercises this right, or if Calfrac terminates the employment of any of Messrs. Ramsay, Dibb or Roberts following a change of control, such officer is entitled to all accrued but unpaid bonuses and to a severance payment equal to two times their annual 2003 base salary.

In addition, each of Messrs. Ramsay, Dibb and Roberts have entered into an agreement with Calfrac whereby each of them waived any change of control or other rights they may have pursuant to their employment agreements provided that the Reorganization and the Acquisition occur as described herein. These agreements also provide that, in the event that a change of control occurs other than on the basis contemplated herein, each of them is entitled to exercise his right to terminate his employment and receive the severance payment described above. In addition, in such circumstances, each of such officers may elect not to receive, the severance payment and in consideration therefore, the respective officer will be released and discharged from the non-competition restrictions of his employment agreement.

Six additional officers and key employees of Calfrac have each signed an agreement with Calfrac providing that each employee will continue his employment with Calfrac or the Corporation, as applicable, until at least June 30, 2004 under such employee's current employment terms. In the event that either or both Mr. Mathison or Mr. Ramsay resign or are terminated as Chairman or Chief Executive Officer, respectively, of either Calfrac or the Corporation, as applicable, on or prior to June 30, 2004, the employee may elect to terminate his employment prior to June 30, 2004 and will receive a termination payment equal to all accrued but unpaid bonuses and to a severance payment equal to two times his annual 2003 base salary.

Share ownership guidelines adopted by the board of directors of the Corporation after completion of the Reorganization provide that each director should own, directly or indirectly, Common Shares having a market value, as defined in the share ownership guidelines, of not less than $• within two years from the later of the date he or she was first elected or appointed to the board of directors of the Corporation and the date of the completion of the Acquisition. Share units credited under any deferred share compensation or similar plan will be included in the calculation of the number of Common Shares owned by a director for this purpose.

As at March •, 2004, the officers and directors of the Corporation, as a group, beneficially own, directly or indirectly, • Common Shares and, assuming that they do not subscribe for any of the Offered Shares, the officers and directors, as a group, will own or exercise control over approximately •% of the outstanding Common Shares in the event of completion of this offering and the Acquisition (on the basis that the net purchase price is paid by the issuance of • Common Shares and the payment of approximately $28.8 million in cash).

The term of office of each of the directors of the Corporation will expire at the next annual meeting of the shareholders.

MANAGEMENT

The following is a brief description of the current directors and senior officers of the Corporation and the proposed directors and senior officers in the event that this offering and the Acquisition are completed.

Ronald P. Mathison, Director and Chairman

Mr. Mathison is the President and Chief Executive Officer of Matco Investments, a private investment company specializing in the restructuring of financially troubled companies as well as providing capital and management expertise to such companies. Mr. Mathison has extensive experience in restructuring and financing corporations in both the public and private markets. Until October 2000, Mr. Mathison was a director of Peters & Co. Limited, an investment firm specializing in the oil and gas industry, and prior to 1999 was also a principal of Peters & Co. Limited's corporate finance department. Prior thereto, Mr. Mathison and two other individuals formed the nucleus of Peters & Co. Capital, a private merchant banking entity that is widely associated with numerous successful restructurings of oil and gas and oil and gas service companies. Mr. Mathison received a B.Comm. (Honours) from the University of Manitoba in 1979 and obtained his Chartered Accountant designation in 1982. Mr. Mathison also holds the designation of Chartered Business Valuator, obtained in 1989, and of Chartered Financial Analyst, obtained in 1990. Mr. Mathison is the sole shareholder of Matco Investments, which controls Matco. Mr. Mathison is the Chairman of Hawker Resources Inc. Mr. Mathison was a founder of Calfrac and has been the Chairman of Calfrac since its formation in 1999.

Douglas R. Ramsay, President and Chief Executive Officer

Mr. Ramsay was a founder of Calfrac and has been the President and Chief Executive Officer of Calfrac since its formation in 1999. Mr. Ramsay has an extensive background in the oil industry. Prior to 1994, Mr. Ramsay was the President of Canadian Fracmaster Ltd. where he spent 12 years enhancing the overall presence of Fracmaster Ltd. in Canada and worldwide. Previous industry experience as a Project Manager for Delta Consultants, Drilling and Completions Foreman for Dome Petroleum Corp. and Service Supervisor for BJ Well Services Company has contributed to Mr. Ramsay's overall knowledge of the industry.

Mr. Ramsay holds a diploma in Petroleum Technology from Southern Alberta Institute of Technology and is a certified Registered Engineering Technologist.

Gordon A. Dibb, Executive Vice President and Chief Financial Officer

Mr. Dibb was a founder of Calfrac and has been the Executive Vice President and Chief Financial Officer of Calfrac since its formation in 1999. Mr. Dibb has over 20 years of oilfield service industry experience in a senior financial capacity, having worked as executive Vice President Business Development for Trace Exploration, Vice President Finance and Chief Financial Officer for Artisan Corporation, Vice President Administration for Nabors Drilling

International Limited, Chief Operating Officer for Destiny Resource Services Corp. and Vice President Finance for Nabors Drilling Ltd. Mr. Dibb also has experience in South Africa working in other industries.

Mr. Dibb is a Chartered Accountant, qualified in both South Africa and Canada, and a member of the Alberta Institute of Chartered Accountants.

Robert S. Roberts, Senior Vice President and Chief Operating Officer

Mr. Roberts was a founder of Calfrac and has been the Senior Vice President and Chief Operating Officer of Calfrac since its formation in 1999. Mr. Roberts has significant industry experience with over 35 years in the pumping service industry. Mr. Roberts previously held senior management positions with Fracmaster Ltd. in its Canadian, United States, South American, Middle East and Russian Operations. Prior to 1996, Mr. Roberts was the Executive Vice President of Fracmaster Ltd.

James S. Blair, Director

Mr. Blair has served as director of Denison since May of 2002. Mr. Blair is President and Chief Executive Officer of ExAlta Energy Inc., an independent oil and natural gas exploration and development company. Until January 2002, Mr. Blair was Senior Vice President and Chief Operating Officer of Husky Energy Inc., an integrated energy and energy-related company that ranks among Canada's largest petroleum companies. Mr. Blair was responsible for managing Husky's upstream business. He developed and implemented comprehensive strategies which led to strong growth of Husky in western Canada, offshore eastern Canada and Asia. Mr. Blair is a director of Viking Energy Royalty Trust, a director and Chairman of Onstream Compressor Rentals Inc., a private oilfield service company, and a director of the Calgary Centre for Innovative Technology. Mr. Blair holds an Honours B.A. (Economics) degree from the University of Alberta. His studies concentrated on resource economics and international trade.

Gregory S. Fletcher, Director

Mr. Fletcher has served as a director of Denison since May of 2002. Mr. Fletcher is an independent businessman involved in the oil and gas industry in western Canada. He has considerable business experience in the junior sector of the oil and gas industry and is currently President of Sierra Energy Inc., a private oil and gas company that he founded in 1997. From June 1998 to May 1999, he was also President, Chief Executive Officer and a director of Canadian Conquest Exploration Inc. and prior to 1997 he was President, Chief Executive Officer and a director of Aztec Resources Ltd. Mr. Fletcher is also Chairman and a director of Diamond Energy Services Inc., a private oilfield service company, a director of Pengrowth Management Limited, a private specialty fund management company and a director of Total Energy Services Ltd., a public oilfield services company. Mr. Fletcher graduated from the University of Calgary in 1972 with a BSc. in geology.

Martin A. Lambert, Director and Interim Chief Executive Officer

Mr. Lambert is a partner with the Bennett Jones LLP law firm, having served as Chief Executive Officer of the firm from 1996 to 2000. Mr. Lambert has been widely recognized as one of Canada's leading merger and acquisitions lawyers, including having recently been named by the National Post as one of Canada's top 30 deal makers, and is a senior member of the firm's mergers and acquisitions team. Mr. Lambert's directorships include Oil States International Inc. and zed.i solutions.inc, both oilfield services firms, as well as Hawker Resources Inc. and Bear Creek Energy Ltd., both oil and gas exploration and production companies. Mr. Lambert's family holding corporation, Mountain Moon Capital Inc., is a shareholder of Matco. Mr. Lambert was appointed Interim Chief Executive Officer of the Corporation on March •, 2004 and will resign such position upon the appointment of Douglas Ramsay as Chief Executive Officer. Mr. Lambert will continue to act as a director of the Corporation.

Paul F. Little, Director

Mr. Little has served as a director of Denison since May of 1997. Mr. Little is President of Westover Investments Inc., an investment company. From 1986 to 1999 he was a principal of the Toronto-based merchant bank, Gornitzki, Thompson & Little and President of GTL Securities Inc., a related securities dealer. Mr. Little serves on

a number of other public company boards including The Nautilus Group, Inc., Medisystem Technologies, Inc., Pason Systems, Inc. and World Point Terminals, Inc. He is Chairman of Echelon General Insurance Company, a private company, and is a member of the Board of Visitors of the Graziadio School of Business at Pepperdine University. Mr. Little is a Chartered Accountant and holds an M.B.A. from the University of British Columbia.

R. Timothy Swinton, Director

Mr. Swinton has extensive experience in the oilfield services industry. He is currently Chairman of NQL Drilling Tools Inc., a position he has held since 2003, and a director of Anderson Energy Ltd., a private oil and natural gas exploration and production company. Since June 1997, Mr. Swinton has been President of Western Provinces Resources Ltd, a private investment company. From 1999 to 2001, he was the Executive Chairman of IPEC Ltd., a Canadian pipeline and oilfield construction company. Prior thereto, Mr. Swinton was Chairman and Chief Executive Officer of Kenting Energy Services Inc., and Chairman, President and Chief Executive Officer of EnServ Corporation. Mr. Swinton has also served on the boards of directors of a number of energy services and other energy-related public companies, including Koch Pipelines Canada Limited, Enserco Energy Service Company Inc. and Anderson Exploration Ltd.

David M. McGoey, Interim Chief Financial Officer

Mr. McGoey is the Chief Financial Officer at Ross Smith Energy Group, a private engineering consulting firm, a position he has held since 1998. Mr. McGoey is President of David M. McGoey Professional Corporation since 1992 and Chief Financial Officer of each of Securex Limited (since 2003) and Torode Realty Ltd. (since 2003). Mr. McGoey was also Chief Financial Officer of Tristone Capital LLC from 2001 to 2002. He has been a Chartered Accountant for over 20 years, a Certified Public Accountant for three years and has over 20 years of public accounting experience. Mr. McGoey is a director of Destiny Resource Services Corp. Mr. McGoey was appointed Interim Chief Financial Officer of the Corporation on March •, 2004 and will resign upon the appointment of Mr. Gordon Dibb as Chief Financial Officer of the Corporation.

PRINCIPAL SHAREHOLDERS

To the best of the knowledge of the directors and officers of the Corporation, the following table sets forth the shareholdings of those persons who are the direct or indirect beneficial owners of or exercise control or direction over 10% or more of any class of voting shares of the Corporation as at the date hereof and after giving effect to this offering and the Acquisition:

Shareholder	Designation of Class	Type of Ownership	Number of Shares	% of Class	Number of Shares After Giving Effect to this Offering and the Acquisition[1][2]	% of Class After Giving Effect to this Offering and the Acquisition
Matco Investments[3][4]	Common	Beneficial	•	45%	•	•%

Notes:

(1) Assuming the Purchase Option is exercised and the purchase price is paid by the issuance of • Common Shares and the payment of approximately $28.8 million in cash, Matco Investments will acquire an additional • Common Shares pursuant to the Acquisition.

(2) Assuming the named entity does not acquire additional Common Shares pursuant to this offering.

(3) To the knowledge of the Corporation, the only shareholder holding, directly or indirectly, greater than 10% of the outstanding shares of Matco Investments is Ronald Mathison, Chairman and a director of the Corporation.

(4) Includes • Common Shares acquired by Matco pursuant to the Subscription. To the knowledge of the Corporation, the only entities with an interest of greater than 10% in Matco are Matco Investments and Mountain Moon Capital Inc. To the knowledge of the Corporation, the only shareholders holding, directly or indirectly, greater than 10% of Mountain Moon Capital Inc. are members of the immediate family of Martin Lambert, a director of the Corporation.

PLAN OF DISTRIBUTION

Under an agreement dated •, 2004 (the "Underwriting Agreement") among the Corporation and each of the Underwriters, the Underwriters have agreed to act as, and the Corporation has appointed the Underwriters as the sole

and exclusive agents of the Corporation to offer the Offered Shares for sale, subject to the terms and conditions contained therein, at a price of $• per share. The Underwriters have agreed that if less than all of the Offered Shares are sold by the Underwriters as agents, the Underwriters shall purchase, as principals, all of the Offered Shares not sold by the Underwriters as agents at the same price per share. Pursuant to the Underwriting Agreement, closing of this offering is to occur on or about March •, 2004, but in any event not later than March •, 2004. The purchase price of $• per Offered Share is payable by the Underwriters to the Corporation against delivery of the Offered Shares. The Corporation has agreed to pay the Underwriters a commission of 5.5% of the gross proceeds or $• per Offered Share. The obligations of the Underwriters under the Underwriting Agreement are several and may be terminated at their discretion on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events. The Underwriters are, however, obligated to take up and pay for all Offered Shares if any are purchased under the Underwriting Agreement.

It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering.

Pursuant to policy statements of certain securities commissions, the Underwriters may not, throughout the period of distribution under this prospectus, bid for or purchase Common Shares. The foregoing restriction is subject to exceptions, including a bid or purchase permitted under the rules of the TSX relating to market stabilization and passive market making activities and a bid or purchase made for or on behalf of a customer where the order was not solicited during the period of distribution, provided that the bid or purchase was not engaged in for the purpose of creating actual or apparent trading in, or raising the price of, the Common Shares. In connection with this offering, and subject to the foregoing, the Underwriters may effect transactions which stabilize or maintain the market price of the Common Shares at levels other than those which might otherwise prevail in the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares have not been and will not be registered under the United States Securities Act of 1933, as amended (the "U.S. Securities Act") or any securities or "blue sky" laws of any of the states of the United States. Accordingly, the Offered Shares may not be offered or sold within the United States or to U.S. persons unless an exemption from registration is available. The Underwriting Agreement enables the Underwriters to re-offer and re-sell Offered Shares to certain qualified institutional buyers in the United States provided such offers and sales are made in accordance with Rule 144A under the U.S. Securities Act. In addition, the Underwriting Agreement provides that the Underwriters will offer and sell securities outside the United States to any U.S. person only in accordance with Regulation S under the U.S. Securities Act.

This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares in the United States. In addition, until 40 days after the announcement of this offering, an offer or sale of the Offered Shares within the United States by any dealer, whether or not participating in the offering, may violate the registration requirement of the U.S. Securities Act if such offer or sale is made otherwise than in accordance with Rule 144A under the U.S. Securities Act or in accordance with any other available exemption from registration under the U.S. Securities Act.

The Corporation has agreed that it will not, without the prior consent of the lead Underwriter pursuant to the Underwriting Agreement, which consent may not be unreasonably withheld, authorize, issue or sell any Common Shares or any securities giving the right to acquire Common Shares (other than the Offered Shares, the Common Shares to be issued pursuant to the Acquisition and securities issued in connection with an arm's length acquisition of assets or an arm's length acquisition of or merger, consolidation or amalgamation with any company or companies), or agree or announce any intention to do so, at any time prior to 90 days after the closing of this offering. In addition, each of Matco Investments, Matco, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts has agreed that it or he will not, without the prior consent of the lead underwriter, which consent is not to be unreasonably withheld, sell or otherwise dispose of any Common Shares received pursuant to the Acquisition at any time prior to two years after the closing of this offering. Upon the expiry of such two year period, these shareholders will be entitled to sell or otherwise dispose of 40% of such Common Shares. Thereafter, the remaining

60% of the Common Shares held by such shareholders may be sold or otherwise disposed of in equal installments upon the expiry of six and twelve months, respectively.

CAPITALIZATION OF THE CORPORATION

The following table sets forth the consolidated capitalization of the Corporation as at December 31, 2002, as at September 30, 2003 and as at September 30, 2003 after giving effect to the Reorganization, this offering and the Acquisition and the other transactions described in the notes to the unaudited pro forma financial statements (collectively, the "Transactions"):

	Authorized	Outstanding as at December 31, 2002 (audited)[1]	Outstanding as at September 30, 2003 (unaudited)	Outstanding as at September 30, 2003 after giving effect to the Transactions (unaudited)
Long-term debt	nil	$43,558,000	$43,097,000	$8,206,000
Common Shares[2]	unlimited	$5,568,000 (17,705,724 shares)[3]	$5,568,000 (17,705,724 shares)[3]	$89,410,000 (• shares)[4][5][6]

Notes:

(1) Derived from the audited financial statements of Denison.

(2) On March •, 2004, the Stock Option Plan of Denison was terminated and no stock options are currently outstanding.

(3) Prior to giving effect to the Consolidation.

(4) After giving effect to the Consolidation.

(5) Pursuant to the Subscription, the Corporation issued • Common Shares for gross proceeds of approximately $5.3 million.

(6) Assuming that the Purchase Option is exercised and that the purchase price is paid by the issuance of • Common Shares and approximately $28.8 million in cash.

CORPORATE HISTORY

Denison

Denison is the continuing corporation formed by the amalgamation under the laws of the Province of Ontario of Denison Mines Limited and Stanrock Uranium Mines Limited pursuant to articles of amalgamation filed on February 12, 1973. Denison amended its articles on July 26, 1983 to create a class of 24 million preferred shares issuable in series, of which 6 million 9¾% Cumulative Redeemable Preferred Shares Series A (the "Preferred Shares Series A") were issued on August 8, 1983. On March 2, 1984 Denison amended its articles to create an unlimited number of Class A Voting Participating Shares without par value ("Class A Shares") and an unlimited number of Class B Non-Voting Participating Shares without par value ("Class B Shares"), and each issued and outstanding common share was changed into one Class A Share and one Class B Share. On March 7, 1985, Denison issued 7 million 9½% Cumulative Redeemable Preferred Shares Series B (the "Preferred Shares Series B"). On June 22, 1992, Denison amended its articles to provide for a minimum of three and a maximum of fifteen directors.

Effective December 21, 1995, the articles were amended: to create an unlimited number of new common shares; to provide that Denison was no longer authorized to issue Preferred Shares Series A, Preferred Shares Series B ("Preferred Shares"), Class A Shares or Class B Shares; to delete the rights, privileges, restrictions and conditions of the Preferred Shares, Class A and Class B Shares; and to provide that, after giving effect to the foregoing, Denison was authorized to issue an unlimited number of common shares. Effective December 21, 1995, each Preferred Share was reclassified into 25 common shares, and each Class A Share and each Class B Share was reclassified into one common share.

Effective May 24, 2002, the articles were amended to change the name of Denison from Denison Mines Limited to Denison Energy Inc., and to implement a share consolidation on the basis of one new common share for each 20 pre-consolidation common shares.

Calfrac

Calfrac was incorporated under the provisions of the ABCA on June 28, 1999 as "836570 Alberta Ltd." and changed its name to "Calfrac Well Services Ltd." by way of articles of amendment filed on September 28, 1999. Calfrac is the continuing corporation formed by the amalgamation under the laws of the ABCA of 850288 Alberta Ltd. and Calfrac pursuant to articles of amalgamation filed on January 1, 2000.

Calfrac's head office is located at 411 - 8th Avenue S.W., Calgary, Alberta T2P 1E3 and its registered office is located at Suite 751, 815 – 8th Avenue S.W., Calgary, Alberta T2P 3P2.

Calfrac has one wholly owned subsidiary, Calfrac USA, incorporated in the state of Colorado, United States on May 24, 2001. Calfrac USA provides fracturing and work-over services to oil and gas customers in the Rocky Mountain area of the United States.

Calfrac also owns 30% of the issued and outstanding shares of ChemErgy.

General Development of the Business of Calfrac

Calfrac was a private corporation founded in June 1999 by Messrs. Mathison, Ramsay, Dibb and Roberts. Calfrac commenced operations in August 1999 from its field station in Medicine Hat, Alberta with a coiled tubing unit. On September 2, 1999, Calfrac successfully completed its first hydraulic fracturing treatment.

In December 1999, Calfrac acquired all of the issued and outstanding shares of Calfrac Limited, which company had completed the acquisition of all of the issued and outstanding shares and warrants of DynaFrac Well Services Ltd. ("DynaFrac") on December 22, 2000. DynaFrac subsequently distributed its assets and liabilities to Calfrac Limited and was dissolved on December 27, 2001. Calfrac Limited distributed all of its assets and liabilities to Calfrac and was subsequently dissolved on December 28, 2001. Calfrac acquired a two-pumper spread, a shallow coiled tubing unit, a high rate nitrogen pumper and four acid pumpers through its indirect acquisition of DynaFrac.

On November 10, 1999, 850288 Alberta Ltd., a wholly owned subsidiary of Calfrac, acquired two deep and one shallow coiled tubing units, two combination nitrogen-acid pumpers and other support equipment from the Coiled Tubing Division of Serval Corporation. On January 1, 2000, 850288 Alberta Ltd. and Calfrac were amalgamated.

Calfrac's second and third spreads of fracturing equipment became operational in December 1999. At this time, Calfrac acquired a small facility in Red Deer, which became functional as a field facility in January 2000.

In February 2000, Calfrac acquired 851350 Alberta Ltd. in exchange for the issuance of 2,125,000 shares of Calfrac. 851350 Alberta Ltd. had a four-year fracturing agreement with its most significant customer, which contract was assumed by Calfrac. In order to provide the fracturing services required under this agreement, Calfrac constructed a new spread of fracturing equipment specifically designed to stimulate the customer's shallow natural gas wells, which equipment constituted Calfrac's fourth spread of fracturing equipment.

During the last half of 2000, Calfrac added another fleet of fracturing equipment to constitute its fifth spread of fracturing equipment. In October 2000, Calfrac leased premises in Grande Prairie to establish a field station to facilitate the expansion of operations into northern Alberta and British Columbia.

During the summer of 2001, Calfrac commissioned its sixth spread of fracturing equipment. At this time, Calfrac also constructed and commenced operations with two additional coiled tubing units designed for shallow well operations but with more powerful compressors than its then existing equipment.

In April 2001, Calfrac acquired 851355 Alberta Ltd. in exchange for the issuance of 2,390,625 shares of Calfrac. 851355 Alberta Ltd. had a four-year fracturing contract with its most significant customer, which contract was assumed by Calfrac. In order to satisfy its obligations under this contract, Calfrac constructed its seventh spread of fracturing equipment.

In February 2002, Calfrac expanded its operations into the United States by leasing a field office in Platteville, Colorado. Although Calfrac provided fracturing services to oil and gas exploration and production companies in Montana in late 2001, the establishment of operations at Platteville, Colorado was Calfrac's first significant presence in the United States. At this time, Calfrac negotiated a one-year fracturing agreement with a major oil and gas exploration and production company, which agreement provided for a three-year right of first refusal for the majority of fracturing work of the customer in the Rocky Mountain area of the United States. During 2002, Calfrac provided fracturing services to customers located in Colorado, New Mexico and Wyoming. In 2003, most of Calfrac's U.S. operations were conducted in the DJ Basin and North Piceance Basin of Colorado.

In November 2002, Calfrac completed the construction of a new field facility on land owned by Calfrac in Red Deer, Alberta. In late 2002 and early 2003, Calfrac completed construction of two additional fracturing spreads, its eighth and ninth spreads of fracturing equipment, and its first spread of equipment specifically designed to fracture NGC.

Calfrac completed construction of a coiled tubing rig designed specifically to perform fracturing through coiled tubing in early 2003. In addition, due to the increasing requirement to use coiled tubing rigs in conventional and NGC fracture jobs, Calfrac signed an 18-month contract in March 2003 with a major supplier of coiled tubing rig services in Alberta. Calfrac has a right of first refusal on five out of seven coiled tubing rigs used for fracturing operated by this supplier. Upon termination of this contract at the end of September 2004, Calfrac may exercise its option to renew the agreement for an additional year or to purchase three of the coiled tubing rigs.

In April 2003, Calfrac negotiated a two year fracturing contract with a major explorer and developer of NGC with a term that commenced on June 1, 2003 and will expire at the earlier of May 31, 2005 or on the date that Calfrac has fractured 300 wells for the customer. In order to satisfy its obligations under this contract, Calfrac has developed and commissioned unique fracturing equipment specifically designed to fracture NGC wells, including the first quint nitrogen pumpers that have been built for use in the fracturing of NGC by any fracturing company. This equipment is expected to be operational in early 2004.

In May 2003, Calfrac signed a fracturing agreement with its most significant customer in the Rocky Mountain region in the United States. This agreement will expire upon the earlier of December 31, 2004 or the completion of 500 fracturing jobs for the customer.

Calfrac also purchased four shallow coiled tubing units from private companies in 2003. These acquisitions increased Calfrac's equipment fleet of shallow coiled tubing units to eight units. Three additional fracture pumpers were also added to Calfrac's equipment in 2003.

SELECTED FINANCIAL INFORMATION

Selected Financial Information of the Corporation

The following table presents a summary of historical financial data for the Corporation for the years ended December 31, 2002, 2001 and 2000 and for the nine months ended September 30, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended, as well as the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings of the Corporation for the year ended December 31, 2002 and for the nine months ended September 30, 2003. The unaudited pro forma consolidated balance sheet was prepared as if (i) the Reorganization; (ii) the issuance of • Common Shares for net proceeds of approximately $111.6 million pursuant to this offering; (iii) the completion of the Acquisition by way of the issuance of • Common Shares and the payment of approximately $28.78 million in cash; and (iv) the other transactions described in the notes to the pro forma financial statements, had occurred on September 30, 2003, and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and the nine months ended September 30, 2003 were prepared as if such transactions had occurred on January 1, 2002. The financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 have been audited by PricewaterhouseCoopers LLP. The pro forma financial statements of the Corporation have not been audited but have been reported on by PricewaterhouseCoopers LLP.

The following data should be read along with "Management's Discussion and Analysis Regarding Denison" and the financial statements and related notes of the Corporation included in this prospectus. The unaudited pro forma information should also be read together with the unaudited pro forma consolidated financial statements and related notes of the Corporation included in this prospectus.

All financial information with respect to the Corporation has been presented in Canadian dollars and in accordance with Canadian generally accepted accounting principles.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING DENISON

The following management's discussion and analysis of financial condition and results of operations relates to the activities of Denison prior to the transformation of Denison to an oilfield services provider and does not reflect the Reorganization, the Acquisition or this offering. *The following management's discussion and analysis of financial condition and results of operations should be read in conjunction with the audited financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements as at and for the nine months ended September 30, 2003 and 2002.*

Segmented Information

The following table summarizes selected historical financial information related to the Corporation and its operations for the periods indicated. The Corporation has recently completed the Reorganization pursuant to which the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc., and the mining leases and mining environmental services related assets of Denison were transferred to, and the related liabilities were assumed by, Denison Mines Inc. The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and has retained certain claims and liabilities.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

Mining Division

The McClean Lake Joint Venture is on target to produce 6 million pounds of uranium from McClean Lake during 2003. Denison's 22.5% share of production for the nine months ended September 30, 2003 totaled 1,082,000 pounds compared with 1,133,000 pounds in the corresponding period of 2002.

During the first nine months of 2003 compared to the corresponding period of 2002, costs of the mining division of Denison were adversely affected by an increase in operating costs of 7% and foreign exchange losses of $650,000. Costs of the mining division of Denison in 2002 were favourably affected by a one-time adjustment of $540,000.

Denison delivers uranium under a variety of contracts with various pricing formulas, the timing and mix of which varies from quarter to quarter. Since the timing of deliveries is at the selection of the customer, the year-to-year comparisons may not be meaningful. Uranium sales volumes delivered in the nine months ended September 30, 2003 were 66% of annual sales volumes compared to 63% during the same period of 2002. Sales volumes in the fourth quarter will be 34% of annual sales volumes.

The average realized Canadian dollar exchange rate relative to the U.S. dollar for the conversion of the U.S. dollar proceeds from uranium sales appreciated from $1.551 for the nine months ended September 30, 2002 to $1.412 for the corresponding period of 2003. This has had a significant negative effect on the revenue and earnings from Denison's mining operations.

Oil and Gas Division

As part of the Reorganization, new oil and gas reserve reports were completed by independent consultants. These reports substantially decreased Denison's oil and gas reserves, resulting in the significant write-down of the carrying value of these assets.

For the nine months ending September 30, 2003, production averaged 641 barrels of oil equivalent ("boe") per day (at a 6:1 gas to oil conversion rate) compared to 558 boe per day for the equivalent period of 2002.

Denison sold its 50% interest in the Carlyle oil producing property (12 boe per day) in southeastern Saskatchewan effective October 1, 2003 for $255,000. Denison also acquired the remaining 50% interest (37 boe per day) in the Smiley gas producing property in Saskatchewan for $600,000.

The two wells drilled in the third quarter in the Aden area for gas were unsuccessful and were abandoned. New gas pipeline capacity, which was anticipated to be available by September, was delayed to November.

During the first nine months of 2003, capital spending totaled approximately $4.0 million including the acquisition of additional interests in the Skiff oil property and the drilling of 6.0 gross (5.1 net) wells, resulting in 1.0 gross (1.0 net) standing gas well in the Evi area and 5.0 gross (4.1 net) dry and abandoned wells. This compares with capital spending of $4.0 million in the first nine months of 2002 for the drilling of 5.0 gross (4.0 net) wells resulting in 2.0 gross (1.0 net) oil wells and 3.0 gross (3.0 net) wells which were dry and abandoned.

In April of 2003, a gas well located in the Bow Island area that had been drilled and completed in the fourth quarter of 2002 at a cost of approximately $350,000, but shut-in pending available pipeline capacity, was sold by Denison. The proceeds of $944,000 from this sale were credited against property, plant and equipment resulting in no recognition of a gain on this transaction.

Environmental Services Division

During the third quarter of 2003, Denison Environmental Services obtained a new contract for the operation of the Kam Kotia water treatment facility, and continued to provide services under its contract for environmental monitoring and maintenance of the closed mine sites of Denison and Rio Algom Ltd. at Elliot Lake and under its contract for project management for the decommissioning of the Hope Brook mine in Newfoundland. Denison Environmental Services was also active in decommissioning work in northern Ontario at the old Munroe mine and is commencing work on the decommissioning of the High Falls generating facility and on the Shebandowan mill complex.

Year Ended December 31, 2002 Compared to Year Ended December 31, 2001

Mining Division

In 2002, Denison's uranium sales volume increased by approximately 16% over the 2001 sales volume. The margin on sales decreased by 17%. In both 2002 and 2001, Denison chose to build strategic inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. Denison's uranium sales are under eleven different long-term contracts with utilities in the United States and the Far East covering approximately all of Denison's production at nominal rates in 2003 and 2004 and a large part of the production currently forecast to 2010. These contracts have various durations and contain a variety of pricing formulas. In 2003, preliminary indications from customers are that uranium deliveries will be 11% in Q1, 47% in Q2, 7% in Q3 and 35% in Q4.

In February 2002, the mining of the Sue C pit was completed recovering 36.5 million pounds of uranium into stockpiles, up 33% from amounts originally anticipated for Sue C. As a result of this increased recovery, amortization rates for mining and processing costs were reduced in mid 2001 and mining related cash costs were reduced from $4.9 million in 2001 to $1.8 million in 2002.

In 2002, mill unit operating costs continued to decline, even though the volume of ore milled in 2002 increased by approximately 25% over 2001 as the ore grade was gradually reduced during the year from an average grade of 3.10% U_3O_8 in 2001 to 2.29% in 2002. It is planned to reduce the milling grade to 2.12%, approximately the grade of the ore in the stockpile, to optimize milling costs over the next four years.

In 2002 definitive agreements were signed enabling the Cigar Lake joint venture to process its ore at the McClean Lake mill. All Cigar Lake ore will be leached at the McClean Lake mill following which the pregnant aqueous solution will be divided between the McClean Lake and Rabbit Lake facilities for processing into uranium concentrates. It is anticipated that toll milling could begin at McClean Lake as early as late 2006.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act. The Saskatchewan government also imposes a tiered royalty which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison has not paid tiered royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years.

In 2002, Denison spent $0.4 million (2001 - $0.6 million, 2000 - $0.7 million) at its Elliot Lake facility. Spending, primarily on monitoring and water treatment, is expected to be reduced in 2003 and 2004 and continue to decline marginally thereafter. All spending is paid for from the Elliot Lake Reclamation Trust, which had a balance of $1.6 million at December 31, 2002. This balance with interest earned thereon is expected to be adequate to fund all monitoring and treatment costs through to December 31, 2008. Future expenditures will consist of ongoing site monitoring of both the Denison and Stanrock Tailings Management Facilities and treating the water runoff from the Stanrock property for as long as 25 to 50 years. The balance of the total provision for $8.0 million represents the estimated present value of maintenance, monitoring and water treatment.

Retirees from Denison's Elliot Lake mine are entitled to certain medical and dental benefits and life insurance. At December 31, 2002 the liability recorded in the consolidated balance sheet was $10.5 million dollars. The actuarial report on this liability as of September 30, 2002 estimates that the actuarial liability is approximately $5.7 million. The surplus of $4.8 million, net of interest on the unfunded $5.7 million liability, is being credited to income over the average 12.5 year average life expectancy of this retiree group.

Environmental Services Division

Denison Environmental Services continued to provide services under a five-year contract (commenced April 1, 2001), including monitoring effluent treatment, maintenance, data storage and reporting activities for closed mine sites for Denison and Rio Algom in the Elliot Lake area and under a contract for at least 30 months (commenced September of 2001) to act as primary project manager for the Hope Brook mine decommissioning in Newfoundland. A significant portion of the business of the division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2002 this was not the case due to reduced mine construction. Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. New mine construction has been low in the last few years and as a result Denison wrote down its inventory of mining equipment held for resale by $433,000.

Oil and Gas Division

In 2002, Canadian oil and gas activities continued to expand. Oil and gas revenues from Denison's operations in Alberta and Saskatchewan increased by $4.9 million, to $6.2 million from $1.3 million in 2001. Successful producing property acquisitions and new production added by Denison's exploration program, combined with increases in commodity prices, all contributed to the increase in oil and gas revenue in 2002. In 2001, Denison received the final $1.5 million of its royalty income from the Villano oil field in Ecuador. Earnings from Greece in 2002 related to a reduction in the provision for closure and in 2000 are from final sale of oil in tanks.

Production volumes have steadily grown from 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) in December 2000 to 438 barrels per day in December 2001 to 648 barrels per day in December 2002. Insufficient pipeline capacity prevented four new Knappen and Aden gas wells from being put into production in 2002. Some pipeline capacity became available in February 2003. Production increased by 458% in 2002 over the previous year and averaged 330 bbls/d for oil and 1.4 mmcf/d for gas. Denison's core property, located in the Countess area of Alberta, accounted for approximately 67% of 2002 production. In 2002, Denison received an average selling price of $35.81 per bbl and $3.54 per mcf for oil and gas, respectively. The price received for oil and gas increased approximately 22% and 12%, respectively, from the prior year. Denison's oil price is referenced to an Edmonton light sweet price adjusted for quality differentials and transportation to determine the realized price. Denison's gas production is sold pursuant to spot sales contracts and Denison receives a price referenced to AECO delivery point. Denison did not enter into any hedging transactions in 2002.

Royalties include payments made to the Crown, freehold owners and third party overriding royalty participants. During 2002, oil and gas royalties were approximately 24% of revenue compared with 19% in the prior year. Countess production is subject to freehold royalties varying from 20% to 27% while other properties are subject to Crown and overriding royalty interests.

Production expenses were $7.28 per boe in 2002. Production expenses increased approximately 14% per boe from 2001. During August and September, Denison performed an extensive work over program at its Countess area that

involved the battery and all of the producing wells. As a result, production expenses in the Countess area, for those two months, averaged $11.15 per boe.

Capital expenditures in 2002 totaled $8.8 million. Denison acquired, for $1.2 million, interests varying from 12.5% to 100% in the Skiff producing oil property located in the Conrad area of southeastern Alberta and plans are underway to reinstate pressure maintenance and thereby more effectively exploit this field. Seismic, drilling and facility expenditures in 2002 increased approximately 42%, to $7.4 million, from $5.2 million in the prior year. Approximately $2.6 million of this spending for exploration drilling was financed from proceeds of a $5.0 million flow-through share issue of common shares. At December 31, 2002, $2.4 million remained to be spent on eligible Canadian Exploration Expenses prior to August 2004. Capital expenditures in 2001 totaled $13.4 million, including $5.6 million for the acquisition of Innovative Energy Inc.

In 2002, Denison's depletion and depreciation provision averaged $9.36 per boe for the year and was $12.54 per boe for the fourth quarter. The increased fourth quarter depletion rate reflects the unfavourable results of Denison's higher risk exploration program in the later part of the year and the industry's trend in 2002 towards higher finding and development costs. Depletion and depreciation charges are calculated on a unit of production method and are based on total proven reserves with a conversion of six thousand cubic feet of gas being equivalent to one barrel of oil. The 2002 depletion calculation includes $805,000 of future capital expenditures to develop Denison's reserves and excludes $69,000 of unproven properties relating to undeveloped land.

Year Ended December 31, 2001 Compared to Year Ended December 31, 2000

Mining Division

Pursuant to its agreement with another participant, Denison was entitled to 2.1 million pounds from the first 4.54 million pounds produced by the McClean Lake Joint Venture and thereafter its 22.5% equity share. Production commenced on June 22, 1999 and commercial levels of production were achieved on November 1, 2001. In 2000, 812,500 pounds were used to repay concentrate borrowed from a third party in previous years.

In 2001, Denison's sales volume of uranium was very similar to 2000. During the year, Denison chose to build inventory in anticipation of sales in the future at prices higher than those currently available in the spot market. During 2001, Denison's uranium sales were under eleven different long-term contracts with utilities in the United States and the Far East. These contracts have various durations and contain a variety of pricing formulas. Volumes delivered in 2000 were significantly higher than 1999. Revenue from sales in 1999, prior to achievement of commercial production, was offset against costs capitalized during the start-up phase.

In 2001, mill operating costs continued to decline and the mill operated continuously, except for vacation and Christmas shutdowns. This followed a shutdown of the mill in the last two months of 2000 as the operator made several modifications to increase the efficiency of the mill.

Denison pays a Saskatchewan basic uranium royalty of 4% of gross uranium sales after receiving the benefit of a 1% Saskatchewan resource credit. Denison also pays Saskatchewan capital taxes based on the greater of 3.6% of gross uranium sales and capital tax otherwise computed under the act.

Prior to 2001, Saskatchewan also levied a graduated uranium royalty tax of 4% to 50% of earnings after the recovery of capital. Retroactive to January 1, 2001, the Saskatchewan government amended its uranium royalty regulations to replace this graduated royalty based upon an earnings calculation with a tiered royalty system which ranges from 4% to 10% of gross uranium sales after recovery of mill and mine capital allowances which approximate capital costs. Denison has not paid graduated royalties in the past and has sufficient mill and mine capital and expansion allowances available or anticipated to shelter it from the tiered royalty at current uranium prices for many years. As uranium sales revenue and not net earnings now drive Saskatchewan uranium royalties, this expense is now deducted in computing earnings subject to income taxes.

Environmental Services Division

In 2001, two new long-term contracts significantly contributed to an increase in the revenue for the Environmental Services Division from $1.8 to $3.0 million. This division was also active in both 2000 and 2001 in several smaller projects. In 1999, substantially all revenue was from the reclamation of Algoma Steel's iron ore mine, the last 10% of which was completed in 2000. Revenues from asset sales discussed below, were $0.1 million in 2001, down significantly from $0.6 million in 2000 and $1.0 million in 1999. In late 2000, demand dropped significantly for used mine and mill equipment. In 2001, losses declined to close to the break even from a loss of $0.3 million in 2000.

A significant portion of the business of the Environmental Services Division has historically involved the sale of mining assets, either as part of its compensation for decommissioning a site or for a fee from third parties. In 2001 this was not the case due to reduced mine construction. In 2000, asset sales generated revenues for Denison of $0.6 million (1999 - $1.0 million). Revenues generated from asset sales are sensitive to the level of new mine construction and other demand factors. In the last half of 2001, overall demand for mine equipment declined significantly. At the end of 2001, Denison had equipment for sale with a book value of $483,000 with an estimated resale value in excess of $725,000.

Oil and Gas Division

During 2001, Denison purchased a 50% interest in the Countess oil field in south central Alberta for $2 million and 100% of the shares of Innovative Energy Ltd. for $4.9 million consisting of the assumption of $2 million of debt, $1.9 million in cash and $1.0 million by the issuance of treasury shares.

A 50% working interest was earned in four wells drilled in southeastern Saskatchewan of which three were completed as oil wells and the fourth well, which was dry, was converted to a water disposal well. Facilities were installed to process the production from these three producing oil wells.

In Alberta, Denison participated with Innovative Energy Inc. in the drilling of four wells, which produced two oil wells at Countess and a new gas discovery at Knappen in southern Alberta. The remaining dry well was abandoned and another previously suspended oil well was converted into a water disposal well at Countess. Processing facilities were constructed at Countess and went into operation in the fourth quarter.

Due to unanticipated delays in obtaining the necessary regulatory approvals to transfer Innovative Energy Inc.'s wells and facilities to Denison and recommence production, the two new wells at Countess and the Knappen gas well were delayed until February 2002 before entering sustained commercial production.

Oil and gas production increased during 2001 from about 5 barrels of oil equivalent (boe) per day (at a 6:1 gas to oil conversion) at the beginning of the year to 438 boe per day in December. Production had increased further to 650 boe per day by the end of February 2002 and was continuing to increase as the Knappen well was increasing to its planned production rate of 2 million cubic feet per day.

During the first quarter of 2001, Denison earned the final $1.5 million of its royalty from the Villano oil field in Ecuador, which totaled $11.7 million over the period 1999 to 2001.

Interest Expense

During 2002, Denison incurred interest expense of $3,239,000 (2001 - $4,448,000, 2000 - $5,981,000) including $2,798,000 (2001 - $4,186,000, 2000 - $5,623,000) on its McClean Lake loan. No interest was capitalized in 2000, 2001 or 2002. Interest expense was reduced in 2002 as a result of loan principal repayments and lower Canadian Prime rates. Interest expense was reduced in 2001 as a result of lower Canadian Prime rates and the renegotiation of Denison's McClean Lake loan to enable Denison to apply surplus cash to reduce loan principal and subsequently reborrow these funds.

Income Taxes

Denison is currently not subject to cash income taxes in any jurisdiction, however, it is subject to the federal large corporations tax, which the 2003 federal budget proposed to phase out over the next five years. Denison has substantial unclaimed capital cost allowance, and other deductions which fully shelter it from federal and Saskatchewan income taxes and for which no future tax asset is recorded on the balance sheet. As a result its tax provision currently includes Ontario income taxes and federal large corporations taxes. The Ontario government has passed legislation under which Ontario income tax rates will be reduced from 12% currently to 8% in 2005. As a result of this rate reduction together with a higher expected future allocation of taxable income to other provinces, Denison reduced its future taxes payable balance by $2.0 million in 2001. Reference is made to note 8(a) of the consolidated financial statements of Denison included in this prospectus, which identifies the major components of the variation in Denison's effective tax rate from the normal Canadian tax rate.

Note 8(b) of the consolidated financial statements of Denison included in this prospectus sets out details of Denison's temporary differences between accounting and tax and non-capital loss balances available to shelter future income tax liabilities. Denison has an overall future tax liability in Ontario but does not expect to be cash taxable for several years. All temporary differences have been incorporated as part of the computation of its future Ontario tax liability of $300,000 at December 31, 2002. Denison has not recorded a future tax asset for temporary differences available to shelter its federal and agreeing province income tax liability. In the three years ended December 31, 2002, Denison was able to shelter its income tax expense with previously unclaimed temporary differences arising subsequent to its comprehensive revaluation of assets, following its reorganization in 1995. Any future utilization of temporary differences existing before 1995 will be charged to retained earnings to reduce income tax expense in the period. As at December 31, 2002 Denison has over $200 million of temporary differences and loss carry-forwards, the potential benefit of which has not been set up as a future tax asset for federal and Saskatchewan income taxes. The future recoverability of a future tax asset for a resource company is largely a function of future commodity price level forecasts.

Capital Resources and Liquidity

At September 30, 2003, Denison had the ability to redraw $3.2 million under the McClean Lake loan and $0.9 million on its other credit lines. Denison's obligations under the McClean Lake loan are being assumed by Denison Mines Inc. at the effective time of the Reorganization.

The amount available under the credit line secured by Denison's oil and gas assets has been reviewed with the lender following receipt of the new oil and gas reserve reports obtained as part of the restructuring process. At September 30, 2003, $4.8 million of the $5.5 million line had been drawn. Denison intends to pay its credit line for the oil and gas business. The credit line will be replaced by a new facility in which Denison Resources Inc. will be the borrower.

During the third quarter of 2003, Denison completed the exploration expenditures fulfilling its obligations arising from the flow through share issue in August 2002.

Impact of Future Accounting Developments

The Accounting Policies of Denison are described in note 1 to the consolidated financial statements of Denison included in this prospectus. Prospectively, effective January 1, 2002, Denison implemented CICA Handbook Section 3870, *Stock-Based Compensation and Other Stock-Based Compensation Payments.* As a result, Denison is amortizing the imputed cost of 520,000 stock options issued during 2003 (and 75,000 stock options issued in 2002) as compensation expense over their vesting period and has included $9,000 in corporate expenses for the year ended December 31, 2002 and reported $292,000 in stock option expenses for the nine months ended September 30, 2003. See Note 9 to the consolidated financial statements of Denison included in this prospectus.

The CICA has recently released the following accounting standards, which the Corporation will be implementing no later than fiscal 2004.

CICA Handbook Section 3063, *Impairment of Long-Lived Assets*

Each year the Corporation prepares an impairment test on its mining and oil and gas assets. Section 3063 applies only to its mining assets. This new handbook section requires that if a mining asset's value is impaired it be written down to its fair value rather than management's best estimate of future undiscounted cash flows. A preliminary review indicates that implementation of this new requirement will have no impact on the Corporation.

CICA Handbook Section 3110, *Asset Retirement Obligations*

This standard requires that the fair value of the disposal cost of an asset be capitalized as part of property, plant and equipment when the asset initially is constructed. In subsequent periods, the Corporation then is required to recognize "interest" on the liability and adjust the carrying value of the asset and liability for changes in estimates of the amount or timing of underlying future cash flows. Upon initial implementation, this new standard will require the Corporation to restate the value of property, plant and equipment for its mining and oil and gas assets and the related liability, but will not have an impact on disclosure related to its decommissioned Elliot Lake mine-site.

Risks and Uncertainties

See "Risk Factors" and "Legal Proceedings" for a discussion of risks and uncertainties.

MANAGEMENT'S DISCUSSION AND ANALYSIS REGARDING CALFRAC

The following management's discussion and analysis of financial condition and results of operations of Calfrac has been prepared by Calfrac and should be read in conjunction with the audited financial statements of Calfrac as at and for the years ended December 31, 2002, 2001 and 2000 and the unaudited interim financial statements of Calfrac as at and for the nine months ended September 30, 2003 and 2002.

Review of Operations

Nine Months Ended September 30, 2003 Compared to Nine Months Ended September 30, 2002

In general, western Canadian oilfield activity was higher in 2003 with 10,227 natural gas wells being completed to the end of September 2003 versus 9,068 for the full year of 2002. In early 2003, Calfrac brought into operation two additional fracture spreads, one coiled tubing rig used for fracturing operations and one NGC spread. During the second and third quarters of 2003, four shallow coiled tubing units were purchased.

Revenue

Consolidated revenues for the nine months ended September 30, 2003 increased by 64% amounting to $108.5 million compared to $66.1 million for the same period of 2002. All of this increase occurred in Canada where revenue increased by 82% to $97.5 million in 2003 from $53.5 million in 2002. This increase in Canadian revenue is attributable to the combination of increased oilfield activity and the larger fleet of equipment that Calfrac had available. In the beginning of June 2003, Calfrac commenced services on its first long-term NGC contract. To the end of September 2003, this contract had contributed an additional $4.5 million to revenue.

Revenue from U.S. operations declined 13% to $10.99 million for the nine months ended September 30, 2003 compared to $12.6 million during the same period of 2002. Not only did the types of hydraulic fractures change with a reduction of per job revenue, but certain contract negotiations were only finalized in May 2003, resulting in a slow start to Calfrac's U.S. operations in 2003.

Operating Expenses

Operating expenses for the nine months ended September 30, 2003 increased 64% to $72.4 million compared to $44.1 million during the same period of 2002. On a consolidated basis, gross margins for the first nine months of 2003 at 33% of revenue were virtually identical to the same period of 2002. However, there were large differences

in geographical operations. In Canada, gross margins improved to 35.1% of revenue from 32.1% of revenue in the same period of 2002, mainly due to increased oilfield activity and improving prices from July 2003. However, the reduction in oilfield activity and changes in the method of fracturing in the DJ Basin impacted Calfrac's U.S. operations in 2003 and gross margins declined to 15.6% of revenue for the first nine months of 2003 from 34.7% of revenue for the same period of 2002. Due to the change in the method of fracturing, which requires more equipment and fewer customized chemicals, it is unlikely that gross margins from Calfrac's U.S. operations can be increased to the same levels achieved in 2002.

Selling, General and Administrative Expenses ("SG&A")

SG&A increased 55% to $8.2 million for the first nine months of 2003 from $5.3 million in the same period of 2002. The largest components of SG&A are salaries and the incentive bonus provisions. Increases in the number of employees will increase the cost of both salaries and the incentive bonus provisions.

The incentive bonus provision in SG&A covers all eligible employees, including operational staff. The amount of this provision is dependent on the excess of income before tax over a threshold rate of return calculated on average capital employed, subject to a maximum bonus level set for each employee. However, as both 2002 and 2003 bonuses were being provided at maximum, the increase in 2003 is largely attributable to an increased number of employees in 2003. Notwithstanding the above, as a percentage of revenue, SG&A dropped to 7.5% in the nine months ended September 30, 2003 compared to 8.0% in the same period of 2002.

Other Expenses, Interest Expense and Depreciation

Other expenses consist mainly of foreign exchange losses incurred in 2003 on cash and receivables denominated in U.S. funds. Interest and depreciation expenses have increased in 2003 due to additional borrowings and amortization resulting from the increased amount of equipment brought into operation in 2003.

Income Taxes

In the first nine months of 2003 a reduction in tax rates reduced income tax by 2% as a percentage of income before taxes. However, the increase in income before taxes from $10.9 million in the first nine months of 2002 to $19.1 million in the same period of 2003 increased the gross income tax expense by 65.6% to $6.8 million for the first nine months of 2003.

Net Income

Net income for the nine months ended September 30, 2003 was 11.3% of revenue, up from the 10.3% of revenue earned over the same period of 2002. This increase was mainly attributable to the increase in revenue and to a lesser extent to the increase in gross margins.

Year Ended December 31, 2002 Compared to the Year Ended December 31, 2001

In general, western Canadian activity declined with 9,068 gas wells being completed in 2002 compared to 11,174 gas wells in 2001. However, Calfrac expanded its operations into the U.S. during 2002 and added additional equipment. As a result, Calfrac was able to record significantly improved results in 2002 compared to 2001.

Revenue

In 2002, Calfrac increased consolidated revenues by 42% to $96 million. The commencement of U.S. operations contributed 58% of this increase. The remaining increase in total revenue was attributable to Canadian operations in southeast Alberta.

Operating Expenses and SG&A

Although as a percentage of revenue, gross margins declined to 32.6% in 2002 versus 36.4% earned in 2001, the gross margins increased by 27% to $31.2 million in 2002 from $24.6 million in 2001. U.S. operations provided 67%, or $4.4 million of this increase. The decline in the percentage of revenue of gross margins in 2002 was caused by downward pricing pressures resulting from lower industry activity and a greater proportion of shallow gas operations.

SG&A increased, both as a percentage of revenue and in absolute terms, in 2002, to 7.7% and $7.4 million from 7.4% and $5.0 million in 2001. The increase was attributable to the additional infrastructure required by Calfrac to commence U.S. operations and to continue to expand Canadian operations.

Interest Expense and Depreciation

Depreciation increased in 2002 compared to 2001 due to the acquisition of additional equipment. In both 2001 and 2002, interest expense declined slightly due to a decline in interest rates and the fact that additional financing for new equipment occurred late in 2002.

Income Tax

Due to the reduction in the tax rates and the inclusion of U.S. taxes, income taxes in 2002 were 37.4% of income before taxes compared to 40.6% in 2001. In 2001, Calfrac used the last of the non-capital income tax losses incurred by Dynafrac Well Services Ltd. to reduce current taxes.

Net Income

Net income for 2002 increased in absolute terms but was a smaller percentage of revenue in 2002 (10.4%) compared to that in 2001 (11.5%). This decline was attributable to reduction in gross margin percentages noted above and to the fact that current taxes in 2001 were reduced by the remaining non-capital income tax losses.

Year Ended December 31, 2001 Compared to the Year Ended December 31, 2000

In general, western Canadian oilfield activity improved in 2001, with 11,174 gas wells being completed compared to 8,933 gas wells in 2000. In the second half of 2001, Calfrac added two fracturing spreads and two shallow gas coiled tubing units to its fleet of operating equipment.

Revenue

Revenue increased 47% in 2001 compared to 2000 to $67.5 million in 2001 from $45.8 million in 2000. The increase was attributable to increased oilfield activity, the availability of additional equipment and the establishment of a permanent base in Grande Prairie, Alberta.

Operating Expenses and SG&A

Gross margin in 2001 was 36.4% of revenue, which was an improvement over the 31.9% in 2000. This increase was attributable to increased oilfield activity and the higher margins earned on northern work performed from the newly established Grande Prairie base in Alberta.

SG&A increased in 2001 to 7.4% of revenue, compared to 7.2% of revenue in 2000. The increase was due to additional infrastructure required to support the growth in equipment and revenue and the fact that 2001 bonus provisions rose to maximum levels due to the growth of income before income tax.

Interest and Depreciation

Interest expense in 2001 was virtually the same as in 2000, due to the pay-out in 2001 of two bank loans and that the new loans for additional equipment were only incurred in the second half of 2001. The increase in depreciation in 2001 resulted from a full year of depreciation on equipment acquired in the second half of 2000 and six months of depreciation on equipment acquired in the second half of 2001.

Income Tax

Income taxes increased to 40.6% of income before taxes in 2001 compared to 16.8% in 2000. In 2000, both current and deferred income taxes were substantially reduced by non-capital income tax losses brought forward from Dynafrac Well Services Ltd. In 2001, the remainder of these losses were used to reduce current income taxes but had little effect on the combined income tax provision.

Net Income

Net income in 2001 was 11.5% of revenue, lower than the 12.3% of revenue earned in 2000. The reduction in 2001 was caused by the fact that, as discussed above, results for 2000 were largely sheltered from income taxes by tax losses carried forward. In absolute terms, net income increased to $7.8 million in 2001 from $5.7 million in 2000.

Capital Resources and Liquidity

As at September 30, 2003, Calfrac had working capital of $3.7 million. As at December 31, 2002, Calfrac had working capital of the amount of $3.0 million over that portion of demand debt due to be repaid in 2003.

As at September 30, 2003, Calfrac had an unutilized operating loan facility of $5.0 million and an undrawn revolving equipment term loan in the amount of $7.5 million. Calfrac invested approximately $20 million in capital assets during the nine months ended September 30, 2003 and approximately $22 million during the year ended December 31, 2002.

Calfrac has committed to approximately $11 million of expenditures for capital equipment that will become operational in the first half of 2004. These expenditures include approximately $5 million on new equipment ordered for fracturing operations in the United States, $3 million on new equipment for fracturing operations in Canada, $2 million on new NGC equipment and $1 million to complete the construction of a new warehouse on Calfrac's property in Grande Prairie, Alberta and to install a new accounting system in Calgary.

Calfrac has historically had sufficient capital resources to satisfy its capital expenditure requirements with working capital, cash flows and its bank line and expects to be able to do the same in 2004.

Risk and Uncertainties

See "Risk Factors" for a discussion of risks and uncertainties.

DIVIDENDS

Although the Corporation does not have a history of paying dividends on its Common Shares, the board of directors may make a determination to pay dividends in the future if circumstances permit. Any decision to pay dividends will be made by the board of directors of the Corporation on the basis of the Corporation's earnings, financial requirements and other conditions existing at the time.

EXECUTIVE COMPENSATION

The compensation of the proposed officers and directors of the Corporation after completion of the Acquisition will be determined by the board of directors after the completion of the Acquisition.

The following executive compensation disclosure relates to the officers and directors of Denison prior to the transformation of Denison to an oilfield services provider. See "Directors and Officers of the Corporation" and "Management".

Summary Compensation Table

The following table sets forth all compensation paid or earned during the fiscal years ended December 31, 2003, 2002 and 2001 to the Chief Executive Officer and to those individuals who were, at December 31, 2003, the most highly compensated executive officers of Denison (the "named executive officers"), with compensation in excess of $100,000 in 2003.

		Annual Compensation			Long-Term Compensation	
Name and Principal Position	Year	Salary ($)	Bonus ($)	Other Annual Compensation[1] ($)	Securities Under Options Granted	All Other Compensation ($)
E. Peter Farmer	2003	360,000	-	46,615[2]	235,000	-
President and Chief	2002	360,000	-	43,839[3]	-	-
Executive Officer	2001	340,000	145,000	37,017[4]	125,000	-
Donald C. Campbell	2003	185,000	-	28,409[2]	29,000	-
Vice President,	2002	185,000	-	27,610[3]	-	-
Marketing and Special Projects	2001	180,000	7,500	28,981[4]	15,000	-
T. E. Craig Bamford	2003	150,000	-	22,377[2]	20,000	-
Vice President, Finance	2002	142,500	-	21,207[3]	-	-
and Chief Financial Officer	2001	135,000	5,000	19,728[4]	25,000	-
Donna J. Gallant	2003	113,389	-	-	2,500	-
Counsel and Secretary	2002	95,548	-	-	-	-
	2001	103,125	-	-	-	-

Notes:

(1) Prior to March •, 2004 Denison had a retirement savings arrangement whereby Denison would contribute to an employee's registered retirement savings plan an amount equal to 3% of salary and a possible further amount to match employee contributions up to a 7% limit depending on the employee's age and years of employment. Effective March •, 2004 this arrangement was terminated.

(2) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $36,000 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,250 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $9,065 for Mr. Farmer; $8,850 for Mr. Campbell; and $8,784 for Mr. Bamford.

(3) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $33,600 for Mr. Farmer; $18,500 for Mr. Campbell; and $12,384 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total amounting to: $8,921 for Mr. Farmer; $8,494 for Mr. Campbell; and $8,652 for Mr. Bamford.

(4) These amounts consist of retirement savings benefits, perquisites and other personal benefits. The retirement savings benefit component exceeds 25% of the total of Other Annual Compensation, amounting to: $27,674 for Mr. Farmer; $18,000 for Mr. Campbell; and $10,238 for Mr. Bamford. The automobile benefit component also exceeds 25% of the total, amounting to: $8,097 for Mr. Farmer; $9,735 for Mr. Campbell; and $8,364 for Mr. Bamford.

Stock Options

The following table sets forth the grants of options to the named executive officers of Denison during the fiscal year ended December 31, 2003:

Option Grants During The Most Recently Completed Financial Year[1]

Name	Securities Under Options Granted (#)	% Total Options Granted to Employees in Financial Year	Exercise or Base Price ($/Security)	Market Value of Securities Underlying Options/SARs on the date of Grant ($/Security)	Expiration Date[1]
E. Peter Farmer	235,000	45.1	2.22	2.22	-
Donald C. Campbell	20,000	3.8	2.22	2.22	-
T. E. Craig Bamford	20,000	3.8	2.22	2.22	-
Donna J. Gallant	2,500	-	2.22	2.22	-

Note:

(1) The Stock Option Plan of Denison has been terminated as at March •, 2004 and no stock options are outstanding.

The following table sets forth each exercise of stock options in the year ended December 31, 2003, and the year-end value of unexercised stock options for any named executive officer holding such options. The Stock Option Plan of Denison has been terminated as at March •, 2004 and no stock options are outstanding.

Aggregate Stock Option Exercises During Year Ended December 31, 2003 and Year End Stock Option Values[1]

Name	Securities Acquired on Exercise (#)	Aggregate Value Realized ($)	Unexercised Stock Options at Year End (#) Exercisable/Unexercisable	Value of Unexercised In-The-Money Options At Year End ($) Exercisable/Unexercisable[2]
E. Peter Farmer	-	-	165,000/235,000	564,200/888,300
Donald C. Campbell	-	-	31,667/13,333	111,000/50,399
T. E. Craig Bamford	-	-	36,667/13,333	127,601/50,399
Donna J. Gallant	-	-	15,833/1,667	45,899/6,301

Notes:

(1) The Stock Option Plan of Denison was terminated on March •, 2004 and no stock options are outstanding.
(2) The closing price at year-end on the TSX of the common shares of Denison (on a pre-consolidation basis) was $6.00.
(3) In connection with the Reorganization, all options have been vested.

Compensation of Directors

Prior to March •, 2004, Denison paid fees to each director in the amount of $6,000 per year and paid to each director a fee of $400 for each meeting of the board of directors the director attended and $400 for each meeting of a committee of the board of directors the director attended. During the fiscal year ended December 31, 2003, Messrs. James S. Blair, Gregory S. Fletcher and Paul F. Little were each granted 15,000 options to purchase common shares of Denison. For each grant, the options vest at the rate of one-third each year commencing on April 30, 2004 and the exercise price is $2.30.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed herein, none of the directors, officers or principal shareholders of the Corporation, Calfrac or Matco Investments and no associate or affiliate of any of them, has or has had any material interest in any transaction which materially affects the Corporation.

There are potential conflicts of interest to which the directors and officers of the Corporation will be subject in connection with the operations of the Corporation. In particular, certain of the directors and officers of the Corporation are involved in managerial and/or director positions with other oilfield services providers whose operations may, from time to time, be in direct competition with those of the Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of the Corporation. See "Directors and Officers of the Corporation". Conflicts, if any, will be subject to the procedures and remedies available under the ABCA. The ABCA provides that, in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise permitted by the ABCA.

DESCRIPTION OF SHARE CAPITAL

The Corporation is authorized to issue an unlimited number of Common Shares. The holders of Common Shares are entitled to receive notice of, and to one vote per share at, every meeting of shareholders of the Corporation, to receive such dividends as the board of directors declares and to share equally in the assets of the Corporation remaining upon the liquidation of the Corporation after the creditors of the Corporation have been satisfied.

PRIOR SALES

The Corporation has issued the following equity securities in the 12 month period prior to the date of this prospectus:

Date of Issuance	Number of Common Shares	Issue Price Per Share
December 12, 2003 to March •, 2004	964,833 common shares[1]	$2.44[2]
March •, 2004	• Common Shares[3]	$7.35

Notes:

(1) Issued on the exercise of stock options, which occurred prior to the Consolidation.

(2) The stock options that were exercised between December 12, 2003 and March •, 2004 had exercise prices ranging from $2.22 to $3.15 per common share of Denison. The aggregate proceeds from the issuance of the 964,833 common shares of Denison upon the exercise of the stock options was approximately $2,35 million for an average issue price per share of $2.44.

(3) Issued pursuant to the Subscription, which occurred after the Consolidation.

PRICE RANGE AND TRADING VOLUME

The Common Shares are listed on the TSX under the trading symbol "DEN". The following table sets forth the reported high and low sale prices and the trading volume for the common shares for each of the periods indicated before giving effect to the Consolidation.

	High ($)	Low ($)	Volume
2002			
First Quarter	0.18	0.13	33,290,010
Second Quarter[1]	4.25	0.16	30,928,730
Third Quarter	3.48	1.80	939,910
Fourth Quarter	2.47	1.80	942,600
2003			
First Quarter	2.80	2.02	962,210
Second Quarter	2.84	2.05	1,318,180
Third Quarter	2.72	2.10	1,367,520
October	2.73	2.45	473,130
November	4.00	2.36	1,737,160
December[2]	6.60	3.60	6,977,070
2004			
January (to January 19)	6.40	5.22	1,640,867

Notes:

(1) On May 24, 2002, Denison consolidated its common shares on a 20 for one basis.

(2) The closing price of the common shares on December 30, 2003, the last trading day prior to the announcement of the Arrangement and the Subscription, and prior to giving effect to the Consolidation, was $6.60.

MATERIAL CONTRACTS

Except for contracts entered into in the ordinary course of business, the following are the only contracts entered into by the Corporation or Calfrac within the two-year period preceding the date of this prospectus which may reasonably be regarded as presently material:

1. The Underwriting Agreement dated •, 2003 between the Corporation and the Underwriters. See "Plan of Distribution".

2. The Purchase Option between Denison, Matco Investments and Calfrac dated as of December 30, 2003 granting the option to Denison to acquire all the shares of Calfrac.

3. The Arrangement Agreement providing for the Arrangement and granting the indemnities described under "Risk Factors – Liabilities from Prior Operations".

4. Assignment and Novation Agreement dated December 29. 2003 between Denison, Denison Mines Inc., the federal government and the Ontario provincial government.

5. Confirmation Agreement dated December 29, 2003 between Denison, the federal government, the Ontario provincial government and Matco.

Copies of these Agreements may be inspected at the Corporation's registered office during normal business hours during the period of distribution of the Offered Shares.

RISK FACTORS

An investment in the securities offered hereby should be considered speculative as Denison is considering a change of business, and the nature of such business, as well as the Corporation's present stage of development. Such change is dependent upon the completion of this offering and the Acquisition. If the Acquisition is not completed, the success of this change in business strategy cannot be assured. A prospective investor should consider carefully the risk factors set out below. In addition, prospective investors should carefully review and consider all other information contained in the prospectus before making an investment decision and consult their own experts where necessary.

Volatility of Industry Conditions

The demand, pricing and terms for fracturing and well stimulation services largely depend upon the level of industry activity for Canadian natural gas and, to a lesser extent, oil exploration and development. Industry conditions are influenced by numerous factors over which Calfrac has no control, including: the level of oil and gas prices; expectations about future oil and gas prices; the cost of exploring for, producing and delivering oil and gas; the expected rates of declining current production; the discovery rates of new oil and gas reserves; available pipeline and other oil and gas transportation capacity; worldwide weather conditions; global political, military, regulatory and economic conditions; and the ability of oil and gas companies to raise equity capital or debt financing.

The level of activity in the Canadian oil and gas exploration and production industry is volatile. No assurance can be given that expected trends in oil and gas production activities will continue or that demand for fracturing and well stimulation services will reflect the level of activity in the industry. Any prolonged substantial reduction in oil and natural gas prices would likely affect oil and gas production levels and therefore affect the demand for fracturing and well stimulating services to oil and gas customers. A material decline in oil or gas prices or Canadian industry activity could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Seasonality

In Canada, the level of activity in the oilfield services industry is influenced by seasonal weather patterns. The spring thaw makes the ground unstable and less capable of supporting heavy weights. Consequently, municipalities and transportation departments enforce road bans that restrict the movement of heavy equipment, thereby reducing well servicing activity levels. In addition, during excessively rainy periods, equipment moves may be delayed, thereby adversely affecting revenues.

There is greater demand for fracturing and well stimulation services in the winter season when the occurrence of freezing permits the movement and operation of heavy equipment. Activities tend to increase in the fall and peak in the winter months of November through March. However, if an unseasonably warm winter prevents sufficient freezing, Calfrac may not be able to access well sites and its operating results and financial condition may therefore be adversely affected. The demand for fracturing and well stimulation services may also be affected by the severity of the Canadian winters. The volatility in the weather and temperature can therefore create unpredictability in activity and utilization rates, which can have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Alternatives to and Changing Demand for Petroleum Products

Fuel conservation measures, alternative fuel requirements, increasing consumer demand for alternatives to oil and gas, and technological advances in fuel economy and energy generation devices could reduce the demand for crude oil and other liquid hydrocarbons. Calfrac cannot predict the impact of changing demand for oil and gas products, and any major changes may have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Dependence on Major Customers

Calfrac's customer base consists of more than 150 oil and gas exploration and production companies, ranging from large multinational public companies to small private companies. Notwithstanding its broad customer base, the majority of Calfrac's sales revenue comes from fracturing services provided to two exploration and production companies. These two customers provided 57% of Calfrac's revenue in the first eleven months of 2003. The largest of these customers provided 50% of Calfrac's revenue in the first eleven months of 2003 and 57% of Calfrac's revenue in 2002. This customer was also an equity shareholder of Calfrac during these time periods, but recently disposed of its equity interest. Calfrac has advised the Corporation that it has historically maintained an excellent relationship with this customer and that Calfrac has no reason to believe that there will be any change to this relationship in the future. Calfrac has three multi-year agreements to provide fracturing services to this customer which expire from June 2004 to August 2005, two of which include minimum work commitments by the customer. In addition, two additional one-year agreements were entered into with this customer in late 2003, after negotiations had begun for the customer to dispose of its equity interest in Calfrac. Notwithstanding the foregoing, there can be no assurance that Calfrac's relationship with these customers will continue, and a significant reduction or total loss of the business from these customers, if not offset by sales to new or existing customers, could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Sources, Pricing and Availability of Raw Materials and Component Parts

Calfrac sources its raw materials, such as proppant, chemicals, nitrogen, carbon dioxide and coiled tubing, from a variety of suppliers, most of whom are located in Canada and the United States. Should Calfrac's current suppliers be unable to provide the necessary raw materials or otherwise fail to deliver products in the quantities required, any resulting delays in the provision of services could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Government Regulation

Calfrac's operations are subject to a variety of federal, provincial and local laws, regulations, and guidelines, including laws and regulations relating to health and safety, the conduct of operations, the protection of the

environment, and the manufacture, management, transportation and disposal of certain materials used in Calfrac's operations. Calfrac believes that it is currently in compliance with such laws and regulations. Calfrac has invested financial and managerial resources to ensure such compliance, and anticipates that it will continue to do so in the future. Although such expenditures historically have not been material to Calfrac, such laws or regulations are subject to change. Accordingly, it is impossible for Calfrac to predict the cost or impact of such laws and regulations on its future operations.

The trend in environmental regulation has been to impose increasingly stringent restrictions and limitations on activities that may impact the environment, including the generation and disposal of waste and the use and handling of chemical substances. The implementation of new laws and regulations could result in materially increased costs, stricter standards and enforcement, larger fines and liability, and increased capital expenditures and operating costs, particularly for Calfrac's customers, which could have a material adverse effect on Calfrac's business, financial condition, results of operations and cash flows.

Kyoto Protocol

Canada is a signatory to the United Nations Framework Convention on Climate Change and has ratified the Kyoto Protocol established thereunder to set legally binding targets to reduce nation-wide emissions of carbon dioxide, methane, nitrous oxide and other so-called "greenhouse gases". The Government of Canada has put forward a Climate Change Plan for Canada which suggests further legislation will set greenhouse gases emission reduction requirements for various industrial activities, including oil and gas exploration and production. Future federal legislation, together with provincial emission reduction requirements, such as those proposed in Alberta's Bill 32: *Climate Change and Emissions Management Act*, may require the reduction of emissions or emissions intensity from the Corporation's operations and facilities. Mandatory emissions reductions may result in increased operating costs and capital expenditures for oil and gas producers, thereby decreasing the demand for Calfrac's services. The mandatory emissions reductions may also impair Calfrac's ability to provide its services economically. Management is unable to predict the impact of the Kyoto Protocol on Calfrac and it is possible that it will adversely affect Calfrac's business, financial condition, results of operations and cash flows.

Operating Risks and Insurance

Calfrac's operations are subject to hazards inherent in the oil and gas industry, such as equipment defects, malfunction and failures, and natural disasters which result in fires, vehicle accidents, explosions and uncontrollable flows of natural gas or well fluids that can cause personal injury, loss of life, suspension of operations, damage to formations, damage to facilities, business interruption and damage to or destruction of property, equipment and the environment. These risks could expose Calfrac to substantial liability for personal injury, wrongful death, property damage, loss of oil and gas production, pollution, and other environmental damages. The frequency and severity of such incidents will affect operating costs, insurability and relationships with customers, employees and regulators.

Calfrac continuously monitors its activities for quality control and safety. However, there are no assurances that Calfrac's safety procedures will always prevent such damages. Although Calfrac maintains insurance coverage that it believes to be adequate and customary in the industry, there can be no assurance that such insurance will be adequate to cover Calfrac's liabilities. In addition, there can be no assurance that Calfrac will continue to be able to maintain adequate insurance in the future at rates it considers reasonable and commercially justifiable, or that insurance will continue to be available on terms as favourable as Calfrac's existing arrangements. The occurrence of a significant uninsured claim, a claim in excess of the insurance coverage limits maintained by Calfrac, or a claim at a time when it is not able to obtain liability insurance, could have a material adverse effect on Calfrac's ability to conduct normal business operations and on its financial condition, results of operations and cash flows.

Key Personnel

The successful operation of Calfrac's business depends upon the abilities, expertise, judgment, discretion, integrity and good faith of its executive officers, employees and consultants. In addition, the ability of the Corporation to expand its services depends upon the ability to attract qualified personnel as needed. The demand for skilled oilfield employees is high, and the supply is limited. The unexpected loss of the Corporation's key personnel or the inability

to retain or recruit skilled personnel could have a material adverse effect on business, financial condition, results of operations and cash flows.

Competition

Each of the markets in which Calfrac participates is highly competitive. To be successful, a provider must provide services that meet the specific needs of oil and gas exploration and production companies at competitive prices. The principal competitive factors in the markets in which Calfrac operates are product and service quality and availability, technical knowledge and experience, reputation for safety and price. Calfrac competes with large national and multi-national companies, such as BJ Services Inc., Halliburton Energy Services, a division of Halliburton Company, and Schlumberger Ltd., that have greater financial and other resources than Calfrac. These companies offer a wide range of well stimulation services in all geographic regions in which Calfrac operates. In addition, Calfrac competes with several smaller regional competitors, such as Trican Well Services Ltd. and Sanjel Corporation. As a result of competition, Calfrac may be unable to continue to provide its present services or to acquire additional business opportunities, which may affect business, financial condition, results of operations and cash flows.

Currency Exchange Rate Risk

Calfrac's expenditures for equipment and a significant proportion of proppant are denominated in United States dollars and these expenditures are therefore directly affected by the Canadian/United States dollar exchange rate, which fluctuates over time. Net income from Calfrac's U.S. operations is denominated in United States dollars, so that a decrease in the value of the Canadian dollar will increase the Canadian dollar amount of net income from U.S. operations. However, as a result of the relative size of Calfrac's U.S. operations, this amount will not be sufficient to offset the increase in expenditures. As a result, a material decrease in the value of the Canadian dollar may negatively impact the Corporation's net revenue.

Absence of Current Business and Acquisition of Calfrac

The Corporation holds no material assets, other than the Purchase Option and certain income tax attributes, and retains certain claims and liabilities of the Corporation including expenses incurred by the Corporation in respect of the Reorganization, certain quantifiable liabilities and certain retained legal proceedings (estimated in aggregate to be approximately $4.5 million) and other expenses incurred by the Corporation including those incurred in connection with this offering and the Acquisition. See "Legal Proceedings". It is a condition of the Underwriting Agreement that at the time of the closing of this offering, the Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed. The Underwriting Agreement also provides that if this offering is completed, but the Acquisition is not completed, the Corporation must call a special meeting of the shareholders of the Corporation within 90 days of the completion of this offering to determine the appropriate use of the proceeds of this offering. If this offering is completed, the Corporation anticipates exercising the Purchase Option and acquiring Calfrac and all liabilities, including environmental liabilities, of Calfrac. Although the Corporation is not aware of any material liabilities relating to Calfrac, it is possible that liabilities may arise in the future which could have a material adverse effect on the Corporation.

Corporate Matters

To date, the Corporation has not paid any dividends on its outstanding common shares. The board of directors of the Corporation may make a determination to pay dividends in the future if circumstances permit.

Additional Financing

There is no guarantee that the Corporation will be able to secure additional financing for future costs of operations or expansion. Additional financing may not be available, or may not be available on favourable terms. Where additional financing is raised by the issuance of common shares or securities convertible into common shares from the Corporation's treasury, control of the Corporation may change and shareholders may suffer dilution to their investment. The Corporation's activities may also be financed partially or wholly with debt, which may increase the

Corporation's debt levels above industry standards. The level of the Corporation's indebtedness from time to time could impair the Corporation's ability to obtain additional financing in the future on a timely basis to take advantage of business opportunities that may arise.

Conflicts of Interest

Certain of the directors and officers of the Corporation are also directors and officers of other oil and gas and oil and gas service companies, and conflicts of interest may arise between their duties as officers and directors of the Corporation and as officers and directors of such other companies. Such conflicts must be disclosed in accordance with, and are subject to such other procedures and remedies as apply under, the ABCA.

There may be situations in which the interests of the directors and management of, and consultants to, the Corporation may conflict with those of the Corporation. Certain members of management are not engaged by the Corporation on a full-time basis and are currently involved, and will continue to be involved, in other entities, businesses and activities, some of which are described herein and all of which will place varying and conflicting demands on their time and attention. Furthermore, some such conflicts may result in the individual being in a direct conflict of interest position in relation to the Corporation. Any conflicts will be resolved in accordance with the provisions of the ABCA and other applicable laws.

Liabilities from Prior Operations

From time to time, there may be legal proceedings pending or threatened against the Corporation relating to the prior business of the Corporation. There can be no assurance that any such litigation will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation. See "Legal Proceedings" for a description of the legal proceedings currently against the Corporation.

In connection with the Arrangement, the Canadian petroleum and natural gas assets of Denison were transferred to, and the related liabilities were assumed by, Denison Resources Inc. and the mining leases and mining environmental services related assets of the Corporation were transferred to, and the related liabilities were assumed by, Denison Mines Inc. In accordance with the Arrangement Agreement, each of Denison Resources Inc. and Denison Mines Inc. provided an indemnity to the Corporation. Denison Resources Inc. provided an indemnity to the Corporation for all claims or losses with respect to liabilities relating to the Canadian petroleum and natural gas assets of Denison transferred to Denison Resources Inc. pursuant to the Arrangement. Denison Mines Inc. provided an indemnity to the Corporation for all claims or losses relating to liabilities relating to Denison's business prior to the effective date of the Arrangement, except for claims or losses covered by the indemnity provided by Denison Resources Inc. and for matters related to specific liabilities retained by the Corporation. See "Legal Proceedings".

Despite the indemnity provided to the Corporation by each of Denison Resources Inc. and Denison Mines Inc., it is possible that the Corporation may be found responsible for claims or losses relating to the assets and liabilities transferred from the Corporation to each of Denison Resources Inc. and Denison Mines Inc. In addition, it is possible that claims or losses may not be within the scope of either of the indemnities or, if within the scope of these indemnities, they may not be recoverable by the Corporation. Such circumstances will include claims or losses that exceed the limits of the applicable indemnity or if the indemnifying party lacks sufficient financial resources to satisfy its obligations pursuant to the indemnity. Because of the nature of the Corporation's former operations (oil and gas exploration and production, mining and environmental services), these claims and losses could include substantial environmental claims. The Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets.

Denison Mines Inc. has assumed the liabilities and obligations of the Corporation under a loan from Cogema, one of Denison's former joint venture partners. Most of the productive assets of Denison Mines Inc. are part of the security granted in favour of Cogema for repayment of the loan. As part of this security, Denison Mines Inc.'s share of net cash flow from the sale of uranium from the Saskatchewan based mining projects is dedicated to the loan's repayment. In addition, the original operating license for the McClean Lake facility, where substantially all of Denison Mine Inc.'s uranium is produced, has been challenged and is currently subject to a hearing at the Federal Court of Appeal. See 11(a) of the Notes to the Consolidated Financial Statements of Denison included herein. The

impact of an unfavourable decision on the ability of Denison Mines Inc. to satisfy its obligations under the indemnities provided to the Corporation cannot be determined at this time.

Claims and liabilities may arise against the Corporation as a result of Denison being a prior owner or operator of certain oil and gas exploration and production, mining and environmental services assets, and in particular, a mine near Elliot Lake, Ontario, that has been closed since 1992. Pursuant to an assignment and novation agreement dated December 22, 2003 among Denison, Denison Mines Inc., the federal government and the Ontario provincial government, Denison agreed to assign to Denison Mines Inc., and Denison Mines Inc. agreed to assume, Denison's rights and obligations under the Elliot Lake Reclamation Trust, with the federal government and Ontario provincial government providing their consent. Pursuant to a confirmation agreement dated December 29, 2003 among Denison, the federal government, the Ontario provincial government and Matco, the federal government and the Ontario provincial government confirmed that they would not make any claim with respect to Denison's environmental, health and safety obligations associated with the Elliot Lake mining facility, or any claim against any of the debt and equity capital raised, or any assets acquired (whether from capital raised or otherwise), by the Corporation after the completion of the Arrangement, provided that nothing will restrict the power of the governments to pursue the Corporation for any statutory offense under environmental, health or safety legislation occurring prior to such effective date. The board of directors of the Corporation is not aware of any such statutory offense having occurred. The confirmation agreement among Denison, the federal government, the Ontario provincial government and Matco does not limit persons other than the federal government and the Ontario provincial government from making any claims against the Corporation in respect of Denison's ownership and operation of the Elliot Lake mining facility.

ELIGIBILITY FOR INVESTMENT

In the opinion of Bennett Jones LLP, counsel to the Corporation, and Stikeman Elliott LLP, counsel to the Underwriters, subject to compliance with the prudent investment standards and general investment provisions of the following statutes (and, where applicable, the regulations thereunder) and, in certain cases, subject to the satisfaction of additional requirements relating to investment or lending policies, procedures or goals, and, in certain circumstances, the filing of such policies, procedures or goals, the Offered Shares are not, at the date hereof, precluded as investments under or by the following statutes:

Insurance Companies Act (Canada)
Trust and Loan Companies Act (Canada)
Cooperative Credit Associations Act (Canada)
Pension Benefits Standards Act, 1985 (Canada)
Pension Benefits Standards Act (British Columbia)
Financial Institutions Act (British Columbia)
Alberta Heritage Savings Trust Fund Act (Alberta)
Employment Pension Plans Act (Alberta)
Insurance Act (Alberta)
Loan and Trust Corporations Act (Alberta)
The Pension Benefits Act, 1992 (Saskatchewan)
The Insurance Act (Manitoba)
The Pension Benefits Act (Manitoba)
The Trustee Act (Manitoba)
Loan and Trust Corporations Act (Ontario)
Pension Benefits Act (Ontario)
Trustee Act (Ontario)
an Act respecting insurance (Québec) (in respect of an insurer, as defined therein, incorporated under the laws of the Province of Québec, other than a guarantee fund)
an Act respecting trust companies and savings companies (Québec) (for a trust company investing its own funds and deposits it receives or a savings company, as defined therein, which invests its own funds)
Supplemental Pension Plans Act (Québec)

Provided the Common Shares are listed on a prescribed stock exchange at the relevant time, the Offered Shares will on closing of this offering be a qualified investment, within the meaning of the Tax Act, for trusts governed by registered retirement savings plans, registered education savings plans, registered retirement income funds and deferred profit sharing plans. Based upon certain representations of the Corporation, the Offered Shares will not, on closing of this offering, constitute "foreign property" under the Tax Act.

LEGAL PROCEEDINGS

Various legal proceedings are pending against the Corporation. Other than those described below, the board of directors of the Corporation considers all such pending proceedings, comprised primarily of labour and employment claims related to the Corporation's former oil and gas operations in Greece, to be routine litigation incidental to the Corporation's business. Of the legal proceedings described below, the Elliot Lake and OilHawk matters are subject to the indemnities provided by Denison Mines Inc. and Denison Resources Inc., as applicable, pursuant to the Arrangement. See "Risk Factors - Liabilities from Prior Operations". The board of directors of the Corporation believes that the resolution of these proceedings will not, individually or in the aggregate, have a material effect on the business, financial condition, results of operations or cash flows of the Corporation (assuming the completion of this offering and the Acquisition). However, the Corporation cannot predict the outcome or ultimate impact of any legal or regulatory proceedings pending against the Corporation or affecting the business of the Corporation or any legal or regulatory proceedings that may relate to the Corporation's prior ownership or operation of assets. Consequently, there can be no assurance that the legal or regulatory proceedings referred to in this prospectus or any that may arise in the future will be resolved without a material adverse effect on the business, financial condition, results of operations or cash flows of the Corporation.

Greek Operations

In September 2002, the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of certain former employees of a subsidiary of the Corporation, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In rejecting the lower court decision, the Greek Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments were required to be made. The decision of the Greek Court of Appeal has been appealed by the employees to the Supreme Court of Greece. A hearing of the Supreme Court is not expected until at least mid 2004. The impact on the Corporation of any adverse decision in this appeal cannot be determined at this time.

In September 2003, the Supreme Court of Greece issued a ruling that another former employee of the Greek subsidiary of the Corporation be compensated for certain vacation days and referred two other compensation matters back for consideration at a new trial at the Court of Appeals of Athens. A hearing date at the Court of Appeals has been set for April 27, 2004. Another set of employees of the Greek subsidiary has received a favourable trial court ruling entitling them to compensation for a miscalculation of severance. This decision is being appealed but no appeal date has been set. The dollar impact on the Corporation of any adverse decision in these actions cannot be determined.

Greek Tax Appeal

The Greek tax authorities are appealing a decision in favour of the Greek subsidiary of the Corporation regarding a penalty for incorrectly maintaining books and data regarding the Greek operations in the amount of approximately $130,000.

OilHawk

There is an ongoing claim before the Court of Queen's Bench of Alberta against a predecessor entity of the Corporation by OilHawk Resources Ltd. The claim is fully insured and being handled by the Corporation's insurer.

Elliot Lake

The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has: (i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at Denison Mines Inc.'s decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and (ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land. The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional

taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

Claims in respect of Calfrac

Calfrac is not involved in and the Corporation is not aware of any present or pending legal proceedings against Calfrac or in respect of its assets.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby have been passed upon on behalf of the Corporation by Bennett Jones LLP and on behalf of the Underwriters by Stikeman Elliott LLP.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of the Corporation are PricewaterhouseCoopers LLP, Chartered Accountants.

Computershare Trust Company of Canada is the registrar and transfer agent for the Common Shares.

INTEREST OF EXPERTS

None of Bennett Jones LLP, Stikeman Elliott LLP or any officer or partner thereof has received or will receive a direct or indirect interest in the property of the Corporation or of any associate or affiliate of the Corporation. Bennett Jones LLP and the officers and partners thereof as a group (other than Mr. Lambert, a partner of Bennett Jones LLP who is a director of the Corporation), and Stikeman Elliott LLP and the officers, employees and partners thereof as a group, beneficially own, directly or indirectly, less than 1% of the securities of the Corporation and its associates and affiliates. Mr. Lambert's personal family holding company, Mountain Moon Capital Inc., is a shareholder of Matco, which after giving effect to the Subscription will beneficially own approximately • or •% of the Common Shares (after giving effect to this offering and the Acquisition).

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus and any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus and any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal adviser.

AUDITOR'S CONSENTS

Consent Regarding The Corporation

We have read the prospectus of Denison Energy Inc. (the "Corporation") dated •, 2004 relating to the sale and issuance of • Class A Common Shares of the Corporation. We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the above-mentioned prospectus of our report dated February 28, 2003 (except for note 13 which is as of •, 2004) to the directors of the Corporation on the consolidated balance sheets of the Corporation as at December 31, 2002, 2001 and 2000 and the consolidated statements of earnings, retained earnings and cash flows for the years then ended, and to the use in the above-mentioned prospectus of our compilation report dated •, 2004 on the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2003 and the unaudited pro forma consolidated statements of earnings for the year ended December 31, 2002 and for the nine-month period September 30, 2003.

Financial Statements of Calfrac

1. Audit Report of PricewaterhouseCoopers LLP and audited financial statements of Calfrac for each of the years in the three year period ended December 31, 2002 and unaudited financial statements of Calfrac for the nine months ended September 30, 2002 and 2003. F-30

Denison Energy Inc.

Pro Forma Financial Statements
(Unaudited)
Nine months ended September 30, 2003 and year ended December 31, 2002
(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

COMPILATION REPORT ON PRO FORMA FINANCIAL STATEMENTS

To the Directors of
Denison Energy Inc.

We have read the accompanying unaudited pro forma balance sheet of Denison Energy Inc. (the "company") as at September 30, 2003 and unaudited pro forma income statements for the nine months then ended and for the year ended December 31, 2002, and have performed the following procedures.

1. Compared the figures in the columns captioned "Denison Energy Inc." to the unaudited financial statements of the company as at September 30, 2003 and for the nine months then ended, and the audited financial statements of the company for the year ended December 31, 2002, respectively, and found them to be in agreement.

2. Compared the figures in the columns captioned "Calfrac Well Services Ltd." to the unaudited financial statements of Calfrac Well Services Ltd. as at September 30, 2003 and for the nine months then ended and the audited financial statements of Calfrac Well Services Ltd. for the year ended December 31, 2002, respectively, and found them to be in agreement.

3. Made enquiries of certain officials of the company who have responsibility for financial and accounting matters about:

   (a) the basis for determination of the pro forma adjustments; and
   (b) whether the pro forma financial statements comply as to form in all material respects with Securities Acts of the various Provinces of Canada (the "Acts").

   The officials:

   (a) described to us the basis for determination of the pro forma adjustments, and

(b) stated that the pro forma statements comply as to form in all material respects with the Acts.

4. Read the notes to the pro forma statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.

5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "Denison Energy Inc." and "Calfrac Well Services Ltd." as at September 30, 2003 and for the nine months then ended, and for the year ended December 31, 2002, and found the amounts in the column captioned "Pro forma consolidated" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

1 Basis of presentation

These unaudited pro forma consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in the prospectus of Denison Energy Inc. (the "company") dated •, 2004 relating to the issue and sale of • common shares (the "Offering"). These unaudited pro forma consolidated financial statements are based on the historical financial statements of the company and Calfrac Well Services Ltd. ("Calfrac"), together with other information available to the company's management.

These unaudited pro forma consolidated financial statements reflect the arrangement of the company pursuant to section 182 of the Business Corporations Act (Ontario) (the "Arrangement") that became effective on March •, 2004 and the subscription for 727,424, common shares by Matco Capital Ltd. for aggregate proceeds of $5,347 on March • 2004 pursuant to an agreement dated December 30, 2003 (the "Subscription"), each entered into by the company prior to the sale and issue of common shares pursuant to the Offering. The unaudited pro forma consolidated financial statements have been prepared to give effect to the acquisition of all of the shares of Calfrac for cash consideration of $28,780 and the issuance of • common shares to the current shareholders of Calfrac as consideration for their Calfrac shares pursuant to the exercise of an option granted to the company by the shareholders of Calfrac on December 30, 2003 (the "Purchase Option"), (collectively, the "Proposed Transactions").

These unaudited pro forma consolidated financial statements also reflect certain financing agreements entered into by Calfrac subsequent to September 30, 2003.

These unaudited pro forma consolidated financial statements are not necessarily indicative of the results that would actually have occurred if the events reflected herein had been in effect on the dates indicated or of the results that may be obtained in the future.

The pro forma consolidated financial statements should be read in conjunction with the December 31, 2002 audited consolidated financial statements and unaudited consolidated financial statements for the nine month period ended September 30, 2003 of Calfrac and audited consolidated financial statements for the year ended December 31, 2002 and the unaudited consolidated financial statements for the nine month period ended September 30, 2003 of the company.

Certain financial statement items have been reclassified for comparative purposes.

After the Arrangement, the Subscription, the Offering and the acquisition of Calfrac, future financial statements of the company will reflect the financial results of Calfrac with Calfrac historical financial information shown as the comparative figures.

2 Pro forma adjustments and assumptions

The pro forma consolidated balance sheet gives effect to the Proposed Transactions as if they occurred as at September 30, 2003 and the pro forma consolidated statements of earnings give effect to the Proposed Transactions as if they occurred on January 1, 2002.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

The accounting policies used in the preparation of these unaudited pro forma consolidated financial statements are in accordance with those disclosed in the company's and Calfrac's audited consolidated financial statements for the year ended December 31, 2002.

These unaudited pro forma consolidated financial statements give effect to the following transactions, assumptions and adjustments:

a) The company collects $2,353 from the assumed exercise of 964,833 stock options at prices ranging from $2.22 to $3.15 per share. It is assumed that $334 will be retained by the company, $1,685 transferred to Denison Mines Inc. and $334 applied against the bank indebtedness of Denison Resources Inc.

b) The company transfers its mining and environmental services businesses to Denison Mines Inc. and its Canadian oil and gas business to Denison Resources Inc. and distributes the common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) to its existing shareholders, pursuant to the Arrangement;

c) The outstanding common shares of the company are consolidated on a twenty-one for one basis, pursuant to the Arrangement;

d) The company issues 727,424 common shares at $7.35 per share pursuant to the Subscription for approximate gross proceeds of $5,347;

e) The net proceeds of the Offering of • common shares by the company amounts to $111,600. Transaction and issuance costs of $8,400 are assumed to have been incurred. For these costs, applying an effective tax rate of 33% provides for the recognition of a future income tax asset ("FITA") in the amount of $2,772 with the remainder $5,628 of the costs reducing the common share balance;

f) The company exercises the Purchase Option to acquire Calfrac for • common shares at an ascribed value of $115,120 and $28,780 of cash raised through the Offering.

The company's exercise of the Purchase Option allows the currently unrecognized existing tax pools of the company to be recognized as a FITA. This transaction has been treated for accounting purposes as required in the Canadian Institute of Chartered Accountants Emerging Issues Committee Abstract #110, which takes into account the relevant status of the company after the transactions stated in 2(b) above.

With tax pool amounts of approximately $224,000 federally and approximately $173,000 provincially and an effective tax rate of 33%, $73,000 is recognized as a FITA. The fair value of the tax pools acquired of $11,000, established by an earlier arms length transaction, is credited to common stock. The difference of $62,000 between the FITA recognized and the fair value of the tax pools is recorded as a deferred credit.

For the year ended December 31, 2002 and the nine month period ended September 30, 2003, the existing current income tax expense and the increase from the reduction of interest expense and increase in interest income in 2(h) will be eliminated by the tax pool value now recognized.

(all currency amounts expressed in thousands of Canadian dollars, except for per share amounts)

g) Calfrac assumes a debt obligation of $58,437 incurred in connection with an acquisition of 4,289,844 Calfrac shares prior to the acquisition of the shares of Calfrac. The creditor is entitled to demand payment of the obligation following a change of control of Calfrac, which occurs with the company's exercise of the Purchase Option. It is assumed that the creditor demands payment and that proceeds from the Offering in the amount of $58,437 are paid to satisfy the obligation. The 4,289,844 Calfrac shares are cancelled and the payment is treated as a proportionate return of capital in the amount of $4,454 and a distribution of retained earnings in the amount of $53,983;

h) Proceeds from the Offering will be used to pay $26,035 of the pre-existing Calfrac bank debt. The principal amount of the debt at January 1, 2002 was $7,837. It is assumed that the unused proceeds earned interest income at the average bank rate for the period. The repayment of this debt reduces interest expense in 2002 by $490 and for the nine month period ended September 30, 2003 by $1,087;

i) Reduction of liabilities with the cash from the Subscription in the amount of $1,000 of the company's bank indebtedness, $1,610 of Ontario tax liability and additional transaction costs of $1,348; and

j) As approved by the shareholders as part of the Arrangement, the deficit of $46,777 will be reduced to zero with corresponding reductions in contributed surplus of $927 to zero and common shares of $45,850 to $89,410.

3 Earnings per share

The authorized share capital of the company is an unlimited number of common shares, without nominal or par value.

The issued capital and related recorded values after giving effect to the Proposed Transactions including the twenty-one for one share consolidation as described in 2(c) above is set out below:

	Number of Common Shares	Amount $	Note
On completion of Proposed Transactions Described above			
Denison shareholders			
As of December 31, 2002	843,130	5,568	
As per exercise of options	45,944	3,226	2(a)
As per Subscription	727,424	5,347	2(d)

Auditors' Report

To The Directors of Denison Energy Inc.

We have audited the consolidated balance sheets of Denison Energy Inc. as at December 31, 2002, December 31, 2001 and December 31, 2000, and the consolidated statements of earnings, retained earnings and cash flows for the years ended December 31, 2002, 2001 and 2000. These financial statements are the responsibility of the Corporation's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Corporation as at December 31, 2002 and December 31, 2001 and the results of its operations and its cash flows for the years ended December 2002, 2001 and 2000 in accordance with Canadian generally accepted accounting principles.

Denison Energy Inc.
Notes to Consolidated Financial Statements

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

1. NATURE OF OPERATIONS AND SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Change of Name
On May 24, 2002 the Corporation filed Articles of Amendment that effective that day changed the corporation's name from Denison Mines Limited to Denison Energy Inc.

Nature of Operations
The Corporation operates in the mining, oil and gas and environmental service sectors. Mining activities include a 22.5% interest in the McClean Lake uranium property and mill in northern Saskatchewan, where uranium production reached commercial levels in November 1999, a 19.96% interest in the Midwest uranium deposit and mineral evaluation and exploration. Oil and gas activities consist primarily of the exploration for and production of oil and natural gas in Western Canada, where the Corporation resumed operations in late 2000 and has expanded through both exploration and acquisitions including the Innovative acquisition described in note 12. The Corporation also holds oil and gas exploration acreage in Greece. Environmental services activities include mine decommissioning services and monitoring of closed mine sites.

Basis of Presentation
The consolidated financial statements have been prepared by management in accordance with Canadian generally accepted accounting principles. The preparation of financial statements, in conformity with Canadian generally accepted accounting principles, requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosures of contingent liabilities as of the date of the financial statements and the reported amounts of revenue and expenses during the reporting period. The most significant estimates are related to the economic lives and recoverability of mining and oil and gas assets, the provisions for decommissioning and reclamation, post-employment benefits, future income taxes and the evaluation of contingent liabilities. Actual results could differ materially from those estimates. The summary of significant accounting policies below describes the accounting methods and practices that have been used in the preparation of these consolidated financial statements. This summary is presented to assist the reader in interpreting the statements contained herein.

Certain comparative figures for prior periods have been reclassified to conform with the presentation adopted in these financial statements. This reclassification has no impact on net earnings or retained earnings.

Consolidation Principles
The consolidated financial statements include the accounts of the Corporation and its subsidiaries. The Corporation's interests in the McClean Lake and Midwest uranium joint ventures and its oil and gas joint ventures are accounted for using the proportionate consolidation method. Under this method, the Corporation includes its proportionate share of assets, liabilities, revenues and expenses.

Revenue Recognition
Mining and oil and gas revenue are recognized when title passes from the Corporation to its customer. Revenue on decommissioning contracts is recognized using the percentage of completion method, where sales, earnings and unbilled accounts receivable are recorded as related costs are incurred. Earnings rates are adjusted periodically as a result of revisions to projected contract revenues and estimated costs of completion. Losses, if any, are recognized fully when first anticipated. Royalty revenue is recognized when earned under the respective agreement.

Cash and Cash Equivalents
Cash and cash equivalents consist of cash and short-term investments with original maturities not exceeding 90 days and are stated at cost, which approximates market value.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Inventories and Prepaid Expenses
Uranium concentrates, assets purchased for resale, supplies and ore in stockpiles are recorded at the lower of average cost and net realizable value. Inventory of ore in stockpiles consists of actual costs to remove overburden and mine ore together with the amortization of open pit mining equipment and is charged to production using the units of production method.

Property, Plant and Equipment
Mining Property, Deferred Exploration and Development Costs
Exploration costs and property acquisition costs are expensed as incurred unless it is determined that a project contains economically recoverable reserves, in which case all such costs relating to that project for the current and subsequent years are capitalized. Pre-production costs, net of revenue during the start-up phase, are capitalized as development costs until the project is capable of sustained operations at commercial production levels. Capitalized mining property, deferred exploration and development costs are amortized using the unit of production method over the expected life of the mine after commercial production levels are attained.

Mine Buildings, Plant and Equipment
Mine buildings, plant and equipment are recorded at cost. Mine buildings, plant and equipment are amortized to estimated residual value over the shorter of the life of the mine, or specific period that the mill or other specific asset will be utilized, using the units of production method. When assets are retired or sold, the resulting gains or losses are reflected in current earnings.

Mining Property Evaluations
The carrying values of mining, exploration and development properties and related mine buildings and equipment are periodically assessed by management to determine whether the net recoverable amount exceeds the carrying value of the project. Any unrecoverable amount is written off against earnings. The net recoverable amount represents future undiscounted cash flows determined using proven, probable and expected reserves and estimated selling prices which reflect both historical prices and expected future selling prices, less operating, capital, financing and reclamation costs.

Oil and Gas Properties, Plant and Equipment
The Corporation's oil and gas properties, plant and equipment are carried at the lower of cost and net recoverable amount. All costs associated with the exploration for and the development of oil and gas properties are capitalized providing the total capitalized cost does not exceed the net recoverable amount. All costs of the Corporation's oil and gas property, plant and equipment are capitalized in one producing cost centre. Depletion is provided on capitalized costs in this producing cost centre by the units of production method based on estimated proven reserves.

Oil and Gas Property Evaluations
Net recoverable amount is the aggregate of estimated undiscounted future net revenues from proven reserves less operating, administration, financing and income tax expense. Estimated future net revenues are determined using year-end prices. The Corporation periodically reviews the costs associated with preproduction stage cost centres to determine whether costs are likely to be recovered. Any unrecoverable amount is written off against earnings.

Other Property, Plant and Equipment
Other property, plant and equipment are amortized according to the straight-line method based on their estimated useful lives, which range from three to twenty years.

Capitalization of Interest
Net interest costs incurred during the development, construction and start-up phase of major projects are capitalized.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Decommissioning and Site Restoration Cost
Estimated decommissioning and site restoration costs of resource properties are accrued and charged to operations using the unit of production method. Provisions with respect to site restoration include long-term treatment and monitoring costs of a longer term nature and are calculated on a discounted basis and incorporate total expected costs net of recoveries. Expenditures incurred to dismantle facilities, restore and monitor closed resource properties are charged against the related decommissioning and site restoration liability. The Corporation's resource activities are subject to various governmental laws and regulations related to the protection of the environment. The Corporation has made and continues to make expenditures in order to comply with or exceed such laws and regulations. The Corporation is continuously updating its decommissioning and site restoration cost estimates. Such estimates are, however, subject to changing laws, regulatory requirements, changing technology and other factors which will be recognized when applicable.

Post Employment Benefits
The Corporation provides dental, supplemental health care and life insurance benefits, but not pensions, to its former Canadian employees who retired on immediate pension from active service prior to 1997. The estimated cost of providing these benefits is actuarially determined using the projected benefits method and was accrued over the service life of this retiree group. The most recent actuarial valuation of this obligation was performed as of September 30, 2002. The interest cost on this unfunded liability and the surplus are being amortized over the remaining lives of this retiree group.

Future Income Taxes
The Corporation follows the asset and liability method of accounting for future income taxes. Under this method, current income taxes are recognized for the estimated income taxes payable for the current period. Future income tax assets and liabilities are determined based on temporary timing differences between the financial reporting and tax bases of assets and liabilities, and are measured using the substantively enacted tax rates and laws that are expected to apply when the differences are expected to reverse. The benefit of tax losses which are available to be carried forward are recognized as assets to the extent that they are more likely than not to be recoverable from future taxable income. Benefits which are recognized in respect of tax deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995 are credited directly to retained earnings and benefits which are recognized in respect of tax deductions which arose subsequent to the comprehensive revaluation of the Corporation's assets are credited to net earnings. The Canadian federal large corporation tax on capital is included in the provision for income taxes.

Translation of Foreign Currencies
Monetary assets and liabilities and non-monetary items carried at market value are translated into Canadian dollars at the period-end exchange rate. Other non-monetary items and revenues and expenses are translated at approximate rates in effect at the dates of the transactions, except depletion and amortization which are translated at the same rate as the related assets.

Financial Instruments
The carrying amounts for cash and short-term deposits, accounts receivable, inventories and prepaid expenses, accounts payable and accrued liabilities on the balance sheets approximate fair value because of the limited term of these instruments. The fair market value of long-term debt approximates book value unless otherwise disclosed. Fair value estimates are made at the balance sheet date, based on relevant market information and information about the financial instrument.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Stock Option Plans

In 2002 the Corporation adopted prospectively the requirements of the CICA handbook section 3470, "Stock-Based Compensation and Other Stock Based Payments." As encouraged by section 3470, the Corporation has adopted the fair value based method to account for stock-based transactions with directors, and eligible employees for options granted in 2002. The value is recognized over the applicable vesting period as an increase in compensation expense and contributed surplus. When the options are exercised, the proceeds received by the Corporation, together with the amount in contributed surplus will be credited to Common Share capital. For options granted prior to January 1, 2002 the Corporation continues to follow the accounting policy under which no expense is recognized for these stock options. When these options are exercised, the proceeds received by the Corporation will be recorded as Common Share capital.

Earnings per share

Basic earnings per Common Share are computed by dividing net earnings by the weighted average number of Common Shares outstanding during the period. Diluted per share amounts are calculated giving effect to the potential dilution that would occur if securities or other contracts to issue Common Shares were exercised or converted to Common Shares. The treasury stock method is used to determine the dilutive effect of stock options and other dilutive instruments. The treasury stock method assumes that proceeds received from exercise of in-the-money stock options are used to repurchase Common Shares at the prevailing market rate.

2. INVENTORIES AND PREPAID EXPENSES

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Uranium concentrate	**$ 11,782**	$ 11,063	$ 8,046	$ 7,064	$ 593
Inventory of ore in stockpiles	**10,970**	15,383	14,522	18,246	18,628
Mine supplies	**1,375**	1,396	1,405	1,543	1,978
Mining equipment acquired for resale	**—**	483	—	483	409

Environmental Services	**547**	**194**	**353**	337	304
	$ 153,523	**$ 21,999**	**$ 131,524**	$ 129,978	$ 122,368

(b) As at September 30, 2003 the Corporation has a 22.5% interest in the McClean Lake mine and mill and a 19.96% interest in the Midwest uranium project, both located in northern Saskatchewan. The McClean Lake mill achieved commercial production levels on November 1, 1999 and has been constructed to process ore from the McClean Lake mine as well as other deposits. A toll milling agreement has been signed with the participants in the Cigar Lake Joint Venture that provides for the processing of a substantial portion of the future output of that mine at the McClean Lake mill, for which the owners of the McClean Lake mill will receive a toll milling fee. In determining the amortization rate for the McClean Lake mill, the Corporation has reduced the amount to be amortized by its expected share of future toll milling revenue.

(c) In September 2003 the Corporation recorded a write-down of its Canadian oil and gas properties by $12,000,000. This write-down was calculated using September 30, 2003 oil and natural gas prices and updated reserve reports for its oil and gas properties.

4. BANK INDEBTEDNESS

As at December 31, 2002 the Corporation had a borrowing facility of up to $6,000,000. Subsequent to year-end, as a result of the fact that substantial proven gas reserves are awaiting pipeline allocation and the short production history of two new wells, this borrowing facility was $5,300,000 as at September 30, 2003. This facility is subject to an annual review and is repayable from oil and gas cash flows and as discussed in note 13(d). This facility bears interest at Canadian bank prime (which was 4.5% on December 31, 2002) plus 0.5% and is secured by a first charge on certain oil and gas properties and a floating charge on other assets in the Western Canadian Basin and not pledged under the facilities described in notes 5(b) and 5(c).

5. LONG-TERM DEBT

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
McClean Lake loan (note 5(b))	**$ 44,250**	$ 50,086	$ 51,962	$ 60,724	$ 59,316
Other long-term debt (note 5(c))	**1,610**	2,308	2,308	2,937	3,392
	45,860	52,394	54,270	63,661	62,708
Less: Current portion	**2,763**	3,605	10,712	11,961	11,086
	$ 43,097	$ 48,789	$ 43,558	$ 51,700	$ 51,622

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

(b) The McClean Lake loan from Cogema Resources Inc. finances the Corporation's share of the costs of development and operation of the McClean Lake mine and mill and Midwest uranium project. This loan is secured only by the Corporation's interest in the McClean Lake mine and mill and the Midwest uranium project. The Corporation's share of net cash flow from McClean Lake uranium sales is dedicated to the loan's repayment. The Corporation has the right to prepay portions of the loan facility and redraw amounts prepaid, including interest savings from amounts prepaid, on 45 days' notice. As at September 30, 2003, the Corporation has the ability to redraw $3,208,000. Interest on this loan is payable at Canadian bank prime plus 1%. The loan is currently scheduled to mature on December 31, 2005, but will be extended to December 31, 2010 if, prior to December 31, 2005, a production decision is made to develop the Midwest uranium project. Any principal balance outstanding at maturity is repayable at 20% per annum. It is not possible to determine the fair value of the McClean Lake loan.

(c) Other long-term debt of $1,610,000 as at September 30, 2003 is repayable over two years up to August 31, 2005 in annual installments plus interest which approximates Canadian bank prime. Principal payments in the next two years are: 2004 - $761,000 and 2005 - $849,000.

(d) The Corporation has a line of credit for $300,000 from a Canadian Chartered Bank. This line of credit bears interest at Canadian bank prime and is secured by a short-term deposit. At September 30, 2003, $26,000 was drawn against this line of credit.

(e) Interest expense on long-term debt was as follows:

	Nine months ended September 30		For the year ended December 31		
	2003 (unaudited)	2002 (unaudited)	2002	2001	2000 (in thousands)
McClean Lake loan	**$ 2,148**	$ 2,093	$ 2,798	$ 4,186	$ 5,623
Other long-term debt	**90**	94	117	246	89

6. POST EMPLOYMENT BENEFITS

The Corporation's post employment benefits accrual includes life insurance for each of its former Canadian employees who retired on immediate pension prior to 1997, together with the future cost of medical and dental benefits as set out in the group policies. The amount accrued is based on estimates provided by the plan administrator which are based on past experience, limits on coverage included in the plan and other assumptions including a growth in medical cost of up to 13% initially, decreasing over five years to 8% per annum and a growth in dental costs of 6% per annum, subject to limits set out in the group policies.

The Corporation's post employment benefit plan is not funded. Changes in the accrued benefit obligation are as follows:

	Nine months ended September 30		For the year ended December 31	
	2003	**2002**	2002	2001 (in thousands)
Accrued benefit obligation – beginning of year	**$ 5,714**	**$ 5,834**	$ 5,834	$ 5,966
Benefits paid	**(200)**	**(310)**	(455)	(482)
Interest cost	**252**	**251**	335	350
Accrued benefit obligation – end of year	**5,766**	**5,775**	5,714	5,834
Unamortized initial transitional surplus	**4,454**	**4,847**	4,749	5,142
	10,220	**10,622**	10,463	10,976
Less: Current portion included in accounts payable	**400**	**425**	400	500
	$ 9,820	**$ 10,197**	$ 10,063	$ 10,476

The unamortized initial transitional surplus is being amortized over the expected 12.5 year (as of September 2002) average life expectancy of this retiree group.

7. DECOMMISSIONING AND SITE RESTORATION

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Elliot Lake					
Elliot Lake mine site restoration accrual *(note 7b))*	**$ 7,681**	$ 8,059	$ 7,984	$ 8,418	$ 9,045
Less: Balance in Elliot Lake Reclamation Trust Fund *(note 7(b))*	**1,342**	1,421	1,606	1,761	2,132
	6,339	6,638	6,378	6,657	6,913
Less: Current portion included in accounts payable	**350**	400	400	425	600
	5,989	6,238	5,978	6,232	6,313
McClean Lake uranium operations *(note 7(c))*	**584**	479	498	388	–
Canadian oil and gas *(note 7(d))*	**147**	115	122	90	–
	$ 6,720	$ 6,832	$ 6,598	$ 6,710	$ 6,313

(b) The Corporation's Elliot Lake uranium mine closed in 1992 and capital works to decommission this site were completed in 1997. The remaining provision is for the estimated cost of monitoring the Tailings Management Areas at the Denison and Stanrock sites and for treatment of water discharged from these areas. The Corporation conducts its activities at both the Denison and Stanrock sites pursuant to decommissioning licenses issued by the Canadian Nuclear Safety Commission. The above accrual represents the Corporation's best estimate of the future reclamation cost based on assumptions as to levels of treatment which will be required in the future. The financial effect of future changes, if any, in requirements, laws, regulations and operating assumptions may be significant, and will be recognized if and when applicable.

Pursuant to a Reclamation Funding Agreement, effective June 30, 1994, with the Governments of Canada and Ontario, the Corporation was required to deposit 90% of its cash flow, after deducting permitted expenses, into the Reclamation Trust Fund. A subsequent agreement with the governments provides for the suspension of the Corporation's obligation to deposit 90% of its cash flow into the Reclamation Trust, provided the Corporation maintains a balance in the Reclamation Trust equal to estimated reclamation spending for the succeeding six calendar years. Withdrawals from this trust fund can only be made with the approval of the Governments of Canada and Ontario, to fund Elliot Lake site restoration costs. The Corporation believes that the current Reclamation Trust balance will be adequate to fund these costs through 2008.

(c) In addition the McClean Lake operation is subject to environmental regulations as set out by Saskatchewan Environment and the Canadian Nuclear Safety Commission. As required by Saskatchewan Environment, the operator of the McClean Lake joint venture has arranged Letters of Credit securing future decommissioning and reclamation liabilities. The Corporation has agreed to indemnify the operator for its proportionate share of any loss incurred up to a maximum amount of $7,755,000.

(d) The Corporation has estimated future removal and site restoration costs of $957,000 at September 30, 2003 (December 31, 2002 - $325,000, December 31, 2001 - $278,000, December 31, 2000 - $182,000) for abandoning its Canadian oil and gas wells and facilities.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

8. INCOME TAXES

(a) Since the Corporation operates in three industrial and geographic segments, its income is subject to varying rates of taxation. A reconciliation of the combined Canadian federal and provincial income tax rate to the Corporation's effective rate of income and resource taxes is as follows:

	For the Year Ending December 31	
	2002	2001
		(in thousands)
Earnings before income taxes	**$ 2,929**	$ 3,214
Combined federal and provincial income tax rate	**43.50%**	43.04%
Computed income tax expense	**$ 1,274**	$ 1,383
Increase (decrease) in taxes resulting from:		
Benefit of previously unrecognized federal and provincial tax pools	**(1,198)**	(1,307)
Resource allowance	**(81)**	(61)
Reduction in Ontario income tax rate due to lower income allocation to Ontario	**—**	(2,000)
Adjustments relating to other years	**(469)**	—
Other	**(78)**	195
Ontario income tax recovery	**(552)**	(1,790)
Federal large corporation tax	**413**	286
Income tax recovery	**$ (139)**	$ (1,504)

(b) The Corporation uses the asset and liability method of accounting for the tax effect of temporary differences between the carrying amount and tax bases of the Corporation's assets and liabilities. Temporary differences arise when the realization of an asset or the settlement of a liability would give rise to either an increase or decrease in the Corporation's income taxes payable for the year or a later period. The Corporation's future tax liability arises in computing its Ontario tax liability, from the deduction of temporary differences, principally capital cost allowance, Canadian exploration and development expenses of $30 million more for tax than accounting, less the future tax reduction expected from the utilization of non-capital losses of $20 million which expire in 2006. As at December 31, 2002, the Corporation has not recognized the future tax benefits for both Federal and Saskatchewan tax purposes, from the future utilization of non-capital loss carry forwards of $21 million expiring in 2006 or temporary tax differences in excess of book values of $208 million that it can carry forward to shelter future Federal and Saskatchewan income tax liabilities. Of this amount, $97 million relates to deductions which arose prior to the Corporation's comprehensive revaluation of assets in 1995. In 2002, the Corporation was able to offset its entire Federal and Saskatchewan income tax expense against these unrecognized tax deductions.

9. SHAREHOLDERS' EQUITY

(a)

	As at September 30		As at December 31		
	2003	2002	2002	2001	2000
	(unaudited)	(unaudited)			(in thousands)
Common stock *(note 9(b))*	**$ 5,568**	$ 5,568	$ 5,568	$ 935	$ 1
Common Share Purchase Warrants *(note 9(c))*	**—**	—	—	688	688
Contributed Surplus *(note 9(c))*	**1,229**	928	937	240	240
Retained Earnings	**67,621**	81,086	81,647	78,579	73,861
	$ 74,418	$ 87,582	$ 88,152	$ 80,442	$ 74,790

(b) Common Stock

Authorized
The authorized share capital consists of an unlimited number of Common Shares.

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

Issued

Changes in issued Common Shares were as follows:

	Number of Shares	(in thousands of $)
Balance as of December 31, 2000	**15,893,560**	$ 1
Shares issued on acquisition of Innovative Energy Inc. net of issued cost of $33,000 (note 12(d))	**386,880**	934
Balance as of December 31, 2001	**16,280,440**	935
Purchase and cancellation of fractional Common Shares resulting from one for 20 share consolidation	**(3,287)**	(12)
Issue of flow-through Common Shares net of $355,000 issue Costs	**1,428,571**	4,645
Balance as of September 30, 2003 and December 31, 2002	**17,705,724**	$ 5,568

All Common Stock balances have been restated to reflect a one for 20 share consolidation, which became effective on May 24, 2002. Prior period earnings per share have been calculated to give effect to this share consolidation as if the share consolidation had been effective at the beginning of the earliest period presented.

