On 17 August 2006 Falconbridge's Bulk Handling Operation in Bathurst, New Brunswick reached an agreement with CEPC – Local 768, Local union 1150 IBEW, Local union 512 UAJAPPIUSC, NBRCCMAW local 1458 for a five year agreement. Terms of the agreement include: (i) a definition of how seniority will apply and how pensions and severances will be provided to workers; (ii) wage increases of US$0.25 per hour for each year of the agreement; and (iii) an increase in the basic pension from US$47 per month per year of service to US$52 in 2010.

Collective agreements covering Falconbridge's unionised hourly employees at CEZ, CEZ (Effluent Treatment Operators), CCR (Production & Maintenance), CCR (Security), Noranda Recycling – Roseville (two agreements), Noranda Recycling – San Jose, Sudbury Operations (Production & Maintenance), Sudbury Operations (Office, Clerical & Technical), Collahuasi, New Madrid, Norandal-Newport, St. Ann (Production & Maintenance), St. Ann (Staff), Kidd Metallurgical Division, Matagami and Falcondo are currently in place and will expire between 2007 and 2008.

See paragraph 15 of Part VIII – "Additional Information – Employees and contractors" for details of the Enlarged Xstrata Group's employees and contractors.

Despite certain operations within the Enlarged Xstrata Group experiencing work stoppages and other forms of industrial action in recent years, such work stoppages and industrial action have not had any material effect on the operating results of the Enlarged Xstrata Group. Xstrata believes that all of the Enlarged Xstrata Group's operations have, in general, good relations with their employees and unions.

The Enlarged Xstrata Group is a party to various defined contribution and defined benefit retirement plans covering a majority of employees worldwide. See paragraph 16 of Part VIII – "Additional Information – Pensions".

Metals marketing

The Enlarged Xstrata Group's marketing and sales strategy is to sell its production at prices that are equal to or greater than the average cash price reported on the LME or other relevant terminal markets. Premiums above the LME settlement price are negotiated based on product form and quality, packaging, delivery terms, supply commitments, delivery location and availability of product. For any intermediate zinc and lead products or by-products sold by the Zinc Business (such as copper cake and copper matte) discounts are negotiated periodically from LME prices which largely reflect inherent third party processing charges.

The Enlarged Xstrata Group procures custom feed materials for processing in the metallurgical facilities. In order to minimise metal price risk exposure on purchased metals and fluctuations in inventory levels, and to obtain the average COMEX/LME prices or better, the Enlarged Xstrata Group employs the use of derivatives in the form of forward or options contracts to hedge these risks. Generally, the Enlarged Xstrata Group does not hedge the price it realises on the sale of the Enlarged Xstrata Group's own production, and accepts prices based on the market price prevailing around the time of

delivery of these metals. From time to time, however, the Enlarged Xstrata Group may fix the metal price associated with its own future production to lock-in certain profits or cash flows.

Competition

The markets in which the Enlarged Xstrata Group operates are competitive. Competition is largely on the basis of price. The Enlarged Xstrata Group competes with numerous suppliers in the same product areas, some of which have substantially greater reserve bases and manufacturing and financial resources. In addition, increased production capacity from competitors in other countries may increase competition in the markets in which the Enlarged Xstrata Group operates.

The Enlarged Xstrata Group's principal competitors in its main operations are set out below:

Copper

The Enlarged Xstrata Group is the world's fourth largest producer of mined copper. Significant copper-producing competitors include Codelco, Phelps Dodge, BHP Billiton, Rio Tinto, Grupo Mexico, Freeport McMoran and Kazakhmys.

Coal – Thermal

The Enlarged Xstrata Group is one of the world's largest producers of export thermal coal. Significant export thermal coal competitors are Anglo American, BHP Billiton, Rio Tinto and coal producers operating in China and Indonesia.

Coal – Coking (including semi-soft coking coal)

The Enlarged Xstrata Group is the world's fifth largest producer of managed export coking coal. Significant competitors in this sector include BHP Billiton Mitsubishi Alliance (BMA), Fording Canadian Coal Trust, Anglo American and Rio Tinto.

Nickel

The Enlarged Xstrata Group is the fourth largest producer of refined nickel in the world. Significant competitors include RAO Norilsk Nickel, Inco, BHP Billiton, Ste Eramet-SLN, Jinchuan Group Limited and Sumitomo Metal Mining Co. Limited.

Zinc

The Enlarged Xstrata Group is one of the largest zinc producers in the western world in terms of capacity accounting for approximately 11% of western world production and approximately 32% of western European production. The Asturiana smelter is one of the lowest-cost producers in the world. Significant zinc smelting competitors are Korea Zinc Company, Zinifex Limited, Umicore SA, Teck Cominco, Outokumpu and zinc smelting operations in China.

Lead

The Enlarged Xstrata Group is one of the world's largest lead producers. Substantial lead-producing competitors include Zinifex Limited, Teck Cominco and Korea Zinc Company and lead mining operations in China.

Aluminium

Significant competitors of the Aluminum Business include Alcoa, Alcan, BHP Billiton, Rusal, Norsk Hydro and, in relation to rolled products, Aleris, Novelis and JW Aluminum.

Chrome

The Enlarged Xstrata Group is the world's largest, in terms of both attributable production and attributable sales, and among the lowest-cost producers of ferrochrome. Significant chrome competitors are the Kermas Group, Hernic (Pty) Limited, Ore & Metal and ferrochrome producers operating in Kazakhstan.

Vanadium

The Enlarged Xstrata Group is one of the world's leading producers of primary vanadium. Significant vanadium competitors are Highveld Steel and Vanadium Corporation Ltd and steel companies operating in China and Russia.

Litigation

Details of legal and arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on the Company and/or the Enlarged Xstrata Group's financial position or profitability in which members of the Enlarged Xstrata Group are engaged, or, so far as Xstrata is aware, which

members of the Enlarged Xstrata Group have pending or threatened, are set out in paragraph 27 of Part VIII – "Additional Information – Litigation".

Public takeovers

There have been no public takeover offers by third parties in respect of the Company's shares during the last and current financial year.

During the last and current financial year, Falconbridge has been subject to the Inco Offer, which terminated on 28 July 2006 without any Falconbridge Shares being acquired by Inco under the Inco Offer, and the Xstrata Offer pursuant to which Xstrata acquired Falconbridge.

Falconbridge was created on 30 June 2005 pursuant to the Falconbridge Amalgamation, under which the assets, liabilities and operations of Noranda and Former Falconbridge were combined and managed and operated as an integrated business by Falconbridge.

Falconbridge is a defendant, along with Brookfield Asset Management Inc., a company formerly known as Brascan Corporation ("Brookfield"), in a claim initiated in November 2005 in Wisconsin, USA by Stark Trading and Shepherd Investment International Ltd (the "Stark Claimants"). The Stark Claimants allege violations of US federal law, including market manipulation and misrepresentation, by Noranda and Brookfield as Noranda's controlling shareholder in connection with Noranda's issuer bid in March 2005, the Noranda takeover bid for Former Falconbridge in March 2005 and the amalgamation of Noranda and Former Falconbridge in June 2005. The Stark Claimants demand a jury trial and seek compensatory damages of US$74.1 million, punitive damages and costs. On 17 January 2006, Brookfield submitted to the Wisconsin court a memorandum of law in support of its motion to dismiss with prejudice the claim filed by the Stark Claimants and on 23 January 2006, Falconbridge submitted to the Wisconsin court a revised memorandum of law in support of its motion to dismiss with prejudice the claim filed by the Stark Claimants.

The Stark Claimants submitted briefs in opposition to the motions to dismiss on 17 March 2006. Brookfield and Falconbridge submitted their reply briefs to the Stark Claimants' opposition on 18 April 2006. The court has not yet ruled on the motions.

Real estate

No material portion of the Enlarged Xstrata Group's business is dependent on a single or connected group of properties or interest in real estate.

Part III

Unaudited Pro Forma Financial Information

[This page is intentionally left blank]

Differences between accounting policies applied by the Former Xstrata Group and the Falconbridge Group

Xstrata's historical financial information for each of the two years ended 31 December 2003 and 31 December 2004 has been prepared in accordance with UK GAAP. Xstrata's historical financial information for the year ended 31 December 2005 (and, for comparative purposes, the year ended 31 December 2004) and the six-month period ended 30 June 2006 (and, for comparative purposes, the six-month period ended 30 June 2005) has been prepared in accordance with IFRS.

The Falconbridge Group's historical financial information for each of the three years ended 31 December 2003, 31 December 2004 and 31 December 2005 and the six month-period ended 30 June 2006 has been prepared in accordance with Canadian GAAP. Significant differences exist between UK GAAP and Canadian GAAP and between IFRS and Canadian GAAP which might be material to such financial information.

See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP" Differences exist between UK GAAP and Canadian GAAP and between IFRS and Canadian GAAP which could significantly affect balance sheet classifications, income statements and the amount and type of disclosures that would have been needed to have been made if the Falconbridge Group's historical financial statements had been prepared in accordance with UK GAAP or IFRS.

Unaudited pro forma balance sheet of the Enlarged Xstrata Group as at 30 June 2006

The following unaudited pro forma balance sheet of the Enlarged Xstrata Group as at 30 June 2006 is prepared to illustrate the effect on the balance sheet of Xstrata of the Falconbridge Acquisition and the Rights Issue, as if the Falconbridge Acquisition and the New Shares Issue had taken place on 30 June 2006, and is based on the unaudited balance sheet of Xstrata at 30 June 2006 extracted without material adjustment from the 2006 Xstrata Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference") and the unaudited IFRS balance sheet reconciliation of Falconbridge as at 30 June 2006 as set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below. It has been prepared on the basis set out in the notes below for illustrative purposes only. Due to its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Enlarged Xstrata Group's actual financial position or results.

The Cerrejón Acquisition completed on 12 May 2006 and the Tintaya Acquisition completed on 21 June 2006. Therefore, both the Cerrejón Business and Tintaya are included in the balance sheet of the Former Xstrata Group at 30 June 2006 and no adjustments are required for pro forma purposes below.

	At 30 June 2006 Former Xstrata Group[1]	Adjustments: Falconbridge Group[2]	Adjustments: Fund raising and costs of Falconbridge Acquisition adjustments[3]	Adjustments: Fair value and pro forma adjustments[4]	Pro forma Enlarged Xstrata Group

Notes:

(1) The consolidated balance sheet information of Xstrata at 30 June 2006 has been extracted without material adjustment from the unaudited 2006 Xstrata Interim Report (parts of which have been incorporated by reference into this document as described in this section of this document headed "Relevant Documentation and Incorporation by Reference") and includes the Cerrejón Business, which was acquired on 12 May 2006, and Tintaya, which was acquired on 21 June 2006.

(2) The consolidated balance sheet information of Falconbridge at 30 June 2006 has been extracted without material adjustment from the unaudited IFRS reconciliation statements set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below. The segmental analysis of Falconbridge net assets at 30 June 2006 set out below is derived on the same basis.

(3) Adjustments to the pro forma balance sheet of Xstrata relating to the Falconbridge Acquisition and to the Rights Issue reflect:

	US$m
(a) Estimated costs of Falconbridge Acquisition	
Falconbridge purchase consideration	16,935
Add: costs related to Falconbridge Acquisition	150
	17,085
(b) Cash settlement	
Net proceeds of Rights Issue (see (c) below)	5,500
Net additional debt (see (d) below)	11,600
	17,100
Less: costs of Falconbridge Acquisition	(17,085)
Increase/(decrease) in cash	15
(c) Estimated proceeds of Rights Issue	
Gross proceeds of Rights Issue	5,600
Less: Rights Issue costs	(100)
	5,500
(d) Additional debt	
Gross proceeds of additional debt	13,400
Less: expenses of borrowings	(100)
Less: repayments of Falconbridge debt	(1,700)
	11,600

(4) Fair value adjustments were calculated as follows:

The table below represents an initial assessment of the fair value adjustments relating to the assets and liabilities shown. As allowed by IFRS 3, the fair values are provisional and may be refined for up to 12 months from the date of the acquisition. The Falconbridge Acquisition completed on 15 August 2006. A further assessment and allocation of the fair values will be undertaken for the financial year ending 31 December 2006 and, to the extent there are differences, a reconciliation to the fair values below will be provided in the Company's audited consolidated financial statements for the year ending 31 December 2006. The fair values have been established using a valuation model which reflects market data, such as LME forward prices and forward foreign exchange rates, and has been adjusted for inputs from independent experts, such as pension advisers and, in respect of ore reserves and mineral resources information, competent persons. The same model and methodology will be used when reassessing the fair values for the Company's audited consolidated financial statements for the year ending 31 December 2006. In addition to the fair value adjustments set out below, the column to which this note relates also includes the consolidation adjustments necessary to eliminate the total investment in Falconbridge together with Falconbridge's share capital and reserves.

		US$m
Purchase consideration (including costs related to Falconbridge Acquisition for 80.1% interest) (assuming completion of compulsory acquisition procedure)		17,085
Fair value adjustments comprising:		
Property, plant and equipment[i]	12,225	
Interest bearing loans and borrowings[ii]	(50)	
Financial assets[iii]	220	
Provisions[iv]	(300)	
Deferred tax liability[v]	(1,405)	
Goodwill relating to deferred tax gross up[vi]	1,500	
Other	(45)	
Add: attributable net assets of Falconbridge Acquisition	4,212	
	16,357	
80.1% share of the fair value of net assets acquired		13,085
Goodwill arising on purchase of 80.1% interest [vii]		4,000
Purchase consideration (including costs of acquisition) for 80.1% interest in Falconbridge		17,085

(i) Fair value adjustments have been made to reflect initial estimates of the fair values of plant and machinery, reserves and resources and other exploration and development projects.

(ii) Loans and borrowings have been adjusted to their estimated fair values at the date of acquisition.

(iii) Financial assets, including hedge instruments, supply and other contracts, have been adjusted to fair value.

(iv) Increases in provisions reflect fair value adjustments to rehabilitation and other minor provisions.

(v) The increase in deferred tax liability largely reflects the tax effect of the fair value adjustments.

(vi) Goodwill has been recognised as a consequence of the requirement to recognise a deferred tax liability on the above fair value adjustments.

(vii) The difference between the purchase consideration and the estimated fair value of identifiable net assets has been recognised as goodwill. This goodwill balance is US$1,500 million higher than it would otherwise have been because of the requirement under IFRS to account for the acquisition of the Former Xstrata Group's initial 19.9% interest in Falconbridge and the subsequent purchase separately rather than in one transaction.

Unaudited pro forma income statement of the Enlarged Xstrata Group for the six-month period ended 30 June 2006

The following unaudited income statement of Xstrata for the six months ended 30 June 2006 is prepared to illustrate the effect on Xstrata's profit for the period of the Acquisitions and the Rights Issue, as if the Acquisitions and the New Shares Issue had taken place on 1 January 2006. The pro forma information is based principally on the unaudited income statement of Xstrata for the six months ended 30 June 2006 extracted without material adjustment from the 2006 Xstrata Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference") and the unaudited IFRS reconciliation statement for Falconbridge for the six months ended 30 June 2006 as set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below. It has been prepared on the basis set out in the notes below for illustrative purposes only. Due to its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Enlarged Xstrata Group's actual financial position or results.

Notes.

[1] The income statement information of Xstrata for the six-month period ended 30 June 2006 has been extracted without material adjustment from the unaudited 2006 Xstrata Interim Report (parts of which have been incorporated by reference into this document as described in this section of this document headed "Relevant Documentation and Incorporation by Reference").

[2] The adjustment recognises one third of the results of Cerrejón, reflecting the Enlarged Xstrata Group's one-third interest in Cerrejón, for the period from 1 January 2006 until the date of closing of the Cerrejón Acquisition, 12 May 2006. These results have been calculated using Cerrejón's unaudited IFRS management accounts for that period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Cerrejón Acquisition had completed on 1 Janaury 2006. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference").

[3] The adjustment recognises the results of Tintaya for the period from 1 January 2006 until the date of closing of the Tintaya Acquisition, 21 June 2006. These results have been calculated using Tintaya's unaudited Peruvian GAAP management accounts for that period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Tintaya Acquisition had completed on 1 January 2006. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). There are no material adjustments to convert the accounts of Tintaya from Peruvian GAAP to IFRS.

[4] The consolidated income statement information of Falconbridge for the six-month period ended 30 June 2006 has been extracted without material adjustment from the unaudited IFRS reconciliation statements set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below.

[5] Adjustments to the pro forma income statement of the Enlarged Xstrata Group relating to the financing of the Falconbridge Acquisition, which completed on 15 August 2006, reflect:

	US$m
Interest on additional debt raised	336
Interest saving on the existing debt of Falconbridge repaid	(46)
Amortisation of debt issue costs on additional debt	10
	300

Interest on additional debt raised has been calculated by applying the Enlarged Xstrata Group's weighted average interest rate for the period to the average estimated debt for the period. In calculating this, allowance has been made for the estimated repayments.

[6] Adjustments to the pro forma income statement of the Enlarged Xstrata Group relating to the fair value pro forma adjustments of the Falconbridge Acquisition, which completed on 15 August 2006, reflect:

[a] Amortisation of initial estimates of fair value adjustments to property, plant and equipment of US$12,225 million over the estimated useful lives of the underlying assets results in a net adjustment of US$365 million when comparing the revised amortisation charge with that already booked in the accounts of Falconbridge;

[b] The unwinding of the discount on the rehabilitation provision of US$5 million;

[c] The amortisation of the increase in the estimated fair values of hedge instruments and supply and other contracts;

[d] The inclusion in the income statement of foreign exchange gains and losses on borrowings previously treated as a natural hedge of assets with non-US dollar functional currencies, to the extent that these assets have lower estimated fair values at the date of the Falconbridge Acquisition; and

[e] Where appropriate taxation effects of the above adjustments have been taken into account by imputing an estimated effective tax rate on the pro forma profits of the Enlarged Xstrata Group.

All the above adjustments will have a continuing effect.

In addition, administration expenses have been reduced by US$30 million to exclude significant non-recurring expenses, such as stock option payments, acquisition defense costs and Sarbanes - Oxley compliance expenses, incurred by Falconbridge during the period.

As allowed by IFRS 3, the fair values are provisional and may be refined for up to 12 months from the date of the acquisition. A further assessment and allocation of the fair values will be undertaken for the financial year ending 31 December 2006 and, to the extent there are differences, a reconciliation to the fair values below will be provided in the Company's audited consolidated financial statements for the year ending 31 December 2006. The fair values have been established using a valuation model which reflects market data, such as LME forward prices and forward foreign exchange rates, and has been adjusted for inputs from independent experts, such as pension advisers and, in respect of ore reserves and mineral resources information, competent persons. The same model and methodology will be used when reassessing the fair values for the Company's audited consolidated financial statements for the year ending 31 December 2006.

[7] Earnings per share calculations have been based on the following financial information within the 2006 Xstrata Interim Report and on the unaudited pro forma financial information as set out above as follows:

	Xstrata	Adjusted Xstrata[i]	Pro forma Enlarged Xstrata Group
Basic weighted average number of shares (000s)	631,713	706,621	915,572

[i] Adjusted amounts reflect the bonus element of the Rights Issue.

Unaudited pro forma income statement of the Enlarged Xstrata Group for the year ended 31 December 2005
The following unaudited pro forma income statement of Xstrata for the year ended 31 December 2005 is prepared to illustrate the effect on Xstrata's profit for the year of the Acquisitions and the Rights Issue, as if the Acquisitions and the New Shares Issue had taken place on 1 January 2005. The pro forma information is based principally on the income statement of Xstrata for the year ended 31 December 2005 extracted without material adjustment from the Xstrata Annual Report and Accounts 2005 (which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference") and the unaudited IFRS reconciliation statement for Falconbridge for the year ended 31 December 2005 as set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note B: Unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005" in this Part III below. It has been prepared on the basis set out in the notes below for illustrative purposes only. Due to its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Enlarged Xstrata Group's actual financial position or results.

The Falconbridge Acquisition completed on 15 August 2006 at a valuation reflecting, amongst other parameters, the profitability of the Falconbridge Group. Global estimates of forward curve commodity prices at the time of completion of the Falconbridge Acquisition were at levels significantly higher than experienced, on average, during the year ended 31 December 2005.

The estimated fair values of the acquired Falconbridge operations have been determined by reference to the commodity price outlook at the time of completion of the Falconbridge Acquisition on 15 August 2006, which was more favourable than that as at 1 January 2005. The additional depreciation and amortisation expense in relation to the increased fair values at 15 August 2006 is applied to the pro forma income statement for the Enlarged Xstrata Group for the year ended 31 December 2005, for illustrative purposes only, and is shown as a deduction to profits of US$700 million. The profitability of the Former Xstrata Group, the Falconbridge Group, the Cerrejón Business and Tintaya for the year ended 31 December 2005 was driven by lower commodity prices than those impacting the fair value adjustment calculated with reference to the valuation of Falconbridge at 15 August 2006. As a result, on a pro forma basis the net impact of the Falconbridge Acquisition, including additional depreciation and amortisation expense and interest costs, is to increase pro forma profit before tax of the Enlarged Xstrata Group for the year ended 31 December 2005 by only US$416 million.

The Enlarged Xstrata Group's pro forma earnings before interest and tax for the year ended 31 December 2005 are US$3,924 million, as shown in Part III – "Unaudited Pro Forma Financial Information – Unaudited pro forma income statement of the Enlarged Xstrata Group for the year ended 31 December 2005".

Notes

(1) The income statement information of Xstrata for the year ended 31 December 2005 has been extracted without material adjustment from the Xstrata Annual Report and Accounts 2005 (parts of which have been incorporated by reference into this document as described in this section of this document headed "Relevant Documentation and Incorporation by Reference").

(2) The adjustment recognises one third of the results of Cerrejón, reflecting the Enlarged Xstrata Group's one-third interest in Cerrejón, for the year ended 31 December 2005. These results have been calculated using Cerrejón's unaudited IFRS management accounts for the period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Cerrejón Acquisition had completed on 1 January 2005. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference").

(3) The adjustment recognises the results of Tintaya for the year ended 31 December 2005. These results have been calculated using Tintaya's unaudited Peruvian GAAP management accounts for that period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Tintaya Acquisition had completed on 1 January 2005. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). There are no material adjustments to convert the accounts of Tintaya from Peruvian GAAP to IFRS.

(4) The income statement information of Falconbridge for the year ended 31 December 2005 has been extracted without material adjustment from the unaudited IFRS reconciliation statements set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note B: Unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005" in this Part III below. The segmental analysis of the Falconbridge income statement for the year ended 31 December 2005 set out below is derived on the same basis.

(5) Adjustments to the pro forma income statement of the Enlarged Xstrata Group relating to the financing of the Falconbridge Acquisition, which completed on 15 August 2006, reflect:

	US$m
Interest on additional debt raised	451
Interest saving on the existing debt of Falconbridge repaid	(63)
Amortisation of the fair value adjustment to fixed interest debt	2
Amortisation of debt issue costs on additional debt	20
	410

Interest on additional debt raised has been calculated by applying the Enlarged Xstrata Group's weighted average interest rate for the period to the average estimated debt for the period. In calculating this, allowance has been made for the estimated repayments that could have been made from Falconbridge's operational cash flows.

(6) Adjustments to the pro forma income statement of the Enlarged Xstrata Group relating to the fair value adjustments of the Falconbridge Acquisition, which completed on 15 August 2006, reflect:

(a) Amortisation of initial estimates of fair value adjustments to property, plant and equipment of US$12,225 million over the estimated useful lives of the underlying assets results in a net adjustment of US$700 million when comparing the revised amortisation charge with that already booked in the accounts of Falconbridge;

(b) The unwinding of the discount on the rehabilitation provision of US$20 million;

(c) The amortisation of the increase in the estimated fair values of hedge instruments and supply and other contracts;

(d) The inclusion in the income statement of foreign exchange gains and losses on borrowings previously treated as a natural hedge of assets with non-US dollar functional currencies, to the extent that these assets have lower estimated fair values at the date of the Falconbridge Acquisition;

(e) The reversal of minority interests recorded by Falconbridge prior to the Falconbridge Amalgamation on 30 June 2005; and

(f) Where appropriate taxation effects of the above adjustments have been taken into account by imputing an estimated effective tax rate on the pro forma profits of the Enlarged Xstrata Group.

All the above adjustments will have a continuing effect.

In addition, administration expenses have been reduced by US$10 million to exclude significant non-recurring expenses, such as in relation to the Falconbridge Amalgamation and Sarbanes – Oxley compliance costs incurred by Falconbridge during the period.

As allowed by IFRS 3, the fair values are provisional and may be refined for up to 12 months from the date of the acquisition. A further assessment and allocation of the fair values will be undertaken for the financial year ending 31 December 2006 and, to the extent there are differences, a reconciliation to the fair values below will be provided in the Company's audited consolidated financial statements for the year ending 31 December 2006. The fair values have been established using a valuation model which reflects market data, such as LME forward prices and forward foreign exchange rates, and has been adjusted for inputs from independent experts, such as pension advisers and, in respect of ore reserves and mineral resources information, competent persons. The same model and methodology will be used when reassessing the fair values for the Company's audited consolidated financial statements for the year ending 31 December 2006.

(7) Earnings per share calculations have been based on the following financial information within the Xstrata Annual Report and Accounts 2005 and on the unaudited pro forma financial information as set out above as follows:

	Xstrata	Adjusted Xstrata[(i)]	Pro forma Enlarged Xstrata Group
Basic weighted average number of shares (000s)	612,421	685,040	864,154

(i) Adjusted amounts reflect the bonus element of the Rights Issue.

Unaudited pro forma segmental information of the Enlarged Xstrata Group for the six month-period ended 30 June 2006

The following unaudited segmental analysis for the unaudited pro forma balance sheet of the Enlarged Xstrata Group as at 30 June 2006 and the unaudited pro forma income statement of the Enlarged Xstrata Group for the six-month period ended 30 June 2006 is principally based on the balance sheet and income statement of Xstrata for the six-month period ended 30 June 2006 extracted without material adjustment from the 2006 Xstrata Interim Report (which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference") and the unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006 as set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below. It has been prepared for illustrative purposes only on the same basis as the unaudited pro forma financial information set out in the sections of this Part III headed "Unaudited pro forma balance sheet of the Enlarged Xstrata Group as at 30 June 2006" and "Unaudited pro forma income statement of the Enlarged Xstrata Group for the six-month period ended 30 June 2006", including the notes to each of those sections. Due to its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Enlarged Xstrata Group's actual financial position or results.

The Former Xstrata Group's segmental information has been extracted from the unaudited financial statements of Xstrata for the six-month period ended 30 June 2006. The totals of the segmental analysis of Falconbridge for the six-month period ended 30 June 2006 have been extracted without material adjustment from the unaudited IFRS reconciliation statements set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006" in this Part III below.

The segmental analysis recognises one third of the results of Cerrejón, reflecting the Enlarged Xstrata Group's one-third interest in Cerrejón for the period from 1 January 2006 until the date of closing of the Cerrejón Acquisition, 12 May 2006. These results have been calculated using Cerrejón's unaudited IFRS management accounts for that period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Cerrejón Acquisition had completed on 1 January 2006. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). The Cerrejón Business's segmental information is classified as part of the Coal Business, with its operations located in South America.

The segmental analysis recognises the results of Tintaya for the period from 1 January 2006 until the date of closing of the Tintaya Acquisition, 21 June 2006. These results have been calculated using Tintaya's unaudited Peruvian GAAP management accounts for that period. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Tintaya Acquisition had completed on 1 January 2006. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). There are no material adjustments to convert the accounts of Tintaya from Peruvian GAAP to IFRS. Tintaya's segmental information is classified as part of the Copper Business, with its operations located in South America.

(1) Within this Part III, EBITDA represents profit before interest, taxation, depreciation and amortisation.
(2) Within this Part III, EBIT represents profit before interest and taxation.

The adjustments to the segmental analysis are as set out in the unaudited pro forma balance sheet of the Enlarged Xstrata Group as at 30 June 2006 and the unaudited pro forma income statement of the Enlarged Xstrata Group for the six-month period ended 30 June 2006, analysed as appropriate for each business unit or corporate cost.

No account has been taken of any trading or other transactions since 30 June 2006 for any member of the Enlarged Xstrata Group.

Unaudited pro forma segmental information of the Enlarged Xstrata Group for the year ended 31 December 2005
The following unaudited segmental analysis for the unaudited pro forma income statement of the Enlarged Xstrata Group for the year ended 31 December 2005 is principally based on the income statement of Xstrata for the year ended 31 December 2005 extracted without material adjustment from the Xstrata Annual Report and Accounts 2005 (which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference") and the unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005 as set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note B: Unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005" in this Part III below. It has been prepared for illustrative purposes only on the same basis as the unaudited pro forma financial information set out in the section of this Part III headed "Unaudited pro forma income statement of the Enlarged Xstrata Group for the year ended 31 December 2005", including the notes to that section. Due to its nature, the pro forma financial information addresses a hypothetical situation and, therefore, does not represent the Enlarged Xstrata Group's actual financial position or results.

The Falconbridge Acquisition completed on 15 August 2006 at a valuation reflecting, amongst other parameters, the profitability of the Falconbridge Group. Global estimates of forward curve commodity prices at the time of completion of the Falconbridge Acquisition were at levels significantly higher than experienced, on average, during the year ended 31 December 2005.

The estimated fair values of the acquired Falconbridge operations have been determined by reference to the commodity price outlook at the time of completion of the Falconbridge Acquisition on 15 August 2006, which was more favourable than that as at 1 January 2005. The additional depreciation and amortisation expense in relation to the increased fair values at 15 August 2006 is applied to the pro forma income statement for the Enlarged Xstrata Group for the year ended 31 December 2005, for illustrative purposes only, and is shown as a deduction to profits of US$700 million. The profitability of the Former Xstrata Group, the Falconbridge Group, the Cerrejón Business and Tintaya for the year ended 31 December 2005 was driven by lower commodity prices than those impacting the fair value adjustment calculated with reference to the valuation of Falconbridge at 15 August 2006. As a result, on a pro forma basis the net impact of the Falconbridge Acquisition, including additional depreciation and amortisation expense and interest costs, is to increase pro forma profit before tax of the Enlarged Xstrata Group for the year ended 31 December 2005 by only US$416 million.

The Former Xstrata Group's segmental information has been extracted from the audited financial statements of Xstrata for the year ended 31 December 2005. The totals of the segmental analysis of Falconbridge for the year ended 31 December 2005 have been extracted without material adjustment from the unaudited IFRS reconciliation statements set out in "Notes to the unaudited pro forma financial information – IFRS reconciliation statements – Note B: Unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005" in this Part III below.

The segmental analysis recognises one third of the results of the audited IFRS income statement of Cerrejón for the year ended 31 December 2005, reflecting the Enlarged Xstrata Group's one-third interest in Cerrejón. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Cerrejón Acquisition had completed on 1 January 2005. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). The Cerrejón Business's segmental information is classified as part of the Coal Business, with its operations located in South America.

The segmental analysis recognises the results of Tintaya extracted without material adjustment from the audited Peruvian GAAP income statement of Tintaya for the year ended 31 December 2005. They have been adjusted to reflect the additional depreciation and amortisation in relation to provisional estimates of the fair value of property, plant and equipment that would have been recognised if the Tintaya Acquisition had completed on 1 January 2005. The provisional estimates of the fair value of property, plant and equipment have been extracted from the unaudited Xstrata 2006 Interim Report (parts of which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"). There are no material adjustments to convert the accounts of Tintaya from Peruvian GAAP to IFRS. Tintaya's segmental information is classified as part of the Copper Business, with its operations located in South America.

(2) Within this Part III, EBIT represents profit before interest and taxation.

The adjustments to the segmental analysis are as set out in the unaudited pro forma income statement of the Enlarged Xstrata Group for the year ended 31 December 2005, analysed as appropriate for each business unit or corporate cost.

Notes to the unaudited pro forma financial information - IFRS reconciliation statements

The following unaudited financial information for Falconbridge is split into three parts to convert certain financial information published by Falconbridge from Canadian GAAP to IFRS, as applied by Xstrata.

The first section, headed "Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006", relates to the balance sheet at 30 June 2006 and the income statement for the six month-period ended 30 June 2006, based on the unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006 set out in Part X – "Financial Information Relating to the Falconbridge Group - Unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006".

The second section, headed "Note B: Unaudited restatements of Falconbridge financial information under IFRS for the year ended 31 December 2005", relates to the income statement for the year ended 31 December 2005, based on the audited consolidated financial statements of Falconbridge for the year ended 31 December 2005 set out in Part X – "Financial Information Relating to the Falconbridge Group - Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003".

The third section, headed "Note C: Unaudited restatements of Falconbridge financial information under IFRS", summarises the restatements to IFRS that have been made in relation to the published results of Falconbridge for the six-month period ended 30 June 2006 and the year ended 31 December 2005.

Note A: Unaudited restatements of Falconbridge financial information under IFRS for the six-month period ended 30 June 2006

The following information demonstrates the conversion of Falconbridge's Canadian GAAP unaudited balance sheet at 30 June 2006 and unaudited income statement for the six month-period ended 30 June 2006 to IFRS as applied by Xstrata:

Note C: Unaudited restatements of Falconbridge financial information under IFRS

Reclassifications have been made to the Falconbridge historical financial information presented under Canadian GAAP in Part X – "Financial Information Relating to the Falconbridge Group" to conform to Xstrata's presentation under IFRS. The following information sets out the details of IFRS adjustments:

(a) Reclassifications

Numerous reclassifications have been made to present the financial information of Falconbridge in the same format as the Former Xstrata Group's IFRS financial statements. The more significant reclassifications are as follows:

Balance Sheet

Financial assets and liabilities have been separately disclosed on the face of the balance sheet.

Income taxes payable have been disclosed separately on the balance sheet, whereas under Canadian GAAP they were included in Trade and Other Payables.

Pension deficits have been disclosed separately rather than within provisions.

Income Statement

Administrative and distributions costs and interest income have been disclosed separately.

(b) IFRS Adjustments to the Falconbridge income statement

Notes relating to the IFRS adjustments

The following notes set out those adjustments that have been made in relation to Falconbridge's Canadian GAAP financial information in accordance with IFRS as applied by Xstrata. Accounting adjustements arising as a result of the Falconbridge Acquisition are reflected in the unaudited pro forma financial information set out in this Part III.

(i) Elimination of unrealised profit

Falconbridge has a 25% interest in the Noranda Income Fund ("NIF") which is treated as an associate and accordingly equity accounted under both Canadian GAAP and IFRS. Falconbridge has historically eliminated in full the unrealised profit on the sale of product which NIF continues to hold as inventory at balance date. IAS 28: Investments in Associates requires such unrealised profit to be eliminated only to the extent of the Enlarged Xstrata Group's 25% interest.

(ii) Acquisition of minority interests in Falconbridge

In 2005, Noranda purchased the 41.5% of Former Falconbridge's outstanding common shares that it did not previously own through the Falconbridge Amalgamation, to form the current Falconbridge. Accounting for the purchase of a minority interest under IFRS 3: Business Combinations differs to the accounting undertaken by Falconbridge in respect of the following:

- Under IFRS 3, once control has been obtained, no fair value adjustments are made to the net assets recorded on subsequent acquisitions of remaining minority interests. Rather the difference between the consideration paid and book values recorded are recognised as an adjustment to Goodwill or Retained Earnings. Falconbridge adjusted the share of net assets acquired by reference to their fair values on the date of the minority acquisition; and

- Under IFRS 3, the cost of the acquisition has been calculated by reference to the share price of Noranda shares on the date of acquisition, while under Canadian GAAP Falconbridge calculated this by reference to a period closer to the announcement of the transaction.

(iii) Deferred stripping

Under Canadian GAAP Falconbridge recognised a liability when the cumulative strip ratio was below the estimated life of mine average strip ratio. Under IFRS, Xstrata suspends deferred stripping at this time and recognises all stripping costs in the income statement until such time as the cumulative strip ratio is greater than the life of mine average strip ratio.

(iv) Pension and other post retirement fund deficits

IAS 19: Employee Benefits requires net surpluses or deficits in relation to defined benefit pension funds and other funded post retirement schemes to be included in the Enlarged Xstrata Group's balance sheet at their fair values. All movements in these fair values between balance dates are required to be reflected in the income statement, except for actuarial gains and losses which are reflected in the Statement of Total Recognised Gains and Losses. Falconbridge's historical policy was only to recognise actuarial gains and losses in the balance sheet and in the income statement systematically and gradually over time.

(v) Preference shares

Under Canadian GAAP, Falconbridge classified preference shares as a liability when the shares provide for mandatory redemption by the issuer or when the holder can require the issuer to redeem the shares at a future date for a fixed or determinable amount.

Under IAS 32: Financial Instruments: Disclosure and Presentation, preference shares are accounted for as compound financial instruments, with the fair value of the shares being allocated between their liability and equity components. This allocation is made by calculating the fair value of the liability component of the instrument and allocating the remainder of the fair value of the instrument to the equity component. Liabilities are recorded at amortised cost in future periods.

(vi) Deferred tax

In accounting for deferred tax under IAS 12: Income Taxes, Xstrata includes tax bases for capital gains tax in its calculation of temporary differences. Falconbridge recognised deferred tax by reference only to the tax base for income tax purposes.

(vii) Interest in Koniambo Nickel

Under Canadian GAAP Koniambo Nickel SAS (a company in which Falconbridge has a 49% interest) was treated as a variable interest entity. As Falconbridge was deemed to be the primary beneficiary of the entity, the company was consolidated in the Falconbridge financial statements.

Under IFRS, the Enlarged Xstrata Group's interest in Koniambo Nickel SAS has been treated as an interest in a jointly controlled entity and proportionately consolidated, in accordance with IAS 31: Interest in Joint Ventures.

(viii) Fair value of financial assets

Under Canadian GAAP a number of financial assets were recorded at historical cost. As required by IAS 39: Financial Instruments: Recognition and Measurement these assets have been recorded at fair value.

(ix) Hedge Instruments

Under Canadian GAAP, Falconbridge did not recognise gains and losses on certain hedge instruments on balance sheet. Under IAS 39: Financial Instruments: Recognition and Measurement Xstrata recognises all such hedge instruments on balance sheet.

Reporting accountant's report on unaudited pro forma financial information

3 October 2006

Dear Sirs

We report on the unaudited pro forma financial information (the "Pro Forma Financial Information") set out in Part III of the prospectus dated 3 October 2006 (the "Prospectus"), which has been prepared on the basis described in Part III of the Prospectus, for illustrative purposes only, to provide information about how the Acquisitions (as defined in the Prospectus) and the Rights Issue (as defined in the Prospectus) might have affected the financial information presented on the basis of the accounting policies adopted by Xstrata plc ("Xstrata") in preparing the financial statements for the year ended 31 December 2005 and for the six-month period ended 30 June 2006, as applicable. This report is required by item 20.2 of Annex I of the EU Regulation 809/2004 (the "PD Regulation") and is given for the purpose of complying with that item and for no other purpose.

Save for any responsibility arising under 5.5.3R(2)(f) of the Prospectus Rules to any person as and to the extent there provided, to the fullest extent permitted by law we do not assume any responsibility and will not accept any liability to any other person for any loss suffered by any such other person as a result of, arising out of, or in connection with this report, or our statement, required by and given solely for the purposes of complying with item 23.1 of Annex I of the PD Regulation, consenting to its inclusion in the Prospectus.

Responsibilities
It is the responsibility of the directors of Xstrata to prepare the Pro Forma Financial Information in accordance with item 20.2 of Annex I of the PD Regulation.

It is our responsibility to form an opinion, as required by item 7 of Annex II of the PD Regulation, as to the proper compilation of the Pro Forma Financial Information and to report that opinion to you.

In providing this opinion we are not updating or refreshing any reports or opinions previously made by us on any financial information used in the compilation of the Pro Forma Financial Information, nor do we accept responsibility for such reports or opinions beyond that owed to those to whom those reports or opinions were addressed by us at the dates of their issue.

Basis of opinion
We conducted our work in accordance with the Standards for Investment Reporting issued by the Auditing Practices Board in the United Kingdom. The work that we performed for the purpose of making this report, which involved no independent examination of any of the underlying financial information, consisted primarily of comparing the unadjusted financial information with the source documents, considering the evidence supporting the adjustments and discussing the Pro Forma Financial Information with the directors of Xstrata.

The UK firm Ernst & Young LLP is a limited liability partnership registered in England and Wales with registered number OC300001 and is a member practice of Ernst & Young Global. A list of members' names is available for inspection at the above address which is the firm's principal place of business and its registered office.

We planned and performed our work so as to obtain the information and explanations we considered necessary in order to provide us with reasonable assurance that the Pro Forma Financial Information has been properly compiled on the basis stated and that such basis is consistent with the accounting policies of Xstrata.

Our work has not been carried out in accordance with auditing or other standards and practices generally accepted in the United States of America or other jurisdictions and accordingly should not be relied upon as if it had been carried out in accordance with those standards and practices.

Opinion
In our opinion:

(a) the Pro Forma Financial Information has been properly compiled on the basis stated; and

(b) such basis is consistent with the accounting policies of Xstrata.

Declaration
For the purposes of Prospectus Rule 5.5.3R(2)(f) we are responsible for this report as part of the Prospectus and declare that we have taken all reasonable care to ensure that the information contained in this report is, to the best of our knowledge, in accordance with the facts and contains no omission likely to affect its import. This declaration is included in the Prospectus in compliance with item 1.2 of Annex I of the PD Regulation.

Yours faithfully

Ernst & Young LLP

Part II

Information on the Former Xstrata Group's Business

[This page is intentionally left blank]

Overview of the Former Xstrata Group's business

The Former Xstrata Group's business comprises the following four principal businesses:

Coal. The Coal Business has interests in 33 operating coal mines, 19 of which are located in Australia, 13 in South Africa and one in Colombia.

Copper. The Former Xstrata Group Copper Business incorporates two operating mines, a smelter and a refinery in Australia, one mine in Argentina and one mining and processing operation in the high Andes region of southern Peru.

Zinc. The Former Xstrata Group Zinc Business has zinc smelting operations in Spain and Germany, interests in three operating mines and a lead smelter in Australia and a lead refining plant in the United Kingdom.

Alloys. The Alloys Business has integrated ferrochrome and vanadium production facilities in South Africa and a platinum group metal ("PGM") joint venture with Rustenburg Plantinum Mines and Kagiso in South Africa.

In addition to its four principal businesses, the Former Xstrata Group also operates Xstrata Technology, a mining and processing technology business with operations in Australia, South Africa and Chile (and, following the Falconbridge Acquisition, Canada). For further information on Xstrata Technology, see Part II – "Information on the Enlarged Xstrata Group – Xstrata Technology".

Xstrata previously had a forestry business in Chile, which was sold in January 2005, and a magnesium recycling business in North America, which was sold in April 2003.

Coal Business summary

Introduction

On a managed basis, the Former Xstrata Group is one of the world's largest producers of export thermal coal, one of the largest producers of export semi-soft/PCI coal and the fifth largest producer of export coking coal. The Coal Business produces a significant amount of coal for sale in the Australian and South African domestic markets from a portfolio of cost competitive mines. The Cerrejón operation, in which the Enlarged Xstrata Group acquired a one-third interest from Glencore in 2006, exports high-grade thermal coal from Colombia to markets principally in Europe and the Americas.

This portfolio comprises interests in 19 operating coal mines in Australia, 13 operating coal mines in South Africa and the Cerrejón coal mine in Colombia. The Enlarged Xstrata Group focuses on the cost effective production of thermal and coking coal for export and domestic use in coke making/steel production, electricity generation and industrial application.

On 24 August 2006, the Former Xstrata Group and African Rainbow Minerals Limited ("ARM") established a new black controlled coal mining company called ARM Coal (Proprietary) Limited ("ARM Coal"), with operating assets and growth projects in South Africa and participation in the export and domestic thermal coal markets. ARM owns 51% and the Enlarged Xstrata Group owns 49% of the issued share capital of ARM Coal, which holds a 20% interest in the coal operations of Xstrata South Africa, excluding the Goedgevonden project, and a direct 51% interest in the Goedgevonden project. In August 2006, ARM exercised an option to increase its direct interests in the coal operations of Xstrata South Africa (excluding the Goedgevonden project) for a cash investment of ZAR400 million (approximately US$51.7 million). As a result historically disadvantaged South Africans will now control approximately 36% of the Coal Business's South African operations. For further information, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – B. Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and paragraph 22.15 of Part VIII – "Additional Information – Material contracts".

The Company estimates that, on a managed tonnage basis, in 2005, the Former Xstrata Group's Australian operations supplied approximately 32% of Australia's thermal coal exports and approximately 20% of South Africa's thermal coal exports. The Coal Business's Australian operations export primarily into Asia, particularly Japan. Semi-soft coking coal production, on a managed tonnage basis, in 2005 represented approximately 15% of the New South Wales operations' output and coking coal represented approximately 40% of the Queensland operations' output which is exported worldwide. Approximately 19% of the Former Xstrata Group's attributable tonnes in the year ended 31 December 2005 were sold into the Australian and South African domestic markets. In 2005, Cerrejón produced approximately 26 Mt of export thermal coal predominately for the European and United States power generation markets.

The Coal Business exports its coal from seven major coal port facilities, five in Australia (the Port Waratah Coal Terminal and the Port Kembla Coal Terminal in New South Wales and Abbott Point, Dalrymple Bay Coal Terminal and R.G. Tanna/Barney Point Coal Terminals in Queensland), one in South Africa (the Richards Bay Coal Terminal) and one in Colombia (Puerto Bolivar).

The purchasing power of the Australian and South African operations has enabled them to negotiate a number of longer term agreements for the purchase of goods and services required by the Coal Business in those jurisdictions which include mining equipment and replacement parts, explosives, fuel, tyres and lubricants, as well as freight, rail and port handling services, which to date has enabled the operations access to scarce resources (such as tyres). The supplier base continues to be stable and Xstrata believes the Coal Business has strong relationships with key suppliers in both Australia and South Africa.

The Enlarged Xstrata Group holds most of its Coal Business interests in mines through joint ventures, in which it generally holds a majority interest. Given the relationships between its joint venture partners and its customers, Xstrata believes that these joint ventures provide the Coal Business with a valuable link to its customer base.

In Australia, the Enlarged Xstrata Group has, either on its own account or through its interests in mines through joint ventures, all underlying mining tenements and it has access (whether under freehold, leasehold or otherwise) to all land that is required for the Coal Business's current mining operations.

The Coal Business's portfolio of operating coal assets allows management to reduce the impact of variations that can be experienced within a single mining operation and the volatility of a single market. This combination of complementary factors includes:

- access to diverse markets – the Coal Business's product distribution, on a managed tonnage basis in Australia and South Africa, to export coking coal (including semi-soft coal), export thermal coal and domestic thermal coal is approximately 18%, 64% and 18% respectively and the acquisition of the Cerrejón Business has provided increased access to markets in Europe and the Americas;

- a geographical distribution of production between Australia, South Africa and Colombia (in Australia and South Africa production is split approximately as to 51%, 19% and 30% respectively between New South Wales, Queensland and South Africa); and

- a unique combination of open cut and underground production sources and a mixture of own operated mines and mines where production is managed under contract. From this combination, Xstrata believes the Coal Business has a balanced risk profile from a diverse portfolio of assets with the ability to meet customer coal quality requirements.

The Enlarged Xstrata Group continues to place a priority on cost competitiveness and growth and has been actively involved in the consolidation of the coal industry in Australia and South Africa. Xstrata believes that there is scope for further consolidation of the Australian coal sector and will continue to consider acquisition opportunities as they arise. The Coal Business regularly reviews its coal holdings and from time to time will dispose of assets which are considered non-core or non-strategic.

The Coal Business's attributable proved and probable reserves as at 31 December 2004 were approximately 1.6 billion tonnes of coal. In addition, Cerrejón had a saleable reserve base in excess of 900 Mt as at 30 June 2005.

The Coal Business's marketing strategy takes advantage of its substantial production volume of prime quality coals from a diversified asset base. The Company believes that the Coal Business's established relationships with coal buyers and a proven track record for stable supply will enable the Coal Business to continue expanding sales to match future production levels. The ability to secure spot sales when required, including for lesser quality thermal coals and into diversified markets, is supported through the Coal Business's relationship with Glencore, a leading coal trader.

See "Coal Business summary – Australian operations – Sales and marketing of the New South Wales operations' coal", "Coal Business summary – Australian operations – Sales and marketing of the Queensland operations' coal", "Coal Business summary – South African operations – Sales and marketing of the South African operations' coal" and

"Coal Business summary – Colombian operations – Sales and marketing of Cerrejón's coal" in this Part IV and Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Coal Business".

The primary focus of the Coal Business's marketing strategy is to maximise the value of its sales of coal products into the export market. The Coal Business will continue to seek to maximise sales into the premium end of the export market, which for its Australian operations is principally the large integrated steel producers and Asian power companies. Xstrata considers that these sectors of the market will continue to be the major growth areas for its Australian thermal and coking coals. The Asian power market has traditionally paid a premium over other coal buyers for Australian thermal coals to ensure secure reliable sources of supply although the price difference to more distant markets is also due to the landed cost competitiveness of other exporting countries.

Located in La Guajira state, in the North-Eastern part of Colombia adjacent to the Venezuelan border, Cerrejón is positioned to supply the import markets of Europe and the Eastern and Gulf Coasts of the United States.

The export marketing activities of the Coal Business, other than for Cerrejón coal, are managed from head office in Sydney for Australian coals and from its Johannesburg office for South African coals. The export coal from Australia (other than from the Cumnock mine, which is subject to a separate agreement with Glencore) is subject to the Market Advisory Agreement between Xstrata Coal Marketing AG, Xstrata AG and Glencore International. Cerrejón coal is marketed through CMC Coal Marketing Company Limited, which is owned by the three Cerrejón joint venture partners.

Coal produced at Cerrejón benefits from relatively low ash content (approximately 8.2%), a low sulphur dioxide emissions profile and high calorific value, making it ideal for power generation. The typical quality of thermal coals mined by the Coal Business in Australia for the export market vary in ash content from 8% to 17% on an air-dried basis and the Coal Business's Australian domestic coal varies in ash content from 22% to 39% on an air-dried basis. The typical gross calorific value of the Enlarged Xstrata Group's Australian washed coals is in the range of 6,300 to 7,300 kilocalories per kilogramme on an air-dried basis. These qualities provide a range of coals to meet customers' needs and also provide an opportunity to blend coals to meet the specifications of particular customers.

Sales to the Australian domestic market are pursued when attractive, both through the renewal of existing contracts and the identification of opportunities. The New South Wales operations are one of the largest suppliers to domestic market power stations and the Coal Business is continuing to seek additional sales in this market.

Due to differing margins as well as a wide range of qualities, sales to the domestic market in South Africa will continue to be pursued when attractive, both through the renewal of existing contracts and the identification of new selling opportunities. Coal produced at Cerrejón is exported to markets principally in Europe and the Americas.

The Coal Business's coking coal production is exported predominantly to the major steelmakers in Asia, Europe and South America.

In December 2005, the Former Xstrata Group and its joint venture participants were awarded the exclusive right to apply for a licence to develop the Donkin coal resource block in Cape Breton, Nova Scotia, Canada. The Enlarged Xstrata Group holds a 66% participating interest in the joint venture. The joint venture participants are Erdene Gold Inc ("Erdene") of Canada, with a 20% interest, Atlantic Transbridge Technologies LLC of the USA with a 9.33% interest and Paul Coughlan, with a 4.67% interest. The award of a special licence, in May 2006, allows the Coal Business and its partners to pursue evaluating the feasibility of mining the estimated 200 Mt Donkin thermal and metallurgical coal resource located off Cape Breton Island in the Sydney coal field. Work on the project has commenced, with the evaluation of the resource and the development of feasibility studies expected to take about two years to complete. The budget estimate for the feasibility study until the first quarter of 2008 is C$17.5 million (approximately US$15.7 million). The Enlarged Xstrata Group intends to finance its share of the investment from its general corporate facilities.

In February 2006, Xstrata, through its wholly-owned subsidiary Xstrata Coal Canada Limited ("Xstrata Coal Canada") entered into an alliance agreement with Erdene, pursuant to which Xstrata Coal Canada subscribed for 3,000,000 common shares of Erdene at C$1.00 per share. This currently represents approximately 6.6% of Erdene. Erdene is a Toronto-listed mineral exploration company with a significant profile and a large number of exploration projects in Mongolia, including coal and base metals. Xstrata Coal Canada has a first option to enter into a joint venture and earn a 75% interest in any

coal opportunity in Mongolia identified by Erdene by funding all work through completion of a feasibility study. Xstrata Coal Canada will also have the right to participate in other mineral development opportunities with Erdene and has the right to name a nominee to the board of directors of Erdene.

Reserve and resource base

The table below sets out the Former Xstrata Group's attributable coal reserve and resource base broken down between the Australian and South African operations as at 30 June 2005:

	Coal reserves[1]				Coal resources		
			Marketable				
Region	Proved	Probable	Proved	Probable Mt	Measured	Indicated	Inferred[2]
New South Wales, Australia	431	291	324	229	1,346	1,504	936
Queensland, Australia	254	159	222	102	547	994	1,747
South Africa	727	131	429	80	1,977	1,029	1,831
Total Coal Business[2]	1,412	580	974	411	3,870	3,526	4,513

The above table does not include reserve or resource information for the Enlarged Xstrata Group's one-third interest in Cerrejón, which was acquired in May 2006. The above table sets out the Former Xstrata Group's attributable coal reserve and resource base, based on the total mine basis figures in the Former Xstrata Group Ore Reserves and Mineral Resources Report. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

(1) Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

(2) See the section of this document headed "Presentation of Information – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

The table below sets out Cerrejón's total mine reserves and resource summary as at 30 June 2005 (the Enlarged Xstrata Group has a one-third interest in the Cerrejón operation, following completion of the Cerrejón Acquisition on 12 May 2006):

Cerrejón – Reserves and Resources (total mine basis), June 2005[1]

	ROM Reserves[2]		Saleable Reserves[2] [3]		Resources[4]		
	Proved	Probable	Proved	Probable	Measured	Indicated	Inferred[5]
Mt	668	222	677	224	692	230	15

Notes:

(1) Additional resources outside the 32 Mtpa pit shell are not included. Resources in the 32 Mtpa mine plan exclude coal resources underlying the Ranchería River. The above information was compiled from version 7 of the Cerrejón geological model which was created in 2004 using MINEX software. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

(2) Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

(3) Saleable Reserves: As sold basis are reserves adjusted for yield losses in the preparation plant (if applicable) and converted to a saleable moisture basis.

(4) Resources are Total Tons in Situ Resources (TTIS). The resources within a defined optimised pit shell which conform to specific quality and thickness criteria and which have been discounted for geological losses.

(5) See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

Competent Persons:
Reserves: Ian Douglas, Xstrata Coal (AusIMM)
Resources: Kerry Whitby, Managing Director, McElroy Bryan Geological Services Pty Ltd, Consulting Geologists (AusIMM)

Production

The tables below set out the total mine production and attributable production of the Coal Business broken down between the Australian and South African operations for the years ended 31 December 2004 and 31 December 2005:

Total mine production[1]	Year ended 31 December	
	2004	2005
	Mt	
New South Wales, Australia	33.3	36.1
Queensland, Australia	21.5	20.9
South Africa	19.2	18.6
Total Coal Business	73.9	75.6

The above table does not include production information for the Enlarged Xstrata Group's one-third interest in Cerréjon, which was acquired in May 2006.

[1] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Attributable production[1]	Year ended 31 December	
	2004	2005
	Mt	
New South Wales, Australia	26.9	28.7
Queensland, Australia	11.8	11.8
South Africa	19.2	18.6
Total Coal Business	57.5	59.0

[1] See the section of this document headed "Presentation of Information – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

The table below sets out consolidated and attributable production and sales data and average received export free on board coal prices, broken down between the Former Xstrata Group's Australian and South African operations and commodity types, for the years ended 31 December 2004 and 31 December 2005:

	Year ended 31 December	
	2004	2005
	Mt (except as otherwise stated)	
Consolidated production[1],[2]:		
Queensland coking	5.2	4.8
New South Wales semi-soft coking	6.7	4.8
Australian thermal	28.9	33.6
South African thermal	19.2	18.6
Total consolidated production	**60.0**	**61.8**
Consolidated Australian sales[2],[3]:		
Queensland coking export	4.9	4.8
New South Wales semi-soft coking export	6.7	4.8
Thermal export	25.6	28.1
Domestic	4.3	5.0
Total consolidated Australian sales	**41.5**	**42.7**
Consolidated South African sales[2],[3]:		
Thermal export	12.9	13.5
Thermal domestic	4.6	6.9
Total consolidated South African sales	**17.5**	**20.4**
Attributable Australian sales[3]:		
Queensland coking export	4.9	4.8
New South Wales semi-soft coking export	6.3	4.4
Thermal export	23.8	26.1
Domestic	4.1	4.8
Total attributable Australian sales	**39.1**	**40.1**
Attributable South African sales[3]:		
Thermal export	12.9	13.5
Thermal domestic	4.6	6.9
Total attributable South African sales	**17.5**	**20.4**
Average received export FOB coal price:		
Queensland coking (US$/t)	65.3	111.5
New South Wales semi-soft coking (US$/t)	47.2	70.3
Australian thermal (US$/t)	40.9	51.2
South African thermal (US$/t)	39.0	48.5

[1] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of production amounts. Production figures have been extracted without material amendment from Xstrata's management records.

[2] Consolidated production and sales are production and sales as reported in the Former Xstrata Group's consolidated financial statements, before the elimination of minority interests. This excludes production and sales attributable to joint venturers in accordance with their proportionate interests in the relevant mine, but includes 100% of production from subsidiaries that the Former Xstrata Group controls, irrespective of the Xstrata Group's shareholding in that subsidiary.

[3] All sales data is ex-mine and therefore does not include sales of third-party purchased coal. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of sales amounts. Sales figures have been extracted without material amendment from Xstrata's management records.

Financial information

The table below provides selected summary financial information in relation to the Coal Business for the year ended 31 December 2004 and for the year ended 31 December 2005 (which has, in each case, been extracted without material amendment from the Xstrata Annual Reports and Accounts) and for the six months ended 30 June 2006 (which has been extracted without material amendment from the 2006 Xstrata Interim Report):

	Unaudited IFRS Year ended 31 December 2004		Audited IFRS Year ended 31 December 2005		Unaudited IFRS Six months ended 30 June 2006	
Coal Business	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**
Revenue[1]	2,693.4	41.7	3,400.4	42.2	1,692.5	32.7
EBITDA (before non-trading items)[1],[2]	916.0	44.3	1,346.5	43.4	582.7	25.7
EBIT (before non-trading items)[1],[2]	667.8	44.6	1,079.3	42.8	426.4	21.9

The above table does not incorporate financial information for Cerrejón for the year ended 31 December 2004 or for the year ended 31 December 2005. Following completion of the Cerrejón Acquisition in May 2006, accounting for the Former Xstrata Group's one-third interest in Cerrejón is included in the interim unaudited IFRS financial statements for the six months ended 30 June 2006. See below for financial information for Cerrejón for the years ended 31 December 2004 and 31 December 2005.

[1] Includes minority interests.

[2] IFRS does not define the measures EBITDA (before non-trading items) (being earnings before interest, tax, depreciation and amortisation and before non-trading items) or EBIT (before non-trading items) (being earnings before interest and tax and before non-trading items). For a description of how these amounts are derived, see the section of this document headed "Presentation of Information – Presentation of financial information".

[3] As a percentage of Xstrata's consolidated EBITDA (before non-trading items) and EBIT (before non-trading items) from continuing operations before common costs and income.

In the 12 months ended 31 December 2004, the entire Cerrejón operation recorded combined consolidated EBITDA (before non-operating income/expense) of US$628.8 million and, in the 12 months ended 31 December 2005, the entire Cerrejón operation recorded combined consolidated EBITDA of US$729.6 million (giving figures attributable to the Enlarged Xstrata Group's 33⅓% stake in Cerrejón acquired by the Former Xstrata Group on 12 May 2006 of approximately US$209.6 million and US$243.2 million, respectively). The Cerrejón financial information presented above has been extracted without material adjustment from, or is based upon, audited "pro forma" combined financial statements prepared under IFRS as at and for the 12 months ended 31 December 2005, with comparatives for the 12 months ended 31 December 2004.

Cost curves

A cost curve provided by Barlow Jonker for 2005 ranks the Former Xstrata Group's Australian and South African coal operations, on a weighted average basis, in the second quartile among major export producers of coal worldwide.

A cost curve provided by Barlow Jonker for 2005 ranks Cerrejón's coal operations, on a weighted average basis, in the first quartile among major export producers of coal worldwide.

See the section of this document headed "Presentation of Information – Cost curves".

Industry overview

For an overview of the industry in which the Coal Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Coal industry overview".

Australian operations

Overview

In the year ended 31 December 2005, the Coal Business's production, on a managed tonnage basis, in Australia was 57.0 Mt of coal, of which attributable production was 40.4 Mt. Managed export sales during this period amounted to 49.6 Mt (35.3 Mt attributable) and Xstrata believes that this represented approximately 21% of all coal exported from Australia (15% on an attributable export sales basis). Approximately 72% of the Coal Business's 2005 export sales from Australia were thermal coal (74% on an attributable tonnage basis).

New South Wales operations

Overview

The Enlarged Xstrata Group owns interests in 13 operating coal mines and a number of development projects, most of which are located in or close to the Hunter Valley of New South Wales. Longwall mining from South Bulga moved to Beltana in 2003 after which only pillar extraction was in operation at South Bulga. During 2004, the Ravensworth East mine was consolidated with the Mount Owen Complex and production at the South Bulga underground mine ceased as all reserves had been extracted. The Enlarged Xstrata Group has an attributable interest of 15% in the operator of the Port Waratah Coal Terminal, located at the port of Newcastle, New South Wales. The Enlarged Xstrata Group also has a consolidated interest of 20% in the Port Kembla Coal Terminal, located at the port of Wollongong, New South Wales.

Description of the New South Wales operations' assets

The following table sets out certain information about each of the Enlarged Xstrata Group's principal operating coal mines in New South Wales:

					Year ended 31 December 2005		
Coal mine	Coal product type	Type of mine[1]	Life of mine (years)[2]	The Enlarged Xstrata Group's attributable interest (%)	Mine production[3]	Attributable production[3] Mt	Attributable sales[4]
Oakbridge Group	**Thermal**						
Bulga Open cut	Thermal	OC	13	68.3	5.1	3.5	3.2
Beltana	Thermal	UG	27	68.3	4.9	3.4	3.4
Baal Bone	Thermal	UG/OC	2	74.1	2.7	2.0	1.8
Macquarie Coal Joint Venture	**Thermal**						
West Wallsend	Thermal	UG	15	80.0	2.3	1.9	1.6
Westside	Thermal	OC	7	80.0	0.7	0.5	0.5
Liddell Group	**Thermal**						
Liddell Open cut	Thermal	OC	18	67.5	2.7	1.9	1.9
Cumnock	**Thermal**	OC	3	84.0	1.1	0.9	0.8
Mount Owen Complex	**Thermal**	OC	14	100.0	6.0	6.0	6.2
United	**Thermal**	UG	5	95.0	2.7	2.5	2.7
Ulan	**Thermal**						
Ulan Underground	Thermal	UG	17	90.0	2.9	2.5	2.6
Ulan OC	Thermal	OC	2	90.0	2.5	2.3	2.3
Ravensworth Group	**Thermal**						
Narama	Thermal	OC	6	50.0	2.5	1.2	1.2
Ravensworth West	Thermal	OC	6	100.0	–	–	–
Total					36.1	28.7	28.3

Notes:
(1) OC = Open cut. UG = Underground.
(2) Life of mines figures are estimates based on planned and scheduled extraction of reserves.
(3) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of production amounts. Production figures have been extracted without material amendment from Xstrata's management records.
(4) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis preparation of sales amounts. Sales figures have been extracted without material amendment from Xstrata's management records.

Mines, projects and developments

Oakbridge Group

The Oakbridge Group includes the Bulga open cut mine, the Baal Bone underground long wall mine, the Baal Bone open cut mine and the Beltana long wall punch mine development, collectively producing both export and domestic thermal coal.

Beltana (Bulga Underground) development began in 2002 and longwall operations commenced following South Bulga's completion of longwall mining in the second quarter of 2003. An upgrade of coal processing metallurgical efficiency was completed in 2005 increasing capacity and improving the marketable coal yield from historic levels.

Macquarie Coal Joint Venture

The Macquarie Coal Joint Venture includes the West Wallsend underground mine, the smaller Westside open cut mine and the Teralba and Cardiff Borehole resources.

The West Wallsend mine plan and mining schedule were updated in 2005 to improve overall performance.

Liddell Group
Mining operations at Liddell are conducted under contract. The Former Xstrata Group entered into a new contract (with the incumbent contractor) in 2004.

Cumnock
Open cut mining operations at Cumnock are conducted under contract. The Enlarged Xstrata Group continues to progress its investigation to determine whether viable mining options exist on the current lease area beyond the completion of mining of existing economically viable reserves which are expected (based on current extraction rates) to be exhausted in late 2008 or early 2009.

Mount Owen
The Mount Owen mine complex was expanded over 2004 and 2005 by combining with an adjacent mining area, Ravensworth East. This mining complex now operates as a single production facility by sharing coal preparation, stockpiling and rail loading infrastructure.

In 2003, the outstanding 34% share of the Glendell project was acquired allowing this area to be included in the adjacent Mount Owen Mining Complex. The development of the complex continues to provide significant synergy benefits to the operating and development areas.

The mining operations at Mount Owen and Ravensworth East are conducted under separate mining contracts by the same independent contractor.

United
The United underground mine operates using continuous miners for development and longwall for extraction. Additional reserves have been acquired from an adjacent lease holder to extend the mine life.

Ulan
The Ulan facilities comprise an underground mine and an open cut mine. The Ulan underground mine is scheduled for upgrade from a 250 metre wide longwall face to a 400 metre "fat face" longwall face during 2006. New equipment has been purchased and is ready for installation.

Ravensworth Group
The Ravensworth Group includes the Narama open cut mine and the new Ravensworth West development.

The Narama resource is fully contracted to supply the local power generator. This contract was upgraded during 2005 by accelerating the annual sales tonnage for the life of the resource.

A new mine at Ravensworth West was approved for development during 2005 and commenced production in 2006 to supply a 1 Mtpa contract to the local power generator.

Sales and marketing of the New South Wales operations' coal
In 2005, approximately 86% of the New South Wales operations' attributable sales were to the export market. The New South Wales operations coal sales are diversified among most of the major power companies and steel mills in Japan, Korea, Mexico and Taiwan with sales also to Brazil, China, India and Europe when demand and prices support such sales. The Coal Business is one of Australia's largest suppliers of semi-soft coking coal and thermal coal to Japan, on a managed basis. Of all the New South Wales operations' coal sales in 2005, both domestic and export, on a managed tonnage basis, approximately 76% was sold for use in electric power generation, approximately 13% for use in steel mill applications and approximately 11% to general industry (which includes third parties that on-sell to various users).

In 2005, the New South Wales operations' six largest thermal coal customers represented, on a managed tonnage basis, approximately 60% of the New South Wales operations' total exported thermal coal sales while its six largest semi-soft coal customers purchased, on a managed tonnage basis, approximately 83% of the New South Wales operations' total exported semi-soft coal. Domestic coal sales are predominantly to electricity generators in New South Wales.

The following table sets out the geographical breakdown of sales of operating coal mines in New South Wales for the year ended 31 December 2005 on a managed tonnage basis:

	Percentage of sales (%)
Japan	46
Australia	21
Mexico	14
Taiwan	11
Other	8
Total	100

In 2005, the New South Wales operations sold, on a managed tonnage basis, approximately 60% of their total sales volume under coal supply agreements with terms extending beyond one year with either fixed prices or annually renewable terms.

The Coal Business expects to continue to sell a significant portion of its Australian coal under annually renewable and long-term supply agreements, particularly in Asia. However, a proportion of the global thermal coal trade will continue to be conducted in the short-term or spot market. Owing to the New South Wales operations' current product and market sales mix, and its planned increase in production over the medium-term, Xstrata believes that it is well positioned to secure sales opportunities as they emerge.

Transportation of the New South Wales operations' coal

All coal exported by the New South Wales operations is transported to port by rail. Pacific National Limited (previously called Freightcorp) and QR National provide the New South Wales mines with all freight services. Rail freight contracts are negotiated with Pacific National Limited and QR National by producers individually, rather than on an industry basis.

Coal from the Mount Owen complex, Bulga complex, West Wallsend, Liddell, Ulan, Cumnock and United is exported through the Port Waratah Coal Terminal. The terminal facility is owned and operated by Port Waratah Coal Services Limited, in which the Enlarged Xstrata Group has an attributable interest of 15%. It is located in the port of Newcastle, approximately 125 kilometres north of Sydney. The shiploading capacity is approximately 89 Mtpa and the terminal is a common user facility. Coal from Baal Bone is exported through the Port Kembla Coal Terminal, located in the port of Wollongong, New South Wales. It is operated by Port Kembla Coal Terminal Ltd, in which the Enlarged Xstrata Group has a 20% interest. The terminal has a shiploading capacity of approximately 15 Mtpa and is a common user facility.

Queensland operations

Overview

The Queensland operations in Australia were acquired by the Former Xstrata Group in June 2003 as part of its acquisition of MIM.

Xstrata Coal manages both the Oaky Creek and Newlands-Collinsville-Abbot Point ("NCA") joint ventures and the Rolleston and Cook operations. The Enlarged Xstrata Group has conditionally agreed to the partial sale of its Cook Colliery and the surrounding Southern Resource. All of the operating coal mines and projects of material value are located in the Bowen Basin, Queensland.

In the year ended 31 December 2005, the Coal Business's attributable production, on a managed tonnage basis, in Queensland was approximately 20.9 Mt of coal, approximately 94% of which was exported. Approximately 41% of the Queensland operations' production was coking coal, approximately 53% was thermal coal and the remaining 6% was supplied to the domestic market.

Description of the Queensland operations' assets

The following table sets out certain information about each of the Enlarged Xstrata Group's principal operating coal mines in Queensland:

Coal mine	Coal product type	Type of mine[1]	Life of mine (years)[2]	The Enlarged Xstrata Group's attributable interest (%)	Year ended 31 December 2005 Mine production[3]	Attributable production[3] Mt	Attributable sales[4]
Oaky Creek	Coking	OC/UG	24	55	6.8	3.7	3.9
NCA							
Newlands	Thermal	OC/UG	18	55	7.9	4.4	4.5
	Coking	OC	13	55	0.4	0.2	0.2
Collinsville	Thermal	OC	10	55	3.1	1.7	1.9
	Coking	OC	10	55	1.4	0.8	0.6
Cook	Coking	UG	–	95	0.1	0.1	0.1
Rolleston	Thermal	OC	22	75	1.0	0.8	0.5
Total	Thermal				12.2	6.9	7.0
	Coking				8.7	4.8	4.8

Notes:
[1] OC = Open Cut. UG = Underground
[2] Life of mine figures are estimates based on planned and scheduled extraction of reserves.
[3] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of production amounts. Production figures have been extracted without material amendment from Xstrata's management records.
[4] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis preparation of sales amounts. Sales figures have been extracted without material amendment from Xstrata's management records.

Mines, projects and developments

Oaky Creek Joint Venture ("OCJV")

The OCJV assets comprise two underground longwall-based operations, namely Oaky North and Oaky No.1 and an open cut mining operation. During 2005, Oaky No.1 had a second longwall installed. The Oaky Coal Preparation plant was recently upgraded to improve metallurgical efficiency and therefore yield.

Newlands-Collinsville-Abbot Point ("NCA")

NCA includes the Newlands and Collinsville mining operations and the Abbot Point port and coal handling facilities (which are owned by Ports Corporation of Queensland and managed by the Enlarged Xstrata Group).

Newlands

Newlands operations include both open cut dragline and truck and shovel operations and underground continuous miner development and longwall extraction.

Open cut production continues at Newlands from a number of pits deposits. This includes a new hard coking and thermal coal pit (called Wollombi) adjacent to the existing Sutton Creek open cut mine, which commenced prime coking coal production in June 2006 and has a production target of 2 Mt in 2007.

The underground longwall operation is being relocated to commence operations in the Newlands North underground in early 2006. Construction of a dense media, spiral and flotation plant is in progress which will increase the metallurgical efficiency and throughput capacity.

Collinsville

Collinsville Coal is an open cut truck, shovel and excavator coal mine, which also has a dragline, operated under a mining contract by an independent operator. The operations produce several brands of coal, including a hard coking coal for export, a domestic hard coking coal for the local Bowen Coke works, a low volatile thermal coal for the local Collinsville power station and export markets and an ultra low volatile coal for export.

Cook

Cook Colliery is an underground *bord and pillar* operation located 30km south of the township of Blackwater, in Central Queensland's Bowen Basin. The mine operated on a small scale during 2004 and the underground operations are being relocated from the Castor seam to the Argo seam during 2005 and 2006 where a higher proportion of coking coal will be produced. On 20 June 2006, Xstrata announced that heads of agreement had been signed with Caledon Resources plc for the partial sale of the Enlarged Xstrata Group's Cook Colliery and the surrounding Southern Resource. The Enlarged Xstrata Group will retain the large Northern Resource. A conditional sale and purchase agreement was entered into in respect of the sale on 22 August 2006. The consideration is A$45 million (approximately US$33.7 million), payable in cash.

Rolleston

Rolleston is located in the southwest of the Bowen Basin, approximately 16 kilometres west of the town of Rolleston and approximately 275 kilometres due west of the coal port of Gladstone.

The open cut dragline mining operations commenced in 2005 following the completion of a 110km rail link to provide domestic thermal coal under a long-term contract and large tonnages of thermal coal to the export market through the port at Gladstone, Queensland. The first coal was railed from Rolleston on time and within budget in October 2005. Further development of the mine will include the construction of a second dragline intended to commence operations in the second quarter of 2007. Rolleston is expected to reach full production of 8 Mtpa in 2008.

Rolleston coal is a low rank, high volatile bituminous coal (ASTM International classification).

Exploration and project assessment

A significant programme of exploration and project assessments continues to be a priority. The following projects and developments are being funded from the Enlarged Xstrata Group's existing resources.

Wandoan Coal Project

The Wandoan Coal Project is the largest known coal resource in the northern part of the Surat Basin, located in Central Queensland. The Surat Basin contains extensive resources of thermal coal. Development of the basin's coal assets to supply export markets is contingent on construction of suitable infrastructure such as mine-to-port rail links. Pre-feasibility work continues in 2006.

Other exploration

The Enlarged Xstrata Group is currently analysing development options and opportunities at Togara North (which is located midway between the newly developed Rolleston mine and Blackwater), large areas adjacent to the Enlarged Xstrata Group's existing NCA operations, the Redrock area to the south of Oaky Creek and Pentland (a thermal coal tenement located west of Townsville).

Sales and marketing of the Queensland operations' coal

Thermal coal is supplied to various customers in Europe and Asia whilst North Queensland customers use Collinsville's thermal coal mainly for the generation of electricity. Domestic quality coking coal is supplied to the Bowen Coke works, which is owned and operated by a subsidiary of Xstrata.

The Bowen Coke works supply coke to the Mount Isa lead smelter as a feed material in the smelting process. It also sells a small amount as coke products to the local market. The plant has a nameplate capacity of 45 ktpa.

The OCJV produces premium quality coking coals for supply to major steel makers in Japan, other parts of Asia, Europe, North Africa, South Africa and South America. These markets are predominantly serviced under term contract arrangements.

The following table sets out the geographical breakdown of sales of the Queensland operations' mines in the year ended 31 December 2005 based on attributable sales:

	Percentage of sales (%)
Japan	38
Korea	23
Europe	18
India	7
Australia	3
Other Asia	4
Other	7
Total	100

In 2005, the Queensland operations sold approximately 96% of their total coking coal sales volume under coal supply agreements with terms extending beyond one year with either fixed prices or annually renewable terms.

Transportation of the Queensland operations' coal

OCJV production is washed at the Oaky Creek coal handling and preparation plant, where coking coal is prepared for export. Treated coal is then transported by rail to the ports of Dalrymple Bay and Gladstone.

The OCJV exports most of its product through the multi-user coal facility at Dalrymple Bay, located just south of Mackay approximately 300 kilometres to the north of the mine.

OCJV production can also be shipped through Gladstone, approximately 390 kilometres to the south-east which has similar loading capabilities to the Dalrymple Bay facility.

Coal from the Newlands and Collinsville Coal Projects is transported by rail to various domestic customers and to the port of Abbot Point for export. Abbot Point is Australia's most northerly coal-shipping port located approximately 20 kilometres north of Bowen. Abbot Point Bulkcoal Pty Ltd, a wholly-owned subsidiary of Xstrata, operates the port of Abbot Point.

South African operations

Overview

The Enlarged Xstrata Group is South Africa's third largest exporter of thermal coal. In the year ended 31 December 2005, the Former Xstrata Group's attributable production of coal from its South African mines was 18.6 Mt and attributable sales were 20.4 Mt of which approximately 66% was exported. Xstrata believes that during 2005 the Coal Business produced approximately 20% of all thermal coal exported from South Africa and supplied approximately 4% of all coal supplied to the South African market. The Enlarged Xstrata Group has an interest in 13 operating coal mines, 11 of which are operated by the Enlarged Xstrata Group.

The Enlarged Xstrata Group also has a 20.91% interest in the Richards Bay Coal Terminal. Xstrata believes the Enlarged Xstrata Group's economic interest in the Richards Bay Coal Terminal provides the South African operations with a strategic advantage due to the associated rights it has to use the coal loading facility. Richards Bay Coal Terminal recently announced an expansion programme to increase throughput capacity from 72 Mtpa to 91 Mtpa at a total project cost of approximately ZAR1 billion, underwritten by the existing Richards Bay Coal Terminal shareholders. If demand exceeds 91 Mtpa, then the shareholders have agreed that the port will be expanded to meet such demand. The incremental 19 Mtpa will have 4 Mtpa allocated to small emerging black empowerment coal producers, 6 Mtpa to the black controlled South Dunes Coal terminal consortium and 9 Mtpa for subscription. If oversubscribed, the subscription capacity will be allocated preferentially to black empowerment coal producers, with existing shareholders (including the Enlarged Xstrata Group) waiving their pre-emptive rights over the incremental capacity. The Enlarged Xstrata Group is confident that it will be able to access the export capacity it requires, particularly after the positive endorsements by key stakeholders of its recently concluded black empowerment deal with ARM.

The 11 mines the Enlarged Xstrata Group manages in South Africa fall into five operating divisions:

- the Tweefontein Division, consisting of the Waterpan, Boschmans and Witcons;
- the iMpunzi Division, consisting of the Phoenix mine, plus the ATC and ATCOM mines. (Total Coal South Africa had a 50% interest in these mines prior to the termination of the joint venture. An arbitration process currently underway will determine the future of these mines. Xstrata is confident it will secure a favourable outcome from this process. For

further information, see paragraph 27 of Part VIII – "Additional Information – Litigation – Total Coal arbitration and court proceedings");

- the Southstock Division consisting of the Tavistock and South Witbank mines;
- the Mpumalanga Division, consisting of the Tselentis and Spitzkop mines; and
- the Goedgevonden Division, consisting of the Goedgevonden mini-pit.

The two mines not operated by the Coal Business form part of the Douglas Tavistock joint venture with Ingwe, and include the Douglas and Middelburg mines.

The Enlarged Xstrata Group's major holdings are located within two of the major coalfields of South Africa – the Witbank and Ermelo Coalfields. All of the mines that the Coal Business operates as well as the Enlarged Xstrata Group's non-managed joint venture mines fall within the Witbank Coalfield with the exception of Tselentis and Spitzkop, which are in the Ermelo Coalfield. Production and planning across all the Coal Business's mines are co-ordinated so as to manage the capacity constraints in exporting coal from South Africa.

