About Solbec

Solbec Pharmaceuticals Ltd identifies naturally-occurring compounds with potential in the development of better therapies for debilitating conditions and life-threatening diseases. The company is currently progressing its key project, Coramsine[®], through Phase I/IIA clinical trials for the treatment of advanced solid tumours, and as a topical treatment for psoriasis. The two proprietary ingredients of Coramsine[®] were isolated from the fruit of a weed known as the Devil's Apple (*Solanum linnaeanum*). They show activity against some cancers and cause potentially therapeutic changes to the immune system. In addition to human health, Coramsine[®] has potential application to animal health and diagnostics. Solbec's business strategy is to partner or out-license Coramsine[®] for the final stages of pre-commercial development and marketing.