(c) Contributed Surplus and Common Share Purchase Warrants

	Nine months ended September 30		For the year ended December 31		
				(in thousands)	
	2003	2002	2002	2001	2000
Balance – beginning of period	**$ 937**	$ 240	$ 240	$ 240	$ 240
Expiry at 549,550 Common Share Purchase Warrant on July 18, 2002	**—**	688	688	—	—
Common Share Stock Options expensed (note 9(d))	**292**	—	9	—	—
Balance – end of period	**$ 1,229**	$ 928	$ 937	$ 240	$ 240

(d) Stock Option Plan

The Corporation has issued stock options pursuant to a Stock Option Plan, approved by shareholders in 1996, under which the Board of Directors may issue up to 2,384,000 Common Shares to directors, eligible employees and service providers. Under this plan the exercise price of each option equals the market price of the Corporation's stock on the date of the grant. A portion of the issued options vest on the anniversary of their grant, except that all options outstanding vest immediately on a takeover. Options expire if unexercised after ten years. A summary of the status of the Corporation's stock options issued under this plan as at September 30, 2003, December 31, 2002 and 2001 and changes during the periods and years ending on those dates is presented below:

(All information as of September 30, 2003 and 2002 and for the nine months ended September 30, 2003 and 2002 is unaudited.)

	For the nine months ended September 30, 2003 (unaudited)		For the year ended December 31, 2002		For the year ended December 31, 2001	
	Shares	**Weighted Average Exercise Price**	Shares	Weighted Average Exercise Price	Shares	Weighted Average Exercise Price
Outstanding beginning of period	**1,002,250**	**$ 4.85**	927,250	$ 5.04	559,750	$ 6.65
Granted	**520,500**	**2.31**	75,000	$ 2.49	367,500	$ 2.60
Forfeited	**402,750**	**6.99**	—	—	—	—
Outstanding end of period	**1,120,000**	**$ 2.90**	1,002,250	$ 4.85	927,250	$ 5.04
Options exercisable at period end	483,833		775,708		626,650	

The following table summarizes information about stock options outstanding at September 30, 2003:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Sept. 30, 2003	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Sept 30, 2003	Weighted-Average Exercise Price
$7.60	97,500	2.7	$ 7.60	97,500	$ 7.60
$2.22 to $3.15	1,022,500	7.0	$ 2.45	385,833	$ 2.45
$3.15 to $7.60	1,120,000	6.9	$ 2.32	483,333	$ 3.47

The following table summarizes information about stock options outstanding at December 31, 2002:

	Options Outstanding			Options Exercisable	
Range of Exercisable Prices	Number Outstanding Dec. 31, 2002	Weighted-Average Remaining Contractual Life	Weighted-Average Exercise Price	Number Exercisable Dec. 31, 2002	Weighted-Average Exercise Price
$7.20 to $7.80	450,250	3.4	$ 7.62	450,250	$ 7.62
$2.31 to $3.15	552,000	8.3	$ 2.60	325,458	$ 2.60
$3.15 to $7.80	1,002,250	5.6	$ 4.85	775,708	$ 4.85

In 2002, the Corporation adopted prospectively CICA handbook section 3870, "Stock-based Compensation and Other Stock-Based Payments". The compensation expense associated with this stock option series has been calculated using the Black-Scholes option-pricing model and $9,000 has been expensed in 2002 and $292,000 in the nine months ended September 30, 2003. The pricing model assumes a 10-year term, expected Common Stock price volatility of 67% and a weighted average life of 10 years and a weighted average risk-free interest rate of 5.4% and an assumption that dividends are reinvested in the Corporation. These options have a ten-year term, with vesting periods ranging from one to four years of the grant date.

(e) Earnings Per Share Data

Prior period earnings per share calculations give effect to the share consolidation described in note 9(b) as if the share consolidation had been effective at the beginning of the period presented.

The calculation of basic earnings per share is based on the weighted average number of shares outstanding during the year in the amount of 16,879,892 (2001 - 15,949,737) Common Shares.

The calculation of diluted earnings per share takes into consideration the potential issue of shares under Stock Options and, in 2001, Common Share Purchase Warrants where the strike price is below the average Common Share price for the year. The number of dilutive options in 2002 is 314,204 (2001 – 412,500). In 2002, 688,046 (2001– 514,750) Stock Options and in 2002 0, (2001 550,000) Common Share Purchase Warrants have been excluded from the calculation of diluted earnings per share as the exercise price is greater than the average Common Share price in the year.

10. OTHER CHANGES IN WORKING CAPITAL

Other changes in working capital consist of:

	As at September 30		As at December 31		
(in thousands)	**2003 (unaudited)**	2002 (unaudited)	**2002**	2001	2000
Accounts receivable	**$ 8,384**	$ 8,700	**$ 567**	$ 868	$ 10,701
Inventories and prepaid expenses	**57**	(1,471)	**2,390**	(6,164)	349
Less amortization of ore milled from Stockpiles	**(3,552)**	(4,057)	**(4,912)**	(5,863)	(6,272)
Accounts payable and accrued liabilities	**(2,338)**	(5,240)	**(1,891)**	(49)	(33,248)
Current taxes payable	**—**	—	**—**	—	513
	$ 2,551	$ 2,068	**$ (3,846)**	$ (11,208)	$ (27,957)

11. CONTINGENT LIABILITIES AND COMMITMENTS

(a) On September 23, 2002 The Federal Court of Canada, Trial Division, quashed the original McClean Lake facility operating license issued in 1999. That license had been superceded and the facility has continued to operate under the new four-year operating license issued in August 2001. The Trial Division decision has been appealed by both the federal regulator of the facility, the Canadian Nuclear Safety Commission ("CNSC") and by the operator and majority owner of the facility, Cogema Resources Inc. The Province of Saskatchewan and First Nations and Métis groups have intervened in support of the appeal. The Federal Court of Appeal granted a stay of the Trial Division decision pending the outcome of the appeal.

The Trial Division decision quashed the original 1999 operating license on the basis that the *Canadian Environmental Assessment Act* was not complied with. Specifically, the project was subject to a lengthy public process under legislation that was replaced by the *Canadian Environmental Assessment Act*. The Trial Division decision creates a significant amount of uncertainty about the rules applicable to obtaining the necessary approvals for the operation of the McClean Lake facility.

While the outcome of the appeal process cannot be determined, the Corporation believes that ultimately the Trial Division decision will be nullified through the appeal process or by the completion of further regulatory requirements. An application for a new license for the McClean Lake facility has been filed with the CNSC. Pending the appeal of the decision, the stay granted by the Federal Court of Appeal eliminates the risk of a stoppage in production at McClean Lake. The Corporation believes that with the continuing efforts of all interested parties, a shut down of the McClean Lake facility is unlikely. The impact of an unfavourable decision cannot be determined at this time.

(b) In September 2002 the Greek Court of Appeal overturned the lower court decision that had ruled that the termination of Denison's former employees, following closure in 1998 of its Greek oil and gas operations, was invalid and abusive and that further payments should be made. In unanimously rejecting the lower court decision, the Court of Appeal determined that the terminations were made in good faith and in accordance with applicable law and ruled that no further severance payments are required to be made. These former employees have further appealed this Court of Appeal decision to the Supreme Court of Greece. The Corporation believes that this appeal will be unsuccessful. The impact of an unfavourable decision cannot be determined at this time.

(c) The City of Elliot Lake has filed complaints with the Ontario Assessment Review Board, alleging that the Municipal Property Assessment Corporation has:

(i) understated the current value which the City is required to use in determining the annual property taxes attributable to the tailings management areas at the Corporation's decommissioned Elliot Lake mine site and those of other closed uranium mines in Elliot Lake; and
(ii) incorrectly categorized these tailings management areas as vacant commercial land, rather than occupied industrial land.

The Corporation believes that the City's complaints are unlikely to be successful. The dollar value of any additional taxes arising from these complaints, in the event the City were to be successful, cannot be determined but could be material and no provision has been made for such amounts.

(d) The Corporation is involved in various other legal actions in the course of business. In the opinion of management, the aggregate amount of any potential liability is not expected to have a material adverse effect on the Corporation's financial position or results.

(e) In July 2002, the Corporation raised $5,000,000 through the issue of 1,428,571 flow-through Common Shares. The Corporation has spent the proceeds of this issue on Canadian Exploration Expenses. As at June 30, 2003, $996,000 remains to be spent prior to July 30, 2004.

(f) Corporation's lease commitments under two operating leases for premises are 2003 - $223,000, 2004 - $196,000, 2005 - $25,000 and 2006 - $7,000.

12. ACQUISITION OF INNOVATIVE ENERGY LTD.

Effective November 8, 2001 the Corporation acquired 100% of Innovative Energy Ltd. of Calgary. The acquisition has been accounted for as a purchase and accordingly these financial statements include Innovative's results from November 8, 2001 onward. The estimated fair value of net assets acquired on November 8, 2001 from Innovative Energy Ltd. and the consideration paid, were as follows:

	As at November 8, 2001
Net assets acquired	
Assets	(in thousands)
Current assets	**$ 533**
Oil and gas property, plant and equipment	**5,597**
	6,130
Liabilities	
Bank indebtedness	**2,285**
Other current liabilities	**913**
Provision for site restoration	**82**
	3,280
Net assets acquired	**$ 2,850**
Consideration	
Cash	**$ 1,916**
Non cash	
Issue of 386,880 Common Shares net of issue costs of $33,000	**934**
Total consideration	**$ 2,850**

13. SUBSEQUENT EVENTS

(a) On December 30, 2003 the Corporation entered into an agreement that provides for, subject to Shareholder approval, a Plan of Arrangement pursuant to section 182 of the *Business Corporations Act* (Ontario) involving the Corporation, Denison Mines Inc. ("Denison Mines"), Tenwest Uranium Limited ("Tenwest"), Denison Resources Inc. ("Denison Resources"), Denison Resources Partnership (the "Partnership"), Denison Mine Holding Corporation ("Mine Holdco") and E. Peter Farmer.

Under this proposed Plan of Arrangement, Denison Mines will acquire the mining and environmental services assets of Denison Energy and be engaged in the mining, milling and sale of uranium concentrates and exploration and development of mineral properties and in providing mine decommissioning and monitoring for third parties. Denison Mines will assume all liabilities, including environmental liabilities, related to the mining assets of the Corporation. As part of the above transaction, Denison Mines will also acquire the assets of the Corporation's wholly owned subsidiary, Tenwest Uranium Limited. Further, Denison Resources will acquire the Canadian oil and gas assets of the Corporation and be engaged in the exploration, development, production and sale of oil, natural gas and natural gas liquids. Denison Resources will assume all liabilities, including environmental liabilities related to the Canadian oil and gas assets of the Corporation. The Plan of Arrangement will also result in the consolidation of the common shares of the Corporation on a twenty-one for one basis. The Plan of Arrangement is subject to regulatory, judicial and shareholder approval and is anticipated to be completed in early March 2004.

(b) Pursuant to the Plan of Arrangement, each of the Corporation's shareholders will receive common shares of Denison Mines Inc. and Denison Oil Corporation (the parent of Denison Resources Inc.) in addition to their one share for the Corporation currently held. After the above is completed, the Plan of Arrangement will result in the consolidation of the Common Shares of the Corporation on a twenty-one for one basis. The Corporation has agreed that immediately following the completion of the Plan of Arrangement described in note 13 (a) above, it will issue the number of Common Shares equal to 45% of the outstanding common shares (after giving effect to such share issuance) to Matco Capital Ltd. ("Matco") and other parties designated by Matco at a purchase price of $7.35 per Common Share after giving effect to the above consolidation.

(c) The Corporation has entered into the Calfrac Option Agreement pursuant to which the shareholders of Calfrac Well Services Ltd. ("Calfrac") have granted the Corporation an option to purchase all of the shares of Calfrac following the completion of the Plan of Arrangement described in note 13 (a) and the Matco subscription described in note 13 (b) for an aggregate purchase price of $227.5 million including assumed debt. The Corporation has the option to pay the purchase price in cash or in a combination of cash and common shares, provided that if the Corporation pays the purchase price by the issuance of common shares, the common shares must make up not less than 80% of the purchase price. In connection with the Corporation's business plans, including the acquisition of Calfrac, the Corporation is currently contemplating a public offering of common shares to raise approximately $120 million.

(d) Following the receipt of revised reserve reports in September, 2003 the borrowing facility described in note 4 has been revised and now requires a reduction in the maximum available on January 1, 2004 to $4,800,000 and further reductions to $3,200,000 on March 31, 2004. The Corporation has agreed to apply net sales proceeds from disposition of any Canadian oil and gas asset together with net proceeds from any share issue attributable to oil and gas assets or stock option proceeds attributable to oil and gas assets to reduce this facility.

14. SEGMENTED INFORMATION

Operations are in the following industries:

Mining	- primarily involves mining, milling and sale of uranium concentrates and exploration and development of mineral properties.
Oil and Gas	- exploration, development, production and sale of oil and natural gas and receipt of royalty revenue.
Environmental Services	- mine decommissioning services and monitoring of decommissioned sites for third parties.

Auditors' Report

To the Directors of
Calfrac Well Services Ltd.

We have audited the consolidated balance sheets of **Calfrac Well Services Ltd.** as at December 31, 2002 and 2001 and the consolidated statements of operations and retained earnings and cash flows for each of the years in the three year period ended December 31, 2002. These financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2002 and 2001 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2002 in accordance with Canadian generally accepted accounting principles.

1 Description of business and basis of presentation

Calfrac Well Services Ltd. (the "company") is a private company originally incorporated under the Business Corporation Act (Alberta) on June 28, 1999. It amalgamated with 850288 Alberta Ltd. on January 1, 2000. The company has established oilfield operations in Red Deer, Alberta, Grand Prairie, Alberta and Medicine Hat, Alberta as well as the United States and offers stimulation services to the oil and gas industry including fracturing, acidizing and coiled tubing services.

2 Summary of significant accounting policies

The financial statements of the company have been prepared by management in accordance with Canadian generally accepted accounting principles. Because a precise determination of many assets and liabilities is dependent upon future events, the preparation of financial statements necessarily involves the use of estimates and approximations which have been made using careful judgement. The financial statements have, in management's opinion, been properly prepared within reasonable limits of materiality and within the framework of the significant accounting policies summarized below:

a) Principles of consolidation

These financial statements include the accounts of Calfrac Well Services Ltd. and its wholly owned subsidiary, Calfrac Well Services Corp. Calfrac Well Services Corp. was incorporated in the United States during 2001 and commenced operations in the last quarter of 2001.

b) Foreign currency translation

The financial accounts of the subsidiary are translated into Canadian currency using the temporal method of translation. Under the temporal method, monetary denominated items are translated at the rate of exchange at the balance sheet date while non-monetary items are translated at the historical rate applicable on the date of the transaction giving rise to the non-monetary balance. Revenues and expenses are translated at the monthly average exchange rates. Gains or losses in translation are recognized in income as they occur.

c) Cash and cash equivalents

Cash and cash equivalents consist of cash on deposit and short-term investments maturing within 90 days.

d) Marketable securities

Marketable securities are carried at the lower of cost and market value.

e) Inventory

Inventory consists of chemicals and proppants used to stimulate wells and is stated at the lower of cost, determined on a first-in, first-out basis and net realizable value.

(Information as at and for the period ended September 30, 2003 is unaudited)

f) Capital assets

Capital assets are recorded at cost and are depreciated over their estimated economic useful lives using the straight-line method at the following annual rates:

Field equipment	10 years
Buildings	20 years
Shop, office and other equipment	5 years
Computers and computer software	3 years
Leasehold improvements	Term of the lease

g) Income taxes

The company follows the liability method of determining income taxes where future income taxes are determined based on temporary differences between the tax bases of assets or liabilities and their carrying amounts in the financial statements.

h) Revenue recognition

Revenue is recognized as services are rendered and products are provided.

i) Stock-based compensation plans

The company does not recognize compensation cost for its stock-based compensation; therefore, no stock-based compensation expense is recorded either on granting or exercise of stock options. Consideration paid by employees, officers or directors on the exercise of stock options is recorded as share capital.

j) Goodwill

Goodwill, which represents the excess of cost over the fair value of net assets acquired, is assessed by the company for impairment at least annually. The impairment test is carried out in two steps. In the first step, the carrying amount is compared with its fair value. When the fair value exceeds its carrying amount, goodwill is considered not to be impaired and performance of the second step of the impairment test is unnecessary. The second step compares the implied fair value of the goodwill with its carrying amount to measure the amount of the impairment loss, if any.

(Information as at and for the period ended September 30, 2003 is unaudited)

On February 23, 2000, the company acquired 100% of the outstanding shares of 851350 Alberta Ltd. ("851350") in exchange for 2,125,000 common shares valued at $1 per share. 851350 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851350, this contract was assigned to Calfrac Well Services Ltd. and 851350 was dissolved on March 1, 2000. $654,325 of the purchase price is being amortized over the four year life of the contract. $1,470,675 has been identified as having an indefinite life and has been classified as goodwill.

On April 5, 2001, the company acquired 100% of the outstanding shares of 851355 Alberta Ltd. ("851355") in exchange for 2,390,625 common shares valued at $1 per share. 851355 had no tangible assets or liabilities but owned an intangible asset consisting of contractual arrangements with a major oil and gas producer. Upon acquisition of 851355, this contract was assigned to Calfrac Well Services Ltd. and 851355 was dissolved on April 10, 2001. $584,802 of the purchase price is being amortized over the four year life of the contract. $1,805,823 has been identified as having an indefinite life and has been classified as goodwill.

As a consequence of the transactions described above, the oil and gas producer acquired a significant minority interest in the company. For the nine months ended September 30, 2003, the company provided services to the oil and gas producer in the amount of $56,952,697 (September 30, 2002 –$28,690,951; December 31, 2002 – $56,270,727; 2001 – $16,137,002; 2000 – $7,523,493). At September 30, 2003 the oil and gas producer owed the company $11,916,589 (December 31, 2002 – $12,261,137; 2001 – $3,765,236). The company's transactions with the oil and gas producer were in the normal course and have been measured at the exchange amount.

5 Bank loans

Loan bearing interest at prime plus 1%.	-	6,999
	34,242,987	22,958,906

In 2002, the company implemented the Canadian Instituted of Chartered Accountants ("CICA") pronouncement EIC #122. The pronouncement requires that bank debt that is callable on demand be reclassified as a current liability. This presentation has been adopted for December 31, 2002 with prior periods reclassified to conform to this presentation.

Effective September 2003, the company renegotiated the terms of these loans to remove the demand feature. Accordingly, at September 30, 2003, these loans have been reflected as long-term, with the current portion of long-term debt reflected accordingly. In November 2003, the loans were amalgamated under one loan facility.

As at September 30, 2003, the company had an unutilized operating loan facility of $5 million and an undrawn revolving equipment term loan in the amount of $7.5 million.

Scheduled principal repayments required in each year to retire the bank loans and long-term debt (see note 6) as at September 30, 2003 are as follows:

	$
2004	11,526,158
2005	10,190,006
2006	6,731,606
2007	4,719,917
2008	3,020,472
Thereafter	2,745,786
	38,933,945

(Information as at and for the period ended September 30, 2003 is unaudited)

6 Long-term debt

	As at December 31,	
	2002	**2001**
	$	**$**
Debenture bearing interest at 8.95% requiring payment of accrued interest monthly plus a fixed principal payment of $53,575 per month, secured by charges on specific equipment.	2,249,850	2,892,750
Non-interest bearing unsecured loan requiring a fixed principal payment of $37,595 per annum.	136,985	-
	2,386,835	2,892,750
Less: Current portion	(680,495)	(642,900)
	1,706,340	2,249,850

7 Income taxes

The following table summarizes the temporary differences that give rise to the future tax liability at December 31:

	As at December 31,	
	2002	**2001**
	$	**$**
Capital assets	6,841,722	4,668,318
Bonus payable	(858,621)	(430,102)
Deferred financing costs	(56,344)	(82,760)
Other	(30,619)	(33,640)
	5,896,138	4,121,816

(Information as at and for the period ended September 30, 2003 is unaudited)

The provision for income taxes in the statement of operations and retained earnings varies from the amount that would be computed by applying the expected tax rate of 42.1% (2001 – 42.6%; 2000 – 43.6%) to income before income taxes. The principal reasons for differences between such expected income tax expense and the amount actually recorded are as follows:

	Years ended December 31,		
	2002 **$**	**2001** **$**	**2000** **$**
Income before tax	16,014,378	13,063,975	6,851,178
Income tax rate	42.1%	42.6%	43.6%
Computed expected income tax expense	6,742,053	5,565,253	2,897,114
Increase (decrease) in income taxes resulting from			
Manufacturing and processing – lower effective tax rate	(879,281)	(674,101)	(422,033)
Non-deductible expenses	177,781	127,800	87,713
Future income tax benefit from tax rate reduction	(87,787)	-	-
U.S. – lower effective tax rate	(38,676)	-	-
Utilization of loss carryforwards not previously recognized	-	-	(1,376,739)
Other	(8,367)	201,732	(127,446)
Large corporations tax	84,000	78,000	91,781
	5,989,723	5,298,684	1,150,390

(Information as at and for the period ended September 30, 2003 is unaudited)

Stock options

The company issued 265,625 stock options to senior executives on August 15, 2003 with an exercise price of $1 per share. The stock options granted vest immediately and expire in five years. Stock options vested may be exercised at any time between the date on which it becomes exercisable and the end of the stock option's term.

Stock-based compensation costs

Effective January 1, 2002, Canadian generally accepted accounting principles require disclosure of impact on net earnings using the fair value method for stock options issued on or after January 1, 2002. If the fair value method had been used, the company's net income would approximate the following pro-forma amounts:

	September 30, 2003 $
Stock-based compensation costs	828,750
Net income for the period	
As reported	12,312,786
Pro-forma	11,484,036

The stock-based compensation costs are recognized over the vesting period of the stock options granted.

The fair value of each stock option granted is estimated on the date of grant using the Black-Scholes option pricing model, minimum value method, based on the following:

	September 30, 2003
Fair value of stock options granted (per common share)	$3.12
Risk-free interest rate	3.04%
Expected life (years)	0.5
Expected volatility	0%
Dividends paid	-

(Information as at and for the period ended September 30, 2003 is unaudited)

9 Commitments

The company leases property (premises), equipment and vehicles under agreements requiring aggregate minimum payment over the next five years, from December 31, 2002, as follows:

	$
2003	2,199,932
2004	1,848,807
2005	734,610
2006	616,612
2007	540,265

10 Financial instruments

The company's financial instruments that are included in the consolidated balance sheet are comprised of cash, marketable securities, accounts receivable, long-term receivable, all current liabilities and long-term debt.

a) Fair values of financial assets and liabilities

The fair values of financial instruments that are included in the consolidated balance sheet, except marketable securities, bank loans and long-term debt approximate their carrying amounts due to the short-term maturity of those instruments. The carrying value of marketable securities approximates quoted market value. The fair value of the bank loans and long-term debt is not materially different from its carrying amounts since the interest rates approximate a market rate of interest.

b) Credit risk

A substantial portion of the company's accounts receivable are with customers in the oil and gas industry and are subject to normal industry credit risks.

c) Interest rate risk

The company is exposed to interest rate cash flow risk on debt subject to floating interest rates.

(Information as at and for the period ended September 30, 2003 is unaudited)

CERTIFICATE OF THE UNDERWRITERS

DATED: January 20, 2004

To the best of our knowledge, information and belief, the foregoing constitutes full, true and plain disclosure of all material facts relating to the securities offered by this prospectus as required by the *Securities Act* (British Columbia), by Part 9 of the *Securities Act* (Alberta), by Part XI of *the Securities Act, 1988* (Saskatchewan), by Part VII of the *Securities Act* (Manitoba), by Part XV of the *Securities Act* (Ontario), by Section 64 of the *Securities Act* (Nova Scotia), by Section 13 of the *Security Frauds Prevention Act* (New Brunswick), by Part II of the *Securities Act* (Prince Edward Island), by Part XIV of the *Securities Act* (Newfoundland and Labrador), and the respective regulations thereunder. To our knowledge, this prospectus, as required by the *Securities Act* (Quebec) and the regulations thereunder, does not contain any misrepresentation that is likely to affect the value or the market price of the securities to be distributed.

Dear Sirs/Mesdames:

Re: Final Prospectus of Calfrac Well Services Ltd.

We refer to the final prospectus of Calfrac Well Services Ltd. (the "Issuer") dated August 20, 2004 (the "Prospectus"), relating to the offering of common shares of the Issuer.

We hereby consent to being named in the Prospectus as counsel for the Issuer under the headings "Legal Matters" and "Interest of Experts", and on the face page of the Prospectus and to the references to and use of our opinions under the heading "Eligibility for Investment" in the Prospectus.

We have read the Prospectus and have no reason to believe that there are any misrepresentations in the information contained therein that are derived from our opinions referred to above or that are within our knowledge as a result of our participation in the preparation of such opinions.

This letter is provided solely for the purpose of assisting you in discharging your responsibilities and may not be relied on by any other person for any other purpose.

Yours truly,

Dear Sirs/Mesdames:

Re: Calfrac Well Services Ltd. - Final Prospectus

We refer to the (final) short form prospectus dated August 18, 2004 (the "Prospectus") of Calfrac Well Services Ltd. ("Calfrac") relating to the distribution of 1,000,000 common shares of Calfrac.

We hereby consent to the use of our firm name on the face page of the Prospectus and under the headings "Eligibility for Investment", "Legal Matters" and "Interest of Experts" in the Prospectus and to the reference to our opinion under the heading "Eligibility for Investment".

We confirm that we have read the Prospectus and have no reason to believe that there are any misrepresentations in the information contained in the Prospectus that is derived from our opinion referred to above or that is within our knowledge as a result of the services we performed in connection with such opinion.

This letter is solely for the information of the addresses and is not to be referred to in whole or in part in the Prospectus or any other similar document and is not to be relied upon for any other purpose.

Yours truly,

"Stikeman Elliott LLP"

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

Attention: Mr. Douglas R. Ramsay, President and Chief Executive Officer

Dear Sir:

Re: Offering of Shares

Peters & Co. Limited, FirstEnergy Capital Corp., RBC Dominion Securities Inc., CIBC World Markets Inc. and Sprott Securities Inc. (the "**Underwriters**") understand that Calfrac Well Services Ltd. (the "**Corporation**") proposes to issue and sell 1,000,000 Common Shares (the "**Shares**") pursuant to the Prospectus and this Agreement.

Upon and subject to the terms and conditions hereof, the Underwriters agree to act as, and the Corporation appoints the Underwriters as, the sole and exclusive agents of the Corporation to offer the Shares for sale on the Closing Date, in accordance with the provisions of Section 22. If less than all of the Shares are sold by the Underwriters as agents, the Underwriters hereby severally, and not jointly, agree to purchase the Shares, as principals, in their respective percentages hereinafter mentioned, and the Corporation hereby agrees to issue and sell to the Underwriters, subject to the provisions of Section 22 hereof, at the Closing Time at a price of $28.40 per Share, that number of Shares which, together with the Shares sold by the Underwriters as agents, aggregates 1,000,000 Shares.

The Underwriters understand that the Corporation will prepare and file, in accordance with the terms hereof, the Prospectus and all other necessary documents in order to qualify the Shares for distribution in each of the Qualifying Provinces.

1. Definitions

In this Agreement:

(a) "**ABCA**" means the *Business Corporations Act* (Alberta);

(b) "**Agreement**" means this agreement between the Underwriters and the Corporation and not any particular Article or Section or other portion except as may be specified, and words such as "hereto", "herein", "hereunder" and "hereby" refer to this Agreement as the context requires;

(c) "**AIF**" means the annual information form of the Corporation dated May 18, 2004;

(d) "**Applicable Securities Laws**" means all applicable securities and corporate laws, rules, regulations, instruments, notices, blanket orders, statements, circulars, procedures and policies in the Qualifying Provinces;

(e) "**ASC**" means the Alberta Securities Commission;

(f) "**Business Day**" means a day which is not Saturday or Sunday or a legal holiday in the City of Calgary, Alberta;

(g) "**ChemErgy**" means ChemErgy Ltd.;

(h) "**Closing Date**" means August 31, 2004 or such other date as the Underwriters and the Corporation may agree which, subject to the entitlement of the Underwriters pursuant to Section 13 to terminate their obligations hereunder, is not later than October 4, 2004;

(i) "**Closing Time**" means 6:30 a.m. (Calgary time) or such other time, on the Closing Date, as the Underwriters and the Corporation may agree;

(j) "**Common Shares**" means the common shares in the share capital of the Corporation;

(k) "**Corporation Financial Statements**" means:

(i) the comparative unaudited interim consolidated financial statements of the Corporation for the six month period ended June 30, 2004;

(ii) the comparative unaudited interim consolidated financial statements of the Corporation for the three month period ended March 31, 2004; and

(iii) the comparative financial statements, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 of Denison;

(iv) the comparative financial statements, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 of Calfrac Well Services Ltd.;

(l) "**Corporation's Counsel**" means Bennett Jones LLP or such other legal counsel as the Corporation, with the consent of the Underwriters, may appoint;

(m) "**Denison**" means Denison Energy Inc. (now the Corporation);

(n) "**Documents**" means, collectively, the documents incorporated by reference in the Preliminary Prospectus and the Prospectus and any Supplementary Material including, without limitation:

(i) the AIF;

(ii) the comparative financial statements, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the shareholders of Denison;

(iii) the comparative financial statements, together with the accompanying report of the auditors, for the fiscal year ended December 31, 2003 addressed to the directors of Calfrac Well Services Ltd.;

(iv) management's discussion and analysis of financial condition and results of operations of Denison for the year ended December 31, 2003;

(v) the comparative unaudited interim consolidated financial statements of the Corporation for the three month period ended March 31, 2004;

(vi) management's discussion and analysis of financial condition and results of operations of the Corporation for the three month period ended March 31, 2004;

(vii) the comparative unaudited interim consolidated financial statements of the Corporation for the six month period ended June 30, 2004;

(viii) management's discussion and analysis of financial condition and results of operations of the Corporation for the six month period ended June 30, 2004;

(ix) the information circular of the Corporation dated May 18, 2004, except the sections entitled "Report on Executive Compensation", "Performance Graph" and "Statement of Corporate Governance Practices";

(x) the Pro Forma Financial Statements;

(xi) the material change report dated January 9, 2004 relating to (i) the proposed reorganization of Denison by way of plan of arrangement and the transfer of all of the assets and liabilities associated with Denison's mining and environmental services business and oil and natural gas business to Denison Mines Inc. and Denison Resources Inc., respectively, and the transfer of all of the shares of Denison Mines Inc. and Denison Resources Inc. to its existing shareholders; (ii) a private placement financing in connection with the reorganization; and (iii) a purchase option granted to Denison to purchase all of the outstanding shares of Calfrac Well Services Ltd. following completion of the reorganization;

(xii) the material change report dated March 15, 2004 relating to the completion of the previously announced reorganization and private placement; and

(xiii) the material change report dated April 1, 2004 relating to the completion of a public offering by way of long form prospectus of 8,064,520 common shares for gross proceeds of approximately $125 million, the exercise of the option held by Denison to purchase all of the shares of Calfrac Well Services Ltd., the amalgamation of the two entities and the name change from "Denison Energy Inc." to "Calfrac Well Services Ltd.";

(o) "**Environmental Laws**" means applicable federal, provincial, state, municipal or local laws, regulations, orders, government decrees or ordinances with respect to environmental, health or safety matters;

(p) "**Exchange**" means the Toronto Stock Exchange;

(q) "**Final MRRS Decision Document**" means a decision document for the Prospectus issued in accordance with the MRRS;

(r) "**GST**" means Goods and Services Tax provided for in the *Excise Tax Act* (Canada);

(s) "**MRRS**" means the mutual reliance review system for prospectuses and annual information forms provided for under National Policy 43-201 "Mutual Reliance Review System for Prospectuses and Annual Information Forms" among the Securities Commissions and the MRRS MOU, as defined therein;

(t) "**NI 44-101**" means National Instrument 44-101 of the Canadian Securities Administrators, as amended or replaced;

(u) "**Offering**" means the offering of Shares contemplated by this Agreement;

(v) "**Preliminary Prospectus**" means the short form preliminary prospectus of the Corporation to be dated August 12, 2004 and any amendment thereto in respect of the distribution of the Shares, in the English and French languages, including the documents incorporated by reference therein;

(w) "**Pro Forma Financial Statements**" means the unaudited pro forma consolidated financial statements of Denison, together with the notes thereto and the compilation report thereon, at pages F-2 to F-11 of the prospectus of Denison dated March 10, 2004;

(x) "**Prospectus**" means the (final) short form prospectus of the Corporation and any amendments thereto in respect of the distribution of the Shares, in the English and French languages, including the documents incorporated by reference therein;

(y) "**Public Record**" means all information filed by or on behalf of the Corporation with the Securities Commissions, including without limitation, the Documents, the Preliminary Prospectus, the Prospectus, any Supplementary Material and any other information filed with any Securities Commission in compliance, or intended compliance, with any Applicable Securities Laws;

(z) "**Qualifying Provinces**" means each of the provinces of Canada;

(aa) "**Securities Commissions**" means the securities commissions or similar regulatory authorities in the Qualifying Provinces;

(bb) "**Selling Dealer Group**" means the dealers and brokers other than the Underwriters who participate in the offer and sale of the Shares pursuant to this Agreement;

(cc) "**subsidiary**" has the meaning ascribed thereto in the *Business Corporations Act* (Alberta);

(dd) "**Supplementary Material**" means, collectively, any amendment to the Preliminary Prospectus, the Prospectus or the U.S. Placement Memorandum, any

amendment or supplemental prospectus or ancillary materials that may be filed by or on behalf of the Corporation under the Applicable Securities Laws or U.S. securities laws, as the case may be, relating to the qualification for distribution of the Shares under Applicable Securities Laws, or the offering and sale of Shares within the United States in accordance with Section 18, as the case may be;

(ee) "**Underwriters' Counsel**" means Stikeman Elliott LLP or such other legal counsel as the Underwriters may appoint;

(ff) "**Underwriters' Expenses**" has the meaning ascribed thereto in Section 12;

(gg) "**United States**" or "**U.S.**" means the United States of America, its territories and possessions, any state of the United States and the District of Columbia; and

(hh) "**U.S. Placement Memorandum**" has the meaning ascribed thereto in Section 18(a)(xi); and

"**misrepresentation**", "**material change**" and "**material fact**" shall have the meanings ascribed thereto under the Applicable Securities Laws; "**distribution**" means "distribution" or "distribution to the public", as the case may be, as defined under the Applicable Securities Laws and "**distribute**" has a corresponding meaning. Wherever the singular or masculine is used in this Agreement, the same shall be read as plural, feminine or body corporate as the context requires.

2. Fee

In consideration for their services in underwriting the distribution of the Shares in the Qualifying Provinces and, in accordance with Section 18, in the United States, the Corporation agrees to pay the Underwriters on the Closing Date a fee of $1.278 per Share for each Share purchased by the Underwriters (being an aggregate amount of $1,278,000), payable at the Closing Time. For greater certainty, the services provided by the Underwriters in connection herewith will not be subject to GST and taxable supplies provided will be incidental to the exempt financial services provided. However, in the event that Canada Revenue Agency determines that GST is exigible on the fees payable to the Underwriters hereunder, the Corporation agrees to pay the amount of GST forthwith upon the request of the Underwriters.

3. Distribution and Certain Obligations of the Underwriters

(a) During the course of the distribution of the Shares by or through the Underwriters, the Underwriters will offer and sell the Shares only in those jurisdictions where they may be lawfully offered for sale or sold. For the purposes of this Section 3, the Underwriters shall be entitled to assume that the Shares may be lawfully offered for sale and sold in the Qualifying Provinces if the Final MRRS Decision Document has been issued evidencing that a receipt for the Prospectus has been issued by the Securities Commissions of each of the Qualifying Provinces, provided the Underwriters have not been notified in writing by the Corporation of any circumstance that would legally prohibit such distribution. The Underwriters will comply with applicable laws, including the Applicable Securities Laws, in connection with the offer to sell or distribution of the Shares. Except in the

Qualifying Provinces, the Underwriters will not, directly or indirectly, solicit offers to purchase or sell the Shares or deliver the Preliminary Prospectus, the Prospectus or any Supplementary Material so as to require registration of the Shares or filing of a prospectus with respect to the Shares under the laws of any jurisdiction, including, without limitation, the United States. Any offer or sale of Shares in the United States will be made in accordance with Section 18 of this Agreement. Each Underwriter will cause similar undertakings to be contained in any agreements among the members of any Selling Dealer Group formed for the distribution of the Shares and will require any member of the Selling Dealer Group formed for the distribution of the Shares to comply with Applicable Securities Laws and U.S. securities laws, as applicable;

(b) The Underwriters will complete and will use their reasonable efforts to cause members of the Selling Dealer Group (if any) to complete the distribution of the Shares promptly after the Closing Time. Peters & Co. Limited will promptly notify the Corporation when, in the Underwriters' opinion, the Underwriters and the members of the Selling Dealer Group (if any) have ceased distribution of the Shares and, promptly after completion of the distribution, will provide the Corporation, in writing, with a breakdown of the number of Shares distributed in each of the Qualifying Provinces where that breakdown is required by the Securities Commission of that province for the purpose of calculating fees payable to that Securities Commission; and

(c) No Underwriter will be liable to the Corporation under this Section 3, with respect to a default by any of the other Underwriters.

4. Qualification for Sale

(a) The Corporation represents and warrants to the Underwriters that it is eligible to use a short form prospectus described in NI 44-101 for the distribution of the Shares.

(b) The Corporation shall:

(i) not later than August 12, 2004 have prepared and filed the Preliminary Prospectus and other documents required under the Applicable Securities Laws with the Securities Commissions and designated the ASC as the principal regulator;

(ii) have obtained from the ASC a preliminary MRRS decision document dated not later than August 12, 2004, evidencing that a receipt has been issued for the Preliminary Prospectus in each Qualifying Province; and

(iii) forthwith after any comments with respect to the Preliminary Prospectus have been received from the Securities Commissions:

(A) but not later than August 23, 2004 (or such later date as may be agreed to in writing by the Corporation and the Underwriters), have prepared and filed the Prospectus and other documents

required under the Applicable Securities Laws with the Securities Commissions; and

(B) have obtained from the ASC the Final MRRS Decision Document dated not later than August 23, 2004 (or such later date as may be agreed to in writing by the Corporation and the Underwriters), evidencing that a receipt has been issued for the Prospectus in each Qualifying Province, or otherwise obtained a receipt for the Prospectus from each of the Securities Commissions;

(c) Until the completion of the distribution of the Shares, the Corporation shall promptly take all additional steps and proceedings that from time to time may be required under the Applicable Securities Laws to continue to qualify the Shares for distribution or, in the event that the Shares have, for any reason, ceased to so qualify, to again qualify the Shares for distribution; and

(d) The Corporation shall take or cause to be taken all other steps and proceedings as may be necessary to enable the Shares to be distributed in all of the Qualifying Provinces through the Underwriters or any other registrant who complies with the relevant provisions of Applicable Securities Laws.

5. Delivery of Prospectus, U.S. Placement Memorandum and Related Documents

The Corporation shall deliver or cause to be delivered to the Underwriters the documents set out below at the respective times indicated:

(a) Prior to or contemporaneously, as nearly as practicable, with the filing with the Securities Commissions of each of the Preliminary Prospectus and the Prospectus:

(i) copies of the Preliminary Prospectus and the Prospectus, each in the English and French languages, signed as required by Applicable Securities Laws; and

(ii) copies of any documents incorporated by reference therein, each in the English and French languages, which have not previously been delivered to the Underwriters;

(b) As soon as it is available, a copy of the U.S. Placement Memorandum prepared as contemplated herein including copies of any documents incorporated by reference therein which have not previously been delivered to the Underwriters;

(c) As soon as they are available and upon request of the Underwriters, copies of any Supplementary Materials required to be filed under Applicable Securities Laws or U.S. securities laws, as applicable, signed as required by Applicable Securities Laws or applicable U.S. securities laws;

(d) Prior to the filing of the Prospectus with the Securities Commissions, a "comfort letter" from the auditors of each of the Corporation and Denison in each case dated the date of the Prospectus, addressed to the Underwriters and reasonably satisfactory in form and substance to the Underwriters, to the effect that they have

carried out certain procedures performed for the purposes of comparing certain specified financial information and percentages appearing in the Prospectus and the documents incorporated therein by reference with indicated amounts in the financial statements or accounting records of the Corporation or Denison, as applicable, and have found such information and percentages to be in agreement, which comfort letter shall be based on a review having a cut-off date of not more than two Business Days prior to the date of the Prospectus;

(e) At the time of delivery to the Underwriters of the Preliminary Prospectus and the Prospectus, the Corporation shall deliver to the Underwriters:

(i) one or more opinions of local counsel in Québec, addressed to the Underwriters and Underwriters' Counsel and dated the date of the filing of the Preliminary Prospectus and Prospectus, in form acceptable to the Underwriters, acting reasonably, to the effect that, except for information in the Preliminary Prospectus, the Prospectus or the documents incorporated therein by reference, translated by the auditors described in clause (ii) below, the text of the French language version of such document (including information incorporated by reference therein) is in all material respects a complete and accurate translation of the English language version thereof; and

(ii) a letter from the auditors of each of the Corporation and Denison in each case addressed to the Underwriters and Underwriters' Counsel and dated the date of the filing of the Preliminary Prospectus and the Prospectus, in form acceptable to the Underwriters, acting reasonably, to the effect that the information excepted from the opinion of counsel referred to in clause 5(e)(i) in the French language version of such document (including information incorporated by reference therein) and translated by each of them is in all material respects a complete and proper translation of the information contained in the English language version thereof;

(f) Opinions and comfort letters similar to the foregoing shall be provided to the Underwriters with respect to any amendment to the Preliminary Prospectus and the Prospectus and any other relevant document at the time the same is presented to the Underwriters for their signature or, if the Underwriters' signature is not required, at the time the same is filed. All such letters shall be in form and substance satisfactory to the Underwriters and the Underwriters' Counsel, each acting reasonably, as contemplated by this Section 5; and

(g) Such delivery shall also constitute the Corporation's consent to the use by the Underwriters and other members of the Selling Dealer Group of the Documents, the Preliminary Prospectus, the Prospectus and any Supplementary Material in connection with the offering and sale of the Shares in the Qualifying Provinces. Each delivery of the U.S. Placement Memorandum will constitute consent by the Corporation to the use of the U.S. Placement Memorandum and any Supplementary Material required to be prepared and/or filed under U.S. securities laws by the U.S. broker affiliates of the Underwriters and members of the Selling

Dealer Group for the distribution of the Shares for sale by them in the United States in accordance with this Agreement.

6. Commercial Copies

(a) The Corporation shall, as soon as possible but in any event not later than noon (local time at the place of delivery) on the Business Day following the date of the filing of the Preliminary Prospectus or the Prospectus, as the case may be, with the Securities Commissions and no later than noon (local time) on the first Business Day after the execution of any Supplementary Material in connection with the Preliminary Prospectus and the Prospectus, cause to be delivered to the Underwriters, without charge, commercial copies of the Preliminary Prospectus, the Prospectus or such Supplementary Material in such numbers and in such cities as the Underwriters may reasonably request by written instructions to the Corporation, the Corporation's counsel or the printer thereof given no later than the time when the Corporation authorizes the printing of the commercial copies of such documents;

(b) The Corporation shall cause to be provided to the Underwriters such number of copies of any documents incorporated by reference in the Preliminary Prospectus, the Prospectus or any Supplementary Material as the Underwriters may reasonably request; and

(c) The Corporation will cause to be delivered to the Underwriters, contemporaneously with the deliveries contemplated by clause (a), at those delivery points that the Underwriters may reasonably request, commercial copies of a U.S. Placement Memorandum and any Supplementary Material required to be delivered to purchasers or prospective purchasers of the Shares.

7. Material Change

(a) During the period of distribution of the Shares, the Corporation will promptly inform the Underwriters of the full particulars of:

(i) any material change (actual, anticipated or threatened) in the business, operations, capital or condition (financial or otherwise) of the Corporation or its properties, assets or liabilities;

(ii) any change in any material fact contained or referred to in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material; and

(iii) the occurrence of a material fact or any event which, in any such case, is, or may be, of such a nature as to:

(A) render the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material untrue, false or misleading in any material respect;

(B) result in a misrepresentation in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material; or

(C) result in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material not complying with Applicable Securities Laws and U.S. securities laws, as applicable,

provided that if the Corporation is uncertain as to whether a material change, change, occurrence or event of the nature referred to in this paragraph has occurred, the Corporation shall promptly inform the Underwriters of the full particulars of the occurrence giving rise to the uncertainty and shall consult with the Underwriters as to whether the occurrence is of such nature;

(b) During the period of distribution of the Shares, the Corporation will promptly inform the Underwriters of the full particulars of:

(i) any request of any Securities Commission or any similar regulatory authority (including the SEC) for any amendment to the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or for any additional information;

(ii) the issuance by any Securities Commission, the Exchange or any similar regulatory authority (including the SEC) of any order to cease or suspend trading of any securities of the Corporation (including the distribution of the Shares) or of the institution or threat of institution of any proceedings for that purpose;

(iii) the receipt by the Corporation of any communication from any Securities Commission or similar regulatory authority (including the SEC) or the Exchange relating to the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the distribution of the Shares;

and except as otherwise agreed by the Underwriters, the Corporation will use its best efforts to prevent the issuance of any such cease trading order or suspension order and, if issued, to obtain the withdrawal thereof as soon as possible;

(c) The Corporation will promptly comply to the reasonable satisfaction of the Underwriters and the Underwriters' Counsel with Applicable Securities Laws and U.S. securities laws, as applicable, with respect to any material change, change, occurrence or event of the nature referred to in Sections 7(a) and (b) above and the Corporation will prepare and file promptly at the Underwriters' request any Supplementary Material which in the Underwriters' opinion, acting reasonably, may be necessary or advisable to comply with Applicable Securities Laws or U.S. securities laws, as applicable; provided that the Corporation shall have allowed

the Underwriters and the Underwriters' Counsel to participate fully in the preparation of any Supplementary Material, to have reviewed any other documents incorporated by reference therein and conduct all due diligence investigations which the Underwriters may reasonably require in order to fulfill their obligations as underwriters and in order to enable the Underwriters responsibly to execute the certificate required to be executed by them in, or in connection with, any Supplementary Material, such approval not to be unreasonably withheld and to be provided in a timely manner; and

(d) During the period of distribution of the Shares, the Corporation will promptly provide to the Underwriters, for review by the Underwriters and the Underwriters' Counsel, prior to filing or issuance:

(i) any financial statements of the Corporation;

(ii) any proposed document, including without limitation any amendment to the AIF, new annual information form, material change report, interim report, or information circular, which may be incorporated, or deemed to be incorporated, by reference in the Preliminary Prospectus or the Prospectus; and

(iii) any press release of the Corporation.

8. Covenants of the Corporation

(a) The Corporation covenants and agrees with the Underwriters and undertakes that:

(i) the Corporation will use the net proceeds from the issuance and sale of the Shares in accordance with the disclosure in the Prospectus; and

(ii) the Corporation will provide to the Underwriters and Underwriters' Counsel and consultants reasonable access to the Corporation's properties, senior management personnel and corporate, financial and other records, for the purposes of conducting such due diligence reviews, before the Closing Date, as the Underwriters consider necessary or appropriate; and

(iii) the Corporation will duly, punctually and faithfully perform all of the obligations to be performed by it under this Agreement.

9. Representations of the Corporation

(a) Each delivery of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum and any Supplementary Material pursuant to Section 5 shall constitute a representation and warranty to the Underwriters by the Corporation that:

(i) all of the information and statements (except information and statements furnished by and relating solely to the Underwriters) contained in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum

and any Supplementary Material, as applicable, including, without limitation, the documents incorporated by reference, as the case may be:

(A) are at the respective dates of such documents, true and correct in all material respects;

(B) contain no misrepresentation; and

(C) constitute full, true and plain disclosure of all material facts relating to the Corporation and the Shares; and

(ii) the Preliminary Prospectus, the Prospectus and any Supplementary Material as applicable, including, without limitation, the documents incorporated by reference, as the case may be, comply in all material respects with the Applicable Securities Laws, including, without limitation, NI 44-101, and the U.S. Placement Memorandum and any related Supplementary Material comply in all respects with U.S. securities laws; and

(iii) except as is disclosed in the Public Record, there has been no intervening material change (actual, proposed or prospective, whether financial or otherwise), from the date of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum and any Supplementary Material to the time of delivery thereof, in the business, operations, capital, properties, assets, liabilities (absolute, accrued, contingent or otherwise), condition (financial or otherwise) or results of operations or ownership of the Corporation and its subsidiaries, taken as a whole.

(b) In addition to the representations and warranties contained in clause (a) hereof, the Corporation represents and warrants to the Underwriters, and acknowledges that each of the Underwriters is relying upon such representations and warranties in entering into this Agreement, that:

(i) the Corporation has full corporate power and authority to issue the Shares and, at the Closing Time, the Shares will be duly and validly created and upon receipt of the purchase price therefor will be issued as fully paid and non-assessable Common Shares and will not have been issued in violation of or subject to any pre-emptive rights or contractual rights to purchase securities issued by the Corporation;

(ii) each of the Corporation and its subsidiaries has been duly incorporated, amalgamated or continued and organized and is validly existing under the laws of its jurisdiction of incorporation, amalgamation or continuance and has all the requisite corporate power and authority to carry on its business, as now conducted and as presently proposed to be conducted, and to own its properties and assets;

(iii) each of the Corporation and its subsidiaries has conducted and is conducting its business in compliance in all material respects with all

applicable laws, rules and regulations, including Environmental Laws and is duly licensed, registered or qualified to transact business;

(iv) the Corporation has not filed any confidential material change reports still maintained on a confidential basis;

(v) the authorized capital of the Corporation consists of an unlimited number of Common Shares, of which there are 17,107,277 Common Shares currently issued and outstanding, all of which are issued as fully paid and non-assessable shares of the Corporation, and no other securities of the Corporation are issued or outstanding;

(vi) no person, firm or corporation holds any securities convertible or exchangeable into securities of the Corporation or its subsidiaries or has any agreement, warrant, option, right or privilege (whether pre-emptive or contractual) being or capable of becoming an agreement, warrant, option or right for the purchase, subscription or issuance of any unissued Common Shares or other securities of the Corporation or securities of its subsidiaries;

(vii) neither the Corporation nor its subsidiaries, directly or indirectly, holds any shares, other securities, options or rights to subscribe for shares or other securities of any corporation, partnership or other entity other than ChemErgy, of which the Corporation holds 30% of the outstanding shares;

(viii) except as disclosed in the Preliminary Prospectus and the Prospectus or in writing to the Underwriters prior to the date hereof, none of the directors, officers or employees of the Corporation, any person who owns, directly or indirectly, more than 10% of any class of securities of the Corporation, or any associate or affiliate of any of the foregoing, had or has any material interest, direct or indirect, in any material transaction or any proposed material transaction with the Corporation which materially affects, is material to or will materially affect the Corporation;

(ix) the descriptions of the assets and the liabilities of the Corporation as set forth in the Corporation Financial Statements, including the notes thereto, fairly represent in accordance with accounting principles generally accepted in Canada applied on a consistent basis, the financial position and condition of the Corporation as at the dates thereof and for the periods covered thereby and reflect all material liabilities (absolute, accrued, contingent or otherwise) of the Corporation as at the dates thereof and for the periods covered thereby required to be disclosed in accordance with generally accepted accounting principles in Canada;

(x) the Pro Forma Financial Statements have been prepared in accordance with Canadian generally accepted accounting principles, consistently applied, have been prepared and presented in accordance with Applicable Securities Laws, and include all adjustments necessary for a fair presentation;

(xi) the Corporation has no subsidiaries other than Calfrac Well Services Corp., Ram Cementers Inc., 1108325 Alberta Ltd., North Aegean Petroleum Company E.P.E. and Sea of Thrace Petroleum Company E.P.E. and has no material shareholdings in any other corporation or business organization other than ChemErgy;

(xii) there have not been any material changes in the capital, assets, liabilities or obligations (absolute, accrued, contingent or otherwise) of the Corporation and its subsidiaries (taken as a whole) from the position set forth in the Corporation Financial Statements that have not otherwise been disclosed in the Preliminary Prospectus, the Prospectus and the U.S. Placement Memorandum and there has not been any material adverse change in the business, operations or condition (financial or otherwise) or results of the operations of the Corporation and its subsidiaries (taken as a whole) since December 31, 2003 that has not otherwise been disclosed in the Preliminary Prospectus, the Prospectus and the U.S. Placement Memorandum, and there are no material facts, transactions, events or occurrences which could negatively affect such capital, assets, liabilities, obligations, business, operations, condition or prospects of the Corporation and its subsidiaries (taken as a whole) of which the Corporation is aware;

(xiii) except as disclosed in the Preliminary Prospectus and the Prospectus or in writing to the Underwriters, there are no actions, suits, proceedings or inquiries pending or threatened against or affecting the Corporation or its subsidiaries at law or in equity or before or by any federal, provincial, municipal or other governmental department, commission, board, bureau or agency which may in any way materially adversely affect the business, operations or condition (financial or otherwise) of the Corporation and its subsidiaries (taken as a whole) or which affect or may affect the distribution of the Shares and the Corporation is not aware of any existing ground on which such action, suit, proceeding or inquiry might be commenced with any reasonable likelihood of success;

(xiv) the Corporation is not in default or breach of, and the execution and delivery of this Agreement, the performance and compliance with the terms of this Agreement and the sale of the Shares by the Corporation will not result in any breach of, or be in material conflict with or constitute a default under, or create a state of facts which, after notice or lapse of time, or both, would constitute a default under any term or provision of the constating documents, by-laws or resolutions of the directors and shareholders of the Corporation or its subsidiaries, or any mortgage, note, indenture, contract, agreement (written or oral), instrument, lease or other document to which the Corporation or any of its subsidiaries is a party or by which it is bound or any judgment, decree, order, statute, rule or regulation applicable to the Corporation or its subsidiaries which default or breach might reasonably be expected to materially adversely affect the business, operations, capital or condition (financial or otherwise) of the

Corporation and its subsidiaries (taken as a whole) or their properties or assets;

(xv) no Securities Commission, the Exchange or any other similar regulatory authority (including the SEC) has issued any order preventing or suspending trading of any securities of the Corporation, no such proceeding is, to the knowledge of the Corporation, pending, contemplated or threatened, and the Corporation is not in default of any requirement of Applicable Securities Laws or applicable U.S. securities laws that would have a material effect on this Offering or the Corporation;

(xvi) the Corporation has full corporate power and authority to enter into this Agreement and to perform its obligations set out herein, and this Agreement has been duly authorized, executed and delivered by the Corporation, and this Agreement is a legal, valid and binding obligation of the Corporation enforceable against the Corporation in accordance with its terms;

(xvii) there are no matters under discussion with any governmental authority relating to taxes, governmental charges or assessments asserted by any such authority;

(xviii) the issued and outstanding Common Shares are listed and posted for trading on the Exchange and the Corporation is in material compliance with the bylaws, rules and regulations of the Exchange;

(xix) the Corporation is a reporting issuer in good standing and not in default in each of the Qualifying Provinces;

(xx) Computershare Trust Company of Canada at its principal offices in the City of Calgary and the City of Toronto is the duly appointed registrar and transfer agent of the Corporation with respect to its Common Shares;

(xxi) to the knowledge of the Corporation, no insider of the Corporation has a present intention to sell any securities of the Corporation held by it, other than as disclosed to the Underwriters;

(xxii) the form of the certificate for the Shares complies with all legal requirements;

(xxiii) no authorization, approval or consent of any court or governmental authority or agency is required to be obtained by the Corporation in connection with the sale and delivery of the Shares except as has been obtained or is contemplated hereby;

(xxiv) except as disclosed in writing to the Underwriters, to the knowledge of the Corporation as at the date of this Agreement, no processes or equipment used or proposed to be used or manufactured by or for the benefit of the Corporation or its subsidiaries or that may be utilized by any of them infringe, or will infringe, any existing patent of any person; and

(xxv) the minute books for the Corporation and its subsidiaries (including in respect of committee meetings) as provided to Stikeman Elliott LLP contain full, true and correct copies of the constating documents of the Corporation and its subsidiaries and contain copies of all minutes of all meetings and all consent resolutions of the directors, committees of the directors and shareholders of the Corporation and its subsidiaries and all such meetings were duly called, properly held and all such consent resolutions were properly adopted.

10. Indemnity

(a) The Corporation (the "**Indemnitor**") shall indemnify and save the Underwriters, and the Underwriters' agents, directors, officers, shareholders and employees, harmless against and from all liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses to which the Underwriters, or any of the Underwriters' agents, directors, officers, shareholders or employees may be subject or which the Underwriters, or any of the Underwriters' agents, directors, officers, shareholders or employees may suffer or incur, whether under the provisions of any statute or otherwise, in any way caused by, or arising directly or indirectly from or in consequence of:

(i) any information or statement contained in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material (other than any information or statement relating solely to the Underwriters and furnished to the Corporation by the Underwriters or the Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or Supplementary Materials) which is or is alleged to be untrue or any omission or alleged omission to provide any information or state any fact the omission of which makes or is alleged to make any such information or statement untrue or misleading in light of the circumstances in which it was made;

(ii) any misrepresentation or alleged misrepresentation (except a misrepresentation which is based upon information relating solely to the Underwriters and furnished to the Corporation by the Underwriters or the Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or Supplementary Materials) contained in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or any Supplementary Materials;

(iii) any prohibition or restriction of trading in the securities of the Corporation or any prohibition or restriction affecting the distribution of the Shares imposed by any competent authority if such prohibition or restriction is based on any misrepresentation or alleged misrepresentation of a kind referred to in Section 10(a)(ii);

(iv) any order made or any inquiry, investigation (whether formal or informal) or other proceeding commenced or threatened by any one or more

competent authorities (not based upon the activities or the alleged activities of the Underwriters or their Selling Dealer Group members, if any) relating to or materially affecting the trading or distribution of the Shares;

(v) any breach of, default under or non-compliance by the Indemnitor with any requirements of the Applicable Securities Laws, applicable U.S. securities laws, the by-laws, rules or regulations of the Exchange or any representation, warranty, term or condition of this Agreement or in any certificate or other document delivered by or on behalf of the Corporation hereunder or pursuant hereto; or

(vi) the Corporation not complying with any requirement of Applicable Securities Laws or applicable U.S. securities laws in connection with the transactions contemplated herein;

(b) Notwithstanding the provisions of Section 10(a), no party who has engaged in any fraud, fraudulent misrepresentation, wilful default or gross negligence shall be entitled, to the extent that the liabilities, claims, losses, costs, damages or expenses were caused by such activity, to claim indemnification from any person who has not engaged in such fraud, fraudulent misrepresentation, wilful default or gross negligence;

(c) If any claim contemplated by Section 10(a) shall be asserted against any of the individuals, persons or corporations in respect of which indemnification is or might reasonably be considered to be provided for in such section, such individual, person or corporation (the "**Indemnified Person**") shall notify the Indemnitor as soon as possible of the nature of such claim (provided that failure to so notify the Indemnitor of the nature of such claim in a timely fashion shall relieve the Indemnitor of liability hereunder only if and to the extent that such failure materially prejudices the Indemnitor's ability to defend such claim) and the Indemnitor shall be entitled (but not required) to assume the defence of any suit brought to enforce such claim, provided however, that the defence shall be through legal counsel selected by the Indemnitor and acceptable to the Indemnified Person acting reasonably and that no settlement may be made by the Indemnitor or the Indemnified Person without the prior written consent of the other, such consent not to be unreasonably withheld. The Indemnified Person shall have the right to retain its own counsel in any proceeding relating to a claim contemplated by Section 10(a) if:

(i) the Indemnified Person has been advised by counsel that there may be a reasonable legal defence available to the Indemnified Person which is different from or additional to a defence available to the Indemnitor (in which case the Indemnitor shall not have the right to assume the defence of such proceedings on the Indemnified Person's behalf);

(ii) the Indemnitor shall not have taken the defence of such proceedings and employed counsel within ten (10) days after receipt of notice of commencement of such proceedings; or

(iii) the employment of such counsel has been authorized by the Indemnitor in writing in connection with the defence of such proceeding;

and, in any such event, the reasonable fees and expenses of such Indemnified Person's counsel (on a solicitor and his client basis) shall be paid by the Indemnitor, provided that the Indemnitor shall not, in connection with any one such action or separate but substantially similar or related actions in the same jurisdiction arising out of the same general allegations or circumstances, be liable for the fees and expenses of more than one separate law firm (in addition to any local counsel) for all such Indemnified Persons;

(d) The Indemnitor hereby waives any rights to recover contribution from the Underwriters with respect to any liability of the Indemnitor by reason of or arising out of any misrepresentation in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material, provided, however, that such waiver shall not apply in respect of liability caused or incurred by reason of any misrepresentation which is based upon information relating solely to the Underwriters contained in such document and furnished to the Corporation by the Underwriters or Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or such Supplementary Material;

(e) If any legal proceedings shall be instituted against the Indemnitor in respect of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the offering of Shares, or if any regulatory authority or stock exchange shall carry out an investigation of the Indemnitor in respect of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the offering of Shares and, in any such case, any Indemnified Person is required to testify, or respond to procedures designed to discover information, in connection with or by reason of the services performed by the Underwriters hereunder, the Indemnified Persons may employ their own legal counsel and the Indemnitor shall pay and reimburse the Indemnified Persons for the reasonable fees, charges and disbursements (on a full indemnity basis) of such legal counsel, the other expenses reasonably incurred by the Indemnified Persons in connection with such proceedings or investigation and a fee at the normal per diem rate for any director, officer or employee of the Underwriters involved in the preparation for or attendance at such proceedings or investigation;

(f) The rights and remedies of the Indemnified Persons set forth in Sections 10, 11 and 12 hereof are to the fullest extent possible in law cumulative and not alternative and the election by any Underwriter or other Indemnified Person to exercise any such right or remedy shall not be, and shall not be deemed to be, a waiver of any other rights and remedies;

(g) The Indemnitor hereby acknowledges that the Underwriters are acting as agents for the Underwriters' respective agents, directors, officers, shareholders and

employees under this Section 10 and under Section 11 with respect to all such agents, directors, officers, shareholders and employees;

(h) The Indemnitor waives any right it may have of first requiring an Indemnified Person to proceed against or enforce any other right, power, remedy or security or claim or to claim payment from any other person before claiming under this indemnity. It is not necessary for an Indemnified Person to incur expense or make payment before enforcing such indemnity;

(i) The rights of indemnity contained in this Section 10 shall not apply if the Corporation has complied with the provisions of Sections 4 and 5 and the person asserting any claim contemplated by this Section 10 was not provided with a copy of the Prospectus or any amendment to the Prospectus or other document which corrects any misrepresentation or alleged misrepresentation which is the basis of such claim and which was required, under Applicable Securities Laws, to be delivered to such person by the Underwriters; and

(j) If the Indemnitor has assumed the defense of any suit brought to enforce a claim hereunder, the Indemnified Person shall provide the Indemnitor copies of all documents and information in its possession pertaining to the claim, take all reasonable actions necessary to preserve its rights to object to or defend against the claim, consult and reasonably cooperate with the Indemnitor in determining whether the claim and any legal proceeding resulting therefrom should be resisted, compromised or settled and reasonably cooperate and assist in any negotiations to compromise or settle, or in any defense of, a claim undertaken by the Indemnitor provided that such Indemnified Person shall be reimbursed as contemplated by Section 10(e).

11. Contribution

(a) In order to provide for just and equitable contribution in circumstances in which the indemnification provided for in this Agreement is due in accordance with its terms but is, for any reason, held by a court to be unavailable from the Indemnitor on grounds of policy or otherwise, the Indemnitor and the party or parties seeking indemnification shall contribute to the aggregate liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses (including legal or other expenses reasonably incurred in connection with investigation or defence of the same) to which they may be subject or which they may suffer or incur:

(i) in such proportion as is appropriate to reflect the relative benefit received by the Indemnitor on the one hand, and by the party or parties seeking indemnity on the other hand, from the offering of the Shares; or

(ii) if the allocation provided by Section 11(a)(i) above is not permitted by applicable law, in such proportion as is appropriate to reflect not only the relative benefits referred to in Section 11(a)(i) above but also to reflect the relative fault of the party or parties seeking indemnity, on the one hand, and the Indemnitor, on the other hand, in connection with the statements,

commissions or omissions or other matters which resulted in such liabilities, claims, demands, losses, costs, damages or expenses as well as any other relevant equitable considerations;

(b) The relative benefits received by the Indemnitor on the one hand, and the Underwriters, on the other hand, shall be deemed to be in the same proportion that the total proceeds of the Offering received by the Corporation (net of fees but before deducting expenses) bear to the fees received by the Underwriters. In the case of liability arising out of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or any Supplementary Material, the relative fault of the Indemnitor on the one hand, and of the Underwriters, on the other hand, shall be determined by reference, among other things, to whether the misrepresentation or alleged misrepresentation, order, inquiry, investigation or other matter or thing referred to in Section 10 relates to information supplied or which ought to have been supplied by, or steps or actions taken or done on behalf of or which ought to have been taken or done on behalf of the Indemnitor or the Underwriters and the parties' relative intent, knowledge, access to information and opportunity to correct or prevent such misrepresentation or alleged misrepresentation, order, inquiry, investigation or other matter or thing referred to in Section 10;

(c) The amount paid or payable by an Indemnified Person as a result of liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses (or claims, actions, suits or proceedings in respect thereof) referred to above shall, without limitation, include any legal or other expenses reasonably incurred by the Indemnified Person in connection with investigating or defending such liabilities, claims, demands, losses, costs, damages and expenses (or claims, actions, suits or proceedings in respect thereof) whether or not resulting in any action, suit, proceeding or claim;

(d) The Indemnitor agrees that it would not be just and equitable if contributions pursuant to this Agreement were determined by pro rata allocation or by any other method of allocation which does not take into account the equitable considerations referred to in the immediately preceding paragraphs. The rights to contribution provided in this Section 11 shall be in addition to, and without prejudice to, any other right to contribution which the Underwriters or any other Indemnified Person may have; and

(e) Any liability of the Underwriters under this Section 11 shall be limited to the amount actually received by the Underwriters under Section 2.

12. Expenses

(a) Whether or not the transactions contemplated herein shall be completed, all costs and expenses of or incidental to the distribution of the Shares shall be borne by the Corporation, including, without limitation, all costs and expenses of or incidental to the preparation, filing and reproduction of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Materials, the fees and expenses of the Corporation's counsel, the costs relating to

road show meetings and presentations (including all printing and travel costs for employees of the Corporation), listing fees, the fees and expenses of agent counsel retained by the Corporation's counsel, the fees and expenses of the Corporation's auditors, translation costs, the fees and expenses related to any newspaper advertisements and all other costs and expenses relating to this transaction and, up to an aggregate maximum of $30,000 plus GST, the fees and expenses of counsel to the Underwriters (on a solicitor and his own client basis) and other reasonable out-of-pocket expenses incurred by the Underwriters;

(b) The Corporation shall reimburse the Underwriters in respect of expenses to which the Underwriters are entitled to reimbursement upon presentation of reasonable evidence of such expenses. The Underwriters shall present reasonable evidence of the Underwriter's Expenses to the Corporation as soon as is practicable following the termination of the Offering and the Corporation shall reimburse the Underwriters within 30 days of receipt of reasonable evidence of the Underwriters' Expenses.

13. Termination

(a) Each of the Underwriters may, without liability, terminate its obligations hereunder, by written notice to the Corporation, in the event that after the date hereof and at or prior to the Closing Time:

(i) there should develop, occur or come into effect or existence any event, action, state, condition or major financial occurrence of national or international consequence, acts of hostilities or escalation thereof or other calamity or crisis or any change or development involving a prospective change in national or international political, financial or economic conditions or any governmental action, law, regulation, inquiry or other occurrence of any nature whatsoever which, in the sole opinion of the Underwriter, acting reasonably, seriously adversely affects or involves, or may seriously adversely affect or involve, the financial markets or the business, operations or affairs of the Corporation;

(ii) any order to cease or suspend trading in any securities of the Corporation or prohibiting or restricting the distribution of the Shares is made, or any proceedings are announced, commenced or threatened for the making of any such order, by any stock exchange, Securities Commission or similar regulatory (including the SEC) or judicial authority (other than as a result of any act or omission of such Underwriter contrary to the terms of this Agreement), and the same has not been rescinded, revoked or withdrawn;

(iii) the Corporation is in breach or non-performance of or default under a material covenant, representation, warranty, term or condition of the Corporation contained herein that has not been waived or rectified or remedied to the satisfaction of the Underwriter;

(iv) any inquiry, investigation or other proceeding (whether formal or informal) in relation to the Corporation or its directors or senior officers is

announced, commenced or threatened by any stock exchange, Securities Commission or similar regulatory (including the SEC) or judicial authority (unless based on the activities or alleged activities of an Underwriter or its agent), or there is any change in law, regulation or policy or the interpretation or administration thereof, and the same has not been rescinded, revoked or withdrawn, if, in the sole opinion of the Underwriter, acting reasonably, the inquiry, investigation or other proceeding, change, announcement, commencement or threatening thereof materially prevents or restricts or may materially prevent or restrict the trading or distribution of the Shares or would be expected to have a material adverse effect on the market price or value of the Shares;

(v) there should occur any material change (actual, contemplated or threatened), change in any material fact, occurrence or event of the nature referred to in Section 7(a) or any development that could result in such a material change (actual, contemplated or threatened), change in any material fact, occurrence or event, which, in the sole opinion of the Underwriter, could reasonably be expected to have a material adverse effect on the market price or value of the Shares or the marketability of the Shares;

(vi) the Underwriter shall become aware of any adverse material change (actual, contemplated or threatened) or adverse material fact with respect to the Corporation which has not been publicly disclosed or disclosed in writing to the Underwriters at or prior to the date hereof; or

(vii) there is announced any change or proposed change in the income tax laws of Canada or the interpretation or administration thereof, and such change, in the sole opinion of the Underwriter, could reasonably be expected to have a material adverse effect on the market price or value of the Shares.

(b) The Underwriters, or any of them, may exercise any or all of the rights provided for in Section 13(a) or Section 14 or Section 22 notwithstanding any material change, change, event or state of facts (except where the Underwriter purporting to exercise any of such rights is in breach of its obligations under this Agreement) and notwithstanding any act or thing taken or done by the Underwriters or any inaction by the Underwriters, whether before or after the occurrence of any material change, change, event or state of facts including, without limitation, any act of the Underwriters related to the offering or continued offering of the Shares for sale and any act taken by the Underwriters in connection with any amendment to the Prospectus (including the execution of any amendment) and the Underwriters shall only be considered to have waived or be estopped from exercising or relying upon any of their rights under or pursuant to Section 13(a) or Section 14 or 22 if such waiver or estoppel is in writing and specifically waives or estops such exercise or reliance; and

(c) Any termination pursuant to the terms of this Agreement shall be effected by notice in writing delivered to the Corporation, provided that no termination shall discharge or otherwise affect any obligation of the Corporation under Section 10,

11, 12 or 22. The rights of the Underwriters to terminate their obligations hereunder are in addition to, and without prejudice to, any other remedies they may have.

14. Closing Documents

The following are conditions precedent to the obligations of the Underwriters to complete the transactions contemplated in this Agreement:

(a) There shall be delivered to the Underwriters legal opinions of the Corporation's Counsel and the Underwriters' Counsel addressed to the Underwriters, in form and substance satisfactory to the Underwriters, acting reasonably, with respect to such matters as the Underwriters may reasonably request relating to the offering of the Shares, including, without limitation, that:

(i) the Corporation has been duly amalgamated and is validly existing under the ABCA and has all requisite corporate power and authority to carry on its business and to own its properties and assets and is in good standing in each jurisdiction in which the conduct of its business requires such qualification, except to the extent that the failure to be so licensed, registered or qualified or be in good standing would not have a material adverse effect on the Corporation (taken as a whole);

(ii) the Corporation has full corporate power and capacity to enter into this Agreement and to perform its obligations set out herein and this Agreement has been duly authorized, executed and delivered by the Corporation and constitutes (subject to the usual qualifications) a legal, valid and binding obligation of the Corporation enforceable against the Corporation;

(iii) the execution and delivery of this Agreement, the performance and compliance with the terms of this Agreement and the sale of the Shares by the Corporation do not and will not result in a breach of, or constitute a default under, and do not and will not create a state of facts which, after notice or lapse of time or both, will result in a breach of or constitute a default under: (A) any applicable laws (including Applicable Securities Laws); (B) any term or provision of the articles, by-laws or, to the knowledge of such counsel, resolutions of the directors or shareholders of the Corporation or its subsidiaries; (C) to the knowledge of counsel, any mortgage, note, indenture, contract, agreement (written or oral), instrument, lease or other document to which the Corporation or its subsidiaries is a party or by which the Corporation or its subsidiaries is bound on the Closing Date; or (D) to the knowledge of such counsel, any judgement, decree, order, statute, rule or regulation applicable to the Corporation or its subsidiaries, which breach or default might reasonably be expected to materially adversely affect the business, operations, capital or condition (financial or otherwise) of the Corporation and its subsidiaries (taken as a whole);

(iv) all necessary action has been taken by the Corporation to validly allot and issue to the Underwriters the Shares;

(v) the Shares, when delivered and sold in accordance with this Agreement, will be duly and validly created and issued as fully paid and non-assessable Common Shares;

(vi) the form and terms of the certificates representing the Shares have been approved by the directors of the Corporation and comply with all legal requirements relating thereto;

(vii) no consent, approval, authorization or order of or qualification with any governmental or regulatory body or agency in the Province of Alberta (or pursuant to the federal laws of Canada applicable therein) is required to be obtained by the Corporation for the offer and sale of the Shares by the Underwriters in the manner contemplated hereby, except such as have been obtained;

(viii) the authorized and issued capital of the Corporation and the attributes of the Shares conform in all material respects with the description thereof in the Prospectus;

(ix) the Shares, when issued, will be qualified investments as set out under the heading "Eligibility for Investment" in the Prospectus;

(x) all necessary documents have been filed, all necessary proceedings have been taken and all legal requirements have been fulfilled as required under the Applicable Securities Laws in order to qualify the Shares for distribution and sale to the public in each of the Qualifying Provinces by or through investment dealers and brokers duly registered under the applicable laws of such provinces who have complied with the relevant provisions of such Applicable Securities Laws;

(xi) all laws of the Province of Québec relating to the use of the French language (other than those relating to oral communications) will have been complied with in connection with the sale of the Shares to purchasers in the Province of Québec if such purchasers receive copies of the Prospectus and of all documents which constitute the contract of sale, including forms of order and confirmation, invoices and receipts, in the French and English language or the French language only;

(xii) the Shares have been conditionally accepted for listing on the Exchange subject to any applicable filing requirements; and

(xiii) to the knowledge of counsel, other than as disclosed in the Prospectus, there are no actions, suits, proceedings or inquiries pending or threatened against or affecting the Corporation or its subsidiaries at law or in equity or before or by any federal, provincial, municipal or other governmental department, commission, board, bureau or agency which may in any way

materially adversely affect the business, operations or condition (financial or otherwise) of the Corporation and its subsidiaries (taken as a whole);

and as to all other legal matters, including compliance with Applicable Securities Laws, in any way connected with the issuance, sale and delivery of the Shares as the Underwriters may reasonably request.

It is understood that the respective counsel may rely on the opinions of local counsel acceptable to them as to matters governed by the laws of jurisdictions other than British Columbia, Alberta, Saskatchewan, Ontario or Canada and on certificates of officers of the Corporation, the transfer agent and the auditors of the Corporation as to relevant matters of fact. It is further understood that the Underwriters' Counsel may rely on the opinion of the Corporation's Counsel as to matters which specifically relate to the Corporation and the Shares, including the issuance of the Shares;

(b) There shall be delivered to the Underwriters at the Closing Time, favourable legal opinions by a recognized United States counsel acceptable to the Underwriters, acting reasonably, in form and substance reasonably satisfactory to the Underwriters, to the effect that no registration of the Shares under the U.S. Securities Act is required for the offer, sale and delivery of the Shares to the Underwriters and the initial resale of the Shares by the Underwriters through their U.S. broker dealer affiliates in the United States;

(c) There shall be delivered to the Underwriters a certificate of the Corporation dated the Closing Date, addressed to the Underwriters and signed on the Corporation's behalf by any two senior officers of the Corporation satisfactory to the Underwriters, acting reasonably, certifying that:

(i) the Corporation has complied with and satisfied all terms and conditions of this Agreement on its part to be complied with or satisfied at or prior to the Closing Time;

(ii) except for changes contemplated by this Agreement, the representations and warranties of the Corporation set forth in this Agreement are true and correct in all material respects at the Closing Time, as if made at such time; and

(iii) no event of a nature referred to in Sections 7(a), 7(b) or 13(a)(ii), (iii), (iv) or (v) has occurred or to the knowledge of such officers is pending, contemplated or threatened;

and the Underwriters shall have no knowledge to the contrary.

(d) There shall be delivered to the Underwriters a comfort letter of each of the auditors referred to in Section 5(d) addressed to the Underwriters and dated the Closing Date, in the format satisfactory to the Underwriters, acting reasonably, bringing the information contained in the comfort letters referred to in Section 5(d) hereof up to the Closing Time, which comfort letters shall be based

on a review having a cut off date not more than two Business Days prior to the Closing Date;

(e) There shall be delivered to the Underwriters evidence satisfactory to the Underwriters that the Corporation has obtained all necessary approvals of the Exchange for the listing of the Shares subject only to the filing of documents which may be required by the Exchange;

(f) The Underwriters shall have obtained satisfactory results of all due diligence investigations; and

(g) There shall be delivered to the Underwriters such other certificates and documents as the Underwriters may request, acting reasonably.

15. Deliveries

The sale of the Shares, if any, shall be completed at the Closing Time at the offices of the Corporation's Counsel in Calgary, Alberta or at such other place as the Corporation and the Underwriters may agree. Subject to the conditions set forth in Section 14, the Underwriters, at the Closing Time, shall deliver by wire transfer to the Corporation in immediately available Canadian funds, the amount of $28,400,000 (after deduction of any wire and other charges) against delivery by the Corporation of:

(a) the opinions, certificates and documents referred to in Section 14;

(b) definitive certificates representing, in the aggregate, all of the Shares registered in such name or names as the Underwriters shall notify the Corporation in writing not less than twenty-four (24) hours prior to the Closing Time; and

(c) a certified cheque or bank draft payable to Peters & Co. Limited representing the fee provided for in Section 2.

16. Due Diligence

During the period from the date hereof until completion of the distribution of the Shares, the Corporation shall allow the Underwriters to participate fully in the preparation of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum and any Supplementary Material and allow the Underwriters to conduct all due diligence which the Underwriters may reasonably require in order to fulfil the Underwriters' obligations as underwriters and to enable the Underwriters to responsibly execute the certificate in the Prospectus, the U.S. Placement Memorandum and any Supplementary Material required to be executed by the Underwriters.

17. Restrictions on Offerings

During the period commencing on the date hereof and ending on the day which is 90 days following the Closing Date, the Corporation shall not, without the prior written consent of Peters & Co. Limited on behalf of (and after consultation with) the Underwriters, which consent shall not be unreasonably withheld, directly or indirectly, offer, nor announce the offering of, nor make any agreement to issue any additional Common Shares or securities convertible or

exercisable into Common Shares (other than for purposes of the stock option plan of the Corporation or the grant of deferred stock units or performance stock units and the issuance of Common Shares on the exercise thereof).

18. Offering in the United States.

(a) For the purposes of this Agreement, the following terms will have the meanings indicated:

(i) "**Directed Selling Efforts**" means "directed selling efforts" as defined in Regulation S and, without limiting the foregoing, but for greater clarity, it means, subject to the exclusions from the definition of directed selling efforts contained in Regulation S, any activity undertaken for the purpose of, or that could reasonably be expected to have the effect of, conditioning the market in the United States for the Shares, and includes the placement of any advertisement in a publication with a general circulation in the United States that refers to the offering of the Shares;

(ii) "**General Solicitation**" and "**General Advertising**" means "general solicitation" and "general advertising", respectively, as used in Rule 502(c) under the U.S. Securities Act, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television, or any seminar or meeting whose attendees had been invited by general solicitation or general advertising;

(iii) "**Institutional Accredited Investor**" means those institutional "accredited investors" specified in Rule 501(a)(1), (2), (3) and (7) of Regulation D;

(iv) "**Qualified Institutional Buyer**" means a "qualified institutional buyer" as defined in Rule 144A;

(v) "**Regulation D**" means Regulation D promulgated under the U.S. Securities Act;

(vi) "**Regulation S**" means Regulation S promulgated under the U.S. Securities Act;

(vii) "**Rule 144A**" means Rule 144A promulgated under the U.S. Securities Act;

(viii) "**SEC**" means the United States Securities and Exchange Commission;

(ix) "**Substantial U.S. Market Interest**" means "substantial U.S. market interest" as defined in Regulation S;

(x) "**U.S. Exchange Act**" means the *United States Securities Exchange Act* of 1934, as amended;

(xi) "**U.S. Placement Memorandum**" means (i) the Preliminary Prospectus supplemented with wrap pages dated the date of the Preliminary Prospectus describing restrictions imposed under the U.S. Securities Act; and (ii) the Prospectus supplemented with wrap pages dated the date of the Prospectus describing restrictions imposed under the U.S. Securities Act; and

(xii) "**U.S. Securities Act**" means the *United States Securities Act* of 1933, as amended.

(b) The Underwriters may offer and sell the Shares within the United States on the terms and subject to the conditions of this Section 18. In connection therewith, the Corporation represents, warrants and covenants that:

(i) the Corporation is a "foreign issuer" (within the meaning of Regulation S) and reasonably believes there is no Substantial U.S. Market Interest with respect to the Shares;

(ii) none of the Corporation, its affiliates or any person acting on its or their behalf (other than the Underwriters, U.S. affiliates of the Underwriters ("**U.S. Affiliates**"), or any members of the banking and selling group formed by them (collectively, the "**Selling Firms**"), as to whom the Corporation makes no representation), has engaged or will engage in any Directed Selling Efforts in the United States with respect to the Shares;

(iii) the Corporation is not, and following the application of the proceeds of the sale of the Shares in the manner described in the Prospectus will not be, an open-end investment company, unit investment trust or face amount certificate company that is or is required to be registered or a closed-end investment company that is required to be, but is not, registered under Section 8 of the *United States Investment Company Act* of 1940, as amended;

(iv) none of the Corporation, its affiliates or any person acting on its or their behalf (other than the Underwriters, U.S. Affiliates, or any of the Selling Firms, as to whom the Corporation makes no representation), has engaged in any form of General Solicitation or General Advertising or in any conduct involving an offering within the meaning of Section 4(2) of the U.S. Securities Act in connection with any offer or sale of the Shares or any security convertible or exchangeable into Common Shares in the United States within the six month period prior to the date of this Agreement;

(v) so long as any of the Shares resold pursuant to Rule 144A are outstanding and are "restricted securities" within the meaning of Rule 144(a)(3) under the U.S. Securities Act and cannot be sold pursuant to Rule 144(k) under the U.S. Securities Act, the Corporation will, if it no longer is subject to the reporting requirements of Section 13 or Subsection 15(d) of the *U.S. Exchange Act* or the information furnishing requirements of Rule 12g3-

2(b) thereunder or if it is subject to such reporting requirements and fails to comply therewith, provide to any holder of those restricted securities, or to any prospective purchaser of those restricted securities designated by a holder, upon the request of that holder or prospective purchaser, at or prior to the time of sale, the information required to be provided by Rule 144A(d)(4) under the U.S. Securities Act (so long as that requirement is necessary in order to permit holders of the restricted securities to effect resales under Rule 144A) to a Qualified Institutional Buyer which is a holder of the restricted securities;

(vi) none of the Corporation or its affiliates will take any action that would cause the registration exemptions in Regulation S or Rule 144A to be unavailable for the offer and sale of the Shares pursuant to this Agreement;

(vii) the Common Shares are not, and as of the Time of Closing the Common Shares will not be, and no securities of the same class as the Common Shares are or will be, listed on a national securities exchange in the United States, registered under Section 6 of the *U.S. Exchange Act*, quoted in an "automated inter-dealer quotation system", as such term is used in the *U.S. Exchange Act*, or convertible or exchangeable at an effective conversion premium (calculated as specified in Section (a)(6) of Rule 144A) of less than ten percent for securities so listed or quoted;

(viii) the Corporation will, within prescribed time periods, prepare and file any forms or notices required under the U.S. Securities Act or applicable blue sky laws; and

(ix) the Corporation will notify Computershare Trust Company of Canada as soon as practicable upon it becoming a "domestic issuer", as defined in Regulation S.

(c) Each Underwriter acknowledges that the Shares have not been and will not be registered under the U.S. Securities Act and may be offered and sold only in transactions exempt from or not subject to the registration requirements of the U.S. Securities Act. Accordingly, each Underwriter separately and not jointly represents, warrants and covenants, and will cause its U.S. Affiliates to comply with such representations, warranties and covenants, that:

(i) it has not offered or sold, and will not offer or sell, any Shares constituting part of its allotment within the United States except as provided in this Section 18 or outside of the United States in accordance with Rule 903 of Regulation S. Accordingly, neither it nor any of its affiliates nor any person acting on its or their behalf has engaged or will engage in: (i) any offer to sell or any solicitation of an offer to buy, any Shares to any person in the United States, (ii) any sale of Shares to any purchaser unless, at the time the buy order was or will have been originated, the purchaser was outside the United States, or such Underwriter, affiliate or person acting on behalf of either reasonably believed that such purchaser was outside the

United States, or any Directed Selling Efforts with respect to the Shares, except as permitted in this Section 18;

(ii) neither it nor any of its affiliates nor any person acting on its or their behalf has or will engage in any form of General Solicitation or General Advertising or in any conduct involving a public offering within the meaning of Section 4(2) of the U.S. Securities Act in connection with its offers or sales of the Shares in the United States;

(iii) all offers and sales of the Shares in the United States will be effected through its U.S. Affiliate duly registered under the *U.S. Exchange Act* and all applicable state securities laws, in accordance with all applicable United States state and federal securities (including broker-dealer) laws;

(iv) each U.S. Affiliate which is purchasing Shares in the United States is a Qualified Institutional Buyer and is a member of, and in good standing with, the National Association of Securities Dealers, Inc. on the date hereof;

(v) it has not used and will not use any written material other than the U.S. Placement Memorandum relating to the offering of the Shares in the United States, and it agrees to deliver, through the U.S. Affiliates, a copy of the U.S. Placement Memorandum to each person in the United States purchasing Shares in an initial resale transaction in the United States;

(vi) any offer, sale or solicitation of an offer to buy Shares that has been made or will be made in the United States was or will be made only to a person it reasonably believes to be a Qualified Institutional Buyer or an Institutional Accredited Investor who is acquiring the Shares (i) for its own account or (ii) for the account of a Qualified Institutional Buyer or an Institutional Accredited Investor, as the case may be, with respect to which it exercises sole investment discretion in a transaction that is exempt from registration under the U.S. Securities Act;

(vii) all purchasers of Shares who are buying such shares pursuant to Rule 144A shall be informed that the Shares are being offered and sold to such purchasers in reliance on an exemption from the registration requirements of the U.S. Securities Act provided by Rule 144A;

(viii) immediately prior to soliciting such offerees, the Underwriter has reasonable grounds to believe and did believe that each offeree was a Qualified Institutional Buyer or an Institutional Accredited Investor, as the case may be;

(ix) prior to completion of any sale of Shares in the United States, each U.S. Purchaser thereof (a "**U.S. Purchaser**") that is a Qualified Institutional Buyer will be deemed to have provided the representations, warranties and covenants in the U.S. Placement Memorandum; and

(x) prior to any sale of Shares in the United States, it caused each U.S. Purchaser that is an Institutional Accredited Investor to sign a U.S. purchaser's letter containing representations, warranties and agreements to the Corporation substantially similar to the form set out in Schedule B.

(d) Each Underwriter agrees that:

(i) prior to the Closing Date, it will request Peters & Co. Limited to provide Computershare Trust Company of Canada with a list of all purchasers of Shares in the United States;

(ii) at closing, it, together with its U.S. Affiliate selling Shares in the United States, will provide a certificate, substantially in the form of Schedule A to this Agreement relating to the manner of the offer and sale of the Shares in the United States;

(iii) if the Underwriters authorize any member of the Selling Dealer Group (if any) to offer and sell Shares in the United States through the U.S. Affiliates, the Underwriters will cause each such firm to acknowledge in writing, for the benefit of the Corporation, its agreement to be bound by the provisions of this Section 18 in connection with all offers and sales of the Shares in the United States. The Underwriters have not made and will not make any other contractual arrangement for the distribution of the Shares in the United States without the prior written consent of the Corporation; and

(iv) it understands that all Shares sold in the United Shares as part of this Offering will bear a legend to the following effect:

"THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "**SECURITIES ACT**") OR STATE SECURITIES LAWS. THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF CALFRAC WELL SERVICES LTD. (THE "**CORPORATION**") THAT SUCH SECURITIES MAY BE OFFERED, SOLD OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, (C) INSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT, (D) PURSUANT TO THE EXEMPTION FROM REGISTRATION UNDER THE SECURITIES ACT PROVIDED BY RULE 144 THEREUNDER, OR (E) PURSUANT TO ANOTHER EXEMPTION FROM REGISTRATION AFTER PROVIDING A LEGAL OPINION SATISFACTORY TO THE CORPORATION.

A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM COMPUTERSHARE TRUST COMPANY OF CANADA UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED

DECLARATION, IN A FORM SATISFACTORY TO COMPUTERSHARE TRUST COMPANY OF CANADA AND THE CORPORATION, TO THE EFFECT THAT THE SALE OF THE SECURITIES REPRESENTED HEREBY IS BEING MADE IN COMPLIANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT."

If the Shares are being sold in compliance with the requirements of Rule 904 of Regulation S, the legend may be removed by providing a declaration to Computershare Trust Company of Canada to the following effect (or as the Corporation may prescribe from time to time):

"The undersigned (A) acknowledges that the sale of the common shares to which this declaration relates is being made in reliance on Rule 904 of Regulation S under the U.S. Securities Act of 1933, as amended, and (B) certifies that (1) it is not an "affiliate" (as defined in Rule 405 under the *Securities Act*, as amended) of the Corporation, (2) the offer of such common shares was not made to a person in the United States and either (a) at the time the buy order was originated, the buyer was outside the United States, or the seller and any person acting on its behalf reasonably believe that the buyer was outside the United States or (b) the transaction was executed on or through the facilities of the Toronto Stock Exchange or the TSX Venture Exchange and neither the seller nor any person acting on its behalf knows that the transaction has been prearranged with a buyer in the United States and (3) neither the seller nor any person acting on its behalf engaged in any directed selling efforts in connection with the offer and sale of such common shares. Terms used herein have the meanings given to them by Regulation S.";

If the Shares are being sold under Rule 144 of the U.S. Securities Act, the legend may be removed by delivery to Computershare Trust Company of Canada of an opinion of counsel of recognized standing and reasonably satisfactory to the Corporation, to the effect that such legend is no longer required under the U.S. Securities Act or state securities laws.

(e) It is understood and agreed by the Underwriters that the Shares may be offered and resold by the Underwriters and members of the Selling Dealer Group in the United States pursuant to the provisions of Rule 144A to persons who are, or are reasonably believed by them to be, Qualified Institutional Buyers in transactions meeting the requirements of Rule 144A and in compliance with any applicable state securities laws of the United States, provided that prior to any such sale each purchaser shall have been provided with the U.S. Placement Memorandum and by purchasing Shares, each purchaser shall be deemed to have represented and warranted for the benefit of the Corporation and the Underwriters that:

(i) it is a Qualified Institutional Buyer and acknowledges that the sale of Shares to it is being made in reliance on Rule 144A, and it is acquiring such Shares for its own account or for the account of one or more

Qualified Institutional Buyers with respect to which it exercises sole investment discretion;

(ii) it understands and acknowledges that the Shares will not be and have not been registered under the U.S. Securities Act or the securities laws of any state of the United States, and are therefore "restricted securities" within the meaning of Rule 144, and that if in the future it shall decide to resell, pledge or otherwise transfer such Shares, the same may be resold, pledged or otherwise transferred only (A) to the Corporation, (B) in the United States, in accordance with Rule 144A to a person it reasonably believes is a Qualified Institutional Buyer that purchases for its own account or for the account of a Qualified Institutional Buyer and to whom notice is given that the offer, sale or transfer is being made in reliance on Rule 144A, (C) outside the United States, in accordance with Rule 904 of Regulation S and in compliance with applicable local laws and regulations, (D) in a transaction exempt from registration under the U.S. Securities Act pursuant to Rule 144 and in compliance with any applicable state securities laws of the United States, or (E) in a transaction that does not require registration under the U.S. Securities Act or any applicable United States state securities laws, and it has furnished to the Corporation an opinion of counsel of recognized standing reasonably satisfactory to the Corporation to that effect;

(iii) it understands that all Shares sold in the United States as part of this offering will bear a legend as set out in paragraph (d)(iv) of this Section 18; and

(iv) it understands and acknowledges that it is making the representations and warranties and agreements contained herein with the intent that they may be relied upon by the Corporation and the Underwriters in determining its eligibility or (if applicable) the eligibility of others on whose behalf it is contracting hereunder to purchase the Shares.

or to such other address as the party may designate by notice given to the other. Each communication shall be personally delivered to the addressee or sent by fax transmission to the address, and:

(a) a communication which is personally delivered shall, if delivered before 4:00 p.m. (local time) on a Business Day, be deemed to be given and received on that day and, in any other case, be deemed to be given and received on the first Business Day following the day on which it is delivered; and

(b) a communication which is sent by fax transmission shall, if sent on a Business Day before 4:00 p.m. (local time), be deemed to be given and received on that day and, in any other case, be deemed to be given and received on the first Business Day following the day on which it is sent.

20. Conditions

(a) All terms and conditions of this Agreement to be performed by the Corporation shall be construed as conditions, and any breach or failure to comply with any material terms and conditions shall entitle the Underwriters to terminate their obligations to purchase the Shares by written notice to that effect given to the Corporation on or prior to the Closing Date. The Underwriters may waive in whole or in part any breach of, default under or non-compliance with any representation, warranty, term or condition hereof, or extend the time for compliance therewith, without prejudice to any of their rights in respect of any other representation, warranty, term or condition hereof or any other breach of, default under or non-compliance with any other representation, warranty, term or condition hereof, provided that any such waiver or extension shall be binding on the Underwriters only if the same is in writing; and

(b) All terms and conditions of this Agreement to be performed by the Underwriters shall be construed as conditions, and any breach or failure to comply with any

material terms and conditions shall entitle the Corporation to terminate its obligation to sell the Shares by written notice to that effect given to the Underwriters on or prior to the Closing Date. The Corporation may waive in whole or in part any breach of, default under or noncompliance with any representation, warranty, term or condition hereof, or extend the time for compliance therewith, without prejudice to any of its rights in respect of any other representation, warranty, term or condition hereof or any other breach of, default under or non-compliance with any other representation, warranty, term or condition hereof, provided that any such waiver or extension shall be binding on the Corporation only if the same is in writing.

21. Survival of Representations and Warranties

It is understood that all representations, warranties and agreements herein contained or contained in certificates or documents submitted pursuant to or in connection with the transaction provided for herein shall survive the issuance of the Shares and the termination of this Agreement and shall continue in full force and effect for the benefit of the Corporation and the Underwriters regardless of any investigation by or on behalf of the Underwriters with respect thereto and regardless of whether transactions contemplated herein have been completed.

22. Several Liability of Underwriters

The Underwriters' rights and obligations under this Agreement are several and not joint and several including, without limitation, that:

(a) each of the Underwriters shall be obligated to purchase only the percentage of the total number of Shares set forth opposite its name in this Section 22; and

(b) if any one or more of the Underwriters does not purchase its applicable percentage of the total number of Shares, the other Underwriters who shall be willing and able to purchase their own applicable percentages of the total number of Shares shall be relieved of their obligations hereunder,

provided that, notwithstanding the provisions of Section (b) of this Section 22, the Underwriters who shall be willing and able to purchase their respective applicable percentages of the total number of Shares shall have the right, but not the obligation, to purchase the total number of Shares. Nothing in this Section 22 shall obligate the Corporation to sell less than all of the Shares to the Underwriters.

The applicable percentage of the total number of Shares which each of the Underwriters shall be separately obligated to purchase is as follows:

Peters & Co. Limited	42.0%
FirstEnergy Capital Corp.	20.0%
RBC Dominion Securities Inc.	20.0%
CIBC World Markets Inc.	9.0%
Sprott Securities Inc.	9.0%

23. Authority to Bind Underwriters

The Corporation shall be entitled to and shall act on any notice or other communication given by or on behalf of the Underwriters by Peters & Co. Limited, which shall represent the Underwriters and which has the authority to bind the Underwriters except in respect of a notice of termination given pursuant to Section 13, which notice may be given by any Underwriter, or an agreement of settlement given under Section 10, which may be given only by the Underwriter affected thereby. Peters & Co. Limited shall consult with the other Underwriters with respect to any such notice or other communication. Acceptance of this offer by the Corporation shall constitute its authority for accepting notification of any such matters from Peters & Co. Limited.

24. Severance

If one or more of the provisions contained herein shall, for any reason, be held to be invalid, illegal or unenforceable in any respect, such invalidity, illegality or unenforceability shall not affect any other provision of this Agreement, but this Agreement shall be construed as if such invalid, illegal or unenforceable provision or provisions had never been contained herein.

25. Relationship Between the Corporation and the Underwriters

The Corporation: (i) acknowledges and agrees that the Underwriters have certain statutory obligations as registrants under the Applicable Securities Laws and have fiduciary relationships with their clients; and (ii) consents to the Underwriters acting hereunder while continuing to act for their clients. To the extent that the Underwriters' statutory obligations as registrants under Applicable Securities Laws or fiduciary relationships with their clients conflict with their obligations hereunder the Underwriters shall be entitled to fulfil their statutory obligations as registrants under Applicable Securities Laws and their duties to their clients. Nothing in this Agreement shall be interpreted to prevent the Underwriters from fulfilling their statutory obligations as registrants under Applicable Securities Laws or to act as a fiduciary of their clients.

26. Governing Law

This Agreement shall be governed by and construed in accordance with the laws of the Province of Alberta and the laws of Canada applicable therein. Each of the Corporation and the Underwriters hereby attorns to the non-exclusive jurisdiction of the courts of the Province of Alberta.

27. Time of the Essence

Time shall be of the essence of this Agreement.

28. Counterpart Execution

This Agreement may be executed in one or more counterparts and by facsimile each of which so executed shall constitute an original and all of which together shall constitute one and the same agreement.

29. Further Assurances

Each party to this agreement covenants and agrees that, from time to time, it will, at the request of the requesting party, execute and deliver all such documents and do all such other acts and things as any party hereto, acting reasonably, may from time to time request be executed or done in order to better evidence or perfect or effectuate any provision of this Agreement or of any agreement or other document executed pursuant to this Agreement or any of the respective obligations intended to be created hereby or thereby.

30. Distributions

The Corporation agrees that it will not prior to the Closing Date declare or pay out any dividends to shareholders of the Corporation or set any record date in respect thereof.

31. Entire Agreement

It is understood that the terms and conditions of this Agreement supersede any previous verbal or written agreement between the Underwriters and the Corporation.

If the foregoing is in accordance with your understanding and is agreed to by you, please confirm your acceptance by signing the enclosed copies of this letter at the place indicated and by returning the same to Peters & Co. Limited.

SCHEDULE A

UNDERWRITERS' CERTIFICATE

In connection with the private placement in the United States of the Shares of Calfrac Well Services Ltd. (the "**Corporation**") pursuant to the underwriting agreement dated August 10, 2004 among the Corporation and the Underwriters named therein (the "**Underwriting Agreement**"), each of the undersigned does hereby certify in favour of the Corporation as follows:

I. Peters & Co. Equities Inc. (the "**U.S. Affiliate**") is a duly registered broker or dealer with the United States Securities and Exchange Commission (the "**SEC**") and is a member of and in good standing with the National Association of Securities Dealers, Inc. on the date hereof and all offers and sales of Securities in the United States will be effected by the U.S. Affiliate in accordance with U.S. broker-dealer agreements;

II. each offeree was provided with a copy of the U.S. Placement Memorandum for the offering of the Shares in the United States, and no other written material has been or will be used;

III. immediately prior to our transmitting such U.S. Placement Memorandum to such offerees, we had reasonable grounds to believe and did believe that each offeree was, and continue to believe that each such offeree who is a U.S. person purchasing Shares from us is, either a "qualified institutional buyer", as defined in Rule 144A under the *Securities Act* of 1933, as amended (the "**1933 Act**"), or an institutional "accredited investor" as defined in Rule 501 of Regulation D under the *1933 Act* (an "**Institutional Accredited Investor**");

IV. no form of general solicitation or general advertising (as those terms are used in Regulation D under the *1933 Act*) was used by us, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television, or any seminar or meeting whose attendees had been invited by general solicitation or general advertising, in connection with the offer or sale of the Shares in the United States;

V. prior to any sale of Shares to an Institutional Accredited Investor in the United States, we caused such U.S. Purchaser to sign a U.S. Purchaser's letter containing representations, warranties and agreements to the Corporation substantially similar to those set forth in Schedule B to the Underwriting Agreement;

VI. neither we nor any member of the Selling Dealer Group (as defined in the Underwriting Agreement), nor any of our or their affiliates, have taken or will take any action which would constitute a violation of Regulation M of the SEC under the *United States Securities Exchange Act* of 1934, as amended; and

VII. the offering of the Shares in the United States has been conducted by us in accordance with the terms of the Underwriting Agreement.

Unless otherwise defined, terms used in this certificate have the meanings given to them in the Underwriting Agreement.

SCHEDULE B

FORM OF U.S. PURCHASER'S LETTER

Calfrac Well Services Ltd.
411 – 8th Avenue S.W.
Calgary, Alberta
T2P 1E3

Attention: Mr. Douglas R. Ramsay, President and Chief Executive Officer

Dear Sirs:

In connection with our proposed purchase of Common Shares (the "**Shares**") of Calfrac Well Services Ltd. (the "**Corporation**"), we confirm and agree as follows:

(a) we are authorized to consummate the purchase of the Shares;

(b) we understand that the Shares have not been and will not be registered under the *United States Securities Act* of 1933, as amended (the "**U.S. Securities Act**"), and that the sale contemplated hereby is being made to Institutional Accredited Investors (as defined in paragraph (c) below) in reliance on a private placement exemption;

(c) we are an institutional "accredited investor" within the meaning of Rule 501(a)(1), (2), (3) or (7) under the U.S. Securities Act ("**Institutional Accredited Investor**") and are acquiring the Shares for our own account or for one or more investor accounts for which we are acting as fiduciary or agent and each such investor account is an Institutional Accredited Investor;

(d) we agree that if we decide to offer, sell or otherwise transfer or pledge all or any part of the Shares, we will not offer, sell or otherwise transfer or pledge any of such Shares (other than pursuant to an effective registration statement under the U.S. Securities Act), directly or indirectly unless:

(i) the sale is to the Corporation; or

(ii) the sale is made outside the United States in accordance with the requirements of Rule 904 of Regulation S under the U.S. Securities Act and in compliance with applicable local laws and regulations; or

(iii) the sale is made pursuant to the exemption from registration under the U.S. Securities Act provided by Rule 144 thereunder; or

(iv) the sale is made in the United States, in accordance with Rule 144A to a person it reasonably believes is a Qualified Institutional Buyer that purchases for its own account or for the account of a Qualified

Institutional Buyer and to whom notice is given that the offer, sale or transfer is being made in reliance on Rule 144A; or

(v) the Shares are sold in a transaction that does not require registration under the U.S. Securities Act or any applicable United States state laws and regulations governing the offer and sale of Shares, and we have furnished to the Corporation an opinion of counsel, of recognized standing reasonably satisfactory to the Corporation, to that effect; or

(vi) the sale is to an Institutional Accredited Investor and a purchaser's letter containing representations, warranties and agreements substantially similar to those contained in this purchaser's letter (except that such subsequent purchaser's letter need not contain the representation set forth in paragraph (f) below) is executed by the subsequent purchaser and delivered to the Corporation prior to the sale;

(e) we understand and acknowledge that the Shares are "restricted securities" as defined in Rule 144 under the U.S. Securities Act, and upon the original issuance thereof, and until such time as the same is no longer required under applicable requirements of the U.S. Securities Act or state securities laws, the certificates representing the Shares, and all certificates issued in exchange therefor or in substitution thereof, shall bear on the face of such certificates the following legend:

"THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "**SECURITIES ACT**") OR STATE SECURITIES LAWS. THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF CALFRAC WELL SERVICES LTD. (THE "**CORPORATION**") THAT SUCH SECURITIES MAY BE OFFERED, SOLD OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, (C) INSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT, (D) PURSUANT TO THE EXEMPTION FROM REGISTRATION UNDER THE SECURITIES ACT PROVIDED BY RULE 144 THEREUNDER, OR (E) PURSUANT TO ANOTHER EXEMPTION FROM REGISTRATION AFTER PROVIDING A LEGAL OPINION SATISFACTORY TO THE CORPORATION.

A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM COMPUTERSHARE TRUST COMPANY OF CANADA UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED DECLARATION, IN A FORM SATISFACTORY TO COMPUTERSHARE TRUST COMPANY OF CANADA AND THE CORPORATION, TO THE EFFECT THAT THE SALE OF THE SECURITIES REPRESENTED HEREBY

IS BEING MADE IN COMPLIANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT.";

If the Shares are being sold in compliance with the requirements of Rule 904 of Regulation S, the legend may be removed by providing a declaration to Computershare Trust Company of Canada to the following effect (or as the Corporation may prescribe from time to time):

"The undersigned (A) acknowledges that the sale of the common shares to which this declaration relates is being made in reliance on Rule 904 of Regulation S under the U.S. Securities Act of 1933, as amended, and (B) certifies that (1) it is not an "affiliate" (as defined in Rule 405 under the Securities Act, as amended) of the Corporation, (2) the offer of such common shares was not made to a person in the United States and either (a) at the time the buy order was originated, the buyer was outside the United States, or the seller and any person acting on its behalf reasonably believe that the buyer was outside the United States or (b) the transaction was executed on or through the facilities of The Toronto Stock Exchange or the TSX Venture Exchange and neither the seller nor any person acting on its behalf knows that the transaction has been prearranged with a buyer in the United States and (3) neither the seller nor any person acting on its behalf engaged in any directed selling efforts in connection with the offer and sale of such common shares. Terms used herein have the meanings given to them by Regulation S.";

if the Shares are being sold under Rule 144 of the U.S. Securities Act, the legend may be removed by delivery to Computershare Trust Company of Canada of an opinion of counsel of recognized standing and reasonably satisfactory to the Corporation, to the effect that such legend is no longer required under the U.S. Securities Act or state securities laws;

(f) we have received a copy of the U.S. Placement Memorandum (as defined in the Underwriting Agreement) and we have been afforded the opportunity (i) to ask such questions as we have deemed necessary of, and to receive answers from, representatives of the Corporation concerning the terms and conditions of the offering of the Shares and (ii) to obtain such additional information which the Corporation possesses or can acquire without unreasonable effort or expense that is necessary to verify the accuracy and completeness of the information contained in the U.S. Placement Memorandum and that we have considered necessary in connection with our decision to invest in the Shares;

(g) we acknowledge that we are not purchasing the Shares as a result of any general solicitation or general advertising, as those terms are used in Regulation D under the U.S. Securities Act including, without limitation, advertisements, articles, notices and other communications published in any newspaper, magazine or similar media or broadcast over television or radio or any seminar or meeting whose attendees have been invited by general solicitation or general advertising; and

(h) we understand and acknowledge that the Corporation (i) is under no obligation to be or to remain a "foreign issuer," (ii) may not, at the time we sell the Shares or at any other time, be a "foreign issuer," and (iii) may engage in one or more transactions which could cause the Corporation not to be a "foreign issuer." If the Corporation is not a "foreign issuer" at the time of any sale pursuant to Rule 904 of Regulation S, the certificate delivered to the buyer may continue to bear the legend contained in paragraph (e) above.

We acknowledge that the representations and warranties and agreements contained herein are made by us with the intent that they may be relied upon by you and by the U.S. Affiliate, in determining our eligibility or (if applicable) the eligibility of others on whose behalf we are contracting hereunder to purchase the Shares. We further agree that by accepting the Shares we shall be representing and warranting that the foregoing representations and warranties are true as at the closing time with the same force and effect as if they had been made by us at the closing time and that they shall survive the purchase by us of the Shares and shall continue in full force and effect notwithstanding any subsequent disposition by us of the Shares.

You and the U.S. Affiliate are irrevocably authorized to produce this letter or a copy hereof to any interested party in any administrative or legal proceeding or official inquiry with respect to the matters covered hereby.

RECEIVED
2005 APR 29 A 11:47
OFFICE OF INTERNATIONAL
CORPORATE FINANCE

March 10, 2004

Denison Energy Inc.
400, 407 - 8th Avenue S.W.
Calgary, Alberta
T2P 1E5

Attention: Mr. Gregory S. Fletcher

Dear Sir:

Re: Offering of Shares

Peters & Co. Limited, FirstEnergy Capital Corp. and RBC Dominion Securities Inc. (the "**Underwriters**") understand that Denison Energy Inc. (the "**Corporation**") proposes to issue and sell 8,064,520 Common Shares (the "**Shares**") pursuant to the Prospectus (as hereinafter defined) and this Agreement.

Upon and subject to the terms and conditions hereof, the Underwriters agree to act as, and the Corporation appoints the Underwriters as, the sole and exclusive agents of the Corporation to offer the Shares for sale on the Closing Date, in accordance with the provisions of Section 22. If less than all of the Shares are sold by the Underwriters as agents, the Underwriters hereby severally, and not jointly, agree to purchase the Shares, as principals, in their respective percentages hereinafter mentioned, and the Corporation hereby agrees to issue and sell to the Underwriters, subject to the provisions of Section 22 hereof, at the Closing Time at a price of $15.50 per Share, that number of Shares which, together with the Shares sold by the Underwriters as agents, aggregates 8,064,520 Shares.

The Underwriters understand that the Corporation will prepare and file, in accordance with the terms hereof, the Prospectus and all other necessary documents in order to qualify the Shares for distribution to the public in each of the Qualifying Provinces (as hereinafter defined).

1. Definitions

In this Agreement:

(a) "**ABCA**" means the *Business Corporations Act* (Alberta);

(b) "**Acquisition**" means the acquisition by the Corporation of all of the issued and outstanding shares of Calfrac pursuant to the Purchase Option;

(c) "**Agreement**" means this agreement between the Underwriters and the Corporation and not any particular Article or Section or other portion except as may be specified, and words such as "hereto", "herein", "hereunder" and "hereby" refer to this Agreement as the context requires;

(d) "**Amalgamation**" means the amalgamation of the Corporation with Calfrac pursuant to section 184 of the ABCA;

(e) "**Applicable Securities Laws**" means all applicable securities and corporate laws, rules, regulations, instruments, notices, blanket orders, statements, circulars, procedures and policies in the Qualifying Provinces;

(f) "**Arrangement**" means the arrangement of the Corporation pursuant to section 182 of the OBCA;

(g) "**Arrangement Agreement**" means the arrangement agreement among the Corporation, Tenwest Uranium Limited, Denison Mines Inc., Denison Resources Inc., Denison Oil Corporation, Denison Resources Partnership, Denison Mine Holding Corporation and E. Peter Farmer, as amended from time to time;

(h) "**ASC**" means the Alberta Securities Commission;

(i) "**Business Day**" means a day which is not Saturday or Sunday or a legal holiday in the City of Calgary, Alberta;

(j) "**Calfrac**" means Calfrac Well Services Ltd., a corporation incorporated under the ABCA;

(k) "**Calfrac Financial Statements**" means:

(i) the unaudited interim financial statements of Calfrac as at and for the nine months ended September 30, 2003; and

(ii) the audited comparative financial statements of Calfrac as at and for the years ended December 31, 2003, 2002 and 2001.

each as set forth in the Prospectus;

(l) "**Closing Date**" means March 23, 2004 or such other date as the Underwriters and the Corporation may agree which, subject to the entitlement of the Underwriters pursuant to Section 13 to terminate their obligations hereunder, is not later than April 21, 2004;

(m) "**Closing Time**" means 6:30 a.m. (Calgary time) or such other time, on the Closing Date, as the Underwriters and the Corporation may agree;

(n) "**Common Shares**" means the common shares in the share capital of the Corporation;

(o) "**Continuance**" means the continuance of the Corporation as an Alberta corporation under section 188 of the ABCA;

(p) "**Corporation's Counsel**" means Bennett Jones LLP or such other legal counsel as the Corporation, with the consent of the Underwriters, may appoint;

(q) "**Environmental Laws**" means applicable federal, provincial, state, municipal or local laws, regulations, orders, government decrees or ordinances with respect to environmental, health or safety matters;

(r) "**Exchange**" means the Toronto Stock Exchange;

(s) "**Final MRRS Decision Document**" means a decision document for the Prospectus issued in accordance with the MRRS;

(t) "**Financial Statements**" means:

(i) the unaudited interim financial statements of the Corporation as at and for the nine month periods ended September 30, 2003 and 2002; and

(ii) the audited financial statements of the Corporation as at and for the years ended December 31, 2002, 2001 and 2000;

each as set forth in the Prospectus;

(u) "**GST**" means Goods and Services Tax provided for in the *Excise Tax Act* (Canada);

(v) "**Indemnity Rights**" means the rights of indemnity of the Corporation set forth in the Arrangement Agreement;

(w) "**Information Circular**" means the information circular of the Corporation dated January 29, 2004 relating to the special meeting of shareholders of the Corporation held on March 3, 2004;

(x) "**Matco**" means Matco Capital Ltd., a corporation controlled by Matco Investments;

(y) "**Matco Investments**" means Matco Investments Ltd., a private investment corporation;

(z) "**MRRS**" means the mutual reliance review system for prospectuses and annual information forms provided for under National Policy 43-201 "Mutual Reliance Review System for Prospectuses and Annual

Information Forms" among the Securities Commissions and the MRRS MOU, as defined therein;

(aa) "**OBCA**" means the *Business Corporations Act* (Ontario);

(bb) "**Offering**" means the offering of Shares contemplated by this Agreement;

(cc) "**Preliminary Prospectus**" means the preliminary prospectus in respect of the distribution of the Shares as amended and restated dated February 11, 2004, in the English and French languages;

(dd) "**Pro Forma Financial Statements**" means the unaudited pro forma consolidated financial statements of the Corporation for the year ended December 31, 2002 and as at and for the nine month period ended September 30, 2003 as set forth in the Preliminary Prospectus and the Prospectus;

(ee) "**Prospectus**" means the (final) prospectus dated March 10, 2004 and any amendments thereto in respect of the distribution of the Shares, in the English and French languages;

(ff) "**Public Record**" means all information filed by or on behalf of the Corporation with the Securities Commissions, including without limitation, the Preliminary Prospectus, the Prospectus, any Supplementary Material and any other information filed with any Securities Commission in compliance, or intended compliance, with any Applicable Securities Laws;

(gg) "**Purchase Option**" means the purchase option agreement among Calfrac, Matco Investments (on behalf of itself and the other shareholders of Calfrac) and the Corporation granting an irrevocable option to the Corporation to purchase all of the issued and outstanding shares of Calfrac for an aggregate purchase price of approximately $227.5 million less the net debt of Calfrac, which is anticipated to be approximately $83.6 million for these purposes;

(hh) "**Qualifying Provinces**" means each of the provinces of Canada;

(ii) "**Reorganization**" means the Arrangement, the Subscription, the Continuance and certain related transactions, collectively;

(jj) "**Securities Commissions**" means the securities commissions or similar regulatory authorities in the Qualifying Provinces;

(kk) "**Selling Dealer Group**" means the dealers and brokers other than the Underwriters who participate in the offer and sale of the Shares pursuant to this Agreement;

(ll) "**Subscription**" means the subscription completed by the Corporation following the Arrangement pursuant to which the Corporation issued 727,073 Common Shares to Matco and investors designated by Matco for aggregate gross proceeds of approximately $5.3 million;

(mm) "**subsidiary**" has the meaning ascribed thereto in the *Business Corporations Act* (Alberta);

(nn) "**Supplementary Material**" means, collectively, any amendment to the Preliminary Prospectus, the Prospectus or the U.S. Placement Memorandum, any amendment or supplemental prospectus or ancillary materials that may be filed by or on behalf of the Corporation under the Applicable Securities Laws or U.S. securities laws, as the case may be, relating to the qualification for distribution of the Shares under Applicable Securities Laws, or the offering and sale of Shares within the United States in accordance with Section 18, as the case may be;

(oo) "**Underwriters' Counsel**" means Stikeman Elliott LLP or such other legal counsel as the Underwriters may appoint;

(pp) "**Underwriters' Expenses**" has the meaning ascribed thereto in Section 12;

(qq) "**United States**" or "**U.S.**" means the United States of America, its territories and possessions, any state of the United States and the District of Columbia; and

(rr) "**U.S. Placement Memorandum**" has the meaning ascribed thereto in Section 18(a)(xi).