The South African operations use more labour-intensive mining techniques and less capital-intensive technology in multi-section mechanised underground operations than the Australian operations because there are less complex mining conditions and the South African operations have access to a more cost effective work force. The Coal Business's South African operations have demonstrated significant productivity improvements at a number of the mines over the last three years through the introduction of additional modern mining equipment technology, improving mine operating procedures and training of its employees.

The Enlarged Xstrata Group owns surface rights in freehold in respect of most of the mines falling within the Tweefontein, iMpunzi and Mpumalanga Divisions (see "Statutory authorisations, licences and concessions" in this Part IV).

In February 2006, Xstrata announced the agreement of the Former Xstrata Group and ARM to establish a new black controlled coal mining company, ARM Coal, with operating assets and growth projects in South Africa and participation in the export and domestic thermal coal markets. The transaction completed on 24 August 2006. ARM owns 51% and the Enlarged Xstrata Group owns 49% of the issued share capital of ARM Coal, which holds a 20% interest in the existing coal operations of Xstrata South Africa excluding the Goedgevonden project, and a direct 51% interest in the Goedgevonden project. In August 2006, ARM exercised an option to increase its direct interests in the coal operations of Xstrata South Africa (excluding the Goedgevonden project) for a cash investment of ZAR400 million (approximately US$51.7 million). As a result, historically disadvantaged South Africans will now control approximately 36% of the Coal Business's South African operations. For further information, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and paragraph 22.15 of Part VIII – "Additional Information – Material contracts".

Description of the South African operations' coal assets

The following table sets out certain information about each of the Enlarged Xstrata Group's operating South African coal mines:

Coal mine	Coal product type	Type of mine[1]	Life of mine (years)[2]	The Enlarged Xstrata Group's attributable interest (%)	Year ended 31 December 2005 Mine production[3] Mt	Attributable production[3] Mt	Attributable sales[4] Mt
Tweefontein Division	**Thermal**						
Waterpan	Thermal	OC/UG	26	100	0.5	0.5	0.5
Boschmans	Thermal	UG	26	100	2.1	2.1	2.1
Witcons	Thermal	UG	26	100	1.8	1.8	1.9
iMpunzi Division	**Thermal**						
Phoenix	Thermal	UG	8	100	1.0	1.0	2.7

Mines operated by Ingwe	**Thermal**						
DTJV[5]	Thermal	OC/UG	28	16	22.9	3.7	3.5
Total					39.7	18.6	20.2

Notes:
(1) OC = Open cut. UG = Underground.
(2) Life of mine figures are estimates based on planned and scheduled extraction of reserves.
(3) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of mine production amounts. Production figures have been extracted without material amendment from Xstrata's management records.
(4) See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of attributable sales. Sales figures have been extracted without material amendment from Xstrata's management records.
(5) DTJV comprises the Douglas and Middelburg mines.

Mines, projects and developments

Tweefontein Division

The Tweefontein Division consists of three wholly-owned mines: Waterpan, Boschmans and Witcons.

Two main mining methods are utilised in this division to extract the reserves: contractor truck-shovel open cut methods at Waterpan, Witcons and the Goedgevonden mini-pit; and underground continuous miner bord and pillar extraction at Boschmans and Witcons. The last cut-drill-blast underground section was phased out in early 2006. The productivity of the continuous miner operations has been significantly improved over the last three years through the application of improved planning, measurement and training systems.

iMpunzi Division

The iMpunzi Division consists of the Phoenix mine, plus the ATC and ATCOM mines.

Phoenix and ATC are underground operations principally using highly productive continuous miner methods. Phoenix is still using cut-drill-blast systems alongside a recently commissioned continuous mixer. ATCOM is a dragline open-pit operation utilising a BE1570W walking dragline as its principal earthmover and truck shovel methods for pre-strip and coal recovery.

Southstock Division

The Southstock Division consists of the Tavistock and South Witbank mines which are both underground operations using highly productive continuous miner methods.

Mpumalanga Division

The Mpumalanga Division consists of two wholly-owned operating mines: Tselentis and Spitzkop. Mining is taking place in the B and C Seams of the Ermelo coal field both in underground continuous miner sections and also using contractor truck-shovel methods in generally shallow outcrop areas.

Goedgevonden Division

The Goedgevonden Division consists of the Goedgevonden mini-pit. The Enlarged Xstrata Group is completing a feasibility study to scale-up the Goedgevonden operation.

Joint venture mines managed by Ingwe

The Douglas and Middelburg mines are operated by the Enlarged Xstrata Group's joint venture partner Ingwe under the Douglas/Tavistock joint venture ("DTJV"). Douglas consists of both underground and open pit operations and Middelburg is an open cut mine. In 2005 a pre-feasibility study was carried out in respect of the Douglas Middelburg Optimisation Project (managed by BHP Billiton) designed to extend the economic life of the complex to 2033.

Projects and developments

In South Africa, the Enlarged Xstrata Group is completing a feasibility study to scale up the Goedgevonden operation; the work is well advanced and it is anticipated that approval will be sought from the Board in late 2006 to proceed with the development of an open pit mine which will annually produce 12 Mt of raw coal washing to 3 Mt of export quality coal and between 3 Mt and 4 Mt of coal suitable for supply to Eskom. The timing of the project is contingent upon rail infrastructure and the Richards Bay Coal Terminal expansion discussed under "– Transportation of the South African operations' coal – Richards Bay Coal Terminal Phase V expansion project" below.

As of 24 August 2006, ARM Coal, which is 51% owned by ARM and 49% owned by the Enlarged Xstrata Group, holds a direct 51% interest in the Goedgevonden project. For further information, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and paragraph 22.15 of Part VIII – "Additional Information – Material contracts".

The commencement of the mining of the "5 Seam" resources in the Tavistock and South Witbank areas is planned for early 2007. Planning work aimed at maximising the utilisation of resources around all of the operations is well advanced. Furthermore, conceptual studies to modernise coal beneficiation and handling infrastructure in both the Tweefontein and iMpunzi areas is being progressed; the objective of the work is to identify opportunities to improve yields and reduce coal processing and handling costs. The Coal Business also conducted further studies in 2005, following the pre-feasibility work, for a new processing plant and export load out system located at Boschmans. This new plant is planned to process coal from Boschmans, Waterpan and Witcons to provide improvements in yield and operating cost.

These projects and developments are being funded from the Enlarged Xstrata Group's existing resources.

Sales and marketing of the South African operations' coal

The marketing of the South African operations' coal is managed through Xstrata Coal Marketing AG with the exception of domestic sales and sales with certain African countries which are managed directly by the South African operations (other than domestic sales from the DTJV, which are managed by Ingwe). Xstrata Coal Marketing AG and Xstrata AG have entered into a Market Advisory Agreement with Glencore International in respect of the South African coal exports that it manages. For further information, see Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Coal Business".

On an air-dried basis, the export coals produced by the South African operations have a relatively low sulphur content and low moisture levels. The ash content of the South African operations' high grade export coals is approximately 14% (on an air-dried basis) and have a gross calorific value ranging from 6,400 to 6,700 kilocalories per kilogramme, whereas its low grade export coals have an ash content of approximately 20% (on an air-dried basis) and have a gross calorific value ranging from 5,600 to 6,100 kilocalories per kilogramme. The South African operations' coal produced for domestic customers generally has a higher sulphur and ash content and a comparatively lower calorific value than the South African operations' typical export product.

All sales figures in this document in relation to the South African operations refer to attributable sales. The South African operations' principal marketing strategy is to maximise sales of high margin export coal, using all of its Richards Bay Coal Terminal entitlement. The South African operations sell their incremental tonnage into the domestic market.

Of the South African operations' attributable sales of 20.4 Mt in 2005, approximately 66% was exported. The major market for exports was Europe, with the United Kingdom, Spain, Germany and France being the South African operations' largest European purchasers. Outside of Europe, Israel was the largest purchaser of the South African operations' coal production. Of the thermal coal exported by the South African operations in 2005, approximately 95% was sold for use in the power industry and the remainder mainly for use in either metallurgical or industrial applications such as the cement industry. The South African operations' eight largest export thermal coal customers represented approximately 64% of its total South African exports in 2005. Xstrata does not believe the South African operations are overly dependent upon any one customer.

The following table sets out the geographical breakdown of attributable sales of the South African operations' mines for the year ended 31 December 2005:

	Percentage of sales (%)
Europe and Mediterranean	59
South Africa	34
Other export	7
Total	100

Of the Coal Business's South African domestic sales of 6.9 Mtpa, approximately 66% was sold to Eskom, the South-African state-owned electricity utility. The major domestic industrial consumers are the paper, sugar, chemical and metallurgical industries and municipal power stations. The South African operations supplied approximately 8.48% of the domestic industrial market in 2005 (which excludes lower margin sales to Eskom for electricity generation and Sasol for the production of synthetic fuels and chemicals, and in which the Coal Business only has an approximately 4.4% market share).

In 2005, approximately 57% of the Coal Business's South African export sales were under spot contracts, with the remaining sales being under term coal supply agreements of one year or longer. In 2005, approximately 87% of the Coal Business's domestic sales were under term contracts, the most significant being with Eskom for the Duvha Power Station, which runs until 2014 with an option to renew for two further 10-year periods.

Transportation of the South African operations' coal

In 2005, all of the coal exported by the Coal Business's South African operations was loaded through the Richards Bay Coal Terminal. The terminal is capable of loading vessels of various sizes and is the only port facility in South Africa with capacity for substantial coal export volumes. The Richards Bay Coal Terminal loaded approximately 69 Mt onto vessels during 2005. All coal that the Coal Business's South African operations export through the Richards Bay Coal Terminal is transported by Spoornet, the State-owned railway operator. In 1995, the shareholders of the Richards Bay Coal Terminal entered into a 10-year agreement under which Spoornet agreed to provide transport of coal exports up to 69.0 Mtpa to the Richards Bay Coal Terminal. These agreements expired in March 2005 and the shareholders entered into a new agreement in 2006, after a transitional period during which they operated under a temporary extension in order to provide the time to fully investigate an expansion of the terminal. Spoornet transported a total of approximately 68.6 Mt of coal (as measured at port) during 2005. Xstrata believes that Spoornet is one of the largest rail transporters of coal in the world.

The Enlarged Xstrata Group has a 20.9% interest in the Richards Bay Coal Terminal, which is owned by seven coal producing companies in South Africa including Ingwe (a subsidiary of BHP Billiton) and Anglo Operations Limited (a subsidiary of Anglo American). The terminal is in the deepwater port of Richards Bay, on the north-eastern coastline of South Africa. It has a nominal annual capacity of 72 Mtpa; the actual throughput for 2005 was approximately 69 Mt. The South African operations of Xstrata are entitled to approximately 13.4 Mtpa, after deducting capacity allocated to non-shareholders who are primarily black empowered junior miners, and net entitlement transferred to and from the South African operations' two joint ventures.

Richards Bay Coal Terminal Phase V expansion project

A new shareholders' agreement has been signed by the Richards Bay Coal Terminal Company shareholders providing for the Phase V expansion project, which is planned to increase total throughput capacity to 91 Mtpa. If demand exceeds 91 Mtpa, then the shareholders have agreed that the port will be expanded to meet such demand. The incremental 19 Mtpa

will have 4 Mtpa allocated to small emerging black empowerment coal producers, 6 Mtpa to the black controlled South Dunes Coal terminal consortium and 9 Mtpa for subscription. If oversubscribed, the subscription capacity will be allocated preferentially to black empowerment coal producers. Xstrata is confident that it will be able to access the export capacity it requires, particularly after the positive endorsements by key stakeholders of its recently concluded black empowerment deal with ARM.

While the capacity of the Richards Bay Coal Terminal has been a constraint on the amount of coal that the Coal Business's South African operations can export and will continue to be a constraint whilst the Phase V expansion is implemented, production and planning across all of the Coal Business's South African operations' mines are co-ordinated to optimise their entitlement to use this facility.

Mineral right applications and conversions

Xstrata Coal South Africa ("XCSA"), the coal division of Xstrata South Africa, has to date received notification that it has been granted 16 new order prospecting rights and has had a number of further prospecting right applications accepted by the Department of Minerals and Energy (the "DME"). XCSA initially applied for 53 prospecting rights (including the 16 new order prospecting rights that it has been granted) of which 20 (in addition to those 16 new order prospecting rights) are currently considered to have reasonable prospectivity. Of these 20 rights, 10 have been granted and, following discussions with the DME, XCSA expects that the other 10 will be granted in due course. XCSA has regular meetings with the DME in this regard.

With regard to the conversion of existing mining authorisations into new order mining rights, XCSA has implemented processes to address, and is making real progress in, the transformational issues required by the legislation and associated black empowerment charter for the mining industry including human resource development and employment equity issues, housing and nutrition, migrant labour and procurement from HDSAs. With regard to the requirement that 15% of the industry be owned by HDSAs by 2009 and 26% of the industry be owned by HDSAs by 2014, XCSA entered into an agreement with ARM in February 2006, which completed on 24 August 2006, to satisfy these conditions. For further information, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and paragraph 22.15 of Part VIII – "Additional Information – Material contracts". See also the sections of this document headed "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – Australian native title and South African land claims" and "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – South African MPRDA and Empowerment Charter".

Colombian operations

Overview

The Cerrejón mining operation is a privately-owned, independently-managed joint venture, in which, through wholly-owned subsidiaries, each of BHP Billiton, Anglo American and Xstrata has a one-third indirect interest.

Cerrejón is one of the largest and lowest-cost export open pit coal mining operations in the world, with a saleable reserve base in excess of 900 Mt as at 30 June 2005. The business is involved in the exploration, production, transportation and shipment of high-grade thermal coal, mined at Cerrejón's deposits, to markets principally in Europe and the Americas.

Located in La Guajira state, in the North-Eastern part of Colombia adjacent to the Venezuelan border, Cerrejón is positioned to supply the import markets of Europe and the Eastern and Gulf Coasts of the United States. Total current infrastructure capacity is estimated to be approximately 29 Mtpa and, in the year ended 31 December 2005, Cerrejón produced approximately 26 Mt of export thermal coal predominately for the European and United States power generation markets.

Cerrejón's coal mining operations are carried on across approximately 69,000 hectares, in which four separate areas are contracted: the North, Central and South Zones, and the Patilla Area. Cerrejón owns an export facility 150 kilometres north-east of the mine on the Caribbean coast at Puerto Bolívar which is connected to the mine by means of a dedicated single-track railway line.

In July 2005, as a result of growing demand in Europe and the Americas, the former joint venture partners (BHP Billiton, Anglo American and Glencore International) approved the progressive expansion of Cerrejón's coal capacity to 32 Mtpa by

2008. The high quality export energy coal is produced from open cut mines utilising traditional truck and shovel methods. Production to meet the approved expansion is intended to be sourced from a number of lease areas, which expire in 2034 with the exception of the Oreganal lease that expires in 2022. The cost of this expansion is currently forecast to be approximately US$129.6 million in aggregate (or approximately US$43.2 million for each of the joint venture members).

Mine, projects and developments

The mine, support facilities and services

Cerrejón is one of the largest and lowest-cost export open pit coal mining operations in the world.

Cerrejón's mining operations start with the removal of surface and top soil layers, which are stored for use in rehabilitation.

The overburden is drilled, blasted and loaded out utilising mining shovels and a truck fleet. Coal seams are exposed and prepared for mining, loaded and transported in trucks to stockpiles and crushers. Crushed coal is conveyed into two silos for loading onto trains for transport to Puerto Bolívar.

There are facilities on site at the Cerrejón mine for carrying out maintenance of trucks, tractors and scrapers. Other facilities include reconstruction depots, administrative offices and telecommunications systems between mine, railroad, port and Cerrejón's administrative headquarters and support offices.

There are also administrative headquarters and support offices in the city of Bogota.

Projects and developments

In May 2005, a feasibility study was completed for an expansion of the mine's infrastructure capacity from 29 Mtpa to 32 Mtpa at a current estimated capital cost of approximately US$129.6 million. The expansion was approved in July 2005 by the former shareholders of Cerrejón and is underway, with completion scheduled for 2008. Work has commenced on feasibility studies to expand the coal production and export capacity beyond 32 Mtpa. Such expansion would aim to exploit the existing reserve base to take advantage of growing demand for import coal in Europe and the United States and require further capital expenditure for mining equipment, transport and other infrastructure.

Sales and marketing of Cerrejón's coal

Coal produced at Cerrejón benefits from relatively low ash content (approximately 8.2%), a low sulphur dioxide emissions profile and high calorific value, making it ideal for power generation.

The markets in which Cerrejón sells its product are competitive. Competition is largely on the basis of price. Cerrejón competes with numerous suppliers of thermal coal. In addition, increased production capacity from competitors in other countries may increase competition in the markets in which Cerrejón operates.

Cerrejón is one of the largest export thermal coal mines in the world. Significant Atlantic and global export thermal coal competitors, beside its joint venture partners Anglo American and BHP Billiton, are currently Rio Tinto, Drummond (a privately-owned coal producer with operations in Colombia) and coal producers operating in China, Indonesia and Russia.

CMC Coal Marketing Company Limited markets coal from Cerrejón.

Transportation of Cerrejón's coal

The rail system of 150 kilometres links the mine with the export ocean terminal at Puerto Bolívar on the Caribbean coast. The coal is transported in trains loaded at the silos, through a continuous miner process system. The complete cycle of loading, transportation, unloading at the port and the return of trains to the mine typically takes approximately 12 hours. Additionally, there is a service train that transports supplies, materials and spare parts. The railroad system is electronically controlled from a central traffic station located at the mine.

Puerto Bolívar is one of the largest export coal ocean terminals in Latin America. It receives vessels of up to 175,000 dead weight tonnes, overall length of 300 metres and beam widths of 45 metres. Its navigable channel is 19 metres in depth, 265 metres in width and four kilometres in length.

The main coal facilities at the port are a train unloading station, three stacker-reclaimers, and a lineal shiploader to put the coal into the vessels, at a rate of 4,800 tons per hour.

The port also has a supply pier to receive ships of up to 30,000 tons that arrive with machinery, spare parts, fuel and other materials required for the mining operation.

Cerrejón also uses two airports, one at the mine and a second in Bolívar.

Litigation and indemnities

Cerrejón is engaged in the following litigation which may have a significant effect on Cerrejón and/or on Cerrejón's financial position or profitability:

- Unpaid royalties. There are three separate class actions alleging that two of the Cerrejón Operating Companies have not paid due and proper royalties on the coal they have produced. The combined amount of damages sought is approximately US$107 million;

- Unpaid 2002 income tax. The Colombian national tax authority is alleging that one of the Cerrejón Operating Companies owes it an additional US$13.7 million in respect of its 2002 income tax assessment; and

- Privatisation of Cerrejón Zona Norte. A number of claims have been made and threatened against Cerrejón Zona Norte and others relating to the sale of the Colombian State's interest in Cerrejón Zona Norte. In three of the claims, the amount of damages sought is estimated to be US$67.7 million; however, the claimant has also requested an alternative declaration of damages of US$1.3 billion and a declaration that the privatisation is null and void. In another claim, which is yet to be served on the Cerrejón Operating Companies, the amount of damages sought is approximately US$3.4 billion and one of the claimants in that claim is seeking an alternative declaration that the privatisation is null and void. In another claim, the amount of damages sought from Cerrejón Zona Norte is approximately US$11 million.

Based on its external legal advice, Cerrejón considers that it is not likely that any liability will result from the above claims and the above claims are being and will be vigorously defended by Cerrejón.

Under the Cerrejón Acquisition Agreement, the Cerrejón Vendors have agreed to indemnify the Cerrejón Purchasers in respect of losses arising out of the claims referred to above. The Cerrejón Vendors have no liability under the indemnity for unpaid 2002 income tax unless the amount claimed by the Cerrejón Purchasers exceeds US$3.5 million. The Cerrejón Vendors have no liability in respect of the claims described above for unpaid mining royalties and the claims relating to the privatisation of Cerrejón Zona Norte and its successors, or certain environmental and health claims by the inhabitants of certain areas where Cerrejón operates, unless the amount of the liability of the Cerrejón Vendors exceeds US$2 million.

The Colombian national tax authority has alleged that Carbones del Cerrejón LLC owes it an aggregate amount of US$42 million in respect of Carbones del Cerrejón LLC's 1996 and 1997 income tax assessments. Carbones del Cerrejón LLC and its shareholders are indemnified in respect of this claim by Exxon Mobil Corporation. The 1996 claim was recently resolved in favour of the Colombian national tax authority, with the amount paid to the authority having been successfully claimed and paid under the indemnity.

Former Xstrata Group Copper Business summary

Introduction

The Former Xstrata Group's copper business, which was acquired by Xstrata in June 2003 as part of the acquisition of MIM and expanded in June 2006 with the acquisition of the Tintaya mine and associated satellite deposits in Peru, incorporates two mines, a smelter and a refinery in Australia, one mine in Argentina and one mining and processing operation in the high Andes region of southern Peru. Concentrate from the Ernest Henry mine is transported to the Mount Isa smelter where it is processed along with concentrate from the Mount Isa mine into anode copper. Surplus concentrate production is sold to third parties. The anode is refined at the Enlarged Xstrata Group's refinery in Townsville. The Alumbrera mine produces a copper-gold concentrate and doré and the Tintaya operation produces copper concentrate and copper cathode, in each case for sale to third parties.

Exploration activity in north-west Queensland is continuing to focus on leveraging value from the Former Xstrata Group Copper Business's strong regional asset and infrastructure base in north Queensland, targeting mineralisation in the Mount Isa/Cloncurry district. The Antapaccay and Coroccohuayco satellite deposits near the Tintaya mine may also provide significant future development potential.

Reserve and resource base

The table below sets out the Former Xstrata Group Copper Business's attributable copper reserves and resources base as at 30 June 2005, with the exception of Alumbrera for which the figures are as at 30 June 2006:

Mine	% Ownership	Mining method	Commodity	Ore reserves[1]		Mineral resources		
				Proved	Probable	Measured	Indicated	Inferred[2]
				Mt (except as otherwise stated)				
Mount Isa	100.0

The above table does not include reserve or resource information for Tintaya, which was acquired in June 2006. See below for reserve and resource information for Tintaya.

The above table sets out the Former Xstrata Group Copper Business's attributable copper reserve and resource base, based on the total mine basis figures in the Former Xstrata Group Ore Reserves and Mineral Resources Report. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

[1] Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

[2] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

Tintaya has Proved and Probable Ore Reserves of 91 Mt, comprising copper oxide ore at an average 1.63% copper grade and copper sulphide ore at an average 1.31% copper grade, as at 30 June 2005. At that date, Tintaya also had a further 24 Mt of Inferred Resources at 1.25% copper grade.

Production

The tables below set out the total and attributable mine production and attributable smelter and refinery production of the Former Xstrata Group Copper Business (broken down between the Former Xstrata Group Copper Business's three copper mines) for the years ended 31 December 2004 and 31 December 2005.

				Year ended 31 December			
				2004		2005	
Copper production[1]	Type of mine[2]	Life of mine (years)[3]	The Enlarged Xstrata Group's Attributable Interest (%)	Mine Production[5]	Attributable Production[5]	Mine Production[5]	Attributable Production[5]
				tonnes			
Mount Isa	UG	13	100	170,197	170,197	177,482	177,482
Ernest Henry Mine	OC	7	100	114,007	114,007	129,010	129,010
Bajo de la Alumbrera[4]	OC	10	50	176,439	88,220	187,317	93,659
Total Former Xstrata Group Copper Business				460,643	372,424	493,809	400,151

The above table does not include reserve or resource information for Tintaya, which was acquired in June 2006. Tintaya produces around 120,000 tpa of high quality copper cathode and concentration.

(1) See the section of this document entitled "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.
(2) UG=Underground. OC=Opencut.
(3) Life of mine figures are estimates based on planned and scheduled extraction of reserves.
(4) The Enlarged Xstrata Group has a 50% interest in the mines' operating company, Minera Alumbrera Limited.
(5) These production figures refer to contained copper, produced from ore (excluding reprocessed slag).

	Year ended 31 December	
Attributable smelter and refinery production[1]	2004	2005
	tonnes	
Mount Isa Copper Smelter (anode)	236,252	220,263
Townsville Refinery (refined)	237,621	219,198

(1) These production figures refer to contained copper.

Financial information

The table below provides selected summary financial information in relation to the Former Xstrata Group Copper Business for the year ended 31 December 2004 and for the year ended 31 December 2005 (which has, in each case, been extracted without material amendment from the Xstrata Annual Reports and Accounts) and for the six months ended 30 June 2006 (which has been extracted without material amendment from the 2006 Xstrata Interim Report):

	Unaudited IFRS Year ended 31 December 2004		Audited IFRS Year ended 31 December 2005		Unaudited IFRS Six months ended 30 June 2006	
Former Xstrata Group Copper Business	US$m	As a percentage of the Former Xstrata Group (%)[3]	US$m	As a percentage of the Former Xstrata Group (%)[3]	US$m	As a percentage of the Former Xstrata Group (%)[3]
Revenue	1,598.3	24.7	2,007.8	24.9	1,718.2	33.2
EBITDA (before non-trading items)[1],[2]	856.7	41.5	1,131.1	36.5	1,184.0	52.3
EBIT (before non-trading items)[1],[2]	644.3	43.0	919.5	36.5	1,076.8	55.3

The above table does not include financial information for Tintaya for the year ended 31 December 2004 or for the year ended 31 December 2005. Following the acquisition of Tintaya in June 2006, accounting for Tintaya within the Former Xstrata Group is included from the date of its acquisition in the interim unaudited IFRS financial statements for the six months ended 30 June 2006. See below for financial information for Tintaya for the year ended 31 December 2005.

(1) Includes minority interests, but excludes share of results from associates.
(2) IFRS does not define the measures EBITDA (before non-trading items) (being earnings before interest, tax, depreciation and amortisation and before non-trading items) or EBIT (before non-trading items) (being earnings before interest and tax and before non-trading items). For a description of how these amounts are derived, see the section of this document headed "Presentation of Information – Presentation of financial information".
(3) As a percentage of Xstrata's consolidated EBITDA (before non-trading items) and EBIT (before non-trading items) from continuing operations before common costs and income.

For the year ended 31 December 2005, Tintaya's revenue was US$389 million, EBITDA was US$250 million and it generated profit before tax (before workers' profit share) of US$196 million. The Tintaya financial information presented above has been extracted without material adjustment from, or is based upon, audited financial statements prepared under Peruvian GAAP as at and for the year ended 31 December 2005.

Cost curve

A cost curve provided by Brook Hunt for 2005 ranks the Former Xstrata Group Copper Business's copper mines, on a weighted basis, in the third quartile of global copper producers. Brook Hunt has also ranked the Former Xstrata Group Copper Business's integrated copper smelter and refinery for 2005, and concluded that it is in the fourth quartile of global production. See the section of this document headed "Presentation of Information – Cost curves".

Industry overview

For an overview of the industry in which the Former Xstrata Group Copper Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Copper industry overview".

Mining Operations

Mount Isa

Total Mount Isa mine production amounted to approximately 177 kt of copper in concentrate from ore in the year ended 31 December 2005.

Copper operations at Mount Isa, located in North West Queensland, include three underground mines (X-41, Enterprise and 1900 Orebody), with a flotation concentrator, copper smelter and associated infrastructure. The Mount Isa operations are 100% owned by the Enlarged Xstrata Group.

Ore is processed in a conventional copper concentrator with a throughput capacity of 7 Mtpa. Concentrates are smelted in the Mount Isa smelter to produce copper anodes.

During 2004, the development of the Northern 3500 underground copper orebody at Mount Isa's Enterprise copper mine was approved. The project will provide an additional high-grade mining zone in Enterprise, enabling the mine to maintain its rated capacity of 3.5 Mtpa and improve the utilisation of the existing hoisting and concentrator capacity. Initial production is scheduled to commence in 2007.

The Former Xstrata Group Copper Business has established a dedicated project team at Mount Isa to evaluate the potential for exploiting known resources contained within the 500 orebody and "halo" mineralisation surrounding the 1100 orebody. Pre-feasibility work is scheduled to commence on both of these projects during 2006, with initial resource estimates expected by early 2007.

Ernest Henry

The Ernest Henry copper-gold mine, located approximately 38 kilometres northeast of Cloncurry in northwest Queensland, commenced operation in 1997. Ernest Henry operations are 100% owned by the Enlarged Xstrata Group.

The copper-gold mine produced approximately 129 kt of copper in concentrate and 167,000 ounces of gold in concentrate in the year ended 31 December 2005.

The Ernest Henry Mine is an open pit operation. Mining of ore is scheduled to cease in 2009, although ore from the long-term ore stockpiles will be processed until 2012. The resource is open at depth and the potential to extend the mine life through underground mining is under investigation.

The plant is a conventional concentrator with the capacity to process up to 11 Mtpa of ore to produce flotation concentrate. The copper-gold ore is crushed in a gyratory crusher, ground in a SAG-ball mill, and floated for the production of a copper-gold concentrate which is predominately trucked to Mount Isa for smelting with the excess shipped to Townsville for transport to third-party smelters.

Alumbrera

The Alumbrera copper-gold mine produced 187 kt of copper in concentrate and 577,000 ounces of gold in concentrate and doré in the year ended 31 December 2005.

The Enlarged Xstrata Group holds a 50% interest and management rights in Minera Alumbrera Limited ("MAA"), the operating company of the Alumbrera mine, with Goldcorp Inc. (following its merger with Wheaton River Minerals Ltd. in 2005) and Northern Orion Resources Inc. holding 37.5% and 12.5% respectively. MAA has an interest in the proceeds of the Alumbrera mine under an agreement with a state owned corporation in Argentina (referred to by its Spanish acronym "YMAD") which owns the deposit. Under the terms of the agreement, MAA has the right to a 100% working interest in the mine. The Alumbrera project began commercial production in 1998. Under the project documentation, following recovery of the initial capital costs by the joint venture parties, YMAD is entitled to a 20% net proceeds royalty payment payable on a quarterly basis for the balance of the mine life, which is currently estimated at 10 years. The first such royalty payment of US$33 million was paid to YMAD in August 2006, after taking into account previous advance payments totalling US$16 million which in 1997 were agreed to be made to YMAD over subsequent periods to assist the local community.

The mine is located in the Province of Catamarca in North West Argentina. Alumbrera comprises the following principal facilities: an open pit mine and concentrator; a 316 kilometre long concentrate slurry pipeline; a 202 kilometre power line; a filter plant; and port and handling facilities near Rosario on the Paraná River. Copper ore is mined from an open pit mine and processed in a concentrator. The processing plant is a conventional flotation concentrator using semi-autogenous grinding mills, followed by ball mills, flotation circuits, and concentrate thickeners. The processing produces a copper concentrate containing gold and a separate gold-silver doré is produced from the gravity circuit. The final copper concentrate is thickened and then is pumped via a slurry pipeline to a filter plant located near Tucuman. The filter plant produces a low-moisture cake, which is loaded onto rail cars for transport to the MAA port facilities at Puerto General San Martin for shipment to third party smelters.

A further expansion to the grinding circuit of the Alumbrera concentrator, which is expected to increase mill throughputs by approximately 8%, from 37 Mtpa to 40 Mtpa, was approved in June 2005. The project is scheduled for commissioning in December 2006. The expansion is aimed at further improving mill productivities, maintaining a more consistent production profile and fully utilising the downstream capacity of the pipeline and filter plant.

Following the addition of 120 million tonnes of reserves to the ore reserve base at Alumbrera in 2004 and 2005, Alumbrera management continued with the in-pit resource definition programme in 2006, with the objective of further extending the ore reserve base at the mine during 2006. In addition, the Former Xstrata Group Copper Business has continued its Alumbrera district exploration programme independently of the Alumbrera joint venture work. Exploration drilling at the Filo Colorado prospect in Catamarca is expected to commence in the second half of 2006, on completion of access road construction.

Tintaya

Tintaya is located in the Espinar province, southern Peru, and consists of an open pit mine and processing operations, comprising both a copper concentrator for sulphide ore and a solution extraction/electrowinning ("SX-EW") processing plant for oxide ore. SX-EW is a two-stage process that first dissolves oxide copper into solution and upgrades copper ions from low-grade leach solutions into a concentrated electrolyte, and then deposits pure copper onto cathodes using an electrolytic procedural. Both copper concentrates from the sulphide ore and cathodes from the SX-EW plant are trucked to the port of Matarani.

The nearby Antapaccay and Coroccohuayco satellite deposits may also provide significant future development potential.

Tintaya produces around 120,000 tones of high quality copper cathode and concentrate per annum, and has significant growth potential. Tintaya has Proved and Probable Ore Reserves of 91 million tonnes, comprising copper oxide ore at an average 1.63% copper and copper sulphide ore at an average 1.31% copper, as at 30 June 2005. In addition, at that date Tintaya had a further 24 million tones of Inferred Resources at 1.25% copper.

Smelting and refining operations

Isa copper smelter

The Isa copper smelter, which utilises ISASMELT furnace technology, is part of the Mount Isa operations with a current nameplate capacity of 240 ktpa of anode copper. The concentrate feed sources are from the adjacent Mount Isa copper mill and the Ernest Henry mine. Anode copper is the primary product from the smelter, which is sent by rail to the Enlarged Xstrata Group's Townsville copper refinery.

A project was completed in the first half of 2006 to construct a leaching plant to recover around 2,500 tpa of additional copper from the electrostatic precipitator dust in the Mount Isa copper smelter.

In November 2004, capital expenditure was approved to expand the capacity of the Mount Isa copper smelter and improve its efficiency. The project comprises the installation of a second rotary holding furnace, a copper slag cleaning furnace and associated plant and equipment. These are all designed to increase the smelter's nameplate capacity from 240,000 tpa of anode copper to 280,000 tpa of anode copper and to obviate the current need for slag re-treatment through the smelter. This project is being progressively commissioned in the second half of 2006. Further enhancements, including two additional oxygen plants to achieve a production capacity of 300,000 tpa, are planned by mid-2007.

The smelter is connected to a third party acid plant which treats sulphur dioxide gases from the primary and secondary smelting stages. Approximately 80-85% capture is currently achieved and following additional incremental capital investment, capture levels are expected to reach 90-95% in the next few years.

Townsville

The Townsville operations encompass a copper refinery, port operations, marketing, customer services and logistics.

Copper refinery

The copper refinery in Townsville produces 99.997% pure LME Grade A copper cathode, using ISAPROCESS technology (which was developed by Xstrata Technology). The plant currently has a nameplate capacity of 280,000 tpa of cathode copper, although capacity is constrained by the throughput of anode copper from the Mount Isa copper smelter. Capacity is expected to increase to 300,000 tpa as the anode production increases. A facility for producing stainless steel cathodes for use in the ISAPROCESS technology adjoins the refinery. Copper produced using ISAPROCESS technology accounts for over 30% of global refined copper production.

Townsville port operations

The facility is at the Port of Townsville in North Queensland. Bulk copper and zinc concentrates are received by rail and transferred to covered storage before ship loading. The site also handles copper cathode and lead bullion.

The bulk handling operation includes a rail car dumper, conveyors, covered storage, conveyors to ship loading, and cranes with "clam shell" buckets for ship unloading. Ships of 45,000 tonnes capacity can be received at the berths.

Sales and marketing

Concentrates from the Mount Isa and Ernest Henry operations which are not processed in the Mount Isa copper smelter are sold to Glencore International under the terms of a concentrate off-take agreement. Copper cathode from the Townsville refinery is sold to third-parties in both the Australian market as well as the export market. Copper cathode destined for the export market is sold to Glencore under terms of an off-take agreement. See Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Copper Business".

The Alumbrera concentrate is of high quality and consistency with high gold value. Approximately 90% is sold under smelter or trader frame contracts and the remainder is sold into the spot market.

Projects and developments

Las Bambas

In August 2004, the Former Xstrata Group acquired rights to explore and develop the Las Bambas copper-gold-molybdenum project in southern Peru for US$120 million. Exploration is underway, with a workforce of 600 employees and contractors at the site.

In 2005, 56,000 metres of diamond drilling for exploration and resource definition were completed in the Ferrobamba, Chalcobamba and Sulfabamba deposits. First year drilling results indicated three high potential skarn and porphyry resource areas, which could form the base of a major 200-250 ktpa copper, gold and molybdenum operation, with further upside from other satellite deposits. The 2006 drilling programme, comprising an additional 100,000 metres to improve definition of the lateral and depth continuity of these three deposits, and to test two of the satellite deposits, is nearing completion. Another major drilling programme is planned for 2007 to bring the main deposits to "Indicated Mineral Resource" and "Measured Mineral Resource" status.

Roseby

In March 2005, the Former Xstrata Group Copper Business agreed to invest in a listed exploration company, Universal Resources Limited. The investment provides the Former Xstrata Group Copper Business with the right to explore and options to acquire 51% of the Roseby copper deposits in the Mount Isa Inlier in north-west Queensland. The investment in Universal is being used to part-fund an exploration project undertaken by the Former Xstrata Group Copper Business for additional copper sulphide mineralisation within the Roseby tenement area during 2005 and 2006. Known as the Sulphide Extension Exploration Project ("SEEP"), principal exploration targets are expected to be beneath and adjacent to the native copper deposits within the Roseby Feasibility Project. Drilling in the SEEP commenced in the second half of 2005, following delineation of the more prospective areas.

Tampakan

The Enlarged Xstrata Group holds an option to acquire 62.5% of the Tampakan copper-gold deposit in the Philippines. Agreement was reached with the current project owner Indophil Resources on the detailed scope and resourcing required to complete a project pre-feasibility study and progress is well advanced on that study. The mineral resource estimate was updated in the first quarter of 2006 using drilling results for the period to February 2006 and increased metal prices. The new estimate represents a significant increase in resource size and confidence. Using a cut-off grade of 0.3% copper grade, the measured, indicated and inferred resource estimate increased to 1.9 billion tonnes of ore at 0.6% copper and 0.2 grams per tonne of gold.

Former Xstrata Group Zinc Business summary

Introduction

Around half of all zinc currently consumed is used for galvanizing steel, which is an environmentally friendly method of protecting steel against corrosion. Zinc also finds application in the manufacture of die-cast alloys, brass and the production of zinc oxides and chemicals.

The Former Xstrata Group Zinc Business's zinc and lead operations are located in northern Spain, northern Germany, Australia and the UK. They comprise: the San Juan de Nieva zinc smelter and the Arnao zinc semis plant in Asturias, Spain; the Hinojedo roasting plant in Cantabria, Spain; the Nordenham zinc smelter near Bremerhaven in northern Germany; the Mount Isa, George Fisher-Hilton and Black Star zinc-lead mines in Queensland, Australia; the McArthur River zinc-lead mine in the Northern Territory, Australia; and the Northfleet lead refinery located in UK.

The Former Xstrata Group Zinc Business's main activities are the production of zinc concentrates and zinc and lead metal.

Ore from the Mount Isa underground (which closed at the end of 2005) and Black Star open cut zinc-lead-silver mines and the George Fisher-Hilton mine is concentrated at Mount Isa producing separate zinc and lead concentrates. The zinc concentrate is used by the Former Xstrata Group Zinc Business's zinc smelters and sold to third parties, while the lead concentrate is smelted on site at the Mount Isa lead smelter, and the lead bullion shipped to the Northfleet lead refinery in the UK for processing. The McArthur River mine produces a bulk zinc-lead-silver concentrate, which is sold to third parties.

Reserve and resource base

The table below sets out the Former Xstrata Group Zinc Business's attributable zinc, lead and silver reserves and resource base as at 30 June 2005:

Mine	% ownership	Mining Method	Commodity	Ore reserves[1] Proved	Ore reserves[1] Probable	Mineral resources Measured	Mineral resources Indicated	Mineral resources Inferred[2]
						Mt		
Mount Isa[3]	100.0							
Isa Lead Mine		UG	Ore	0.4	–	1.0	0.1	–
			%Zinc	5.9%	–	7.3%	4.2%	–

Definitions
OC = open cut, UG = underground

The above table sets out the Former Xstrata Group Zinc Business's attributable zinc, lead and silver reserve and resource base, based on the total mine basis figures in the Former Xstrata Group Ore Reserves and Mineral Resources Report. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

[1] Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

[2] See the section of this document headed "Presentation of Information Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

[3] On 2 August 2006, the Former Xstrata Group Zinc Business announced that reserves increased at Black Star and George Fisher from 48 million tonnes in 2004 to 66 million tonnes in 2005, with current total reserves of 81 million confirmed, as follows:

[4] Since acquiring from ANT Minerals Pty Ltd the 25% interest it did not already own in December 2005, the Former Xstrata Group has had a 100% interest in the McArthur River mine.

George Fisher	48.8Mt@8.6% zinc, 4.9% lead and 100g/t silver
Black Star	32.3Mt@5.1% zinc, 3.2% lead and 61g/t silver
Total	81.1Mt@7.2%zinc, 4.2% lead and 84g/t silver

Production

For the year ended 31 December 2005, the Former Xstrata Group Zinc Business's total zinc metal production was approximately 649 kt.

The tables below set out the mine, smelter and refinery production of the Former Xstrata Group Zinc Business broken down between the Former Xstrata Group's mines, smelters and refineries for the years ended 31 December 2004 and 31 December 2005:

					Year ended 31 December			
					2004		2005	
Zinc, lead and silver production[1]	Commodity	Type of mine[2]	Life of mine (years)[3]	The Enlarged Xstrata Group's attributable interest (%)	Mine production	Attributable production	Mine production	Attributable production
					Tonnes (except as otherwise stated)			
Mount Isa		UG	7-9	100				
(including Hilton	Zinc				191,433	191,433	231,167	231,167

Total Zinc	154,446	147,494
Saleable Zinc	145,121	140,974

[1] Production figures in tonnes for lead and zinc and kozs for silver. Production figures refer to contained metal. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

[2] UG = Underground.

[3] Life of mine figures are estimates based on planned and scheduled extraction of reserves.

[4] Since acquiring from ANT Minerals Pty Ltd the 25% interest it did not already own in December 2005, the Former Xstrata Group has had a 100% interest in the McArthur River mine. Attributable production figures for the year ended 31 December 2005 are nevertheless calculated as 75% of total mine production for the whole of 2005.

Financial information

The table below provides selected summary financial information in relation to the Former Xstrata Group Zinc Business for the year ended 31 December 2004 and for the year ended 31 December 2005 (which has, in each case, been extracted without material amendment from the Xstrata Annual Reports and Accounts) and for the six months ended 30 June 2006 (which has been extracted without material amendment from the 2006 Xstrata Interim Report):

	Unaudited IFRS Year ended 31 December 2004		Audited IFRS Year ended 31 December 2005		Unaudited IFRS Six months ended 30 June 2006	
Former Xstrata Group Zinc Business	US$m	As a percentage of the Former Xstrata Group (%)[3]	US$m	As a percentage of the Former Xstrata Group (%)[3]	US$m	As a percentage of the Former Xstrata Group (%)[3]
Revenue	1,165.3	18.0	1,448.9	18.0	1,283.9	24.8
EBITDA (before non-trading items)[1],[2]	145.5	7.0	303.1	9.8	433.1	19.1
EBIT (before non-trading items)[1],[2]	79.1	5.3	238.7	9.5	400.2	20.6

[1] Includes minority interests.

[2] IFRS does not define the measures EBITDA (before non-trading items) (being earnings before interest, tax, depreciation and amortisation and before non-trading items) or EBIT (before non-trading items) (being earnings before interest and tax and before non-trading items). For a description of how these amounts are derived, see the section of this document headed "Presentation of Information – Presentation of financial information".

[3] As a percentage of Xstrata's consolidated EBITDA (before non-trading items) and EBIT (before non-trading items) from continuing operations before common costs and income.

Cost curve

A cost curve provided by Brook Hunt for 2005 ranks the Former Xstrata Group Zinc Business's zinc smelters, on a weighted basis, in the first quartile of worldwide production of zinc metal. Brook Hunt has also ranked the Former Xstrata Group Zinc Business's zinc mines, on a weighted basis, for 2005, and concluded that they are in the third quartile of global zinc mine production. See the section of this document headed "Presentation of Information – Cost curves".

Industry overview

For an overview of the zinc and lead industries in which the Former Xstrata Group Zinc Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Zinc and lead industry overview".

Description of operations

The zinc-lead operations comprise:

Australia

- the Mount Isa underground (which closed at the end of 2005) and Black Star open cut zinc-lead-silver mines and the lead smelter;
- the George Fisher-Hilton zinc-lead-silver mine;
- the McArthur River zinc-lead-silver mine;

Spain

- the Hinojedo roasting plant;
- the San Juan de Nieva electrolytic zinc plant;
- the Arnao manufacturing facility;

Germany

- the Nordenham electrolytic zinc plant; and

United Kingdom

- the Northfleet lead refinery.

Mining operations

Zinc, lead and silver from the Mount Isa orebodies are produced from the Black Star open cut mine (commissioned in early 2005) and from the George Fisher-Hilton zinc-lead-silver mine located approximately 20 kilometres to the north of Mount Isa. The Former Xstrata Group Zinc Business is one of the five largest producers of zinc, ranks among the world's leading producers of lead and, together with the Falconbridge Group, is one of the five largest producers of silver, in each case by volume of production.

Mount Isa lead mines

The Mount Isa zinc-lead-silver mines produced 2.19 Mt of ore in the year ended 31 December 2005. The new Black Star open cut mine was commissioned in early 2005 and its production will replace production from the Mount Isa lead mine (which closed at the end of 2006).

The zinc-lead-silver and copper orebodies at Mount Isa occur adjacent to each other. The zinc-lead-silver orebodies extend from the surface to about one kilometre below the surface. Individual orebodies range in widths up to 35 metres and may persist for hundreds of metres in length.

Crushed ore is conveyed to the heavy medium plant at Mount Isa where a separation is made on the basis of ore density. Around 30-35% of the ore is rejected as gangue, waste material, containing very little valuable mineral. Around 95-97% of the zinc, lead and silver metal is recovered and fed to the zinc-lead concentrator. The pre-concentrated ore is held in bins, which feed the concentrator. Zinc concentrates are transported by rail to Townsville for distribution to third party smelters located in Townsville and around the globe to Former Xstrata Group Zinc Business zinc smelters and third parties. Lead concentrate is converted into lead bullion at the Mount Isa lead smelter, then transported to Northfleet for refining. The ore is processed in the Mount Isa concentrator.

George Fisher-Hilton mine

The Hilton mine commenced production in 1990. The George Fisher operation, situated 2 kilometres north of the original Hilton mine, commenced production in 2000. George Fisher is on the same zinc-lead bearing structures as those found at Mount Isa and Hilton, but mining at George Fisher is complicated by cross faulting and softer ground. Hilton and George Fisher ores are trucked to the Mount Isa lead concentrator for processing. The George Fisher-Hilton mine produced 2.58 Mt of ore in the year ended 31 December 2005.

McArthur River mine

The McArthur River zinc-lead-silver mine lies approximately 900 kilometres south-east of Darwin, in the north-eastern part of the Northern Territory. It is one of the world's largest zinc deposits. Until December 2005 it was operated as a joint venture between the Former Xstrata Group (75%) and ANT Minerals Pty Ltd (25%), a consortium of Japanese companies. Since that time, it has been 100% owned by the Former Xstrata Group.

The mine was operated as a fully mechanised underground operation and underground mining operations were scaled down significantly at the beginning of October 2005 as open pit mining commenced at the test pit. Underground production ceased in the last quarter of 2005. In August 2005, Xstrata announced its intention to convert the mine from an underground to an open pit operation to enable production to continue, as underground mining is no longer viable. After 10 years of operation, the most accessible underground ore has been extracted and the underground mining operations, which comprise over 100 kilometres of underground tunnels, have become uneconomical. The development of an open-cut operation is the only way to access the significant ore reserves and secure the future of the operation. Such development requires Northern Territory government approval. For further information on the approval process, see below under the heading "Projects and developments".

Production from the mine increased by 20% in 2005 compared to 2004, although the head grade declined from 12.7% zinc in 2004 to 11.9% zinc in 2005, due to the depletion of the number 2 orebody, the mining of bulk stopes and open pit tonnes with lower head grades during the last quarter. As a result, in 2005 zinc in bulk concentrate production decreased by 4% compared to 2004, to 153,644 tonnes.

The concentrator processes ore from the underground mine and utilises conventional crushing, SAG-ball grinding, ultra-fine grinding with IsaMills, and four-stage flotation techniques to produce a bulk zinc-lead concentrate. The McArthur River Mine produced 1.68 Mt of treated ore (1.26 Mt attributable tonnes to the Former Xstrata Group at 75% on a full-year

basis, ignoring the Former Xstrata Group's acquisition of ANT Minerals Pty Ltd's 25% interest in December 2005) in the year ended 31 December 2005.

Smelting and refining operations

The Hinojedo Roasting Plant

The Hinojedo roasting plant is located in the Spanish region of Cantabria, near the Port of Santander. The major plant facilities at Hinojedo are a flash roaster and a liquid sulphur dioxide plant. Following cessation of mining activity at the Former Xstrata Group's former Reocín mine in Cantabria, which closed in 2003, concentrates purchased from third parties are being treated at the Hinojedo facility to produce calcine which is then transported to the San Juan de Nieva electrolytic zinc plant.

The San Juan de Nieva electrolytic zinc plant

The San Juan de Nieva electrolytic zinc plant is located in the Asturias region of Spain near the port of Avilés and is one of the leading plants of its kind in the world in terms of production capacity, costs and efficiencies. Following the completion of a further 7,000 tonne expansion in December 2004, the total production capacity of the plant is now 500 ktpa. The Company estimates that the plant accounts for approximately 5% of world production.

The plant comprises five major operating areas: concentrate receiving and storage; roasting and sulphuric acid plant; leaching and purification, electrowinning; and casting. The plant utilises conventional technologies for the production of zinc ingots: zinc alloys, zinc for plating and zinc dust and by-products of sulphuric acid, mercury and germanium oxide.

An oleum plant, with an annual capacity of 52 kt, which was commissioned at San Juan in 2003, provides a cost efficient solution to the disposal of sulphuric acid.

The Arnao manufacturing facility

The Arnao manufacturing facility is located approximately four kilometres from the San Juan de Nieva electrolytic zinc plant and produces zinc oxide, zinc dust and rolled lead-silver anodes.

The Nordenham electrolytic zinc plant

The Nordenham smelter is located in Germany at Nordenham on the Weser estuary, opposite Bremerhaven in Northern Germany. The plant was commissioned in 1972. Since then the plant has been expanded and modernised to the current capacity of 145 ktpa of zinc metal.

The plant comprises five major operating areas: concentrate receiving and storage; roasting and sulphuric acid plant; leaching and purification; electrowinning, and melting and casting. The Nordenham smelter produces zinc ingots, zinc alloys, sulphuric acid, cadmium metal, copper cement and lead-silver concentrate. The iron residue, jarosite, is ponded approximately 10 kilometres from the smelter.

Mount Isa lead smelter

The Mount Isa lead smelter treats lead concentrates from the Mount Isa, Black Star and George Fisher-Hilton mines as well as the BHP Billiton-owned Cannington mine, located approximately 150 km from Mount Isa.

The annual production capacity of the smelter is 170 kt of crude lead bullion. In the year ended 31 December 2005 it produced 160 kt.

The crude lead is transported to the Townsville port, where it is shipped to Northfleet for refining.

Northfleet lead refinery

The Northfleet lead refinery has a lead refining capacity of 180 ktpa and in the year ended 31 December 2005 it produced 161 kt.

The facility is located approximately 60 kilometres outside London and has a refining line for processing Mount Isa's crude lead bullion. A second refining line and a recycling facility were closed during 2003.

Projects and developments

Construction of a new zinc concentrates filter plant at Mount Isa was started at the end of July 2006 and is currently being commissioned. The filter plant allows increased zinc concentrate production and reduces the moisture of the concentrates and, therefore, transport costs.

A zinc-lead concentrator revamp project at Mount Isa was approved during the first half of 2006. This project involves upgrading the concentrator capacity to 6.5 Mtpa throughput with the installation of a new reliable milling and flotation circuit by the first half of 2008 at a capital cost of US$120 million. Further developments have identified that a short-term expansion is possible using second-hand equipment that will deliver an improvement in plant capacity. The expected increase in ore throughput is an incremental 1.5 Mtpa with the equipment secured at a cost of less than US$5 million.

The Black Star open pit at Mount Isa was commissioned in early 2005. The mine is expected to produce an average of 2.3 Mtpa during its 11-year life of mine. Potential exists to expand both production and the life of mine with expansion studies currently in progress.

In August 2005, Xstrata announced its intention to convert the McArthur River mine from an underground to an open cut operation to enable production to continue at the mine. Underground production ceased in the last quarter of 2005. Without such conversion, the mine would face the prospect of closure. For further information on the McArthur River mine, see above under the heading "McArthur River mine". The change of mining method requires government approval. In August 2005 a draft Environmental Impact Statement ("EIS") was lodged with the Northern Territory Government for the open cut conversion. In December 2005, an EIS Supplement was submitted responding to around 150 matters raised though a public review process. At the conclusion of the EIS process on 23 February 2006, the Northern Territory Minister for Environment and Heritage recommended against the mine proposal. This recommendation was passed to the Minister for Mines and Energy, who on 20 March 2006, referred the matter back to the Environmental Protection Agency for further assessment on nine issues. On 4 July 2006, a Public Environmental Report was lodged in the next stage of the Northern Territory Government's assessment of the proposed conversion. On 28 August 2006 the Northern Territory Environment Minister announced a conditional recommendation in favour of the open pit development subject to the final decision of the Northern Territory Minister of Mines and Energy as well as Commonwealth approval. Both decisions are still pending. McArthur River Mine Pty Limited is currently assessing and negotiating the conditions contained in the recommendation. The switch of mining methods entails an investment initially estimated at A$66 million (approximately US$49.4 million) which, provided the necessary regulatory approval is obtained, is expected to be made over the next two years and funded from the Enlarged Xstrata Group's free cash flow. The regulatory approval may be subject to stringent compliance requirements which, added to further delays in the approval process, will result in increased project capital and operating cost.

Meanwhile, a mine management plan approved by the Northern Territory Government's Department of Business, Industry and Resource Development includes approval for a test pit on site to contribute ore for sampling and for processing. A further extension of the test pit was approved by the Northern Territory Government, which will allow production to continue until the first quarter of 2007 while final permits for the open pit are obtained.

The McArthur River ore body remains one of the largest known deposits of zinc and lead in the world. A change to an open pit mine would extend the life of mine by at least 25 years and allow the Enlarged Xstrata Group to retain the option to develop McArthur River as a source of zinc feed for a potential future zinc refinery using the Enlarged Xstrata Group's Albion process technology.

A US$14 million new facility is being built at San Juan de Nieva to produce silver concentrates from the leach residue. This facility, which is now operative, was successfully commissioned in July and allows San Juan to treat high silver concentrates.

The Northfleet lead refinery in the UK continues efforts to reduce lead production cycle times through improved process control and standardisation of the operation. Cycle times decreased by 45% between 2004 and 2005.

Sales and marketing

Zinc metal sales represent more than 60% of the Former Xstrata Group Zinc Business's turnover, while zinc concentrate sales represent approximately 16% and refined lead and silver approximately 18%. The remainder of sales are derived from the sales of by-products such as germanium, cadmium, sulphuric acid and sulphur dioxide.

Practically all the zinc metal produced by the Former Xstrata Group Zinc Business is sold in EU countries. Sales are largely in the form of SHG ingots (approximately 48%) with the remainder being sold in the form of zinc alloys. European markets by order of importance are Spain, Germany, Portugal, Austria, France and the UK. In the European markets, the Former Xstrata Group Zinc Business's smelters principally supply the galvanising sector. Glencore was the Former Xstrata Group Zinc Business's largest customer in 2005, accounting for approximately 38% of total zinc metal sales.

Zinc concentrates are sold mainly to Japan, Korea, China, Australia and Europe. Glencore was the Former Xstrata Group Zinc Business's largest customer in 2005, accounting for approximately 53% of total zinc concentrate sales. Sales into Europe, including Spain and Germany, command a premium over LME prices. Premiums have increased to substantial levels since 2000 as a result of Atlantic/Pacific freight costs and reduced imports of metal especially from the Pacific Rim, due to increasing Asian consumption, in particular in China. In 2005, approximately 75% of the Former Xstrata Group Zinc Business's zinc metal sales were made under term contracts while approximately 25% of the Former Xstrata Group Zinc Business's sales were on a spot basis.

Concentrate suppliers

Following the expansion of the San Juan de Nieva plant's design production capacity, and the acquisition of Nordenham smelter, approximately 1.3 Mtpa of zinc concentrate is required as feedstock to the electrolytic zinc plants for them to operate at current capacity.

San Juan de Nieva and Nordenham typically purchase zinc concentrates from more than ten third party sources, of which five accounted for approximately 65% of their total concentrate requirements in 2005. San Juan de Nieva and Nordenham have contracted for about 100% of their total zinc concentrate requirements for 2006. Approximately 300,000 tonnes of zinc in concentrate are expected to be sourced from Mount Isa.

In 2005, Glencore supplied approximately 50% of zinc concentrates sourced by the Former Xstrata Group Zinc Business from third parties and is the principal supplier of the Former Xstrata Group Zinc Business in addition to being its largest customer. These purchases and sales were all made under contracts on arm's length terms. In addition, in 2005, Teck Cominco's Red Dog mine in Alaska accounted for approximately 22% of the Former Xstrata Group Zinc Business's total zinc concentrate requirements.

Alloys Business summary

The Former Xstrata Group produces chrome and vanadium alloys for a widely spread customer base in the steel industry.

Chrome operations

Introduction

The Enlarged Xstrata Group is the world's largest producer of ferrochrome in terms of both attributable production and attributable sales, with current capacity attributable to the Chrome Business of approximately 1.29 Mtpa, representing approximately 20% of global capacity. The Enlarged Xstrata Group's chrome assets are situated in South Africa.

The Enlarged Xstrata Group's assets consist of five operating chromite mines and 18 ferrochrome furnaces, all of which are managed through a combined Pooling and Sharing Venture (the "PSV") with Merafe Resources Limited ("Merafe"). Two of the ferrochrome furnaces were until 16 November 2005 owned in a 50/50 production joint venture, known as the Gemini Joint Venture, with Samancor Limited ("Samancor"), a major South African ferrochrome producer. Merafe has concluded a transaction with Samancor which resulted in Merafe replacing Samancor in the Gemini Joint Venture and all associated mining activities with effect from 16 November 2005. The assets and business of the Gemini Joint Venture and certain strategic chrome reserves which were also acquired as part of the transaction have been incorporated within the PSV. The assets are now managed along with all of the other PSV assets and fall under the control and management of the Joint Board of the PSV. The assets under the control of the PSV include resources associated with the Kroondal and Marikana mining areas situated close to the Wonderkop ferrochrome operations and adjacent to the Waterval East and Waterval West mines.

The Enlarged Xstrata Group's attributable interest in the PSV is staggered over time, with its current participation being 79.5% as from 1 July 2006. Immediately following the formation of the PSV on 1 July 2004, Merafe's participation was 11%. Under the terms of the pooling arrangements, Merafe's interest increased to 14% on 1 July 2005, to 17% on 16 November 2005 following the contribution of its share of the Gemini Joint Venture assets, and is scheduled to increase to

20.5% from 1 July 2006. Merafe has the option to extend its participation interest in the PSV to 26% through disproportionate funding on future expansion projects.

Capacity attributable to the PSV is approximately 1.6 Mtpa of ferrochrome, which increased to approximately 1.96 Mtpa with the commissioning of Project Lion. In addition to operational synergies, the PSV facilitates the Enlarged Xstrata Group's compliance with the Black Economic Empowerment provisions of the MPRDA in relation to the ferrochrome business.

Reserve and resource base

The table below sets out the Chrome Business's attributable chrome reserve and resource base as at 30 June 2005.

				Ore Reserves				Mineral Resources		
				Run-of-Mine		Saleable				
Operating Mines	% attributable	Mining Method	Commodity	Proved (Mt)	Probable (Mt)	Proved (Mt)	Probable (Mt)	Measured (Mt)	Indicated (Mt)	Inferred (Mt)

			3PGE + Au g/t	–	–	–	3.87 g/t	–
Total				–	–	37.3	15.6	–

The above table sets out the Chrome Business's attributable platinum reserve and resource base, based on the total mine basis figures in the Former Xstrata Group Ore Reserves and Mineral Resources Report. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

(1) Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve and resource amounts.

(2) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

(3) The Enlarged Xstrata Group's interest in the Mototolo Joint Venture, following the transaction with Kagiso, has decreased from 50% to 37%, effective retrospectively from the inception of the Mototolo Joint Venture.

Production

The table below sets out the total mine and attributable ferrochrome production of the Chrome Business for the years ended 31 December 2004 and 31 December 2005:

	Year ended 31 December			
	2004		2005	
Ferrochrome production[1]	Mine production	Attributable Production	Mine production	Attributable Production
		tonnes		
South Africa	1,299,463	1,225,408	1,287,836	1,121,685

(1) See the section of this document entitled "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts. Production figures have been extracted without material amendment from Xstrata's management records.

Financial information

The table below provides selected summary financial information in relation to the Chrome Business for the year ended 31 December 2004 and for the year ended 31 December 2005 (which has, in each case, been extracted without material amendment from the Xstrata Annual Reports and Accounts) and for the six months ended 30 June 2006 (which has been extracted without material amendment from the 2006 Xstrata Interim Report)

	Unaudited IFRS Year ended 31 December 2004		Audited IFRS Year ended 31 December 2005		Unaudited IFRS Six months ended 30 June 2006	
		As a percentage of the Former Xstrata Group		As a percentage of the Former Xstrata Group		As a percentage of the Former Xstrata Group
Chrome Business	US$m	(%)[3]	US$m	(%)[3]	US$m	(%)[3]
Revenue[1]	819.3	12.7	797.5	9.9	331.4	6.4
EBITDA (before non-trading items)[1],[2]	168.9	8.2	168.8	5.4	36.3	1.6
EBIT (before non-trading items)[1],[2]	148.9	9.9	141.5	5.6	23.9	1.2

(1) Includes minority interests.

(2) IFRS does not define the measures EBITDA (before non-trading items) (being earnings before interest, tax, depreciation and amortisation and before non-trading items) or EBIT (before non-trading items) (being earnings before interest and tax and before non-trading items). For a description of how these amounts are derived, see the section of this document headed "Presentation of Information – Presentation of financial information".

(3) As a percentage of Xstrata's consolidated EBITDA (before non-trading items) and EBIT (before non-trading items) from continuing operations before common costs and income.

Cost curve

Cost curves produced by CRU for 2005 rank the Chrome Business's operations, on a weighted average basis, in the second quartile of worldwide production of high carbon ferrochrome. See the section of this document headed "Presentation of Information – Cost curves".

Industry overview

For an overview of the industry in which the Chrome Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Chrome industry overview".

For an overview of the industry in which the Vanadium Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Vanadium industry overview".

Description of chrome operations

The Enlarged Xstrata Group controls and operates through the PSV with Merafe a combined capacity of approximately 1.6 Mtpa of ferrochrome. The Chrome Business is currently the world's largest (in terms of both attributable production and attributable sales) and among the lowest-cost producers of ferrochrome. Xstrata believes it is well placed to maintain and continue to grow its ability to offer a wide range of products and to produce large volumes at low cost. The Chrome Business will pursue continued growth in its chrome operations whilst at the same time seeking to maintain its position as one of the lowest-cost producers of ferrochrome in the world.

Following the acquisition of a controlling interest in the African Carbon Group, which enhanced the Chrome Business's focus on key primary raw materials in the ferrochrome production process, and the Former Xstrata Group's entry into a platinum joint venture with Rustenburg Platinum Mines Limited ("RPM") and Kagiso Trust Investments (Proprietary) Limited ("Kagiso"), the Enlarged Xstrata Group intends to continue to evaluate appropriate potential acquisition opportunities and the possibilities for diversifying the Chrome Business's operations' ferrochrome product range.

All of the Chrome Business's operating chrome mines are shallow underground mines accessed by decline shafts. Mining is carried out using a mechanised board and pillar method and is currently conducted at depths ranging from 50 to 300 metres below the surface. All development is on reef, thereby reducing waste dilution. In addition to sourcing ore from its own mines, the chrome operations purchase and process chrome-rich tailings from nearby platinum producers where chrome-rich fines (usually referred to as UG2) are generated as a by-product. The Chrome Business sells approximately 6% of its chrome ore as foundry grade chromite and converts the rest into ferrochrome. The Chrome Business's metallurgical plants are all situated close to the Chrome Business's chrome mines, thereby reducing rail and road transport costs.

Production is derived from 18 furnaces at four metallurgical facilities. The eight most recently constructed furnaces were designed, constructed and commissioned by the Chrome Business which has helped to reduce capital costs. By designing and constructing its own furnaces the Chrome Business has been able to further increase the efficiency and reliability of its furnaces, with annual furnace operating availability figures in excess of 98.0% being maintained for these eight furnaces. Thirteen of the Chrome Business's furnaces have a semi-closed configuration and large off-gas handling facilities which allow these furnaces to utilise lower quality ore and reductants. Over the 17 years to the end of 2005, the Chrome Business increased its annual attributable production of ferrochrome from approximately 120 kt to a peak in the year ended 31 December 2004 of 1.2 Mt and 1.1 Mt in the year ended 31 December 2005. 14 of the Chrome Business's 18 ferrochrome producing furnaces are currently operational, with the remaining four currently out of operation due to prevailing market conditions.

The Mitsui alliance inherited from the purchase of CMI in 1998 attributes 30 ktpa alloy from the Lydenburg furnaces to Mitsui & Co. Ltd.

The Chrome Business's agglomeration technology makes chrome-bearing tailings from platinum mines a competitive source of chrome units in the ferrochrome production process when compared to traditional ore feed costs. Approximately 35% of the current ore feed balance of the furnaces is sourced from chrome-bearing tailings from platinum mines under long-term and "life-of-mine" off-take agreements. The remainder is currently sourced from the chrome operations' chromite mines, however, this ore feed balance can be varied. This flexibility gives the chrome operations the ability, where it is cost-effective to do so, to change the proportions of chrome ore sourced from the chrome operations' chromite mines and chrome bearing tailings sourced from platinum mines.

In 2005, the Chrome Business's attributable sales of ferrochrome were approximately 1.2 Mt, of which approximately 47% were sold into Europe, approximately 15% into North America, approximately 9% into Japan, and approximately 21% into other Asian countries with approximately 8% sold locally in South Africa.

Completion in November 2005 of development of the infrastructure at the Kroondal mine increased the mine's production capacity from 70 kt per month to 160 kt per month.

In 2005, higher underground production volumes from the Kroondal mine, especially after the acquisition of the Marikana reserves in July 2005, enabled the lower quality open cast operations at Kroondal and Boshoek to be scaled down by 200,000 tonnes of run-of-mine production.

Operations at the Horizon mine were temporarily suspended from 1 July 2005 to December 2005 to refurbish the mine, with the objective of improving yields and production costs from January 2006. The mine re-started operations in January 2006.

The Thorncliffe mining complex is currently being expanded with the development of the Helena mine to supply ore to the new Project Lion ferrochrome smelter.

The marketing of the Former Xstrata Group's ferrochrome production (other than certain tonnage sold into Asia) is supported by Glencore under marketing agency and distribution agreements. For further information see Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Alloys Business – Chrome operations".

Projects

Project Lion

Project Lion is a new ferrochrome facility in the Mpumalanga Province in South Africa, close to the Chrome Business's chrome reserves at the Thorncliffe mining complex. The project is being carried out under the PSV with Merafe. It is divided into three phases comprising six furnaces, with phase one comprising two furnaces. The project has encountered some external difficulties, in particular the quality of the kiln riding rings and roller support castings, difficult ground conditions and unusually high rainfall during the construction phase. Despite these challenges, the project officially started production in September 2006. Completed at a cost of ZAR1.67 billion (approximately US$215.9 million), the smelter and mine have a design capacity of 360 ktpa, increasing the PSV's total annual capacity by over 22% to 1.96 Mtpa and reducing the average unit operating costs of the business. The Project Lion smelter enhances the Chrome Business's ability to compete through its low production cost, access and proximity to transport infrastructure and ability to produce a very low silicon product as a superior chemical specification. Metal produced from the furnaces can either be cast into ingots or granulated depending on customer requirements.

The smelter uses the Enlarged Xstrata Group's patented "Premus" technology involving the pre-reduction of chromite ore with anthracite fines. The use of this technology is expected to ensure that the Project Lion smelter will be in the first quartile in terms of costs due to the low energy consumption and higher chrome recoveries. Energy consumption is approximately 40% lower than that of the conventional process ensuring that the production costs are much less sensitive to electricity pricing. Ore will be obtained from the Enlarged Xstrata Group's Helena mine which is currently being developed and is in close proximity to the Project Lion smelter, ensuring cost efficiency in terms of ore transport costs. The Helena mine development also remains within the project timing schedule and budget, with chrome ore already being brought to surface. The smelting process also has the capacity to use low-cost UG2 ore that will be sourced from the neighbouring platinum mines and uses low quantities of high cost metallurgical coke.

Mototolo

The Former Xstrata Group and Rustenburg Platinum Mines Limited ("RPM"), a subsidiary of Anglo Platinum Limited, entered into an unincorporated joint venture in July 2005 called the "Mototolo joint venture". In February 2006, Xstrata announced its agreement to form a black economic empowerment partnership with Kagiso Trust Investments (Proprietary) Limited ("Kagiso") in respect of the Former Xstrata Group's 50% interest in the Mototolo Joint Venture. As of 11 May 2006, Kagiso, through a special purpose vehicle, Kagiso Platinum Venture (Pty) Limited ("KPV"), acquired 26% of the Former Xstrata Group's 50% interest in the joint venture, resulting in KPV owning a fully participative 13% interest in the earnings from the Mototolo Joint Venture, in return for funding its proportionate share of the total capital expenditure required for

the project. The Enlarged Xstrata Group retains an effective 37% interest. KPV's participation is effective retrospectively from the inception of the Mototolo Joint Venture.

The purpose of the joint venture is to produce platinum group metals through the development and exploitation of a platinum group metals mine and concentrator.

The Enlarged Xstrata Group is responsible for developing and running the mine and RPM is responsible for construction and running of the concentrator plant. The Enlarged Xstrata Group and RPM will each contribute a similar amount of in-situ platinum group metal reserves and resources from the Chrome Business's Thorncliffe farm (adjacent to its Thorncliffe Chrome mine) and RPM's Richmond farm, part of its Der Brochen project area, to the venture. The total capital expenditure until commissioning is estimated at ZAR1,350 million (approximately US$174.5 million), of which the Enlarged Xstrata Group's share is 37%.

Construction of the mine and concentrator began in August 2005 with the initial production of platinum group metals ounces anticipated in the last quarter of 2006 and full production by the end of 2007. The project benefits from a life of mine of approximately 19 years at a planned milling rate of 200,000 tonnes per month and head grade of 3.74 platinum group metal grammes per tonne and it is expected to produce 132,000 ounces of platinum per annum and 82,000 ounces of palladium per annum.

The platinum industry is an attractive industry and is seen to have synergies with the Alloys Business. The Enlarged Xstrata Group has used the Mototolo project as a small entry point into the platinum industry, capitalising on the experience of partner and industry leader Anglo Platinum. The Enlarged Xstrata Group's experience and expertise in mechanised room and pillar mining will be leveraged as the Enlarged Xstrata Group will be responsible for the development and operation of the underground mine. In addition to ensuring the economic exploitation of the Enlarged Xstrata Group's Thorncliffe platinum group metals reserve, the Mototolo Joint Venture also produces a long-term supply for the Chrome Business of UG2 chrome ore that will be used at the nearby Project Lion smelter to produce ferrochrome.

Bokamoso

On 28 November 2005, Xstrata announced the planned construction by its chrome venture with Merafe of a chrome ore agglomeration facility at the Wonderkop site, named Project Bokamoso.

The agglomeration facility will be based on the Outokumpu technology currently employed at the Chrome Business's Boshoek operation. The anticipated total project cost of US$125 million comprises the construction of the agglomeration facility and related infrastructure development. The project consists of the erection and commissioning of a pelletising and sintering plant with a combined production capacity of approximately 1.2 Mtpa.

The additional agglomeration capacity is intended to restore the ore balance between the mines and smelters in the Chrome Business's Western operations, reduce operating costs for the smelting operations and enhance mining and operational efficiencies. The project is also intended to improve environmental performance and operational flexibility. Construction commenced in the second quarter of 2006, with the plant commissioning expected to start towards the end of the second quarter of 2007. The plant is scheduled to reach full capacity in the first half of 2008.

Mineral right applications and conversions

Xstrata Alloys, the Alloys division of Xstrata South Africa (Pty) Ltd, has to date submitted one old order prospecting right conversion application and four applications for new order prospecting rights under the MPRDA. The old order prospecting right conversion application and all four new order prospecting right applications have been accepted by the Department of Minerals and Energy (the "DME") with the DME having recently indicated that three of the applications for new order prospecting rights have been granted by the Minister. Xstrata Alloys is currently awaiting a date from the DME in respect of the Notarial Execution of such rights, and a final decision is awaited in respect of the balance of the applications which are currently in an advanced stage of processing.

With regard to new order mining right applications, five out of six planned applications have been submitted to the DME to date, all of which have been accepted by the DME and are currently being processed. In addition, ten out of twelve planned applications have been submitted to the DME in respect of converting existing old order mining rights. Once applications are accepted by the DME, an administrative process follows whilst the DME considers the applications. The minister must grant the rights if the Former Xstrata Group has complied in full with all the application requirements.

With regard to the requirement that 15% of the industry be owned by HDSAs by 2009 and 26% of the industry be owned by HDSAs by 2014, Merafe is Xstrata Alloys' black empowerment partner in the business with a current share of 20.5%

which is expected to increase to the required 26% well within the stipulated regulatory timeframe. Similarly, Xstrata Alloys has entered into a partnership agreement with Kagiso to give effect to the black economic empowerment obligations on the Mototolo Joint Venture. All the charter requirements of the MPRDA such as employment equity and procurement requirements are fully on track and Xstrata expects full compliance to be achieved well in advance of the May 2009 deadline. The other requirements of the MPRDA, such as the social and labour plans and human resources development plans that were submitted with applications, were accepted by the DME and no problems are envisaged with the remaining applications. See the sections of this document headed "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – Australian native title and South African land claims" and "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – South African MPRDA and Empowerment Charter".

Vanadium operations

Introduction

The Enlarged Xstrata Group's vanadium operations consist of its Rhovan plant situated in the North West Province, South Africa. Rhovan, an integrated mining and vanadium processing plant, produces and converts vanadium pentoxide (V_2O_5) into ferrovanadium (FeV). In 2003, the production process of the chemical plant was adapted to enable it to produce vanadium oxide (V_2O_3) and a new electric furnace was commissioned, which allows for ferrovanadium to be produced by an alternative process consuming less expensive aluminium. The Vanadium Business's ferrovanadium conversion facility in Swaziland is currently non-operational.

Capacity for the Vanadium Business's operations is approximately 22 million pounds of vanadium pentoxide equivalent per annum, which Xstrata believes represents approximately 10% of estimated global production.

Reserve and resource base

The table below outlines the Vanadium Business's vanadium reserve and resource base as at 30 June 2005

				Ore Reserves[1]		Mineral Resources		
	% attributable	Mining Method	Commodity	Proved	Probable	Measured	Indicated	Inferred[2]
				Mt (except as otherwise indicated)				
Vanadium								
Rhovan	100	OC	Ore	44.0	6.0	77.5	–	139.8
			V_2O_5	0.5%	0.7%	0.5%	–	0.5%

The above table sets out the Vanadium Business's attributable vanadium reserve base, based on the total mine basis figures in the Former Xstrata Group Ore Reserves and Mineral Resources Report. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve estimates.

[1] Reserves are a subset of resources and are included in the resource estimate. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

[2] See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

Production

The table below provides information on the Vanadium Business's vanadium pentoxide production for the years ended 31 December 2004 and 31 December 2005:

Vanadium[1]	Year ended 31 December	
	2004	2005
	(in lbs in V_2O_5 equivalent)	
South Africa	21,067,000	20,166,000

[1] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation Resources and reserves, production and sales" for an explanation of the basis of preparation of production amounts. Production figures have been extracted without material amendment from Xstrata's management records.

Financial information

The table below provides selected summary financial information in relation to the Vanadium Business for the year ended 31 December 2004 and for the year ended 31 December 2005 (which has, in each case, been extracted without material amendment from the Xstrata Annual Reports and Accounts) and for the six months ended 30 June 2006 (which has been extracted without material amendment from the 2006 Xstrata Interim Report):

	Unaudited IFRS Year ended 31 December 2004		Audited IFRS Year ended 31 December 2005		Unaudited IFRS Six months ended 30 June 2006	
Vanadium Business	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**	**US$m**	**As a percentage of the Former Xstrata Group (%)[3]**
Revenue	133.7	2.1	318.0	4.0	100.6	1.9
EBITDA (before non-trading items)[1],[2]	34.1	1.7	181.1	5.8	62.4	2.8
EBIT (before non-trading items)[1],[2]	22.3	1.5	175.6	7.0	59.3	3.0

[1] Includes minority interests. The Enlarged Xstrata Group's interest in the Mototolo Joint Venture, following the transaction with Kagiso, has decreased from 50% to 37%, effective retrospectively from the inception of the Mototolo Joint Venture.

[2] IFRS does not define the measures EBITDA (before non-trading items) (being earnings before interest, tax, depreciation and amortisation and before non-trading items) or EBIT (before non-trading items) (being earnings before interest and tax and before non-trading items). For a description of how these amounts are derived, see the section of this document headed "Presentation of Information – Presentation of financial information".

[3] As a percentage of Xstrata's consolidated EBITDA (before non-trading items) and EBIT (before non-trading items) from continuing operations before common costs and income.

Description of vanadium operations

The Vanadium Business's operations comprise the mining of vanadium ore, the production of vanadium pentoxide and the conversion of vanadium pentoxide to ferrovanadium.

Xstrata believes that in 2005, the Vanadium Business achieved a world market share of approximately 10% with approximately 21.5 million pounds of vanadium pentoxide production, the vast majority of which was converted into ferrovanadium. In 2005, the Vanadium Business produced approximately 20 million pounds (expressed as V_2O_5 equivalent) of ferrovanadium.

The Vanadium Business's operations are carried on at its Rhovan plant situated in the North West Province, South Africa. Previously, the Former Xstrata Group had an additional vanadium operation at Vantech in South Africa as well as interests in the Windimurra vanadium project in Australia. The Vantech operation closed in 2004 due to its ore body being mined out. The oversupply of vanadium pentoxide in 2000 and 2001 and the consequent depression in vanadium pentoxide prices, contributed largely towards the closure of the Windimurra operation on 10 February 2003, following steps to reduce costs and production that proved insufficient to ensure the sustainable financial viability of this asset. Since then settlement has been reached with Precious Metals Australia to take over all responsibilities, obligations and costs related to the rehabilitation of the Windimurra project. Rehabilitation of the Vantech site is also progressing well, with full closure expected to take approximately four to five years in order to allow for groundwater remediation.

The Vanadium Business's Rhovan operation is an integrated vanadium producer. The processing plant at Rhovan is located adjacent to the mine, resulting in low ore handling costs. Titaniferous magnetite ore is mined using open cast methods in an open pit at Rhovan by means of the drill, blast, and haul technique. The ore is fed into an in-pit crusher where it is crushed and then transported by overland conveyor to the beneficiation plant. At current production levels the Vanadium Business's reserve and resource base in South Africa should support the operations for at least another 30 years.

