GREAT QUEST
METALS LTD.

Second Quarter Report to Shareholders - For the Six Months Ended June 30, 2005
(BC Form 51-102F1, Schedule C: Management Discussion and Analysis)

Dear Shareholders:

Introduction

The focus of the activities of Great Quest Metals Ltd. for the Company's Second Quarter of 2005 (April 1 through June 30, 2005) was centered around the drill program on the Djambaye 2 gold zone within the Kenieba concession, western Mali, West Africa. A total of 10 holes were drilled and visible gold was seen in all 10 holes. The Company also carried out a preliminary program of soil sampling and geological mapping on the Manankoto concession, 10 km southwest of the Kenieba concession with encouraging results. Subsequent to the end of the Quarter, the Government of Mali granted the 2,149 sq km Kenieti diamond concession to Great Quest.

Also subsequent to the end of the quarter, a $220,000 private placement was announced.

Kenieba Concession Diamond Drill Program

Great Quest drilled 10 diamond drill holes averaging roughly 100 m in depth for a total of 1,063.8 m on the Djambaye 2 gold zone. These holes were drilled over a length of 400 m along the 2,342 m zone. All 10 holes intersected gold mineralization and assays verified the presence of visible gold seen in the core of all 10 holes. One intersection in hole KN 11-05, between 35.7 and 44.25 m intersected 100.76 g/t over 8.55 m (estimated true width of 5.68 m), including 808 g/t gold over 1.05 m in quartz breccia. Some of the better drill holes included KN 04-05 which intersected (all widths are estimated true widths) 2.19 m of 9.98 g/t gold, KN 06-05 with 12.49 m of 2.80 g/t gold including 2.96 m of 9.82 and KN 08-05 with 14.59 m of 2.54 g/t gold including 1.16 m of 17.57 g/t gold.

The diamond drill became available subsequent to the completion of the first 10 holes, and the Company drilled an additional two holes to learn more about the high grade breccia zone intersected in KN 11-05. Assay results from these two holes are not yet available. Great Quest plans to continue drilling later in autumn at the end of the rainy season to further define the Djambaye 2 gold zone with possible testing of the Djambaye 1, Kabaya 1 and Kabaya 2 gold zones on the Kenieba concession and the Baroya Nord gold zone and Segala Extension in the nearby Baroya concession.

Manankoto Concession

Great Quest completed a program of soil sampling and geological mapping this spring on the 105 sq km Manankoto concession. Two zones of anomalous gold were defined. In the first, anomalous gold from 23 to 1,884 parts per billion gold was picked up on 10 of 13 lines over 5.5 km. The second area, west of the first, was traced for 4.5 km with values from 20 to 282 ppb gold. The next program will consist of pitting and sampling the anomalous areas.

Kenieti Diamond Concession

Subsequent to the end of the quarter, Great Quest was granted the 2,149 sq km Kenieti concession in western Mali. Three previously found kimberlite pipes occur in this concession as well as diamonds in alluvium in 4 different locations. One 0.05 carat diamond was previously discovered in the 5.0 hectare Orange River kimberlite pipe. The Company has hired the exploration division of the Malian Mines Ministry to do a compilation report on this concession.

Further Exploration Plans

The Company plans to carry out a geophysical program on the Bourdala concession as well as a study of the logs from 90,000 m of reverse circulation drilling on the Sepola concession.

The Exploration Team

Planning for and supervision of the Mali gold projects is carried out by Mamadou Keita, M.Sc. Geo., Willis W. Osborne M.Sc. Geo. and Marvin Mitchell P. Geo. Mr. Mitchell is the Independent Qualified Person under National Instrument 43-101.

4. SHARE CAPITAL (continued)

Stock Options (continued)

Expected volatility	46.62%
Risk-free interest rate	3.59%
Expected life	5 years
Expected dividend	0%

Option pricing models require the input of highly subjective assumptions including the expected price volatility. Changes in the subjective input assumptions can materially affect the fair value estimate, and therefore the existing models do not necessarily provide a reliable single measure of the fair value of the Company's stock options.