"**misrepresentation**", "**material change**" and "**material fact**" shall have the meanings ascribed thereto under the Applicable Securities Laws; "**distribution**" means "distribution" or "distribution to the public", as the case may be, as defined under the Applicable Securities Laws and "**distribute**" has a corresponding meaning. Wherever the singular or masculine is used in this Agreement, the same shall be read as plural, feminine or body corporate as the context requires.

2. Fee

In consideration for their services in underwriting the distribution to the public in the Qualifying Provinces of the Shares and in accordance with Section 18, in the United States, the Corporation agrees to pay the Underwriters on the Closing Date a fee

of $0.8525 per Share for each Share purchased by the Underwriters (being an aggregate amount of $6,875,003), payable at the Closing Time. For greater certainty, the services provided by the Underwriters in connection herewith will not be subject to GST and taxable supplies provided will be incidental to the exempt financial services provided. However, in the event that Canada Customs and Revenue Agency determines that GST is exigible on the fees payable to the Underwriters hereunder, the Corporation agrees to pay the amount of GST forthwith upon the request of the Underwriters.

3. Distribution and Certain Obligations of the Underwriters

(a) During the course of the distribution of the Shares to the public by or through the Underwriters, the Underwriters will offer and sell the Shares to the public only in those jurisdictions where they may be lawfully offered for sale or sold. For the purposes of this Section 3, the Underwriters shall be entitled to assume that the Shares may be lawfully offered for sale and sold in the Qualifying Provinces if the Final MRRS Decision Document has been issued evidencing that a receipt for the Prospectus has been issued by the Securities Commissions of each of the Qualifying Provinces, provided the Underwriters have not been notified in writing by the Corporation of any circumstance that would legally prohibit such distribution. The Underwriters will comply with applicable laws, including the Applicable Securities Laws, in connection with the offer to sell or distribution of the Shares. Except in the Qualifying Provinces, the Underwriters will not, directly or indirectly, solicit offers to purchase or sell the Shares or deliver the Preliminary Prospectus, the Prospectus or any Supplementary Material so as to require registration of the Shares or filing of a prospectus with respect to the Shares under the laws of any jurisdiction, including, without limitation, the United States. Any offer or sales of Shares in the United States will be made in accordance with Section 18 of this Agreement. Each Underwriter will cause similar undertakings to be contained in any agreements among the members of any Selling Dealer Group formed for the distribution of the Shares and will require any member of the Selling Dealer Group formed for the distribution of the Shares to comply with Applicable Securities Laws and U.S. securities laws, as applicable;

(b) The Underwriters will complete and will use their reasonable efforts to cause members of the Selling Dealer Group (if any) to complete the distribution of the Shares promptly after the Closing Time. Peters & Co. Limited will promptly notify the Corporation when, in the Underwriters' opinion, the Underwriters and the members of the Selling Dealer Group (if any) have ceased distribution of the Shares and, promptly after completion of the distribution, will provide the Corporation, in writing, with a breakdown of the number of Shares distributed in each of the

Qualifying Provinces where that breakdown is required by the Securities Commission of that province for the purpose of calculating fees payable to that Securities Commission; and

(c) No Underwriter will be liable to the Corporation under this Section 3, with respect to a default by any of the other Underwriters.

4. Qualification for Sale

(a) The Corporation shall file the Prospectus and related documents no later than 5:00 p.m. (Calgary time) on March 10, 2004, and a Final MRRS Decision Document dated no later than March 10, 2004 shall be obtained from the ASC evidencing that a receipt for the Prospectus in each of the Qualifying Provinces has been issued;

(b) Until the completion of the distribution of the Shares, the Corporation shall promptly take all additional steps and proceedings that from time to time may be required under the Applicable Securities Laws to continue to qualify the Shares for distribution or, in the event that the Shares have, for any reason, ceased to so qualify, to again qualify the Shares for distribution; and

(c) The Corporation shall take or cause to be taken all other steps and proceedings as may be necessary to enable the Shares to be offered and sold to the public in all of the Qualifying Provinces through the Underwriters or any other registrant who complies with the relevant provisions of Applicable Securities Laws.

5. Delivery of Prospectus, U.S. Placement Memorandum and Related Documents

The Corporation shall deliver or cause to be delivered to the Underwriters the documents set out below at the respective times indicated:

(a) As soon as they are available and upon request of the Underwriters, copies of the Prospectus, each in the English and French languages, signed as required by Applicable Securities Laws;

(b) As soon as it is available a copy of the U.S. Placement Memorandum prepared as contemplated herein including copies of any documents incorporated by reference therein which have not previously been delivered to the Underwriters;

(c) As soon as they are available and upon request of the Underwriters, copies of any Supplementary Materials required to be filed under

Applicable Securities Laws or U.S. securities laws, as applicable, signed as required by Applicable Securities Laws or applicable U.S. securities laws;

(d) Prior to the filing of the Prospectus with the Securities Commissions, a "comfort letter" from the auditors of each of the Corporation and Calfrac in each case dated the date of the Prospectus, addressed to the Underwriters and reasonably satisfactory in form and substance to the Underwriters, to the effect that they have carried out certain procedures performed for the purposes of comparing certain specified financial information and percentages appearing in the Prospectus with indicated amounts in the financial statements or accounting records of the Corporation or Calfrac, as applicable, and have found such information and percentages to be in agreement, which comfort letter shall be based on a review having a cut-off date of not more than two Business Days prior to the date of the Prospectus;

(e) At the time of delivery to the Underwriters of the Prospectus, the Corporation shall deliver to the Underwriters:

(i) one or more opinions of local counsel in Québec, addressed to the Underwriters and Underwriters' Counsel and dated the date of the filing of the Preliminary Prospectus and Prospectus, in form acceptable to the Underwriters, acting reasonably, to the effect that, except for information in the Preliminary Prospectus or Prospectus as the case may be, translated by the auditors described in clause (ii) below, the text of the French language version of such document (including information incorporated by reference therein) is in all material respects a complete and accurate translation of the English language version thereof; and

(ii) a letter from the auditors of each of the Corporation and Calfrac in each case addressed to the Underwriters and Underwriters' Counsel and dated the date of the filing of the Preliminary Prospectus and the Prospectus, in form acceptable to the Underwriters, acting reasonably, to the effect that the information excepted from the opinion of counsel referred to in clause 5(e)(i) in the French language version of such document (including information incorporated by reference therein) and translated by each of them is in all material respects a complete and proper translation of the information contained in the English language version thereof;

(f) Opinions and comfort letters similar to the foregoing shall be provided to the Underwriters with respect to any amendment to the Prospectus and

any other relevant document at the time the same is presented to the Underwriters for their signature or, if the Underwriters' signature is not required, at the time the same is filed. All such letters shall be in form and substance satisfactory to the Underwriters and the Underwriters' Counsel, each acting reasonably, as contemplated by this Section 5; and

(g) Such delivery shall also constitute the Corporation's consent to the use by the Underwriters and other members of the Selling Dealer Group of the Prospectus and any amendment to the Prospectus in connection with the offering and sale of the Shares in the Qualifying Provinces. Each delivery of the U.S. Placement Memorandum will constitute consent by the Corporation to the use of the U.S. Placement Memorandum and any Supplementary Material required to be prepared and/or filed under U.S. securities laws by the U.S. broker affiliates of the Underwriters and members of the Selling Dealer Group for the distribution of the Shares for sale by them in the United States in accordance with this Agreement.

6. Commercial Copies

(a) The Corporation shall, as soon as possible but in any event not later than noon (local time at the place of delivery) on March 11, 2004 in Calgary, Toronto, Vancouver and Montreal, cause to be delivered to the Underwriters, without charge, commercial copies of the Prospectus in such numbers and in such locations in Calgary, Toronto, Vancouver and Montreal as the Underwriters may reasonably request by written instructions to the printer thereof given no later than the time when the Corporation authorizes the printing of the commercial copies of such documents. Commercial copies of any amendment to the Prospectus shall be delivered within similar time periods on the next Business Day following the date of filing such amendment in the Qualifying Provinces in such numbers and in such locations in Calgary, Toronto, Vancouver, and Montreal as the Underwriters may reasonably request; and

(b) The Corporation will cause to be delivered to the Underwriters, contemporaneously with the deliveries contemplated by clause (a), at those delivery points that the Underwriters may reasonably request, commercial copies of a U.S. Placement Memorandum and any Supplementary Material required to be delivered to purchasers or prospective purchasers of the Shares.

7. Material Change

(a) During the period of distribution of the Shares, the Corporation will promptly inform the Underwriters of the full particulars of:

(i) any material change (actual, anticipated or threatened) in the business, operations, capital or condition (financial or otherwise) of the Corporation or, to its knowledge, Calfrac, or their respective properties, assets or liabilities, or the Acquisition;

(ii) any change in any material fact contained or referred to in the Prospectus, the U.S. Placement Memorandum or any Supplementary Material; and

(iii) the occurrence of a material fact or any event, which, in any such case, is, or may be, of such a nature as to:

(A) render the Prospectus, the U.S. Placement Memorandum or any Supplementary Material untrue, false or misleading in any material respect;

(B) result in a misrepresentation in the Prospectus, the U.S. Placement Memorandum or any Supplementary Material; or

(C) result in the Prospectus, the U.S. Placement Memorandum or any Supplementary Material not complying with Applicable Securities Laws and U.S. securities laws, as applicable,

provided that if the Corporation is uncertain as to whether a material change, change, occurrence or event of the nature referred to in this paragraph has occurred, the Corporation shall promptly inform the Underwriters of the full particulars of the occurrence giving rise to the uncertainty and shall consult with the Underwriters as to whether the occurrence is of such nature;

(b) During the period of distribution of the Shares, the Corporation will promptly inform the Underwriters of the full particulars of:

(i) any request of any Securities Commission or any similar regulatory authority (including the SEC) for any amendment to the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or for any additional information;

(ii) the issuance by any Securities Commission, the Exchange or any similar regulatory authority (including the SEC) of any order to cease or suspend trading of any securities of the Corporation (including the distribution of the Shares) or of the institution or threat of institution of any proceedings for that purpose;

(iii) the receipt by the Corporation of any communication from any Securities Commission or similar regulatory authority (including the SEC) or the Exchange relating to the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the distribution of the Shares;

(iv) the determination by the Corporation or Matco Investments to terminate the Purchase Option or waive any condition to the obligations of the Corporation thereunder, including a full description of the occurrence giving rise to such determination to terminate such agreement or waive any such condition;

and except as otherwise agreed by the Underwriters, the Corporation will use its best efforts to prevent the issuance of any such cease trading order or suspension order and, if issued, to obtain the withdrawal thereof as soon as possible;

(c) The Corporation will promptly comply to the reasonable satisfaction of the Underwriters and the Underwriters' Counsel with Applicable Securities Laws and U.S. securities laws, as applicable, with respect to any material change, change, occurrence or event of the nature referred to in Sections 7(a) and (b) above and the Corporation will prepare and file promptly at the Underwriters' request any Supplementary Material which in the Underwriters' opinion, acting reasonably, may be necessary or advisable to comply with Applicable Securities Laws or U.S. securities laws, as applicable; provided that the Corporation shall have allowed the Underwriters and the Underwriters' Counsel to participate fully in the preparation of any Supplementary Material, to have reviewed any other documents incorporated by reference therein and conduct all due diligence investigations which the Underwriters may reasonably require in order to fulfill their obligations as underwriters and in order to enable the Underwriters responsibly to execute the certificate required to be executed by them in, or in connection with, any Supplementary Material, such approval not to be unreasonably withheld and to be provided in a timely manner; and

(d) During the period of distribution of the Shares, the Corporation will promptly provide to the Underwriters, for review by the Underwriters and the Underwriters' Counsel, prior to filing or issuance:

(i) any financial statements of the Corporation; and

(ii) any press release of the Corporation.

8. Covenants of the Corporation

(a) The Corporation covenants and agrees with the Underwriters and undertakes that:

(i) the Corporation will use the net proceeds from the issuance and sale of the Shares in accordance with the disclosure in the Prospectus; and

(ii) the Corporation will provide to the Underwriters and Underwriters' Counsel and consultants reasonable access to the Corporation's properties, senior management personnel and corporate, financial and other records, and will make reasonable commercial efforts to provide the Underwriters and Underwriters' Counsel with similar access in respect of Calfrac, for the purposes of conducting such due diligence reviews, before the Closing Date; as the Underwriters consider necessary or appropriate; and

(iii) the Corporation will duly, punctually and faithfully perform all of the obligations to be performed by it under this Agreement and the Purchase Option.

9. Representations of the Corporation

(a) Each delivery of the Prospectus, the U.S. Placement Memorandum and any Supplementary Material pursuant to Section 5 shall constitute a representation and warranty to the Underwriters by the Corporation that:

(i) all of the information and statements (except information and statements furnished by and relating solely to the Underwriters) contained in the Prospectus, the U.S. Placement Memorandum and any Supplementary Material, as the case may be:

(A) are at the respective dates of such documents, true and correct in all material respects;

(B) contain no misrepresentation; and

(C) constitute full, true and plain disclosure of all material facts relating to the Corporation, Calfrac, the Reorganization, the Acquisition and the Shares; and

(ii) the Prospectus and any Supplementary Material comply in all material respects with the Applicable Securities Laws, and the U.S. Placement Memorandum and any related Supplementary Material comply in all respects with U.S. securities laws; and

(iii) except as is disclosed in the Prospectus, the U.S. Placement Memorandum or any Supplementary Materials, there has been no intervening material change (actual, proposed or prospective, whether financial or otherwise), from the date of the Prospectus, the U.S. Placement Memorandum and any Supplementary Material to the time of delivery thereof, in the business, operations, capital, properties, assets, liabilities (absolute, accrued, contingent or otherwise), condition (financial or otherwise) or results of operations or ownership of the Corporation and its Subsidiary or, to the knowledge of the Corporation after due inquiry, Calfrac.

(b) In addition to the representations and warranties contained in clause (a) hereof, the Corporation represents and warrants to the Underwriters, and acknowledges that each of the Underwriters is relying upon such representations and warranties in entering into this Agreement, that:

(i) the Corporation has full corporate power and authority to issue the Shares and, at the Closing Time, the Shares will be duly and validly created and upon receipt of the purchase price therefor will be issued as fully paid and non-assessable Common Shares;

(ii) the Corporation has been duly incorporated, amalgamated or continued and organized and is validly existing under the ABCA, and has all the requisite corporate power and authority to carry on its business, as now conducted and as presently proposed to be conducted, and to own its properties and assets;

(iii) the Corporation has conducted and is conducting its business in compliance in all material respects with all applicable laws, rules and regulations, including Environmental Laws and is duly licensed, registered or qualified to transact business;

(iv) the information and statements set forth in the Public Record were true, correct, and complete and did not contain any misrepresentation as of the date of such information or statements, and the Corporation has not filed any confidential material change reports still maintained on a confidential basis;

(v) the authorized capital of the Corporation consists of an unlimited number of Common Shares, of which there are 1,615,718 Common Shares currently issued and outstanding, all of which are issued as fully paid and non-assessable shares of the Corporation, and no other securities of the Corporation are issued or outstanding except as disclosed in clause (vi) hereof;

(vi) no person, firm or corporation holds any securities convertible or exchangeable into securities of the Corporation or the Subsidiary or has any agreement, warrant, option, right or privilege (whether pre-emptive or contractual) being or capable of becoming an agreement, warrant, option or right for the purchase, subscription or issuance of any unissued Common Shares or other securities of the Corporation or securities of the Subsidiary;

(vii) there is no agreement in force or effect which in any manner affects of will affect the voting or control of any of the securities of the Corporation;

(viii) neither the Corporation nor the Subsidiary, directly or indirectly, holds any shares, other securities, options or rights to subscribe for shares or other securities of any corporation, partnership or other entity;

(ix) except as disclosed in the Prospectus or in writing to the Underwriters, none of the directors, officers or employees of the Corporation, any person who owns, directly or indirectly, more than 10% of any class of securities of the Corporation, or any associate or affiliate of any of the foregoing, had or has any material interest, direct or indirect, in any material transaction or any proposed material transaction with the Corporation which materially affects, is material to or will materially affect the Corporation;

(x) the descriptions of the assets and the liabilities of the Corporation as set forth in the Financial Statements, including the notes thereto, fairly represent in accordance with accounting principles generally accepted in Canada applied on a consistent basis, the financial position and condition of the Corporation as at the dates thereof and for the periods covered thereby and reflect all material liabilities (absolute, accrued, contingent or otherwise) of the Corporation as at the dates thereof and for the periods covered thereby required to be disclosed in accordance with generally accepted accounting principles in Canada;

(xi) the Pro Forma Financial Statements, including the notes thereto, of the Corporation contained in the Preliminary Prospectus and the Prospectus have been prepared in accordance with Canadian generally accepted accounting principles, consistently applied, have been prepared and presented in accordance with Applicable Securities Laws, and include all adjustments necessary for a fair

presentation; the assumptions contained in the Pro Forma Financial Statements are suitably supported and consistent with the financial results of the Corporation and Calfrac, and the Financial Statements and the Calfrac Financial Statements provide a reasonable basis for the compilation of the Pro Forma Financial Statements and such Pro Forma Financial Statements accurately reflect such assumptions;

(xii) the Corporation has no subsidiaries other than North Aegean Petroleum Company E.P.E. and Sea of Thrace Petroleum Company E.P.E. and has no material shareholdings in any other corporation or business organization. None of the Corporation's subsidiaries carry on any active business or hold any assets material to the Corporation;

(xiii) there have not been any material changes in the capital, assets, liabilities or obligations (absolute, accrued, contingent or otherwise) of the Corporation and the Subsidiary (taken as a whole) from the position set forth in the Financial Statements that have not otherwise been disclosed in the Preliminary Prospectus, the Prospectus and the U.S. Placement Memorandum and there has not been any material adverse change in the business, operations or condition (financial or otherwise) or results of the operations of the Corporation and the Subsidiary (taken as a whole) since December 31, 2002 that has not otherwise been disclosed in the Preliminary Prospectus, the Prospectus and the U.S. Placement Memorandum, and there are no material facts, transactions, events or occurrences which could negatively impact on such capital, assets, liabilities, obligations, business, operations, condition or prospects of the Corporation and the Subsidiary (taken as a whole) of which the Corporation is aware;

(xiv) there has not been any reportable disagreement (within the meaning of National Policy Statement No. 31 of the Canadian Securities Administrators) with the auditors of the Corporation;

(xv) except as disclosed in the Prospectus or in writing to the Underwriters, there are no actions, suits, proceedings or inquiries pending or threatened against or affecting the Corporation or the Subsidiary at law or in equity or before or by any federal, provincial, municipal or other governmental department, commission, board, bureau or agency which may in any way materially adversely affect the business, operations or condition (financial or otherwise) of the Corporation and the Subsidiary

(taken as a whole) or which affect or may affect the distribution of the Shares and the Corporation is not aware of any existing ground on which such action, suit, proceeding or inquiry might be commenced with any reasonable likelihood of success;

(xvi) the Corporation is not in material default or breach of, and the execution and delivery of this Agreement and the Purchase Option, the performance and compliance with the terms of this Agreement, the Purchase Option and the sale of the Shares by the Corporation will not result in any material breach of, or be in material conflict with or constitute a material default under, or create a state of facts which, after notice or lapse of time, or both, would constitute a material default under any term or provision of the constating documents, by-laws or resolutions of the directors and shareholders of the Corporation or the Subsidiary, or any mortgage, note, indenture, contract, agreement (written or oral), instrument, lease or other document to which the Corporation or the Subsidiary is a party or by which it is bound or any judgment, decree, order, statute, rule or regulation applicable to the Corporation or the Subsidiary which default or breach might reasonably be expected to materially adversely affect the business, operations, capital or condition (financial or otherwise) of the Corporation and the Subsidiary (taken as a whole) or their properties or assets;

(xvii) no Securities Commission, the Exchange or any other similar regulatory authority (including the SEC) has issued any order preventing or suspending trading of any securities of the Corporation, no such proceeding is, to the knowledge of the Corporation, pending, contemplated or threatened, and the Corporation is not in default of any requirement of Applicable Securities Laws or applicable U.S. securities laws that would have a material effect on this Offering or the Corporation;

(xviii) the Corporation has full corporate power and authority to enter into this Agreement and to perform its obligations set out herein, and this Agreement has been duly authorized, executed and delivered by the Corporation, and this Agreement is a legal, valid and binding obligation of the Corporation enforceable against the Corporation in accordance with its terms, subject to the general qualifications that:

(A) enforceability may be limited by bankruptcy, insolvency or other laws affecting creditors' rights generally;

(B) equitable remedies, including the remedies of specific performance and injunctive relief, are available only in the discretion of the court and the courts have statutory and inherent powers to stay proceedings before them;

(C) rights to indemnity and contribution thereunder may be limited under applicable law;

(D) applicable laws regarding limitations of actions; and

(E) the validity, binding nature and enforceability of provisions in this Agreement which purport to sever therefrom any provision which is unenforceable or invalid under applicable law without affecting the enforceability or validity of the remainder of this Agreement would be determined in the discretion of the court;

(xix) except as disclosed in writing to the Underwriters or Underwriters' counsel, with such exceptions as are not material to the Corporation and the Subsidiary (taken as a whole), the Corporation and the Subsidiary have duly and on a timely basis filed all tax returns required to be filed by them, have paid all taxes due and payable by them and have paid all assessments and reassessments and all other taxes, governmental charges, penalties, interest and other fines due and payable by them and which are claimed by any governmental authority to be due and owing and adequate provision has been made for taxes payable for any completed fiscal period for which tax returns are not yet required and there are no agreements, waivers, or other arrangements providing for an extension of time with respect to the filing of any tax return or payment of any tax, governmental charge or deficiency by the Corporation or the Subsidiary and there are no actions, suits, proceedings, investigations or claims threatened or pending against the Corporation or the Subsidiary in respect of taxes, governmental charges or assessments or any matters under discussion with any governmental authority relating to taxes, governmental charges or assessments asserted by any such authority;

(xx) the issued and outstanding Common Shares are listed and posted for trading on the Exchange and the Corporation is in material compliance with the bylaws, rules and regulations of the Exchange;

(xxi) the Corporation is a reporting issuer in good standing and not in default in each of the Qualifying Provinces;

(xxii) Computershare Trust Company of Canada at its principal offices in the City of Calgary and the City of Toronto is the duly appointed registrar and transfer agent of the Corporation with respect to its Common Shares;

(xxiii) to the knowledge of the Corporation, no insider of the Corporation has a present intention to sell any securities of the Corporation held by it, other than as disclosed to the Underwriters;

(xxiv) except as disclosed in the Prospectus or in writing to the Underwriters, the Corporation and the Subsidiary have no liabilities (whether absolute, contingent, present, future or otherwise), including without limitation, under or pursuant to Environmental Laws, which individually or in the aggregate would have a material adverse effect on the condition (financial or otherwise), prospects, earnings, business or properties of the Corporation and the Subsidiary (taken as a whole), whether or not it arises from transactions in the ordinary course of business;

(xxv) except as disclosed in writing to the Underwriters or otherwise in the normal course of business, the Corporation has not advanced funds, extended credit or been a creditor of any insider of the Corporation or any person not dealing at arm's length with such person and the Corporation has not borrowed funds from, received extensions of credit from or otherwise been a debtor of any insider of the Corporation or any person not dealing at arm's length with such person;

(xxvi) the Shares to be issued as described in this Agreement when issued, delivered and paid for in full will be validly issued as fully paid Common Shares, and will not have been issued in violation of or subject to any pre-emptive rights or contractual rights to purchase securities issued by the Corporation;

(xxvii) the form of the certificate for the Shares complies with all legal requirements;

(xxviii) except for the Underwriters, there is no other person, firm or corporation acting or purporting to act at the request of the Corporation who is entitled to any brokerage, finder's, underwriter's or agency fee in connection with the transactions contemplated hereby;

(xxix) no authorization, approval or consent of any court or governmental authority or agency is required to be obtained by the Corporation

in connection with the sale and delivery of the Shares except as has been obtained or is contemplated hereby;

(xxx) the minute books for the Corporation and the Subsidiary (including in respect of committee meetings) as provided to Stikeman Elliott LLP contain full, true and correct copies of the constating documents of the Corporation and the Subsidiary and contain copies of all minutes of all meetings and all consent resolutions of the directors, committees of the directors and shareholders of the Corporation and the Subsidiary and all such meetings were duly called, properly held and all such consent resolutions were properly adopted;

(xxxi) the Corporation has full corporate power and authority to enter into the Purchase Option and to perform its obligations set out therein and the Purchase Option has been duly authorized, executed and delivered by the Corporation and the Purchase Option is a legal, valid and binding obligation of the Corporation enforceable against the Corporation in accordance with its terms, subject to the general qualifications that:

(A) enforceability may be limited by bankruptcy, insolvency or other laws affecting creditors' rights generally;

(B) equitable remedies, including the remedies of specific performance and injunctive relief, are available only in the discretion of the court and the courts have statutory and inherent powers to stay proceedings before them; and

(C) rights to indemnity and contribution thereunder may be limited under applicable law;

(D) applicable laws regarding limitations of actions; and

(E) the validity, binding nature and enforceability of provisions in the Purchase Option which purport to sever therefrom any provision which is unenforceable or invalid under applicable law without affecting the enforceability or validity of the remainder of the Purchase Option would be determined in the discretion of the court;

(xxxii) to the knowledge of the Corporation, each of Denison Resources Inc. and Denison Mines Inc. has full corporate power and authority to enter into the Arrangement Agreement and to perform its obligations set out therein and the Arrangement Agreement has

been duly authorized, executed and delivered by each of such corporations and the Arrangement Agreement, including in particular but without limitation, the Indemnity Rights, is a legal, valid and binding obligation of each of such corporations enforceable against such corporations in accordance with its terms, subject to the general qualifications that:

(A) enforceability may be limited by bankruptcy, insolvency or other laws affecting creditors' rights generally;

(B) equitable remedies, including the remedies of specific performance and injunctive relief, are available only in the discretion of the court and the courts have statutory and inherent powers to stay proceedings before them; and

(C) rights to indemnity and contribution thereunder may be limited under applicable law;

(D) applicable laws regarding limitations of actions; and

(E) the validity, binding nature and enforceability of provisions in the Arrangement Agreement which purport to sever therefrom any provision which is unenforceable or invalid under applicable law without affecting the enforceability or validity of the remainder of the Arrangement Agreement would be determined in the discretion of the court;

(xxxiii) the Corporation has no reason to believe that the representations and warranties of Calfrac in the Purchase Option are not true and correct as at the date hereof or that Calfrac is in breach of any covenants in the Purchase Option on the date hereof, except, in either case, such as would not have a material adverse effect on the business, operations, capital, properties, assets, liabilities (absolute, accrued, contingent or otherwise), condition (financial or otherwise) or results of operations of Calfrac and its subsidiaries, taken as a whole;

(xxxiv) the Corporation anticipates that it will exercise the Purchase Option following the closing of the Offering and the Corporation is not aware of any reason that is reasonably likely to occur that would cause the acquisition of Calfrac not to be completed as contemplated in the Purchase Option and the Corporation is not aware of any event which has occurred which would provide any of the parties to the Purchase Option with a reasonable basis to terminate or seek a termination of the Purchase Option;

(xxxv) to the knowledge of the Corporation, after due inquiry, the descriptions of the assets and the liabilities of Calfrac as set forth in the Calfrac Financial Statements, including the notes thereto, fairly represent in accordance with generally accepted accounting principles in Canada applied on a consistent basis, the financial position and condition of Calfrac and its results from operations as at the dates thereof and reflect all material liabilities (absolute, accrued, contingent or otherwise) of Calfrac as at the dates thereof and for the periods covered thereby required to be disclosed in accordance with generally accepted accounting principles in Canada; and

(xxxvi) the representations and warranties of the Corporation in the Purchase Option, a true copy of which (including all schedules thereto and agreements relating thereto) has been provided to the Underwriters, are true and correct as of the date hereof, except as such would not have a material adverse effect on the business, operations, capital, properties, assets, liabilities (absolute, accrued, contingent or otherwise), condition (financial or otherwise) or results of operations of the Corporation.

10. Indemnity

(a) The Corporation (the "**Indemnitor**") shall indemnify and save the Underwriters, and the Underwriters' agents, directors, officers, shareholders and employees, harmless against and from all liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses to which the Underwriters, or any of the Underwriters' agents, directors, officers, shareholders or employees may be subject or which the Underwriters, or any of the Underwriters' agents, directors, officers, shareholders or employees may suffer or incur, whether under the provisions of any statute or otherwise, in any way caused by, or arising directly or indirectly from or in consequence of:

(i) any information or statement contained in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or in any other document or material filed or delivered pursuant hereto (other than any information or statement relating solely to the Underwriters and furnished to the Corporation by the Underwriters or the Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or Supplementary Materials) which is or is alleged to be untrue or any omission or alleged omission to

provide any information or state any fact the omission of which makes or is alleged to make any such information or statement untrue or misleading in light of the circumstances in which it was made;

(ii) any misrepresentation or alleged misrepresentation (except a misrepresentation which is based upon information relating solely to the Underwriters and furnished to the Corporation by the Underwriters or the Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or Supplementary Materials) contained in the Preliminary Prospectus, Prospectus, U.S. Placement Memorandum or any Supplementary Materials or in any other document or any other part of the Public Record filed by or on behalf of the Corporation;

(iii) any prohibition or restriction of trading in the securities of the Corporation or any prohibition or restriction affecting the distribution of the Shares imposed by any competent authority if such prohibition or restriction is based on any misrepresentation or alleged misrepresentation of a kind referred to in Section 10(a)(ii);

(iv) any order made or any inquiry, investigation (whether formal or informal) or other proceeding commenced or threatened by any one or more competent authorities (not based upon the activities or the alleged activities of the Underwriters or their Selling Dealer Group members, if any) relating to or materially affecting the trading or distribution of the Shares;

(v) any breach of, default under or non-compliance by the Indemnitor with any requirements of the Applicable Securities Laws, applicable U.S. securities laws, the by-laws, rules or regulations of the Exchange or any representation, warranty, term or condition of this Agreement or in any certificate or other document delivered by or on behalf of the Corporation hereunder or pursuant hereto; or

(vi) the Corporation not complying with any requirement of Applicable Securities Laws or applicable U.S. securities laws in connection with the transactions contemplated herein;

(b) Notwithstanding the provisions of Section 10(a), no party who has engaged in any fraud, fraudulent misrepresentation, wilful default or gross negligence shall be entitled, to the extent that the liabilities, claims, losses, costs, damages or expenses were caused by such activity, to claim

indemnification from any person who has not engaged in such fraud, fraudulent misrepresentation, wilful default or gross negligence;

(c) If any claim contemplated by Section 10(a) shall be asserted against any of the individuals, persons or corporations in respect of which indemnification is or might reasonably be considered to be provided for in such section, such individual, person or corporation (the "**Indemnified Person**") shall notify the Indemnitor as soon as possible of the nature of such claim (provided that failure to so notify the Indemnitor of the nature of such claim in a timely fashion shall relieve the Indemnitor of liability hereunder only if and to the extent that such failure materially prejudices the Indemnitor's ability to defend such claim) and the Indemnitor shall be entitled (but not required) to assume the defence of any suit brought to enforce such claim, provided however, that the defence shall be through legal counsel selected by the Indemnitor and acceptable to the Indemnified Person acting reasonably and that no settlement may be made by the Indemnitor or the Indemnified Person without the prior written consent of the other, such consent not to be unreasonably withheld. The Indemnified Person shall have the right to retain its own counsel in any proceeding relating to a claim contemplated by Section 10(a) if:

(i) the Indemnified Person has been advised by counsel that there may be a reasonable legal defence available to the Indemnified Person which is different from or additional to a defence available to the Indemnitor (in which case the Indemnitor shall not have the right to assume the defence of such proceedings on the Indemnified Person's behalf);

(ii) the Indemnitor shall not have taken the defence of such proceedings and employed counsel within ten (10) days after receipt of notice of commencement of such proceedings; or

(iii) the employment of such counsel has been authorized by the Indemnitor in writing in connection with the defence of such proceeding;

and, in any such event, the reasonable fees and expenses of such Indemnified Person's counsel (on a solicitor and his client basis) shall be paid by the Indemnitor, provided that the Indemnitor shall not, in connection with any one such action or separate but substantially similar or related actions in the same jurisdiction arising out of the same general allegations or circumstances, be liable for the fees and expenses of more

than one separate law firm (in addition to any local counsel) for all such Indemnified Persons;

(d) The Indemnitor hereby waives any rights to recover contribution from the Underwriters with respect to any liability of the Indemnifying Party by reason of or arising out of any misrepresentation in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record, provided, however, that such waiver shall not apply in respect of liability caused or incurred by reason of any misrepresentation which is based upon information relating solely to the Underwriters contained in such document and furnished to the Corporation by the Underwriters or Underwriters' Counsel expressly for inclusion in the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum or such Supplementary Material;

(e) If any legal proceedings shall be instituted against the Indemnitor in respect of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the offering of Shares, or if any regulatory authority or stock exchange shall carry out an investigation of the Indemnitor in respect of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record or the offering of Shares and, in any such case, any Indemnified Person is required to testify, or respond to procedures designed to discover information, in connection with or by reason of the services performed by the Underwriters hereunder, the Indemnified Persons may employ their own legal counsel and the Indemnitor shall pay and reimburse the Indemnified Persons for the reasonable fees, charges and disbursements (on a full indemnity basis) of such legal counsel, the other expenses reasonably incurred by the Indemnified Persons in connection with such proceedings or investigation and a fee at the normal per diem rate for any director, officer or employee of the Underwriters involved in the preparation for or attendance at such proceedings or investigation;

(f) The rights and remedies of the Indemnified Persons set forth in Sections 10, 11 and 12 hereof are to the fullest extent possible in law cumulative and not alternative and the election by any Underwriter or other Indemnified Person to exercise any such right or remedy shall not be, and shall not be deemed to be, a waiver of any other rights and remedies;

(g) The Indemnitor hereby acknowledges that the Underwriters are acting as agents for the Underwriters' respective agents, directors, officers, shareholders and employees under this Section 10 and under Section 11 with respect to all such agents, directors, officers, shareholders and employees;

(h) The Indemnitor waives any right it may have of first requiring an Indemnified Person to proceed against or enforce any other right, power, remedy or security or claim or to claim payment from any other person before claiming under this indemnity. It is not necessary for an Indemnified Person to incur expense or make payment before enforcing such indemnity;

(i) The rights of indemnity contained in this Section 10 shall not apply if the Corporation has complied with the provisions of Sections 4 and 5 and the person asserting any claim contemplated by this Section 10 was not provided with a copy of the Prospectus or any amendment to the Prospectus or other document which corrects any misrepresentation or alleged misrepresentation which is the basis of such claim and which was required, under Applicable Securities Laws, to be delivered to such person by the Underwriters; and

(j) If the Indemnitor has assumed the defense of any suit brought to enforce a claim hereunder, the Indemnified Person shall provide the Indemnitor copies of all documents and information in its possession pertaining to the claim, take all reasonable actions necessary to preserve its rights to object to or defend against the claim, consult and reasonably cooperate with the Indemnitor in determining whether the claim and any legal proceeding resulting therefrom should be resisted, compromised or settled and reasonably cooperate and assist in any negotiations to compromise or settle, or in any defense of, a claim undertaken by the Indemnitor provided that such Indemnified Person shall be reimbursed as contemplated by Section 10(e).

11. Contribution

(a) In order to provide for just and equitable contribution in circumstances in which the indemnification provided for in this Agreement is due in accordance with its terms but is, for any reason, held by a court to be unavailable from the Indemnitor on grounds of policy or otherwise, the Indemnitor and the party or parties seeking indemnification shall contribute to the aggregate liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses (including legal or other expenses reasonably

incurred in connection with investigation or defence of the same) to which they may be subject or which they may suffer or incur:

(i) in such proportion as is appropriate to reflect the relative benefit received by the Indemnitor on the one hand, and by the party or parties seeking indemnity on the other hand, from the offering of the Shares; or

(ii) if the allocation provided by Section 11(a)(i) above is not permitted by applicable law, in such proportion as is appropriate to reflect not only the relative benefits referred to in Section 11(a)(i) above but also to reflect the relative fault of the party or parties seeking indemnity, on the one hand, and the Indemnitor, on the other hand, in connection with the statements, commissions or omissions or other matters which resulted in such liabilities, claims, demands, losses, costs, damages or expenses as well as any other relevant equitable considerations;

(b) The relative benefits received by the Indemnitor on the one hand, and the Underwriters, on the other hand, shall be deemed to be in the same proportion that the total proceeds of the Offering received by the Corporation (net of fees but before deducting expenses) bear to the fees received by the Underwriters. In the case of liability arising out of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Material or any other part of the Public Record, the relative fault of the Indemnitor on the one hand, and of the Underwriters, on the other hand, shall be determined by reference, among other things, to whether the misrepresentation or alleged misrepresentation, order, inquiry, investigation or other matter or thing referred to in Section 10 relates to information supplied or which ought to have been supplied by, or steps or actions taken or done on behalf of or which ought to have been taken or done on behalf of the Indemnitor or the Underwriters and the parties' relative intent, knowledge, access to information and opportunity to correct or prevent such misrepresentation or alleged misrepresentation, order, inquiry, investigation or other matter or thing referred to in Section 10;

(c) The amount paid or payable by an Indemnified Person as a result of liabilities, claims, demands, losses (other than losses of profit in connection with the distribution of the Shares), costs, damages and expenses (or claims, actions, suits or proceedings in respect thereof) referred to above shall, without limitation, include any legal or other expenses reasonably incurred by the Indemnified Person in connection with investigating or defending such liabilities, claims, demands, losses,

costs, damages and expenses (or claims, actions, suits or proceedings in respect thereof) whether or not resulting in any action, suit, proceeding or claim;

(d) The Indemnitor agrees that it would not be just and equitable if contributions pursuant to this Agreement were determined by pro rata allocation or by any other method of allocation which does not take into account the equitable considerations referred to in the immediately preceding paragraphs. The rights to contribution provided in this Section 11 shall be in addition to, and without prejudice to, any other right to contribution which the Underwriters or any other Indemnified Person may have; and

(e) Any liability of the Underwriters under this Section 11 shall be limited to the amount actually received by the Underwriters under Section 2.

12. Expenses

(a) Whether or not the transactions contemplated herein shall be completed, subject to Section 12(c), all costs and expenses of or incidental to the distribution of the Shares shall be borne by the Corporation, including, without limitation, all costs and expenses of or incidental to the preparation, filing and reproduction of the Preliminary Prospectus, the Prospectus, the U.S. Placement Memorandum, any Supplementary Materials, the fees and expenses of the Corporation's counsel, the costs relating to road show meetings and presentations (including all printing and travel costs for employees of the Corporation), listing fees, the fees and expenses of agent counsel retained by the Corporation's counsel, the fees and expenses of the Corporation's auditors and the Corporation's engineers, translation costs, the fees and expenses related to any newspaper advertisements and all other costs and expenses relating to this transaction, other than those set forth in Section 12(c) hereof to be paid by the Underwriters;

(b) If the Offering is not completed due to any reason whatsoever, including, without limitation, the inability or unwillingness of the Corporation or due to any of the Underwriters exercising the termination rights set forth herein, the Corporation shall be responsible for the fees and expenses of counsel to the Underwriters (on a solicitor and his own client basis) and the reasonable out-of-pocket expenses incurred by the Underwriters, including their expenses related to due diligence investigations (including the fees and expenses of any experts retained by the Underwriters in connection therewith), information meetings and travel (collectively, the "**Underwriters' Expenses**"); provided, however, that if the purchase and

sale of the Shares is not completed in accordance with the terms hereof by reason of a breach by or default of the Underwriters, the Underwriters shall be responsible for the Underwriters' Expenses;

(c) If the Offering is completed, the Underwriters shall be responsible for the Underwriters' Expenses; and

(d) If the Underwriters are entitled to reimbursement for Underwriters' Expenses hereunder, the Corporation shall reimburse the Underwriters upon presentation of reasonable evidence of such expenses. The Underwriters shall present reasonable evidence of the Underwriter's Expenses to the Corporation as soon as is practicable following the termination of the Offering and the Corporation shall reimburse the Underwriters within 30 days of receipt of reasonable evidence of the Underwriters' Expenses.

13. Termination

(a) Each of the Underwriters may, without liability, terminate its obligations hereunder, by written notice to the Corporation, in the event that after the date hereof and at or prior to the Closing Time:

(i) there should develop, occur or come into effect or existence any event, action, state, condition or major financial occurrence of national or international consequence, acts of hostilities or escalation thereof or other calamity or crisis or any change or development involving a prospective change in national or international political, financial or economic conditions or any governmental action, law, regulation, inquiry or other occurrence of any nature whatsoever which, in the sole opinion of the Underwriter, acting reasonably, seriously adversely affects or involves, or may seriously adversely affect or involve, the financial markets or the business, operations or affairs of the Corporation or Calfrac;

(ii) the state of the financial markets is such that the Shares cannot in the reasonable opinion of the Underwriter be profitably marketed;

(iii) any order to cease or suspend trading in any securities of the Corporation or prohibiting or restricting the distribution of the Shares is made, or any proceedings are announced, commenced or threatened for the making of any such order, by any stock exchange, Securities Commission or similar regulatory (including the SEC) or judicial authority (other than as a result of any act or omission of such Underwriter contrary to the terms of this

Agreement), and the same has not been rescinded, revoked or withdrawn;

(iv) the Corporation is in breach or non-performance of or default under a material covenant, representation, warranty, term or condition of the Corporation contained herein that has not been waived or rectified or remedied to the satisfaction of the Underwriter;

(v) any inquiry, investigation or other proceeding (whether formal or informal) in relation to the Corporation or its directors or senior officers is announced, commenced or threatened by any stock exchange, Securities Commission or similar regulatory (including the SEC) or judicial authority (unless based on the activities or alleged activities of an Underwriter or its agent), or there is any change in law, regulation or policy or the interpretation or administration thereof, and the same has not been rescinded, revoked or withdrawn, if, in the sole opinion of the Underwriter, acting reasonably, the inquiry, investigation or other proceeding, change, announcement, commencement or threatening thereof materially prevents or restricts or may materially prevent or restrict the trading or distribution of the Shares or would be expected to have a material adverse effect on the market price or value of the Shares;

(vi) there should occur any material change (actual, contemplated or threatened), change in any material fact, occurrence or event of the nature referred to in Section 7(a) or any development that could result in such a material change (actual, contemplated or threatened), change in any material fact, occurrence or event, which, in the sole opinion of the Underwriter, could reasonably be expected to have a material adverse effect on the market price or value of the Shares or the marketability of the Shares;

(vii) the Underwriter shall become aware of any adverse material change (actual, contemplated or threatened) or adverse material fact with respect to the Corporation or Calfrac which has not been publicly disclosed or disclosed in writing to the Underwriters at or prior to the date hereof, and, in the case of an adverse material change or adverse material fact with respect to Calfrac, the Corporation shall not have either terminated the Purchase Option in accordance with its terms or renegotiated the terms of the Purchase Option on terms and conditions satisfactory to the Underwriter in its sole discretion; or

(viii) there is announced any change or proposed change in the income tax laws of Canada or the interpretation or administration thereof, and such change, in the sole opinion of the Underwriter, could reasonably be expected to have a material adverse effect on the market price or value of the Shares.

(b) The Underwriters, or any of them, may exercise any or all of the rights provided for in Section 13(a) or Section 14 or Section 20 notwithstanding any material change, change, event or state of facts (except where the Underwriter purporting to exercise any of such rights is in breach of its obligations under this Agreement) and notwithstanding any act or thing taken or done by the Underwriters or any inaction by the Underwriters, whether before or after the occurrence of any material change, change, event or state of facts including, without limitation, any act of the Underwriters related to the offering or continued offering of the Shares for sale and any act taken by the Underwriters in connection with any amendment to the Prospectus (including the execution of any amendment) and the Underwriters shall only be considered to have waived or be estopped from exercising or relying upon any of their rights under or pursuant to Section 13(a) or Section 14 or 20 if such waiver or estoppel is in writing and specifically waives or estops such exercise or reliance; and

(c) Any termination pursuant to the terms of this Agreement shall be effected by notice in writing delivered to the Corporation, provided that no termination shall discharge or otherwise affect any obligation of the Corporation under Section 10, 11, 12 or 20. The rights of the Underwriters to terminate their obligations hereunder are in addition to, and without prejudice to, any other remedies they may have.

14. Closing Documents

The following are conditions precedent to the obligations of the Underwriters to complete the transactions contemplated in this Agreement:

(a) There shall be delivered to the Underwriters legal opinions of the Corporation's Counsel and Calfrac's counsel, as applicable, and the Underwriters' Counsel addressed to the Underwriters, in form and substance satisfactory to the Underwriters, acting reasonably, with respect to such matters as the Underwriters may reasonably request relating to the offering of the Shares, including, without limitation, that:

(i) the Corporation has been duly continued and is validly existing under the ABCA and has all requisite corporate power and authority to carry on its business and to own its properties and

assets and is in good standing in each jurisdiction in which the conduct of its business requires such qualification, except to the extent that the failure to be so licensed, registered or qualified or be in good standing would not have a material adverse effect on the Corporation (taken as a whole);

(ii) Calfrac has been duly incorporated and is validly existing under the ABCA and has all requisite corporate power and authority to carry on its business and to own its properties and assets and is in good standing in each jurisdiction in which the conduct of its business requires such qualification, except to the extent that the failure to be so licensed, registered or qualified or be in good standing would not have a material adverse effect on Calfrac (taken as a whole);

(iii) the Corporation has full corporate power and capacity to enter into this Agreement and the Purchase Option and to perform its obligations set out herein and therein, and this Agreement and the Purchase Option have been duly authorized, executed and delivered by the Corporation and constitute (subject to the usual qualifications) legal, valid and binding obligations of the Corporation enforceable against the Corporation;

(iv) Calfrac has full corporate power and capacity to enter into the Purchase Option and to perform its obligations set out therein, and the Purchase Option have been duly authorized, executed and delivered by Calfrac and constitutes (subject to the usual qualifications) a legal, valid and binding obligation of Calfrac enforceable against Calfrac;

(v) the execution and delivery of this Agreement and the Purchase Option, the performance and compliance with the terms of this Agreement and the Purchase Option and the sale of the Shares by the Corporation do not and will not result in a breach of, or constitute a default under, and do not and will not create a state of facts which, after notice or lapse of time or both, will result in a breach of or constitute a default under: (A) any applicable laws (including Applicable Securities Laws); (B) any term or provision of the articles, by-laws or resolutions of the directors or shareholders of the Corporation or the Subsidiary; (C) to the knowledge of counsel, any mortgage, note, indenture, contract, agreement (written or oral), instrument, lease or other document to which the Corporation or the Subsidiary is a party or by which the Corporation or the Subsidiary is bound on the Closing Date; or

(D) to the knowledge of such counsel, any judgement, decree, order, statute, rule or regulation applicable to the Corporation or the Subsidiary, which breach or default might reasonably be expected to materially adversely affect the business, operations, capital or condition (financial or otherwise) of the Corporation and the Subsidiary (taken as a whole);

(vi) the execution and delivery of the Purchase Option and the performance and compliance with the terms of the Purchase Option by Calfrac do not and will not result in a breach of, or constitute a default under, and do not and will not create a state of facts which, after notice or lapse of time or both, will result in a breach of or constitute a default under: (A) any applicable laws (including Applicable Securities Laws); (B) any term or provision of the articles, by-laws or resolutions of the directors or shareholders of Calfrac or its subsidiaries; (C) to the knowledge of counsel, any mortgage, note, indenture, contract, agreement (written or oral), instrument, lease or other document to which Calfrac or its subsidiaries is a party or by which Calfrac or its subsidiaries is bound on the Closing Date; or (D) to the knowledge of such counsel, any judgement, decree, order, statute, rule or regulation applicable to Calfrac or its subsidiaries, which breach or default might reasonably be expected to materially adversely affect the business, operations, capital or condition (financial or otherwise) of the Calfrac and its subsidiaries (taken as a whole);

(vii) all necessary action has been taken by the Corporation to validly allot and issue to the Underwriters the Shares;

(viii) the Shares, when delivered and sold in accordance with this Agreement, will be duly and validly created and issued as fully paid and non-assessable Common Shares;

(ix) the form and terms of the certificates representing the Shares have been approved by the directors of the Corporation and comply with all legal requirements relating thereto;

(x) no consent, approval, authorization or order of or qualification with any governmental or regulatory body or agency in the Province of Alberta (or pursuant to the federal laws of Canada applicable therein) is required to be obtained by the Corporation for the offer and sale of the Shares by the Underwriters in the manner contemplated hereby, except such as have been obtained;

(xi) the Corporation has the necessary corporate power and authority to execute and deliver the Prospectus and the U.S. Placement Memorandum and all necessary corporate action has been taken by the Corporation to authorize the execution and delivery by or on behalf of the Corporation of the Prospectus and the U.S. Placement Memorandum and the filing thereof, as the case may be, in each of the Qualifying Provinces or the U.S. in accordance with Applicable Securities Laws and applicable U.S. securities laws;

(xii) the authorized and issued capital of the Corporation, the attributes of the Shares and the agreements in connection with the Reorganization and Acquisition conform in all material respects with the description thereof in the Prospectus;

(xiii) the authorized and issued capital of Calfrac;

(xiv) the Shares, when issued, will be qualified investments as set out under the heading "Eligibility for Investment" in the Prospectus;

(xv) all necessary documents have been filed, all necessary proceedings have been taken and all legal requirements have been fulfilled as required under the Applicable Securities Laws in order to qualify the Shares for distribution and sale to the public in each of the Qualifying Provinces by or through investment dealers and brokers duly registered under the applicable laws of such provinces who have complied with the relevant provisions of such Applicable Securities Laws;

(xvi) all laws of the Province of Québec relating to the use of the French language (other than those relating to oral communications) will have been complied with in connection with the sale of the Shares to purchasers in the Province of Québec if such purchasers receive copies of the Prospectus and of all documents which constitute the contract of sale, including forms of order and confirmation, invoices and receipts, in the French and English language or the French language only;

(xvii) the Corporation is a reporting issuer in each of the Qualifying Provinces and is not on the list of defaulting issuers maintained by the Securities Commissions of each of such provinces;

(xviii) the issuance of the Shares has been conditionally approved by the Exchange and the Shares have been conditionally accepted for listing upon the Exchange subject to any applicable filing requirements;

(xix) to the knowledge of counsel, other than as disclosed in the Prospectus, there are no actions, suits, proceedings or inquiries pending or threatened against or affecting the Corporation or the Subsidiary at law or in equity or before or by any federal, provincial, municipal or other governmental department, commission, board, bureau or agency which may in any way materially adversely affect the business, operations or condition (financial or otherwise) of the Corporation and the Subsidiary (taken as a whole); and

(xx) the Arrangement has become effective in accordance with its terms;

and as to all other legal matters, including compliance with Applicable Securities Laws, in any way connected with the issuance, sale and delivery of the Shares as the Underwriters may reasonably request.

It is understood that the respective counsel may rely on the opinions of local counsel acceptable to them as to matters governed by the laws of jurisdictions other than Alberta or Canada and on certificates of officers of the Corporation, the transfer agent and the auditors of the Corporation and Calfrac as to relevant matters of fact. It is further understood that the Underwriters' Counsel may rely on the opinion of the Corporation's Counsel as to matters which specifically relate to the Corporation and the Shares, including the issuance of the Shares;

(b) There shall be delivered to the Underwriters at the Closing Time, favourable legal opinions by a recognized United States counsel acceptable to the Underwriters, acting reasonably, in form and substance reasonably satisfactory to the Underwriters, to the effect that no registration of the Shares under the U.S. Securities Act is required for the offer, sale and delivery of the Shares to the Underwriters and the initial resale of the Shares by the Underwriters through their U.S. broker dealer affiliates in the United States;

(c) There shall be delivered to the Underwriters a certificate of the Corporation dated the Closing Date, addressed to the Underwriters and signed on the Corporation's behalf by any two senior officers of the Corporation satisfactory to the Underwriters, acting reasonably, certifying that:

(i) the Corporation has complied with and satisfied all terms and conditions of this Agreement on its part to be complied with or satisfied at or prior to the Closing Time;

(ii) except for changes contemplated by this Agreement, the representations and warranties of the Corporation set forth in this Agreement are true and correct in all material respects at the Closing Time, as if made at such time; and

(iii) no event of a nature referred to in Sections 7(a), 7(b) or 13(a)(iii), (iv), (v) or (vi) has occurred or to the knowledge of such officers is pending, contemplated or threatened;

and the Underwriters shall have no knowledge to the contrary.

(d) There shall be delivered to the Underwriters a comfort letter of each of the auditors referred to in Section 5(d) addressed to the Underwriters and dated the Closing Date, in the format satisfactory to the Underwriters, acting reasonably, bringing the information contained in the comfort letters referred to in Section 5(d) hereof up to the Closing Time, which comfort letters shall be based on a review having a cut off date not more than two Business Days prior to the Closing Date;

(e) No ruling, order or determination shall have been issued and no proceeding for the same shall have been commenced or threatened and the Underwriters shall be satisfied, acting reasonably, that no circumstances shall exist preventing or materially and adversely affecting the performance of the Purchase Option by the parties thereto or the completion of the transactions contemplated by the Purchase Option in accordance with the terms thereof;

(f) There shall be delivered to the Underwriters evidence satisfactory to the Underwriters that the Corporation has obtained all necessary approvals of the Exchange for the issuance and listing of the Shares subject only to the filing of documents which may be required by the Exchange;

(g) There shall be delivered to the Underwriters a duly executed undertaking in the form attached hereto as Schedule B;

(h) The Underwriters, acting reasonably, shall be satisfied that there is no reason that the Acquisition cannot be completed;

(i) The Underwriters shall have obtained satisfactory results of all due diligence investigations relating to any Supplementary Material;

(j) Each of Matco, Matco Investments, Douglas R. Ramsay, Gordon A. Dibb and Robert S. Roberts shall have entered into an agreement in form and substance reasonably satisfactory to the Underwriters, as described in the Prospectus under the heading "Plan of Distribution"; and

(k) There shall be delivered to the Underwriters such other certificates and documents as the Underwriters may request, acting reasonably.

15. Deliveries

The sale of the Shares, if any, shall be completed at the Closing Time at the offices of the Corporation's Counsel in Calgary, Alberta or at such other place as the Corporation and the Underwriters may agree. Subject to the conditions set forth in Section 14, the Underwriters, at the Closing Time, shall deliver by wire transfer to the Corporation in immediately available Canadian funds, the amount of $125,000,060 (after deduction of any wire and other charges) against delivery by the Corporation of:

(a) the opinions, certificates and documents referred to in Section 14;

(b) definitive certificates representing, in the aggregate, all of the Shares registered in such name or names as the Underwriters shall notify the Corporation in writing not less than twenty-four (24) hours prior to the Closing Time; and

(c) a certified cheque or bank draft payable to Peters & Co. Limited representing the fee provided for in Section 2;

provided however that the payment to Peters & Co. Limited pursuant to paragraph (c) may be made by way of set-off against the payment to be made to the Corporation in this paragraph 15.

16. Due Diligence

During the period from the date hereof until completion of the distribution of the Shares, the Corporation shall allow the Underwriters to participate fully in the preparation of the Prospectus, the U.S. Placement Memorandum and any Supplementary Material and allow the Underwriters to conduct all due diligence which the Underwriters may reasonably require in order to fulfil the Underwriters' obligations as underwriters and to enable the Underwriters to responsibly execute the certificate in the Prospectus, the U.S. Placement Memorandum and any Supplementary Material required to be executed by the Underwriters.

17. Restrictions on Offerings

During the period commencing on the date hereof and ending on the day which is 120 days following the Closing Date, the Corporation shall not, without the prior written consent of Peters & Co. Limited on behalf of (and after consultation with) the Underwriters, which consent shall not be unreasonably withheld, directly or indirectly, offer, nor announce the offering of, nor make any agreement to issue any additional Common Shares or securities convertible or exercisable into Common Shares (other

than for purposes of the stock option plan of the Corporation or pursuant to any presently outstanding rights or agreements or other convertible securities).

18. Offering in the United States.

(a) For the purposes of this Agreement, the following terms will have the meanings indicated:

(i) "**Directed Selling Efforts**" means "directed selling efforts" as defined in Regulation S and, without limiting the foregoing, but for greater clarity, it means, subject to the exclusions from the definition of directed selling efforts contained in Regulation S, any activity undertaken for the purpose of, or that could reasonably be expected to have the effect of, conditioning the market in the United States for the Shares, and includes the placement of any advertisement in a publication with a general circulation in the United States that refers to the offering of the Shares;

(ii) "**General Solicitation**" and "**General Advertising**" means "general solicitation" and "general advertising", respectively, as used in Rule 502(c) under the U.S. Securities Act, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television, or any seminar or meeting whose attendees had been invited by general solicitation or general advertising;

(iii) "**Institutional Accredited Investor**" means those institutional "accredited investors" specified in Rule 501(a)(1), (2), (3) and (7) of Regulation D;

(iv) "**Qualified Institutional Buyer**" means a "qualified institutional buyer" as defined in Rule 144A;

(v) "**Regulation D**" means Regulation D promulgated under the U.S. Securities Act;

(vi) "**Regulation S**" means Regulation S promulgated under the U.S. Securities Act;

(vii) "**Rule 144A**" means Rule 144A promulgated under the U.S. Securities Act;

(viii) "**SEC**" means the United States Securities and Exchange Commission;

(ix) "**Substantial U.S. Market Interest**" means "substantial U.S. market interest" as defined in Regulation S;

(x) "**U.S. Exchange Act**" means the *United States Securities Exchange Act* of 1934, as amended;

(xi) "**U.S. Placement Memorandum**" means (i) the Preliminary Prospectus supplemented with wrap pages dated the date of the Preliminary Prospectus describing restrictions imposed under the U.S. Securities Act; and (ii) the Prospectus supplemented with wrap pages dated the date of the Prospectus describing restrictions imposed under the U.S. Securities Act; and

(xii) "**U.S. Securities Act**" means the *United States Securities Act* of 1933, as amended.

(b) The Underwriters may offer and sell the Shares within the United States on the terms and subject to the conditions of this Section 18. In connection therewith, the Corporation represents, warrants and covenants that:

(i) the Corporation is a "foreign issuer" (within the meaning of Regulation S) and reasonably believes there is no Substantial U.S. Market Interest with respect to the Shares;

(ii) none of the Corporation, Matco, their respective affiliates or any person acting on its or their behalf (other than the Underwriters, U.S. affiliates of the Underwriters ("**U.S. Affiliates**"), or any members of the banking and selling group formed by them (collectively, the "**Selling Firms**"), as to whom the Corporation makes no representation), has engaged or will engage in any Directed Selling Efforts in the United States with respect to the Shares;

(iii) the Corporation is not, and following the application of the proceeds of the sale of the Shares in the manner described in the Prospectus will not be, an open-end investment company, unit investment trust or face amount certificate company that is or is required to be registered or a closed-end investment company that is required to be, but is not, registered under Section 8 of the *United States Investment Company Act* of 1940, as amended;

(iv) none of the Corporation, Matco, their respective affiliates or any person acting on its or their behalf (other than the Underwriters, U.S. Affiliates, or any of the Selling Firms, as to whom the Corporation makes no representation), has engaged in any form of

General Solicitation or General Advertising or in any conduct involving an offering within the meaning of Section 4(2) of the U.S. Securities Act in connection with any offer or sale of the Shares or any security convertible or exchangeable into Common Shares in the United States within the six month period prior to the date of this Agreement;

(v) so long as any of the Shares resold pursuant to Rule 144A are outstanding and are "restricted securities" within the meaning of Rule 144(a)(3) under the U.S. Securities Act and cannot be sold pursuant to Rule 144(k) under the U.S. Securities Act, the Corporation will, if it no longer is subject to the reporting requirements of Section 13 or Subsection 15(d) of the *U.S. Exchange Act* or the information furnishing requirements of Rule 12g3-2(b) thereunder or if it is subject to such reporting requirements and fails to comply therewith, provide to any holder of those restricted securities, or to any prospective purchaser of those restricted securities designated by a holder, upon the request of that holder or prospective purchaser, at or prior to the time of sale, the information required to be provided by Rule 144A(d)(4) under the U.S. Securities Act (so long as that requirement is necessary in order to permit holders of the restricted securities to effect resales under Rule 144A) to a Qualified Institutional Buyer which is a holder of the restricted securities;

(vi) none of the Corporation, Matco or their respective affiliates will take any action that would cause the registration exemptions in Regulation S or Rule 144A to be unavailable for the offer and sale of the Shares pursuant to this Agreement;

(vii) the Common Shares are not, and as of the Time of Closing the Common Shares will not be, and no securities of the same class as the Common Shares are or will be, listed on a national securities exchange in the United States, registered under Section 6 of the *U.S. Exchange Act*, quoted in an "automated inter-dealer quotation system", as such term is used in the *U.S. Exchange Act*, or convertible or exchangeable at an effective conversion premium (calculated as specified in Section (a)(6) of Rule 144A) of less than ten percent for securities so listed or quoted;

(viii) the Corporation will, within prescribed time periods, prepare and file any forms or notices required under the U.S. Securities Act or applicable blue sky laws; and

(ix) the Corporation will notify Computershare Trust Company of Canada as soon as practicable upon it becoming a "domestic issuer", as defined in Regulation S.

(c) Each Underwriter acknowledges that the Shares have not been and will not be registered under the U.S. Securities Act and may be offered and sold only in transactions exempt from or not subject to the registration requirements of the U.S. Securities Act. Accordingly, each Underwriter separately and not jointly represents, warrants and covenants, and will cause its U.S. Affiliates to comply with such representations, warranties and covenants, that:

(i) it has not offered or sold, and will not offer or sell, any Shares constituting part of its allotment within the United States except as provided in this Section 18 or outside of the United States in accordance with Rule 903 of Regulation S. Accordingly, neither it nor any of its affiliates nor any person acting on its or their behalf has engaged or will engage in: (i) any offer to sell or any solicitation of an offer to buy, any Shares to any person in the United States, (ii) any sale of Shares to any purchaser unless, at the time the buy order was or will have been originated, the purchaser was outside the United States, or such Underwriter, affiliate or person acting on behalf of either reasonably believed that such purchaser was outside the United States, or any Directed Selling Efforts with respect to the Shares, except as permitted in this Section 18;

(ii) neither it nor any of its affiliates nor any person acting on its or their behalf has or will engage in any form of General Solicitation or General Advertising or in any conduct involving a public offering within the meaning of Section 4(2) of the U.S. Securities Act in connection with its offers or sales of the Shares in the United States;

(iii) all offers and sales of the Shares in the United States will be effected through its U.S. Affiliate duly registered under the *U.S. Exchange Act* and all applicable state securities laws, in accordance with all applicable United States state and federal securities (including broker-dealer) laws;

(iv) each U.S. Affiliate which is purchasing Shares in the United States is a Qualified Institutional Buyer and is a member of, and in good standing with, the National Association of Securities Dealers, Inc. on the date hereof;

(v) it has not used and will not use any written material other than the U.S. Placement Memorandum relating to the offering of the Shares in the United States, and it agrees to deliver, through the U.S. Affiliates, a copy of the U.S. Placement Memorandum to each person in the United States purchasing Shares in an initial resale transaction in the United States;

(vi) any offer, sale or solicitation of an offer to buy Shares that has been made or will be made in the United States was or will be made only to a person it reasonably believes to be a Qualified Institutional Buyer or an Institutional Accredited Investor who is acquiring the Shares (i) for its own account or (ii) for the account of a Qualified Institutional Buyer or an Institutional Accredited Investor, as the case may be, with respect to which it exercises sole investment discretion in a transaction that is exempt from registration under the U.S. Securities Act;

(vii) all purchasers of Shares who are buying such shares pursuant to Rule 144A shall be informed that the Shares are being offered and sold to such purchasers in reliance on an exemption from the registration requirements of the U.S. Securities Act provided by Rule 144A;

(viii) immediately prior to soliciting such offerees, the Underwriter has reasonable grounds to believe and did believe that each offeree was a Qualified Institutional Buyer or an Institutional Accredited Investor, as the case may be;

(ix) prior to completion of any sale of Shares in the United States, each U.S. Purchaser thereof (a "**U.S. Purchaser**") that is a Qualified Institutional Buyer will be deemed to have provided the representations, warranties and covenants in the U.S. Placement Memorandum; and

(x) prior to any sale of Shares in the United States, it caused each U.S. Purchaser that is an Institutional Accredited Investor to sign a U.S. purchaser's letter containing representations, warranties and agreements to the Corporation substantially similar to the form set out in Schedule C.

(d) Each Underwriter agrees that:

(i) prior to the Closing Date, it will request Peters & Co. Limited to provide Computershare Trust Company of Canada with a list of all purchasers of Shares in the United States;

(ii) at closing, it, together with its U.S. Affiliate selling Shares in the United States, will provide a certificate, substantially in the form of Schedule A to this Agreement relating to the manner of the offer and sale of the Shares in the United States;

(iii) if the Underwriters authorize any member of the Selling Dealer Group (if any) to offer and sell Shares in the United States through the U.S. Affiliates, the Underwriters will cause each such firm to acknowledge in writing, for the benefit of the Corporation, its agreement to be bound by the provisions of this Section 18 in connection with all offers and sales of the Shares in the United States. The Underwriters have not made and will not make any other contractual arrangement for the distribution of the Shares in the United States without the prior written consent of the Corporation; and

(iv) it understands that all Shares sold in the United Shares as part of this Offering will bear a legend to the following effect:

"THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "**SECURITIES ACT**") OR STATE SECURITIES LAWS. THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF DENISON ENERGY INC. (THE "**CORPORATION**") THAT SUCH SECURITIES MAY BE OFFERED, SOLD OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, (C) INSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT, (D) PURSUANT TO THE EXEMPTION FROM REGISTRATION UNDER THE SECURITIES ACT PROVIDED BY RULE 144 THEREUNDER, OR (E) PURSUANT TO ANOTHER EXEMPTION FROM REGISTRATION AFTER PROVIDING A LEGAL OPINION SATISFACTORY TO THE CORPORATION.

A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM COMPUTERSHARE TRUST COMPANY OF CANADA UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED DECLARATION, IN A FORM SATISFACTORY TO COMPUTERSHARE TRUST COMPANY OF CANADA AND THE CORPORATION, TO THE EFFECT THAT THE SALE OF THE SECURITIES REPRESENTED HEREBY IS BEING MADE IN

COMPLIANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT."

If the Shares are being sold in compliance with the requirements of Rule 904 of Regulation S, the legend may be removed by providing a declaration to Computershare Trust Company of Canada to the following effect (or as the Corporation may prescribe from time to time):

"The undersigned (A) acknowledges that the sale of the common shares to which this declaration relates is being made in reliance on Rule 904 of Regulation S under the U.S. Securities Act of 1933, as amended, and (B) certifies that (1) it is not an "affiliate" (as defined in Rule 405 under the *Securities Act*, as amended) of the Corporation, (2) the offer of such common shares was not made to a person in the United States and either (a) at the time the buy order was originated, the buyer was outside the United States, or the seller and any person acting on its behalf reasonably believe that the buyer was outside the United States or (b) the transaction was executed on or through the facilities of the Toronto Stock Exchange or the TSX Venture Exchange and neither the seller nor any person acting on its behalf knows that the transaction has been prearranged with a buyer in the United States and (3) neither the seller nor any person acting on its behalf engaged in any directed selling efforts in connection with the offer and sale of such common shares. Terms used herein have the meanings given to them by Regulation S.";

If the Shares are being sold under Rule 144 of the U.S. Securities Act, the legend may be removed by delivery to Computershare Trust Company of Canada of an opinion of counsel of recognized standing and reasonably satisfactory to the Corporation, to the effect that such legend is no longer required under the U.S. Securities Act or state securities laws.

(e) It is understood and agreed by the Underwriters that the Shares may be offered and resold by the Underwriters and members of the Selling Dealer Group in the United States pursuant to the provisions of Rule 144A to persons who are, or are reasonably believed by them to be, Qualified Institutional Buyers in transactions meeting the requirements of Rule 144A and in compliance with any applicable state securities laws of the United States, provided that prior to any such sale each purchaser shall have been provided with the U.S. Placement Memorandum and by purchasing Shares, each purchaser shall be deemed to have represented

and warranted for the benefit of the Corporation and the Underwriters that:

(i) it is a Qualified Institutional Buyer and acknowledges that the sale of Shares to it is being made in reliance on Rule 144A, and it is acquiring such Shares for its own account or for the account of one or more Qualified Institutional Buyers with respect to which it exercises sole investment discretion;

(ii) it understands and acknowledges that the Shares will not be and have not been registered under the U.S. Securities Act or the securities laws of any state of the United States, and are therefore "restricted securities" within the meaning of Rule 144, and that if in the future it shall decide to resell, pledge or otherwise transfer such Shares, the same may be resold, pledged or otherwise transferred only (A) to the Corporation, (B) in the United States, in accordance with Rule 144A to a person it reasonably believes is a Qualified Institutional Buyer that purchases for its own account or for the account of a Qualified Institutional Buyer and to whom notice is given that the offer, sale or transfer is being made in reliance on Rule 144A, (C) outside the United States, in accordance with Rule 904 of Regulation S and in compliance with applicable local laws and regulations, (D) in a transaction exempt from registration under the U.S. Securities Act pursuant to Rule 144 and in compliance with any applicable state securities laws of the United States, or (E) in a transaction that does not require registration under the U.S. Securities Act or any applicable United States state securities laws, and it has furnished to the Corporation an opinion of counsel of recognized standing reasonably satisfactory to the Corporation to that effect;

(iii) it understands that all Shares sold in the United States as part of this offering will bear a legend as set out in paragraph (d)(iv) of this Section 18; and

(iv) it understands and acknowledges that it is making the representations and warranties and agreements contained herein with the intent that they may be relied upon by the Corporation and the Underwriters in determining its eligibility or (if applicable) the eligibility of others on whose behalf it is contracting hereunder to purchase the Shares.

19. Notices

Any notice under this Agreement shall be given in writing and either sent by facsimile or hand delivered to the party to receive such notice at the address indicated below:

(a) to the Corporation at:

or to such other address as the party may designate by notice given to the other. Each communication shall be personally delivered to the addressee or sent by fax transmission to the address, and:

(a) a communication which is personally delivered shall, if delivered before 4:00 p.m. (local time) on a Business Day, be deemed to be given and received on that day and, in any other case, be deemed to be given and received on the first Business Day following the day on which it is delivered; and

(b) a communication which is sent by fax transmission shall, if sent on a Business Day before 4:00 p.m. (local time), be deemed to be given and received on that day and, in any other case, be deemed to be given and received on the first Business Day following the day on which it is sent.

20. Conditions

(a) All terms and conditions of this Agreement to be performed by the Corporation shall be construed as conditions, and any breach or failure to comply with any material terms and conditions shall entitle the Underwriters to terminate their obligations to purchase the Shares by written notice to that effect given to the Corporation on or prior to the Closing Date. The Underwriters may waive in whole or in part any breach of, default under or non-compliance with any representation, warranty, term or condition hereof, or extend the time for compliance therewith, without prejudice to any of their rights in respect of any other representation, warranty, term or condition hereof or any other breach of, default under or non-compliance with any other representation, warranty, term or condition hereof, provided that any such waiver or extension shall be binding on the Underwriters only if the same is in writing; and

(b) All terms and conditions of this Agreement to be performed by the Underwriters shall be construed as conditions, and any breach or failure to comply with any material terms and conditions shall entitle the Corporation to terminate its obligation to sell the Shares by written notice to that effect given to the Underwriters on or prior to the Closing Date. The Corporation may waive in whole or in part any breach of, default under or noncompliance with any representation, warranty, term or condition hereof, or extend the time for compliance therewith, without prejudice to any of its rights in respect of any other representation, warranty, term or condition hereof or any other breach of, default under or non-compliance with any other representation, warranty, term or condition hereof, provided that any such waiver or extension shall be binding on the Corporation only if the same is in writing.

21. Survival of Representations and Warranties

It is understood that all warranties, representations, covenants and agreements herein contained or contained in certificates or documents submitted pursuant to or in connection with the transaction provided for herein shall survive the issuance of the Shares and the termination of this Agreement and shall continue in full force and effect for the benefit of the Corporation and the Underwriters regardless of any investigation by or on behalf of the Underwriters with respect thereto and regardless of whether transactions contemplated herein have been completed.

22. Several Liability of Underwriters

The Underwriters' rights and obligations under this Agreement are several and not joint and several including, without limitation, that:

(a) each of the Underwriters shall be obligated to purchase only the percentage of the total number of Shares set forth opposite its name in this Section 22; and

(b) if any one or more of the Underwriters does not purchase its applicable percentage of the total number of Shares, the other Underwriters who shall be willing and able to purchase their own applicable percentages of the total number of Shares shall be relieved of their obligations hereunder,

provided that, notwithstanding the provisions of Section (b) of this Section 22, the Underwriters who shall be willing and able to purchase their respective applicable percentages of the total number of Shares shall have the right, but not the obligation, to purchase the total number of Shares. Nothing in this Section 22 shall obligate the Corporation to sell less than all of the Shares to the Underwriters.

The applicable percentage of the total number of Shares which each of the Underwriters shall be separately obligated to purchase is as follows:

Peters & Co. Limited 50%
FirstEnergy Capital Corp. 25%
RBC Dominion Securities Inc. 25%

23. Authority to Bind Underwriters

The Corporation shall be entitled to and shall act on any notice or other communication given by or on behalf of the Underwriters by Peters & Co. Limited, which shall represent the Underwriters and which has the authority to bind the Underwriters except in respect of a notice of termination given pursuant to Section 13, which notice may be given by any Underwriter, or an agreement of settlement given under Section 10, which may be given only by the Underwriter affected thereby. Peters & Co. Limited shall consult with the other Underwriters with respect to any such notice or other communication. Acceptance of this offer by the Corporation shall constitute its authority for accepting notification of any such matters from Peters & Co. Limited.

24. Severance

If one or more of the provisions contained herein shall, for any reason, be held to be invalid, illegal or unenforceable in any respect, such invalidity, illegality or unenforceability shall not affect any other provision of this Agreement, but this Agreement shall be construed as if such invalid, illegal or unenforceable provision or provisions had never been contained herein.

25. Relationship Between the Corporation and the Underwriters

The Corporation: (i) acknowledges and agrees that the Underwriters have certain statutory obligations as registrants under the Applicable Securities Laws and have fiduciary relationships with their clients; (ii) acknowledges and agrees that the Underwriters are neither the agents of the Corporation nor otherwise fiduciaries of the Corporation; and (iii) consents to the Underwriters acting hereunder while continuing to act for their clients. To the extent that the Underwriters' statutory obligations as registrants under Applicable Securities Laws or fiduciary relationships with their clients conflict with their obligations hereunder the Underwriters shall be entitled to fulfil their statutory obligations as registrants under Applicable Securities Laws and their duties to their clients. Nothing in this Agreement shall be interpreted to prevent the Underwriters from fulfilling their statutory obligations as registrants under Applicable Securities Laws or to act as a fiduciary of their clients.

26. Governing Law

This Agreement shall be governed by and construed in accordance with the laws of the Province of Alberta and the laws of Canada applicable therein. Each of the Corporation and the Underwriters hereby attorns to the non-exclusive jurisdiction of the courts of the Province of Alberta.

27. Time of the Essence

Time shall be of the essence of this Agreement.

28. Counterpart Execution

This Agreement may be executed in one or more counterparts and by facsimile each of which so executed shall constitute an original and all of which together shall constitute one and the same agreement.

29. Further Assurances

Each party to this agreement covenants and agrees that, from time to time, it will, at the request of the requesting party, execute and deliver all such documents and do all such other acts and things as any party hereto, acting reasonably, may from time to time request be executed or done in order to better evidence or perfect or effectuate any provision of this Agreement or of any agreement or other document executed pursuant to this Agreement or any of the respective obligations intended to be created hereby or thereby.

30. Distributions

The Corporation agrees that it will not prior to the Closing Date declare or pay out any dividends to shareholders of the Corporation or set any record date in respect thereof.

31. Entire Agreement

It is understood that the terms and conditions of this Agreement supersede any previous verbal or written agreement between the Underwriters and the Corporation.

If the foregoing is in accordance with your understanding and is agreed to by you, please confirm your acceptance by signing the enclosed copies of this letter at the place indicated and by returning the same to Peters & Co. Limited.

SCHEDULE A

UNDERWRITERS' CERTIFICATE

In connection with the private placement in the United States of the Shares of Denison Energy Inc. (the "**Corporation**") pursuant to the underwriting agreement dated March 10, 2004 among the Corporation and the Underwriters named therein (the "**Underwriting Agreement**"), each of the undersigned does hereby certify in favour of the Corporation as follows:

I. Peters & Co. Equities Inc. (the "**U.S. Affiliate**") is a duly registered broker or dealer with the United States Securities and Exchange Commission (the "**SEC**") and is a member of and in good standing with the National Association of Securities Dealers, Inc. on the date hereof and all offers and sales of Securities in the United States will be effected by the U.S. Affiliate in accordance with U.S. broker-dealer agreements;

II. each offeree was provided with a copy of the U.S. Placement Memorandum for the offering of the Shares in the United States, and no other written material has been or will be used;

III. immediately prior to our transmitting such U.S. Placement Memorandum to such offerees, we had reasonable grounds to believe and did believe that each offeree was, and continue to believe that each such offeree who is a U.S. person purchasing Shares from us is, either a "qualified institutional buyer", as defined in Rule 144A under the *Securities Act* of 1933, as amended (the "**1933 Act**"), or an institutional "accredited investor" as defined in Rule 501 of Regulation D under the *1933 Act* (an "**Institutional Accredited Investor**");

IV. no form of general solicitation or general advertising (as those terms are used in Regulation D under the *1933 Act*) was used by us, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television, or any seminar or meeting whose attendees had been invited by general solicitation or general advertising, in connection with the offer or sale of the Shares in the United States;

V. prior to any sale of Shares to an Institutional Accredited Investor in the United States, we caused such U.S. Purchaser to sign a U.S. Purchaser's letter containing representations, warranties and agreements to the Corporation substantially similar to those set forth in Schedule C to the Underwriting Agreement;

VI. neither we nor any member of the Selling Dealer Group (as defined in the Underwriting Agreement), nor any of our or their affiliates, have taken or will

take any action which would constitute a violation of Regulation M of the SEC under the *United States Securities Exchange Act* of 1934, as amended; and

VII. the offering of the Shares in the United States has been conducted by us in accordance with the terms of the Underwriting Agreement.

Unless otherwise defined, terms used in this certificate have the meanings given to them in the Underwriting Agreement.

Dated ●, 2004.

SCHEDULE B

UNDERTAKING RE FURTHER SALES

●, 2004

Peters & Co. Limited
FirstEnergy Capital Corp.
RBC Dominion Securities Inc.

Dear Sirs:

The undersigned understand that Denison Energy Inc. (the "**Corporation**") proposes to engage you as underwriters in connection with the proposed offering of Common Shares by way of a final prospectus dated today to be filed in each of the provinces of Canada. Capitalized terms used but not defined in this letter have the meanings given them in the prospectus.

Each of the undersigned is a significant registered or beneficial holder of Common Shares and is providing this letter to you as an inducement for you conducting the underwriting contemplated by the prospectus.

During the period commencing on the date of this letter and ending on a day that is 180 days following the Closing Date, none of the undersigned will, directly or indirectly, without the prior written consent of Peters & Co. Limited (which consent will not be unreasonably withheld), authorize, issue, offer, sell, contract to sell or grant any option to purchase any Common Shares of the Corporation or any securities convertible into, exchangeable for or giving the right to purchase any Common Shares of the Corporation, or announce any intention to effect the foregoing, other than the sale or transfer or grant of any option to purchase any Common Shares of the Corporation to a bona fide full time employee of the Corporation.

Yours truly,

MATCO CAPITAL LTD.

SCHEDULE C

FORM OF U.S. PURCHASER'S LETTER

Denison Energy Inc.
40 Dundas Street West, Suite 320
Toronto, Ontario
M5G 2C2

Attention: Mr. E. Peter Farmer, President and Chief Executive Officer

Dear Sirs:

In connection with our proposed purchase of Common Shares (the "**Shares**") of Denison Energy Inc. (the "**Corporation**"), we confirm and agree as follows:

(a) we are authorized to consummate the purchase of the Shares;

(b) we understand that the Shares have not been and will not be registered under the *United States Securities Act* of 1933, as amended (the "**U.S. Securities Act**"), and that the sale contemplated hereby is being made to Institutional Accredited Investors (as defined in paragraph (c) below) in reliance on a private placement exemption;

(c) we are an institutional "accredited investor" within the meaning of Rule 501(a)(1), (2), (3) or (7) under the U.S. Securities Act ("**Institutional Accredited Investor**") and are acquiring the Shares for our own account or for one or more investor accounts for which we are acting as fiduciary or agent and each such investor account is an Institutional Accredited Investor;

(d) we agree that if we decide to offer, sell or otherwise transfer or pledge all or any part of the Shares, we will not offer, sell or otherwise transfer or pledge any of such Shares (other than pursuant to an effective registration statement under the U.S. Securities Act), directly or indirectly unless:

(i) the sale is to the Corporation; or

(ii) the sale is made outside the United States in accordance with the requirements of Rule 904 of Regulation S under the U.S. Securities Act and in compliance with applicable local laws and regulations; or

(iii) the sale is made pursuant to the exemption from registration under the U.S. Securities Act provided by Rule 144 thereunder; or

(iv) the sale is made in the United States, in accordance with Rule 144A to a person it reasonably believes is a Qualified Institutional Buyer that purchases for its own account or for the account of a Qualified Institutional Buyer and to whom notice is given that the offer, sale or transfer is being made in reliance on Rule 144A; or

(v) the Shares are sold in a transaction that does not require registration under the U.S. Securities Act or any applicable United States state laws and regulations governing the offer and sale of Shares, and we have furnished to the Corporation an opinion of counsel, of recognized standing reasonably satisfactory to the Corporation, to that effect; or

(vi) the sale is to an Institutional Accredited Investor and a purchaser's letter containing representations, warranties and agreements substantially similar to those contained in this purchaser's letter (except that such subsequent purchaser's letter need not contain the representation set forth in paragraph (f) below) is executed by the subsequent purchaser and delivered to the Corporation prior to the sale;

(e) we understand and acknowledge that the Shares are "restricted securities" as defined in Rule 144 under the U.S. Securities Act, and upon the original issuance thereof, and until such time as the same is no longer required under applicable requirements of the U.S. Securities Act or state securities laws, the certificates representing the Shares, and all certificates issued in exchange therefor or in substitution thereof, shall bear on the face of such certificates the following legend:

"THE SECURITIES REPRESENTED HEREBY HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "**SECURITIES ACT**") OR STATE SECURITIES LAWS. THE HOLDER HEREOF, BY PURCHASING SUCH SECURITIES, AGREES FOR THE BENEFIT OF DENISON ENERGY INC. (THE "**CORPORATION**") THAT SUCH SECURITIES MAY BE OFFERED, SOLD OR OTHERWISE TRANSFERRED ONLY (A) TO THE CORPORATION, (B) OUTSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT, (C) INSIDE THE UNITED STATES IN ACCORDANCE WITH RULE 144A UNDER THE SECURITIES ACT, (D) PURSUANT TO THE EXEMPTION FROM REGISTRATION UNDER THE SECURITIES ACT PROVIDED BY RULE 144 THEREUNDER, OR (E) PURSUANT TO ANOTHER EXEMPTION FROM REGISTRATION

AFTER PROVIDING A LEGAL OPINION SATISFACTORY TO THE CORPORATION.

A NEW CERTIFICATE BEARING NO LEGEND MAY BE OBTAINED FROM COMPUTERSHARE TRUST COMPANY OF CANADA UPON DELIVERY OF THIS CERTIFICATE AND A DULY EXECUTED DECLARATION, IN A FORM SATISFACTORY TO COMPUTERSHARE TRUST COMPANY OF CANADA AND THE CORPORATION, TO THE EFFECT THAT THE SALE OF THE SECURITIES REPRESENTED HEREBY IS BEING MADE IN COMPLIANCE WITH RULE 904 OF REGULATION S UNDER THE SECURITIES ACT.";

If the Shares are being sold in compliance with the requirements of Rule 904 of Regulation S, the legend may be removed by providing a declaration to Computershare Trust Company of Canada to the following effect (or as the Corporation may prescribe from time to time):

"The undersigned (A) acknowledges that the sale of the common shares to which this declaration relates is being made in reliance on Rule 904 of Regulation S under the U.S. Securities Act of 1933, as amended, and (B) certifies that (1) it is not an "affiliate" (as defined in Rule 405 under the Securities Act, as amended) of the Corporation, (2) the offer of such common shares was not made to a person in the United States and either (a) at the time the buy order was originated, the buyer was outside the United States, or the seller and any person acting on its behalf reasonably believe that the buyer was outside the United States or (b) the transaction was executed on or through the facilities of The Toronto Stock Exchange or the TSX Venture Exchange and neither the seller nor any person acting on its behalf knows that the transaction has been prearranged with a buyer in the United States and (3) neither the seller nor any person acting on its behalf engaged in any directed selling efforts in connection with the offer and sale of such common shares. Terms used herein have the meanings given to them by Regulation S.";

if the Shares are being sold under Rule 144 of the U.S. Securities Act, the legend may be removed by delivery to Computershare Trust Company of Canada of an opinion of counsel of recognized standing and reasonably satisfactory to the Corporation, to the effect that such legend is no longer required under the U.S. Securities Act or state securities laws;

(f) we have received a copy of the U.S. Placement Memorandum (as defined in the Underwriting Agreement) and we have been afforded the opportunity (i) to ask such questions as we have deemed necessary of, and to receive answers from, representatives of the Corporation concerning

the terms and conditions of the offering of the Shares and (ii) to obtain such additional information which the Corporation possesses or can acquire without unreasonable effort or expense that is necessary to verify the accuracy and completeness of the information contained in the U.S. Placement Memorandum and that we have considered necessary in connection with our decision to invest in the Shares;

(g) we acknowledge that we are not purchasing the Shares as a result of any general solicitation or general advertising, as those terms are used in Regulation D under the U.S. Securities Act including, without limitation, advertisements, articles, notices and other communications published in any newspaper, magazine or similar media or broadcast over television or radio or any seminar or meeting whose attendees have been invited by general solicitation or general advertising; and

(h) we understand and acknowledge that the Corporation (i) is under no obligation to be or to remain a "foreign issuer," (ii) may not, at the time we sell the Shares or at any other time, be a "foreign issuer," and (iii) may engage in one or more transactions which could cause the Corporation not to be a "foreign issuer." If the Corporation is not a "foreign issuer" at the time of any sale pursuant to Rule 904 of Regulation S, the certificate delivered to the buyer may continue to bear the legend contained in paragraph (e) above.

We acknowledge that the representations and warranties and agreements contained herein are made by us with the intent that they may be relied upon by you and by the U.S. Affiliate, in determining our eligibility or (if applicable) the eligibility of others on whose behalf we are contracting hereunder to purchase the Shares. We further agree that by accepting the Shares we shall be representing and warranting that the foregoing representations and warranties are true as at the closing time with the same force and effect as if they had been made by us at the closing time and that they shall survive the purchase by us of the Shares and shall continue in full force and effect notwithstanding any subsequent disposition by us of the Shares.

You and the U.S. Affiliate are irrevocably authorized to produce this letter or a copy hereof to any interested party in any administrative or legal proceeding or official inquiry with respect to the matters covered hereby.

3 EXECUTIVE SUMMARY

Denison Energy Inc. ("Denison") holds a 22.5% interest in the McClean Lake Joint Venture ("McClean Joint Venture"). Cogema Resources Inc. ("Cogema") holds a 70% interest in and is the operator of the Joint Venture. The Joint Venture holds title to mining claims and leases in northeastern Saskatchewan, approximately 750 kilometres north of Saskatoon which are host to unconformity-type uranium deposits which are currently being exploited by the Joint Venture.

The Joint Venture owns the JEB Mill which is a uranium processing facility, commissioned in 1999, which is licensed to produce eight million pounds of U_3O_8 per year. The JEB Mill is currently processing ore from stockpiled material from the Sue C and JEB deposits, located on the property. Mining of the Sue A, B and E deposits is scheduled to provide future feed in the period 2005 to 2009. An agreement is in place for the JEB Mill to process ore and produce up to 9.2 million pounds of U_3O_8 per year under a toll milling arrangement, from the Cigar Lake deposit, owned by the Cigar Lake Joint Venture. A production capacity increase to 12 million pounds U_3O_8 per year will be financed by the Cigar Lake Joint Venture. Implementation of this agreement is dependent on development of Cigar Lake receiving regulatory approval and a production decision by the Cigar Lake Joint Venture. Mining and processing schedules and costs used in the current report assume that the JEB Mill expansion will take place in 2005 and that processing of Cigar Lake ore will begin in 2006.

The McClean North deposit is part of a trend of uranium mineralization which strikes 070° to 090° in the southwestern portion of the McClean Lake Property. Uranium mineralization is located primarily within highly altered sandstones or regolith of the Athabasca Formation immediately above the Aphebian basement. The trend of mineralization extends over a distance of one kilometre and within that trend there are a number of pods of significantly higher-grade mineralization. The economics of four of those pods have been examined in this report and three of the pods (Pods 1E, 2 and 5) form the probable reserves.

The deposit has, in the past, been considered for development by underground mining methods and reserves have previously been reported assuming underground development. An initial review documented by Denison in mid 2003 indicated that, as a result of changes in technology and economics, since the previous feasibility study in 1990, development may be more economic using Borehole Mining methods.

The results of metallurgical studies which formed part of previous feasibility studies are summarized in this report and costing information has been updated to reflect current operations at the JEB Mill. The metallurgy of McClean North is very similar to that of the Sue deposits which are currently being processed or are scheduled for processing at the JEB Mill.

Denison requested that Layne Christensen Canada Limited ("Layne") and Golder Associates Ltd. ("Golder") examine, at a prefeasibility level, the geotechnical and economic parameters related to production from McClean North using hydraulic borehole mining technology. A copy of the report prepared jointly by Layne and Golder is included as Appendix 2.

The mining method proposed ("hydraulic borehole mining") involves:

- Drilling access holes of 61 centimetre diameter from surface through the ore
- Use of an expandable reamer to ream the ore to a 1.5 metre diameter

- Use of jetting technology, including an "air shroud" to expand the mined cavity to its ultimate diameter which is projected to be four metres
- Extraction of ore from the bottom of the cavity using "airlift" technology
- Separation of ore from drilling fluids in a surface separation plant
- Backfilling of the ore cavity with cement and the access drill hole with aggregate.

On the basis of the studies presented in this report the writers have prepared the estimate of Probable Reserves presented in Table 1, on a 100% basis, for McClean North.

Table 1 : McClean North Probable Reserves – 100% basis

Pod	Number of Holes to Access Ore	Diluted Probable Tonnes x 1,000	Grade U_3O_8 %	U_3O_8 lbs. x 1,000
Pod 1E	73	14.7	8.14	2,637
Pod 2	68	17.5	3.72	1,438
Pod 5	32	5.1	4.34	488
Total	**173**	**37.3**	**5.54**	**4,563**

Major assumptions which were involved in developing this estimate include:

- A uranium price of $Cdn 22 per pound U_3O_8
- Meeting regulatory and permitting requirements in a timely manner
- Processing of Cigar Lake ore beginning in 2006 which will permit economies of scale for milling and other costs.
- Processing of ore in conjunction with ore from Sue A, B, and E beginning in 2006
- Costs and schedules developed in the current prefeasibility study and documented in this report
- Integrity of the survey database for hole locations and down-hole deviations

The Layne Golder study includes recommendations for additional work prior to and part of a bankable feasibility study in order to further evaluate four principal aspects of the mining system. The recommendations address the following:

- "Cutability": Two boreholes are recommended to provide core samples for testing to determine the optimum cutting pressures and the anticipated cutting rates.
- Air Shroud: Detailed design work and bench testing is recommended to determine the optimum pressure and flow rate of the compressed air as well as the effective distance of the air shroud.
- Expandable Reamer: A complete review of existing technology and design of reamers is recommended followed by bench testing.
- Pilot Test: A pilot test is recommended to provide confirmation of the equipment designs and production rates.

The hydraulic borehole mining method offers potential for the development of other high-grade, but small, deposits with better economics than open pit or underground extraction. The writers recommend that historic exploration results be reviewed to identify other candidates for similar exploitation. One such occurrence, on the Caribou trend is proposed by the writers as the location of a pilot test.

4 INTRODUCTION TERMS OF REFERENCE AND SCOPE

4.1 Introduction

Denison Energy Inc. ("Denison") holds a 22.5% participating interest in the McClean Lake Joint Venture ("McClean Joint Venture") which owns a uranium processing facility ("JEB Mill") and holds title to mining claims and leases ("McClean Lake Property") which are host to uranium deposits and prospects in northeastern Saskatchewan. Cogema Resources Inc. ("Cogema") holds a 70% interest in and is the operator of the McClean Joint Venture. Cogema is a wholly owned subsidiary of Cogema S.A., incorporated in France ("Cogema Group") which in turn is a wholly owned subsidiary of Areva S.A. also incorporated in France. ("Areva Group"). The remaining 7-5% interest is held by OURD (Canada) Co., Ltd. ("OURD").

The JEB Mill, which has a nominal capacity for the production of six million pounds per year of U_3O_8, began operation in 1999 and has been processing ore mined from the JEB and Sue C pits located on the McClean Lake property. In 2001 the JEB Mill received a four-year operating licence that will allow it to increase its annual production limit from six to eight million pounds U_3O_8. The increase gives the mill more flexibility in its operation and better reflects the plant's actual capacity. A mill expansion is planned, subject to regulatory approval, to further increase capacity to 12 million pounds of U_3O_8 by 2006.

An agreement has been signed with the Cigar Lake Joint Venture to mill ore from the Cigar Lake deposit. Implementation of the agreement depends on the Cigar Lake Joint Venture making a positive production decision and receiving the required permits. Processing of ore, which will be received in the form of a slurry from Cigar Lake is scheduled to begin in 2006. Approximately half of the leachate, once the uranium is in solution, will be forwarded to Rabbit Lake for further processing and the balance will be processed in the JEB Mill. Processing of Cigar Lake ore will occupy between 4 and 9.2 million pounds of the JEB mill capacity.

The McClean Lake Property is host to a number of uranium deposits and prospects. Reserves and resources reported by Denison prior to mid 2003 were based on a combination of recent work and historic feasibility studies, including a feasibility study for development of the McClean Lake deposit (the subject of the current report) by underground methods. Because of advances in mining technologies, the possible reoganization of Denison (Denison Energy Inc., 2003), the discovery of deposits subsequent to the release of early 1990 feasibility studies for some deposits and possibly outdated or time-expired sections of previous studies, Denison determined that it would be prudent to re-examine the fundamental parameters behind these studies and to prepare a technical report which would be compliant with National Instrument 43-101 ("NI 43-101").

In October 2003 Denison completed a technical report which reported on reserves and resources on the McClean Lake Property (Kerr et. al. 2003). That report indicated that underground development of McClean North was not likely the most economically appropriate method. The report provided a resource estimate for McClean North which assumed development using Blindshaft Boring. The resource estimate was based on an economic analysis supported by scoping-level studies.

Denison has since completed more detailed technical and economic studies, at a pre-feasibility level, which are summarized in this report.

4.2 Scope, Terms of Reference and Purpose

Andrew Rickaby and William Kerr were requested by Denison Energy Inc. to examine economic and technical parameters at a "prefeasibility study" level and, if warranted, prepare a technical report compliant with NI 43-101.

In order to evaluate geotechnical parameters and mining related costs Denison requested the assistance of:

- Layne Christensen Canada Limited ("Layne") in conjunction to examine the technical feasibility and economics of the mining method including capital and operating costs for all stages of mining prior to transportation to the JEB Mill.
- Layne retained Golder Associates Ltd. ("Golder") to evaluate geotechnical and hydrogeologic parameters which would impact on development of McClean North by hydraulic borehole mining methods;

Denison provided Layne and Golder with three-dimensional models of the mineralized pods (described in Kerr et. al., 2003) and idealized layouts of boreholes of three-metre and four-metre diameter within the mineralized pods. Denison also provided a spreadsheet which estimated, for each borehole the depth to ore, thickness of ore and proportion of mined cavity which would occur laterally outside of mineralization. (based on the idealized layout). These factors were used by Layne and Golder for the derivation of mining costs. The writers have developed estimates of dilution and unproductive mining costs in order to reflect uncertainties concerning the boundaries of mineralization.

The metallurgy of the McClean North deposit had been examined, including prefeasibility level estimates of costs in Kerr et. al. (2003) considering processing of ore at a rate of 2 million pounds U_3O_8 per year. Denison requested that H.C. Counsell update the processing cost portion of that examination using production rates of 4.3 million pounds U_3O_8 per year, which would reflect processing of McClean North ore together with ore from the Sue, A, B and E deposits.

4.3 Sources of Information

Geological, mining and other information for the preparation of this report originated from active involvement by the writers in the projects and from the following sources:

- Denison internal documents including reports and correspondence concerning the project.
- Databases and drawing files on compact disc or email from Cogema's offices in Saskatoon and the McClean Lake site.
- Assays for U_3O_8, down-hole surveys and geology were received by email from Cogema's parent company offices in France (C. Demange, Manager Mining Reserves, Department Business Unit Mines, Cogema Group).
- Hole locations and assays for As and Ni were received by email from Cogema (S. Wilson and G. Breton) Information relating to original assay certificates and original drill logs were obtained from Cogema files in Saskatoon.

Additional information concerning marketing, economics and history were provided from Denison internal files and communications with Don Campbell, Vice President Marketing and Special Projects and Craig Bamford, Vice President Finance and Chief Financial Officer.

4.4 Field Involvement of Qualified Persons

Denison holds a minority interest in the Property and is not the operator of any of the programmes carried out on the Property. Denison participates in the management of the Joint Venture through the Joint Venture Management Committee. On site, daily management of all projects, programmes and operations is carried out by Cogema.

William Kerr has made numerous visits to the Property between 1997 and the present in his capacity as Director, Resource Evaluation for Denison. His involvement on site has included participation in bi-annual Joint Venture Management Committee Meetings, regular and periodic reports on programmes and visits to the Property.

Gary Cohoon has not visited the property and has relied on information provided by Denison.

All drilling on the McClean North deposit was carried out between 1978 and 1989 and none of the writers was involved in these drilling programmes.

5 DISCLAIMER

The writers have relied on data and results from previous work programmes carried out on the McClean North deposit including work carried out by its Joint Venture Partner. The writers have audited part of the information relating to U_3O_8 assays used for resource estimates, as described in Section 16 but have not independently drilled or sampled the deposit. During the course of the present study a number of checks have been carried out on the validity and reasonableness of data and information, as indicated in the body of this report, however the writers have relied on the integrity and completeness of information available.

The writers have relied in particular on the following information:

1) Information on mining claims was provided by Denison. The writers have not independently verified the information.
2) The writers have not independently drilled or carried out sampling on the property and the writers have relied on information provided with respect to drilling.
3) Survey information for drill hole co-ordinates, down-hole surveys or for topography have not been audited or verified.

All reference to dollars are Canadian dollars unless otherwise noted.

6 McCLEAN JOINT VENTURE PROPERTY DESCRIPTION AND LOCATION

The McClean Joint Venture holds 100% interest in the JEB Mill and deposits on the McClean Lake Property.

The McClean Lake Property is located about 26 kilometres by road west of the Rabbit Lake mine and approximately 750 kilometres by air north of Saskatoon. (Figure 1 and Figure 2). Denison holds a 22.5% participating interest in the McClean Joint Venture. The remainder is distributed between Cogema (70%) and OURD (Canada) Co., Ltd. ("OURD"),(7.5%).

The McClean Lake Property is host to the McClean North, Sue A, B, C and E, and the JEB deposits as well as other prospects. Two of these deposits, JEB and Sue C, have been mined and the ore, which was stockpiled on surface, is currently being processed. The mined-out JEB pit has been converted into the JEB Tailings Management Facility designed to also receive tailings from Midwest and Cigar Lake ores in addition to the tailings from McClean Lake. Special low-grade uranium-bearing waste ("special waste[1]") from the Sue C deposit has been deposited in the mined-out Sue C pit. Agreement has been reached for Cigar Lake special-waste to be deposited in that pit as well.

[1] Special waste is material which is below cut-off (usually about 0.085 %U, 0.1% U_3O_8,) but which does contain uranium mineralization grading greater than 0.025% U and which requires special disposal.

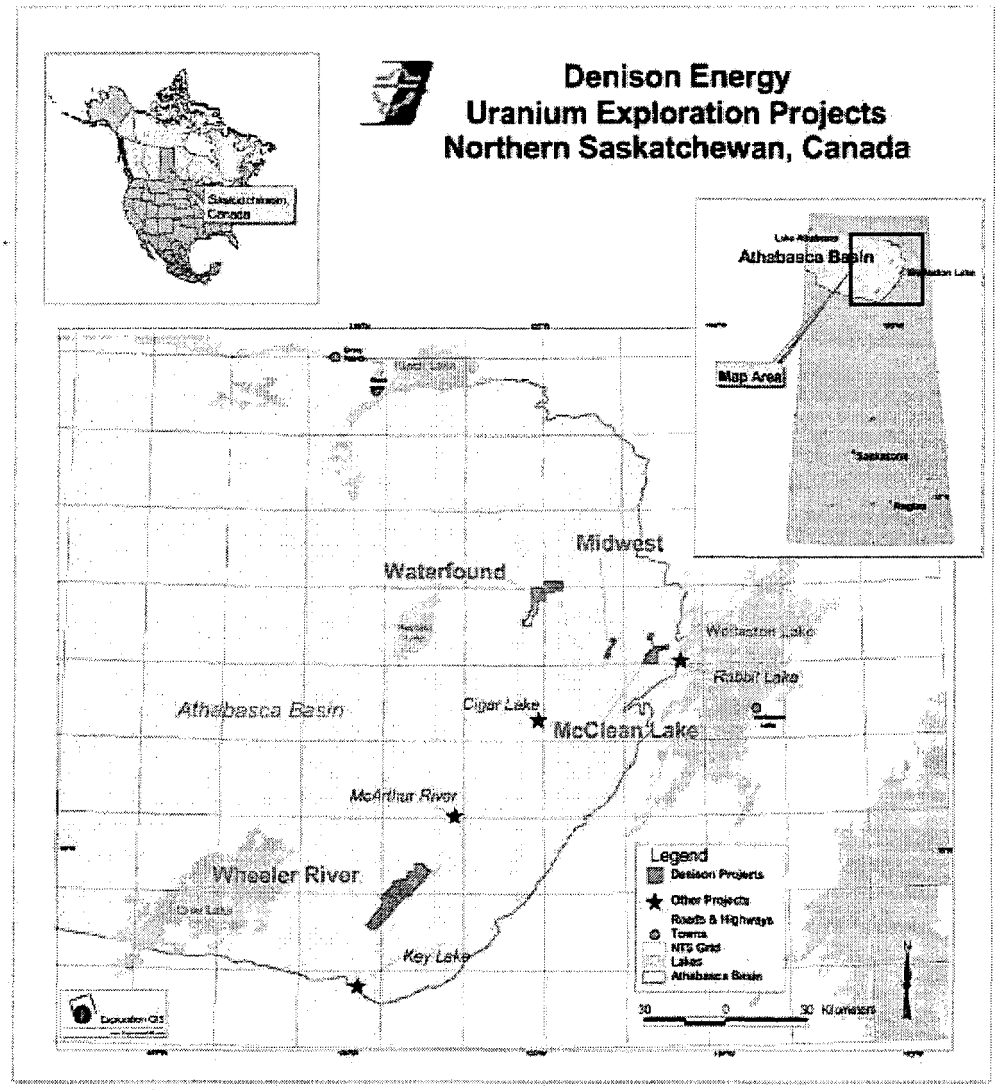

Figure 1 : Denison Uranium Properties in Northern Saskatchewan

The JEB Mill consists of a modern mill licensed to produce 8.0 million pounds of uranium concentrate per year, a sulphuric acid plant, warehouses, shops, offices and living accommodations for site personnel, together with all related infrastructure. The JEB Mill is currently operating at a rate of approximately 6 million pounds per year of U_3O_8 to fulfil existing contracts and to optimize stockpile throughput.

All of the surface facilities and the mine sites are located on lands owned by the province of Saskatchewan. The right to use and occupy the lands was granted in a surface lease agreement with the province of Saskatchewan. The original surface lease agreement of 1991 was replaced by a new agreement in 2002. This new surface lease is valid for a period of 33 years. Obligations under the surface lease agreement primarily relate to annual reporting regarding the

status of the environment, the land development and progress made on northern employment and business development. The McClean Lake surface lease covers an area of approximately 4,660 hectares.

The McClean Lake Property consists of two mineral leases covering an area of 980 hectares and nine mineral claims covering an area of 3,148 hectares. The right to mine the McClean Lake deposits was acquired under these mineral leases, as renewed from time to time. The mineral leases are for terms of 10 years with the right to renew for successive 10-year periods provided that the leaseholders are not in default pursuant to the terms of the lease. The terms of the two mineral leases expire in April 2006. The projections in this report assume that all leases will be extended, allowing mining and processing of the reserves and resources quantified by the writers. A mineral claim grants the holder the right to explore for minerals within the claim lands and the right to apply for a mineral lease.

Details concerning the claims are located in Appendix 1.

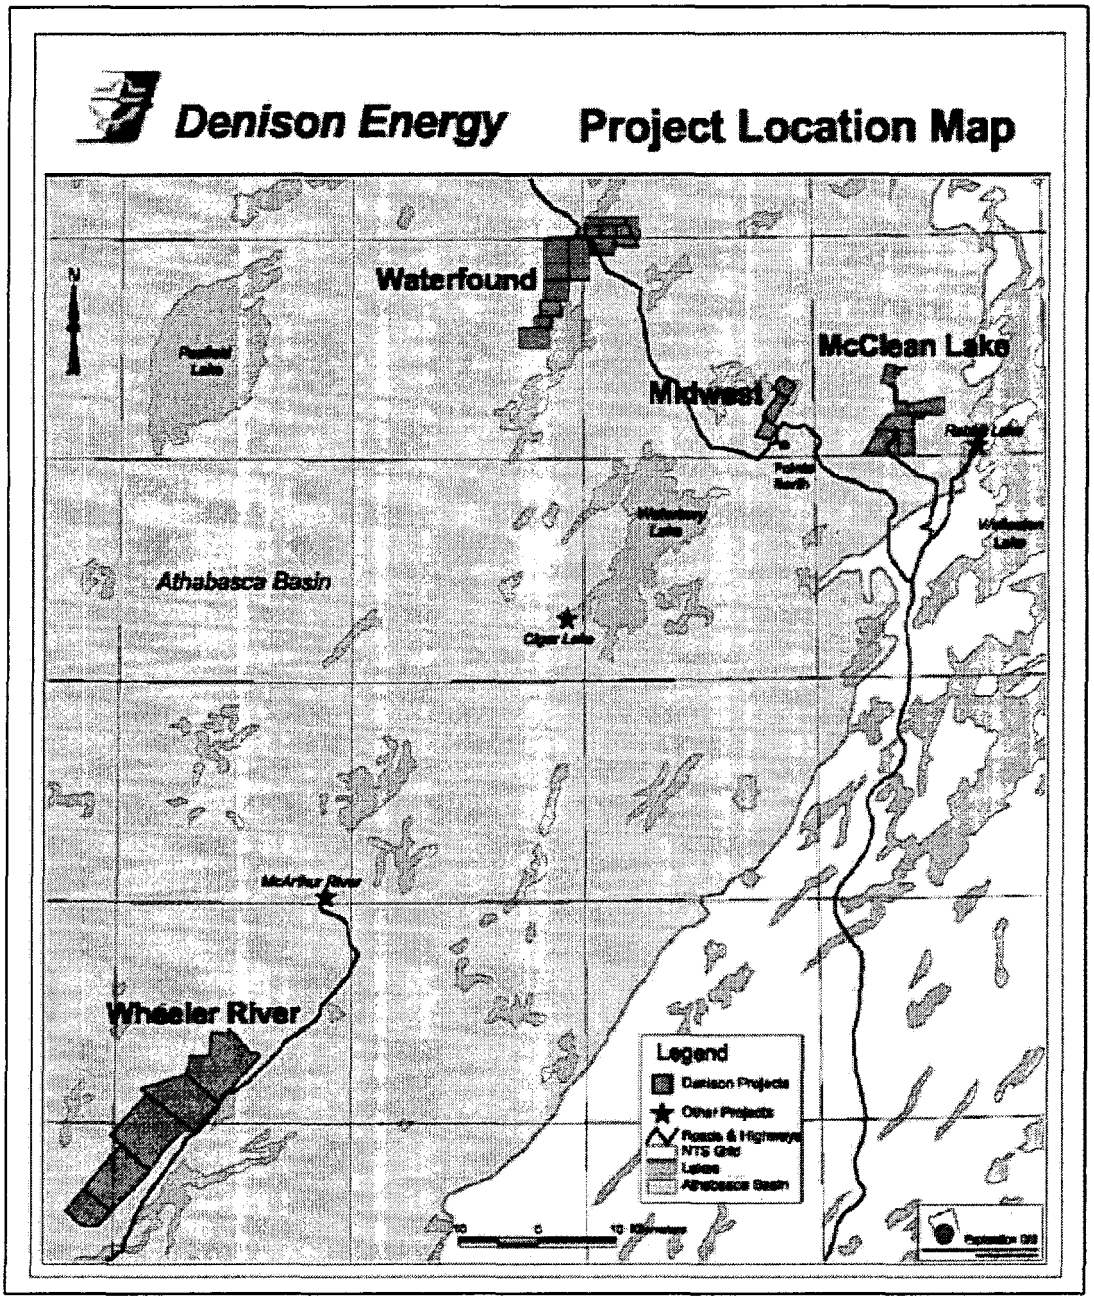

Figure 2 : Denison Uranium Properties in the Athabasca Basin

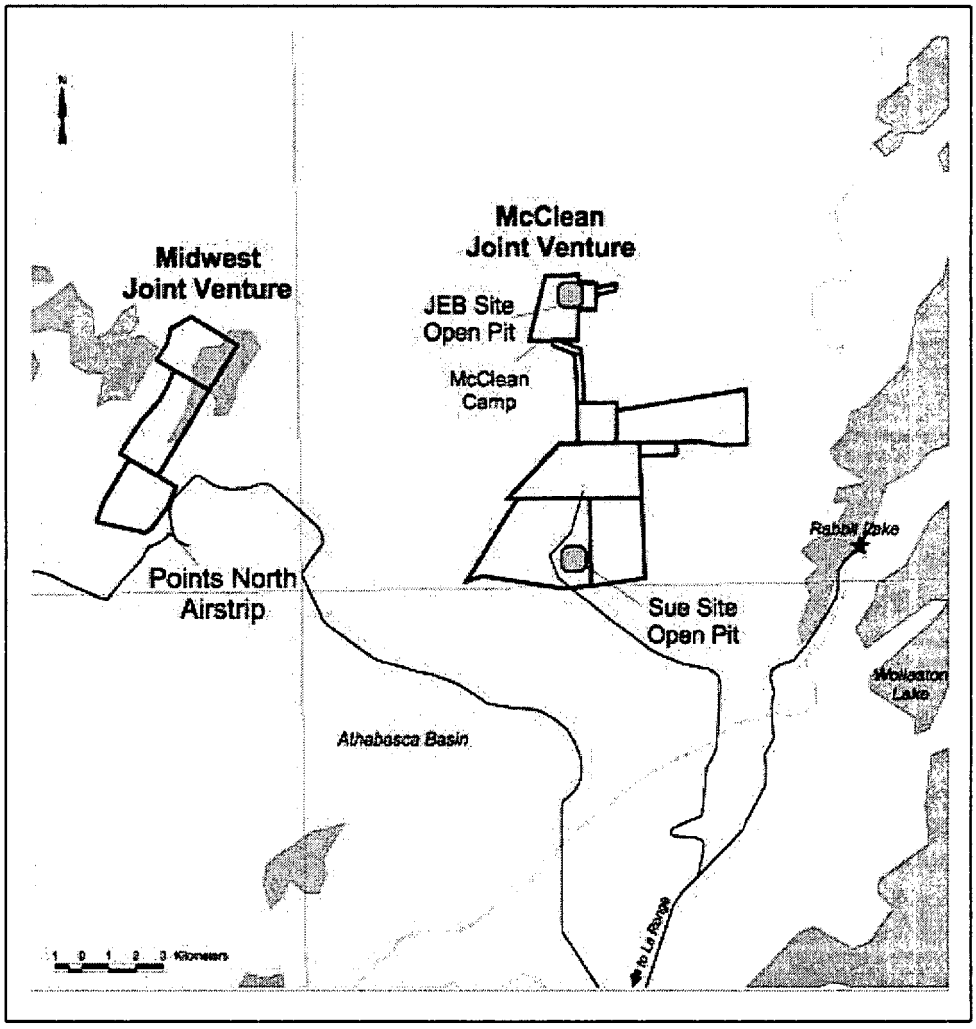

Figure 3 : McClean and Midwest Property Location

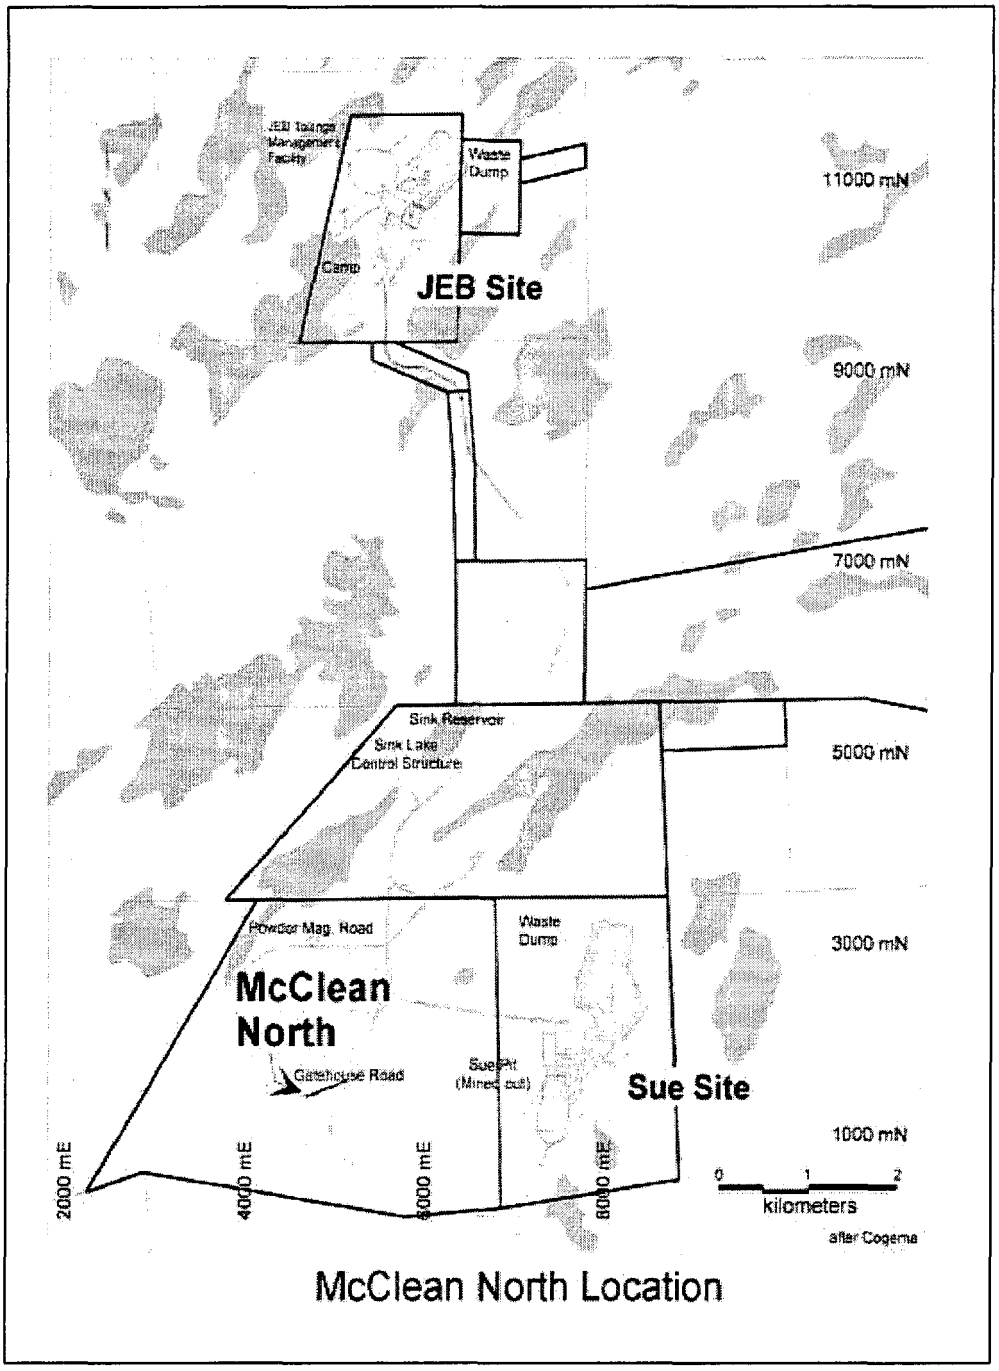

Figure 4 : McClean North Location

7 EXISTING INFRASTRUCTURE, CLIMATE, ACCESSIBILITY, LOCAL RESOURCES AND PHYSIOGRAPHY

7.1 Existing Infrastructure

The main facilities and operations currently at the McClean Lake Facility are an open pit mining area (Sue Site) and the JEB Mill located near the previously mined-out JEB pit, which has been converted to the tailings management facility (JEB Site). Various supporting facilities for activities such as water treatment, site infrastructure such as roads, electricity distribution and the camp facilities are also located on the McClean Property. The Sue C pit is currently completed, and future mining of the Sue A and B pits has been approved. A 12-kilometre haul road connects the Sue and JEB Sites. The camp facilities are located near the JEB Site. The office and shops for the mill are housed in the mill complex.(Figure 4).