All of the vanadium pentoxide and ferrovanadium produced by the Vanadium Business is marketed or distributed by Glencore under marketing, agency and distribution agreements. For further information, see Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Alloys Business – Vanadium operations".

In 2005, approximately 84% of the Vanadium Business's sales were represented by sales of ferrovanadium and approximately 16% were represented by sales of vanadium pentoxide.

In 2005, approximately 35% of the Vanadium Business's sales of ferrovanadium were into Europe and approximately 10%, 21%, 20% and 10% were into Asia, North America (USA, Canada and Mexico), South America and Japan, respectively.

The Enlarged Xstrata Group will continue to assess the feasibility of a number of potential projects aimed at enhancing the cost effectiveness of the Vanadium Business to ensure that they are well positioned if and when market conditions deteriorate. In addition, the Enlarged Xstrata Group will continue to evaluate both the feasibility of producing vanadium from sources other than vanadium bearing ores and the potential for diversifying the vanadium operations product range.

Mineral right applications and conversions

In the 18-month period leading up to the promulgation of the MPRDA on 1 May 2004, the Department of Minerals and Energy (the "DME") did not formally issue the Former Xstrata Group with a mining authorisation for the ongoing Rhovan vanadium operations. The result of this was that the Former Xstrata Group was required to make application for a new order mining right (as opposed to a conversion to such a new order mining right) for the Rhovan operations. Such an application was duly submitted. The DME has acknowledged the situation and the Enlarged Xstrata Group is working with the DME in order to ensure all outstanding issues are satisfied and that the application can be approved expeditiously.

The Enlarged Xstrata Group is in discussions with a potential black economic empowerment partner with a view to its becoming the Former Xstrata Group's partner in the Rhovan operations. See the sections of this document headed "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – Australian native title and South African land claims" and "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – South African MPRDA and Empowerment Charter".

Reductant operations

The Enlarged Xstrata Group currently supplies its chrome operations with its total Söderberg electrode paste requirements as well as approximately 280,000 tpa of char, which is used as a reductant on its ferrochrome furnace. The Enlarged Xstrata Group also acquired a controlling interest in the African Carbon Group with effect from 1 July 2004 which produces 600,000 tpa of char in addition to the 70,000 tpa of char produced at the Enlarged Xstrata Group's other facilities. The Former Xstrata Group is currently self-sufficient in terms of its char reductant requirements and 40% self-sufficient in terms of its total reductant requirements.

Statutory authorisations, licences and concessions

New South Wales operations' coal assets

The Enlarged Xstrata Group currently holds all necessary leases and licences to cover exploration and mining activities in respect of the Coal Business. A summary of the status of the mining leases and licences for New South Wales operations' coal assets is set out in the table below.

Australian mining companies are required by law to submit Mining Operations Plans ("MOPs") and Annual Environmental Management Reports ("AMERs") to the Department of Mineral Resources ("DMR"). The MOPs outline plans for mining and rehabilitation over a period of between three and seven years and identify the costs associated with the rehabilitation of the site. The AMERs report the annual progress in relation to the MOPs.

The Enlarged Xstrata Group has submitted all the required MOPs and AMERs and has lodged the necessary securities with the relevant DMR. Additional securities are in the process of being negotiated as part of the regular review of the rehabilitation costs undertaken during the MOP process.

Individual mines establish provision for rehabilitation liabilities by accruing a rehabilitation provision per tonne, by obtaining bank guarantees or by a combination of these methods. Rehabilitation provisions are referred to as securities and are specified in the mining leases or during the MOP process.

Queensland operations' coal assets

The Enlarged Xstrata Group currently holds all necessary leases and licences to cover exploration and mining activities in respect of the Coal Business. A summary of the status of these mining leases and licences for Queensland operations' coal assets is set out in the table below. These leases and licences relate to coal mines, projects and longer term prospects. The Enlarged Xstrata Group has several Mineral Development Licences with renewals pending approval. This status has no effect on the operation of the mines or security of title.

EPCA PL – Petroleum Lease Coal

Principal terms and conditions for mining concessions relevant to the Queensland mining operations include the requirement to have an Environmental Authority issued by the Environmental Protection Agency ("EPA") and a Plan of Operations ("POO") lodged with the EPA.

The POO specifies proposed mining and rehabilitation activities for a term of up to five years. The POO also includes an estimate of the maximum mine rehabilitation liability for the term of the POO and calculation of the corresponding financial assurance required to be lodged with the Department of Natural Resources and Mines ("DNRM"). The level of financial assurance required to be lodged with government is a percentage of the total rehabilitation liability. The percentage required is dependent on the environmental performance category of the mine which is determined in accordance with EPA guidelines.

The miner calculates the total rehabilitation liability and the EPA may require this figure to be increased (resulting in an increase in the financial assurance). The EPA is not bound by previous estimates and has, in the case of third parties outside the Enlarged Xstrata Group, significantly altered and increased agreed calculations for total rehabilitation cost. There is no indication that the EPA will alter the calculation for the total rehabilitation cost of sites operated by the Enlarged Xstrata Group, but no assurance can be given that this will not occur in the future.

An annual return is required to be lodged with the EPA for each Environmental Authority. The annual return reports on compliance with Environmental Authority conditions. The Enlarged Xstrata Group has submitted all required POOs and annual returns for Environmental Authorities and has lodged the necessary financial assurances with the DNRM.

Enlarged Xstrata Group's South African coal assets

Summary of the Enlarged Xstrata Group's mining licences and authorisations

Division/mine	Mining licence no.	Expiration date (a transitional ending on 30 April 2009 applies under the MPRDA)	EMPR status
Tweefontein Division			
Waterpan Colliery	34/95	Indefinite	Approved
Boschmans Colliery	34/95	Indefinite	Approved
Witcons Colliery	34/95	Indefinite	Approved
iMpunzi Division			
Phoenix Colliery	31/94	Indefinite	Approved
ATC	31/94	Indefinite	Approved
ATCOM	31/94	Indefinite	Approved
Southstock Division			
Tavistock Colliery	31/94	Indefinite	Approved
South Witbank Colliery	31/94	Indefinite	Approved
South Witbank Colliery (Klippoortje)	18/01	2014	Approved
Mpumalanga Division			
Tselentis Colliery (Smutsoog)	9/01	Indefinite	Approved
Tselentis Colliery (Botharust/Lilliput/Klipstapel)	14/04	2009	Approved
Tselentis Colliery (Witbank/Main)	13/04	2009	Approved
Spitzkop Colliery	15/04	2009	Approved
Goedgevonden Division			
Goedgevonden Colliery	24/2004	2009	Approved
Goedgevonden Colliery (Zaaiwater)	5/2003	2018	Approved
Rietspruit JV	13/99	2022	Approved
DTJV			
Middelburg	9/99	2034	Approved
Douglas	11/99	2022	Approved

In terms of the MPRDA, which came into operation on 1 May 2004, the mineral resources are the common heritage of all people of South Africa and the state is custodian thereof for the benefit of all South Africans. Xstrata South Africa, either directly or through subsidiaries or through co-arrangements with Ingwe, holds mining authorisations and consequently old order mining rights, as defined in the MPRDA, over all of the areas covered in its current life of business plan with the exception of a portion of the Goedgevonden project area and a property at Tselentis, over which properties it has acquired new order prospecting rights. These new order prospecting rights provide Xstrata South Africa with the exclusive right to apply for new order mining rights over the economically exploitable mining areas.

Xstrata South Africa has a number of initiatives in place to ensure that it complies with the requirements of the MPRDA hence allowing it to convert its old order mining rights into new order rights within the maximum five year transitional period as provided within the legislation. These old order mining rights continue to remain in force for a period not exceeding five years and cease to exist upon conversion and registration of the new mining right or if the holder fails to lodge the old order mining right for conversion before 30 April 2009, being the date upon which the maximum period of five years expires.

Xstrata South Africa has an ongoing freehold acquisition programme to secure surface rights ahead of mining where required. For undeveloped resources, only limited surface freehold is owned. In most instances, however, title to the mineral rights confers the right to utilise or acquire the surface freehold as may be necessary for mining purposes. Xstrata South Africa manages the necessary old order rights and freehold properties relative to their current and projected mining operations.

Copper and gold assets

Mineral rights at the Former Xstrata Group Copper Business's various operations are held through mining tenements. No separate surface rights exist for the properties. A summary of the mining tenements directly involved in actual operations is shown in the table below.

Status of Former Xstrata Group Copper Business's copper and gold asset mining tenements

Alumbrera mine

Tenement	Tenement Name	Original Granted	Expires	Comments
YMAD	YMAD Lease	26-Dec-1997	25-Feb-2017	600 ha area lease

Principal terms and conditions for mining concessions relevant to the Queensland mining operations include the requirement to have an Environmental Authority issued by the EPA and a POO lodged with the EPA. The POO specifies proposed mining and rehabilitation activities for a term of up to five years. The POO also includes an estimate of the maximum mine rehabilitation liability for the term of the POO and calculation of the corresponding financial assurance required to be lodged with the DNRM. The level of financial assurance required to be lodged with the government is a percentage of the total rehabilitation liability. The percentage required is dependent on the environmental performance category of the mine, which is determined in accordance with EPA guidelines.

The miner calculates the total rehabilitation liability and the EPA may require this figure to be increased (resulting in an increase in the financial assurance). The EPA is not bound by previous estimates and has in the case of mines of third parties outside of the Enlarged Xstrata Group, significantly altered and increased agreed calculations for total rehabilitation cost. There is no indication that the EPA will alter the calculation for the total rehabilitation cost of sites operated by the Enlarged Xstrata Group, but no assurance can be given that this will not occur in the future.

An annual return is required to be lodged with the EPA for each Environmental Authority. The annual return reports on compliance with Environmental Authority conditions. The Enlarged Xstrata Group has submitted all required POOs and annual returns for Environmental Authorities and has lodged the necessary financial assurances with the DNRM.

Alumbrera is required to submit environmental management reports every two years to the Provinces of Catamarca and Tucuman. The reports present results of the environmental monitoring conducted and any changes or issues in specific areas of the operation to the portions of the project that occur in each province. The report to Catamarca addresses the mine and mineral processing operations and the concentrator pipeline operation within the Catamarca Province. The report to the Province of Tucuman addresses pipeline and filter plant operations. The Enlarged Xstrata Group has submitted all required reports. No financial assurance is required by the Argentine authorities for Alumbrera.

Summary of Former Xstrata Group Zinc Business zinc and lead operations' mineral leases

Mineral rights at the various operations are held through mining licences. No separate surface rights exist for the properties.

Principal terms and conditions for mining concessions relevant to the Queensland mining operations include the requirement to have an Environmental Authority issued by the EPA and a POO lodged with the EPA. The POO specifies the proposed mining and rehabilitation activities for a term of up to five years. The POO also includes an estimate of the maximum mine rehabilitation liability for the term of the POO and calculation of the corresponding financial assurance required to be lodged with the DNRM. The level of financial assurance required to be lodged with the government is a percentage of the total rehabilitation liability. The percentage required is dependent on the environmental performance category of the mine, which is determined in accordance with EPA guidelines.

The miner calculates the total rehabilitation liability and the EPA may require this figure to be increased (resulting in an increase in the financial assurance). The EPA is not bound by previous estimates and has, in the case of third parties outside the Enlarged Xstrata Group, significantly altered and increased agreed calculations for total rehabilitation cost. There is no indication that the EPA will alter the calculation for the total rehabilitation cost of sites operated by the Enlarged Xstrata Group, but no assurance can be given that this will not occur in the future.

An annual return is required to be lodged with the EPA for each Environmental Authority. The annual return reports on compliance with Environmental Authority conditions. The Enlarged Xstrata Group has submitted all required POOs and annual returns for Environmental Authorities and has lodged the necessary financial assurances with the DNRM.

For McArthur River, the terms and conditions for mining concessions relevant to Northern Territory mining operations include the requirement to have a Mine Management Plan ("MMP") submitted and accepted by the Department of Business, Industry and Resource Development. The MMP specifies the proposed mining and rehabilitation activities for the McArthur River mine. The Enlarged Xstrata Group has submitted the required MMP and has lodged the necessary financial assurance.

Spanish zinc assets

The various Spanish Exploitation Concessions through which Asturiana controls the mineral rights and the right to mine at the Reocín mine expired on 25 July 2003. Currently neither mining concessions nor relevant investigation claims are owned by Asturiana in Spain.

Summary of the Alloys Business operations' mineral leases

An approved mining licence was required for all mining operations in terms of Section 9 of the Minerals Act (Act 50 of 1991), which was repealed by the MPRDA. These licences are valid for certain defined periods in terms of the transitional arrangements of the MPRDA.

Location(s)	Mining licence no.	Expiry date	
Kroondal	Mineral area 2 (Portion of MA no 1 of the farm Kroondal) Mineral area 4 (Portion of MA no 3 of the farm Kroondal) Mineral area 6 (Portion of MA no 5 of the farm Kroondal) Mineral area 8 (Portion of MA no 7 of the farm Kroondal) Mineral area 9 (Portion of MA no 5 of the farm Kroondal) Mineral area 10 (Portion of MA no 1 of the farm Kroondal) Portion 91 of the farm Kroondal 304 JQ	ML 2/2002 ML 24/2002	None 19/12/2012

Other licences

Maloma anthracite mine

Xstrata South Africa (Pty) Ltd holds a mining lease granted in 1992 by His Majesty, Ngwenyama of Swaziland in respect of the Maloma anthracite mine in Swaziland.

The ore from Sudbury Mines/Mill is crushed and ground and the nickel/copper bearing sulphide materials contained in the ore are separated from waste materials at the Strathcona mill to produce nickel/copper concentrate and copper concentrate. The Sudbury Mines/Mill total ore milled for the year ended 31 December 2005 was 2,174,998 tonnes and for the six months ended 30 June 2006 was 1,006,228. The Strathcona mill has a capacity of approximately 8,500 tonnes of ore per day. The copper concentrate from the Strathcona Mill is delivered to Kidd Creek Metallurgical's mineral processing facilities for smelting and refining. The nickel/copper concentrate from the Strathcona mill is delivered to the Sudbury smelter for smelting.

Montcalm

The Montcalm nickel mine was brought into production in 2004. It is located 100 kilometres east of the Kidd Metallurgical Site in Montcalm Township in the Province of Ontario and comprises four 21 year leases covering mining and surface rights over 831 hectares.

The Montcalm project reached its designed production capacity of 750,000 tpa during the fourth quarter of 2004. This included conversion of a redundant mill line at the Kidd concentrator to handle the Montcalm ores. Two concentrates are produced, a copper concentrate which is treated at the Kidd Metallurgical Complex and a nickel concentrate which is transported to the Enlarged Xstrata Group's smelter in Sudbury.

In the year ended 31 December 2005 a total of 750,073 tonnes of Montcalm ore were mined and milled grading 1.52% nickel and 0.79% copper. During the six months ended 30 June 2006, Montcalm mined and milled 435,204 tonnes grading 1.57% nickel and 0.79% copper. During 2005, both the mine and mill were successfully test run at an 875,000 tpa rate (116% of design capacity). The ability of the mine and mill to run consistently at the planned 875,000 tpa rate has been confirmed.

The Nickel Business's smelting and refining operations

Falcondo

The ore mined at Falcondo is milled, smelted and refined at Falcondo's mineral processing facilities, which have a capacity of approximately 29,000 tpa of nickel contained in ferronickel. The facilities include a metallurgical treatment plant, a crude oil processor and a 200-megawatt thermal power plant. In the six months ended 30 June 2006, Falcondo purchased back-up power energy from the national grid during the period of maintenance of the three owned units. Falcondo has dock facilities and a crude oil tank farm at the port of Haina (near Santo Domingo) and a 70-kilometre crude oil pipeline from the port to its mineral processing facilities. Falcondo's production of nickel in ferronickel for the year ended 31 December 2005 was 28,668 tonnes and, in the six months ended 30 June 2006, was 14,367 tonnes.

Falcondo is presently studying a 2,000 tpa expansion via the upgrading of one of its two electric arc furnaces from 60 MW to 75 MW while enhancing transformer reliability and furnace integrity. Falcondo is studying the implementation of continuous tapping in its two electric furnaces. This project is intended to improve safety performance and furnace operability and result in the production of an additional 250 tpa of nickel.

Falcondo has also initiated a project to convert from liquid hydrocarbons to coal in the process plant. This project entails the replacement of the shaft furnaces with two kilns. This project is intended to significantly decrease the operating cost at Falcondo.

Sudbury smelter

The nickel/copper concentrate from the Strathcona mill is treated at the Sudbury smelter along with Raglan and Montcalm concentrates and custom feed from other sources. The smelter produces a matte containing nickel, copper and cobalt, as well as silver, gold and platinum group metals. The Sudbury smelter has the capacity to produce approximately 130,000 tpa of matte. The matte produced is shipped by rail to Quebec City and by sea to the Nikkelverk refinery in Norway for further processing.

The Sudbury smelter's output for the year ended 31 December 2005 from all sources was 63,093 tonnes of nickel, 20,798 tonnes of copper and 2,423 tonnes of cobalt and, for the six months ended 30 June 2006, from all sources was 29,318 tonnes of nickel, 10,026 tonnes of copper and 1,099 tonnes of cobalt. Copper concentrate sent to the Kidd Creek and Horne smelters contained 18,126 tonnes of copper in the year ended 31 December and, in the six months ended

30 June 2006, contained 8,572 tonnes of copper. Sulphuric acid produced as a result of smelting activity in Sudbury was 310,618 tonnes in the year ended 31 December 2005 and, in the six months ended 30 June 2006, 144,597 tonnes.

The Company estimates that meeting regulatory emission reductions targets in respect of fugitive and stack, particulate and sulphur dioxide at the Sudbury smelter could involve expenditure of approximately US$40 million to US$60 million by 2008.

Nikkelverk

Falconbridge Nikkelverk AS ("Nikkelverk") which is wholly-owned by the Enlarged Xstrata Group, operates a refinery and a sulphuric acid plant at Kristiansand, Norway. The refinery processes the matte produced by the Sudbury smelter as well as custom feed from other sources, which includes the treatment of the silver, gold and platinum group metals contained in the matte and custom feed. The refinery has an annual capacity of approximately 86,000 tonnes of nickel, 40,000 tonnes of copper and 5,200 tonnes of cobalt. The sulphuric acid plant has a capacity of approximately 115,000 tpa of sulphuric acid. In 2005, the refinery produced 84,866 tonnes of nickel, 38,681 tonnes of copper, 5,021 tonnes of cobalt and 108,828 tonnes of sulphuric acid. In the six months ended 30 June 2006, the refinery produced 41,126 tonnes of nickel, 20,329 tonnes of copper, 2,531 tonnes of cobalt and 53,704 tonnes of sulphuric acid.

Mattes from the Sudbury smelter and from BCL Limited ("BCL") in Botswana were the main sources of nickel/copper feed materials for the Nikkelverk refinery during the six months ended 30 June 2006.

In the year ended 31 December 2005 the refinery produced approximately 405,500 ounces of PGMs and, in the six months ended 30 June 2006, it produced 195,774 ounces of PGMs.

Significant expansion of the nickel and cobalt capacity, based on matte or laterite intermediates, is possible if market conditions warrant such expansion.

FIL

Falconbridge International Limited ("FIL"), through its offices in Bridgetown, Barbados and Brussels, Belgium, is responsible for managing the Integrated Nickel Operations' ("INO") custom feed business outside Canada. Custom feed, or third-party primary smelter mine production (concentrate), primary smelter production (matte) and secondary raw materials, provides a significant source of feed to the Sudbury smelter and the Nikkelverk refinery. The availability of and profit margins associated with the custom feed processed at the Sudbury smelter and the Nikkelverk refinery are largely a function of metal grade and the level and relationship of nickel, copper, cobalt, silver, gold and platinum group metals prices and competition for such materials.

The custom feed processed at the Sudbury smelter consists largely of nickel/copper/cobalt secondary raw materials and nickel concentrates. Most secondary raw materials are sourced on a spot basis or under contracts of one to three years' duration. Concentrates are sourced on a spot basis and through multi-year contracts. In the year ended 31 December 2005, the Sudbury smelter's output from all third-party feeds included 9,300 tonnes of nickel, 6,600 tonnes of copper and 1,360 tonnes of cobalt and, in the six months ended 30 June 2006, the smelter's output from all third-party feeds included 7,538 tonnes of nickel, 4,040 tonnes of copper and 630 tonnes of cobalt.

In 1985, FIL entered into a long-term agreement with BCL to treat complex nickel/copper matte from BCL's smelter in Botswana. BCL matte represented approximately 52% of all nickel treated at the Nikkelverk refinery in direct refinery custom feeds in the year ended 31 December 2005. Under the agreement, which was extended in 2002 to the end of 2015, BCL has agreed to deliver approximately 10,000 tonnes of nickel in matte per year.

In the year ended 31 December 2005, custom feed represented approximately 37% of the nickel, 64% of the copper, and 80% of the cobalt output at the Nikkelverk refinery compared with approximately 41.6% of the nickel, 69.6% of the copper and 81.2% of the cobalt output in the six months ended 30 June 2006.

Sales and marketing of the Nickel Business's nickel

Marketing and sales of ferronickel produced at Falcondo are conducted through Falconbridge U.S., Inc., Falconbridge Europe S.A. and Falconbridge (Japan) Limited.

Projects and developments

Sudbury Operations, Ontario

The Sudbury area is one of the world's largest sources of nickel and contains significant copper, cobalt, silver, gold and platinum group metals. In addition to its operating mines, the Enlarged Xstrata Group has large property holdings covering favourable geology of the Sudbury Igneous Complex.

Exploration has defined a mineral resource at Nickel Rim South located 2.7 kilometres north of the airport at a depth of approximately 1,100 to 1,600 metres. The inferred resource consists of 13.4 million tonnes grading 1.8% nickel, 3.3% copper, 1.8 grams per tonne platinum, 2.0 grams per tonne palladium and 0.8 grams per tonne gold. A decision to proceed with a five-year underground definition programme costing US$368 million was announced on 11 March 2004 and underground drilling on the resource commenced in the second quarter of 2006. Drilling on the Fraser Morgan zones resulted in measured plus indicated resources totalling 4.9 million tonnes grading 1.80% nickel and 0.56% copper in Zones 8 and 9. Zone 11 at Fraser Morgan also contains 2.4 million tonnes of inferred resources grading 1.8% nickel and 0.5% copper, which is presently being drilled from underground to upgrade the confidence in the resource to be included in an updated feasibility study.

The Falconbridge Group spent US$9.156 million on exploration in support of the Sudbury operations in 2005 and the Enlarged Xstrata Group plans to spend US$15.6 million in 2006. This includes diamond drilling and other exploration that was carried out on certain of the Falconbridge Group's properties by option and joint venture partners, who also have exploration programmes planned for 2006.

Xstrata announced on 19 September 2006 that the Nickel Business had begun construction of a new cobalt and nickel recycling plant at the Sudbury smelter that is expected to more than double the capacity of the smelter's existing recycling business, with anticipated investment of C$21.4 million (approximately US$19.2 million). The Nickel Business has received all necessary environmental permits following a detailed engineering and pilot-testing phase completed mid-June 2006. Commissioning of the new plant, which will be operated and maintained by the Nickel Business's current Sudbury employees, is scheduled for July 2007.

Raglan, Quebec

An annual exploration programme in 2005 resulted in the discovery of approximately 2.5 Mt of mineral resources at Zones 3, 5-8, West Boundary, Donaldson and East Lake. This is more than double the annual production rate at Raglan which milled 934,000 tonnes of ore in 2005. The most significant result was the expansion of lens 8H which now is estimated to contain 2.3 Mt grading 2.8% nickel. This is the largest single lens ever discovered in Raglan. Zone 5-8 which includes lenses in Zones 7 and 8 will be placed in the Mining Stage Gate Process and may become the next major mining centre at Raglan. Preliminary results from the 2006 programme have continued to expand the resource at Zones 5-8 and actual resource estimation and verification is intended to be updated on completion of the current drill programme, which will coincide with the Arctic winter. Preliminary results for 2006 have also identified new open pittable resources and the programme continues with nine drills.

The Nickel Business spent US$10.8 million (US$6.2 million after Quebec tax credits) in 2005 in support of the Raglan operation. The Falconbridge Group initially planned to spend US$20.7 million (US$11.6 million after Quebec tax credits) in 2006. However, due to unusually severe winter weather, which extended well into June 2006, it is expected that the programme will be curtailed by 10% to 15% depending on how long the field season can be extended into the fourth quarter of 2006.

In April 2006, the Falconbridge Group shared C$9.3 million with the local Inuit communities, representing the share of the profits generated by the operations of the Raglan nickel mine located in the Nunavik Territory of Northern Quebec. This yearly profit-sharing is part of the Raglan Agreement, a comprehensive agreement signed on 28 February 1995 with the Makivik Corporation and local Inuit communities. The agreement is designed to harmonise relations and foster opportunities between the Falconbridge Group (and, going forward, the Enlarged Xstrata Group) and local populations and their representatives in areas such as training, hiring of local businesses and environmental management.

With the first phase of the Raglan mine optimisation complete, focus has shifted to developing the phase II scope. The second phase of Raglan's optimisation will focus on utilising increased mill capacity by expanding site infrastructure and ore production to allow for the mining, milling and processing of 1.3 Mtpa of ore resulting in approximately 30,500 tonnes of

annual contained nickel production. Scoping study work has been initiated. This phase is targeted to be completed in early 2008.

A major investment programme is planned for the Nickel Business's nickel installations at the Raglan mine involving the launch of two important studies for the Raglan mine expansion. The first will focus on developing new ore reserves to replace those depleted since the mine's opening in 1997. This investment is expected to reach nearly C$240 million over six years.

The second study is to support the expansion of nickel ore production from 1 Mtpa to 1.3 Mtpa as early as 2009. This 30% increase, requiring an additional investment of roughly C$250 million, would create 50 additional jobs and increase the value of annual royalties the Enlarged Xstrata Group pays to local Inuit communities.

This amount is in addition to the nearly C$200 million in equipment and upgrades the Falconbridge Group has invested at the Raglan Mine since 2004. The initial investment in the construction of Raglan was in excess of US$600 million.

Major renovations are to commence at the Nickel Business's *Deception Bay* loading dock. The C$50 million investment will extend the dock's service life and support the production increases.

Nickel Rim, Ontario, Canada

In 2001, Falconbridge discovered Nickel Rim South – a high grade 13.4 Mt resource grading 1.8% nickel, 3.3% copper and significant platinum, palladium and gold. A five-year underground definition and development programme was initiated in 2004 at this deposit, located nine kilometres from the Enlarged Xstrata Group's Sudbury smelter.

The estimated capital cost of this project is US$524 million, reflecting an increase of US$100 million in foreign exchange and escalation variations.

Vent shaft sinking, which began in February 2005, was at 1,440 metres at the end of July 2006 and is ahead of schedule. Main shaft sinking began in April 2005 and was at 1,046 metres at the end of July 2006. This project is expected to be completed in 2009, with production starting in 2009.

Koniambo Project, New Caledonia

Koniambo is a pyrometallurgical complex for the production of ferronickel in the Northern Province of New Caledonia. Production is targeted to begin in 2009/2010 and is expected to reach 60,000 tpa of nickel. In 2005, final agreements were put in place by and among Falconbridge, Société Minière du Sud Pacifique S.A. ("SMSP") and other relevant parties to provide for the transfer of the Koniambo ore body in New Caledonia to Koniambo Nickel SAS, a company owned 49% by the Enlarged Xstrata Group and 51% by SMSP. In late December 2005, the Falconbridge Group met the relevant conditions of the Bercy Accord for this transfer to take place, including having placed firm orders for at least US$100 million in total for equipment and services relating to the project.

The *Koniambo Project* continues to advance the Detailed Engineering, the Execution Plan and the Procurement Programme with a 2006 budget of US$240 million, in addition to the US$96 million invested in 2005. More than US$388 million has already been committed to the project to date.

The Koniambo Project team is currently concentrating its efforts to address the challenges typical for such projects in the areas of controlling costs, execution planning and sustainable development. As is the case with other major industrial projects, Koniambo is faced with very significant growth in the costs associated with raw materials, transportation and the shortage of specialised resources for all projects because of the extension of the Goro Nickel construction schedule.

Xstrata Nickel remains committed to developing the Koniambo complex, one of its anchor projects, along with its controlling shareholder partner, SMSP.

Prior to completion of the Falconbridge Acquisition, Falconbridge had already begun a review of the costs and its execution strategy so as to measure the impact of the new economic reality on the project. Xstrata Nickel is designing a new project execution strategy in the context of increases in the costs of energy, raw materials and goods and services and a shortage of skilled labour.

The capital cost of the project was estimated to be US$2.2 billion (in 2004 US dollars based on an issued feasibility study) excluding interest to be incurred during construction, price escalation and initial working capital requirements. The project includes the construction of a US$600 million power station with an installed generating capacity of 390 MW and a metallurgical plant, mine development and other infrastructure such as the port and road facilities.

The Koniambo Project will continue to be actively developed during this period of strategy renewal, particularly in the Voh-Koné-Pouembout region. This includes in particular the current environmental, archaeological and geotechnical studies.

The close-communication approach used since the start of the project with the local stakeholders will remain unchanged, and the local team will maintain its strong presence in the community.

The Nickel Business has, subject to certain terms and conditions including fiscal and legislative stability, agreed to arrange for or provide up to 100% of the financing required for the project. Given these financing arrangements, the project's free cash flow would first be used to service and repay debt incurred to finance the construction of the project before any distributions would be available to the equity owners in the project. In March 2006, Falconbridge put in place a US$360 million bridge finance facility to provide interim financing for the project pending completion of the permanent project financing.

At a 2.0% nickel cut-off grade, the Koniambo deposit contains measured plus indicated resources of 75.6 Mt at 2.47% nickel plus inferred resources of 82.7 Mt grading 2.5% nickel. The measured and indicated resources were converted to proven and probable reserves totalling 62.5 Mt grading 2.40% nickel. In addition, the project has an inferred limonite resource estimated at 100 Mt at 1.6% nickel and 0.2% cobalt that could be developed at a later date.

Kabanga, Tanzania

In April 2005, the Falconbridge Group entered into a joint venture agreement with Barrick Gold Corporation ("Barrick") on the Kabanga nickel deposit, located in northwestern Tanzania. At the time of the acquisition, Barrick estimated the inferred resource to be 26.4 Mt grading 2.6% nickel. Under the terms of the agreement, the Falconbridge Group acquired a 50% indirect joint venture interest in respect of the Kabanga Project for US$15 million and will be the operator of the joint venture. The Enlarged Xstrata Group will fund an initial US$50 million work plan and will have the option to direct an additional US$95 million towards completing a feasibility study to vest in the project over the next several years.

Current work, including exploration and infill diamond drilling, metallurgical testing and engineering study work led to the completion of a scoping study. The scoping study documentation was delivered at the end of the first quarter of 2006. The companies continued to upgrade the resource to measured and indicated categories to support the work plan and diamond drilling is ongoing with seven drills in the ground to define and expand the resource. In addition, systematic exploration of the under-explored Kabanga licence have been initiated and select regional targets are being evaluated.

Araguaia, Brazil

In 2005 the Nickel Business discovered two new significant nickel laterite deposits on its Araguaia properties in the Para State of northern Brazil. These are new grassroots discoveries in an area where the first recorded drilling for base metals was completed by the Nickel Business's exploration team in October 2004.

The Araguaia Belt includes a number of ophiolitic complexes that were obducted along the border of the Araguaia mobile belt. It comprises a variety of sedimentary rocks and several large ultramafic bodies that extends in excess of 400 kilometres in the north-south direction. Development of significant laterite profiles with nickel grades above 1% and thicknesses ranging from 10m to 110m have been identified overlying some of these ophiolite bodies.

Approximately 40% of the entire belt has been subjected to an airborne geophysical survey, including radiometric and magnetic data covering covered some 32,700 line-km at 500 meter line spacing. The Nickel Business has drilled 786 holes in the Araguaia Belt.

Serra do Tapa is the top priority target identified to date based on significant nickel intercepts particularly in the north part of the area. The deposit is at least 4.5 km long in a north-south direction and ranges from approximately 500m to 1000m wide based on 320m by 80m drilling carried out to date. The southern extension is also being tested with scout drill holes. Vale dos Sonhos is located approximately 15 km southeast of the Serra do Tapa deposit. The target area extends 2.5 km in

a north-south direction, is open to the north and south and averages approximately 800m wide based on current drilling. Drilling to date in 2006 appears to have extended the Vale dos Sonhos deposit an additional 1.5 km to the south and the ongoing drill programme is designed to delineate the extension of the deposit in this area.

The 2006 drilling campaign is in progress and is expected to include at least 14,000m of drilling at Serra do Tapa and Vale do Sonhos to close the drill grid to a spacing of 80m by 160m, followed by resource estimation when assay results are obtained. The drill programme continues with the objective of achieving a drill spacing of 80m by 80m to improve the level of confidence in the resource estimate. Other drilling is planned to test the southern extensions of these zones as well as continue regional scout drilling along the Araguaia belt.

The project area is well positioned with respect to infrastructure. Ample hydro power is available and the distance to main transmission lines is 20km to 100km. Rail service is available within 100km to 200 km, while roads and rail lines are being upgraded and extended to the South Network at 100km per year. Barge access to a sea port is possible from Maraba (200km from Cinzeiro) on the completion of the lock system at Tucurui which is planned for the end of 2007.

The deposits occur on properties owned by the Enlarged Xstrata Group or where the Enlarged Xstrata Group has the right to earn a 100% interest by completing a series of cash payments totalling US$2.4 million staged over eight years. On the basis of airborne surveys covering approximately 22,000 square kilometres in the region, the Nickel Business has consolidated its ground position over the key targets such that it now controls mineral rights (Exploration Licenses) to almost 5,400 square kilometres (539,000 hectares).

Falconbridge Copper Business summary

Introduction

The Falconbridge Copper Business markets copper cathodes directly to producers of industrial products from the Falconbridge Copper Business's CCR refinery in Montreal-East, Quebec, the Kidd Creek refinery in Timmins, Ontario, and the Lomas Bayas operation in Chile. The Falconbridge Copper Business's Chilean operations also market cathodes made available via toll refining agreements with Altonorte anodes. Altogether, sales of copper metal cathodes in the six months ended 30 June 2006 were made to 26 customers in 11 countries. Approximately 80% of the Falconbridge Copper Business's sales of copper metal in the six months ended 30 June 2006 were made in North America with the balance sold in Europe and Asia. The Falconbridge Copper Business's Chilean operations produce approximately 290,000 tonnes of copper anodes per year that are sold in Canada, Chile, Europe and Asia.

Copper production is dependent on mine supply from integrated and third party sources as well as secondary recycled materials sourced globally from third parties. In the six months ended 30 June 2006, 70% (including Alumbrera) of Horne, 65% (59% with Glencore) of Altonorte and 47% (41% with Glencore) of Kidd Creek's primary feed stocks came from non-related third parties. In addition, approximately 10% of the Falconbridge Copper Business's Horne smelter's feed tonnage came from recycled electronics and other copper and precious metal bearing secondary materials, which were sourced from third parties. Antamina copper concentrates are sold to customers globally. See Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Copper Business".

The Falconbridge Copper Business is a fully-integrated producer of copper metal and concentrate. The Falconbridge Copper Business includes the operation of the Enlarged Xstrata Group's 33.75%-owned Antamina copper and zinc mine in Peru and the 100%-owned Altonorte copper smelter located near Antofagasta, Chile, the Enlarged Xstrata Group's 44% stake in the Collahuasi copper mine in Chile and 100% interest in the Lomas Bayas operations, as well as refining, smelting and recycling facilities in Canada and in the United States, which are referred to as Canadian Copper and Recycling ("CC&R").

Reserve and resource base

The table below sets out the Falconbridge Copper Business's attributable copper reserve and resource base as at 31 December 2005:

			Mineral reserves[1]		Mineral resources (in addition to mineral reserves) [1]		
Mine	% Ownership	Commodity	Proven	Probable	Measured	Indicated	Inferred[2]
			Mt (except as otherwise stated)				
Kidd Creek	100.0		17.836	1.178	0.891	1.706	11.900
		% Copper	1.82	2.05	2.37	2.06	2.7
		% Zinc	5.61	4.41	3.75	7.59	4.8
		% Lead	0.18	0.09	0.18	0.19	0.3
		Silver (g/t)	54	33	35	55	81
Lomas Bayas	100.0		72.797	166.423	22.791	257.827	31.000
		% Copper	0.36	0.36	0.30	0.28	0.30
Collahuasi	44.0		245.275	1559.057	48.674	429.686	1820.000
		% Copper	1.10	0.86	0.55	0.65	0.75
Antamina	33.75		76.000	374.000	35.000	25.000	41.000
		% Copper	1.12	1.19	0.53	0.44	0.8
		% Zinc	1.40	0.84	0.39	0.26	0.6
		Silver (g/t)	14.9	12.4	7.0	6.4	16
		% Molybdenum	0.029	0.031	0.033	0.026	0.02

Notes

The above table sets out the Copper Business's attributable copper, zinc, lead and silver reserve and resource base, based on the total mine basis figures in the Falconbridge Group Mineral Reserves and Mineral Resources Information. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

(1) In the above table, mineral resources are additional to mineral reserves and are not included in the mineral reserve estimates. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

(2) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Inferred resources" for an explanation of the basis of preparation of inferred resource estimates.

Production

The tables below set out the total mine production and attributable production of the Falconbridge Copper Business for the years ended 31 December 2004 and 31 December 2005 and for the six months ended 30 June 2005 and 30 June 2006:

Total mine production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
	tonnes			
Mined copper	931,300	894,700	448,700	454,400
Refined copper	524,200	539,200	263,200	304,200
Mined zinc	277,900	304,300	178,200	126,500
Refined zinc	121,600	113,700	73,500	77,400

Note

(1) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Attributable production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
	tonnes			
Mined copper	430,400	414,600	208,600	212,400
Refined copper	491,600	505,300	246,300	287,500
Mined zinc	152,000	182,200	102,700	79,900
Refined zinc	121,600	113,700	73,500	77,400

Note

(1) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Financial information

The table below provides selected summary financial information in relation to the Falconbridge Copper Business for the year ended 31 December 2004 and the year ended 31 December 2005 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003") and for the six months ended 30 June 2006 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006"):

	Audited Restated Canadian GAAP Year ended 31 December 2004		Audited Canadian GAAP Year ended 31 December 2005		Unaudited Canadian GAAP Six months ended 30 June 2006	
		As a percentage of the Falconbridge Group		As a percentage of the Falconbridge Group		As a percentage of the Falconbridge Group
Copper Business	US$m	(%)	US$m	(%)	US$m	(%)
Revenues	3,592	53.1	4,421	54.3	4,247	62.4
Income generated from operating assets[1]	673	48.4	1,086	59.7	1,346	68.0

Note

(1) For a definition of income generated from operating assets, see the section of this document headed "Presentation of Information – Presentation of financial information – Supplemental performance measures in respect of the Falconbridge Group".

Cost curve

A cost curve provided by Brook Hunt for 2005 ranks the Falconbridge Copper Business, on a weighted basis, in the second quartile of global copper producers. See the section of this document headed "Presentation of Information – Cost curves".

For an overview of the industry in which the Falconbridge Copper Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Copper industry overview".

The Falconbridge Copper Business's mining operations

Antamina

Located in the Andes mountains in Peru, approximately 270 kilometres north-east of Lima and at an elevation of 4,300 metres, the Antamina deposit is one of the largest copper/zinc ore bodies in the world, with a milling rate of 85,000 tonnes per day.

A capital investment of US$2,148 million was made to bring Antamina into production. Of this amount, US$1,320 million was financed using senior project debt.

The Enlarged Xstrata Group's beneficial interest in Compañía Minera Antamina S.A. ("Antamina") is 33.75%, with the beneficial owners comprising BHP Billiton at 33.75%, Teck Cominco at 22.5% and Mitsubishi Corporation with a 10% interest.

Antamina began commercial production in October 2001. In 2005, Antamina produced 1,287,257 tonnes of copper concentrate grading 29.10% copper, 343,559 tonnes of zinc concentrate grading 53.66% zinc and 12,875 tonnes of molybdenite concentrate containing 52.20% molybdenum. In 2005, payable copper contained on the concentrates sales was 815,703 pounds of copper, 355,711 pounds of zinc, 16,124 pounds of molybdenum and 8,797 metric ounces of silver.

Collahuasi

The Enlarged Xstrata Group owns a 44% interest in Compañía Minera Doña Inés de Collahuasi S.C.M. ("Collahuasi"), an independent company which owns the mining and water rights and other assets comprising the Collahuasi operation, together with Anglo American which also holds a 44% interest, and a Japanese consortium holding the remaining 12% interest.

A capital investment of US$1,792 million was required to bring Collahuasi into commercial production. The financing requirement, including working capital, was approximately US$1,870 million.

The Collahuasi property covers 446 exploitation concessions over 133,803 hectares and 185 exploration concessions over 66,500 hectares. The property is located in northern Chile, about 180 kilometres southeast of the port of Iquique, at an elevation of 4,300 metres. It contains two separate porphyry copper deposits, known as Ujina and Rosario: the Ujina high grade secondary enrichment has been mined already but an important reserve of primary copper ore remains; Rosario has large tonnages of high grade primary ore and important secondary enrichment zones. The Huinquintipa oxide copper deposit is located downstream from the Rosario deposit. In addition, the property hosts high-grade copper mineralisation at the adjacent Rosario West deposit.

Production is expected to average 397,400 tpa of copper in concentrates and 59,400 tpa of copper cathode from 1999 to 2008. The mine site is serviced under a 20-year power supply contract with Empresa Nacional de Electricidad S.A., a Chilean electric utility company.

During the year ended 31 December 2005, 161.3 million tonnes of material were mined, 40.1 million tonnes of ore were milled at the concentrator and 6.5 million tonnes of ore were processed at the copper oxide leaching plant. The Falconbridge Group's share of copper produced by Collahuasi during the year ended 31 December 2005 was 26,698 tonnes of cathode copper and 155,550 payable tonnes (161,192 contained tonnes) of copper in concentrate.

The Ujina pit was practically depleted during the year 2004 and ore extraction ramped-up in the Rosario Pit during the year 2004. In the last months of 2004, production at the Rosario Pit had achieved its full capacity.

During 2004, Collahuasi's board of directors approved the construction of a molybdenum separation plant. The project was commissioned during October 2005 and the capital investment reached US$35.6 million. The plant is currently in full operation, and its production is approximately 640 dmt of concentrates per month grading 48.3% molybdenum.

Canadian Copper and Recycling

CC&R mines and procures copper and precious metal concentrates and secondary materials for processing at the Enlarged Xstrata Group's copper smelters and refineries and markets copper and related by-products.

The Enlarged Xstrata Group and its predecessors in title have been mining the Kidd Creek copper/zinc deposits since 1966. The Kidd Creek mining operation's principal copper/zinc properties in the Timmins area are located in Kidd Township, Porcupine mining division, Ontario. The property in the Timmins area of northern Ontario comprises six half lots, or 960 acres, in the Porcupine Mining Division, District of Cochrane, Ontario. The properties are 100% held by the Enlarged Xstrata Group. The Kidd Creek deposits are currently mined through one surface shaft, which accesses the upper mine and two winzes which access progressively deeper levels known as the lower mine and Mine D. In the year ended 31 December 2005, the upper mine (formerly No. 1 and No. 2 mines) accounted for 23% of production, the lower mine (formerly No. 3 mine) accounted for 56% and Mine D 21% of the Kidd Creek Mining Division's mine ore production.

Ore production at the Kidd Creek Mining Division ("Kidd Creek Mining") for the year ended 31 December 2005 was approximately 2.38 Mt and, for the six months ended 30 June 2006, was approximately 1.25 Mt. The milled grades as at 30 June 2006 were; copper 2.00% and zinc 5.13%, compared with copper 1.99% and zinc 6.21% at 31 December 2005. Metals in concentrate produced as at 31 December 2005 totalled 42,700 tonnes of copper and 120,000 tonnes of zinc, compared with 24,769 tonnes of copper and 55,019 tonnes of zinc as at 30 June 2006.

The development of Mine D was approved in 2000, to extend the depth of the Kidd Creek ore body beyond the limits of the No. 3 mine at 6,800 feet (2,070 metres) to a depth of 8,800 feet (2,682 metres) for Stage 1. Stage 2, going down to 10,200 feet (3,109 metres), is still under feasibility study. Production from Mine D began in the second half of 2004 and production reached 480,000 tonnes in 2005 with ramp-up continuing into 2006. Mine D, Stage 1 of the project is scheduled to be completed in 2006.

Lomas Bayas

The Lomas Bayas mine comprises seven exploitation concessions covering approximately 2,022 hectares. The Fortuna de Cobre deposit comprises 11 exploitation concessions covering approximately 1,216 hectares. The Enlarged Xstrata Group

also holds 25 exploitation concessions and two exploitation concession applications covering approximately 4,669 hectares between the Lomas Bayas mine and the Fortuna de Cobre deposit as well as 61 exploration concessions and two exploitation concession applications covering an area around the Fortuna de Cobre deposit.

The Lomas Bayas mine is located in the Second Region of Chile, approximately 110 kilometres north-east of the port city of Antofagasta. The mine is situated at an altitude of 1,500 metres in the Atacama Desert. The Fortuna de Cobre deposit is situated 3 kilometres to the south of the Lomas Bayas mine.

In July 2001, the Falconbridge Group acquired 100% of the Lomas Bayas copper mine and adjacent Fortuna de Cobre copper deposit from Boliden Limited ("Boliden") for an initial cash payment of US$66 million. In July 2006, Falconbridge exercised its rights to retain the Fortuna de Cobre deposit by paying a further US$15million to Boliden. The Fortuna de Cobre copper deposit could expand production or extend the mine life by nine years, to 2023.

Lomas Bayas currently operates one open pit mine. High-grade ore is crushed and placed on leach pads by a series of portable conveyors and a stacking system. Lower-grade ore that does not economically justify the cost of crushing and additional handling is placed directly on separate leach pads by mine haulage trucks. Solutions containing sulphuric acid are then applied to leach the ores and copper recovery occurs by a solvent extraction-electrowinning process. The copper cathode is transported by truck and rail to the port at Antofagasta and shipped to customers overseas. Lomas Bayas is serviced by the electrical grid of northern Chile under a contract that expires in the second half of 2008 with a local electricity supplier.

In the year ended 31 December 2005, Lomas Bayas mined 40.6 Mt of ore and rehandling material from which 63,147 tonnes of cathode copper were produced.

The Falconbridge Copper Business's smelting and refining operations

Altonorte Smelter

The Enlarged Xstrata Group owns 100% of the Altonorte copper smelter located in northern Chile. The smelter recently completed a major modernisation and US$170 million Phase 3 expansion project, which more than doubled its capacity to a nominal 850,000 tpa of copper concentrate throughput, copper anode output capacity to approximately 290,000 tpa and sulphuric acid capacity to 790,000 tpa.

The Altonorte custom smelter processes copper concentrate from third-party mines located mainly in Chile. Approximately 35% of the Altonorte smelter's production is sold to Codelco and is refined at Codelco's Chuquicamata refinery near Calama, Chile, a portion of which is returned to the Enlarged Xstrata Group in the form of cathodes. The balance of the smelter's blister anode production is exported. The smelter's sulphuric acid production is sold to customers located in the northern region of Chile. In the year ended 31 December 2005, Altonorte processed 894,694 tonnes of feed material, produced 297,542 tonnes of copper anodes and produced 808,230 tonnes of sulphuric acid.

CC&R

CC&R operates the Horne copper smelter located in Rouyn-North, Quebec, the Canadian Copper and Recycling refinery ("CCR refinery") in Montreal-East, Quebec, the Kidd Creek Metallurgical Division, a copper-zinc complex located in Timmins, Ontario and five recycling facilities located in the United States and Canada.

CC&R has the capacity to process approximately 1,300,000 tpa of copper and precious metal-bearing feed materials at the Horne and Kidd Creek smelters. In the six months ended 30 June 2006, the Falconbridge Group processed 640,000 tonnes of feed and, in the year ended 31 December 2005, Falconbridge processed 1,102,100 tonnes of feed, in each case at the Horne and Kidd Creek smelters. In the six months ended 30 June 2006, approximately 70% of the CC&R feed was procured from North America with the balance from South America and other sources, compared with 75% from North America in the year ended 31 December 2005.

The ore from Kidd Creek Mining Division is transported by a group-owned railway to the Kidd Creek Metallurgical Division's mineral processing facilities, located 27 kilometres southeast of the mine. The mill produces copper and zinc concentrates, and treats all ores from the Kidd Creek Mining Division in two of four circuits. The remaining two circuits are available to process custom feed. In 2004, one of these circuits was rehabilitated and converted to treat 750,000 tpa of nickel ore from the Enlarged Xstrata Group's new Montcalm mine, located approximately 100 kilometres west of the

metallurgical site. Nickel concentrate from the circuit is shipped to Sudbury for processing. The Kidd copper concentrate produced as well as the by-product Montcalm copper concentrate, are processed at the Kidd Creek Metallurgical Division's copper smelter. In addition to these feeds, the smelter also treats copper concentrate from the Nickel Business's Sudbury Strathcona mill as well as other copper custom feeds. The smelter has the capacity to produce 150,000 tpa of blister copper. The 57,027 tonnes of blister produced at the Kidd Creek smelter in the six months ended 30 June 2006 and the 119,000 tonnes of blister produced there in the year ended 31 December 2005 were either sent as anode for refining at its refinery, or shipped to the Falconbridge Copper Business's CCR refinery. For the six months ended 30 June 2006, the Kidd Creek copper refinery produced 61,813 tonnes of copper cathode, having produced 111,200 tonnes in the year ended 31 December 2005.

The Kidd Creek zinc plant has the capacity to produce 147,000 tpa of zinc. In October 2004 a new precious metal recovery circuit was commissioned in the zinc plant. The new circuit allows the plant to process Agnico-Eagle's Laronde Mine precious metal bearing zinc concentrates, and to recover the gold and silver as precious metals/lead residue that is further refined at the Falconbridge Copper Business's Horne smelter. Approximately 100,000 tonnes of Laronde zinc concentrate are received on an annual basis. The balance of the zinc plant's feed is Kidd zinc concentrate, and any surplus Kidd zinc concentrate is available for processing at facilities such as the Noranda Income Fund's CEZ refinery located in Valleyfield Quebec. In the six months ended 30 June 2006, the Kidd Creek zinc plant produced 74,379 tonnes of saleable zinc, having produced 113,700 tonnes in the year ended 31 December 2005.

In addition to the mineral processing facilities, the copper smelter, the copper refinery and the zinc plant, the Kidd Creek Metallurgical Division also operates a cadmium plant, an indium plant, two sulphuric acid plants and a liquid sulphur dioxide plant. In the six months ended 30 June 2006, the Kidd Creek Metallurgical Division produced 241,644 tonnes of sulphuric acid, having produced 472,300 tonnes in the year ended 31 December 2005.

In October 2005, the copper, zinc, and milling operations of the Kidd Creek Metallurgical Division were impacted to varying degrees by a four-week strike by the site's unionised workforce, Canadian Auto Workers – Local 599. The Falconbridge Group subsequently agreed a new three-year collective agreement with Canadian Auto Workers – Local 599 in respect of the Kidd Metallurgical Division.

The Horne smelter utilises two technologies that work together to optimise its production: concentrate injection and continuous smelting and continuous converting. Through its smelting process, the Horne smelter is able to treat concentrates containing impurities such as arsenic, antimony, bismuth and other materials in addition to conventional copper concentrates. In 2005, of the total volumes treated by the Horne smelter, approximately 22% of this feed was obtained from the Louvicourt, Antamina and Collahuasi mines and the balance was sourced from third parties under contracts having durations of one to three years or purchased on a spot basis. In September 2005, the NCV (Noranda Converter) at the Horne smelter was brought back on line. The operating rate increased from 600,000 tpa to 800,000 tpa of concentrate. Anode production capacity increased to 180,000 tpa from 140,000 tpa. This increase in operations was based on the availability of concentrates at economical treatment terms. Anode output from the Horne smelter totalled 94,523 tonnes in the six months ended 30 June 2006 and 147,000 tonnes in the year ended 31 December 2005. All anodes produced at the Horne copper smelter were refined at the Falconbridge Copper Business's CCR refinery. The smelter also produced 320,070 tonnes of sulphuric acid in the six months ended 30 June 2006 and 517,900 tonnes of sulphuric acid in the year ended 31 December 2005.

Xstrata announced on 21 September 2006 a major project at the Horne smelter aimed at significantly reducing the presence of metal-bearing particulates, and in particular arsenic, in the Notre Dame neighbourhood adjacent to the smelter, at an anticipated project cost of approximately C$20 million (approximately US$17.9 million). The various elements of the project are intended to be completed between 2006 and 2009. Once completed, a subsequent study will be undertaken to identify new opportunities to further reduce the impact of smelter operations in the Notre Dame neighbourhood. Since 1998, emissions of gases and dusts (lead, arsenic and total dust) have been reduced by more than 80% following the successful implementation of a series of environmental and process optimisation projects. The Horne smelter has committed to continually reduce the environmental impact of its activities with particular attention to the Notre Dame neighbourhood adjacent to the smelting operations.

The CCR refinery processes copper anodes from the Horne, Altonorte and Inco smelters as well as other unrefined copper and precious metals from the Enlarged Xstrata Group and third-party sources. In the six months ended 30 June 2006, the

refinery produced 181,252 tonnes of copper cathode, approximately 469.3 thousand ounces of gold and 16.9 million ounces of silver and in the year ended 31 December 2005, the refinery produced 304,200 tonnes of copper cathode, approximately 908,350 thousand ounces of gold, 33.2 million ounces of silver and, in each period, other by-products including selenium, tellurium, nickel sulphate and a concentrate of platinum group metals. A contract was signed in early 2005 for the refining of Inco anodes at the CCR refinery with shipments commencing in August 2005. In September 2005, the CCR refinery moved to a seven-day operation in preparation to increase 2006 production to 372,000 tonnes.

The Falconbridge Copper Business is a leader in the recovery of copper, gold, silver and platinum group metals from the recycling of electronics and other copper and precious metal-bearing secondary materials. In addition to materials delivered directly to the Enlarged Xstrata Group's smelters and refineries, the Falconbridge Copper Business operates two sampling facilities in California and Rhode Island for the sampling and preparation of recycle feeds for plants in Roseville, California, Lavergne, Tennessee and Brampton, Ontario that provide asset management and recycling services to original equipment manufacturers for end-of-life electronic hardware. During 2005, a new commercial office and warehouse was opened in Penang, Malaysia to assist Asian based customers with the collection and shipment of electronic scrap from production facilities to the sampling plants in San Jose or Rhode Island. This new company is called Noranda Recycling Malaysia.

The Falconbridge Copper Business's processing plants and technology enable the treatment of large tonnages of recycled materials. In the six months ended 30 June 2006, recycled materials comprised 9% of the feed for the copper smelters and approximately 10% of the copper, 20% of the gold, 10% of the silver and 85% of the platinum group metals produced by the CCR refinery. In the year ended 31 December 2005, recycled materials comprised 12% of the feed for the copper smelters and approximately 17% of the copper, 20% of the gold, 10% of the silver and 95% of the platinum group metals produced by the CCR refinery.

Sales and marketing of the Falconbridge Copper Business's copper

The Falconbridge Copper Business's sales and marketing activities are based in Toronto, Canada; Santiago, Chile; Zug, Switzerland; San Jose, California; and Cleveland, Ohio. Primary functions include the purchase of custom concentrates and recycled materials, and the sale of concentrates, blister, copper cathodes, precious and platinum group metals and sulphuric acid, as well as refinery by-products.

Projects and developments

Kidd Creek operations, Ontario

Exploration support of the Kidd Creek operations in 2005 were conducted in three areas within 200 kilometres of the Enlarged Xstrata Group's core infrastructure in Timmins. Exploration was undertaken in conjunction with junior mining company partners as part of a plan to test all prospective airborne EM targets on properties in the Detour-Normetal, Halliday Dome and FedNor areas by the end of 2007. No significant results were returned in 2005.

Significantly, the exploration expenditures in 2006 are starting to shift back to the Focused Exploration Zone – a region underlain by 150 square kilometres of highly prospective base metal stratigraphy immediately north of Kidd Mine. Previously, the Falconbridge Group conducted exploration in this same area but aimed above a depth of 200m below surface.

Ongoing exploration at the Kidd Creek mine is focused in Mine D between the 98 and 102 levels to upgrade the mineralisation to the inferred resource category.

Work on the shaft bottom and lateral development was completed in the first quarter of 2006. Production from block 2 began in the fourth quarter of 2005 and production from block 3 began in the third quarter of 2006.

The capital expenditures associated with this project are expected to total C$684 million (approximately US$613.0 million) having increased following the approval of a new target schedule and budget that became the project baseline in April 2005, as well as escalation associated with delineation drilling during 2006.

El Pachón, Argentina

The acquisition of the El Pachón project was completed in September 2001. The property is located in the province of San Juan, Argentina at an elevation of 3,600 to 4,100 metres about three kilometres from the Chilean border and seven kilometres from the Los Pelambres mine. Diamond drilling, geological mapping and reinterpretation of the resource model

were completed in 2003 with the objective to identify higher grade resources within the known resource and test exploration targets.

Work in 2004 included an external review of the resource estimate and work to update the Feasibility Study prepared by Cambior in 1997. A proposal to place the project in the Prefeasibility Stage of the Mining Stage Gate Process was presented to senior management in 2005. Work on the Prefeasibility Study began in 2006 using SNC Lavalin as the main engineering contractor company.

In 2006, work has progressed in road re-opening, environmental baseline data collection and progression of the project towards the feasibility gate. The project is currently in the pre-feasibility stage. Additional metallurgical studies will be completed after the in-fill drill programme, which is planned to start in the fourth quarter of 2006.

El Morro, Chile

The El Morro property is located in Region III, 140 kilometres east of the port of Huasco at an elevation of 4,000 to 4,300 metres. The La Fortuna zone on the El Morro property contains an inferred mineral resource estimated at 466 Mt grading 0.61% copper and 0.50 grams per tonne gold at a copper cut-off of 0.4% copper. The El Morro resource, located five kilometres west-northwest of La Fortuna, contains an inferred mineral resource estimated at 45 Mt grading 0.5% copper and 0.2 gram per tonne gold at a cut-off grade of 0.4% copper.

The Falconbridge Group has a 70% interest in the El Morro property from Metallica Resources Inc. having paid US$10 million in cash to Metallica Resources Inc. and it is now preparing a pre-feasibility study. If either party dilutes its interest in the property to 10% or less, their interest will convert to 2% net smelter royalty. Other agreement obligations have been met, including an initial cash payment of US$300,000, subscribing for US$1 million in shares of Metallica Resources Inc. and completing aggregate expenditures on the property of more than US$10 million. The Enlarged Xstrata Group intends to maintain the property and satisfy its outstanding legal and environmental obligations. In 2006 pre-feasibility level work has been carried out. Key elements of this work have included metallurgical studies as well as an infill diamond drill programme designed to upgrade the La Fortuna resource to the measured and indicated categories.

Rosario West, Chile

The first stage of the Inferred Resource estimate on Collahuasi's Rosario West zone was completed in 2005. Exploration results indicate the Rosario West zone contains an inferred mineral resource estimated at 248 million tonnes grading 1.54% copper at a 0.4% copper cut-off. The joint venture partners (Anglo American, Falconbridge Limited and a Japanese consortium led by Mitsui & Co., Ltd.) believe that these exploration results further demonstrate the potential of developing resources at Collahuasi.

The mineral resource is located in the central part of the Rosario West zone, and only 300 metres from the projected edge of the Rosario open pit. The mineralised zone, as currently defined, remains open to the north, south and at depth, and is thought to occupy approximately 50% of the total prospective area.

Copper mineralisation is principally contained in a structurally controlled chalcocite supergene blanket that formed over a swarm of high sulfidation veins. These results indicate potential to extend the life of the current operation, and add leachable resources to the existing reserve base. Portions of the resource contain elevated arsenic content that will be subject to further study.

Collahuasi has extended the drill programme into 2006. Although Rosario West is the main focus of the current diamond-drill campaign, exploration drilling is also in progress on the Poderosa zone, located immediately southeast of the Rosario operation, where geophysical surveys have yielded strong anomalies.

Since start-up the operating experience has increased the throughput of Collahuasi from the nameplate design capacity of 110,000 tonnes per day to over 130,000 tonnes per day in July 2006 using the same equipment. However, there is potential to increase capacity to 150,000 tonnes per day and this increased capacity is currently in the process of being implemented depending on water availability. The focus of the management team is on the continued optimisation of the current facilities through a series of debottlenecking initiatives allowing for increased production.

Further expansion is also being assessed due to the existing large and growing resource base. Although the current resource base could support further expansion on its own, exploration efforts have also identified a new high grade zone (named "Rosario West"), which is approximately 250 metres south of the Rosario pit. In addition, other geological anomalies have also been identified that could further increase the size of the Rosario West resource, currently estimated to be in excess of 250 Mt of 1.5% copper. The strategy is to further define the potential of this new resource which, given its size and high copper grades, could provide the most profitable ore to support a further expansion in copper production.

Antamina, Peru

Adding additional grinding capacity is being assessed with the potential installation of a pebble crushing circuit which would assist SAG milling of hard ores (M4/M4A) and, therefore, increasing the overall throughput and production of metal in concentrate. Engineering is currently being completed with a decision to implement expected in 2006.

West Wall, Chile

The West Wall property is located in Region V, about 100 kilometres north of Santiago, Chile at an elevation of 3,000 metres to 3,700 metres. The Falconbridge Group satisfied all outstanding earn-in obligations in 2005 under a joint venture with Minera Anglo American Chile, and is currently vested at 50%. A low grade porphyry resource was identified on the property in the 1980s by Minera Anglo American Chile and Noranda discovered a new porphyry system, referred to as the Lagunillas zone, located three kilometres to the southwest. Diamond drilling in 2002 and 2005 outlined a secondary enriched blanket of copper mineralisation underlain by significant primary mineralisation. The zone extends over an area of 1,200 metres north-south and ranges from 350 to 450 metres in width. Economic evaluation of the mineralisation revealed the zone to be uneconomic due to moderate grade and significant thickness of barren leach cap.

Discussions between the partners are ongoing in respect of continuing exploration.

Frieda River, Papua New Guinea

The Falconbridge Group optioned the Frieda River property in Papua New Guinea from Highlands Pacific Ltd. ("Highlands Pacific") in January 2002. The property is located in northern Papua New Guinea and contains mineral resources in three separate copper deposits (Horse-Ivaal-Trukai, Koki and Nena). The agreement with Highlands Pacific allows for the Enlarged Xstrata Group to earn a 72% interest in any or all of the properties by spending an aggregate US$5 million over five years and completing a feasibility study on an elected property or properties. The 72% interest is subject to reduction if the Papua New Guinean government exercises its right to acquire up to a 30% interest in the project. During the option period, the Enlarged Xstrata Group may acquire 72% of the Nena copper-gold deposit, which is located within the Frieda River Property by paying US$10.8 million and completing a feasibility study.

As part of a 1996 prefeasibility study, Highlands Pacific estimated an inferred resource of 270 Mt of 0.4% copper and 0.3 grams per tonne gold, at a 0.2% copper cut-off grade for the Koki system and the Nena deposit was estimated to contain measured and indicated resources totalling 49.8 Mt at 2.2% copper and 0.6 grams of gold per tonne at a 0.5% copper cut-off grade. Incorporation of more recent drilling into a revised block model in 2003, followed by an optimisation study in 2004, estimated the Horse-Ivaal-Trukai deposit to contain indicated mineral resources totalling 74.6 Mt at a grade of 0.63% copper and 0.37 grams per tonne gold plus inferred mineral resources totalling 360 Mt grading 0.6% copper and 0.38 grams per tonne gold in a potential open pit.

The 2005 work programme on the Frieda River project closed off the northern and southern extensions of the Nena deposit and focused on identifying high grade Nena-style copper-gold mineralisation at North Debom, Hiro Ridge and Ekwai Debom. The best intersections came from Ekwai Debom where hole 053NOR05 cored 204 metres of 0.81% copper and 0.22 grams per tonne gold, including 48 metres of 1.85% copper and 0.22 grams per tonne of gold (18m to 66m). A follow-up hole (076NOR05) located 50 metres to the north intersected 24 metres of 3.20% copper, 0.36 grams per tonne of gold, starting at a hole depth of 42 metres. Drilling in 2004-2005 increased the Nena mineral resource in-situ copper tonnes by 20%. The new optimised resource stands at 42.7 Mt at 3.09% copper and 0.59 grams per tonne of gold in a potential open pit. A metallurgical drilling programme in 2005 has been successful in collecting geological end members for evaluation at the Falconbridge Technology Centre. The overall objective is aimed at enhancing potential recoveries and concentrate grades within the Nena high sulfidation system.

The exploration work programme for 2006 is concentrating on increasing the porphyry hypogene mineral resource in order to facilitate a large tonnage mining and processing operation. Areas such as Kokomo, Koki, Horse East and Guria are considered to have the highest potential for discovering additional tonnes. Higher grade, near surface secondary enriched

zones associated with the porphyries will also be targeted. Pending a favourable outcome of the phase 1 metallurgical tests, phase 2 will be implemented involving laboratory flotation tests in order to arrive at a statement of expected grades and recoveries. Hydrometallurgical test work will be undertaken to further explore the leaching process alternatives.

Lomas Bayas Expansion, Chile

As part of the Falconbridge Group's review of the Fortuna de Cobre deposit, the development of the exploration tunnel began in March 2005 and is now complete. Construction of the pilot plant was completed in August 2005 and pilot testing (the first stage of two) is expected to be completed in November 2006. The results of conceptual studies to optimise the development of Fortuna and integration with Lomas are being assessed. A decision on which alternative to pursue is expected to be taken later in 2006.

Aluminum Business summary

Introduction

Alumina (aluminium oxide) is produced from bauxite, the basic aluminium-bearing ore, by a chemical process. Aluminium is, in turn, produced from alumina by an electrolytic process which uses large quantities of electrical energy to separate the aluminium from the oxygen in alumina. The smelting of one tonne of aluminium requires between 14 and 18.5 megawatthours of electric energy. Depending upon quality, between four and five tonnes of bauxite are required to produce approximately two tonnes of alumina, which yield approximately one tonne of aluminium.

The Aluminum Business's aluminium products include primary aluminium in the form of 1,500 lb standard ingots (sows), billet, electrical conductor rod and foundry alloy. The Aluminum Business's aluminium fabricated products include fin stock for the air conditioning, refrigeration and automotive industries; container stock used for semi-rigid food packaging and disposable cookware; converter foil used in flexible packaging for the food, juice and pharmaceutical industries; conductor strip for transformers.

In each of the year ended 31 December 2005 and the six-month period ended 30 June 2006, 99.9% of the Aluminum Business's consolidated aluminium sales were made in North America.

The Aluminum Business operates six plants in the United States that produce alumina, primary aluminium and aluminium foil, as well as a mining operation in St. Ann, Jamaica. The alumina plant and the bauxite mining operations are operated under a 50% joint interest with Century Aluminum Company. In the year ended 31 December 2005, approximately 93.6% of consolidated aluminium sales were to United States customers, compared with 93.8% for the six-month period ended 30 June 2006.

The Aluminum Business's fabricated products operations purchase the majority of the Aluminum Business's primary metal requirements from third parties. This allows the primary reduction plant to optimise product mix by selling value-added products to third parties. St. Ann Bauxite produces all of the bauxite used at the Gramercy alumina refinery, and sells excess bauxite to third parties. The Gramercy alumina refinery, which currently has the capacity to produce just over one million tonnes of smelter grade alumina, plus an additional 200,000 tonnes of chemical grade alumina, supplies all of the alumina used at the Aluminum Business's New Madrid smelter, and sells the balance of its alumina to Century Aluminum Company or third parties.

Reserve and resource base

The table below sets out the Aluminum Business's attributable aluminium reserve base as at 31 December 2005 (the Aluminum Business has no reportable resource base):

			Mineral reserves[1]	
Mine	**% Ownership**	**Commodity**	**Proven**	**Probable**
			Mt (except as otherwise stated)	
St Ann Bauxite	50.0		9.708	19.593
		% Aluminium	25.37	24.91

Notes

The above table sets out the Aluminum Business's attributable aluminium reserve base, based on the total mine basis figures in the Falconbridge Group Mineral Reserves and Mineral Resources Information. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve estimates.

(1) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

Production

The tables below set out the total mine production and attributable primary aluminium and bauxite production of the Aluminum Business for the years ended 31 December 2004 and 31 December 2005 and for the six months ended 30 June 2005 and 30 June 2006:

Total mine production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
	tonnes			
Primary aluminium	247,472	245,581	123,078	125,698
Bauxite	660,858	3,744,788	1,882,417	2,512,158

Note

(1) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Attributable production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
	tonnes			
Primary aluminium	247,472	245,581	123,078	125,698
Bauxite	330,429	1,872,394	941,209	1,256,079

Note

(1) See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Financial information

The table below provides selected summary financial information in relation to the Aluminum Business for the year ended 31 December 2004 and the year ended 31 December 2005 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003") and for the six months ended 30 June 2006 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006"):

	Audited Restated Canadian GAAP Year ended 31 December 2004		Audited Canadian GAAP Year ended 31 December 2005		**Unaudited Canadian GAAP Six months ended 30 June 2006**	
Aluminum Business	US$m	As a percentage of the Falconbridge Group (%)	US$m	As a percentage of the Falconbridge Group (%)	US$m	As a percentage of the Falconbridge Group (%)
Revenues	935	13.8	1,077	13.2	676	9.9
Income generated from operating assets[1]	89	6.4	106	5.8	120	6.1

Note

(1) For a definition of income generated from operating assets, see the section of this document headed "Presentation of Information – Presentation of financial information – Supplemental performance measures in respect of the Falconbridge Group".

Cost curve

A cost curve provided by Brook Hunt for 2005 ranks the Aluminum Business in the third quartile of global aluminium smelter producers. See the section of this document headed "Presentation of Information – Cost curves".

For an overview of the industry in which the Aluminum Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Aluminum industry overview".

Description of the Aluminum Business's operations

Primary products

Alumina requirements are supplied by Gramercy Alumina LLC ("Gramercy") of Louisiana. On 1 October 2004, Noranda Aluminum, Inc. and Century Aluminum Company each purchased, from Kaiser Aluminum Inc., a 50% ownership interest in Gramercy and a 50% economic interest in the St. Ann Bauxite mine in Jamaica.

The Aluminum Business operates a primary aluminium reduction plant located adjacent to the Mississippi River, near New Madrid, Missouri. The plant has three potlines that produced 245,600 tonnes of molten aluminium in the year ended 31 December 2005 and 125,700 tonnes in the six-month period ended 30 June 2006 and the smelter is in the process of increasing the metal production output to 265,000 tpa by 2011. The site also contains a carbon plant that produces anodes for the reduction cells, and a cast house capable of producing 1,500lb standard ingots and value-added products such as billet, electrical conductor rod and foundry alloy.

The smelter requires constantly approximately 480 megawatts of power, which it receives through a 15-year contract with AmerenUE. The contract has an effective date of 1 June 2005 and includes one-year extensions with a five-year notice period. The contract provides for a power rate of approximately US$35/MWh, with any future rate changes subject to approval by the regulatory authorities of the State of Missouri.

Fabricated products

The Aluminum Business operates four plants in the South-Eastern United States that combine to serve a broad range of customer needs. The Enlarged Xstrata Group is the second largest producer of aluminium foil products in North America. In the year ended 31 December 2005, third-party shipments totalled 178,000 tonnes and in the six-month period ended 30 June 2006, totalled 95,000 tonnes.

The original Huntingdon, Tennessee plant, which the Aluminum Business has operated since 1979, has an approximate annual production capacity of 60,000 tonnes. It produces heavy-gauge foil from continuous cast metal, serving the electrical, semi-rigid container and air conditioning fin stock markets. The Salisbury, North Carolina plant also operates continuous casters and has an approximate annual production capacity of 45,000 tonnes of light and heavy-gauge foil. The Newport, Arkansas facility processes re-roll material into lighter gauge coated and uncoated foil. It can produce approximately 15,000 tonnes annually. The major products produced at the Salisbury and Newport plants are flexible packaging materials, air-conditioning fin stock and converter foil used in food containers.

The Falconbridge Group recently completed construction of a modern aluminium foil plant at a cost of US$226 million (excluding financing) to reinforce the Aluminum Business's position as a leading, low-cost supplier of heavy-gauge foil products. The foil plant is located adjacent to the existing Huntingdon plant and has an annual production capacity of approximately 107,000 tonnes of heavy-gauge foil, bringing the Aluminum Business's total annual foil production capacity to 227,000 tonnes. The plant utilises state-of-the-art technology in casting, rolling and material handling. The new foil plant includes four new continuous casting machines, a high-speed, wide-width rolling mill with associated finishing equipment and an automated product storage and retrieval system. The automated storage and retrieval system is designed to reduce cooling time and lower handling costs. The high speed, low-gauge casters and wide-width rolling mill are designed to improve product quality, lower scrap rates and increase productivity.

Sales and marketing of the Aluminum Business's aluminium

Primary products (billet, foundry and rod) are marketed to customers using three Regional Sales Managers, three foundry alloy distributors and one rod distributor. Approximately 97% of those products are sold directly to the end-user with the balance being sold through the distribution network. Customers are based throughout North America with the greatest concentration in the central United States. Also, an agreement is in place with a German company for the marketing and manufacturing of high strength primary die-casting alloys (which are patent protected) in North America.

New US federal efficiency standards for central air conditioning units have boosted demand for finstock, which is the Aluminum Business's most important end-use market. Growth has also remained strong in the semi-rigid container market largely because of rising demand for prepared foods.

Projects and developments

Currently, the aluminium smelter has four projects in progress intended to achieve world-class performance when compared to similar technology. These projects are intended to increase metal production by 12,000 tonnes per year by 2011 and to result in improved energy efficiency.

Norandal is considering a brownfield expansion of its Salisbury rolling plant which contemplates adding a used breakdown mill along with either two or three new continuous casters to support the finishing capabilities of the existing plant. Depending on the number of casters, capital costs are estimated to be between US$50 million and US$75 million. The project is currently in the early stages of development and, if approved, is intended to commence between 2008 and 2010.

Falconbridge Zinc Business summary

Introduction

The Falconbridge Zinc Business markets zinc metal directly from its Kidd Creek division and acts as a marketing agent for the Noranda Income Fund's Canadian Electrolytic Zinc refinery (CEZ). Most of the production from these facilities is sold directly to the steel industry and other major consumers of zinc. CEZ and Kidd Creek are jointly a major supplier of zinc metal and zinc powders, accounting for approximately 4% of world refined production. In each of the year ended 31 December 2005 and the six-month period ended 30 June 2006, over 95% of the Falconbridge Zinc Business's consolidated sales of zinc on behalf of Kidd Creek and CEZ were in North America, with the balance sold to customers in Europe and Asia. The galvanising sector represented approximately 55% of the Falconbridge Zinc Business's consolidated zinc sales in each of the year ended 31 December 2005 and the six-month period ended 30 June 2006.

Zinc production is dependent on concentrates from mines. The raw material feed stream for the CEZ and Kidd Creek zinc refineries is managed through a combination of third-party purchases and the integrated mine production of the Enlarged Xstrata Group. This allows the Falconbridge Zinc Business to take advantage of transportation, cost differentials and the treatment capabilities of its refineries. Concentrate purchases originate with both local mines and, subject to market conditions, offshore mines. The Falconbridge Zinc Business also markets Antamina zinc concentrates to European customers.

The Falconbridge Zinc Business produces zinc concentrate and copper concentrates at its mines and procures and processes zinc concentrate at the Canadian Electrolytic Zinc Limited ("CEZ") refinery owned by the Noranda Income Fund. The zinc business unit also produces lead concentrates at the Brunswick mine and procures and processes lead/silver concentrates, residues and recycle materials at the Brunswick smelter. Marketing of the CEZ refinery and the Falconbridge Zinc Business's zinc metal and related alloys, as well as the Falconbridge Zinc Business's lead metal and related alloys, is carried out through its head office in Toronto, Ontario and affiliated marketing offices in Zug, Switzerland and Cleveland, Ohio. The marketing office in Zug also purchases and sells base metals within the European market. In addition, the Falconbridge Zinc Business operates the General Smelting of Canada foundry in Lachine, Quebec, which produces various lead and zinc alloys and anodes. The Falconbridge Zinc Business also operates NorFalco LLC, which markets, transports and distributes the sulphuric acid produced by all Falconbridge Group copper, zinc and nickel operations located in Canada to customers in North America.

Reserve and resource base

The table below sets out the Falconbridge Zinc Business's attributable zinc reserve and resource base as at 31 December 2005 (the Falconbridge Zinc Business has no reportable Inferred Resources):

			Mineral reserves[1]		Mineral resources (in addition to mineral reserves)[1]	
Mine	% Ownership	Commodity	Proven	Probable	Measured	Indicated
			Mt (except as otherwise stated)			
Brunswick Mine	100.0		13.230	1.462	1.542	1.942
		% Copper	0.38	0.21	0.34	0.30
		% Zinc	8.83	8.26	9.07	9.60
		% Lead	3.52	3.63	3.53	4.07
		Silver (g/t)	104	106	94	101

Notes:

The above table sets out the Zinc Business's attributable copper, zinc, lead and silver reserve and resource base, based on the total mine basis figures in the Falconbridge Group Mineral Reserves and Mineral Resources Information. See the section of this document headed "Presentation of information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of the reserve and resource estimates.

[1] In the above table, mineral resources are additional to mineral reserves and are not included in the mineral reserve estimates. See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation" for an explanation of the basis of preparation of reserve amounts.

Production

The tables below set out the total mine production and attributable production of the Falconbridge Zinc Business for the years ended 31 December 2004 and 31 December 2005 and the six months ended 30 June 2005 and 30 June 2006:

Total mine production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
		tonnes		
Mined zinc	367,000	265,600	139,100	133,900
Refined zinc	398,857	386,112	211,039	205,179
Mined lead	73,700	75,400	39,300	38,300
Refined lead	83,800	76,100	44,500	42,400

Note

[1] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Attributable production[1]	Year ended 31 December		Six months ended 30 June	
	2004	2005	2005	2006
		tonnes		
Mined zinc	367,000	265,600	139,100	133,900
Refined zinc	190,857	181,812	109,439	107,079
Mined lead	73,700	75,400	39,300	38,300
Refined lead	83,800	76,100	44,500	42,400

Note

[1] See the section of this document headed "Presentation of Information – Ore reserve and mineral resource reporting – basis of preparation – Resources and reserves, production and sales" for an explanation of the basis of preparation of the production amounts.

Financial information

The table below provides selected summary financial information in relation to the Falconbridge Zinc Business for the year ended 31 December 2004 and the year ended 31 December 2005 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Financial Information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003") and for the six months ended 30 June 2006 (which has been extracted without material amendment from Part X – "Financial Information Relating to the Falconbridge Group – Unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006"):

	Audited Restated Canadian GAAP Year ended 31 December 2004		Audited Canadian GAAP Year ended 31 December 2005		Unaudited Canadian GAAP Six months ended 30 June 2006	
Zinc Business	US$m	As a percentage of the Falconbridge Group (%)	US$m	As a percentage of the Falconbridge Group (%)	US$m	As a percentage of the Falconbridge Group (%)
Revenues	415	6.1	504	6.2	570	8.4
Income generated from operating assets[1]	14	1.0	60	3.3	215	10.9

Note

[1] For a definition of income generated from operating assets, see the section of this document headed "Presentation of Information – Presentation of financial information – Supplemental performance measures in respect of the Falconbridge Group".