The JEB Mill uses sulphuric acid and hydrogen peroxide leaching and a solvent extraction recovery process to extract and recover the uranium product from the ore. A series of unit processes, or circuits, are directly associated with uranium production. Discharge of treated water is through the JEB Water Treatment Plant, located at the JEB Site. Tailings are discharged through a pipe-in-pipe containment system to the edge of the JEB Tailings Management Facility, where they are deposited in water in the mined-out JEB pit.

All tailings from the JEB Mill are deposited in the JEB Tailings Management Facility ("JTMF") in the mined out JEB pit. The facility has been designed to also receive tailings from the processing of the high-grade Midwest and Cigar Lake ores.

7.2 Climate

Site activities are carried out all year despite the cold weather during the winter months. The climatic data, temperature and precipitation, have been summarized from data provided by Environment Canada (2003) for Collins Bay Saskatchewan, located approximately 15 kilometres to the southwest. The mean monthly temperatures are below 0°C for seven months of the year. The annual, mean monthly temperature ranges between -24°C and 15°C, with extremes as low as –45°C, indicating the severity of the winter. The precipitation is relatively heavy for the region (550 millimetres annually with more than half that total falling as rain). The wettest period is from June to September, which accounts for 55% of the total annual precipitation. The mean annual temperature is –4° C and the area lies within a zone of discontinuous permafrost.

The mining and separation plant costed in the Layne Golder report has included the costs of winterization of equipment and operations could be conducted year round. Denison has, however, assumed operation for only 162 days per year, which could mitigate any problems with winter operations.

7.3 Accessibility

Access to the McClean Lake site is by both road and air. Goods are transported to the sites by truck over an all-weather road connecting with the provincial highway system. Air transportation is provided through the Points North airstrip about 25 kilometres from McClean Lake (Figure 3).

The trend of the McClean North deposits crosses the main access road to the facilities. and all of the pods are located within 0.5 kilometres of the road. (Figure 4 and Figure 5).

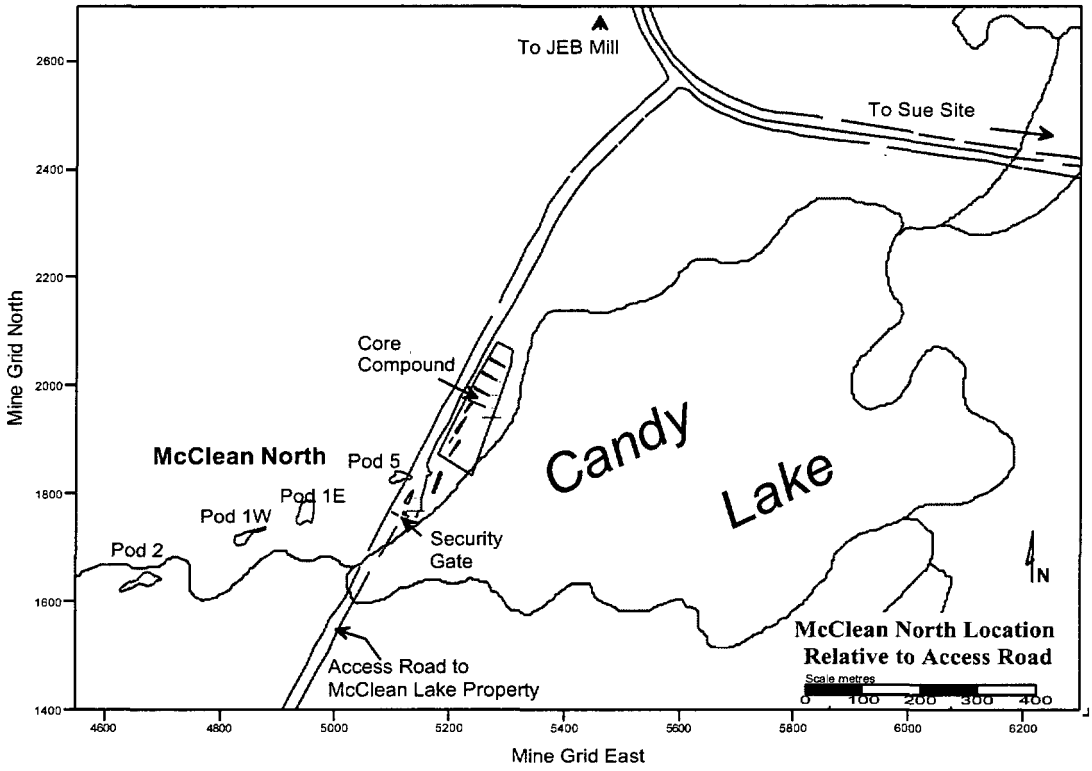

Figure 5 : McClean North Location Relative to Access Road

7.4 Local Resources

Water for industrial activities is obtained from Pat Lake southwest of the JEB Mill, on the McClean Lake Property.

Electric power for the JEB Mill and the Sue Site is obtained from the provincial grid through a switch station at Points North, with stand-by power available as required.

The nearest permanent community is Wollaston Post, about 50 kilometres from McClean Lake and 70 kilometres from Midwest on the east side of Wollaston Lake. Workers commute to and from McClean Lake, first by aircraft landing at Points North then by bus to the site. While at McClean, workers reside in a permanent camp. Personnel are recruited from the northern

communities and major population centres, such as Saskatoon, and normally work one week on and one week off.

Points North, which is both an airstrip and also a supply depot, is located several kilometres southeast of Midwest and about a 30 minute vehicle drive from McClean (Figure 3).

7.5 Physiography

The entire area was glaciated at least three times during the last 150,000 years. The land forms are sandy, gravelly sediments in the form of ground moraines, drumlins and drumlinoid ridges following northeast-southwest trends to produce sand and gravel ridges which cover the largest portion of the area. The maximum relief is 90 metres (450 to 540 metres above sea level). The drainage is typical of relatively flat, recently glaciated regions, forming a deranged pattern characterized by numerous lakes and wetlands, which covers 25% of the region. Discontinuous muskeg is present throughout the area in topographic depressions and ranges in thickness from one to two metres. The vegetation in the area, rarely more than 10 metres high, consists of jack pine and black spruce with moss as the predominant groundcover.

Relief over the mineralized pods can best be described as flat with a minium elevation (based on collar elevations for the exploration drilling) of 430 metres over Pod 2 to 438 metres over Pod 5.

Surficial deposits over the pods vary from three-metres to 13-metres thick with an average of 6.4 metres.

8 HISTORY

Canadian Occidental Petroleum Limited ("Canadian Oxy") began exploring for uranium in northern Saskatchewan in 1974. The prospective area was located between the known Rabbit Lake deposit and the Midwest Lake area where uraniferous boulder trains had been found previously. In April 1977, Canadian Oxy entered into a joint venture agreement ("Wolly Joint Venture") with Inco Limited ("Inco"). During a diamond drilling programme in 1977, one of the 47 holes drilled encountered encouraging uranium mineralization. During the next two years, extensive exploration work, including airborne geophysics electromagnetic surveys and diamond drilling, was carried out.

Mineralization was discovered at McClean Lake (the McClean North deposit) in January 1979 and follow-up drilling later that year confirmed the existence of a significant unconformity-type uranium deposit. Subsequent exploration resulted in the discovery in 1980 of the McClean South deposit (not addressed in this report) and the JEB deposit in 1982.

In 1984, Canadian Oxy and Inco received conditional approval for an underground exploration permit for the McClean deposit from the regulatory authorities. Shortly thereafter, Canadian Oxy and Inco reached a corporate decision to suspend all ongoing field and engineering work on that project.

In January 1985, Minatco Limited ("Minatco"), a predecessor in title to Cogema, entered into the Wolly Joint Venture (predecessor to the McClean Joint Venture) with Canadian Oxy and Inco.

From 1985 to 1990, Minatco continued exploration of the McClean Lake Property including airborne and ground geophysical surveys, percussion drilling and diamond drilling. The reconnaissance diamond drilling programme resulted in the discovery of the Sue A deposit in 1988. Further drilling in the later part of 1988 and 1989 resulted in the discovery of the Sue B and Sue C deposits, while the Sue E deposit was discovered in 1991.

In 1993, the owners of the Midwest Property and the McClean Lake Property agreed to combine the two projects and develop them as a complementary development. Ownership interests in the respective joint ventures were interchanged with Denison acquiring a 22.5% interest in McClean Lake.

Development of the McClean Lake uranium facility began in March 1995. Construction and commissioning were completed in 1997. The JEB deposit was mined out and the ore stockpiled. The JEB Pit was then converted, in 1999, into the JEB Tailings Management Facility.

Mining of the Sue C ore body was completed on February 3, 2002 and all of the ore has been stockpiled on surface. The low-grade uranium special waste, from the mining of the JEB and Sue C deposits, has been disposed of in the mined-out Sue C pit, in a manner which will not interfere with the mining of the adjacent Sue A deposit. This work was completed in April 2002. The pit is now being allowed to flood naturally.

Table 2 illustrates the production history from the McClean Lake properties to the end of 2002.

Table 2 : McClean Lake Properties - Production History

	1999	**2000**	**2001**	**2002**
Ore Milled - tonnes x 1,000	23	82	98	122
Average Grade - % U_3O_8	3.24	3.42	3.10	2.29
Production - lbs U_3O_8 x 1,000	1,455	6,015	6,595	6,098

8.1 McClean North History

Uranium mineralization at McClean North was located by drilling in 1979 and drilling for exploration and geotechnical studies continued until 1990.

A feasibility study was completed in 1990 which contemplated development of the McClean North deposit by underground methods (Kilborn, 1990). The feasibility study estimated proven reserves of 168,300 tonnes grading 2.88% U_3O_8. The writers have reviewed the methodology used for the 1990 reserve estimate and are of the opinion that the estimate, at the time, would have met the now current standards for reserve estimates. However, Denison is of the opinion that development of high-grade portions of the deposit by the hydraulic borehole mining method is more appropriate, given current mining costs, uranium prices, technical standards and advances in non-entry mining methods, and have not attempted to update the 1990 study to 2003 costs, prices and standards.

9 GEOLOGY

9.1 Athabasca Basin Geology

The McClean Lake and Midwest uranium deposits lie near the eastern margin of the Athabasca basin in the Churchill Structural Province of the Canadian Shield. The bedrock geology of the area consists of Precambrian gneisses unconformably overlain by flat-lying, unmetamorphosed sandstones and conglomerates of the Athabasca Group. The Midwest Property straddles the transition zone between two prominent litho-structural domains within the Precambrian basement, the Mudjatik to the west and the Wollaston to the east, while the McClean Lake Property is entirely within the Wollaston domain. These domains are the result of the Hudsonian Orogeny in which an intense thermo-tectonic period remobilized the Archean age rocks and led to intensive folding of the overlying Aphebian-age supracrustal metasedimentary units. The Mudjatik domain represents the orogenic core and comprises non-linear, felsic, granitoid to gneissic rocks surrounded by subordinate thin gneissic supracrustal units. These rocks, which have reached granulite-facies metamorphic grades, usually occur as broad domal features. The adjacent Wollaston domain consists of a steeply dipping isoclinally-folded sequence of Aphebian gneissic rocks with a distinct northeast lineal structural trend. The basement surface is marked by a paleo-weathered zone with lateritic characteristics referred to as regolith.

The sedimentary rocks of the Athabasca Basin unconformably overlie the metamorphic basement. The basin is deep, closed and elliptically shaped. The sedimentary rocks in the basin are fluvial sandstones and conglomerates with minor shales and dolomites.

The area is cut by a major northeast-striking fault system of Hudsonian Age. The faults occur predominantly in the basement rocks but often extend up into the Athabasca Group due to several periods of post-depositional movement. Diabase sills and dykes are frequently associated with the faulting.

9.2 Local and Property Geology

9.2.1 Pre-Athabasca Formation

The pre-Athabasca or basement geology underlying the McClean Lake area is composed of a thin cover of Lower Aphebian gneissic rocks, believed to be 200 to 300-metre thick, lying on Archean granitoid gneisses. Geophysical evidence suggests that approximately one half of the McClean Lake area is underlain by these felsic granitoids. Those rocks occur as domal masses and range from foliated granitoids in the core to more gneissic rocks on the margins and in many instances are wrinkles or bulges of much larger features (Figure 7). Complex folding has produced thin arcuate antiforms in the Archean granitoids surrounded by narrow synforms of lower Aphebian pelitic gneisses containing a graphitic unit that is highly significant with regards to uranium exploration. The lower member of the Aphebian cover displays a continuous stratigraphic succession of predominantly metapelitic gneisses containing a dominant graphitic member. All of the known significant uranium mineralization on the McClean property is directly associated with that graphitic member.

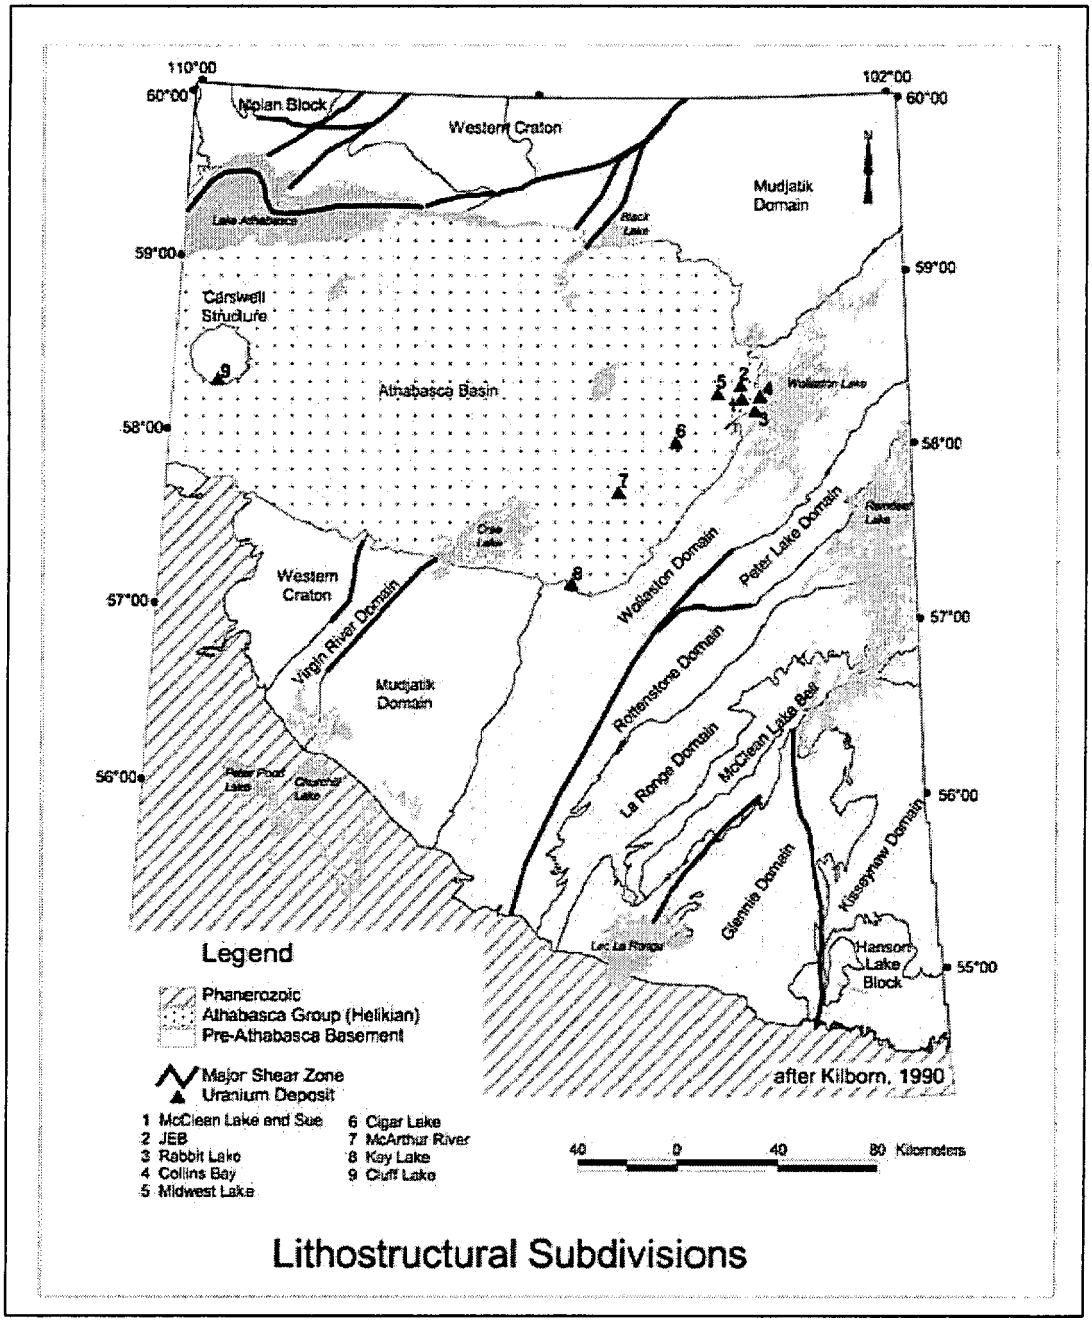

Figure 6 : Geology Northern Saskatchewan (after Kilborn, 1990)

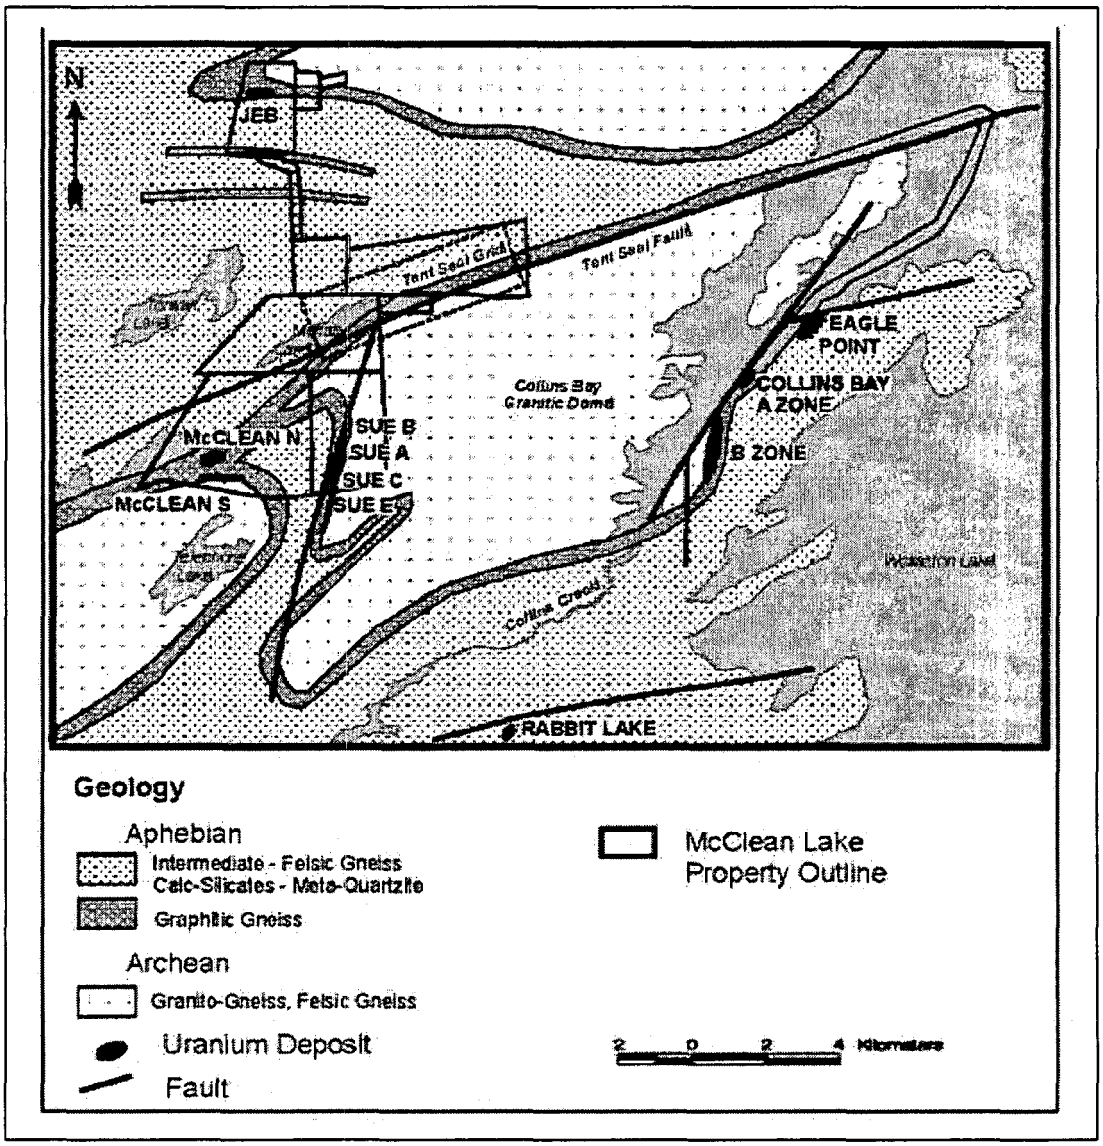

Figure 7 : Basement Geology of the McClean Lake Property and Area (after Kilborn, 1990)

9.2.2 Athabasca Formation

Figure 8 illustrates the generalized stratigraphic sequence in the McClean Lake Area.

The unconformity at the base of the Athabasca Sandstone contains a tropical paleo-weathering profile. The regolith varies from a few to over 30-metres thick, the thickness being highly

dependent on the composition of the parent rock as well as basement structures. The regolith is often completely destroyed by hydrothermal alteration in zones of mineralization.

The Athabasca Sandstone unit covers the whole of the McClean Lake Property. On the McClean Lake Property the Athabasca Sandstone is represented by up to 200 metres of the Manitou Falls formation, a non-marine fluviatile sandstone with conglomeratic lenses in the basal B member. These sandstones were deposited on alluvial fans and in braided streams and typically show abundant cross-bedding, coarser and finer units, and a general horizontal layering. The Athabasca thickens westward into the basin.

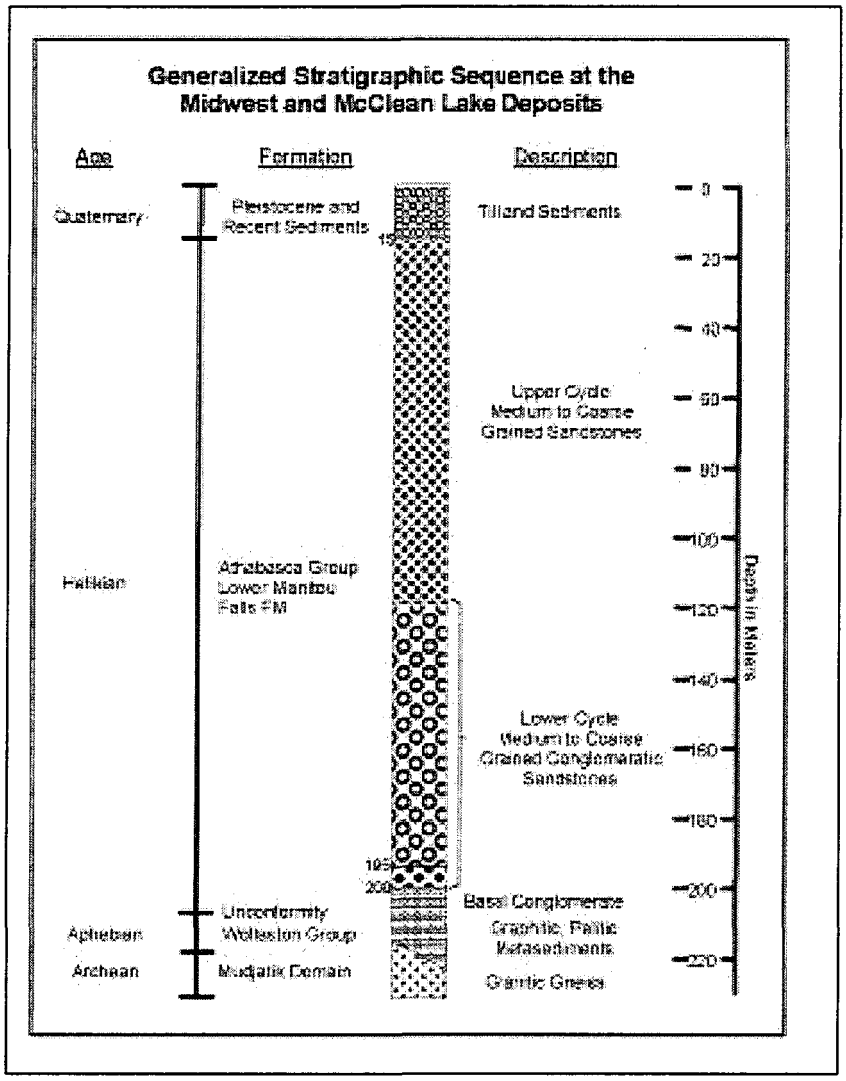

Figure 8 : Table of Formations

9.2.3 Quaternary Geology

The surficial deposits are of Quaternary age consisting largely of a Pleistoscene drumlinized till plain resting directly on the sandstone bedrock. The till is locally overlain by sediments consisting of glaciofluvial sands and gravels, and recent alluvial sands and silts. The till generally is two to four-metres thick, but thickens to as much as 15 metres under local uplands such as drumlins, which can provide up to 30 metres of relief as gentle undulations.

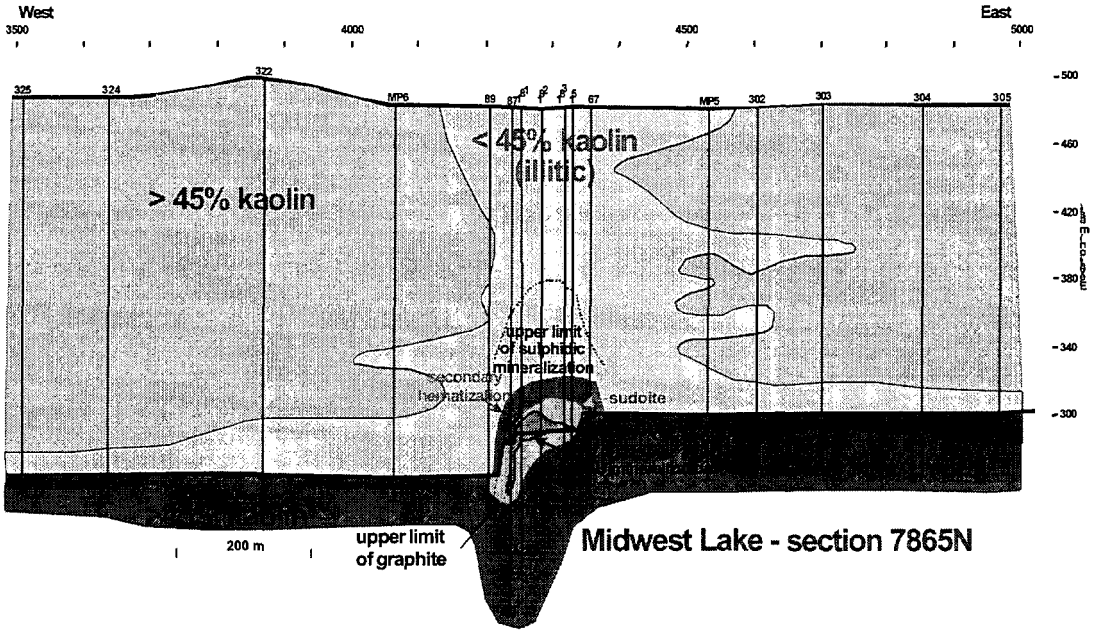
9.2.4 Structure

The structural geology of the pre-Athabasca rocks is highly complex, having undergone at least three major deformational episodes of folding during the Hudsonian Orogeny. Many of the faults exhibit several superimposed periods of activity with both horizontal and vertical movements being evident. Some fault sets were reactivated following Athabasca sedimentation and provided channel-ways for hydrothermal solutions and the loci for uranium deposition. Horizontal shear cleavage has been identified at the unconformity horizon and is best expressed in the highly altered environment of the uranium deposits. These shear structures appear to be related to and control the alteration.

The McClean North and South deposits are controlled by a zone of strong east-west faulting and fracturing coincident with the basement graphitic gneisses. These faults dip about 70° south and exhibit a combination of normal and reverse offsets which create basement highs of a few metres. There are also steeply-dipping northeast and northwest-trending fracture sets which show both vertical and lateral displacement.

East of the McClean deposits on the Sue trend the favourable graphitic gneiss which hosts or is immediately below the Sue deposits is in fault contact to the east with feldspathic gneisses and granitoid rocks whereas to the west it is gradational with intermediate gneissic units. At the Sue deposits combinations of normal and reverse faults which parallel the east-dipping foliation in the graphitic gneisses have resulted in basement relief of 10 to 20 metres. Reverse faulting stepped the unconformity down to the west. The Sue A and B deposits occur along the western flank of a basement horst which has 8 to 10 metres of relief. Northeasterly and northwesterly striking faults offset and modify the major north-south structural controls, creating conditions which limit, or significantly control, the extent of mineralization along the trend.

9.3 Alteration



9.3.1 General

The following description of alteration associated with unconformity-type uranium deposits is largely taken from Quirt, 2003.

"The two main types of ore paragenesis in the Athabasca basin are dictated by form of fluid interaction and can be separated by deposit location: (1) sandstone hosted egress-type (Midwest) involving mixing of the oxidized sandstone brine with relatively reduced fluids issuing from the basement into the sandstone, and (2) basement hosted ingress-type (Sue C and E) involving fluid-rock reactions between oxidising sandstone brine entering basement fault zones and the wall rock. Both types of mineralization and associated host-rock alteration occurred at sites of basement-sandstone fluid interaction where a spatially-stable redox gradient/front was present.

"The dominant ore location can occur in the sandstone directly above the unconformity (McClean Lake Property) straddling the unconformity (Midwest), or perched high above the unconformity (certain zones at both McClean Lake and Midwest). Similarly, in some deposit areas, there is a plunge to the mineralized pods from sandstone-hosted to basement-hosted within deposit–scale strike lengths (McClean Lake trend, Sue trend). Other deposit areas do not show this feature (Midwest).

"Most sandstone hosted deposits display dominant desilicification features and coincident abundant accumulations of clay minerals and detrital minerals like zircon and tourmaline. Around basement hosted deposits, however, the host rock alteration is dominantly chloritic with restricted illite at the expense of biotite, cordierite and garnet as at Sue C.

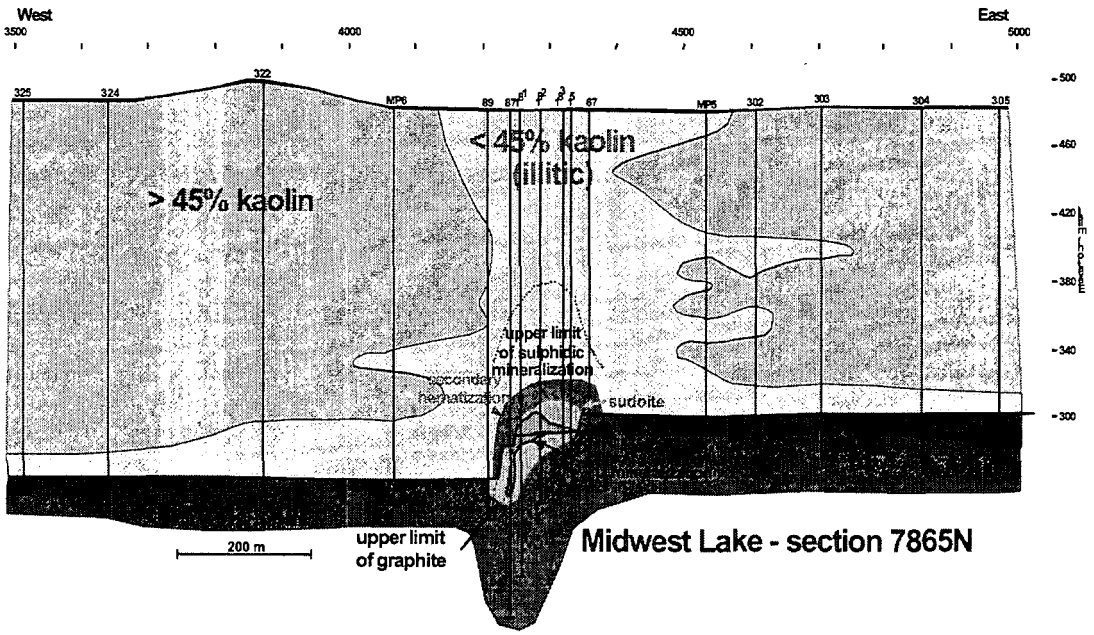


Figure 9 : Location of mineralization, in a north facing section, at Midwest straddling the unconformity and associated host-rock alteration (after Quirt, 2003)

"Illite is often characteristic of the core of the altered and mineralized zone. Complex redox-controlled reactions and acid-base reactions resulted in precipitation of massive pitchblende with associated hematite accumulation and varying amounts of base and other metallic mineralization at sites of fluid-fluid and fluid rock interaction. The geochemical signatures of the individual unconformity-type deposits do vary significantly. Sandstone hosted deposits, such as Midwest, predominantly demonstrate subequal U+Ni+Co+As mineralization, while the basement hosted deposits of the Sue trend are predominantly U+V."

9.3.2 McClean Lake Property

Kilborn (1990) describes the alteration at the McClean Lake deposits as follows:

- At the McClean North and South deposits, alteration is extensive above and below the mineralization, being largely controlled by the zone of east-west faulting. Argillic (clay) alteration with some hematitic and chloritic alteration envelopes the mineralization and extends upwards along fractures for several tens of metres where it is ultimately capped by silicified sandstones. Alteration of the basement rocks below the mineralization consists of bleaching, chloritization, argillization, and hematization. Transverse to the mineralized trend, the alteration diminishes very rapidly and rocks are frequently fresh within a few metres of mineralization. At Sue A, the deposit lies on and immediately above the unconformity in an envelope of massive earthy-red clay. Argillic alteration extends almost to the sandstone subcrop along fault zones, leaving only scattered sections of silicification in the cap rock. At Sue B, the mineralization is likewise hosted by massive earthy-red clay, while the upper zone displays remnant silicification. The sandstone between the upper and lower zones is lightly silicified. The vein type Sue C

deposit is intimately associated with clay alteration and argillization of the basement. The Sue E deposit is likewise basement hosted and the has limited basement alteration outside of the mineralization.

The extent of alteration around the McClean North deposit affects the strength and stability of mine openings. While this was a detriment when development by underground methods were considered, the alteration is an advantage for using jet-boring. The effects of both cuttability of ore by jet-boring and the stability of mined cavities has been addressed by Golder in Kinley et. al, 2003 (Appendix 2).

10 DEPOSIT TYPES

The following description of unconformity-type uranium deposits is adapted from Quirt (2003).

Unconformity-type uranium deposits are very high-grade and high-tonnage relative to other types of uranium deposits and the Athabasca-hosted deposits in Saskatchewan currently account for over 34% of world-wide uranium production. A model of unconformity-type uranium deposits is illustrated in Figure 10. According to Quirt (2003), there are two main types of ore paragenesis that are dictated by form of fluid interaction and can be separated by deposit location: 1) sandstone-hosted egress-type (e.g. Cigar lake, Cluff D, McArthur River, Collins Bay, Midwest) involving mixing of the oxidized sandstone brine with relatively reduced fluids issuing from the basement into the sandstone, and 2) basement-hosted ingress-type (e.g., Rabbit Lake, Eagle Point, Sue C, Claude, and Cluff Lake North) involving fluid-rock reactions between oxidising sandstone brine entering basement fault zones and the wall rock. For the sandstone-hosted deposits, fluid-fluid interactions best explain the presence of massive and fracture mineralization, while for basement hosted deposits, fluid-rock interactions best explain the presence of fracture filling mineralization. Both types of mineralization and associated host-rock alteration occurred at sites of basement-sandstone fluid interaction where a spatially-stable redox gradient/front was present. Without sufficient ore reaction constituents and/or the presence of a stable redox front, a barren host-rock alteration halo formed without significant mineralization.

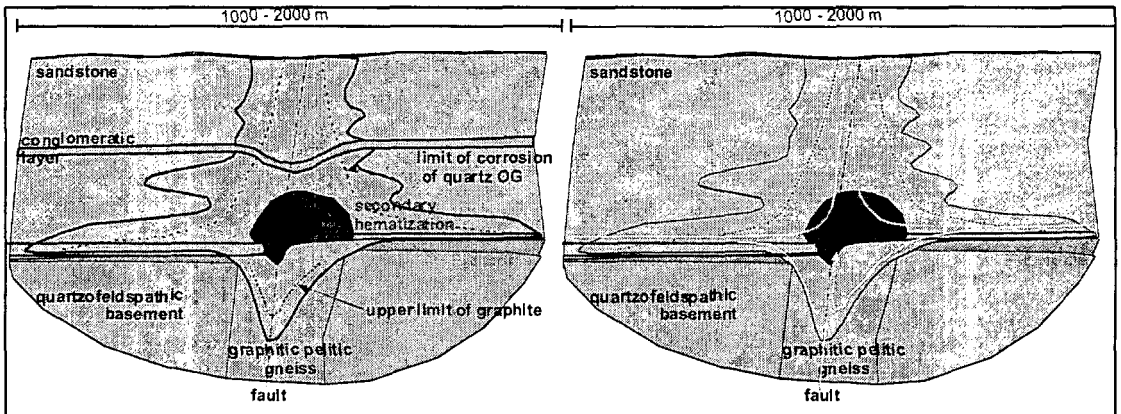

Figure 1. Conceptual model of egress-type sandstone-hosted mineralization; left: mineralization and alteration features, right: fluid flow (Hoeve and Quirt, 1984, 1987).

Figure 10 : Conceptual Model of Egress Type, Sandstone-Hosted Mineralization, After Hoeve and Quirt 1984, 1987

The prevailing hydrological conditions controlled the location of fluid interaction relative to the unconformity, with either egress-type or ingress-type deposits forming. For the egress-type deposits, the location relative to the unconformity of the fluid mixing and the redox front were variable and controlled by the hydrological environment. The dominant ore location can occur in

the sandstone directly above the unconformity (Key Lake, Midwest) or perched high above the unconformity (McClean Lake, Cigar Lake). The basement-hosted fluid rock interactions show less variation in location relative to the unconformity. Similarly, in some deposit areas, there is a plunge to the mineralized pods (e.g., McClean Lake trend, Sue trend). Other deposit areas do not exhibit this feature (Midwest, Cigar Lake).

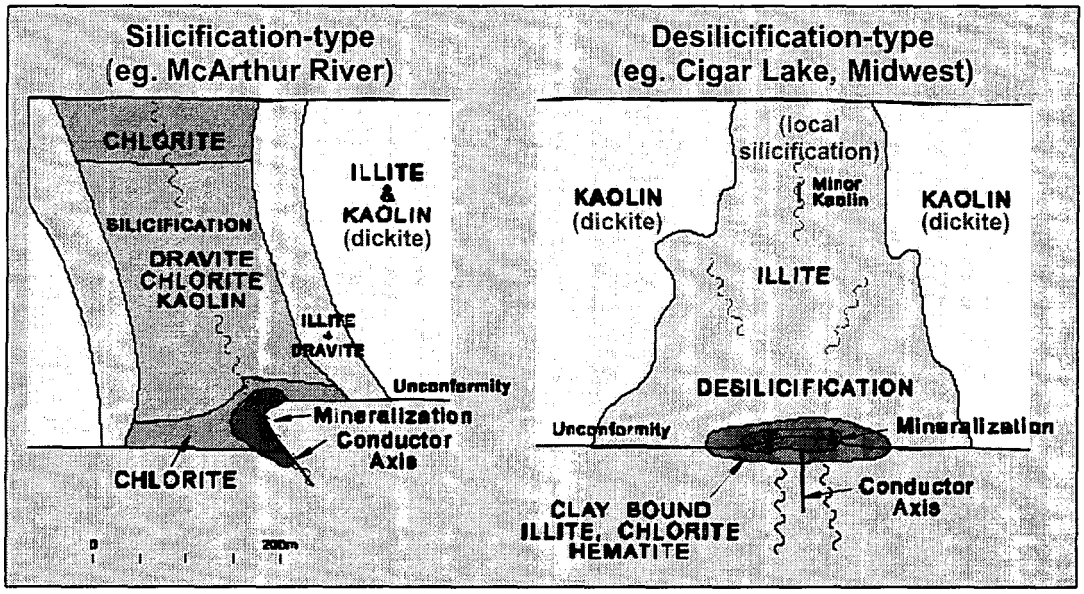

Figure 11 : Variation in Egress-Type Sandstone-Hosted, Host Rock Alteration Features, after Quirt, 2003 and Wasyliuk, 2000.

11 MINERALIZATION

The McClean North and South deposits are situated between two Archean domes and occur as sausage-shaped pods straddling the unconformity between the Athabasca sandstones and the crystalline basement. Two mineralized trends striking north 70° east to due east and approximately 0.5 kilometres apart have been identified and are referred to as McClean North and McClean South. The mineralized pods are generally at and above the unconformable contact which is, on average, 160 metres below the surface in this area. The regolith, which is invariably destroyed in zones of uranium mineralization, is from 15 to 45 metres thick. The overlying Athabasca sandstone is typically 150 to 160-metres thick and is covered by an average of six metres of glacial overburden.

The host rocks for the mineralization are altered sandstones and Aphebian basement rocks usually altered to clay-rich rocks. Structurally, the deposits are controlled by a zone of strong east-west faulting and fracturing coincident with the basement graphitic gneisses. Alteration is extensive above and below the mineralization, being largely controlled by the zone of east-west faulting. A zone of illite alteration forms a mushroom–shaped envelope tilted to the north in the McClean North Zone. There are 11 discrete pods (of which four have been examined in this report, and of which three are considered for reserve estimates), arranged along the two separate but parallel trends separated by approximately 500 metres. Generally, mineralization in the basement is at the eastern extremity of the zone. Uranium mineralization is hosted in hematitically altered clay-rich zones in which illite forms massive layers. Uranium occurs as fine-grained coffinite, as veinlets and nodules of pitchblende and as masses of pitchblende/uraninite. Highly variable but generally small amounts of nickel arsenides are associated with the uranium. The McClean North has a ratio of arsenic and nickel to U3O8 of 0.20 and 0.11 respectively, while the McClean South ratios are 0.57 and 0.31 respectively. Generally, the mineralization located below the unconformity has less arsenic and nickel than that found in the sandstone. The McClean pods are elongated east-west and range from 70 metres (Pod 6) to 300 metres (Pod 1, combining Pods 1W and 1E) in length. Typical widths are 10 to 20 metres. In cross section they are flat, lenticular to oval shaped bodies with thickness' commonly from 5 to 10 metres.

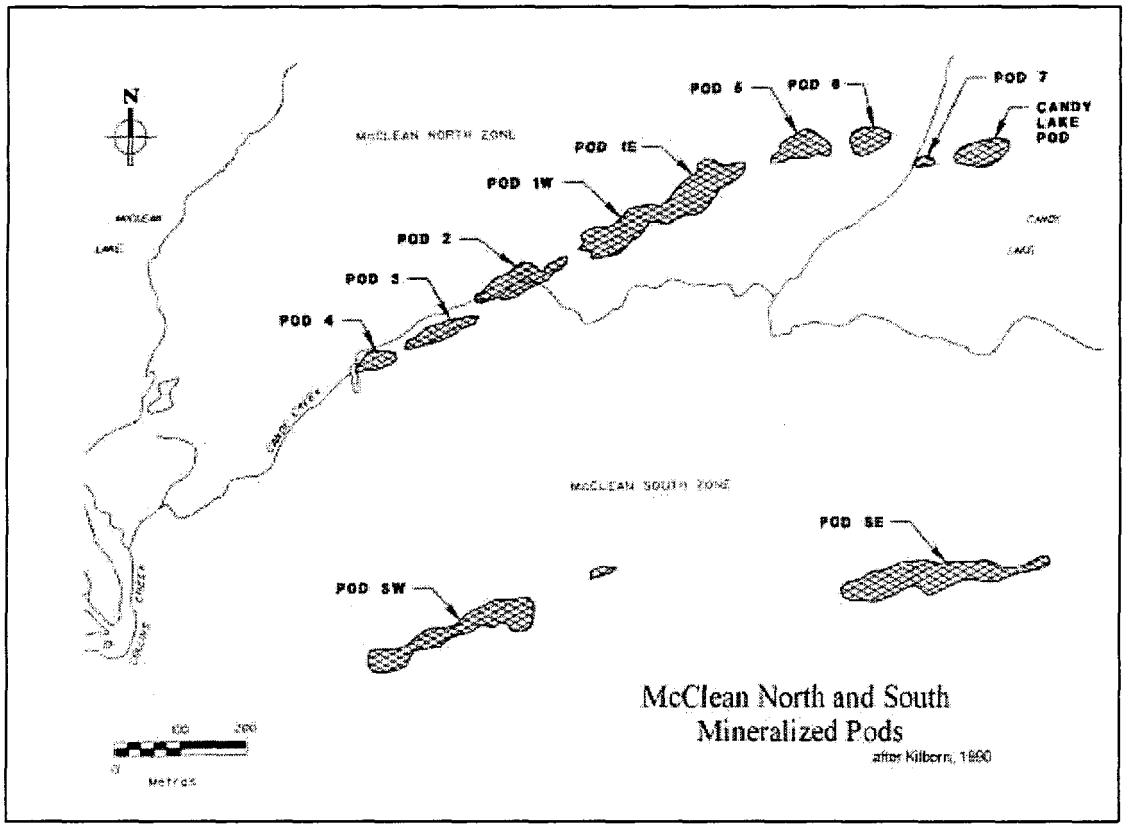

Figure 12 : McClean North and South Mineralized Trends (after Kilborn, 1990)

12 EXPLORATION

12.1 McClean Lake Area

Canadian Oxy began exploring for uranium in northern Saskatchewan in 1974 in the area between the known Rabbit Lake deposit and the Midwest Lake area where uraniferous boulder trains had been found previously. In April 1977, Canadian Oxy entered into a joint venture agreement with Inco Limited ("Inco"). During a diamond drilling programme in 1977, one of the 47 drill holes encountered encouraging uranium mineralization. During the next two years, extensive exploration work, including airborne geophysics electromagnetic surveys and diamond drilling, was carried out.

Mineralization was discovered at McClean Lake (the McClean North deposit) in January 1979 and follow-up drilling later that year confirmed the existence of a significant unconformity-type uranium deposit. Subsequent exploration resulted in the discovery in 1980 of the McClean South deposit and of the JEB deposit in 1982.

In January 1985, Minatco Limited ("Minatco"), a predecessor in title to Cogema, entered into the joint venture with Canadian Oxy and Inco. From 1985 to 1990, Minatco continued exploration of the property including airborne and ground geophysical surveys, percussion drilling and diamond drilling. The reconnaissance diamond drilling programme resulted in the discovery of the Sue A deposit in 1988. Further drilling in the later part of 1988 and 1989 resulted in the discovery of the Sue B and Sue C deposits.

In 1993, the owners of the Midwest and the McClean Lake projects agreed to combine the two projects. Ownership interests in the respective joint ventures were interchanged with Denison acquiring a 22.5% interest in McClean Lake. The Sue D and E deposits were discovered in the early 1990's. (The Sue D deposit has been deemed likely uneconomic and has not been considered in this report. It is located midway between Sue C and Sue E).

In the winter of 2002, exploration drilling on the western extension of the Sue trend discovered a pod-like deposit in the Caribou Lake area. The mineralization is distinct from that of the Sue trend in that it is sandstone hosted and arsenical. The alteration and structure continue along strike, however, and much further work remains to be carried out in the search for more of these pods.

13 DRILLING

As of April 30, 1990, when the diamond drilling of the McClean North and South deposit ceased, 416 diamond drill holes totalling 81,810 metres had been drilled into the McClean North and McClean South deposits. CanadianOxy and Inco drilled 303 holes totalling 59,687 metres beginning in 1979. Minatco drilled an additional 113 holes totalling 22,123 metres between 1987 and 1990.

All drilling was by diamond drilling, the majority of which was NQ size (47.6 millimetre diameter). The majority of the drilling extended approximately 25 to 30 metres into the basement, below the unconformity.

Drill hole spacing within the McClean deposits are not uniform for all pods. In general, the McClean North deposit is drilled at approximate hole spacing of 7.5 metres on lines 15 metres apart. Infill drilling in higher grade portions of Pod 1E provides a drill hole pattern of approximately 7.5 metres by 7.5 metres.

Figure 13 illustrates the drilling pattern at McClean North.

13.1 Drillhole Surveys

Kilborn (1990) reported on drill hole surveying as follows:

> "All drill hole collar locations have been surveyed and horizontal co-ordinates and vertical elevations established. All drill hole spacings described [above] are at the collar.
>
> To determine the deviation of the diamond drill holes from surface, directional DTH [down-the-hole] surveys, using a Sperry-Sun multishot survey instrument, were completed on all holes drilled after 1986. Prior to 1986, either acid-dip tests or occasional Tropari® measurements were made on all diamond drill holes. Horizontal co-ordinates and vertical elevations at points down the hole have been calculated and plotted. Generally, the deviation of diamond drill holes is less than 2°."

The writers note that uncertainty concerning the azimuth of a 2° dip variation could result in a horizontal variation of up to 10 metres in the location of a hole at a depth of 150 metres.

The writers have not audited the surveying but note that down-hole survey results are available for the majority of the holes within the McClean pods as illustrated in the following table:

Table 3 : Downhole Surveys McClean North

Pod	Holes with Surveys	Holes without Surveys	Comments
Pod 2	10	2	northern boundary of main portion of pod 2 is uncertain due to one unsurveyed hole
Pod 1W	5	4	the position of the "tail" of pod 1W is uncertain due to lack of surveys in 3 holes
Pod 1E	12	4	the position of the northeast and southeast corner of pod 1E is uncertain. Lack of surveys in holes east of pod 1E result in uncertainty concerning the eastern boundary
Pod 5	7	-	all holes have down-hole surveys

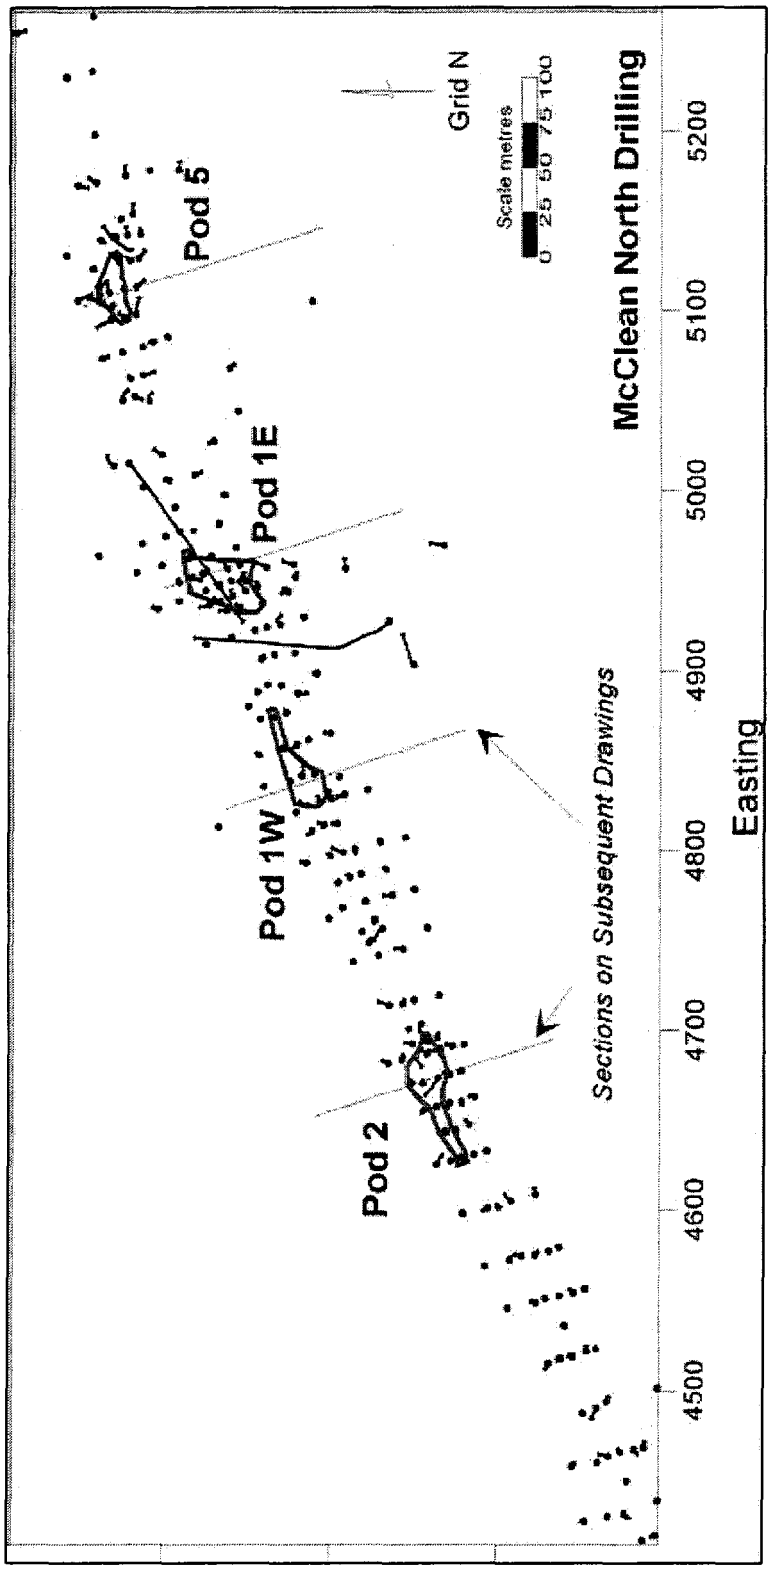

Figure 13: McClean North Drilling

14 SAMPLING METHOD AND APPROACH

Kilborn (1990) provided the following description of drill-hole logging and sampling for drilling up to 1990 on the McClean property :

> "Following the completion of a drill-hole, the hole is radiometrically logged using a down-hole slim-line calibrated gamma probe. A Century Geophysical Model 9067 probe is currently being used .....
>
> Diamond drill core is placed in standard 1.5-metre-long wooden trays of 4.5-metre capacity and is transported to an enclosed core-handling facility where it is geologically logged and sampled. Geological logging includes detailed recording of lithology, alteration, mineralization, structure, fracturing, and core recovery. Fracture density is recorded as RQD (Rock Quality Designation) which is the percent of total core length recovered in solid pieces greater than 100 mm in length. Sample numbers and location are recorded on the drill log.
>
> Uranium mineralization is identified in the drill core by using the gamma-logs from the DTH results and by scanning the drill core with a hand-held scintillometer. Mineral boundaries and high-grade intervals within the core are located and identified.
>
> Sample intervals are generally 500 mm long except where boundaries of higher- and lower-grade mineralization fall within a sample interval. In this case two 250-mm long sample intervals are collected. To ensure that the mineralized intersection is completely defined, samples are collected a minimum of 1 metre on each side of any identified mineralized zone.
>
> To check background geochemistry values for possible anomalous uranium and other elements, the sandstone and basement rocks are routinely sampled. A 250-mm sample length is taken in each of the lithological units identified in the basement rocks. Samples are also routinely collected in all major fault structures and alterations zones at 500 mm intervals.
>
> All sampled diamond-drill core is split in half. One portion of the core is placed in a sample bag, identified and sent to an independent laboratory for assaying. The other portion of the sample remains in the core box. All assay rejects are returned to Minatco and are stored at the Wolly Joint Venture property."

The writers have noted that sampling intervals were generally a consistent 0.5 metres at Sue A, B and E but that sampling at McClean North often used shorter intervals, especially within high-grade mineralization. Drilling by Canadian Oxy commonly used sample intervals of 0.31 metres (1 foot) with shorter samples in high-grade sections and larger samples remote from mineralization. Drilling by Minatco in 1989 used sample intervals of either 0.25 or 0.5 metres.

Corman (1992) reported the following description of logging procedures between 1989 and 1992 (with particular reference to Sue E):

> "Since 1989 all geological data retrieved from diamond drill holes has been entered systematically by Minatco personnel into the GDM[2] computer system. ....
> The data entry process begins in the field where the geological information retrieved from the drill core or from down-hole surveys is entered into the computer by the field geologists. This information includes descriptions of the hole lithologies, alteration styles, geotechnical data (RQD, recovery, fractures per metre, etc.) down-hole deviations, assay samples collected and down-hole gamma logs. ."

The last series of drill holes at McClean North was carried out during 1989. (The series prefixed with MC and M).

Sample intervals from drilling of the McClean North deposit are variable, due to different sampling protocols during different drilling campaigns. Samples from the high-grade sections which are the subject of the current examination at McClean North, tend to be in the range of 0.25 to 0.31 metres with shorter sample intervals common within especially high-grade intervals. The database for U_3O_8 adds further variability in that a number of individual assays have been divided as two (or in some cases three) individual assay records where only one sample was collected. (See also database Audit Section 16.2)

15 SAMPLE PREPARATION ANALYSES AND SECURITY

Drill samples collected prior to 1980 programme were assayed by Inco's J.Roy Gordon Research Laboratory in Sheridan Park, Mississauga, Ontario. Samples collected during the 1988 drilling programme by Minatco were assayed by Barringer Laboratories (Alberta) Ltd.

Kilborn 1990 reported the following assay procedures for the McClean property deposits:

> "Since January 1985, Minatco, as operator of the Wolly Joint Venture has shipped all samples to Barringer Laboratories (Alberta) Ltd. (Barringer) in Calgary for preparation and assaying. Uranium assays of mineralized drill core from drill programmes between 1979 and 1982, prior to Minatco becoming project operator, were performed by Inco's Roy Gordon Research Laboratory at Sheridan Park, Mississauga, Ontario.
>
> The procedure used by Barringer to prepare the core samples is:
> - Dry diamond drill cores.
> - Crush cores to approximately 4 mm.
> - Split crushed cores using a Jones splitter, to obtain a 500-g sample.
> - Pulverize 500-g sample, using a ring pulverizer, to minus 147µm (100 mesh).
> - Split the pulverized sample to obtain a 500-mg sample.
> - Analyze the 500-mg sample.
>
> All cores sampled in mineralized, fault and alteration zones sent to Barringer by Minatco were analyzed for U_3O_8 , nickel, cobalt, copper, arsenic, vanadium, molybdenum, and lead.

[2] GDM (Geological Data Management) software developed by B.R.G.M. (Bureau de Recherches Geologiques e Minieres France) and GEOMATH (Houston, U.S.A.).

Samples collected in the unmineralized sandstone to check background geochemistry are assayed for U_3O_8 .

The analytical samples are completely digested in a nitric-perchloric-hydrofluoric acid mixture and evaporated to dryness. The residue is dissolved in a specified volume of dilute hydrochloric acid. Quantitative values for nickel, cobalt, copper, vanadium, molybdenum and lead are determined by atomic absorption spectrophotometry (AA). Uranium is analyzed fluorimetrically and arsenic is determined colorimetrically.

Samples assaying in excess of 5% U_3O_8 are re-assayed using a 1-g sample. The sample is digested as previously described and then analyzed volumetrically for U_3O_8 ."

No description was available to the writers on the procedures used at Inco's J. Roy Gordon Research Laboratory for samples prior to 1980.

No assays for arsenic or nickel were available for drilling from the 1980 drilling (hole numbers without a prefix; for example hole 2036). The writers assume that these holes were assayed only for U_3O_8 .

16 DATA VERIFICATION

16.1 Original Assay Check Procedures

Kilborn (1990) reported the following check assay procedures:

"Control samples are routinely assayed by Barringer or with each batch of core samples analyzed.

Minatco has periodically verified portions of the uranium assay data base by cross-checking assays with other laboratories and by assaying duplicate samples at the Barringer laboratory. On average assay variability in grades exceeding 0.10% U_3O_8 is within 10 percent with the Barringer value being generally lower than that of other labs.

Assays performed at Inco's laboratory were done using an X-ray fluorescence (XRF) method. To check on the accuracy of the results obtained by Inco's assay laboratory, all samples collected from "ore grade" sections of the McClean diamond drill holes completed by the end of the 1979 winter programme were also assayed by XRAL Laboratories (XRAL), in Don Mills, Ontario. The XRF method was also used by XRAL. A total of 271 samples were sent for check assaying.

The results from the two laboratories showed variations within the limits of laboratory sensitivity. The largest variation occurred in the sections with the lowest uranium concentrations. Having established the reliability of Inco's XRF assay results, this method and Inco's laboratory were used for all future drill programmes prior to Minatco becoming operator of the Wolly Joint Venture project. No additional check assays were performed by

outside laboratories. Inco's laboratory did, however, routinely carry out internal checks, but documentation showing results are unavailable."

16.2 Current Database Audit

The writers carried out the following comparisons of assays within the databases with copies of original assay certificates or drill logs.

1979 Drilling
Copies of original assay reports for U_3O_8 were compared with the database for holes C175, C175 and C183. No assay reports were located by the writers for Ni or As and no As results are contained in the database.

1980 Drilling
Hard copy typed drill logs with accompanying, computer generated sample results were compared with the U_3O_8 database for holes 2036 and 2071. No results were reported for Ni or As.

1988 Drilling
Copies of original assay reports from Barringer for U_3O_8, As and Ni were compared with the database for holes MC36, and MC64.

The following differences were noted:

1. In hole 2071, one assay, remote from the mineralized pod was recorded as 0.027% U_3O_8 in the database and 0.029% in the drill logs prepared in 1980. No original assay sheet was available. Given that the difference is small, and the sample is not considered in the mineralized model this discrepancy is not considered significant.
2. Assays which are reported as less than the detection limit of 0.01% U_3O_8 are recorded in the database as 0.01% U_3O_8 . This "convention" for entering values below the detection limit does not affect the estimate of the grades within the pods.
3. The U_3O_8 assay results are, in numerous instances, recorded as two or more sample intervals when in fact only one assay was collected. Since no complete database of sample intervals was available to the writers no attempt was made to correct this discrepancy. This situation does not affect the estimate of grades for the pods with the method used by the writers. In the preparation of descriptive statistics on assay distributions this problem along with the variable sample lengths in general, was overcome by using composite grades.

The writers have not audited the survey information for hole locations or down-hole deviations.

17 ADJACENT PROPERTIES

There is no information on adjacent properties which is relevant to the current study.

18 MINERAL PROCESSING AND METALLURGICAL TESTING

A description of the JEB Mill is contained in Section 23.2.4.

Counsell (2003) (and Appendix 3) reviewed the metallurgical test work carried out prior to 1990 which is documented in Kilborn (1990). Metallurgical test work was carried out by Ortech, Total Jovac and Lakefield, concurrently with early work on JEB, Sue A,B and C using composites of drill core. The most important results established by the test work concerning McClean ore were:

- Assays of the samples show the arsenic and nickel content of McClean ore were low. This will generally lead to faster leaching, lower oxidizing agent and acid consumption and lower tailings treatment costs.
- The leaching extraction for all samples including McClean was between 98% and 99%.
- The McClean uranium leached quickly and 6-hour retention time was selected.
- The ore did not require fine grinding.
- The ore did not require high temperature leaching and 55°C was selected.
- Acid and oxidizing agent consumption was moderate.
- The Bond Work Index was about the same as other deposits in the area.
- Settling tests for C.C.D. did not indicate any problems with the McClean ore.
- The dynamics and recoveries for the organic extraction were good.

Counsell (2003) concludes "Taking all the above information into account, I would expect the McClean ores could be processed in the JEB mill in the same way as the JEB and Sue C ores currently being milled and with 98% recovery."

Counsell (2003) estimates that the direct milling cost for McClean North ore will be $Cdn 2.88 per pound U_3O_8.

The McClean North deposit is not currently scheduled for development or milling. Milling could take place concurrently with milling of ore from Sue A,B and E and mixed with those ores or subsequently on its own. Mixing of the ore with other Sue ores would assist in maximizing capacity utilization at the JEB Mill and, for the purpose of this study, it is assumed that McClean North ore is intermixed with ore from the Sue deposits between 2006 and 2010.

19 MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

19.1.1 Assumptions

19.1.1.1 Geological Model

The geological model used for the McClean North deposit is consistent with the model previously used by Denison and Cogema. Uranium mineralization occurs along a 1-kilometre trend which strikes approximately North 70° East to due East. Mineralization occurs in proximity to, and both above and below, the unconformity between the Athabasca Sandstone and underlying basement rocks.

Within the overall trend of the McClean North mineralization, nine pods with "higher" grade mineralization have been identified by diamond drilling. (Figure 12). Four of the pods (or portions of the pods) are the subject of the current report (three of which have mineralization with sufficient grade and continuity to justify estimates of reserves).

19.1.1.2 Area of Influence

Both exploration and definition drilling have been carried out in a vertical orientation. Initial exploration drilling tended to be carried out at 15 metre spacing on lines spaced 20 to 30 metres apart. More detailed drilling at 12.5 metre centres on 12.5 metre lines has been completed within Pods 2 and 5. Pod 1E has drill spacing approximating 7.5 metres. The drill spacing and orientation warrant a classification, for material which is potentially exploitable by hydraulic borehole mining, of "indicated" in the case of resources or probable in the case of reserves.

19.1.1.3 Cut-off Grades

A cut-off grade of 2% U_3O_8 was used to define the mineralized outlines of material which could potentially be exploited by hydraulic borehole mining. Several narrow intersections of internal waste, below this grade, were included within the mineralized outlines to maintain a smooth mineable outline. Several instances of mineralization above cut-off grade, well up in the sandstone were not included due to the selection of the mining method.

19.1.1.4 Minimum Thickness

The podiform deposits exhibit an average thickness in the seven-metre range, rarely exceeding 10 metres. A minimum thickness of five metres was used to define mineable outlines, considering the hydraulic borehole mining method.

19.1.1.5 Specific Gravity and Bulk Density

Specific gravity for individual samples was estimated using the following formula:

Density = $1/(0.452-0.00326 \times (U_3O_8\%))$

which resulted in the following estimates of specific gravity for each of the pods:

Pod 1E	2.42
Pod 1W	2.27
Pod 2	2.30
Pod 5	2.31

This estimation method is consistent with that used in the past by Cogema and Kilborn. (See also Appendix 2). Bulk density was assumed to be equal to specific gravity.

19.1.1.6 Database

The resource estimate is based on 35 drill holes (17 in Pod 1E, 11 in Pod 2 and 7 in Pod 5) which collectively encompass 764 individual assays which occur within the mineralized model. Many of the sample intervals were less than the "standard" 0.5 metres and are commonly in the range of 0.25 metres in high-grade sections.

19.1.1.7 Grade Distribution

Frequency and Cumulative Frequency Distribution plots, together with descriptive statistics are summarized below for samples which occur within the mineralized outline of the pods (the sample statistics include Pod 1W which was considered, at an early stage, as having resource potential). Given the variability of sample lengths within McClean North all statistics were carried out on one-metre composites.

N = 958 samples within solids
Mean = 7.22% U_3O_8
Range 0 to 98% U_3O_8

Statistics carried out on
composites of 1 metre
N= 320 composites
Mean = 6.31 % U_3O_8
Median = 2.3%
Range 0.0002% to 67.37% U_3O_8

Decile Analyis

Decile	% U_3O_8			within upper decile	
10%	0.03	60%	0.53	95%	6.8
20%	0.09	70%	0.84	99%	29.6
30%	0.15	80%	1.41		
40%	0.22	90%	3.3		
50%	0.34				

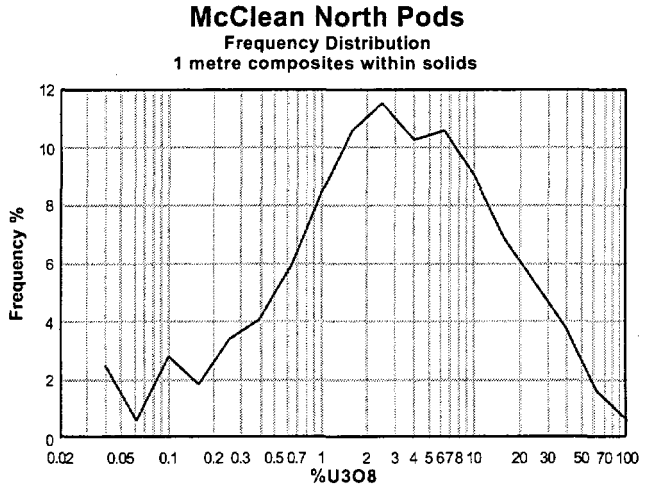

Figure 14 : McClean North U3O8 Frequency Distribution

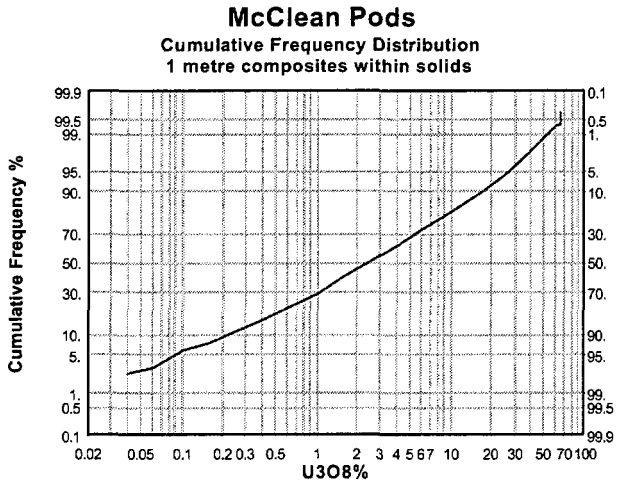

Figure 15 : McClean North U3O8 Cumulative Frequency Distribution

19.1.1.8 Correlation Methodology

The mineralization was correlated on 7.5 metre cross-sections. The object of the exercise was to define the three-dimensional boundaries of mineralized zones. These shapes were then digitized into a wire-framed solid model in cross-sectional slices using GEMCOM® software to create a "solid model".

19.1.1.9 Resource Estimation Methodology

Tonnage

The tonnage for each of the Pods was estimated by applying the bulk density determined above to the volume of each pod "wire-frame".

Grade

The composite grade of each drill hole, within the wireframed solids, was estimated by a length and specific gravity-weighted average of the assays in drill hole intercepts within the pod. The average grade of the pod was estimated by applying a polygonal method weighting to the drill hole averages. The writers have not attempted to develop a block model to predict varying grades within the individual pods.

The above method was modified somewhat in the case of Pod 1E. The density of drilling in Pod 1E varies and tends to be more closely-spaced in the centre of the pod where there are discernibly higher grades and thicker intersections. (Pod 2 and Pod 5 have an approximately uniform distribution of drill holes). The grade for Pod 1E was estimated by applying an inverse distance squared weighting to the composite grade of each drill hole. The effect of the inverse distance weighting reduced the estimated grade in Pod 1E from 10.96% to 10.42% U_3O_8.

19.1.1.10 In-Place Estimate of Mineralized Rock

Table 21 presents the in-place estimate of mineralized material.

Table 4 : McClean North In-Place Estimate of Mineralization

POD	VOLUME (metres$^{3)}$	SPECIFIC GRAVITY	TONNAGE	U_3O_8 %	U_3O_8 (lbs. x 1,000)
Pod 1E	6,621	2.42	16,022	10.42	3,680
Pod 1W	4,414	2.27	10,019	3.55	784
Pod 2	7,540	2.30	17,342	4.87	1,861
Pod 5	2,274	2.31	5,253	5.90	683
TOTAL	**20,850**	**2.33**	**48,636**	**6.54**	**7,000**
Total exclusive of Pod 1W	**16,435**	**2.35**	**38,617**	**7.31**	**6,224**

Note: Pod 1W is included in the above list of mineralized material and was subjected to economic analyis but is not included in resources or reserves.

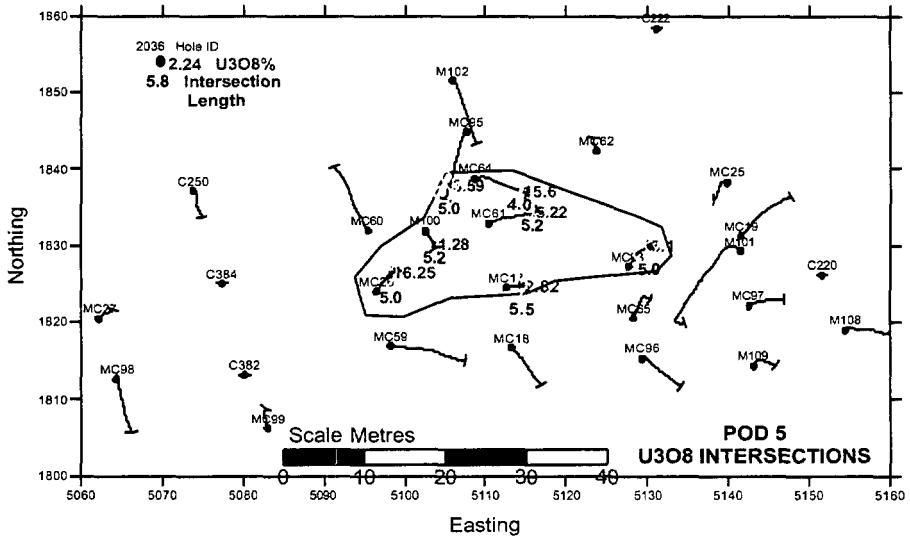

Figure 18 : Pod 5 Mineralized Intersections

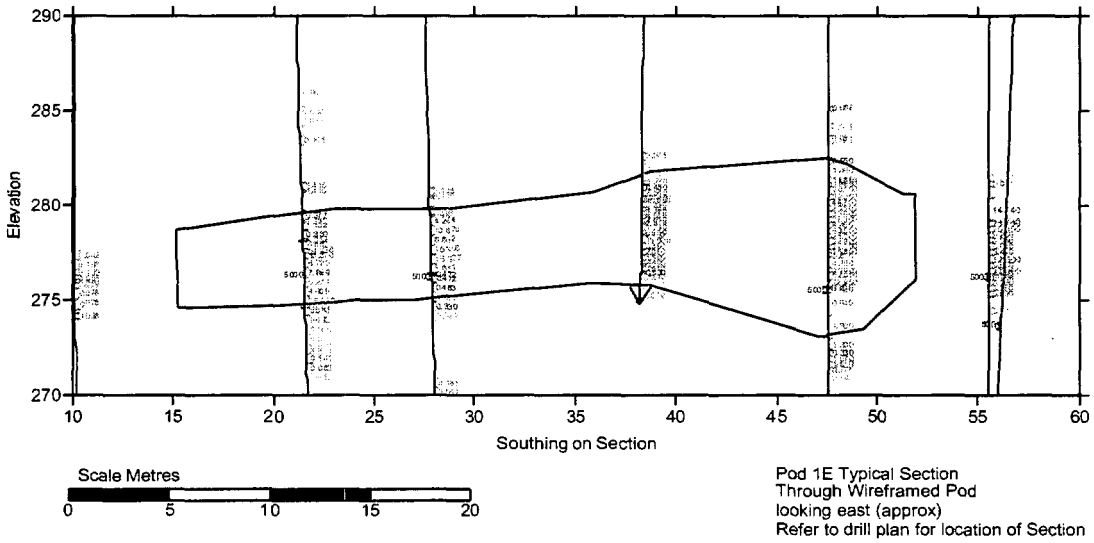

Figure 19 : Pod 1E Typical Section Through Mineralized Pod

19.2 McClean North – Reserve Estimate

The development of the reserve estimate for McClean North involved the following process:

- Idealized layout of boreholes and mined cavities on plan
- Synthetic mining and application of recovery factors to idealized layout
- Application of Dilution Factors
- Determination of Economics of each pod

19.2.1 Layout of Idealized Boreholes on Plan

Denison developed an idealized layout of three-metre and four-metre mined cavities on plan for each of the pods as illustrated in Figure 20 through Figure 23.

The prefeasibility studies to date reported by Layne and Golder (Kinley et.al,2003, Appendix 2) assume that jetting of four-metre cavities will be attainable. The costs associated with three-metre diameter cavities have provided an assessment of the sensitivity of the economics to reductions in cavity size.

These layouts attempt to emulate the closest packing possible which would maximize the access to ore while minimizing the amount of mining beyond the ore-waste contact. The layouts recognize that a number of the cavities will overlap the ore-waste contact and provide an initial projection of dilution from waste on the periphery of the ore.

19.2.2 Synthetic Mining and Application of Recovery Factors to Idealized Plan

Layne and Golder have synthetically mined the deposit using both three-metre and four-metre cylinders, on the three dimensional GEMCOM models of the mineralization provided by Denison, in order to estimate recoverable tonnages and costs.

Recovery of ore within mined cavities will be less than 100% due to several factors including:

- Irregularities in the shape of the mined cavity
- Partial recovery of jetted ore from the cavity
- Deviation of the holes from closest packing

A recovery factor of 85% has been applied by Layne and Golder to the idealized recovery from the borehole layout.

19.2.3 Dilution

Dilution will result from:

- Cavities which laterally straddle the ore-waste contact. This dilution is partially recognized in the idealized layout of boreholes described in Section 19.2.1. Additional dilution will occur since the position of the ore-waste contacts are not known with the precision implied by the current wireframed models. The lateral ore-waste boundary is expected to be extremely sharp and "waste" material can be expected to have a grade of zero.
- Material reamed and jetted from above the ore and caving from the back as a stable arch is formed: (Kinley et. al., 2003). While most of this "waste" may be expected to carry some uranium mineralization a grade of zero U_3O_8 has been assumed.
- Material mined from below the ore to form the sump of the cavity. This material is also expected to carry some uranium mineralization, however a grade of zero U_3O_8 has been assumed.
- Deviation of holes which could result in "projected" mined cavities overlapping on previously mined and backfilled cavities. Since the ore is considerably softer than the backfill this dilution is expected to be minor. In addition, selectively jetting on the sides of the cavity, away from the backfill will also reduce such dilution. (Dye placed in the backfill will permit identification of situations where this occurs).

Denison has applied a dilution factor of 28% to Pod 1E, 31% to Pod 2 and 36% to Pod 5 at zero grade to account for the above dilution factors.

19.2.4 Economics of Each Pod

The reserve estimate for McClean North is based on those pods which display an economic return based on four-metre mined cavities and using other parameters further described in Section 23 including mining and other costs identified by Layne, Golder and Denison and a uranium price of $Cdn 22 per pound U_3O_8 .

Based on economic criteria, Pod 1W does not meet the requirement for classification as reserves.

19.2.5 McClean North Reserve Estimate

Denison estimates the following reserves for McClean North based on the assumptions and criteria detailed in this report.

Table 5 : McClean North Reserve Estimate

Pod	Number of Boreholes	Undiluted Indicated Tonnes x1,000	Grade U_3O_8 %	Diluted Probable Tonnes x 1,000	Grade U_3O_8 %	U_3O_8 lbs. x 1,000
Pod 1E	73	11.5	10.4	14.7	8.14	2,637
Pod 2	68	13.4	4.9	17.5	3.72	1,438
Pod 5	32	3.8	5.9	5.1	4.34	488
Total	**173**	**17.1**	**7.23**	**37.3**	**5.54**	**4,563**

The writers are of the opinion that the drilling and sampling density is sufficient to classify these reserves as probable.

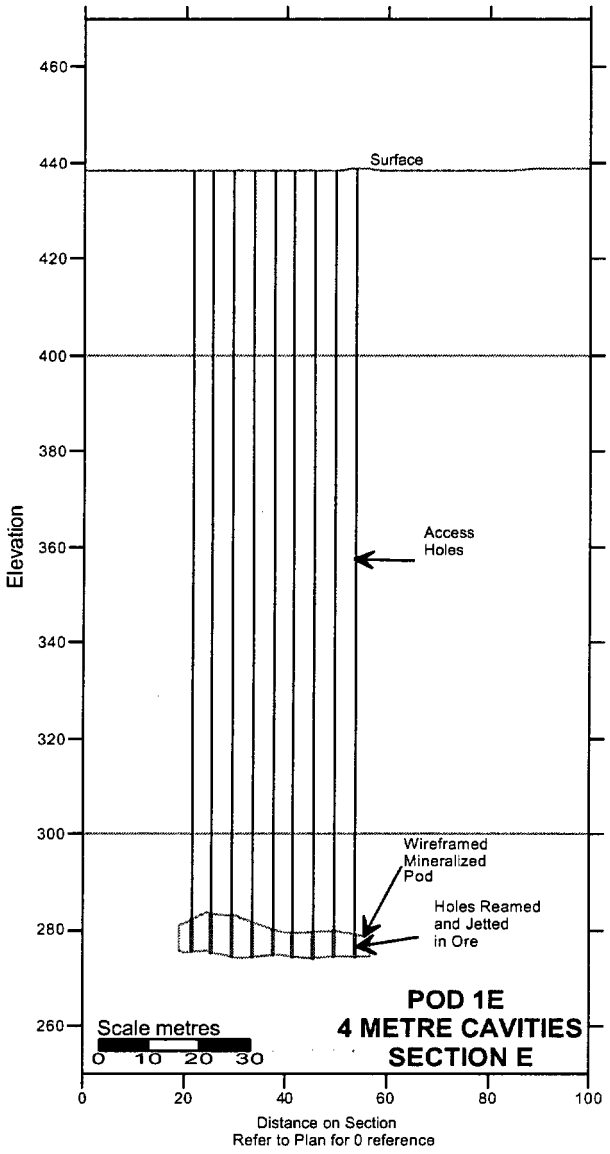

Figure 24 : Pod 1E, Section E, Typical Section with Synthetic Mining of Boreholes

20 OTHER RELEVANT DATA AND INFORMATION

The milling schedule and the operating costs assume that the JEB Mill will initiate processing of ore from Cigar Lake in 2006. A feasibility study has been completed concerning the milling of Cigar Lake ore and an agreement is in place between the Cigar Lake joint venture and the McClean Joint Venture for processing of Cigar Lake ore. However, a production decision has not yet been made by the members of the Cigar Lake joint venture and all regulatory approvals have not yet been received.

Denison is a minority partner in the McClean Joint Venture. Cogema is the operator and majority owner. The writers have received complete cooperation from Cogema in acquiring the data used in this study. However, Cogema may hold different opinions (concerning for example reserves) or may reach different conclusions than those reached by the writers which could affect development and mining plans. Cogema is not a publicly quoted company in Canada and is consequently not required to comply with NI 43-101 or its companion policies.

The writers are not aware of any other relevant data or information, not described in this report which would affect the conclusions or opinions presented.

21 INTERPRETATION AND CONCLUSIONS

An examination has been carried out of the technical and economic factors relating to the use of hydraulic borehole mining of mineralized pods at McClean North.

The mineralized pods at McClean North which demonstrate amenability to the blindshaft-boring and hydraulic mining method are located at depths of approximately 160 metres at the contact between the Athabasca sandstone and underlying gneissic basement. The method involves:

- Drilling access holes of 61 cm diameter from surface through the ore
- Use of an expandable reamer to ream the ore to a 1.5 metre diameter
- Use of jetting technology, including an "air shroud" to expand the mined cavity to its ultimate diameter which is projected to be four metres
- Extraction of ore from the bottom of the cavity using "airlift" technology
- Separation of ore from drilling fluids in a surface separation plant
- Backfilling with cement.

Ore will be transported to stockpiles at the JEB Mill. Processing of this ore has not currently been scheduled. For the purposes of this study it is assumed that ore from McClean North will be mixed and processed concurrently with ore from the Sue, A, B and E deposits during the period 2006 to 2010.

The Layne Golder report (Appendix 2), based on parameters discussed in the report, the maximum cutting distance of a 69 Megapascal and 1,630 cubic metres per day, water jet equipped with an air shroud was estimated at 0.75 metres in submerged conditions. Given initial reaming to 1.5-metre diameter and subjecting the ore to two sequences of jetting, on an extendable reamer arm, suggests a maximum diameter of 4.5 metres. An assumed diameter of four metres has been used for the base-case economic analysis and the estimation of reserves. An economic analysis has also been completed assuming a diameter of three metres in order to examine the effect of these major parameter on the economics. (Cavity size does not materially affect the recoverable tonnes or grade of mineralization.)

The writers are of the opinion that technical and economic parameters have been carried out to the level of a prefeasibility study. The exploration drilling and sampling provide sufficient confidence in the continuity, size and grade of the pods to classify the mineralization as probable reserves.

Table 6 summarizes the probable reserves estimated at McClean North.

Table 6 : McClean North Probable Reserves

Pod	Undiluted Indicated		Diluted Probable		U_3O_8
	Tonnes x1,000	Grade U_3O_8 %	Tonnes x 1,000	Grade U_3O_8 %	lbs. x 1,000
Pod 1E	11.5	10.4	14.7	8.14	2,637
Pod 2	13.4	4.9	17.5	3.72	1,438
Pod 5	3.8	5.9	5.1	4.34	488
Total	**17.1**	**7.23**	**37.3**	**5.54**	**4,563**

Major assumptions which were involved in developing this estimate include:

- A uranium price of $Cdn 22 per pound U_3O_8
- Meeting regulatory and permitting requirements in a timely manner
- Processing of Cigar Lake ore beginning in 2006 which will permit economies of scale for milling and other costs.
- Processing of ore in conjunction with ore from Sue A, B, and E beginning in 2006
- Costs and schedules developed in the current prefeasibility study and documented in this report
- Integrity of the survey database for hole locations and down-hole deviations

22 RECOMMENDATIONS

The Layne Golder study includes recommendations for additional work prior to and part of a bankable feasibility study in order to further evaluate four principal aspects of the mining system. The recommendations address the following:

- Cuttability: Two boreholes are recommended to provide core samples for testing to determine the optimum cutting pressures and the anticipated cutting rates.
- Air Shroud: Detailed design work and bench testing is recommended to determine the optimum pressure and flow rate of the compressed air as well as the effective distance of the air shroud.
- Expandable Reamer: A complete review of existing technology and design of reamers is recommended followed by bench testing.
- Pilot Test: A pilot test is recommended to provide confirmation of the equipment designs and production rates.

The hydraulic borehole mining method offers potential for the development of other high-grade, but small, deposits with better economics than either open pit or underground extraction. The writers recommend that historic exploration results be reviewed to identify other candidates for similar exploitation. One such occurrence, on the Caribou trend is proposed by the writers as the location of a pilot test.

23 ADDITIONAL REQUIREMENTS

23.1 Mining Operations

23.1.1 Introduction and Basic Principles of Operation

The mining method proposed ("hydraulic borehole mining") involves:

- Delineation drilling to define the orebody
- Drilling and setting casing in surficial deposits
- Drilling access holes of 61 cm diameter from surface through the ore
  (The current analysis assumes the use of one overburden drill to pre-drill a number of the access holes to the top of ore, in addition to the main production drill which will also be capable of drilling delineation and access holes.)
- Directional surveying
- Use of an expandable reamer to ream the ore to a 1.5 metre diameter
- Use of jetting technology, including an "air shroud" to expand the mined cavity to its ultimate diameter which is projected to be four metres
- Extraction of ore from the bottom of the cavity using "airlift" technology
- Cavity monitoring with a sonic tool to record cavity size
- Separation of ore from drilling fluids in a surface separation plant
- Backfilling of the ore cavity with cement and the access drill hole with aggregate.

The method and procedures are detailed in Appendix 2.

23.1.2 Borehole Placement

Mineralization at McClean North, as elsewhere on the Property, occurs in very discreet pods and structures. Contacts between ore and waste are expected to be near vertical and extremely sharp over distances of less than the width of the mined cavity. Consequently, the economics of development is sensitive to minimizing the proportion of boreholes which occur partially or wholly within waste.

Due to the geometry and limited size of the pods, approximately half of the mined cavities will occur on or in proximity to the periphery of the pods. With the present drilling the ore-waste contact locations can only be estimated with a precision which is greater than the diameter of the mined cavities. Consequently, without additional definition of the contacts a number of the "pre-planned" boreholes would likely fall within waste and a portion of the ore would occur outside of the "pre-planned" mining area.

The writers have examined the economics of carrying out additional drilling in order to completely define the contacts to within less than one metre which would be required to completely "pre-plan" all boreholes. The depth of drilling, the number of holes and the precision which would be required make that approach unattractive. Borehole placement and planning will be carried out through a combination of production mining and delineation drilling. The effect on economics (and to a limited extent dilution) has been addressed in the following manner:

- The "pre-planned synthetic" boreholes used in this study have included a number of boreholes which straddle the ore-waste contact location as currently estimated. That has permitted an estimate of the proportion of mined cavities which would contain waste in an ideal situation where the contact is known with precision.
- Allowance for small-diameter delineation drill holes prior to production mining drilling. It is assumed that 25% of the production holes will require prior delineation drilling.
- Allowance for large-diameter access holes that do not intercept ore. It is assumed that between 5% and 7.5% of access holes are drilled to depth without intercepting ore and which are not subjected to reaming or jetting.

Boreholes which straddle the ore-waste contact can be subjected to modified jetting procedures in order to preferentially mine waste on one side of the borehole. (The jetting can take place on only one side of the cavity if desired). This would marginally improve the economics and would reduce dilution in such situations. However, the current analysis has not incorporated such a procedure.

The projected production schedule is summarized in Table 7.

Table 7 : Borehole Mining Schedule – 4 Metre Cavities

23.2 Processing Recoverability

23.2.1 Surface Separation Plant

Ore will be recovered on surface in a separation plant which includes a primary classifying screen and a series of four linear motion shaker tables.

The materials handling, separation, and water handling systems are more fully described in Appendix 2 which also includes a flow sheet.

23.2.2 Waste Disposal

Process water can be dealt with at the JEB tailings management facility (TMF) and contaminated soil, liner materials and un-useable equipment can be sent to the Sue C pit surround tailings repository

Disposal of wastes is budgeted in the decommissioning costs.

23.2.3 Transport to JEB Mill

Ore will be removed from the separation circuit by loader to a nearby ore pad and subsequently moved to the JEB Mill by haul truck.

23.2.4 JEB Mill

The following sections describing the JEB Mill have been taken from Kerr et al. (2003).

The JEB mill, which started production in 1999, is located adjacent to the JEB pit which has been converted into the JEB Tailings Management Facility (TMF). The mill has so far processed ores from the JEB pit and Sue C ores. Over the last four years, the operation of the mill has been improved each year (McLean Joint Venture, 2002c) and the operating costs have been reduced spectacularly.

Figure 25 illustrates a simplified schematic of the JEB Mill.

The main unit operations in the process are:

- grinding with SAG and ball mill;
- leaching;
- counter current decantation (C.C.D);
- pregnant solution clarification;
- solvent extraction;
- yellow cake precipitation;
- ammonium sulphate crystallizer;
- tailings neutralization and disposal;
- water treatment

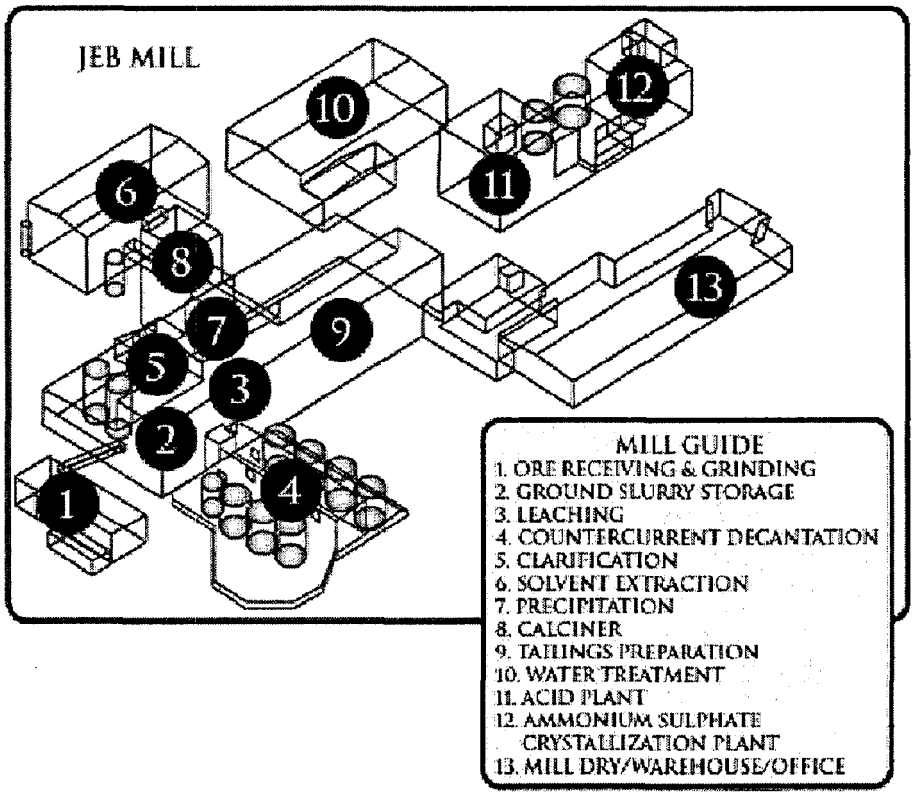

Figure 25 : JEB Mill Schematic (after Cogema, 2003)

The ore is stockpiled near the mill and fed into the SAG mill. The grinding circuit is oversized and was only required to operate 38.9% of the possible time in 2002. The ground slurried ore is stored in pachucas for continuous feed to the leaching circuit.

The uranium is leached from the ore in two circuits with sulphuric acid. Hydrogen peroxide is used as the oxidising agent. The first circuit operates at room temperature and the second at 50°C and both circuits operate at atmospheric pressure. In 2002, the extraction was over 98% and the total mill sulphuric acid consumption was 87.5 kg/tonne. The total retention time is about 8 hours.

The solids are separated from the uranium containing solutions after leaching in a conventional 6-stage thickener counter current decantation circuit and the system was 99.65% efficient in 2002. The overflow from the first thickener is clarified in a sand filter.

The solvent extraction circuit employs conventional technology and uses an amine extractant in a kerosene organic solvent. The circuit consists of uranium extraction, arsenic scrub, water wash, uranium stripping with ammonia, ammonia scrub and organic regeneration stages. The raffinate is partially recirculated to the C.C.D. circuit and the losses are very low and 99.97% of the uranium was recovered in 2002.

Pregnant strip solution contains the uranium extracted in the previous SX circuit, but it also contains a significant amount of molybdenum. This molybdenum would also precipitate with the uranium, if not removed. The quantity of molybdenum in the strip solution is high enough to exceed reject limits imposed by the uranium conversion facilities that treat yellowcake produced at McClean Lake. The carbon adsorption columns remove approximately 75% of the molybdenum from the pregnant strip solution and reduces the amount of molybdenum carried over to the precipitation circuit to below the penalty limits.

The ammonium sulphate circuit is required to remove excess ammonium sulphate produced from the addition of ammonia in the solvent extraction and yellowcake precipitation circuits. In addition, it is required to evaporate any water added to these same circuits that contain ammonium sulphate. The ammonium sulphate is sold as a fertilizer.
The yellowcake is precipitated from pregnant strip solution with ammonia and the solids are then separated from the liquid in thickeners and centrifuges. The precipitate is then dried and calcined in a rotary multiple hearth.

The calcined yellowcake is discharged to an automatic packaging capsule which fills 210 L drums.

The tailings and part of the raffinate are mixed together with lime, barium chloride and ferric sulphate. The lime neutralizes acid and the barium chloride and ferric sulphate precipitate radium and arsenic.

Thickened tailings received from the tailings thickener are deposited to the JEB tailings disposal pit, using a sub-aerial pervious surround tailings disposal system. The JEB tailings pit contains a dewatering drift and raise to control the water levels, and a base filter to drain the tailings. The surrounding sandstone has a higher permeability that the consolidated tailings thereby allowing ground water to flow around the deposited tailings mass. During plant operations, a hydraulic gradient is created in the filter layer under the tailings by pumping water through the drift and raise with submersible raise water pump. The water level in the tailings pit is controlled by pumping water from the pit with barge mounted vertical turbine pumps to the reclaim water tank, where it is combined.

The water pumped from the surface of the tailings pit and the tailings thickener overflow is treated in a three-stage water treatment plant. Each stage contains a mixing tank and a clarifier. Lime, barium chloride and ferric sulphate are added to each stage and further precipitate radium and arsenic. The overflow from the last thickener flows into monitoring ponds and the water is not discharged until assays confirm that the water conforms to all regulations (McClean Joint Venture, 2002c).

The mill was designed and is operated to meet all environmental and safety regulations. The employee exposure to radiation is well below the limits.

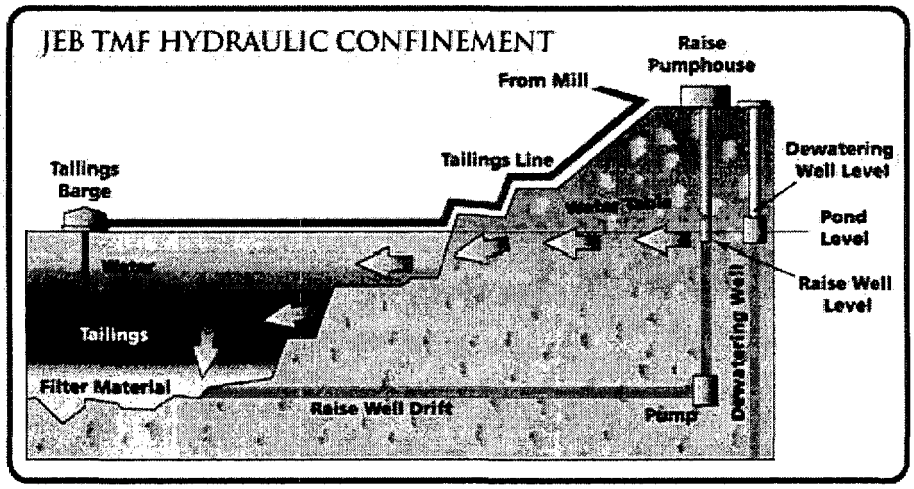

Figure 26 : JEB Tailings Management Facility (after Cogema 2003b)

23.2.5 JEB Mill Expansion

An agreement has been made between the McClean Joint Venture and Cigar Lake Mine to partially custom mill Cigar ores at the JEB mill.

The Cigar Lake ore will be ground at the Cigar Mine and transported to the JEB mill as a pulp in specially designed and government approved containers. All of the Cigar Lake ore will be unloaded, stored and leached at the JEB mill. The pregnant aqueous solution will be further processed at both JEB mill and Rabbit Lake Mill. The capacity of the JEB mill will be increased from a nominal 6 million pounds of U_3O_8 per year to 12 million pounds of U_3O_8 .

The JEB mill will require modification and expansion to enable it to treat the Cigar Lake ore and the flow sheet of the mill after the expansion is illustrated in Figure 25.

The most important changes that will be required are:

- a slurry unloading and storage system;
- pregnant aqueous solution storage and load-out system;
- a cyclone counter current circuit;
- an extra pregnant aqueous sand filter and storage tanks;
- two extra molybdenum adsorption columns;
- expansion of the ammonium sulphate plant;
- an extra ammonium sulphate storage bin;
- some extra reagent preparation and storage equipment;
- an oxygen plant

An engineering company, AMEC E and C Services Ltd. of Saskatoon, completed a report "JEB Mill Expansion Project" in August 2002 (Amec E and C Services, 2002). This report includes flow sheets, general arrangement drawings, site plan drawings and HVAC schematics as well as design criteria and capital cost estimates. All the capital costs to change the plant to process

Cigar Lake ore will be paid for by Cigar Lake and so do not affect this study. The only mill-related capital cost to Midwest will be to expand the leaching circuit.

It is very important for the economics of the McClean Lake and Midwest projects that the expanded mill will have sufficient capacity to meet the milling schedules.

Prior to the AMEC report, COGEMA completed a study "Cigar Lake Project, 2001 Feasibility Study, Supporting Document No. 4A JEB Mill Expansion" (Cogema and Cigar Lake Mining Corporation, 2001). Included in this study is very detailed calculations of the current capacity and required expansion for each unit process in the mill. Also, the capacity of all ancillary facilities such as water distribution, water treatment, electrical distribution, camp accommodation and sulphuric acid plant have been taken into account. These calculations have been checked and demonstrate that a reasonable safety margin has been included in each step of the milling.

The expansion includes an oxygen plant. The hydrogen peroxide currently used will be replaced with oxygen which will reduce operating costs. The leaching pressure will be increased to 2 Bar from atmospheric and the current leaching tanks are designed for this pressure.

The milling ore tonnage capacity is limited by the pump, piping and counter current circuit size. The practical limit is about 142,000 tonnes per year. Other circuits of the mill, such as solvent extraction and yellow cake precipitation and drying, limit how much uranium can be produced. The practical annual limit after expansion will be about 12 million pounds of U_3O_8 .

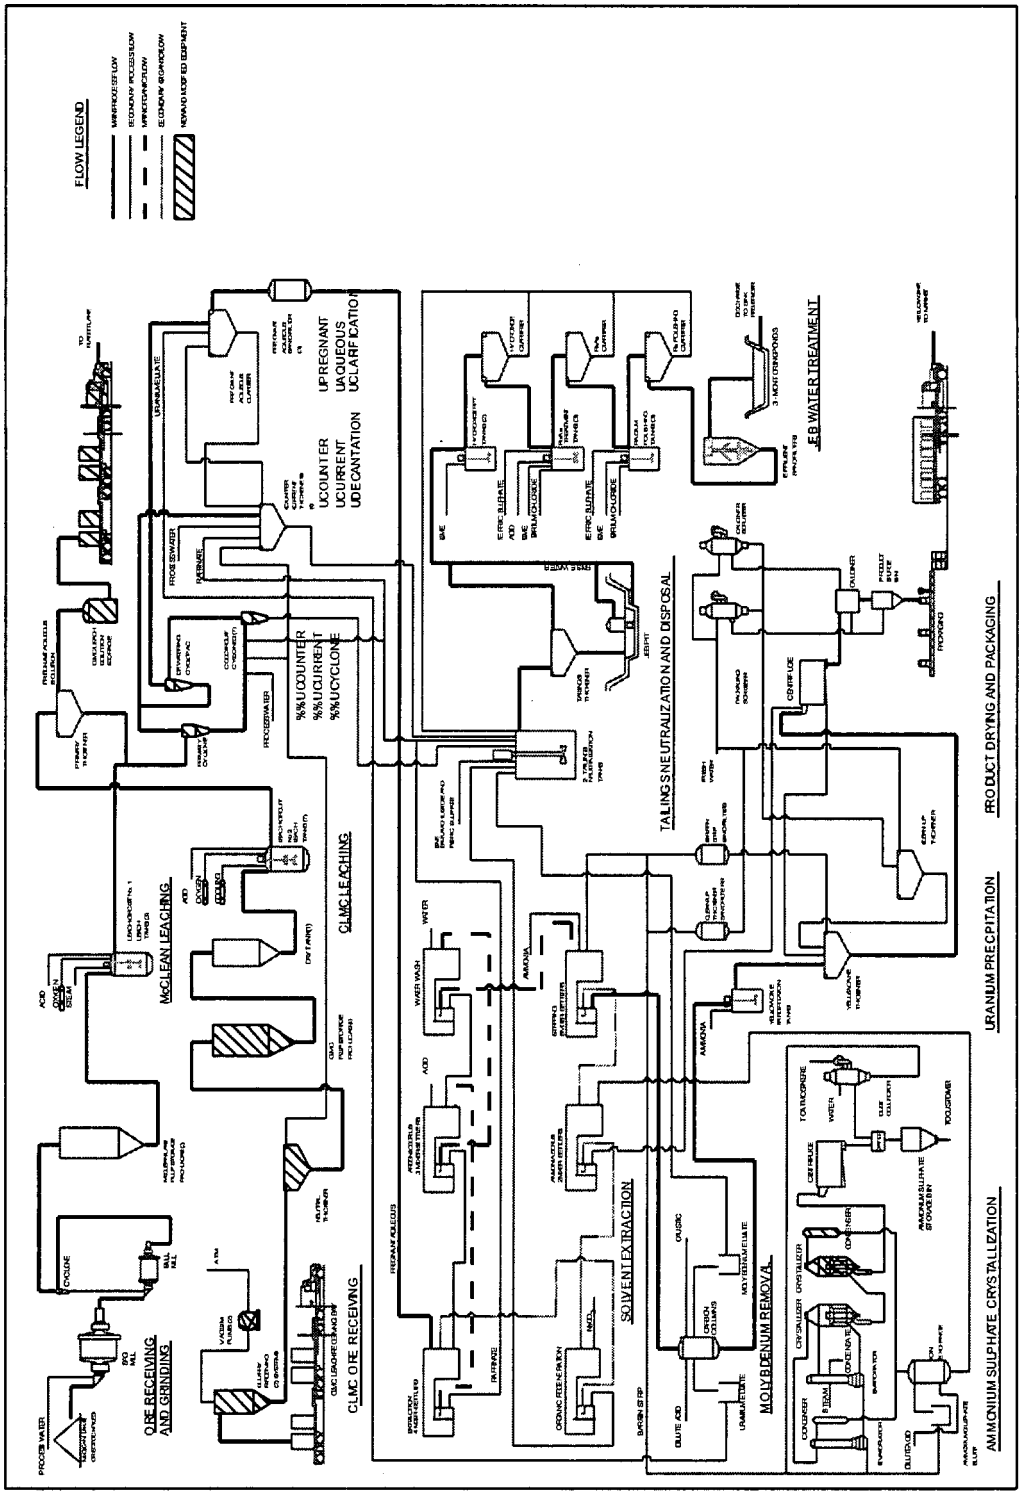

Figure 27 : JEB Mill Simplified Flow Sheet

23.2.6 McClean North Metallurgy

The metallurgy of the McClean North deposit as well as the metallurgy of other deposits has been examined by H.C. Counsell on behalf of Denison (Kerr et. al., 2003). Copies of the reports dealing specifically with McClean North are contained in Appendix 3.

23.3 URANIUM MARKETS

23.3.1 Uranium Demand

The only significant commercial use for uranium in the world is to fuel nuclear power plants for the generation of electricity. Demand for electricity world-wide continues to grow and nuclear power is expected to play an important part.

The increased emphasis on reducing greenhouse gases pursuant to the Kyoto Protocol to the United Nations Framework on Climate Change and concern for the damage caused by acid rain are drawing increased interest in nuclear power generation which produces neither greenhouse gases nor acid rain. A number of countries have formally recognized that the nuclear option is necessary if they are going to meet their Kyoto Protocol targets. Globally, nuclear power avoids 2.4 billion tonnes per year of CO_2 which would be produced if the same amount of electricity were produced from coal.

There are currently 441 nuclear reactors with a generating capacity of 361 Gigawatts of electrical output (GWe), in operation in 31 different countries, generating about 16% of the world's electricity requirements. In addition, there are 29 more reactors under construction, and, as well, several of the reactors that are not currently operational, including four in Canada, are expected to restart in the near future. A further 34 reactors are planned, for which approvals and funding are already in place.

Uranium consumption world-wide in 2002 was about 170 million pounds of U_3O_8. The demand for uranium is expected to grow by between 1% and 2% per year over the next decade. This growth in consumption is projected to come from the construction of new reactors, but also from improving capacity factors, upgrading of the generating capacity of existing plants, and the extension of the licensed operating lives of the reactors.

23.3.2 Uranium Supply

Uranium is produced in 21 countries world-wide but more than 51% of the total annual production in 2002 came from mines in Canada and Australia.

The four largest producers accounted for over 60% of world mine production, with Cameco and Cogema alone accounting for over 40%. Total annual world mine production in 2002 was about 94 million pounds of U_3O_8 which is equal to approximately 55% of annual requirements to fuel nuclear reactors. The McClean Lake Facility is one of the world's largest producing uranium facilities.

During the past several years, secondary sources of supply have been required to fill the gap between demand and primary mine production. These secondary sources include:

- During the 1990's countries that were formerly republics of the Soviet Union sold a large quantity of uranium from inventory. Russia is now a net consumer, producing only part of its requirements.
- Reprocessing of uranium and plutonium is being utilized by some of the utilities in Europe and Japan. However, this material is not expected to meet more than 6% of demand over the next 10 years and reprocessing capacity expansion would require substantially higher uranium prices to be justified.
- Uranium from nuclear disarmament is expected to supply 10 to 12% of demand over the next 10 to 15 years. There had been considerable uncertainty concerning the timing and method that this material from the conversion of Highly-Enriched Uranium ("HEU") would enter into the market. Two agreements entered into in 1999 have reduced that uncertainty. Cameco, Cogema and RWE Nukem Inc. entered into a commercial agreement giving them an option to purchase a large portion of the material derived from HEU and deliver it to the long-term markets. At the same time, the United states government purchased about 29 million pounds of uranium from the conversion of HEU in 1997 and 1998 and agreed to hold that material, together with another 30 million pounds then held by the Department of Energy, in inventory for a period of 10 years.
- Commercial inventories have met a portion of the demand requirements over the past decade but their impact on supply is now expected to be at a reducing rate.

The reduced availability of some of these sources is expected to tighten the supply-demand balance.

As a result of these factors, new mines are required to meet the medium and long-term market requirements. However, apart from the scheduled Cigar Lake start-up, no large new mine is being proposed for development and several mines are scheduled to close as their reserves are depleted. Significant uncovered demand exists in the market from 2004 onward and Denison expects the tightening supply-demand balance to put upward pressure on uranium prices.

23.3.3 Uranium Prices

Figure 28 illustrates the spot market price for U_3O_8 over the past decade and a half. The spot market represented only about 11% of uranium demand in 2002, in line with the level in recent years (see also Section 23.3.4 Contracts). The spot price increased during 2001 from $US 7.10 to $US 9.60 and to $US 10.20 at December 31 2002. Spot prices by mid 2003 had increased to $US 10.90 and by the end of October were $US 12.75 (Source Ux Consulting Company LLC.).

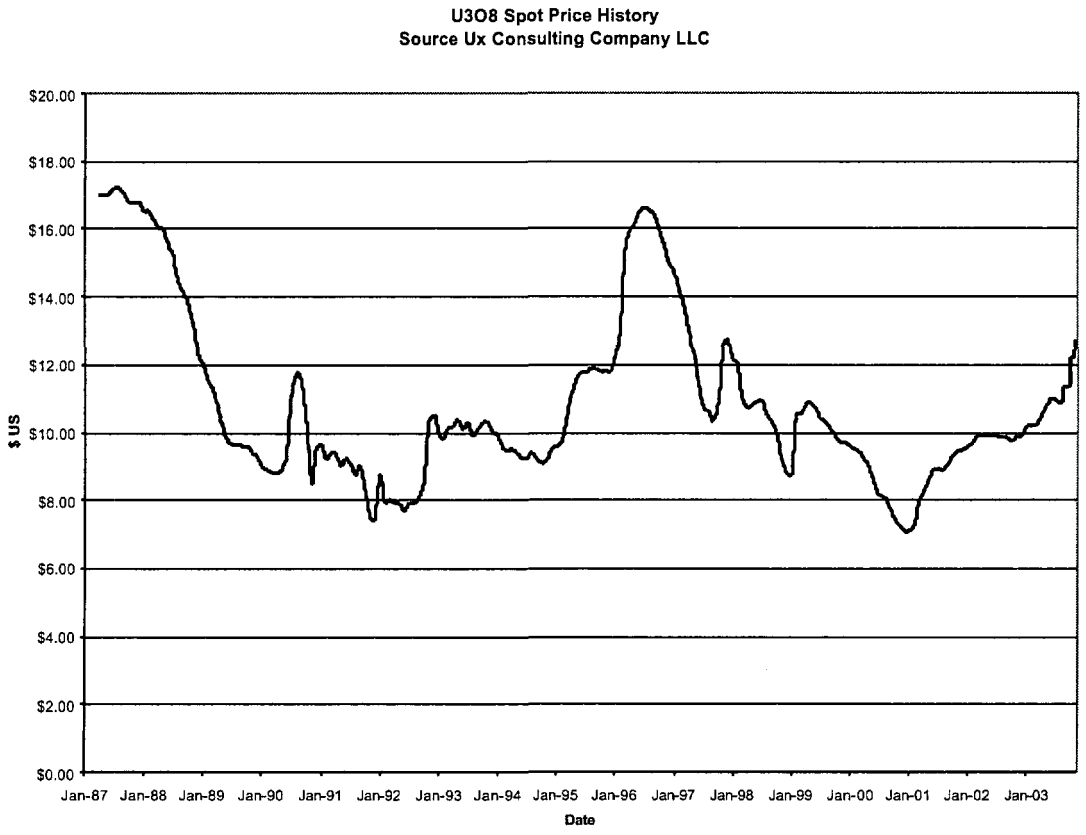

Figure 28 : Uranium Spot Market Price History (after Ux Consulting Company, LLC, 2003)

23.3.4 Contracts

Uranium is priced on its U_3O_8 content. There are no deductions for further treatment costs. Denison sells its uranium f.o.b. converter (Cameco at Blind River, Ontario; British Nuclear Fuels plc. in the U.K.; Comurhex, part of Groupe Cogema, in France and the ConverDyn Partnership in the U.S.).

Denison and Cogema jointly market their respective shares of production from the McClean Lake Property to nuclear facilities around the world. All of Denison's current sales are under long-term contracts and not on the spot market Prices under these contracts are established by a number of methods including fixed prices, base prices adjusted by inflation indices, changes in long-term reference prices and annual price negotiations. About 16% of Denison's uranium revenue is sensitive to fluctuations in the spot price. Many contracts contain floor prices, ceiling prices and quantity flexibilities which enable the purchaser to reduce or increase the amount of uranium to be delivered from year to year within a specified range. Prices in the long-term market are higher than those in the spot market and are traditionally less volatile. Prices under uranium sales contracts are considered confidential.

23.3.5 Uranium Price Assumptions

A price of $Cdn 22.00 per pound U_3O_8 has been used for the estimation of reserves and resources in this report.

Denison is of the opinion that this price assumption is consistent with:

- Independent forecasts of supply and demand fundamentals and price projections.
- Current spot market prices of $US 12.75 per pound U_3O_8 . (as of October 27th 2003)
- Recent exchange rates of $US 0.75 to $Cdn 1.00 (The exchange daily rate as reported by the Bank of Canada has averaged $US 0.735 between August 1st and October 27th and was trading at 0.763 on October 27th).
- Denison's policy of selling all production under long-term contracts.
- Long term contract prices and terms relative to spot prices.

Long term contract terms are confidential.

The price assumption is sensitive to exchange rates, actual price premiums under long-term contracts and future price movements.

23.4 ENVIRONMENTAL AND REGULATORY REQUIREMENTS

23.4.1 GENERAL

Environmental and hygiene matters related to McClean Lake and Midwest are mainly regulated by:

Federally
- the Canadian Nuclear Safety Commission [3]("CNSC").
- the Department of Fisheries and Oceans ("DFO").
- Ministry of Labour.
- Health Canada.
- Environment Canada.

Provincially
- Saskatchewan Environment ("SE")
- Saskatchewan Industry and Resources (Mining Lands).
- Saskatchewan Labour.

The major relevant legislation which the above agencies administer are:
- The Nuclear Safety and Control Act[4] ("NSCA") enacted in 1997 and administered by the CNSC.

[3] The CNSC supersedes the Atomic Energy Control Board.

- The Canadian Environmental Assessment Act, ("CEAA") enacted in January 1995.
- The Metal Mining Effluent Regulations.
- Saskatchewan Occupational Health and Safety – Mining Regulations.

The current mining and processing plan for McClean North is dependent on receiving licensing approvals for the mining of Cigar Lake ore, ore from Sue E and mining and processing of McClean North, as well as construction of the Cigar Lake mine and the expansion of the JEB Mill. An environmental assessment under CEAA has been completed for disposal of Cigar Lake waste rock in the Sue C pit.