Cost curve

A cost curve provided by Brook Hunt for 2005 ranks the Falconbridge Zinc Business's zinc smelters, on a weighted basis, in the fourth quartile of worldwide production of zinc metal. Brook Hunt has also ranked the Falconbridge Zinc Business's zinc mines, on a weighted basis, for 2005, and concluded that they are in the third quartile of global zinc mine production. See the section of this document headed "Presentation of Information – Cost curves".

For an overview of the zinc industry in which the Falconbridge Zinc Business operates, see Part II – "Information of the Enlarged Xstrata Group's Business – Overview of the industries in which the Enlarged Xstrata Group principally operates – Zinc and lead industry overview".

The Falconbridge Zinc Business's mining operations

Brunswick mine, New Brunswick

The Brunswick mine was developed and commenced operations in the early 1960s. The Falconbridge Group acquired a controlling interest in the mine in 1971 and a 100% interest in 1996. The mine is located approximately 27 kilometres southwest of Bathurst, New Brunswick. The Enlarged Xstrata Group has surface rights and 100% ownership of the mineral rights on 1,030 hectares comprising the No. 12 Crown Grant (Nos. 35097 and 34300). The Brunswick mine is scheduled for closure in 2010.

Production occurs on five main levels to a depth of 1,125 metres. Two shafts provide access. The No. 3 shaft is 1,337 metres deep and is used to hoist personnel, ore and equipment. The No. 2 shaft is 963 metres deep and is used to hoist personnel and supplies. This shaft carries all compressed air and water services for the mine. The remaining cage hoist is used intermittently as a backup to the No. 3 shaft facilities and a second means of egress from the mine.

Mining methods are open stope with delayed backfill including pillar-less, pyramid-shaped open stope sequences and end-slicing. The ore body consists of a series of sub-parallel ore lenses with an average dip of 70 degrees, a composite width of up to 200 metres, a maximum strike length of 1,300 metres and a maximum depth of 1,150 metres.

Ore is processed in the concentrator using grinding, differential flotation, concentrate filtering and drying technologies to produce four products, including zinc, lead, bulk and copper concentrate. Flotation tailings are sent to a paste plant for recovery and production of paste backfill. Residual tailings are sent to the tailings impoundment facility. Process water is recycled back to the concentrator while the excess runs through an effluent treatment facility prior to being discharged.

Processed mine ore increased to an average of 9,700 tonnes per day in the year ended 31 December 2005 and produced 265,600 tonnes of zinc in concentrate. Zinc recoveries in the mill were 88% in the year ended 31 December 2005. Processed mine ore increased to an average of 9,950 tonnes per day in the six-month period ended 30 June 2006 and produced 133,850 tonnes of zinc in concentrate. Zinc recoveries in the mill were 87% in the six-month period ended 30 June 2006.

Matagami division, Quebec

The Bell Allard zinc/copper mine commenced commercial production in January 2000 with an anticipated life of approximately five years. As planned, mineral reserves at the Bell Allard mine were depleted in 2004. As a result, mine operations at Bell Allard ceased during the fourth quarter of 2004.

The Matagami/Bell Allard concentrator and other surface facilities were placed on care and maintenance to support other potential mining projects in this favourable geologic area, such as Perseverance. The facilities are located 10 kilometres southwest of the town of Matagami in northwestern Quebec.

The Falconbridge Zinc Business's smelting and refining operations

Brunswick smelter, New Brunswick

The Brunswick smelter, located in Belledune, New Brunswick, is a lead smelter that processes lead concentrates from the Brunswick mine as well as a wide range of offshore lead and lead/silver concentrates and residues. Consistent with the Falconbridge Group's strategy of increasing its flexibility to treat complex feed materials, construction of a new silver refinery was completed in the first quarter of 2001.

The Brunswick smelter also operates a lead-acid battery recycling facility in Belledune, New Brunswick with a processing capacity of 15,000 tonnes of batteries per year. Most of the used batteries are sourced from the Atlantic Provinces with Quebec and the New England states providing the balance.

In December 2002, the Falconbridge Group announced that the Brunswick smelter would change to a seasonal operation effective 1 July 2003 due to the shortage of economic feed material. Under a seasonal operation the plant will run for eight months a year on Brunswick mine concentrates, third-party sulphates and other third-party material, and will be shut down for the remaining four months each year. However, in 2004 and 2005, the plant ran for over nine months due to the improved availability of concentrate and other materials.

CEZ refinery

The CEZ refinery (in which the Enlarged Xstrata Group has a 25% interest via its 25% stake in the Noranda Income Fund) is located in Salaberry de-Valleyfield, Quebec. The refinery processes zinc concentrate for the production of zinc metal and powders. It is located near the St. Lawrence Seaway and has access to road, rail and sea transportation links. In 2003, 2004 and 2005, over 80% of the zinc concentrate processed at the CEZ refinery was sourced from mines owned or partly owned by the Enlarged Xstrata Group, including the Brunswick mine, Bell Allard mine and Antamina. The refinery's products are marketed in the United States, Canada, Europe and Asia.

A plant optimisation project increased nominal annual plant capacity from 225,000 tonnes to 255,000 tonnes in 1999.

In the year ended 31 December 2005, the plant achieved near record production of 272,400 tonnes despite the fact that production was negatively impacted by the higher iron levels in the feed mix. In the six-month period ended 30 June 2006, production at the plant totalled 130,782 tonnes, compared with 135,542 tonnes in the six-month period ended 30 June 2005. During the first quarter of 2006, production was negatively affected by the breakdown of one of the electrolyte circulation pipes in the refinery. This breakdown has not, however, affected the target production for the year ending 31 December 2006.

In May 2002, Noranda sold the CEZ processing facility to the Noranda Income Fund for a combination of cash and ordinary and priority units of the Fund. These priority units were then sold by Noranda pursuant to two separate public offerings. The Enlarged Xstrata Group continues to own a 25% interest in the Noranda Income Fund in the form of ordinary units. The ordinary units are subordinated in respect of cash distributions to the priority units until 2017.

The Enlarged Xstrata Group is party to a processing agreement to sell to the refinery up to 550,000 tonnes of zinc concentrate annually until 2017, an amount expected to support 100% of its annual production at planned rates for that period. The refinery pays the Enlarged Xstrata Group for the concentrate based on the LME price for "payable zinc metal" contained in the concentrate less a treatment charge or processing fee, initially set at C$0.352 per pound of payable zinc metal. The processing fee is adjusted annually to reflect changes in certain costs and was C$0.361 per pound in 2005.

Pursuant to various management agreements, the Enlarged Xstrata Group will continue to operate and manage the refinery and also provide management, marketing and other administrative services to the Noranda Income Fund.

NorFalco, USA

In April 1998, Noranda, Former Falconbridge and DuPont agreed to form Noranda DuPont LLC, a joint venture to market, transport and distribute sulphuric acid in North America. On 29 June 2001, Noranda DuPont LLC redeemed DuPont's 50% voting interest in Noranda DuPont LLC and its name was changed to NorFalco LLC ("NorFalco"). NorFalco purchases and resells to consumers all of the Enlarged Xstrata Group's Canadian sulphuric acid production.

NorFalco has developed an extensive distribution infrastructure of tank cars, trucks, marine tankers and terminals in order to supply approximately 1.9 million tonnes of sulphuric acid to consumers in North America. Its staff is based at its head office near Cleveland, Ohio and at the office of its wholly-owned Canadian subsidiary, NorFalco Sales Inc., near Toronto, Ontario. NorFalco was owned by Noranda (65%) and Former Falconbridge (35%) prior to the amalgamation of Noranda and Former Falconbridge and is now 100% owned by the Enlarged Xstrata Group.

Sales and marketing of the Falconbridge Zinc Business's zinc and other products

Marketing of the CEZ refinery and the Falconbridge Zinc Business's zinc metal and related alloys, as well as the Falconbridge Zinc Business's lead metal and related alloys, is carried out through its head office in Toronto, Ontario and affiliated marketing offices in Zug, Switzerland and Cleveland, Ohio. The marketing office in Zug also purchases and sells base metals within the European market.

The Falconbridge Zinc Business sells approximately 275,000 tpa of zinc metal produced on behalf of the CEZ refinery and 140,000 tpa on behalf of the Kidd Creek zinc refinery. Sales are made primarily in Canada and the United States.

The Falconbridge Zinc Business sells to the CEZ processing facility up to 550,000 tpa of zinc concentrate from its own mines and from third party suppliers, under a supply and processing agreement to support 100% of planned production rates to 2017. The Falconbridge Zinc Business markets zinc and bulk concentrates to third party smelters and traders into

the global market. In addition, the Falconbridge Zinc Business acts as sales agent in Europe on behalf of Antamina's frame sales agreements.

The Falconbridge Zinc Business procures third party lead concentrate and secondary feeds for the Belledune Lead Smelter and manages the sale of approximately 75,000 tpa of refined lead.

Projects and developments

Perseverance deposits, Quebec

The Perseverance deposits are located close to the Enlarged Xstrata Group's existing mill infrastructure in Matagami, Quebec. A feasibility study on the Perseverance and Equinox deposits has been completed under the Falconbridge Zinc Business's internal review process.

In anticipation of a positive decision on this project a four-year collective agreement was negotiated in 2004 with the local union to cover the closure of the Bell Allard mine and to facilitate the standby period and the possible opening of Perseverance during the four-year term.

During the second quarter of 2006, the Falconbridge Group acquired the 10% interest in the Perseverance property held previously by Société de Developpement de la Baie James ("SDBJ") for C$6.5 million and now has a 100% interest in the property.

On 11 August 2006, Falconbridge announced that it expected to invest approximately US$130 million (C$145 million) in the development of the Perseverance zinc mine. Construction is expected to last about two years, with the mine's life expectancy estimated at roughly five years. The mine is expected to employ approximately 250 people during the construction's peak period and about 225 thereafter.

The zinc produced at the Perseverance mine will be processed at the Enlarged Xstrata Group's former Matagami mine facilities where, in anticipation of the Perseverance project start-up, Falconbridge retained the administrative offices and concentrator after the Bell-Allard mine's closure in 2004. The annual production of 228,000 tonnes of zinc concentrate will be shipped and processed at the CEZ Refinery in Valleyfield, Quebec. The annual production of 35,000 tonnes of copper concentrate will be shipped and processed at the Horne Smelter in Rouyn-Noranda, Quebec.

Perseverance has measured and indicated resources of 5.1 Mt grading 15.8% zinc, 1.24% copper, 29 grams of silver per tonne and 0.38 gram of gold per tonne. The Falconbridge exploration team won the 2001 Bill Dennis Prospector of the Year Award from the Prospectors and Developers Association of Canada for its discovery of this deposit.

Lady Loretta, Australia

The Lady Loretta project is located north of Mount Isa, in Queensland, Australia. After completing a preliminary feasibility on the project, the Falconbridge Group exercised its option to acquire a 75% interest in the Lady Loretta project in December 2000 from its partner, BUKA Minerals Limited. Permitting is complete. Queensland government approval has been granted for the transfer to BUKA Minerals Limited of the adjacent Lady Annie part of the property (above 150 metres), defined as the Lady Annie sublease. The Enlarged Xstrata Group has not yet taken a decision on the timing of any production.

Lennard Shelf, Australia

In April 2004, the Falconbridge Group entered into an agreement with Teck Cominco to earn a 50% interest in the Lennard Shelf mineral properties, plant and equipment and infrastructure in Western Australia. In order to earn its 50% interest, the Enlarged Xstrata Group will be required to effectively invest approximately A$26 million in exploration, operating, capital expenditures or other advances in Lennard Shelf. The property was acquired by Teck Cominco from Western Metals Limited ("Western Metals") in October 2003 for A$26 million (approximately US$19.5 million).

Lennard Shelf, located in the Kimberly region of Western Australia, 2,500 kilometres north-east of Perth, consists of a number of Mississippi Valley type lead/zinc deposits and a mill with an annual capacity of 3.1 Mt of ore. In the year ended 30 June 2003, Lennard Shelf produced 176,000 tonnes of zinc and 70,000 tonnes of lead. Work was suspended by Western Metals in late November 2003.

The Enlarged Xstrata Group and Teck Cominco are endeavouring to produce a redevelopment plan for the assets. Work includes a detailed review of resources, as well as mine planning and other optimisation work and an exploration programme to expand the current resources. A revised block model was completed in 2004 and used as a basis for a preliminary mine planning exercise. A mineral resource was estimated to contain measured and indicated resources of 2.8 Mt grading 8.47% zinc and 1.96% lead. Inferred resources totalling 300,000 tonnes grading 8.2% zinc and 1.7% lead were also estimated. These resources contain factors for mining recovery and dilution because they were derived from the mining study.

In 2005, a total of 18,066m in 33 holes were drilled to test targets at Pilijippa (9,431m in 14 holes), Limestone Billy Hills (3,473m in 8 holes), Road Gossan (1,556m in 5 holes) and Pillara Range North (3,603m in 7 holes). The best grades and intersections came from the Pilijippa area, however, a detailed review of results is required to determine whether follow-up drilling is warranted. The 2005 programme was aided with 52.2 km of Gradient IP, 22 km of MIMDAS, 2,690 station gravity survey, along with 2 soil surveys. An integration of these data sets will help in selecting the 2006 drill targets.

Teck Cominco has provided a 2006 work plan that has been reviewed and approved by the Joint Venture Operating Committee. The objective of the programme is to identify additional resources. An aggressive drill programme comprised of 32,000m in 52 holes is planned to evaluate the Emanuel Range and Pillara areas with the assistance of additional IP and gravity geophysics. IP surveying is planned for the Mt. Talbot area.

In April 2006, Falconbridge and Teck Cominco agreed to restart the Pillara mine at a rate of 1 Mtpa. Work is progressing to achieve full commercial production during the first quarter of 2007.

The Lennard Shelf mine is expected to produce 70,000 to 80,000 tpa of zinc, on a 100%-basis, for four to five years. The estimated capital cost of the restart is A$23 million (approximately US$17.2 million) on a 100% basis, with an additional A$5 million (approximately US$3.7 million) in pre-production costs. First concentrate production is planned for early 2007.

Other products and activities of the Falconbridge Group

Lead metal

The Enlarged Xstrata Group is engaged in the mining of lead and the refining and recycling of lead metal at the Enlarged Xstrata Group's wholly-owned Brunswick Mine and Brunswick Smelter. The marketing of lead metal and its alloys is carried out from offices in Toronto, Canada, Cleveland, Ohio, USA, and Zug, Switzerland. In 2005, over 90% of the Falconbridge Group's consolidated lead metal sales were made in Canada and the United States.

As is the case for copper and zinc production, lead production is dependent upon the availability of mine concentrates. In 2005, approximately 65% of the Brunswick lead smelter feed was supplied by the Brunswick Mine, with the balance sourced from lead/silver concentrates and metal-bearing residues.

Sulphuric Acid

Sulphur dioxide gas is a by-product of smelting and refining operations. Most of the sulphur dioxide gas produced at the Enlarged Xstrata Group's Canadian and Chilean smelters is captured before stack emission and converted into sulphuric acid or liquid sulphur dioxide in order to comply with sulphur dioxide emission limits. The Canadian sulphuric acid production is sold to NorFalco, which markets, transports and distributes sulphuric acid in North America. In 2005, NorFalco and its wholly-owned Canadian subsidiary marketed approximately 1.9 Mt of sulphuric acid from the Falconbridge Group and third-party suppliers. Sulphuric acid produced at the Enlarged Xstrata Group's Chilean smelter is sold by Falconbridge Chile Limitada locally to mining companies using this product for their copper leaching operations.

Magnesium

The Enlarged Xstrata Group's Danville Quebec magnesium plant has a design capacity of 58,000 tonnes of pure and alloy magnesium products and is owned 80% by the Enlarged Xstrata Group and 20% by Société générale de financement du Quebec.

Magnesium is classified as a light metal. By volume, it is approximately two-thirds the weight of aluminium and one quarter the weight of steel. Magnesium is used in several applications, including the production of aluminium alloys typically containing between 0.5% and 3.5% magnesium (can stock for aluminium beverage containers is the largest application)

and die-casting of component parts for the automotive, electronics and manufacturing industries. Magnesium die-cast alloys have excellent strength-to-weight ratios and are attractive for many applications.

Other subsidiaries

Novicourt

Novicourt, a publicly traded Quebec company, is a Canadian exploration and development company focused on the discovery of new mineral deposits mainly in Canada and Brazil. Novicourt's primary asset until the depletion of ore in July 2005 was a 45% direct interest in the Louvicourt copper/zinc mine located near Val-d'Or, Quebec. Novicourt also owns a 45% interest in the Louvaur/Alexis Joint Venture, which carries out exploration on land surrounding the Louvicourt deposit. Novicourt also participates in exploration joint ventures with others, including Falconbridge.

On 12 July 2005, the Louvicourt mill completed the processing of the final ore produced from the Louvicourt Mine as the ore reserves were depleted.

Copper production from the Louvicourt mine in 2005 was 17,000 tonnes (2004 – 33,000 tonnes) reflecting the reduced ore production and lower copper ore grades averaging 2.2% (2004 – 2.8%). Zinc production was 13,000 tonnes of contained zinc (2004 – 21,000 tonnes). Due to the mine's closure in July 2005, Novicourt's total net revenue in 2005 was C$36.6 million, 40% lower than the total net revenue of C$59.8 million in 2004.

On 22 June 2006 Falconbridge announced that it would offer to acquire by way of takeover bid all of the outstanding common shares of Novicourt that it does not already own (7,620,207 shares) at a cash offer price of C$2.30 per Novicourt share. Falconbridge then held approximately 62.1% of the outstanding common shares of Novicourt. Falconbridge offered an aggregate of approximately C$17.5 million (approximately US$15.7 million) in cash under the offer. The offer, as extended, expired on 22 August 2006, resulting in Falconbridge now holding approximately 93.6% of the common shares of Novicourt. The balance of the Novicourt shares will be acquired by Falconbridge under a second step business compulsory acquisition transaction, expected to be completed in October 2006, after which Novicourt will be a wholly-owned subsidiary of Falconbridge.

Magnola

In January 2003, Falconbridge announced plans for a temporary shutdown of the Falconbridge Group's magnesium business, which is held by Magnola Metallurgy Inc. ("Magnola"), a company owned 80% by the Enlarged Xstrata Group, in response to major structural changes which had taken place in the global magnesium industry. A pre-tax charge of US$520 million was recorded in Falconbridge's 2002 year-end financial results to reduce the carrying value of the magnesium project, as a result of the market conditions.

In 1997 when the decision to proceed with the Magnola project was made, magnesium offered very attractive growth opportunities, on the premise of its inherent strength-to-weight characteristics and the potential demand in the automobile industry. Since that time, exports of low-cost Chinese production have continued to grow and have depressed prices.

At the time of the announcement of the shutdown, there were approximately 380 employees located at the magnesium operations in Danville, Quebec.

In 2003, a further US$33 million pre-tax charge related to costs incurred to shut down the plant was recorded in the first quarter. As of 31 December 2005 the book value of the Falconbridge Group's magnesium business was approximately US$280 million (31 December 2004 – US$272 million).

Statutory authorisations, licences and concessions

Nickel

Falcondo

Falcondo holds a mining concession and owns mining and mineral processing facilities for the production of ferronickel located near the town of Bonao, approximately 80 kilometres northwest of Santo Domingo, Dominican Republic.

Properties and mines

Falcondo has been mining and processing nickel laterite ore in the Dominican Republic since 1971. Falcondo's mining concession covers approximately 21,830 hectares. Falcondo owns 4,831 hectares, 4,802 of which are inside the mining

concession and include the mining areas and the mineral processing facilities, and 29 of which are outside the mining concession and include the townsite at Bonao. The term of the mining concession is for an unlimited period.

Summary of property holdings

Block number	Mineral area	Concession name
BLOCK A		QUISQUEYA NO. 1 CONCESSION
BLOCK C1 W		QUISQUEYA NO. 1 CONCESSION
BLOCK D2		QUISQUEYA NO. 1 CONCESSION
BLOCK B		QUISQUEYA NO. 1 CONCESSION
BLOCK C1 E		QUISQUEYA NO. 1 CONCESSION
BLOCK E		QUISQUEYA NO. 1 CONCESSION (PROJECT AREA)
Total area	21,830 hectares	

The Quisqueya No. 1 Concession is located principally within the District of Monsenor Nouel, Province of La Vega, Dominican Republic.

The term of the mining concession is for an unlimited period.

Raglan

The Raglan property is located 105 kilometres south of the northern tip of the Ungava (Nunavik) Peninsula in the Province of Quebec, approximately 1,800 kilometres north of Montreal. The property comprises 1,226 map-designated claims covering 48,149 hectares and ten 20-year mining leases covering 963 hectares. The first of the leases expires in June 2016. All are renewable for three 10-year terms, provided that mining has taken place for at least two of the preceding ten years. One mining lease application covering 32 hectares remains outstanding from 2005.

Summary of property holdings

In addition to the above noted operating assets, there are 1226 map designated claims that make up the surrounding Raglan property.

Sudbury

The Falconbridge Group has been mining nickel/copper ores in the Sudbury area of northern Ontario since 1929. The Sudbury Mines/Mill principal nickel/copper producing properties in the Sudbury area are located in the Townships of Falconbridge, Levack, Garson, Dowling and Blezard. The properties comprise of patented land and licences of occupation.

Summary of property holdings

Lindsley Mine

The property comprises six patents covering 919.50 acres of Mineral Rights and 553.79 acres of Surface Rights located in Blezard Township in the Sudbury Mining Division.

Falconbridge and East Mine Area

The property comprises 53 patented mining claims covering 2115.09 acres of Mineral and Surface Rights located in Falconbridge and Garson Townships in the Sudbury Mining Division. A portion of this property covers the area where the smelter and related infrastructure are located.

Fecunis, North, Strathcona, Longvack South and Fraser Mines

The property comprises 38 patented mining claims covering 1614.91 acres of Mineral and Surface Rights as well as three Licence of Occupation covering 31.10 acres all of which are located in Levack Township in the Sudbury Mining Division. A portion of this property covers the area where the Fraser Mine is located.

Hardy, Onaping and Craig Mines
The property comprises 18 patented mining claims covering 746.77 acres of Mineral and Surface Rights as well as one (1) Licence of Occupation covering 3.75 acres all of which are located in Levack and Dowling Townships in the Sudbury Mining Division. A portion of this property covers the area where the Onaping Mine is located.

Hardy, Onaping and Craig Mines
The property comprises 17 patented mining claims covering 716.88 acres of Mineral and Surface Rights located in Levack and Dowling Townships in the Sudbury Mining Division. A portion of this property covers the area where the Craig Mine is located.

Nickel Rim South Deposit
The property comprises two patented mining claims covering 89.68 acres of Mineral and Surface Rights located in MacLenan Township in the Sudbury Mining Division.

In addition to the above noted operating assets, there is a much larger land package that makes up the Sudbury Property.

All cover Mining and Surface Rights, except for LO 10551, which is for Mining Rights only.
Certain Parcels in Falconbridge and Garson Township are subject to a Joint Venture Agreement. The Enlarged Xstrata Group holds a 40% interest in the Mining Rights and a 100% interest in the Surface Rights.

In addition to the above noted operating assets, there is a much larger land package that makes up the Sudbury Property.

Montcalm

The Montcalm nickel mine was brought into production in 2004. It is located 100 kilometres east of the Kidd Metallurgical Site in Montcalm Township in the Province of Ontario and comprises four 21 year leases covering mining and surface rights over 831 hectares.

Araguaia, Brazil

In 2005, the Nickel Business discovered two new significant nickel laterite deposits on its Araguaia properties in the Para State of northern Brazil. These are new grassroots discoveries in an area where the first recorded drilling for base metals was completed by Falconbridge's exploration team in October 2004.

The deposits occur on properties owned by the Enlarged Xstrata Group or where the Enlarged Xstrata Group has the right to earn a 100% interest by completing a series of cash payments totaling US$2.4 million staged over eight years. Falconbridge has consolidated its ground position over the key targets such that it now controls mineral rights (Exploration Licenses) to almost 5,400 square kilometres (539,000 hectares).

Copper

Altonorte Smelter

The Altonorte copper smelter is located in northern Chile.

Summary of property holdings

The following table sets forth the mining development concessions for the Falconbridge Group's installations at the Altonorte site. All of the concessions have been granted and are maintained by the payment of annual taxes.

Antamina

The Antamina operation is located in the Andes mountains in Peru, approximately 270 kilometres north of Lima at an elevation of 4,300 metres.

Summary of property holdings

Antamina

The property consists of 70 concessions covering 7,725.25 hectares located in the San Marcos District in the Province of Huari.

Antamina No 1

The property consists of five concessions covering 4,014.00 hectares located in the San Marcos District in the Province of Huari.

Antamina – Huarmey

The property consists of six concessions covering 3,500.00 hectares located in the Huarmey and Paypay Districts in the Province of Huarmey.

Collahuasi

The Collahuasi property covers 435 exploitation concessions over 128,621 hectares and 184 exploration concessions over 61,800 hectares. The property is located in northern Chile, about 180 kilometres southeast of the port of Iquique, at an elevation of 4,300 metres. It contains two separate porphyry copper deposits, known as Ujina and Rosario: the Ujina high grade secondary enrichment has been mined already but an important reserve of primary copper ore remains; Rosario has large tonnages of high grade primary ore and important secondary enrichment zones. The Huinquintipa oxide copper deposit is located downstream from the Rosario deposit. In addition, the property contains high-grade copper mineralisation at the adjacent Rosario West deposit.

Summary of property holdings

The following table sets out the exploitation concessions covered by the Collahuasi property:

Property	Number of exploitation concessions	Area (ha)
Sector Yacimiento	184	35,399
Sociedad Contractual Minera Michincha	29	22,920
Comuna de Iquique	18	2,127

Lomas Bayas, Chile

The Lomas Bayas mine comprises seven exploitation concessions covering approximately 2,022 hectares. The Fortuna de Cobre deposit comprises 11 exploitation concessions covering approximately 1,216 hectares. Falconbridge also holds 25 exploitation concessions and two exploitation concession application covering approximately 4,669 hectares between the Lomas Bayas mine and the Fortuna de Cobre deposit as well as 61 exploration concessions and two exploitation concession applications covering an area around the Fortuna de Cobre deposit.

The Lomas Bayas mine is located in the Second Region of Chile, approximately 110 kilometres north-east of the port city of Antofagasta. The mine is situated at an altitude of 1,500 metres in the Atacama Desert. The Fortuna de Cobre deposit is situated 3 kilometres to the south of the Lomas Bayas mine.

Summary of property holdings

The following table sets forth the mining development concessions for the Falconbridge Group's Lomas Byas operations. All of the concessions have been granted.

El Pachón, Argentina

The El Pachón property is located in the province of San Juan, Argentina at an elevation of 3,600 to 4,100 metres about three kilometres from the Chilean border and seven kilometres from the Los Pelambres mine.

Summary of property holdings

The property consists of 48 concessions covering 1882.26 hectares.

El Morro, Chile

The El Morro property is located in Region III, 140 kilometres east of the port of Huasco at an elevation of 4,000 to 4,300 metres.

Summary of property holdings

The property consists of 163 exploitation concessions covering 41,225.98 hectares.

West Wall, Chile

The West Wall property is located in Region V, about 100 kilometres north of Santiago, Chile at an elevation of 3,000-3,700 metres. A low grade porphyry resource was identified on the property in the 1980s by Minera Anglo American Chile and Noranda discovered a new porphyry system, referred to as the Lagunillas zone, located three kilometres to the southwest. Diamond drilling in 2002 and 2005 outlined a secondary enriched blanket of copper mineralisation underlain by significant primary mineralisation. The zone extends over an area of 1,200 metres north-south and ranges from 350 to 450 metres in width. Economic evaluation of the mineralisation revealed the zone to be uneconomic due to moderate grade and significant thickness of barren leach cap.

Summary of property holdings

The following table sets forth the mining development concessions for the Falconbridge Group's West Wall operations.

Mining development concession	Area (ha)

Aluminum

The Enlarged Xstrata Group operates six plants in the United States that produce alumina, primary aluminum and aluminum foil, as well as a mining operation in St. Ann, Jamaica.

St. Ann Bauxite

Summary of property holdings

The St. Ann Bauxite plant facilities and associated railroad are located on approximately 420 hectares of land owned 51% by the Government of Jamaica and 49% by St. Ann Bauxite Limited. Other lands required for mining remain under the ownership of the Government of Jamaica and are held under a mining lease. The area covered by the mining lease is approximately 10,000 hectares of which approximately 1,100 hectares of rehabilitated lands no longer required for mining activity have been returned to the Government of Jamaica as required under the terms of agreement. The lease provides for a minimum of 4.5 Mt per year until 2030.

Zinc

Brunswick Mine

History and location

The Brunswick mine is located approximately 27 kilometres southwest of Bathurst, New Brunswick. The Enlarged Xstrata Group has surface rights and 100% ownership of the mineral rights on 1,030 hectares comprising the No. 12 Crown Grant (Nos. 35097 and 34300).

Summary of property holdings

The mineral rights to Brunswick Mine No. 12 have been granted fee simple under Orders-in-Council No's 62-422 and 70-693.

Matagami Division

History and location

The Bell Allard zinc/copper mine commenced commercial production in January 2000 with an anticipated life of approximately five years. As planned, mineral reserves at the Bell Allard mine were depleted in 2004. As a result, the Falconbridge Group ceased operations at the mine during the fourth quarter of 2004.

The Matagami concentrator and other support facilities were placed on care and maintenance to support other potential mining projects such as Perseverance in this favorable geologic area. The facilities are located 10 kilometres southwest of the town of Matagami in northwestern Quebec.

Summary of property holdings

Mining concession	Area (ha)	Renewal date
458	378.47	31 January 2007
504	81.49	31 January 2007

Brunswick Smelter

The Brunswick smelter is located on a year round Atlantic port near the village of Belledune in New Brunswick.

Summary of property holdings

The Brunswick smelter property is held fee simple.

CEZ Refinery

The CEZ refinery (in which the Falconbridge Group has a 25% interest through its interest in the Noranda Income Fund) is located in Salaberry-de-Valleyfield, Quebec.

Frieda River, Papua New Guinea

The Frieda River property is located in northern Papua New Guinea and contains mineral resources in three separate copper deposits (Horse-Ivaal-Trukai, Koki and Nena).

Summary of property holdings

EL 1024	April River Property
EL 1312	Nong River Property
EL 58	Frieda River Property
ELA 1224	Frieda River Property

Perseverance deposits, Quebec

The Perseverance deposits made up of Perseverance, Equinox and are located close to the Falconbridge Group's existing mill infrastructure in Matagami, Quebec.

Summary of property holdings

A mining lease covering the Perseverance deposits has not yet been applied for. The deposit is covered by unpatented mining claims.

Claim number	Recorded date	Expiry date

Directors and Senior Management of Xstrata

[This page is intentionally left blank]

Board of Directors

A list of the members of the Company's Board of Directors is set forth in the table below.

Directors:

Name	Age	Position
Willy Strothotte†	62	Chairman
Mick Davis	48	Chief Executive
Trevor Reid	45	Chief Financial Officer
Santiago Zaldumbide	64	Executive Director, Chief Executive of Xstrata Zinc and Executive Chairman of Asturiana de Zinc
Ivan Glasenberg†	49	Non-executive Director
Paul Hazen	64	Non-executive Director
Robert MacDonnell	69	Non-executive Director
Sir Steve Robson CB	63	Non-executive Director
David Rough	55	Non-executive Director
Dr. Frederik Roux	59	Non-executive Director
Ian Strachan	63	Non-executive Director
Secretary:		
Richard Elliston		

(†) Glencore International Nominee: see Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore"

The business address for the directors is c/o Bahnhofstrasse 2, P.O. Box 102, 6301 Zug, Switzerland.

Willy Strothotte, aged 62, is Chairman of Glencore International. From 1961 to 1978 Mr. Strothotte held various positions with responsibility for international trading in metals and minerals in Germany, Belgium and the USA. In 1978, Mr. Strothotte joined Glencore International, taking up the position of Head of Metals and Minerals in 1984. Mr. Strothotte was appointed Chief Executive Officer of Glencore International in 1993 and held the combined positions of Chairman and Chief Executive Officer from 1994 until 2001, when the roles of Chairman and Chief Executive were split. Mr. Strothotte has been Chairman of Xstrata AG since 1994, and Chairman of Xstrata since February 2002, and is currently a director of Century Aluminum Corporation and Minara Resources Limited.

Mick Davis, aged 48, is the Chief Executive of Xstrata. Mr. Davis was appointed as Chief Executive of Xstrata AG in October 2001, and was appointed to the Board of Xstrata in February 2002. Previously, Mr. Davis was Chief Financial Officer and an executive director of Billiton Plc, appointed in July 1997, and served as Executive Chairman of Ingwe Coal Corporation Limited from 1995. He joined Gencor Limited in early 1994 from Eskom, the South African state-owned electricity utility, where he was an executive director.

Trevor Reid, aged 45, is the Chief Financial Officer of Xstrata. Mr. Reid joined Xstrata AG in January 2002, and was appointed to the Board of Xstrata in February 2002. Prior to joining Xstrata, he was Global Head of Resource Banking at the Standard Bank Group. He joined the Standard Bank Group in 1997 from Warrior International Limited, a corporate finance boutique specialising in the minerals sector.

Santiago Zaldumbide, aged 64, is an Executive Director of Xstrata, Chief Executive of Xstrata Zinc and Executive Chairman of Asturiana de Zinc. Mr. Zaldumbide was appointed to the Board of Xstrata in February 2002. He is a previous Chief Executive Officer and Director of Union Explosivos Rio Tinto and of Petroleos del Norte. In 1990, Petroleos del Norte became part of the Repsol Oil Group where Mr. Zaldumbide was responsible for establishing the international structure of the enlarged Repsol Oil Group. In 1994 he was appointed Chief Executive Officer of the Corporación Industrial de Banesto and, in December 1997, Chairman and Chief Executive Officer of Asturiana de Zinc. Mr. Zaldumbide is also a member of the Supervisory Board of Air Products and Chemicals, Inc. and a director of ThyssenKrupp SA.

Ivan Glasenberg, aged 64, is Chief Executive Officer of Glencore International, which he joined in 1984. Mr. Glasenberg was appointed to the Board of Xstrata in February 2002. He worked in the coal department of Glencore in South Africa for three years and in Australia for two years. From 1989 to 1990, he managed Glencore International's Hong Kong and

Beijing offices. In 1991 he became Head of the Glencore Coal Department and in 2002 Chief Executive Officer of Glencore International. He is also currently a Director of Minara Resources Limited.

Paul Hazen, aged 64, joined the Board of Xstrata AG in May 2000, and was appointed a Director of Xstrata in February 2002. Mr. Hazen is a former Chairman and CEO of Wells Fargo and Company and he was a director of Phelps Dodge Corporation until February 2003 and Deputy Chairman and Lead Independent Director of Vodafone Group Plc until July 2006. Mr. Hazen retired in April 2001 as Chairman after a 30-year career with Wells Fargo and Company. Mr. Hazen is currently Chairman of Accel-KKR and of KKR Financial Corporation. He also serves as Lead Independent Director of Safeway, Inc. and a Director of Willis Group Holdings Ltd.

Robert MacDonnell, aged 69, joined the Board of Xstrata AG in May 1997, and was appointed to the Board of Xstrata in February 2002. Prior to joining Kohlberg Kravis Roberts & Co. in 1976, Mr. MacDonnell was a management consultant at Arthur Andersen & Co. He subsequently formed his own firm, which specialised in small management buyouts. Mr. MacDonnell became the first non-founding partner of KKR in 1982 and participated in virtually all investment decisions until the firm expanded in the late 1980s. Mr. MacDonnell is also currently a director of Safeway, Inc.

Sir Steve Robson CB, aged 63, retired as Second Permanent Secretary at HM Treasury in January 2001. He had joined HM Treasury after leaving university. His early career included a period as Private Secretary to the Chancellor of the Exchequer and a two-year secondment to Investors in Industry plc (3i). From 1997 until his retirement, his responsibilities included the legal framework for regulation of the UK financial services industry, public private partnerships, procurement policy including the private finance initiative and the Treasury's enterprises and growth unit. Sir Steve is a non-executive director of JPMorgan Cazenove Holdings, Partnerships UK plc and The Royal Bank of Scotland Group plc. Sir Steve was appointed to the Board of Xstrata in February 2002 and is Chairman of the Audit Committee.

David Rough, aged 55, was a Director of Legal & General Group Plc before retiring from Legal & General in June 2002. As Group Director (Investments), Mr. Rough headed all aspects of fund management within Legal & General Investments. Mr. Rough is currently a director of BBA Group plc, Emap plc, Land Securities plc, Brown, Shipley & Co Ltd and Mithras Investment Trust plc. Mr. Rough was appointed to the Board of Xstrata in April 2002, is Deputy Chairman, the Senior Independent Director and Chairman of the Nominations Committee.

Dr. Frederik Roux, aged 59, joined Johannesburg Consolidated Investment Company Limited in 1976, where he held positions in the Finance, Base Metals, Gold and Platinum divisions. In 1990, he joined Gencor Limited where he became Chairman of Alusaf and Executive Director responsible for Gencor Base Metals and Heavy Minerals. Since 1997, he has pursued private business interests in game ranching and safaris in South Africa. Dr. Roux is also Chairman of Impala Platinum Holdings Limited. Dr. Roux was appointed to the Board of Xstrata in February 2002.

Ian Strachan, aged 63, is a director of Reuters Group plc, Johnson Matthey plc, Rolls Royce plc and Transocean Inc. Mr. Strachan was Chairman of Instinet Group Inc from 2003 to 2005 and Chief Executive of BTR plc from 1996 to 1999. Mr. Strachan joined Rio Tinto plc (formerly RTZ plc) as CFO in 1987, and was Deputy Chief Executive from 1991 to 1995. Mr. Strachan was appointed to the Board of Xstrata at the Annual General Meeting held in May 2003 and is the Chairman of the Health, Safety, Environment and Community Committee.

Board composition

The Company's Board of Directors consists of 11 Directors. Pursuant to the Relationship Agreement (and Glencore International's agreement that the Relationship Agreement will, nevertheless, continue in full force and effect notwithstanding that it no longer holds 30% or more of the issued ordinary share capital of the Company), Glencore International is permitted to nominate a maximum of three directors of Xstrata or (if lower or higher) such number of directors of Xstrata nominated by Glencore International as is equal to one less than the number of Independent Directors. Glencore International previously nominated three directors to the board of directors of the Company. However, following Mr. David Issroff's resignation from the board of directors of the Company with effect from 10 May 2006, Glencore International currently only has two nominees to the Board, being Messrs. Strothotte and Glasenberg. See further Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Relationship with controlling shareholder".

Mr. Hazen, Mr. MacDonnell, Sir Steve Robson, Mr. Rough, Dr. Roux and Mr. Strachan are the independent Non-Executive Directors. Mr. Rough is the Senior Independent Director.

The Company's Memorandum and Articles stipulate that at every Annual General Meeting (AGM) of the Company, one-third of the Directors, or the number nearest to one-third, shall retire from office by rotation. At the Company's AGM on 9 May 2006 the following Directors retired from office, offered themselves for re-election, and were all re-elected:

Name	Position
Ivan Glasenberg	Non-executive Director
Robert MacDonnell	Non-executive Director
Dr. Frederik Roux	Non-executive Director
Santiago Zaldumbide	Executive Director, Chief Executive of Xstrata Zinc and Executive Chairman of Asturiana de Zinc

Board committees

For details of the Company's board committees, their membership and operation, see paragraph 14 of Part VIII – "Additional Information – Corporate governance and board practices".

Senior management

In addition to the Executive Directors, Messrs. Davis, Reid and Zaldumbide, the Company's senior management consists of the following executive officers who are responsible for the business and administrative departments indicated below:

Name	Age	Position
Bill Brooks	63	Chief Executive, Xstrata Aluminum
Peter Coates	60	Chief Executive, Xstrata Coal
Marc Gonsalves	44	Executive General Manager, Corporate Affairs
Peet Nienaber	56	Chief Executive, Xstrata Alloys
Ian Pearce	49	Chief Executive, Xstrata Nickel
Charlie Sartain	45	Chief Executive, Xstrata Copper

The business address for the Senior Executives is c/o Bahnhofstrasse 2, P.O. Box 102, 6301 Zug, Switzerland.

William H. Brooks, aged 63, is the Chief Executive of the Aluminum Business. Mr. Brooks was appointed President of the Aluminum Business in 1998. His previous assignments included President of the Rolled Products Division, President of Primary Products Division and Plant Manager – Huntingdon. Mr. Brooks has 30 years of experience in the aluminium industry, having spent 22 of those years with Noranda Aluminium, Inc. and eight with a subsidiary company of Alusuisse Aluminium. Mr. Brooks holds a Bachelor of Business degree from Cleveland State University, a Master of Business degree from the University of Tennessee and he is a Certified Public Accountant.

Peter Coates, aged 60, is the Chief Executive of the Coal Business. He has a degree in mining engineering and has over 40 years' experience in the mining industry. Prior to becoming the CEO of Xstrata's Coal Business, he occupied various senior positions in the industry throughout Australia and South America. He is the current Chairman of the Minerals Council of Australia and a past Chairman of the NSW State Minerals Advisory Council and the Australian Coal Association. He is a current member of the board of each of the NSW State Minerals Advisory Council, the Queensland Resources Council and the Australian Coal Association. Prior to joining Xstrata, Mr. Coates was head of Glencore's coal operations and spearheaded its asset acquisition programme in Australia and South America. He has previously occupied senior mining roles in various commodities including, nickel, iron ore, bauxite and coking coal. Mr. Coates is a director of Port Waratah Coal Services and Port Kembla Coal Terminal. He is also a Fellow of the Australasian Institute of Mining and Metallurgy and a member of the Australian Institute of Company Directors.

Marc Gonsalves, aged 44, is the Executive General Manager, Corporate Affairs of Xstrata plc. Mr. Gonsalves joined Xstrata AG in January 2002 and joined Xstrata plc in February 2002. He has 13 years' experience in the mining industry in the field of investor, media and government relations. Mr. Gonsalves was Vice President of Investor Relations and Communications at BHP Billiton prior to joining Xstrata AG. Mr. Gonsalves was head of corporate affairs at JCI Limited, where he worked from 1991 until 1997.

Peet Nienaber, aged 55, is the Chief Executive of the Alloys Business. Mr. Nienaber holds both a Bachelor and Honours degree in Engineering. Mr. Nienaber started his career as an Iscor bursary holder at Iscor Steelworks in Newcastle, South

Africa and worked for 15 years in the ferroalloy industry at both Samancor and CMI until 1988, when he became one of the founder members of what is now the Enlarged Xstrata Group's Chrome Business. In 1997, Mr. Nienaber was appointed Chief Executive of Xstrata's South African alloys operations.

Ian W. Pearce, aged 49, is the Chief Executive of the Nickel Business. Mr. Pearce joined Falconbridge in August 2003 as Senior Vice-President, Projects & Engineering, leading the advancement and completion of major projects such as Koniambo and Nickel Rim, and holds a bachelor degree in Science from University of Witwatersrand in South Africa. He also attended the Management Advancement Programme at the same institution. Mr. Pearce has over 26 years of professional experience in metallurgy and mining. Prior to joining Falconbridge, Mr. Pearce acquired project management experience in the United States, Indonesia, Chile and South Africa. Among numerous assignments, he worked as the Executive Project Director of Muskeg River Oil Sands Project in Alberta for Fluor Daniel Canada Inc.

Charlie Sartain, aged 44, is the Chief Executive of the Copper Business and was appointed in January 2004. He holds an Honours degree in Mining Engineering. Mr. Sartain worked with MIM Holdings Limited for more than 20 years in a range of engineering then senior management roles in both Australia and Latin America prior to taking up his current position. Mr Sartain is also a director of the Council on Australian-Latin American Relations. Mr. Sartain was appointed a director and Vice President of the Queensland Resources Council on 3 April 2004 and on 16 June 2005 he was appointed a director of the Sustainable Minerals Institute at the University of Queensland. Mr. Sartain is also a director of the International Copper Association.

There is no family relationship between any of the Company's directors or senior management.

Part VII

Use of proceeds and Terms and Conditions of the Rights Issue

[This page is intentionally left blank]

1. Use of proceeds and terms and conditions of the Rights Issue

Use of proceeds of the Rights Issue

The Company has launched the Rights Issue to refinance part of the debt raised to finance the cash consideration paid in respect of the Falconbridge Acquisition.

The total net proceeds of the Rights Issue, after estimated aggregate costs and expenses of approximately £54 million (approximately US$102 million), are expected to be approximately £2.9 billion (approximately US$5.5 billion).

The total net proceeds will be applied towards repayment of the principal and interest that is currently outstanding under the fully drawn US$7.0 billion Equity Bridge Facility.

The Company is also considering alternatives for refinancing the outstanding debt under the Equity Bridge Facility not refinanced with the net proceeds of the Rights Issue and under the Debt Bridge Facility. It intends to refinance this outstanding debt and, depending on market conditions and other factors, it may do so in whole or in part by issuing debt securities. The Company may pursue one or more of such alternatives at any time that it judges market conditions and other factors to be favourable.

Terms and conditions of the Rights Issue

The Rights Issue is being made on the terms and subject to the conditions set out in this document (and, in the case of Qualifying non-CREST Shareholders, the Provisional Allotment Letter). Up to an aggregate of 235,787,596 New Shares are being offered by way of Nil Paid Rights payable in full on acceptance by Qualifying Shareholders on the basis of:

1 New Share at 1,265 pence per New Share for every 3 Existing Shares

held on the Record Date and so in proportion for any other number of Existing Shares then held and otherwise as set out in this document. Holdings of Existing Shares in certificated and uncertificated form will be treated as separate holdings for the purpose of calculating entitlements under the Rights Issue. Fractions of New Shares will not be allotted and fractional entitlements will be rounded down to the nearest whole numbers of New Shares.

The Issue Price of 1,265 pence per New Share represents a 42.5% discount to the closing middle-market price on the London Stock Exchange's main market for listed securities of 2,198 pence per Ordinary Share on 2 October 2006, which was the last business day prior to the announcement of the Rights Issue. The New Shares will, when issued and fully paid, rank equally in all respects with the Existing Shares, including the right to receive all dividends or distributions declared after the date of this document. For the avoidance of doubt, the New Shares shall not be entitled to participate in the dividend of US$0.13 per share declared on 2 August 2006 and payable on 13 October 2006 in the respect of Existing Shares held on the record date of 22 September 2006. There will be no restrictions on the free transferability of the New Shares save as provided in the Articles. The rights attaching to the New Shares are governed by the Articles, a summary of which is set out in paragraph 9 of Part VIII – "Additional Information – Summary of the memorandum and articles of association of the Company and mandatory takeover bids, squeeze-out and sell-out rules" of this document.

The Rights Issue is being made in the United Kingdom by way of this document and the Provisional Allotment Letters. The Rights Issue is not being made by way of this document or the Provisional Allotment Letters in any jurisdiction other than the United Kingdom, but will be made to Qualifying Shareholders with registered addresses in other jurisdictions as described in paragraph 7(b) of this Part VII. Shareholders taking up their rights by completing a Provisional Allotment Letter or sending a Many-to-Many instruction ("MTM instruction") to CRESTCo will be deemed to have made the warranties set out in paragraph 8 of this Part VII, unless such requirement is waived by the Company.

The attention of Overseas Shareholders and any person (including, without limitation, custodians, nominees and trustees) who has a contractual or other legal obligation to forward this document into a jurisdiction other than the United Kingdom is drawn to paragraphs 7 and 8 of this Part VII. In particular, subject to the provisions of paragraph 7 of this Part VII, Qualifying Shareholders with registered addresses in the United States, Australia, Canada, Japan or South Africa are not being sent this document or Provisional Allotment Letters and will not have their accounts credited with Nil Paid Rights.

Application has been made to the Financial Services Authority for the New Shares (nil and fully paid) to be admitted to the Official List and to the London Stock Exchange for the New Shares (nil and fully paid) to be admitted to trading on the

London Stock Exchange's main market for listed securities. Application has also been made to the Admission Board of the SWX for the New Shares (nil and fully paid) to be admitted to listing on the SWX. It is expected that Admission to the Official List will become effective and that dealings in the New Shares will commence on the London Stock Exchange and on the SWX, nil paid, at 8.00 a.m. (London time) on Thursday, 5 October 2006.

None of the New Shares has been marketed or is being made available in whole or in part to the public other than in connection with the Rights Issue.

The Existing Shares are already admitted to CREST. Applications will be made for the Nil Paid Rights, the Fully Paid Rights and the New Shares to be admitted to CREST. CRESTCo requires the Company to confirm to it that certain conditions imposed by the CREST Regulations are satisfied before CRESTCo will admit any security to CREST. It is expected that these conditions will be satisfied in respect of the Nil Paid Rights, the Fully Paid Rights and the New Shares on admission of the New Shares to the Official List, nil paid. As soon as practicable after satisfaction of the conditions, the Company will confirm this to CRESTCo.

Save for those New Shares which Glencore International takes up pursuant to the irrevocable undertakings it has given to the Company or pursuant to the Glencore Underwriting Letter, the Rights Issue has been fully underwritten by the Underwriters on the terms of the Underwriting Agreement and the Rights Issue is conditional upon, amongst other things, fulfilment of the following conditions:

(a) this document being approved by and filed with the FSA in accordance with the Prospectus Rules and the FSMA and filed with the SWX in accordance with the Swiss Listing Rules and being made available to the public by not later than 5.00 p.m. on Tuesday, 3 October 2006 (or such later time or date as the Banks may agree);

(b) none of the representations, warranties or undertakings given by Xstrata in the Underwriting Agreement being breached, untrue, inaccurate or misleading in any respect when made;

(c) Admission and Swiss Admission occurring at or before 8.00 a.m. on Thursday, 5 October 2006 (or such later time or date as the Company and the Banks may agree); and

(d) the Underwriting Agreement otherwise having become unconditional in all respects and not having terminated in accordance with its terms prior to Admission.

If these conditions are not fulfilled, the Rights Issue will not proceed.

The Underwriting Agreement may terminate upon the occurrence of certain events, in which case the Rights Issue will not proceed. The attention of Qualifying Shareholders is drawn to paragraph 21 of Part VIII – "Additional Information – Summary of the terms of the Underwriting Agreement", in which a summary of the principal terms of the Underwriting Agreement is set out.

The Underwriters may engage in trading activity for the sole purpose of hedging their commitments under the Underwriting Agreement. Such activity may include purchases and sales of securities of the Company and related or other securities and instruments (including Ordinary Shares, Nil Paid Rights and Fully Paid Rights).

Deutsche Bank and JPMorgan Cazenove may arrange sub-underwriting for some, all or none of the New Shares which the Underwriters have underwritten. The Company is mindful of the Competition Commission's recommendations with regard to competitive tendering of sub-underwriting commissions. After careful consideration of the benefits to the Company, the Directors have concluded that such a process would be unlikely to result in any significant benefit to the Company and would not, therefore, have been appropriate in connection with the Rights Issue.

The Banks or their affiliates provide various investment banking, commercial banking and financial advisory services from time to time to the Enlarged Xstrata Group. In addition, affiliates of the Banks are lenders under certain of the Enlarged Xstrata Group's debt facilities. In particular, Deutsche Bank and JPMorgan Chase are lenders under the Debt Bridge Facility Agreement, the Acquisition Facilities Agreement and the Equity Bridge Facility Agreement. See paragraph 21 of Part VIII – "Additional Information – Summary of the terms of the Underwriting Agreement" for details of the Underwriting

Agreement, paragraph 22.9 of Part VIII – "Additional Information - Material contracts" for details of the Debt Bridge Facility Agreement, the Acquisition Facilities Agreement and the Equity Bridge Facility Agreement and paragraph 22.11 of Part VIII – "Additional Information - Material contracts" for details of the Standby Equity Underwriting Letter.

The Company has received from Glencore International an irrevocable undertaking to take up its full entitlement under the Rights Issue. In addition, CSSEL has agreed to transfer to Glencore International its entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue and Glencore International and Glencore International has also irrevocably undertaken to take up in full such entitlements. CSSEL (in respect of 151,560,600 Ordinary Shares) and Glencore International have agreed to lock-ups which, subject to certain exceptions, will expire six months after the latest time for acceptance and payment in full of entitlements to subscribe for the New Shares. A total of 84,200,333 New Shares are subject to Glencore International's irrevocable undertakings, equivalent to approximately 35.71% of the maximum number of New Shares to be issued under the Rights Issue. The actual number of New Shares taken up by Glencore International pursuant to the Irrevocable Undertaking Agreement may be less than 84,200,333 if Glencore International disposes of any of its existing holding of Ordinary Shares prior to the ex-rights date as a result of the exercise of any exchange rights pursuant to the Glencore Exchangeable Bonds. However, Deutsche Bank and JPMorgan Cazenove have agreed, as agent for the Company, to endeavour to procure subscribers for such number of New Shares as Glencore International is unable to take up prior to the latest time and date for acceptance and payment in full under the Rights Issue as a consequence of having to dispose of Ordinary Shares in these circumstances (such New Shares being referred to herein as "Exchanged New Shares"), except if in the opinion of the Banks subscribers are unlikely to be procured for such Exchanged New Shares. Pursuant to the Glencore Underwriting Letter, Glencore International has agreed to subscribe for New Shares equivalent in number to the Exchanged New Shares for which Deutsche Bank and JPMorgan Cazenove have not procured subscribers. The Takeover Panel has granted a dispensation from any obligation on either Glencore International or CSSEL to make a mandatory offer for Xstrata pursuant to Rule 9 of the City Code, as a result of Glencore International and CSSEL's interest being diluted by exchange rights under the Glencore Exchangeable Bonds being exercised or conversion rights under the 2010 Convertible Bonds, 2017 Convertible Debenture or 2017 Convertible Bonds into Ordinary Shares being exercised, between Monday, 2 October 2006 (being the latest practicable date prior to the publication of this document) and completion of the Rights Issue and subsequently being increased again as a result of Glencore International subscribing for New Shares pursuant to the irrevocable undertakings it has given to the Company or pursuant to the Glencore Underwriting Letter. Glencore International's right to acquire shares pursuant to Note 11 on Rule 9.1 of the City Code is not affected by this dispensation nor by these arrangements generally. Glencore International will be paid an underwriting commission by the Company of US$35.1 million in connection with its undertakings. Further details of Glencore International's Irrevocable Undertaking Agreement and the lock-up arrangements are set out in paragraph 22.2 of Part VIII – "Additional Information – Material contracts".

Subject, amongst other things, to the conditions referred to in sub-paragraphs (a) to (d) above being satisfied and save as provided in paragraph 9 of this Part VII below, it is intended that:

(i) Provisional Allotment Letters in respect of Nil Paid Rights will be dispatched to Qualifying non-CREST Shareholders (other than certain Overseas Shareholders) at their own risk on Wednesday, 4 October 2006;

(ii) Computershare Investor Services PLC will instruct CRESTCo to credit the appropriate stock accounts of Qualifying CREST Shareholders (other than certain Overseas Shareholders) with such Shareholders' entitlements to Nil Paid Rights, with effect from 8.00 a.m. on Thursday, 5 October 2006;

(iii) the Nil Paid Rights and Fully Paid Rights will be enabled for settlement by CRESTCo by 8.00 a.m. on Thursday, 5 October 2006, or if later, as soon as practicable after the Company has confirmed to CRESTCo that all the conditions for admission of such rights to CREST have been satisfied; and

(iv) definitive share certificates in respect of New Shares to be held in certificated form are expected to be dispatched by post by Friday, 3 November 2006 to accepting Qualifying non-CREST shareholders or their renouncees at their registered address (unless lodging agent details have been completed on page 4 of the Provisional Allotment Letter).

The offer of New Shares to Qualifying CREST Shareholders will be made, on the terms and conditions set out in this document, at the time when (such Shareholders' stock accounts having been credited as described in paragraph (ii) above) the Nil Paid Rights and Fully Paid Rights are enabled for settlement as described in paragraph (iii) above.

2. Action to be taken

The action to be taken in respect of New Shares depends on whether, at the relevant time, the Nil Paid Rights or Fully Paid Rights in respect of which action is to be taken are in certificated form (that is, are represented by Provisional Allotment Letters) or are in uncertificated form (that is, are in CREST).

If you have received a Provisional Allotment Letter and are a Qualifying non-CREST Shareholder and do not have a registered address in the United States, Australia, Canada, Japan or South Africa (subject to certain limited exceptions), please refer to paragraphs 3 and 5 to 12 (inclusive) of this Part VII.

If you hold Ordinary Shares in CREST and do not have a registered address in the United States, Australia, Canada, Japan or South Africa (subject to certain limited exceptions), please refer to paragraphs 4 to 12 (inclusive) of this Part VII and to the CREST Manual for further information on the CREST procedures referred to below.

CREST sponsored members should refer to their CREST sponsors, as only their CREST sponsors will be able to take the necessary actions specified below to take up the entitlements or otherwise to deal with the Nil Paid Rights or Fully Paid Rights of CREST sponsored members.

Qualifying Shareholders who hold Ordinary Shares through the SIS System should contact the Swiss Bank through which such Shareholders hold Ordinary Shares for details of how to participate in the Rights Issue.

3. Action to be taken in relation to Nil Paid Rights represented by Provisional Allotment Letters

(a) General

The Provisional Allotment Letter sets out:

(i) the holding of Existing Shares on which a Qualifying non-CREST Shareholder's entitlement to New Shares has been based;

(ii) the aggregate number of New Shares which have been provisionally allotted to such Qualifying non-CREST Shareholder;

(iii) the procedures to be followed if a Qualifying non-CREST Shareholder wishes to dispose of all or part of his entitlement or to convert all or part of his entitlement into uncertificated form; and

(iv) instructions regarding acceptance and payment, consolidation, splitting and registration of renunciation.

On the basis that Provisional Allotment Letters are posted on Wednesday, 4 October 2006, and that dealings commence on Thursday, 5 October 2006, **the latest time and date for acceptance and payment in full will be 11.00 a.m. on Friday, 27 October 2006.**

(b) Procedure for acceptance and payment

(i) Qualifying non-CREST Shareholders who wish to accept in full

Holders of Provisional Allotment Letters who wish to take up all of their Nil Paid Rights must return the Provisional Allotment Letter, together with a cheque or banker's draft, made payable to "The Royal Bank of Scotland plc A/C Xstrata plc Rights Issue" and crossed "A/C payee only", for the full amount payable on acceptance, in accordance with the instructions printed on the Provisional Allotment Letter, by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) to Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case so as to arrive as soon as possible and in any event so as to be received not later than 11.00 a.m. on Friday, 27 October 2006. A reply-paid envelope will be enclosed with the Provisional Allotment Letter for use within the United Kingdom only for this purpose. If you post your Provisional Allotment Letter within the United Kingdom by first class post, it is recommended that you allow at least four days for delivery.

(ii) Qualifying non-CREST Shareholders who wish to accept in part

Holders of Provisional Allotment Letters who wish to take up some but not all of their Nil Paid Rights and wish to sell some or all of those which they do not want to take up, should first apply for split Provisional Allotment Letters by completing Form X on page 4 of the Provisional Allotment Letter, and returning it by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) to Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case so as to be received no later than 3.00 p.m. on Wednesday, 25 October 2006, the last date and time for splitting Provisional Allotment Letters, together with a covering letter stating the number of split Provisional Allotment Letters required and the number of Nil Paid Rights to be comprised in each split Provisional Allotment Letter. Once they have received these, they should then deliver the split Provisional Allotment Letter representing the New Shares they wish to accept together with a cheque or a banker's draft for the appropriate amount, payable to "The Royal Bank of Scotland plc A/C Xstrata plc Rights Issue" and crossed "A/C payee only", by 11.00 a.m. on Friday, 27 October 2006, the last date and time for acceptance. The second Provisional Allotment Letter (representing the New Shares such Qualifying non-CREST Shareholders do not wish to take up) will be required in order to sell those rights.

Qualifying non-CREST Shareholders who wish to take up some of their Nil Paid Rights (but not sell the remainder), should complete Form X on page 4 of the Provisional Allotment Letter and return it by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) to Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case together with a covering letter confirming the number of New Shares to be taken up and a cheque or banker's draft to pay for this number of New Shares. In this case, the Provisional Allotment Letter, the cover letter and the cheque or banker's draft must be received by Computershare Investor Services PLC by 3.00 p.m. on Wednesday, 25 October 2006, being the last time and date for splitting Provisional Allotment Letters.

(iii) Company's discretion as to validity of acceptances

If payment is not received in full by 11.00 a.m. on Friday, 27 October 2006, the provisional allotment will (unless the Company has exercised its right to treat as valid an acceptance as set out below) be deemed to have been declined and will lapse. However, the Company may, with the agreement of the Underwriters (not to be unreasonably withheld or delayed), but shall not be obliged to, treat as valid (i) Provisional Allotment Letters and accompanying remittances for the full amount due which are received through the post not later than 3.00 p.m. on Friday, 27 October 2006 (the cover bearing a legible postmark dated not later than 11.00 a.m. on Friday, 27 October 2006), and (ii) acceptances in respect of which remittances are received prior to 11.00 a.m. on Friday, 27 October 2006 from an authorised person (as defined in Section 31(2) of the FSMA) specifying the number of New Shares to be acquired and an undertaking by that person to lodge the relevant Provisional Allotment Letter, duly completed, in due course.

The Company may also (in its absolute discretion) treat a Provisional Allotment Letter as valid and binding on the person(s) by whom or on whose behalf it is lodged even if it is not completed in accordance with the relevant instructions or is not accompanied by a valid power of attorney where required.

(iv) Payments

All subscription monies must be in pounds sterling and must be made by cheque or banker's draft made payable to "The Royal Bank of Scotland plc A/C Xstrata plc Rights Issue" and crossed "A/C payee only". Cheques or banker's drafts must be drawn on a bank or building society or branch of a bank or building society in the UK or Channel Islands which is either a settlement member of the Cheque and Credit Clearing Company Limited or the CHAPS Clearing Company Limited or which has arranged for its cheques and banker's drafts to be cleared through the facilities provided by any of those companies or committees and must bear the appropriate sort code in the top right hand corner. All documents, cheques and banker's drafts sent through the post will be sent at the risk of the sender. Cheques drawn on most major high street banks and building societies in the UK will be satisfactory. Cheques or banker's drafts will be presented for payment upon receipt. The Company reserves the right to instruct Computershare Investor Services PLC to seek special clearance of cheques and banker's drafts to allow the Company to obtain full value for remittances at the earliest opportunity. No interest will be allowed on payments made before they are due and any interest on such payments ultimately will accrue for the benefit of the Company. It is a term of the Rights Issue, and returning the Provisional Allotment Letter with a remittance in the form of a cheque will constitute a warranty, that cheques shall be honoured on first presentation. The Company may elect to treat as invalid acceptances in respect of which cheques are not so honoured.

If the New Shares have already been allotted to a Qualifying non-CREST Shareholder prior to any payment not being so honoured or such acceptances being treated as invalid, the Company may (in its absolute discretion as to manner, timing and terms) make arrangements for the sale of such shares on behalf of such Qualifying non-CREST Shareholders and hold the proceeds of sale (net of the Company's reasonable estimate of any loss that is has suffered as a result of the same and of the expenses of the sale, including without limitation, any stamp duty or SDRT payable on the transfer of such shares, and of all amounts payable by such Qualifying non-CREST Shareholders pursuant to the provisions of this Part VII in respect of the acquisition of such shares) on behalf of such Qualifying non-CREST Shareholders. Neither the Company nor the Underwriters nor any other person shall be responsible for, or have any liability for, any loss, expense or damage suffered by such Qualifying non-CREST Shareholders as a result.

All enquiries in relation to Provisional Allotment Letters should be addressed to Computershare Investor Services PLC (telephone 0870 707 1417 (UK only) or +44 870 707 1417 (international calls)). The helpline is available between the hours of 8.30 a.m. and 5.30 p.m. (London Time) (9.30 a.m. and 6.30 p.m. Central European Time) on Monday to Friday excluding public holidays in the UK.

(c) Money Laundering Regulations

If the value of a Qualifying non-CREST Shareholder's application exceeds £9,000 (the approximate equivalent of €15,000) (or is one of a series of linked applications, the aggregate value of which exceeds that amount), and such Shareholder either does not pay by a cheque drawn on an account in the Shareholder's own name and/or the account from which payment is to be made is not held within an institution that is authorised in the UK by the Financial Services Authority under the Financial Services and Markets Act 2000 or that is an EU authorised credit institution, as defined in Article 1 of the Banking Consolidation Directive (2000/12/EC) as referred to in the verification of identity requirements of the Money Laundering Regulations 2003, the Money Laundering Regulations 2003 will apply. Computershare Investor Services PLC is entitled to require, at its absolute discretion, verification of identity from any person lodging a Provisional Allotment Letter (the "applicant") including, without limitation, any person who appears to Computershare Investor Services PLC to be acting on behalf of some other person. Submission of a Provisional Allotment Letter will constitute a warranty that the Money Laundering Regulations 2003 will not be breached by the acceptance of the remittance and an undertaking by the applicant to provide promptly to Computershare Investor Services PLC such information as may be specified by Computershare Investor Services PLC as being required for the purpose of the Money Laundering Regulations 2003. Pending the provision of evidence satisfactory to Computershare Investor Services PLC as to identity, Computershare Investor Services PLC may, after consultation with the Company and the Underwriters and having taken into account their comments and requests, retain a Provisional Allotment Letter lodged by an applicant for New Shares and/or the cheque or banker's draft or other remittance relating to it and/or not enter the New Shares to which it relates on the register of members or issue any share certificate in respect of them.

If satisfactory evidence of identity has not been provided within a reasonable time, then the acceptance will not be valid (without prejudice to the right of the Company to take proceedings to recover any loss suffered by it as a result of the failure of the applicant to provide satisfactory evidence). In that case, the application monies (without interest) will be returned to the bank or building society account from which payment was made.

The guidance below is provided in order to reduce the likelihood of difficulties, delays and potential rejection of an application (but does not limit the right of Computershare Investor Services PLC to require verification of identity as stated above):

(a) applicants are urged, if possible, to make their payment by their own cheque. If this is not practicable and an applicant uses a cheque drawn by a building society or other third party or a banker's draft, the applicant should:

  (i) write the applicant's name and address on the back of the building society cheque, banker's draft or third party cheque and, in the case of an individual, record his date of birth against his name; and

  (ii) if a building society cheque or banker's draft is used, ask the building society or bank to print on the cheque the full name and account number of the person whose building society or bank account is being debited or to write those details on the back of the cheque and add their stamp.

If the cheque is drawn by a third party other than in accordance with paragraph 3(c)(a) above, both the applicant and the third party should ensure that one of the following documents is enclosed with the Provisional Allotment Letter: evidence of their respective names and addresses from an appropriate third party, for example recent original bills from a gas, electricity or telephone company, or a bank statement, in each case bearing the applicant's or the third party's name and address. Originals of such documents are required. Original documents will be returned by post at the applicant's own risk.

(b) if an application is delivered by hand, the applicant should ensure that he has with him evidence of identity bearing his photograph, for example, a valid full passport.

In respect of any application by an applicant as agent for one or more persons and who is not a UK or EU regulated person or institution (e.g. a UK financial institution), irrespective of the value of the application, Computershare Investor Services PLC is obliged to take reasonable measures to establish the identity of the person or persons on whose behalf the application is being made. Applicants making an application as agent should specify on the Provisional Allotment Letter if they are a UK or EU regulated person or institution.

(d) Dealings in Nil Paid Rights

Assuming the Rights Issue becomes unconditional, dealings on the London Stock Exchange and the SWX in the Nil Paid Rights are expected to commence at 8.00 a.m. on Thursday, 5 October 2006. A transfer of Nil Paid Rights can be made (in the case of Qualifying non-CREST Shareholders) by renunciation of the Provisional Allotment Letter in accordance with the instructions printed on it and delivery of the Provisional Allotment Letter to the transferee.

(e) Dealings in Fully Paid Rights

Following acceptance of the provisional allotment and payment in full in accordance with the provisions set out in this document (and, in the case of Qualifying non-CREST Shareholders, the Provisional Allotment Letter) and until close of business on the Closing Date, the Fully Paid Rights may be transferred (in the case of Qualifying non-CREST Shareholders) by renunciation of the relevant fully paid Provisional Allotment Letter (following the procedure set out in paragraph 3(f) of this Part VII). The transferee will be required to complete Form Y on page 4 of the Provisional Allotment Letter and to lodge it for registration by post or by hand with Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) with Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case so as to be received by not later than 3.00 p.m. on Tuesday, 24 October 2006. To be able to do this, Qualifying non-CREST Shareholders will need to have their fully paid Provisional Allotment Letter returned to them after acceptance has been effected by Computershare Investor Services PLC. However, fully paid Provisional Allotment Letters will only be returned to Shareholders if their return is requested by ticking Box 4 on page 1 of the Provisional Allotment Letter.

After Friday, 27 October 2006, the New Shares will be in registered form and transferable in the usual way.

(f) Renunciation and splitting of Provisional Allotment Letters

Qualifying non-CREST Shareholders who wish to transfer all (and not some only) of their Nil Paid Rights or, after acceptance of the provisional allotment and payment in full, Fully Paid Rights comprised in a Provisional Allotment Letter may (save as required by the laws of certain overseas jurisdictions) renounce such allotment in favour of one person (or several persons as joint holders) by completing and signing Form X on page 4 of the Provisional Allotment Letter (if it is not already marked "Original Duly Renounced") and passing on the entire Provisional Allotment Letter to their stockbroker or bank or other appropriate financial adviser or to the transferee. Once a Provisional Allotment Letter has been renounced, it will become a negotiable instrument in bearer form. The latest time and date for registration of renunciation of Provisional Allotment Letters, fully paid, is 3.00 p.m. on Tuesday, 24 October 2006.

If a holder of a Provisional Allotment Letter wishes to have only some of the New Shares registered in his name and to transfer the remainder, or wishes to transfer all the Nil Paid Rights, or (if appropriate) Fully Paid Rights but to different persons, he may have the Provisional Allotment Letter split, for which purpose he or his agent must complete and sign Form X on page 4 of the Provisional Allotment Letter. The Provisional Allotment Letter must then be delivered by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) to Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case so as to be received by not later than 3.00 p.m. on Wednesday, 25 October 2006, if not paid or if fully paid to be cancelled and exchanged for the split Provisional Allotment Letters required. The number of

split Provisional Allotment Letters required and the number of Nil Paid Rights or (as appropriate) Fully Paid Rights to be comprised in each split Provisional Allotment Letter should be stated in an accompanying letter. Form X on page 4 of split Provisional Allotment Letters will be marked "Original Duly Renounced" before issue.

The Company reserves the right to refuse to register any renunciation in favour of any person in respect of which the Company believes such renunciation may violate applicable legal or regulatory requirements including (without limitation) any renunciation in the name of any person with an address outside the UK.

(g) Registration in names of persons other than Qualifying Shareholder(s) originally entitled
In order to register Fully Paid Rights in certificated form in the name of someone other than the Qualifying Shareholder(s) originally entitled, the renouncee or his agent(s) must complete Form Y on page 4 of the Provisional Allotment Letter (unless the renouncee is a CREST member who wishes to hold Fully Paid Rights in uncertificated form, in which case Form X and the CREST Deposit Form (both on page 4 of the Provisional Allotment Letter) must be completed — see paragraph 3(h) of this Part VII) and send the entire Provisional Allotment Letter, when fully paid, by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ or by hand only (during normal business hours) to Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ, in each case so as to be received by not later than 11.00 a.m. on Friday, 27 October 2006.

The New Shares comprised in several renounced Provisional Allotment Letters may be registered in the name of one holder (or joint holders) if Form Y on page 4 of the Provisional Allotment Letter is completed on one Provisional Allotment Letter (the "Principal Letter") and all the Provisional Allotment Letters are lodged in one batch. Details of each Provisional Allotment Letter (including the Principal Letter) should be listed in the Consolidated Listing Form adjacent to Forms X and Y on page 4 of the Principal Letter and the allotment number of the Principal Letter should be entered in the space provided on each of the other Provisional Allotment Letters.

(h) Deposit of Nil Paid Rights or Fully Paid Rights into CREST
Nil Paid Rights or Fully Paid Rights represented by a Provisional Allotment Letter may be converted into uncertificated form, that is, deposited into CREST (whether such conversion arises as a result of a renunciation of those rights or otherwise). Similarly, Nil Paid Rights or Fully Paid Rights held in CREST may be converted into certificated form, that is, withdrawn from CREST. Subject as provided in the next following paragraph (or in the Provisional Allotment Letter), normal CREST procedures and timings apply in relation to any such conversion. Qualifying Shareholders are recommended to refer to the CREST Manual for details of such procedures.

The procedure for depositing the Nil Paid Rights or Fully Paid Rights represented by a Provisional Allotment Letter into CREST, whether such rights are to be converted into uncertificated form in the name(s) of the person(s) whose name(s) and address(es) appear(s) on page 1 of the Provisional Allotment Letter or in the name of a person or persons to whom the Provisional Allotment Letter has been renounced, is as follows: Form X and the CREST Deposit Form (both on page 4 of the Provisional Allotment Letter) will need to be completed and the Provisional Allotment Letter deposited with the CCSS; in addition, the normal CREST Stock Deposit procedures will need to be carried out, except that (a) it will not be necessary to complete and lodge a separate CREST Transfer Form (prescribed under the Stock Transfer Act 1963) with the CCSS, and (b) only the whole of the Nil Paid Rights or Fully Paid Rights represented by the Provisional Allotment Letter may be deposited into CREST. Shareholders wishing to deposit some only of the Nil Paid Rights or Fully Paid Rights represented by the Provisional Allotment Letter into CREST must first apply for split Provisional Allotment Letters, bearing in mind the latest time for depositing the Nil Paid Rights or Fully Paid Rights represented by the Provisional Allotment Letters into CREST. If the rights represented by more than one Provisional Allotment Letter are to be deposited, the CREST Deposit Form on each Provisional Allotment Letter must be completed and deposited. The Consolidated Listing Form on page 4 of the Provisional Allotment Letter must not be used.

A holder of the Nil Paid Rights represented by a Provisional Allotment Letter who is proposing to convert those rights into uncertificated form (whether following a renunciation of such rights or otherwise) is recommended to ensure that the conversion procedures are implemented in sufficient time to enable the person holding or acquiring the Nil Paid Rights in CREST following the conversion to take all necessary steps in connection with taking up the entitlement prior to 11.00 a.m. on Friday, 27 October 2006. In particular, having regard to normal processing times in CREST and on the part of Computershare Investor Services PLC, the latest recommended time for depositing a renounced Provisional Allotment Letter (with Form X and the CREST Deposit Form (both on page 4 of the Provisional Allotment Letter) duly completed), with the

CCSS (in order to enable the person holding or acquiring (as appropriate) the Nil Paid Rights in CREST as a result of the conversion to take all necessary steps in connection with taking up the entitlement prior to 11.00 a.m. on Friday, 27 October 2006) is 3.00 p.m. on Wednesday, 25 October 2006.

When Form X and the CREST Deposit Form (both on page 4 of the Provisional Allotment Letter) have been completed, the title to the Nil Paid Rights or Fully Paid Rights represented by the Provisional Allotment Letter will cease forthwith to be renouncable or transferable by delivery, and for the avoidance of doubt any entries in Form Y will not subsequently be recognised or acted upon by Computershare Investor Services PLC. All renunciations or transfers of the Nil Paid Rights or Fully Paid Rights must be effected through the CREST system once such Nil Paid Rights or Fully Paid Rights have been deposited into CREST.

CREST sponsored members should contact their CREST sponsor.

(i) Issue of New Shares in definitive form

Definitive share certificates in respect of New Shares to be held in certificated form are expected to be dispatched to Qualifying non-CREST Shareholders or their transferees who hold Fully Paid Rights in certificated form, as the case may be, by post by Friday, 3 November 2006 to persons entitled thereto at their registered address (unless lodging agent details have been completed on page 4 of the Provisional Allotment Letter). After dispatch of definitive share certificates, Provisional Allotment Letters will cease to be valid for any purpose whatsoever. Pending dispatch of definitive share certificates, instruments of transfer will be certified by Computershare Investor Services PLC against the register, against lodgement of fully paid Provisional Allotment Letters and/or, in the case of renounced Provisional Allotment Letters, against the registration receipt, Form Y, bearing the stamp of Computershare Investor Services PLC.

4. Action to be taken in relation to Nil Paid Rights and Fully Paid Rights in CREST

(a) General

Subject as provided in paragraph 7 of this Part VII in relation to certain Overseas Shareholders, each Qualifying CREST Shareholder is expected to receive a credit to his CREST stock account of his entitlement to Nil Paid Rights on Thursday, 5 October 2006. It is expected that such rights will be enabled by 8.00 a.m. on Thursday, 5 October 2006. The CREST stock account to be credited will be an account under the participant ID and member account ID that apply to the Existing Shares held at the close of business on the Record Date by the Qualifying CREST Shareholder in respect of which the Nil Paid Rights have been provisionally allotted.

The Nil Paid Rights will constitute a separate security for the purposes of CREST and can accordingly be transferred, in whole or in part, by means of CREST in the same manner as any other security that is admitted to CREST.

If for any reason it is impracticable to credit the Nil Paid Rights to the stock accounts of Qualifying CREST Shareholders or to enable the Nil Paid Rights, Provisional Allotment Letters shall, unless the Company otherwise determines, be sent out in substitution for the Nil Paid Rights which have not been so credited or enabled and the expected timetable as set out in this document may be adjusted as appropriate. **References to dates and times in this document should be read as subject to any such adjustment.** The Company will make an appropriate announcement to a Regulatory Information Service approved by the UK Financial Services Authority giving details of the revised dates **but Qualifying CREST Shareholders may not receive any further written communication**.

CREST members who wish to take up all or part of their entitlements in respect of, or otherwise to transfer all or part of their Nil Paid Rights or Fully Paid Rights held by them in CREST should refer to the CREST Manual for further information on the CREST procedures referred to below. Qualifying CREST Shareholders who are CREST sponsored members should consult their CREST sponsor if they wish to take up their entitlements as only their CREST sponsor will be able to take the necessary action to take up their entitlements or otherwise to deal with their Nil Paid Rights or Fully Paid Rights.

CREST members or CREST personal members who wish to take up any part of their entitlements which are held for the account or benefit of US persons determined to be eligible to participate in the Rights Issue in accordance with the procedures set forth in this document and applicable law will be required to materialise such part of their entitlements and will receive a Provisional Allotment Letter in respect of such part of their entitlements. Any such CREST members or, where applicable, such CREST members' CREST sponsor should contact Computershare Investor Services PLC.

(b) Procedure for acceptance and payment

(i) Many-to-Many instructions

CREST members who wish to take up all or part of their entitlement in respect of Nil Paid Rights in CREST must send (or, if they are CREST sponsored members, procure that their CREST sponsor sends) an MTM instruction to CRESTCo which, on its settlement, will have the following effect:

(a) the crediting of a stock account of Computershare Investor Services PLC under the participant ID and member account ID specified below, with the number of Nil Paid Rights to be taken up;

(b) the creation of a settlement bank payment obligation (as this term is defined in the CREST Manual), in accordance with the RTGS payment mechanism (as this term is defined in the CREST Manual), in favour of the RTGS settlement bank of Computershare Investor Services PLC in pounds sterling in respect of the full amount payable on acceptance in respect of the Nil Paid Rights referred to in paragraph 4(a) above; and

(c) the crediting of a stock account of the accepting CREST member (being an account under the same participant ID and member account ID as the account from which the Nil Paid Rights are to be debited on settlement of the MTM instruction) of the corresponding number of Fully Paid Rights to which the CREST member is entitled on taking up his Nil Paid Rights referred to in paragraph 4(a) above.