The major activity which must be carried out in order for a project to receive environmental approvals is an environmental assessment ("EA"). The Canadian Environmental Assessment Agency states that "Depending on the nature of the project, and the significance of possible environmental effects, the type of assessment required will vary. Most projects are assessed relatively quickly under what is known as a screening type assessment. Larger projects that have potential for greater environmental impacts may require a comprehensive study." (Canadian Environmental Assessment Agency, 2003)

Prior to enactment of the CEAA, environmental permitting and licensing was subject to the Environmental Assessment and Review Process Guidelines Order ("EARPGO"), approved by Order in Council, June 21, 1984. In August of 1991, the governments of Canada and Saskatchewan set up a Joint Federal-Provincial Panel on Uranium Mining Developments in Northern Saskatchewan ("Panel") for the purpose of holding public hearings on five uranium projects, including McClean Lake and Midwest. On December 23, 1993 the governments of Canada and Saskatchewan gave their approval for the development of the McClean Lake project, subject to licensing by the AECB, now the CNSC. In June 1999 McClean Lake received an operating license. In August of 2001 the current four-year operating license was issued by the CNSC permitting production of up to 8 million pounds of U_3O_8 per year.

In September 2002 the Federal Court of Canada, Trial Division, quashed the original operating license issued in 1999 for McClean Lake in response to an application by the Inter-Church Uranium Committee Education Co-operative. The decision was not critical of the performance of the McClean facility, but was based on a technical question about the administration of the licensing process. Cogema, as operator of the McClean Joint Venture and the CNSC have appealed the decision and a stay of the decision was granted in November 2002 pending the results of the appeal.

In order to eliminate the uncertainty caused by the court decision, an application is being prepared for a new operating license for McClean to replace the current license.

[4] The NSCA superseded the Atomic Energy Control Act ("AECA") which was administered by the Atomic Energy Control Board ("AECB").

23.4.2 REGULATORY PROCESS FOR McCLEAN NORTH

The development of this deposit as an underground mine was included in the Panel hearings under EARPGO but is not included in the current operating license for McClean Lake. Since different methods of mining are contemplated in this report, a new EA under CEAA may be required prior to licensing approvals of CNSC, DFO and SE.

23.4.3 Permitting Costs and Licensing Fees

The writers have assumed a cost of $1 million for the planning and permitting of McClean North.

23.5 TAXES AND ROYALTIES

23.5.1 Provincial Royalties and Taxes

23.5.1.1 Saskatchewan Provincial Royalties

Denison pays royalties to the province of Saskatchewan on the sale of uranium extracted from ore bodies in the province under the terms of Part III of the Crown Mineral Royalty Schedule, 1986 (Saskatchewan) ("Schedule") as amended. The calculation calls for the payment of a basic royalty (currently 5% of gross sales of uranium), reduced by a Saskatchewan resource credit (1% of gross sales of uranium).

The schedule also provides for additional tiered royalties to become payable as a percentage of revenue after the Company has deducted from revenue its capital costs for mill expansion and mine development in accordance with provisions set out in the Schedule. The company currently has substantial capital recovery banks and anticipates that at current selling prices, it will not use up its capital recovery banks in the foreseeable future. Following recovery of the capital investment, revenues are subject to an additional tiered royalty as follows:

Table 8 : Saskatchewan Tiered Royalty Schedule

Average price per kilogram of U_3O_8 *	Tiered Royalty as a % of Revenues within the Bracket
Up to $30	0%
$30 to $45	6%
$45 to $60	10%
more than $60	15%

*1999 bracket value to be indexed annually

Royalties are assessed on gross revenue received less any shipping component of those revenues.

A provincial royalty of 4% on revenues, less $0.09 per pound for the estimated shipping component, has been used in the current economic analysis.

23.5.1.2 Saskatchewan Resource Surcharge and Capital Tax

Denison is subject to capital tax on paid-up capital (as defined in the relevant provincial legislation) in respect of its operations in Saskatchewan. In Saskatchewan it currently pays a rate of 0.6% on paid up capital in excess of $15 million. In addition a resource corporation in Saskatchewan pays a corporate surcharge of 3.6% of the gross sales of uranium to the extent that the amount so calculated exceeds the regular capital tax described above.

The provincial resource surcharge is based on gross revenues less the transportation component of any revenue.

A provincial resource surcharge of 3.6% on uranium production less $0.09 per pound for the estimated shipping component, has been used in the current economic analysis to reflect the combined effect of capital tax and provincial resource surcharge.

23.6 CAPITAL COSTS

Capital costs have been estimated by Layne for various categories of development and equipment related to mining. Denison has estimated other capital costs related to permitting, trial mining and additional equipment.

The capital costs and schedule are summarized in Table 9.

Table 9 : Capital Cost Estimates and Schedule

	Year 1	Year 2	Year 3	Year 4	Year 5	Year 6	Year 7	TOTALS
	2004	2005	2006	2007	2008	2009	2010	
Capital Costs								
Design, Planning Permitting	1,000,000							1,000,000
Trial Mining (net of revenue)		3,000,000						3,000,000
Site Setup		465,965						465,965
Instrumentation		118,800						118,800
Radiation Safety		40,000	40,000	40,000	40,000			160,000
Misc Equipment		1,240,800						1,240,800
Mining Rig		5,610,000						5,610,000
Dewatering System, pumps building etc.		1,729,200						1,729,200
Mobilization		4,356,000						4,356,000
Delineation Drilling			340,763	340,763	340,762			1,022,288
Demobilization					660,000			660,000
Decommissioning					436,613			436,613
TOTAL CAPITAL COST	**1,000,000**	**16,560,765**	**380,763**	**380,763**	**1,477,375**			**19,799,666**

These capital costs include an estimate of the net cost of carrying out a trial mining operation. Denison is currently proposing that such trial mining could take place in a high-grade pod located on the Caribou trend. Since no resource estimate compatible with NI43-101 has been prepared the details of that proposal are not included in this report. The capital costs for trial mining at Caribou reflects the writers' current assessment of the costs net of revenue. Neither the table nor the cash flow recognize that some portion of the equipment used for trial mining would reduce the capital costs for production mining

Approximately $13 million of the capital costs (comprising instrumentation, miscellaneous equipment, mining rig and mobilization) are not specifically site related and could be applicable to use on other high-grade deposits. No residual value has been applied to this equipment but recommendations are made concerning the identification of similar deposits amenable to the hydraulic borehole mining method.

23.7 OPERATING COSTS

23.7.1 Mining

The mining operating costs and their derivation are detailed in Appendix 2 (including pod 1W). The average costs per hole for each of the pods, before management and engineering support and unproductive abandoned holes, and are summarized in Table 10 exclusive of the costs of unproductive holes and owners direct management and engineering support.

Table 10 : Summary of Mining Operating Costs per Borehole by Pod

	Pod 1E	**Pod 2**	**Pod 5**
	$	**$**	**$**
Overburden Casing	24,447	25,518	25,383
Rat / OB Drill /Survey	59,711	63,001	61,445
Reaming Costs	3,787	5,130	3,015
Management	11,166	12,909	10,165
Production Mining	63,547	73,467	57,849
Hole Abandonment	14,078	17,429	12,455
Weighted Camp Costs	11,749	15,916	9,356
Total Operating (before items below)	**188,485**	**213,370**	**179,668**

Denison estimates that a total of $1.3 million as the cost of unproductive holes, which are drilled beyond the ore limits and are abandoned without production.

Owners direct management and engineering costs are estimated at 3% of the preceding mining costs and total $1.15 million over the three year period of production.

Figure 29 : Mining Operating Costs and Schedule

Mining Costs (including onsite and offsite support costs)

		2006	**2007**	**2008**	**TOTAL**
Pod 1E		10,932,138	2,827,277	-	13,759,415
Pod 2		-	9,174,892	5,334,239	14,509,131
Pod 5		-	-	5,749,391	5,749,391
Abandoned holes	% abandoned				
Pod 1E	5.0%	277,286	71,712	-	348,997
Pod 2	7.5%	-	331,955	192,997	524,952
Pod 5	7.5%	-	-	231,812	231,812
Owners' direct management and engineering		336,283	372,175.07	345,253.18	1,053,711
TOTAL		**11,545,706**	**12,778,011**	**11,853,692**	**36,177,409**

23.7.2 Milling Cost

The derivation of milling costs is contained in Appendix 3.

A summary of milling costs is contained in Table 11.

Table 11 : Summary of Milling Costs

Category	**Cost $ / lb. U_3O_8**
Direct Milling Cost	2.25
Allocated On-site Cost	0.92
Allocated Off-site Cost	0.23
Administration Cost (3% of direct milling cost)	0.07
TOTAL	**3.47**

Production from McClean North will be blended, at a rate of 1 million pounds U_3O_8 per year (560,000 pounds in 2010) from 2006 through 2010 with ore from the Sue pits.

23.8 Manpower Requirements

A full time crew of 28 people, as outlined in Table 12 has been factored into the operating costs.

Table 12 : Summary of Site Personnel

CREWS	**Site Maintenance Management**	**Production Mining Rig**	**Overburden Drilling Rig**
Project Manager	1		
Engineer	1

Separation Plant Operator		2	
Separation Plant Labourer		2	
Equipment Operators		2	
Mechanics	1		
Welders	1		1
Total	5	13	10

23.9 ECONOMIC ANALYSIS

23.9.1 Cash Flow

A summary undiscounted pre-tax cash flow is presented in Table 13. With the assumptions and methods detailed as the base case in this report exploitation of McClean North by hydraulic borehole mining generates a pre-tax cumulative cash flow of $17.6 million.

Table 13 : Summary Undiscounted Pre-Tax Cash Flow (Project Basis)

	($ and pounds x 1,000)							
	Year 1 2004	**Year 2 2005**	**Year 3 2006**	**Year 4 2007**	**Year 5 2008**	**Year 6 2009**	**Year 7 2010**	TOTALS
CAPTIAL COSTS	1,000	16,561	381	381	1,477	-	-	19,800

Milling Indirect Costs	-	-	1,218	1,218	1,218	1,218	685	5,555
TOTAL Operating Costs.	-	-	15,188	16,457	15,495	3,468	1,952	52,560
Uranium production (lbs U3O8)	-	-	980	980	980	980	552	4,472
GROSS SALES U_3O_8 $22/lb.	-	-	21,560	21,560	21,560	21,560	12,138	98,378
DEDUCTIONS								
Sask Production Royalty 4%	-	-	848	848	848	848	477	3,869
Sask Resource Surcharge 3%	-	-	636	636	636	636	358	2,902
Shipping	-	-	363	363	363	363	204	1,655
NET REVENUE (Project)	-	-	**19,714**	**19,714**	**19,714**	**19,714**	**11,099**	89,953
CASH FLOW (Project)	**- 1,000**	**- 16,561**	**4,145**	**2,876**	**2,742**	**16,246**	**9,147**	17,594
CUMULATIVE CASH FLOW	- 1,000	- 17,561	- 13,416	- 10,541	- 7,799	8,447	17,594	

23.9.2 Sensitivity Analysis

23.9.2.1 Changes to Prices, Costs and Production – Base Case

Figure 30 illustrates the sensitivity, assuming four metre cavities, of some of the major parameters and assumptions: capital costs, mining costs, milling costs, U_3O_8 price and U_3O_8 recovery.

Uranium prices and overall recovery of uranium are the most sensitive factors in terms of relative changes in cumulative cash flow.

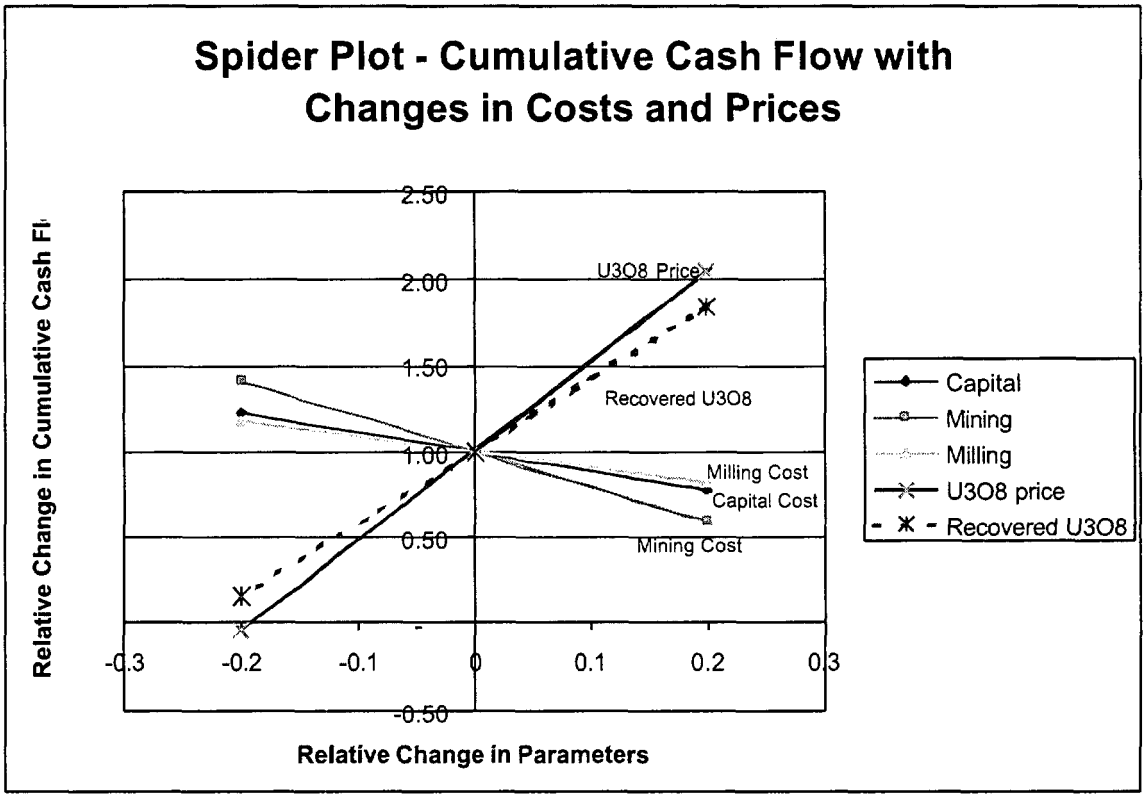

Figure 30 : Spider Plot - Sensitivity to Costs, Prices and U3O8 Recovery.

The Layne Golder prefeasibility study has used estimates of four-metre diameter cavities using a combination of reaming and jetting. Backup to the study provided by Layne and Golder also included an analysis of costs and production for three-metre diameter cavities. Denison has developed a cash flow given the scenario of three-metre diameter cavities which indicates a positive cumulative cash flow of approximately $4 million. In this scenario estimates of tonnage and recoverable uranium are marginally higher and grade lower as indicated in Table 14.

Table 14 : Three-Metre Cavity Scenario - Estimates of Tonnage, Grade and Contained U3O8

	Tonnes x 1,000	**Grade % U_3O_8**	**U_3O_8 lbs. x 1,000**
Pods 1E, 2 and 5	39.4	5.45%	4,735

The analysis of the three-metre cavity scenario indicates that a cavity size of greater than three metres will need to be attained to make hydraulic borehole mining economically attractive but also indicates that the method is fairly robust in terms of cavity size attained.

23.10 Minelife

The Layne Golder study indicates that the mining component of the operation would be completed in two years, assuming a 300 working-day year. The writers have assumed that operations would be curtailed during winter months and that mining operations would take place 200 days per year over a three year period.

Ore from mining would be stockpiled and blended with ore from the Sue deposits, at a rate of one million pounds U_3O_8 per year over the following 4.5 year period.

23.11 Payback

As the previous cash flow indicates payback will occur during the fourth year following initiation of mining.

26 CERTIFICATES OF QUALIFICATION

26.1 William C. Kerr

I William C. Kerr of 1 Port Street East, Mississauga, Ontario certify that:

- I graduated from the University of New Brunswick, Fredericton, New Brunswick in 1975 with a Bachelor of Science degree in geology.
- I am a registered member in good standing of the Association of Professional Geoscientists of Ontario; Registration Number 0120.
- I am a registered member in good standing of the Association of Professional Engineers and Geologists of Saskatchewan, Registration Number 12624.
- I have practised my profession as a geologist since 1975, during which time I have held technical and executive positions with senior and junior mining companies throughout North America.
- I have worked as an independent consultant providing various exploration management services to geological and geophysical exploration companies and the mining industry in Canada and Mexico.
- I am a "qualified person" as defined in National Instrument 43-101.
- My experience has included exploration and development work for gold, base-metals, uranium, diamonds, and industrial minerals.
- I have read national Instrument 43-101 and its companion policy 43-101F and the technical report has been prepared in accordance with their requirements with the exception that I am not independent of Denison.
- In my capacity as Director, Resource Evaluation, Denison Energy, Inc., I have visited numerous times the Midwest Property and the McClean Lake Property since 1997.
- I have authored the following sections of the report titled McClean North Uranium Deposit, Report on Reserves, based on, Pre-Feasibility Study, Development Using, Hydraulic Borehole Mining dated November 29, 2003 Sections 1 to 22 and portions of Section 23. I have not authored all sections of the report, but as the non-independent Qualified Person for Denison Energy Inc, in accordance with National Instrument 43-101 and its Companion Policies, I have reviewed all sections authored by myself and all independent and non-independent authors and am satisfied as to their relevancy and completeness and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authority and any publication by them including in electronic format available to the public.

Dated at Toronto this _____

William C. Kerr

26.2 Andrew C. Rickaby

I, Andrew C. Rickaby, do hereby certify that:

- I reside at 71 First Street, Oakville Ontario, L6J 3R5
- I am a graduate of Queen's University, Kingston, Ontario, in 1958 with a B.Sc in Mining Engineering.

I have worked in the mining industry all my working life as detailed below:

2002 to Present:: Consultant
1999 to 2002: Vice President, Mineral and Environmental Operations, Denison Mines Limited (Now Denison Energy Inc.)
1987 to 1999: Vice President, Mining Operations, Denison Mines Limited
1982 to 1987: Vice President, Elliot Lake Operations, Denison Mines Limited
1976 to 1982: Mine Manager/General Manager, Denison Mines Limited
1974 to 1976: Project Manager, Canadian Mine Services Limited
1967 to 1974: Engineer, Mine Superintendent, Denison Mines Limited
1964 to 1966: Industrial Engineer, Canadian Johns Manville
1958 to 1964: Engineer, Mine Supervisor, International Nickel

- By virtue of my education and experience I am a qualified person for portions of this report dealing with mining, processing, scheduling, and cash flows. I am not a "qualified person" as defined in National Instrument 43-101.
- I am not independent of Denison Energy Inc. in accordance with the requirements of National Instrument 43-101 and its Companion Policies.
- I have authored or co-authored the following sections of the report: Sections 1 to 5 and Section 23.
- I have read the written report titled McClean North Uranium Deposit, Report on Reserves, based on, Pre-Feasibility Study, Development Using, Hydraulic Borehole Mining and dated November 29, 2003 and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I have read national Instrument 43-101 and its companion policy 43-101F and the technical report has been prepared in accordance with their requirement with the exception that neither I nor William Kerr are independent of Denison.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authourity and any publication by them including in electronic format available to the public.

26.3 Gary A. Cohoon

I, Gary A. Cohoon of 744 Victoria Street, Kincardine, Ontario certify that:

- I graduated from Queen's University, Kingston, Ontario in 1973 with a BSc. (Honours) in geology.
- I graduated from York University, North York, Ontario in 1980 with a Masters in Business Administration (MBA)
- I am a registered member in good standing of the Association of Professional Geoscientists of Ontario; Registration Number 0633.
- I have practised my profession as a geologist since 1973, continuously with the exception of time spent obtaining the MBA in 1979 and 1980. I have held technical and executive positions with senior and junior mining companies.
- I have worked as an independent consultant providing exploration, corporate and marketing services to the mining industry in Canada and Mexico since 1998.
- I am a "qualified person" as defined in National Instrument 43-101.
- My experience has included exploration, development and marketing of various commodities including gold, base-metal, uranium and industrial minerals.
- I am independent of Denison Energy Inc. in accordance with the requirements of National Instrument 43-101 and its Companion Policies.
- I have authored or co-authored the following sections of the report: Sections 4, 5, 16, 19, 20, 21, 22, and portions of Section 23. I have been responsible for the overall compilation of the report.
- I have read the written report titled McClean North Uranium Deposit, Report on Reserves, based on Pre-Feasibility Study, Development Using Hydraulic Borehole Mining Method, and dated November 29, 2003 and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I have read National Instrument 43-101 and its companion policy 43-101F1 and the technical report has been prepared in accordance with their requirements with the exception that I have not personally visited the properties. However, a joint author, Wm. Kerr has carried out such visits on a number of occasions.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authority and any publication by them including in electronic format available to the public.

1. Introduction

Denison Energy Incorporated (Denison) has requested a pre-feasibility study to assess the feasibility of mining the McClean North ore pods at its joint venture project at Cogema's McClean Lake property using borehole mining methods. Figure 1 shows the location of the McClean Lake property relative to other uranium mines and projects in Northern Saskatchewan.

Reference: www.denisonenergy.com/en/operations/uranium/mcclean/

Figure 1 Location of McClean Lake Project, Northern Saskatchewan

Layne Christensen Canada Limited of Calgary was approached by Denison to consider and evaluate the mining of the McLean Lake Uranium resource by Borehole Hydraulic Mining methods.

Three to four ore pods present at McClean North, containing roughly 7 million lbs of U_3O_8 were to be assessed in the study. Denison estimated that 5 million lbs of U_3O_8 could be recovered over 4 years and the high-grade ore could be blended with low grade ore from the open-pit mining proposed by Denison for the Sue deposits.

Denison has requested a cost estimate for a hydraulic borehole mining approach and this report summarizes the estimated capital and operating costs and the anticipated ore recovery.

Golder Associates Limited (Golder) was retained by Layne to assist with geotechnical, hydrogeological and water management issues.

2. Resource Description

2.1. Orebody Definition

The McClean North orebody consists of a series of small pods with a SW-NE trend that straddle the unconformity between the Athabasca sandstones and the crystalline basement. The pods are located between McClean and Candy Lakes at a depth of approximately 165 m. Figure 2 shows the general distribution of the mineralized trends at McClean Lake relative to nearby lakes and rivers.

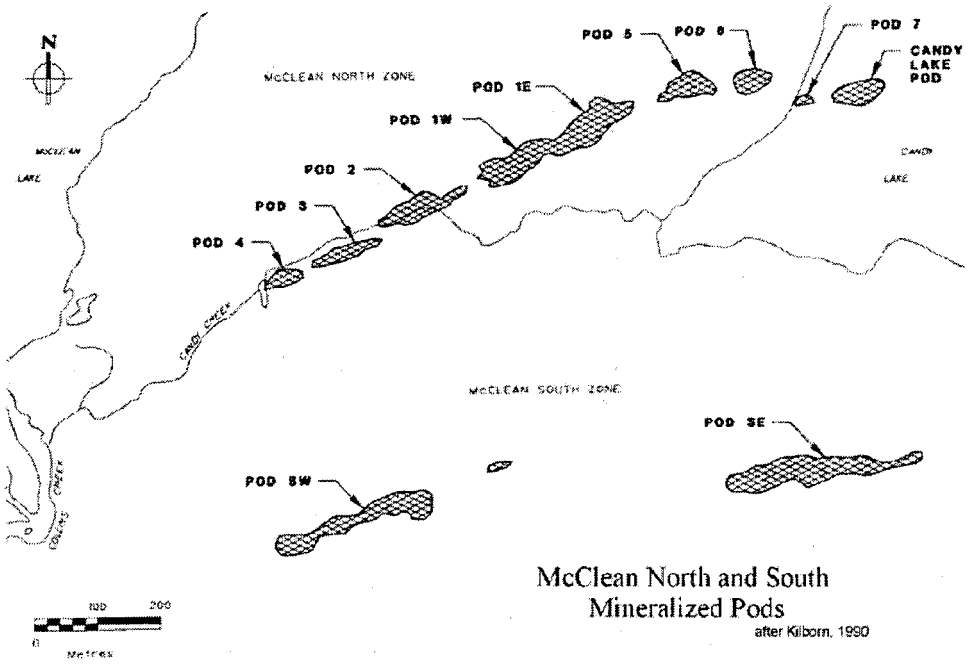

Figure 2 Mineralized pods of the McClean North and South pods (From Denison, 2003)

The mineralization is hosted in altered sandstone and basement rock and is surrounded by an argillic (clay) alteration halo. Typical pod widths are 10 to 20 meters and in cross-section the pods are flat, lenticular to oval shaped bodies with thicknesses commonly from 5 to 10 meters.

Resource definition work carried out by Denison (Kerr et. al, 2003) for the McClean Lake North deposit has identified four of the pods shown in Figure 2 that may be suitable for exploitation using borehole mining methods. The current resource model for the four pods (pods 5, 1E, 1W, and 2) is made up of three-dimensional shapes (in Gemcom) that roughly delimit the portion of the mineralization within a 2% U_3O_8 cutoff grade. The average U_3O_8 grade for each of the four pods was determined using a polygonal ore reserve estimation approach. Table 1 below summarizes the resource estimate for the four pods provided by Denison to the project study team.

Table 1 General resource estimate for McClean North used in Borehole Mining Study

Pod	Pod Vol (m^3)	Pod Area (m^2)	Avg.Ore Thickness (m)	Ore Specific Gravity	Tonnes Ore	U_3O_8 %	U_3O_8 (T)	U_3O_8 (lbs)
2	7540	917	8.2	2.30	17,342	4.9	845	1,861,926
1W	4414	635	7.0	2.27	10,020	3.6	356	784,189
1E	6621	1005	6.6	2.42	16,023	10.4	1,670	3,680,790
5	2274	447	5.1	2.31	5,253	5.9	310	683,264

Denison also provided detailed resource assessment of various diameter cylindrical ore cavities superimposed on the three-dimensional ore pods. Both 3 m and 4 m diameter cylinders were synthetically mined in the three-dimensional ore pods with some cylinders overlapping (in plan) the 2% U_3O_8 cutoff grade line, as shown below in Figure 3. A total of 215 holes are necessary to fully exploit the orebody using 4 m diameter mining cavities.

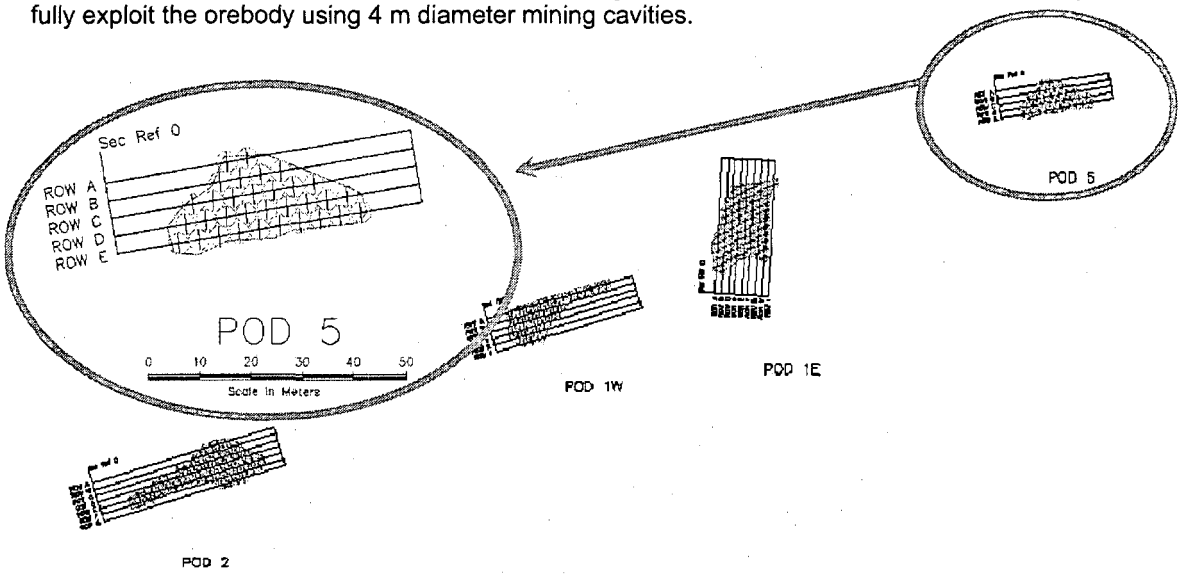

Figure 3 Example of synthetic mining of four ore pods using 4m diameter cylinders

Detailed spreadsheets outlining the thickness of ore in each synthetic cylinder and the amount of each cylinder (in plan) outside the 2% U_3O_8 cutoff grade line were included in the information provided by Denison. The detailed resource estimate used to assess recovery assumes that no grade exists outside the 2% U_3O_8 cutoff grade line. Figure 4 shows the distribution of ore thickness derived from the synthetic 4 m diameter cylinders. Most of the ore will be in the 5 m to 9 m thickness range.

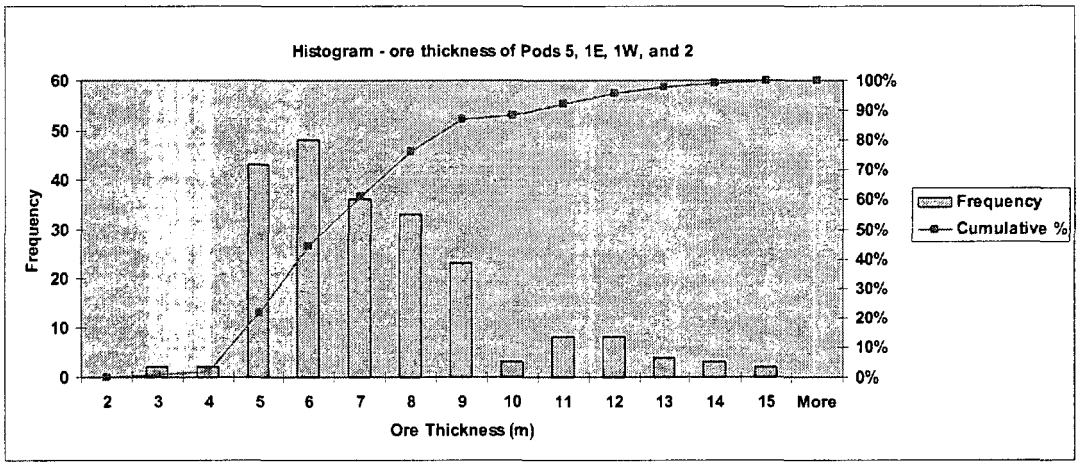

Figure 4 Histogram of Orebody Thickness for McClean North Study

Additional detailed information on the orebodies can be found in the Denison Energy report on McClean and Midwest deposits (Denison, 2003).

2.2. Geotechnical Properties

As of 1999, over 130 sub-vertical exploration boreholes has been drilled in the area near pods 1, 2 and 5. Most of these holes were logged geologically and very limited geotechnical information was collected. Previous geotechnical work included 40 holes drilled specifically for geotechnical and hydrogeological purposes between 1988 and 1990. Several reports by Golder, identified in the References section, describe the geotechnical data that has been collected from the deposit. The data are summarized below. Figure 5 shows the generalized stratigraphic sequence of the McClean Lake North Deposit.

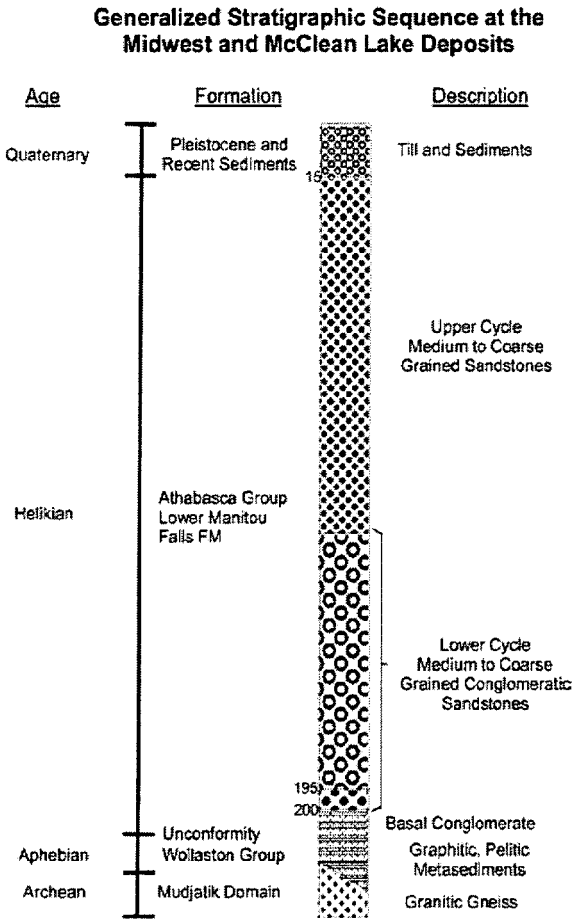

Figure 5 Generalized stratigraphic sequence at McClean North

The surficial deposits consist of glacial till and gaciofluvial and glaciolacustrine (sands, silts, clays) that vary from approximately 3 m to 13 m in thickness, with an average of 6.4 m.

The Lower Manitou Falls Formation of the Athabasca Group overlies the deposit and is composed of medium to coarse grained sandstones and conglomeritic sandstones. The sandstone unit is measured to be between 152 m and 168 m in thickness, and is on average 160.6 m thick.

The ore pods at McClean Lake occur at the unconformity between the sandstones and the underlying metasedimentary gneiss at a depth of approximately 165 m. In cross section they are flat, lenticular to oval shaped bodies, and using a 2% U_3O_8 cutoff grade, they are between 2.2 and 14.3 m thick and are on average 6.7 m thick. The orebodies are typically contained within an envelope of strong to intense argillic (clay) alteration.

The ore itself is expected to be highly variable in terms of strength and composition. In general, the ore is expected to be composed of weak altered sandstone, unconsolidated clays and silts, and occasional strong unaltered sandstone or hydrothermally altered pods.

High grade zones are anticipated to consist of pieces of strong massive pitchblende contained in a weak matrix of clayey, silty or sandy material. The softer portions of the matrix in the ore will exhibit strengths between 2-3 MPa, the harder portions between 25-30 MPa. Overall, the ore is expected to exhibit strength of approximately 10 MPa.

Utilizing Hydraulic Borehole Mining methods (to be fully described later), the ore is anticipated to break down into a well graded material ranging from clay to cobble sizes. The clay content may be significant (up to 20%) with substantial silt and sand as well. The pieces of hard pitchblende contained within the weak matrix will not be broken down by jetting and are expected to fall to the bottom of the jetting cavity where they will be broken up by a drill bit mounted on the bottom of the mining string.

Since the reamer arms and cutting jet are anticipated to be down looking at approximately 20°, the back of the ore cavity is anticipated to be conical and thus relatively stable. However, since the rock immediately above the orebody is anticipated to behave very much like the ore itself some spalling should be expected. Given the heterogeneous nature of the material, the cone in the back of the cavity is expected to break up in a piece meal fashion as jetting is carried out and should not endanger the jetting tool itself.

The anticipated geotechnical conditions that will be encountered during overburden drilling and mining are summarized in a long-section shown in Figure 6 that extends from just west of Pod 1W to east of Pod 1E. This section is expected to be representative of the conditions throughout the McClean North Project area.

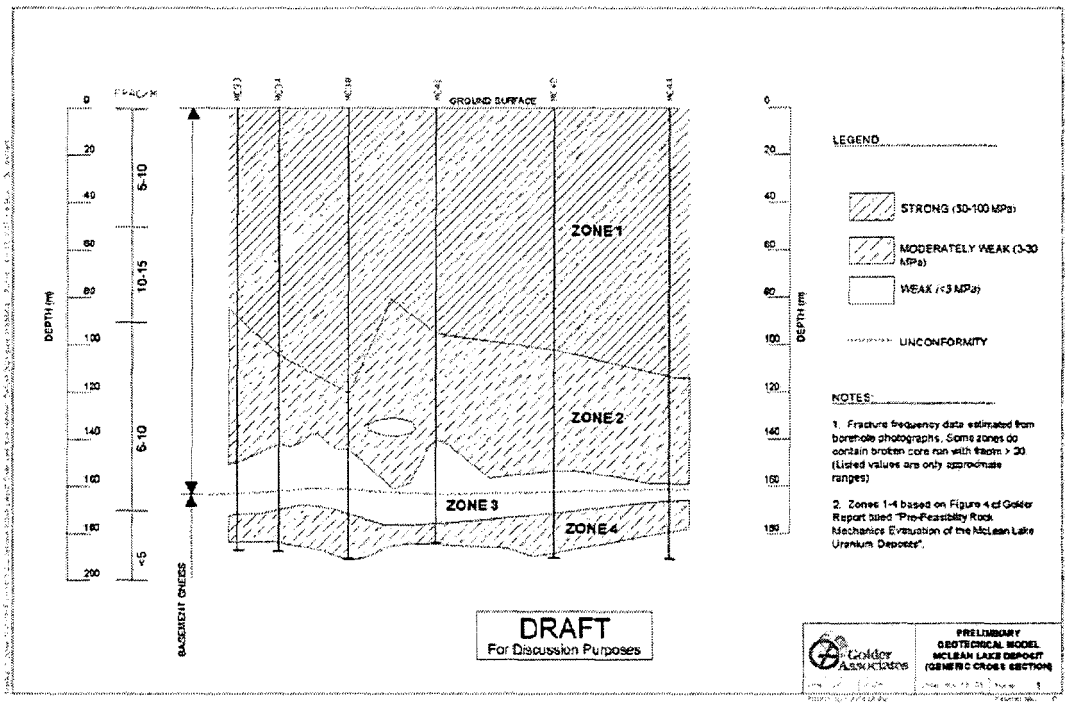

Figure 6 Anticipated strength and fracture intensity in sandstone, ore, and basement rock

2.3. Hydrogeology

The hydrogeology of the McClean North system is well described in the physical environment section of Cogema's technical information document (Cogema, 2003). The hydrostratigraphy of the McClean North deposit consists of unconsolidated glacial and lacustrine sediments overlying Athabasca Group sedimentary rock which is composed of upper sandstones and a basal conglomeritic unit, the orebody pods (each surrounded by an envelope of highly altered rock) and basement rocks. Currently, a shallow groundwater flow system is present in the unconsolidated glaciolacustrine sediments controlled by recharge from precipitation and interaction with the nearby lakes, streams, and muskeg. A deeper groundwater flow system comprised of flow in the sandstone below the unconsolidated sediments is characterized by flow to the west towards McClean Lake and Collins Creek. Flow in the sandstone at depth near the ore pods is primarily horizontal. Fracture enhanced hydraulic conductivity in the sandstone units is observed both on local and regional scales.

The borehole mining is not anticipated to have an additive impact (relative to background) on the migration of radio nuclides away from ore pods for several reasons, including:

- A negative pressure in the mining cavity will be maintained during active mining creating a localized flow towards the mining cavity, and;
- The mining cavities will be backfilled with non shrink concrete immediately after completion.

3. Jet Boring Technology

3.1. Methodology

A number of technical options for the mining system were evaluated at the beginning of this pre-feasibility study. The pumping aspects of ore recovery as well as the cutting options were considered in several technical sessions. The pumping options varied from a slurry-wall type of pump, equipped with a feeder-breaker and installed at the end of the mining tool, to a simple airlift system. The cutting options included various proven mechanical reaming, drilling and water jetting systems, linked to or moving independently of the pumping apparatus, operating in either submerged or dry conditions.

Layne has had significant experience with large diameter slurry airlift systems. With our ten years of large diameter bulk sampling experience in coal, kimberlite and uranium, it was ascertained by Layne that known and existing proven technologies should be applied.

In order to evaluate the above options it was considered that the Jet Boring mining system should have the following characteristics: speed of handling, practicality, reliability, robustness, based on proven technology and be easy to support technically. Given the depth of the ore body and considering that mining will be conducted through boreholes, it appeared essential that the mining equipment be an adaptation of existing drilling and bulk sampling technology.

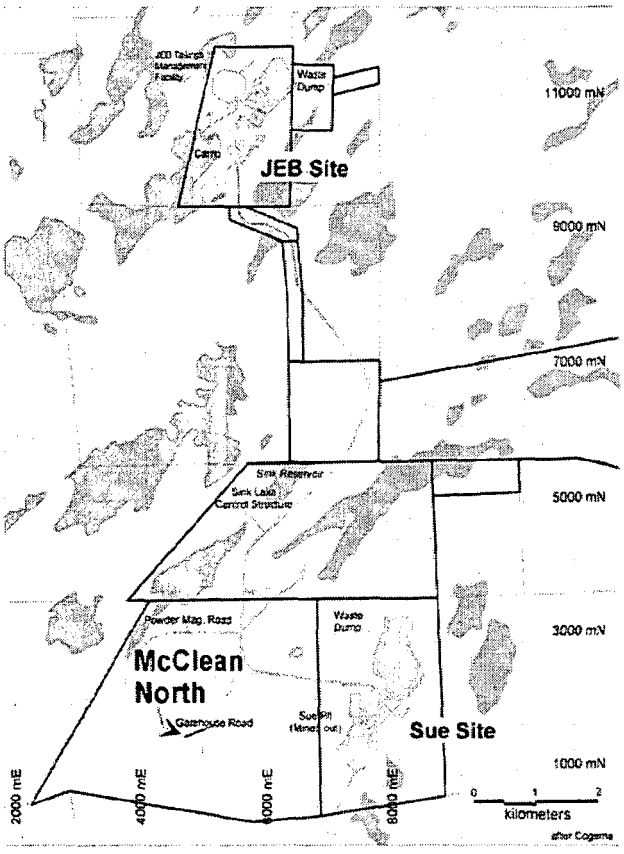
Based upon these considerations, it was decided that the most feasible configuration was to mount a cutting jet (equipped with an air-shroud) on a conventional drilling reamer and to pump the ore slurry with a hydraulic airlift system. This system had the advantage of using a very high pressure, high volume, robust pumping technology that can handle a very heterogeneous slurry (including rocks) while maximizing the stability of the cavities. It also allowed threaded triple wall reverse-circulation drill pipe to be used, facilitating rapid tripping from the hole, and a large diameter drill bit to be used for primary crushing of large rock fragments in the hole. The disadvantage of this system was the reduced effective range of the cutting jet because the mining cavity must be permanently submerged. The limited range of the cutting jet can be partially mitigated by mounting the jet near the end of the arms of an expandable reamer and by shrouding the cutting jet with compressed air.

3.2. Cutting pressures / distances

A study similar to the one summarized in this document was carried out in 2001 (Layne, 2001) for the Midwest deposit for Cogema Resources Inc. The McClean Lake ore is anticipated to behave in a similar manner to the ore at the Midwest deposit, with the exception that it is anticipated to be slightly stronger. Cutting pressures for the Midwest ore were evaluated in cuttability tests that were conducted by Flow Industry in Seattle (Flow 1980). These tests consisted in exposing rock cores of various strengths to water jets of various pressures. The damage on the cores caused by the water jets was measured and the operating cutting pressures were derived from these observations. This report concluded that the operating cutting pressure for the Midwest deposit ore should be 70 MPa (10,000 psi). Further investigation of cutting pressures is required since there appears to be a lack of consistency between the rock strength values used in the Flow report with those found in more recent geotechnical investigations. It is expected that the specific cutting pressure will be reduced following additional studies to 5000 psi.

In submerged conditions, the energy of water jets dissipates extremely rapidly, within centimeters of the nozzle. In order to minimize this energy dissipation, the water jet should be designed to have the maximum flow rate and the minimum pressure for a given pump power. Based on the cuttability tests conducted by Flow and on the range of existing pumps, a cutting pressure of 70 MPa and a flow rate of 1,630 m^3/d (300 USgpm) were selected for this study.

Based on the Schlichtling's formula, the maximum cutting distance of a 70 MPa jet in submerged conditions ranged from 0.15 to 0.30 m for the Midwest ore. Using an air shroud around the water jet mitigates against the rapid dissipation of the jet energy for as long as the air shroud remains effective. At distances beyond the effectiveness of the air-shroud, the energy of the water jet dissipates in water according to the Schlichtling's formula. The effectiveness of the air shroud was studied by Flow for Cogema in 1995 and found to be approximately 0.80 m.



The following assumptions were used in the jetting calculations:

- Jet operating pressure: 35 to 70 MPa (5,000 to 10,000 psi)
- Jet pumping rate: 1,635 m^3/d (300 USgpm)
- Jet nozzle diameter: 9.6 mm
- Jet horsepower: 875 to 1750 hp depending on necessary jet pressure
- Effective air-shroud distance: 0.8 m
- Jet mining rate: 10 T/hour

Based on the above discussion, the maximum cutting distance of a 70 MPa, 1,630 m^3/d water jet equipped with an air shroud was estimated at 0.75 m in submerged conditions for the McClean Lake North Ore.

4. Infrastructure

Figure 7 shows the location of the McClean North deposit relative to the other site infrastructure at the JEB and SUE sites in Northern Saskatchewan.

McClean North Location

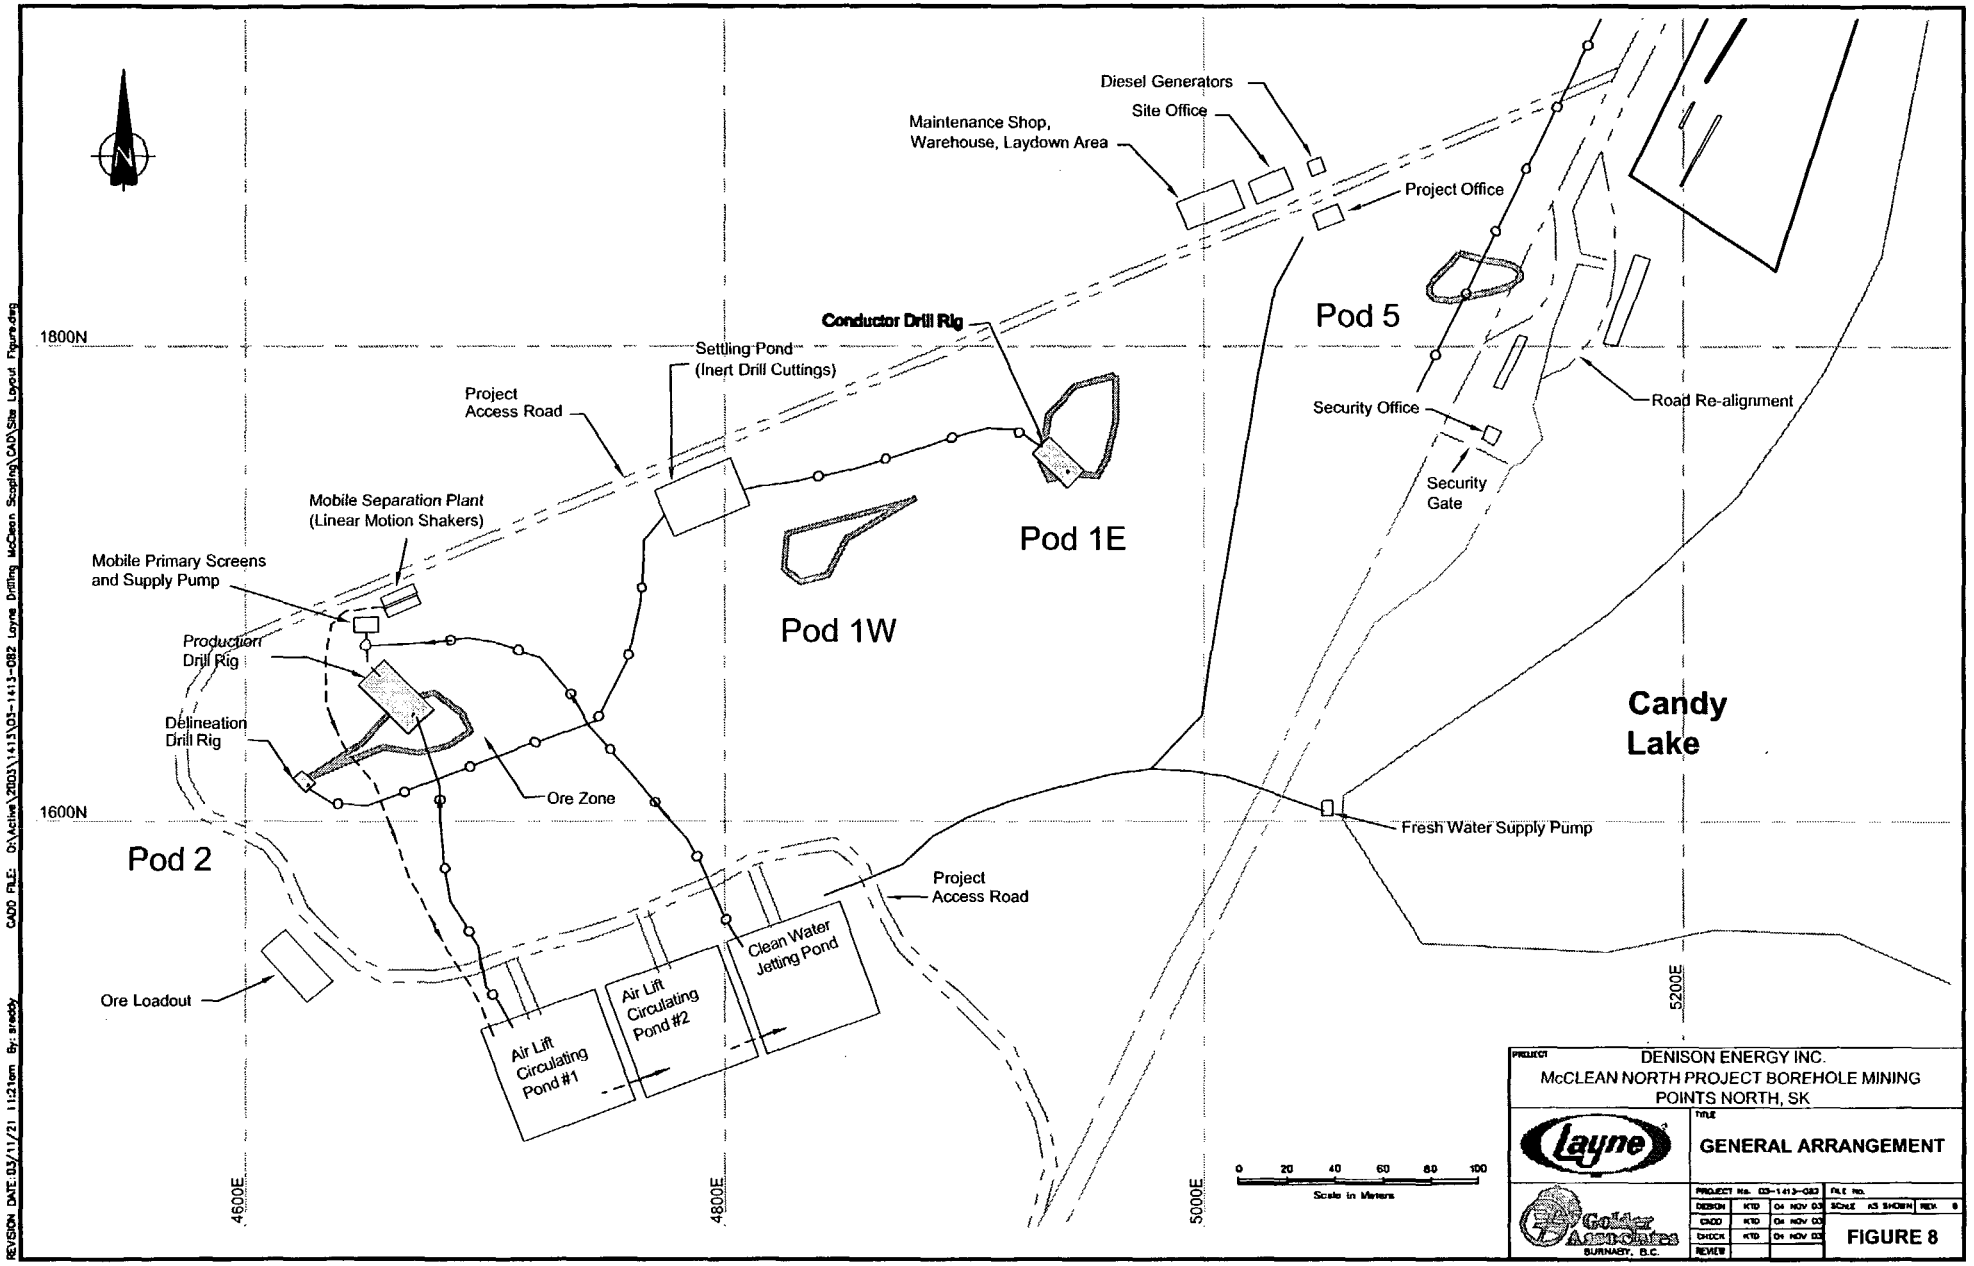


Figure 7 Location of McClean North Deposit (From Denison, 2003)

As shown in Figure 7, the McClean North deposit is approximately 3 kilometers from the Sue site. Process water can be dealt with at the JEB tailings management facility (TMF) and contaminated soil, liner materials and un-useable equipment can be sent to the Sue C pit tailings repository. There are bulk water neutralization facilities both at the Sue and JEB sites that could handle contaminated water. Water from both neutralization facilities is eventually discharged into the Sink reservoir which could be used for water supply. A 25KV power line runs 1 km to the east of the McClean North site and it could be utilized for power needs if necessary but diesel generators are assumed in the cost estimate. Permanent camp facilities exist at the JEB site.

Borehole drilling and mining will be carried out from roads that will be constructed connecting to existing road access at McClean Lake. Glacial deposits of coarse granular soils are understood to be readily available near the site and should be suitable for construction purposes. Borehole collar elevations suggest that relief in the area should not exceed 1-2 meters. The proposed site layout is presented in Figure 8 (second following page).

It will be necessary to provide containment of all process water and drilling fluids such that an accidental spill does not result in a release to the environment. The fluid containment ponds will be fully lined with PVC geomembrane

All exposed pipelines will be insulated and heat traced to be suitable for winter operation. All drill rigs, the separation plant and the ore blending plant will be contained within enclosures to enable winter operation. Layne anticipates the application of Arctic operation technologies and protocols applied to bulk sampling operations in northern Ontario and throughout the Northwest Territories.

5. Mining Concept

5.1. Ore Delineation

Mining using the Jet Boring method requires accurate knowledge of the ore grades for each drill hole location to define the top and bottom depths of the mining cavity. Based on the exploration borehole density maps provided by Denison, the existing exploration boreholes were drilled on a grid spacing varying between 7 m and 15 m. Since the anticipated size of the mining cavities ranges from 3 m to 4 m, an ore delineation program will be required. The delineation program will consist of advancing small diameter rotary holes through the orebody which will be logged using a gamma-count geophysical probe. It is anticipated that the boreholes will be spaced between the production holes. For the purposes of the cost estimate, it is assumed that one delineation hole will be provided per four production holes (e.g. 25% of number of production holes). This will allow sufficient definition of the ore limits, casing requirements, and casing shoe depths.

5.2. Overburden drilling

Overburden drill holes will be put down using two separate drill rigs. An auger rig will be used to drill and set 36" conductor casing into bedrock. A casing drill rig will be used to drill mining access holes through the overburden and set casing where necessary.

The conductor casings will be cemented in place to provide a seal between surface water and groundwater. Conductor casing will be installed to 20 m below the surface overburden (till, sands, gravels).

Overburden access holes will be drilled to 24" diameter using an engineered stabilized bottom hole drilling assembly and large conventional reverse circulation tricone drilling equipment. Layne drilling technologies for accurately controlled large diameter are well developed over the long term from previous and existing controlled drilling programs. Layne has carried out a number of projects with similar equipment to similar depths. The extent of casing requirements for these holes is unknown at this stage and should be determined in the feasibility study. However, based on the rock conditions encountered in the Athabasca Sandstones in recent large diameter drilling programs and based on possible mining optimization, it is anticipated that not all access holes will require casing. For the purposes of this study and for preparation of the cost estimate, it was assumed that, on average, 50% of the access holes will be cased to the top of the ore. A drilling and casing rate of 3 m per hour has been assumed in the cost analysis.

All holes will be surveyed for alignment following completion of drilling. This survey will yield exact position in the orebody and relative position to adjacent holes. Some deviation of boreholes is expected and convergence between adjacent mining cavities and this should be identified prior to jetting so that mining of nearby cavities can be avoided. Due to the large diameter of the drilling equipment and stiffness of the drill string, it is anticipated that borehole deviation will be limited and the impact of this deviation is included in the ore recovery estimate. Hole deviation is not anticipated to exceed 30-50 cm and with accurate hole surveying, directional control on the mining jet will enable accurate cavity mining.

5.3. Mining methodology

A schematic representation of the conceptual mining system is presented on the following page in Figure 9

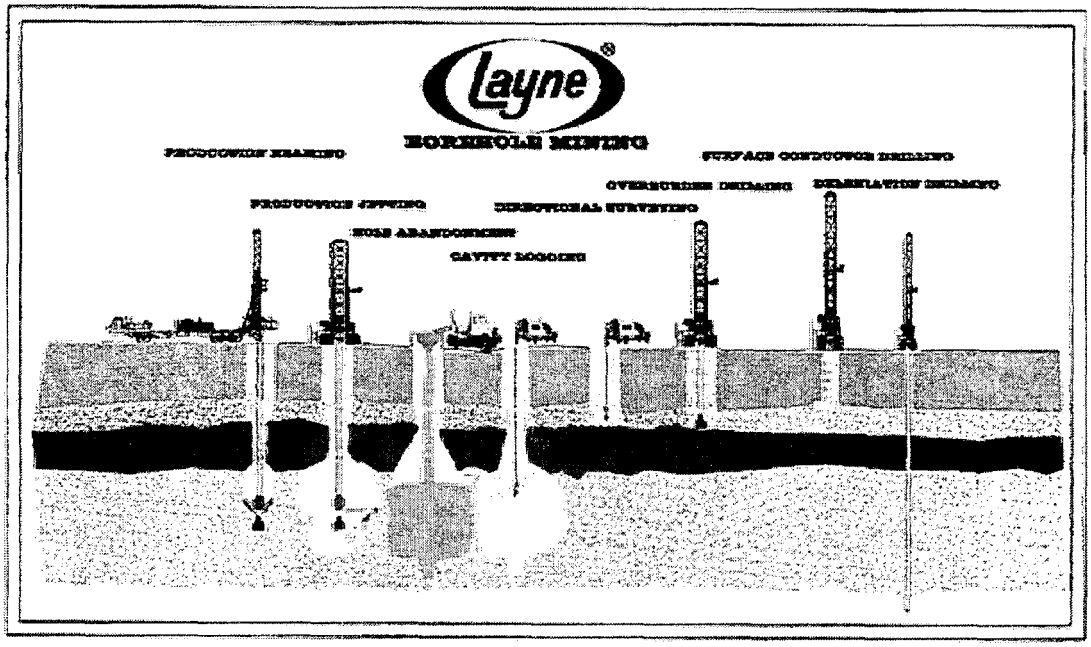

Figure 9 Conceptual Borehole Mining System

Key features of the proposed method are:

- The use of an airlift in triple wall reverse-circulation drill pipe for material removal,
- The use of an under-reamer for initial hole enlargement followed by one or more passes with the air shrouded jetting system engaged (air-shrouded cutting jet),
- All mining to be conducted under submerged conditions.

Carrying out mining under submerged conditions is thought to create fewer potential problems than attempting to mine in dry conditions. In particular, if mining in dry conditions:

- The presence of numerous open exploration boreholes may make it difficult to continually dewater the mining cavity,
- High groundwater inflows will introduce excess water to the slurry handling system and create a positive water balance – such water would have to be treated prior to release to the environment,
- Significant amounts of groundwater extraction may affect the groundwater conditions,

The advantages of a submerged cavity are:

- Submerged conditions enable use of an airlift.
- Cavity stability will be enhanced.

The under-reaming will be carried out at a diameter of 1.5 m (60") in possibly several passes. The under-reamer will have down looking expandable arms (set to gauge determined by the operator) and reaming will be carried out from the top down. A schematic of the under reamer in action is shown in Figure 10.

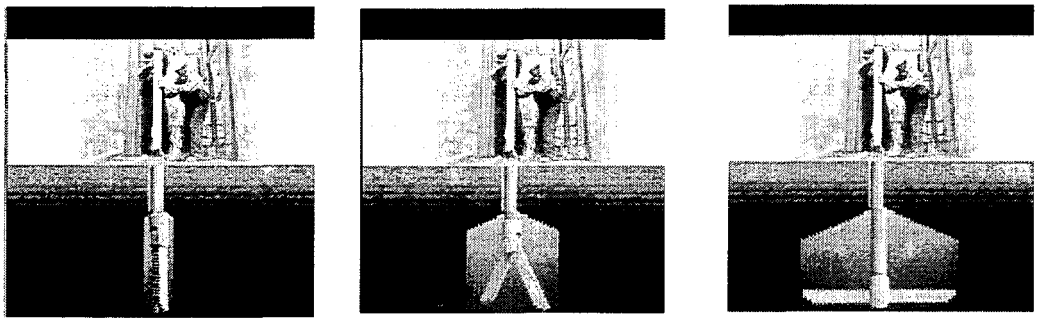

Figure 10 Progressive under reaming and schematic of reamer

Following completion of under-reaming, the under-reaming assembly will be tripped to surface to change over to jetting apparatus. However, future development of the assembly may focus on a single set-up, so that the jetting stage can be carried out without a trip to surface. Based on assumptions presented previously in this report, it is anticipated that this first stage of jetting can be completed to a final diameter of 3 m (0.75m jetted annulus) without significant challenges. For cavity enlargement to 4 m, the jetting equipment would be reset on the arms of the under-reamer to reach out further from the drill rods to further expand the cavity.

Jetting equipment will be mounted on the under-reamer. This will provide a number of advantages:

- Extension of the reamer arms will allow the jets to get closer to the cavity surface and thereby increase the cutting capability,
- The under-reamer will be very robust and will be able to withstand impact to the tool from, for example, rock falling from the cavity walls,
- Further extensions can be adapted to the under-reamer to allow the jet to be extended and allow further enlargement of the cavity.
- Oversize rock created by jetting can be crushed in a sump by the bit and under-reamer.

Mined ore will be removed using an air-lift system. The air-lift will require 800 – 1600 USgpm of water flow to enable operation. It is anticipated that even with high specific gravity ores, 95% of the mined material will be recovered from the cavities.

Boreholes will be backfilled using a low to moderate strength concrete backfill (10 MPa 28 day strength). The backfill concrete should have sufficient strength to resist excavation when cutting in an adjacent borehole. A target strength of 10 MPa is expected to be sufficient. The concrete will be marked with dye, or filling agents so that it can be easily identified in the slurry returns from the borehole. This will enable the driller to redirect the cutting away from such areas. Concrete strengths can be varied in the field as required. Drill rods on the production miner will be used as a concrete slickline to backfill the cavities.

As discussed earlier in this report, groundwater flow in the sandstone near the deposit is generally horizontal. This will minimize the movement of contaminants from the ore body to surface or shallow subsurface waters and will therefore reduce the requirements for backfilling of the boreholes with concrete. However, the costs assumed in this report anticipate filling the entire borehole back to surface.

A step-by-step description of the mining method is included in Appendix I.

5.4. Production mining cycle

Table 2 provides an example mining cycle for a 4 m diameter cavity, based on the weighted average ore thickness for all pods of 6.9 m. It is anticipated that drilling and reaming will be conducted in one stage and jetting will be carried out in a subsequent stage. The under-reaming assembly will be equipped with a drilling bit, so that prior drilling of the cavity area is not necessary. The cycle presented in Table 2, and on which the average cost estimates are based, uses the following anticipated production rates:

- Under-reaming at 2 m/hour.
- Jetting at 10 T/hour.

Table 2 Mining Cycle, Example for average ore thickness (6.9 m)

Service Equipment/Repairs/Misc Downtime (15%)		4.4
Jetting Cycle		34
Actual Mining Time (Reaming and Jetting)		21
Run in concrete slick line backfill cavity		3
Standby Contingency (5%)		3
Total Anticipated O/B Drilling and Mining Cycle		**55 hours**

The mining cycle was also computed for various ore thicknesses and ranges from 41 hours to 85 hours for 3 m and 15 m thick ore respectively. The jetting production rate of 10 T/h was based on the 1980 Flow report (comparison with other Flow mining experiments), on mining experiments conducted by Savanick of the US Bureau of Mines in similar rocks to those of the Midwest ore and on the results of the 1996 Cluff Lake experiment (3 T/h average production when the equipment was available with a maximum production rate of 10 T/h).

The rig and jetting down times (due to equipment repairs, servicing, breakdowns or other interruptions to production) were assumed to be 15%. In practice, down times may be expected to be higher in the initial stages of the project and would drop as equipment and personnel adapt.

The cycle in Table 2 shows that, for the 4 m diameter cavity, the cycle is very sensitive to jetting production rates as actual jet mining comprises 32% of the mining cycle, while reaming comprises only 6%.

5.5. Recoverable Resource

In order to determine the amount of ore recovered, Denison's 4 m cylinders (Figure 4) were used and it was assumed that only the area within the 2% U_3O_8 cutoff grade line produce ore. It was assumed that 85% of the ore within each cylinder could be recovered, which is based on the following assumptions:

- Loss of some ore at the bottom of the cavity (estimated 95% recover of ore from cavity);
- Limited hole deviation;
- Inaccuracy in cavity shape;

Using this approach, a total of 5,048,776 lbs of U_3O_8 is recovered from the four pods which is approximately 72% of the proven resource in the three-dimensional ore pods. Table 3 provides a breakdown of the recovered lbs of U_3O_8 from each individual pod.

Table 3 Hydraulic Borehole Mining Recovery from Each McClean North Pod

Pod	Total lbs U_3O_8 Recovered
1E	2,636,863
1W	485,816
2	1,437,668
4	488,429

6. Materials Handling

6.1. Separation

The liquid-solids separation plant concept enables high recovery of ore from the air-lift slurry and provides clean water for recycling to the rig for jetting. The use of clean water for jetting will reduce jetting tool and pump wear and reduce downtime for replacement of tools. A further requirement of the separation plant will be to dewater the ore to minimize water that must be trucked with the ore. A conceptual flow sheet is presented in Figure 11.

The separation plant is expected to consist of primary and secondary circuits. The air-lift will discharge directly onto a primary classifying screen. The underpull from the primary screen will flow directly onto four in-series linear motion shaker tables that will remove the solids from the slurry. Coarse material will be removed by loader to a nearby ore pad and eventually removed by haul truck to the mill. Underflow from the primary screen and shaker tables will be pumped to the primary circulating drill water containment pond.

6.2. Water Handling

As the air-lift system will require between 1600 and 2000 USgpm to operate it will be problematic to remove enough solids from the circulating drill water to use it for jetting. Because of the large volume of water necessary, all drilling process water must be re-used (circulated) through the system. Therefore, a total of three containment ponds will be necessary. Water skimmed from the primary circulating drill water pond will be pumped to a secondary pond and eventually skimmed to the third clean water jetting pond.

In terms of water balance, since the proposed methodology utilizes a flooded cavity for mining, it is anticipated that there will be no net groundwater inflow and that groundwater heads in the mining cavity should be roughly balanced. Some water will be lost in ore shipments and it is expected that a small amount of make-up water will be required.

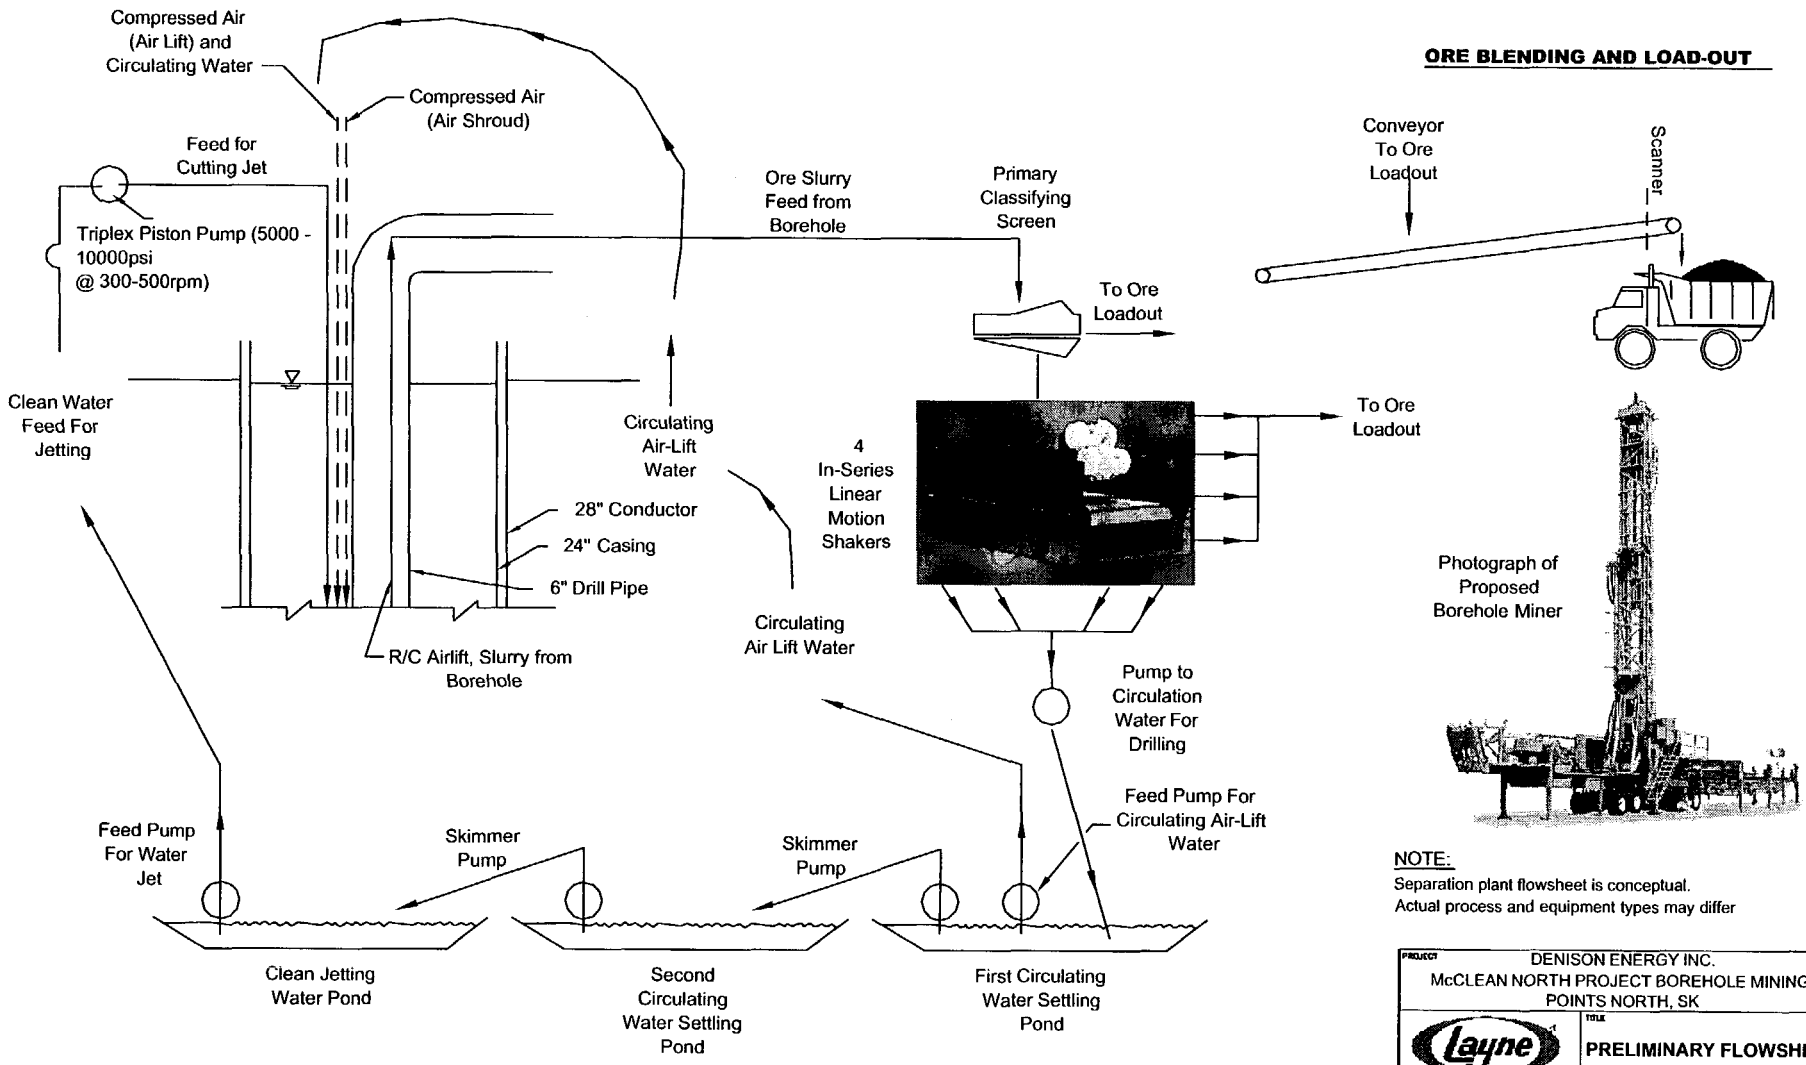
The clean water pond has been sized to hold enough water to jet a cavity in the thickest ore. The primary circulating drill water pond was sized using the following approach:

Drill Water Pond Capacity = Necessary clean water to jet a cavity in thickest ore / number of days to jet a cavity in thickest ore * 7 days to clarify water.

Water will be pumped in moveable, double walled and heat traced pipelines around the site.

Some clean water will be required for use in processing, such as water for washing the screens and gland water for the pumps. This water will be re-used in the process and reduce the needs for make-up water. A fresh water pump from Candy Lake will be used to supply the necessary make up water for the project (Figure 8).

Drilling fluids used by the overburden drilling rigs will be kept separate from the production slurry. Drilling mud from the overburden rigs will be screened at the rig and circulated through a separate small settling pond.



An example alternative to building engineered containment/settling ponds would involve pumping all circulation drilling water to the Sue bulk neutralization facility for treatment after the coarse solids have been removed was carried out. Clean water necessary for mining would also need to be pumped from the Sink reservoir, forming a closed loop for water supply and treatment from the mining. Costs for this option are not included in this report.

6.3. Ore Blending and shipping

Denison will use the high-grade ore recovered from the borehole mining to blend with lower grade ore from open-pit operations. The study assumes that all ore haulage will be carried out by Denison/Cogema and no costs have been included.

6.4. Decommissioning

At the end of the project, contaminated process water will be moved from the storage ponds using tanker trucks and the water will be deposited in the JEB TMF. All sludge will be removed from the ponds and sent to ore processing. Potentially contaminated soil from near the mining areas, contaminated equipment, and PVC liner from the ponds will be sent to the Sue C surround tailings facility. A site decommissioning costs of $30 per m^2 for engineered containment facilities has been used.

NOTE:
Separation plant flowsheet is conceptual.
Actual process and equipment types may differ

7. Cost Estimate

A summary of major cost items and an analysis of costs for 4 m diameter mining cavities are presented in the following tables:

- Table 4 Capital Costs
- Table 5 Labour
- Table 6 Operating Costs
- Table 7 Final Cost Analysis

All costs are presented in Canadian dollars. The capital breakdown is listed in Table 4 and the sub-totals shown in Table 7. Itemized operating costs are listed in Table 6. Table 7 provides operating costs for each functional area and camp costs, as well as $/tonne mined, and $/lb U_3O_8 recovered. The detailed resource estimate was used to provide a cylinder by cylinder estimate of the operating costs (presented later in Figure 13). These estimates are discussed in greater detail in the following paragraphs.

7.1. Capital and Non Operating Costs

Capital costs cover the purchase of drilling and ancillary equipment needed for the project and for the construction of infrastructure items shown in Table 4. Within the Capital Costs, an allowance has been made for decommissioning of the site, following completion of mining. This order of magnitude estimate allows for removal of liners and trucking of the potentially contaminated material overlying the liners to the Sue site for disposal. Delineation drilling costs and mobilization and demobilization costs has been identified separately from the Capital Costs item. Mobilization covers the costs of tooling and sourcing Layne equipment and transporting to site. All costs are based on 2003 prices and have not been discounted. Costs are based on telephone quotations for major equipment and standard industry data.

Table 4 Summary of Capital and Non Operating Cost Items

CAPITAL COST AREAS

Site Set-Up

Miscellaneous Buildings, Upgrade Roads, Containment Ponds

Power Generation

Power in 200 KVA light plants and additional 200 KVA generator sets

Instrumentation

Slurry Flow/pressure

Miscellaneous Equipment

Concrete trucks, Loader/Fork Lift, Batch Plant with winterized building, Light Power Plants
Additional Power Plant, Computerized welder, Clean Water Pump, Acoustic Mining Cavity Survey

Mining Rig

Production Rig (includes pump, mud handling, comp, drill pipe, inst, tools), Winterized Production Enclosures

De-Watering System

Pipelines, Primary Classifier, Shaker Tables and Pumps, Pump to Dirty Water Containment,
Circulation Pump for Mining with barge, Skimmer pump with barge (and winterized shack)
Jetting Pump with Barge (and winterized shack), Mobile building for de-watering plant (and winterized shack)
Valves, etc, Load Out Facilities, Ore Storage (winterized) and Building

Site Tear Down/Decommission

Decommission Ponds/Roads, etc

DELINEATION DRILLING PRELIMINARIES

Delineation Drilling

MOBILIZATION

Drilling Equipment

Overburden Rig (includes pump, mud handling, compressors, drill pipe)
Production Rig - Rig Up, Function Trials, Mobilization, Winterization, Office Safety Site Administration
Shop Facility and Inventory (Winterized), Service Trucks, Forklifts, etc.

DEMOBILIZATION

Transport, Cleanup

Sub-totals for the itemized capital are summarized as follows:

Capital Costs	**$ 9,601,379**
Delineation Drilling	**$ 1,022,288**
Mobilization	**$ 4,356,000**
Demobilization	**$ 660,000**

7.2. Operating Costs

The necessary site labour for management, overburden drilling and production mining are outlined in Table 5.

Table 5 Summary of Site Personnel

CREWS	Site Maintenance Management	Production Mining Rig	Overburden Drilling Rig
Project Manager	1		
Engineer	1		
Project Administrator	1		
Drilling Superintendent		1	1
Driller		2	2
Roughnecks		4	6
Sep Plant Operator		2	
Sep Plant Labourer		2	
Equipment Operators		2	
Mechanics	1		
Welders	1		1
Sub-Totals	5	13	10

The total full-time crew is 28. Note that rathole drilling and conductor casing welding staff are not included in the full time staff but are included on a unit cost basis. The labour crews are factored into the operating costs in Table 6.

Mining operating costs are presented in Table 6 under the following headings:

- *Casing costs*: Cost of 36" conductor and 24" hole casing plus transport to site.
- *Rathole and overburden drilling plus consumables*: including conductor and overburden drilling, setting casing and all necessary consumables.
- *Production drilling consumables*: including all necessary consumables needed during ore reaming.
- *Management/Support:* including personnel costs for all management and maintenance personnel identified in Table 5.
- *Production Mining*: Includes labor costs, fuel costs (mobile equipment, 1000 hp jetting pump), parts and repairs (for rig, separation plant, mobile equipment, etc), truck leasing (10 pickup trucks), consumables (separation plant and rig consumables) and miscellaneous costs. Fuel is expected to be available at $0.62/litre FOB from Cogema.
- *Hole Abandonment.* Costs for backfilling of cavities with concrete. Assumed cost $100/m^3 placed.

Unit borehole mining operating costs are outlined in Table 6 below along with values for the average mining cavity.

Table 6 Summary of Mining Operating Costs

Operating Costs	Cost	Unit	Value for Average Cavity
Casing Cost	$ 299.51	per cased meter	84 m
Rathole and Overburden Drilling, Consumables, Hole Survey	$ 350.01	Per meter drilled	175 m
Total Production Drilling Consumables	$ 477.40	per reamed meter	8.6 m
Total Management / Support	$ 210.38	per hour	55 hours
Total Production Mining Costs	$ 1,197.28	per hour	55 hours
Hole Abandonment	$ 100.00	per cubic meter	145 m^3

The mining operating cost for an average mining cavity is $182,113. The proportional mining operating costs for the categories listed above are shown in Figure 12.

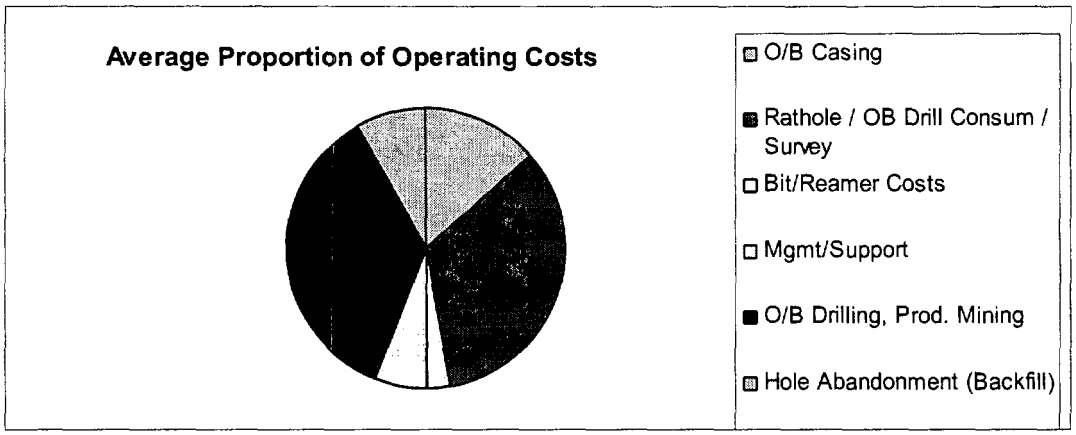

Figure 12 Operating cost breakdown for average ore thickness (6.9 m) for 4 m diameter cavity

Camp costs are also included in the operating costs listed in Table 7, which includes $41,000 per man per 300 working day year for camp costs, plus 20% off site-costs. The average on and off site camp costs are $12,694 per mining cavity and the total over the entire project is $ 2,729,183.

Figure 13 shows the estimated total operating cost for all cylinders (separated out by pod) for 4 m diameter mining cavities.

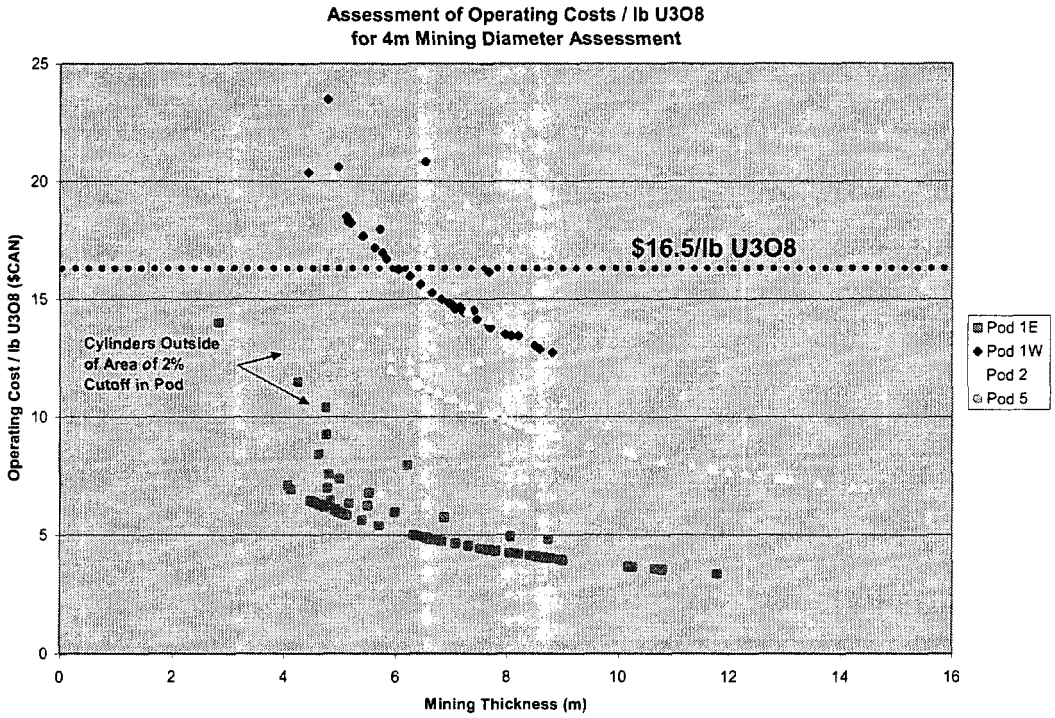

Figure 13 Assessment of operating costs for each cylinder in 4 m diameter mining cavity analysis

7.3. Other Assumptions

Labor is assumed to be non-union.

7.4. Cost Summary and Discussion

Table 7 below lists the final cost analysis for 4 m diameter cavity mining.

Table 7 Life of Project Capital and Operating Cost Analysis

Total Operating Costs (Mining and Camp)	$ 41,977,544
Total $ Op Costs / Total m^3	$ 2,813
Total $ Op Costs / Total T	$ 1,205
$ Op Costs / lb U3O8 Recovered	$ 8.3
Project Duration (Using 300 Working Day Year)	2 Years
Production Rate (lb U3O8 / Year)	2.5E+06
Total Capital Cost (Undiscounted)	$ 15,639,667

The approach that has been taken to the technical feasibility of jet bore mining has been to identify existing equipment that can accomplish the required tasks without significant adaptation, then to consider ways in which the equipment might be developed to provide enhanced performance in terms of production rates and ultimate cavity size. Thus the base case of a 4 m final diameter cavity is one that could be accomplished with minimal equipment enhancement and engineering design.

In addition to equipment development, there are other factors that may allow additional production to be achieved from individual jet bore cavities. Clay within the orebody is likely to soften and squeeze when left in contact with water. Some of the more friable parts of the rock mass may also slough from the walls as a result of elevated shear stress, although this is expected to be a minor factor unless the cavity can be partially depressurized. The combination of these effects may allow enhanced productivity by allowing holes to sit for a period of time, followed by a further cycle of jetting.

Cavity instability poses the greatest potential risks to the financial viability of the mining method, either because down-hole equipment is damaged or lost or because raveling of the roof results in ore dilution and increased backfill requirements. Raveling of the roof may also cause interconnections to other pilot holes and loss of production from adjacent cavities. While drilling equipment can be designed to control some of these risks under most circumstances, the risks can probably not be eliminated. One of the functions of a pilot test will be to investigate and quantify such risks.

8. Feasibility Study – Proof-of-concept

A number of assumptions have been made in this pre-feasibility study. Among these assumptions, the most significant ones should be carefully evaluated to prove the technical concepts during a bankable feasibility study. The four principal aspects of the mining system to be further evaluated are:

- Cuttability: the cuttability tests conducted by Flow in 1980 could not be accurately correlated to the geotechnical model. It is recommended that two boreholes be cored (large diameter core 6" +/-) through the ore body, core samples representative of the various degrees of alteration and strength be selected, and cuttability tests undertaken. This proposed testing will determine the optimum cutting pressures and the anticipated production rates.
- Air shroud: basic design and bench tests should be conducted to optimize the air shroud around the cutting jet. The testing would include measuring pressures at different standoff distances in submerged conditions in order to select the most efficient air shroud design. This testing will determine the optimum pressure and flow rate of the compressed air, as well as the effective distance of the air shroud.
- Expandable reamer: a more detailed review of existing oilfield and mining technology for the expandable reamer should be completed. Following this review, the necessary basic design will be undertaken to optimize the reamer in terms of maximum expanded size and the airline, waterline and cutting jet mounting arrangement. Finally, reamer prototypes may be built to undertake mechanical bench and field testing and verify the design.
- Pilot test: a pilot test should confirm the equipment designs and production rates that can be used in a feasibility study of mining the McClean North deposit using a Jet Boring method. The pilot test will confirm the mining parameters (production rates, mining distance) estimated in the conceptual study and test the mechanical aspects of the mining equipment. The pilot test should include mining two or three cavities and allow some experimentation with different casing configurations and mining cycles.

The capital costs estimated to carry out a full-scale mining test at McClean Lake, for example on the Caribou deposit, are estimated to be $3.5 million and are described in a separate document.

Appendix I

Borehole Mining Procedures

Layne procedures for Bulk production will start with the following procedures:

- **Delineation drilling to define the ore body.**

  1. Move in delineations rig over pre-drilled conductor hole.
  2. Core or R.C. through the ore body to define the Lithology top and ore grade.
  3. Pull out of the hole and move to next site.

- **Surface Conductor drilling.**

  1. Move in Conductor Rig over pre-staked site
  2. Drill oversized hole through overburden about 5 meters
  3. Run surface conductor casing
  4. Cement casing to the surface to allow for a tight seal from the lake
  5. Pull out of the hole and move to the next site

- **Overburden drilling**

  1. Move in and set up over pre-cased conductor hole
  2. Pick up drill pipe and large diameter drill bit and start drilling overburden, conventional circulation. Switch to Airlift R.C. at 20 m.
  3. Take surveys to maintain straight hole with digital ESS survey tool. (Surveys should be taken every 50 ft.)
  4. Record any problematic hole conditions for casing off at completion
  5. Pick up solids while drilling and deliver them to the separation and dilution plant for processing with ore removal
  6. Finish drilling overburden to the top of the slim clay zone above the Targeted ore body
  7. Condition the hole and pull out to run casing through the problematic areas
  8. Cement the bottom joints of the casing and pull out of the hole to move to the next hole

- **Directional Surveying.**

  1. Setup wire line unit and directional Gyro over pre-drilled overburden hole
  2. Survey hole and record surveys every 10 meters
  3. Maintain records on diskettes and hard copies, making plots and records for geologist or drilling Engineers.
  4. Pull out of the hole and move to next hole.

- **Production Reaming**

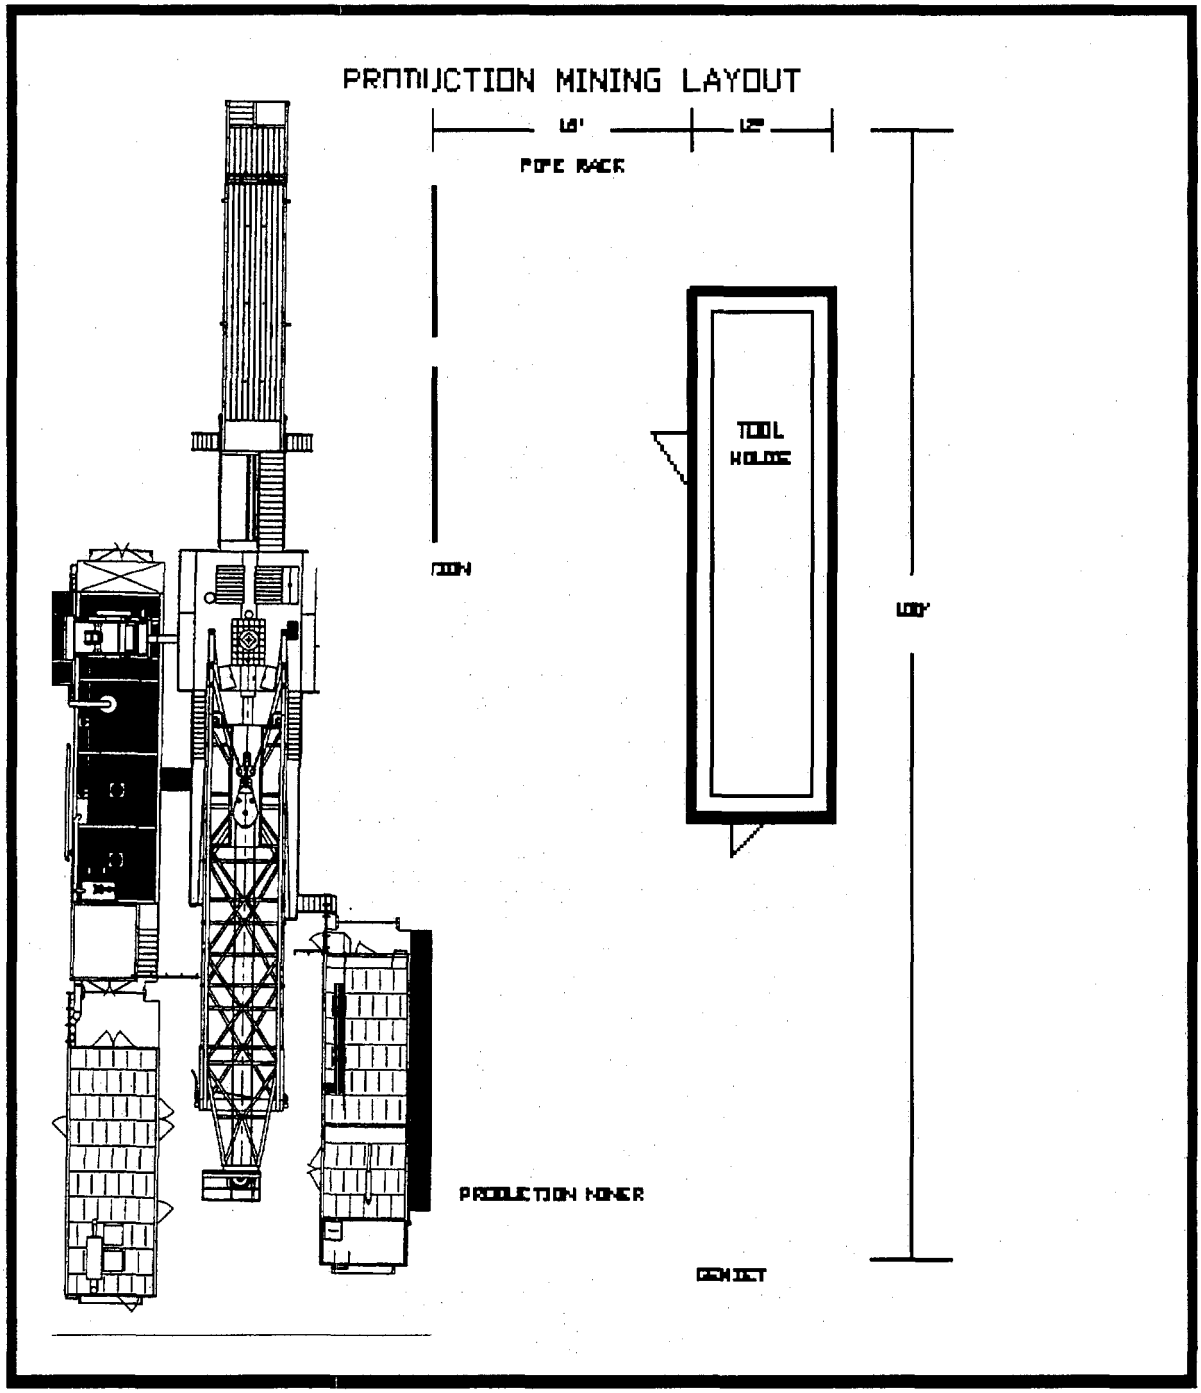
  1. Move production Miner over pre-drilled production hole
  2. Pick up Under reamer and run into the hole to the top of the slim clay zone above the targeted ore body
  3. Rotate slowly and apply less that 5000 lbs weight on bit opening the under reamer arms and ream up the clay to keep it from sloughing in on top of under reaming process.
  4. Drill and ream to bottom about 3 meters per hr.
  5. Drop ball to release arms and pull out of the hole to lay down Under reamer assembly

- **Production Jetting assembly**

1. Pick up the high pressure jetting assembly with short arm
2. Trip into the hole to the top of the targeted ore body
3. Start reverse lift system
4. Apply jet air system slowly to extend arm extension
5. Rotate and jet wash about 3 to 5 Meters per hour to bottom
6. Trip jet assembly out of the hole

Note: At this point the Cavity Meter log should be run on the first few holes to determine the size of hole being produced. If needed the long arm extension can be picked up and run into the hole to extend the bore repeating the first steps.

- **Cavity Monitoring**



1. Set up wire line unit over open hole of production drilled hole
2. Log open hole with cavity (sonic) tool recording cavity size
3. Maintain logs on diskette and hard copy, plotting log for geologist or drilling engineer.
4. Pull out of hole and move to next site

- **Hole Abandonment**

1. Set up hopper over production drilled hole after Cavity meter run OK's volume of production
2. Dump cement mix of 10Mpa. Mix from batch plant, with concrete mixer truck, directly into the borehole
3. Calculate cement to fill hole to 10 meters into the overburden hole
4. Pick up and move to the next hole.

The layout of the proposed borehole mining train is presented in Figure I-1 (below).

Figure I-1.

29 APPENDIX 3 – McCLEAN METALLURGY MEMORANDUM

MEMORANDUM

Subject: McClean Deposit

To: Mr. A. C. Rickaby cc: Mr. J. Spiteri

From: Mr. H. C. Counsell Date: June 26, 2003

I have reviewed the Wholly Joint Venture Feasibility Study, Volume 1, Project Description of October 1990 by Kilborn (Saskatchewan).

Included in the study is a description of the laboratory metallurgical test work carried out at Ortech, Total Jovac and Lakefield on samples from JEB, Sue A and B, McClean and Sue C. The McClean test work was done by Ortech.

The drill core samples received and the composite samples used for test work were described in the report.

The most important facts established by the test work concerning McClean ore were:

- Assays of the samples show the arsenic and nickel content of McClean ore were low. This will generally lead to faster leaching, lower oxidizing agent and acid consumption and lower tailings treatment costs.
- The leaching extraction for all samples including McClean was between 98 and 99.
- The McClean uranium leached quickly and 6-hour retention time was selected.
- The ore did not require fine grinding.
- The ore did not require high temperature leaching and 55°C was selected.
- Acid and oxidizing agent consumption was moderate.
- The Bond Work Index was about the same as other deposits in the area.
- Settling tests for C.C.D. did not indicate any problems with the McClean ore.
- The dynamics and recoveries for the organic extraction were good.

Taking all the above information into account, I would expect the McClean ores could be processed in the JEB mill in the same way as the JEB and Sue C ores currently being milled and with 98% recovery.

Metallurgically, the McClean ore will respond to treatment very similarly to the JEB and Sue C ore currently being treated, however, the actual milling cost will depend on the overall milling schedule at the time the McClean ore is processed. If the ore is milled concurrently with Cigar Lake ore, then the estimated cost shown in the H.C.C. estimate for Sue A and B and Sue E ore should be used, as shown below:

Direct milling cost	\$2.88/lb U_3O_8
Total milling cost, with all allocated costs	\$4.69/lb U_3O_8

Laboratory tests with Midwest and Cigar Lake ore indicate that leaching the two ores together could lead to some precipitation of Cigar Lake uranium. As Midwest ore requires much longer leaching time and contains much more arsenic than McClean ore, there could be similar reaction if they were leached in the same circuit. Therefore, it would be preferable if the two ores were not leached together.

/lk

MEMORANDUM

Subject: Milling Cost for McClean Ores

To: Mr. A. C. Rickaby cc: Messrs. W. C. Kerr, J. G. Spiteri, G. A. Cohoon

From: Mr. H. C. Counsell Date: July 21, 2003

In a fax dated June 23, 2003, I stated that the McClean deposit would be similar to the JEB and Sue C ores currently being milled. An estimate of the milling cost was given as:

Direct Milling Cost	\$2.88/lb. of U_3O_8
Total Milling Cost, with all allocated costs	\$4.69/lb. of U_3O_8

This estimate was based on producing about 2,000,000 lbs. of U_3O_8 per year while concurrently milling Cigar Lake ore. However, if the milling rate was increased to over 4,000,000 pounds per year, then the unit milling costs would be reduced.

If the mill production was 4.3 million pounds of U_3O_8 per year, then the estimated milling cost would be reduced to:

Direct Milling Cost	\$2.25/lb. of U_3O_8
Allocated On-site Costs	\$0.92/lb. of U_3O_8
Allocated Off-site Costs	\$0.23/lb. of U_3O_8
Allocated Administration Costs	\$0.07/lb. of U_3O_8
Total Mill Costs	\$3.47/lb. of U_3O_8

This cost estimate was based on the Midwest estimate for 2010 in my original report with the following changes:

- The production was reduced from 4.5 to 4.3 million pounds.
- The current (2002 actual) ferric sulphate consumptions were used instead of the much higher rates used for Midwest.
- The annual cost for tailings neutralization was reduced from \$5,286,000 to \$1,373,000.
- The Cigar Lake ore would be milled at the same time of the rates scheduled for 2010.

3 SUMMARY

Denison Energy Inc. ("Denison") holds a 22.5% interest in the McClean Lake Joint Venture and a 19.96% interest in the Midwest Joint Venture. Cogema Resources Inc. ("Cogema") is the operator of both Joint Ventures. The Joint Ventures have title to mining claims and leases in northeastern Saskatchewan, approximately 750 kilometres north of Saskatoon, which are host to unconformity-type uranium deposits which are currently being exploited by the Joint Ventures. The McClean Joint Venture owns the JEB Mill which is a uranium processing facility, commissioned in 1999, which is licensed to produce eight million pounds of U_3O_8 per year.

Denison has requested that Joe Spiteri and Gary Cohoon work with William Kerr, Andrew Rickaby and H.C. (Tim) Counsell to review previous work and technical reports on the Midwest and McClean Lake properties in Saskatchewan.

The McClean Lake and Midwest uranium deposits lie near the eastern margin of the Athabasca basin in the Churchill structural Province of the Canadian Shield. The deposits are classical unconformity-type uranium deposits which occur at or proximal to the unconformity between sedimentary rocks of the Athabasca Formation and the underlying Precambrian gneissic basement. The deposits are intimately associated with fault structures and graphitic units within the basement.

Mineralization was discovered at McClean Lake (the McClean North deposit) in 1979. Subsequent exploration led to the discovery of the McClean South deposit in 1980 and the JEB deposit in 1982. From 1985 to 1990, Minatco Limited, a predecessor in title to Cogema, explored the property. Further exploration resulted in the discovery of the Sue A, B, C and E deposits between 1988 and 1991. The JEB and Sue C deposits have since been mined-out and stockpiled. Ore from the stockpiles is currently being processed in the JEB Mill. This property is also host to the Sue A, Sue B, Sue E and McClean North uranium deposits as well as other deposits and exploration prospects (which are not examined in this report). The property held by the Midwest Joint Venture hosts the Midwest uranium deposit, which was discovered in 1978 and drilled off over the next two years.

An agreement is in place for the JEB mill to process ore and produce up to 9.2 million pounds of U_3O_8, under a toll milling arrangement, from the Cigar Lake deposit, owned by the Cigar Lake Joint Venture. A production capacity increase to 12 million pounds U_3O_8 per year will be financed by the Cigar Lake Joint Venture. Implementation of this agreement is dependent on Cigar Lake receiving regulatory approval and a production decision by the Cigar Lake Joint Venture. All mining and processing schedules and the costs used in the current report assume that the JEB Mill expansion will take place in 2005 and that processing of Cigar Lake ore will begin in 2006.

The majority of the ore from the Sue C and JEB stockpiles are scheduled for processing between 2003 and 2006. The Sue A and B deposits are tentatively scheduled to be developed by open pit mining methods in 2005 and 2007 respectively. Ore from these deposits will be blended with the

remaining Sue C stockpile. The metallurgy of the Sue A and B deposits is similar to that from Sue C and can be processed in the JEB mill with no modifications.

Sue E is tentatively scheduled for development in 2006 and 2007. Ore will be blended with stockpiles from Sue A, B and C and processed in the period 2007 to 2009. A portion of the Sue E deposit extends onto an adjacent property held by Cameco Corporation. An agreement permitting development of the deposit is currently being negotiated.

Dewatering, overburden removal and waste rock stripping for the Midwest open pit deposit is tentatively scheduled to commence in 2007, with ore mining to take place in the latter half of 2009. Ore from Midwest would be processed starting in 2010. Processing of ore from Sue E and Midwest will require modifications to the JEB mill, budgeted at between $12 and $15 million.

Denison has reported reserves for a number of these deposits which are based on previous studies carried out by Denison, Cogema and other operators. Due to advances in mining technologies, possibly outdated or time-expired sections of those previous studies, and the possible company reorganization, Denison requested that a technical report be prepared which would address reserves and resources on the Properties.

A feasibility study, contemplating underground mining methods was prepared for Midwest in 1990. Cogema has recently completed a prefeasibility study for development by open pit but has not yet made a recommendation to the Joint Venture partners concerning reserves or resources. The writers have examined the prefeasibility study and have prepared reserve estimates assuming open pit extraction.

Cogema has completed scoping studies and prefeasibility level estimates and prepared reserve estimates for Sue A, B and E assuming development by open pit. The writers have examined the results of the prefeasibility studies and original drilling to form the basis for the estimates contained herein.

Previously reported reserves at McClean North assumed development using underground mining methods. This report assumes development using Blindshaft Boring technology. McClean North has not been scheduled for production. The metallurgy of McClean North indicates that it can be accommodated in the JEB Mill with no modifications required.

The writers have prepared estimates of the reserves and resources for the deposits, on a 100% basis, as presented in Table 1 and Table 2 as of December 31, 2002.

Table 1 : Summary of Reserves (100% basis)

Deposit	PROVEN			PROBABLE			TOTAL PROVEN AND PROBABLE			STRIPPING RATIO
	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 millions	
Stockpiles	531	1.84	21,600				531	1.84	21,600	n.a.
Sue A	14.3	1.23	386	43	1.19	1,126	57	1.20	1,512	34.9
Sue B	14.5	0.55	176	92.4	0.53	1,069	107	0.53	1,245	15.5
Sue E	8.6	1.49	281	320	0.78	5,519	329	0.80	5,800	29.7
Midwest	92	7.02	14,240	290.8	3.0	19,286	383	3.97	33,525	178
Totals	660	2.52	36,683	746.2	1.64	27,000	1,407	2.05	63,682	

Table 2 : Summary of Resources (100% basis)

Deposit	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000
		Indicated	
McClean North undiluted	30.9	7.31	4,950
		Inferred	
Sue E diluted	23.6	0.71	367

Assumptions used to develop these estimates include:

- A uranium price of $22 Canadian per pound of U_3O_8 .
- Processing of Cigar Lake ore beginning in 2006 which will permit economies of scale for milling and other costs.
- Costs and schedules developed in prefeasibility-level studies prepared by Cogema and Denison and summarized in this report.
- Integrity of the survey database for hole locations and down-hole deviations.
- Geotechnical and hydrological conditions at each of the deposits are as has been reported by Golder Associates and Cogema.
- That an agreement is reached with the adjacent claim owner to allow development of Sue E.
- Other assumptions as documented in the body of this report.

The estimates are based on a total 360 diamond drill holes and 6,514 assays for U_3O_8 within the interpreted shapes of economic ore with estimated reserves. To verify the accuracy of the database the writers have compared the assays from 38 of the drill holes to original assay certificates. No major errors were found.

The optimized pits, and thus the estimate of reserves are quite robust in terms of variations in assumptions concerning mining costs. For example, a 50% increase in mining costs at Midwest results in an optimized Whittle® pit shell which contains only 3% less U_3O_8 .

The reserve estimates are much less robust in terms of assumed U_3O_8 prices. In the case of Midwest, and based on preliminary pit optimization analysis, the writers are of the opinion that a U_3O_8 price assumption of less than, approximately $19.50 would result in a significant reduction in U_3O_8 content of the economic reserves. Price increases would have a limited effect on reserves at Midwest since the majority of the in-place resource (exclusive of the Southern Tail) is being extracted with the pit contemplated in this report.

Absolute changes in milling costs (per pound of U_3O_8) will have the same effect as a change in U_3O_8 price. Milling costs tend to be about 25% of the selling price on a fully allocated basis.

The greatest impact on undiscounted cash flow projections is the Canadian dollar price received for U_3O_8.

4 INTRODUCTION AND TERMS OF REFERENCE

4.1 Introduction

Denison Energy Inc. ("Denison") holds interests in two Joint Ventures which hold rights in mineral claims and leases and a uranium processing plant in northern Saskatchewan: Denison has a 22.5% interest in The McClean Joint Venture ("McClean Joint Venture") and a 19.96% interest in the Midwest Joint Venture ("Midwest Joint Venture"), (collectively "Joint Ventures"). Cogema Resources Inc. ("Cogema") is the operator of both joint ventures with 70.0% and 54.84% respectively in the McClean Joint Venture and the Midwest Joint Venture. Cogema is a wholly owned subsidiary of Cogema S.A., incorporated in France ("Cogema Group") which in turn is a wholly owned subsidiary of Areva S.A also incorporated in France. ("Areva Group").

The McClean Joint Venture owns a uranium processing facility ("JEB Mill ") which has a nominal design capacity for the production of 6 million pounds per year of U_3O_8. The JEB Mill began operation in 1999 and has been processing ore mined from the JEB and Sue C pits since start-up. In 2001, the JEB Mill received a four-year operating licence that will allow it to increase its annual production limit from 6 to 8 million pounds U_3O_8. The increase gives the mill more flexibility in its operation and better reflects the plant's actual capacity. A mill expansion is planned, subject to regulatory approval, to further increase annual capacity to 12 million pounds of U_3O_8 by 2006.

An agreement has been signed with the Cigar Lake Joint Venture to mill ore from the Cigar Lake deposit. Implementation of the agreement depends on the Cigar Lake Joint Venture making a positive production decision and receiving the required permits. Processing of ore, which will be received in the form of a slurry from Cigar Lake is scheduled to begin in 2006. Approximately half of the leachate, once the uranium is in solution, will be forwarded to Rabbit Lake for further processing and the balance will be processed in the JEB Mill. Processing of Cigar Lake ore will occupy between 4 and 9.2 million pounds of the JEB mill capacity.

The McClean Joint Venture holds mineral claims and leases ("The McClean Lake Property") which are host to four uranium deposits; the Sue A, B, E and McClean North deposits for which resource and reserve estimates are presented in this report. The claims were also host to the JEB and Sue C deposits which have been mined out and which are currently being processed from stockpiles. Reserve reports for the stockpiles are also presented here.

The Midwest Joint Venture holds mineral claims and leases ("The Midwest Property") which is host to the Midwest deposit for which a reserve estimate is presented in this report.

Collectively the McClean Lake Property and Midwest Property are referred to as "The Properties".

4.2 Terms of Reference and Purpose

Denison holds varying interests in uranium mines, development projects, and exploration properties in northern Saskatchewan. Feasibility level studies were carried out on the Midwest deposit and deposits within the McClean Lake Property in 1990. Since that time, the JEB Mill has been constructed and has a three year operating history, and several more deposits have been discovered in this area.

Because of advances in mining technologies, the possible reorganization of Denison, (Denison Energy Inc., 2003) the discovery of deposits subsequent to the release of the early 1990's feasibility studies, and possibly outdated or time expired sections of the previous studies, Denison determined that it would be prudent to re-examine the fundamental parameters behind these studies and to prepare a technical report which would be compliant with NI 43-101.

Denison Energy Inc. has requested that Joe Spiteri and Gary Cohoon work with William Kerr, Andrew Rickaby and H.C. Counsell to review previous work and technical reports on the Midwest and McClean Lake Properties in Saskatchewan. William Kerr (P.Geo, Ontario), an employee of Denison acted as a qualified person and provided opinions concerning the geology of the deposits. Mr. Kerr as an employee of Denison is not independent. H.C. Counsell (P.Eng., Ontario) acted as a qualified person for, and provided opinions concerning metallurgy and processing costs. Mr. Counsell is not independent. Joe Spiteri (P.Geo, Ontario) acted as an independent qualified person and provided opinions and estimates concerning the reserves and mining costs. Gary Cohoon (P.Geo, Ontario) acted as an independent qualified person and assisted in the compilation of information and preparation of the report. Andrew Rickaby, retired Vice President of Operations of Denison (BSc. Applied Sciences, in Mining Engineering) assisted in the acquisition and interpretation of relevant data concerning mining and processing. Mr. Rickaby is not independent.

4.3 Sources of Information

Geological and other information for the preparation of this report was provided to Joe Spiteri and Gary Cohoon by Denison from the following sources:

- Internal documents including reports and correspondence concerning the projects.
- Databases concerning drilling results and resource estimates on compact discs or by email from Cogema's parent company offices in France primarily from C. Demange Manager Mining Reserves, Department Business Unit Mines, Cogema Group, and A. Grove, Ingénieur Géologue and Geostatisticien, Cogema Group.
- Databases and drawing files on compact disc or by email from Cogema's offices in Saskatoon and the McClean Lake site.
- Databases and previous block models on the Midwest deposit from John Reedman (who prepared the 1990 block model for Midwest) by email.
- Telephone conversations with Larry Richardson (former mine geologist and employee of Denison who was involved in earlier estimates for the deposits), Steve Wilson (Mine Geologist with Cogema at the McClean Lake mine site), Mike Eaid (Chief Mine Engineer with Cogema at the McClean Lake mine site), Guy Breton (Project Geologist with Cogema).
- Copies of original the drill logs and assay certificates were obtained from Cogema's offices in Saskatoon and the mine site.
- Copies of some assay certificates for drilling during 2001 were received directly from the Saskatchewan Research Council laboratory.

Information concerning process, metallurgy and milling was provided to H.C. Counsell from the following sources:

- Internal Denison documents including reports and correspondence concerning the projects.
- Reports prepared by or for Cogema concerning the project.
- A visit to the Saskatoon offices of Cogema from May 12 to 14th and interviews with Dr. John Rowson (Director, McClean Lake Regulatory Affairs, Cogema).

- Telephone interview with Henry Schnell (Manager, Process Development, Cogema).

Additional information concerning marketing, economics and history were provided from Denison internal files and communications with Don Campbell, Vice President Marketing and Special Projects and Craig Bamford, Vice President Finance and Chief Financial Officer.

4.4 Field Involvement of Qualified Persons

Denison holds a minority interest in all of the Properties and since 1993 has not been the operator of any of the programmes carried out on the Properties. Denison participates in the management of the Joint Ventures through the Joint Venture Management Committee. On site, daily management of all projects, programmes and operations is carried out by Cogema.

William Kerr has made numerous visits to the Properties between 1997 and present in his capacity as Director, Resource Evaluation for Denison. His involvement on site has included participation in bi-annual Joint Venture Management Committee Meetings, regular and periodic reports on programmes and visits to the Properties in the course of drilling programmes.

The majority of the drilling on the Properties was carried out between 1978 and 1992 and none of the writers was involved in those programmes. William Kerr provided input to the drilling programme carried out on Sue E during the winter of 2001 through site visits during the drilling and discussions with on-site management.

Joe Spiteri, Gary Cohoon and H.C. Counsell have not visited the site.

5 DISCLAIMER

Joe Spiteri's and Gary Cohoon's views and opinions on the Midwest and McClean Lake deposits and operations are based on information provided by Denison and H.C. Counsell. H.C. Counsell's views and opinions are also based on information provided by Denison.

During the course of the present examination a number of checks have been carried out on the validity and reasonableness of data and information, as indicated in the body of this report. However, the writers have relied on the integrity and completeness of the information as provided.

The writers have relied in particular on the following information:

1) Information on mining claims was provided by Denison. The independent writers have not independently verified this information.
2) The writers have not independently drilled or carried out check sampling on the property and the writers have relied on information provided with respect to drilling.
3) Survey information, for drill hole co-ordinates, down hole drill surveys or for topography have not been audited or verified.

All reference to dollars are Canadian dollars unless otherwise noted.

6 PROPERTY DESCRIPTION AND LOCATION

The deposits and projects are located on properties held by two joint ventures: the McClean Joint Venture and the Midwest Joint Venture.

The latitude and longitude for Midwest is approximately 58° 15' north and 104° 02' west on NTS sheet 74I 8. The latitude and longitude for the McClean deposits is 58° 15' north and 103° 53' west on NTS sheet 64L5.

6.1 McClean Joint Venture

The McClean Joint Venture holds 100% interest in the JEB Mill and deposits on the McClean Lake Property.

The McClean Lake Property is located about 26 kilometres by road west of the Rabbit Lake mine and approximately 750 kilometres by air north of Saskatoon. (Figure 1 and Figure 2). Denison holds a 22.5% participating interest in the McClean Joint Venture. The remainder is distributed between Cogema (70%) and OURD (Canada) Co., Ltd. ("OURD"),(7.5%).

The McClean Lake Property is host to the Sue A, B, C and E, the McClean North and the JEB deposits as well as other prospects. Two of these deposits, JEB and Sue C, have been mined and the ore, which was stockpiled on surface, is currently being processed. The mined-out JEB pit has been converted into the JEB Tailings Management Facility designed to also receive tailings from Midwest and Cigar Lake ores in addition to the tailings from McClean Lake. Special low-grade uranium-bearing waste ("special waste[1]") from the Sue C deposit has been deposited in the mined-

[1] Special waste is material which is below cut-off (usually about 0.085 %U, 0.1% $U_3O_{8,}$) but which does contain uranium mineralization grading greater than 0.025% U and which requires special disposal.

out Sue C pit. Agreement has been reached for Cigar Lake special-waste to be deposited in that pit as well.

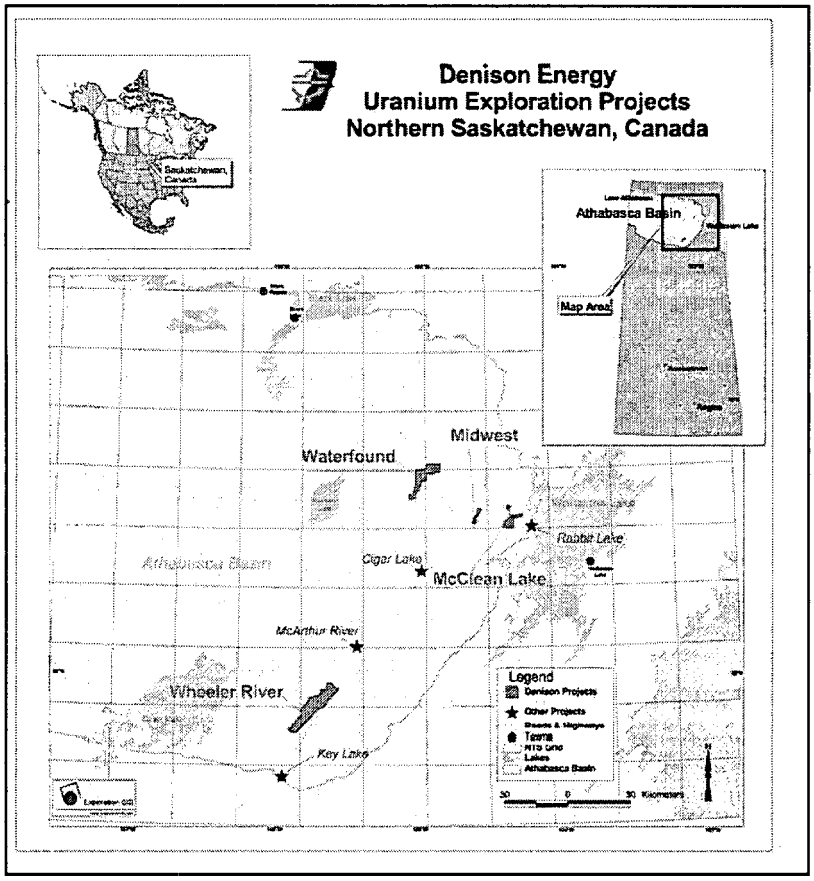

Figure 1 : Location Map, Denison Uranium Projects, Northern Saskatchewan

The JEB Mill consists of a modern mill licensed to produce 8.0 million pounds of uranium concentrate per year, a sulphuric acid plant, warehouses, shops, offices and living accommodations for site personnel, together with all related infrastructure. The JEB Mill is currently operating at a rate of approximately 6 million pounds per year of U_3O_8 to fulfil existing contracts and to optimize stockpile throughput.

All of the surface facilities and the mine sites are located on lands owned by the province of Saskatchewan. The right to use and occupy the lands was granted in a surface lease agreement with the province of Saskatchewan. The original surface lease agreement of 1991 was replaced by a new agreement in 2002. This new surface lease is valid for a period of 33 years. Obligations under the surface lease agreement primarily relate to annual reporting regarding the status of the environment, the land development and progress made on northern employment and business development. The McClean Lake surface lease covers an area of approximately 4,660 hectares.

The McClean Lake Property consists of two mineral leases covering an area of 980 hectares and nine mineral claims covering an area of 3,148 hectares. The right to mine the McClean Lake

deposits was acquired under these mineral leases, as renewed from time to time. The mineral leases are for terms of 10 years with the right to renew for successive 10-year periods provided that the leaseholders are not in default pursuant to the terms of the lease. The terms of the two mineral leases expire in April 2006. The projections in this report assume that all leases will be extended, allowing mining and processing of the reserves and resources quantified by the writers. A mineral claim grants the holder the right to explore for minerals within the claim lands and the right to apply for a mineral lease.

Details concerning the claims are located in Appendix 1: Mineral Lease and Claim Information.

6.2 Midwest Joint Venture

The Midwest Joint Venture holds rights to mineral leases and claims which host the Midwest deposit. Denison holds a 19.96% participating interest in the Midwest Joint Venture through its wholly owned subsidiary Tenwest Uranium Limited ("Tenwest"). The remainder is distributed between Cogema (54.84%), OURD (4.5%) and Redstone Resources Inc. (20.7%).

The Midwest deposit is located under Mink Arm of South McMahon Lake about 20 kilometres by existing roads from the JEB mill. The site is approximately 750 kilometres, by air, north of Saskatoon. (Figure 1 and Figure 2)

Since the completion of the test-mining programme in 1988 and 1989, when the test mine was allowed to flood, the site has been under an environmental monitoring and site security surveillance programme. At present, there is an inactive water treatment plant, two water storage ponds and a core storage area on the site and a dam in the Mink Arm of South McMahon Lake.

All of the facilities used in the test-mining programme and all of the existing surface facilities are located on lands owned by the province of Saskatchewan. The right to use and occupy the lands was granted, in a surface lease agreement, with the province of Saskatchewan. The original surface lease agreement of 1988 was replaced by a new agreement in 2002. This new surface lease is valid for a period of 33 years. Obligations under the surface lease agreement primarily relate to annual reporting regarding the status of the environment, the land development and progress made on northern employment and business development. The Midwest surface lease covers an area of approximately 646 hectares.

The Midwest Property consists of three contiguous mineral leases covering an area of 1,426 hectares. The right to mine the Midwest deposit was acquired under these mineral leases, as renewed from time to time. The mineral leases are for terms of 10 years with the right to renew for successive subsequent 10-year periods provided that the leaseholders are not in default pursuant to the terms of the lease. The term of two of the mineral leases expires in December 2008 and the third expires in December 2003. The writers have assumed that these leases will be renewed allowing for the complete extraction of all of the reserves quantified in this report.

Details concerning the claims are located in Appendix 1: Mineral Lease and Claim Information.

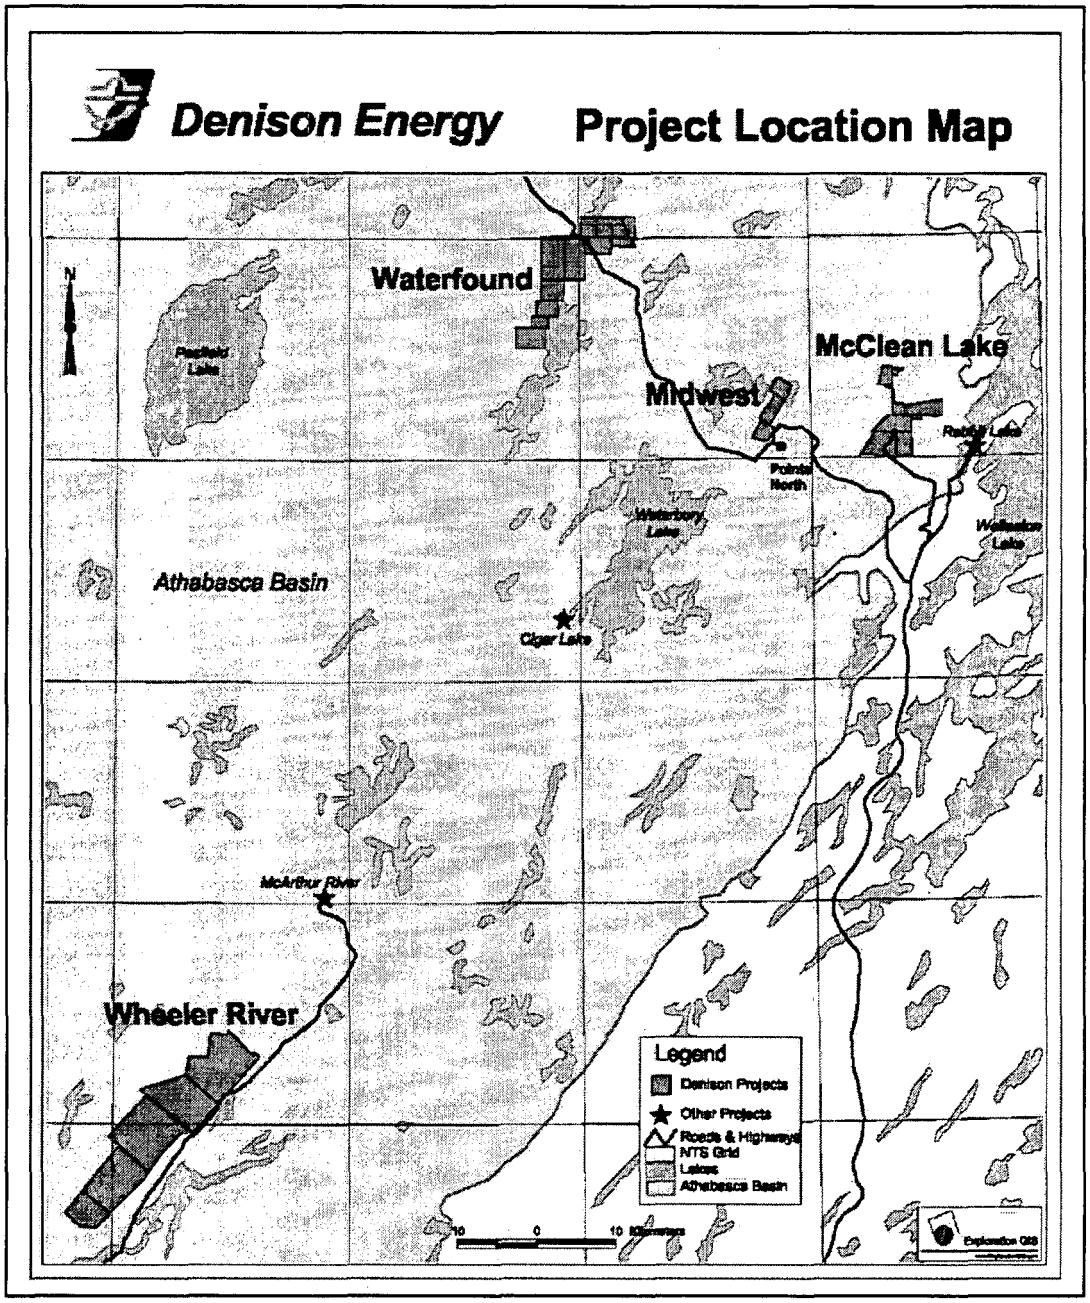

Figure 2 : Denison Uranium Projects In The Athabasca Basin

7 ACCESSIBILITY, CLIMATE, LOCAL RESOURCES, INFRASTRUCTURE AND PHYSIOGRAPHY

7.1 Accessibility

Access to the McClean Lake and Midwest sites is by both road and air. Goods are transported to the sites by truck over an all-weather road connecting with the provincial highway system. Air transportation is provided through the Points North airstrip about 25 kilometres from McClean Lake and 4 kilometres from Midwest. (Figure 3).

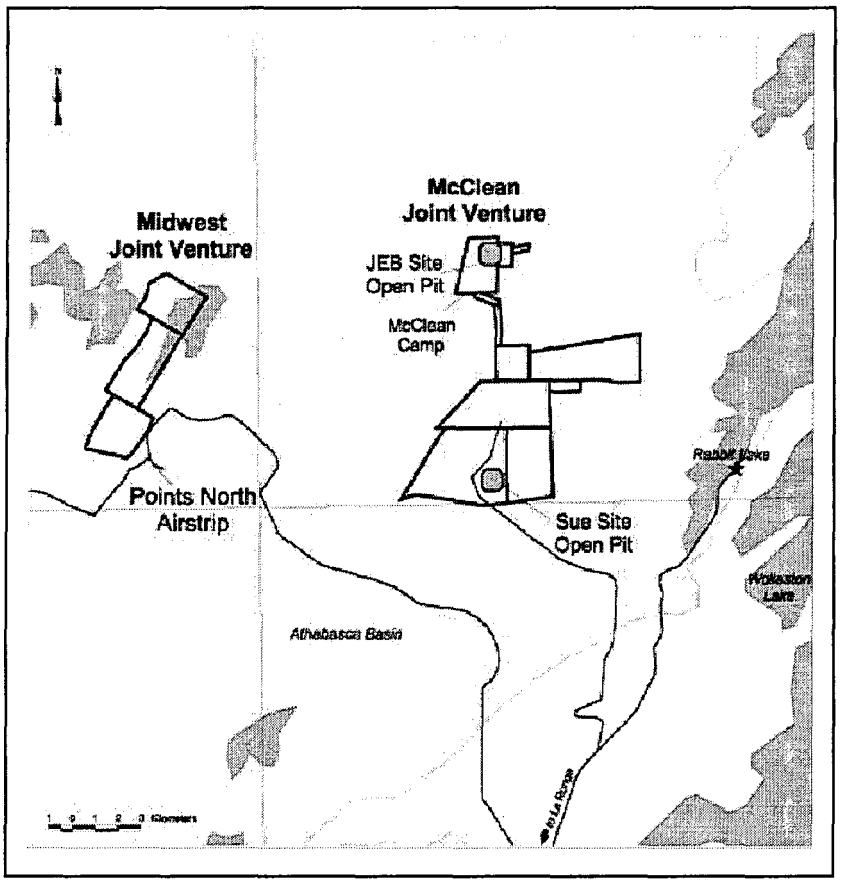

Figure 3 : Midwest and McClean Lake Properties

7.2 Climate

Site activities are carried out all year despite the cold weather during the winter months. The climatic data, temperature and precipitation, have been summarized from data provided by Environment Canada (2003) for Collins Bay Saskatchewan, located approximately 15 kilometres to the southwest. The mean monthly temperatures are below 0°C for seven months of the year. The annual, mean monthly temperature ranges between -24°C and 15°C, with extremes as low as –45°C, indicating the severity of the winter. The precipitation is relatively heavy for the region (550

millimetres annually with more than half that total falling as rain). The wettest period is from June to September, which accounts for 55% of the total annual precipitation. The mean annual temperature is –4° C and the area lies within a zone of discontinuous permafrost.

7.3 Local Resources

Water for industrial activities is obtained from Pat Lake southwest of the JEB Mill, on the McClean Lake Property.

Electric power for the JEB Mill and the Sue Site is obtained from the provincial grid through a switch station at Points North, with stand-by power available as required.

The nearest permanent community is Wollaston Post, about 50 kilometres from McClean Lake and 70 kilometres from Midwest on the east side of Wollaston Lake. Workers commute to and from McClean Lake, first by aircraft landing at Points North then by bus to the site. While at McClean, workers reside in a permanent camp. Personnel are recruited from the northern communities and major population centres, such as Saskatoon, and normally work one week on and one week off.

Points North, which is both an airstrip and also a supply depot, is located several kilometres southeast of Midwest and about a 30 minute vehicle drive from McClean. (Figure 3).

7.4 Infrastructure

The main facilities and operations currently at the McClean Lake Facility are an open pit mining area (Sue Site) and the JEB Mill located near the previously mined-out JEB pit, which has been converted to the tailings management facility (JEB Site). Various supporting facilities for activities such as water treatment, site infrastructure such as roads, electricity distribution and the camp facilities are also located on the McClean Property. The Sue C pit is currently completed, and future mining of the Sue A and B pits has been approved. A 12-kilometre haul road connects the Sue and JEB Sites. The camp facilities are located near the JEB Site. The office and shops for the mill are housed in the mill complex. (Figure 4).

The JEB Mill uses sulphuric acid and hydrogen peroxide leaching and a solvent extraction recovery process to extract and recover the uranium product from the ore. A series of unit processes, or circuits, are directly associated with uranium production. Discharge of treated water is through the JEB Water Treatment Plant, located at the JEB Site. Tailings are discharged through a pipe-in-pipe containment system to the edge of the JEB Tailings Management Facility, where they are deposited in water in the mined-out JEB pit.

All tailings from the JEB Mill are deposited in the JEB Tailings Management Facility ("JTMF") in the mined out JEB pit. The facility has been designed to also receive tailings from the processing of the high-grade Midwest and Cigar Lake ores.

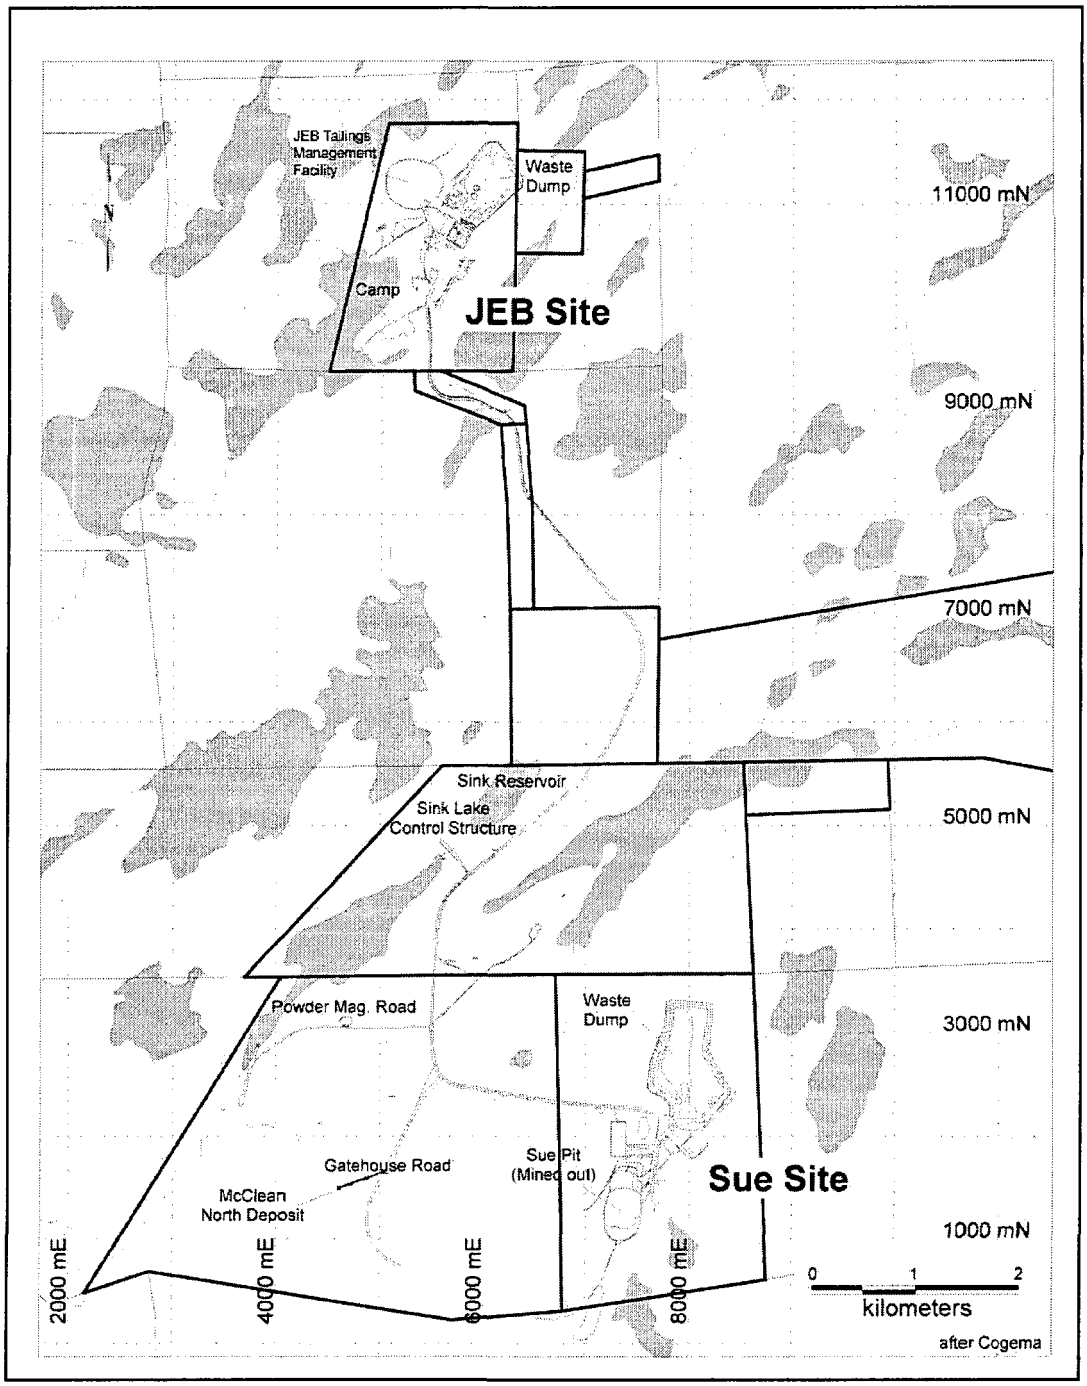

Figure 4 : JEB and Sue Sites

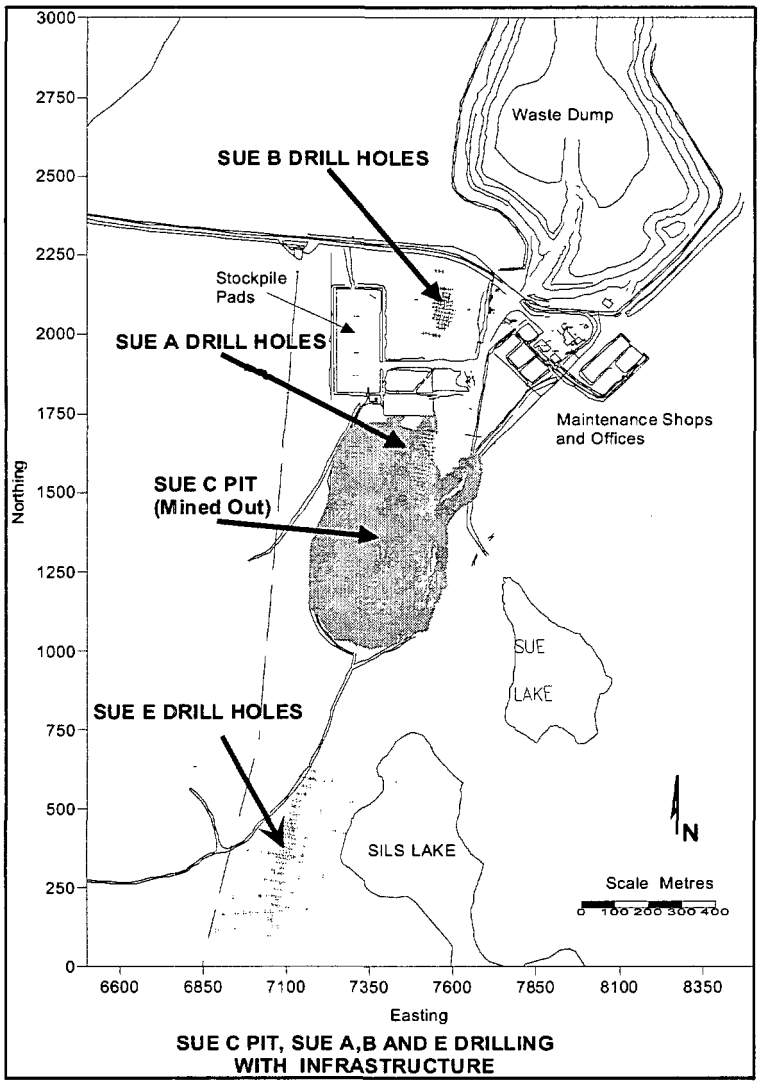

Figure 5 : Sue Site, Drilling, Infrastructure and Physiography

7.5 Physiography

The entire area was glaciated at least three times during the last 150,000 years. The land forms are sandy, gravelly sediments in the form of ground moraines, drumlins and drumlinoid ridges following northeast-southwest trends to produce sand and gravel ridges which cover the largest portion of the area. The maximum relief is 90 metres (450 to 540 metres above sea level). The drainage is typical of relatively flat, recently glaciated regions, forming a deranged pattern characterized by numerous lakes and wetlands, which covers 25% of the region. Discontinuous muskeg is present throughout the area in topographic depressions and ranges in thickness from one to two metres. The vegetation in the area, rarely more than 10 metres high, consists of jack pine and black spruce with moss as the predominant groundcover.

8 HISTORY

8.1 McClean Lake Property

Canadian Occidental Petroleum Limited ("Canadian Oxy") began exploring for uranium in northern Saskatchewan in 1974. The prospective area was located between the known Rabbit Lake deposit and the Midwest Lake area where uraniferous boulder trains had been found previously. In April 1977, Canadian Oxy entered into a joint venture agreement ("Wolly Joint Venture") with Inco Limited ("Inco"). During a diamond drilling programme in 1977, one of the 47 holes drilled encountered encouraging uranium mineralization. During the next two years, extensive exploration work, including airborne geophysics electromagnetic surveys and diamond drilling, was carried out.

Mineralization was discovered at McClean Lake (the McClean North deposit) in January 1979 and follow-up drilling later that year confirmed the existence of a significant unconformity-type uranium deposit. Subsequent exploration resulted in the discovery in 1980 of the McClean South deposit (not addressed in this report) and the JEB deposit in 1982.

In 1984, CanadianOxy and Inco received conditional approval for an underground exploration permit for the McClean deposit from the regulatory authorities. Shortly thereafter, Canadian Oxy and Inco reached a corporate decision to suspend all ongoing field and engineering work on that project.

In January 1985, Minatco Limited ("Minatco"), a predecessor in title to Cogema, entered into the Wolly Joint Venture (predecessor to the McClean Joint Venture) with Canadian Oxy and Inco. From 1985 to 1990, Minatco continued exploration of the McClean Lake Property including airborne and ground geophysical surveys, percussion drilling and diamond drilling. The reconnaissance diamond drilling programme resulted in the discovery of the Sue A deposit in 1988. Further drilling in the later part of 1988 and 1989 resulted in the discovery of the Sue B and Sue C deposits, while the Sue E deposit was discovered in 1991.

In 1993, the owners of the Midwest Property and the McClean Lake Property agreed to combine the two projects and develop them as a complementary development. Ownership interests in the respective joint ventures were interchanged with Denison acquiring a 22.5% interest in McClean Lake.

Development of the McClean Lake uranium facility began in March 1995. Construction and commissioning were completed in 1997. The JEB deposit was mined out and the ore stockpiled. The JEB Pit was then converted, in 1999, into the JEB Tailings Management Facility.

Mining of the Sue C ore body was completed on February 3, 2002 and all of the ore has been stockpiled on surface. The low-grade uranium special waste, from the mining of the JEB and Sue C deposits, has been disposed of in the mined-out Sue C pit, in a manner which will not interfere with the mining of the adjacent Sue A deposit. This work was completed in April 2002. The pit is now being allowed to flood naturally.

Table 3 illustrates the production history from the McClean Lake properties to the end of 2002.

Table 3 : McClean Lake Properties - Production History

	1999	2000	2001	2002
Ore Milled - tonnes x 1,000	23	82	98	122
Average Grade - % U_3O_8	3.24	3.42	3.10	2.29
Production - lbs U_3O_8 x 1,000	1,455	6,015	6,595	6,098

8.1.1 Previous Reserve Estimates

Cogema (2001) reported the following estimate of reserves and resources for Sue A, B and E in 2001 based on a geostatistical estimates of mineralization and pit optimization studies.

Table 4 : Sue A, B and E , 2001 Reported Reserves and Resources

	Tonnes	Grade	lbs U_3O_8
RESERVES	**x 1,000**	**% U_3O_8**	**x 1,000**
Sue A	55.38	1.07	1,310
Sue B	104.27	0.66	1,520
RESOURCES			
Sue E	384,876	0.98	8,290*

*Denison only reported a portion of the resource estimate for Sue E in its 2003 Annual Information Form in order to reflect that a portion of the deposit extends beyond the McClean Lake Property.

Cogema and Denison reported the following stockpile reserves

	Tonnes	Grade	lbs. U_3O_8
RESERVES	**x 1,000**	**% U_3O_8**	**x 1,000**
Sue C	499.96	1.93	21,280
JEB	31.41	0.53	370

The reserves and resources presented in the tables above are the subject of the current reserve and resource audit.

8.2 Midwest

Initial exploration work in the vicinity of the Midwest deposit began in 1966. From 1968 to 1975, exploration was carried out on an exploration permit which included the area covered by the current mineral leases. Most of the work was concentrated on the area near South McMahon Lake where uranium-mineralized boulders were found. In 1974, the exploration permit was changed to mineral leases.

During the winter season of 1977, one of the holes drilled through the unconformity encountered radioactive mineralization. In January 1978, the existing Midwest deposit was intersected. During 1978 through 1980, a further 439 holes were drilled (for a total of about 650) to delineate the deposit and to explore the surrounding area of the mineral leases.

The operator of Midwest from 1968 to 1982, Canada Wide Mines Ltd. (CWML) a subsidiary of Esso Resources Canada Ltd., carried out an extensive series of studies on mining methods, development of a milling process and environmental evaluations. All of this data was reported in the documentation associated with the preliminary Environmental Impact Statement for Midwest submitted to the provincial regulatory agencies by the operator in 1981. A corporate decision was made to defer the development of the project and the documentation did not receive a formal review. In 1982, CWML suspended further work on the project.

In 1987, Denison acquired a 45% interest in the Midwest Property and became the operator. An underground test-mining programme was completed in 1989.

In 1993, the respective owners of McClean Lake Property and Midwest Property combined their interests to make one complementary project with one mill at McClean Lake. In order to accomplish this, a portion of Denison's interest in Midwest was exchanged for an interest in McClean Lake. This transaction, together with several related ownership changes, resulted in Denison's ownership interest in Midwest being reduced to 19.5% and Minatco became the Operator.

In 1999, Denison increased its interest in Midwest by 5.50% through the exercise of first refusal rights. Subsequently, Denison decreased its interest in Midwest from 25% to 19.96% effective March 31, 2001.

8.2.1 1990 Reserve and Resource Estimate

A reserve estimate was prepared in 1990 by J. Reedman (Reedman, 1990) under the direction of L.C. Richardson for the Midwest Joint Venture. Geological and Mineable reserves derived from this estimate were summarized and further adjusted for mining dilution (Denison, 1990, Appendix 3H) The estimates assumed development by underground mining methods using a 0.5% U_3O_8 cut-off.

This estimate used the classification conventions of the U.S. Bureau of Mines (at that time) and is summarized in Table 5 and Table 6.

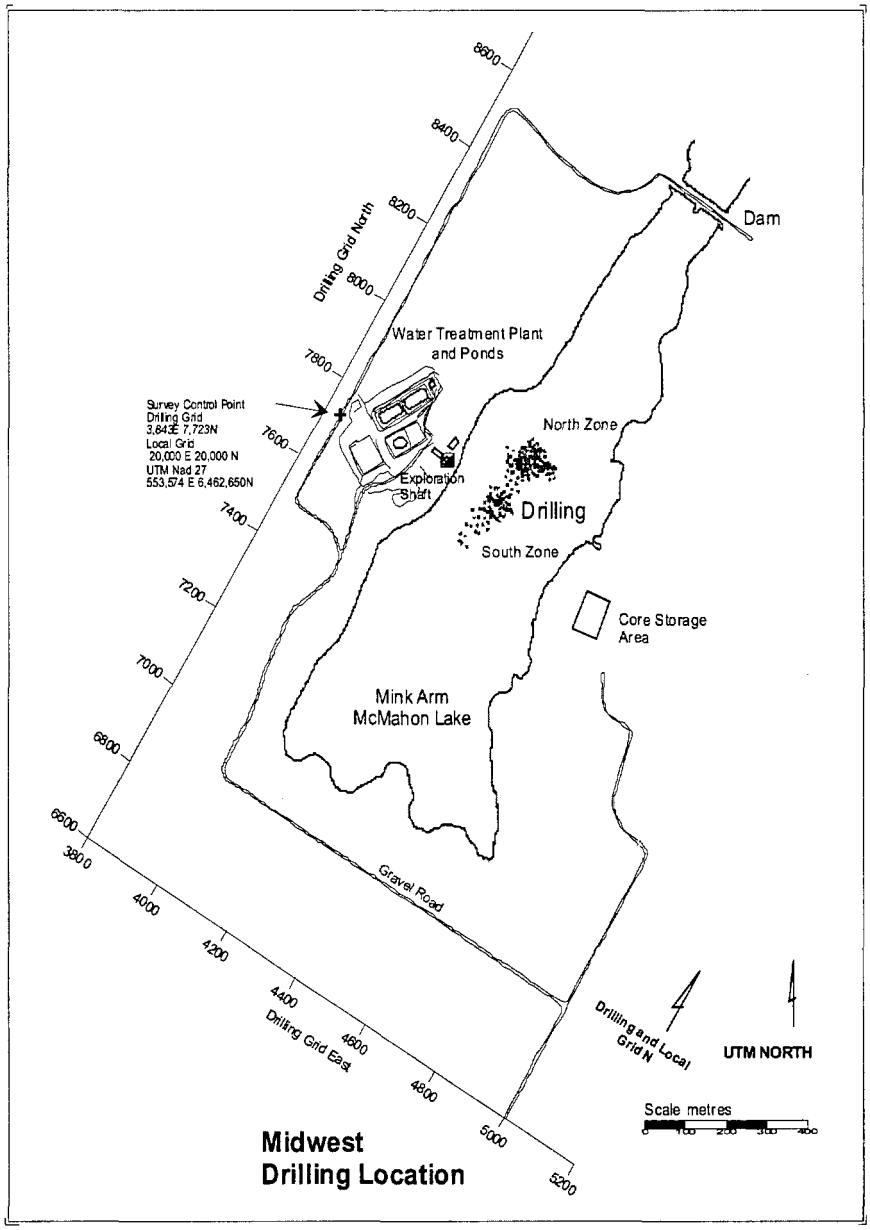

Figure 6 : Midwest Site

Table 5 : Midwest, 1990 Geological Reserve/Resource

Classification Geological Reserve	**Tonnes**	**Grade %U_3O_8**	**U_3O_8 Tonnes**	**U_3O_8 Lbs x 1,000**
Measured				
High-grade Unconformity	167,538	8.27	13,856	30,546

9 Geological Setting

9.1 Athabasca Basin Geology

The McClean Lake and Midwest uranium deposits lie near the eastern margin of the Athabasca basin in the Churchill Structural Province of the Canadian Shield. The bedrock geology of the area consists of Precambrian gneisses unconformably overlain by flat-lying, unmetamorphosed sandstones and conglomerates of the Athabasca Group. The Midwest Property straddles the transition zone between two prominent litho-structural domains within the Precambrian basement, the Mudjatik to the west and the Wollaston to the east, while the McClean Lake Property is entirely within the Wollaston domain. These domains are the result of the Hudsonian Orogeny in which an intense thermo-tectonic period remobilized the Archean age rocks and led to intensive folding of the overlying Aphebian-age supracrustal metasedimentary units. The Mudjatik domain represents the orogenic core and comprises non-linear, felsic, granitoid to gneissic rocks surrounded by subordinate thin gneissic supracrustal units. These rocks, which have reached granulite-facies metamorphic grades, usually occur as broad domal features. The adjacent Wollaston domain consists of a steeply dipping isoclinally-folded sequence of Aphebian gneissic rocks with a distinct northeast lineal structural trend. The basement surface is marked by a paleo-weathered zone with lateritic characteristics referred to as regolith.

The sedimentary rocks of the Athabasca Basin unconformably overlie the metamorphic basement. The basin is deep, closed and elliptically shaped. The sedimentary rocks in the basin are fluvial sandstones and conglomerates with minor shales and dolomites.

The area is cut by a major northeast-striking fault system of Hudsonian Age. The faults occur predominantly in the basement rocks but often extend up into the Athabasca Group due to several periods of post-depositional movement. Diabase sills and dykes are frequently associated with the faulting. The diabase dykes are often mineralized as exhibited in holes 192 and 487 at Midwest.

9.2 Local and Property Geology

9.2.1 Pre-Athabasca Formation -McClean Lake Area

The pre-Athabasca or basement geology underlying the McClean Lake area is composed of a thin cover of Lower Aphebian gneissic rocks, believed to be 200 to 300-metre thick, lying on Archean granitoid gneisses. Geophysical evidence suggests that approximately one half of the McClean Lake area is underlain by these felsic granitoids. Those rocks occur as domal masses and range from foliated granitoids in the core to more gneissic rocks on the margins and in many instances are wrinkles or bulges of much larger features (Figure 8). Complex folding has produced thin arcuate antiforms in the Archean granitoids surrounded by narrow synforms of lower Aphebian pelitic gneisses containing a graphitic unit that is highly significant with regards to uranium exploration. The lower member of the Aphebian cover displays a continuous stratigraphic succession of predominantly metapelitic gneisses containing a dominant graphitic member. All of the known significant uranium mineralization on the McClean property is directly associated with that graphitic member.

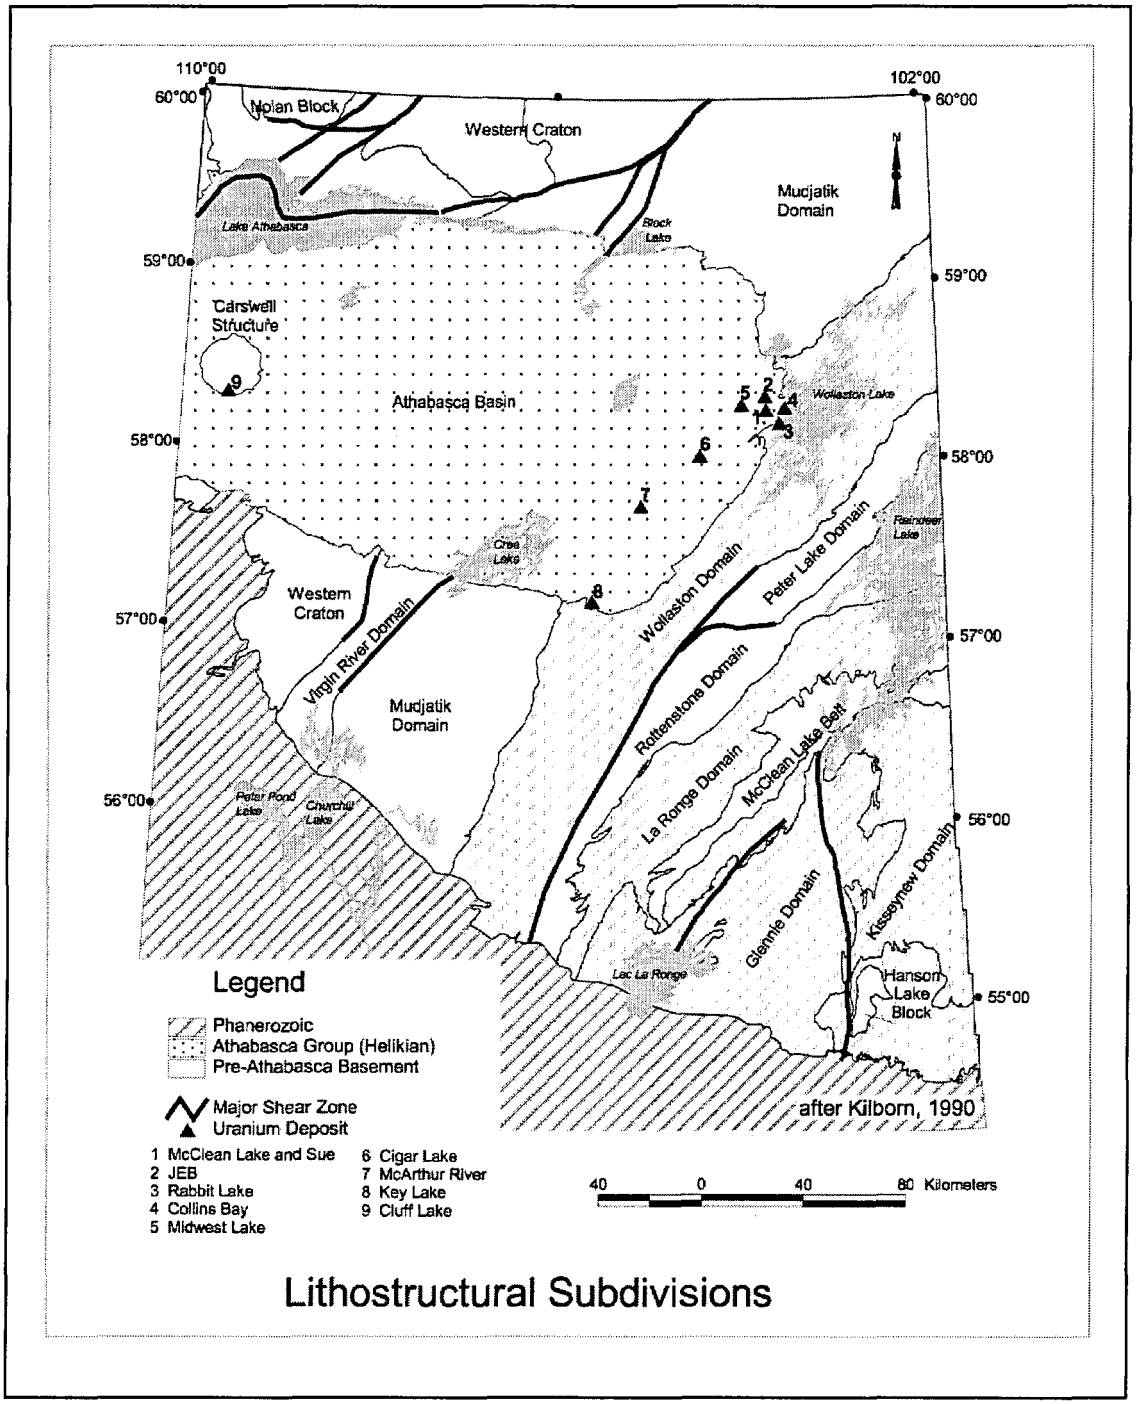

Figure 7 : Geology Northern Saskatchewan

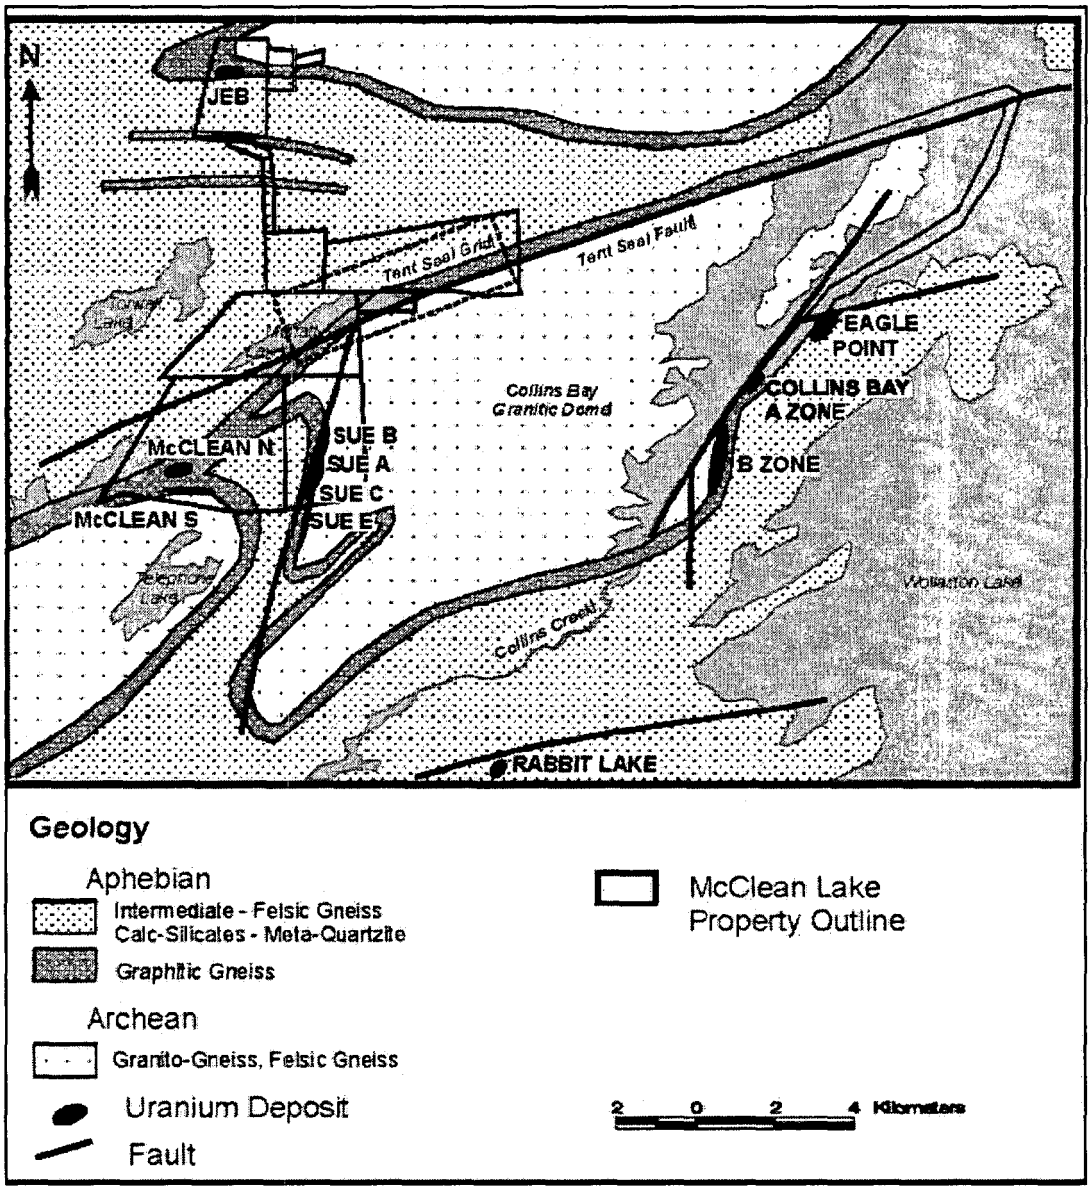

Figure 8 : Basement Geology of the McClean Lake Property and Area (after Kilborn, 1990)

9.2.2 Pre-Athabasca - Midwest Area

The following is summarized from Hoeve (1984).

The metamorphic basement underlying the deposit consists of a steeply-dipping sheet of Aphebian metasediments that is wedged between the Western and Eastern granites. The latter probably represent an Archean substratum which was remobilized during Hudsonian orogenesis. For the Western Granite, an Archean age has been documented. The Aphebian metasediments are in part graphitic and commonly garnetiferous. The top of the metamorphic basement, immediately

underlying the sub-Athabasca unconformity, contains a partially preserved paleo-weathering profile of lateritic character which is in the order of 10 to 20-metres thick.

9.2.3 Athabasca Formation - McClean Lake and Midwest Properties

Figure 9 illustrates the generalized stratigraphic sequence in the McClean Lake and Midwest Properties.

The unconformity at the base of the Athabasca Sandstone contains a tropical paleo-weathering profile. The regolith varies from a few to over 30-metres thick, the thickness being highly dependent on the composition of the parent rock as well as basement structures. The regolith is often completely destroyed by hydrothermal alteration in zones of mineralization.

The Athabasca Sandstone unit covers the whole of the Properties. On the McClean Lake Property the Athabasca Sandstone is represented by up to 200 metres of the Manitou Falls formation, a non-marine fluviatile sandstone with conglomeratic lenses in the basal B member. These sandstones were deposited on alluvial fans and in braided streams and typically show abundant cross-bedding, coarser and finer units, and a general horizontal layering. The Athabasca thickens westward into the basin.

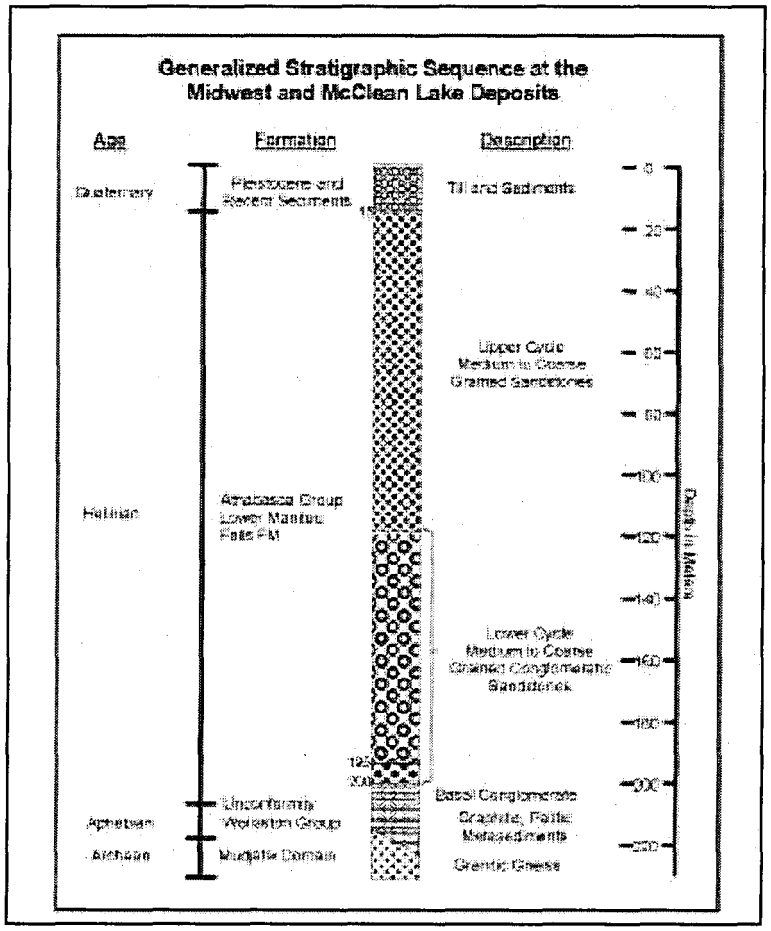

Figure 9 : Table of Formations

9.2.4 Quaternary Geology

The surficial deposits are of Quaternary age consisting largely of a Pleistoscene drumlinized till plain resting directly on the sandstone bedrock. The till is locally overlain by sediments consisting of glacio-fluvial sands and gravels, and recent alluvial sands and silts. The till generally is two to four-metres thick, but thickens to as much as 15 metres under local uplands such as drumlins, which can provide up to 30 metres of relief as gentle undulations.

9.2.5 Structure

The structural geology of the pre-Athabasca rocks is highly complex, having undergone at least three major deformational episodes of folding during the Hudsonian Orogeny. Many of the faults exhibit several superimposed periods of activity with both horizontal and vertical movements being evident. Some fault sets were reactivated following Athabasca sedimentation and provided channel-ways for hydrothermal solutions and the loci for uranium deposition. Horizontal shear cleavage has been identified at the unconformity horizon and is best expressed in the highly altered environment of the uranium deposits. These shear structures appear to be related to and control the alteration.

At the Midwest deposit structural control is both regional and local. Regionally the deposit is located along a major graphitic trend which also represents a zone of extensive faulting. Locally within the deposits, high-angle faults display a strong influence on ore morphology. The deposit displays sharp lateral boundaries which can be observed in both plan and section. Mineralization follows a general north-30° east-trending fault corridor, parallel to the general strike of the graphitic unit. Within the envelope of mineralization, high-grade lenses display an east-northeast or locally north-northwest, elongation. In cross-section a 15 metre average down-drop to the west occurred due to movements along the north-30° east-trending fault set.

The McClean North and South deposits are controlled by a zone of strong east-west faulting and fracturing coincident with the basement graphitic gneisses. These faults dip about 70° south and exhibit a combination of normal and reverse offsets which create basement highs of a few metres. There are also steeply-dipping northeast and northwest-trending fracture sets which show both vertical and lateral displacement.

The favourable graphitic gneiss which hosts or is immediately below the Sue deposits is in fault contact to the east with feldspathic gneisses and granitoid rocks whereas to the west it is gradational with intermediate gneissic units.

At the Sue deposits combinations of normal and reverse faults which parallel the east-dipping foliation in the graphitic gneisses have resulted in basement relief of 10 to 20 metres. Reverse faulting stepped the unconformity down to the west. The Sue A and B deposits occur along the western flank of a basement horst which has 8 to 10 metres of relief. Northeasterly and northwesterly striking faults offset and modify the major north-south structural controls, creating conditions which limit, or significantly control, the extent of mineralization along the trend.

9.3 Alteration

9.3.1 General

The following description of alteration associated with unconformity-type uranium deposits is largely taken from Quirt, 2003.

"The two main types of ore paragenesis in the Athabasca basin are dictated by form of fluid interaction and can be separated by deposit location: (1) sandstone hosted egress-type (Midwest) involving mixing of the oxidized sandstone brine with relatively reduced fluids issuing from the basement into the sandstone, and (2) basement hosted ingress-type (Sue C and E) involving fluid-rock reactions between oxidising sandstone brine entering basement fault zones and the wall rock. Both types of mineralization and associated host-rock alteration occurred at sites of basement-sandstone fluid interaction where a spatially-stable redox gradient/front was present.

"The dominant ore location can occur in the sandstone directly above the unconformity (McClean Lake Property) straddling the unconformity (Midwest), or perched high above the unconformity (certain zones at both McClean Lake and Midwest). Similarly, in some deposit areas, there is a plunge to the mineralized pods from sandstone-hosted to basement-hosted within deposit–scale strike lengths (McClean Lake trend, Sue trend). Other deposit areas do not show this feature (Midwest).

"Most sandstone hosted deposits display dominant desilicification features and coincident abundant accumulations of clay minerals and detrital minerals like zircon and tourmaline. Around basement hosted deposits, however, the host rock alteration is dominantly chloritic with restricted illite at the expense of biotite, cordierite and garnet as at Sue C.

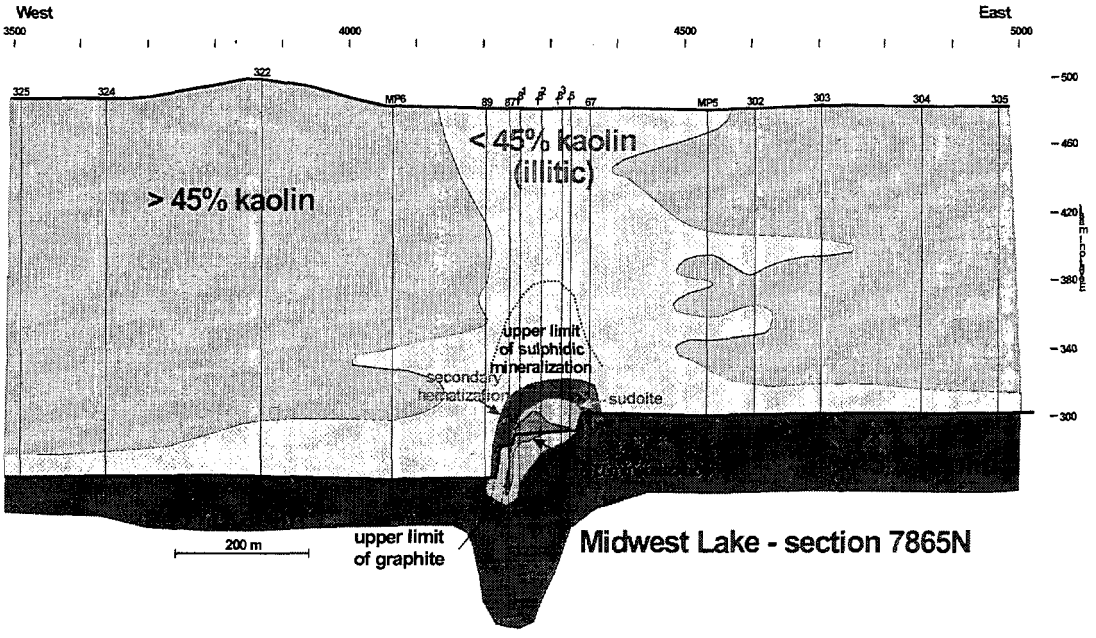

Figure 10 : Location of mineralization, in a north facing section, at Midwest straddling the unconformity and associated host-rock alteration (after Quirt, 2003)

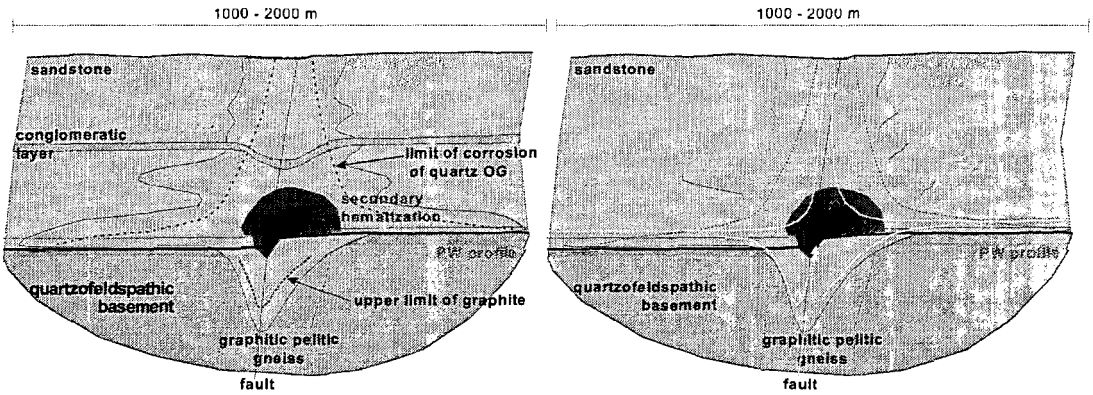
"Illite is often characteristic of the core of the altered and mineralized zone. Complex redox-controlled reactions and acid-base reactions resulted in precipitation of massive pitchblende with associated hematite accumulation and varying amounts of base and other metallic mineralization at sites of fluid-fluid and fluid rock interaction. The geochemical signatures of the individual unconformity-type deposits do vary significantly. Sandstone hosted deposits, such as Midwest, predominantly demonstrate subequal U+Ni+Co+As mineralization, while the basement hosted deposits of the Sue trend are predominantly U+V."

9.4 McClean Lake Property

Kilborn (1990) describes the alteration at the McClean Lake deposits as follows:

- At the McClean North and South deposits, alteration is extensive above and below the mineralization, being largely controlled by the zone of east-west faulting. Argillic (clay) alteration with some hematitic and chloritic alteration envelopes the mineralization and extends upwards along fractures for several tens of metres where it is ultimately capped by silicified sandstones. Alteration of the basement rocks below the mineralization consists of bleaching, chloritization, argillization, and hematization. Transverse to the mineralized trend, the alteration diminishes very rapidly and rocks are frequently fresh within a few metres of mineralization. At Sue A, the deposit lies on and immediately above the unconformity in an envelope of massive earthy-red clay. Argillic alteration extends almost to the sandstone subcrop along fault zones, leaving only scattered sections of silicification in the cap rock. At Sue B, the mineralization is likewise hosted by massive earthy-red clay, while the upper zone displays remnant silicification. The sandstone between the upper and lower zones is lightly silicified. The vein type Sue C deposit is intimately associated with clay alteration and argillization of the basement. The Sue E deposit is likewise basement hosted and the has limited basement alteration outside of the mineralization.

9.5 Midwest Property



At the Midwest deposit, hydrothermal alteration resulted in extensive quartz solution and strong argillization (illite and Mg-chlorite) of the original rock. Clay minerals invaded the sandstone matrix. Argillization appears stronger along faults as fracturing and brecciation reduced sandstone cohesion. Interaction of fracturing and alteration creates a halo of friable rock that caps the deposit. Inside the friable envelope, a one to ten-metre wide zone of massive hematized clay surrounds the mineralization.

10 Deposit Types

The following description of unconformity-type uranium deposits is adapted from Quirt (2003).

Unconformity-type uranium deposits are very high-grade and high-tonnage relative to other types of uranium deposits and the Athabasca-hosted deposits in Saskatchewan currently account for over 34% of world-wide uranium production. A model of unconformity-type uranium deposits is

illustrated in Figure 11. According to Quirt (2003), there are two main types of ore paragenesis that are dictated by form of fluid interaction and can be separated by deposit location: 1) sandstone-hosted egress-type (e.g. Cigar lake, Cluff D, McArthur River, Collins Bay, Midwest) involving mixing of the oxidized sandstone brine with relatively reduced fluids issuing from the basement into the sandstone, and 2) basement-hosted ingress-type (e.g., Rabbit Lake, Eagle Point, Sue C, Claude, and Cluff Lake N) involving fluid-rock reactions between oxidising sandstone brine entering basement fault zones and the wall rock. For the sandstone-hosted deposits, fluid-fluid interactions best explain the presence of massive and fracture mineralization, while for basement hosted deposits, fluid-rock interactions best explain the presence of fracture filling mineralization. Both types of mineralization and associated host-rock alteration occurred at sites of basement-sandstone fluid interaction where a spatially-stable redox gradient/front was present. Without sufficient ore reaction constituents and/or the presence of a stable redox front, a barren host-rock alteration halo formed without significant mineralization.

Conceptual model of egress-type sandstone-hosted mineralization;

left: mineralization and alteration features, right: fluid flow (Hoeve and Quirt, 1984, 1987).

Figure 11 : Conceptual Model of Egress Type, Sandstone-Hosted Mineralization, After Hoeve and Quirt 1984, 1987.

The prevailing hydrological conditions controlled the location of fluid interaction relative to the unconformity, with either egress-type or ingress-type deposits forming. For the egress-type deposits, the location relative to the unconformity of the fluid mixing and the redox front were variable and controlled by the hydrological environment. The dominant ore location can occur in the sandstone directly above the unconformity (Key Lake, Midwest) or perched high above the unconformity (McClean Lake, Cigar Lake). The basement-hosted fluid rock interactions show less variation in location relative to the unconformity. Similarly, in some deposit areas, there is a plunge to the mineralized pods (e.g., McClean Lake trend, Sue trend). Other deposit areas do not exhibit this feature (Midwest, Cigar Lake).

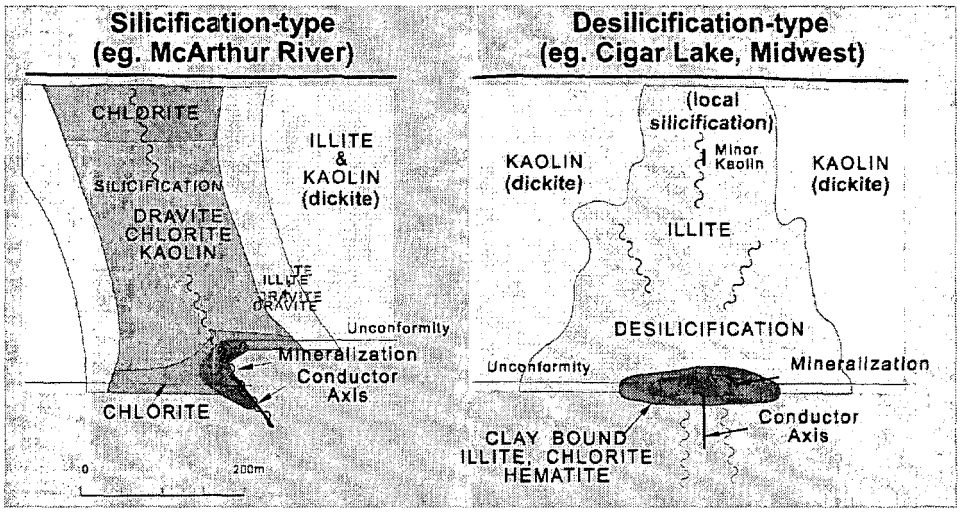


Figure 12 : Variation in Egress-Type Sandstone-Hosted, Host Rock Alteration Features, after Quirt, 2003 and Wasyliuk, 2000.

11 MINERALIZATION

11.1 Sue A

The Sue A and B deposits are situated on the western flank of the Collins Bay Dome and are the two most northerly deposits on a north-south trend along or near a steeply-dipping unit of graphitic gneiss within a 4-kilometre basement conductor. Combinations of normal and reverse faults which parallel the east-dipping foliation in the graphitic gneiss have resulted in basement relief of 10 to 20 metres. Both deposits occur along the western flank of a basement horst which has 8 to 10 metres of relief. They are located on and above the unconformity which lies 65 to 75 metres below surface, and the bulk of the mineralization lies in the overlying sandstone. These deposits are typically hosted by massive earthy-red clay extending for about 10 metres above and below the unconformity. Argillic alteration extends well up into the sandstones above the mineralization. Chloritic alteration is prevalent in the basement rocks with hematization near the unconformity. Beneath the mineralization, the paleo-weathering profile has been destroyed. The mineralization at Sue A and Sue B is generally associated with niccolite and has average ratios of U_3O_8 to Ni and As of 0.45 and 0.37 respectively.

The gently west-dipping Sue A deposit is approximately 175 metres long with a horizontal width ranging from 10 to 30 metres (and averaging 15 to 20 metres) at a 0.10% U_3O_8 cut-off. It exhibits an average thickness of four metres, ranging from three to nine metres. The mineralization is intimately controlled by close proximity to the unconformity and by faulting, resulting in predictable cross-sectional shapes. Diamond drilling information indicates that only a minor portion of the Sue A deposit lies below the unconformity.

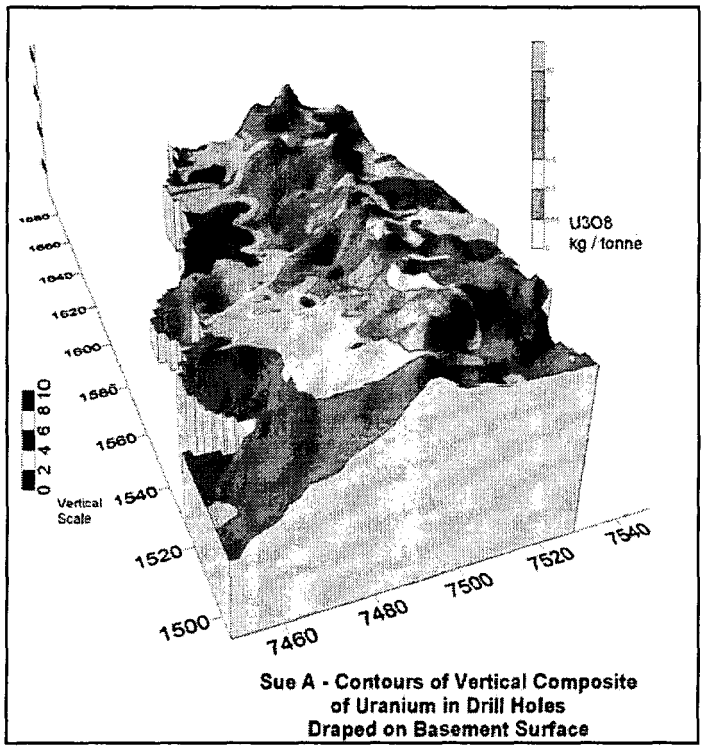

Figure 13 : Sue A, U_3O_8 contours in drilling, draped on basement

11.2 Sue B

The Sue B deposit is located approximately 350 metres north of the Sue A deposit. It consists of a two tiered zone with an upper horizon approximately 25 metres below surface, at the 420 elevation and a lower horizon at the 390 elevation, just above the unconformity (Figure 14). The upper horizon averages 10 metres in thickness and the lower horizon four metres in thickness. The mineralized zone, which extends well into the sandstones is approximately 60 metres long. The upper and lower zones are connected by a narrow chimney like zone of mineralization believed to be a steeply-dipping fault structure.

The Sue B mineralization, other than its proximity to the graphitic gneiss, is largely fault controlled. Uranium mineralization is hosted by massive earthy-red clay, although the upper zone contains remnant silicification. Uranium at Sue B is associated with nickel and arsenic with U_3O_8 to Ni and As ratios of 0.0.70 and 0.64 respectively.

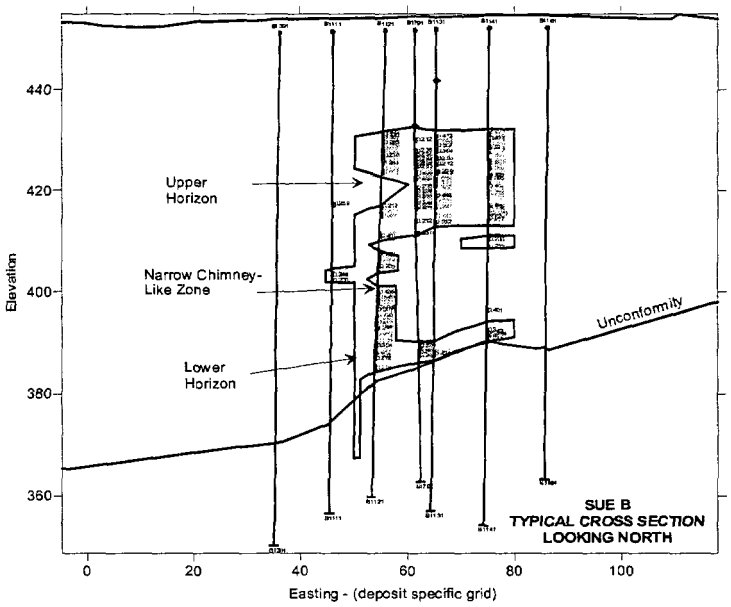

Figure 14 :Sue B Typical Cross-Section Looking North

11.3 Sue C

The mined-out Sue C deposit lies 100 metres west of the south end of the Sue A deposit (Figure 15). It trended north 12° east for 390 metres and occupied a 75 degree east-dipping structure. The Sue C deposit and its southerly depth extension are located entirely within the basement graphitic gneisses approximately 100 metres west of the main Sue graphitic unit. There was a distinct depth gradation to the mineralization of this deposit, with the mineralization sub-cropping at the unconformity in the north and central part of the deposit and plunging gently south in the southern portion. The central part of the deposit, occupying a length of 80 to 100 metres, extended downwards from the unconformity a length of 60 metres and contained approximately 75% of the pre-mining estimated reserves.

Along the trace of the deposit, the unconformity was stepped down to the west by reverse faults resulting in basement relief of 10 to 30 metres. The vein-like mineralization sub-cropped at the unconformity in the north and central part and plunged gently south. To the north the deposit thinned to about 1 metre and only extended to a depth of 10 to 20 metres below the unconformity. To the south the top of the mineralization dropped away from the unconformity through a transitional zone to a deeper zone characterized by disseminated mineralization within the foliated graphitic metasediments.

Uranium mineralization is typically massive uraninite with pitchblende and minor coffinite hosted in a clay matrix. Assays exceeding 20 to 30% U_3O_8 over 1-metre intervals were not uncommon. Unlike the Sue A and B, there are only minor amounts of other minerals associated with the uranium. Veins in the hanging wall were assumed from the surface drilling to be of limited extent, but much of the increased uranium content mined, relative to original reserve estimates, was attributed to these veins. (Wilson, 2002). (See also Sue C stockpiles).

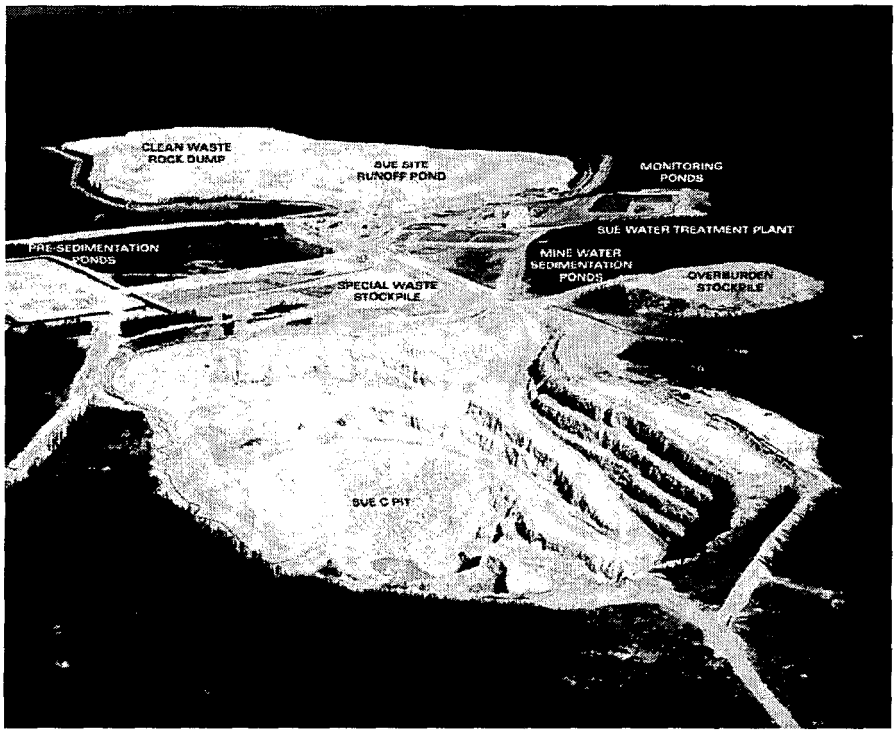

Figure 15 : Sue C Deposit - Mined Out.

11.4 Sue E

The Sue E deposit, although discovered in the early 1990's, did not undergo development drilling until 2001. The mineralization has a strike length of approximately 320 metres, with horizontal widths varying from 4 to 15 metres and occurs from 50 to 200 metres below the surface. The style of mineralization and setting is similar to that of the southern part of the Sue C deposit, that is, totally basement hosted narrow, steeply-dipping vein-type and relatively clean mineralogy. However, Sue E does contain more Ni and As than Sue C. The U_3O_8 to As ratio is 1.03 and the U_3O_8 to Ni ratio is 1.57.

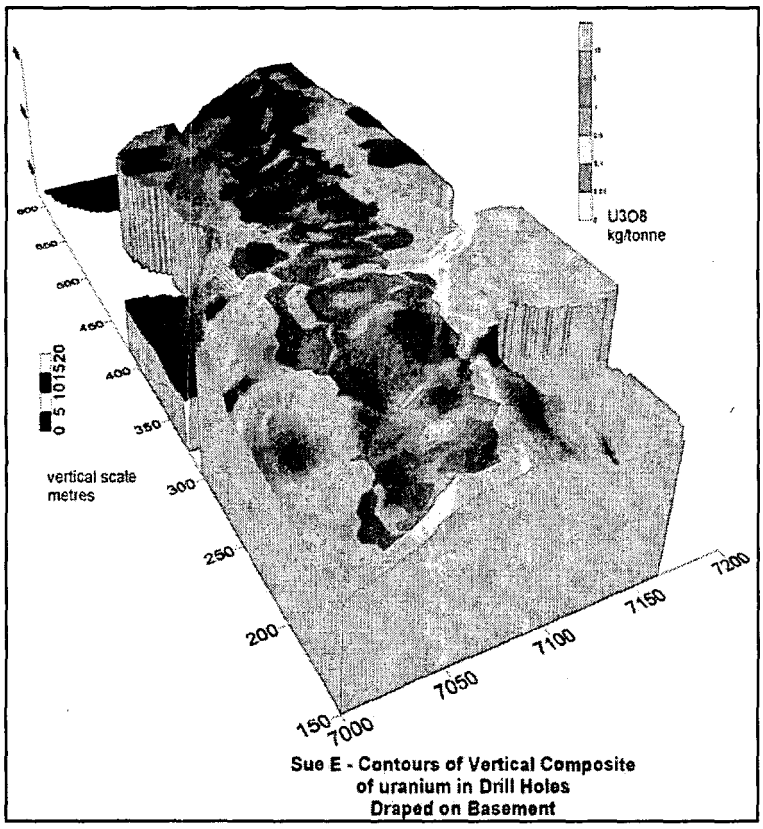

Figure 16 : Sue E Vertical composite of uranium assays draped on basement

11.5 McClean North and South

The McClean North and South deposits are situated between two Archean domes and occur as sausage-shaped pods straddling the unconformity between the Athabasca sandstones and the crystalline basement. Two mineralized trends striking north 70° east to due east and approximately 0.5 kilometres apart have been identified and are referred to as McClean North and McClean South. The mineralized pods are generally at and above the unconformable contact which is, on average, 160 metres below the surface in this area. The regolith, which is invariably destroyed in zones of uranium mineralization, is from 15 to 45 metres thick. The overlying Athabasca sandstone is typically 150 to 160-metres thick and is covered by an average of six metres of glacial overburden.

The host rocks for the mineralization are altered sandstones and Aphebian basement rocks usually altered to clay-rich rocks. Structurally, the deposits are controlled by a zone of strong east-west faulting and fracturing coincident with the basement graphitic gneisses. Alteration is extensive above and below the mineralization, being largely controlled by the zone of east-west faulting. A zone of illite alteration forms a mushroom–shaped envelope tilted to the north in the McClean North Zone. There are 11 discrete pods (of which three are considered in the current report for inclusion in resources), arranged along the two separate but parallel trends separated by approximately 500 metres. Generally, mineralization in the basement is at the eastern extremity of the zone. Uranium mineralization is hosted in hematitically altered clay-rich zones in which illite forms massive layers. Uranium occurs as fine-grained coffinite, as veinlets and nodules of

pitchblende and as masses of pitchblende/uraninite. Highly variable but generally small amounts of nickel arsenides are associated with the uranium. The McClean North has a U_3O_8 to arsenic and nickel ratio of 0.20 and 0.11 respectively, while the McClean South ratios are 0.57 and 0.31 respectively. Generally, the mineralization located below the unconformity has less arsenic and nickel than that found in the sandstone. The McClean pods are elongated east-west and range from 70 metres (Pod 6) to 300 metres (Pod 1, combining Pods 1W and 1E) in length. Typical widths are 10 to 20 metres. In cross section they are flat, lenticular to oval shaped bodies with thickness' commonly from 5 to 10 metres.

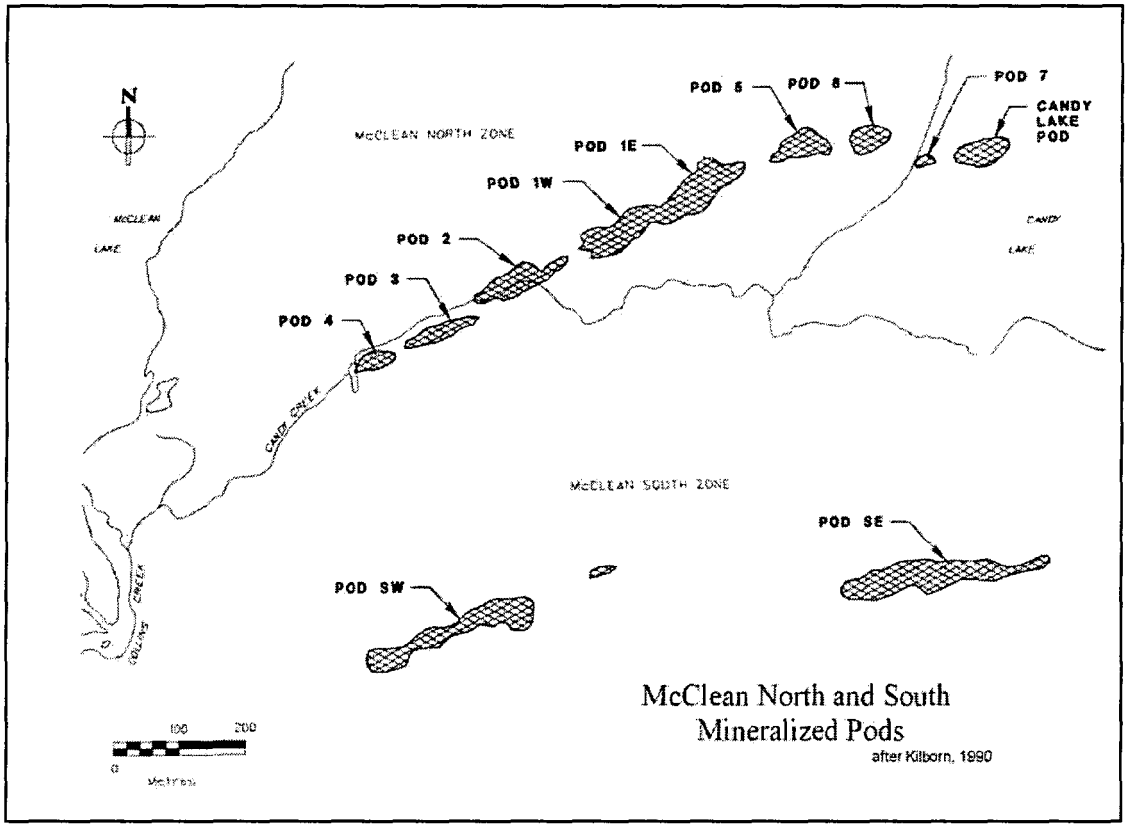

Figure 17 : McClean North and McClean South Mineralized Trends

11.6 Midwest

The Midwest deposit consists of a 400 metre long mineralized trend containing three distinct pods, the North Zone, the South Zone and the Southern Tail. (Since the Southern Tail is small, somewhat isolated and likely not economically mineable by open pit, it was not considered in this report). The horizontal width varies from 10 to 80 metres. The thickness of the zone averages seven metres with a maximum of approximately 25 metres. Mineralization consists primarily of uranium oxides (uranite and pitchblende) with a suite of nickel-cobalt arsenides, sulphides and sulpharsenides in a clay matrix. The highest grade mineralization consists of one to four metre thick sections of massive uranium oxides and niccolite surrounded by a thin clay envelope. Nickel and arsenic average grades are high, at 3.5% and 5.7% respectively. Typically, high-grade mineralization is surrounded by a thin low-grade envelope (0.05 to 0.5% U_3O_8), one to two metres thick, which consists of massive clay and strongly argillized sandstone.

The Midwest deposit is representative of a typical unconformity-type zone, where the majority of the mineralization is located at the basement sandstone contact either in the basal conglomerate or in the upper basement unit. However, approximately 17% of the economic deposit tonnage, determined later in this report, (1.9% of the contained U_3O_8) occurs in a perched horizon, up to 150 metres above the unconformity, in the overlying sandstones.

The deposit displays sharp, grade-based, lateral boundaries, both in plan and section. Mineralization follows a general north 3° east-trending structural fault corridor, parallel to the strike of the graphitic unit. High-grade lenses display a north 70° east elongation in the North Zone and a northerly orientation in the South Zone. (Grid northeast and northwest respectively). (Figure 25, page 65). Locally, mineralized lenses occur along steep faults above and below the main unconformity mineralization. Generally, the uranium-nickel mineralization is dependent on the intersection of the graphitic, pelitic metasediments, the major fault system which parallels and displaces them, and the unconformity. The main mineralized zone follows a series of offset faults, which contain anomalous uranium and nickel mineralization. The mineralized zone has been traced in drill holes for over 900 metres on strike (approximately north 30° east).

All three pods of the Midwest deposit are located beneath Mink Arm of South McMahon Lake. To facilitate underground sampling and future mining a dam was constructed 600 metres north of the North Zone (approximately 400 metres north of a designed pit crest), closing off Mink Arm from the rest of the lake. Pumping will be required prior to the commencement of overburden stripping.

The highest-grade mineralization, termed unconformity mineralization, occurs as a series of flat-lying, fault-bounded bodies at, and immediately above the unconformity. The mineralization is predominantly massive and colloform pitchblende with nickel arsenides. The important uranium minerals are uraninite, pitchblende, and coffinite. The gangue of this high-grade material is usually sideritic and hematitic clay.

The sandstone mineralization occurs as fine grained sooty pitchblende and nickel arsenides filling and coating fractures, and as disseminations throughout the sandstone clay matrix. It forms a halo around the higher grade unconformity mineralization.

The basement mineralization occurs as pitchblende and nickel arsenides in veins and disseminations associated with kaolinite or chlorite and sericite. It occurs in shear zones extending to at least 100 metres below the unconformity.

12 EXPLORATION

12.1 McClean Lake Area

Canadian Occidental Petroleum Limited ("CanadianOxy") began exploring for uranium in northern Saskatchewan in 1974 in the area between the known Rabbit Lake deposit and the Midwest Lake area where uraniferous boulder trains had been found previously. In April 1977, CanadianOxy entered into a joint venture agreement with Inco Limited ("Inco"). During a diamond drilling programme in 1977, one of the 47 drill holes encountered encouraging uranium mineralization. During the next two years, extensive exploration work, including airborne geophysics electromagnetic surveys and diamond drilling, was carried out.

Mineralization was discovered at McClean Lake (the McClean North deposit) in January 1979 and follow-up drilling later that year confirmed the existence of a significant unconformity-type uranium deposit. Subsequent exploration resulted in the discovery in 1980 of the McClean South deposit and of the JEB deposit in 1982.

In January 1985, Minatco Limited ("Minatco"), a predecessor in title to Cogema, entered into the joint venture with CanadianOxy and Inco. From 1985 to 1990, Minatco continued exploration of the property including airborne and ground geophysical surveys, percussion drilling and diamond drilling. The reconnaissance diamond drilling programme resulted in the discovery of the Sue A deposit in 1988. Further drilling in the later part of 1988 and 1989 resulted in the discovery of the Sue B and Sue C deposits.

In 1993, the owners of the Midwest and the McClean Lake projects agreed to combine the two projects. Ownership interests in the respective joint ventures were interchanged with Denison acquiring a 22.5% interest in McClean Lake. The Sue D and E deposits were discovered in the early 1990's. (The Sue D deposit has been deemed likely uneconomic and has not been considered in this report. It is located midway between Sue C and Sue E).

In the winter of 1992, exploration drilling on the western extension of the Sue trend discovered a pod-like deposit in the Caribou Lake area. The mineralization is distinct from that of the Sue trend in that it is sandstone hosted and arsenical. The alteration and structure continue along strike, however, and much further work remains to be carried out in the search for more of these pods.

12.2 Midwest Area

Initial exploration work in the vicinity of the Midwest deposit began in 1966. From 1968 to 1975, exploration was carried out by Canada Wide Mines Limited ("CWML") on an exploration permit which included the area covered by the current mineral leases. Most of the work was concentrated on the area near South McMahon Lake where uranium mineralized boulders were found.

During the winter season of 1977, one of the holes drilled through the unconformity encountered uranium mineralization. In January 1978, the existing Midwest deposit was intersected. During 1978 through 1981, a further 439 holes were drilled (for a total of about 650) to delineate the deposit and to explore the surrounding area of the mineral leases. Additional drilling for engineering nd metallurgical testing were completed subsequently from both surface and underground.

The diamond drilling indicated that there was a high-grade zone of mineralization surrounded by lower grade uranium beneath Mink Arm of South McMahon Lake.

In 1987, Denison acquired a 45% interest in the Midwest project and became the Operator. An underground test mining programme was completed in 1989 which involved sinking a 3.7 metre diameter shaft to a depth of 185 metres on the west side of Mink Arm. A 180 metre-long cross-cut was developed at a depth of 170 metres in the sandstone. The objectives of this programme were to observe water conditions, make a geotechnical assessment of the altered sandstone and assess radiation levels (associated with both the ore and water) in order to design protective measures for underground mining. Three drill holes (RM-1 to RM-3) were drilled and assayed. Four vertical, 1.2-metre diameter blindshaft boreholes were drilled through the high-grade mineralization but were not assayed. All of the underground work was carried out adjacent to or within what is now the South Zone.

13 DRILLING

All drilling has been by diamond drilling, usually with NQ sized core.

13.1 McClean North and South Deposits

As of April 30, 1990, when the diamond drilling of the McClean North and South deposit ceased, 416 diamond drill holes totalling 81,810 metres had been drilled into the McClean North and McClean South deposits.

The spacing varies from 7.5 metre spacing along 7.5 metre lines to 7.5 metre spacing along 15 metre lines to 7.5 to 15 metre spacing along lines 30 metres apart. The higher density of drilling is in areas of the pods that are higher grade and required more detailed information for reserve and resource estimates.

13.2 Sue A

A total of 79 diamond drill holes totalling 7,661 metres have been drilled in the Sue A deposit. Drill holes are generally at 10 metre centres on lines 12.5 metres apart

13.3 Sue B

A total of 57 holes totalling 5,149 metres have been drilled into the Sue B deposit. Like the pattern on the Sue A, drill holes are generally at 10 metre centres on lines 12.5 metres apart.

13.4 Sue C

The Sue C deposit was drilled on 12.5 metre fences with a hole spacing of 10 metres. A total of 128 diamond drill holes were drilled prior to the development decision, totalling 21,749 metres of core.

13.5 Sue E

At Sue E, a total of 135 diamond drill holes have been cored for a total of 23,757 metres. Drill spacing was at staggered 10 metre centres on 12.5 metre lines.

13.6 Midwest

Over 650 drill holes have tested the Midwest property, of which 100 surface (and wedged extensions) and three underground holes occur in proximity to the current deposit. Eighty of these are NQ diamond drill holes from the surface, 20 are PQ holes drilled for metallurgical test work, and 3 are confirmation holes drilled from the underground crosscut. All of the surface holes were geologically and geotechnically logged and sampled by previous owners of Midwest, while the underground holes were logged and sampled by Denison personnel.

13.6.1 Midwest Lost Core

Core recovery at Midwest was an issue, especially during early drill programmes but did improve over time. Table 7 illustrates the core loss recorded for intervals reporting over 0.1% U_3O_8. (The intervals include those for which U_3O_8 values have been assigned a value by the "lost core convention", below, so that all mineralized intersections are represented).

Drill Hole Series	Core Loss % for intersections reporting over 0.1% U_3O_8
1 to 100	15.7
101 to 200	9.1
201 to 300	6.4
301 to 400	5.8
401 to 500	3.4
501 to 600	5.55
600 to 640	8.6

Table 7 : Core Loss Reported by Series of Drill Holes

13.6.1.1 Lost Core Convention Midwest.

Denison (1990, Appendix 3C) reports that the following conventions were used by CWML for the assignment of mineralization values to lost core:

> The value assigned to lost core is the lowest assay of recovered material from one of three samples. These samples are:
> 1. The sample within which the lost core occurs.
> 2. The sample immediately above the one containing the lost core.
> 3. The sample immediately below the one containing lost core.

The writers have noted that:

1. Core recovery did improve over time and had reached acceptable levels for holes numbered above 200 likely through improved drilling techniques and technology (although the poor recovery in the 600 series holes is not explained).
2. Comparisons of holes with poor core recovery with adjacent holes with good core recovery indicate that there is no cause for concern with the above convention.

The writers conclude that the application of the "lost core convention" is appropriate.

13.7 Drill Hole Surveys

13.7.1 McClean Property

Kilborn (1990) reported on drill hole surveying as follows:

> "All drill hole collar locations have been surveyed and horizontal co-ordinates and vertical elevations established. All drill hole spacings described [above] are at the collar.
>
> To determine the deviation of the diamond drill holes from surface, directional DTH [down-the-hole] surveys, using a Sperry-Sun multishot survey instrument, were completed on all holes drilled after 1986. Prior to 1986, either acid-dip tests or occasional Tropari® measurements were made on all diamond drill holes. Horizontal co-ordinates and vertical elevations at points down the hole have been calculated and plotted. Generally, the deviation of diamond drill holes is less than 2°."

The writers note that uncertainty concerning the azimuth of a 2° dip variation could result in a horizontal variation of up to 10 metres in the location of a hole at a depth of 150 metres.

The writers have not audited the surveying database and note that hole location as well as down-hole deviation may significantly impact on reserve estimates especially in the smaller deposits subject to perimeter effects.

13.7.2 Midwest

The collar locations of all drill holes were surveyed to provide horizontal and elevation co-ordinates.

Trigg (1990a) reported that 22 of the diamond drill holes do not have reliable down-hole surveys. The methods used for carrying out down-hole surveys, for which there are azimuth and dip measurements, was not stated, however, the 22 holes without reliable data do include holes for which only acid dip-tests results are available. Trigg also reported that in CWML's 1982 feasibility study a statistical analysis was performed on the holes for which reliable down-hole data exists. The study concluded that at the 285 metre level, the supposedly vertical holes could have deviated by up to 12 metres with an average deviation of roughly 5 metres. Trigg concluded that sensitivity analysis indicated, relative to the 1990 reserve estimate, uncertainty in hole location could cause a fluctuation in tonnage of 8%, metal content of 5% and grade of 3%.

The writers have not audited the survey database and note that hole location may significantly impact on the reserve estimate especially in the very high-grade areas of the North Zone where the transition from high-grade to unmineralized rock is very sharp.

The drilling grid at Midwest is oriented with grid-north approximately 32° east of true north. The writers have assumed that down-hole survey orientations in the survey database refer to grid north and not true north. It has not been possible to verify this assumption and the assumption could affect both the estimate of tonnage and grade and the position of the boundaries of the mineralized zone. Recommendations are made concerning confirmation drilling on the boundaries of the mineralization which would correspond with the toe of a pit, where the incremental stripping ratio of any perimeter ore block will be very high.

14 SAMPLING METHOD AND APPROACH

14.1 Sue A, B, E and McClean

Kilborn (1990) provided the following description of drill-hole logging and sampling for drilling up to 1990:

> "Following the completion of a drill-hole, the hole is radiometrically logged using a down-hole slim-line calibrated gamma probe. A Century Geophysical Model 9067 probe is currently being used .....
>
> Diamond drill core is placed in standard 1.5-metre-long wooden trays of 4.5-metre capacity and is transported to an enclosed core-handling facility where it is geologically logged and sampled. Geological logging includes detailed recording of lithology, alteration, mineralization, structure, fracturing, and core recovery. Fracture density is recorded as RQD (Rock Quality Designation) which is the percent of total core length recovered in solid pieces greater than 100 mm in length. Sample numbers and location are recorded on the drill log.
>
> Uranium mineralization is identified in the drill core by using the gamma-logs from the DTH results and by scanning the drill core with a hand-held scintillometer. Mineral boundaries and high-grade intervals within the core are located and identified.
>
> Sample intervals are generally 500 mm long except where boundaries of higher- and lower-grade mineralization fall within a sample interval. In this case two 250-mm long sample intervals are collected. To ensure that the mineralized intersection is completely defined, samples are collected a minimum of 1 metre on each side of any identified mineralized zone.
>
> To check background geochemistry values for possible anomalous uranium and other elements, the sandstone and basement rocks are routinely sampled. A 250-mm sample length is taken in each of the lithological units identified in the basement rocks. Samples are also routinely collected in all major fault structures and alterations zones at 500 mm intervals.
>
> All sampled diamond-drill core is split in half. One portion of the core is placed in a sample bag, identified and sent to an independent laboratory for assaying. The other portion of the sample remains in the core box. All assay rejects are returned to Minatco and are stored at the Wolly Joint Venture property."

The writers have noted that sampling intervals were generally a consistent 0.5 metres at Sue A, B and E but that sampling at McClean North often used shorter intervals within high-grade mineralization.

Corman (1992) reported the following description of logging procedures between 1989 and 1992 (with particular reference to Sue E):

> "Since 1989 all geological data retrieved from diamond drill holes has been entered systematically by Minatco personnel into the GDM[2] computer system. ....
> The data entry process begins in the field where the geological information retrieved from the drill core or from downhole surveys is entered into the computer by the field geologists. This information includes descriptions of the hole lithologies, alteration styles, geotechnical data (RQD, recovery, fractures per metre, etc.) downhole deviations, assay samples collected and downhole gamma logs. ."

The writers understand that similar methodology has been used for sampling since 1992, although at some time since 1992 the use of the GDM software was abandoned. The writers also note that hand written logs were also prepared for at least some of the drill holes since 1990 but that sample numbers with corresponding lengths down the hole are not recorded on the written drill logs.

14.2 Midwest

No description of the sampling method was available to the writers.

15 SAMPLE PREPARATION ANALYSES AND SECURITY

15.1 Midwest

Wray (1982) reports that the majority of core samples collected and assayed between 1978 and 1981 were assayed at Loring Laboratories of Calgary (the exceptions were samples from hole MP-3 and some samples from holes 235 and 278). For samples assaying up to 5% U_3O_8 a fluorometric method was used and for samples recording higher than 5.0% U_3O_8 a volumetric method was used.

15.2 Sue A,B, E and McClean

Kilborn 1990 reported the following assay procedures for the McClean property deposits:

> "Since January 1985, Minatco, as operator of the Wolly Joint Venture has shipped all samples to Barringer Laboratories (Alberta) Ltd. (Barringer) in Calgary for preparation and assaying. Uranium assays of mineralized drill core from drill programmes between 1979 and 1982, prior to Minatco becoming project operator, were performed by Inco's Roy Gordon Research Laboratory at Sheridan Park, Mississauga, Ontario.
>
> The procedure used by Barringer to prepare the core samples is:

[2] GDM (Geological Data Management) software developed by B.R.G.M. (Bureau de Recherches Geologiques e Minieres France) and GEOMATH (Houston, U.S.A.).

- Dry diamond drill cores.
- Crush cores to approximately 4 mm.
- Split crushed cores using a Jones splitter, to obtain a 500-g sample.
- Pulverize 500-g sample, using a ring pulverizer, to minus 147μm (100 mesh).
- Split the pulverized sample to obtain a 500-mg sample.
- Analyze the 500-mg sample.

All cores sampled in mineralized, fault and alteration zones sent to Barringer by Minatco were analyzed for U_3O_8 , nickel, cobalt, copper, arsenic, vanadium, molybdenum, and lead. Samples collected in the unmineralized sandstone to check background geochemistry are assayed for U_3O_8 .

The analytical samples are completely digested in a nitric-perchloric-hydrofluoric acid mixture and evaporated to dryness. The residue is dissolved in a specified volume of dilute hydrochloric acid. Quantitative values for nickel, cobalt, copper, vanadium, molybdenum and lead are determined by atomic absorption spectrophotometry (AA). Uranium is analyzed fluorimetrically and arsenic is determined colorimetrically.

Samples assaying in excess of 5% U_3O_8 are re-assayed using a 1-g sample. The sample is digested as previously described and then analyzed volumetrically for U_3O_8 ."

Since 1990 the majority of samples have been assayed at the Saskatchewan Research Council Laboratories ("SRC") in Saskatoon. SRC analyses for uranium using the fluorimetric method using a Jarrel Ash Fluorimeter with a detection limit of 0.2 ppm U. Base metals are analyzed using ICP methods using a Perkin Elmer Optima 3000 DV. SRC includes standards and blanks interspersed amongst samples.

16 DATA VERIFICATION

16.1 Midwest

16.1.1 Check Assays

16.1.1.1 Drilling Programmes 1978 to 1981

Wray (1982) summarized the results of 157 check assays carried out on core drilled between 1978 and 1981. Samples for check assays were divided into two groups: 1) Low-grade samples reporting less than 5.0% U_3O_8 and 2) High-grade samples reporting greater than 5.0% U_3O_8 .

The umpire laboratories for check assays were conducted by X-Ray Assay Laboratories of Toronto during 1978 and 1979 and at Bondar Clegg Laboratories of Vancouver in 1980 and 1981.

Wray concluded that:

- "The 73 high-grade samples showed Loring to be slightly higher (0.8%) on average than the umpire lab. The graphed results showed that the majority of the check assays were within 5% of the original, with no apparent bias.

- The 84 low-grade samples showed a much larger variation than the high-grade samples. On average the Loring samples appear to be about 5% lower than the checks. The graphed results show that individually the samples vary considerably more than 5%."

The writers have examined the graphs referenced above and note that the majority of check assays reporting greater than 1.0% U_3O_8 are within 10% of the original assay with no apparent bias. Samples reporting less than 1.0% U_3O_8 display a wider variation and that the umpire laboratories tended to report higher grades. The writers also note that material of this grade will have no significant impact on resource or reserve estimates.

16.1.1.2 PQ Drill Holes

Wray (1981) reported that 30 check assays on the original 300 assays from the PQ series of holes indicated that the original assays could have over reported the U_3O_8 by up to 10%. He recommended that the assays not be used until all of the samples were re-assayed. Wray reports that at the time of writing the referenced memorandum the samples were in the laboratory and that he was waiting for the results. The writers have assumed that any required adjustments were made.

16.1.2 Current Database Audit

The writers compared the assays for all elements in the digital database with assay certificates from nine holes. For seven of the holes only intersections within and adjacent to zones of economic interest were checked. For one hole all assays recorded throughout the length of the hole were compared with the assay certificates. With the following exceptions no major problems were encountered.

- The lost core convention (Section 13.6.1) was applied inconsistently in five cases in three of the nine holes examined.
- In hole 529 two sections of lost core, within a high-grade intercept were recorded as 0.001% U_3O_8 (equivalent to nil assay).
  In holes 42 and 609 the values for U_3O_8 were derived from averages of adjacent and recovered core assays or the value for the recovered section (which was higher than adjacent values).

  The writers note that the number of inconsistencies were minor and tended to cancel each other out.

- Holes 527 and 529 had numerous (over 20%) unexplained differences between database and assay certificates for all elements from sections remote from the mineralization of interest.
  The writers note that these unexplained differences were all located remote from intersections with economic mineralization, were very low-grade and will not have any effect on the reserve or resource estimates presented in this report. The writers recommend however, that the possibility of errors in portions of the database should be addressed in the event that geochemical or geostatistical studies are carried out which may rely on data from low-grade sections of drill holes.

16.2 Sue A,B, E and McClean

Kilborn (1990) reported the following check assay procedures:

> "Control samples are routinely assayed by Barringer or with each batch of core samples analyzed.
>
> Minatco has periodically verified portions of the uranium assay data base by cross-checking assays with other laboratories and by assaying duplicate samples at the Barringer laboratory. On average assay variability in grades exceeding 0.10% U_3O_8 is within 10 percent with the Barringer value being generally lower than that of other labs.
>
> Assays performed at Inco's laboratory were done using an X-ray fluorescence (XRF) method. To check on the accuracy of the results obtained by Inco's assay laboratory, all samples collected from "ore grade" sections of the McClean diamond drill holes completed by the end of the 1979 winter programme were also assayed by XRAL Laboratories (XRAL), in Don Mills, Ontario. The XRF method was also used by XRAL. A total of 271 samples were sent for check assaying.
>
> The results from the two laboratories showed variations within the limits of laboratory sensitivity. The largest variation occurred in the sections with the lowest uranium concentrations. Having established the reliability of Inco's XRF assay results, this method and Inco's laboratory were used for all future drill programmes prior to Minatco becoming operator of the Wolly Joint Venture project. No additional check assays were performed by outside laboratories. Inco's laboratory did, however, routinely carry out internal checks, but documentation showing results are unavailable.

Drilling since approximately 1990 did not include any external checks on the assay laboratories.

16.2.1 Current Database Audit

The writers compared the assays within the assay data base for each deposit against original assay certificates for randomly selected holes as indicated in Table 8. All assays in the database were verified.

Table 8 : Holes selected for assay database audit McClean Property

Sue A	Sue B	Sue E	McClean
CS 13	CS 44	ES417	
CS 14	CS 45	ES426	MC64
CS 18	CS 46	ES427	C175
CS 22	CS 48	ES457	
CS 24	CS 112	ES598	
CS 28	CS 114	ES608	
CS 67	CS 125	ES621	
CS 78	CS 179	ES622	
CS 87			
CS 92			
CS 176			

The process of verifying the assays was complicated by several factors. 1) The formal assay and drill-hole databases do not include sample numbers which can be compared with assay certificates. 2) Written drill logs since approximately 1990 do not include sampling information 3) hard copies

of assay certificates from SRC for Sue E drilling were not always retained. The writers located a separate, informal database which did provide sample numbers with corresponding locations in the hole and obtained copies of the assay certificates directly from the SRC laboratory.

17 ADJACENT PROPERTIES

The property immediately surrounding the McClean Property, on three sides, was part of the Wolly Joint Venture which received considerable exploration effort. The McClean Property was carved out of portions of the Wolly Joint Venture properties by the participants.

The property south of the McClean Property is held by Cameco. The Sue E deposit extends onto this property.

18 MINERAL PROCESSING AND METALLURGICAL TESTING

18.1 JEB Mill

A description of the JEB Mill is contained in Section 23.2.1

Table 9 illustrates the metallurgical balance of the JEB mill for 2002 when a blend of ore from Sue C and the JEB pit were processed. (McClean Joint Venture, 2002a and 2002b)

Table 9 : JEB Mill Metallurgical Balance for 2002

Mill Stream	Quantity and Units	Assay	Kg U	Distribution U%
Leach feed	121,979 t.	1.94 %U	2,371,925	100.00
Leach solid tailings (loss)	121,979 t.	0.032 %U	39,112	1.65
CCD #6 U/Flow (loss)	193,852 m^3	0.042 g/L	8,178	0.34
S.X. (loss)	200,976 m^3	0.001 g/L	217	0.01
Yellowcake ppt. liquid (loss)	34,116 m^3	0.007 g/L	225	0.01
Molybdenum Eluate (loss)	-	-	580	0.03
Total Losses U	-	-	48,312	2.04
Recovery % U	-	-		**97.96**

18.2 Metallurgical Testing

18.2.1 Sue C and JEB

The JEB mill started operations in 1999 and has successfully processed ore from these deposits since that time. The metallurgical balance for 2002 is presented in Table 9.

18.2.2 Sue A and B

Leach tests have been conducted on a blend of Sue A and Sue B drill core by Service d'Etudes de Procédés et Analysis ("SEPA"), part of the Cogema Group and they leached very similarly to the JEB and Sue C ores currently being processed (SEPA, 1998). They are fully leached in 8 hours and the extraction was 98%. The overall recovery is expected to be 97%.

18.2.3 Sue E

The metallurgical test work on drill core is currently being carried out at SEPA laboratories and extractions of over 99% have been obtained and the overall recovery is estimated at 98.0%. It is possible that longer leach times than the other Sue ores may be required and it may be necessary to expand the leaching circuit before the Midwest ore is treated, but this would not increase total capital expenditures which are expected to be $12 to $15 million.

18.2.4 McClean North

The McClean North deposit is not currently scheduled for development or milling. The writers have assumed that milling would occur subsequent to the milling of material from Midwest, concurrently with Cigar Lake or other ore, but in a separate circuit from the Cigar Lake ore.

Metallurgical work is documented in Kilborn (1990). Metallurgical test work was carried out by Ortech, Total Jovac and Lakefield, concurrently with early work on JEB, Sue A, B and C, using composites of drill core. The most important results established by the test work concerning McClean ore were:

- Assays of samples show the arsenic and nickel content of McClean ore are low. This will generally lead to faster leaching, lower oxidising agent and acid consumption and lower tailings treatment costs.
- The leaching extraction for all samples was between 98% and 99%.
- The McClean uranium leached quickly and six hour retention was chosen.
- The ore did not require high-temperature leaching and 55° C was selected.
- Acid and oxidising agent consumption was moderate.
- The bond work index was about the same as other deposits in the area.
- Settling tests for Counter Current Decantation did not indicate any problems with McClean ore.
- The dynamics and recoveries for the organic extraction were good.

Taking all of the above information into account the writers would expect the McClean ores could be processed in the JEB Mill in the same manner as the JEB and Sue C ores currently being milled, with 98% recovery.

Laboratory tests with Midwest and Cigar Lake ore indicate that leaching the two ores together would lead to some precipitation of the Cigar Lake uranium. As Midwest ore requires much longer leaching time than McClean ore there could be similar reaction if they were leached in the same circuit. Therefore it would be preferable if the two ores were not leached together.

18.2.5 Midwest

The Midwest deposit is scheduled to be milled from 2010 to 2017 at the same time as Cigar Lake ore is being processed.

The deposit was discovered prior to 1990 and has been extensively tested since then. The tests have shown that good extractions could be obtained with sulphuric acid. However, the leaching conditions in the early tests were different than is now planned for the JEB mill (Melis Engineering, 1990).

In August 1998 leaching tests were carried out at SEPA to design the JEB mill expansion. The test showed that 99.5% uranium extraction could be obtained using the following conditions (SEPA,1998a):

- leach time 24 hours
- acid addition 120 kg/tonne
- free acid at end of test 25 g/L
- oxidation, 0_2 at 2 bar pressure
- redox - 470 millivolts

The ores currently being treated in the JEB mill and other Sue ores only require 8-hour leaching; however, the Midwest deposit requires longer leaching time and 24 hours has been selected as optimal. If the ore is leached longer, reprecipitation starts and lowers recovery.

Leaching tests have also been conducted on Cigar Lake ore by itself and in blends with Midwest. These tests show that Cigar Lake ore requires only 8 hours leaching time, and if it was blended with Midwest material and leached for 24 hours, reprecipitation of the Cigar Lake uranium would start. Therefore separate leaching circuits have been included in the design (SEPA, 1998a).

Leaching the custom ore separately from the McClean or Midwest material will also make the metallurgical accounting more accurate and simpler as solutions can be measured and sampled better than solids.

When the Midwest and Cigar Lake ores are being processed concurrently, the ores will be leached separately and the Cigar Lake leached slurry will be fed into its own primary thickener. The thickener overflow solution will be trucked to the Rabbit Lake mill for further treatment and the thickener underflow slurry will be mixed with the Midwest leach slurry and fed together to the counter current decantation circuit. Settlement tests were conducted at the SEPA laboratory on blended leach slurries using the Eimco hi-rate thickener procedures and calculation. These tests showed that blending the slurries led to no difficulties and that the counter current decantation circuit with the addition of the cyclone circuit will handle the scheduled ores (Amec E and C Services, 2002 and SEPA, 2002).

Considering the high leach recoveries in the tests and the low solution losses in the plant, it is estimated that the Midwest recovery will be 98%.

The main mineralogical difference between the Midwest deposit and the other ores to be treated in the JEB mill is the higher arsenic content. Additional tests were carried out in 2000 and 2001 addressing potential issues due to the arsenic content. These tests were carried out on drill core from holes specially drilled for this purpose. This core was sealed and frozen with liquid nitrogen. (SEPA, 2001). The arsenic is partially leached with the uranium and would cause unacceptable

water quality discharges if it were not precipitated in the tailings neutralization and the water treatment plant. Ferric sulphate is used in combination with lime and air to precipitate arsenic, predominantly as the mineral scorodite (Fe As 0_4•2 H_2O) which is very insoluble and stable (Cogema and Cigar Lake Mining Corporation, 2001). Currently, the ferric sulphate used is made in Quebec and transported in a solution. The quantities required for milling Midwest are much higher and current purchasing arrangements would be very expensive. Cogema is investigating making ferric sulphate solution at the site from IPSCO mill scale (Phoenix, undated). There is an excess of this scale available in Saskatchewan and it contains a large amount of iron oxides. The process would consist of dissolving the scale in sulphuric acid that would produce a mixture of ferrous and ferric sulphate. The ferrous would then have to be oxidized to the ferric form. There are established chemical methods (SEPA, 1999) of doing this. It is estimated that the cost of ferric sulphate for the Midwest project produced in this way would be about $0.88 per pound of U_3O_8 and a cost of $1.00 has been used in the operating cost estimates included in this report.

19 MINERAL RESOURCE AND MINERAL RESERVE ESTIMATES

19.1 Sue A

19.1.1 Criteria and Assumptions

19.1.1.1 Geological Model

The geological model used for the Sue A Deposit is believed to be consistent with the model previously used by Denison and Cogema. The Sue A Deposit is located on a 4.5 kilometre long, north-south mineralized trend, named the Sue Trend. For the most part, the uranium mineralization is found to be dipping at approximately 15° to the west above an unconformity. The preferential site for the precipitation of uranium is along northeast-trending, steeply-dipping faults.

The unconformity dips gently to the west at about 5° . It is cut and offset by two major east-west faults and the above mentioned north-south fault. It appears as if the east-west faults are both syn and post mineralization.

Often the sense of movement of the block faulting (horst and graben) is west side down-dropped.

19.1.1.2 Area of influence

Both exploration and definition drilling has been performed in a vertical orientation. The drill spacing is approximately 10 metres apart, on section, with the section lines being 12.5 metres apart. The drill spacing and the attitude of this deposit warrant a classification, for material which occurs within the writers' Whittled® pit (See Section 19.1.2.1), as proven and probable.

19.1.1.3 Cut-off grades

A loose cut-off grade of approximately 0.1% U_3O_8 was used for this deposit. The cut-off grade was kept loose to allow for the correlation of a three-dimensionally-coherent shape, recognizing that some in-situ variability does exist and that any one assay should be considered "suspect". While these cut-off grades were not based on hard economics, they are "in the ball park" and for the most part, appear to represent a natural break in the assay population. Where appropriate, the writers included narrow intersections of internal waste to maintain a smooth mineable outline. As well, material that was numerically above cut-off grade, but did not fit the interpretation of the

developing geometry was not included as "ore". In addition, isolated blocks of mineralization that did make the cut-off criteria but did not correlate on at least two drill sections were not counted as "ore".

19.1.1.4 Minimum Thickness

The Main Zone ore thickness varied from 2.5 metres to 11 metres with an average of about four metres. The thickness of the hanging-wall zone ranges from 2.5 metres to 4.5 metres with an average of about three metres. This zone is located between sections 1637.5 N and 1675 N, where it appears to be (dextrally?) offset by an E-W fault. The hanging-wall zone may represent the southern tail of a missing zone which should, based on periodicity, be located between Sue A and Sue B.

19.1.1.5 Dilution

It is assumed that a smaller fleet of equipment will be used to mine the ore than will be used for the waste. The writers estimate that (open pit) mining dilution on the Sue At Deposit will be about one metre on all sides of the deposit, which totals 55%.

19.1.1.6 Specific Gravity

Appendix 2: Specific Gravity Measurements and Estimates, summarizes the methods used in the past for estimating specific gravity at Sue A. Previous operators (Kilborn, 1990) have estimated specific gravity based on the following formula.

$$SG_c = 1/(0.452-(0.00326 \times *(\%U_3O_8 + \%Ni + \%As)))$$

where SG_c = estimated specific gravity.

The writers understand that this formula was developed on the basis of empirical relationships between measured specific gravity and U_3O_8 assays. The writers have not examined source documents or data concerning these estimates but note that they are reasonable for the rock type and mineralization.

The writers have estimated the specific gravity for Sue A using the same formula as that used by Kilborn.

19.1.1.7 Bulk Density

The writers have assumed that bulk density will be equal to specific gravity.

19.1.1.8 Database

The immediate Sue area has been drilled with holes and 2,308 assays recorded in the data base. Of the assays in the database, 780 report U_3O_8 assays of 0 or 0.001 which represent unassayed intervals or nil assays. Approximately 395 samples with assays in 29 holes are located within the wire-frame interpreted by the writers to have potential for economic exploitation.

19.1.1.9 Grade Distribution

Frequency and cumulative frequency distributions together with descriptive statistics for the U_3O_8 within the ore model are contained in Appendix 3. The cumulative frequency plot shows an

inflection at 10% U_3O_8 at the 95th percentile. An inspection of the drill sections indicates good clustering , both in the hole and adjacent holes, of assays above 10% U_3O_8 .

19.1.1.10 Correlation Methodology

The mineralization was correlated on 12.5 metre cross-sections and one contoured inclined section/isopac. The object of the exercise was to define the three dimensional boundaries of the mineralized zones. These shapes were then "digitized" into a wire-framed solid model in cross-sectional slices using GEMCOM® software to create a solid model.

19.1.1.11 Resource Estimation Methodology

A block model was created constrained within the wire-frames inferred from the drill information. Since our estimate was only meant to be a rapid audit, the main solid was not sub-domained into a high-grade core and a low-grade envelope. An inverse-distance cubed (ID3) algorithm was used to prevent the smearing of high grades into the low-grade areas.

Variograms were used to determine the search ellipse for grade projection and categorization. Details are contained in Appendix 6.

Volume to tonnage conversion incorporated a tonnage factor that averaged 2.37 as was described above.

19.1.1.12 In-Place Estimate of Mineralized Rock

Undiluted and diluted "in-place" estimates of mineralized rock, which do not take into consideration potential economics of exploitation are illustrated in Table 10.

Table 10 : Sue A In-Place Estimate of Mineralization

Undiluted In-Place Estimate of Mineralized Rock				
Tonnes	**U_3O_8 (%)**	**Ni (%)**	**As (%)**	**Dilution %**
40,215	1.721	3.86	4.84	
In-Place Dilution				
22,033	0.040	0.35	0.36	54.8%
Diluted In-Place Mineralization				
62,248	1.126	2.62	3.254	

Figure 18 and Figure 19 illustrate the Sue A wire-framed model relative to drill holes and a pit shell.

19.1.2 Sue A Reserve and Resource Estimate

19.1.2.1 Whittled® Pit Shell

The writers have identified the economically-exploitable portion of the mineralization using Whittle® software to generate an optimized pit shell. The parameters for the pit shell are contained in Appendix 4 and include:

- pit slopes of 43° on the east and southwest wall and 52° on the northwest wall (most of the southwest wall will day-light in the Sue C pit)
- mining costs for ore of $5.08 per tonne and for waste and overburden of $2.96 per tonne.
- an allowance for semi-variable costs of $0.80 per tonne mined which covers 66% of such costs.
- processing costs of $4.67 per pound of U_3O_8 as identified in the section on metallurgy and processing (Section 23.2).
- an allowance of $2 per pound of U_3O_8 for royalties and product shipping costs.
- a uranium price of $Cdn 22 per pound.

The writers have assumed that a designed pit will approximate the Whittled® pit since access is facilitated by the adjacent mined-out Sue C pit.

19.1.2.2 Sue A Reserve and Resource Estimate

The writers' estimates of reserves and resources in the Sue A deposit are summarized in Table 11.

Table 11 : Sue A Reserve Estimate

	Undiluted		Dilution		Diluted		
Reserves	**Tonnes x 1,000**	**Grade U_3O_8 %**	**Tonnes x 1,000**	**Grade U_3O_8 %**	**Tonnes x 1,000**	**Grade U_3O_8 %**	**U_3O_8 lbs x 1,000**
Proven	9.2	1.87	5.1	0.04	14.3	1.23	386
Probable	27.7	1.82	15.2	0.04	43.0	1.20	1,126
Total Proven and Probable	**37.0**	**1.83**	**20.3**	**0.04**	**57.2**	**1.20**	**1,511**
Waste and Overburden					2,000		
Stripping Ratio					35		

It should be noted that the writers have not considered costs, which might be required, of relocating surface ponds and other infrastructure that appear to be immediately to the north of the planned pit.