(ii) Contents of Many-to-Many instructions

The MTM instruction must be properly authenticated in accordance with CRESTCo's specifications and must contain, in addition to the other information that is required for settlement in CREST, the following details:

- the number of Nil Paid Rights to which the acceptance relates;
- the participant ID of the accepting CREST member;
- the member account ID of the accepting CREST member from which the Nil Paid Rights are to be debited;
- the participant ID of Computershare Investor Services PLC in its capacity as a CREST receiving agent, which is 3RA40;
- the member account ID of Computershare Investor Services PLC in its capacity as a CREST receiving agent, which is XSTRATA;
- the number of Fully Paid Rights that the CREST member is expecting to receive on settlement of the MTM instruction, which must be the same as the number of Nil Paid Rights to which the acceptance relates;
- the amount payable by means of the CREST assured payment arrangements on settlement of the MTM instruction, which must be the full amount payable on acceptance in respect of the number of Nil Paid Rights to which the acceptance relates;
- the intended settlement date, which must be on or before 11.00 a.m. on Friday, 27 October 2006;
- the nil paid ISIN Number, which is GB00B1FML606;
- the fully paid ISIN Number, which is GB00B1FMM786; and
- the Corporate Action Number for the Rights Issue, which will be available by viewing the relevant corporate action details in CREST.

(iii) Valid acceptance

An MTM instruction complying with each of the requirements as to authentication and contents set out in this paragraph 4(b) will constitute a valid acceptance where either:

(a) the MTM instruction settles by not later than 11.00 a.m. on Friday, 27 October 2006; or

(b) (i) the MTM instruction is received by CRESTCo by not later than 11.00 a.m. on Friday, 27 October 2006; and

(ii) at the discretion of the Company (A) the MTM instruction is received by CRESTCo by not later than 11.00 a.m. on Friday, 27 October 2006, (B) the number of Nil Paid Rights inserted in the MTM instruction is credited to the CREST stock member account of the accepting CREST member specified in the MTM instruction at 11.00 a.m. on Friday, 27 October 2006 and (C) the relevant MTM instruction settles by 2.00 p.m. on Friday, 27 October 2006 (or such later time and/or date as the Company may determine).

An MTM instruction will be treated as having been received by CRESTCo for these purposes at the time at which the instruction is processed by the Network Providers' Communications Host (as this term is defined in the CREST Manual) at CRESTCo of the network provider used by the CREST member (or by the CREST sponsored member's CREST sponsor). This will be conclusively determined by the input time stamp applied to the MTM instruction by the Network Providers' Communications Host.

(iv) Representations, warranties and undertakings of CREST members

A CREST member or CREST sponsored member who makes a valid acceptance in accordance with this paragraph 4(b) of this Part VII represents, warrants and undertakes to the Company that he has taken (or procured to be taken), and will take (or will procure to be taken), whatever action is required to be taken by him or by his CREST sponsor (as appropriate) to ensure that the MTM instruction concerned is capable of settlement at 11.00 a.m. on Friday, 27 October 2006 and remains capable of settlement at all times after that until 2.00 p.m. on Friday, 27 October 2006 (or until such later time and date as the Company may determine). In particular, the CREST member or CREST sponsored member represents, warrants and undertakes that at 11.00 a.m. on Friday, 27 October 2006 and at all times thereafter until 2.00 p.m. on Friday, 27 October 2006 (or until such later time and date as the Company may determine), there will be sufficient Headroom within the Cap (as those terms are defined in the CREST Manual) in respect of the cash memorandum account to be debited with the amount payable on acceptance to permit the MTM instruction to settle. CREST sponsored members should contact their CREST sponsor if they are in any doubt.

If there is insufficient Headroom within the Cap in respect of the cash memorandum account of a CREST member or a CREST sponsored member for such amount to be debited or the CREST member's or CREST sponsored member's acceptance is otherwise treated as invalid and the New Shares have already been allotted to such CREST member or CREST sponsored member, the Company may (in its absolute discretion as to the manner, timing and terms) make arrangements for the sale of such shares on behalf of that CREST member or CREST sponsored member and hold the proceeds of sale (net of the Company's reasonable estimate of any loss that it has suffered as a result of the acceptance being treated as invalid and of the expenses of sale, including without limitation, any stamp duty or SDRT payable on the transfer of such shares, and of all amounts payable by the CREST member or CREST sponsored member pursuant to the provisions of this Part VII in respect of the acquisition of such shares) on behalf of such CREST member or CREST sponsored member. Neither the Company nor the Underwriters nor any other persons shall be responsible for, or have any liability for, any loss, expense or damage suffered by the CREST member or CREST sponsored member as a result.

(v) CREST procedures and timings

CREST members and CREST sponsors (on behalf of CREST sponsored members) should note that CRESTCo does not make available special procedures in CREST for any particular corporate action. Normal system timings and limitations will therefore apply in relation to the input of an MTM instruction and its settlement in connection with the Rights Issue. It will be the responsibility of the CREST member concerned to take (or, if the CREST member is a CREST sponsored member, to procure that his CREST sponsor takes) the action necessary to ensure that a valid acceptance is received as stated above by 11.00 a.m. on Friday, 27 October 2006. In this connection CREST members and (where applicable) CREST sponsors are referred in particular to those sections of the CREST Manual concerning practical limitations of the CREST system and timings.

(vi) CREST member's undertaking to pay

A CREST member or CREST sponsored member, who makes a valid acceptance in accordance with the procedures set out in this paragraph 4(b) of this Part VII, (a) undertakes to pay to the Company, or procure the payment to the Company of, the amount payable in pounds sterling on acceptance in accordance with the above procedures or in such other manner as the Company may require (it being acknowledged that, where payment is made by means of the RTGS payment mechanism (as defined in the CREST Manual) the creation of an RTGS settlement bank payment obligation in pounds

sterling in favour of Computershare Investor Services PLC's RTGS settlement bank (as defined in the CREST Manual), in accordance with the RTGS payment mechanism shall, to the extent of the obligation so created, discharge in full the obligation of the CREST member (or CREST sponsored member) to pay to the Company the amount payable on acceptance), and (b) requests that the Fully Paid Rights and/or New Shares, to which they will become entitled be issued to them on the terms set out in this document and subject to the memorandum and articles of association of the Company.

If the payment obligations of the relevant CREST member in relation to such New Shares are not discharged in full and such New Shares have already been allotted to the CREST member or CREST sponsored member, the Underwriters may (in their absolute discretion as to the manner, timing and terms) sell them on behalf of the CREST member or CREST sponsored member and hold the proceeds of sale (net of expenses, including without limitation, any stamp duty or SDRT payable on the transfer of such shares, and of all amounts payable by the CREST member or CREST sponsored member pursuant to the provisions of this Part VII in respect of the acquisition of such shares) or an amount equal to the original payment of the CREST member or CREST sponsored member (whichever is lower) on trust for such CREST member or CREST sponsored member. Neither the Company nor any of the Banks nor any other persons shall be responsible for, or have any liability for, any loss, expense or damage suffered by the CREST member or CREST sponsored member as a result.

(vii)Discretion as to rejection and validity of acceptances

The Company may: .

(a) reject any acceptance constituted by an MTM instruction, which is otherwise valid, in the event of breach of any of the representations, warranties and undertakings set out or referred to in this paragraph 4(b) of this Part VII. Where an acceptance is made as described in this paragraph 4(b) of this Part VII which is otherwise valid, and the MTM instruction concerned fails to settle by 2.00 p.m. on Friday, 27 October 2006 (or by such later time and date as the Company may determine), the Company shall be entitled to assume, for the purposes of its right to reject an acceptance as described in this paragraph 4(b) of this Part VII, that there has been a breach of the representations, warranties and undertakings set out or referred to in this paragraph 4(b) of this Part VII unless the Company is aware of any reason outside the control of the CREST members or CREST sponsor (as appropriate) concerned for the MTM instruction not to settle;

(b) with the agreement of the Underwriters (not to be unreasonably withheld or delayed), treat as valid (and binding on the CREST member or CREST sponsored member concerned) an acceptance which does not comply in all respects with the requirements as to validity set out or referred to in this paragraph 4(b) of this Part VII;

(c) with the agreement of the Underwriters (not to be unreasonably withheld or delayed), accept an alternative properly authenticated dematerialised instruction from a CREST member or (where applicable) a CREST sponsor as constituting a valid acceptance in substitution for, or in addition to, an MTM instruction and subject to such further terms and conditions as the Company may determine;

(d) with the agreement of the Underwriters (not to be unreasonably withheld or delayed), treat a properly authenticated dematerialised instruction (in this sub-paragraph the "first instruction") as not constituting a valid acceptance if, at the time at which Computershare Investor Services PLC receives a properly authenticated dematerialised instruction giving details of the first instruction, either the Company or Computershare Investor Services PLC has received actual notice from CRESTCo of any of the matters specified in Regulation 35(5)(a) of the CREST Regulations in relation to the first instruction. These matters include notice that any information contained in the first instruction was incorrect or notice of lack of authority to send the first instruction; and

(e) with the agreement of the Underwriters (not to be unreasonably withheld or delayed), accept an alternative instruction or notification from a CREST member or (where applicable) a CREST sponsor, or extend the time for acceptance and/or settlement of an MTM instruction or any alternative instruction or notification, if, for reasons or due to circumstances, outside the control of any CREST member or CREST sponsored member or (where applicable) CREST sponsor, the CREST member or CREST sponsored member is unable validly to take up all or part of his Nil Paid Rights by means of the above procedures. In normal circumstances, this discretion is only likely to be exercised in the event of any interruption, failure or breakdown of CREST (or of any part of CREST) or on the part of facilities and/or systems operated by Computershare Investor Services PLC in connection with CREST.

(c) Money Laundering Regulations

In respect of any application relating to Nil Paid Rights held in CREST by an applicant who is acting as agent for one or more persons and who is not a UK or EU regulated person or institution (e.g. a UK financial institution), then, irrespective of the value of the application, Computershare Investor Services PLC is required to take reasonable measures to establish the identity of the person or persons on whose behalf the application is being made. Applicants making an application as agent should therefore contact Computershare Investor Services PLC before sending any MTM instruction or other instruction so that appropriate measures may be taken.

Submission of an MTM instruction which constitutes, or which may on its settlement constitute, a valid acceptance as described above constitutes a warranty and undertaking by the applicant to provide promptly to Computershare Investor Services PLC any information Computershare Investor Services PLC may specify as being required for the purposes of the Money Laundering Regulations. Pending the provision of evidence satisfactory to Computershare Investor Services PLC as to identity, Computershare Investor Services PLC, having consulted with the Company and the Underwriters and having taken into account their comments and requests may take, or omit to take, such action as it may determine to prevent or delay settlement of the MTM instruction. If satisfactory evidence of identity has not been provided within a reasonable time, then Computershare Investor Services PLC will not permit the MTM instruction concerned to proceed to settlement but without prejudice to the right of the Company and/or the Underwriters to take proceedings to recover any loss suffered by it as a result of failure by the applicant to provide satisfactory evidence.

(d) Dealings in Nil Paid Rights

Assuming the Rights Issue is unconditional, dealings in the Nil Paid Rights on the London Stock Exchange and the SWX are expected to commence at 8.00 a.m. on Thursday, 5 October 2006. A transfer (in whole or in part) of Nil Paid Rights can be made by means of CREST in the same manner as any other security that is admitted to CREST. The Nil Paid Rights are expected to be disabled in CREST after the close of CREST business on Friday, 27 October 2006.

(e) Dealings in Fully Paid Rights

Following acceptance of the provisional allotment and payment in full (in whole or in part) in accordance with the provisions set out in this document, the Fully Paid Rights may be transferred (in whole or in part) by means of CREST in the same manner as any other security that is admitted to CREST. The last date for settlement of any transfer of Fully Paid Rights in CREST is expected to be Friday, 27 October 2006. The Fully Paid Rights are expected to be disabled in CREST after the close of CREST business on Friday, 27 October 2006.

After Friday, 27 October 2006, the New Shares will be registered in the name(s) of the person(s) entitled to them in the Company's register of members and will be transferable in the usual way.

(f) Withdrawal of Nil Paid Rights or Fully Paid Rights from CREST

Nil Paid Rights or Fully Paid Rights held in CREST may be converted into certificated form, that is, withdrawn from CREST. Normal CREST procedures (including timings) apply in relation to any such conversion.

The recommended latest time for receipt by CRESTCo of a properly authenticated dematerialised instruction requesting withdrawal of Nil Paid Rights from CREST is 4.30 p.m. on Friday, 20 October 2006, so as to enable the person acquiring or (as appropriate) holding the Nil Paid Rights following the conversion into certificated form to take all necessary steps in connection with taking up the entitlement prior to 11.00 a.m. on Friday, 27 October 2006.

Qualifying Shareholders are recommended to refer to the CREST Manual for details of such procedures.

(g) Issue of New Shares in CREST

Fully Paid Rights in CREST are expected to be disabled in CREST after the close of CREST business on Friday, 27 October 2006 (the latest date for settlement of transfers of Fully Paid Rights in CREST). New Shares will be issued in uncertificated form to those persons registered as holding such Fully Paid Rights in CREST at the close of business on that date. Computershare Investor Services PLC will instruct CRESTCo to credit the appropriate stock accounts of those persons (under the same participant ID and member account ID that applied to the Fully Paid Rights held by those persons) with their entitlements to New Shares with effect from the next Business Day (expected to be Monday, 30 October 2006).

(h) Right to allot/issue in certificated form

Despite any other provision of this document, the Company reserves the right to allot and to issue any Nil Paid Rights, Fully Paid Rights or New Shares in certificated form. In normal circumstances, this right is only likely to be exercised in the event of an interruption, failure or breakdown of CREST (or of any part of CREST) or of a part of the facilities and/or systems operated by Computershare Investor Services PLC in connection with CREST.

5. Procedure in respect of rights not taken up (whether certificated or in CREST) and withdrawal rights

(a) Procedure in respect of rights not taken up (whether certificated or in CREST)

If an entitlement to New Shares is not validly taken up by 11.00 a.m. on Friday, 27 October 2006 in accordance with the procedure laid down for acceptance and payment, then that provisional allotment will be deemed to have been declined and will lapse. Deutsche Bank and JPMorgan Cazenove will endeavour (as agents of the Company) to procure subscribers for all (or as many as possible) of those New Shares not taken up at a price per New Share which is at least equal to the aggregate of the Issue Price (at which the New Shares will be subscribed) and the expenses of procuring such subscribers (including any applicable brokerage fees and commissions and amounts in respect of value added tax), such subscribers to be found as soon as reasonably practicable following the Closing Date and in any event by not later than the close of business on Tuesday, 31 October 2006.

Notwithstanding the above, Deutsche Bank and JPMorgan Cazenove may cease to endeavour to procure any such subscribers if in the opinion of Deutsche Bank and JPMorgan Cazenove following consultation with the Company, there is no reasonable likelihood that any such subscribers can be so procured at such a price by such time. If and to the extent that subscribers cannot be procured on the basis outlined above, the relevant New Shares will be subscribed for by the Underwriters as principals pursuant to the Underwriting Agreement or by sub-underwriters procured by Deutsche Bank and JPMorgan Cazenove, in each case, at the Issue Price.

It will be a term of such subscription that any premium over the aggregate of the Issue Price and the expenses of procuring subscribers (including any applicable brokerage fees and commissions and amounts in respect of value added tax) shall be paid (subject as provided in this paragraph 5 of this Part VII):

(i) where the Nil Paid Rights were, at the time they lapsed, represented by a Provisional Allotment Letter, to the person whose name and address appeared on page 1 of the Provisional Allotment Letter;

(ii) where the Nil Paid Rights were, at the time they lapsed, in uncertificated form, to the person registered as the holder of those Nil Paid Rights at the time of their disablement in CREST; and

(iii) where an entitlement to New Shares was not taken up by an Overseas Shareholder, to that Overseas Shareholder.

New Shares for which subscribers are procured on this basis will be re-allotted to such subscribers and the aggregate of any premiums (being the amount paid by such subscribers after deducting the Issue Price and the expenses of procuring such subscribers including any applicable brokerage fees and commissions and amounts in respect of value added tax), if any, will be paid (without interest) to those persons entitled (as referred to above) pro rata to the relevant lapsed provisional allotments, save that no payment will be made of amounts of less than £5.00, which amounts will be aggregated and be paid to the Company. Holdings of Ordinary Shares in certificated and uncertificated form will be treated as being held by different persons for these purposes.

Any transactions undertaken pursuant to this paragraph 5 of this Part VII shall be deemed to have been undertaken at the request of the persons entitled to the lapsed provisional allotments and none of the Company, the Banks or any other person procuring subscribers shall be responsible or have any liability whatsoever for any loss or damage (whether actual or alleged) arising from the terms of or timing of any such acquisition, any decision not to endeavour to procure subscribers or the failure to procure subscribers on the basis described above. The Banks will be entitled to retain any brokerage fees, commissions or other benefits received in connection with these arrangements. Cheques for the amounts due will be sent by post, at the risk of the person(s) entitled, to their registered addresses (the registered address of the first named in the case of joint holders), provided that where any entitlement concerned was held in CREST, the amount due will, unless the Company (in its absolute discretion) otherwise determines, be satisfied by the Company procuring the creation of an

assured payment obligation in favour of the relevant CREST member's (or CREST sponsored member's) RTGS settlement bank in respect of the cash amount concerned in accordance with the RTGS payment mechanism.

Even if all the New Shares are not subscribed for (whether by Qualifying Shareholders, the Underwriters or otherwise), those New Shares which have been taken up will be allotted to persons who have validly subscribed for New Shares if the Rights Issue becomes unconditional.

(b) Withdrawal rights

Persons who have the right to withdraw their acceptances under Section 87Q(4) of the FSMA after a supplementary prospectus has been published and who wish to exercise such right of withdrawal must deposit a written notice of withdrawal, which must include the full name and address of the person wishing to exercise such right of withdrawal and, if such person is a CREST member, the participant ID and the member account ID of such CREST member, by hand only (during normal business hours) with Computershare Investor Services PLC, 2nd Floor, Vintners Place, 68 Upper Thames Street, London EC4V 3BJ or by facsimile to Computershare Investor Services PLC (facsimile 0870 703 6112 (UK only) or +44 870 703 6112 (international)), with an original to follow by post or by hand to Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ, in each case so as to be received before the end of the period of 2 working days beginning with the first working day after the date on which the supplementary prospectus was published. Notice of withdrawal of acceptance given by any other means or which is deposited with Computershare Investor Services PLC after the end of the period of 2 working days beginning with the first working day after the date on which the supplementary prospectus was published will be invalid. Furthermore, the exercise of withdrawal rights will not be permitted after payment by the relevant person of its subscription in full and the allotment of the New Shares to such person becoming unconditional. In such circumstances, Shareholders are advised to consult their professional advisers.

Provisional allotments of entitlements to New Shares which are the subject of a valid withdrawal notice will be deemed to be declined. Such entitlements to New Shares will be subject to the provisions of paragraph 5(a) of this Part VII above as if the entitlement had not been validly taken up.

6. Taxation

Information on taxation in the UK, Switzerland and the US with regard to the Rights Issue is set out in paragraphs 18 to 20 of Part VIII – "Additional Information – UK taxation", "Additional Information – Swiss taxation" and "Additional Information – US taxation" of this document. The information contained in paragraphs 18 to 20 of Part VIII is intended only as a general guide to the current tax position in each of these jurisdictions and Qualifying Shareholders in these jurisdictions should consult their own tax advisers regarding the tax treatment of the Rights Issue in light of their own circumstances. **Shareholders who are in any doubt as to their tax position or who are subject to tax in any other jurisdiction should consult an appropriate professional adviser immediately.**

7. Overseas Shareholders

(a) General

The making or acceptance of the proposed offer of New Shares to or by persons resident in, or who are citizens of, countries other than the United Kingdom may be affected by the laws of the relevant jurisdiction. Those persons should consult their professional advisers as to whether they require any governmental or other consents or need to observe any other formalities to enable them to take up their rights.

It is the responsibility of any person (including, without limitation, custodians, nominees, agents and trustees) outside the United Kingdom wishing to take up rights under the Rights Issue to satisfy himself as to full observance of the applicable laws of any relevant territory including obtaining any requisite governmental or other consents which may be required, observing any other requisite formalities and paying any issue, transfer or other taxes due in such territories. The comments set out in this paragraph 7 are intended as a general guide only and any Qualifying Shareholder who is in doubt as to his position should consult his professional adviser without delay.

Subject to certain exceptions, receipt of this document and/or a Provisional Allotment Letter or the crediting of Nil Paid Rights to a stock account in CREST will not constitute an offer in any jurisdiction other than the United Kingdom and, accordingly, recipients of this document and/or a Provisional Allotment Letter in such jurisdictions must treat them as being sent for information only. No person receiving a copy of this document

and/or a Provisional Allotment Letter and/or receiving a credit of Nil Paid Rights to a stock account in CREST in any jurisdiction other than the United Kingdom may treat the same as constituting an invitation or offer to him, nor should he in any event deal with the Nil Paid Rights or Fully Paid Rights unless, in the relevant jurisdiction, such an invitation or offer could lawfully be made to him or the Nil Paid Rights or Fully Paid Rights could lawfully be dealt with without contravention of any unfulfilled registration or other legal or regulatory requirements.

Accordingly, persons (including, without limitation, custodians, nominees, agents and trustees) receiving a copy of this document and/or a Provisional Allotment Letter or whose stock account in CREST is credited with Nil Paid Rights or Fully Paid Rights should not, in connection with the Rights Issue, distribute or send the same in or into any jurisdiction or transfer Nil Paid Rights or Fully Paid Rights to any person in, or citizen or resident of, any such jurisdiction (including, but not limited to, the United States) where to do so would or might contravene local securities laws or regulations. If a Provisional Allotment Letter or credit of Nil Paid Rights or Fully Paid Rights in CREST is received by any person in any such jurisdiction, or by their agent or nominee, such person must not seek to take up the rights referred to in this document or the Provisional Allotment Letter or renounce the Provisional Allotment Letter or transfer the Nil Paid Rights or Fully Paid Rights in CREST except under an express written agreement between him and the Company. Any person who does forward this document or a Provisional Allotment Letter into any such jurisdiction (whether under a contractual or legal obligation or otherwise) should draw the recipient's attention to the contents of this paragraph 7.

The Company reserves the right, but shall not be obliged, to treat as invalid any acceptance, or take up or purported acceptance or take up of the offer of New Shares, Nil Paid Rights or Fully Paid Rights which appears to the Company or its agents to have been executed, effected or dispatched in a manner which may involve a breach of the securities laws or regulations of any jurisdiction or if the Company believes or its agents believe that the same may violate applicable legal or regulatory requirements or if, in the case of a Provisional Allotment Letter, it provides an address for delivery of Provisional Allotment Letters, share certificates in, or if, in the case of a credit of New Shares in CREST such credit is made to a CREST member or CREST sponsored member whose registered address is in the United States, Australia, Canada, Japan, South Africa or any other jurisdiction outside the United Kingdom in which it would be unlawful to deliver such Provisional Allotment Letters or share certificates. The attention of Qualifying Shareholders with registered addresses in the United States, or persons who are citizens or residents of the United States, is drawn to paragraphs 7(c), 7(d) and 7(e) below, and the attention of Qualifying Shareholders with registered addresses in Australia, Canada, Japan or South Africa or persons who are citizens or residents of such jurisdictions, is drawn to paragraph 7(f) below.

New Shares have been be provisionally allotted (nil paid) to all Qualifying Shareholders, including Overseas Shareholders. In addition, despite any other provision of this document or the Provisional Allotment Letter, the Company reserves the right to permit any Qualifying Shareholder to take up his rights if the Company in its sole and absolute discretion is satisfied, at any time prior to 11.00 a.m. on Friday, 27 October 2006, that the transaction in question is exempt from, or not subject to, the legislation or regulations giving rise to the restrictions in question.

Those Shareholders who wish, and are permitted, to take up their entitlement should note that payments must be made as described in paragraph 3 of this Part VII (where Nil Paid Rights are represented by Provisional Allotment Letters) and paragraph 4 of this Part VII (where Nil Paid Rights are in CREST).

The provisions of paragraph 5 of this Part VII will apply generally to Overseas Shareholders who are unable to (or do not) take up New Shares provisionally allotted to them.

Specific restrictions relating to certain jurisdictions are set out below.

(b) Notice in the London Gazette

In accordance with section 90(5) of the Companies Act, the offer by way of rights to Qualifying Shareholders who have no registered address within the United Kingdom and who have not given the Company an address within the United Kingdom for the service of notices will (subject to the Rights Issue becoming unconditional) be made by the Company publishing a notice in the London Gazette on the day following the date on which the Provisional Allotment Letters are dispatched, stating where copies of this document and Provisional Allotment Letters may be inspected or, in certain circumstances, be obtained on personal application by or on behalf of such Qualifying Shareholders. Such qualifying Shareholders may be able to participate in the Rights Issue if they satisfy themselves that, and in the case of those Qualifying Shareholder with

registered addresses in, or residents of the United States, Australia, Canada, Japan or South Africa, they are able to prove to the Company or its agents that, the receipt, or acceptance, of the offer in such jurisdiction will not breach local securities laws. If a Qualifying Shareholder with a registered address in, or resident in, the United States, Australia, Canada, Japan or South Africa can prove this to the satisfaction of the Company, then the Company at its absolute discretion may arrange for him to be sent a Provisional Allotment Letter whether he is a Qualifying non-CREST Shareholder or Qualifying CREST Shareholder.

(c) Offering restrictions relating to the United States

None of the Nil Paid Rights, the Fully Paid Rights or the New Shares has been or will be registered under the Securities Act, or under any relevant securities laws of any state or other jurisdiction of the United States, and, subject to certain exceptions, none may be offered, sold, renounced, resold, taken up, delivered or transferred, directly or indirectly, in or into the United States.

Accordingly, subject as set out below, neither this document nor any Provisional Allotment Letter constitutes an offer for, or an invitation to apply for, or an invitation to purchase or subscribe for, any Nil Paid Rights, Fully Paid Rights or New Shares in the United States, and no prospectus or any Provisional Allotment Letters will be sent to, or will be accepted for registration from, any Shareholders with registered addresses in the United States. Nil Paid Rights and Fully Paid Rights will not be credited to a stock account in CREST of Qualifying Shareholders with registered addresses in the United States and must not be transferred to any such Shareholders, as indicated in paragraph 8 below.

Notwithstanding the foregoing, the Company reserves the right to make the Nil Paid Rights, the Fully Paid Rights and the New Shares available to institutions in the United States that are reasonably believed to be "qualified institutional buyers" or "QIBs", in the sole discretion of the Company, in transactions that are exempt from registration under the Securities Act. Shareholders and beneficial owners in the United States will not be able to participate in the Rights Issue unless they meet the legal requirements needed to establish their eligibility to participate in the Rights Issue to the satisfaction of the Company, including making appropriate representations to that effect by completing an investor representation letter to the satisfaction of the Company in time to be able to lodge the Provisional Allotment Letter, together with the appropriate remittance for the full amount payable on acceptance, by no later than 11.00 a.m. on Friday, 27 October 2006.

Any person in the United States who obtains a copy of this document or a Provisional Allotment Letter and who is not a QIB is required to disregard them.

The New Shares not taken up by the Qualifying Shareholders pursuant to the Rights Issue, if any, may be offered in the United States to persons reasonably believed to be QIBs in transactions not subject to the registration requirements of the Securities Act. Such acquirers will need to meet the legal requirements needed to establish their eligibility to make such acquisition to the satisfaction of the Company, including making appropriate representations to that effect by completing an investor representation letter.

Potential acquirers of the Nil Paid Rights, the Fully Paid Rights and the New Shares in the United States are advised to consult legal counsel prior to making any offer for, resale, pledge or other transfer of, the Nil Paid Rights, the Fully Paid Rights or the New Shares.

Prospective acquirers are hereby notified that sales of the Nil Paid Rights, the Fully Paid Rights and the New Shares may be made in reliance upon the exemption from the registration requirements of the Securities Act provided by Rule 144A or another exemption from, or in a transaction not subject to, the registration requirements of the Securities Act.

Until 40 days after the commencement of the Rights Issue, an offer, sale or transfer of the Nil Paid Rights, the Fully Paid Rights or the New Shares by a dealer (whether or not participating in the Rights Issue) may violate the registration requirements of the Securities Act.

(d) US transfer restrictions

The offering and delivery of the Nil Paid Rights to, and the offering and acquisition of the Fully Paid Rights or New Shares in the United States to and by, a limited number of persons reasonably believed to be QIBs is being made in reliance on an exemption from the registration requirements of the Securities Act. None of the Nil Paid Rights, Fully Paid Rights or New Shares offered hereby have been or will be registered under the Securities Act or with any securities regulatory authority of

any state or other jurisdiction of the United States and, accordingly, none of such securities may be offered, sold, pledged, or otherwise transferred or delivered except pursuant to an exemption from or in a transaction not subject to the registration requirements under the Securities Act or pursuant to an effective registration statement under the Securities Act.

Each acquirer of New Shares or Fully Paid Rights in the United States will be required to execute and deliver to the Company and/or one or more of its designees an investor letter in the appropriate form, setting forth certain restrictions and procedures regarding the New Shares and Fully Paid Rights, which will contain, amongst other things, the following representations, warranties, agreements and confirmations:

(i) it is an institution which (aa) has such knowledge and experience in financial and business matters as to be capable of evaluating the merits and risks of its investment in the Fully Paid Rights and New Shares, and (bb) it and any accounts for which it is acting are each able to bear the economic risk of such investment, and are each able to sustain a complete loss of any investment in the Fully Paid Rights and New Shares;

(ii) prior to taking up the Fully Paid Rights or the New Shares, it received and read a copy of this document, the investor letter and the documents and information incorporated by reference into this document and will have had access to financial and any other information regarding the Company and the Nil Paid Rights, the Fully Paid Rights and the New Shares as it has requested in connection with any investment decision to acquire the Fully Paid Rights and New Shares. If the acquirer has had any queries regarding this acquisition of the Fully Paid Rights and New Shares or the Company and its affairs or the terms of the Nil Paid Rights, the Fully Paid Rights or the New Shares, it has had the opportunity to and has asked these questions of and received answers satisfactory to it from the representatives of the Company. In making any acquisition of Fully Paid Rights or New Shares, it is relying on this document and not any other information or representation concerning the Company. It agrees that it has held and will hold this document and any Provisional Allotment Letter in confidence, it being understood that this document and any Provisional Allotment Letter that have been or will be received by the acquirer are solely for its use and that it has not duplicated, distributed, forwarded, transferred or otherwise transmitted this document, any Provisional Allotment Letter or any other presentational or other materials concerning the Rights Issue (including electronic copies thereof) to any persons within the United States, and agrees that such materials shall not be duplicated, distributed, forwarded, transferred or otherwise transmitted by it. It has made its own assessment concerning the relevant tax, legal and other economic considerations relevant to its investment in the Fully Paid Rights and the New Shares;

(iii) it acknowledges that the Existing Shares are admitted to the Official List and admitted to trading on the London Stock Exchange and that the Company is therefore required to publish certain business and financial information in accordance with the rules and practices of the Financial Services Authority and the London Stock Exchange (the "Exchange Information") and that the acquirer is able to obtain or access such information without undue difficulty. It acknowledges that neither the Company nor any of its affiliates has made any representation to the acquirer with respect to the Company, other than the information contained in this document. It acknowledges that neither the Banks nor any of their affiliates have made any representation with respect to the Company, the Nil Paid Rights, the Fully Paid Rights or the New Shares. It understands that the Exchange Information has been prepared in accordance with UK format, style and content, which differs from US format, style and content;

(iv) it is a QIB within the meaning of Rule 144A under the Securities Act, and that if it is acquiring the Fully Paid Rights or the New Shares as a fiduciary or agent for one or more investor accounts, each such account is a QIB, it has investment discretion with respect to each such account, and has full power and authority to make, and does make, the acknowledgements, representations and agreements herein on behalf of each such account;

(v) it is a QIB who is acquiring the Fully Paid Rights and New Shares for its own account (or the account of a QIB as to which it has full investment discretion) for investment purposes, and not with a view to distribution within the meaning of the US securities laws;

(vi) it understands and acknowledges that the Nil Paid Rights, the Fully Paid Rights and the New Shares are being offered in a transaction not involving any public offering in the United States within the meaning of the Securities Act and that the Nil Paid Rights, the Fully Paid Rights and the New Shares have not been and will not be registered under the Securities Act or any state securities laws. It agrees that the Nil Paid Rights, the Fully Paid Rights and the New Shares

may not be reoffered, sold, pledged or otherwise transferred, and that it will not directly or indirectly reoffer, sell, pledge or otherwise transfer the Nil Paid Rights, the Fully Paid Rights or the New Shares, except (aa) in an offshore transaction in accordance with Rule 903 or 904 of Regulation S under the Securities Act, (bb) to another QIB in accordance with Rule 144A under the Securities Act or (cc) with respect to the New Shares only, pursuant to Rule 144 under the Securities Act (if available); and that, in each case, such offer, sale pledge or transfer must, and will, be made in accordance with any applicable securities laws of any state or other jurisdiction of the United States;

(vii) it understands that no representation has been, or will be, made by the Company or the Banks as to the availability of Rule 144 under the Securities Act or any other exemption under the Securities Act or any state securities laws for the reoffer, pledge or transfer of the New Shares;

(viii) it understands that the Nil Paid Rights, the Fully Paid Rights and the New Shares are "restricted securities" within the meaning of Rule 144(a)(3) under the Securities Act and that, for so long as they remain "restricted securities", they may not be deposited into any unrestricted depositary facility established or maintained by a depositary bank;

(ix) it acknowledges and agrees that if the New Shares are in certificated form, the certificates representing the New Shares will contain substantially the following legend:

"THE SECURITIES REPRESENTED BY THIS CERTIFICATE HAVE NOT BEEN REGISTERED UNDER THE UNITED STATES SECURITIES ACT OF 1933, AS AMENDED (THE "SECURITIES ACT"), OR UNDER THE SECURITIES LAWS OF ANY STATE OR OTHER JURISDICTION OF THE UNITED STATES, AND MAY NOT BE REOFFERED, SOLD, PLEDGED OR OTHERWISE TRANSFERRED EXCEPT (I) IN AN OFFSHORE TRANSACTION IN ACCORDANCE WITH RULE 903 OR 904 OF REGULATION S UNDER THE SECURITIES ACT, (II) TO A QUALIFIED INSTITUTIONAL BUYER, AS DEFINED IN RULE 144A UNDER THE SECURITIES ACT, IN ACCORDANCE WITH RULE 144A OR (III) PURSUANT TO RULE 144 UNDER THE SECURITIES ACT (IF AVAILABLE); AND THAT, IN EACH CASE, SUCH OFFER, SALE, PLEDGE OR TRANSFER MUST, AND WILL, BE MADE IN ACCORDANCE WITH ANY APPLICABLE SECURITIES LAWS OF ANY STATE OR OTHER JURISDICTION OF THE UNITED STATES. NO REPRESENTATION CAN BE MADE AS TO THE AVAILABILITY OF THE EXEMPTION PROVIDED BY RULE 144 UNDER THE SECURITIES ACT FOR RESALES OF THE SECURITIES REPRESENTED HEREBY.

NOTWITHSTANDING ANYTHING TO THE CONTRARY IN THE FOREGOING, THE SECURITIES REPRESENTED HEREBY MAY NOT BE DEPOSITED INTO ANY UNRESTRICTED DEPOSITARY RECEIPT FACILITY IN RESPECT OF THE COMPANY'S SECURITIES ESTABLISHED OR MAINTAINED BY A DEPOSITARY BANK.";

(x) any information that it has hereto furnished to the Company with respect to its financial position is correct and complete in all material respects as of the date of this letter, and if there should be any material change in such information prior to the consummation of the transactions contemplated hereby, it will promptly furnish such revised or corrected information to the Company; and

(xi) it has not taken up the Nil Paid Rights, the Fully Paid Rights or the New Shares as a result of any general solicitation or general advertising, including advertisements, articles, notices or other communications published in any newspaper, magazine or similar media or broadcast over radio or television or as a result of any seminar or meeting whose attendees have been invited by general solicitation or general advertising.

(e) Procedures for exercising the Nil Paid Rights and Fully Paid Rights for QIBs in the United States

QIBs in the United States may exercise the Nil Paid Rights and the Fully Paid Rights by delivering a properly completed Provisional Allotment Letter to Computershare Investor Services PLC in accordance with the procedures set out in paragraph 3(b) of this Part VII.

QIBs who hold Ordinary Shares through a bank, a broker or another financial intermediary will need to procure that the relevant bank, broker or financial intermediary submits the Provisional Allotment Letter on their behalf.

Overseas Shareholders who are in the United States and who hold Ordinary Shares should refer to the restrictions described in the section of this document headed "Notice to US Investors". Overseas Shareholders who are in the United States must also complete, and return to the Company, an investor letter in the appropriate form as described in paragraph 7(d) of this Part VII, with a copy to the Underwriters. Overseas Shareholders who hold Ordinary

Shares through a bank, a broker or another financial intermediary, should procure that the relevant bank, broker or financial intermediary submits an investor letter on their behalf.

The Company and Computershare Investor Services PLC have the discretion to refuse to accept any Provisional Allotment Letter that is incomplete, unexecuted or not accompanied by an executed investor letter or any other required additional documentation.

(f) Australia, Canada, Japan and South Africa

Due to restrictions under the securities laws of Australia, Canada, Japan and South Africa, no copies of this document and no Provisional Allotment Letters will be sent to, and no Nil Paid Rights will be credited to a stock account in CREST of, Qualifying Shareholders with registered addresses in, and the Nil Paid Rights, the Fully Paid Rights and the New Shares may not be transferred or sold to or renounced or delivered in, any of those countries. Accordingly, no offer of Nil Paid Rights, Fully Paid Rights or New Shares is being made by way of this document or any Provisional Allotment Letter to Shareholders with registered addresses in, or to residents of any of, Australia, Canada, Japan or South Africa.

The provisions set out in paragraph 5 of this Part VII will apply to the rights of Qualifying Shareholders with registered addresses in Australia, Canada, Japan or South Africa that are not taken up.

(g) Overseas territories other than the United States, Australia, Canada, Japan and South Africa

Provisional Allotment Letters will be posted to Qualifying non-CREST Shareholders other than, subject to certain limited exceptions, those Qualifying non-CREST Shareholders who have registered addresses in the United States, Australia, Canada, Japan or South Africa and Nil Paid Rights will be credited to the CREST stock accounts of Qualifying CREST Shareholders other than those Qualifying Shareholders who have registered addresses in the United States, Australia, Canada, Japan or South Africa. Such Qualifying Shareholders may, subject to the laws of their relevant jurisdiction, accept their rights under the Rights Issue in accordance with the instructions set out in this document and, in the case of Qualifying non-CREST Shareholders only, the Provisional Allotment Letter. In cases where Overseas Shareholders do not take up Nil Paid Rights provisionally allotted to them, the provisions of paragraph 5 of this Part VII will apply.

Qualifying Shareholders who have registered addresses in or who are resident in, or who are citizens of, countries other than the UK should consult their professional advisers as to whether they require any governmental or other consents or need to observe any other formalities to enable them to take up their Nil Paid Rights.

If you are in any doubt as to your eligibility to accept the offer of New Shares or to deal with Nil Paid Rights or Fully Paid Rights, you should contact your professional adviser immediately.

8. Representations and warranties relating to Overseas Shareholders

(a) Qualifying non-CREST Shareholders

Any person accepting and/or renouncing a Provisional Allotment Letter or requesting registration of the New Shares comprised therein represents and warrants to the Company and the Banks that, except where proof has been provided to the Company's satisfaction that such person's use of the Provisional Allotment Letter will not result in the contravention of any applicable legal or regulatory requirement in any jurisdiction, (a) such person is not accepting and/or renouncing the Provisional Allotment Letter, or requesting registration of the relevant New Shares, from within the United States, Australia, Canada, Japan or South Africa, (b) such person is not in any territory in which it is unlawful to make or accept an offer to acquire New Shares or to use the Provisional Allotment Letter in any manner in which such person has used or will use it, (c) such person is not acting on a non-discretionary basis for a person located within the United States, Australia, Canada, Japan or South Africa or any territory referred to in (b) above at the time the instruction to accept or renounce was given, and (d) such person is not acquiring New Shares with a view to the offer, sale, resale, transfer, delivery or distribution, directly or indirectly, of any such New Shares into the United States, Australia, Canada, Japan or South Africa or any territory referred to in (b) above. The Company may treat as invalid any acceptance or purported acceptance of the allotment of New Shares comprised in, or renunciation or purported renunciation of, a Provisional Allotment Letter if it (a) appears to the Company or its agent to have been executed in or dispatched from the United States, Australia, Canada, Japan or South Africa or otherwise in a manner which may involve a breach of the laws of any jurisdiction or if it believes the same may violate any applicable legal or regulatory requirement, (b) provides an address in the United States, Australia, Canada, Japan or South Africa for delivery of definitive share certificates for New Shares, or credit to a CREST stock account of a CREST member or CREST sponsored member located in the United States, Australia, Canada, Japan or South

Africa (or any other jurisdiction outside the United Kingdom in which it would be unlawful to deliver such share certificates or credit such account), or (c) purports to exclude the warranty required by this paragraph.

(b) Qualifying CREST Shareholders

A CREST member or CREST sponsored member who makes a valid acceptance in accordance with the procedures set out in paragraph 4 of this Part VII represents and warrants to the Company and the Banks that, except where proof has been provided to the Company's satisfaction that such person's acceptance will not result in the contravention of any applicable legal requirement in any jurisdiction, (a) he is not within the United States, Australia, Canada, Japan or South Africa, (b) he is not in any territory in which it is unlawful to make or accept an offer to acquire Fully Paid Rights or New Shares, (c) he is not accepting on a non-discretionary basis for a person located within the United States, Australia, Canada, Japan or South Africa or any territory referred to in (b) above at the time the instruction to accept was given, and (d) he is not acquiring Fully Paid Rights or New Shares with a view to the offer, sale, transfer, delivery or distribution, directly or indirectly, of any such Fully Paid Rights or New Shares into the United States, Australia, Canada, Japan or South Africa or any territory referred to in (b) above. The Company reserves the right to reject any MTM instruction sent from the United States, Australia, Canada, Japan or South Africa or by a CREST member who is acting on a non-discretionary basis for the account or benefit of a person located within the United States, Australia, Canada, Japan or South Africa.

The comments set out in paragraph 7 of this Part VII and this paragraph 8 are intended as a guide only and persons resident in, or who are citizens of, countries other than the United Kingdom should consult their professional advisers as to whether they require any governmental or other consents or need to observe any other formalities to enable them to take up their rights.

9. Times and dates

The Company shall in its discretion and after consultation with its financial and legal advisers (and with the agreement of the Banks (not to be unreasonably withheld or delayed)) be entitled to amend the dates that Provisional Allotment Letters are dispatched or dealings in Nil Paid Rights commence and amend or extend the latest date for acceptance under the Rights Issue and all related dates set out in this document and in such circumstances shall notify the UK Financial Services Authority and a Regulatory Information Service and the SWX and, if appropriate, Shareholders but Qualifying Shareholders may not receive any further written communication. In particular, pursuant to the Underwriting Agreement, the Company and the Banks have agreed that if a supplementary prospectus is issued by the Company two or fewer Business Days prior to the latest time and date for acceptance and payment in full under the Rights Issue (or such later date as may be agreed between the Company and the Banks), such date shall be deemed to be the date which is three Business Days after the date of issue of the supplementary prospectus (and the dates and times of principal events due to take place following such date shall be extended accordingly).

All documents and cheques posted to or by Qualifying Shareholders and/or their transferees or renouncees (or their respective agents, as appropriate) will be posted at their own risk.

10. Xstrata Share Schemes

In accordance with the rules of the Xstrata Share Schemes, the Directors propose to make adjustments to the terms of outstanding options and awards to take account of the issue of New Shares. Such adjustments will be made subject to the rules of the Xstrata Share Schemes. The Company will notify participants of any such adjustments in due course.

11. Governing law

The terms and conditions of the Rights Issue as set out in this document and, where appropriate, in the Provisional Allotment Letter shall be governed by, and construed in accordance with, the laws of England and Wales.

12. Jurisdiction

The Courts of England and Wales are to have exclusive jurisdiction to settle any dispute which may arise out of or in connection with the Rights Issue, this document or the Provisional Allotment Letter. By accepting rights under the Rights Issue in accordance with the instructions set out in this document and, in the case of Qualifying non-CREST Shareholders only, the Provisional Allotment Letter, Qualifying Shareholders irrevocably submit to the jurisdiction of the Courts of England and Wales and waive any objection to proceedings in any such court on the ground of venue or on the ground that proceedings have been brought in an inconvenient forum.

Part VIII

Additional Information

[This page is intentionally left blank]

1. Responsibility

The Company and the Directors, whose names appear in Part VI – "Directors and Senior Management of Xstrata", accept responsibility for the information contained in this document. Having taken all reasonable care to ensure that such is the case, the information contained in this document is, to the best of the knowledge of the Company and the Directors, in accordance with the facts and contains no omission likely to affect its import.

2. Incorporation and registered office

Xstrata plc was incorporated and registered in England and Wales under the name Glassdesk Limited on 31 December 2001 with registered number 4345939 as a private company with limited liability under the Companies Act. By a written resolution passed on 9 February 2002, the Company resolved to change its name to Xstrata Limited. The change of name became effective on 18 February 2002. On 20 February 2002, the Company re-registered as a public limited company under the Companies Act. The principal legislation under which the Company operates is the Companies Act and the regulations made thereunder.

The Company's registered office is at 4th Floor, Panton House, 25/27 Haymarket, London SW1Y 4EN, United Kingdom, telephone +44 20 7968 2800.

The Company's head office is at Bahnhofstrasse 2, CH-6301 Zug, Switzerland, telephone +41 41 726 6070, which is also the business address of the Directors.

3. Subsidiaries and corporate structure

3.1 Corporate structure

Xstrata AG, which was the predecessor of Xstrata plc, was established in Switzerland in 1926. On 25 March 2002, Xstrata plc merged with Xstrata AG to become the holding company of the Former Xstrata Group. Xstrata plc is the holding company of the Enlarged Xstrata Group.

3.2 Significant subsidiary and associated undertakings of the Former Xstrata Group

The following table shows, as of 30 June 2006, the significant subsidiaries of the Former Xstrata Group and the associated undertakings of the Former Xstrata Group which Xstrata considers are likely to have a significant effect on the assessment of the Enlarged Xstrata Group's assets and liabilities, financial position or profit and losses.

Notes:
(1) Falconbridge owns 100% of the shares of Natresco Incorporated which, in turn, owns 100% of the shares of Falconbridge U.S., Inc.
(2) NorFalco LLC is indirectly wholly-owned by Falconbridge, through its subsidiaries Noranda Commodities, Inc. (65%) and NACID, Inc. (35%).
(3) On 22 June 2006, Falconbridge announced that it would offer to acquire by way of a takeover bid all of the outstanding common shares of its subsidiary, Novicourt Inc., that it did not already own. See Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group – Significant developments during the period under review – 2006".

(4) Falconbridge owns 100% of the shares of 3086143 Nova Scotia Company which, in turn, owns 100% of the shares of Noranda Finance Inc.
(5) Falconbridge Chile S.A., CMDIC Holdings Limited and Falconbridge Collahuasi Limited own 19.93%, 20.09% and 3.98% respectively, and 44%, collectively, of the shares of Compañía Minera Doña Inés de Collahuasi S.C.M. ("Collahuasi"), which owns 100% of the Collahuasi operation.
(6) CMLB Holdings Limited owns 100% of the shares of Compañía Minera Falconbridge Lomas Bayas ("Lomas Bayas"), which owns 100% of the Lomas Bayas operation.
(7) Falconbridge holds a 25% interest in the Noranda Income Fund, a trust formed under the laws of Ontario, Canada, which indirectly owns a zinc processing facility in Valleyfield, Quebec.
(8) Falconbridge holds 100% of the shares of Noranda Antamina Ltd.,which, in turn, owns a 33.75% interest in Compañía Minera Antamina S.A.

4. Capitalisation and indebtedness

4.1 As at 31 August 2006, the unaudited gross capitalisation of the Enlarged Xstrata Group calculated in accordance with IFRS was US$32,068.5 million. Of this amount, total shareholders' equity was US$9,070.8 million and total gross indebtedness was US$22,997.7 million. US$791.5 million of the gross indebtedness balance was non-current and guaranteed but unsecured. US$14.1 million of the gross indebtedness balance was current and guaranteed but unsecured. The current secured debt was US$146.3 million and the non-current secured debt was US$96.7 million. The current unsecured and unguaranteed debt was US$12,076.2 million and the non-current unsecured and unguaranteed debt was US$9,872.9 million. The Enlarged Xstrata Group's unaudited net indebtedness position as at 31 August 2006 was US$20,358.9 million being the Enlarged Xstrata Group's gross indebtedness of US$22,997.7 million (US$12,236.6 million current debt and US$10,761.1 million non-current debt) offset by cash or cash equivalents of US$2,638.8 million. The Enlarged Xstrata Group's unaudited net financial indebtedness position as at 31 August 2006 was US$20,358.9 million being the Enlarged Xstrata Group's net indebtedness of US$20,358.9 million offset by current financial receivables of US$nil.

4.2 As at 30 June 2006, the unaudited total shareholders' equity of the Enlarged Xstrata Group in accordance with IFRS was US$8,760.0 million (excluding the profit and loss reserve).

4.3 The following table sets out the unaudited total current debt, total non-current debt (excluding the current portion of long-term debt) of the Enlarged Xstrata Group as at 31 August 2006 (calculated in accordance with IFRS) and capitalisation (calculated in accordance with IFRS) of the Former Xstrata Group as at 30 June 2006 and the Enlarged Xstrata Group as at 31 August 2006:

	Unaudited IFRS at 31 August 2006 US$m
Total current debt	
Guaranteed and unsecured[1]	14.1
Secured[3]	146.3
Unguaranteed and unsecured	12,076.2
	12,236.6
Total non-current debt (excluding current portion of long-term debt)	
Guaranteed and unsecured[2]	791.5
Secured[3]	96.7
Unguaranteed and unsecured	9,872.9
	10,761.1
Total gross indebtedness	**22,997.7**

	Unaudited IFRS at 30 June 2006 US$m
Shareholders' equity	
Issued share capital	352.4
Share premium	4,172.1
Own shares	(123.0)
Convertible borrowings – equity component	80.5
Other reserves	4,278.0
	8,760.0
Changes in shareholders' equity to 31 August 2006:	
Increase in issued share capital	0.4
Increase in share premium	8.0
Decrease in convertible borrowings – equity component	(0.9)
Increase in other reserves	303.3
Total shareholders' equity at 31 August 2006	**9,070.8**
Gross capitalisation at 31 August 2006	**32,068.5**

(1) Relates to capital market notes which are guaranteed unsecured private placements in the United States.
(2) Relates to capital market notes which are guaranteed unsecured private placements in the United States and convertible bonds and convertible bond issue costs. For detailed information on the convertible bonds, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – B. Operating and financial review relating to the Former Xstrata Group – Liquidity reserves – Convertible borrowings".
(3) Relates to obligations under finance leases and hire purchase contracts.

4.4 The following table sets out the unaudited net financial indebtedness (calculated in accordance with IFRS) of the Enlarged Xstrata Group as at 31 August 2006:

	Unaudited IFRS at 31 August 2006 US$m
Cash and equivalents	2,638.8
Trading securities	0.0
Liquidity	**2,638.8**
Current financial receivable	**0.0**
Current bank debt[1]	118.9
Current portion of non-current debt[2]	11,706.3
Other current financial debt[3]	411.4
Current financial debt	**12,236.6**
Net current financial indebtedness	**9,597.8**
Non-current bank loans[2]	7,085.1
Bonds issued[5]	540.1
Other non-current loans[4]	3,135.9
Non-current financial indebtedness	**10,761.1**
Net financial indebtedness	**20,358.9**

Notes:

(1) Includes bank overdrafts.
(2) Includes unsecured syndicated/term/revolving credit bank loans, secured bank loans, other unsecured bank loan issue costs.
(3) Includes capital market notes, minority interest loans, obligations under finance leases and hire purchase contracts and other loans.
(4) Includes capital market notes, minority interest loans and obligations under finance leases, hire purchase contracts, preference shares and other loans.
(5) Includes convertible bond and convertible bond issue costs.

4.5 For details of guarantees outstanding and contingent liabilities of the Former Xstrata Group as at 31 December 2005, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – B. Operating and Financial Review Relating to the Former Xstrata Group – Contingent liabilities".

4.6 Save as disclosed above and excluding intra-group indebtedness and guarantees, no member of the Enlarged Xstrata Group had at the close of business on 31 August 2006 any outstanding loan capital (including loan capital created but unissued), term loans or any other borrowings or indebtedness in the nature of borrowings, including indirect indebtedness, bank overdrafts, liabilities under acceptances (other than normal trade bills) or acceptance credits, hire purchase commitments, obligations under finance leases, guarantees or other contingent liabilities.

5. Equity Capital Management Programme

The Enlarged Xstrata Group has in place an equity capital management programme ("ECMP"). Under the ECMP, up to 10% of the issued share capital of Xstrata can be purchased in the market by Batiss Investments Limited ("Batiss"), a Guernsey registered entity owned by a charitable trust, which is independent of the Enlarged Xstrata Group.

5.1 Purchasing activity

As part of the ECMP, Batiss has entered into an option agreement with Xstrata Capital Corporation A.V.V. ("Xstrata Capital"), a wholly-owned subsidiary within the Enlarged Xstrata Group, whereby Batiss grants to Xstrata Capital a right to require Batiss to sell the Ordinary Shares purchased to a third party (other than a subsidiary of Xstrata plc), as nominated by Xstrata Capital, at an exercise price of 1p per share.

Under the option agreement, Xstrata Capital pays Batiss a premium for this right, the premium being the equivalent of the market price paid by Batiss for the Ordinary Shares plus associated costs less the 1p exercise price. This premium payment, together with funds from a subscription by Xstrata Capital for non-voting redeemable preference shares in Batiss, provides the funding for Batiss to acquire the Ordinary Shares in the market. These payments are sourced from the existing and future cash resources of Xstrata Capital.

Xstrata Capital is able to exercise its right under the option agreement for a period of six years from the date of each purchase. Batiss waives its right to receive dividends on Ordinary Shares which it holds from time to time.

During the financial year ended 31 December 2005, 26.1 million Ordinary Shares were purchased under the ECMP for US$522 million, bringing the total purchases under the ECMP to 31 December 2005, to 29 million Ordinary Shares (approximately 4.7% of Xstrata's issued ordinary share capital) at an average cost of £10.72 per Ordinary Share. No Ordinary Shares were sold under the ECMP during that period. However, Batiss sold 29,450,976 Ordinary Shares in connection with the Placing announced on 17 May 2006. As at 2 October 2006 (being the latest practicable date prior to the publication of this document), Batiss held no Ordinary Shares.

5.2 Conduct and disclosure of purchases

Purchases of Ordinary Shares under the ECMP are made in the market at prices not exceeding 105% of the average middle-market closing price of the Ordinary Shares over the previous five days, as derived from the London Stock Exchange Daily Official List. The purchasing activity of Batiss is conducted and disclosed in keeping with existing regulation governing UK corporate share repurchases.

5.3 Future application of Ordinary Shares held by Batiss

The proceeds from the sale of the 29,450,976 Ordinary Shares sold by Batiss in connection with the Placing were used by the Former Xstrata Group to repay a portion of the debt incurred in relation to the acquisition of the initial stake of approximately 19.9% in Falconbridge and the Cerrejón Acquisition. Xstrata Capital intends that Ordinary Shares held by Batiss under the ECMP in the future will either be used by the Enlarged Xstrata Group as a source of financing for future acquisitions, in keeping with the Enlarged Xstrata Group's growth strategy, or placed in the market. Batiss waives its right to receive any dividends on, and does not exercise voting rights attaching to, Ordinary Shares held by it from time to time.

If the Ordinary Shares price rises, Xstrata Capital would profit on a future placing to the extent that the price realised for the Ordinary Shares in the market exceeds the original market price paid plus associated funding costs.

Xstrata Capital and Xstrata will consider in the future whether any Ordinary Shares held by Batiss will be acquired by Xstrata. Any repurchase of Ordinary Shares by Xstrata would be subject to the approval of Shareholders and to appropriate clearance being obtained from the Swiss tax authorities.

The decision when to place the Ordinary Shares in the market, use the Ordinary Shares to assist the Enlarged Xstrata Group in facilitating future transactions or to repurchase Ordinary Shares for cancellation will be considered in light of the Enlarged Xstrata Group's funding requirements and capital structure at the time.

5.4 Accounting treatment

While Ordinary Shares are held by Batiss under the ECMP they are disregarded for the purposes of calculating earnings per Ordinary Share. Batiss is consolidated by Xstrata as a quasi-subsidiary, and Ordinary Shares held by it are accounted for as a deduction from shareholders' funds in Xstrata's consolidated balance sheet.

Where Ordinary Shares held by Batiss are subsequently disposed of by way of a placing or as consideration for an acquisition by the Enlarged Xstrata Group, any gain or loss is taken directly to the Enlarged Xstrata Group's reserves to the extent that the market value of the Ordinary Shares so disposed is above or below the cost of those Ordinary Shares. No gain or loss is recognised in Xstrata's consolidated profit and loss account.

If Ordinary Shares held by Batiss are repurchased and cancelled by Xstrata, this would be accounted for in Xstrata's consolidated financial statements as though it had occurred at the time of the purchase of the Ordinary Shares by Batiss.

6. New Shares

6.1 The New Shares which are the subject of the Rights Issue have been provisionally allotted (nil paid) to all Qualifying Shareholders by a resolution of a person duly authorised by a committee of the Board and created in accordance with the laws of England.

6.2 The New Shares will have the same rights in all respects as the Existing Shares (including the right to receive all dividends or other distributions declared after the date of the New Shares Issue). For the avoidance of doubt, the New Shares shall not be entitled to participate in the interim dividend of US$0.13 per share declared on 2 August 2006 and payable on 13 October 2006 in respect of Existing Shares held on the record date of 22 September 2006. A summary of the rights of the Existing Shares is set out in paragraph 9 of this Part VIII below.

6.3 Shareholders who choose not to take up their rights under the Rights Issue will be diluted by 25% following the New Shares Issue (assuming no options granted under the Xstrata Share Schemes or conversion rights under the 2010 Convertible Bonds, the 2017 Convertible Debenture or the 2017 Convertible Bonds are exercised between 2 October 2006 (being the latest practicable date prior to the publication of this document) and the New Shares Issue).

6.4 The ISIN Code for the Nil Paid Rights is GB00B1FML606. The ISIN Code for the Fully Paid Rights is GB00B1FMM786. The ISIN Code for the New Shares is GB0031411001.

6.5 The Swiss Security Number for the Nil Paid Rights is 2 708 557. The Swiss Security Number for the New Shares is 1 386 215.

6.6 The Nil Paid Rights and New Shares will be tradeable on the SWX in Swiss Francs. The Nil Paid Rights and New Shares will only be traded on the SWX in uncertificated form.

7. Share capital and securities convertible into share capital

Share capital upon implementation of the Rights Issue

7.1 The authorised, issued and fully paid share capital of Xstrata as at 2 October 2006 (being the latest practicable date prior to the publication of this document) is as follows:

	Authorised (number)	Authorised	Issued (number)	Issued
Ordinary Shares of US$0.50 each	15,109,948,397	US$7,554,974,198.50	707,362,787	US$353,681,393.50
Non-Voting Deferred Shares of £1 each	50,000	£50,000	50,000	£50,000
Special Voting Share of US$0.50	1	US$0.50	1	US$0.50

7.2 The authorised, issued and fully paid share capital of Xstrata immediately following the New Shares Issue (assuming no options granted under the Xstrata Share Schemes or conversion rights under the 2010 Convertible Bonds, the 2017 Convertible Debenture or the 2017 Convertible Bonds are exercised between 2 October 2006 (being the latest practicable date prior to the publication of this document) and the New Shares Issue) will be as follows:

	Authorised (number)	Authorised	Issued (number)	Issued
Ordinary Shares of US$0.50 each	15,109,948,397	US$7,554,974,198.50	943,150,383	US$471,575,191.50
Non-Voting Deferred Shares of £1 each	50,000	£50,000	50,000	£50,000
Special Voting Share of US$0.50	1	US$0.50	1	US$0.50

The Directors intend, at the first Annual General Meeting of the Company following the full refinancing of the Equity Bridge Facility (which is expected to be the Annual General Meeting of the Company in 2007) to seek Shareholder approval to reduce the authorised share capital of the Company by cancelling such number of authorised but unissued Ordinary Shares as the directors of the Company consider appropriate taking into account the capital structure of the Company at that time.

History of share capital

7.3 Xstrata was incorporated with an authorised share capital of £1,000 divided into 1,000 ordinary shares of £1 each, of which one share was issued nil paid to Instant Companies Limited of 1 Mitchell Lane, Bristol BS1 6BU, UK, the subscriber to Xstrata's Memorandum of Association.

7.4 The following alterations to the authorised and issued share capital of Xstrata have taken place and the following authorities have been granted to the directors of the Company under sections 80 and 95 of the Companies Act, between the Company's incorporation and the date of this document:

(a) on 19 February 2002 the authorised share capital of the Company was increased to £50,000 by the creation of 49,000 ordinary shares of £1 each;

(b) at an extraordinary general meeting of the Company on 19 March 2002:

  (i) the authorised share capital of the Company of £50,000, divided into 50,000 ordinary shares of £1 each, was re-designated as 50,000 Non-Voting Deferred Shares of £1 each;

  (ii) the authorised share capital of the Company was increased to US$175,000,000.50 and £50,000 by the creation of 350,000,000 Ordinary Shares and one special voting share of US$0.50;

(iii) the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) up to an aggregate nominal amount of US$166,140,650, such authority to expire on 19 March 2007 (unless previously revoked, varied or extended by the Company in general meeting); and

(iv) the directors were of the Company empowered pursuant to the section 80 authority described in paragraph (b)(iii) above to allot ordinary shares of the Company for cash until the conclusion of the next Annual General Meeting of the Company after admission in connection with the Xstrata IPO as if section 89 of the Companies Act did not apply to such allotment but limiting such power to certain specified matters in connection with the acquisitions of the Duiker Group and the Enex Group, the Xstrata Merger and the Xstrata IPO, the allotment of equity securities in connection with a rights issue and other allotments of equity securities up to an aggregate nominal amount of US$6,315,025;

(c) at the Annual General Meeting of the Company on 8 May 2003:

(i) the authority conferred on the directors of the Company by Article 14 of the Articles to allot relevant securities was renewed for a period expiring on 9 May 2008 and for that period the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) up to US$42,100,166 (equivalent to 84,200,333 Ordinary Shares); and

(ii) the power conferred on the directors of the Company by Article 15 of the Articles to allot equity securities as if section 89(1) of the Companies Act did not apply was renewed for a period expiring on 9 May 2008 and for that period the directors of the Company were given power pursuant to section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act) up to US$6,315,025 (equivalent to 12,630,050 Ordinary Shares);

(d) at an extraordinary general meeting of the Company on 8 May 2003:

(i) the authorised share capital of the Company was increased conditional on admission of the nil paid rights in respect of the MIM Rights Issue becoming effective, from US$175,000,000 to US$437,500,000 by the creation of an additional 525,000,000 Ordinary Shares;

(ii) subject to and conditional on admission of the nil paid rights in respect of the MIM Rights Issue becoming effective and in place of all existing powers, the authority conferred on the directors of the Company by Article 14 of the Articles to allot relevant securities was renewed for a period expiring on 9 May 2008 and for that period the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) up to (A) US$189,450,750 (equivalent to 378,901,500 Ordinary Shares) in connection with the MIM Rights Issue, and (B) otherwise than in connection with the MIM Rights Issue, US$104,197,912.50 (equivalent to 208,395,825 Ordinary Shares); and

(iii) subject to and conditional on admission of the Ordinary Shares in respect of the MIM Rights Issue becoming effective and in place of all existing powers, the power conferred on the directors of the Company by Article 15 of the Articles to allot equity securities as if section 89(1) of the Companies Act did not apply was renewed for a period expiring on 9 May 2008 and for that period the directors of the Company were given power pursuant to *section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act)* up to US$15,787,562.50 (equivalent to 31,575,125 Ordinary Shares);

(e) by resolution of a committee of the board of directors of the Company on 30 July 2003, as authorised by resolution of the board of directors of the Company passed at its meeting on 17 July 2003, the directors of the Company have, as at 2 October 2006 (being the latest practicable date prior to the publication of this document), issued and allotted 39,317,027 new Ordinary Shares to holders of 2010 Convertible Bonds in respect of conversions of the relevant 2010 Convertible Bonds. The new Ordinary Shares issued and allotted as described above rank *pari passu* with the other Existing Shares, trade on the London Stock Exchange and the SWX and were admitted to the Official List on 28 August 2003;

(f) at the Annual General Meeting of the Company held on 6 May 2004:

(i) in place of all existing authorities and pursuant to the authority conferred on the directors of the Company by Article 14 of the Articles to allot relevant securities, the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) for a period expiring (unless previously renewed, varied or revoked) at the end of the next Annual General Meeting of the Company after 6 May 2004 up to US$105,250,402 (equivalent to 210,500,804 Ordinary Shares); and

(ii) in place of all existing powers and pursuant to the power conferred on the directors of the Company by Article 15 of the Articles, the directors of the Company were authorised to allot equity securities as if section 89(1) of the Companies Act did not apply for a period expiring at the end of the next Annual General Meeting of the Company after 6 May 2004 and for that period the directors of the Company were given power pursuant to section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act) up to US$15,787,560 (equivalent to 31,575,120 Ordinary Shares);

(g) by resolution of an Allotment Committee on 23 March 2005, as authorised by resolution of the board of directors of the Company passed at its meeting on 24 February 2005, the directors of the Company issued and allotted 1,000,000 new Ordinary Shares to K.B. (C.I.) Nominees Limited for the purposes of the Xstrata plc Employee Share Ownership Trust (an employees' share scheme as that term is defined for the purposes of the Companies Act, and within the provisions of Sections 80(2) and 89(5) of the Companies Act). The 1,000,000 new Ordinary Shares rank *pari passu* with the other Existing Shares, trade on the London Stock Exchange and the SWX and were admitted to the Official List on 8 April 2005;

(h) at the Annual General Meeting of the Company held on 9 May 2005:

(i) in place of all existing authorities and pursuant to the authority conferred on the directors of the Company by Article 14 of the Articles to allot relevant securities, the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) for a period expiring (unless previously renewed, varied or revoked) at the end of the next Annual General Meeting of the Company after 9 May 2005 up to US$105,250,402 (equivalent to 210,500,804 Ordinary Shares); and

(ii) in place of all existing powers and pursuant to the power conferred on the directors of the Company by Article 15 of the Articles, the directors of the Company were authorised to allot equity securities as if section 89(1) of the Companies Act did not apply for a period expiring at the end of the next Annual General Meeting of the Company after 9 May 2005 and for that period the directors of the Company were given power pursuant to section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act) up to US$15,787,560 (equivalent to 31,575,120 Ordinary Shares);

(i) at the Annual General Meeting of the Company held on 9 May 2006:

(i) in place of all existing authorities and pursuant to the authority conferred on the directors of the Company by Article 14 of the Articles to allot relevant securities, the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) for a period expiring (unless previously renewed, varied or revoked) at the end of the next Annual General Meeting of the Company after 9 May 2006 up to US$108,477,815 (equivalent to 216,955,630 Ordinary Shares); and

(ii) in place of all existing powers and pursuant to the power conferred on the directors of the Company by Article 15 of the Articles, the directors of the Company were authorised to allot equity securities as if section 89(1) of the Companies Act did not apply for a period expiring at the end of the next Annual General Meeting of the Company after 9 May 2006 and for that period the directors of the Company were given power pursuant to section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act) up to US$16,271,672 (equivalent to 32,543,344 Ordinary Shares);

(j) by resolution of a Placing Committee on 16 May 2006, as authorised by resolution of the board of directors of the Company passed at its meeting on 16 May 2006, the directors of the Company issued and allotted 32,543,344 new Ordinary Shares to placees for the purposes of the Placing. The 32,543,344 new Ordinary Shares rank *pari passu* with the other Existing Shares, trade on the London Stock Exchange and the SWX and were admitted to the Official List on 22 May 2006; and

(k) at an extraordinary general meeting of the Company held on 30 June 2006:

(i) the authorised share capital of the Company was increased from US$437,500,000.50 and £50,000 to US$7,554,974,199.00 and £50,000 by the creation of an additional 14,234,948,397 Ordinary Shares;

(ii) the authority conferred on the directors of the Company by Article 14 of the Articles was renewed for a period expiring (unless previously renewed, varied or revoked) on 30 June 2011 and the directors of the Company were authorised pursuant to section 80 of the Companies Act to exercise all the powers of the Company to allot relevant securities (as defined in that section) up to (A) US$7,000,000,000.00 (equivalent to 14,000,000,000 Ordinary Shares) in connection with one or more issues of relevant securities under one or more transactions to refinance in whole or in part any amount outstanding under the Equity Bridge Facility, and (B) otherwise than in

connection with one or more issues of relevant securities under one or more transactions to refinance in whole or in part the Equity Bridge Facility, US$117,474,198.50 (equivalent to 234,948,397 Ordinary Shares);

(iii) in place of all existing powers and pursuant to the power conferred on the directors of the Company by Article 15 of the Articles, the directors of the Company were authorised to allot equity securities as if section 89(1) of the Companies Act did not apply for a period expiring at the end of the next Annual General Meeting of the Company after 30 June 2006 and for that period the directors of the Company were given power pursuant to section 95 of the Companies Act to allot equity securities (as defined in section 94(2) of the Companies Act) up to US$17,621,129.00 (equivalent to 35,242,258 Ordinary Shares).

7.5 All issued Ordinary Shares are fully paid.

7.6 There are no treasury shares held by the Company as at the date of this document.

7.7 As at 2 October 2006 (being the latest practicable date prior to the publication of this document) K.B. (C.I.) Nominees Limited holds 4,834,557 Ordinary Shares on behalf of the Xstrata Share Schemes, representing approximately 0.68% of Xstrata's current issued ordinary share capital.

7.8 As at 2 October 2006 (being the latest practicable date prior to the publication of this document) Batiss holds no Ordinary Shares pursuant to the ECMP. See paragraph 10.3 of this Part VIII.

7.9 The Existing Shares have been admitted to the Official List of the Financial Services Authority, to trading on the London Stock Exchange's main market for listed securities and to listing on the SWX. The ISIN number of the Existing Shares is GB0031411001. The Swiss Security Number for the Existing Shares is 1 386 215.

Securities convertible into share capital

7.10 On 15 August 2003, Xstrata Capital issued US$600,000,000 3.95% guaranteed convertible bonds due 2010 (the 2010 Convertible Bonds). As at 2 October 2006 (being the latest practicable date prior to publication of this document) US$214,419,000 of the 2010 Convertible Bonds remain outstanding. See paragraph 22.34 of this Part VIII.

7.11 On 6 September 2005, Xstrata Capital issued a US$375,000,000 4.00% guaranteed convertible debenture due 2017 (the 2017 Convertible Debenture). In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document the 2017 Convertible Bonds in consideration for the cancellation of the 2017 Convertible Debenture, the waiver of all rights of the holder of the 2017 Convertible Debenture (Trilon International Inc. ("Trilon"), which is a subsidiary of Brookfield Asset Management Inc., a company formerly known as Brascan Corporation ("Brookfield")), under the 2017 Convertible Debenture and the related deed poll and the release of Xstrata Capital and Xstrata from each of their respective obligations under the 2017 Convertible Debenture and the related deed poll. See paragraph 22.20 of this Part VIII.

7.12 In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document US$375,000,000 4.00% guaranteed convertible bonds due 2017 (the 2017 Convertible Bonds). See paragraph 22.3 of this Part VIII.

8. Auditors

The auditor of the Company for each of the financial years ended 31 December 2003, 31 December 2004 and 31 December 2005 was Ernst & Young LLP, of 1 More London Place, London SE1 2AF, United Kingdom, which is registered to carry out audit work by the Institute of Chartered Accountants in England and Wales.

The auditor of Noranda for each of the financial years ended 31 December 2003 and 31 December 2004 and of Falconbridge for the financial year ended 31 December 2005 was Ernst & Young LLP (Canada), of Ernst & Young Tower, 222 Bay Street Toronto, Ontario M5K 1J7, which is registered to carry out audit work as a participating firm with the Canadian Public Accountability Board.

9. Summary of the memorandum and articles of association of the Company and mandatory takeover bids, squeeze-out and sell-out rules

9.1 Memorandum of association

The memorandum of association of Xstrata provides that its principal object is to carry on the business of a holding company. The objects of Xstrata are set out in full in clause 4 of its memorandum of association which is available for inspection at the address specified in paragraph 31 of this Part VIII.

9.2 Articles of association

(a) The articles of association of Xstrata were adopted pursuant to a special resolution of Xstrata passed on 19 March 2002 and amended by a special resolution of Xstrata passed on 9 May 2005.

(b) The Articles have been drafted so that certain rights that are inalienable under Swiss law and that holders of Xstrata AG Shares enjoyed prior to the Xstrata IPO are preserved in the Company subject to the following arrangements. Under English law the Articles can always be amended by a special resolution (requiring a 75% majority of those present and voting, in person or by proxy). Consequently, a special voting share has been created which carries weighted voting rights sufficient to defeat any resolution which would amend certain of the Articles ("Entrenched Rights Actions"). The holder of the special voting share, The Law Debenture Trust Corporation p.l.c. (the "trustee company"), has agreed under a voting agreement with the Company (the "Voting Agreement"), to exercise its votes to vote against (and so defeat) any resolution to amend or remove an Entrenched Rights Action except in limited circumstances as described in paragraph 9.13 of this Part VIII. This structure has the effect of entrenching certain rights into the Articles.

(c) These rights include the following:

(i) the right not to have changes made to the Articles which would cause a member to cease to be a member or take away a member's rights to speak and vote at general meetings, to be paid a dividend if one is declared and to receive liquidation proceeds on a winding up;

(ii) the right of shareholders to requisition a general meeting (if they hold Ordinary Shares whose nominal value is equivalent to CHF1 million or more);

(iii) the right to at least 20 clear days' notice of all shareholder meetings;

(iv) the right to have satellite general meetings in Switzerland if the general meeting is not held in Switzerland;

(v) the right of members to appoint directors and alternate directors;

(vi) the right not to have membership withdrawn by consolidation of share capital;

(vii) a provision in a proxy appointment includes the right to demand a poll and confers the right to speak at a meeting;

(viii) the right to inspect records;

(ix) the right to a special examination of the transactions and other matters affecting shareholder rights; and

(x) a provision requiring the publication of notices relating to the Company in the Swiss Commercial Gazette and at least one leading Swiss newspaper.

9.3 Share rights

(a) Subject to the provisions of the Companies Acts (as defined in the Articles) and without prejudice to any rights attached to any existing shares or class of shares, any share may be issued with such rights or restrictions as the Company may by ordinary resolution determine or, subject to and in default of such determination, as the Board may determine.

(b) Subject to the Articles and to the Companies Acts (as defined in the Articles), and without prejudice to any rights attaching to any existing shares or class of shares, the Board may issue any shares which are to be redeemed, or which at the option of the Company or the holder are liable to be redeemed. The unissued shares of the Company (whether forming part of the original or any increased capital) are at the disposal of the Board.

9.4 Voting rights

(a) Subject to the rights and restrictions attached to any class of shares:

(i) on a show of hands, every member present in person or by proxy has one vote (save that neither the holder of the special voting share nor any holder of deferred share(s) shall be entitled to vote) and a proxy appointed by a member on behalf of such member's shareholding shall also have one vote;

(ii) on a poll:

(A) every member present in person or by proxy (except the holder of the special voting share and any holder of the deferred shares) shall have:

(i) one vote for each fully paid share; and

(ii) for each partly-paid share, such proportion of the votes attached to a fully paid share as would mean that such proportion is the same as the proportion of the amount paid up on the total issue price of that share;

(B) the holder of the special voting share shall, on an Entrenched Rights Action, have enough votes to defeat the resolution but, on all other decisions, shall have no votes; and

(C) the holders of the deferred shares shall not be entitled to vote.

(iii) unless the Board determines otherwise, a member who has been served with a direction notice after failure (whether by such member or by another person) to provide the Company with information concerning interests in those shares required to be provided under the Companies Act, shall (for so long as the information is not supplied and for up to 14 days thereafter) not be entitled to vote in respect of the shares in relation to which the information has not been supplied.

9.5 Dividends and other distributions

(a) Subject to the provisions of the Companies Acts (as defined in the Articles), the Company may by ordinary resolution declare dividends in accordance with the respective rights of the members, but no dividend shall exceed the amount recommended by the Board. The dividend shall be paid according to the amounts paid on shares in respect of which the dividend is paid, but no amount paid on a share in advance of calls shall be treated for these purposes as paid on the share. The special voting share and the deferred shares shall not carry the right to receive a dividend.

(b) Subject to the provisions of the Companies Acts (as defined in the Articles), the Board may pay interim dividends if it appears to the Board that they are justified by the profits of the Company available for distribution.

(c) The Board may also pay at intervals determined by it any dividend at a fixed rate if it appears to the Board that the profits available for distribution justify the payment. If the Board acts in good faith it shall not incur any liability to the holders of shares conferring preferred rights for any loss they may suffer by the lawful payment of an interim dividend on any shares having deferred or non-preferred rights.

(d) No dividend or other moneys payable in respect of a share shall bear interest against the Company unless otherwise provided by the rights attached to the share.

(e) The Board may withhold payment from a person of any dividend in respect of shares in the Company if those shares represent at least a 0.25% interest in the Company's shares or any class thereof and if, in respect of those shares, such person has been served with a direction notice after failure (whether by such person or by another) to provide the Company with information concerning interests in those shares required to be provided under the Companies Act (as defined in the Articles).

(f) Except as otherwise provided by the rights attached to any class of shares, all dividends will be declared and paid according to the amounts paid-up on the shares during any portion of the period in respect of which the dividend is paid.

(g) The Board may, if authorised by an ordinary resolution of the Company, offer any holder of shares the right to elect to receive shares by way of scrip dividend instead of cash in respect of the whole (or some part, to be determined by the Board) of any dividend.

(h) Any dividend which has remained unclaimed for 12 years from the date when it became due for payment shall, if the Board so resolves, be forfeited and cease to remain owing by the Company.

(i) Except as provided by the rights and restrictions attached to any class of shares (as to which see paragraph 9.7 below), the holders of the Company's shares will under general law be entitled to participate in any surplus assets in a winding up in proportion to their shareholdings. A liquidator may, with the sanction of an extraordinary resolution and any other sanction required by the Insolvency Act 1986, divide among the members in specie the whole or any part of the

assets of the Company and may, for that purpose, value any assets and determine how the division shall be carried out as between the members or different classes of members.

9.6 Variation of rights

Except as set out in paragraphs 9.2 and 9.14 in the case of an Entrenched Rights Action and subject to the provisions of the Companies Acts (as defined in the Articles), rights attached to any class of shares may be varied or abrogated in such manner (if any) as may be provided by those rights, or in the absence of any provision, either with the written consent of the holders of not less than three-fourths in nominal value of the issued shares of that class, or the sanction of an extraordinary resolution passed at a separate general meeting of the holders of those shares.

9.7 Rights of holders of deferred shares

The holders of deferred shares shall not have the right to receive notice of any general meeting of the Company nor the right to attend, speak or vote at any such general meeting. The deferred shares have no rights to dividends and, on a winding-up or other return of capital entitle the holder only to the repayment of the amounts paid upon such shares after repayment of the nominal amount paid up on the Ordinary Shares, the nominal amount paid up on the special voting share plus the payment of £100,000 per Ordinary Share. The Company has irrevocable authority at any time to appoint any person to execute on behalf of the holders of any deferred shares a transfer of and/or an agreement to transfer the deferred shares to such persons as the Company may determine as custodian of the shares and/or purchase or cancel the deferred shares (in accordance with the provisions of the Companies Act) in any such case for not more than £1 for each share being transferred, purchased or cancelled to be paid to the registered relevant holder of the shares without obtaining the sanction of the holder or holders of the deferred shares for such a transfer and/or acquisition and, pending such transfer and/or acquisition, to retain the certificate for such deferred shares. The Company may, at its option, redeem all of the deferred shares in issue at any time (but subject to the minimum capital requirement of the Companies Act) at a price not exceeding £1 for each share redeemed to be paid to the relevant registered holdings of the shares. The Company must provide the holders of the deferred shares with not less than 28 days' notice in writing of its intention to do so, fixing a time and place for the redemption.

9.8 Transfer of shares

(a) A member may transfer all or any of his certificated shares by an instrument of transfer in any usual form or in any other form, which the Board may approve. An instrument of transfer shall be signed by or on behalf of the transferor and, unless the share is fully paid, by or on behalf of the transferee. An instrument of transfer need not be under seal.

(b) The Board may, in its absolute discretion and without giving any reason, refuse to register the transfer of a certificated share which is not a fully paid share, provided that the refusal does not prevent dealings in shares of that class in the Company from taking place on an open and proper basis. The Board may also refuse to register the transfer of a certificated share unless the instrument of transfer:

  (i) is lodged, duly stamped (if stampable), with the Company and (except where the shares are registered in the name of a recognised person (as defined in the Articles) and no certificate shall have been issued therefor) is accompanied by the relevant share certificate and such other evidence of the right to transfer as the Board may require;

  (ii) is in respect of one class of share only; and

  (iii) is in favour of not more than four persons.

(c) The Board may refuse to register a transfer of shares in the Company by a person if those shares represent at least a 0.25% interest in the Company's shares or any class thereof and if, in respect of those shares, such person has been served with a direction notice after failure (whether by such person or by another) to provide the Company with information concerning interests in those shares required to be provided under the Companies Act, unless (i) the transfer is an approved transfer (as defined in the Articles), (ii) the relevant member is not himself in default as regards supplying the information required and certifies that no person in default as regards supplying such information is interested in any of the shares the subject of the transfer, or the transfer of the shares is required to be registered by the CREST Regulations.

(d) Notice of refusal to register a transfer must be sent to the transferee within two months after the date on which the instrument of transfer was lodged with the Company or the instruction to transfer shares was received by the Company from the Operator of a Relevant System (in each case, as defined in the CREST Regulations), as the case may be.

(e) No fee shall be charged for the registration of any instrument of transfer or other document relating to or affecting the title to any share.

(f) Shares may be transferred by means of a Relevant System, including the Relevant System of which CRESTCo Limited is the Operator (in each case, as defined in the CREST Regulations).

(g) The Board shall decline to register any transfer of the special voting share except where permitted in accordance with the Voting Agreement in place between the Company and the holder of the special voting share. The Voting Agreement is described in paragraph 9.14 below.

(h) Save as provided above or as required by the Companies Act or other applicable law, the Company shall not impose restrictions on the transfer of shares.

9.9 Alteration of share capital

The Company may from time to time by ordinary resolution increase, consolidate and divide or, subject to the Companies Acts (as defined in the Articles), subdivide its share capital. The Company may by ordinary resolution also cancel any shares which have not, at the date of the resolution, been taken or agreed to be taken by any person and diminish the amount of its authorised share capital by the amount of the shares so cancelled. Subject to the provisions of the Companies Acts (as defined in the Articles), the Company may by special resolution reduce its share capital, capital redemption reserve and share premium account in any way.

9.10 General meetings

All general meetings of the Company other than annual general meetings shall be called extraordinary general meetings. The board shall convene and the Company shall hold general meetings as annual general meetings in accordance with the requirements of the Companies Act.

The board may call general meetings whenever and at such times and places as it shall determine. On the requisition of members pursuant to the provisions of the Companies Act, the board shall promptly convene an extraordinary general meeting in accordance with the requirements of the Companies Act.

In addition to the rights granted to members under Section 376 of the Companies Act (to have members' resolutions circulated), the Company shall on the requisition in writing of a member or members holding a number of ordinary shares whose total nominal value (based on prevailing exchange rates at the time such a request is made) is not less than the equivalent of CHF 1 million and, at the expense of the requisitionists, give to members of the Company entitled to receive notice of general meetings notice of any resolution which may properly be moved and is intended to be moved at an annual general meeting by such requisitionists. The Company is not bound to give notice of a resolution unless a copy of the requisition signed by the requisitionists is deposited at the registered office of the Company not less than six weeks before the relevant annual general meeting.

Subject to the provisions of the Companies Act and the Articles, each member of the Company is entitled to attend a general meeting. The board may resolve to enable persons entitled to attend a general meeting to do so by simultaneous attendance and participation at a satellite meeting place anywhere in the world. If a general meeting is not held in Switzerland then arrangements will be made for a satellite meeting place in Switzerland.

9.11 Special voting share

The special voting share does not carry a right to receive dividends, has rights to vote in certain circumstances and carries a right to no more than the amount of capital paid up on such a share in the event of liquidation. As noted below, the special voting share carries enough votes to defeat any resolution deemed to be an Entrenched Rights Action. The special voting share will be redeemable by the Company on termination of the Voting Agreement.

9.12 Entrenched rights action

If the Company proposes to take an Entrenched Rights Action, such action shall require approval by a special resolution passed at a general meeting. The holders of the Ordinary Shares and the holder of the special voting share are entitled to vote as a single class on a poll. On such a resolution, the holder of the special voting share shall have sufficient votes to defeat the resolution. Entrenched Rights Actions are described in paragraph 9.2 above.

9.13 Mandatory takeover bids, squeeze-out and sell-out rules

As of 20 May 2006, the City Code applies to the Company and the provisions of the Articles designed to replicate certain provisions of the City Code whilst the City Code did not apply to the Company no longer apply. (Such provisions in the Articles contained certain takeover protections which were designed to ensure that no person acquired 30% or more of the Company's voting rights or, if they already held more than 30% (but less than 50%) of the Company's voting rights, acquired any additional voting rights, without making a cash offer to all Shareholders.)

Other than as provided by the Takeovers Directive (Interim Implementation) Regulations 2006 and the City Code, there are no rules or provisions relating to mandatory bids and/or squeeze-out and/or sell-out rules in relation to the Ordinary Shares.

9.14 The Voting Agreement

The Voting Agreement provides that the trustee company will vote against any Entrenched Rights Actions unless:

(a) in the opinion of counsel such resolutions can be passed without derogating in any material respect from the rights which the former Xstrata AG shareholders would enjoy if the shares in the Company were shares in a company incorporated in Switzerland; or

(b) in the opinion of counsel such resolutions would be permitted in relation to a merger between a Swiss corporation (Aktiengesellschaft) and an English plc under Swiss law and practice then in force and applicable, were the merger to take place at the time of the proposed resolutions; or

(c) the Company has certified to the trustee company that after having invited all shareholders to object, no shareholder has objected to the adoption of the resolution or has voted against it.

The Voting Agreement is terminable and may be amended under certain limited circumstances including in circumstances broadly comparable to those mentioned in paragraphs 9.14(a) and (b) above.

9.15 Directors

(a) Appointment of directors

Unless otherwise determined by ordinary resolution, the number of directors (other than alternate directors) shall be not less than two. Directors may only be appointed by Xstrata by ordinary resolution and not by the board of directors.

(b) Age of directors

The provisions of the UK Companies Act with regard to "Age limit for directors" shall not apply to Xstrata but where the board of directors convenes any general meeting of Xstrata at which (to the knowledge of the board of directors) a director will be proposed for appointment or re-appointment who at the date for which the meeting is convened will have attained the age of 70 or more, the board of directors shall give notice of his age in years in the notice convening the meeting.

(c) No share qualification

A director shall not be required to hold any shares in the capital of Xstrata by way of qualification.

(d) Retirement of directors by rotation

At every annual general meeting of Xstrata, one-third of the directors or if their number is not three or a multiple of three, the number nearest to one-third, but at least one, will retire by rotation. The directors to retire will be those who have been longest in office. Any director who has at the start of the annual general meeting been in office for more than three years since his last appointment or re-appointment shall retire at the annual general meeting. As between those who were appointed or re-appointed on the same day, those to retire will be (unless they otherwise agree) determined by lot. A retiring director shall be eligible for re-election.

(e) Remuneration of directors

(i) The emoluments of any director holding executive office for his services as such shall be determined by the board of directors, and may be of any description.

(ii) The ordinary remuneration of the directors who do not hold executive office for their services (excluding amounts payable under any other provision of the articles) shall not exceed in aggregate £1 million per annum or such higher amount as Xstrata may from time to time by ordinary resolution determine. Subject thereto, each such director shall be paid a fee for their services (which shall be deemed to accrue from day to day) at such rate as may from time to time be determined by the board of directors. In addition, any director who does not hold executive office and who performs services, which in the opinion of the board of directors are outside the scope of the ordinary duties of a director, may be paid such extra remuneration as the board of directors may determine.

(iii) In addition to any remuneration to which the directors are entitled under the articles, they may be paid all travelling, hotel and other expenses properly incurred by them in connection with their attendance at meetings of the board of directors or committees of the board of directors, general meetings or separate meetings of the holders of any class of shares or of debentures of Xstrata or otherwise in connection with the discharge of their duties.

(iv) The board of directors may provide benefits, whether by the payment of gratuities or pensions, insurance or otherwise, for any past or present director or employee of Xstrata or any of its subsidiary undertakings or any body corporate associated with, or any business acquired by, any of them, and for any member of his family or any person who is or was dependent on him.

(f) Permitted interests of directors

Subject to the provisions of the Companies Act, and provided that he has disclosed to the board of directors the nature and extent of any material interest of his, a director notwithstanding his office:

(i) may be a party to, or otherwise interested in, any transaction or arrangement with Xstrata or in which Xstrata is otherwise interested;

(ii) may act by himself or his firm in a professional capacity for Xstrata (otherwise than as auditor), and he or his firm shall be entitled to remuneration for professional services as if he were not a director;

(iii) may be a director or other officer of, or employed by, or a party to any transaction or arrangement with, or otherwise interested in, any body corporate promoted by Xstrata or in which Xstrata is otherwise interested; and

(iv) shall not, by reason of his office, be accountable to Xstrata for any benefit which he derives from any such office or employment, or from any such transaction or arrangement, or from any interest in any such body corporate, and no such transaction or arrangement shall be liable to be avoided on the ground of any such interest or benefit.

Xstrata is also subject to the additional requirements applicable to transactions with related parties imposed by the Listing Rules. This may result in a transaction or arrangement referred to in sub-paragraph (i) requiring, amongst other things, shareholder approval.

(g) Restrictions on voting

Except as otherwise provided in the Articles, a director shall not vote at a meeting of the board of directors or a committee of the board of directors on any resolution of the board of directors concerning a matter in which he has an interest which (together with any interest of any person connected with him) is to his knowledge material, unless his interest arises only because the resolution concerns one or more of the following matters:

(i) the giving of a guarantee, security or indemnity in respect of money lent or obligations incurred by him or any other person at the request of, or for the benefit of, Xstrata or any of its subsidiary undertakings;

(ii) the giving of a guarantee, security or indemnity in respect of a debt or obligation of Xstrata or any of its subsidiary undertakings for which the director has assumed responsibility (in whole or part and whether alone or jointly with others) under a guarantee or indemnity or by the giving of security;

(iii) a contract, arrangement, transaction or proposal concerning an offer of shares, debentures or other securities of Xstrata or any of its subsidiary undertakings for subscription or purchase, in which offer he is or may be entitled to participate as a holder of securities or in the underwriting or sub-underwriting of which he is to participate;

(iv) a contract, arrangement, transaction or proposal concerning any other body corporate in which he or any person connected with him is interested, directly or indirectly, and whether as an officer, shareholder, creditor or otherwise, if he and any persons connected with him do not to his knowledge hold an interest (as that term is used in sections 198 to 211 of the Companies Act) representing 1% or more of either any class of the equity share capital (excluding any shares of that class held as treasury shares) of such body corporate (or any other body corporate through which his interest is derived) or of the voting rights available to members of the relevant body corporate (any such interest being deemed for such purpose to be a material interest in all circumstances);

(v) a contract, arrangement, transaction or proposal for the benefit of employees of Xstrata or of any of its subsidiary undertakings which does not award him any privilege or benefit not generally accorded to the employees to whom the arrangement relates; and

(vi) a contract, arrangement, transaction or proposal concerning any insurance which Xstrata is empowered to purchase or maintain for, or for the benefit of, any directors or for persons who include directors.

Xstrata may by ordinary resolution suspend or relax to any extent, either generally or in respect of any particular matter, any provision of the articles prohibiting a director from voting at a meeting of directors or of a committee of directors.

(h) Borrowing powers

The board of directors may exercise all the powers of Xstrata to borrow money, to guarantee, to indemnify, to mortgage or charge its undertaking, property, assets (present and future) and uncalled capital, and to issue debentures and other securities whether outright or as collateral security for any debt, liability or obligation of Xstrata or of any third party. There is no requirement on the directors to restrict the borrowings of Xstrata or its subsidiaries.

(i) Indemnity of directors

Subject to the provisions of the Companies Acts, but without prejudice to any indemnity to which the person concerned may otherwise be entitled, every director or other officer of the Company (other than any person (whether an officer or not) engaged by the Company as auditor) shall be indemnified out of the assets of the Company against any liability incurred by him for negligence, default, breach of duty or breach of trust in relation to the affairs of the Company, provided that such person shall not be entitled to such indemnification to the extent that it would cause the relevant provision of the Articles providing for such indemnification, or any element of it, to be treated as void under the Act or otherwise under the Companies Acts.

10. Directors', Senior Executives' and other interests

10.1 Directors' and Senior Executives' interests

The interests of the Directors and Senior Executives in the share capital of the Company (all of which are beneficial unless otherwise stated), including the interests of persons connected with the Directors and/or Senior Executives for the purposes of section 346 of the Companies Act, as notified to the Company pursuant to sections 324 or 328 of the Companies Act and entered in the register maintained pursuant to section 325 of the Companies Act, at the date of this document, and following the New Shares Issue, including as a percentage of the Enlarged Share Capital, (assuming full take up by the Directors and Senior Executives of their entitlements under the Rights Issue and no options granted under the Xstrata Share Schemes and no conversion rights under the 2010 Convertible Bonds, the 2017 Convertible Debenture or the 2017 Convertible Bonds are exercised between 2 October 2006 (being the latest practicable date prior to the publication of this document) and the New Shares Issue), are as follows:

[1] Mr. Davis has a conditional right to acquire a further 206,897 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for of such Ordinary Shares is 5 March 2007. Mr. Davis has a right to acquire 169,811 Ordinary Shares at no cost in respect of the 2005 bonus plan which will vest on 25 February 2007. Mr. Davis has a further right to acquire 96,801 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 55,315 Ordinary Shares on 23 February 2007 and 41,486 Ordinary Shares on 23 February 2008.

[2] Mr. Reid has a conditional right to acquire a further 181,380 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 87,931 of such Ordinary Shares is 5 March 2007, for 57,639 Ordinary Shares is 11 March 2008 and for 35,810 Ordinary Shares is 10 March 2009. Mr Reid has a right to acquire 32,372 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 25,856 Ordinary Shares on 23 February 2007 and 6,516 Ordinary Shares on 23 February 2008.

[3] Mr. Zaldumbide has a conditional right to acquire a further 182,658 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 80,690 Ordinary Shares is 5 March 2007, for 66,357 Ordinary Shares is 11 March 2008 and for 35,611 Ordinary Shares is 10 March 2009. Mr Zaldumbide has a right to acquire 38,775 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 31,020 Ordinary Shares on 23 February 2007 and 7,755 Ordinary Shares on 23 February 2008.

[4] Mr. Coates has a conditional right to acquire a further 125,004 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 52,545 Ordinary Shares is 5 March 2007, for 44,704 Ordinary Shares is 11 March 2008 and for 27,755 Ordinary Shares is 10 March 2009. Mr. Coates has a further right to acquire 28,965 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 23,172 Ordinary Shares on 23 February 2007 and 5,793 Ordinary Shares on 23 February 2008.

[5] Mr. Gonsalves has a conditional right to acquire a further 97,119 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 39,828 Ordinary Shares is 5 March 2007, for 32,468 Ordinary Shares is 11 March 2008 and for 24,823 Ordinary Shares is 10 March 2009. Mr. Gonsalves has a further right to acquire 20,744 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 16,595 Ordinary Shares on 23 February 2007 and 4,149 Ordinary Shares on 23 February 2008.

[6] Mr. Nienaber has a conditional right to acquire a further 79,975 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 34,153 Ordinary Shares is 5 March 2007, for 29,002 Ordinary Shares is 11 March 2008 and for 16,820 Ordinary Shares is 10 March 2009. Mr. Nienaber has a further right to acquire 15,250 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest on 23 February 2007.

[7] Mr. Sartain has a conditional right to acquire a further 97,207 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 34,153 Ordinary Shares is 5 March 2007, for 37,511 Ordinary Shares is 11 March 2008 and for 25,543 Ordinary Shares is 10 March 2009. Mr. Sartain has a further right to acquire 25,335 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 18,767 Ordinary Shares on 23 February 2007 and 6,568 Ordinary Shares on 23 February 2008.

In accordance with the rules of the Xstrata Share Schemes, the Directors propose to make adjustments to the terms of outstanding options and awards to take account of the New Shares Issue. Such adjustments will be made subject to the rules of the Xstrata Share Schemes.

10.2 Directors' and Senior Executives' conflicts of interest

Mr. Strothotte and Mr. Glasenberg are Directors nominated by Glencore International. Therefore, potential conflicts of interest may arise between the duties owed by such Directors to the Company and their duties to Glencore. The Relationship Agreement between the Company and Glencore International regulates the ongoing relationship between the Company and Glencore, as described in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Relationship with controlling shareholder". In particular, under the Relationship Agreement, directors of Xstrata nominated by Glencore International are not permitted, unless the independent directors agree otherwise, to vote on any resolutions of the Company's board of directors to approve any aspect of Xstrata's involvement in or enforcement of any arrangements, agreements or transactions with any member of Glencore.

There are no other potential conflicts of interests between any duties to the Company of the Directors and the Senior Executives and their private interests and/or other duties.

10.3 Interests of major Shareholders

Insofar as is known to Xstrata, the name of each person who, directly or indirectly, has an interest in Xstrata's ordinary share capital which is notifiable under Part VI of the Companies Act, and the amount of such person's interest, as at 2 October 2006 (being the latest practicable date prior to the publication of this document) are as follows:

	Ordinary Shares	
Name	**No.**	**%**
Credit Suisse Securities (Europe) Limited[1]	153,709,951	21.73
Glencore International AG[1]	101,040,400	14.28
AXA Investment Managers UK Limited[2]	1,518,658	0.21

[1] As a result of their participation in a capital management programme entered into by Glencore International, CSFB Equities and CSSEL in connection with the Former Xstrata Group's acquisition of MIM and the MIM Rights Issue (the "Arrangement"), Glencore International, CSFB Equities and CSSEL are jointly interested in 254,750,351 Ordinary Shares, representing approximately 36.01% of the current issued ordinary share capital of the Company. Xstrata was notified by Credit Suisse Group on 28 September 2006 that: (i) 2,137,541 of the Ordinary Shares held by CSSEL, representing approximately 0.30% of the current issued ordinary share capital of the Company, were in the course of settlement at the relevant time in the notification; and (ii) Credit Suisse Group has additional interests in a further 12,045,550 of the Ordinary Shares, representing approximately 1.70% of the current issued ordinary share capital of the Company. Under its terms, the Arrangement will terminate on 2 December 2006.

[2] AXA Investment Managers UK Limited ("AXA") notified the Company on 20 September 2006 that AXA holds a beneficial interest in 1,518,658 Ordinary Shares or approximately 0.21% of the current issued ordinary share capital of the Company and a non-beneficial interest in 75,073,778 Ordinary Shares or approximately 10.61% of the current issued ordinary share capital of the Company. In total, AXA is therefore deemed to have an interest in 76,592,436 Ordinary Shares, representing approximately 10.83% of the current issued ordinary share capital of the Company.

Insofar as is known to Xstrata, the Company is not directly or indirectly owned or controlled by another corporation, any foreign government, or any other natural or legal person, severally or jointly

Insofar as is known to Xstrata, immediately following the New Shares Issue, the interests of those persons, set out above with an interest in Xstrata's ordinary share capital which is notifiable under Part VI of the Companies Act, and the amount of such persons' interests, including as a percentage of the Enlarged Share Capital, (assuming full take up by such persons of their entitlements under the Rights Issue (and, in the case of CSSEL'S entitlements in respect of 151,560,600 Ordinary Shares, full take up by Glencore International of such entitlements) and no options granted under the Xstrata Share Schemes, no exchange rights under the Glencore Exchangeable Bonds and no conversion rights under the 2010 Convertible Bonds, the 2017 Convertible Debenture or the 2017 Convertible Bonds are exercised between 2 October 2006 (being the latest practicable date prior to the publication of this document) and the New Shares Issue), will be as follows:

	Ordinary Shares	
Name	**No.**	**%**
Credit Suisse Securities (Europe) Limited[1]	154,426,401	16.37
Glencore International AG[1]	185,240,733	19.64
AXA Investment Managers UK Limited[2]	2,042,877	0.21

[1] See note 1 to the table above. As a consequence of the Arrangement, Glencore International, CSFB Equities and CSSEL will, following the New Shares Issue and subject to the assumptions set out above, be jointly interested in 339,667,134 Ordinary Shares, representing approximately 36.01% of the Enlarged Share Capital.

[2] See note 2 to the table above.

None of the major Shareholders referred to above has different voting rights from other Shareholders.

10.4 Other directorships and partnerships

The Directors and Senior Executives of Xstrata hold or have held in the past five years the following directorships, in addition to their directorships of Enlarged Xstrata Group companies, and are or were members of the following partnerships:

(1) Position no longer held

Other information relating to the Directors and the Senior Executives

10.5 Details of the Directors and Senior Executives of Xstrata, their business addresses and their functions are set out in Part VI – "Directors and Senior Management of Xstrata". The Directors comprise all of the members of the administrative, supervisory or management bodies of Xstrata.

10.6 At the date of this document none of the Directors or Senior Executives:

(a) except as set out in this document, has been a member of the administrative, management or supervisory bodies or partner at any time in the previous five years of any company or partnership, or is still a member of the administrative, management or supervisory bodies or partner of any company or partnership;

(b) has any convictions in relation to fraudulent offences incurred during the previous five years;

(c) whilst Director or Senior Executive has been associated with any bankruptcies, receiverships or liquidations whilst acting as Director or Senior Executive during the previous five years;

(d) has been subject to any official public incrimination and/or sanction by a statutory or regulatory authority (including designated professional bodies) or been disqualified by a court from acting as a member of the administrative, management or supervisory bodies of an issuer or from acting in the management or conduct of the affairs of any issuer during the previous five years; or

(e) has any family relationship with any other Director or Senior Executive.

11. Directors' service agreements and letters of appointment

11.1 Mr. Davis and Mr. Reid have employment agreements with Xstrata Services (UK) Limited but their services as Chief Executive and Chief Financial Officer respectively are provided to the Company under a secondment agreement entered into between the Company and Xstrata SL on 19 March 2002. Each of Mr. Davis and Mr. Reid are seconded to the Company for a fixed term of two years thereafter renewable by the Company for further periods of two years. The secondment agreements of Mr. Davis and Mr. Reid were renewed for the two-year period commencing on 19 March 2004 and ending on 19 March 2006 and further renewed for the two-year period commencing on 19 March 2006 and ending on 19 March 2008.

Under their employment agreements, Mr. Davis' salary is currently £1,000,000 per annum and Mr. Reid's salary is £470,693 per annum. In addition, each of Mr. Davis and Mr. Reid receives permanent health, life and private medical insurance, a housing allowance of US$183,000 per annum and US$141,660 per annum respectively (to enable each to maintain a residence in Switzerland so as to qualify under Swiss law for a work permit) and participates in money purchase retirement plans to which neither is required to make any contribution. In addition, Mr. Reid is eligible to participate in the Xstrata LTIP and each of Mr. Davis and Mr. Reid is eligible to participate in the annual bonus scheme operated by the Company.

The employment of Mr. Davis and Mr. Reid may be terminated by not less than 12 months' notice by Xstrata SL or the Director concerned. On a termination of the employment agreement by Xstrata SL in breach, or if Mr. Davis or Mr. Reid resigns in circumstances where he cannot in good faith be expected to continue in employment, he is entitled to be paid a sum equal to 100% of his annual salary, an amount equal to his previous year's bonus and to have all entitlements under any retirement benefit arrangements in which he participates paid up to the date of termination of employment in accordance with the relevant plan rules.

11.2 Mr. Zaldumbide has a professional services agreement with Asturiana de Zinc, S.A. dated 29 January 1998 as renewed on 29 January 2001 and 4 February 2004 to act as Chairman of Asturiana. The agreement is in force until 28 February 2007 (previously 29 January 2007) and continues thereafter indefinitely unless terminated by Asturiana giving six months' notice to that effect provided that such notice may not be given to result in his employment termination before 28 February 2007.

Up until 31 December 2002, Mr. Zaldumbide was entitled to a total fee for the term of his agreement of €3,005,060 payable at the rate of €601,012 per annum less any fees from external directorships. This contract predates the acquisition of Asturiana. With effect from 1 June 2003, the Remuneration Committee concluded an agreement with Mr. Zaldumbide that his annual fee should be reviewed in line with the other executive directors of the Company. His fee for the year ended 31 December 2006 is €829,450. Mr. Zaldumbide receives no pension benefits under the terms of his fixed cost remuneration arrangement. On termination of the agreement, other than on his voluntary termination or termination for gross negligence, Mr. Zaldumbide is entitled to receive a sum from the redemption of an insurance policy (acquired by Asturiana for a premium of €3,005,060), including any with profits bonus payable under the policy less the compensation received by him during the term of the agreement. This part of the agreement is not affected by the review.

On termination of the agreement by expiry of the fixed term, Mr. Zaldumbide is entitled to receive the capital redemption value of the policy, including the with profit bonus element, minus the aforementioned amount of €3,005,060 which he will already have received. Mr. Zaldumbide's entitlements under the insurance policy are in lieu of his receiving pension benefits. In addition, Mr. Zaldumbide is entitled to participate in the Xstrata LTIP and annual bonus scheme operated by the Company. Mr. Zaldumbide is engaged as a director of the Company on the terms of a letter of appointment dated 11 March 2002. The appointment, subject to re-election when appropriate by the Company in General Meeting, is on an indefinite basis subject to the existence of the agreement between Mr. Zaldumbide and Asturiana. Mr. Zaldumbide receives no additional remuneration for his position as Director.

11.3 Mr. Strothotte is engaged by the Company as a non-executive director and Chairman on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months commencing on 25 February 2002 and is terminable thereafter by six months' notice by Mr. Strothotte. The Company may terminate Mr. Strothotte's appointment at any time and on such termination Mr. Strothotte will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the company. Mr. Strothotte receives an annual fee of £200,000 as Chairman of the Company and for his membership and chairmanship of the Company's Remuneration Committee. His appointment is subject to confidentiality undertakings.

11.4 Mr. Rough is engaged by the Company as a non-executive director and Deputy Chairman on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 1 April 2002 and is terminable by six months' notice by Mr. Rough. The Company may terminate Mr. Rough's appointment at any time and on such termination Mr. Rough will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Mr. Rough was also appointed Senior Independent Director by the board of directors of the Company. He receives an annual fee of £140,000 as Deputy Chairman and for his membership of the Company's Remuneration Committee, Audit Committee and HSEC Committee, and for his membership and chairmanship of the Nominations Committee. His appointment is subject to confidentiality undertakings.

11.5 Until his resignation as a director of the Company with effect from 10 May 2006, Mr. Issroff was engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment was for an initial fixed term of 36 months which commenced on 25 February 2002 and was terminable by six months' notice by Mr. Issroff. The Company was entitled to terminate Mr. Issroff's appointment at any time and on such termination Mr. Issroff would not have been entitled to any compensation for loss of office. The term was renewable by the board of directors of the Company. Mr. Issroff received an annual fee of £63,000 and is subject to confidentiality undertakings.

Mr. Issroff has confirmed to the Company that he has no outstanding claims against the Company or any of its subsidiaries in respect of remuneration, fees, costs, expenses or otherwise.

11.6 Mr. Glasenberg is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Mr. Glasenberg. The Company may terminate Mr. Glasenberg's appointment at any time and on such termination Mr. Glasenberg will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Mr. Glasenberg receives an annual fee of £63,000 and is subject to confidentiality undertakings. Mr. Glasenberg receives an additional annual fee of £10,000 for his membership of the Company's Nominations Committee.

11.7 Mr. Hazen is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months' commencing on 25 February 2002 and is terminable thereafter by six months' notice by Mr. Hazen. The Company may terminate Mr. Hazen's appointment at any time and on such termination Mr. Hazen will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Mr. Hazen receives an annual fee of £63,000 and is subject to confidentiality undertakings. Mr. Hazen receives an additional annual fee of £10,000 for his membership of the Company's Remuneration Committee.

11.8 Mr. MacDonnell is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Mr. MacDonnell. The Company may terminate Mr. MacDonnell's appointment at any time and on such termination Mr. MacDonnell will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Mr. MacDonnell receives an annual fee of £63,000 and is subject to confidentiality undertakings. Mr. MacDonnell receives an additional annual fee of £10,000 for his membership of the Company's Nominations Committee.

11.9 Dr. Roux is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Dr. Roux. The Company may terminate Dr. Roux's appointment at any time and on such termination Dr. Roux will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Dr. Roux receives an annual fee of £63,000 and is subject to confidentiality undertakings. Dr. Roux receives additional annual fees of £10,000 each for his membership of the Company's Audit Committee and HSEC Committee.

11.10 Sir Steve Robson is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Sir Steve. The Company may terminate Sir Steve's appointment at any time and on such termination he will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Sir Steve receives an annual fee of £90,000 as a non-executive director and for his membership and chairmanship of the Company's Audit Committee. His appointment is subject to confidentiality undertakings.

11.11 Mr. Strachan is engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 8 May 2003 and is terminable thereafter by six months' notice by Mr. Strachan. The Company may terminate Mr. Strachan's appointment at any time and on such termination Mr. Strachan will not be entitled to any compensation for loss of office. The term may be renewed by the board of directors of the Company. Mr. Strachan receives an annual fee of £63,000 and is subject to confidentiality undertakings. Mr. Strachan receives additional annual fees of £10,000 each for his membership of the Company's Audit Committee and HSEC Committee and a further £7,000 fee as chairman of the HSEC Committee.

12. Directors' and Senior Executives' remuneration

12.1 In addition to the options and rights under the Xstrata Share Schemes disclosed in paragraph 10.1 and paragraph 13 of this Part VIII, the amount of remuneration paid (including any contingent or deferred compensation), and benefits in kind granted to directors of the Company for services in all capacities to the Enlarged Xstrata Group by any person for the financial year ending 31 December 2005 was as follows:

Director	Salary and fees[1]	Bonus	Deferred *Bonus*	Housing Allowance US$	Health, life and private medical insurance	Other Benefits	Total
Executives							
Mick Davis	1,729,000[2]	1,663,450[5a]	2,961,084[5a*]	183,000[6a]	141,622[7]	–	**6,678,156**

Notes

(1) Salary and fees includes non-executive directors' fees which may be paid in shares.

(2) In 2005, Mr. Davis' and Mr. Reid's salaries were set and paid in UK pounds sterling. The salary figures above have been translated to US dollars based on the average pound/dollar exchange rate for the year of £1.00: US.$1.820 (2004: £1.00: US.$1.833) and therefore reflect the impact of the exchange rate fluctuations during the year.

(3) In 2005, Mr. Zaldumbide's basic salary and benefits were set and paid in Euros. The figures above have been translated to US dollars based on the average Euro/dollar exchange rate for the year of €1.00: US$1.245 (2004: €1.00: US$1.244) and therefore reflect the impact of the exchange rate fluctuations during the year.

(4) With the exception of Mr. Strachan whose fees were set in pounds and paid in US dollars, all non-executive director fees were set and paid in UK pounds sterling. The figures above have been translated to US dollars based on the average pound/dollar exchange rate for the year of £1.00: US.$1.820 (2004: £1.00: US.$1.833) and therefore reflect the impact of the exchange rate fluctuations during the year.

(5a) Bonuses were calculated in US dollars and translated at a rate of £1.00: US$1.751, the exchange rate prevailing on the date of the award.

(5b) Bonuses were awarded and paid in Euros and translated at a rate of EUR1: US$1,192, the exchange rate prevailing on the date of the award.

(6a) In 2005, Mr. Davis' housing allowance was awarded and paid in US dollars.

(6b) In 2005, Mr. Reid's housing allowance was awarded in US dollars and paid in UK pounds sterling.

(7) In 2005, Mr. Davis' benefits were set and paid in both UK pounds sterling and Swiss Francs. The benefits have been translated to US dollars based on the average pound/dollar exchange rate for the year of £1.00: US.$1.820 (2004: £1.00: US.$1.833) and the average Swiss franc/dollar exchange rate for the year of CHF 1.00: US$0.802 (2004: CHF 1.00: US$0.805) and therefore reflects the impact of the exchange rate fluctuations during the year.

(8) In 2005, Mr. Reid's benefits were set and paid in UK pounds sterling. The benefits have been translated to US dollars based on the average pound/dollar exchange rate for the year of £1.00: US.$1.820 (2004: £1.00: US.$1.833) and therefore reflects the impact of the exchange rate fluctuations during the year.

(9) No consideration has been paid to or is receivable by third parties for making available the qualifying services of any directors during the year or in connection with the management affairs of Xstrata.

(*) Deferred bonus payable in shares. The number of shares awarded will be determined by reference to the market value of the shares at the date the bonus payment was determined. Amount also includes US$50,046.58, US$17,307.69 and US$12,805.56 in respect of dividend equivalents awarded during the year in respect of prior years' deferred bonus awards which will vest on the date of the underlying award for Mr. Davis, Mr. Reid and Mr. Zaldumbide respectively.

12.2 In addition to the options and rights under the Xstrata Share Schemes disclosed in paragraph 10.1 of this Part VIII, the aggregate remuneration (including any contingent or deferred compensation) and benefits in kind paid or granted to the Senior Executives by Xstrata and its subsidiaries during the financial year ended 31 December 2005 for services in all capacities was US$8,309,742. Xstrata is not required to, and does not otherwise, disclose publicly remuneration for Senior Executives on an individual basis.

12.3 The total amount set aside or accrued by Xstrata or its subsidiaries to provide pension, retirement or similar benefits for the Directors and Senior Executives of Xstrata for the financial year ending 31 December 2005 was US$nil.

12.4 Other than as set out in paragraphs 11 and 13 of this Part VIII, none of the members of the administrative, management, or supervisory bodies' service contracts with the Company or any of its subsidiaries provide for benefits upon termination of employment.

13. Details of Xstrata Share Schemes

Full details of the Directors' and Senior Executives' interests in the Xstrata Share Schemes are given in paragraph 10 of this Part VIII.

The Xstrata Long Term Incentive Plan ("LTIP")

13.1 (a) The Xstrata LTIP has two elements:

(i) a long term incentive plan award, which is a free contingent award of Ordinary Shares that will vest after three years, subject to, and to the extent that, performance criteria determined at the time of grant have been satisfied; and

(ii) a share option to acquire Ordinary Shares at a specified exercise price after the third anniversary of grant, to the extent that performance conditions have been satisfied.

LTIP awards may be granted in different forms to suit local regulatory and tax requirements, provided that the economic effect is the same. In countries where an award involving real shares is not appropriate or feasible for legal, regulatory or tax reasons, a phantom version of either or both elements of the Xstrata LTIP will be operated. This will deliver a cash payment equal to the net benefit a participant would have derived from the vesting or exercise of a share based LTIP award or option.

(b) The Remuneration Committee may grant awards under the Xstrata LTIP at its discretion at any time within 42 days after the announcement by the Company of its results for any period or within 42 days of any day on which the Remuneration Committee considers that exceptional circumstances exist which justify a grant. No payment is required for the grant of a LTIP award or option.

(c) Executive Directors and employees of the Company and its subsidiaries are eligible to participate at the discretion of the Remuneration Committee and selection will be based on agreed criteria, such as, for example, individual performance, role, skills and potential.

(d) Options and LTIP awards may be granted over newly issued or existing Ordinary Shares. Any existing Ordinary Shares may be acquired and held by the Xstrata Employee Share Ownership Trust established to benefit employees and former employees of the Enlarged Xstrata Group. To the extent that new Ordinary Shares are to be issued to satisfy awards granted under the Xstrata LTIP, the aggregate number that may be capable of issue on exercise or vesting of such rights under the Xstrata LTIP, when added to the number of Ordinary Shares issued or issuable pursuant to subsisting rights to subscribe for Ordinary Shares granted in the preceding ten years under any other discretionary employees' share scheme of the Company shall not, on the date of grant, exceed 5% of the Company's issued share capital. The options and awards granted at the time of the Xstrata Merger to replace options granted under the Xstrata AG Share Schemes are ignored in determining these limits.

(e) No consideration will be payable on the grant or vesting of an LTIP award. On exercise of an option, a participant is required to pay an exercise price which will not be less than the market value of an Ordinary Share on the date of grant or, if greater, and in the case of an option to subscribe for shares, the nominal value of an Ordinary Share. Market value is based upon the average closing middle-market quotation of an Ordinary Share on the London Stock Exchange on the seven dealing days which immediately precede the date of grant.

(f) The aggregate value of options (calculated on a Black-Scholes basis) and LTIP awards made to an individual under the Xstrata LTIP in any one year may not exceed an amount equal to two times base salary (other than in very exceptional circumstances where the limit may not exceed four times base salary).

(g) LTIP awards and options will normally vest or be capable of exercise at the end of a three year performance period providing the employee has remained in employment with the Enlarged Xstrata Group. The number of Ordinary Shares that may be acquired will depend on the extent to which performance targets set by the Remuneration Committee at the time of grant have been satisfied. Options will remain exercisable for a maximum of seven years or such shorter period as the Remuneration Committee may specify (after which they will lapse). Performance

targets are not capable of being retested at the end of the performance period, so that any proportion of a LTIP award or option which does not vest after three years will lapse.

(h) LTIP awards and options granted during 2004 and 2005 are subject to a performance target under which the vesting of half the LTIP awards and options are conditional on total shareholder return ("TSR") relative to a peer group, with 25% vesting if TSR growth is at the median of the peer group, 50% vesting for performance at or above the second decile of the peer group and straight line vesting in between these points. Vesting of the remaining 50% of the LTIP awards and options is conditional on the Enlarged Xstrata Group's real cost savings relative to targets with 5% vesting for cost savings of 1%, 35% for cost savings of 2% and 50% vesting for cost savings of 3% or more.

(i) Early vesting and exercise of options and LTIP awards will be permitted where the participant leaves employment in certain circumstances being death, ill health or disability and the sale of a business or company in which the participant is employed. Where participants leave employment for any other reason, vested options and LTIP awards will remain exercisable for a period of one year, after which they shall lapse; unvested options and LTIP awards shall lapse immediately unless the Remuneration Committee determines otherwise, in which case they shall vest to the extent to which the performance targets have been met.

(j) If there is a change of control or any amalgamation or reconstruction or winding up of the Company, options and LTIP awards will automatically vest in full or (in certain circumstances) may be exchanged for equivalent options or LTIP awards over shares in the acquiring company.

(k) LTIP awards and options are not pensionable nor are they transferable except as determined by the Remuneration Committee and on such terms and to such persons (or categories of person) as they shall specify. Such transfers will normally only be permitted where there will be no immediate realisation of economic benefit by means of a sale to an unconnected third party. In all other cases, awards may only be realised by persons to whom they are granted (or, in the case of death, by their personal representatives). Ordinary Shares allotted or transferred under the Xstrata LTIP will rank equally with Ordinary Shares then in issue except in respect of entitlements arising prior to the date of exercise or vesting (save that dividends or dividend equivalents may be payable prior to vesting at the discretion of the Remuneration Committee).

(l) The numbers of Ordinary Shares subject to options and LTIP awards and the price (if any) payable on their exercise may be adjusted if there is a variation of the Company's share capital such as a capitalisation issue, sub-division, consolidation or reduction of the share capital.

(m) The Board may amend the Xstrata LTIP, but any alterations to the provisions relating to eligibility, equity dilution, individual participation limits and the adjustments that may be made following a variation of the share capital cannot be altered to the advantage of actual or potential participants without the prior approval of Shareholders in general meeting (except for minor amendments to benefit the administration of the Xstrata LTIP, to take account of a change in legislation or developments in law affecting the Xstrata LTIP or to obtain or maintain favourable tax, exchange control or regulatory treatment for participants in the Xstrata LTIP or for any member of the Enlarged Xstrata Group). No amendment may operate to affect adversely any right already acquired by a participant without their prior consent. The Board has power to create sub-plans to the Xstrata LTIP to accommodate local variations in tax or regulatory treatment but such sub-plans must fall within the overall objectives and spirit of the Xstrata LTIP.

(n) The Xstrata LTIP will terminate on 20 March 2012 when no further awards will be granted, or such earlier time as the Remuneration Committee may consider appropriate, but the rights of existing participants will not thereby be affected.

The Xstrata AG Share Schemes

13.2 The Xstrata AG Share Schemes comprised the Xstrata AG management and employee share incentive scheme (the "Management Scheme") and the Xstrata AG directors' incentive scheme (the "Directors' Incentive Scheme"). Awards and options subsisting under these schemes were converted into equivalent rights over Ordinary Shares and the Management Scheme and Directors' Incentive Scheme were renamed Xstrata Group Management and Employee Share Incentive Scheme and Xstrata Directors' Incentive Scheme respectively upon the Xstrata Merger becoming effective.

Xstrata AG Management and Employee Share Incentive Scheme

13.3 (a) The Management Scheme which was established in 1998 consists of two elements:

(i) Xstrata AG Shares purchased by employees at a price equal to market value, which are restricted from dealings for a period of two years at the end of which period the participant may call for delivery of the Xstrata AG Shares; and

(ii) share options to acquire Xstrata AG Shares at an exercise price fixed at the date of grant which are granted to employees in proportion to the number of restricted Xstrata AG Shares purchased by them. A participant may request the payment of a cash sum equivalent to the net gain he would have received had he exercised the option and acquired Xstrata AG Shares on the exercise.

(b) If a participant ceases employment with the Enlarged Xstrata Group for any reason, he will remain entitled to exercise all of his vested options and a proportion of his unvested options (pro rated according to the proportion which the period since the date of grant bears to the two year vesting period) in accordance with the terms of the Management Scheme (except where cessation is by reason of gross negligence or misconduct when all unvested options will lapse). A participant's restricted Ordinary Shares will automatically vest and be released to him within five days of such cessation.

(c) If a participant ceases to be employed by the Enlarged Xstrata Group by reason either of his employing company ceasing to be under the control of the Company or the business in which he is working is transferred out of the Enlarged Xstrata Group, all his options will automatically vest and become immediately exercisable and will remain exercisable for three years from vesting. A participant's restricted Ordinary Shares will automatically vest and be released to him.

(d) In the case of a takeover, reconstruction, amalgamation or winding up of the Company, or a public offer (whether conditional or not) to acquire all the Ordinary Shares of the Company, all of a participant's options will automatically vest and become immediately exercisable and will remain exercisable for three years from vesting. All restricted Ordinary Shares will automatically vest and be released to participants.

(e) The numbers of Ordinary Shares subject to options and the price payable on their exercise may be adjusted if there is a variation of the Company's share capital such as a capitalisation issue, sub-division, consolidation or reduction of share capital or a merger, or other similar transaction involving the Company.

(f) Loans have been made to a number of participants in the Management Scheme to enable them to meet tax liabilities arising on the grant of their options. These loans are repayable to the extent that the associated options are exercised (or if options lapse on a participant ceasing to be in employment due to gross negligence or misconduct).

Xstrata AG Directors' Incentive Scheme

13.4 The Directors' Incentive Scheme was established in 1998 and its provisions are substantially the same as those of the Management Scheme described at paragraph 13.3 above.

Options granted to Mr. Davis and Mr. Reid

13.5 Mr. Davis and Mr. Reid were each granted options to acquire 59,000 Xstrata AG Shares in September 2001 and in January 2002 respectively pursuant to the terms on which they were recruited. The options were granted for no consideration. The principal terms of these options are summarised below. See "Options granted to Mr. Davis" and "Options granted to Mr. Reid" in this Part VIII. All of these options were replaced by new options over 590,000 Ordinary Shares in each case upon the Xstrata Merger becoming effective and are subject to the same terms and conditions as applied before the Xstrata Merger. Except as described below, the terms of the options are substantially the same as those of the Management Scheme described above. Mr. Davis was also granted an option for no consideration to acquire 88,500 Xstrata AG Shares by Glencore International on 19 September 2001, the terms of which are summarised below (the "Glencore option"). This option was discharged in full on 20 September 2005 and Mr. Davis received from Glencore International consideration equating to the value of the option. See "The Glencore option" in paragraph 13.5(f) of this Part VIII below.

Options granted to Mr. Davis

(a) In addition to the options held by Mr. Davis under the Xstrata LTIP as detailed in paragraph 10.1 of this Part VIII, Mr. Davis holds options to acquire 889,720 Ordinary Shares as adjusted following the MIM Rights Issue. These options were granted in two tranches. The exercise price of the first tranche was fixed on 1 October 2002 at £6.47 and subsequently adjusted to £4.29 following the rights issue. The exercise price of the second tranche was set on 1 October 2003 at £4.72 by reference to the market value of an Ordinary Share at that date. Where an option vests and becomes exercisable early (for example by virtue of a takeover of the Company or a cessation of employment as specified in (c) below) the exercise price for any tranche of the options for which the exercise price has not already been determined shall be the lower of (i) the market value of a share averaged over the three months prior to the date of vesting and (ii) in the case of a cessation of employment the date of that cessation, or in the case of a takeover or other event, the market value of a share on the date immediately prior to the completion of the relevant event as appropriate.

(b) An option will vest, and become exercisable, on the third anniversary of the date by reference to which the exercise price for that option is fixed. The options will normally lapse on the seventh anniversary of the date of vesting.

(c) If Mr. Davis ceases to be employed by the Enlarged Xstrata Group for any reason he may exercise any vested options within six months of such cessation (after which time they will lapse). Any unvested options will lapse if he is dismissed lawfully under the terms of his employment contract or if he voluntarily resigns (except where he has a valid reason to terminate his employment as defined in his employment contract, in which case all unvested options shall immediately vest and become exercisable for a period of six months). In all other cases, he will remain entitled to retain his unvested options which will vest in accordance with their terms, after which they will remain exercisable for a period of six months.

(d) The options may be replaced by options over shares in the acquiring or successor company following a takeover, reconstruction or amalgamation of the Company. The replacement options shall be under the same terms, and be exercisable on the same dates, as the options for which they were exchanged, provided that where a replacement of options occurs prior to the date on which the exercise price of the options or tranche thereof has been determined, the number of shares over which the replacement options are granted and the exercise price shall be calculated by reference to the market value of a share in that acquiring or successor company.

(e) The options are not transferable except as determined by the Remuneration Committee and on such terms and to such persons as they shall specify. Such transfers will only normally be permitted where there will be no immediate realisation of economic benefit by means of a sale to an unconnected third party as a result of the transfer.

The Glencore option

(f) On 19 September 2001 Glencore International awarded Mr. Davis an option over 88,500 Xstrata AG shares owned by Glencore, at an exercise price of CHF205.00 per share and exercisable from 19 September 2004. The closing share price of Xstrata AG on the day Mr Davis joined the Company (1 October 2001) was CHF140.00 per share. Under the terms of Xstrata plc's merger with Xstrata AG in March 2002, each Xstrata AG share was replaced by ten Xstrata plc shares and the option was therefore replaced with an option over 885,000 shares in Xstrata plc, owned by Glencore, at an exercise price of CHF20.50 per share. The option was subsequently amended following the rights issue in May 2003, to a revised option over 1,334,669 shares in Xstrata at an exercise price of CHF13.60 per share. This option was discharged in full on 20 September 2005 and Mr. Davis received from Glencore a consideration equating to the current value of the option (CHF26.3 million, representing 1.334 million shares at CHF19.70 per share, being the difference between Xstrata's closing price of CHF33.30 per share on Monday 19 September 2005 and the exercise price of CHF13.60 per share).

Options granted to Mr. Reid

(g) In addition to the options held by Mr. Reid under the Xstrata LTIP as detailed in paragraph 10.1 of this Part VIII, Mr. Reid held options to acquire 889,720 Ordinary Shares as adjusted following the MIM Rights Issue. These options comprised three tranches. The first tranche relates to one half of the total number of Ordinary Shares and the second and third tranches to one quarter of the total number of Ordinary Shares. The exercise price of the first tranche was CHF18.9 as adjusted for the Xstrata Merger which was the weighted average market price of an Xstrata AG Share during December 2001 and was subsequently adjusted to CHF 12.53 following the MIM Rights Issue in May 2003. The

exercise price of the second tranche was fixed on 15 January 2003 at £6.21 and was subsequently adjusted to £4.12 following the rights issue in May 2003. The exercise price of the third tranche was fixed on 15 January 2004 at £6.35 by reference to the market value of an Ordinary Share on that date. Mr. Reid exercised his rights in respect of the first tranche of 444,860 options on 2 March 2005 and he currently holds 444,860 options of the original grant of 889,720 options.

(h) Each tranche of options will vest, and become exercisable, on the third anniversary of the date by reference to which the exercise price for the tranche is fixed. The options will normally lapse on the seventh anniversary of the date of vesting.

(i) If Mr. Reid ceases to be employed by the Enlarged Xstrata Group for any reason he may exercise any vested options within six months of such cessation (after which time they will lapse). Any unvested options will lapse if he is dismissed lawfully under the terms of his employment contract or if he voluntarily resigns (except where he has a valid reason to terminate his employment as defined in his employment contract, in which case all unvested options shall immediately vest and become exercisable for a period of six months). In all other cases, he will remain entitled to retain his unvested options which will vest in accordance with their terms, after which they will remain exercisable for a period of six months.

(j) The options may be replaced by equivalent options over shares in an acquiring or successor company following a takeover, reconstruction or amalgamation of the Company. The replacement options shall be under the same terms, and be exercisable on the same dates, as the options for which they were exchanged, provided that where a replacement of options occurs prior to the date on which the exercise price of the options or tranche thereof has been determined, the number of shares over which the replacement options are granted and the exercise price shall be calculated by reference to the market value of a share in that acquiring or successor company.

(k) The options are not transferable except as determined by the Remuneration Committee and on such terms and to such persons as they shall specify. Such transfers will only normally be permitted where there will be no immediate realisation of economic benefit by means of a sale to an unconnected third party as a result of the transfer.

The Xstrata Annual Bonus Plan (the "Bonus Plan")

13.6

(a) The Executive Directors and certain other senior executives of the Enlarged Xstrata Group are eligible to participate in the Bonus Plan.

(b) The maximum bonus pool available for distribution to participants in the Bonus Plan is calculated by reference to a fixed proportion of the net profits of the Enlarged Xstrata Group during a performance period. This proportion is determined by the Remuneration Committee and communicated to participants in advance of the performance period.

(c) The payment of any bonus under the Bonus Plan is subject to a hurdle rate, such that the Enlarged Xstrata Group's return on equity should be at least equal to the Enlarged Xstrata Group's average cost of borrowing. If this hurdle is not reached, the bonus pool will be zero. The amount of the bonus pool that is distributed in any one year, and the relative proportions payable to each participant will be at the discretion of the Remuneration Committee. The Remuneration Committee will retain the discretion not to award a bonus to a participant, but instead make a contribution to a trust for the benefit of an employee (or employees) of an equivalent sum.

(d) The amount of bonus payable under the Bonus Plan that any one participant is eligible to receive in cash in any one year will be limited to 100% of the individual's basic salary.

(e) For years up to 31 December 2004 the total of cash and deferred bonus was limited to 200% of salary. Since 31 December 2004, the total cash received plus the value of any deferred element may not exceed 300% of a participant's basic salary in the year in which that bonus is calculated. Up to a further 100% of salary in excess of the 100% limit that would otherwise be payable to an individual in any one year under the Bonus Plan will be deferred for a period of one year. Any amount in excess of this additional 100% deferred will be deferred for a period of two years. Deferred amounts which may, at the discretion of the Remuneration Committee, be payable in the form of cash or Ordinary Shares having an equivalent value (measured by reference to the market value of an Ordinary Share at the

date the bonus is determined) will be paid at the end of the deferral period, provided that the employee has remained in employment throughout. The total cash received plus the value of any deferred element shall not exceed 200% of a participant's basic salary in the year in which that bonus is calculated.

(f) It is expected that any Ordinary Shares required to satisfy any deferred element of the bonus payments will be purchased in the market and held in the Xstrata Employee Share Ownership Trust for the deferral period. There is no intention to use newly issued Ordinary Shares for the Bonus Plan.

(g) Participants are able to receive dividend equivalent payments in respect of all deferred bonus awards made since 31 December 2004.

The Xstrata Employee Share Ownership Trust

13.7

(a) The Xstrata Employee Share Ownership Trust is for the benefit of employees and former employees of the Enlarged Xstrata Group, and their spouses, widows, widowers and children or step-children under the age of 18. The trust is used, amongst other things, to co-ordinate the funding and manage the delivery of Ordinary Shares for option and LTIP awards granted under the LTIP and the options granted by the Company to replace the options granted under the Xstrata AG Share Schemes as described above.

(b) The trustee is not permitted to hold more than 5% of the issued share capital of the Company at any one time.

(c) The Company has the power to appoint new and additional trustees or to remove any trustee. It also has the power to amend the trust deed with the agreement of the trustee. The trustee is entitled to an indemnity out of the assets of the trust fund and, if they are insufficient, from the Company against any claims, costs and liabilities which it may incur in carrying out its duties (other than where it has been fraudulent, negligent or guilty of gross misconduct).

(d) The trust is funded by contributions from employing companies in the Enlarged Xstrata Group and/or loans from the Enlarged Xstrata Group or from external sources.

The Xstrata Employee and Directors Share Ownership Trust

13.8

(a) The Xstrata Employee and Directors' Share Ownership Trust is for the benefit of the same persons as are described in paragraph 13.7 in this Part VIII and, in addition, any existing or former non-executive directors of Xstrata AG. The trust was used, amongst other things, to co-ordinate the funding and manage the delivery of Ordinary Shares for the options granted by the Company to replace the options granted under the Xstrata AG Share Schemes as described above where those have been granted to non-executive directors of Xstrata AG. The trust has not been funded since the Xstrata Merger and it is not anticipated that the trust will be funded on an ongoing basis.

(b) Save as described in sub-paragraph (a) above, the terms of the trust will be substantially the same as those set out at paragraph 13.7 in this Part VIII.

***The Xstrata* Number 2 Employee Share Ownership Trust**

13.9

(a) The Xstrata Number 2 Employee Share Ownership Trust is for the benefit of the same persons as are described in paragraph 13.7 in this Part VIII. The trust is used primarily to co-ordinate the funding, management and delivery of ordinary shares for awards and options granted under the LTIP to employees resident in Australia.

(b) Save as described in sub-paragraph (a) above, the terms of the trust are substantially the same as those set out at paragraph 13.7 in this Part VIII.

The Added Value Incentive Plan

13.10

(a) This plan is intended solely for the Chief Executive and any future successor in that role. It is contingent on him building up and maintaining a holding of at least 350,000 Ordinary Shares, including shares held beneficially and, subject to the agreement of the Remuneration Committee, fully vested options that have not yet been exercised and

which have exercise prices materially below the market share price at the commencement of the relevant Added Value Plan cycle (a "Plan Cycle")

(b) The Chief Executive will not be eligible to participate in the LTIP in any year when a Plan Cycle commences. No Plan Cycles may commence when the Chief Executive is within six months of his anticipated retirement date.

(c) Payments under the scheme will be based upon the growth in total shareholder return ("TSR") over a three year performance period relative to an index of 20 global mining companies, which will form the Xstrata TSR Index. At the end of each performance period an Excess Return figure will be calculated, which will quantify the difference in TSR between the Xstrata TSR Index and Xstrata. Once the Excess Return figure has been calculated it will be applied to the market capitalisation of Xstrata at the start of the performance period to measure the "Added Value" added relative to the movement in the market. The Added Value will be limited to 50% of the initial market capitalisation. If this figure is positive, it will be multiplied by a Participation Percentage (which is 0.5% of the Added Value for the first Plan Cycle and 0.3% for the 2006 Plan Cycle) to calculate the "Base Reward". The maximum aggregate Participation Percentage for Plan Cycles commencing in any three-year period shall not exceed 1.1%.

(d) No payments will be made under a Plan Cycle if Xstrata underperforms the Xstrata TSR Index. The Base Reward will be increased or decreased in line with the Xstrata share price index measured against the comparator group. A reduction will then be made for lower levels of absolute performance, by applying a multiplier to the indexed Base Reward to calculate the Final Reward. For absolute TSR over 25% a multiplier of 1 will be applied, for 0% a multiplier of 0.5 and for -25% or below a multiplier of 0. Between -25% and +25% straight-line interpolation will apply. Provided Xstrata's TSR is at least equal to the TSR index, the Final Reward under each Plan Cycle will be at least US$1million.

(e) 50% of the Final Reward shall be payable in cash or in Shares, as determined by the Remuneration Committee, as soon as practicable following determination of the Final Reward by the Remuneration Committee. Of the remaining 50% of the Final Reward, 25% shall be deferred for a period of one year and the final 25% of the Final Reward shall be deferred as for a period of two years.

(f) In the event of a change of control, all open Plan Cycles will vest immediately. The Final Reward under each open Plan Cycle will be calculated as if the performance period terminated on the date of the transaction.

(g) In the event of the Chief Executive ceasing to be an Xstrata employee as a result of death, ill health or disability, all open Plan Cycles will vest immediately. The Final Reward under each open Plan Cycle will be calculated as if the performance period terminated on the date of cessation of employment. In the event of the Chief Executive ceasing to be an Xstrata employee other than in the circumstances described above, all Plan Cycles will lapse and no payments will be made unless the Remuneration Committee in its absolute discretion determines otherwise.

(h) In the event of a variation in the capital of Xstrata, the Participation Percentages may be adjusted in such way as the Remuneration Committee determines.

(i) The Added Value Incentive plan will terminate on the fifth anniversary of the Adoption Date, when no further awards will be granted.

14. Corporate governance and board practices

14.1 General

The Listing Rules require listed companies incorporated in the UK to report on the manner in which they apply the Principles of Good Governance and the extent to which they comply with the provisions set out in Section 1 of the Combined Code on Corporate Governance issued in July 2003 (the "Combined Code").

The Xstrata Board is committed to the principle of best practice in corporate governance.

The Combined Code recommends that at least half the members of a board (excluding the chairman) of a public company listed in the UK should be non-executive directors who are independent in character and judgement and free from relationships or circumstances which are likely to affect, or could appear to affect, their judgement. Xstrata has six independent non-executive directors: Mr. Hazen, Mr. MacDonnell, Sir Steve Robson CB, Mr. Rough, Dr. Roux and

Mr. Strachan. Xstrata therefore considers that it is compliant with the revised Combined Code in relation to the constitution of its board of directors.

The Combined Code contains main and supporting principles and provisions. The Listing Rules require every listed company to report on how it applies the principles in the Combined Code, and to confirm that it complies with the Combined Code's provisions or, where it does not, to provide an explanation. The Company complies with the best practice governance provisions as set out in Section 1 of the Combined Code, except, as explained below, with regard to membership of the Remuneration Committee as the Chairman of the Committee is not considered independent and save that no individual member of the Audit Committee has been identified as having recent and relevant financial experience.

The Combined Code also recommends that the board of directors should appoint one of its independent non-executive directors to be the senior independent director. The senior independent director should be available to shareholders if they have concerns that contact through the normal channels of chairman, chief executive officer or chief financial officer has failed to resolve or for which such contact is inappropriate. Xstrata's senior independent director is Mr. Rough.

Xstrata's board of directors has established four committees: the Audit Committee, the Nominations Committee, the Remuneration Committee and the Health, Safety, Environment and Community Committee. From time to time, separate committees are set up by the Company's board of directors to consider specified issues when the need arises.

14.2 Audit Committee

The Audit Committee assists the Company's board of directors in discharging its responsibilities with regard to financial reporting, external and internal audits and controls, including reviewing Xstrata's annual financial statements, considering the scope of Xstrata's annual external audit and the extent of non-audit work undertaken by external auditors, approving Xstrata's internal audit programme, advising on the appointment of external auditors and reviewing the effectiveness of Xstrata's internal control systems.

The Combined Code recommends that all members of the Audit Committee should be non-executive directors, all of whom are independent in character and judgement and free from relationships or circumstances which are likely to affect, or could appear to affect, their judgement and that at least one member should have recent and relevant financial experience. The Audit Committee comprises four independent Non-executive Directors: Sir Steve Robson CB (Chairman of the Audit Committee), Mr. Rough, Dr. Roux and Mr. Strachan. The Board considers that the members of the Audit Committee collectively have sufficient recent and relevant financial experience to discharge its role and responsibilities. The Board therefore considers that it complies with Combined Code recommendations regarding the composition of the Audit Committee.

The Chief Executive, the Chief Financial Officer, the Group Controller, a representative of the Company's external auditors and the Head of Internal Audit normally attend the meetings. Other directors of the Company and senior management may also, on invitation by the Committee, attend and speak, but not vote at any meeting of the Audit Committee. As an outcome of an evaluation of the Audit Committee's performance, the Audit Committee decided it would be helpful to invite the chairmen and chief executives of Xstrata's Business Unit Audit Committee and the chief executives of the business units to attend the Audit Committee meetings on a rotational basis in order to further enhance communication and best practice.

The Audit Committee reports its activities and makes recommendations to the board of directors of the Company. During the year ended 31 December 2005 the Audit Committee met four times. Its activities in respect of that financial year included:

(a) reviewing for submission to the Company's board of directors, the 2004 annual financial statements and the 2005 interim financial statements and reviewing the external auditor's detailed reports thereon;

(b) reviewing the appropriateness of the Former Xstrata Group's accounting policies;

(c) regularly reviewing the potential impact on the Former Xstrata Group's financial statements of a range of matters which involve significant judgement, estimation or uncertainty, and the possible impairment of fixed asset values;

(d) reviewing the external auditor's plan and scope for the audit of the Former Xstrata Group accounts, and approving their remuneration both for audit and non-audit work, and their terms of engagement. The Audit Committee carefully monitored the nature, range and cost of non-audit services provided by the external auditors, particularly in relation to the annual cost of audit fees. It also concluded that the US$100,000 limit for non-audit assignments, above which prior approval of the Audit Committee was required, is set at an appropriate level;

(e) recommending to the board of directors of the Company the reappointment of the external auditors following an evaluation of their effectiveness and confirmation of auditor objectivity and independence;

(f) undertaking a review of related party transactions, with particular focus on those transactions with Glencore. The Audit Committee found that transactions with Glencore are at competitive market rates and are deemed to be commercial arm's length transactions. The arrangements with Glencore are seen to be to the commercial advantage of Xstrata;

(g) examining the effectiveness of the Company's risk management system including its risk management process and profile, the Company's internal control systems and operations which were examined and tested by the internal auditors. It also received a report on internal network security;

(h) reviewing the structure and limits of Former Xstrata Group insurance policies, and these were considered to be appropriate;

(i) reviewing and approving the internal audit plans for 2005, the effectiveness of the internal audit function and, at each meeting, reviewing the reports on findings and on progress against recommendations;

(j) monitoring the controls which are in force to ensure the integrity of the information reported to the Shareholders;

(k) reviewing procurement policies and procedures to ensure they were based on common standards and applied across the Xstrata's business units;

(l) receiving quarterly reports on the status of Xstrata's tax residency;

(m) evaluating the performance of the Audit Committee;

(n) receiving a report on succession planning for senior financial and accounting personnel; and

(o) reviewing the whistleblowing arrangements within the Former Xstrata Group.

Following each Audit Committee meeting, separate meetings are held by the Audit Committee with the external auditors in the absence of executive management, with executive management in the absence of the external auditors and with the internal auditor in the absence of executive management and the external auditors. The Audit Committee keeps under review the independence and objectivity of the external and internal auditors, through:

(a) seeking confirmation that the external auditors are, in their professional judgement, independent of the Enlarged Xstrata Group;

(b) obtaining from the external auditors an account of all relationships between the auditors and the Enlarged Xstrata Group; and

(c) consideration of whether, taken as a whole, the various relationships between the Enlarged Xstrata Group and the external auditors impaired the auditors' judgement or independence.

The Enlarged Xstrata Group has a specific policy governing the conduct of non-audit work by the external auditors which ensures that the Company is in compliance with the requirements of the Combined Code and the Ethical Standards for Auditors published by the Auditing Practices Board. Under that policy the external auditors are prohibited from performing services which:

(a) result in the auditing of their own work;

(b) result in the auditors participating in activities normally undertaken by management;

(c) puts the auditor in the role of advocate for the Enlarged Xstrata Group; or

(d) create a mutuality of interest between the auditors and the Enlarged Xstrata Group.

The auditors are permitted to provide non-audit services that are not in conflict with auditor independence. Six-monthly reports are made to the Audit Committee detailing non-audit fees paid to both the external and internal auditors. However, prior approval of the Audit Committee is required for each specific service provided by the external auditors. A range of non-audit services has been pre-approved in principle by the Audit Committee. However, where the fee is likely to be in excess of US$100,000 for such services, specific reapproval is required, while prior approval of the Chief Financial Officer is required for those pre-approved services where the fee is likely to be less than US$100,000.

The Audit Committee is supported and assisted in its work by separate audit committees for each of Xstrata's business units in line with the decentralised commodity business unit model. The Business Unit Audit Committees are independent of the executive management of the business unit and are chaired by suitably qualified individuals independent of Xstrata. The terms of reference of these committees are consistent with those of the Company's Audit Committee. Meeting dates precede those of the Company's Audit Committee and minutes of their meetings are circulated to the Company's Audit Committee.

14.3 Nominations Committee

The Nominations Committee assists the Company's board of directors in discharging its responsibilities relating to the composition of the board of directors. The Nominations Committee is responsible for reviewing, from time to time, the structure of the Company's board of directors, determining succession plans for the chairman and chief executive officer, and identifying and recommending suitable candidates for appointment as directors of the Company.

The Combined Code recommends that a majority of a nominations committee should be non-executive directors independent in character and judgement and free from relationships or circumstances which are likely to affect, or could appear to affect, their judgement.

The Nominations Committee comprises Mr. Rough (Chairman of the Nominations Committee), Mr. Glasenberg and Mr. MacDonnell. Of these non-executive directors, Mr. Glasenberg is not considered independent.

During the year ended 31 December 2005, the Nominations Committee met three times. Its activities in respect of that year included:

(a) reviewing the plan for the retirement by rotation and re-election of directors of the Company and the framework for board succession planning to ensure continuity. This is designed to take in account matters such as the size of the Company, product diversity and geographical spread, as well as maintaining a balance to the board of directors of the Company in relation to independent/non-independent members, their skills and experience;

(b) continuing its search, initiated at the end of 2004, for a non-executive director based in Australia with a mining background. Ultimately, the search for a non-conflicted mining candidate was unsuccessful;

(c) subsequently initiating and continuing a new search, in collaboration with an external search consultancy, for a non-executive director with broad international experience;

(d) approving arrangements for the annual appraisal of the board's and directors' performance. This was carried out by means of a questionnaire to all directors inviting comments on general and specific aspects of board and director performance and commitment. Results were reported to the board by Mr. Rough as the Senior Independent Director.

14.4 Remuneration Committee

The principal roles of the Remuneration Committee are: (i) to consider and determine all elements of the remuneration of the Chief Executive and Chief Financial Officer and of the heads of the major operating subsidiaries or business units of the Company (the "Executive Group") as defined by the Chief Executive; and (ii) to determine targets for any performance-related pay schemes operated by the Company. At its meetings, the Remuneration Committee makes recommendations to the board of directors of the Company in regard to all elements of the remuneration for the Executive Directors and the members of the Executive Group. The Remuneration Committee receives independent advice on benchmarking and best practice. The terms of reference of the Remuneration Committee conform precisely to the Combined Code. The setting of non-executive directors' remuneration is decided by the board of directors of the company as a whole.

The Combined Code recommends that all members of a company's remuneration committee should be non-executive directors, all of whom are independent in character and judgement and free from relationships or circumstances which are likely to affect, or could affect, their judgement.

The Remuneration Committee is chaired by Mr. Strothotte. As Chairman of the Company and Chairman of Glencore International, he is not considered to be an independent director. The Board regards Mr. Strothotte's membership as critical to the work of the Remuneration Committee due to his extensive knowledge and experience of the global mining resources sector. Mr. Rough and Mr. Hazen, the other members of the Remuneration Committee, are both non-executive directors and independent. The Chief Executive attends meetings by invitation but does not participate at a meeting of the Remuneration Committee (or during the relevant part) at which any part of his remuneration is being discussed or participate in any recommendation or decision concerning his remuneration.

The Remuneration Committee's activities in respect of the year ended 31 December 2005 included:

(a) devising an Added Value Incentive Plan in collaboration with the Hay Group, an independent remuneration consultancy, to incentivise the Chief Executive by providing a share of the long-term value created for Shareholders and to create alignment with Shareholders by means of ownership. This plan was recommended by the Remuneration Committee to, and subsequently approved by, the board of directors of the Company and by Shareholders;

(b) agreeing amendments to the Annual Bonus Plan for key executives which introduce a broader range of bonus performance conditions including health and safety. The amendments also enable up to 300% of salary to be paid as a bonus for outstanding performance but subject to the condition that the first 100% of salary is paid in cash, the next 100% is paid in shares but restricted for one year and the next 100% is paid in shares but restricted for two years;

(c) agreeing amendments to the Deferred Bonus Plan to reflect that dividends will accrue on all deferred bonus shares, but will only be paid on vesting;

(d) determining the remuneration for the Executive Directors and reviewing the remuneration arrangements proposed for the members of the Executive Committee; and

(e) determining the vesting percentage applicable to awards under the Long Term Incentive Plan 2002 which vested in May 2005.

14.5 Health, Safety, Environment and Community Committee

The Health, Safety, Environment and Community Committee was established by the board of directors of the Company on 24 February 2005, for the purpose of reviewing and making recommendations to the board on the appropriateness and effectiveness of health, safety, environment and community strategy, systems and methodology. It also reviews the results of any investigation into significant health, safety, environment and community incidents and keeps the board informed of new developments, trends and/or forthcoming significant legislation on health, safety, environment and community matters which may be relevant to the Enlarged Xstrata Group's operations, its assets or employees.

The HSEC Committee comprises Mr. Strachan, who chairs the HSEC Committee, Mr. Davis, Mr. Rough and Dr. Roux.

14.6 Executive Committee

The Executive Committee is a committee of the board of directors of Xstrata (Schweiz) AG, the main direct subsidiary of Xstrata plc. The Executive Committee obtains its responsibility and authority from the Xstrata (Schweiz) AG board and is directly accountable to the Xstrata plc board. It is chaired by Mr. Davis and comprises executive directors Mr. Reid and Mr. Zaldumbide, together with the chief executives of the other business units, Mr. Coates (Xstrata Coal), Mr. Sartain (Xstrata Copper), Mr. Pearce (Xstrata Nickel), Mr. Brooks (Xstrata Aluminum) and Mr. Nienaber (Xstrata Alloys), as well as Mr. Gonsalves (Executive General Manager, Corporate Affairs). Other members of senior management are invited to attend Executive Committee meetings as required. The Executive Committee is responsible for implementing strategy, approval of matters consistent with its delegated levels of authority and overseeing the various businesses which comprise the Enlarged Xstrata Group. All meetings of the Executive Committee are held outside the United Kingdom.

15. Employees and contractors

For the year ended 31 December 2005, the average monthly number of Former Xstrata Group employees and contractors of the Former Xstrata Group was approximately 24,000 in aggregate. The following table shows the average monthly number of employees, which includes Executive Directors and excludes employees of associates and joint ventures and contractors, by category of business for each of the three years ended 31 December 2003, 31 December 2004 and 31 December 2005 and for the six-month periods ended 30 June 2005 and 30 June 2006:

	Average for the year ended 31 December			Average for the six months ended 30 June
	2003	2004	2005	2006
Coal	6,838	6,697	6,762	7,752
Chrome/platinum group metals	4,224	4,197	4,408	6,530
Vanadium	677	536	363	544
Copper	1,477	2,821	3,226	3,790
Zinc-Lead	2,051	2,331	2,742	2,814
Forestry	16	16	–	–
Technology	12	54	56	50
Corporate/unallocated	29	38	42	57
Total	15,324	16,690	17,599	21,537

The following table shows the average monthly number of employees of the Former Xstrata Group, which includes Executive Directors and excludes employees of associates and joint ventures and contractors, by geographic location for each of the three years ended 31 December 2003, 31 December 2004 and 31 December 2005 and for the six-month periods ended 30 June 2005 and 30 June 2006:

	Average for the year ended 31 December			Average for the six months ended 30 June
	2003	2004	2005	2006
Africa	9,379	8,976	8,936	11,216
Americas	523	1,126	1,162	2,900
Australia	3,857	5,048	5,803	5,689
Europe/unallocated	1,565	1,540	1,698	1,732
Total	15,324	16,690	17,599	21,537

The following table shows the average monthly number of contractors of the Former Xstrata Group by category of business for each of the two years ended 31 December 2004 and 31 December 2005:

	Average for the year ended 31 December	
	2004	2005
Coal	3,541	4,061
Chrome	450	500
Vanadium	130	75
Copper	650	1,018
Zinc-Lead	565	768
Technology	42	41
Total	5,378	6,463

The following table shows the average monthly number of contractors of the Former Xstrata Group by geographic location for each of the two years ended 31 December 2004 and 31 December 2005:

	Average for the year ended 31 December	
	2004	2005
Africa	2,498	2,676
Americas	15	328
Australia	2,572	3,163
Europe	293	296
Total	5,378	6,463

The following table shows the approximate number of Falconbridge Group employees as at 31 December 2003, 31 December 2004 and 31 December 2005:

	At 31 December		
	2003	2004	2005
Approximate number of employees	15,000	14,500	14,500

On 14 September 2005, Falconbridge entered into employee retention agreements with a number of employees including the following executives: Derek Pannell, Aaron Regent, Steve Douglas, Martin Schady, Peter Kukielski, William Brooks, Claude Ferron, Joseph Laezza, Fernando Emilio Porcile, Robert Sippel, Brian Barr, Ian Pearce, Katherine Rethy, Paul Severin, Jeffery Snow, Michael Agnew, Michael Boone, Denis Couture, Dominique Dionne, John Doyle, Michael Frilegh, André Joron, Edward Laks, Robert Telewiak and Stephen Young.

Mr. Kukielski resigned his position of Chief Operating Officer and left Falconbridge on 1 July 2006, having accepted the position of Chief Operating Officer at Teck Cominco, without receiving payment under his employee retention agreement with Falconbridge.

The retention agreements with each of Messrs. Pannell, Regent, Douglas, Schady and Pearce provided that in the event that the executive's employment was terminated without just cause (which term included the failure by Falconbridge to obtain the assumption of the agreement by a purchaser upon a change of control) or in the event such executive resigned as a result of being constructively dismissed, a payment would be made equal to three times the aggregate of such executive's annual base salary and 100% of such executive's individual target bonus (60% of such executive's annual base salary for the year in which termination of employment actually occurred) and payment of a pro-rated bonus for the year in which the termination occurred. In addition, the agreements required Falconbridge to continue benefits, to the extent it may do so legally and in compliance with the benefits plans in existence at the time, at a level substantially equivalent to those provided while the executive was employed for a period of 36 months. Where this was not possible, Falconbridge was required to reimburse the senior officer for all reasonable expenses incurred to replace such benefits, as well as reimburse him, to a maximum of C$20,000, for legal, financial, outplacement or other professional services incurred in connection with the cessation of his employment. The retention agreements also provided that, in the event of a change of

control of Falconbridge, any unvested entitlements to Falconbridge Shares under the Falconbridge Limited Share Purchase Plan and credit in the Falconbridge Management Deferred Share Unit Plan held by those executives would vest immediately and any unvested stock options would vest immediately and remain exercisable for 36 months. In addition, the above-named executives were entitled to and were paid retention bonuses in the aggregate amount of approximately C$4 million on 11 August 2006.

The agreements with the balance of the executives provided for various guaranteed severance arrangements, retention bonuses, accelerated option vesting and/or enhanced contributions to employee share savings plans that became payable upon the change of control of Falconbridge upon its acquisition by the Former Xstrata Group.

In aggregate, approximately C$8.5 million (approximately US$7.6 million) was paid by Falconbridge on 11 August 2006 as retention bonuses to all relevant Falconbridge employees including approximately C$4 million paid to the above-named executives. In aggregate, approximately US$16.2 million has been paid by Falconbridge following completion of the Falconbridge Acquisition in relation to severance arrangements to all relevant Falconbridge employees including the above-named executives and the Company estimates that future amounts to be paid in due course by Falconbridge following completion of the Falconbridge Acquisition in relation to outstanding severance arrangements will not be material to the results of operations or financial condition of the Enlarged Xstrata Group.

Xstrata is currently assessing arrangements for bringing appropriate senior management of the Falconbridge Group within the ambit of the Xstrata Share Schemes.

16. Pensions

16.1 Former Xstrata Group pension arrangements

16.1.1 General

The majority of the Former Xstrata Group's employees are covered by defined contribution retirement arrangements where on retirement the employees receive benefits based on the value of their share of the fund. Contributions to the funds are made by the Former Xstrata Group as well as in some cases by employees and are generally based on a fixed percentage of pensionable salary of up to 20%. Payments to the pension plans are recognised as an operating expense each year. The Former Xstrata Group also operates a small number of defined benefit arrangements (which relate to a small proportion of employees) which, according to the most recent actuarial valuations are fully funded or provided for on the actuarial basis set out in the relevant valuations. In some cases those defined benefits are in the process of being converted to defined contribution benefits.

The Former Xstrata Group has established money purchase retirement benefit plans for certain senior employees, whose participation is at the invitation of the Former Xstrata Group. Mr. Davis and Mr. Reid have accepted the Former Xstrata Group's invitation to participate from their respective dates of joining the Former Xstrata Group.

The plans are designed so as to optimise taxation implications, having regard to the taxation and employment status of each executive.

Contributions (which are reviewed every two years) are calculated on actuarial advice with the objective of accumulating sufficient funds over the working lifetime of each executive to provide an overall target position which will be equivalent to approximately 60% of final salary at normal retirement age for executives who begin participating in the plans at the age of 40. The target pension includes an allowance for pension increases on payment in line with inflation up to a maximum of 5%. The actual benefits payable will however be based on the amount which has accumulated in that member's money purchase account.

Such contributions are inclusive of contributions from the relevant individuals whose contracts of employment set out the rates if any that they are required to pay as members. No contribution is currently required from either Mr. Davis or Mr. Reid.

Normal retirement age under the plans is age 60. If a relevant individual leaves or retires early the benefit is the amount that has accumulated in his money-purchase account.