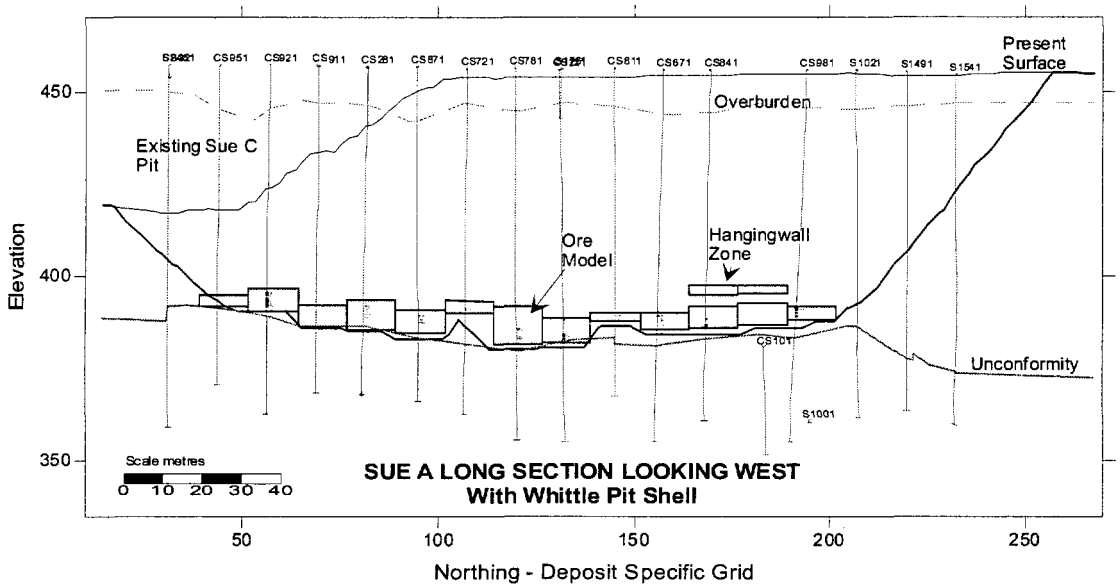

Figure 18 : Sue A Long Section With Whittled® Pit Shell

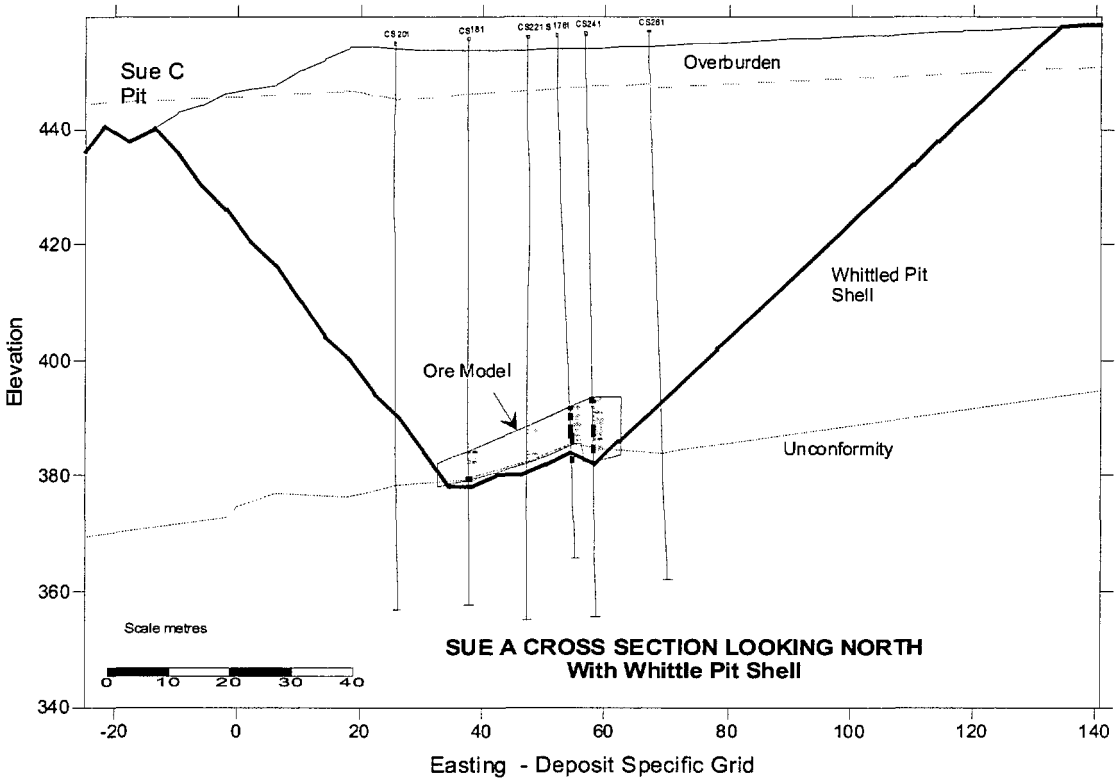

Figure 19 : Sue A Cross Section with Whittled® Pit Shell

19.2 SUE B

19.2.1 Criteria and Assumptions

19.2.1.1 Geological Model

The geological model used for the Sue B deposit is consistent with the model previously used by Denison Energy and Cogema. Sue B is located at and above the unconformity, along the mineralized Sue trend. This lineament is believed to have been a conduit for the movement of uranium and base metal-bearing solutions.

For the most part, the uranium mineralization is concentrated in horizontal or shallow west-dipping enriched zones. The conduits appear to be one or two steeply-dipping faults that make up the above mentioned Sue trend. Some uranium mineralization is noted in the western-most fault.

Since the majority of the diamond drill holes on this deposit are vertical it is often difficult to determine the true thickness and dip of the mineralization carried within the vertical dipping lineament. A minimal number of inclined holes, drilled from east to west, would have been useful.

Often the sense of movement of the block faulting (horst and graben) is west side down dropped.

19.2.1.2 Area of Influence

Both exploration and definition drilling has been performed in a vertical orientation, with the exception of a few inclined holes. The drill spacing is approximately 10 metres by 12.5 metres. Since the bulk of the mineralization in this zone is clearly within continuous flat-lying lenses, half of which are associated with a regolith/unconformity, correlation is straightforward. The existing correlation is sufficient to classify the reserves within the writers' pit, as proven and probable as detailed in Table 13.

19.2.1.3 Cut-off grades

A loose cut-off grade of 0.1% U_3O_8 was used. The cut-off grade was kept loose to allow for the correlation of a three-dimensionally-coherent shape, recognizing that some in-situ variability does exist and that any one assay should be considered "suspect". While these cut-off grades were not based on hard economics, they are "in the ball park" and do appear to represent a natural break in the assay population.

19.2.1.4 Minimum Thickness

The true thickness of the vertical structure likely varies from 0.5 metres to as much as one to two metres. The true thickness of the inclined to horizontal mineralized zones is 10 metres in the upper horizon and four metres in the lower horizon.

19.2.1.5 Dilution

It is assumed that a smaller fleet of equipment will be used to mine the ore than will be used for the waste. The writers estimate that (open pit) mining dilution on the Sue B deposit will equate to a 1.5 metre skin, totalling approximately 60%. This dilution estimate could be reduced if care is taken in the narrow and inclined ore blocks.

19.2.1.6 Specific Gravity

Appendix 2: Specific Gravity Measurements and Estimates, summarizes the methods used in the past for estimating specific gravity at Sue B. Cogema and previous operators (Kilborn, 1990) have estimated specific gravity based on the following formula:

$$SG_c = 1/(0.452\text{-}0.00326 \times (\%U_3O_8))$$

The writers understand that this formula was developed on the basis of empirical relationships between measured specific gravity and U_3O_8 assays. The writers have not examined source documents or data concerning these estimates but note that they are reasonable for the rock type and mineralization.

The writers have estimated the specific gravity for Sue B using the same formula as that used by in previous studies.

19.2.1.7 Database

The complete Sue B database consists of 68 holes and 2,829 assay entries. A total of 652 of the U_3O_8 assays are recorded as zero or 0.001% which are assumed, by the writers, to represent unassayed sample intervals or nil U_3O_8 assays. The resource estimate is based on 770 samples in 25 holes within the interpretation of the ore model.

19.2.1.8 Grade Distribution

Frequency and cumulative frequency distribution graphs, together with descriptive statistics for the samples within the interpretation of the ore model are contained in Appendix 3. The Sue B deposit does not contain a high-grade population.

19.2.1.9 Correlation Methodology

The mineralization was correlated on 12.5 metre cross-sections using a model adopted from the other Sue deposits. The object of the exercise was to define the three-dimensional boundaries of the mineralized zones. These shapes were then "digitized" into a wire framed solid model in cross sectional slices using GEMCOM® software to create a solid model.

19.2.1.10 Resource Estimation Methodology

A block model was created, constrained within the wire-frames inferred from the drill information. An ID3 algorithm was used to prevent the "smearing" of high grades into the low-grade areas.

Variograms were produced for each of the upper and lower horizon and used to determine the search ellipse for grade projection. Details are contained in Appendix 5.

Volume to tonnage conversion incorporated a tonnage factor that averaged 2.22 as described above.

19.2.1.11 In-Place Estimate of Mineralized Rock

Undiluted and diluted estimates of mineralized rock, which do not take into consideration potential economics of exploitation are illustrated in Table 12.

Table 12 : Sue B In-Place Estimate of Mineralization

ZONE	TONNES	U_3O_8 (%)	Ni (%)	As (%)	Dilution %
		Undiluted In-Place Mineralization			
UPPER	55,053	0.704	1	1	
LOWER	33,172	0.806	2	3	
TOTAL	88,225	0.742	1	2	
			Dilution		
UPPER	29,681	0.029	1	1	53.9%
LOWER	33,618	0.032	1	1	101.3%
TOTAL	63,299	0.031	1	1	71.7%
		Diluted In-Place Mineralization			
UPPER	84,734	0.468	1	1	
LOWER	66,790	0.416	1	2	
TOTAL	151,524	0.445	1	1	

19.2.2 Sue B Reserve and Resource Estimate

19.2.2.1 Optimized Pit Shell and Preliminary Designed Pit

The writers have identified economically exploitable mineralization through an iterative process involving the use of Whittle® software to identify optimized pit shells and the preliminary design of a pit with haul roads.

The parameters for the optimized pit shell, using Whittle® software are contained in Appendix 5. These parameters include:

- pit slopes which account for a haul road, 16-metres wide (compatible with small equipment including 35 to 50 tonne trucks and 3 to 4-cubic metre shovels.)
- direct mining costs for waste of $2.96 per tonne and for ore of $5.08 per tonne.
- an allowance for semi-variable costs, including administration, site services and site support of $1.30 per tonne, which covers 85% of such anticipated charges.
- processing costs of $4.67 per pound of U_3O_8 as identified in Section 23.2
- an allowance of $ 2 per pound for royalties and shipping costs.
- a uranium price of $Cdn 22 per pound U_3O_8 .

The ultimate pit slopes used by Cogema range from 31.7° (north wall) to 39.1° (south wall) in a 75-metre-deep pit. The writers have noted that the nearby Sue C pit attained actual pit slopes ranging from 42° to 47°, over a vertical height of 135 metres (the east wall of the pit was originally designed to have slopes of greater than 50° but failed to approximately 47°). The writers have assumed Whittle® slopes of 45° and final crest to final toe slopes (including ramps) of 38° to 47° for the Sue B pit.

A preliminary pit was designed, with haul roads, which was accommodated within the optimized pit shell.

19.2.2.2 Sue B Reserve and Resource Estimate

The writers have based the estimate of reserves and resources at Sue B on the preliminary designed pit described above. The reserve and resource estimate is summarized in Table 13.

Table 13 : Sue B Reserve and Resource Estimate

	Zone	Tonnes Diluted x 1,000	Grade U_3O_8 %	U_3O_8 lbs x 1,000
Proven	Upper	5.5	0.39	47.1
	Lower	9.0	0.65	129.1
	Subtotal	14.5	0.55	176.2
Probable	Upper	78.4	0.48	823.0
	Lower	14.0	0.80	246.3
	Subtotal	92.4	0.53	1,069.2
Total Proven and Probable		**106.9**	**0.53**	**1,245.4**
Overburden		330.0		
Waste		1,326.0		
Waste to Ore Ratio		15.5		

The proven and probable reserve estimate averages 1.6% Ni and 1.8% As.

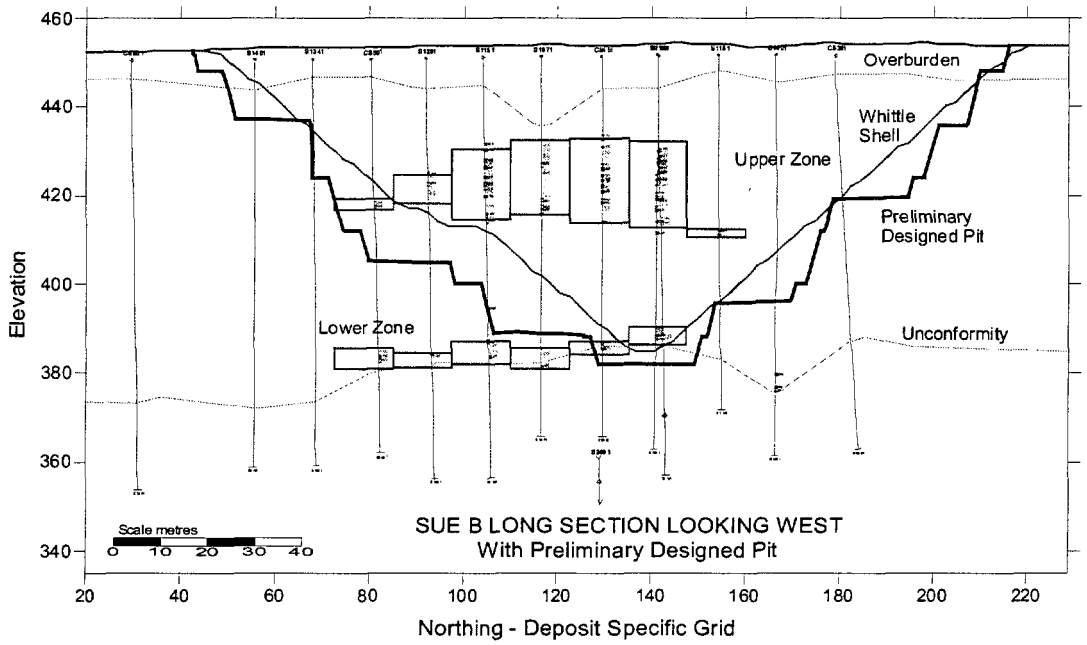

Figure 20 : Sue B Long Section With Preliminary Designed Pit

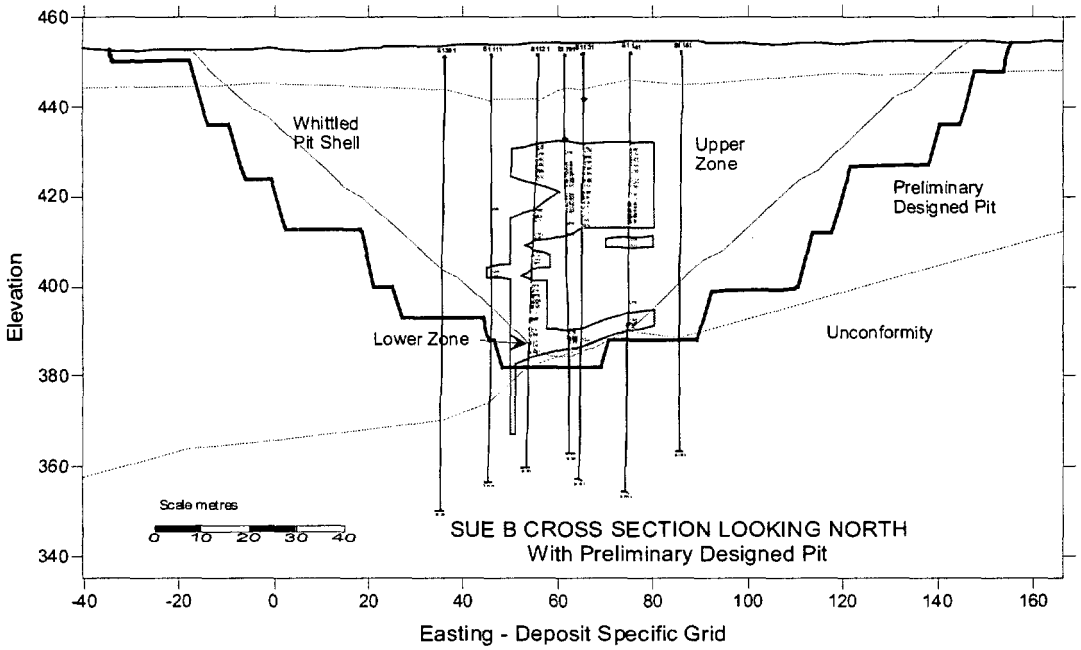

Figure 21 : Sue B Cross Section With Preliminary Designed Pit

19.3 SUE E

19.3.1 Criteria and Assumptions

19.3.1.1 Geological Model

The geological model used for the Sue E deposit is consistent with the model previously used by Denison and Cogema. The Sue E Deposit is located along a 4.5 kilometre-long mineralized trend, named the Sue Trend. Sue E is located completely within basement rocks, at the south end of this trend at or below the unconformity. This lineament is believed to have been a conduit for the movement of uranium and base metal-bearing solutions.

For the most part, the uranium mineralization is found either in steeply-dipping zones along two steeply-dipping faults (East and West Fault) or in less than 45° west-dipping enriched zones that leaked into basement rocks on the east side of the main lineament.

Since the majority of the diamond drill holes on this deposit are vertical it is often difficult to determine the true horizontal width of the mineralization carried within the vertically-dipping structures. A few inclined holes have been drilled from east to west. While these holes are useful in outlining the width of the vertical structures on some sections, they are not too useful in outlining

the frequent west-dipping pods and zones. The writers would have preferred that 1/3 of the drilling be vertical, 1/3 inclined from west to east and the final 1/3 be drilled from east to west.

Often the sense of movement of the block faulting (horst and graben) is west side down-dropped.

19.3.1.2 Area of influence

Both exploration and definition drilling have been performed in a staggered, vertical orientation, with the exception of a few inclined holes. The drill spacing varies from approximately 10 metres by 12.5 metres (or closer) to 10 metres by 25 metres. While this spacing is relatively tight, the attitude of the holes and the narrow width of the mineralization (at times less than 10 metres) makes correlation somewhat subjective. The existing correlation is sufficient to classify the bulk of the mineralization within the writers' pit, as proven and probable reserves. In addition there are 24 thousand tonnes grading 0.78% U_3O_8 which have been categorized as inferred.

19.3.1.3 Cut-off grades

A loose cut-off grade of approximately 0.05% U_3O_8 was used to define the mineralized envelope. Potentially economic deposits were then further defined using a 0.1% U_3O_8 cut-off grade. The cut-off grade was kept loose to allow for the correlation of a three-dimensionally-coherent shape, recognizing that some in-situ variability does exist and that any one assay should be considered "suspect". While these cut-off grades were not based on hard economics, they are "in the ball park" and do appear to represent a natural break in the assay population. Where appropriate, the writers included narrow intersections of internal waste to maintain a smooth mineable outline. As well, material that was numerically above cut-off grade, but did not fit the interpretation of developing geometry was not included as "ore".

19.3.1.4 Minimum Thickness

The true width of the vertical structure likely varies from less than 1 metre to possibly as much as 6 metres. The true thickness of the wide, inclined zones ranges from 4 to 15 metres.

19.3.1.5 Dilution

It is assumed that a smaller fleet of equipment will be used to mine the ore than will be used for the waste. The writers estimate that (open pit) mining dilution for all zones in the Sue E deposit will average 118% if a 2-metre wide skin of waste is mined with the ore.

19.3.1.6 Specific Gravity

Grove (2003a) reported that the following formula was used by Cogema for estimating specific gravity in mineralized sections at Sue E: (See also Appendix 2: Specific Gravity Measurements and Estimates)

$SG_c = 1/(0.437 - 0.0026*(U_3O_8\% + Ni\% + As\%))$

where SG_c = estimated specific gravity.

The writers understand that this formula was developed on the basis of empirical relationships between measured specific gravity and U_3O_8 assays in hole 457 (Corman, 1992) . The writers have not examined source documents or data concerning these estimates but note that they are reasonable for the rock type and mineralization.

The writers have estimated the specific gravity for Sue E using the same formula as that used by prior operators.

19.3.1.7 Bulk Density

The writers have assumed that bulk density is equal to specific gravity.

19.3.1.8 Database

The complete Sue E database consist of 286 drill holes and 7,276 sample intervals. A total of 1,815 of the sample intervals report zero or 0.001% U_3O_8 which are assumed to represent unassayed intervals or nil U_3O_8 assays. Approximately 1,864 samples in 59 drill holes occur within the interpretation of the ore model.

19.3.1.9 Grade Distribution

Frequency distribution and cumulative frequency distribution graphs for samples which occur within the interpretation of the ore model, together with descriptive statistics are contained in Appendix 3. The Sue E deposit statistics resemble those for Sue A, although the latter possesses more assay intervals in the 2 to 10% range.

19.3.1.10 Correlation Methodology

The mineralization was correlated on 12.5 (or greater) metre cross-sections and one vertical longitudinal slice. The object of the exercise was to define the three dimensional boundaries of the mineralized zones and faults. These shapes were then "digitized" into a wire framed solid model in cross-sectional slices using GEMCOM® software to create a solid model. Given the poor orientation of some of the drill holes it is recommended that any future drilling include holes drilled from west to east.

19.3.1.11 Resource Estimation Methodology

A block model was created, constrained in the wire-frames inferred from the drill information. An ID3 algorithm was used to prevent the "smearing" of high grades into the low-grade areas.

Variograms were used to determine the search ellipse for grade projection. Reasonable variograms were produced in vertical (the best range), horizontal, inclined west and inclined east orientations, reflecting the complexity of this mineralized system. Details are provided in Appendix 5.

Volume to tonnage conversion incorporated a tonnage factor that averaged 2.34 as was described in this document.

19.3.1.12 In-Place Estimate of Mineralized Rock

Undiluted and Diluted "in-place" estimates of mineralized rock, which do not take into consideration potential economics of exploitation are illustrated in Table 14.

Table 14 : Sue E In-Place Estimate of Mineralization

Tonnes	U_3O_8 (%)	Ni (%)	As (%)	Dilution %
		Undiluted		
227,826	1.479	0.836	1.411	
		Dilution		
267,868	0.063	0.257	0.359	117.6%
		Diluted		
495,694	0.714	0.523	0.843	

19.3.2 Sue E Reserve and Resource Estimate

19.3.2.1 Optimized Pit Shell and Preliminary Designed Pit

The writers have identified economically exploitable mineralization through an iterative process involving the use of Whittle® software to identify optimized pit shells and the preliminary design of a pit with haul roads.

The parameters for the optimized pit shell, using Whittle® software are contained in Appendix 4. These parameters include:

- pit slopes which account for a haul road, 24-metres wide
- direct mining costs for waste of $2.68 per tonne and for ore of $5.08 per tonne.
- an allowance for semi-variable costs, including administration, site services and site support of $0.30 per tonne, which covers 64% of such anticipated charges within the resulting Whittle® shell and 75% in the preliminary designed pit.
- processing costs of $4.67 per pound of U_3O_8 as identified in Section 23.2.
- An allowance of $2 per pound of U_3O_8 for royalties and product shipping costs.
- a uranium price of $Cdn 22 per pound U_3O_8 .

The optimized Whittle® pit shell suggests the following economic mineralization (before considering the design of a pit with haul roads.)

Table 15 : Sue E – Whittle® Pit Shell

	TONNES	U_3O_8 (%)	U_3O_8 lbs	DILUTION (%)
		Undiluted In-Place Estimate of Mineralization		
Measured	4,006	3.117	275,207	
Indicated	143,753	1.719	5,446,335	
Infrerred	15,035	1.552	514,288	
Total	162,794	1.738	6,235,831	
		In-Place Dilution		
Measured	4,711	0.063	6,541	117.6%
Indicated	169,054	0.063	234,734	117.6%
Infrerred	17,681	0.063	24,551	117.6%
Total	191,446	0.063	265,826	117.6%
		Diluted In-Place Mineralization		
Measured	8,717	1.466	281,748	
Indicated	312,807	0.824	5,681,070	
Infrerred	32,716	0.747	538,839	
Total	354,240	0.833	6,501,657	
Waste Rock	7,157,855			
Overburden	1,036,082			
Pit Total	8,548,177			
W/O RATIO	23.1			

The writers have prepared a preliminary designed pit, including haul roads, using the Whittle® shell as a guide, as a basis for the reserve estimate given in the following section. The ultimate pit slopes used by Cogema range from 33° (north) to 36° (south) in a 128-metre-deep pit. Since the actual, ultimate pit slopes for the 135 metre-deep Sue C pit ranged from 42° to 47° , the writers have used 42° in the Whittle® runs and 33° to 41° in the "designed" pits.

19.3.2.2 Sue E Reserve Estimate

The writers conclude that Sue E contains the following reserve:

Table 16 : Sue E Reserve Estimate

	Tonnes diluted x 1,000	Grade U_3O_8 %	U_3O_8 lbs x 1,000
Proven	8.6	1.49	281
Probable	320	0.78	5,519
Subtotal Proven and Probable	**329**	**0.80**	**5,800**
Overburden	1,163		
Waste Rock	8,580		
Stripping Ratio (inferred included in waste)	29.7		

The proven and probable reserve estimate averages 0.50% Ni and 0.76% As.

Table 17 : Sue E Resource Estimate

	Tonnes x 1,000	Grade U_3O_8 %	U_3O_8 lbs x 1,000
Inferred Resources	23.6	0.71	367

Search distances used for the ore categories were:

Proven (Measured)	6 metres
Probable (Indicated)	15 metres
Inferred	40 metres

Sue E is not overly sensitive to pit slope and mining cost parameters in terms of the tonnage and grade indicated above. However, optimizing the pit and minimising stripping is very sensitive to the accurate estimate of the location of mineralization at the toe and the bottom level of a designed pit. The present drilling pattern, dominated by vertical holes does not permit accurate positioning of a designed pit relative to mineralization. The writers recommend a series of angled holes, on each section, between 300-north and 400-north in order to position the toe and lower benches of a designed pit more accurately.

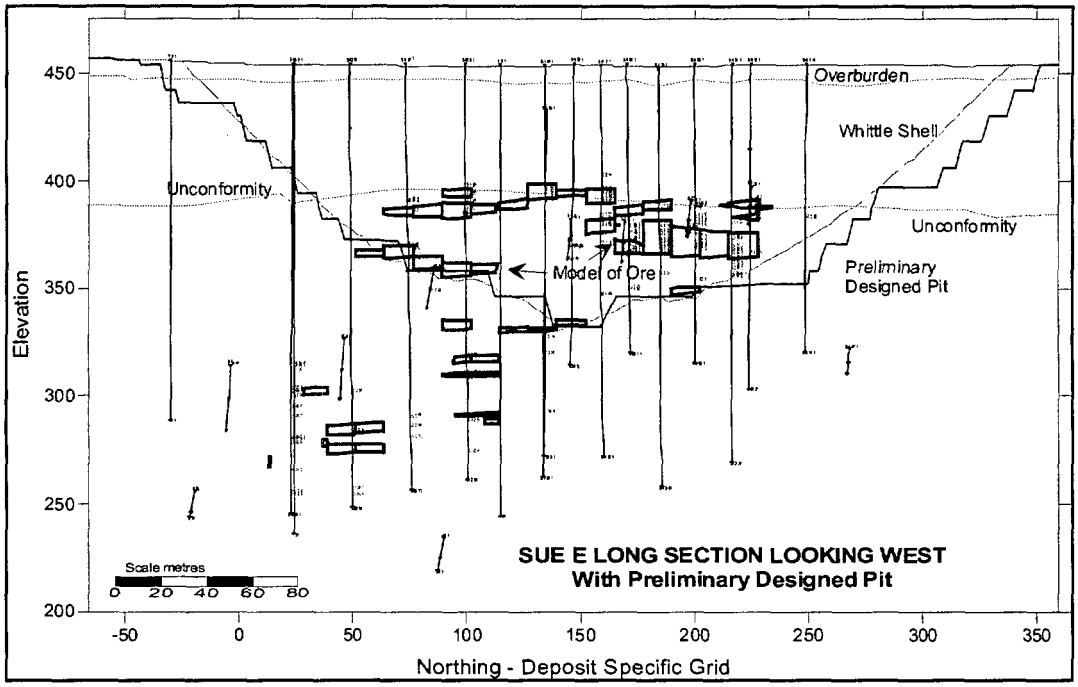

Figure 22 : Sue E Long Section with Preliminary Designed Pit

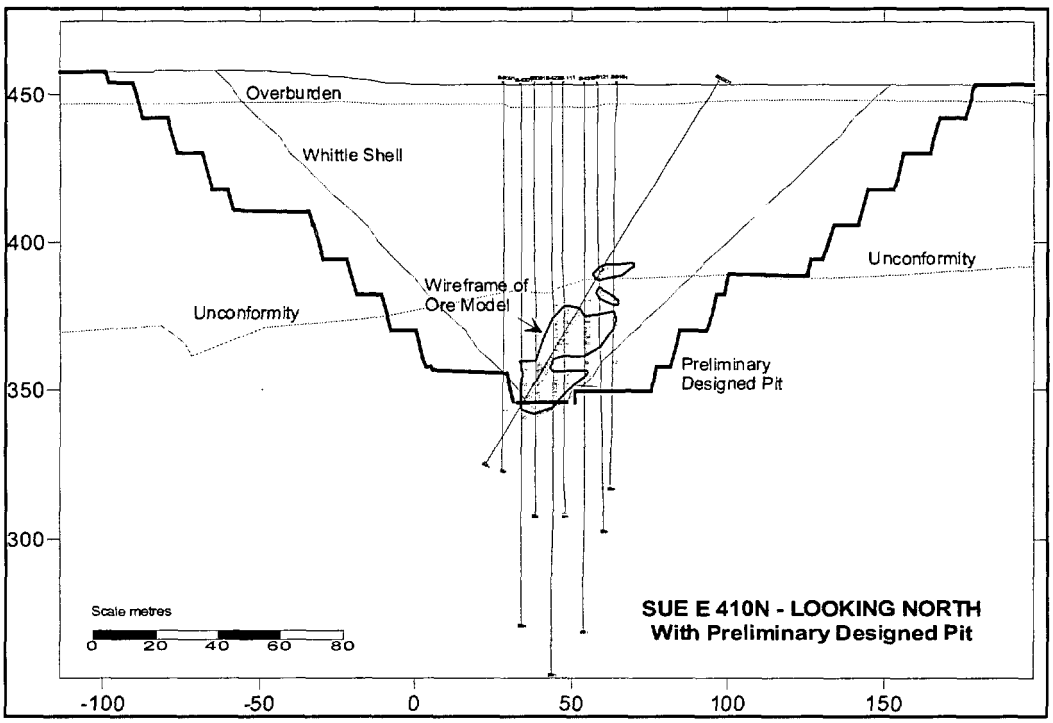

Figure 23 : Sue E Cross Section with Preliminary Designed Pit

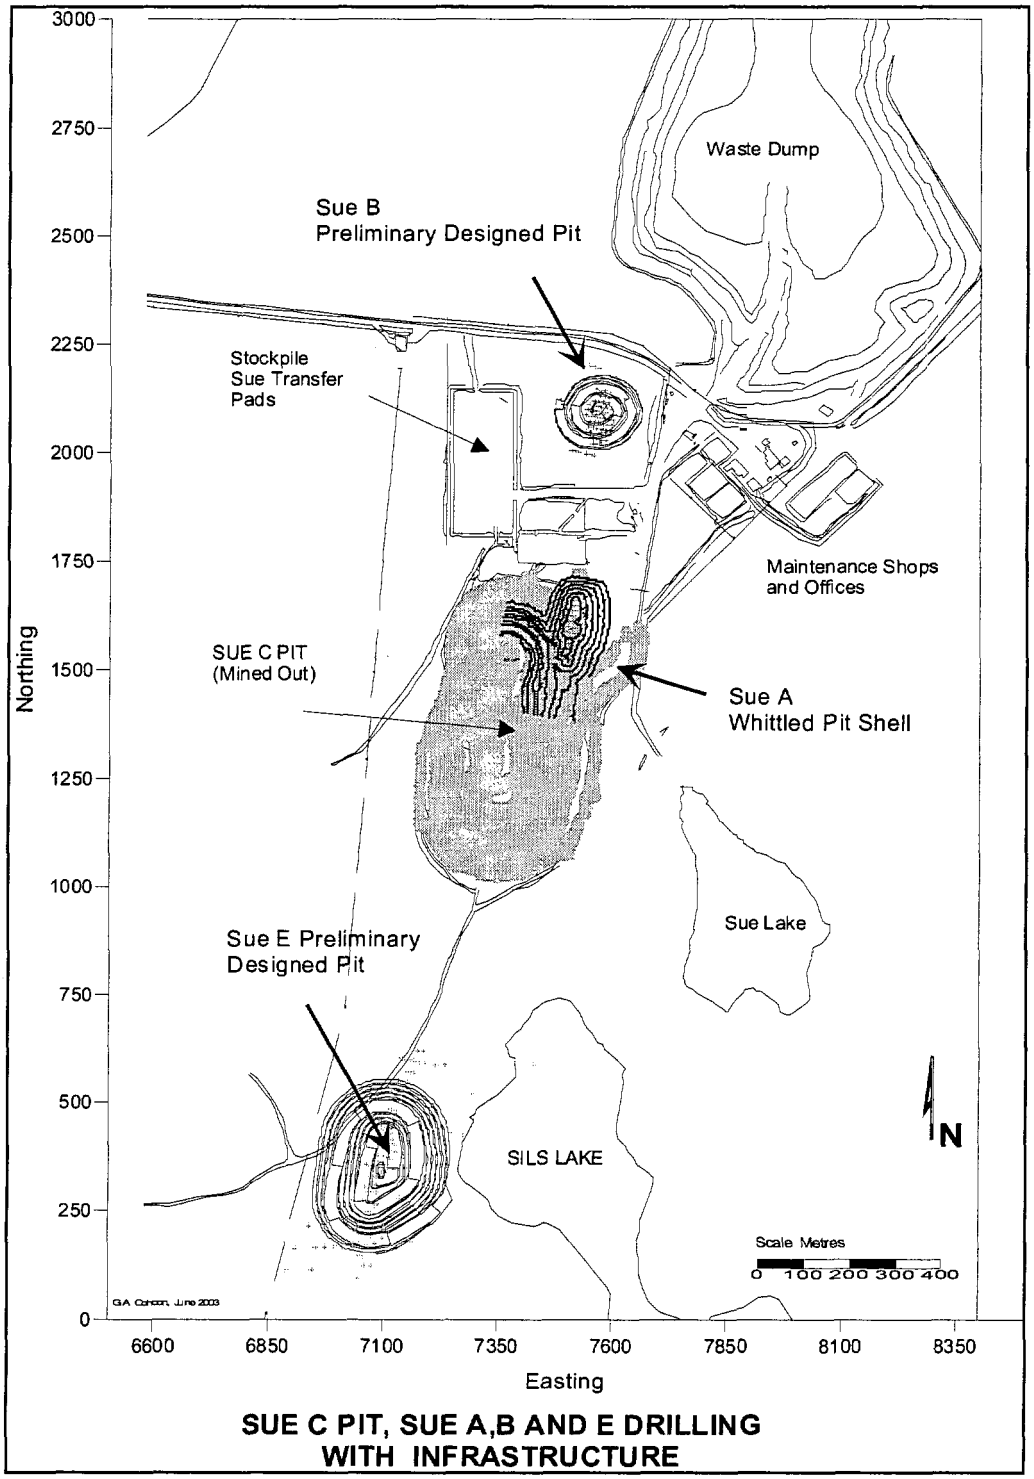

Figure 24 : Sue A, B and E Preliminary Pits

19.4 Midwest

19.4.1 Criteria and Assumptions

19.4.1.1 Geological Model

The geological model used for the Midwest deposit is consistent with the model previously used by Denison Energy and Cogema. The Midwest Deposit is located adjacent to, and to the east of a major north-south striking lineament. This lineament is believed to have been a conduit for the movement of uranium and base metal bearing solutions from the basement into overlying regolith and sandstone.

For the most part, the uranium mineralization is found to be horizontally-dipping, at or just above an unconformity. The preferential site for the precipitation of uranium in the north zone is along northeast-trending, steeply-dipping faults. To a lesser degree uranium mineralization in the south zone may be found in conjugate, northwest-striking, steeply-dipping faults. The steep fault dips have been inferred from grade-thickness plots. The trend of these faults has been supported by mapping in a cross-cut located at approximately 7760 north. Unfortunately, original observations and dip data from underground work was not available for observation.

Periodically, perched mineralization may be found up to 150 metres above the unconformity hosted deposits, in the overlying sandstones. Less frequently, mineralization may be found deep in the basement, within the previously described, steeply-dipping faults.

Often the sense of movement of the block faulting (horst and graben) is west side down dropped.

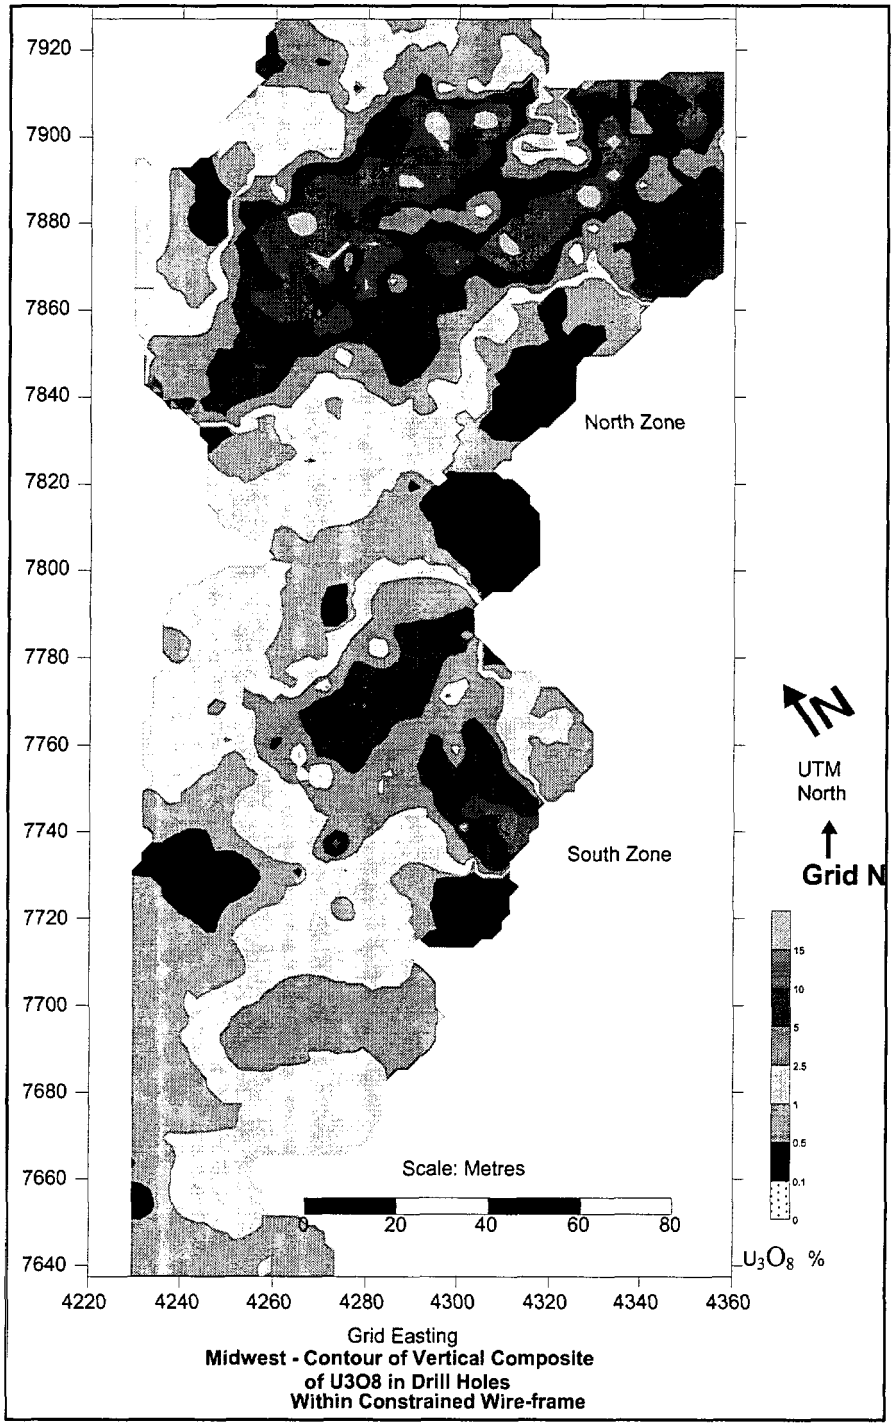

Figure 25 : Midwest U_3O_8 in Drill Holes, Within Wire-frame of Mineralization

19.4.1.2 Area of influence

Both exploration and definition drilling has been performed in a vertical orientation. The drill spacing varies from approximately 7.5 metres by 15 metres in the North Zone to 12.5 by 15 metres in the South Zone. Variograms were produced for each of the North and South Zones. Approximately 90% of the contained uranium in the writers' solids was within the proven and probable search radii produced by the GEMCOM® Software using parameters from the variograms. A subsequent review of the remaining material (on plan and section) demonstrated its viability, to the writers' satisfaction as probable ore. Although the drill holes used to define this deposit are long, and drill location of any one hole should always be suspect, the drilling is oriented normal to the mostly flat-lying large-scale trend of the mineralization. The drill frequency and attitude is sufficient to classify the reserves within the writers' preliminary designed pit, as proven and probable.

No review of the Southern Tail deposit was made because this deposit is too small, deep and distal from the South Zone to be incorporated in the same pit.

19.4.1.3 Cut-off grades

A loose cut-off grade of approximately 0.15% to 0.25% U_3O_8 was used to define mineralized shapes for the unconformity deposits. The cut-off grade was kept loose to allow for the correlation of a three-dimensionally-coherent shape, taking into consideration that some in-situ variability does exist and that any one assay should be considered "suspect". The cut-off grade for the overlying perched ore was approximately 0.1% U_3O_8. Recognizing that this material would have to be mined to get to the unconformity mineralization, it need not carry the cost of mining. The cut-off grade for "special waste" was 0.025% U_3O_8 considering that this material will be used to dilute the Midwest mill-feed to 2.3% U_3O_8 to allow for public road transport. While these cut-off grades were not based on hard economics, they are "in the ball park" and do appear to represent a natural break in the assay population. Where appropriate, the writers included narrow intersections of internal waste to maintain a smooth mineable outline. As well, material that was numerically above cut-off grade, but did not fit the interpretation of the developing geometry (to result in a coherent shape of mineralization) was not included as "ore". In addition, isolated blocks of mineralization that did make the cut-off criteria but did not correlate on at least two drill sections, were not counted as "ore".

19.4.1.4 Minimum Thickness

The North and South Zone ore thickness varies from two metres to 28 metres with an average of about eight metres. The thickness of the perched zones is significantly larger, but these zones represent a very small part of the total reserve. Mining of the thinnest zones will require small loading equipment, grade control, definition drilling and co-operation between the operator and the geologist.

19.4.1.5 Dilution

The writers estimate that (open pit) mining dilution on the Midwest deposits could be kept to about 15%. However, since the regulations require that trucked ore have a grade of no greater than 2.3% U_3O_8, Midwest will be further diluted by special waste until its head grade drops to 2.3% U_3O_8. (The writers have made the assumption that construction of a dedicated haul road or the use of specially designed trucks is not warranted because of the economics).

As was stated above, estimated grades for low-grade material within a 1-metre "skin" around the main resource have been incorporated in the current resource estimate. The resulting dilution from this estimate totals approximately 35%. The blocks contribute only marginally (less than 1%) to the overall U_3O_8 content although they add significantly to the tonnage.

19.4.1.6 Specific Gravity

Appendix 2: Specific Gravity Measurements and Estimates summarizes previous studies and methods used for estimating specific gravity and bulk density. The writers have specifically examined the estimation methods used by J. Reedman (1990) and as reviewed by Trigg (1990) and have used a similar approach to estimating specific gravity using the following:

- for sandstone, outside of the confines of mineralization a specific gravity of 2.3
- for basement, outside of the confines of mineralization 2.15
- for unsampled sections in perched "ore" a specific gravity of 2.2
- for unsampled sections in unconformity "ore" a specific gravity of 2.1
- for samples which assay less than 1.5% U_3O_8 a specific gravity of 2.1
- for samples which assay greater than 1.5% U_3O_8 but less than 10% a specific gravity derived from the following formula developed by CWML:

$$SG_c = 94.90/ ((14.6P)+13N(1-P) + 47.45(1-P)(1-N))$$

where:
$P=U_3O_8$ % assay in decimal form x 2.144
N= Ni % assay in decimal form x 2.95
SG_c = specific gravity estimated for the core sample

- for samples which assay greater than 10% a specific gravity derived from the following formula as recommended by Trigg (1990):

$$D_d = 1.91 + 0.0561 \times (U_3O_8\% + Ni\%)$$

where D_d = Derived density
U_3O_8 % = U_3O_8 % as assayed.
Ni % = Ni% as assayed.

The writers used the above estimates of specific gravity in all cases, rather than measured specific gravities, due to the lack of a readily verifiable database of original specific gravity measurements.

19.4.1.7 Bulk Density

The writers have assumed that bulk density will be equal to specific gravity. (See also Section 13.6.1 Midwest Lost Core).

19.4.1.8 Database

The Midwest database used for the estimate consists of 664 drill holes with assays (an additional 184 holes in the data base, which it is assumed were drilled for geotechnical or engineering purposes have no assays) and 15,441 assay entries including intervals for which U_3O_8 assays have been estimated using the Lost Core Convention. The database also includes approximately 2,870 entries of 0.001% for U_3O_8 for which U_3O_8 assays are not available and which have, in effect, been used as nil assays.

The writers have used the same data base as that used by J. Reedman and by Cogema. That database tends to use the "lost core convention" as described in Section 13.6.1.1, although several inconsistencies with the application of that convention were noted.

19.4.1.9 Grade Distribution

Appendix 3 graphically demonstrates the frequency distribution and the cumulative frequency distribution for U_3O_8 within the modelled solids together with descriptive statistics relating to the grade distribution. The writers conclude that there are two distinct populations: 1) comprising "low-grade" values in the range of .10% to approximately 10% U_3O_8 and 2) a "high-grade" population comprising values above 10% U_3O_8 . The writers also note that approximately 20% of the contained U_3O_8 can be accounted for by the top 2% of the assay distribution and 40% by the top 10%. (Assuming an equal tonnage weighting for all sample intervals).

In some situations the occurrence of a separate high-grade population, and dominance of the reserve estimate by a small proportion of the assay population, could lead to concerns about erratic high values which are not necessarily representative. Examination of the distribution of the high-grade values at Midwest however, indicates that they are clustered in defined high-grade pods. Of the values reporting over 25% U_3O_8 only two samples (one of which was the highest assay within Midwest with 50% U_3O_8) occur outside of the well-defined high-grade zone in the northern portion of the deposit. The writers conclude that no cutting is required or justified.

See also Section 19.4.1.11, Resource Estimation Methodology.

19.4.1.10 Correlation Methodology

The mineralization was correlated on 7.5 metre cross-sections and three evenly-spaced longitudinal slices. The object of the exercise was to define the three-dimensional boundaries of the mineralized zones. These shapes were then "digitized" into a wire framed solid model in cross-sectional slices using GEMCOM® software to create a solid model.

19.4.1.11 Resource Estimation Methodology

A block model, with 4 metre by 4 metre by 2-metre high blocks was created and constrained within the wire-framed solids inferred from the drill information. Since the estimate was only meant to be a rapid audit, the main solid was not sub-domained to a high-grade core and a low-grade envelope[3]. An ID^3 algorithm was used to prevent the "smearing" of high grades into the low-grade areas. A standard needling technique was used to determine partial blocks within the ore perimeter.

Variograms were used to determine the search ellipse for grade projection within the solids. These orientations were:

Maximum	NE	30 metres
Intermediate	NW	15 metres
Minimum	Vertical	12 metres

Estimates for the grade of diluting material, surrounding the constrained solid, were based on the grade of a 1-metre skin of dilution around the ore.

Block grades were estimated using a specific gravity and length weighting of the relevant assays from drilling. Block bulk tonnage was estimated on the basis of length weighted average specific gravity estimates.

The average specific gravity for the zones within the wire-framed solids averaged 2.55 for the north zone, 2.23 for the south zone and 2.11 for the perched zone, using the specific gravity formula previously described.

19.4.1.12 In-Place Estimate of Mineralized Rock

Undiluted and diluted "in-place" estimates of mineralized rock, which do not take into consideration potential economics of exploitation are illustrated in Table 18.

Table 18 : Midwest In-Place Estimate of Mineralization

	Undiluted In-Place Mineralization					
ZONE	**TONNES**	**U_3O_8 (%)**	**U_3O_8 lbs x 1,000**	**Ni (%)**	**As (%)**	**DILUTION %**
South	117,639	2.412	6,255	2.439	3.551	
North	169,405	7.345	27,432	6.115	10.181	
Perched	49,490	0.564	615,361	0.324	0.663	
Total	336,534	4.623	34,299	3.978	6.464	

[3] The writers recommend that any detailed resource or reserve estimate incorporate such divisions. Reedman (1990) did develop separate boundaries for "high-grade" and "low-grade" ore.

		In-Place Dilution

19.4.2 Midwest Reserve and Resource Estimate

19.4.2.1 Optimized Pit Shell and Preliminary Designed Pit.

The writers have identified the economically exploitable portion of the mineralization through an iterative process involving the use of Whittle® software, to identify optimized pit shells, and the preliminary design of a pit with haul roads.

The parameters for the "base case" optimized pit using Whittle® software are contained in Appendix 4. These parameters include:

- pit slopes and bench configurations which are in agreement with the results of geotechnical work reported by Golder (Golder, 1981) except that the 5 metres of overburden was assumed to have a bench face-angle of 76° (i.e. the same as the underlying rock units.)
- direct mining costs for ore, waste and overburden which are consistent with prefeasibility studies carried out by Denison and Cogema. (See also Section 23.7)
- an allowance for semi-variable costs, including an administration fee, site services and site support, which covers 75% of such costs in the base case optimized pit. (100% in the higher cost case which emulates a designed pit – see below).
- processing costs of $4.16 per pound of U_3O_8 as identified in the section on metallurgy and processing. (Section 23.2)
- an allowance of $2.00 per pound U_3O_8 for royalties and product shipping charges.
- a uranium price of $Cdn 22.00 per pound U_3O_8 .

This process identified the following preliminary estimate of economically exploitable mineralization:

Table 19 : Base Case Whittle® Shell - Estimate of Economic Mineralization

	Undiluted Estimate			
ZONE	**TONNES**	**U_3O_8 (%)**	**U_3O_8 lbs x 1,000**	**Dilution %**
South	82,021	3.086	5,580	
North	153,689	8.000	27,106	
Perched	49,490	0.564	615	

Total	285,200	5.296	33,299	
		Dilution		
South	35,433	0.05	39	43%
North	46,568	0.165	169	30%
Perched	15,639	0.064	22	32%
Total	97,640	0.107	230	34%
		Diluted Estimate		
South	117,454	2.170	5,620	
North	200,257	6.178	27,277	
Perched	65,129	0.444	637	
Total	**382,840**	**3.973**	**33,535**	

This "base case" optimized Whittle® pit shell does not include parameters for a designed pit including haul roads.

The writers have analyzed the effect of a designed pit by:

- analyzing the sensitivity of the optimized pit results with both direct and semi-variable costs increased by up to 50% to emulate the results of extra waste-stripping requirements for a haul road.
- preparing a preliminary pit design including haul roads in order to identify extra stripping requirements.

The optimized pit design used is very robust to changes in mining costs. The increase of 50% in direct waste mining and semi-variable costs did result in a 5% decrease in ore tonnage (at a higher grade) but only a 3% decrease in contained U_3O_8 in the, resulting, artificial, Whittle pit shell. The optimized pit shell is not as robust to assumed lower U_3O_8 prices. Significantly lower tonnages and contained U_3O_8 occur when the price assumption is reduced below about $19.50.

The configuration of the ore, with very sharp boundaries between high-grade mineralization and waste, around the perimeter of the toe of an ultimate pit, does make the economics of a pit very sensitive to pit design. The writers have designed a preliminary pit with haul roads which accesses all of the ore within the optimized Whittle® pit shell. This preliminary, designed pit resulted in 70.3 million tonnes of waste and ore will be required in a designed pit. (44% larger than the optimized Whittle® shell). The resulting designed pit also contains an additional 1% U_3O_8 due to additional low-grade material which did not fall within the optimized Whittle® pit shell. A second designed pit, which also roughly respected the boundaries of the optimized Whittle® pit shell more closely resulted in a 65.7 million tonnes of waste and ore, but also failed to access 3.6 million pounds of U_3O_8 indicated in the optimized Whittle® pit shell.

The writers conclude that, given the robustness of the optimized Whittle® pit as indicated above, that the optimized Whittle® pit shell forms a good basis for the estimate of reserves at a U_3O_8 price of $22 per pound. The writers also conclude that approximately 68 million tonnes of waste, including overburden will be required to access this reserve.

19.4.2.2 Midwest Reserve and Resource Estimate

The mineralization in the base case Whittle® pit has been used by the writers to prepare the following estimate of reserves and resources recognizing that additional stripping will be required for a designed pit. Subsequent economic and cash flow analyses recognize this additional stripping.

Categorization of the reserves and resources is based on the block model interpolation parameters contained in Section 31 with adjustments as described in Section 19.4.1.2.

Table 20 : Midwest Reserve Estimate

	Zone	Tonnes Diluted x 1,000	Grade U_3O_8 %	U_3O_8 lbs. x 1,000
Proven	North	81.9	7.67	13,843
	South	5.2	2.85	326
	Perched	4.9	0.69	75
Subtotal Proven		**92.0**	**7.02**	**14,244**
Probable	North	118.4	5.15	13,435
	South	112.3	2.14	5,294
	Perched	60.2	0.42	562
Subtotal Probable		**290.8**	**3.0**	**19,291**
Total Proven and Probable		**382.8**	**3.97**	**33,535**

As was previously described, several Whittle® pit shells and two rapidly designed pits with haul roads were used to estimate the ultimate waste requirements. The writers estimate that this reserve can be accessed with a pit which will require approximately 68 million tonnes of waste, including overburden, for a stripping ratio of 178 to 1.

The pit design, and the ability to optimally access all of the ore while minimizing waste stripping, is very sensitive to the accurate identification of ore waste boundaries. Recommendations are made concerning additional drilling around the margins of the toe of the preliminary pit design to define the boundaries with additional precision.

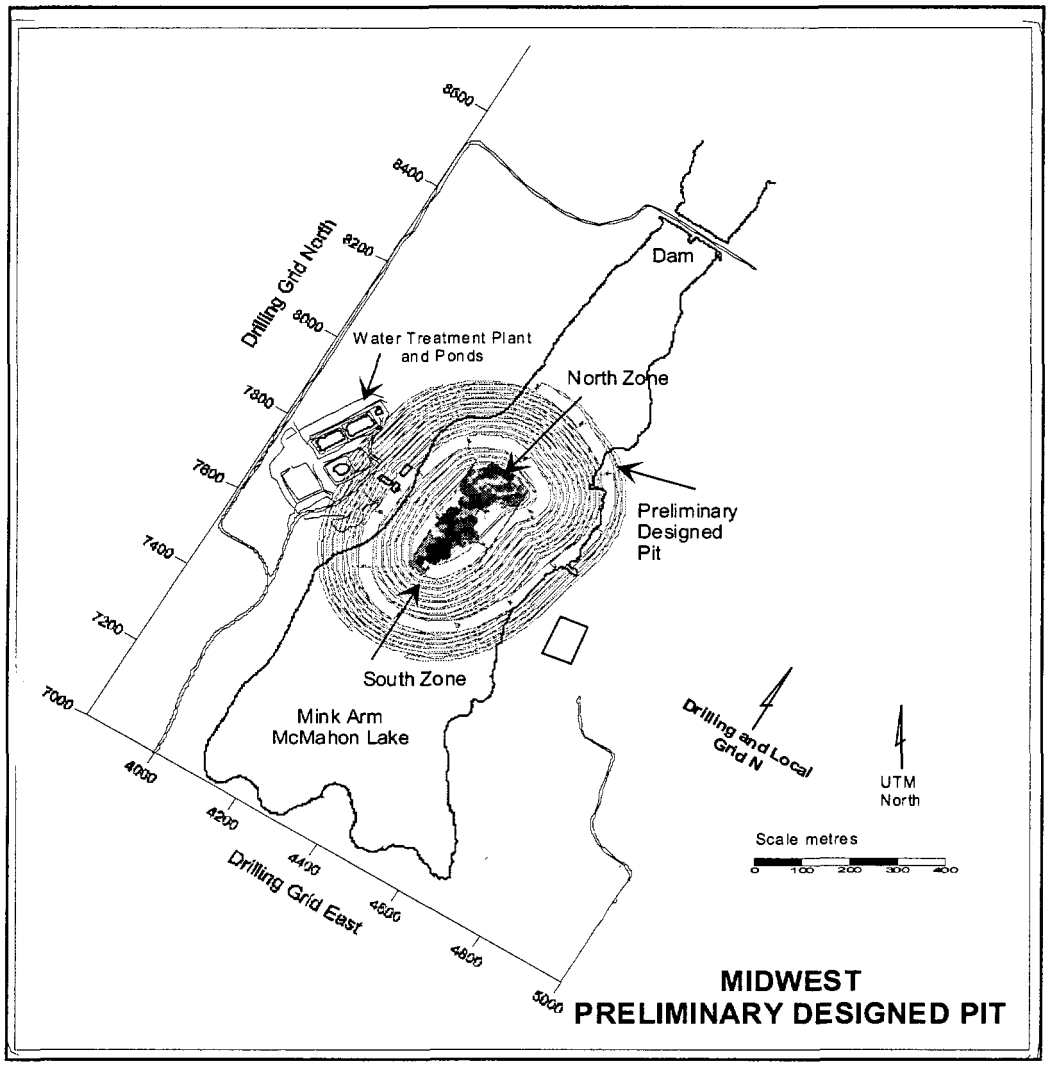

Figure 26 : Midwest with preliminary designed pit

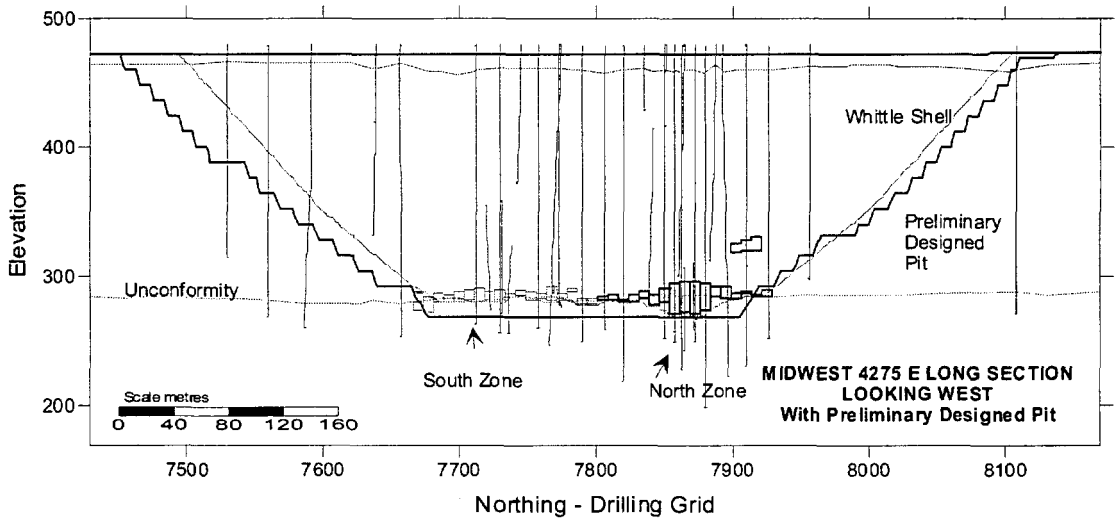

Figure 27 : Midwest 4275 East Long Section with Preliminary Designed Pit

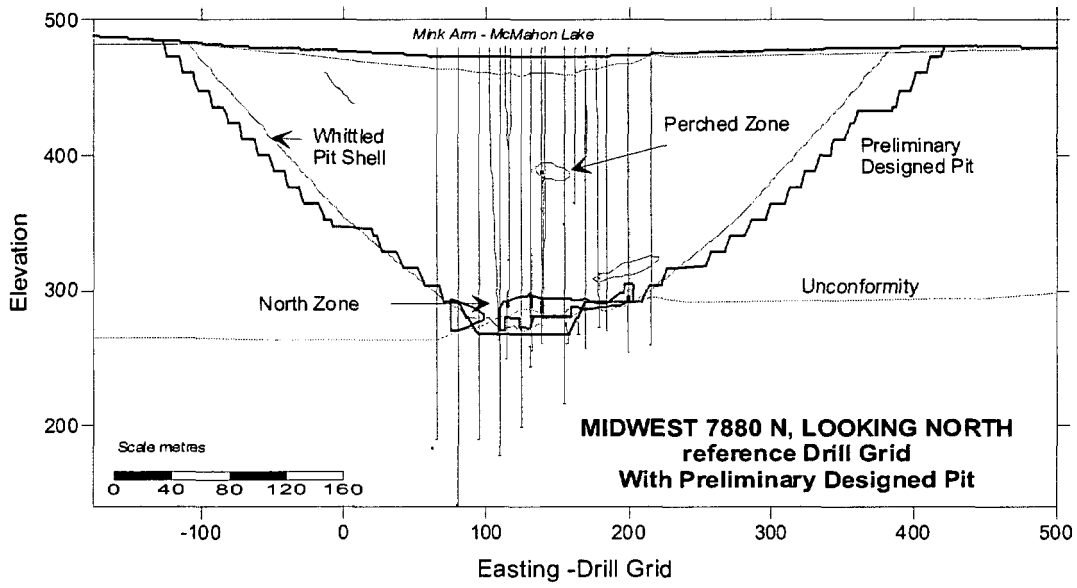

Figure 28 : Midwest 7880 North Cross Section with Preliminary Designed Pit

19.5 McClean North

A feasibility study carried out in 1990 contemplated mining of the McClean North Deposit by underground mining methods (Kilborn, 1990). That feasibility has not been updated to reflect 2003 costs and practices. However, preliminary analysis indicates that other mining methods would be more economically appropriate. The writers have based the current resource estimate on exploitation of portions of Pod 1E, Pod 2 and Pod 5, using Blindshaft Boring. (See Section 23.1.5 for a description of the method). Variations on this non-entry method, involving access by drilling from surface and excavation of cavities within the ore, may include adaptation of hydraulic mining technology.

19.5.1 Criteria and Assumptions

19.5.1.1 Geological Model

The geological model used for the McClean North deposit is consistent with the model previously used by Denison and Cogema. Uranium mineralization occurs along a 1-kilometre trend which strikes approximately North 70° East to due East. Mineralization occurs in proximity to, and both above and below, the unconformity between the Athabasca Sandstone and underlying basement rocks.

Within the overall trend of the McClean North mineralization, eight pods with "higher" grade mineralization have been identified by diamond drilling. (Figure 17). Three of these pods (or portions of the pods) contain mineralization with grade and continuity, as described below, for which resources have been estimated.

19.5.1.2 Area of Influence

Both exploration and definition drilling have been carried out in a vertical orientation. Initial exploration drilling tended to be carried out at 15 metre spacing on lines spaced 20 to 30 metres apart. More detailed drilling at 12.5 metre centres on 12.5 metre lines has been completed within Pods 2 and 5. Pod 1E has drill spacing approximating 7.5 metres. The drill spacing and orientation warrant a classification, for material which is potentially exploitable by Blindshaft Boring, of indicated resources.

19.5.1.3 Cut-off Grades

A cut-off grade of 2% U_3O_8 was used to define the mineralized outlines of material which could potentially be exploited by Blindshaft Boring. Several narrow intersections of internal waste, below this grade, were included within the mineralized outlines to maintain a smooth mineable outline. Several instances of mineralization above cut-off grade, well up in the sandstone were not included due to the selection of the mining method.

19.5.1.4 Minimum Thickness

The podiform deposits exhibit an average thickness in the seven-metre range, rarely exceeding 10 metres. A minimum thickness of five metres was used to define mineable outlines, considering the Blindshaft Boring method.

19.5.1.5 Specific Gravity and Bulk Density

Specific gravity for individual samples was estimated using the following formula:

$$\text{Density} = 1/(0.452-0.00326 \times (U_3O_8\%))$$

which resulted in the following estimates of specific gravity for each of the pods:

Pod 1E	2.42
Pod 2	2.30
Pod 5	2.31

This estimation method is consistent with that used in the past by Cogema and Kilborn. (See also Appendix 2). Bulk density was assumed to be equal to specific gravity.

19.5.1.6 Database

The resource estimate is based on 35 drill holes (17 in Pod 1E, 11 in Pod 2 and 7 in Pod 5) which collectively encompass 764 individual assays which occur within the mineralized model. Many of the sample intervals were less than the "standard" 0.5 metres and are commonly in the range of 0.25 metres in high-grade sections.

19.5.1.7 Grade Distribution

Frequency and Cumulative Frequency Distribution plots, together with descriptive statistics are contained in Appendix 3 for samples which occur within the mineralized outline of the pods (the sample statistics include Pod 1W which was considered, at an early stage, as having resource potential). Given the variability of sample lengths within McClean North all statistics were carried out on one-metre composites.

19.5.1.8 Correlation Methodology

The mineralization was correlated on 7.5 metre cross-sections. The object of the exercise was to define the three-dimensional boundaries of mineralized zones. These shapes were then digitized into a wire-framed solid model in cross-sectional slices using GEMCOM® software to create a "solid model".

19.5.1.9 Resource Estimation Methodology

Tonnage

The tonnage for each of the Pods was estimated by applying the bulk density determined above to the volume of each pod "wire-frame".

Grade

The composite grade of each drill hole, within the wireframed solids, was estimated by a length and specific gravity-weighted average of the assays in drill hole intercepts within the pod. The average grade of the pod was estimated by applying a polygonal method weighting to the drill hole averages. The writers have not attempted to develop a block model to predict varying grades within the individual pods.

The above method was modified somewhat in the case of Pod 1E. The density of drilling in Pod 1E varies and tends to be more closely-spaced in the centre of the pod where there are discernibly higher grades. (Pod 2 and Pod 5 have an approximately uniform distribution of drill holes). The grade for Pod 1E was estimated by applying an inverse distance squared weighting to the composite grade of each drill hole. The effect of the inverse distance weighting reduced the estimated grade in Pod 1E from 10.96% to 10.42% U_3O_8.

19.5.1.10 In-Place Estimate of Mineralized Rock

Table 21 presents the in-place estimate of mineralized material.

Table 21 : McClean North In-Place Estimate of Mineralization

POD	VOLUME (metres^3)	SPECIFIC GRAVITY	TONNAGE	THICKNESS (metres)	U_3O_8 %	U_3O_8 (lbs x 1,000)
Pod 1E	6,621	2.42	16,022	6.6	10.42	3,680
Pod 2	7,540	2.30	17,342	8.2	4.87	1,861
Pod 5	2,274	2.31	5,253	5.1	5.90	683
TOTAL	16,435	2.35	38,617	6.63	7.31	6,224

19.5.2 McClean Resource Estimate

The resource estimate for McClean North is based on the assumption that 80% of the in-situ mineralization in the three pods can be extracted with approximately 193 bore holes with a reamed diameter, through ore, of 3.65 metres as illustrated in **Figure 29** and **Figure 30**.

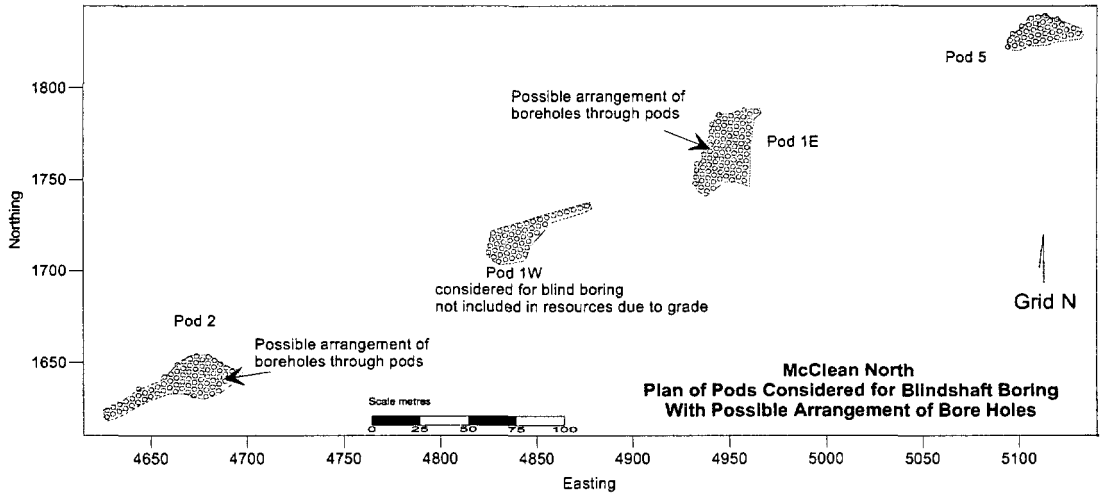

Figure 29 : McClean North Plan of Pods Considered for Blindshaft Boring

The theoretical limit of "coverage" of hexagonally-packed circles on a plane, not considering the boundaries, is 90.6%. It is assumed that the layout of boreholes will permit 85% potential coverage with an additional 5% loss due to hole deviation and dilution. The placement of boreholes illustrated in Figure 30 suggests the potential for 87% coverage in Pod 1E.

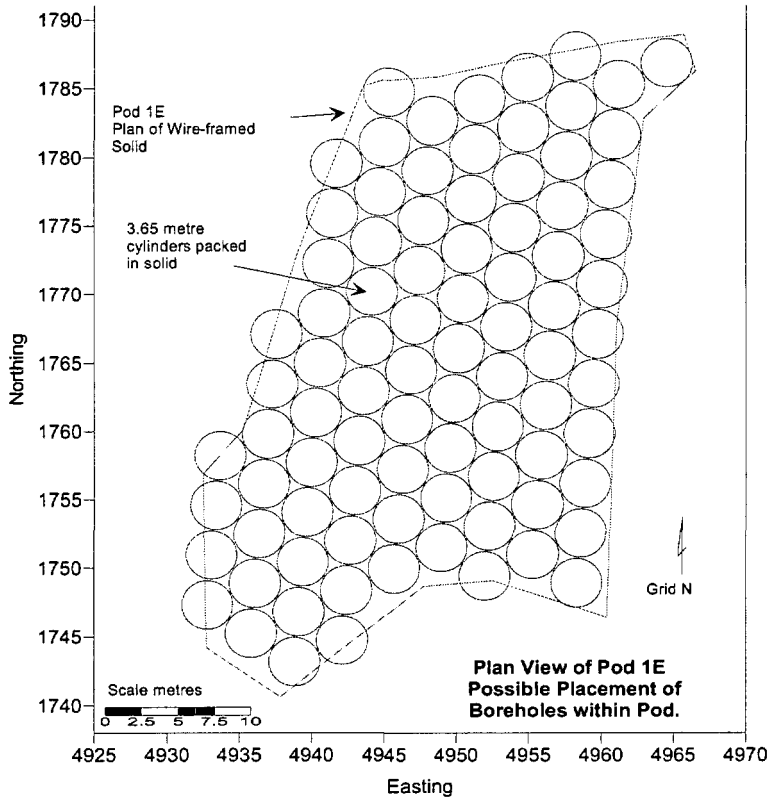

Figure 30 : Pod 1E Possible Arrangement of Boreholes

Table 22 summarizes the undiluted resource estimate for McClean North, assuming extraction using blind borehole methods.

Table 22 : McClean North Undiluted Resource Estimate

	Tonnes	Grade U_3O_8 %	U_3O_8 lbs x 1,000
Indicated			
Pod 1E	12,800	10.42	2,900
Pod 2	13,900	4.87	1,500
Pod 5	4,200	5.90	550
Total Indicated	30,900	7.31	4,950

Additional dilution tonnage will originate from material above and below the zones, boreholes which extend beyond the zones and re-drilling of backfilled material due to hole deviation. The writers have not estimated the amount or grade of such dilution.

The writers conclude that the estimate can be classified as indicated based on the existing drill hole spacing and the geological characteristics of the deposits. Section 23.1.5 summarizes the cost estimates which indicate that there is reasonable expectation of economic extraction.

19.6 Sue C Stockpile

19.6.1 Antecedents, Prior Estimates and Basis of Estimate

Prior to mining Cogema estimated that Sue C contained 375,000 tonnes grading 3.3% U_3O_8 based on assay results from diamond drilling using kriging and geostatistical methods. A pit was designed to access this ore, although the last two benches of the designed pit, were not mined due to pit wall failure. During the mining operation 2,101 holes drilled for grade control and 3,230 blast holes were radiometrically logged. Estimates of the grade from the radiometric logs were used to prepare an interim estimate, again using kriging. This estimate suggested 530,000 tonnes, in-situ, grading 3% U_3O_8. (Wilson, 2002). The estimates are presented here in order to illustrate the development of the current reserve estimate.

The current estimate of reserves in the Sue C stockpiles is based on measurements of U_3O_8 content and tonnage from truck counts as summarized in the following sections.

19.6.2 Stockpiling and Ore Movement Methods

Mining of the Sue C Pit was initiated in July of 1997 and continued through February 4, 2002. Ore was mined using a backhoe with a 2.2 metre wide bucket (with rare exceptions when a shovel was used due to equipment availability) and loaded into 100 tonne trucks.

Trucked to Sue Transfer Pad

The loaded trucks were weighed on a deck scale and scanned by an overhead radiometric scanner for ore classification and grade estimation (see section on sampling, below) and the ore was placed at the Sue Transfer Pad in one of the following four classifications based on grade:

- Special Waste 0.025% U to 0.085% U
- Low-Grade 0.085% U (cut-off grade) to 1.49% U
- Medium-Grade 1.5% U to 4.99% U
- High-Grade greater than 5% U

Waste was disposed in the waste dump located north of the Sue B deposit.

"Special waste" was stockpiled and subsequently disposed of in the Sue C pit after the cessation of mining. The pit is being allowed to flood naturally.

Trucked to JEB Stockpile

Trucking of ore, also using 100 tonne trucks, from the Sue C Transfer Pad to the JEB stockpiles (a distance of approximately 12 kilometres) was initiated in March 2000 and is ongoing, on a batch basis. Trucks are weighed on a deck scale and scanned using an overhead radiometric scanner before delivery at the JEB stockpiles. For the first two years (until April, 2002) ore from Sue C was stored in three stockpiles using the same classification as above. Starting in April 2002 the high-grade ore was further classified and separated as follows:

- High-Grade 5.0% U to 7.99% U
- Super-High-Grade 8.0%U to 10.99% U
- Premium-High-Grade greater than 11.0% U

At year end 2002 there were also stockpiles of ore:

- from the JEB pit
- a boulder pile containing over-sized material caught on the grizzly.[4]

Blending for Mill Feed

Prior to feeding ore to the mill, ore from various stockpiles is selected and transferred to a blend pile. The objective is to provide a consistent feed-grade to the mill for a period of approximately five days. The surface of this blend pile is scanned with a portable radiometric scanner to obtain an estimate of the pile. The pile is mixed and blended and additional scans are made of the mixed pile.

[4] The addition of an hydraulic rock-breaker, subsequent to year end is alleviating and will gradually eliminate the problem of over-sized material.

19.6.3 Sampling and Grade Estimate Methodology

19.6.3.1 Scanners

Estimates of grade of ore prior to introduction to the mill leach circuit is based on two principal types of radiometric scanners:

- Truck Scanner ("Truck Scanner"). This is a radiometric scanner, model Digital Ore Grade Evaluator® manufactured by Asitec E.C. of France and now supported by Gamma Mine Technology of France. The Truck Scanner consists of a single sodium iodide detector suspended over the truck, three metres above the load level, using a 60 degree nominal cone of reception. Wilson (2002) reports "design" error ranges of 10% for ore grading between 0.01% to 10% U and 5% for ore grading between 10% and 40% U at the 95% confidence level when identifiable error factors such as positioning, changes in background radiation, truck loading, or disparate size of trucks are taken into account.
- Portable Scanner ("Portable Scanner"). The Portable Scanner is a Smart Scaler model manufactured by Asitec E.C. of France and now supported by Gamma Mine Technology of France. It is a field portable, rugged, unit which works with external Geiger Mueller sensors. It has an analog ratemeter for visual monitoring and a wide counting range. There are four Portable Scanners in use at the mine, each identified with a unique number to facilitate calibration.

19.6.3.2 Scanning

Truck Scanning
Trucks are scanned using the Truck Scanner immediately upon leaving the pit for delivery to the Sue Transfer Pad and subsequently when ore is trucked to the JEB stockpiles.

The truck identification number, date, time, gamma counts (in counts per second) and ore grade (estimated from gamma counts) and tare of the scales are all recorded.

Portable Scanner
The Portable Scanner is used for a variety of purposes including blend-bucket analysis, grade control, truck verification and scanning of stockpiles.

19.6.3.3 Scanner Calibrations

The Portable Scanners were initially calibrated in 1999 on ore from the JEB pit and subsequently re-calibrated in 2000, with ore from the Sue C pit. (Calibrations are deposit specific).

The Portable Scanners were calibrated in 1999 using the following procedure (Wilson, 2002):

- Buckets containing blended ore (from the Sue C pit) were scanned immediately before they were dumped in the mill grizzly. These scans comprised 1,998 tonnes of low-grade, 3,975 tonnes of medium-grade and 1,747 tonnes of high-grade.
- 42 composite samples of the slurry after grinding (9 low-grade, 23 medium grade and 10 high-grade samples) were collected were collected from the SAG mill overflow and assayed for U.

- A relationship between scanner readings and U assays was developed resulting in the following formula:

  $Uo/oo = 0.04085 \times (cps)^{1.0872}$

  where Uo/oo = Uranium in parts per thousand
  cps = counts per second from the scanner reading

Results from the calibrated Portable Scanners were used to calibrate the overhead Truck Scanner using the following:

- Three hundred and ninety, 100 tonne trucks of waste special waste and ore were surveyed with the Portable Scanner and by the Truck Scanner between December 1999 and February 2000.
- The Portable Scanner, with pole mounted detectors, was used to take 16 evenly-spaced readings which were subsequently averaged from each truckload.
- The relationship between Portable Scanner and the Truck Scanner results was used to develop the following formula:

$Uo/oo = 0.0022x\ (cps)^{1.120}$

where U = uranium in parts per thousand
cps = counts per second from the truck scanner.

An additional adjustment to the formula for the Truck Scanner was made as more data for calibration were received. It was noted that the Truck Scanner (using the above formula) was under estimating the grade of high-grade truck loads, probably due to saturation of the detector at high count rates. The following formula is now applied to Truck Scanner readings of over 10,000 counts per second:

$Uo/oo = 0.00000118x(cps)^{1.958}$
if cps > 7994 cps

The preceding revisions to earlier formulas have been retroactively applied to earlier scanner readings for truck loads delivered from the Sue C Transfer Pad to the JEB mill site (but not to material delivered to and still in place at the Sue C Transfer Pad. This may result in an underestimate of grade at the Sue C Transfer Pad.)

The four Smart Scalers are periodically (initially weekly and more recently monthly) checked against a standard "brick" to determine any drift. The writer has examined this data and no drift has been detected in the four scanners.

19.6.3.4 Weightometer Calibrations

The deck weightometer used for weighing ore trucks is calibrated on a regular basis by weighing a 22 tonne grader on that weightometer and on another weightometer at the mine gates. It should be noted that this weight is only about 15% of the typical weight of a loaded truck.

Calibrations are checked approximately annually by Mass Load Technologies of Saskatoon during regular maintenance. These calibrations are carried out to within $1/10^{th}$ of 1%. (Eaid, personal communications).

19.6.4 Post Mining Stockpile Reserve Estimate

Based on truck weights and grade estimates from the Truck Scanner, as described above the estimate for reserves mined from Sue C and placed on the stockpiles was

Tonnes Mined and Stockpiled	Grade U%	kgs U x 1,000	lbs U_3O_8 x 1,000
652,700	2.15	14,031	36,479

This tonnage and grade , when compared with the post-mining estimate of in-situ tonnage and grade implies mining dilution of 23% carrying a grade of 0.53% U_3O_8 .

19.6.5 Material Milled from Sue C Stockpile

A running balance of material at each stockpile is computed based on movement between the stockpiles and the mill. Since milling of ore from Sue C commenced in 2000 the following tonnages have been milled:

Table 23 : Material Milled from Sue C Stockpile

Year	Tonnes x 1,000	Grade % U	kgs U x 1,000	lbs U_3O_8 x 1,000
2000	25	5.54	1,369	3,559
2001	52	4.47	2,324	6,042
2002	74	2.93	2,154	5,600
Total	**151**	**3.83**	**5,846**	**15,198**

19.6.6 Sue C Stockpile Reserve Estimate

The remaining stockpiles as of December 31 2002 are summarized in Table 24.

Table 24 : Sue C Stockpile Summary

Grade Classification and Site	Tonnes	U %	U kg x 1,000	U_3O_8 lbs x 1,000
Low-Grade at Sue C	377,221	0.38	1,448	3,764
Low-Grade at JEB	23,214	0.36	83	216
Medium-Grade at Sue C	18,477	2.61	483	1,256
Medium-Grade at JEB	44,371	3.21	1,423	3,699
High-Grade at Sue C	7,284	11.26	821	2,134
High-Grade at JEB	1,693	6.28	106	276
Super High-Grade at JEB	10,234	11.51	1,178	3,063
Premium at JEB	17,469	14.93	2,608	6,780
Blend boulders	2,122	1.63	35	91
TOTAL	**502,085**	**1.64**	**8,185**	**21,279**

19.6.7 JEB Stockpile

At December 31 2002 Denison and Cogema estimated that the stockpile of ore from the JEB pit was estimated to contain 31,410 tonnes grading approximately 0.45% U for a uranium content of 141,345 kilograms. (367,000 pounds U_3O_8)

Similar procedures concerning estimates of tonnage and grade for ore from the JEB pit were used to arrive at this estimate although parameters such as calibration of the scanners differed. The estimate of grade is made with less confidence than that for the Sue C stockpiles (Wilson, 2002).

The writers have not carried out reconciliations of production and milling estimates and have not audited the estimate in detail.

19.6.8 Stockpile Surveys

Stockpile Tonnage

At year end 2002 the stockpiles of Sue C ore at the Sue Transfer Pad and the JEB Site were surveyed (800 survey shots at the Sue C transfer pad and 565 survey shots at the JEB Site). The results of the survey and assumptions concerning density are summarized in Table 25.

Table 25 : Sue C Stockpile Topographic Surveys - December 31 2002

Stockpile Source	Site	Stockpile Grade Category	Volume m^3 x 1,000	Density tonnes/m^3	Tonnes
Sue	Sue	low	197,295	1.9	374,861
Sue	Sue	medium	7,192	2.2	15,822
Sue	Sue	high	2,766	2.4	6,638
Sue Blend boulders	JEB	blend	1,179	1.8	2,122
Sue	JEB	low	15,331	1.9	29,129
Sue	JEB	medium	24,499	2.2	53,898
Sue	JEB	high	1,017	2.4	2,441
Sue	JEB	super high	4,427	2.4	10,625
Sue	JEB	premium	8,328	2.4	19,987
Subtotal Sue			262,034		515,523
JEB	JEB	low	29,499	1.9	38,948
TOTAL			282,533		**554,471**

The writers believes that the greatest uncertainty in the surveyed estimate of tonnage would be due to the estimates of specific gravity for unconsolidated, blasted material. Based on expected in-place specific gravity for the various grades, the above assumes a void factor of 20% which is on the low end of the range of what one would expect for run-of-mine stockpile material.

Although estimates of tonnage from surveying compared with the truck counts vary considerably for individual stockpiles, with the smaller piles, as expected, demonstrating the worst comparison the total tonnage estimate does provide support for the tonnage estimates prepared from truck counts and stockpile balance.

Stockpile Grade Audit

At year end 2002 an audit was carried out on the surface of the stockpiles located at the JEB Site, using the Portable Scanners as illustrated in Table 26.

Table 26 : Year End 2002 Portable Scanner Audit of JEB Stockpiles

Stockpile at JEB / source of stockpile	Estimated Grade from truck counts and Truck Scanner % U	Estimated grade from stockpile Portable Scanner %U	Number of Portable Scanner Readings
JEB	.45	**.6**	20
Sue Low	.359	**.5**	18
Sue Medium	3.21	**3.1**	31
Sue High	6.28	**9.2**	22
Sue Super High	11.51	**10.6**	32
Sue Premium	14.93	**13.8**	23
Boulder Pile		**16.3**	8

Although these limited number of scans on the surface of the stockpiles cannot be considered a definitive estimate of grade they do provide confirmation of the grade estimated by the Truck Scanner and stockpile balance.

19.6.9 Mill Reconciliations

Support for the estimated grades is provided by comparisons between the geology department and the mill.

Figure 31 provides, on a monthly basis, a comparison of the estimates from the geology department (scanner grade) for the blend piles and from the mill and monthly uranium production. The mill estimates the feed grade based on analysis of the uranium content in leach solution (subsequent to crushing and placing mineralization into solution but before additional processing).

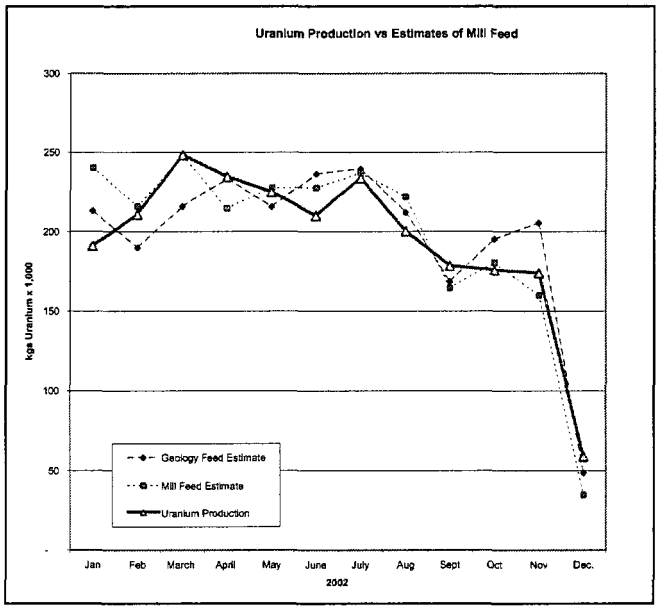

Figure 31 : Uranium Production compared with Feed Grade Estimates

Estimates by the geology department and the mill department for the uranium content of mill feed for the year 2002, were each 2.37 million kilograms of uranium compared with actual production during the year of 2.34 million kilograms.

19.6.10 Summary of Sue C and JEB Stockpile Estimates

The writer concludes that the stockpiles located at Sue C and JEB are estimated to contain the following:

Source	Tonnes x 1,000	Grade % U	Kg U millions	Grade % U_3O_8	lbs U_3O_8 millions
Sue C	502.1	1.64	8.2	1.92	21.27
JEB	31.4	0.45	.14	0.53	0.37
Total	533.5	1.57	8.3	1.84	21.64

The writer believes that there is sufficient confidence in these estimates for them to be categorized as proven.

20 Other Relevant Data and Information

The milling schedule and the operating costs assume that the JEB Mill will initiate processing of ore from Cigar Lake in 2006. A feasibility study has been completed concerning the milling of Cigar Lake ore and an agreement is in place between the Cigar Lake joint venture and the McClean Joint Venture for processing of Cigar Lake ore. However, a production decision has not yet been made

by the members of the Cigar Lake joint venture and all regulatory approvals have not yet been received.

Cogema is the operator and majority owner of both the McClean Joint Venture and the Midwest Joint Venture. Where appropriate the writers have used data provided by Cogema. However, Cogema may hold different opinions (concerning for example reserves) and may reach different conclusions (concerning for example pit design). Those opinions and conclusions may result in differences to development and mining plans.

Cogema is not a publicly listed company in Canada and is consequently not required to comply with National Instrument 43-101 or its companion policies.

21 Interpretation and Conclusions

The writers conclude that, on the basis of the assumptions and analysis documented in the body of this report, the McClean Lake Joint Venture and Midwest Joint Venture are host to the following reserves and resources:

Table 27 : Summary of Reserves (100% basis)

Deposit	PROVEN			PROBABLE			TOTAL PROVEN AND PROBABLE			STRIPPING RATIO
	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 millions	
Stockpiles	531.0	1.84	21,600				531	1.84	21,600	n.a.
Sue A	14.3	1.23	386	43	1.19	1,126	57	1.20	1,512	34.9
Sue B	14.5	0.55	176	92.4	0.53	1,069	107	0.53	1,245	15.5
Sue E	8.6	1.49	281	320	0.78	5,519	329	0.80	5,800	29.7
Midwest	92	7.02	14,244	290.8	3.00	19,291	383	3.97	33,535	178
Total	660.4	2.52	36,683	746.2	1.64%	27,000	1,407	2.05	63,692	

Table 28 : Summary of Resources (100% basis)

Deposit	Tonnes x 1,000	Grade % U_3O_8	lbs. U_3O_8 x 1,000
		Indicated	
McClean North undiluted	30,900	7.31	4,950
		Inferred	
Sue E diluted	23.6	0.71	367

Major assumptions used in the development of the above conclusions include.

- A uranium price of $22 Canadian per pound of U_3O_8 .
- Processing of Cigar Lake ore beginning in 2006 which will permit economies of scale for milling and other costs.

- Costs and schedules developed in prefeasibility-level studies prepared by Cogema and Denison and summarized in this report.
- Integrity of the survey database for hole locations and downhole deviations.
- Geotechnical and hydrological conditions at each of the deposits are as has been reported by Golder Associates and Cogema.
- Other assumptions as documented in the body of this report.

The reserve and resource estimates are quite robust in terms of mining cost assumptions. An increase of 50% in the assumed waste mining costs at Midwest, for example, resulted in a Whittle® pit shell with only 3% less U_3O_8 content. Similar situations apply to the other pits.

Assumptions concerning future uranium prices will have significant effects on the reserve estimates.

22 Recommendations

Although ore reserve estimates are not, generally, overly sensitive to stripping ratio, waste quantities at Midwest and Sue E are large (68 and 9.8 million tonnes respectively). Optimizing pit designs in order to minimize stripping and to ensure that the reserves are fully accessed could benefit from additional work to define geotechnical characteristics and to position pit toes more precisely, as recommended below:

- The Midwest deposit contains very sharp boundaries between high-grade ore and waste. The design of the pit, in terms of both maximizing ore recovery and minimizing unnecessary waste removal, is very sensitive to knowledge of the location of the ore-waste boundary around the toe of a designed pit. The writers recommend that additional drilling be carried out around the perimeter of the high-grade mineralization in order to confidently place the designed pit toe and minimize waste stripping costs.
- Virtually all drilling at Sue E was vertical or inclined to the west and the main trend to the mineralization is also vertical or west-dipping. The orientation does not provide sufficient certainty concerning the location of what will be the toe and lower benches of a pit, to optimize a final pit design. The writers recommend that additional drilling be carried out on each section between 300 and 400 North with –45 to –60° holes to intersect the projected location of the bottom bench of a pit. Once this is done, a final ramp design may be engineered.
- Most of the rock mechanics work performed to date on Midwest was focussed on the ore and immediate hanging-wall since underground development was contemplated. Pit designs would benefit from drilling for geotechnical and hydrogeological information in the area of pit wall contacts, which will be distal from the ore and the alteration system.

23 Additional Requirements

23.1 Mining Operations

The anticipated schedule for mining of the deposits is illustrated in Table 29.

Table 29 : Mining Schedule

Deposit	2005	2006	2007	2008	2009	2010
Sue A						
Waste tonnes x 1,000	2,000					
Ore tonnes	57,203					
Grade %	1.2					
Lbs U_3O_8 x 1,000	1,512					
Sue B						
Waste tonnes x 1,000			1,656			
Ore tonnes			107,051			
Grade %			0.53			
Lbs U_3O_8 x 1,000			1,246			
Sue E						
Waste tonnes x 1,000		5,035	5,035			
Ore tonnes			328,590			
Grade %			0.80			
Lbs U_3O_8 x 1,000			5,794			
Midwest						
Overburden t's x 1,000			2,900			
Waste tonnes			3,096	29,400	29,400	3,204
Ore tonnes						383,840
Grade %						3.97
Lbs U_3O_8 x 1,000						33,535
Ore tonnes diluted						650,000
Grade						2.34

Development of the McClean deposit, using the Blindshaft Boring technology contemplated in this report, is not currently scheduled. It is anticipated that once a development decision is made approximately three to six months would be required for site development and preparation before ore extraction would begin and that continuous extraction, with one machine would proceed over the following four to five years.

23.1.1 Sue A

Sue A is located immediately north of the mined-out Sue C open pit and will be mined as an extension of the Sue C pit. Mining of all ore and waste is scheduled to take place in 2005. Ore from Sue A will be blended with ore from the Sue C stockpile and Sue E for processing from 2007 to 2009.

Mining costs and other parameters are contained in Appendix 4. These costs and preliminary pit design parameters assume the use of smaller mining equipment and trucks than used in the Sue E and Midwest pits and a slower mining rate (8,000 to 9,000 tonnes per day) due to small pit dimensions.

23.1.2 Sue B

Complete mining of Sue B by open pit is scheduled for 2007. Ore will be blended with material from Sue A, C and E for processing in subsequent years.

Mining costs and other parameters are contained in Appendix 4. These costs and preliminary pit design parameters assume the use of smaller mining equipment and trucks than used in the Sue E and Midwest pits and a slower mining rate (8,000 to 9,000 tonnes per day) due to small pit dimensions.

This pit will benefit from innovative ramp design and layout, which will likely include an increase in ramp grade and a decrease in haul-road width on the lower pit benches.

23.1.3 Sue E

Mining of waste from the Sue E open pit is scheduled to commence in 2006 with mining of ore in 2007. A total ore and waste mining rate of 18,000 tonnes per day would be appropriate for a pit of these dimensions. Maximum truck sizes will likely be approximately 50 tonnes and 5 to 9 cubic metre shovel-loaders would be appropriate.

Ore will be blended with material from Sue A and B for processing in subsequent years. With the current mill schedule, approximately 130,000 tonnes grading 0.28% U_3O_8 remains in stockpile at the end of 2010. This material may be processed in prior years through differing tonnage and grade feed or processed in later years. For the purposes of the cash flow produced in this report it is assumed that this low-grade stockpile is blended with custom milled ore between 2010 and 2016. It is assumed that a positive decision concerning the JEB Mill expansion will be made in order to accommodate material from Sue E.

23.1.4 Midwest

Mining of the Midwest deposit by open pit is scheduled to take place between 2007 and early 2010. It is suggested that the initial pre-stripping be performed by a contractor using 135 to 170 tonne trucks matched with 17 cubic metre shovels. During the third year of pre-production activity (2.5 years of actual stripping) a switch will be required to a smaller mining fleet (similar to the fleet anticipated for Sue E) and company operators. This will take place at approximately the 350 metre elevation (160 metres from surface). Mining rates will likely commence at 15,000 tonnes per day in overburden, rising to about 35,000 tonnes per day in the first six months. The next 1.5 years will see mining rates exceed 80,000 tonnes per day with the last six months of mining averaging approximately 15,000 tonnes per day. The actual ore mining rate will likely be less than 5,000 tonnes per day.

23.1.5 McClean North

The current study assumes mining of the McClean north deposit using Blindshaft Boring methods.

23.1.5.1 Description of Blindshaft Boring Method

The Blindshaft Boring method involves drilling a pattern of contiguous large-diameter bore holes from surface through the ore body (Figure 30). The method includes access to the orebody using a bored 1.5 metre diameter hole drilled through approximately 165 metres of overburden and sandstone (average depth to top of the ore) and removal of the ore with an expandable under-reamer to a diameter of 3.65 metres. (Alternatively, excavation of the cavity in ore may be accomplished using hydraulic mining technology.) Small-diameter directionally-controlled pilot holes may be required prior to the shaft boring in order to optimize borehole placement. Cuttings are removed from the bottom of the hole in a reverse-circulation drilling system. On completion each hole would be back-filled with cemented material.

The Midwest Joint Venture has carried out evaluations of the method with respect to the Midwest Deposit and has received initial estimates of relevant capital and operating costs.

23.2 Processing, Recoverability

23.2.1 Present JEB Mill

The JEB mill started production in 1999, is located adjacent to the JEB pit which has been converted into the JEB Tailings Management Facility (TMF). The mill has so far processed ores from the JEB pit and Sue C ores. Over the last four years, the operation of the mill has been improved each year (McLean Joint Venture, 2002c) and the operating costs have been reduced spectacularly.

Figure 32 illustrates a simplified schematic of the JEB Mill.

The main unit operations in the process are:

- grinding with SAG and ball mill;
- leaching;
- counter current decantation (C.C.D);
- pregnant solution clarification;
- solvent extraction;
- yellow cake precipitation;
- ammonium sulphate crystallizer;
- tailings neutralization and disposal;
- water treatment

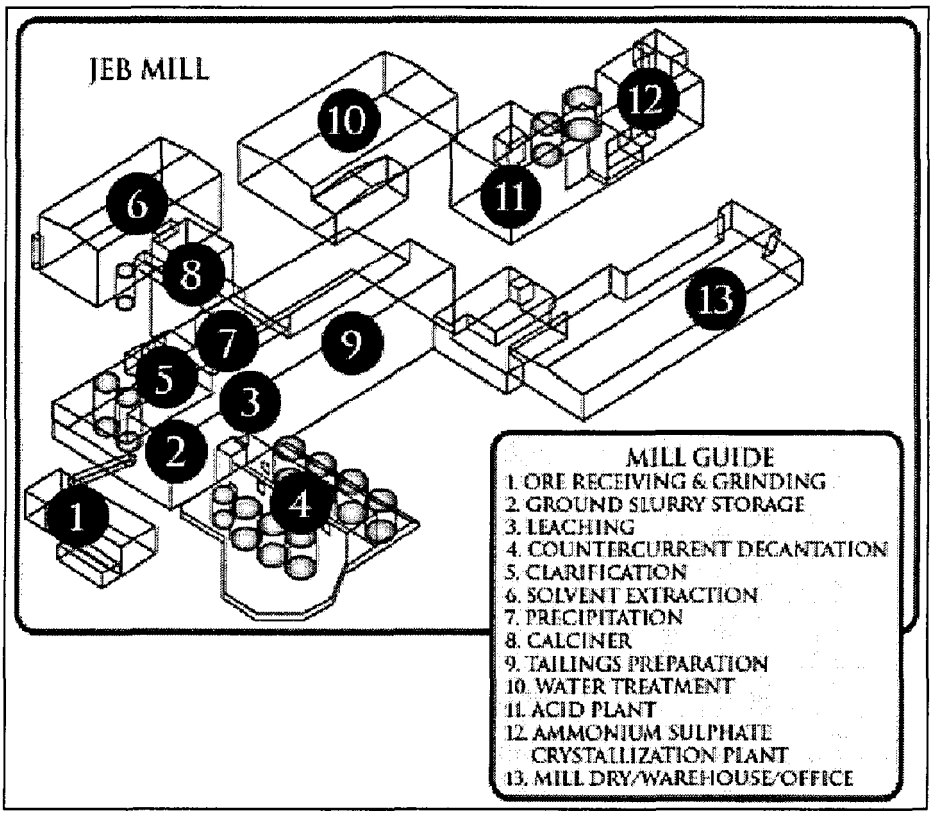

Figure 32 : JEB Mill Schematic (after Cogema, 2003b)

The ore is stockpiled near the mill and fed into the SAG mill. The grinding circuit is oversized and was only required to operate 38.9% of the possible time in 2002. The ground slurried ore is stored in pachucas for continuous feed to the leaching circuit.

The uranium is leached from the ore in two circuits with sulphuric acid. Hydrogen peroxide is used as the oxidising agent. The first circuit operates at room temperature and the second at 50°C and both circuits operate at atmospheric pressure. In 2002, the extraction was over 98% and the total mill sulphuric acid consumption was 87.5 kg/tonne. The total retention time is about 8 hours.

The solids are separated from the uranium containing solutions after leaching in a conventional 6-stage thickener counter current decantation circuit and the system was 99.65% efficient in 2002. The overflow from the first thickener is clarified in a sand filter.

The solvent extraction circuit employs conventional technology and uses an amine extractant in a kerosene organic solvent. The circuit consists of uranium extraction, arsenic scrub, water wash, uranium stripping with ammonia, ammonia scrub and organic regeneration stages. The raffinate is partially recirculated to the C.C.D. circuit and the losses are very low and 99.97% of the uranium was recovered in 2002.

Pregnant strip solution contains the uranium extracted in the previous SX circuit, but it also contains a significant amount of molybdenum. This molybdenum would also precipitate with the uranium, if not removed. The quantity of molybdenum in the strip solution is high enough to exceed reject limits imposed by the uranium conversion facilities that treat yellowcake produced at McClean Lake. The carbon adsorption columns remove approximately 75% of the molybdenum from the pregnant strip solution and reduces the amount of molybdenum carried over to the precipitation circuit to below the penalty limits.

The ammonium sulphate circuit is required to remove excess ammonium sulphate produced from the addition of ammonia in the solvent extraction and yellowcake precipitation circuits. In addition, it is required to evaporate any water added to these same circuits that contain ammonium sulphate. The ammonium sulphate is sold as a fertilizer.

The yellowcake is precipitated from pregnant strip solution with ammonia and the solids are then separated from the liquid in thickeners and centrifuges. The precipitate is then dried and calcined in a rotary multiple hearth.

The calcined yellowcake is discharged to an automatic packaging capsule which fills 210 L drums.

The tailings and part of the raffinate are mixed together with lime, barium chloride and ferric sulphate. The lime neutralizes acid and the barium chloride and ferric sulphate precipitate radium and arsenic.

Thickened tailings received from the tailings thickener are deposited to the JEB tailings disposal pit, using a sub-aerial pervious surround tailings disposal system. The JEB tailings pit contains a dewatering drift and raise to control the water levels, and a base filter to drain the tailings. The surrounding sandstone has a higher permeability that the consolidated tailings thereby allowing ground water to flow around the deposited tailings mass. During plant operations, a hydraulic gradient is created in the filter layer under the tailings by pumping water through the drift and raise with submersible raise water pump. The water level in the tailings pit is controlled by pumping water from the pit with barge mounted vertical turbine pumps to the reclaim water tank, where it is combined.

The water pumped from the surface of the tailings pit and the tailings thickener overflow is treated in a three-stage water treatment plant. Each stage contains a mixing tank and a clarifier. Lime, barium chloride and ferric sulphate are added to each stage and further precipitate radium and arsenic. The overflow from the last thickener flows into monitoring ponds and the water is not discharged until assays confirm that the water conforms to all regulations (McClean Joint Venture, 2002c).

The mill was designed and is operated to meet all environmental and safety regulations. The employee exposure to radiation is well below the limits.

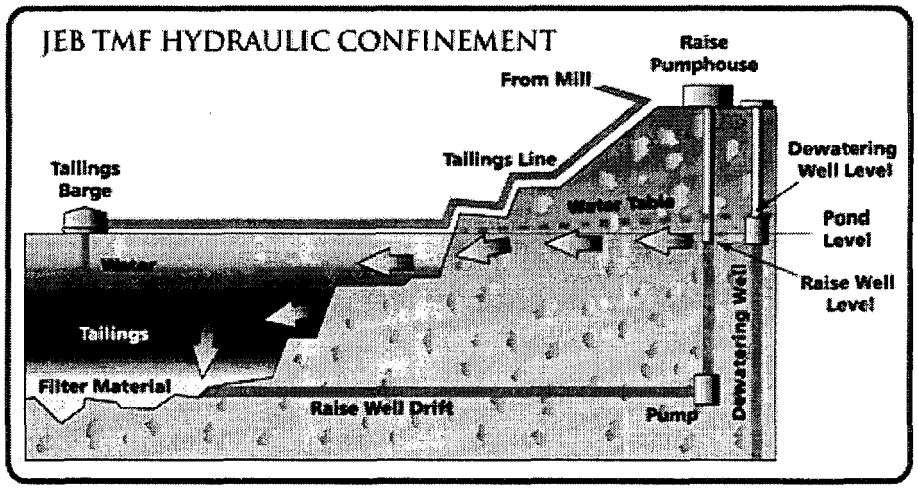

Figure 33 : JEB Tailings Management Facility (after Cogema 2003b)

23.2.2 JEB Mill Expansion

An agreement has been made between the McClean Joint Venture and Cigar Lake Mine to partially custom mill Cigar ores at the JEB mill.

The Cigar Lake ore will be ground at the Cigar Mine and transported to the JEB mill as a pulp in specially designed and government approved containers. All of the Cigar Lake ore will be unloaded, stored and leached at the JEB mill. The pregnant aqueous solution will be further processed at both JEB mill and Rabbit Lake Mill. The capacity of the JEB mill will be increased from a nominal 6 million pounds of U_3O_8 per year to 12 million pounds of U_3O_8 .

The JEB mill will require modification and expansion to enable it to treat the Cigar Lake ore and the flow sheet of the mill after the expansion is illustrated in Figure 34.

The most important changes that will be required are:

- a slurry unloading and storage system;
- pregnant aqueous solution storage and load-out system;
- a cyclone counter current circuit;
- an extra pregnant aqueous sand filter and storage tanks;
- two extra molybdenum adsorption columns;
- expansion of the ammonium sulphate plant;
- an extra ammonium sulphate storage bin;
- some extra reagent preparation and storage equipment;
- an oxygen plant

An engineering company, AMEC E and C Services Ltd. of Saskatoon, completed a report "JEB Mill Expansion Project" in August 2002 (Amec E and C Services, 2002). This report includes flow sheets, general arrangement drawings, site plan drawings and HVAC schematics as well as design criteria and capital cost estimates. All the capital costs to change the plant to process Cigar Lake

ore will be paid for by Cigar Lake and so do not affect this study. The only mill-related capital cost to Midwest will be to expand the leaching circuit.

It is very important for the economics of the McClean Lake and Midwest projects that the expanded mill will have sufficient capacity to meet the milling schedules.

Prior to the AMEC report, COGEMA completed a study "Cigar Lake Project, 2001 Feasibility Study, Supporting Document No. 4A JEB Mill Expansion" (Cogema and Cigar Lake Mining Corporation, 2001). Included in this study is very detailed calculations of the current capacity and required expansion for each unit process in the mill. Also, the capacity of all ancillary facilities such as water distribution, water treatment, electrical distribution, camp accommodation and sulphuric acid plant have been taken into account. These calculations have been checked and demonstrate that a reasonable safety margin has been included in each step of the milling.

The expansion includes an oxygen plant. The hydrogen peroxide currently used will be replaced with oxygen which will reduce operating costs. The leaching pressure will be increased to 2 Bar from atmospheric and the current leaching tanks are designed for this pressure.

The milling ore tonnage capacity is limited by the pump, piping and counter current circuit size. The practical limit is about 142,000 tonnes per year. Other circuits of the mill, such as solvent extraction and yellow cake precipitation and drying, limit how much uranium can be produced. The practical annual limit after expansion will be about 12 million pounds of U_3O_8 .

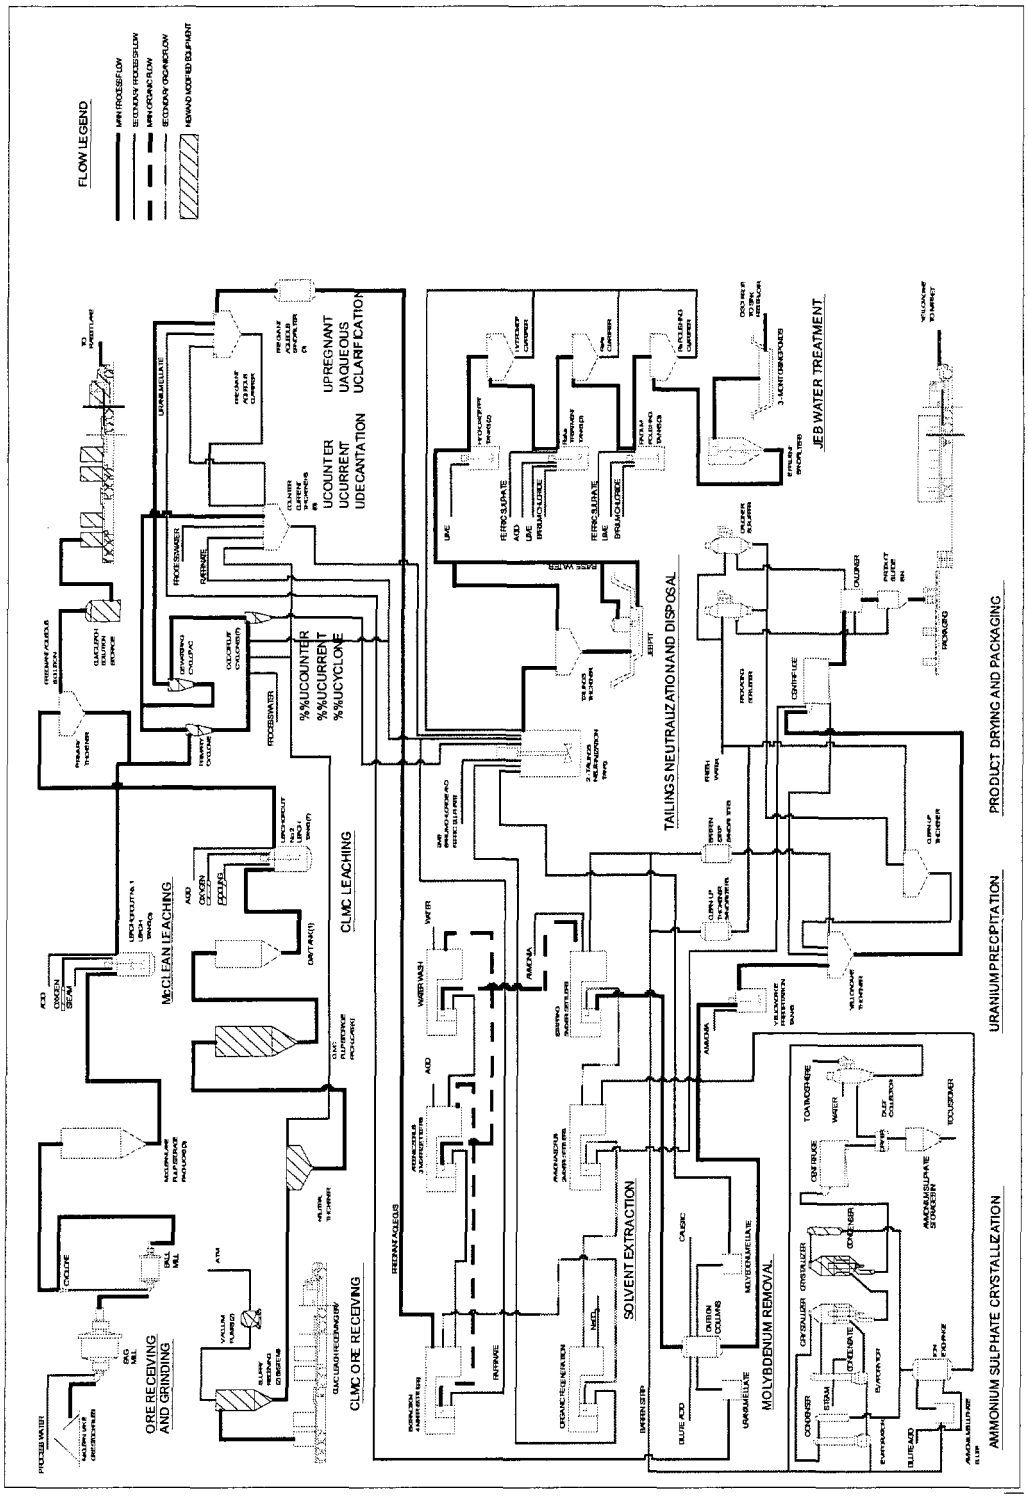

Figure 34 : JEB Mill Simplified Flow Sheet after Expansion

23.2.3 Milling Schedule

The production plans involve processing ore solely from the Sue C and JEB stockpiles until 2005 and subsequently from the Sue A , Sue B, Sue E and Midwest deposits.

In 2006, the JEB mill is scheduled to start processing Cigar Lake ore concurrently with McClean ores. Cigar Lake will pay a custom milling fee and the McClean unit milling costs will be reduced by the economies of scale.

23.2.4 Deposit Metallurgy

A summary of metallurgical testing for each of the deposits is contained in Section 18. The estimated recoveries used for the current study are:

Sue A, B	97 %
Midwest	98 %
Sue E	98 %
McClean North	98 %

Table 30 : JEB Mill Schedule

23.3 Uranium Markets

23.3.1 Uranium Demand

The only significant commercial use for uranium in the world is to fuel nuclear power plants for the generation of electricity. Demand for electricity world-wide continues to grow and nuclear power is expected to play an important part.

The increased emphasis on reducing greenhouse gases pursuant to the Kyoto Protocol to the United Nations Framework on Climate Change and concern for the damage caused by acid rain are drawing increased interest in nuclear power generation which produces neither greenhouse gases nor acid rain. A number of countries have formally recognized that the nuclear option is necessary if they are going to meet their Kyoto Protocol targets. Globally, nuclear power avoids 2.4 billion tonnes per year of CO_2 which would be produced if the same amount of electricity were produced from coal.

There are currently 441 nuclear reactors with a generating capacity of 358 Gigawatts of electrical output (GWe), in operation in 31 different countries, generating about 16% of the world's electricity requirements. In addition, there are 29 more reactors under construction, and, as well, several of the reactors that are not currently operational, including six in Canada, are expected to restart in the near future. A further 29 reactors are planned, for which approvals and funding are already in place.

Uranium consumption world-wide in 2002 was about 170 million pounds of U_3O_8. The demand for uranium is expected to grow by between 1% and 2% per year over the next decade. This growth in consumption is projected to come from the construction of new reactors, but also from improving capacity factors, upgrading of the generating capacity of existing plants, and the extension of the licenced operating lives of the reactors.

23.3.2 Uranium Supply

Uranium is produced in 21 countries world-wide but more than 53% of the total annual production in 2002 came from mines in Canada and Australia.

The four largest producers accounted for over 60% of world mine production, with Cameco and Cogema alone accounting for over 40%. Total annual world mine production in 2002 was about 91 million pounds of U_3O_8 which is equal to approximately 53% of annual requirements to fuel nuclear reactors. The McClean Lake Facility is one of the world's largest producing uranium facilities.

During the past several years, secondary sources of supply have been required to fill the gap between demand and primary mine production. These secondary sources include:

- During the 1990's countries that were formerly republics of the Soviet Union sold a large quantity of uranium from inventory. Russia is now a net consumer, producing only part of its requirements.

- Reprocessing of uranium and plutonium is being utilized by some of the utilities in Europe and Japan. However, this material is not expected to meet more than 6% of demand over the next 10 years and reprocessing capacity expansion would require substantially higher uranium prices to be justified.
- Uranium from nuclear disarmament is expected to supply 10 to 12% of demand over the next 10 to 15 years. There had been considerable uncertainty concerning the timing and method that this material from the conversion of Highly-Enriched Uranium ("HEU") would enter into the market. Two agreements entered into in 1999 have reduced that uncertainty. Cameco, Cogema and RWE Nukem Inc. entered into a commercial agreement giving them an option to purchase a large portion of the material derived from HEU and deliver it to the long-term markets. At the same time, the United states government purchased about 29 million pounds of uranium from the conversion of HEU in 1997 and 1998 and agreed to hold that material, together with another 30 million pounds then held by the Department of Energy, in inventory for a period of 10 years.
- Commercial inventories have met a portion of the demand requirements over the past decade but their impact on supply is now expected to be at a reducing rate.

The reduced availability of some of these sources is expected to tighten the supply-demand balance.

As a result of these factors, new mines are required to meet the medium and long-term market requirements. However, apart from the scheduled Cigar Lake startup, no large new mine is being proposed for development and several mines are scheduled to close as their reserves are depleted. Significant uncovered demand exists in the market from 2004 onward and Denison expects the tightening supply-demand balance to put upward pressure on uranium prices.

23.3.3 Uranium Prices

Figure 35 illustrates the spot market price for U_3O_8 over the past decade and a half. The spot market represented only about 11% of uranium demand in 2002, in line with the level in recent years (see also Section 23.4 Contracts). The spot price increased during 2001 from $US 7.10 to $US 9.60 and to $US 10.20 at December 31 2002. Spot prices in recent months (to June 2003) have increased to the $US 10.90 to 11.00 range.

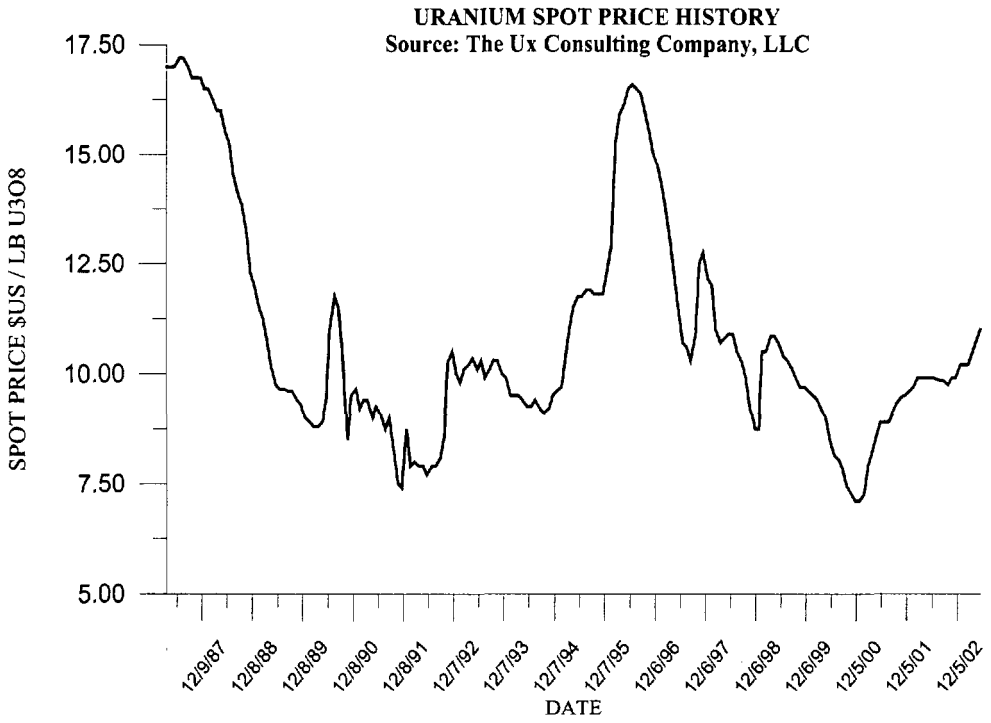

Figure 35 : Uranium Spot Market Price History (after Ux Consulting Company, LLC, 2003)

23.4 Contracts

Uranium is priced on its U_3O_8 content. There are no deductions for further treatment costs. Denison sells its uranium f.o.b converter (Cameco at Blind River, Ontario; British Nuclear Fuels plc. in the U.K.; Comurhex, part of Groupe Cogema, in France and the ConverDyn Partnership in the U.S.).

Denison and Cogema jointly market their respective shares of production from the McClean Lake Property to nuclear facilities around the world. All of Denison's current sales are under long-term contracts and not on the spot market Prices under these contracts are established by a number of methods including fixed prices, base prices adjusted by inflation indices, changes in long-term reference prices and annual price negotiations. About 16% of Denison's uranium revenue is sensitive to fluctuations in the spot price. Many contracts contain floor prices, ceiling prices and quantity flexibilities which enable the purchaser to reduce or increase the amount of uranium to be delivered from year to year within a specified range. Prices in the long-term market are higher than those in the spot market and are traditionally less volatile. Prices under uranium sales contracts are considered confidential.

23.4.1 Uranium Price Assumptions

A price of $Cdn 22.00 per pound U_3O_8 has been used for the estimation of reserves and resources in this report.

Denison is of the opinion that this price assumption is consistent with:

- Independent forecasts of supply and demand fundamentals and price projections.
- Current spot market prices in the range of $US 11.00 per pound U_3O_8 .
- Recent exchange rates of $US 0.70 to $Cdn dollar (The exchange daily rate as reported by the Bank of Canada has averaged $US 0.684 between January 2nd and June 12th and $US 0.702 for the three months prior to June 12th).
- Denison's policy of selling all production under long-term contracts.
- Long term contract prices and terms relative to spot prices.

Long term contract terms are confidential and the independent writers are not aware of the terms of any such contracts.

The price assumption is sensitive to exchange rates, actual price premiums under long-term contracts and future price movements.

23.5 Environmental Considerations

Environmental and hygiene matters related to McClean Lake and Midwest are mainly regulated by:

Federally
- the Canadian Nuclear Safety Commission [5]("CNSC").
- the Department of Fisheries and Oceans ("DFO").
- Ministry of Labour.
- Health Canada.
- Environment Canada.

Provincially
- Saskatchewan Environment ("SE")
- Saskatchewan Industry and Resources (Mining Lands).
- Saskatchewan Labour.

The major relevant legislation which the above agencies administer are:
- The Nuclear Safety and Control Act[6] ("NSCA") enacted in 1997 and administered by the CNSC.
- The Canadian Environmental Assessment Act, ("CEAA") enacted in January 1995.

[5] The CNSC supersedes the Atomic Energy Control Board.
[6] The NSCA superseded the Atomic Energy Control Act ("AECA") which was administered by the Atomic Energy Control Board ("AECB").

- The Metal Mining Effluent Regulations.
- Saskatchewan Occupational Health and Safety – Mining Regulations.

The current mining and processing plan is dependent on receiving licensing approvals for the mining of Cigar Lake ore, Midwest ore and ore from Sue E as well as construction of the Cigar Lake mine and the expansion of the JEB Mill. An environmental assessment under CEAA has been completed for disposal of Cigar Lake waste rock in the Sue C pit.

The major activity which must be carried out in order for a project to receive environmental approvals is an environmental assessment ("EA"). The Canadian Environmental Assessment Agency states that "Depending on the nature of the project, and the significance of possible environmental effects, the type of assessment required will vary. Most projects are assessed relatively quickly under what is known as a screening type assessment. Larger projects that have potential for greater environmental impacts may require a comprehensive study." (Canadian Environmental Assessment Agency, 2003)

Prior to enactment of the CEAA, environmental permitting and licensing was subject to the Environmental Assessment and Review Process Guidelines Order ("EARPGO"), approved by Order in Council, June 21, 1984. In August of 1991, the governments of Canada and Saskatchewan set up a Joint Federal-Provincial Panel on Uranium Mining Developments in Northern Saskatchewan ("Panel") for the purpose of holding public hearings on five uranium projects, including McClean Lake and Midwest. On December 23, 1993 the governments of Canada and Saskatchewan gave their approval for the development of the McClean Lake project, subject to licensing by the AECB, now the CNSC. In June 1999 McClean Lake received an operating license. In August of 2001 the current four-year operating license was issued by the CNSC permitting production of up to 8 million pounds of U_3O_8 per year.

In September 2002 the Federal Court of Canada, Trial Division, quashed the original operating license issued in 1999 for McClean Lake in response to an application by the Inter-Church Uranium Committee Education Co-operative. The decision was not critical of the performance of the McClean facility, but was based on a technical question about the administration of the licensing process. Cogema, as operator of the McClean Lake Joint Venture and the CNSC have appealed the decision and a stay of the decision was granted in November 2002 pending the results of the appeal.

In order to eliminate the uncertainty caused by the court decision, an application is being prepared for a new operating license for McClean to replace the current license.

The following summarizes the expected licensing requirements for each of the deposits and operations.

Sue A and B

Development of these deposits is included in the current operating license. No further approvals are required.

Sue E

Development of this deposit is not included in the current operating license and was not part of the Panel hearing on McClean Lake. As a consequence, Sue E will require an EA under CEAA, following which licensing approvals will be required from the CNSC, the DFO and SE. The

present schedule shows the EA approval in early 2005 following by the operating license approvals in late 2005.

McClean North

The development of this deposit as an underground mine was included in the Panel hearings under EARPGO but is not included in the current operating license for McClean Lake. However, since different methods of mining are contemplated in this report, a new EA under CEAA may be required prior to licensing approvals of CNSC, DFO and SE.

Midwest

Midwest is currently licensed under a Uranium Mine Site Preparation License issued in 2002 for an indefinite term for the care and maintenance of the site.

The development of the Midwest deposit as an underground mine was reviewed in the Panel hearings under EARPGO and approved by the federal and provincial governments in 1998. As a result of the change to open pit mining, a new EA under CEAA will be required. Upon approval of the EA, expected in late 2005, approval of the CNSC, the DFO and SE will be required for the issuance of the operating license. It is anticipated that the operating license will be issued in 2006.

Processing of Cigar Lake Ore at JEB Mill

The development of the Cigar Lake deposit and the milling of the ore at the JEB Mill was reviewed by the Panel under EARPGO and approved by the federal and provincial governments. Because of the uncertainty caused by the September 2002 court decision regarding McClean Lake, the Cigar Lake Joint Venture filed an application for an EA under CEAA. Following approval of the EA and the necessary approvals of the CNSC, the DFO and SE, a construction license will be issued. The construction license is expected to be issued early in 2004. Engineering and construction are scheduled to be completed to allow start of mining in 2006.

23.6 Taxes and Royalties

23.6.1 Provincial Royalties and Taxes

23.6.1.1 Saskatchewan Provincial Royalties

Denison pays royalties to the province of Saskatchewan on the sale of uranium extracted from ore bodies in the province under the terms of Part III of the Crown Mineral Royalty Schedule, 1986 (Saskatchewan) ("Schedule") as amended. The calculation calls for the payment of a basic royalty (currently 5% of gross sales of uranium), reduced by a Saskatchewan resource credit (1% of gross sales of uranium).

The schedule also provides for additional tiered royalties to become payable as a percentage of revenue after the Company has deducted from revenue its capital costs for mill expansion and mine development in accordance with provisions set out in the Schedule. The company currently has substantial capital recovery banks and anticipates that at current selling prices, it will not use up its

capital recovery banks in the foreseeable future. Following recovery of the capital investment, revenues are subject to an additional tiered royalty as follows:

Table 31 : Saskatchewan Tiered Royalty Schedule

Average price per kilogram of U_3O_8 *	Tiered Royalty as a % of Revenues with the Bracket
Up to $30	0%
$30 to $45	6%
$45 to $60	10%
more than $60	15%

*1999 bracket value to be indexed annually

Royalties are assessed on gross revenue received less any shipping component of those revenues.

A provincial royalty of 4% on revenues, less $0.09 per lb for the estimated shipping component, has been used in the current economic analysis.

23.6.1.2 Saskatchewan Resource Surcharge and Capital Tax

Denison is subject to capital tax on paid-up capital (as defined in the relevant provincial legislation) in respect of its operations in Saskatchewan. In Saskatchewan it currently pays a rate of 0.6% on paid up capital in excess of $15 million. In addition a resource corporation in Saskatchewan pays a corporate surcharge of 3.6% of the gross sales of uranium to the extent that the amount so calculated exceeds the regular capital tax described above.

The provincial resource surcharge is based on gross revenues less the transportation component of any revenue.

A provincial resource surcharge of 3.6% on uranium production less $0.09 per pound for the estimated shipping component, has been used in the current economic analysis to reflect the combined effect of capital tax and provincial resource surcharge.

Other Royalties

Midwest Deposit

Two royalties, with identical terms are payable on 20% of the production from Midwest, declining to 12.5% after payout (revenue equal to capital, operating costs and royalties). Denison is responsible for 5.5% and Cogema 14.5% (declining after payout). Each of the royalties have terms as follows:

- Before payout the royalty applies to 20% of production.
- After payout the royalty applies to 12.5% of production.
- Payments under each royalty are calculated as follows:

on first 800,000 pounds of U_3O_8 production	1%
on following 700,000 pounds of U_3O_8 production	1.75%
on balance of U_3O_8 production	2%

Denison believes that, based on current reserve estimates and projected selling prices the royalty payments will total between $3.9 and $4.5 million, of which Denison's obligation will be $1 million to $1.25 million.

Sue E Deposit
The McClean Joint Venture is currently negotiating with Cameco for the right to mine portions of the Sue E deposit which extend onto a claim held by Cameco. It is expected that the terms of such an agreement would involve a cash payment and a royalty. Since the terms of such an agreement have not been finalized the cash payment and royalty have not been included in the cash flow (nor in the Whittle® parameters).

23.7 Capital And Operating Cost Estimates

23.7.1 Capital Cost Estimate

Sustaining Capital Costs – A total of $5.4 million in capital costs have been budgeted for the period 2003 to 2005 (exclusive of JEB Mill modifications listed below.

Sue A and Sue B - Sue A and B are located in close proximity to the present infrastructure at the Sue Site. No significant capital costs are required prior to the initiation of mining.

Sue E - Sue E is located close to the Sue C site. A total of $3 million has been budgeted for site preparation and infrastructure prior to the initiation of mining at Sue E.

Midwest - Capital costs for Midwest have been budgeted at $83.7 million prior to the initiation of mining and exclusive of the required JEB Mill modifications. Decommissioning costs are budgeted at $23.5 million of which $9.8 million will be expended immediately on completion of mining and the balance over the following nine years. The schedule for the capital cost expenditures is illustrated in Table 32.

Table 32 : Midwest Capital Cost Estimates

	$ x 1,000 2007	2008	2009	2010	2011 to 2019
Water Treat. Ponds & Plant, Water Distribution	10,664	-	-		
Dewatering Wells	8,127	8,126			
Site Excavation	8,221	-			
Elect., Propane &Fuel Storage., Surf. Facilities &Commission.	21,360				
Surface Mobile Equipment (after salvage of 50%)	26,582				
Misc. (Health and Safety Equip., drilling)	197	197	197		
Decommissioning				9,800	1,520
TOTAL	75,150	8,323	196	9,800	1,520

Capital Cost Estimates for JEB Mill Modifications

Processing of both Sue E and Midwest ore require modifications to the JEB mill. Cogema has estimated the cost of these modifications at $12 million. This study has used $15 million.

McClean North

Preliminary estimates of Capital Costs for development of McClean North by Blindshaft Boring are contained in APPENDIX 6 – BLINDSHAFT BORING COST BASIS.

23.7.2 Operating Cost Estimates

Mining Cost Estimates

Costs for mining are illustrated in Table 33.

Table 33 : Mining Cost Estimates

	$ / Tonne			Site Support, Services & Administration
	Overburden	**Waste**	**Ore**	**$ x 1,000**
Sue A	2.96	2.96	5.08	2,500
Sue B	2.96	2.96	5.08	2,700
Sue E	2.68	2.68	5.08	4,000
Midwest	0.89	1.32	18.26	61,017

* Assumed ore mining costs at Midwest include $1.28 for direct mining and delivery to the Midwest stockpile pad plus $10 per tonne for trucking ore, diluted to 2.34% U_3O_8, to the JEB Mill. Assumed ore mining costs at Sue A, B and E include $1.12 for trucking to the JEB Site and $1.00 for loading and other handling costs.

The Administration, Site Support and Site Services for Midwest comprise the following:

Table 34 : Midwest, Administration and Site Services

	$ x 1,000				
	2007	2008	2009	2010	TOTAL
Administration	1,785	3,570	3,570	3,570	12,495
Site Support	3,657	3,657	3,657	4,725	15,696
Supervision, Tech. Services & Construction Management	2,214	2,214	2,214	1,881	8,523
Warehouse & freight	2,023	2,023	2,023	1,787	7,856
Mink Arm Drainage (Dam exists)	990	0	0	0	990
Mine Dewatering & Treatment(Pit & Wells)	1,832	1,832	1,832	3,696	9,192
Company Shop, Office & Pit Support	2,730	2,730	2,730	1,734	9,924
TOTAL	15,231	16,026	16,026	17,393	64,676

Estimates of mining costs for the development of McClean North by Blindshaft Boring are contained in Appendix 6.

Processing Cost Estimates

Processing costs used for the reserve estimates for each of the deposits are contained in Appendix 4.

Processing costs are dependent on the metallurgy of the ores being processed and also the economies of scale which result from processing Cigar Lake ore.

23.8 Economic Analysis

Table 35 presents a summary pre-tax cash flow for the combined projects. The cash flow is on a 100% "Projects" Basis. It does not reflect varying portions to be paid (or received) by participants in the Joint Ventures for capital, operating, administrative costs or toll milling fees. Nor does it reflect costs or fees related to processing ore form the Cigar Lake Joint Venture.

Figure 36 illustrates the effect of changes in major parameters, mining cost, milling cost and uranium price, on the total cash flow.

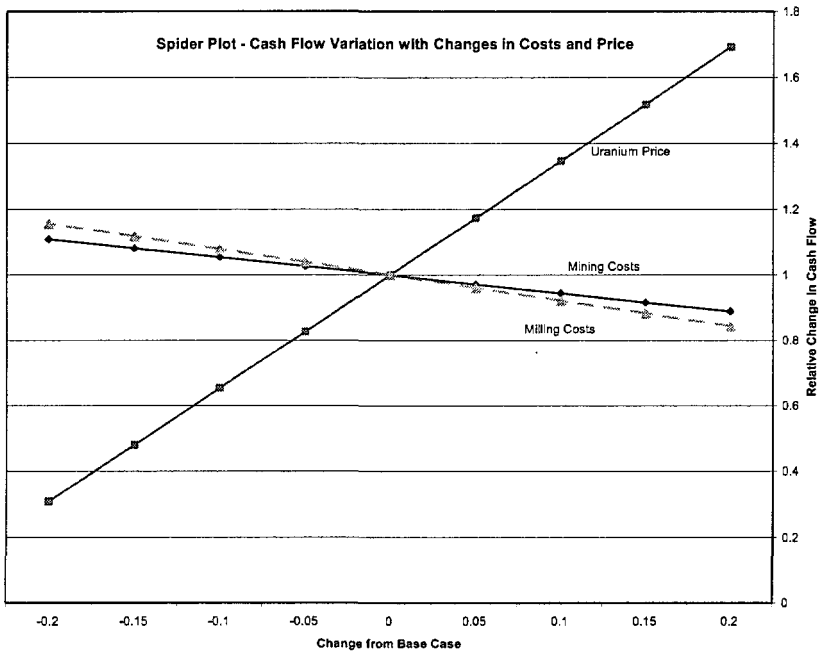

Figure 36 : Spider Plot - Effect on Total Cash Flow with Variations in Costs and Price

The effect of changes to estimates of U_3O_8 content in the ore, (through changes in tonnage in grade) would be similar to changes in uranium price.

Table 35 : Pre Tax Cash Flow - Stockpiles, Sue A,B, E and Midwest - Projects Basis

Pre Tax Cash Flow – Stockpiles, Sue A,B,E and Midwest – Projects Basis

	2003	2004	2005	2006	2007	2008	2009	2010	2011	2016	2017	Totals

23.9 Payback

The major capital costs for Sue A and B are the costs of mining waste and ore. The ore will be blended with other ore from the Sue C and JEB stockpiles prior to processing. Depending on assumptions concerning the timing of processing of the Sue A and B ores, payback will occur within 1 to 3 years.

The major components of investment for Sue E are $3 million for site infrastructure, mining costs and completion of the JEB Mill modifications. The JEB Mill modifications are also required for Midwest. Assuming that 15% of the cost of the modifications is attributed to Sue E, payback will occur near the end of the first year of milling the ore.

Midwest is much more capital intensive than the deposits on the McClean Property. Approximately $260 million are budgeted for investment in Midwest (including, site infrastructure and mining costs) before any ore is processed from the Midwest Deposit. Assuming a U_3O_8 selling price of $22 per pound, payback of this capital investment is projected to occur during the fourth year of the 8.2 years that ore will be milled from Midwest.

23.10 Minelife

Waste and ore from Sue A and B will be mined in less than one year. Waste from Sue E will be mined over a two year period and ore at the end of the period. Ore from these deposits will be blended with stockpiled material from Sue A and B and will be processed during the period 2007 to 2009 and early 2010.

Midwest will require up to four years of predevelopment preparation and waste mining before ore is accessed. All ore will be mined in a period of six months following waste stripping. Ore will be processed during the following eight years to nine years.

26 Statements of Qualification

26.1 William C. Kerr

I William C. Kerr of 1 Port Street East, Mississauga, Ontario certify that:

- I graduated from the University of New Brunswick, Fredericton, New Brunswick in 1975 with a Bachelor of Science degree in geology.
- I am a registered member in good standing of the Association of Professional Geoscientists of Ontario; Registration Number 0120.
- I am a registered member in good standing of the Association of Professional Engineers and Geologists of Saskatchewan, Registration Number 12624.
- I have practised my profession as a geologist since 1975, during which time I have held technical and executive positions with senior and junior mining companies throughout North America.
- I have worked as an independent consultant providing various exploration management services to geological and geophysical exploration companies and the mining industry in Canada and Mexico.
- I am a "qualified person" as defined in National Instrument 43-101.
- My experience has included exploration and development work for gold, base-metals, uranium, diamonds, and industrial minerals.
- I have read national Instrument 43-101 and its companion policy 43-101F and the technical report has been prepared in accordance with their requirements with the exception that I am not independent of Denison.
- In my capacity as Director, Resource Evaluation, Denison Energy, Inc., I have visited numerous times the Midwest Property and the McClean Lake Property since 1997.
- I have authored the following sections of the report dated October 10 2003: Sections 6 through 12, Section 19.6. I have co-authored Sections 1 through 5, 13 through 17, and 19 through 23. I have not authored all sections of the report, but as the non-independent Qualified Person for Denison Energy Inc, in accordance with National Instrument 43-101 and its Companion Policies, I have reviewed all sections authored by myself and all independent and non-independent authors and am satisfied as to their relevancy and completeness and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authority and any publication by them including in electronic format available to the public.

Dated at Toronto this 16th day of October 2003

William C. Kerr

26.2 Andrew C. Rickaby

I, Andrew C. Rickaby, do hereby certify that:

- I reside at 71 First Street, Oakville Ontario, L6J 3R5
- I am a graduate of Queen's University, Kingston, Ontario, in 1958 with a B.Sc in Mining Engineering.

I have worked in the mining industry all my working life as detailed below:

2002 to Present:: Consultant
1999 to 2002: Vice President, Mineral and Environmental Operations, Denison Mines Limited (Now Denison Energy Inc.)
1987 to 1999: Vice President, Mining Operations, Denison Mines Limited
1982 to 1987: Vice President, Elliot Lake Operations, Denison Mines Limited
1976 to 1982: Mine Manager/General Manager, Denison Mines Limited
1974 to 1976: Project Manager, Canadian Mine Services Limited
1967 to 1974: Engineer, Mine Superintendent, Denison Mines Limited
1964 to 1966: Industrial Engineer, Canadian Johns Manville
1958 to 1964: Engineer, Mine Supervisor, International Nickel

- By virtue of my education and experience I am a qualified person for portions of this report dealing with mining, processing, scheduling, and cash flows. I am not a "qualified person" as defined in National Instrument 43-101.
- I am not independent of Denison Energy Inc. in accordance with the requirements of National Instrument 43-101 and its Companion Policies.
- I have authored or co-authored the following sections of the report: Sections 23.1, 23.5, 23.7, 23.8, 23.9, 23.10 and the portions of the Appendices dealing with capital and operating costs.
- I have read the written report entitled Report on the Reserves and Resources of Denison Energy Inc. McClean lake and Midwest Area, Saskatchewan and dated October 10th 2003 and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I have read national Instrument 43-101 and its companion policy 43-101F and the technical report has been prepared in accordance with their requirement with the exception that neither I nor William Kerr are independent of Denison.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authourity and any publication by them including in electronic format available to the public.

Dated this 16th day of October, 2003

Andrew C. Rickaby

26.3 Joe Spiteri

I, Joseph G. Spiteri, of RR 2, Acton, Ontario do hereby certify that:

- I graduated with a BSc. (Honours) degree in Earth Science from the University of Toronto in 1976.
- I am a member of the Canadian Institute of Mining and Metallurgy. I am a registered member in good standing of the Association of Professional Geoscientists of Ontario.
- I have worked as a geologist, engineer or mining operator for a total of 26 continuous years since my graduation from university. Over half of this experience has been at an operations management or executive level with senior and junior mining companies.
- I have worked internationally as an incorporated and now independent geological and mining consultant continuously since 1995.
- I have read the definition of "qualified person" set out in National Instrument 43-101 ("NI 43-101") and certify that by reason of my education, affiliation with a professional association (as defined in NI 43-101) and past relevant work experience, I fulfil the requirements to be a "qualified person" for the purposes of NI 43-101.
- I have performed the mineral resource and reserve interpretation and estimation on all of the deposits discussed in this report. I have also reviewed the proposed mining methods, mining rates and associated costs, along with joint author A. Rickaby. I have authored or co-authored the following sections of the report: Sections 4, 19.1 to 19.4, 21, 22 and portions of Section 23 and the Appendices dealing with reserve estimates.
- I am independent of Denison Energy Inc. in accordance with the requirements of NI 43-101 and its Companion Policies.
- I have read the written report entitled Report on the Reserves and Resources of Denison Energy Inc. McClean lake and Midwest Area, Saskatchewan and dated October 10th 2003 and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I have read national Instrument 43-101 and its companion policy 43-101F and the technical report has been prepared in accordance with their requirements with the exception that I have not personally visited the properties. However, a joint authour William Kerr has carried out such visits on a number of occasions.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authourity and any publication by them including in electronic format available to the public.

Dated this 16th Day of October, 2003.

J. G. Spiteri

26.4 Gary A. Cohoon

I, Gary A. Cohoon of 744 Victoria Street, Kincardine, Ontario certify that:

- I graduated from Queen's University, Kingston, Ontario in 1973 with a BSc. (Honours) in geology.
- I graduated from York University, North York, Ontario in 1980 with a Masters in Business Administration (MBA)
- I am a registered member in good standing of the Association of Professional Geoscientists of Ontario; Registration Number 0633.
- I have practised my profession as a geologist since 1973, continuously with the exception of time spent obtaining the MBA in 1979 and 1980. I have held technical and executive positions with senior and junior mining companies.
- I have worked as an independent consultant providing exploration, corporate and marketing services to the mining industry in Canada and Mexico since 1998.
- I am a "qualified person" as defined in National Instrument 43-101.
- My experience has included exploration, development and marketing of various commodities including gold, base-metal, uranium and industrial minerals.
- I am independent of Denison Energy Inc. in accordance with the requirements of National Instrument 43-101 and its Companion Policies.
- I have authored or co-authored the following sections of the report: Sections 4, 5, 16, 19, 20, 21, 22, and portions of the Appendices. I have been responsible for the overall compilation and editing of the report.
- I have read the written report entitled Report on Reserves and Resources of Denison Energy Inc. McClean Lake and Midwest Area, Saskatchewan and dated October 10th 2003, and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.
- I have read National Instrument 43-101 and its companion policy 43-101F1 and the technical report has been prepared in accordance with their requirements with the exception that I have not personally visited the properties. However, a joint author, Wm. Kerr has carried out such visits on a number of occasions.
- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authority and any publication by them including in electronic format available to the public.

Dated this 16th day of October 2003

Gary A. Cohoon

26.5 H.C. Counsell

CERTIFICATE OF QUALIFICATION

I, Hugh C. Counsell, do hereby certify that:

- I reside at 13 Victoria Avenue, Lakefield, ON K0L 2H0
- I am a registered engineer in Ontario (No. 9515016)
- I am a graduate of The Royal School of Mines, Imperial College, London University, U.K. in Mining Engineering (Mineral Technology)

I have worked in the mineral processing industry all my working life as shown below:

1993 to Present: worked on occasional projects for Denison, including potential investment evaluation and the closing of the Elliot Lake site.

1982 to 1993: Denison, as Manager of Surface Operations and Manager of Processing. I was responsible for all aspects of surface operations including the uranium and yttrium metallurgical plants, mechanical workshops, utilities, mine hoists, ventilation fans and laboratories.

1974 to 1981: Tara Mines, Ireland, as Manager of Processing. I was responsible for metallurgical test work, design, commissioning and start-up of a large lead-zinc concentrator including a ship loading terminal.

1969 to 1973: Noranda Mines, as Mill Superintendent at Gaspé Copper and Horne Division.

1966 to 1969: Texas Gulf Sulphur, Timmins as Metallurgical Engineer.

1964 to 1966: Noranda Mines, Quebec, as Metallurgist.

1961 to 1963: Rhodesian Selection Trust, Zambia, as Metallurgist.

- By virtue of my education, professional affiliation and experience I am a qualified person for portions of the report dealing with metallurgy and processing.
- I am not independent of Denison Energy Inc. in accordance with the requirements of National Instrument 43-101 and its Companion Policies by virtue of the fact that I own shares of Denison Energy Inc.
- I have authoured or coauthoured the following sections of the report: Section 18, Mineral Processing and Metallurgical Testing and Section 23.2 Processing and Recoverability.
- I have read the written report entitled Report on Reserves and Resources of Denison Energy Inc. McClean Lake and Midwest Area, Saskatchewan and dated October 10th 2003, and do not have any reason to believe that there are any misrepresentations in the information derived from the technical report or that the written disclosure contains any misrepresentation of the information contained in the technical report.

- I have read National Instrument 43-101 and its companion policy 43-101F1 and the technical report has been prepared in accordance with their requirements with the exception that I have not personally visited the properties. However, a joint authour, Wm. Kerr has carried out such visits on a number of occasions.

- I consent to the filing of this report, when done so in its entirety, with any stock exchange or securities related regulatory authority and any publication by them including in electronic format available to the public.

Dated this 16th day of October of 2003

28 Appendix 2: Specific Gravity Measurements and Estimates

28.1 Midwest Deposit

Densities used by previous operators for determining tonnage factor include a combination of measured density by rock type (for samples recording less than 1.5% U_3O_8) measured densities for mineralized rock where available and an empirically derived formula based on assays for U and Ni.

28.1.1 Canada Wide Mines Limited Conventions

Denison (1990 Appendix 3.C) reports the following methods for estimating specific gravity:

1. Where possible, specific gravities of samples were physically measured (dry bulk density). Measured specific gravities at Midwest range from 1.39 to 6.16.

2. Where no measured value exists and the sample is considered low-grade (<1.5% U_3O_8), the specific gravity was estimated according to rock type as follows:

Table 38 : Specific Gravities used by CWML for Unmineralized Rock

Rock Type	S.G.
Sandstone, Conglomerate	2.30
Altered Sandstone	2.20
Mudstone, Regolith	2.10
Basement Gneiss	2.15
Altered Gneiss	2.10

3. Where no measured specific gravity value exists and the sample is considered high-grade, specific gravity was "calculated" according to a semi-empirical relationship between specific gravity, weight % Nickel and weight % Uranium.

$$SG_c = (94.90)/ ((14.6P) + 13N(1-P) + 47.45(1-P)(1-N)$$

where P= U assay (decimal) x 2.144
N= Ni assay (decimal) x 2.95
SG_c = Specific Gravity of the core sample

This formula was derived from 119 measured samples and subsequently checked for 683 samples for which %U was greater than 2, %Ni was greater than 0 and specific gravity measurements were available.

28.1.2 Canada Wide Minerals Limited Method of Measuring Density

Trigg (1990) reports that he was informed verbally concerning the method used by CWML for measuring density as follows:

1. Select about one-half of the available whole core
2. Weigh the sample. This was referred to as the "fresh weight"
3. Immerse the sample in a graduated column filled with water and, in some cases, a small amount of polydrill, which was added in an attempt to avoid disintegration of the sample.
4. Measure the volume of displaced water.
5. Weigh the sample, This was referred to as the "wet weight".
6. Dry in oven with temperatures sufficient to dry sample but not cause deterioration.
7. Weigh the sample. This was referred to as the "dry weight".
8. Calculate the "dry bulk density" by dividing dry weight by volume of displaced water.

28.1.3 CWML Minerals and Trigg (1990) Estimates of Rock Density

Trigg (1990a) reviewed density data and examined the densities used by Esso Minerals for unmineralized rock (<1.5% U_3O_8) as follows:

Table 39 : Unmineralized Densities - Trigg 1990 and CWML Minerals

ROCK TYPE	UNIT	DENSITY TRIGG (1990)	NUMBER OF MEASUREMENTS	DENSITY CWML
Diabase	13	2.7	1	not stated
Mudstone	12a or 22	2.2	6	2.1
Sandstone /Conglomerate	12b, 12c	2.3	233	2.3
Clay	11	2.0	43	2.0
Pegmatite	10a	2.1	2	not stated
Quartz Feldspar Biotite Gneiss	8	2.1	15	2.15
Porphyroblastic Gneiss	7	2.2	2	2.15
Altered Gneiss		no data		2.10

Table 40 : Unmineralized Specific Gravity Used by Reedman

Unit	Specific Gravity
Sandstone	2.3
Altered sandstone	2.2
Basement	2.15
Altered Basement	2.10

28.1.4 Bulk Density for Mineralized Rock

The Reedman estimate was carried out using the following conventions for specific gravity:

1. Where possible measured specific gravities were used.

3. Where no measured specific gravity value existed and the sample is considered high-grade the specific gravity was estimated using the following formula:
4.

$$SG_c = 94.90/ ((14.6P)+13N(1-P) + 47.45(1-P)(1-N))$$

where:

P=U_3O_8 % assay in decimal form x 2.144
N= Ni % assay in decimal form x 2.95
SG_c = specific gravity estimated for the core sample

Trigg (1990a) reviewed the methods and formulas used by CWML for the estimation of density of material with greater than 1.5% U_3O_8. Trigg concluded that the density formula underestimated the overall density by about 4%, particularly when U_3O_8 values are greater than 10 per cent. He recommended the following formula for cases where U_3O_8 assayed greater than 12 per cent:

$$D_d = 1.91 + 0.0561 \times (U_3O_8\% + Ni\%)$$

where D_d = Derived density
U_3O_8 % = U_3O_8 % as assayed.
Ni % = Ni% as assayed.

28.1.5 Other

Demange (undated) carried out additional statistical analysis concerning the relationship between density and various metal value assays. The best predictor which he examined involved a combination of U and Ni. No recommendations were made in this report.

28.2 Sue and McClean Deposits

Corman (1992) documented the methodology for density measurements (which were subsequently used to develop formulas for density estimates based on metal content) as follows:

> In the field wet bulk density sampling was performed by Minatco personnel using the following procedures:
>
> 1) A geologist present at the time of drilling, tightly wraps a thin plastic film around pieces of core in order to retain the cores moisture content and keep the samples saturated.
> 2) Core is carefully transported (minimizing disturbance and without allowing samples to freeze) back to camp for testing. Desaturation due to release of dissolved gas and air, as a result of depressurization of the samples after their retrieval from underground is considered significant.
> 3) Individual core samples are selected and weighed in air and in near freezing water. The bulk volume of the sample is then determined based on the Archimedes principle by comparing the weights of the sample in air and water (the buoyant weight).
> 4) The sample is identified (assay sample tag) and described and sent whole to the assay laboratory for further analysis.

5) The assay lab determines the grades of the U_3O_8 , Ni, As, Mo, V and Pb associated with each particular sample as well as determining a dry weight of the entire sample.
6) The Bulk dry density (t/ m^3) = Dry Weight / Bulk Volume = Dry Weight / (Wet weight – buoyant weight).

28.3 Sue A Deposit

Richardson (1992) reported that the following formula was used by operators prior to 1992 for the estimation of specific gravity:

Density = 1/(0.452-0.00326 x (%U_3O_8))

Kilborn (1990) used the following formula which incorporates nickel and arsenic assays.

Density = 1/(0.452 –0.00326*(%U_3O_8 +%Ni+%As)).

The writers have not determined what specific gravity estimate method has been used by Cogema.

The writers have estimated the specific gravity for Sue A using the same formula as that used by Kilborn (incorporating Ni and As).

28.4 Sue B Deposit

Richardson (1992) reported that the following formula was used by operators prior to 1992 for the estimation of specific gravity:

Density = 1/(0.452-0.00326 x (%U3O8))

The writers have not determined what specific gravity estimate method was used by Cogema

The writers have used the formula reported by Richardson for the estimate of specific gravity.

28.5 Sue E Deposit

Corman, 1992 provided the following description of the development of density determinations for all of the deposits on the McClean Lake Property and specifically for Sue E:

> "As is now Minatco's standard procedure in ore reserve estimates a specific density equation is developed for each individual deposit. The density equations calculated are based on the density model developed by P. Golightly INCO (while working on the McClean deposits) relating measured dry bulk densities to assayed U_3O_8 grades.
>
> With addition [sic] testing done by Minatco and reviewed by consultants, the original Golightly equation has been modified to fit better with the changing metallurgy and styles of mineralization of the projects various deposits.

From one diamond-drill hole (S457), 116 samples were collected and tested in the field for density values. .... "

Corman reported that the following equation was recommended for Sue E:

Dry bulk density (t/m^3) = $1/(0.437-0.0026(U_3O_8$ %+Ni%+As%))

Grove (2003b) reported a uniform specific gravity of 2.3 was used by Cogema for estimating resources and reserves at Sue E: He also reported that the use of the following formula gave very similar results:

SG = 1/(0.4261-(0.0003425*1.179245*grade in kg/t U))

The writers have estimated the specific gravity using the formula developed by Corman for Sue E.

28.6 McClean North Deposit

Richardson (1992) reported that the following formula was used by operators prior to 1992 for the estimation of specific gravity:

Density = $1/(0.452-0.00326 \times (U_3O_8$ %))

Grove (2003a) reported that use of the above formula is being retained by Cogema for estimates on the McClean deposit.

28.7 Specific Gravity for Non-Sampled Material

The following specific gravities were assumed for non-sampled material:

Midwest	2.10 for unconformity "ore" inside the solid
	2.10 for basement ore inside the solid
	2.20 for perched ore in the sandstone
	2.30 for sandstone (i.e. all rock above the basement) outside of the solid
	2.15 for basement, outside of the solid
Sue A	2.30 for rock above the unconformity
	2.28 for rock in the basement
Sue B	2.30 for rock above the unconformity
	2.28 for rock within the basement
Sue E	2.30 for rock above the unconformity
	2.28 for rock within the basement
McClean	2.30 for rock above the unconformity
	2.28 for anything within the basement

29 APPENDIX 3 – U_3O_8 GRADE DISTRIBUTION

30 Appendix 4 – Whittled® Pit Shell and Preliminary Designed Pit Criteria

30.1 Midwest

In order to estimate what portion of the "in-place" resource is economically accessible by open pit the writers carried out a two stage process involving: 1) optimization of a pit shell using Whittle® software and 2) preliminary design of a pit with ramps.

Whittle® Pit Shell

An optimized pit shell, containing 33.5 million pounds U_3O_8 and a total of 48.7 million tonnes of rock and overburden was determined using Whittle® software using the following criteria:

Uranium Price $Cdn 22.00 /lb. U_3O_8

Pit Slopes

Benches in Pit (metres)	Bench Height (metres)	Berm Width (metres)	Bench Face Angle	Inter Ramp Angle
Surface to 472 Toe	5	10	76°	
472-352	12	7.44	76°	49°
352-292	12	9.68	70°	40.5°
292-280	12	-	65°	38°

Mining Cost / Tonne of Rock Mined. (Includes hauling costs for ore to JEB Mill)

Material	$Cdn /Tonne
Ore	17.09
Waste Rock	1.32
Overburden	0.89

Other Cost / Tonne Mined

Concept	$Cdn/Tonne
Cogema Administration	0.16
Site Support	0.20
Supervision Tech Services and Construction Management	0.48
Total	0.84

Milling Costs / pound U_3O_8 produced $Cdn 4.16 / lb of U_3O_8

Other

Royalties, shipping and other post-production charges $ 2.00 / lb. U_3O_8

Preliminary Pit Design

A preliminary design, containing 29.9 million pounds of U_3O_8 and a total of 65.7 million tonnes of rock and overburden was constructed for the "Whittled®" pit shell described in the previous section.

A second attempt was made to design a pit which would extract more of the 33.5 million pounds of U_3O_8 that was in the Whittle® shell. This second pit, which has a slightly larger "footprint", contained 34 million pounds U_3O_8 and 70.3 million pounds of rock and overburden. Subsequent inspection of the pits and the block model showed that the second pit had extracted low-grade blocks which would "not pay" (i.e. were not in the Whittle® shell).

The writers recognize that the final pit optimization will come with several more iterations of the pit design process and have concluded that the final pit will extract 33.5 million pounds U_3O_8 and approximately 68.4 million tonnes of rock, including overburden, waste rock and ore.

30.2 Sue A

In order to estimate what portion of the "in-place" resource is economically accessible by open pit the writers identified an optimized pit using Whittle® Software using the following criteria.

Uranium Price $Cdn 22.00 /lb U_3O_8

Pit Slopes (note that the southwest wall of the Sue A pit will daylight into the mined-out Sue C pit)

Pit Wall	Angle
East Wall	43°
Southeast Wall	43°
Northwest Wall	52°

Mining Cost / Tonne of Rock Mined. (Includes hauling costs for ore to JEB Mill)

Material	$Cdn /Tonne
Ore	3.96
Waste Rock	2.96
Overburden	2.96

Other Costs / Tonne of Rock Mined

Administration, Site Support, Technical Services etc. $ 0.80 / tonne mined.

Milling Costs / pound U_3O_8 produced $Cdn 4.67 / lb. of U_3O_8

Other Royalties, shipping and other post-production charges $ 2.00 / lb. U_3O_8

Whittled® Pit vs. Designed Pit

The writers have assumed that a designed pit will approximate the Whittled® pit since access is facilitated by the adjacent mined-out Sue C pit.

Cogema has carried out preliminary designs for the pit to access Sue A as illustrated in Figure 42.

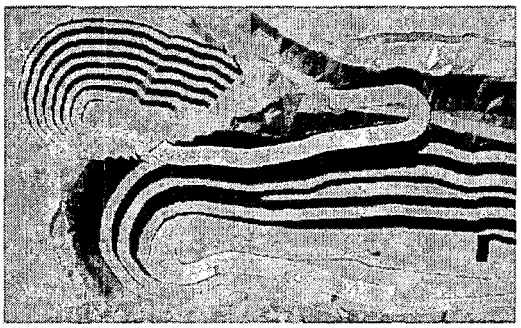

Figure 42 : Cogema Conceptual Design of Sue A Pit with Access

30.3 Sue B

In order to estimate what portion of the "in-place" resource is economically accessible by open pit the writers carried out a two stage process involving: 1) optimization of a pit shell using Whittle® software and 2) preliminary design of a pit with ramps.

Whittled® Pit

Uranium Price $Cdn 22.00 /lb U_3O_8

Pit Slopes

Pit Wall	Angle
East Wall	45°
West Wall	45°
South Wall	45°
North Wall	45°

Mining Cost / Tonne of Rock Mined. (Includes hauling costs for ore to JEB Mill)

Material	$Cdn /Tonne
Ore	5.08
Waste Rock	2.96
Overburden	2.96

Other Costs / Tonne of Rock Mined

Administration, Site Support, Technical Services etc. $ 1.30 / tonne mined.

Milling Costs / pound U_3O_8 produced $Cdn 4.67 / lb of U_3O_8

Other

Royalties, shipping and other post-production charges $ 2.00 / lb. U_3O_8

Preliminary Pit Design.

A preliminary pit was designed with ramps by the writers with the following criteria:

Bench Height	2 x 6 metre
Berm Width	6 metres
Batter Slope	76°
Ramp Width	16 metres
Ramp Grade	10% if necessary 12% for last bench or 2 if required
Overburden slope	2 to 1 - 63.4°
Ultimate crest to toe	38° (east wall) 47° (north wall)

The designed pit approximates closely the Whittled® optimized pit.

30.4 Sue E

In order to estimate what portion of the "in-place" resource is economically accessible by open pit the writers carried out a two stage process involving: 1) optimization of a pit shell using Whittle® software and 2) preliminary design of a pit with ramps.

Whittled® Pit

Uranium Price $Cdn 22.00 /lb U_3O_8

Pit Slopes

Pit Wall	Angle
East Wall	42°
West Wall	42°
South Wall	42°
North Wall	42°

Mining Cost / Tonne of Rock Mined. (Includes hauling costs for ore to JEB Mill)

Material	$Cdn /Tonne
Ore	5.08
Waste Rock	2.68
Overburden	2.68

Other Costs / Tonne of Rock Mined

Administration, Site Support, Technical Services etc. $ 0.30 / tonne mined.

Milling Costs / pound U_3O_8 produced $Cdn 4.67 / lb of U_3O_8

Other

Royalties, shipping and other post-production charges $ 2.00 / lb. U_3O_8

Preliminary Pit Design

A preliminary pit was designed using the following criteria:

Bench Height	1 x 12 metre
Berm Width	8 metres
Batter Slope	76°
Ramp Width	24 metres
Ramp Grade	10%
Overburden slope	2 to 1 63.4°

31 Appendix 5 – Interpolation Parameters for Reserve and Resource Categorization

Variograms were produced at 15 degree horizontal increments for each deposit and separate zones in each deposit. The variograms were examined to determine appropriate search directions and distances.

MIDWEST BLOCK MODEL INTERPOLATION PARAMETERS ($1/d^3$)

All directions refer to the drilling grid (same as the Local Mine Grid for Midwest)

Measured (Code – 1) Assumed to be up to the lag distance at 2/3's of the sill height.

32 APPENDIX 6 – BLINDSHAFT BORING COST BASIS

The resource estimate at McClean North is based on the assumption of exploitation by Blindshaft Boring methods. Evaluations have been carried out in the past to consider the use of the method at Midwest and capital and operating cost estimates for drilling were received from Zeni Drilling Company in 2001. (Zeni, 2001). Estimates for a separation plant are derived from an evaluation carried out by Cogema related to Midwest.

Method Description

The Blindshaft Boring method involves:

1. Drill delineation hole to accurately spot boreholes (one delineation hole for 4 production holes is assumed for this study). Small-diameter directionally-controlled pilot holes may be required to control borehole deviation in which case pilot holes can also serve as delineation holes.
2. Surface case borehole as required (an average overburden thickness of 5 metres has been assumed in this study).
3. Mobilize boring machine to borehole collar.
4. Bore 1.5-metre diameter borehole to top of ore zone (average depth of 165 metres has been assumed).
5. Ream 3.65-metre diameter through ore zone. (8 metres of reaming from above, to below the ore has been assumed).
6. Recover ore in surface separation plant.
7. Backfill with cemented fill to surface.
8. Mobilize boring machine to next collar.

SCHEDULE OF SHARE CAPITAL

The Class A Common Shares of Calfrac Well Services Ltd. ("the Corporation") shall be called "Common Shares" and shall have attached thereto the following special rights and restrictions:

(a) Voting

The holders of the Common Shares or a fraction thereof shall be entitled to receive notice of or to attend and vote at all meetings of the shareholders of the Corporation.

(b) Dividends

Subject to the rights of holder of any other class of shares, the holders of the Common Shares shall in each year, in the discretion of the directors, be entitled out of the monies lawfully available for dividends to pay such non-cumulative, non-preferential dividends payable at such times and in such amounts as may be determined in the absolute discretion of the Directors from time to time.

(c) Liquidation, Dissolution or Winding-Up

Subject to the rights of the holders of any other class of shares, in the event of liquidation, dissolution or winding-up of the Corporation, whether voluntary or involuntary, or any other distribution of the assets of the Corporation among its shareholders for the purposes of winding up its affairs, the remaining property and assets of the Corporation shall be distributed rateably to the holders of the Common Shares.

SCHEDULE OF OTHER PROVISIONS

In addition to, and without limiting such other powers which the Corporation may by law possess, the directors of the Corporation may without authorization of the shareholders:

(a) borrow money on the credit of the Corporation;

(b) issue, reissue, sell or pledge debt obligations of the Corporation; and

(c) mortgage, hypothecate, pledge or otherwise create a security interest in all or any property of the Corporation, owned or subsequently acquired, to secure any obligation of the Corporation.

CALFRAC WELL SERVICES LTD.

BY-LAW NO. 1

A by-law relating generally to the conduct of the business and affairs of CALFRAC WELL SERVICES LTD. (hereinafter called the "Corporation").

IT IS HEREBY ENACTED as a by-law of the Corporation as follows:

DEFINITIONS

1. In this by-law and all other by-laws of the Corporation, unless the context otherwise specifies or requires:

(a) "Act" means the *Business Corporations Act* (Alberta) and the regulations made thereunder, as from time to time amended, and in the case of such amendment any reference in the by-laws shall be read as referring to the amended provisions thereof;

(b) "board" means the board of directors of the Corporation;

(c) "by-laws" means the by-laws of the Corporation from time to time in force and effect;

(d) all terms contained in the by-laws which are defined in the Act shall have the meanings given to such terms in the Act;

(e) words importing the singular number only shall include the plural and vice versa; words importing the masculine gender shall include the feminine and neuter genders; and

(f) the headings used in the by-laws are inserted for reference purposes only and are not to be considered or taken into account in construing the terms or provisions thereof or to be deemed in any way to clarify, modify or explain the effect of any such terms or provisions.

REGISTERED OFFICE

2. The Corporation shall at all times have a registered office within Alberta. Subject to subsection (4) of section 20 of the Act, the directors of the Corporation may at any time:

(a) change the address of the registered office within Alberta;

(b) designate, or revoke or change a designation of, a records office within Alberta; or

(c) designate, or revoke or change a designation of, a post office box within Alberta as the address for service by mail of the Corporation.

SEAL

3. The corporate seal of the Corporation shall be such as the directors may by resolution from time to time adopt.

DIRECTORS

4. Number. The number of directors shall be the number fixed by the articles, or where the articles specify a variable number, the number shall be not less than the minimum and not more than the maximum number so specified and shall be determined from time to time within such limits by resolution of the shareholders or the board of directors. Subject to subsection (4) of section 105 of the Act, at least half of the directors shall be resident Canadians.

5. Vacancies. Subject to section 111 of the Act, a quorum of directors may fill a vacancy among the directors, except a vacancy resulting from an increase in the number or minimum number of directors or from a failure to elect the number or minimum number of directors required by the articles. If there is not a quorum of directors, or if there has been a failure to elect the number or minimum number of directors required by the articles, the directors then in office shall forthwith call a special meeting of shareholders to fill the vacancy and, if they fail to call a meeting or if there are no directors then in office, the meeting may be called by any shareholder. If the shareholders have adopted an amendment to the articles to increase the number or minimum number of directors, and have not, at the meeting at which they adopted the amendment, elected an additional number of directors authorized by the amendment, the directors then in office shall forthwith call a special meeting of shareholders to fill the vacancy.

A director appointed or elected to fill a vacancy holds office for the unexpired term of his predecessor.

6. Powers. Subject to any unanimous shareholder agreement, the directors shall manage the business and affairs of the Corporation and may exercise all such powers and do all such acts and things as may be exercised or done by the Corporation and are not expressly directed or required to be done in some other manner by the Act, the articles, the by-laws, any special resolution of the Corporation, a unanimous shareholder agreement or by statute.

7. Duties. Every director and officer of the Corporation in exercising his powers and discharging his duties shall:

(a) act honestly and in good faith with a view to the best interests of the Corporation; and

(b) exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances.

8. Qualification. The following persons are disqualified from being a director of the Corporation:

(a) anyone who is less than 18 years of age;

(b) anyone who

(i) is a dependent adult as defined in the *Dependent Adults Act* or is the subject of a certificate of incapacity under that Act,

(ii) is a formal patient as defined in the Mental Health Act,

(iii) is the subject of an order under The Mentally Incapacitated Persons Act appointing a committee of his person or estate or both, or

(iv) has been found to be a person of unsound mind by a court elsewhere than in Alberta;

(c) a person who is not an individual; and

(d) a person who has the status of bankrupt.

Unless the articles otherwise provide, a director of the Corporation is not required to hold shares issued by the Corporation.

9. Term of Office. A director's term of office (subject to the provisions, if any, of the Corporation's articles or any unanimous shareholder agreement, and subject to his election for an expressly stated term) shall be from the date of the meeting at which he is elected or appointed until the close of the first annual meeting of shareholders following his election or appointment or until his successor is elected or appointed.

10. Election. Subject to sections 106 and 107 of the Act, shareholders of the Corporation shall, by ordinary resolution at the first meeting of shareholders and at each succeeding annual meeting at which an election of directors is required, elect directors to hold office for a term expiring not later than the close of the next annual meeting of shareholders following the election. A director not elected for an expressly stated term ceases to hold office at the close of the first annual meeting of shareholders following his election but, if qualified, is eligible for re-election. Notwithstanding the foregoing, if directors are not elected at a meeting of shareholders, the incumbent directors continue in office until their successors are elected.

If a meeting of shareholders fails to elect the number or the minimum number of directors required by the articles by reason of the disqualification or death of any candidate, the directors elected at that meeting may exercise all the powers of the directors if the number of directors so elected constitutes a quorum.

11. Consent to Election. A person who is elected or appointed a director is not a director unless he was present at the meeting when he was elected or appointed and did not refuse to act as a director or, if he was not present at the meeting when he was elected or appointed, he consented to act as a director in writing before his election or appointment or within 10 days after it or he has acted as a director pursuant to the election or appointment.

12. Removal. Subject to sections 107 and 109 of the Act, the shareholders of the Corporation may by ordinary resolution at a special meeting remove any director from office before the expiration of his term of office and may, by a majority of votes cast at the meeting, elect any person in his stead for the remainder of his term.

13. Vacation of Office. A director of the Corporation ceases to hold office when:

(a) he dies or resigns;

(b) he is removed from office; or

(c) he becomes disqualified.

A resignation of a director becomes effective at the time a written resignation is sent to the Corporation, or at the time specified in the resignation, whichever is later.

14. Validity of Acts. An act of a director or officer is valid notwithstanding an irregularity in his election or appointment or a defect in his qualification. An act of the directors or a committee of directors is valid notwithstanding non-compliance with paragraphs 4, 21 or 23 hereof.

MEETINGS OF DIRECTORS

15. Place of Meeting. Unless the articles otherwise provide, meetings of directors and of any committee of directors may be held at any place. A meeting of directors may be convened by the Chairman of the Board (if any), the President or any director at any time and the Secretary shall upon direction of any of the foregoing convene a meeting of directors.

16. Notice. Notice of the time and place for the holding of any meeting of directors or of any committee of directors shall be sent to each director or each director who is a member of such committee, as the case may be, not less than forty-eight (48) hours before the time of the meeting; provided that a meeting of directors or of any committee of directors may be held at any time without notice if all the directors or members of such committee are present (except where a director attends the meeting for the express purpose of objecting to the transaction of any business on the grounds that the meeting is not lawfully called) or if all the absent directors waive notice of the meeting. The notice of a meeting of directors shall specify any matter referred to in subsection (3) of section 115 of the Act that is to be dealt with at the meeting, but need not specify the purpose or the business to be transacted at the meeting.

For the first meeting of directors to be held following the election of directors at an annual or special meeting of the shareholders or for a meeting of directors at which a director is appointed to fill a vacancy in the board, no notice of such meeting need be given to the newly elected or appointed director or directors in order for the meeting to be duly constituted, provided a quorum of the directors is present.

17. Waiver of Notice. Notice of any meeting of directors or of any committee of directors or the time for the giving of any such notice or any irregularity in any meeting or in the notice thereof may be waived by any director in writing or by telecopy, telegram, cable or telex addressed to the Corporation or in any other manner, and any such waiver may be validly given either before or after the meeting to which such waiver relates. Attendance of a director at any meeting of directors or of any committee of directors is a waiver of notice of such meeting, except when a director attends a meeting for the express purpose of objecting to the transaction of any business on the grounds that the meeting is not lawfully called.

18. Omission of Notice. The accidental omission to give notice of any meeting of directors or of any committee of directors to or the non-receipt of any notice by any person shall not invalidate any resolution passed or any proceeding taken at such meeting.

19. Telephone Participation. A director may participate in a meeting of directors or of any committee of directors by means of telephone or other communication facilities that permit all persons participating in the meeting to hear each other, and a director participating in a meeting by those means is deemed for the purposes of the Act and this by-law to be present at that meeting.

20. Adjournment. Any meeting of directors or of any committee of directors may be adjourned from time to time by the chairman of the meeting, with the consent of the meeting, to a fixed time and place. Notice of an adjourned meeting of directors or committee of directors is not required to be given if the time and place of the adjourned meeting is announced at the original meeting. Any adjourned meeting shall be duly constituted if held in accordance with the terms of the adjournment and a quorum is present thereat. The directors who formed a quorum at the original meeting are not required to form the quorum at the adjourned meeting. If there is no quorum present at the adjourned meeting, the original meeting shall be deemed to have terminated forthwith after its adjournment. Any business may be brought before or dealt with at the adjourned meeting which might have been brought before or dealt with at the original meeting in accordance with the notice calling the same.

21. Quorum and Voting. Subject to the articles, a majority of the number of directors constitutes a quorum at any meeting of directors and, notwithstanding any vacancy among the directors, a quorum of directors may exercise all the powers of the directors. Subject to subsections (3) and (4) of section 114 of the Act, directors shall not transact business at a meeting of directors unless a quorum is present and at least half of the directors present are resident Canadians. Questions arising at any meeting of directors shall be decided by a majority of votes. In the case of an equality of votes, the chairman of the meeting in addition to his original vote shall have a second or casting vote.

22. Resolution in Lieu of Meeting. Subject to the articles or a unanimous shareholder agreement, a resolution in writing, signed by all the directors entitled to vote on that resolution at a meeting of directors or committee of directors, is as valid as if it had been passed at a meeting of directors or committee of directors. A resolution in writing dealing with all matters required by the Act or this by-law to be dealt with at a meeting of directors, and signed by all the directors entitled to vote at that meeting, satisfies all the requirements of the Act and this by-law relating to meetings of directors.

COMMITTEES OF DIRECTORS

23. General. The directors may from time to time appoint from their number a managing director, who must be a resident Canadian, or a committee of directors, at least half of whom shall be resident Canadians, and may delegate to the managing director or such committee any of the powers of the directors, except that no managing director or committee shall have the authority to:

(a) submit to the shareholders any question or matter requiring the approval of the shareholders;

(b) fill a vacancy among the directors or in the office of auditor;

(c) issue securities except in the manner and on the terms authorized by the directors;

(d) declare dividends;

(e) purchase, redeem or otherwise acquire shares issued by the Corporation, except in the manner and on the terms authorized by the directors;

(f) pay a commission referred to in section 42 of the Act;

(g) approve a management proxy circular;

(h) approve any annual financial statements to be placed before the shareholders of the Corporation; or

(i) adopt, amend or repeal by-laws of the Corporation.

Notwithstanding the foregoing and subject to the articles or any unanimous shareholder agreement, the directors may, by resolution, delegate to a director, managing director or committee of directors the power to:

(a) borrow money on the credit of the Corporation;

(b) issue, reissue, sell or pledge debt obligations of the Corporation;

(c) subject to section 45 of the Act, give a guarantee on behalf of the Corporation to secure performance of an obligation of any person; and

(d) mortgage, hypothecate, pledge or otherwise create a security interest in all or any property of the Corporation, owned or subsequently acquired, to secure any obligation of the Corporation.

24. Audit Committee. Subject to subsection (3) of section 171 of the Act, if any of the issued shares of the Corporation, or securities of the Corporation which may or might be exchanged for or converted into shares of the Corporation, were part of a distribution to the public and the Corporation has more than fifteen shareholders, the directors shall elect annually from among their number an audit committee to be composed of not fewer than three directors, a majority of whom are not officers or employees of the Corporation or any of its affiliates.

Each member of the audit committee shall serve during the pleasure of the board of directors and, in any event, only so long as he shall be a director. The directors may fill vacancies in the audit committee by election from among their number.

The audit committee shall have power to fix its quorum at not less than a majority of its members and to determine its own rules of procedure subject to any regulations imposed by the board of directors from time to time and to the following paragraph.

The auditor of the Corporation is entitled to receive notice of every meeting of the audit committee and, at the expense of the Corporation, to attend and be heard thereat, and, if so requested by a member of the audit committee, shall attend every meeting of the committee held during the term of office of the auditor. The auditor of the Corporation or any member of the audit committee may call a meeting of the committee.

The audit committee shall review the financial statements of the Corporation prior to approval thereof by the board and shall have such other powers and duties as may from time to time by resolution be assigned to it by the board.

REMUNERATION OF DIRECTORS, OFFICERS AND EMPLOYEES

25. Subject to the articles or any unanimous shareholder agreement, the directors of the Corporation may fix the remuneration of the directors, officers and employees of the Corporation. Any remuneration paid to a director of the Corporation shall be in addition to the salary paid to such director in his capacity as an officer or employee of the Corporation. The directors may also by resolution award special remuneration to any director in undertaking any special services on the Corporation's behalf other than the routine work ordinarily required of a director of the Corporation. The confirmation of any such resolution by the shareholders shall not be required. The directors, officers and employees shall also be entitled to be paid their travelling and other expenses properly incurred by them in connection with the affairs of the Corporation.

The aggregate remuneration paid to the directors and the aggregate remuneration paid to the five highest paid officers and employees, other than directors, shall be disclosed to the shareholders at every annual meeting.

SUBMISSION OF CONTRACTS OR TRANSACTIONS TO SHAREHOLDERS FOR APPROVAL

26. The directors in their discretion may submit any contract, act or transaction for approval, ratification or confirmation at any annual meeting of the shareholders or at any special meeting of the shareholders called for the purpose of considering the same and any contract, act or transaction that shall be approved, ratified or confirmed by resolution passed by a majority of the votes cast at any such meeting (unless any different or additional requirement is imposed by the Act or by the Corporation's articles or any other by-law) shall be as valid and as binding upon the Corporation and upon all the shareholders as though it had been approved, ratified and/or confirmed by every shareholder of the Corporation.

CONFLICT OF INTEREST

27. A director or officer of the Corporation who is a party to a material contract or proposed material contract with the Corporation, or is a director or an officer of or has a material

interest in any person who is a party to a material contract or proposed material contract with the Corporation shall disclose the nature and extent of his interest at the time and in the manner provided in the Act. Except as provided in the Act, no such director of the Corporation shall vote on any resolution to approve such contract. If a material contract is made between the Corporation and one or more of its directors or officers, or between the Corporation and another person of which a director or officer of the Corporation is a director or officer or in which he has a material interest, (i) the contract is neither void nor voidable by reason only of that relationship, or by reason only that a director with an interest in the contract is present at or is counted to determine the presence of a quorum at a meeting of directors or committee of directors that authorized the contract, and (ii) a director or officer or former director or officer of the Corporation to whom a profit accrues as a result of the making of the contract is not liable to account to the Corporation for that profit by reason only of holding office as a director or officer, if the director or officer disclosed his interest in accordance with the provisions of the Act and the contract was approved by the directors or the shareholders and it was reasonable and fair to the Corporation at the time it was approved. This paragraph is subject to any unanimous shareholder agreement.

FOR THE PROTECTION OF DIRECTORS AND OFFICERS

28. No director or officer for the time being of the Corporation shall be liable to the Corporation for the acts, receipts, neglects or defaults of any other director or officer or employee or for joining in any receipt or act for conformity or for any loss, damage or expense happening to the Corporation through the insufficiency or deficiency of title to any property acquired by the Corporation or for or on behalf of the Corporation or for the insufficiency or deficiency of any security in or upon which any of the monies of or belonging to the Corporation shall be placed out or invested or for any loss or damage arising from the bankruptcy, insolvency or tortious act of any person, firm or corporation including any person, firm or corporation with whom or which any monies, securities or effects shall be lodged or deposited or for any loss, conversion, misapplication or misappropriation of or any damage resulting from any dealings with any monies, securities or other assets belonging to the Corporation or for any other loss, damage or misfortune whatever which may happen in the execution of the duties of his respective office of trust or in relation thereto, unless the same shall happen by or through his failure to exercise the powers and to discharge the duties of his office honestly, in good faith with a view to the best interests of the Corporation, and in connection therewith to exercise the care, diligence and skill that a reasonably prudent person would exercise in comparable circumstances, provided that nothing herein contained shall relieve a director or officer from the duty to act in accordance with the Act or relieve him from liability under the Act. The directors for the time being of the Corporation shall not be under any duty or responsibility in respect of any contract, act or transaction whether or not made, done or entered into in the name or on behalf of the Corporation, except such as shall have been submitted to and authorized or approved by the directors. If any director or officer of the Corporation shall be employed by or shall perform services for the Corporation otherwise than as a director or officer or shall be a member of a firm or a shareholder, director or officer of a body corporate which is employed by or performs services for the Corporation, the fact of his being a shareholder, director or officer of the Corporation or body corporate or member of the firm shall not disentitle such director or officer or such firm or body corporate, as the case may be, from receiving proper remuneration for such services.

INDEMNITIES TO DIRECTORS AND OTHERS

29. (1) Subject to section 124 of the Act, except in respect of an action by or on behalf of the Corporation or body corporate to procure a judgment in its favour, the Corporation shall indemnify a director or officer of the Corporation, a former director or officer of the Corporation or a person who acts or acted at the Corporation's request as a director or officer of a body corporate of which the Corporation is or was a shareholder or creditor, and his heirs and legal representatives, against all costs, charges and expenses, including an amount paid to settle an action or satisfy a judgment, reasonably incurred by him in respect of any civil, criminal or administrative action or proceeding to which he is made a party by reason of being or having been a director or officer of the Corporation or body corporate, if:

(a) he acted honestly and in good faith with a view to the best interests of the Corporation; and

(b) in the case of a criminal or administrative action or proceeding that is enforced by a monetary penalty, he had reasonable grounds for believing that his conduct was lawful.

(2) The Corporation shall, subject to the approval of a Court (as defined in the Act), indemnify a person referred to in subparagraph 29(1) hereof in respect of an action by or on behalf of the Corporation or a body corporate to procure a judgment in its favour, to which he is made a party by reason of being or having been a director or an officer of the Corporation or body corporate, against all costs, charges and expenses reasonably incurred by him in connection with such action if he fulfills the conditions set out in subparagraph 29(1)(a) and (b) hereof.

(3) Notwithstanding anything in this paragraph 29, a person referred to in subparagraph 29(1) shall be entitled to indemnity from the Corporation in respect of all costs, charges and expenses reasonably incurred by him in connection with the defence of any civil, criminal or administrative action or proceeding to which he is made a party by reason of being or having been a director or officer of the Corporation or body corporate, if the person seeking indemnity:

(a) was substantially successful on the merits of his defence of the action or proceeding; and

(b) fulfills the conditions set out in subparagraph 29(1)(a) and (b) hereof.

OFFICERS

30. Appointment of Officers. Subject to the articles or any unanimous shareholder agreement, the directors annually or as often as may be required may appoint from among themselves a Chairman of the Board and shall appoint a President and a Secretary and if deemed advisable may appoint one or more Vice-Presidents, a Treasurer and one or more Assistant Secretaries and/or one or more Assistant Treasurers. None of such officers except the Chairman of the Board need be a director of the Corporation although a director may be appointed to any office of the Corporation. Two or more offices of the Corporation may be held by the same person. In case and whenever the same person holds the offices of Secretary and Treasurer he

may but need not be known as the Secretary-Treasurer. The directors may from time to time appoint such other officers, employees and agents as they shall deem necessary who shall have such authority and shall perform such functions and duties as may from time to time be prescribed by resolution of the directors. The directors may from time to time and subject to the provisions of the Act, vary, add to or limit the duties and powers of any officer, employee or agent.

31. Removal of Officers and Vacation of Office. Subject to the articles or any unanimous shareholder agreement, all officers, employees and agents, in the absence of agreement to the contrary, shall be subject to removal by resolution of the directors at any time, with or without cause.

An officer of the Corporation ceases to hold office when he dies, resigns or is removed from office. A resignation of an officer becomes effective at the time a written resignation is sent to the Corporation, or at the time specified in the resignation, whichever is later.

32. Vacancies. If the office of President, Vice-President, Secretary, Assistant Secretary, Treasurer, Assistant Treasurer, or any other office created by the directors pursuant to paragraph 30 hereof shall be or become vacant by reason of death, resignation or in any other manner whatsoever, the directors shall, in the case of the President and Secretary, and may, in the case of any other officers, appoint an individual to fill such vacancy.

33. Chairman of the Board. The Chairman of the Board (if any) shall, if present, preside as chairman at all meetings of the board and of shareholders. He shall sign such contracts, documents or instruments in writing as require his signature and shall have such other powers and shall perform such other duties as may from time to time be assigned to him by resolution of the directors.

34. President. The President shall be the chief executive officer of the Corporation (except as may otherwise be specified by the board of directors) and shall, subject to the direction of the board of directors, exercise general supervision and control over the business and affairs of the Corporation. In the absence of the Chairman of the Board (if any), and if the President is also a director of the Corporation, the President shall, when present, preside as chairman at all meetings of directors and shareholders. He shall sign such contracts, documents or instruments in writing as require his signature and shall have such other powers and shall perform such other duties as may from time to time be assigned to him by resolution of the directors or as are incident to his office.

35. Vice-President. The Vice-President or, if more than one, the Vice-Presidents in order of seniority, shall be vested with all the powers and shall perform all the duties of the President in the absence or inability or refusal to act of the President, provided, however, that a Vice-President who is not a director shall not preside as chairman at any meeting of directors or shareholders. The Vice-President or, if more than one, the Vice-Presidents shall sign such contracts, documents or instruments in writing as require his or their signatures and shall have such other powers and shall perform such other duties as may from time to time be assigned to him or them by resolution of the directors.

36. Secretary. The Secretary shall give or cause to be given notices for all meetings of directors, any committee of directors and shareholders when directed to do so and shall, subject to the provisions of the Act, maintain the records referred to in subsections (1), (3) and (5) of section 21 of the Act. He shall sign such contracts, documents or instruments in writing as require his signature and shall have such other powers and shall perform such other duties as may from time to time be assigned to him by resolution of the directors or as are incident to his office.

37. Treasurer. Subject to the provisions of any resolution of the directors, the Treasurer shall have the care and custody of all the funds and securities of the Corporation and shall deposit the same in the name of the Corporation in such bank or banks or with such other depositary or depositaries as the directors may by resolution direct. He shall prepare and maintain adequate accounting records. He shall sign such contracts, documents or instruments in writing as require his signature and shall have such other powers and shall perform such other duties as may from time to time be assigned to him by resolution of the directors or as are incident to his office. He may be required to give such bond for the faithful performance of his duties as the directors in their uncontrolled discretion may require and no director shall be liable for failure to require any such bond or for the insufficiency of any such bond or for any loss by reason of the failure of the Corporation to receive any indemnity thereby provided.

38. Assistant Secretary and Assistant Treasurer. The Assistant Secretary or, if more than one, the Assistant Secretaries in order of seniority, and the Assistant Treasurer or, if more than one, the Assistant Treasurers in order of seniority, shall be vested with all the powers and shall perform all the duties of the Secretary and Treasurer, respectively, in the absence or inability or refusal to act of the Secretary or Treasurer as the case may be. The Assistant Secretary or, if more than one, the Assistant Secretaries and the Assistant Treasurer or, if more than one, the Assistant Treasurers shall sign such contracts, documents or instruments in writing as require his or their signatures respectively and shall have such other powers and shall perform such other duties as may from time to time be assigned to him or them by resolution of the directors.

39. Managing Director. The directors may from time to time appoint from their number a Managing Director who must be a resident Canadian and may delegate to the Managing Director any of the powers of the directors subject to the limits on authority provided by subsection (3) of section 115 of the Act. The Managing Director shall conform to all lawful orders given to him by the directors and shall at all reasonable times give to the directors or any of them all information they may require regarding the affairs of the Corporation. Any agent or employee appointed by the Managing Director shall be subject to discharge by the directors.

40. Duties of Officers may be Delegated. In case of the absence or inability or refusal to act of any officer of the Corporation or for any other reason that the directors may deem sufficient, the directors may delegate all or any of the powers of such officer to any other officer or to any director for the time being.

SHAREHOLDERS' MEETINGS

41. Annual Meeting. Subject to sections 131 and 132 of the Act, the annual meeting of shareholders shall be held at the registered office of the Corporation or at a place elsewhere within Alberta determined by the directors on such day in each year and at such time as the directors may determine.

42. Special Meetings. The directors of the Corporation may at any time call a special meeting of shareholders to be held on such day and at such time and, subject to section 131 of the Act, at such place within Alberta as the directors may determine.

43. Meeting on Requisition of Shareholders. The holders of not less than five percent (5%) of the issued shares of the Corporation that carry the right to vote at a meeting sought to be held may requisition the directors to call a meeting of shareholders for the purposes stated in the requisition. The requisition shall state the business to be transacted at the meeting and shall be sent to each director and to the registered office of the Corporation. Subject to subsection (3) of section 142 of the Act, upon receipt of the requisition, the directors shall call a meeting of shareholders to transact the business stated in the requisition. If the directors do not within twenty-one days after receiving the requisition call a meeting, any shareholder who signed the requisition may call the meeting.

44. Notice. A notice in writing of a meeting of shareholders stating the day, hour and place of meeting and if special business is to be transacted thereat, stating (i) the nature of that business in sufficient detail to permit the shareholder to form a reasoned judgment on that business and (ii) the text of any special resolution to be submitted to the meeting, shall be sent to each shareholder entitled to vote at the meeting, who on the record date for notice is registered on the records of the Corporation or its transfer agent as a shareholder, to each director of the Corporation and to the auditor of the Corporation not less than 21 days and not more than 50 days (exclusive of the day of mailing and of the day for which notice is given) before the date of the meeting; provided that a meeting of shareholders may be held for any purpose on any day and at any time and, subject to section 131 of the Act, at any place without notice if all the shareholders and all other persons entitled to attend such meeting are present in person or represented by proxy at the meeting (except where a shareholder or other person attends the meeting for the express purpose of objecting to the transaction of any business on the grounds that the meeting is not lawfully called) or if all the shareholders and all other persons entitled to attend such meeting and not present in person nor represented by proxy thereat waive notice of the meeting.

A director of the Corporation is entitled to receive notice of and to attend and be heard at every meeting of shareholders of the Corporation.

The auditor of the Corporation is entitled to receive notice of every meeting of shareholders of the Corporation and, at the expense of the Corporation, to attend and be heard at every meeting on matters relating to his duties as auditor.

45. Waiver of Notice. Notice of any meeting of shareholders or the time for the giving of any such notice or any irregularity in any meeting or in the notice thereof may be waived by any shareholder, the duly appointed proxy of any shareholder, any director or the

auditor of the Corporation in writing or by telecopy, telegram, cable or telex addressed to the Corporation or in any other manner, and any such waiver may be validly given either before or after the meeting to which such waiver relates. Attendance of a shareholder or any other person entitled to attend a meeting of shareholders is a waiver of notice of such meeting, except when he attends a meeting for the express purpose of objecting to the transaction of any business on the grounds that the meeting is not lawfully called.

46. Omission of Notice. The accidental omission to give notice of any meeting of shareholders to or the non-receipt of any notice by any person shall not invalidate any resolution passed or any proceeding taken at any such meeting.

47. Record Dates. The directors may fix in advance a date as the record date for the determination of shareholders (i) entitled to receive payment of a dividend, (ii) entitled to participate in a liquidation distribution or (iii) for any other purpose except the right to receive notice of or to vote at a meeting of shareholders, but such record date shall not precede by more than 50 days the particular action to be taken.

The directors may also fix in advance a date as the record date for the determination of shareholders entitled to receive notice of a meeting of shareholders, but such record date shall not precede by more than 50 days or by less than 21 days the date on which the meeting is to be held.

If no record date is fixed,

(a) the record date for the determination of shareholders entitled to receive notice of a meeting of shareholders shall be

(i) at the close of business on the last business day preceding the day on which the notice is sent; or

(ii) if no notice is sent, the day on which the meeting is held; and

(b) the record date for the determination of shareholders for any purpose other than to establish a shareholder's right to receive notice of a meeting or to vote shall be at the close of business on the day on which the directors pass the resolution relating to that purpose.

48. Chairman of the Meeting. In the absence of the Chairman of the Board (if any), the President and any Vice-President who is a director, the shareholders present entitled to vote shall elect another director as chairman of the meeting and if no director is present or if all the directors present decline to take the chair then the shareholders present shall elect one of their number to be chairman.

49. Votes. Votes at meetings of shareholders may be given either personally or by proxy. Every question submitted to any meeting of shareholders shall be decided on a show of hands except when a ballot is required by the chairman of the meeting or is demanded by a shareholder or proxyholder entitled to vote at the meeting. A shareholder or proxyholder may demand a ballot either before or on the declaration of the result of any vote by show of hands.

At every meeting at which he is entitled to vote, every shareholder present in person and every proxyholder shall have one (1) vote on a show of hands. Upon a ballot at which he is entitled to vote every shareholder present in person or by proxy shall (subject to the provisions, if any, of the articles) have one (1) vote for every share registered in his name. In the case of an equality of votes the chairman of the meeting shall not, either on a show of hands or on a ballot, have a second or casting vote in addition to the vote or votes to which he may be entitled as a shareholder or proxyholder.

At any meeting, unless a ballot is demanded by a shareholder or proxyholder entitled to vote at the meeting a declaration by the chairman of the meeting that a resolution has been carried unanimously or by a particular majority or lost or not carried by a particular majority shall be conclusive evidence of the fact without proof of the number or proportion of votes recorded in favour of or against the resolution.

If at any meeting a ballot is demanded on the election of a chairman or on the question of adjournment or termination, the ballot shall be taken forthwith without adjournment. If a ballot is demanded on any other question or as to the election of directors, the ballot shall be taken in such manner and either at once or later at the meeting or after adjournment as the chairman of the meeting directs. The result of a ballot shall be deemed to be the resolution of the meeting at which the ballot was demanded. A demand for a ballot may be withdrawn.

50. Right to Vote. Subject to section 139 of the Act or unless the articles otherwise provide, each share of the Corporation entitles the holder of it to one vote at a meeting of shareholders.

Where a body corporate or association is a shareholder of the Corporation, any individual authorized by a resolution of the directors or governing body of the body corporate or association to represent it at meetings of shareholders of the Corporation is the person entitled to vote at all such meetings of shareholders in respect of the shares held by such body corporate or association.

Where a person holds shares as a personal representative, such person or his proxy is the person entitled to vote at all meetings of shareholders in respect of the shares so held by him.

Where a person mortgages, pledges or hypothecates his shares, such person or his proxy is the person entitled to vote at all meetings of shareholders in respect of such shares so long as such person remains the registered owner of such shares unless, in the instrument creating the mortgage, pledge or hypothec, he has expressly empowered the person holding the mortgage, pledge or hypothec to vote in respect of such shares, in which case, subject to the articles, such holder or his proxy is the person entitled to vote in respect of the shares.

Where two or more persons hold shares jointly, one of those holders present at a meeting of shareholders may in the absence of the others vote the shares, but if two or more of those persons who are present, in person or by proxy, vote, they shall vote as one on the shares jointly held by them.

51. Proxies. Every shareholder, including a shareholder that is a body corporate, entitled to vote at a meeting of shareholders may by means of a proxy appoint a proxyholder and one or more alternate proxyholders, who are not required to be shareholders, to attend and act at the meeting in the manner and to the extent authorized by the proxy and with the authority conferred by the proxy.

An instrument appointing a proxyholder shall be in written or printed form and shall be executed by the shareholder or by his attorney authorized in writing and is valid only at the meeting in respect of which it is given or any adjournment of that meeting.

An instrument appointing a proxyholder may be in the following form or in any other form which complies with the requirements of the Act:

> The undersigned shareholder of _____ hereby appoints _____ of _____, whom failing, _____ of _____ as the nominee of the undersigned to attend and act for and on behalf of the undersigned at the meeting of the shareholders of the said Corporation to be held on the ___ day of _____, 20__ and at any adjournment thereof in the same manner, to the same extent and with the same power as if the undersigned were personally present at the said meeting or such adjournment thereof.
>
> Dated the ___ day of _____, 20__.
>
> _____
> Signature of Shareholder

The directors may specify in a notice calling a meeting of shareholders a time not exceeding forty-eight (48) hours, excluding Saturdays, Sundays and holidays, preceding the meeting or an adjournment of the meeting before which time proxies to be used at the meeting must be deposited with the Corporation or its agent.

The chairman of the meeting of shareholders may in his discretion accept any written communication (including without limitation any telecopy, telegram, cable or telex) as to the authority of anyone claiming to vote on behalf of and to represent a shareholder notwithstanding that no instrument of proxy conferring such authority has been deposited with the Corporation, and any votes given in accordance with such written communication accepted by the chairman of the meeting shall be valid and shall be counted.

52. Telephone Participation. A shareholder or any other person entitled to attend a meeting of shareholders may participate in the meeting by means of telephone or other communication facilities that permit all persons participating in the meeting to hear each other and a person participating in such a meeting by those means is deemed for the purposes of the Act and this by-law to be present at the meeting.

53. Adjournment. The chairman of the meeting may with the consent of the meeting adjourn any meeting of shareholders from time to time to a fixed time and place and if the meeting is adjourned by one or more adjournments for an aggregate of less than thirty (30) days it is not necessary to give notice of the adjourned meeting other than by announcement at the time of an adjournment. If a meeting of shareholders is adjourned by one or more adjournments for an aggregate of thirty (30) days or more, notice of the adjourned meeting shall be given as for an original meeting but, unless the meeting is adjourned by one or more adjournments for an aggregate of more than ninety (90) days, subsection (1) of section 149 of the Act does not apply.

Any adjourned meeting shall be duly constituted if held in accordance with the terms of the adjournment and a quorum is present thereat. The persons who formed a quorum at the original meeting are not required to form the quorum at the adjourned meeting. If there is no quorum present at the adjourned meeting, the original meeting shall be deemed to have terminated forthwith after its adjournment. Any business may be brought before or dealt with at the adjourned meeting which might have been brought before or dealt with at the original meeting in accordance with the notice calling the same.

54. Quorum. Two (2) persons present and each holding or representing by proxy at least one (1) issued share of the Corporation shall be a quorum at any meeting of shareholders for the election of a chairman of the meeting and for the adjournment of the meeting to a fixed time and place but not for the transaction of any other business; for all other purposes two (2) persons present and holding or representing by proxy one-twentieth of the shares entitled to vote at the meeting shall be a quorum. If a quorum is present at the opening of a meeting of shareholders, the shareholders present may proceed with the business of the meeting, notwithstanding that a quorum is not present throughout the meeting.

Notwithstanding the foregoing, if the Corporation has only one shareholder, or one shareholder holding a majority of the shares entitled to vote at the meeting, that shareholder present in person or by proxy constitutes a meeting and a quorum for such meeting.

55. Resolution in Lieu of Meeting. A resolution in writing signed by all the shareholders entitled to vote on that resolution is as valid as if it had been passed at a meeting of the shareholders. A resolution in writing dealing with all matters required by the Act or this by-law to be dealt with at a meeting of shareholders, and signed by all the shareholders entitled to vote at that meeting, satisfies all the requirements of this Act or the by-law relating to meetings of shareholders.

SHARES AND TRANSFERS

56. Issuance. Subject to the articles, any unanimous shareholder agreement and to section 30 of the Act, shares in the Corporation may be issued at the times and to the persons and for the consideration that the directors determine; provided that a share shall not be issued until the consideration for the share is fully paid in money or in property or past service that is not less in value than the fair equivalent of the money that the Corporation would have received if the share had been issued for money.

57. Security Certificates. A security holder is entitled at his option to a security certificate that complies with the Act or a non-transferable written acknowledgment of his right to obtain a security certificate from the Corporation in respect of the securities of the Corporation held by him. Security certificates shall (subject to compliance with section 48 of the Act) be in such form as the directors may from time to time by resolution approve and such certificates shall be signed by at least one director or officer of the Corporation or by or on behalf of a registrar, transfer agent or branch transfer agent of the Corporation, or by a trustee who certifies it in accordance with a trust indenture. Any signatures required on a security certificate may be printed or otherwise mechanically reproduced on it. If a security certificate contains a printed or mechanically reproduced signature of a person, the Corporation may issue the security certificate, notwithstanding that the person has ceased to be a director or an officer of the Corporation, and the security certificate is as valid as if he were a director or an officer at the date of its issue.

58. Agent. The directors may from time to time by resolution appoint or remove (i) one or more trust companies registered under the Trust Companies Act as its agent or agents to maintain a central securities register or registers or (ii) an agent or agents to maintain a branch securities register or registers for the Corporation.

59. Dealings with Registered Holder. Subject to the Act, the Corporation may treat the registered owner of a security as the person exclusively entitled to vote, to receive notices, to receive any interest, dividend or other payments in respect of the security, and otherwise to exercise all the rights and powers of an owner of the security.

60. Surrender of Security Certificates. Subject to the Act, no transfer of a security issued by the Corporation shall be registered unless or until the security certificate representing the security to be transferred has been presented for registration or, if no security certificate has been issued by the Corporation in respect of such security, unless or until a duly executed transfer in respect thereof has been presented for registration.

61. Defaced, Destroyed, Stolen or Lost Security Certificates. In case of the defacement, destruction, theft or loss of a security certificate, the fact of such defacement, destruction, theft or loss shall be reported by the owner to the Corporation or to an agent of the Corporation (if any), on behalf of the Corporation, with a statement verified by oath or statutory declaration as to the defacement, destruction, theft or loss and the circumstances concerning the same and with a request for the issuance of a new security certificate to replace the one so defaced, destroyed, stolen or lost. Upon the giving to the Corporation (or if there be an agent, hereinafter in this paragraph referred to as the "Corporation's agent", then to the Corporation and the Corporation's agent) of a bond of a surety company (or other security approved by the directors) in such form as is approved by the directors or by the Chairman of the Board (if any), the President, a Vice-President, the Secretary or the Treasurer of the Corporation, indemnifying the Corporation (and the Corporation's agent if any) against all loss, damage or expense, which the Corporation and/or the Corporation's agent may suffer or be liable for by reason of the issuance of a new security certificate to such owner, and provided the Corporation or the Corporation's agent does not have notice that the security has been acquired by a bona fide purchaser and before a purchaser described in section 67 of the Act has received a new, reissued or re-registered security, a new security certificate may be issued in replacement of the one defaced, destroyed, stolen or lost, if such issuance is ordered and authorized by any one of the

Chairman of the Board (if any), the President, a Vice-President, the Secretary or the Treasurer of the Corporation or by resolution of the directors.

62. Enforcement of Lien for Indebtedness. Subject to subsection (8) of section 48 of the Act, if the articles of the Corporation provide that the Corporation has a lien on the shares registered in the name of a shareholder or his legal representative for a debt of that shareholder to the Corporation, the directors of the Corporation may sell any such shares in such manner as they think fit until the debt has been paid in full. No sale shall be made until such time as the debt ought to be paid and until a demand and notice in writing stating the amount due and demanding payment and giving notice of intention to sell in default shall have been served on the holder or his legal representative of the shares subject to the lien and default shall have been made in payment of such debt for seven days after service of such notice. Upon any such sale, the proceeds shall be applied, firstly, in payment of all costs of such sale, and, secondly, in satisfaction of such debt and the residue (if any) shall be paid to such shareholder or his legal representative or as he shall direct. Upon any such sale, the directors may enter or cause to be entered the purchaser's name in the securities register of the Corporation as holder of the shares, and the purchaser shall not be bound to see to the regularity or validity of, or be affected by, any irregularity or invalidity in the proceedings, or be bound to see to the application of the purchase money, and after his name or the name of his legal representative has been entered in the securities register, the regularity and validity of the sale shall not be impeached by any person.

DIVIDENDS

63. The directors may from time to time by resolution declare and the Corporation may pay dividends on its issued shares, subject to the provisions (if any) of the Corporation's articles.

The directors shall not declare and the Corporation shall not pay a dividend if there are reasonable grounds for believing that:

(a) the Corporation is, or would be after the payment be, unable to pay its liabilities as they become due; or

(b) the realizable value of the Corporation's assets would thereby be less than the aggregate of its liabilities and stated capital of all classes.

The Corporation may pay a dividend by issuing fully paid shares of the Corporation and, subject to section 43 of the Act, the Corporation may pay a dividend in money or property.

64. In case several persons are registered as the joint holders of any securities of the Corporation, any one of such persons may give effectual receipts for all dividends and payments on account of dividends, principal, interest and/or redemption payments in respect of such securities.

VOTING SECURITIES IN OTHER BODIES CORPORATE

65. All securities of any other body corporate carrying voting rights held from time to time by the Corporation may be voted at all meetings of shareholders, bondholders, debenture holders or holders of such securities, as the case may be, of such other body corporate and in such manner and by such person or persons as the directors of the Corporation shall from time to time determine and authorize by resolution. The duly authorized signing officers of the Corporation may also from time to time execute and deliver for and on behalf of the Corporation proxies and arrange for the issuance of voting certificates or other evidence of the right to vote in such names as they may determine without the necessity of a resolution or other action by the directors.

NOTICES, ETC.

66. Service. Any notice or document required by the Act, the articles or the by-laws to be sent to any shareholder or director of the Corporation may be delivered personally to or sent by mail addressed to:

(a) the shareholder at his latest address as shown in the records of the Corporation or its transfer agent; and

(b) the director at his latest address as shown in the records of the Corporation or in the last notice filed under section 106 or 113 of the Act.

Such notice or document shall be deemed to have been sent on the day of personal delivery or mailing. With respect to every notice or document sent by mail it shall be sufficient to prove that the envelope or wrapper containing the notice or document was properly addressed and put into a post office or into a post office letter box.

67. Failure to Locate Shareholder. If the Corporation sends a notice or document to a shareholder and the notice or document is returned on three consecutive occasions because the shareholder cannot be found, the Corporation is not required to send any further notices or documents to the shareholder until he informs the Corporation in writing of his new address.

68. Shares Registered in More than one Name. All notices or documents shall, with respect to any shares in the capital of the Corporation registered in more than one name, be sent to whichever of such persons is named first in the records of the Corporation and any notice or document so sent shall be deemed to have been duly sent to all the holders of such shares.

69. Persons Becoming Entitled by Operation of Law. Every person who by operation of law, transfer or by any other means whatsoever shall become entitled to any shares in the capital of the Corporation shall be bound by every notice or document in respect of such shares which prior to his name and address being entered on the records of the Corporation in respect of such shares shall have been duly sent to the person or persons from whom he derives his title to such shares.

70. Deceased Shareholder. Any notice or document sent to any shareholder in accordance with paragraph 66 hereof shall, notwithstanding that such shareholder be then deceased and whether or not the Corporation has notice of his decease, be deemed to have been duly sent in respect of the shares held by such shareholder (whether held solely or with other persons) until some other person be entered in his stead in the records of the Corporation as the holder or one of the holders thereof and shall be deemed to have been duly sent to his heirs, executors, administrators and legal representatives and all persons (if any) interested with him in such shares.

71. Signatures upon Notices. The signature of any director or officer of the Corporation upon any notice may be written, stamped, typewritten or printed or partly written, stamped, typewritten or printed.

72. Computation of Time. All computations of time required to be made pursuant to the articles or by-laws of the Corporation shall be made (i) in accordance with the provisions of the Interpretation Act, to the extent such provisions are applicable, and (ii) in any other case, in accordance with the customary meaning ascribed to the words requiring such computation of time.

73. Proof of Service. A certificate of any officer of the Corporation in office at the time of the making of the certificate or of an agent of the Corporation as to facts in relation to the sending of any notice or document to any shareholder, director, officer or auditor or publication of any notice or document shall be conclusive evidence thereof and shall be binding on every shareholder, director, officer or auditor of the Corporation, as the case may be.

CUSTODY OF SECURITIES

74. All securities (including without limitation warrants) owned by the Corporation may be lodged (in the name of the Corporation) with a chartered bank or a trust company or in a safety deposit box or, if so authorized by resolution of the directors, with such other depositaries or in such other manner as may be determined from time to time by the directors.

All securities (including without limitation warrants) belonging to the Corporation may be issued and held in the name of a nominee or nominees of the Corporation (and if issued or held in the names of more than one nominee shall be held in the names of the nominees jointly with right of survivorship) and shall be endorsed in blank with endorsement guaranteed in order to enable transfer thereof to be completed and registration thereof to be effected.

EXECUTION OF CONTRACTS, ETC.

75. Contracts, documents or instruments in writing requiring the signature of the Corporation may be signed by the President alone or any person or persons authorized by resolution of the directors and all contracts, documents or instruments in writing so signed shall be binding upon the Corporation without any further authorization or formality. The directors are authorized from time to time by resolution to appoint any person or persons on behalf of the

Corporation either to sign contracts, documents or instruments in writing generally or to sign specific contracts, documents or instruments in writing.

The corporate seal of the Corporation may, when required, be affixed by the President to contracts, documents or instruments in writing signed by him as aforesaid or by the person or persons appointed as aforesaid by resolution of the directors.

The term "contracts, documents or instruments in writing" as used in this by-law shall include deeds, mortgages, hypothecs, charges, cheques, drafts, orders for the payment of money, notes, acceptances, bills of exchange, conveyances, transfers and assignments of property, real or personal, immovable or movable, agreements, releases, receipts and discharges for the payment of money or other obligations, conveyances, transfers and assignments of securities and all paper writings.

The signature or signatures of the President or any person or persons appointed as aforesaid by resolution of the directors may, if specifically authorized by resolution of the directors, be printed, engraved, lithographed or otherwise mechanically reproduced upon all contracts, documents or instruments in writing or bonds, debentures or other securities of the Corporation executed or issued by or on behalf of the Corporation and all contracts, documents or instruments in writing or securities of the Corporation on which the signature or signatures of any of the foregoing persons shall be so reproduced, by authorization by resolution of the directors, shall be deemed to have been manually signed by such persons whose signature or signatures is or are so reproduced and shall be as valid to all intents and purposes as if they had been signed manually and notwithstanding that the persons whose signature or signatures is or are so reproduced may have ceased to hold office at the date of the delivery or issue of such contracts, documents or instruments in writing or securities of the Corporation.

FISCAL PERIOD

76. The fiscal period of the Corporation shall terminate on such day in each year as the board of directors may from time to time by resolution determine.

ENACTED the 21st day of June, 2004.

President

Secretary

CALFRAC WELL SERVICES LTD.

BY-LAW NO. 2

A by-law respecting the borrowing of money, the giving of guarantees and the giving of security by CALFRAC WELL SERVICES LTD. (hereinafter called the "Corporation").

IT IS HEREBY ENACTED as a by-law of the Corporation as follows:

The directors of the Corporation may from time to time:

(a) borrow money on the credit of the Corporation;

(b) issue, reissue, sell or pledge debt obligations of the Corporation, including without limitation, bonds, debentures, notes or other evidences of indebtedness or guarantee of the Corporation, whether secured or unsecured;

(c) give a guarantee on behalf of the Corporation to secure performance of an obligation of any individual, partnership, association, body corporate, trustee, executor, administrator or legal representative;

(d) mortgage, hypothecate, pledge or otherwise create an interest in or charge on all or any property of the Corporation, owned or subsequently acquired, to secure payment of a debt or performance of any other obligation of the Corporation;

(e) delegate to one or more directors, a committee of directors or one or more officers of the Corporation as may be designated by the directors, all or any of the powers conferred by the foregoing clauses of this by-law to such extent and in such manner as the directors shall determine at the time of each such delegation.

In the event any provision of any other by-law of the Corporation now in force is inconsistent with or in conflict with any provision of this by-law, the provisions of this by-law shall prevail to the extent necessary to remove the inconsistency or conflict.

This by-law shall remain in force and be binding upon the Corporation as regards any party acting on the faith thereof until a copy, certified by the Secretary of the Corporation, of a by-law repealing or replacing this by-law shall have been received by such party and duly acknowledged in writing.

ENACTED the 21st day of June, 2004.

Dear Ms. Lacroix:

Re: Calfrac Well Services Ltd.

Further to your letter of May 27, 2004, we hereby confirm on behalf of Calfrac Well Services Ltd. (formerly Denison Energy Inc.) (the "Corporation") that no securities of the Corporation were distributed in the province of Quebec pursuant to exemptions from the prospectus requirements contained in section 52 of the *Securities Act* (Quebec) in the financial year ended December 31, 2003.

Please call me directly should you have any concerns with respect to the foregoing.

Kind regards,

BENNETT JONES LLP

(signed) *"Mark Paslawski"*

MP/llm

cc Lorraine Graham (Calfrac Well Services Ltd.)

APPENDIX A

NOTICE PURSUANT TO SECTION 50 OF THE *SECURITIES ACT* (QUÉBEC) AND SECTION 106 OF THE *REGULATION UNDER THE SECURITIES ACT* (QUÉBEC)

***Capitalized terms used herein but not otherwise defined shall have the meaning set forth in the application letter to which this Appendix A is attached and/or the Denison Information Circular.*

1. THE NAME AND ADDRESS OF EACH OF THE LEGAL PERSONS INVOLVED IN A MERGER OR A CAPITAL REORGANIZATION, WITH A BRIEF DESCRIPTION OF THEIR ACTIVITIES:

The following legal persons will partake in an exchange of securities with persons resident in Québec ("**Québec Securityholders**") in connection with the Denison Arrangement:

Denison Energy Inc. ("Energyco")

a) Energyco was incorporated in Ontario by the amalgamation in 1973 of Denison Mines Limited and Stanrock Uranium Mines Limited. Energyco changed its name from Denison Mines Limited to Denison Energy Inc. in 2002. Energyco's head office and registered office is located at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2.

b) Energyco's business is divided into three segments operated by Energyco directly rather than through separate subsidiaries: (i) mining and uranium operations, (ii) environmental consulting services to other mining resource companies with respect to the rehabilitation and monitoring of closed mine sites, and (iii) oil and natural gas exploration and development.

c) The authorized capital of Energyco consists of an unlimited number of Energyco Common Shares, of which, as at January 29, 2004, 18,244,577 Energyco Common Shares were issued and outstanding. In addition, Energyco had, as at January 29, 2004, 523,480 Energyco Options to purchase Energyco Common Shares outstanding.

d) Energyco is, and has been for a period of time in excess of 12 months, a reporting issuer (where such concept exists) under the securities legislation of each Canadian province (the "**Jurisdictions**"). To the best of its knowledge, information and belief, Energyco is not in default of the requirements under the legislation of the Jurisdictions or the regulations made thereunder.

e) The Energyco Common Shares are listed and posted for trading on the Toronto Stock Exchange (the "**TSX**") under the trading symbol "DEN".

Denison Oil Corporation ("Oilco")

a) Oilco is a corporation that was incorporated on January 21, 2004 under the ABCA and having its head office at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2. The registered office of Oilco is c/o Blake, Cassels & Graydon LLP, Suite 3500, Bankers Hall East, 855 - 2nd Street S.W., Calgary, Alberta, T2P 4J8.

b) Oilco has not conducted any business to date, but has executed agreements in connection with the Denison Arrangement and the Forte Arrangement.

c) The authorized capital of Oilco consists of an unlimited number of Oilco Common Shares, an unlimited number of Oilco First Preferred Shares, 3,500,000 Oilco Performance Shares, and an unlimited number of Oilco Second Preferred Shares. As of the date hereof, there is one issued and outstanding Oilco Common Share, which is owned by Energyco. Following the completion of the Denison Arrangement, there will be approximately 3,734,111 Oilco Common Shares issued and outstanding which will be held by the former Energyco Shareholders.

d) After giving effect to the Denison Arrangement, all of the PNG Assets and PNG Liabilities will have been transferred from Energyco to Resourceco, a wholly owned subsidiary of Oilco. Pursuant to the Forte Arrangement, Forte will amalgamate with 1087215 Alberta Ltd., a wholly owned subsidiary of Oilco.

e) Oilco is not currently a reporting issuer in any Jurisdiction. However, disclosure with respect to the PNG Assets and PNG Liabilities to be transferred to Resourceco, Oilco's wholly owned subsidiary, pursuant to the Denison Arrangement has been publicly available through Energyco's public filings.

f) Oilco intends to apply to the TSX to list the Oilco Common Shares on the TSX (or failing approval by the TSX, to apply to the TSX Venture Exchange (the "**TSX Venture**") to list the Oilco Common Shares on the TSX Venture) upon the completion of the Denison Arrangement and the Forte Arrangement.

Denison Mines Inc. ("Mineco")

a) Mineco is a corporation that was incorporated on September 25, 2003 under the OBCA, having its head office and registered office at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2.

b) Mineco has not conducted any business to date, but has executed agreements in connection with the Denison Arrangement and the Forte Arrangement.

c) The authorized capital of Mineco consists of an unlimited number of Mineco Common Shares and an unlimited number of preferred shares. As of the date hereof, there is issued and outstanding one Mineco Common Share, which is currently owned by Energyco.

d) After completion of the Denison Arrangement, all of the Uranium Assets and Uranium Liabilities will have been transferred from Energyco to Mineco.

e) Mineco is not currently a reporting issuer in any Jurisdiction. However, disclosure with respect to the Uranium Assets and Uranium Liabilities to be transferred to Mineco pursuant to the Denison Arrangement has been publicly available through Energyco's public filings.

f) Mineco intends to apply to the TSX to list the Mineco Common Shares on the TSX (or failing approval by the TSX, to apply to the TSX Venture to list the Mineco Common Shares on the TSX Venture) upon the completion of the Denison Arrangement.

Denison Mines Holding Corporation ("Mine Holdco")

a) Mine Holdco is a corporation that was incorporated on September 25, 2003 under the OBCA, having its head office and registered office at 40 Dundas Street West, Suite 320, Toronto, Ontario, M5G 2C2.

b) Mine Holdco has not conducted any business but was incorporated to execute certain transfers of securities in connection with the Denison Arrangement.

c) The authorized capital of Mine Holdco consists of one Class A common share and an unlimited number of Class B common shares. As of the date hereof, there is issued and outstanding one Class A common share, which is currently owned by E. Peter Farmer for consideration of $1.00.

d) Mine Holdco is not currently nor will it be following the Denison Arrangement a reporting issuer in any Jurisdiction.

2. A DESCRIPTION OF THE SECURITIES INVOLVED IN THE EXCHANGE:

Relevant Securities:

The following securities will be exchanged with Québec Securityholders pursuant to the Denison Arrangement:

(i) common shares of Energyco ("**Energyco Common Shares**");

(ii) a new class of common shares of Energyco to be specifically created and issued in connection with the Denison Arrangement ("**New Energyco Common Shares**");

(iii) Series 1 preference shares of Energyco to be specifically created and issued in connection with the Denison Arrangement ("**Energyco Spin-Out Shares**");

(iv) common shares of Oilco ("**Oilco Common Shares**"); and

(v) common shares of Mineco ("**Mineco Common Shares**").

Transactions relating to the Denison Arrangement:

a) The Uranium Assets and Uranium Liabilities will be, directly and indirectly, transferred and assigned by Energyco to Mineco, in exchange for the issuance of Mineco Common Shares to Energyco.

b) The PNG Assets and PNG Liabilities will be transferred and assigned by Energyco to Oilco, through its wholly owned subsidiary, Resourceco, in exchange for the issuance of Oilco Common Shares to Energyco.

c) As a result of a) and b), Energyco will own the number of Mineco Common Shares equal to the number of Energyco Common Shares issued and outstanding on the effective date for the Denison Arrangement, and the number of Oilco Common Shares equal to 1/5 of the number of Energyco Common Shares issued and outstanding on the effective date for the Denison Arrangement.

d) Energyco Shareholders who are non-residents of Canada within the meaning of the *Income Tax Act* (Canada) (the "**Tax Act**") will transfer their Energyco Common Shares to Energyco, indirectly through Mine Holdco, and, for each Energyco Common Share transferred, will receive in exchange (subject to adjustment in certain situations) (i) 1/21 of one New Energyco Common Share, (ii) 1/5 of one Oilco Common Share, and (iii) one Mineco Common Share.

e) Energyco Shareholders who are residents of Canada within the meaning of the Tax Act, including Québec Securityholders, will transfer their Energyco Common Shares directly to Energyco, and, for each Energyco Common Share transferred, will receive in exchange (subject to adjustment in certain situations) (i) 1/21 of one New Energyco Common Share, and (ii) one Energyco Spin-Out Share, which Energyco Spin-Out Share will be transferred to Mine Holdco in exchange for 1/5 of one Oilco Common Share and one Mineco Common Share.

f) Upon completion of the Denison Arrangement, former Energyco Shareholders will hold 100% of the issued and outstanding common shares of each of Mineco, Oilco and New Energyco; Oilco will indirectly hold all of the PNG Assets and PNG Liabilities; and Mineco will own all of the Uranium Assets and Uranium Liabilities. New Energyco will hold the option to purchase all of the shares of a private oilfield services company.

g) As part of the Denison Arrangement, all of the Energyco Options that have not been exercised at the time the Denison Arrangement comes into effect will be cancelled and will cease to represent any right to purchase Energyco Common Shares, and Energyco's stock option plan will be terminated. Energyco will provide each of its Energyco Optionholders with an opportunity to exercise their Energyco Options prior to the time the Denison Arrangement comes into effect, including Energyco Options that, by their terms, do not vest until after such time. No Québec Securityholders hold any Energyco Options.

3. THE NUMBER AND VALUE OF THE SECURITIES:

a) As of January 29, 2004, there were 18,244,577 Energyco Common Shares issued and outstanding. The maximum number of Energyco Common Shares that may be exchanged pursuant to the Denison Arrangement, in the event that all Energyco Options (that are "in the money") are exercised prior thereto, is 18,670,557. The closing price of the Energyco Common Shares on the TSX on February 18, 2004 was $5.66.

b) There are currently no New Energyco Common Shares issued and outstanding; such shares shall be issued in accordance with the Denison Arrangement (as described at Section 2 of this Notice).

c) There are currently no Energyco Spin-Out Shares issued and outstanding; such shares shall be issued in accordance with the Denison Arrangement (as described at Section 2 of this Notice).

d) As of February 20, 2004, there was one Oilco Common Share issued and outstanding, which was subscribed for by Energyco for a price of $2001.

e) As of February 20, 2004, there was one Mineco Common Share issued and outstanding, which was subscribed for by Energyco for a price of $10.

4. THE METHOD OF EVALUATING THE SECURITIES, AND THE BASIS FOR EXCHANGE:

Method of evaluating the securities:

a) The value of the securities for the purposes of the Denison Arrangement was arrived at through arm's length negotiations between Energyco, Tenwest, Mineco, Oilco, Resourceco, the Partnership, Mine Holdco and E. Peter Farmer, and as is set forth in an amended and restated arrangement agreement between such parties dated January 28, 2004 (the "**Denison Arrangement Agreement**") (as copy of which is attached as Exhibit G of the Denison Information Circular).

b) A special committee of the board of directors of Energyco has received an opinion from FirstEnergy Capital Corp. ("**FirstEnergy**") that the consideration to be received pursuant to the Denison Arrangement is fair, from a financial point of view, to the Energyco Shareholders, and that the Forte Arrangement is fair, from a financial point of view, to the Energyco Shareholders, who will become holders of Oilco Common Shares upon completion of the Denison Arrangement.

c) The board of directors of Energyco has unanimously approved the Denison Arrangement and has recommended that its shareholders and optionholders vote in favour of the arrangement.

d) Energyco has entered into agreements with holders of 894,750 Energyco Options, or approximately 85% of the issued and outstanding Energyco Options as at January 12, 2004, pursuant to which such Energyco Optionholders have agreed that they will vote their Energyco Options in favour of the Denison Arrangement. See page 29 of the attached Denison Information Circular under the heading of "Support Agreements" for further information.

Basis for the exchange:

Energyco Shareholders (other than dissenting Energyco Shareholders) will exchange each Energyco Common Share for: (i) 1/21 of one New Energyco Common Share, (ii) 1/5 of one Oilco Common Share, and (iii) one Mineco Common Share, all as more fully described in section 2 of this Notice.

5. THE CONDITIONS TO BE MET FOR COMPLETION, AND THE DATE SET FOR THE TRANSACTION:

Conditions for Completion:

a) On January 29, 2004, Energyco was issued, pursuant to section 182 of the OBCA, an interim order (the "**Denison Interim Order**") by the Superior Court of Justice of Ontario (the "**Ontario Court**") which specifies, among other things, certain procedures and requirements to be followed in connection with the calling and holding of the Denison Meeting and the completion of the Denison Arrangement.

b) With respect to matters to be brought before the Denison Meeting pertaining to matters of business affecting Oilco and Mineco, each Energyco Shareholder shall be entitled to one vote on a ballot at the Denison Meeting for each Energyco Common Share held, and such resolutions will be effective resolutions of the shareholders of each of Oilco and Mineco as if passed at a meeting of the shareholders of each of Oilco and Mineco entitled to vote on such matters.

c) The Denison Meeting is to be held on March 3, 2004 at which Energyco will seek the requisite Energyco Securityholder approval for the special resolutions approving the Denison Arrangement. Pursuant to the Denison Interim Order, the requisite approval is 66⅔% of the votes cast by Energyco Shareholders (for the "**Energyco Shareholders' Resolution**") and 66⅔% of the votes cast by Energyco Optionholders (for the "**Energyco Optionholders' Resolution**"), represented at the Denison Meeting in person or by proxy, with Energyco Shareholders and Energyco Optionholders voting as separate classes.

d) The respective obligations of Energyco, Oilco and Mineco to complete the transactions contemplated by the Denison Arrangement Agreement are subject to a number of conditions which must be satisfied or waived in order for the Denison Arrangement to become effective. These conditions are provided for in the Denison Arrangement Agreement and include the following:

   (i) The Energyco Shareholders' Resolution shall have been passed by Energyco Shareholders at the Denison Meeting in accordance with terms of the Denison Interim Order;

   (ii) The Energyco Optionholders' Resolution shall have been passed by Energyco Optionholders at the Denison Meeting in accordance with the terms of the Denison Interim Order;

   (iii) The Denison Interim Order and Denison Final Order shall have been obtained in form and substance satisfactory to Energyco;

   (iv) The TSX or the TSX Venture shall have confirmed the listing and posting for trading of the Mineco Common Shares and the Oilco Common Shares, and the TSX shall have consented to the Denison Arrangement and have approved the listing of the New Energyco Common Shares and the shares to be issued in connection with the Matco Subscription under the Subscription Agreement;

(v) No action shall have been instituted and be continuing on the effective date of the Denison Arrangement for an injunction to restrain, or a declaratory judgement in respect of, or damages on account of, or relating to, the Denison Arrangement (including with respect to the conveyance agreements attached to the Denison Arrangement Agreement), the Subscription Agreement or the Indemnification Agreement, and no cease trading or similar orders with respect to the securities of Energyco, Mineco or Oilco shall have been issued and remain outstanding;

(vi) All regulatory requirements shall have been complied with, and consents, agreements, orders and approvals, including those of Energyco's joint venture partners, shall have been obtained to complete the Denison Arrangement and the transactions contemplated by the Denison Arrangement;

(vii) None of the consents, orders, regulations or approvals required for the Denison Arrangement shall contain terms or conditions or require undertakings or security deemed unsatisfactory or unacceptable by Energyco, Mineco, Resources, Oilco or the Partnership;

(viii) Dissent Rights may not be exercised in respect of Energyco Common Shares representing more than 5% of the aggregate number of Energyco Common Shares outstanding at the effective date of the Denison Arrangement;

(ix) The Subscription Agreement shall not have been terminated and the purchase price under the Subscription Agreement shall have been paid into escrow pending the time the Denison Arrangement becomes effective and closing of the Share Subscription; and

(x) The Denison Arrangement Agreement shall not have been terminated under its terms.

e) The board of directors of Energyco may decide at any time before or after the Denison Meeting not to proceed with the Denison Arrangement in which event the Denison Arrangement Agreement will be terminated without any further action on the part of the Energyco Securityholders or the Ontario Court. The board of directors of Energyco considers it appropriate to retain the flexibility to terminate the Denison Arrangement should some extraordinary event occur prior to the effective date of the Denison Arrangement, which in the opinion of the Board makes it inappropriate to consummate the Denison Arrangement. The Energyco Shareholders' Resolution and the Energyco Optionholders' Resolution authorize such action.

Date of the Transactions:

The Denison Meeting is to be held on March 3, 2004 at which Energyco will seek the requisite approval of the Energyco Shareholders' Resolution and the Energyco Optionholders' Resolution. The Denison Arrangement is expected to be completed on or about March 8, 2004, but no later than March 31, 2004.

6. THE NAME AND ADDRESS OF ANY REMUNERATED AGENT:

As described at Section 4 of this Notice, FirstEnergy has provided a fairness opinion to the board of directors of Energyco in connection with the Denison Arrangement. The corporate address of FirstEnergy is 1600, 333 – 7th Avenue SW, Calgary, Alberta, T2P 2Z1.

There are underwriters involved in the public offering contemplated by Energyco following completion of the Denison Arrangement and the subscription by Matco; however, besides FirstEnergy, there are no other remunerated agents involved in the Denison Arrangement for which approval is sought under this Notice.

7. THE AMOUNT OF SUCH REMUNERATION:

FirstEnergy is entitled to receive a fee in the aggregate amount of $750,000 for its services in connection with the Denison Arrangement and the Forte Arrangement. FirstEnergy is also entitled to obtain a fee which is payable in the event that FirstEnergy's services are used to sell Energyco's uranium assets, sell Mineco's shares, amalgamate Mineco or assist in some other form of business combination for Mineco, and such fee shall be 2.5% of the equity consideration above $1.90 per share for the Mineco shares, payable on closing.

Ladies and Gentlemen:

Re: Calfrac Well Services Ltd. (formerly Denison Energy Inc.)

On behalf of Calfrac Well Services Ltd., we submit this Notice of Transaction pursuant to Section 8.1 of National Policy Statement 51 entitled *Changes in the Ending Date of a Financial Year and in Reporting Status*. On March 24, 2004, Denison Energy Inc. completed a vertical short form amalgamation (the "Amalgamation") with its wholly-owned subsidiary Calfrac Well Services Ltd. pursuant to subsection 184(1) of the *Business Corporations Act* (Alberta). As a result of the Amalgamation, Denison Energy Inc. changed its name to Calfrac Well Services Ltd.

1. **Parties to Transaction:**

   The parties to the transaction were Denison Energy Inc. and Calfrac Well Services Ltd.

2. **Effective Date of Transaction:**

   The effective date of the transaction was March 24, 2004.

3. **Approvals Required:**

   The board of directors of Denison Energy Inc. and Calfrac Well Services Ltd. each approved the Amalgamation on March 24, 2004 prior to the effective time of the Amalgamation.

4. **For each party to the transaction that was a Filing Issuer immediately prior to the effective date of the transaction, the date of its last financial year end prior to the effective date of the transaction:**

   As a result of the amalgamation completed on March 8, 2004 between Denison Energy Inc. and Tenwest Uranium Limited, Denison Energy Inc.'s last financial year end period for accounting purposes was March 8, 2004.

5. **The method of accounting for the transaction and, where appropriate, the entity that is identified as being the acquirer for accounting purposes:**

As Calfrac Well Services Ltd. is required to be identified as the acquiror for accounting purposes, this transaction was accounted for as a reverse takeover.

6. **With respect to the continuing Filing Issuer:**

(a) the date of its first fiscal year end subsequent to the transaction; and

For accounting purposes, the Amalgamation caused a financial year end for income tax purposes only to occur on March 24, 2004 (the effective date of the Amalgamation). The first fiscal year end subsequent to the Amalgamation for Calfrac will be December 31, 2004.

(b) the periods, including the comparative reporting periods, if any, to be covered in the interim and annual financial statements to be filed for the continuing Filing Issuer's first financial year subsequent to the transaction.

The continuing issuer will file interim and annual financial statements following the Amalgamation.

Should you have any questions, please contact the undersigned at your convenience at (403) 298-2068.

Yours truly,

BENNETT JONES LLP

March 18, 2004

VIA SEDAR

The Securities Commission or Regulatory
Authority in each Province of Canada

Ladies and Gentlemen:

Re: Denison Energy Inc.

We represent Denison Energy Inc. ("Denison" or the "Filing Issuer"), and on behalf of Denison, we submit this Notice of Transaction pursuant to Section 8.1 of National Policy Statement 51 entitled *Changes in the Ending Date of a Financial Year and in Reporting Status*. On March 8, 2004, Denison completed a short form vertical amalgamation (the "Amalgamation") with its wholly-owned subsidiary Tenwest Uranium Limited ("Tenwest") pursuant to subsection 178(1) of the *Business Corporations Act* (Ontario).

1. **Parties to Transaction:**

   The parties to the transaction were Denison and Tenwest.

2. **Effective Date of Transaction:**

   The effective date of the transaction was March 8, 2004.

3. **Approvals Required:**

   The board of directors of Denison approved the Amalgamation prior to the effective date thereof. The holders of the common shares in the capital of Denison (the "Denison Shares") and options to purchase Denison Shares (collectively, the "Denison Securityholders") approved the transaction and related matters at a special meeting held on March 3, 2004.

4. **For each party to the transaction that was a Filing Issuer immediately prior to the effective date of the transaction, the date of its last financial year end prior to the effective date of the transaction:**

   Each of Denison's and Tenwest's last financial year end period was December 31, 2003.

5. **The method of accounting for the transaction and, where appropriate, the entity that is identified as being the acquirer for accounting purposes:**

Denison is the continuing issuer following the Amalgamation. All of the property, liabilities and obligations of Tenwest held immediately before the Amalgamation became the property, liabilities and obligations of Denison at the effective time of the Amalgamation.

6. **With respect to the continuing Filing Issuer:**

(a) the date of its first fiscal year end subsequent to the transaction; and

For accounting purposes, the Amalgamation caused a financial year end to occur for Denison on March 8, 2004 (the effective date of the Amalgamation). The first fiscal year end subsequent to the Amalgamation for Denison will be December 31, 2004.

(b) the periods, including the comparative reporting periods, if any, to be covered in the interim and annual financial statements to be filed for the continuing Filing Issuer's first financial year subsequent to the transaction.

The continuing issuer will file interim and annual financial statements following the Amalgamation.

Should you have any questions, please contact the undersigned at your convenience at (403) 298-8142.

Yours truly,

BENNETT JONES LLP