Risk benefit insurance plans have been established for Mr. Davis and Mr. Reid to provide benefits in respect of the individual on death before retirement. The intention is that a lump sum benefit of four times base salary will be paid and surviving dependants will receive pensions. In the case of a spouse, the lifetime pension is intended to be approximately 50% of base salary immediately prior to death and for each eligible child a pension of approximately 10% of base salary will be paid until age 18, or in full-time education until age 21. These benefits are partly self-insured.

On permanent disability, insurance has been established in respect of the Executive Directors so that the relevant individual will receive a replacement income of approximately 75% of base salary until normal retirement age (which income is subject to periodic increases in payment). Contributions to the relevant plans will continue to be paid on behalf of the relevant individual during any periods when the replacement income is paid. These benefits are partly self-insured, in respect of Mr. Davis.

Where it is mandatory for the relevant individual to participate in a pension scheme other than social security in the country in which he is employed, the Former Xstrata Group will pay required contributions to such a scheme on behalf of the individual in addition to those described above.

Benefit scales defined above will be subject to revision where taxation or other legislation so requires or permits.

The Former Xstrata Group operates a number of retirement and related benefit plans for its employees. The plans are operated in accordance with local custom and practice and, where funded, assets are invested externally from the Enlarged Xstrata Group, being generally invested with insurance companies, and are regulated by local legislation. The benefits provided by the retirement plans vary by jurisdiction and include retirement pensions, retirement lump sums, separation payments, risk benefits and post-retirement medical benefits.

16.1.2 Industry funds

In South Africa, the Former Xstrata Group participates in two significant multi-employer schemes, The Mine Employees Pension Fund and The Sentinel Mining Industry Retirement Fund.

The Mine Employees Pension Fund is a defined contribution scheme.

The Sentinel Mining Industry Retirement Fund largely converted to a defined contribution scheme from a defined benefit scheme on 31 March 2001, with members over the age of 55 at conversion retaining their defined benefit promise.

In Australia, under the NSW Coal & Oil Shale Mineworkers (Superannuation) Act 1941 (the "1941 Act"), and certain industrial agreements, the Enlarged Xstrata Group is required to make contributions to the Coal Super Retirement Income Fund for each person employed as a Mineworker (as defined by the 1941 Act).

The Coal Super Retirement Income Fund is separated into two plans:

- NSW Mineworkers Superannuation Fund.
- NSW Coal & Oil Shale Mineworkers Superannuation (Accumulation) Fund (COSAF).

The Mineworkers Superannuation Fund, was closed to new members after a major restructuring in 1993. The majority of active members (98%) have accepted the Transfer of Entitlements Offer from the plan and their entitlements have been transferred to the COSAF (accumulation) fund. Up until March 1993, benefits were paid from this fund in the form of pensions. The fund is used to pay pensions to surviving former coal miners or their spouses.

In addition to the above, contributions are made by certain entities in the consolidated entity to the COSAF fund. This is an accumulation fund and as such an actuarial review is not required. Contributions are based on a "reference rate" as defined in the 1941 Act and based on a percentage of an industry classification pay rate. The fund provides accumulated benefits on resignation, retirement, disability or death.

16.1.3 Defined benefit schemes

The Former Xstrata Group has no material defined benefit pension or post-retirement scheme at 30 June 2006.

During November 2002, in accordance with Spanish law, the pension commitments of the Spanish pension scheme were externalised through an insurance contract with Bank of Bilbao Vizcaya Argentaria SA at a cost of €20.3 million (US$20.2 million). All the associated pension liabilities of Xstrata Spain have been fully secured, without recourse to Xstrata.

16.4 Falconbridge Group pension arrangements

Falconbridge sponsors numerous pension plans at its locations around the world: from defined benefit to capital accumulation plans, contributory to non-contributory and covering a wide spectrum of employees including collectively bargained employees.

The main defined benefit plans sponsored in Canada and in the United States are non-contributory. Staff plans use pension formulas that take into account the years of service, the average of the last years of eligible earnings (usually 3 or 5) and a percentage that varies from 1.75% minus social security to a flat 1.5%. Normal retirement age is at age 65 but members can usually retire early without any early retirement reduction penalty if they leave active employment at the age of 60. Some plans provide from an unreduced pension plus a temporary supplementary pension to age 65 once members reach 30 years of service. Certain plans also provide for inflation adjustment annually but the majority do not. There are mechanisms in place to protect the spouses of members by having part of the retirement pension revert to the spouse if the member should die after retirement. Some plans do not automatically provide for that protection as the normal form of pension is a lifetime pension with a minimum guarantee of 5 years.

The main defined benefit plans for hourly and collectively bargained employees are principally based on a flat pension per month and per years of service. These plans are collectively bargained and the flat pension varies by location and country. As for the staff plans, early retirement provisions are included, such as unreduced pension after 30 years of service, age 58 with 32 years of service or age 60 with 20 years of service. Early retirement with penalty is available from age 55 and certain plans provide for annual inflation adjustment while others negotiate such an increase under the collective bargaining process. The normal form of pension varies greatly from plan to plan as some provide a lifetime pension without any guarantee while others provide a lifetime pension with a 5-year guarantee along with a 67% reversal to the spouse following the death of the pensioner.

Falconbridge also sponsors supplemental plans for the defined benefit and the capital accumulation plans for pension promises and contribution requirements that cannot be paid by the pension plans under limits imposed by applicable legislation. These supplemental plans are not funded by any trust funds and payments are made by the Falconbridge Group out of operating revenues.

Falconbridge's main defined benefit pension plans and other benefit plans are currently in deficit on the basis set out in the most recent relevant actuarial valuations for the plans. Further details of the funding position in respect of such plans is set out in Note 20 (Employee Future Benefit Plans) of Falconbridge's financial statements for the year ended 31 December 2005 included in Part X – "Financial Information Relating to the Falconbridge Group – Financial Information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003", which shows a net deficit of plan assets over benefit obligations of US$181 million for pension benefit plans as at 31 December 2005 and a net deficit of plan assets over benefit obligations of US$408 million for other benefit plans as at 31 December 2005.

Falconbridge also sponsors a wide variety of capital accumulation plans that include defined contribution plans, 401(k) plans, group registered retirement savings plans, deferred profit sharing plans and after-tax savings plans. These plans are usually contributory by plan members and the contributions by the Falconbridge Group are a combination of basic contributions plus matching contributions based on the employee contributions and/or contributions based on a graded schedule with respect to age plus years of service.

17. Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP

The historical financial information in respect of the Former Xstrata Group included in Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group" and incorporated by reference into this document as set out in the section of this document headed "Relevant Documentation and Incorporation by Reference" for the years ended 31 December 2003 and 31 December 2004 has been prepared and presented in accordance with UK GAAP, whilst the historical financial information in respect of the Former Xstrata Group included in Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group" and incorporated by reference into this document as set out in the section of this document

headed "Relevant Documentation and Incorporation by Reference" for the years ended 31 December 2004 and 31 December 2005 and the six-month periods ended 30 June 2005 and 30 June 2006 has been prepared and presented in accordance with IFRS.

Significant differences exist between IFRS and UK GAAP.

The following information is included in Notes 5 (First time adoption of IFRS and changes in accounting policies) and 7 (IFRS Reconciliation to UK GAAP) to Xstrata's audited consolidated financial statements for the year ended 31 December 2005 included in the Xstrata Annual Report and Accounts 2005, which have been incorporated by reference into this document as set out in the section of this document headed "Relevant Documentation and Incorporation by Reference":

- a discussion of Xstrata's first time adoption of IFRS from 1 January 2005 and Xstrata's consequent change in accounting policies;
- a summary of certain significant differences between IFRS and UK GAAP as they apply and applied to Xstrata;
- a reconciliation between Xstrata's UK GAAP and IFRS consolidated balance sheet at 1 January 2004 (the date of Xstrata's transition to IFRS);
- a reconciliation between Xstrata's UK GAAP and IFRS consolidated balance sheet and equity at 31 December 2004;
- notes to the consolidated balance sheet and equity reconciliation at 1 January 2004 and 31 December 2004;
- a reconciliation between Xstrata's UK GAAP and IFRS profit for the year ended 31 December 2004; and
- notes to the reconciliation of consolidated profit for the financial year ended 31 December 2004.

The historic financial information on the Falconbridge Group reproduced in Part X – "Financial Information Relating to the Falconbridge Group" has been prepared and presented in accordance with Canadian GAAP. Significant differences exist between UK GAAP and Canadian GAAP, and IFRS and Canadian GAAP. See Part III – "Unaudited Pro Forma Financial Information" for unaudited pro forma financial information in relation to the Enlarged Xstrata Group prepared in accordance with IFRS and for unaudited reconciliations converting statements of the financial performance and position of Falconbridge from Canadian GAAP to IFRS, as applied by Xstrata, as at and for the six-month period ended 30 June 2006 and for the year ended 31 December 2005.

Xstrata does not produce financial statements in accordance with US GAAP. Significant differences exist between US GAAP and IFRS, UK GAAP and Canadian GAAP.

The organisations that promulgate US GAAP and IFRS, UK GAAP and Canadian GAAP have significant ongoing projects that could have a significant impact on future comparisons between US GAAP and IFRS, UK GAAP and Canadian GAAP. Future developments or changes in US GAAP and IFRS, UK GAAP or Canadian GAAP may give rise to additional differences between US GAAP and IFRS, UK GAAP and Canadian GAAP which could have a significant impact on the Enlarged Xstrata Group.

In making an investment decision, investors must rely on their own examination of the Enlarged Xstrata Group, the terms of the Rights Issue and the financial and other information included in this document and incorporated into this document by reference. Potential investors should consult their own professional advisers for an understanding of the differences between US GAAP, IFRS, UK GAAP and Canadian GAAP, and how these differences might affect the financial information included in this document and incorporated into this document by reference.

18. UK taxation

The following paragraphs are based on current UK tax legislation and HM Revenue & Customs practice at the date of this document. The summary set forth below is intended as a general guide for certain classes of investor and does not purport to constitute a comprehensive analysis of the tax consequences under UK law of the acquisition, ownership and sale of New Shares. It is not intended to be, nor should it be considered, legal or tax advice. Qualifying Shareholders who are in any doubt as to their tax position, or who are subject to tax in a jurisdiction other than the UK, should obtain their own tax advice.

These paragraphs deal only with UK taxation. On the basis that the Company is a resident of Switzerland (see paragraph 18.1 below), certain parts of paragraph 19 of this Part VIII (Swiss taxation) are potentially relevant to all holders of New Shares, regardless of the jurisdiction in which any such holder is resident for tax purposes. Prospective investors resident in the UK are referred in particular to paragraphs 19.5 to 19.7 for information relating to Swiss withholding tax which will be deducted from dividends paid by the Company on New Shares. Investors are also referred to paragraph 19.4 for information on Swiss securities transfer tax which may arise in certain circumstances.

The taxation summaries in this paragraph 18 apply only to Qualifying Shareholders who are the beneficial owners of Ordinary Shares and hold such securities for investment purposes, and not to, for example, dealers in securities. Except where indicated, the summaries only cover the principal UK tax consequences of holding New Shares for Qualifying Shareholders (a) who are resident or (in the case of capital gains tax) ordinarily resident in (and only in) the UK for tax purposes (although it should be noted that special rules, which are not covered, apply to such holders of New Shares who are not domiciled in the UK) and (b) who do not have a permanent establishment in Switzerland with which the holding of Ordinary Shares is connected.

General

18.1 The Company's place of effective management is in Switzerland and it is accordingly treated as resident in Switzerland, and not in the UK, for the purposes of Swiss and UK taxation and for the purposes of the UK-Switzerland double tax treaty. That position will, however, be reviewed from time to time, and it is possible that the Company could in the future become resident for the purposes of taxation in the UK or elsewhere.

This section is written on the basis that the Company is and remains resident in Switzerland and will therefore be subject to the Swiss tax regime and not (save in respect of UK source income) the UK tax regime. Since the Company is incorporated in England and Wales, however, the UK stamp duty and stamp duty reserve tax regimes will be relevant to transfers (and, in some cases, the issue) of rights to New Shares (including New Shares represented by Provisional Allotment Letters, Nil Paid Rights or Fully Paid Rights held in CREST) and/or New Shares themselves.

All potential investors (wherever resident) are referred to the section below headed "UK Stamp Duty and Stamp Duty Reserve Tax (SDRT)".

Taxation of chargeable gains

18.2 For the purposes of UK taxation of chargeable gains, the issue of the New Shares by the Company should be regarded as a reorganisation of the Company's share capital. Accordingly, Shareholders will not be treated as having disposed of their holding of Existing Shares to the extent that they take up all or part of their rights under the Rights Issue in respect of that shareholding, and no liability to UK tax on chargeable gains in respect of the New Shares should arise if they take up their entitlement to the New Shares in full. Instead, their holding of Existing Shares and their New Shares will be generally treated as a single asset ("New Holding"), acquired at the time they are deemed to have acquired their holding of Existing Shares (save that, where an individual's holding of Existing Shares is treated as consisting of more than one asset for tax purposes, the New Shares acquired will be attributed *pro rata* to those existing assets). For the purpose of computing any gain or loss on a subsequent disposal by a Shareholder of any shares comprised in his or her New Holding, the amount paid by the Shareholder for the New Shares will be added to the acquisition cost of his or her holding(s) of Existing Shares and the aggregate cost will be apportioned between the Ordinary Shares comprised in his or her New Holding which are disposed of and those which are retained.

If Shareholders sell or otherwise dispose of all or some of the New Shares allotted to them or of their rights to subscribe for them, or if they allow all or any part of their rights to lapse and receive a cash payment in respect of them, they may, depending on the circumstances, incur a liability to UK taxation of chargeable gains. However, if the proceeds resulting

from a lapse or disposal of the rights do not exceed whichever is the greater of £3,000 or 5% of the market value (as at the date of lapse or disposal) of the Existing Shares in respect of which the rights arose, the Shareholders will not generally be treated as making a disposal for the purposes of UK tax of chargeable gains; instead, the proceeds will be deducted from the acquisition cost of the holding of Existing Shares for the purpose of computing any chargeable gain or allowable loss on a subsequent disposal.

18.3 Indexation Allowance/Taper Relief

The following paragraphs deal separately with the positions of corporate and non-corporate Shareholders:

(i) Corporate Shareholders
Shareholders who are within the charge to UK corporation tax will continue to obtain the benefit of indexation allowance on the New Holding. For the purposes of calculating the indexation allowance on any disposal of the New Holding, however, the expenditure incurred in acquiring the New Shares will be treated as incurred only when the Shareholder made payment or became liable to make payment, not at the time the Existing Shares were deemed to be acquired.

(ii) Non-corporate Shareholders
For disposals by individuals, personal representatives or trustees, the indexation allowance was frozen by reference to the Retail Price Index at April 1998 (although indexation relief for holding periods up to then was preserved) and was replaced by a system of taper relief. Taper relief operates by reducing the amount of any chargeable gain realised on the disposal of assets (after indexation relief, if available) by a percentage amount. The amount of the percentage is dependent on the period of ownership of the relevant asset since 6 April 1998 and on whether that asset qualified for the business or non-business rate of taper. For the purposes of calculating a Shareholder's entitlement to taper relief (if any), New Shares should be treated as acquired on the date of acquisition of the Existing Shares in respect of which the right to such New Shares arose.

(iii) Non-UK resident shareholders
In so far as Shareholders who are not resident or ordinarily resident in the UK are within the charge to UK taxation of chargeable gains, the tax treatment of the Rights Issue should be as set out for UK resident holders at sub-paragraphs (i) and (ii) above.

Subject to the provisions set out below in relation to temporary non-residents, Shareholders who are not resident or ordinarily resident in the United Kingdom will not normally be liable for UK tax on chargeable gains unless they carry on a trade, profession or vocation in the United Kingdom through a branch or agency (in the case of an individual Shareholder) or through a permanent establishment (in the case of a Shareholder within the charge to UK corporation tax) and the Existing Shares or New Holding are or have been used or held by or for the purposes of the branch, agency or permanent establishment (as the case may be).

If a Shareholder is liable for UK tax on chargeable gains, he or she might, depending on the circumstances, be liable to UK taxation of chargeable gains on any disposition of the New Holding.

An individual Shareholder who has ceased to be resident or ordinarily resident for tax purposes in the UK for a period of less than five years of assessment and who disposes of all or part of the New Holding during that period may be liable on his or her return to UK tax on chargeable gains arising during the period of absence, subject to any available exemption or relief.

Taxation of dividends

18.4 A UK resident Shareholder, or a holder of New Shares who is carrying on a trade, profession or vocation in the UK through a branch or agency in connection with which the New Shares are held, will generally, depending upon the holder's particular circumstances, be subject to UK income tax or corporation tax (as the case may be), on the gross amount of any dividends paid by the Company on the New Shares, before deduction of any Swiss withholding tax. Paragraphs 19.5 to 19.7 below contain information on the Swiss withholding tax which will be deducted from dividends paid by the Company, and the procedure under which a UK resident Shareholder may claim a refund of part of that withholding tax. A credit for Swiss withholding tax would generally be given against any UK tax liability in respect of the dividends, provided that the holder has taken reasonable steps to benefit from the double taxation treaty between

Switzerland and the UK. A UK resident individual Shareholder who is liable to UK income tax at no more than the basic rate will be liable to income tax on the dividend income at the dividend ordinary rate (10% in 2006-2007). A UK resident individual Shareholder who is liable to UK income tax at the higher rate will be subject to income tax on the dividend income at the dividend upper rate (32.5% in 2006-2007).

UK stamp duty and stamp duty reserve tax (SDRT)

18.5 No stamp duty or SDRT will generally be payable on the issue of Provisional Allotment Letters or the crediting of Nil Paid Rights to accounts in CREST. Where New Shares represented by such documents or rights are registered in the name of the Qualifying Shareholder entitled to such New Shares or New Shares are credited in uncertificated form to CREST accounts for the benefit of such a Qualifying Shareholder, no liability to stamp duty or SDRT will generally arise.

The purchaser of rights to New Shares represented by Provisional Allotment Letters (whether nil paid or fully paid) or of Nil Paid Rights or Fully Paid Rights held in CREST on or before the latest time for registration of renunciation will not generally be liable to pay stamp duty, but the purchaser will normally be liable to pay SDRT at the rate of 0.5% of the actual consideration paid. Where such a purchase is effected through a stockbroker or other financial intermediary, that person will normally account for the SDRT and will indicate that this has been done in any contract note issued to the purchaser. In other cases, the purchaser of the rights to New Shares represented by Provisional Allotment Letters is liable to pay the SDRT and must account for it to HM Revenue & Customs. SDRT arising on the transfer of Nil Paid Rights or Fully Paid Rights held in CREST will be collected and accounted for to HM Revenue & Customs by CRESTCo at the expense of the purchaser.

No stamp duty or SDRT will be payable on the registration of renunciation of Provisional Letters of Allotment, whether by the original holders or their renouncees.

Any dealings in New Shares after the latest time for the registration of renunciation will normally be subject to stamp duty or SDRT. The transfer on sale of New Shares will generally give rise to a liability to ad valorem stamp duty at the rate of 0.5% (rounded up to the next multiple of £5) of the amount or value of the consideration paid. Stamp duty will normally be paid by the purchaser or transferee of the New Shares. An agreement to transfer New Shares will normally give rise to SDRT at the rate of 0.5% of the amount or value of the consideration payable but such liability will be cancelled, or any SDRT paid refunded, if the agreement is completed by a duly stamped transfer within six years of either the date of the agreement or (if the agreement is conditional) the date when the agreement became unconditional. SDRT will normally be the liability of the purchaser or transferee of the New Shares.

Under the CREST system for paperless transfers of securities, no stamp duty or SDRT will arise on a transfer of New Shares into the system unless the transfer into CREST is itself for consideration in money or money's worth, in which case a liability to SDRT will arise, usually at the rate of 0.5% of the amount or value of the consideration given. The transfer of New Shares within CREST will generally be liable to SDRT (at a rate of 0.5% of the amount or value of the consideration paid), rather than stamp duty, and SDRT on relevant transactions settled within the system or reported through it for regulatory purposes will be collected and accounted for to HM Revenue & Customs by CRESTCo (generally at the expense of the transferee or purchaser).

Under the SIS System, a sale or transfer of New Shares will generally be liable to SDRT (at a rate of 0.5% of the consideration paid), rather than stamp duty, and SDRT on relevant transactions settled within the system will be collected and accounted for to HM Revenue & Customs by SIS.

Where New Shares are issued or transferred to, or to a nominee or agent for, (a) a person whose business is or includes the provision of clearance services or (b) a person whose business is or includes issuing depositary receipts, stamp duty or SDRT will generally be payable at a higher rate of 1.5% of the amount or value of the consideration payable (rounded up in the case of stamp duty to the nearest £5) or, in certain circumstances, the value of the New Shares. Clearance services may however elect, provided certain conditions are satisfied, for the normal rate of UK stamp duty or SDRT (0.5%) to apply to issues or transfers of chargeable securities or relevant securities (such as New Shares) into, and to transactions within, such services instead of the 1.5% rate of stamp duty or SDRT applying to an issue or a transfer of chargeable securities or relevant securities into the clearance service. Such an election has been made by the SIS System in respect of issues or transfers of chargeable securities or relevant securities into, and transactions within, the SIS System.

The above statements are intended only as a general guide to the current stamp duty and SDRT position. Transfers to certain categories of person are not liable to stamp duty or SDRT.

The UK stamp duty and/or SDRT charges summarised above are in addition to any Swiss securities issue and/or transfer tax which may become chargeable in the circumstances described at paragraph 19.4 of this Part VIII.

19. Swiss taxation

Prospective investors in New Shares should note that this paragraph 19 deals only with Swiss taxation. As the Company is incorporated in England and Wales, sales and transfers of New Shares, Nil Paid Rights and Fully Paid Rights will, regardless of the tax residence of the transferor or transferee, the place of execution of any transfer documentation, and the exchange on which the sale occurs, be subject to UK stamp duty or stamp duty reserve tax (as summarised at paragraph 18.5 of this Part VIII) in addition to any applicable Swiss securities issue and transfer tax (summarised at paragraph 19.4 below).

Income tax on dividend distributions

19.1 For an individual resident in Switzerland and holding New Shares as a private or business asset, dividends and similar distributions of the Company will be subject to Swiss federal, cantonal and municipal taxes. A Swiss corporate entity that owns at least 20% of the capital of the Company or Ordinary Shares with a market value of at least CHF2 million may qualify for the participation exemption. Dividends and similar distributions received which qualify for the participation exemption, after certain expense allocations as defined by the applicable legislation, should be tax exempt, but it should be noted that the dividends will be subject to Swiss withholding tax (see paragraph 19.5 below).

A non-resident holder, who does not hold the New Shares in connection with the conduct of a trade or business, in Switzerland through a permanent establishment or fixed place of business, should not be liable for any Swiss federal, cantonal or municipal income taxes on dividends or other distributions paid in respect of New Shares merely as a result of holding the New Shares other than the withholding tax to be withheld by the Company from such dividends or other distributions (see paragraph 19.5 below).

Capital gains on disposals of shares

19.2 A Swiss resident individual who holds New Shares as a private asset will generally not be subject to any Swiss federal, cantonal or municipal income taxation on gains realised upon the sale or other disposal of New Shares. Private gains realised upon a repurchase of New Shares by the Company or an entity held directly or indirectly by the Company may, however, be re-characterised as taxable income if certain conditions are met. Book gains realised on New Shares held as a business asset of a Swiss resident are included in the taxable income of such person.

Capital gains realised by a Swiss corporation owning at least 20% of the capital of the Company may be exempt under the participation exemption subject to conditions. Any such corporation should take its own professional advice on its tax position in respect of its holding of New Shares.

A non-resident holder of New Shares should generally not be subject to any Swiss federal, cantonal or municipal taxation on gains realised upon a sale or other disposal of New Shares unless the New Shares so disposed of can be attributed to a permanent establishment or fixed place of business maintained by such person within Switzerland. Gains realised upon a repurchase of New Shares by the Company or an entity held directly or indirectly by the Company may, however, be re-characterised as a triggering event for Swiss withholding tax purposes if certain conditions are met.

Wealth and capital taxes

19.3 Individual holders of New Shares resident in Switzerland or otherwise subject to Swiss taxation holding the shares as a private asset will generally be subject to annual net wealth tax on these assets. The annual net wealth tax of individual holders of New Shares resident in Switzerland or otherwise subject to Swiss taxation holding these as a business asset may be affected to the extent that a gain has been crystallised. Similarly the annual capital tax of corporations may be affected to the extent that a gain on the shareholding has been reflected in their accounts.

Securities issue and transfer tax

19.4 The issue of New Shares of a Swiss legal entity is generally subject to a 1.0% one-time capital duty (issuance stamp tax on the creation of shares in a Swiss corporation). The tax is payable by the issuer. In the case at hand, the New Shares

will be issued by a UK legal entity being managed and controlled in Switzerland. Accordingly, provided that certain conditions are met, it may be possible that the issue of New Shares could be exempt from capital duty.

Any subsequent sale of New Shares will be subject to Swiss securities transfer tax, currently 0.3% if the seller is either a Swiss bank or another Swiss securities dealer, as defined in the Swiss Federal Stamp Duty Law, or if such sale or transfer occurs through or with a Swiss bank or another Swiss securities dealer. Additionally, the sale of New Shares through or by a member of SWX may be subject to a stock exchange levy at the usual rates.

The Swiss securities transfer tax charges summarised above are in addition to the UK stamp duty and/or SDRT which will arise on sales or transfers of New Shares, Nil Paid Rights and Fully Paid Rights regardless of the tax residence of the transferor or transferee, the place of execution of any transfer documentation, or the exchange on which the sale occurs. For further information on those UK charges, please see paragraph 18.5 of this Part VIII.

Withholding tax on dividends and other distributions

19.5 Dividends paid and similar cash distributions or distributions in kind made by the Company to a holder of New Shares (including dividends on liquidation and stock dividends) will be subject to a Swiss federal withholding tax at the rate of 35%. The withholding tax on dividends must be withheld by the Company from the gross distribution and paid to the Swiss Federal Tax Administration.

The withholding tax on dividends will be fully refundable for – or as the case may be fully creditable against the income tax liability of – a Swiss resident recipient of a distribution if he is the beneficial owner of the New Shares at the time of the payment and if he duly reports the gross distribution received on his tax return.

A recipient of a distribution of the Company who is not a resident of Switzerland for tax purposes and does not hold the New Shares in connection with the conduct of a trade or business in Switzerland through a permanent establishment or a fixed place of business and qualifies as a resident of a country which maintains a bilateral treaty for the avoidance of double taxation with Switzerland may be entitled to a full or partial refund of withholding tax under the provisions of the applicable treaty, as described below in relation to UK and US resident shareholders. However, such non-resident shareholders should be aware that the rate of recoverable Swiss withholding tax and procedures for claiming treaty refunds (and the time frame required for obtaining a refund) may differ from country to country and may therefore differ from those described below. Such non-resident shareholders should consult their own tax advisers regarding the procedures for claiming any refund of the Swiss withholding tax under an applicable treaty.

Reclaim procedures for UK resident Shareholders

(a) Procedure

19.6 Three copies of Swiss tax Form 86, duly completed and signed, must be sent to the Inspector of Taxes in the United Kingdom to whom the claimant makes his income tax return (or to the Inspector of Taxes for the district in which the claimant resides, if he has not made such a return) no later than the 31st of December of the third year following the calendar year in which the dividend became due. Rights to repayment arising in one calendar year must be claimed in a single claim. Two copies of the forms will be sent by the Inspector of Taxes to the Federal Tax Administration of Switzerland CH-3003 Berne.

The claim must be accompanied by evidence of deduction of Swiss withholding tax. In general, a certificate of deduction, signed bank voucher or credit slip will satisfy this requirement. However the Swiss administration reserves the right to request further evidence and information.

The claim form may be filed by a representative on behalf of the beneficial owner, provided that the representative is formally authorised by a power of attorney (which must be attached to the form).

(b) Rates

19.7 UK resident shareholders (other than corporations which control at least 25% of the voting power of the Company) that are eligible for double taxation treaty benefits may reclaim four sevenths of the 35% withholding tax on dividends, leaving a net Swiss tax cost of 15%.

The Swiss Federal Tax Administration and HM Revenue & Customs announced on their websites on 27 January 2006 and 31 January 2006 respectively that agreement had been reached at official level on a proposed protocol to the UK-Switzerland double taxation treaty, under which pension funds of one state would be exempt from taxation in the other state on dividends paid by a resident of that other state. However, as that agreement is a non-binding understanding at official level only, it cannot be known at present whether or not the necessary legal steps will in fact be taken to create any such protocol and bring it into effect, or, if so, what further terms or qualifications it may contain.

Reclaim procedures for US resident Shareholders

(a) Procedures

19.8 Three copies of the appropriate Swiss tax Form 82, duly completed and signed before a notary public of the United States, must be sent to the Federal Tax Administration, Eigerstrasse, CH-3003 Berne, Switzerland, no later than the 31st of December of the third year following the calendar year in which the dividend became due. Rights to repayment arising in one calendar year must be claimed in a single claim. If the claimant, at the time of claiming, is outside the United States, the declaration may be made before a United States consular office.

The claim must be accompanied by evidence of deduction of Swiss withholding tax. In general, a certificate of deduction, signed bank voucher or credit slip will satisfy this requirement. However the Swiss administration reserves the right to request further evidence and information.

The claim form may be filed by a representative on behalf of the beneficial owner, provided that the representative is formally authorised by a power of attorney (which must be attached to the form).

(b) Rates

19.9 US resident shareholders (other than corporations with a shareholding in the Company of at least 10%) that are eligible or double taxation treaty benefits may reclaim four sevenths of the 35% withholding tax on dividends, leaving a net Swiss tax cost of 15%.

20. US taxation

The following is a summary based on present law of certain US federal income tax considerations relevant to the receipt, exercise and disposition of Nil Paid Rights pursuant to the Rights Issue as well as the acquisition, ownership and disposition of the Fully Paid Rights and New Shares. It addresses only US holders (as defined below) that receive the Nil Paid Rights with respect to Existing Shares in the Rights Issue, will hold the Nil Paid Rights, Fully Paid Rights and New Shares as capital assets and use the US dollar as its functional currency. The discussion is not a complete description of all the tax considerations that may be relevant to a US holder. The discussion does not consider the circumstances of particular purchasers subject to special tax rules, such as banks, dealers, traders in securities that elect mark to market treatment, insurance companies, tax-exempt entities, US expatriates, holders of 10% or more of the Company's shares, persons holding the Nil Paid Rights, Fully Paid Rights or New Shares as part of a hedge, straddle, conversion or other integrated financial transaction and persons that are not residents of the United States.

THE STATEMENTS ABOUT US FEDERAL INCOME TAX ISSUES CONTAINED IN THIS DOCUMENT ARE MADE TO SUPPORT MARKETING OF THE NIL PAID RIGHTS, FULLY PAID RIGHTS AND NEW SHARES. NO TAXPAYER CAN RELY ON THEM TO AVOID US FEDERAL TAX PENALTIES. EACH PROSPECTIVE PURCHASER SHOULD SEEK ADVICE FROM AN INDEPENDENT TAX ADVISOR ABOUT THE TAX CONSEQUENCES UNDER ITS OWN PARTICULAR CIRCUMSTANCES OF THE RECEIPT, EXERCISE AND DISPOSITION OF NIL PAID RIGHTS AS WELL AS THE ACQUISITION, OWNERSHIP AND DISPOSITION OF THE FULLY PAID RIGHTS AND NEW SHARES UNDER THE LAWS OF SWITZERLAND, THE UNITED KINGDOM, THE UNITED STATES AND ITS CONSTITUENT JURISDICTIONS AND ANY OTHER JURISDICTION WHERE THE PURCHASER MAY BE SUBJECT TO TAXATION.

As used herein, "US holder" means a beneficial owner of Nil Paid Rights, Fully Paid Rights or New Shares that for US federal income tax purposes is (i) an individual citizen or resident of the United States, (ii) a corporation or other business entity created or organised under the laws of the United States or its political subdivisions, (iii) a domestic trust or (iv) an estate the income of which is subject to US federal income tax without regard to its source.

The US federal income tax treatment of a partner in a partnership that holds Nil Paid Rights, Fully Paid Rights or New Shares will depend on the status of the partner and the activities of the partnership. Partnerships should consult their tax

advisors concerning the US federal income tax consequences to their partners of the acquisition, ownership and disposition of Nil Paid Rights, Fully Paid Rights or New Shares.

US holders should note that the "Swiss Taxation" and "UK Taxation" discussions above also are relevant. Because the Company is a tax resident of Switzerland, Swiss withholding tax will be deducted from interest and dividends paid by the Company. (See paragraphs 19.5,19.8 and 19.9 above). Because the Company is incorporated in England and Wales, sales and transfers of Nil Paid Rights, Fully Paid Rights and New Shares will be subject to UK stamp duty or stamp duty reserve tax. (See paragraph 18.5 above).

Taxation of Nil Paid Rights

Receipt of Nil Paid Rights

20.1 A US holder should not recognise taxable income when it receives Nil Paid Rights pursuant to the Rights Issue. The US holder's holding period in the Nil Paid Rights will include its holding period in the Existing Shares with respect to which the rights were distributed.

If the fair market value of Nil Paid Rights when received is less than 15% of the fair market value of the Existing Shares with respect to which Nil Paid Rights are received, the Nil Paid Rights will have a nil tax basis unless the US holder affirmatively elects to allocate its adjusted tax basis in its Existing Shares to the Nil Paid Rights in proportion to the relative fair market values of the Existing Shares and the Nil Paid Rights received (determined on the date Nil Paid Rights are received). A US holder must make this election on its tax return for the taxable year in which the Nil Paid Rights are received.

If the fair market value of Nil Paid Rights when received is 15% or greater than the fair market value of the Existing Shares with respect to which Nil Paid Rights are received, a US holder's adjusted tax basis in its Existing Shares must be allocated between the Existing Shares and the Nil Paid Rights in proportion to their then relative fair market values.

Exercise of Nil Paid Rights

20.2 A US holder will not recognise taxable income when it receives New Shares by exercising Nil Paid Rights. A US holder will have a tax basis in the New Shares equal to such holder's tax basis, if any, in the Nil Paid Rights exercised plus the US dollar value of the pounds sterling exercise price of the Nil Paid Rights on the acquisition date (or, in the case of cash basis and electing accrual basis taxpayers, the settlement date). A US holder's holding period in the New Shares generally will begin on the date the Nil Paid Rights are exercised.

Disposition of Nil Paid Rights

20.3 Subject to the passive foreign investment company ("PFIC") rules discussed below, a US holder will recognise capital gain or loss on the sale or other disposition of Nil Paid Rights in an amount equal to the difference between such holder's tax basis in the Nil Paid Rights and the US dollar value of the amount realised from the sale or other disposition. Any gain or loss generally will be treated as arising from US sources.

A US holder that receives foreign currency on the sale or other disposition of the Nil Paid Rights will realise an amount equal to the US dollar value of the foreign currency on the date of sale or other disposition (or in the case of cash basis and electing accrual basis taxpayers, the settlement date). A US holder will have a tax basis in the foreign currency received equal to the US dollar amount realised. Any gain or loss realised on a subsequent conversion of the foreign currency into US dollars will be US source ordinary income or loss.

Expiration of Nil Paid Rights

20.4 If a US holder allows Nil Paid Rights to expire without selling or exercising them, the Nil Paid Rights should be deemed to have a nil tax basis and, therefore, the US holder should not recognise any loss upon expiration of the Nil Paid Rights.

A US holder that receives proceeds as a result of the sale of the Nil Paid Rights by the Underwriters on its behalf will be treated either as having sold the Nil Paid Rights (as described above) or as having exercised the Nil Paid Rights and sold the New Shares. If the US holder is treated as having sold Nil Paid Rights, whether the gain will be long-term or short-term depends upon the holder's holding period in the relevant Existing Shares. A US holder that is treated as having sold the New Shares will recognise a short-term capital gain or loss as described in paragraph 20.6 below.

Taxation of the New Shares

Dividends

20.5 Subject to the PFIC rules discussed below, cash dividends paid with respect to the New Shares (including the amount of any Swiss income tax withheld) generally will be included in the gross income of a US holder as ordinary income from foreign sources. The dividends will not be eligible for the dividends-received deduction generally available to US corporations for dividends from other US corporations. The dividends received by noncorporate US holders, however, will be taxed at the preferential rate allowed for qualified dividend income: (i) the Company qualifies for benefits under the income tax treaty between the United States and Switzerland (the "Treaty"); (ii) the Company is not a PFIC; (iii) the US holder has held the New Shares for a sufficient period; and (iv) other requirements are met. The Company believes that it will qualify for benefits under the Treaty.

The amount that a US holder must include on account of a dividend paid in foreign currency will be based on the exchange rate on the date the US holder receives the dividend whether or not the US holder converts the payment into US dollars at that time. The US holder will have a basis in the currency received equal to its US dollar value on the date of receipt. Any gain or loss recognised on a subsequent conversion or other disposition of the currency generally will be treated as ordinary income or loss from US sources.

Subject to generally applicable limitations, a US holder may be entitled to a credit against its US federal income tax liability, or a deduction in computing its US federal taxable income, for Swiss taxes withheld at the appropriate rate. A US holder entitled to claim reduced withholding under the Treaty may not claim a credit for tax withheld at a higher rate. (See paragraphs 19.8 and 19.9 above).

Dispositions

20.6 Subject to the PFIC rules discussed below, a US holder generally will recognise capital gain or loss on the sale or other disposition of the New Shares equal to the difference between the amount realised and the US holder's tax basis in the New Shares. Any gain or loss generally will be treated as arising from US sources. Deductions for capital losses are subject to significant limitations.

A US holder that receives foreign currency on the sale or other disposition of New Shares will realise an amount equal to the US dollar value of the foreign currency received on the date of sale (or, in the case of cash basis and electing accrual basis taxpayers, the settlement date). A US holder will have a tax basis in the currency received equal to the US dollar amount realised. Any gain or loss on a subsequent conversion or other disposition of the currency generally will be US source ordinary income or loss.

Passive Foreign Investment Company

20.7 The Company does not expect to be treated as a PFIC in the current or subsequent taxable years. Because the PFIC determination is made annually on the basis of the Company's income and assets, including goodwill, the Company cannot assure investors that it will not be a PFIC in the current or subsequent taxable years.

The Company would be a PFIC for any taxable year if, taking into account the income and assets of certain subsidiaries, 75% or more of the Company's gross income consists of passive income or 50% or more of the average quarterly value of the Company's assets consists of assets that produce, or are held for the production of, passive income. Passive income generally includes gains from transactions in commodities. The principal products of the Enlarged Xstrata Group are commodities, but passive income does not include gains or losses from the sale of commodities if substantially all of the commodities are inventory, depreciable property used in its trade or business or supplies used or consumed in the ordinary course of business. The Company believes that it currently qualifies for the active business exception, but it cannot assure a US holder that the requirements for this exception will be met in future years.

If the Company were a PFIC in any year during which a US holder owned Nil Paid Rights, Fully Paid Rights or New Shares, dividends received by noncorporate US holders would not qualify to be treated at a preferential rate, and all US holders would be subject to additional taxes on any excess distributions received from the Company and on any gain realised from the sale or other disposition of the Nil Paid Rights, Fully Paid Rights or the New Shares (but not from the exercise of the Nil Paid Rights) whether or not the Company continued to be a PFIC. A US holder has an excess distribution to the extent that distributions on the New Shares during a taxable year exceed 125% of the average amount received during the three preceding years or, if shorter, the US holder's holding period (including the period the US holder held the Nil Paid Rights).

To compute the tax on excess distributions or any gain, (i) the excess distribution or the gain is allocated rateably over the holding period, (ii) the amount allocated to the current year and any year before the Company became a PFIC is taxed as ordinary income in the current year and (iii) the amount allocated to other taxable years is taxed at the highest applicable marginal rate in effect for each year and an interest charge is imposed to recover the deemed benefit from the deferred payment of the tax attributable to each year. If the Company were a PFIC, a US holder generally would be subject to similar rules with respect to distributions by, and dispositions of the shares of, any direct or indirect subsidiaries of the Company that also were PFICs.

If the Company becomes a PFIC in any tax year and the New Shares are actively traded on the London Stock Exchange, a US holder may avoid some of the tax consequences just described by electing to mark the New Shares to market annually. Any gain from marking the New Shares to market or from disposing of them will be ordinary income. A US holder may recognise loss from marking the New Shares to market, but only to the extent of unreversed gains from marking them to market. Loss from marking New Shares to market will be ordinary, and loss on disposing of them will be an ordinary loss except to the extent of unreversed gains.

A US holder will not be able to elect to treat the Company as a qualified electing fund, or QEF, because the Company does not intend to prepare the information that needed to make a QEF election.

US holders should consult their own tax adviser concerning the potential application of the PFIC provisions.

Backup withholding and information reporting

20.8 Dividends paid in respect of the New Shares and proceeds from the sale or exchange of Nil Paid Rights, Fully Paid Rights and New Shares may be reported to the US Internal Revenue Service unless the holder is a corporation or otherwise establishes a basis for exemption. Backup withholding may apply to reportable payments unless the US holder provides its taxpayer identification number or otherwise establishes a basis for exemption. Any amount withheld may be credited against a US holder's US federal income tax liability or refunded to the extent it exceeds the holder's liability.

THE DISCUSSION ABOVE IS A GENERAL SUMMARY. IT DOES NOT COVER ALL TAX MATTERS THAT MAY BE OF IMPORTANCE TO A PARTICULAR INVESTOR. EACH PROSPECTIVE INVESTOR IS URGED TO CONSULT ITS OWN TAX ADVISOR ABOUT THE TAX CONSEQUENCES TO IT OF AN INVESTMENT IN THE NOTES IN LIGHT OF THE INVESTOR'S OWN CIRCUMSTANCES.

21. Summary of the terms of the Underwriting Agreement

21.1 Pursuant to the Underwriting Agreement, Deutsche Bank and JPMorgan Cazenove have agreed, save in respect of rights which are taken up pursuant to the irrevocable undertakings received from Glencore International and pursuant to the separate underwriting commitment Glencore International has given to the Banks pursuant to the Glencore Underwriting Letter, as agent for the Company to procure subscribers for New Shares not taken up under the Rights Issue at a price not less than the total of the Issue Price (plus expenses), failing which, Deutsche Bank and JPMSL (the "Underwriters") have agreed to subscribe themselves for any such New Shares.

21.2 The Company has agreed to pay Deutsche Bank and JPMorgan Cazenove (a) a commission of 1.75% of the aggregate value at the Issue Price of the maximum number of New Shares (excluding those taken up by Glencore International pursuant to the irrevocable undertakings it has given to the Company and pursuant to the separate underwriting commitment Glencore International has given to the Banks pursuant to the Glencore Underwriting Letter); and (b) a further commission of 0.125% of the aggregate value at the Issue Price of the maximum number of New Shares (excluding those taken up by Glencore International pursuant to the irrevocable undertakings it has given to the Company and pursuant to the separate underwriting commitment Glencore International has given to the Banks pursuant to the Glencore Underwriting Letter) with respect to each additional period of seven full days or part thereof following the initial period of 30 days from and including the date of the Underwriting Agreement up to and including the second Business Day after the Closing Date (or such later date as determined pursuant to the terms of the Underwriting Agreement), or, if earlier, the date on which the obligations of the Banks under the Underwriting Agreement are terminated or lapse or the Underwriting Agreement ceases to be capable of becoming unconditional, provided that any commission so payable shall be reduced on a pro rata basis in respect of any period of less than seven full days.

21.3 The Company will generally pay all other costs, charges and expenses of, or incidental to, the Rights Issue including the Banks' reasonable legal and other out-of-pocket expenses and all related value added tax, if applicable.

21.4 The Underwriting Agreement is conditional, amongst other things, on this document being approved by and filed with the FSA in accordance with the Prospectus Rules and the FSMA and filed with the SWX in accordance with the Swiss Listing Rules and being made available to the public by not later than 5.00 p.m. on Tuesday, 3 October 2006 (or such later time or date as the Banks may agree); none of the representations, warranties or undertakings given by Xstrata in the Underwriting Agreement being breached, untrue, inaccurate or misleading in any respect when made; Admission and Swiss Admission occurring at or before 8.00 a.m. on Thursday, 5 October 2006 (or such later time or date as the Company and the Banks may agree); and the Underwriting Agreement otherwise having become unconditional in all respects and not having terminated in accordance with its terms prior to Admission).

21.5 The Underwriting Agreement confers on the Banks the right to terminate their obligations, prior to Admission for amongst other things any material inaccuracy or omission from documents relating to the Rights Issue, including this document; material breach of any of the representations, warranties or undertakings provided by the Company pursuant to the Underwriting Agreement or of any other provision of the Underwriting Agreement; a change in national or international financial, economic or political conditions, as would be likely to materially prejudice the success of the Rights Issue and the distribution of the New Shares or dealings in the New Shares in the secondary market.

21.6 Pursuant to the Underwriting Agreement, the Company and the Banks have agreed that if a supplementary prospectus is issued by the Company two or fewer Business Days prior to the latest time and date for acceptance and payment in full under the Rights Issue (or such later date as may be agreed by the Company and the Banks), such date shall be deemed to be the date which is three Business Days after the date of issue of the supplementary prospectus (and the dates and times of principal events due to take place following such date shall be extended accordingly).

21.7 The Underwriting Agreement also contains: (i) certain customary warranties by the Company as to the accuracy of the information contained in this document and in relation to other matters relating to the Enlarged Xstrata Group and its businesses; (ii) indemnities from the Company in favour of each of the Banks; and (iii) certain undertakings from the Company relating, amongst other things, to consultation with, and the provision of information to, the Banks.

21.8 Glencore International has irrevocably undertaken in the Irrevocable Undertaking Agreement described in paragraph 22.2 of this Part VIII to take up in full its entitlements under the Rights Issue and to take up in full CSSEL's entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue. The actual number of New Shares taken up by Glencore International pursuant to the Irrevocable Undertaking Agreement may be less than 84,200,333 (being the total number of New Shares which are subject to Glencore International's irrevocable undertakings) if Glencore International disposes of any of its existing holding of Ordinary Shares prior to the ex-rights date as a result of the exercise of any exchange rights pursuant to the Glencore Exchangeable Bonds. However, Deutsche Bank and JPMorgan Cazenove have agreed, as agent for the Company, to endeavour to procure subscribers for such number of New Shares as Glencore International is unable to take up prior to the latest time and date for acceptance and payment in full under the Rights Issue as a consequence of having to dispose of Ordinary Shares in these circumstances (such New Shares being referred to herein as "Exchanged New Shares"), except if in the opinion of the Banks subscribers are unlikely to be procured for such Exchanged New Shares. Pursuant to the Glencore Underwriting Letter, Glencore International has agreed to subscribe for New Shares equivalent in number to the Exchanged New Shares for which Deutsche Bank and JPMorgan Cazenove have not procured subscribers.

22. Material contracts

The following contracts are the only contracts (not being contracts entered into in the ordinary course of business) that have been entered into by Xstrata or any member of the Enlarged Xstrata Group within the two years immediately preceding the date of this document which are, or may be, material or which have been entered into by Xstrata or any member of the Enlarged Xstrata Group at any other time and which contain provisions under which Xstrata or any member of the Enlarged Xstrata Group has an obligation or entitlement that is material to the Enlarged Xstrata Group as at the date of this document:

Underwriting Agreement

22.1 The Underwriting Agreement dated 3 October 2006 between the Company and the Banks for the underwriting of the Rights Issue, described in paragraph 21 of this Part VIII.

Irrevocable Undertaking Agreement and lock-up arrangements

22.2 The irrevocable undertaking agreement dated 3 October 2006 (the "Irrevocable Undertaking Agreement") between Xstrata and Glencore International, pursuant to which Glencore International irrevocably undertakes to take up in full its entitlements under the Rights Issue and to take up in full CSSEL's entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue. The actual number of New Shares taken up by Glencore International pursuant to the Irrevocable Undertaking Agreement may be less than 84,200,333 (being the total number of New Shares which are subject to Glencore International's irrevocable undertakings) if Glencore International disposes of any of its existing holding of Ordinary Shares prior to the ex-rights date as a result of the exercise of any exchange rights pursuant to the Glencore Exchangeable Bonds. However, Deutsche Bank and JPMorgan Cazenove have agreed, as agent for the Company, to endeavour to procure subscribers for such number of New Shares as Glencore International is unable to take up prior to the latest time and date for acceptance and payment in full under the Rights Issue as a consequence of having to dispose of Ordinary Shares in these circumstances (such New Shares being referred to herein as "Exchanged New Shares"), except if in the opinion of the Banks subscribers are unlikely to be procured for such Exchanged New Shares. Pursuant to the Glencore Underwriting Letter, Glencore International has agreed to subscribe for New Shares equivalent in number to the Exchanged New Shares for which Deutsche Bank and JPMorgan Cazenove have not procured subscribers.

Pursuant to the Irrevocable Undertaking Agreement, the Company has agreed to pay Glencore International an underwriting commission of US$35.1 million.

The Irrevocable Undertaking Agreement also contains a lock-up in relation to Glencore International's interests in Xstrata that will expire six months after the latest time for acceptance and payment in full of entitlements to subscribe for the New Shares offered under the Rights Issue. The lock-up arrangements do not prevent a disposal by Glencore International of an interest in Xstrata: (i) pursuant to certain merger or take over transactions in respect of Xstrata and its Ordinary Shares; (ii) which is the subject of a distribution or dividend; (iii) in connection with the exercise of exchange rights pursuant to any existing exchangeable bonds; (iv) necessary for Glencore International to be in compliance with or not in breach of any applicable law or regulation or any ruling or pronouncement of any court, tribunal or regulatory authority; (v) to any other member of Glencore which enters into a similar lock-up arrangement with Xstrata; (vi) after the ex-rights date, to any financial institution in connection with any financing arrangement if such financial institution enters into a similar lock-up arrangement with Xstrata, or to any financial institution to hold as custodian, nominee or agent; (vii) in connection with the acceptance of a general offer made to all holders of issued and allotted Ordinary Shares for the time being (other than Ordinary Shares held or contracted to be acquired by the offeror or its associates within the meaning of section 430E of the Companies Act) made in accordance with the City Code on terms which treat all such holders alike; and (viii) in connection with the execution and delivery by Glencore International of an irrevocable commitment or undertaking to accept a general offer (without any further agreement to transfer or dispose of any Ordinary Shares or any interest therein) as is referred to in paragraph (vii) above.

Under a separate agreement dated 3 October 2006 between Xstrata and CSSEL, CSSEL has agreed to a lock-up in relation to the 151,560,600 Ordinary Shares it holds pursuant to the Arrangement with Glencore that will expire six months after the latest time for acceptance and payment in full of entitlements to subscribe for the New Shares offered under the Rights Issue. CSSEL's lock-up arrangements do not prevent a disposal by CSSEL of an interest in any or all of such 151,560,600 Ordinary Shares: (i) to Glencore International or any other member of Glencore provided that Glencore International or such member has entered into an undertaking in substantially similar terms in respect of those Ordinary Shares; (ii) after the ex-rights date, to any associated company of CSSEL or any other person provided such associated company or person has entered into an undertaking in substantially similar terms in respect of those Ordinary Shares; (iii) made with the Company's prior written consent; (iv) in connection with the acceptance of a general offer made to all holders of issued and allotted Ordinary Shares for the time being (other than Ordinary Shares held or contracted to be acquired by the offeror or its associates within the meaning of section 430E of the Companies Act) made in accordance with the City Code on terms which treat all such holders alike; and (v) in connection with the execution and delivery by CSSEL of an irrevocable commitment or undertaking to accept a general offer (without any further agreement to transfer or dispose of any Ordinary Shares or any interest therein) as is referred to in paragraph (iv) above.

The Irrevocable Undertaking Agreement and CSSEL's lock-up arrangements shall cease to have effect if the following conditions are not fulfilled by 31 December 2006: (i) the issue of this document; and (ii) Admission. Glencore International's undertaking to take up CSSEL's entitlements is further conditional on Glencore International acquiring such entitlements.

2017 Convertible Bonds

22.3 In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital and Xstrata intend as soon as reasonably practicable after the date of this document to enter into a trust deed with Law Debenture Trustees Limited as trustee constituting the 2017 Convertible Bonds. Under the trust deed, Law Debenture Trustees Limited is expected to be appointed to act as trustee of the 2017 Convertible Bonds. Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document US$375 million of guaranteed convertible bonds due 14 August 2017 (the 2017 Convertible Bonds) to Trilon International Inc. ("Trilon"), which is a subsidiary of Brookfield Asset Management Inc., a company formerly known as Brascan Corporation ("Brookfield"), convertible, at any time after the issue of the 2017 Convertible Bonds, at the option of the holder into 4.00% exchangeable redeemable preference shares of Xstrata Capital which are expected to be exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2017 Convertible Bonds are expected to be guaranteed by Xstrata with a coupon of 4.00% per annum. The initial exchange price is expected to be £17.1315. Such exchange price is expected to be adjusted immediately following the issue of the 2017 Convertible Bonds as a result of the Rights Issue. Unless previously redeemed or converted or purchased and in each case cancelled, it is expected that the terms of the 2017 Convertible Bonds will provide that the 2017 Convertible Bonds will be redeemed on 14 August 2017 at their principal amount together with unpaid accrued interest (if any) and that at any time after 14 August 2010, Xstrata Capital may, on giving notice, redeem the 2017 Convertible Bonds at their principal amount together with interest accrued to the date fixed for redemption. It is intended that the 2017 Convertible Bonds will be issued in consideration for the cancellation of the 2017 Convertible Debenture, the waiver of all rights of the holder of the 2017 Convertible Debenture (Trilon) under the 2017 Convertible Debenture and the related deed poll and the release of Xstrata Capital and Xstrata from each of their respective obligations under the 2017 Convertible Debenture and the related deed poll.

RBCT Shareholders' Agreement

22.4 A shareholders' agreement (the "RBCT Shareholders' Agreement") dated 21 August 2006 between Xstrata South Africa, RBCTCL, Ingwe Collieries Limited, Anglo Operations Limited, Total Coal South Africa (Proprietary) Limited, Sasol Mining (Proprietary) Limited, Kangra Coal (Proprietary) Limited, Eyesizwe Coal (Proprietary) Limited and South Dunes Coal Terminal Agency (Proprietary) Limited regulating the relationship of the parties in relation to the Richards Bay Coal Terminal and providing for the admission of South Dunes Coal Terminal Agency (Proprietary) Limited as a shareholder of Richards Bay Coal Terminal Company Limited. The RBCT Shareholders' Agreement replaced the RBCT Memorandum of Agreement described in paragraph 22.18 below. Provision is made in the RBCT Shareholders' Agreement for the shareholders to provide guarantees with respect to any new or changed arrangements in relation to the financing of Phase III of the Richards Bay Coal Terminal in the event that all shareholders have agreed such expansion. The RBCT Shareholders' Agreement records in regard to each share in RBCTCL that, although the entitlement to throughput coal through the Richards Bay Coal Terminal may be granted to commercial users who do not own shares in RBCTCL, the correlation between shares in RBCTCL and the corresponding entitlement (defined as the right of RBCTCL shareholders to load tonnage of export coal through the Richards Bay Coal Terminal) shall be continued. The RBCT Shareholders' Agreement makes provision in respect of throughput, entitlement and committed actual tonnage usage, liability for wharfage fees, operating charges, interest charges, capital charges, shortfall in committed actual tonnage usage, temporary transfer of the right to utilise the entitlement to export coal through the Richards Bay Coal Terminal and the transfer of shares and such entitlement. Various events of default are specified and, in the event of default, each of the non-defaulting shareholders of RBCTCL acquires an option to acquire a portion of the defaulter's shares. The RBCT Shareholders' Agreement also makes provision for the "Quatro Development" and Phase V expansion of the Richards Bay Coal Terminal. The Quatro Development is the development designed to increase the throughput capacity of the Richards Bay Coal Terminal from 72 Mtpa of export grade coal with the right to utilise 34 grades to 76 Mtpa of export grade coal with the right to utilise 34 grades. See also Part IV – "Information on the Former Xstrata Group's Business – Coal Business summary – South African operations – Mines, projects and developments – Richards Bay Coal Terminal Phase V expansion project".

Falconbridge Phelps Dodge Co-operation Agreement

22.5 A co-operation agreement dated as of 25 June 2006 (the "Falconbridge Phelps Dodge Co-operation Agreement") between Phelps Dodge and Falconbridge in relation to the Phelps Dodge Inco Combination Agreement.

The Falconbridge Phelps Dodge Co-operation Agreement was entered into between Phelps Dodge and Falconbridge in order to facilitate the transactions contemplated by the Phelps Dodge Inco Combination Agreement and the Inco Support Agreement as amended in connection with the Phelps Dodge Inco Combination. The entry into the Falconbridge Phelps

Dodge Co-operation Agreement was also a condition to: (i) Phelps Dodge's willingness to enter into a note purchase agreement pursuant to which Phelps Dodge conditionally agreed to purchase up to US$3.0 billion aggregate principal amount of Inco convertible subordinated notes in connection with the Inco Offer; and (ii) Inco's agreeing to make the revised Inco Offer announced on 26 June 2006.

Pursuant to the Falconbridge Phelps Dodge Co-operation Agreement Falconbridge agreed to take certain actions and refrain from taking certain actions in order to facilitate the Phelps Dodge Inco Combination. Amongst other things, each of Falconbridge and Phelps Dodge agreed to afford the other reasonable access to information concerning it, subject to the terms and conditions of the confidentiality agreement previously entered into by Falconbridge and Phelps Dodge. In addition, Falconbridge agreed to furnish Phelps Dodge with information concerning Falconbridge and (to the extent available to Falconbridge) Falconbridge Shareholders for the preparation, filing and mailing of the proxy statement of Phelps Dodge proposed to be delivered to its shareholders in connection with the shareholder approval required to be obtained by Phelps Dodge of the transactions contemplated by the Phelps Dodge Inco Combination Agreement and the regulatory filings required to consummate the transactions contemplated by the Phelps Dodge Inco Combination Agreement. Phelps Dodge and Falconbridge made customary representations, warranties and covenants in the Falconbridge Phelps Dodge Co-operation Agreement.

The Falconbridge Phelps Dodge Co-operation Agreement provided that it would terminate and, except in respect of provisions relating to the personal liability of directors and officers of Falconbridge and Phelps Dodge, be of no further force and effect, upon any termination of: (i) the Inco Support Agreement by either Falconbridge or Inco; or (ii) the Phelps Dodge Inco Combination Agreement by either Phelps Dodge or Inco.

The Falconbridge Phelps Dodge Co-operation Agreement therefore terminated as described above upon the termination of the Inco Support Agreement as described in paragraph 22.17 of this Part VIII.

Falconbridge LionOre Agreement

22.6 A conditional share purchase agreement dated 6 June 2006 (the "Falconbridge LionOre Agreement") between Falconbridge and LionOre relating to the sale to LionOre of certain assets and related operations of Falconbridge, including Falconbridge's Nikkelverk refinery in Norway and the Falconbridge marketing and custom feed organisations that market and sell the finished nickel and other products produced at Nikkelverk and obtain third party feeds for this facility (the "LionOre Identified Assets"). In addition, the sale would have included an agreement to supply up to 60,000 tonnes of nickel-in-matte annually for up to ten years.

The closing of the sale of the LionOre Identified Assets was conditional on, amongst other things, the clearance by the US Department of Justice and the European Commission of the Inco Offer and Inco acquiring more than 50% (on a fully-diluted basis) of the Falconbridge Shares pursuant to the Inco Offer or otherwise. As a result of the termination of the Inco Offer, the asset sales under the Falconbridge LionOre Agreement did not proceed.

Pursuant to the Falconbridge LionOre Agreement, LionOre agreed to acquire all of the issued and outstanding shares in the capital of the following affiliates of Falconbridge from Falconbridge or its affiliates, as applicable: Falconbridge Nikkelverk A/S ("FNA"), Falconbridge International Limited ("FIL"), Falconbridge U.S. Inc. ("FUS"), Falconbridge Europe S.A. ("FESA"), Falconbridge (Japan) Limited ("FJKK"), Falconbridge International S.A. ("FISA"), (FNA, FIL, FUS, FESA, FJKK and FISA, collectively the "FNA Group") and further to acquire all inventories, work in process and finished goods in the possession of the FNA Group but owned by Falconbridge and the accounts receivable owing to Falconbridge either by sale of goods by a member of the FNA Group on behalf of Falconbridge or sale of goods to a member of the FNA Group by Falconbridge.

The purchase price agreed to be paid by LionOre for the LionOre Identified Assets was US$650 million, of which US$400 million was agreed to be in cash and US$250 million of LionOre common shares. This purchase price was agreed to be subject to certain adjustments tied to changes in the final working capital levels of the LionOre Identified Assets and certain other adjustments.

Falconbridge agreed to sell, or cause to be sold, to one or more non-affiliated parties by not later than 150 days of the closing date, such number of the shares in the capital of LionOre obtained pursuant to the agreement that after giving effect to such sale, it and its affiliate shareholdings in LionOre would be in the aggregate less than 10% of the aggregate number of common shares of LionOre. This selldown was required to be carried out in a manner which, to Falconbridge's

knowledge, would not have resulted in any purchaser receiving more than 5% of the outstanding common shares of LionOre, and with Falconbridge using commercially reasonable efforts to not sell shares of LionOre to another mining company.

Falconbridge also agreed not to exercise or permit the exercise of any voting rights attached to any shares held by it or its affiliates in LionOre. Falconbridge would also have been restricted from acquiring any further securities of LionOre for a period of two years following the closing date.

Each of Falconbridge and LionOre agreed to provide customary indemnities to the other in connection with specified losses suffered or incurred by the other party.

Closing under the Falconbridge LionOre Agreement was agreed to be subject to the satisfaction of a number of conditions, including:

(i) the obtaining or attainment of all applicable approvals and consents necessary to permit the transactions contemplated by the Inco Offer and the change in ownership of the FNA Group;

(ii) it not being illegal, and no injunction being in place prohibiting the sale and purchase of the FNA Group as contemplated in the Falconbridge LionOre Agreement; and

(iii) the TSX having conditionally approved the issue and listing of LionOre shares to be issued to Falconbridge as part of the acquisition price consideration.

LionOre's obligations pursuant to the Falconbridge LionOre Agreement were agreed to be subject to a number of conditions, including the following conditions for the exclusive benefit of LionOre:

(i) financing being available to LionOre on the closing date; and

(ii) LionOre being satisfied, acting reasonably, with the terms of all Regulatory Approvals (as defined in the Falconbridge LionOre Agreement) that affect it, the FNA Group or the business LionOre agreed to acquire.

Falconbridge's obligations pursuant to the Falconbridge LionOre Agreement were agreed to be subject to a number of conditions, including the following conditions for the exclusive benefit of Falconbridge:

(i) Inco must have acquired pursuant to the Inco Offer or otherwise more than 50% (on a fully-diluted basis as further defined in the Inco Support Agreement) of the common shares of Falconbridge; and

(ii) LionOre shall have paid to Falconbridge on closing the US$650 million acquisition price by the delivery of US$400 million in cash and 49,118,057 common shares of LionOre as provided for in the Falconbridge LionOre Agreement.

Falconbridge and LionOre were entitled to waive any condition in its favour by written instrument, without prejudice.

Under the Falconbridge LionOre Agreement, Falconbridge agreed to be prohibited from soliciting, initiating or entertaining inquiries or proposals, providing non-public information to, or participating in any negotiations with respect to the acquisition of all or any part of the FNA Group or the Nikkelverk Refinery until such time as Falconbridge had determined in good faith that Regulatory Approvals (as defined in the Falconbridge LionOre Agreement) were unlikely to be obtained on a timely basis or LionOre was unlikely to be able to satisfy the conditions of closing on a timely basis.

It was further agreed under the Falconbridge LionOre Agreement, that Falconbridge was entitled to terminate the foregoing exclusivity obligation and be free to entertain alternative transactions by paying a break fee, however only if it determined in good faith that Regulatory Approvals (as defined in the Falconbridge LionOre Agreement) were unlikely to be obtained or that LionOre was unlikely to be able to satisfy the conditions of closing, both on a timely basis.

Based on the above, if Falconbridge had desired to terminate the exclusivity obligation prior to the date the DOJ and the Commission had provided Regulatory Approvals (as defined in the Falconbridge LionOre Agreement) satisfactory to

Falconbridge (the "Regulatory Approval Date"), Falconbridge would have been entitled to notify LionOre and concurrently Inco would have paid to LionOre US$10 million. If Falconbridge desired to terminate the exclusivity period from and after the Regulatory Approval Date, Falconbridge was entitled to (and did) notify LionOre and concurrently Inco would (and did) pay to LionOre US$32.5 million. Termination of the exclusivity period would not have terminated the Falconbridge LionOre Agreement.

The Falconbridge LionOre Agreement also provided that, if, following the payment of any of the exclusivity break fees the closing of the acquisition of the Nikkelverk Refinery occured, LionOre would be required to repay to Inco the amount received on delivery of such notice on the closing date.

The closing of the transaction was agreed to be on such date as Falconbridge determined on not less than five business days' notice to LionOre provided that the closing date would have been: (i) not earlier than the day on which all of the conditions precedents in the Falconbridge LionOre Agreement had been satisfied or waived; and (ii) not later than the latest date until which Inco had agreed to maintain the Inco Offer (the "Closing Date").

The Falconbridge LionOre Agreement provided for termination on the earlier of: (i) Falconbridge giving LionOre a notice of termination at any time and for any reason; and (ii) the earlier of (A) the latest date until which Inco agreed to maintain the Inco Offer as specified in the Inco Support Agreement or such earlier date on which the Inco Offer expired, was withdrawn or otherwise terminated, or (B) 1 January 2007 if by that date any conditions in the Falconbridge LionOre Agreement had not been satisfied or waived.

If the Falconbridge LionOre Agreement had terminated pursuant to any reason noted in the termination provision, if such termination had occurred before the Regulatory Approval Date, Inco was required concurrently with the giving by Falconbridge of the notice of termination or the termination date, as applicable, to pay to LionOre the amount of US$10 million, provided that the failure to obtain Regulatory Approval (as defined in the Falconbridge LionOre Agreement) was not due to the failure by LionOre to act in a commercially reasonable manner in considering whether to accept any term or condition proposed by a Regulatory Authority (as defined in the Falconbridge LionOre Agreement) as a condition or requirement of such Regulatory Approval, or if such termination occurred after the Regulatory Approval Date, US$32.5 million.

Any exclusivity break fee paid would be credited towards any termination break fee payable.

Second Falconbridge Shareholder Rights Plan

22.7 A shareholder rights plan agreement dated as of 21 March 2006 between Falconbridge and CIBC Mellon Trust Company providing for the adoption by Falconbridge of a shareholder rights plan (the "Second Falconbridge Shareholder Rights Plan"). Under the Second Falconbridge Shareholder Rights Plan, Falconbridge issued one SRP Right for each Falconbridge Share then outstanding and authorised the issue of SRP Rights in respect of any Falconbridge Shares issued thereafter.

On 27 June 2006, a three-member panel of the Ontario Securities Commission (the "OSC") conducted a hearing relating to the application by Xstrata to terminate the Second Falconbridge Shareholder Rights Plan. The panel issued its decision on 30 June 2006 to the effect that the Second Falconbridge Shareholder Rights Plan Second be cease traded on the earlier of the date that: (a) Xstrata Canada takes up sufficient Falconbridge Shares pursuant to the Xstrata Offer to satisfy the condition of the Xstrata Offer (prior to its deletion under the Second Xstrata Notice of Variation) that at least a majority of the Falconbridge Shares then outstanding (calculated on a fully diluted basis), the votes attached to which would be included in the minority approval of a second step business combination or going private transaction pursuant to Rule 61-501 and Regulation Q-27, had been validly deposited to the Xstrata Offer and not withdrawn (the "Majority of the Minority Condition"); and (b) 28 July 2006. The panel also ordered that Xstrata Canada be precluded from exercising its right as stated in the original Xstrata Offer to acquire up to 5% of the Falconbridge Shares through normal course purchases on the Toronto Stock Exchange in accordance with applicable securities laws, until the earlier of the date on which Xstrata Canada took up sufficient Falconbridge Shares to satisfy the Majority of the Minority Condition and 28 July 2006.

The Second Falconbridge Shareholder Rights Plan was consequently cease traded on 28 July 2006 and, on the same date, Xstrata Alberta, purchased 18,556,430 Falconbridge Shares through the facilities of the TSX. These Falconbridge Shares

represented 4.98% of the outstanding Falconbridge Common Shares as at 18 May 2006, the date of the initial Xstrata Offer.

The SRP Rights were attached to the Falconbridge Shares and were not exercisable until the time (the "Separation Time"), which was defined in the Second Falconbridge Shareholder Rights Plan to mean the close of business on the tenth business day after the earlier of: (i) the first public announcement of facts indicating that a person had acquired Beneficial Ownership (as defined in the Second Falconbridge Shareholder Rights Plan) of 20% or more of the Falconbridge Shares; (ii) the date of commencement of, or first public announcement of the intent of any person to commence, a take-over bid to acquire 20% or more of the Falconbridge Shares, other than as a result of a Permitted Bid (as defined in the Second Falconbridge Shareholder Rights Plan and as described below); and (iii) the date upon which a Permitted Bid (as defined therein and described below) ceased to be such. The directors of Falconbridge had the discretion to delay the Separation Time in the case of (ii) and (iii) above and Falconbridge's Notice of Change to its Directors' Circular dated 26 May 2006 relating to the announced revised Inco Offer stated that on 23 May 2006 they had done so with respect to the Xstrata Offer.

The Second Falconbridge Shareholder Rights Plan did not apply to certain types of transactions, including "Permitted Bids". A "Permitted Bid" was defined as a bid that, amongst other things, was a take-over bid made to all Falconbridge Shareholders for all the Falconbridge Shares that provided that no Falconbridge Shares may be taken up unless more than 50% of the Falconbridge Shares held by Independent Shareholders (as defined in the Second Falconbridge Shareholder Rights Plan) had been deposited and not withdrawn. The Inco Offer was a Permitted Bid.

From and after the Separation Time, each SRP Right entitled a holder thereof to purchase one Falconbridge Share for a price (the "Exercise Price") equal to four times the market price (as defined in the Second Falconbridge Shareholder Rights Plan) per Falconbridge Share (subject to adjustment in certain circumstances). Pursuant to the Second Falconbridge Shareholder Rights Plan, if any person (an "Acquiring Person") acquired Beneficial Ownership of 20% or more of the Falconbridge Shares other than as a result of certain exempt transactions (including acquisitions pursuant to a Permitted Bid) (a "Flip-in Event"), then after the close of business on the tenth business day after the first date of public announcement by Falconbridge or an Acquiring Person that an Acquiring Person had become such, each SRP Right thereafter would have constituted, effective from and after the Separation Time, the right to purchase from Falconbridge, upon payment of the Exercise Price, that number of Falconbridge Shares having an aggregate market price (as defined in the Second Falconbridge Shareholder Rights Plan) equal to twice the Exercise Price (thereby effectively giving Falconbridge Shareholders the right to purchase Falconbridge Shares at a 50% discount). However, SRP Rights beneficially owned by an Acquiring Person and persons acting jointly or in concert with an Acquiring Person would have been void. The result would have been to significantly dilute the shareholdings of any such acquiror. Until the Separation Time (or the earlier termination or expiration of the SRP Rights), the SRP Rights would have been evidenced by the certificates representing the associated Falconbridge Shares and would have been transferable only together with the associated Falconbridge Shares. After the Separation Time, separate certificates evidencing the SRP Rights ("Rights Certificates"), together with a disclosure statement describing the SRP Rights, would have been required to be mailed to holders of record of Falconbridge Shares (other than an Acquiring Person) as of the Separation Time. The SRP Rights would have traded separately from the Falconbridge Shares after the Separation Time.

Under the Second Falconbridge Shareholder Rights Plan, Falconbridge's board of directors had the discretion prior to the occurrence of a Flip-in Event that would occur by reason of a take-over bid, made by means of a take-over bid circular sent to all holders of Falconbridge Shares, to waive the application of the plan to such Flip-in Event, provided that such waiver automatically constituted a waiver of the application of the plan to any other Flip-in Event made by means of a take-over bid circular to all holders of Falconbridge Shares prior to the expiry of any take-over bid for which the plan was waived or deemed to have been waived. Falconbridge's board of directors also had the right, without the prior consent of the holders of Falconbridge Shares (or the holders of SRP Rights if the Separation Time had occurred), at any time prior to the occurrence of a Flip-in Event, to redeem all (but not less than all) of the SRP Rights at a redemption price of C$0.00001 per SRP Right, subject to certain adjustments. If a person had acquired Falconbridge Shares pursuant to a Permitted Bid or pursuant to a transaction for which Falconbridge's board of directors had waived the application of the Second Falconbridge Shareholder Rights Plan, then Falconbridge's board of directors would immediately upon the consummation of such acquisition have been deemed to have elected to redeem the SRP Rights at the redemption price.

Falconbridge agreed in the Inco Support Agreement that, unless required by the terms of the Second Falconbridge Shareholder Rights Plan or a final and non-appealable order of a court having jurisdiction or an order of the OSC, Falconbridge would not redeem the SRP Rights or otherwise waive, amend, suspend the operation of or terminate the Second Falconbridge Shareholder Rights Plan without the prior written consent of Inco.

Xstrata Offer

22.8 The Xstrata Offer pursuant to the Offer Document (as amended and varied by the Variation Documents). See Part II – "Information on the Enlarged Xstrata Group – The Falconbridge Acquisition" beginning on page 161 of this document.

22.9 The following agreements entered into in connection with the debt financing of the Xstrata Offer:

Acquisition Facilities and Debt Bridge Facility

22.9.1 On 17 May 2006, Xstrata (Schweiz) AG entered into an underwriting letter (the "First Debt Underwriting Letter") with Barclays, Deutsche Bank, JPMorgan Chase and RBS (Barclays, Deutsche Bank, JPMorgan Chase and RBS together the "Debt Underwriters"). Pursuant to the First Debt Underwriting Letter, the Debt Underwriters agreed to underwrite a US$8.5 billion acquisition facilities agreement (the "First Underwritten Acquisition Facilities Agreement") and a US$3.5 billion debt bridge facility (the "First Underwritten Debt Bridge Facility Agreement"). Each of the First Underwritten Acquisition Facilities Agreement and the First Underwritten Debt Bridge Facility Agreement contained the same material terms as the Acquisition Facilities Agreement and the Debt Bridge Facility Agreement (details of which are given below). On the same date, Xstrata and Xstrata (Schweiz) AG entered into the Equity Bridge Facility Agreement (details of which are given below).

22.9.2 Following the successful completion of the Placing, the amount of the facility underwritten pursuant to the First Underwritten Debt Bridge Facility Agreement was reduced to US$2.5 billion, and Xstrata (Schweiz) AG entered into a supplemental underwriting letter on 12 June 2006 with the Debt Underwriters to document, amongst other things, this facility reduction.

22.9.3 On 30 June 2006, as part of the syndication of the First Underwritten Acquisition Facilities Agreement, Xstrata (Schweiz) AG entered into a sub-underwriting letter with the Debt Underwriters and certain other banks and financial institutions (the "Debt Sub-Underwriters") pursuant to which the Debt Underwriters transferred certain participations in the First Underwritten Acquisition Facilities Agreement to the Debt Sub-Underwriters.

22.9.4 On 19 July 2006, in connection with the Second Increased Xstrata Offer, Xstrata (Schweiz) AG entered into an underwriting letter (the "Second Debt Underwriting Letter") with the Debt Underwriters. Pursuant to the Second Debt Underwriting Letter, the Debt Underwriters agreed to underwrite a US$9.5 billion acquisition facilities agreement and a US$2.5 billion debt bridge facility. The facility agreements underwritten pursuant to the Second Debt Underwriting Letter contained the same material terms as the Acquisition Facilities Agreement and the Debt Bridge Facility Agreement (details of which are given below). Pursuant to the Second Debt Underwriting Letter, Xstrata (Schweiz) AG and the Debt Underwriters also agreed that the First Debt Underwriting Letter would be suspended as between Xstrata (Schweiz) AG and the Debt Underwriters until such time as the Debt Sub-Underwriters consented to the Second Increased Xstrata Offer and agreed to increase the size of the facility underwritten pursuant to the First Underwritten Acquisition Facilities Agreement to US$9.5 billion.

22.9.5 On 3 August 2006, Xstrata (Schweiz) AG entered a supplemental sub-underwriting agreement with the Debt Underwriters and the Debt Sub-Underwriters pursuant to which: (i) the Debt Sub-Underwriters and the Debt Underwiters consented to the Second Increased Xstrata Offer and agreed to increase the size of the facility underwritten pursuant to the First Underwritten Acquisition Facilities Agreement to US$ 9.5 billion; and (ii) Xstrata (Schweiz) AG and the Debt Underwriters agreed to terminate the Second Debt Underwriting Letter.

22.9.6 On 3 August 2006, Xstrata, Xstrata (Schweiz) AG and certain other subsidiaries of Xstrata entered into the Debt Bridge Facility Agreement with the Debt Underwriters and affiliates of certain of the Debt Underwriters.

The Debt Bridge Facility Agreement provides Xstrata (Schweiz) AG with a facility (the "Debt Bridge Facility") which consists of a six-month term loan facility for US$2,500,000,000 with the ability to extend (at Xstrata (Schweiz) AG's option) by 364 days.

The Debt Bridge Facility has been fully drawn for the purposes of satisfying the consideration payable by Xstrata Canada for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer.

Interest is payable on the loans at the rate which is aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which is initially 0.40% per annum. Following the date falling six months after the date of the Debt Bridge Facility Agreement, the margin will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of the Company.

The Debt Bridge Facility Agreement contains certain mandatory prepayment events, including: (i) illegality; and (ii) a change of control of the Company.

The Debt Bridge Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from the Company and certain other members of the Former Xstrata Group in favour of the lenders of the Debt Bridge Facility, which are typical for this type of credit agreement. It also contains customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Debt Bridge Facility.

22.9.7 On 8 August 2006, Xstrata, Xstrata (Schweiz) AG and certain other subsidiaries of Xstrata entered into the Acquisition Facilities Agreement with the Debt Underwriters and the Debt Sub-Underwriters and affiliates of certain of the Debt Underwriters and the Debt Sub-Underwriters.

The Acquisition Facilities Agreement provides Xstrata (Schweiz) AG with facilities (the "Acquisition Facilities") which consist of: (i) a 36-month term loan facility for US$3,353,000,000 ("Facility A"); (ii) a 60-month-and-one-day term loan facility for US$1,117,000,000 ("Facility B"); (iii) a 60-month revolving loan facility for US$3,353,000,000 ("Facility C"); and (iv) a 364-day term loan facility for US$1,677,000,000 with the ability to extend (at Xstrata (Schweiz) AG's option) by 364 days ("Facility D").

The Acquisition Facilities have been drawn in part for the purposes of: (i) satisfying the consideration payable by Xstrata Canada for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer; and (ii) the refinancing of the First Facility and the Cerrejón Bridge Facility (details of which are given below).

The remainder of the Acquisition Facilities are available for: (i) financing or refinancing the consideration payable to holders of options to acquire shares in Falconbridge; (ii) paying all costs, fees and expenses (and taxes on them) and all stamp duty, registration and other similar taxes incurred by or on behalf of the Company in connection with the Xstrata Offer, the Acquisition Facilities and the Debt Bridge Facility; (iii) the refinancing of certain existing financial indebtedness of and preferred shares in the Falconbridge Group; and (iv) general corporate purposes of the Enlarged Xstrata Group.

Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which in respect of Facility A is initially 0.60% per annum, in respect of Facility B is initially 0.70% per annum, in respect of Facility C is initially 0.70% per annum and in respect of Facility D is initially 0.50% per annum. Following the date falling six months after the date of the Acquisition Facilities Agreement, the margin in respect of each facility will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of the Company.

Commitment fees are also payable from (and including) the date of the Acquisition Facilities Agreement to (and including): (i) in the case of Facility A, Facility B and Facility D, the date which is six months after the date of the Acquisition Facilities Agreement; and (ii) in the case of Facility C, the date which is 59 months after the date of the Acquisition Facilities Agreement. They are a percentage rate per annum on the day to day basis equal to: (i) 35% of the applicable margin on the undrawn amount of each of Facility A, Facility B, and Facility C; and (ii) 30% of the applicable margin on the undrawn amount of Facility D.

The Acquisition Facilities Agreement contains certain mandatory prepayment events, including: (i) illegality; and (ii) a change of control of the Company.

The Acquisition Facilities Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from the Company and certain other members of the Former Xstrata Group in favour of the lenders of the Acquisition Facilities, which are typical for this type of credit agreement. It also contains customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Acquisition Facilities.

Equity Bridge Facility

22.9.8 The Equity Bridge Facility Agreement dated 17 May 2006 between, amongst others, Xstrata (Schweiz) AG, Deutsche Bank and JPMorgan Chase (Deutsche Bank and JPMorgan Chase together the "Equity Bridge Facility Lenders") (as amended by an amendment letter dated 3 August 2006 between Xstrata (Schweiz) AG and Deutsche Bank as Facility Agent under the Equity Bridge Facility Agreement).

The Equity Bridge Facility Agreement provides Xstrata (Schweiz) AG with a term loan facility for US$7.0 billion due on the earlier of: (i) six months after initial utilisation; and (ii) 15 May 2007 (the "Equity Bridge Facility").

The Equity Bridge Facility has been fully drawn for the purposes of satisfying the consideration payable by Xstrata Canada for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer.

Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which is initially 0.40% per annum. Following the date falling six months after the date on which the Equity Bridge Facility Agreement was signed, the margin will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of the Company.

The Equity Bridge Facility Agreement contains certain mandatory prepayment events, including: (i) illegality; (ii) fundraising; and (iii) a change of control of the Company.

The Equity Bridge Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from the Company and certain other members of the Former Xstrata Group in favour of the lenders of the Equity Bridge Facility, which are typical for this type of credit agreement. It also contains customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Equity Bridge Facility.

The Equity Bridge Facility is fully subordinated to the Acquisition Facilities and the Debt Bridge Facility such that the Equity Bridge Facility Lenders cannot enforce their rights to repayment or prepayment while either of the Acquisition Facilities or the Debt Bridge Facility remains outstanding. The only circumstance in which the Equity Bridge Facility may be repaid ahead of the Acquisition Facilities and the Debt Bridge Facility without the consent of the Acquisition Facilities Lenders and the Debt Bridge Facility Lenders is where the Company uses the Equity Refinancing Amount.

Xstrata intends to use the net proceeds of the Rights Issue to repay in part the Equity Bridge Facility in accordance with its obligations under the Standby Equity Underwriting Letter.

Placing Agreement

22.10 A placing agreement dated 17 May 2006 (the "Placing Agreement") between Xstrata, Batiss, Xstrata Capital (Xstrata Capital and Batiss together, the "Sellers"), Deutsche Bank, JPMorgan Cazenove and JPMSL relating to a placing of 61,994,320 Ordinary Shares.

Under the Placing Agreement, each of Deutsche Bank and JPMorgan Cazenove (each in its capacity as a "Manager") severally agreed, conditionally on, amongst other things, the 32,543,344 new Ordinary Shares to be issued pursuant to the Placing Agreement (the "New Placing Shares") being admitted to the Official List, admission to trading on the London Stock Exchange becoming effective and the commencement of dealings in the New Placing Shares on the SWX ("Admission"), and in reliance on the representations, warranties and undertakings set out in the Placing Agreement, as agent of Xstrata to use their respective reasonable endeavours to procure placees to take up the New Placing Shares at the placing price (as set out in Xstrata's and the Sellers' respective terms of sale) upon and subject to the terms and conditions of the announcement giving details of the Placing, and, subject to their having procured placees to take up the New Placing Shares, as agent of the Sellers to use their respective reasonable endeavours to procure placees to take up the

29,450,976 Ordinary Shares owned by Batiss to be sold pursuant to the Placing Agreement at the direction of Xstrata Capital (the "Batiss Placing Shares").

Under the Placing Agreement, Xstrata agreed to pay to Deutsche Bank and JPMorgan Cazenove, in aggregate, 2.00% of the proceeds of the placing of the New Placing Shares in underwriting commissions, and up to 0.75% of the proceeds of the placing of the New Placing Shares in fees.

Under the Placing Agreement, Batiss also agreed to pay to Deutsche Bank and JPMorgan Cazenove, in aggregate, 2.00% of the proceeds of the placing of the Batiss Placing Shares in underwriting commissions, and up to 0.75% of the proceeds of the placing of the Batiss Placing Shares in fees.

In accordance with an agreement dated 24 February 2003 between Batiss and Xstrata Capital in connection with the ECMP, Xstrata Capital exercised its rights to require Batiss to transfer the Batiss Placing Shares in connection with the Placing, with Xstrata Capital retaining the net proceeds from such transfer in return for the redemption of one redeemable preference share in Batiss held by Xstrata Capital for each Batiss Placing Share transferred.

Xstrata also agreed under the Placing Agreement to bear its own costs and expenses, and to pay the costs and expenses of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them), of, or in connection with, or incidental to, the bookbuilding process (the "Bookbuild") to be conducted by Deutsche Bank and JPMorgan Cazenove to arrange participation by placees in the Placing to be effected by Deutsche Bank and JPMorgan Cazenove pursuant to the Placing Agreement to the extent that the Bookbuild related to the New Placing Shares, the placing of the New Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the New Placing Shares. The agreement included (without limitation) the costs and expenses of, and incidental to, the applications to the FSA, to the London Stock Exchange and the SWX for Admission, the fees payable to the FSA, the London Stock Exchange and the registrars, all accountancy, legal, professional and other expenses of Xstrata and of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them) incurred in connection with the placing of the New Placing Shares and Admission (including, where applicable, any irrecoverable amount in respect of VAT), and the costs of printing, advertising and circulating the documents in connection with the Bookbuild to the extent that it related to the New Placing Shares, the placing of the New Placing Shares, the allotment and issue of the New Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the New Placing Shares.

Xstrata Capital agreed under the Placing Agreement to bear its own costs and expenses and those of Batiss, and to pay the costs and expenses of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them), of, or in connection with, or incidental to, the Bookbuild to the extent that the Bookbuild related to the Batiss Placing Shares, the placing of the Batiss Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the Batiss Placing Shares. The agreement included (without limitation) the fees payable to the registrars, all accountancy, legal, professional and other expenses of the Sellers and of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them) incurred in connection with the placing of the Batiss Placing Shares, and the costs of printing, advertising and circulating the documents in connection with the Bookbuild to the extent that it related to the Batiss Placing Shares, the placing of the Batiss Placing Shares and any other matter or arrangement contemplated by, or incidental to, the placing of the Batiss Placing Shares.

The Placing Agreement contains certain customary representations, warranties, undertakings, covenants and indemnities given by Xstrata in favour of Deutsche Bank, JPMorgan Cazenove and JPMSL.

Standby Equity Underwriting Letter

22.11 Pursuant to an agreement entered into between Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL on 17 May 2006 (the "Standby Equity Underwriting Letter"), Deutsche Bank and JPMSL have irrevocably undertaken, severally, and not jointly or jointly and severally, to underwrite, each as to 50%, one or more equity offerings by Xstrata (and/or, subject to the approval of Deutsche Bank and JPMorgan Cazenove, such approval not to be unreasonably withheld or delayed, by one or more directly or indirectly owned subsidiaries of Xstrata) to raise, in aggregate, such amount as is required to pay or repay any amounts then outstanding under the Equity Bridge Facility Agreement, together with costs and expenses (the "Equity Refinancing Amount"). The net proceeds raised by way of such equity offering(s), which include the Rights Issue, will be used first to pay or repay amounts outstanding under the Equity Bridge Facility Agreement.

Under the Standby Equity Underwriting Letter, Xstrata undertakes to effect one or more equity offerings, by itself or by one or more directly or indirectly owned subsidiaries as aforesaid, to pay or repay the Equity Refinancing Amount by the termination date of the Equity Bridge Facility Agreement (being six months after initial utilisation of the Equity Bridge Facility) (the "Termination Date") at such price as is determined by Xstrata, Deutsche Bank and JPMorgan Cazenove as described in paragraph (ii) below. Xstrata has agreed to undertake a rights issue underwritten by Deutsche Bank and JPMSL of such number of Ordinary Shares as is necessary to pay or repay the Equity Refinancing Amount by the Termination Date to the extent that the Equity Refinancing Amount has not already been paid or repaid.

Xstrata intends to use the net proceeds of the Rights Issue to repay in part the Equity Bridge Facility in accordance with its obligations under the Standby Equity Underwriting Letter.

The Standby Equity Underwriting Letter also contains, amongst others, the following provisions:

(i) unless Xstrata, with the prior approval of Deutsche Bank and JPMorgan Cazenove (such approval not to be unreasonably withheld or delayed), determines otherwise, the Equity Refinancing Amount will be raised by way of an underwritten rights issue of Ordinary Shares to existing Shareholders. Xstrata may, however, with the prior approval of Deutsche Bank and JPMorgan Cazenove (such approval not to be unresonably withheld or delayed), elect to raise the Equity Refinancing Amount through any one or more of the following:

   (A) an underwritten rights issue of Ordinary Shares or convertible unsecured loan stock ("Stock Units") or other securities to existing Shareholders (an "Agreed Rights Issue");

   (B) an underwritten non-pre-emptive cash placing of Ordinary Shares ("Cash Placing");

   (C) an underwritten non-pre-emptive cash placing of Ordinary Shares owned by Batiss ("Batiss Placing"); and/or

   (D) such other method as Xstrata, Deutsche Bank and JPMorgan Cazenove may agree;

(ii) Deutsche Bank, JPMorgan Cazenove, JPMSL and Xstrata have agreed that the issue price of any Ordinary Shares, Stock Units or other securities, as the case may be, proposed to be issued in connection with any Agreed Rights Issue, Cash Placing and/or Batiss Placing will be determined by Xstrata, Deutsche Bank and JPMorgan Cazenove at the time the relevant equity offering is launched acting reasonably and in good faith in the light of the then prevailing market conditions, any relevant Listing Rules requirements and/or Investor Protection Committee Guidelines, the market price of an Ordinary Share immediately prior to launch and, in the case of an Agreed Rights Issue, customary discounts to market price, but in any event the issue price will not be: (A) less than the pounds sterling equivalent of US$0.50 per new Ordinary Share; or (B) in the case of Stock Units, a price which would, upon conversion of any Stock Units, result in Ordinary Shares being issued at a discount to their nominal value. The Issue Price of the Rights Issue was determined in accordance with these provisions;

(iii) Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL have undertaken to negotiate reasonably and in good faith the terms and conditions of any underwriting agreement to be entered into in connection with any equity offering by Xstrata (and/or by one or more directly or indirectly owned subsidiaries of Xstrata) to raise some or all of the Equity Refinancing Amount (each an "Agreed Underwriting Agreement"). In addition, Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL have agreed that the terms and conditions of any Agreed Underwriting Agreement will be customary for the type of equity offering it relates to, including, for example, the inclusion of an obligation for Xstrata to prepare a prospectus (if necessary), the provision of standard warranties by Xstrata and comfort letters in respect of any prospectus, customary indemnities in favour of Deutsche Bank, JPMorgan Cazenove and JPMSL, the obtaining of irrevocable undertakings (if any), customary conditions and termination provisions and customary force majeure provisions, if any. The Underwriting Agreement in respect of the Rights Issue was entered into in accordance with these provisions;

(iv) Xstrata has undertaken that until any amounts drawn down under the Equity Bridge Facility Agreement are repaid neither Xstrata nor any subsidiary of Xstrata will undertake any rights issue, placing or other form of capital markets fund raising which is not managed by Deutsche Bank and JPMorgan Cazenove or underwritten by Deutsche Bank and JPMSL without Deutsche Bank and JPMorgan Cazenove's prior written consent (the "Undertaking"). Notwithstanding

the above, if the board of directors of Xstrata (the "Xstrata Board") believes that Deutsche Bank, JPMorgan Cazenove and/or JPMSL:

(A) are not acting reasonably and in good faith or in accordance with the provisions described in paragraph (ii) above in relation to the setting of the issue price of any Ordinary Shares or Stock Units, as the case may be, proposed to be issued in connection with any Agreed Rights Issue; and/or

(B) are not negotiating reasonably and in good faith the terms and conditions of any Agreed Underwriting Agreement in accordance with the provisions described in paragraph (iii) above,

Xstrata will notify Deutsche Bank, JPMSL and JPMorgan Cazenove in writing of the Xstrata Board's belief and may then seek to agree a higher issue price (the "Third Party Issue Price") and/or terms and conditions more favourable than those being offered by Deutsche Bank and JPMSL (the "Third Party Terms"), with a third party or third parties. If Xstrata is successful it will notify Deutsche Bank, JPMSL and JPMorgan Cazenove of that Third Party Issue Price and/or those Third Party Terms. If within 48 hours from receipt of such notice Deutsche Bank, JPMSL and JPMorgan Cazenove have not confirmed their irrevocable agreement to manage and underwrite the Agreed Rights Issue, Cash Placing and/or Batiss Placing, as the case may be, at that Third Party Issue Price and/or to enter into an Agreed Underwriting Agreement on terms no less favourable to Xstrata (or the relevant subsidiary of Xstrata) than the Third Party Terms, then the undertaking described in this paragraph (iv) shall cease to apply provided that the third party or third parties who has or have offered the Third Party Issue Price or the Third Party Terms has or have first offered to take a transfer of all of the rights and obligations of the lending banks and other relevant finance parties at par under the Equity Bridge Facility Agreement. The Rights Issue complies with the provisions described in this paragraph (iv) and Xstrata entered into the Underwriting Agreement in respect of the Rights Issue without any notification to Deutsche Bank, JPMSL and JPMorgan Cazenove in the terms described above;

(v) in consideration of Deutsche Bank, JPMorgan Cazenove and JPMSL entering into the Standby Equity Underwriting Letter, Xstrata agreed to pay (or procure that the same are paid) in aggregate to Deutsche Bank and JPMorgan Cazenove a standby equity underwriting fee of up to 1.00% of US$7.0 billion (including VAT, if applicable) and an equity structuring fee of up to US$15,000,000 (including VAT, if applicable); and

(vi) in addition to the fees payable as described in paragraph (v) above, if some or all of the Equity Refinancing Amount is raised through an Agreed Rights Issue (including the Rights Issue), Xstrata has agreed to pay (or procure that the same are paid) in aggregate to Deustche Bank JPMorgan Cazenove:

(A) aggregate commissions of between 0.75% and 2.00% of the aggregate value of the price at which Deutsche Bank and JPMSL underwrite the Agreed Rights Issue ("Underwritten Price") of the maximum number of underwritten securities; and

(B) an additional 0.125% of the aggregate value at the Underwritten Price of the maximum number of underwritten securities for each additional seven full days or part thereof following the initial period of 30 days from the date the final terms of the Agreed Rights Issue are publicly announced up to and including the second business day after the closing date of the Agreed Rights Issue, or, if earlier, the date when the obligations of Deutsche Bank, JPMorgan Cazenove and JPMSL in respect of the Agreed Rights Issue are terminated, lapse or cease to be capable of becoming unconditional.

If a third party or third parties has or have acquired the lending banks' rights and obligations under the Equity Bridge Facility Agreement in accordance with the provisions described in paragraph (iv) above, Deutsche Bank, JPMSL and JPMorgan Cazenove will cease to have any obligations under the Standby Equity Underwriting Letter upon giving written notice to Xstrata.

Tintaya Acquisition sale and purchase agreement

22.12 A sale and purchase agreement dated 15 May 2006 between Xstrata Peru S.A. ("Xstrata Peru") and BHP Peru Holdings Inc. and Global BHP Copper Ltd (the "Tintaya Vendors"), pursuant to which Xstrata Peru conditionally agreed to purchase and the Tintaya Vendors conditionally agreed to sell all of the Tintaya Vendors' shares in BHP Billiton Tintaya S.A. (subsequently renamed Xstrata Tintaya S.A.,"Tintaya"), representing 99.981% of Tintaya's issued and outstanding shares.

Under the agreement, Xstrata Peru or another Former Xstrata Group entity in addition agreed to purchase the rights and obligations of BHP Finance (International) Inc. as lender under a loan to Tintaya. The total payment for the shares and loan was US$750 million, subject to adjustment for pre-closing changes in Tintaya's net working capital. The acquisition price comprised an initial cash consideration of US$634 million in respect of the shares being acquired and the assumption of US$116 million of debt.

An agreed price participation arrangement based on prevailing copper prices upon completion of the transaction resulted in further deferred cash payments to the Tintaya Vendors totalling US$25 million having to be paid during the 18 months from January 2007 to June 2008.

Two further conditional deferred payments of US$25 million each in cash may also be payable to the Tintaya Vendors. The first such amount will be payable in July 2009 if the LME copper price exceeds certain levels from July 2008 to June 2009. The second amount will be payable if either of the Antapaccay or Coroccohuayco satellite deposits are developed prior to 2020.

The deferred payments are guaranteed by Xstrata Holdings.

Under the agreement, Xstrata Peru made customary representations and warranties, about its authority to enter into the transaction, its ability to pay and certain related matters, and customary covenants covering the period after closing, including that within 60 days after closing Xstrata Peru will offer to purchase minority shareholders' shares in Tintaya on substantially the same terms on a price per share basis as those given to the Tintaya Vendors.

Xstrata Peru has agreed to indemnify the Tintaya Vendors for any direct losses arising out of a breach of any of Xstrata Peru's representations and warranties or covenants or for fraud by Xstrata Peru in connection with the agreement or Xstrata Peru's ancillary documents.

The Tintaya Acquisition completed on 21 June 2006.

Cerrejón Bridge Facility Agreement

22.13 The Cerrejón Bridge Facility Agreement dated 8 May 2006 between, amongst others, Xstrata (Schweiz) AG, Barclays, Deutsche Bank, JPMorgan Chase and RBS (Barclays, Deutsche Bank, JPMorgan Chase and RBS together the "Cerrejón Bridge Facility Lenders").

The Cerrejón Bridge Facility Agreement provided Xstrata (Schweiz) AG with a 364 day revolving credit facility for US$2,500,000,000 with a term out extension option for an additional 364 days (the "Cerrejón Bridge Facility").

The Cerrejón Bridge Facility was utilised by the Former Xstrata Group for general corporate purposes and to fund the Cerrejón Acquisition.

Interest was payable on the loans at the rate which was the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which was 0.40% per annum.

A commitment fee was also payable at a percentage rate per annum on the day-to-day basis equal to 0.10% per annum on the undrawn amount of the Cerrejón Bridge Facility.

The Cerrejón Bridge Facility Agreement included certain mandatory prepayment events, including: (i) illegality; (ii) fundraising; and (iii) a change of control of Xstrata.

The Cerrejón Bridge Facility Agreement contained representations, warranties and undertakings (including financial condition covenants and undertakings requiring the provision of a guarantee from Xstrata and certain other members of the Former Xstrata Group) in favour of the lenders of the Cerrejón Bridge Facility which were typical for this type of credit agreement. It also contained customary events of default upon occurrence of which the lenders were entitled to terminate and demand repayment of the Cerrejón Bridge Facility.

The Company prepaid and cancelled the Cerrejón Bridge Facility using funds made available to it pursuant to the Acquisition Facilities Agreement. Members of the Enlarged Xstrata Group no longer have the right to borrow, nor the lenders any obligation to lend, funds pursuant to the Cerrejón Bridge Facility Agreement.

Cerrejón Acquisition Agreement

22.14 The Cerrejón Acquisition Agreement, being a sale and purchase agreement dated 1 March 2006 (as amended on 15 March 2006) between Glencore International and Xstrata (Schweiz) AG, which became effective on 15 March 2006, in relation to the Cerrejón Acquisition, pursuant to which the Cerrejón Purchasers purchased, and the Cerrejón Vendors sold, and procured the transfer of, the entire issued share capital of the Cerrejón Xstrata Group Companies and the share held by a Glencore nominee in one of the Cerrejón Operating Companies. The Cerrejón Xstrata Group Companies collectively hold a 33⅓% interest in each of the Cerrejón Operating Companies.

The aggregate consideration payable by the Cerrejón Purchasers to the Cerrejón Vendors under the Cerrejón Acquisition Agreement was US$1,712 million, which included an agreed amount of US$12 million in respect of the value of the excess net assets of the Cerrejón Business as at 1 January 2006 (the "Effective Date") over the Cerrejón Purchasers' target net asset value of the Cerrejón Business. The Cerrejón Purchasers also paid to the Cerrejón Vendors interest on the purchase price from the Effective Date to closing on 12 May 2006 ("Closing") at LIBOR plus 0.75%. The purchase price was not subject to further adjustments for the working capital, debt or cash position of the Cerrejón Business at Closing. The Cerrejón Vendors' share of profits and losses of the Cerrejón Business from the Effective Date to Closing was for the account of the Cerrejón Purchasers.

The Cerrejón Acquisition Agreement contained further provisions, customary for a transaction of that nature, to ensure that the economic effect of the transaction was a sale and purchase of the Cerrejón Business as of the Effective Date. Under these provisions, any leakage of value from the Cerrejón Target Companies or the Cerrejón Operating Companies to the Cerrejón Vendors (for example, any dividend paid by a Cerrejón Target Company to the Cerrejón Vendors) between the Effective Date and Closing was for the account of the Cerrejón Vendors on a US dollar for US dollar basis. To the extent that any such leakage occurred and the amount was agreed between the Cerrejón Purchasers and the Cerrejón Vendors prior to Closing, the relevant amount would be deducted from the purchase price. Conversely, any capital injection by the Cerrejón Vendors into the Cerrejón Target Companies or the Cerrejón Operating Companies (for example, any capital expenditure by the Cerrejón Vendors or the Cerrejón Operating Companies) between the Effective Date and Closing was for the account of the Cerrejón Purchasers on a US dollar for US dollar basis. To the extent that any such capital injection occurred and the amount was agreed between the Cerrejón Purchasers and the Cerrejón Vendors prior to Closing, the relevant amount would be added to the purchase price.

Under the Cerrejón Acquisition Agreement the Cerrejón Vendors gave certain warranties to the Cerrejón Purchasers concerning constitutional details, accounts, financial matters, mining interests and contracts of the Cerrejón Target Companies and the Cerrejón Operating Companies.

The Cerrejón Vendors have no liability for a breach of any warranty or any claim under the tax covenant (as described below and except in relation to a claim for unpaid 2002 income tax) unless any individual claim exceeds US$100,000 and unless all claims, in aggregate, exceed US$2 million. The maximum liability of the Cerrejón Vendors for all breaches of the warranties and for all claims under the tax covenant (as described below) is the purchase price. These limitations do not apply to any claims under the non-tax indemnities described below.

As is customary for a transaction of this nature, the Cerrejón Vendors agreed in a tax covenant to indemnify the Cerrejón Purchasers in respect of certain taxation liabilities of the Cerrejón Target Companies and one third of certain taxation liabilities of the Cerrejón Operating Companies, which in each case are attributable to the period up to the Effective Date, including in relation to a claim for unpaid 2002 income tax and certain claims relating to stamp tax and VAT. The Cerrejón Vendors shall have no liability under the indemnity for unpaid 2002 income tax unless the amount claimed by the Cerrejón Purchasers exceeds US$3.5 million.

The Cerrejón Vendors have also agreed to indemnify the Cerrejón Purchasers against: (i) certain claims for unpaid mining royalties; (ii) claims relating to the privatisation of Cerrejón Zona Norte and its successors; and (iii) certain environmental and health claims by the inhabitants of certain areas where Cerrejón operates. The Cerrejón Vendors have no liability in respect of these claims unless the amount of the liability of the Cerrejón Vendors exceeds US$2 million.

ARM Coal agreements

22.15 The following agreements, each dated 27 February 2006 except for the preference share subscription agreement described in paragraph (vi) below which is currently being finalised following the exercise of the option referred to in paragraph (iii) below (the "Second Preference Share Subscription Agreement"), in connection with the agreement of the Former Xstrata Group and African Rainbow Minerals Limited ("ARM") to establish a new black controlled coal mining company called ARM Coal, with operating assets and growth projects in South Africa and participation in the export and domestic thermal coal markets, as described in Part I – "Financial Information and Operating and Financial Information Relating to the Former Xstrata Group and the Falconbridge Group – B. Operating and financial review relating to the Former Xstrata Group - Recent significant developments":

(i) an ordinary share subscription and shareholders' agreement (the "Ordinary Share Subscription and Shareholders' Agreement") between ARM, Xstrata (Schweiz) AG and Lexshell 676 Investments (Proprietary) Limited (the latter renamed ARM Coal (Proprietary) Limited) ("ARM Coal"), under which ARM and Xstrata (Schweiz) AG agreed to subscribe for ordinary shares in ARM Coal;

(ii) a preference share subscription and shareholders' agreement between ARM, Xstrata (Schweiz) AG, Xstrata South Africa and ARM Coal, under which ARM Coal agreed to subscribe for preference shares in Xstrata South Africa using the proceeds received from ARM and Xstrata (Schweiz) AG for ordinary shares in ARM Coal under the Ordinary Share Subscription and Shareholders' Agreement;

(iii) an option agreement between Xstrata South Africa, ARM, ARM Coal and Xstrata (Schweiz) AG under which Xstrata South Africa agreed to grant ARM an option to subscribe for further preference shares in Xstrata South Africa to increase its participation by up to a further 10%. ARM exercised this option in full in August 2006 and accordingly will enter into the Second Preference Share Subscription Agreement;

(iv) a notarial joint venture agreement between Xstrata South Africa and ARM Coal in relation to the establishment of an unincorporated mining joint venture at Goedgevonden between Xstrata South Africa and ARM Coal (the "Goedgevonden Project");

(v) a facility agreement between Xstrata South Africa and ARM Coal under which Xstrata South Africa agreed to provide debt funding to ARM Coal of ZAR765,000,000 (approximately US$117.6 million) in order for ARM Coal to acquire a 51% interest in the Goedgevonden Project and up to ZAR1,200,000,000 (approximately US$184.5 million) in order for ARM Coal to make its contributions to the Goedgevonden Project during the feasibility phase and development phase of the Goedgevonden Project; and

(vi) the Second Preference Share Subscription Agreement between ARM, Xstrata (Schweiz) AG, Xstrata South Africa and ARM Coal, under which ARM Coal will agree to subscribe for preference shares in Xstrata South Africa for a cash consideration of ZAR400 million (approximately US$51.7 million).

XK Platinum Partnership agreements

22.16 A notarial sale and partnership agreement dated 22 February 2006 (the "Sale and Partnership Agreement") between Xstrata South Africa, Kagiso Platinum Venture (Proprietary) Limited ("KPV"), Rustenburg Platinum Mines Limited ("RPM") and Kagiso Trust Investments (Proprietary) Limited ("Kagiso"), in relation to the formation of a black economic empowerment partnership with Kagiso, through the special purpose vehicle KPV, (the "XK Platinum Partnership") in respect of the Former Xstrata Group's former 50% interest in the Mototolo Joint Venture as described in Part I – "Financial Information and Operating and Financial Information Relating to the Former Xstrata Group and the Falconbridge Group – B. Operating and financial review relating to the Former Xstrata Group – Acquisitions, disposals and discontinued operations – Acquisitions and disposals" and paragraph 22.24 of this Part VIII.

Pursuant to the terms of the Sale and Partnership Agreement:

(i) the parties to the Sale and Partnership Agreement together with Mototolo Holdings (Proprietary) Limited ("MH") entered into a third addendum dated 22 February 2006 to the Mototolo Joint Venture Agreement dated 12 July 2005 between RPM, Xstrata South Africa and MH (as previously amended by a first addendum dated 30 August 2005 and a second addendum dated 22 September 2005) (the "Mototolo Joint Venture Agreement") in terms of which the XK

Platinum Partnership has become a party to the Mototolo Joint Venture Agreement and assumed most of the rights and obligations of Xstrata South Africa; and

(ii) Xstrata South Africa, KPV, RPM and MH entered into an addendum dated 22 February 2006 to the shareholders' agreement dated 12 July 2005 between Xstrata South Africa and RPM as co-shareholders in MH, recognising the admission of KPV as a shareholder in MH.

In order to facilitate Kagiso's fundraising in relation to the Mototolo Joint Venture, Xstrata South Africa and Investec Bank Limited ("Investec") entered into a guarantee agreement dated 23 March 2006 (the "Guarantee Agreement"). Under the Guarantee Agreement, as security for certain of the obligations and responsibilities of KPV towards Investec in terms of a project loan facility agreement between KPV and Investec (the "PLF Agreement"), Xstrata South Africa has provided an on demand guarantee of the performance by KPV of the obligations of KPV to Investec under the PLF Agreement, limited to an amount of ZAR100 million (approximately US$12.9 million), until the technical completion date of the Mototolo Joint Venture project.

Xstrata South Africa, Investec and KPV also entered into a subordination agreement dated 23 March 2006, pursuant to which Xstrata South Africa agreed to subordinate certain of its claims against KPV in connection with Mototolo Joint Venture agreements in favour of and for the benefit of Investec's claims against KPV under the PLF Agreement.

Xstrata South Africa, RPM, MH, Investec, KPV and Kagiso also entered into a lender-sponsor agreement dated 29 March 2006 primarily to regulate the manner in which Investec will realise security, including ahead of any claims of Xstrata South Africa subject to the terms of the agreement, upon a default of the terms of the PLF Agreement and where KPV is in breach of certain of the provisions of the Sale and Partnership Agreement.

Inco Support Agreement

22.17 A support agreement (the "Inco Support Agreement") dated 10 October 2005 (as amended by amendment agreements dated 12 January 2006, 20 February 2006, 21 March 2006, 13 May 2006, 25 June 2006 and 16 July 2006) between Inco and Falconbridge with respect to the Inco Offer.

The Inco Support Agreement was terminated after Inco advised Falconbridge on 28 July 2006 that Inco had received less than 50.01% of the then outstanding Falconbridge Shares under the Inco Offer, that the Inco Offer had therefore not succeeded and that Inco had elected not to extend the Inco Offer. As a result, under the Inco Support Agreement a payment of US$150 million was paid by Falconbridge to Inco on 1 August 2006 and, following completion of the Xstrata Offer, a further US$300 million was paid by Falconbridge to Inco on 16 August 2006.

Falconbridge agreed in the Inco Support Agreement that, promptly upon the purchase by Inco of such number of Falconbridge Shares which represents at least a majority of the outstanding Falconbridge Shares, Inco would be entitled to designate such number of members of the Falconbridge board of directors, and any committees thereof, as would have been proportionate to the percentage of the outstanding Falconbridge Shares owned by Inco (the time of such election or appointment of such directors being the "Effective Time").

The Inco Support Agreement contained a number of customary representations and warranties of Inco and Falconbridge, and each of Falconbridge and Inco also agreed in the Inco Support Agreement to a number of mutual covenants.

Falconbridge agreed in the Inco Support Agreement that, prior to the earlier of the time of the appointment or election to its board of directors of persons designated by Inco who represented a majority of the directors of Falconbridge and the termination of the Inco Support Agreement, Falconbridge would, and would cause each of its subsidiaries to, conduct its business in the ordinary course consistent with past practice and not undertake certain types of restricted activities unless Inco otherwise agreed in writing.

Falconbridge agreed that if the Inco Offer were not, or ceased to qualify as, a Permitted Bid, Falconbridge would immediately defer the separation time of the SRP Rights in respect of the Inco Offer and continue to defer separation of the SRP Rights with respect to the Inco Offer. Falconbridge further agreed that, immediately prior to the expiry time of the Inco Offer (the "Inco Expiry Time"), it would waive or suspend the operation of or otherwise render the Second

Falconbridge Shareholder Rights Plan inoperative against the Inco Offer, any compulsory acquisition and any subsequent acquisition transaction.

The Inco Support Agreement also provided that if Inco acquired not less than 50.01% of the outstanding Falconbridge Shares (on a fully-diluted basis) no later than 10 days after the Inco Expiry Time, Falconbridge would, at the request of Inco, promptly take all necessary steps to redeem all of its outstanding junior preference shares (Series 1, 2 and 3) and any other class of preference shares, or any outstanding convertible debentures.

The Inco Support Agreement also contained certain "non-solicitation" provisions pursuant to which Falconbridge agreed that it would not, directly or indirectly: (i) take any action of any kind which might, directly or indirectly, interfere with the successful acquisition of Falconbridge Shares pursuant to the Inco Offer; (ii) engage in any discussions or negotiations regarding, or provide any confidential information with respect to, any acquisition proposal, provided that Falconbridge was permitted to advise any person making an unsolicited acquisition proposal that such acquisition proposal did not constitute a superior proposal when Falconbridge's board of directors had so determined; (iii) withdraw, modify or qualify, or propose publicly to withdraw, modify or qualify, in any manner adverse to Inco, the approval or recommendation of Falconbridge's board of directors or any committee thereof of the Inco Support Agreement or the Inco Offer; (iv) approve or recommend, or remain neutral with respect to, or propose publicly to approve or recommend, or remain neutral with respect to, any acquisition proposal; or (v) accept or enter into, or publicly propose to accept or enter into, any letter of intent, agreement in principal, agreement, arrangement or undertaking related to any acquisition proposal.

The Inco Support Agreement provided that, notwithstanding the foregoing restrictions, the board of directors of Falconbridge was permitted, subject to certain requirements, to: (i) withdraw, modify or qualify (or propose to withdraw, modify or qualify) in any manner adverse to Inco the approval or recommendation of the Inco Offer; or (ii) engage in discussions or negotiations with, or provide information pursuant to the Inco Support Agreement to, any person in response to an acquisition proposal by any such person, only if it had received an unsolicited bona fide written acquisition proposal from such person and such acquisition proposal constituted a superior proposal.

The Inco Support Agreement defined a "superior proposal" as an unsolicited bona fide acquisition proposal made by a third party to Falconbridge in writing after 10 October 2005: (i) to purchase or otherwise acquire, directly or indirectly, by means of a merger, take-over bid, amalgamation, plan of arrangement, business combination, consolidation, recapitalisation, liquidation, winding-up or similar transaction, all of the Falconbridge Shares and offering or making available the same consideration in form and amount per Falconbridge Share to be purchased or otherwise acquired; (ii) that was reasonably capable of being completed without undue delay, taking into account all legal, financial, regulatory (including competition/ antitrust approvals in the United States and Canada and Investment Canada Act approval) and other aspects of such proposal and the party making such proposal; (iii) in respect of which any required financing to complete such acquisition proposal had been demonstrated to the satisfaction of the board of directors of Falconbridge, acting in good faith (after receipt of advice from its financial advisors and outside legal counsel), would be obtained; (iv) which was not subject to a due diligence and/or access condition which would allow access to the books, records, personnel or properties of Falconbridge or any subsidiary or their respective representatives beyond 5:00 p.m. (Eastern Standard Time) on the third day after which access was afforded to the third party making the acquisition proposal (provided, however, that the foregoing would not restrict the ability of such third party to continue to review information provided to it by Falconbridge during such three day period); (v) which was offered or made available to all Falconbridge Shareholders in Canada and the United States; (vi) in respect of which the board of directors of Falconbridge determined in good faith (after receipt of advice from its financial advisors with respect to (y) below and outside legal counsel with respect to (x) below) that (x) failure to recommend such acquisition proposal to Falconbridge Shareholders would have been inconsistent with its fiduciary duties and (y) the acquisition proposal would, taking into account all of the terms and conditions of such acquisition proposal, if consummated in accordance with its terms (but not assuming away any risk of non-completion), have resulted in a transaction more favourable to Falconbridge Shareholders from a financial point of view than the Inco Offer (including any adjustment to the terms and conditions of the Inco Offer pursuant to the Inco Support Agreement, and taking into account the long-term value and anticipated synergies anticipated to be realised as a result of the combination of Inco and Falconbridge); and (vii) that, subject to compliance with the requirements of Inco Support Agreement, the board of directors of Falconbridge had determined to recommend to Falconbridge Shareholders.

From and after the date of the Inco Support Agreement until its termination, Falconbridge was obliged to notify Inco of any proposal, inquiry, offer (or any amendment thereto) or request relating to or constituting an acquisition proposal, any

request for discussions or negotiations, any request for representation on the board of directors of Falconbridge or any request for non-public information relating to Falconbridge or any subsidiary or material joint venture or material mineral property of which Falconbridge's directors, officers, representative or agents were or became aware, or any amendments to the foregoing.

Falconbridge was not permitted to accept, approve or recommend, nor enter into any agreement relating to, an acquisition proposal (other than a confidentiality agreement contemplated by the Inco Support Agreement) unless: (i) the acquisition proposal constituted a superior proposal; (ii) Falconbridge had complied with the non-solicitation restrictions in the Inco Support Agreement; (iii) Falconbridge had provided Inco with notice in writing that there was a superior proposal together with all documentation related to and detailing the superior proposal at least seven business days prior to the date on which the board of directors of Falconbridge proposed to accept, approve, recommend or to enter into any agreement relating to such superior proposal; (iv) ten business days had elapsed from the later of the date Inco received notice of Falconbridge's proposed determination to accept, approve, recommend or to enter into any agreement relating to such superior proposal, and the date Inco received a copy of the written proposal in respect of the acquisition proposal and, if Inco had proposed to amend the terms of the Inco Offer in accordance with the Inco Support Agreement, the board of directors of Falconbridge (after receiving advice from its financial advisors and outside legal counsel) had determined in good faith that the acquisition proposal was a superior proposal compared to the proposed amendment to the terms of the Inco Offer by Inco; (v) Falconbridge concurrently terminated the Inco Support Agreement in accordance with its terms; and (vi) Falconbridge had previously paid, or concurrently paid, to Inco the Falconbridge termination payment as described below.

Pursuant to the Inco Support Agreement, Falconbridge agreed that, during the ten day business period referred to above or such longer period as Falconbridge may have approved for such purpose, Inco had the opportunity, but not the obligation, to propose to amend the terms of the Inco Offer. The board of directors of Falconbridge was obliged to review any proposal by Inco to amend the terms of the Inco Offer in order to determine, in good faith in the exercise of its fiduciary duties, whether Inco's proposal to amend the Inco Offer resulted in the acquisition proposal not being a superior proposal compared to the proposed amendment to the terms of the Inco Offer.

The Inco Support Agreement could be terminated at any time prior to the Effective Time in a number of circumstances. Falconbridge was required to pay US$450 million to Inco following termination of the Inco Support Agreement in certain specified circumstances, including where the Inco Support Agreement was terminated by Falconbridge because Falconbridge proposed to enter into a definitive agreement with respect to a superior proposal in compliance with the provisions of the Inco Support Agreement. Falconbridge was not required to pay US$450 million in such case if certain requirements were met, including that such termination arose solely as a result of a material adverse change in respect of Inco which had occurred since the date of the Inco Support Agreement and the board of directors of Falconbridge had determined in good faith that a material adverse change in Inco had occurred since the date of the Inco Support Agreement and that the failure to change the Falconbridge board's recommendation, or refusal to reaffirm such recommendation, would have been inconsistent with its fiduciary duties.

Falconbridge was obliged to pay US$40 million to Inco if the Inco Support Agreement was terminated by Inco because Falconbridge had been in default of any covenants or obligations under the Inco Support Agreement or if any representation or warranty of Inco under the Inco Support Agreement had been at the date of the Inco Support Agreement untrue or incorrect or had become incorrect at any time prior to the Inco Expiry Time and such default or inaccuracy was not curable or, if curable, was not cured by the earlier of such date which was within 30 days from the date of notice of such breach and the Inco Expiry Time.

Except in certain specified circumstances, Falconbridge was obliged to pay (and did pay on 1 August 2006) US$150 million to Inco if, amongst other things, the Inco Offer was not completed as a result of the Inco Minimum Tender Condition of the Inco Offer not having been satisfied in circumstances in which either the US, EC or Canadian antitrust clearances had been obtained or such antitrust clearances had not been obtained and Falconbridge had not complied with certain covenants and obligations under the Inco Support Agreement. The "Inco Minimum Tender Condition" was the condition (as amended pursuant to the Sixth Amending Agreement described below) that there be validly deposited under the Inco Offer and not withdrawn at the Inco Expiry Time such number of Falconbridge Shares which, together with any Falconbridge Shares directly or indirectly owned by Inco, constituted at least 50.01% of the Falconbridge Shares outstanding at the Inco Expiry Time (calculated on a fully-diluted basis).

In circumstances in which the expense payment of US$150 million was payable as described above, if within 18 months of the termination of the Inco Support Agreement in certain specified circumstances, a competing proposal is consummated (including the Xstrata Offer), then Falconbridge was required, prior to or concurrently with the consummation of a competing proposal, to pay (and did pay on 16 August 2006) to Inco US$450 million less US$150 million if such amount had previously been paid to Inco.

By a notice of extension dated 14 December 2005, Inco extended the Inco Expiry Time of the Inco Offer from 8:00 p.m. (Toronto time) on 23 December 2005 to 8:00 p.m. (Toronto time) on 27 January 2006. On 12 January 2006, Inco and Falconbridge amended the Inco Support Agreement so that, in the event the Competition Clearance Conditions (as defined in the Inco Support Agreement) were not satisfied or waived by the Inco Expiry Time, Inco would extend the Inco Offer, subject to the terms of the Inco Support Agreement, through one or more extensions for such number of days as did not exceed the lesser of: (i) an additional 120 days from the Initial Expiry Time (as defined in the Inco Support Agreement, being 8:00 p.m. on 23 December 2005); and (ii) such number of days as required for the Competition Clearance Conditions (as defined in the Inco Support Agreement) to be satisfied.

By a further notice of extension dated 19 January 2006, Inco further extended the Inco Expiry Time of the Inco Offer to 8:00 p.m. (Toronto time) on 28 February 2006.

On 20 February 2006, Inco and Falconbridge further amended the Inco Support Agreement so that, in the event the Competition Clearance Conditions (as defined in the Inco Support Agreement) were not satisfied or waived by the Inco Expiry Time, Inco would extend the Inco Offer, subject to the terms of the Inco Support Agreement, through one or more extensions for such number of days as did not exceed the lesser of: (i) an additional 229 days from the Initial Expiry Time; and (ii) such number of days as required for the Competition Clearance Conditions (as defined in the Inco Support Agreement) to be satisfied.

By a further notice of extension dated 27 February 2006, Inco further extended the Inco Expiry Time to 8:00 p.m. (Toronto time) on 30 June 2006.

On 21 March 2006, Inco and Falconbridge further amended the Inco Support Agreement in connection with the expiry of Falconbridge's First Falconbridge Shareholder Rights Plan (described in paragraph 22.19 of this Part VIII) and the implementation of the Second Falconbridge Shareholder Rights Plan (described in paragraph 22.7 of this Part VIII).

On 13 May 2006, Inco and Falconbridge further amended the Inco Support Agreement in connection with, amongst other things, the revision of the Inco Offer and the increase of the break fees payable by Falconbridge to Inco from US$320 million to US$450 million.

Under the terms of a fifth amending agreement dated 25 June 2006 (the "Fifth Amending Agreement") between Inco and Falconbridge amending the Inco Support Agreement, Inco agreed to increase the cash consideration and the share consideration offered to holders of Falconbridge Shares pursuant to the Inco Offer to C$53.83 in cash and to 0.82419 of an Inco common share, respectively, per Falconbridge Share. Assuming full pro-ration of the maximum amounts of cash and share consideration available, Falconbridge Shareholders would have been entitled to receive C$17.50 in cash and 0.55676 of an Inco common share for each Falconbridge Share tendered to the Inco Offer, subject to adjustment for fractional shares.

The Fifth Amending Agreement also amended the Inco Support Agreement to provide that the Inco Support Agreement may be terminated by either Inco or Falconbridge in the event that: (i) the other party had not complied in all material respects with its covenants or obligations under the Inco Support Agreement; or (ii) any representation or warranty of the other party under the Inco Support Agreement, as the case may be, had been untrue or incorrect as at 10 October 2005 (being the first date of the Inco Support Agreement) or had become untrue or incorrect at any time prior to the Inco Expiry Time and such untrue or incorrect representation or warranty was not curable or, if curable, was not cured by the earlier of such date which was 30 days from the notice of such breach and the Inco Expiry Time except, in the case of a termination by Falconbridge, for any untrue representations or warranties of Inco which, individually or in the aggregate, would not reasonably be expected to have had a Material Adverse Effect (as defined in the Inco Support Agreement) with respect to Inco and except, in the case of a termination by Inco, for any untrue representations or warranties of Falconbridge which, individually or in the aggregate, would not, or would not reasonably be expected to, have had a Material Adverse Effect

(as defined in the Inco Support Agreement) with respect to Falconbridge or would not, or would not reasonably be expected to, have prevented or materially delayed the completion of the Inco Offer or a subsequent acquisition transaction prior to the Inco Expiry Time.

In light of the then proposed Phelps Dodge Inco Combination, under the terms and subject to the conditions of the Fifth Amending Agreement, Falconbridge agreed to use its reasonable best efforts to co-operate with Inco and to obtain all necessary consents and approvals with respect to the transactions contemplated by the Phelps Dodge Inco Combination Agreement. Falconbridge also agreed to furnish Inco with all information concerning it and Falconbridge Shareholders as may be required (and, in the case of Falconbridge Shareholders, available to it) for the preparation, filing and mailing of the management information and proxy circular proposed to be delivered to Inco shareholders in connection with the then proposed Phelps Dodge Inco Combination, as well as the making of regulatory filings, as required under the Phelps Dodge Inco Combination Agreement.

The Fifth Amending Agreement also provided for certain technical amendments to the Inco Support Agreement for the purpose of clarifying certain provisions.

Under the terms of a sixth amending agreement dated 16 July 2006 (the "Sixth Amending Agreement") between Inco and Falconbridge amending the Inco Support Agreement, Inco agreed to increase the maximum cash consideration offered to holders of Falconbridge Shares pursuant to the Inco Offer to C$7,080,125,473. The maximum number of Inco common shares issuable under the Inco Offer was also reduced to 213,077,333 Inco shares from 213,171,558 Inco shares reflecting a reduction in the number of Falconbridge Shares outstanding on an adjusted fully-diluted basis since 25 June 2006. As a result, Falconbridge Shareholders would have been entitled to elect to receive either: (a) C$60.20 in cash for each Falconbridge Share held; or (b) 0.80312 of an Inco common share plus C$0.05 in cash for each Falconbridge Share held, subject, in each case, to pro-ration based upon the maximum amount of cash available and the maximum number of Inco common shares issuable under the Inco Offer.

Under the terms of the Sixth Amending Agreement, Falconbridge acknowledged the reduction of the minimum tender condition of the Inco Offer from 66⅔% to 50.01%, with the result that the Inco Offer was made subject to the condition that there be validly deposited under the Inco Offer and not withdrawn at the Inco Expiry Time such number of Falconbridge Shares which, together with any Falconbridge Shares directly or indirectly owned by Inco, constituted at least 50.01% of the Falconbridge Shares outstanding at the Inco Expiry Time (calculated on a fully-diluted basis).

Inco consented in the Sixth Amending Agreement to the declaration and payment of the Falconbridge Special Dividend under the Inco Support Agreement and agreed that Falconbridge would be permitted to reduce the exercise price of any option outstanding on 16 July 2006 under its stock option plans exercised after 16 July 2006 by the amount of the Falconbridge Special Dividend in respect of each Falconbridge Share for which any such option is exercised.

Falconbridge also confirmed in the Sixth Amending Agreement that the board of directors of Falconbridge, upon consultation with its financial and legal advisors, had unanimously determined that the increased price under the Inco Offer announced on 16 July 2006 was fair from a financial point of view to all Falconbridge Shareholders (other than Inco) and that it was in the best interests of Falconbridge for the Inco Offer to be made and for the board of directors of Falconbridge to support the transactions contemplated by the Inco Support Agreement, as amended. Accordingly, the board of directors of Falconbridge unanimously approved the making of a recommendation that Falconbridge Shareholders accept the Inco Offer and tender their Falconbridge Shares to the Inco Offer.

RBCT Memorandum of Agreement

22.18 A memorandum of agreement (the "RBCT Memorandum of Agreement") dated 7 October 2005, between Xstrata South Africa, Richards Bay Coal Terminal Company Limited ("RBCTCL"), Ingwe Collieries Limited, Anglo Operations Limited, Total Coal South Africa (Proprietary) Limited, Sasol Mining (Proprietary) Limited, Kangra Coal (Proprietary) Limited, Eyesizwe Coal (Proprietary) Limited and South Dunes Coal Company (Proprietary) Limited in relation to Phase V of the Richards Bay Coal Terminal, which replaced a previous memorandum of agreement entered into in respect of Phase V, pursuant to which the parties agreed the terms of investment to increase the terminal capacity and grant access to common users. The RBCT Memorandum of Agreement was replaced by the RBCT Shareholders' Agreement described in paragraph 22.4 above.

First Falconbridge Shareholder Rights Plan

22.19 A shareholder rights plan agreement dated as of 22 September 2005 between Falconbridge and CIBC Mellon Trust Company providing for the adoption by Falconbridge of a shareholder rights plan (the "First Falconbridge Shareholder Rights Plan"). The First Falconbridge Shareholder Rights Plan, which expired on 22 March 2006 in accordance with its provisions, was on substantially the same terms as the Second Falconbridge Shareholder Rights Plan, with the principal exception that the Second Falconbridge Shareholder Rights Plan did not impose a minimum deposit period.

2017 Convertible Debenture

22.20 On 6 September 2005, Xstrata Capital issued a US$375,000,000 guaranteed convertible debenture due 14 August 2017 (the 2017 Convertible Debenture) to Brascade Corporation which is convertible, at any time after 14 August 2006, into 4.00% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2017 Convertible Debenture is guaranteed by Xstrata and was issued at par, with a coupon of 4.00% per annum. Interest on the 2017 Convertible Debenture is payable semi-annually in arrear in equal instalments on 6 March and 6 September each year. The initial exchange price was £17.1315 and an adjustment to the exchange price as a result of the Rights Issue is expected to be made in accordance with the terms of the 2017 Convertible Debenture. Unless previously redeemed, converted or cancelled, the 2017 Convertible Debenture is redeemable on 14 August 2017 at its principal amount plus unpaid accrued interest (if any). At any time after 14 August 2010, Xstrata Capital is entitled, on giving notice, to redeem the 2017 Convertible Debenture at its principal amount plus unpaid accrued interest (if any). In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document the 2017 Convertible Bonds in consideration for the cancellation of the 2017 Convertible Debenture, the waiver of all rights of the holder of the 2017 Convertible Debenture (Trilon) under the 2017 Convertible Debenture and the related deed poll and the release of Xstrata Capital and Xstrata from each of their respective obligations under the 2017 Convertible Debenture and the related deed poll.

Lansdowne Falconbridge Share purchase agreements

22.21 A share purchase agreement entered into on 1 September 2005 made as of 26 August 2005 (the "Share Purchase Agreement") between Lansdowne UK Equity Fund Limited, a company incorporated under the laws of the Cayman Islands, B.W.I. ("Lansdowne"), Xstrata Alberta and Xstrata, pursuant to which Xstrata Alberta purchased and Lansdowne sold 367,415 Falconbridge Shares owned by Lansdowne for C$10,287,620. Xstrata Alberta completed the purchase of an additional 2,585 Falconbridge Shares under the Share Purchase Agreement for an aggregate purchase price of C$72,380 in cash on 8 September 2005.

Pursuant to a share purchase agreement made as of 2 September 2005 (the "Second Share Purchase Agreement") between Lansdowne, Xstrata and Xstrata Alberta, Xstrata Alberta agreed to purchase and Lansdowne agreed to sell 180,240 Falconbridge Shares owned by Lansdowne for an aggregate purchase price of C$5,046,720 in cash. The completion of the purchase of the 180,240 Falconbridge Shares pursuant to the Second Purchase Agreement, which was subject to regulatory approval under the Competition Act (Canada), was completed on 19 September 2005.

Each of the Share Purchase Agreement and the Second Share Purchase Agreement provided that, in the circumstances described in paragraph 22.23 of this Part VIII below, Xstrata Alberta would pay to Lansdowne in cash the product of the Excess Amount (as defined in paragraph 22.23 of this Part VIII below) and the number of Falconbridge Shares acquired pursuant to the respective agreement.

The acquisitions of the additional Falconbridge Shares by Xstrata Alberta were made to try to ensure that Xstrata and Xstrata Alberta's ownership of Falconbridge Shares was sufficient to allow them to equity account for their investment in Falconbridge. This was unsuccessful due to subsequent share issues by Falconbridge which diluted Xstrata Alberta's holding to below 20%.

Second Facility Agreement

22.22 A facility agreement dated 18 August 2005 (the "Second Facility Agreement") pursuant to which Deutsche Bank and JPMorgan Chase, National Association provided a 364 day term facility for US$600,000,000 (the "Second Facility") which was made available to, and was utilised by, Xstrata (Schweiz) AG to fund the purchase of Falconbridge Shares by Xstrata Alberta pursuant to the Brookfield Purchase Agreement referred to in paragraph 22.23 of this Part VIII below.

Interest was payable on loans pursuant to the Second Facility at the rate which was the aggregate of: (i) LIBOR, (ii) mandatory costs (being regulatory costs of the lenders which are passed on to the borrowers), and (iii) the margin, which was 0.40% per annum.

The Second Facility included certain mandatory prepayment events, including (i) illegality, (ii) a change of control of Xstrata, (iii) disposal of assets (subject to certain thresholds) and (iv) from incurring indebtedness for borrowed money and equity issues.

The Second Facility contained representations, warranties and undertakings (including financial condition covenants and undertakings requiring the provision of a guarantee from Xstrata and certain other members of the Former Xstrata Group) in favour of the lenders of the Second Facility which were typical for this type of credit agreement. It also contained customary events of default upon the occurrence of which the lenders were entitled to terminate and demand repayment of the Second Facility.

Xstrata used part of the proceeds of the Placing to prepay and cancel the Second Facility. Members of the Enlarged Xstrata Group no longer have any right to borrow, nor the lenders any obligation to lend, funds pursuant to the Second Facility Agreement.

Brookfield Purchase Agreement in respect of Falconbridge Shares

22.23 A sale and purchase agreement (the "Brookfield Purchase Agreement") dated 14 August 2005 between Xstrata, Xstrata Alberta, Brookfield Asset Management Inc. ("Brookfield"), which was then known as Brascan Corporation, Brascade Corporation ("Brascade") and 6287042 Canada Limited (the "Vendor"), pursuant to which the Former Xstrata Group acquired 73,115,756 Falconbridge Shares (the "Purchased Shares") for C$28.00 per share, for an aggregate purchase price of C$2,047,241,168 (the "Purchase Price").

The Purchase Price was paid by means of the delivery to the Vendor of two promissory notes made by Xstrata Alberta. One note, for US$1,327,345,890, was due and paid in cash on 22 August 2005. The second note, for US$375,000,000, was paid on 6 September 2005 through the issue to Brascade of the 2017 Convertible Debenture. The two promissory notes were secured with a pledge given by Xstrata Alberta in favour of the Vendor of the Purchased Shares on a basis proportionate to the principal amounts of the two promissory notes, which pledge has since been released. The 2017 Convertible Debenture was issued at par, has a 12-year term and bears interest at 4% per annum. Subject to its terms, it is convertible at any time at the option of the holder into approximately 12.1 million new Ordinary Shares in Xstrata based on a conversion price of £17.1315 per new Ordinary Share, representing a 35% premium to the closing price of Xstrata's Ordinary Shares on 11 August 2005. The 2017 Convertible Debenture is redeemable by Xstrata Capital at par plus accrued interest at any time after 14 August 2010. On 6 September 2005, pursuant to and in accordance with the terms and conditions of the 2017 Convertible Debenture, Brascade transferred the 2017 Convertible Debenture to Trilon.

In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document the 2017 Convertible Bonds in consideration for the cancellation of the 2017 Convertible Debenture, the waiver of all rights of the holder of the 2017 Convertible Debenture (Trilon) under the 2017 Convertible Debenture and the related deed poll and the release of Xstrata Capital and Xstrata from each of their respective obligations under the 2017 Convertible Debenture and the related deed poll.

Xstrata and Xstrata Alberta agreed in the Brookfield Purchase Agreement that if on or prior to 14 May 2006, Xstrata, directly or through an affiliate, or any person acting jointly or in concert with Xstrata, publicly announced an intention to merge with Falconbridge whereby Xstrata, or any person acting jointly or in concert with Xstrata, would acquire a majority portion of Falconbridge's business, or announced an intention to make an offer to the shareholders of Falconbridge to acquire sufficient Falconbridge Shares to own a majority of the outstanding Falconbridge Shares, in either case for a price per Falconbridge Share in excess (the "Excess Amount") of C$28.00, then within five days of the completion of either such transaction, Xstrata and Xstrata Alberta would pay to the Vendor in cash the product of the Excess Amount and the number of Falconbridge Shares acquired pursuant to the Brookfield Purchase Agreement.

The Brookfield Purchase Agreement also provided that until such time as a nominee of Xstrata was elected or appointed to the board of directors of Falconbridge, Brookfield, Brascade and the Vendor would (i) exercise the voting rights

appertaining to any junior preference shares of Falconbridge beneficially owned by them from time to time to nominate and vote for one individual whom Xstrata had, acting reasonably, approved as a nominee to serve as a director of Falconbridge and (ii) if requested to do so by Xstrata, would cause one of their two nominees serving as a director of Falconbridge and representing the holders of the junior preference shares of Falconbridge to resign as a director, unless prior to such request one of these nominees had already resigned, upon prior notice and without being requested by Xstrata to do so. The holders of the junior preference shares were entitled to vote as a class to elect two directors to the board of directors of Falconbridge, but otherwise do not generally have the right to vote at meetings of the shareholders of Falconbridge. On 20 October 2005, Xstrata waived its right to require the exercise of the rights appertaining to the junior preference shares in Falconbridge to nominate and vote for a Xstrata nominee to the board of Falconbridge.

Each of Brookfield, Brascade and the Vendor agreed in the Brookfield Purchase Agreement not to sell any junior preference shares of Falconbridge until 13 October 2005, other than to affiliates of Brookfield. In addition, after 13 October 2005, if any of Brookfield, Brascade or the Vendor (the "Brookfield Offeror") desired to sell any of the Falconbridge junior preference shares beneficially owned by it (the "Offered Shares"), the Brookfield Offeror was obliged to provide Xstrata Alberta with the right of first offer in respect of those shares, by providing Xstrata Alberta with a notice that indicated the number of Offered Shares and the price at which the Brookfield Offeror wished to sell the Offered Shares. In order to purchase the Offered Shares, Xstrata Alberta was obliged, within 48 hours of receipt of the notice, to provide a written response indicating that it would purchase all of the Offered Shares at the offer price. If Xstrata Alberta failed to provide a response within 48 hours of receipt of the notice, then Xstrata Alberta would have been deemed to have waived its rights to purchase any of the Offered Shares. If the response did not provide for the purchase of all of the Offered Shares at the offer price, then the Brookfield Offeror was entitled, within 60 days following the expiration of the notice period, to enter into an agreement for the sale to any other person(s) of all the Offered Shares at a price not less than the offer price (and otherwise on the same terms as provided in the notice).

Mototolo Joint Venture

22.24 The Mototolo Joint Venture Agreement notarial pooling and sharing agreement between Xstrata South Africa, RPM (a member of the Anglo Platinum Group) and MH dated 12 July 2005 (as amended by a first addendum dated 30 August 2005, a second addendum dated 22 September 2005 and a third addendum dated 22 February 2006), pursuant to which Xstrata South Africa and RPM entered into an unincorporated joint venture (the "Mototolo Joint Venture") in respect of platinum group metal ("PGM") resources in Mpumalanga Province in South Africa. Xstrata South Africa and RPM initially had an equal 50% participation interest in the Mototolo Joint Venture, although Xstrata South Africa's participation reduced to 37% as of 11 May 2006 in connection with the arrangements described in paragraph 22.16 of this Part VIII.

Under the Mototolo Joint Venture Agreement, Xstrata South Africa agreed to develop and operate the underground mine, contributing its expertise in mechanised room and pillar mining, while RPM agreed to construct and manage a 200,000 tonnes per month PGM concentrator.

In terms of a concentrate sale agreement between RPM and Xstrata South Africa, dated 12 July 2005, RPM also agreed to purchase Xstrata South Africa's 50% share of PGM concentrate for further smelting refining and marketing of finished product and Xstrata South Africa agreed to construct a beneficiation plant at its own cost to process the UG2 chrome tailings arising from the PGM concentrator and to purchase RPM's share of chrome concentrate.

Falconbridge Amalgamation Agreement

22.25 An amalgamation agreement (the "Falconbridge Amalgamation Agreement") dated 2 June 2005 between Noranda and Former Falconbridge providing for the amalgamation of Noranda and Former Falconbridge (the "Falconbridge Amalgamation") pursuant to Section 175 of the Business Corporations Act (Ontario), as amended (the "OBCA").

Under the Falconbridge Amalgamation, holders of common shares of Former Falconbridge (other than Noranda and dissenting shareholders to the Falconbridge Amalgamation) received 1.77 Falconbridge Shares for each common share of Former Falconbridge. Holders of common shares, preferred shares or junior preference shares in the capital of Noranda or cumulative preference shares in the capital of Former Falconbridge received an equal number of shares of Falconbridge having the same attributes as the shares of Noranda or Former Falconbridge held by them immediately prior to the Falconbridge Amalgamation.

Pursuant to the terms of the Falconbridge Amalgamation Agreement, Noranda and Former Falconbridge amalgamated under the OBCA and continued as one corporation named "Falconbridge Limited".

Upon completion of the Falconbridge Amalgamation, the assets, liabilities and operations of Noranda and Former Falconbridge were combined and managed and operated as an integrated business by Falconbridge. The Falconbridge Amalgamation became effective on 30 June 2005.

Noranda Debt Underwriting Agreement

22.26 A debt underwriting agreement (the "Noranda Debt Underwriting Agreement") dated 2 June 2005 between Noranda and the underwriters named in the table below (the "Noranda Debt Underwriters") relating to certain debt securities maturing in 2017 and 2035 (the "2017 Notes" and the "2035 Notes" respectively, and together the "Noranda Notes"). Subject to the terms and conditions of the Noranda Debt Underwriting Agreement, the Noranda Debt Underwriters, through their representatives Deutsche Bank Securities Inc., severally agreed to purchase from Noranda the following respective principal amounts of Noranda Notes listed opposite their name below at the public offering price less the underwriting commissions of 0.675% (per 2017 Note) and 0.875% (per 2035 Note):

Noranda Debt Underwriters	Principal Amount of 2017 Notes US$	Principal Amount of 2035 Notes
Deutsche Bank Securities Inc.	100,000,000	100,000,000
Citigroup Global Markets Inc.	22,500,000	22,500,000
HSBC Securities (USA) Inc.	22,500,000	22,500,000
J.P. Morgan Securities Inc.	22,500,000	22,500,000
Merrill Lynch, Pierce, Fenner & Smith Incorporated	22,500,000	22,500,000
Barclays Capital Inc.	10,000,000	10,000,000
BNP Paribas Securities Corp	10,000,000	10,000,000
Comerica Securities, Inc.	10,000,000	10,000,000
Fifth Third Securities, Inc.	10,000,000	10,000,000
SG Americas Securities LLC	10,000,000	10,000,000
SunTrust Capital Markets Inc.	10,000,000	10,000,000
Total	250,000,000	250,000,000

Pursuant to the Noranda Debt Underwriting Agreement the obligations of the several Noranda Debt Underwriters to purchase the Noranda Notes referred to above were subject to certain conditions precedent and the Noranda Debt Underwriters agreed to purchase all of the Noranda Notes if any of the Noranda Notes were purchased.

Noranda agreed to indemnify the Noranda Debt Underwriters against some specified types of liabilities, including liabilities under the Securities Act and Canadian securities legislation, and to contribute to payments the Noranda Debt Underwriters may be required to make in respect of any of these liabilities.

The Noranda Notes were a new issue of securities with no established trading market. The Noranda Notes were not listed on any securities exchange or on any automated dealer quotation system. The Noranda Debt Underwriters were permitted to make a market in the Noranda Notes after completion of the offering, but were not obligated to do so and could discontinue any market-making activities at any time without notice.

In connection with the offering of the Noranda Notes, the Noranda Debt Underwriters were permitted to purchase and sell the Noranda Notes in the open market. These transactions could have included short sales, purchases to cover positions created by short sales and stabilising transactions.

The Noranda Debt Underwriters were permitted to close out any short position by purchasing notes in the open market.

Under the Noranda Debt Underwriting Agreement, the Noranda Debt Underwriters could impose a penalty bid, i.e. where a particular Noranda Debt Underwriter would repay to the other Noranda Debt Underwriters a portion of the underwriting commission received by it because the representative of the Noranda Debt Underwriters had repurchased Noranda Notes sold by or for the account of that Noranda Debt Underwriter in stabilising or short covering transactions.

Roseby copper deposits agreement

22.27 An agreement between Xstrata Queensland Limited ("Xstrata Queensland") and Universal Resources Limited ("Universal") dated 11 March 2005, providing Xstrata Queensland with the right to explore and options to acquire 51% of the Roseby copper deposits in the Mount Isa area in north-west Queensland, Australia. Under the agreement, Xstrata Queensland agreed to invest A$6.6 million (approximately US$4.9 million) in Universal, a listed Australian exploration company, by way of a placement of 30 million shares of Universal at an issue price of A$0.22 per share. This represented 13.2% of Universal's issued capital.

Of Xstrata Queensland's investment in Universal, A$4.4 million was agreed to be used to part-fund the planned Roseby Feasibility Project. Xstrata Queensland was also granted an option to acquire a direct 51% interest in this project at its then market value.

The remaining A$2.2 million was agreed to be used to fund an exploration project undertaken by Xstrata Queensland for additional copper sulphide mineralisation within the Roseby tenement area during 2005 and 2006. Known as the Sulphide Extension Exploration Project (SEEP), principal exploration targets were expected to be beneath and adjacent to the native copper deposits within the Roseby Feasibility Project. It was agreed that an option would be granted to Xstrata Queensland to earn 51% equity in SEEP either by expending a minimum of A$10 million plus delivering a bankable feasibility study or by A$15 million expenditure on exploration.

In addition, Xstrata Queensland secured the option to purchase future copper concentrate production from Roseby that is not subject to prior off-take agreements.

Falconbridge Support Agreement

22.28 A support agreement (the "Falconbridge Support Agreement") dated 8 March 2005 between Noranda and Former Falconbridge pursuant to which Noranda agreed to make an offer to purchase all of the outstanding common shares of Former Falconbridge not already owned by Noranda or its affiliates (the "Noranda Offer") and, subject to the satisfaction of certain conditions, pursuant to which Noranda agreed to take up such shares.

Noranda had also agreed to proceed with a share exchange issuer bid (the "Noranda Issuer Bid") pursuant to which Noranda would offer to purchase up to approximately 63.4 million of its common shares in exchange for three series of junior preferred shares of Noranda with an aggregate stated value of US$1.25 billion. Pursuant to the Falconbridge Support Agreement, Noranda agreed to coordinate the Noranda Offer and the Noranda Issuer Bid such that the Noranda Offer would expire at least five days after Noranda took up common shares of Noranda under the Noranda Issuer Bid. Noranda committed to extend the expiry date of the Noranda Offer for a minimum of 30 days in the event that Noranda waived: (i) the condition in the Noranda Issuer Bid that Brookfield would have deposited and not withdrawn 63,377,140 common shares of Noranda to the Noranda Issuer Bid; or (ii) the condition in the Noranda Offer that Noranda had not taken up any Noranda Shares under the Noranda Issuer Bid. Noranda also agreed it may not waive without the consent of Former Falconbridge the minimum tender condition of the Noranda Offer that at the expiry time of the Noranda Offer, the number of common shares of Former Falconbridge tendered (or deemed tendered) and not withdrawn under the Noranda Offer would not be sufficient to enable Noranda to complete a second stage business combination in accordance with applicable securities and corporate laws.

Pursuant to the Falconbridge Support Agreement, each of Former Falconbridge and Noranda made certain representations and warranties to the other. Former Falconbridge agreed that until the common shares of Former Falconbridge were taken up by Noranda, Former Falconbridge would conduct its business in the ordinary and regular course. Each of Noranda and Former Falconbridge agreed to use its reasonable best efforts to take or cause to be taken all appropriate action or to do or cause to be done all things necessary to consummate and make effective the transactions contemplated in the Falconbridge Support Agreement.

Noranda covenanted in the Falconbridge Support Agreement that, assuming completion of the Noranda Offer, it would take such action to ensure that the Noranda Board of Directors was comprised of Alex Balogh, André Bérard, Jack L. Cockwell, Maureen Kempston Darkes, J. Bruce Flatt, A.L. (Al) Flood, Norman Gish, Robert J. Harding, David W. Kerr, Edmund King, Neville Kirchmann, James McCutcheon, Mary Mogford, George Myhal, Derek G. Pannell, David Race and James Wallace.

The Falconbridge Support Agreement was capable of being terminated by either Noranda or Former Falconbridge if a court of competent jurisdiction or other governmental body issued an order or had taken similar action restraining the Noranda Offer in certain circumstances.

Former Falconbridge could also terminate the Falconbridge Support Agreement if, amongst other things: (i) the Noranda Offer was not made within the time period provided in the Falconbridge Support Agreement; (ii) the Noranda Offer did not conform in all material respects with the description of the offer in the Falconbridge Support Agreement; (iii) Noranda had not become legally obligated to accept and take up the common shares of Former Falconbridge on or prior to 31 May 2005 subject to any extension contemplated in the Falconbridge Support Agreement; (iv) the Noranda Offer was terminated, withdrawn or expired; (v) there was a material breach of the representations and warranties on the part of Noranda in the Falconbridge Support Agreement; or (vi) there was a material breach by Noranda of its covenants contained in the Falconbridge Support Agreement and Noranda failed to remedy the breach within five business days of notice of the breach.

Noranda could also terminate the Falconbridge Support Agreement if, amongst other things: (i) Noranda determined, acting reasonably, prior to 31 May 2005 that any condition to the Noranda Offer would not be satisfied or waived prior to such date; (ii) any condition to the Noranda Offer had not been satisfied or waived on expiry of the Noranda Offer; (iii) there had been a material breach of the representations and warranties on the part of Former Falconbridge in the Falconbridge Support Agreement; (iv) there had been a material breach by Former Falconbridge of its covenants contained in the Falconbridge Support Agreement and Former Falconbridge had failed to remedy the breach within five business days of notice of the breach; or (v) the board of directors of Former Falconbridge had withdrawn or modified (in a manner determined by Noranda to be adverse to Noranda) its approval or recommendation of the Noranda Offer, the Falconbridge Support Agreement or the transactions contemplated in the Falconbridge Support Agreement.

Brookfield lock-up agreement

22.29 A lock-up agreement dated 8 March 2005 between Brookfield, Brascade and Noranda, pursuant to which Brookfield and Brascade agreed to deposit, subject to certain conditions, common shares in the capital of Noranda ("Noranda Shares") owned by them or any of their wholly-owned subsidiaries to the offer by Noranda to exchange up to 63,377,140 Noranda Shares for 50,000,000 junior preference shares of Noranda. Under the Lock-up Agreement, Brookfield and Brascade also agreed to vote their Noranda Shares in favour of any resolution required to create such junior preference shares.

WMC Facilities agreement

22.30 A US$4,000,000,000 acquisition facilities and subscription agreement and a US$2,600,000,000 bridge facility and subscription agreement, both dated 1 March 2005, pursuant to which Barclays Capital, JPMorgan Chase, National Association and RBS provided facilities (the "WMC Facilities") to Xstrata (Schweiz) AG and certain other members of the Former Xstrata Group in accordance with an underwriting letter dated 19 November 2004.

No member of the Former Xstrata Group utilised funds made available to it pursuant to the WMC Facilities due to the failure of the proposed acquisition of WMC Resources Limited. Members of the Enlarged Xstrata Group no longer have any right to borrow, nor the lenders any obligation to lend, funds pursuant to the WMC Facilities.

Las Bambas option agreement

22.31 An option contract dated 1 October 2004 between Empresa Minera del Centro del Peru S.A. ("Centromin") and Xstrata Peru relating to the grant of an option for a term of four years, with the potential to extend for a further two years.

The agreement was entered into following the Former Xstrata Group winning the right, in August 2004, to explore, and the option to develop, the Las Bambas copper-gold-molybdenum project in Southern Peru following an international bid process conducted by ProInversion (Peru's Private Investment Promotion Agency).

The consideration for the initial option was US$45.5 million plus US$500,000 and US$750,000 for each six months in year 5 and year 6 of the option respectively. On the exercise of the option, Centromin agreed to execute a transfer agreement relating to the transfer of mining tenements covering approximately 35,000 hectares and including the Chalcobamba, Ferrobamba, Sulfobamba and Charcas deposits and other assets to Xstrata.

The Las Bambas copper project is within the Southern Peru copper belt, which hosts a series of major copper operations including Toquepala and Cuajone (SPCC), the Tintaya operation and Cerro Verde (Phelps Dodge). It is located in the district of Apurimac, 260 kilometres from Cuzco. Exploration work indicated a resource in excess of 500 million tonnes and copper grades of over 1%.

Xstrata Peru continues to progress work and liaise with ProInversion, Centromin and the Government of Peru to complete exploration and feasibility work in accordance with the option contract. During or at the end of this period, Xstrata Peru has the right to exercise its option to develop the copper operation.

First Facility Agreement

22.32 A US$1,400,000,000 multi-currency revolving facilities and subscription agreement dated 28 May 2004 (the "First Facility Agreement") pursuant to which Barclays Bank PLC, BNP Paribas SA, London Branch, Deutsche Bank AG London, Dresdner Bank Luxembourg SA, HSBC Bank PLC, J.P. Morgan Europe Limited, RBS and other lenders provided general purpose working capital facilities (the "First Facilities") to Xstrata (Schweiz) AG and certain other members of the Former Xstrata Group. The First Facility Agreement was entered into in the ordinary course of business and is on customary terms.

The First Facilities consisted of: (i) a 60-month term loan facility for US$1,000,000,000 ("Facility A"), and (ii) a 364-day revolving loan facility with an extension option for US$400,000,000 ("Facility B").

Interest was payable on loans pursuant to the First Facilities at the rate which was the aggregate of: (i) LIBOR, (ii) mandatory costs (being regulatory costs of the lenders which are passed on to the borrowers), and (iii) the margin, which in respect of Facility A was 0.50% per annum and in respect of Facility B was 0.40% per annum.

The First Facilities included certain mandatory prepayment events, including: (i) illegality; (ii) a change of control of Xstrata; (iii) disposal of assets (subject to certain thresholds); and (iv) incurring indebtedness for borrowed money and equity issues.

The First Facility Agreement contained representations, warranties and undertakings (including financial condition covenants and undertakings) and contained a guarantee from Xstrata and certain other members of the Former Xstrata Group in favour of the lenders of the First Facilities, which were typical for this type of credit agreement. The First Facility Agreement also contained customary events of default upon the occurrence of which the lenders were entitled to terminate and demand repayment of the First Facilities.

Xstrata prepaid the First Facilities using funds made available to it pursuant to the Acquisition Facilities Agreement. Members of the Enlarged Xstrata Group no longer have any right to borrow, nor the lenders any obligation to lend, funds pursuant to the First Facility Agreement.

PSV Pooling and Sharing Agreement

22.33 A notarial pooling and sharing agreement between Xstrata South Africa and Merafe Resources Limited ("Merafe") dated 23 February 2004 (the "Pooling and Sharing Agreement") establishing the Xstrata Merafe Chrome Venture, pursuant to which the parties pool their respective South African chrome and ferrochrome assets in the Pooling and Sharing Venture ("PSV") and share in the earnings from such assets.

The Enlarged Xstrata Group's Chrome Business assets consist of five operating chromite mines and 18 ferrochrome furnaces, all of which are managed through the PSV. Two of the ferrochrome furnaces were until 16 November 2005 owned in a 50/50 production joint venture, known as the Gemini Joint Venture, with Samancor Limited ("Samancor"), a major South African ferrochrome producer. Merafe concluded a transaction with Samancor which resulted in Merafe replacing Samancor in the Gemini Joint Venture and all associated mining activities with effect from 16 November 2005. The assets and business of the Gemini Joint Venture and certain strategic chrome reserves which were also acquired as part of the transaction have been incorporated within the PSV. The assets are now managed along with all of the other PSV assets and fall under the control and management of the Joint Board of the PSV.

Xstrata South Africa's attributable interest in the PSV is staggered over time, with its current participation from 1 July 2006 being 79.5%. Immediately following the formation of the PSV on 1 July 2004, Merafe's participation was 11%. Under the terms of the pooling arrangements, Merafe's interest increased to 14% on 1 July 2005, to 17% on 16 November 2005 following the contribution of its share of the Gemini Joint Venture assets, and to 20.5% from 1 July 2006.

The following addenda and adjustment agreements have been entered into in relation to the above arrangements:

(a) an addendum dated 8 April 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to extend the date of fulfilment of a suspensive condition in the Pooling and Sharing Agreement;

(b) a second addendum dated 30 April 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to extend the date of fulfilment of a suspensive condition in the Pooling and Sharing Agreement;

(c) a third addendum dated 25 June 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to reinstate the Pooling and Sharing Agreement with effect from 31 May 2004, extend the date of fulfilment of the suspensive conditions contained in the Pooling and Sharing Agreement and amend the provisions of the Pooling and Sharing Agreement relating to EBITDA and capital expenditure;

(d) a fourth addendum dated 8 December 2004 between Xstrata South Africa and Merafe, pursuant to which the parties amended various provisions in the Pooling and Sharing Agreement pertaining to EBITDA, net working capital, environmental obligations, maintenance capital, the inclusion by Xstrata South Africa of a further asset in the PSV, and various other miscellaneous issues;

(e) an agreement dated 3 May 2005 between Xstrata South Africa, Merafe and Merafe Ferrochrome and Mining (Proprietary) Limited ("Merafe Ferrochrome") in relation to the adjustment of the parties' respective participant interests in the PSV, pursuant to which the parties agreed to amend the Pooling and Sharing Agreement so that Merafe's share in the PSV would increase to 17%; and

(f) a fifth addendum agreement dated 15 November 2005 between Xstrata South Africa, Merafe and Merafe Ferrochrome, pursuant to which the parties conditionally agreed to amend the Pooling and Sharing Agreement to make provision for the inclusion of the Project Lion ferrochrome expansion project as part of the PSV and the consequent adjustment of Merafe's share in the PSV so that, with effect from from 1 July 2006, Merafe's share in the PSV increased to 20.5%.

Xstrata South Africa, Merafe and Merafe Ferrochrome are currently discussing a sixth addendum agreement, pursuant to which it is expected Xstrata South Africa will agree to loan to the PSV US$100 million. It is expected that the sixth addendum agreement will provide that until Merafe has repaid the loan together with interest at the prime rate, EBITDA cash distributions to Merafe in terms of the Pooling and Sharing Agreement will be subject to certain restrictive provisions and until otherwise agreed by the parties, Xstrata South Africa will be entitled to a pro rata portion of the EBITDA cash distributions made to Merafe.

2010 Convertible Bonds

22.34 On 15 August 2003, Xstrata Capital issued US$600,000,000 of guaranteed convertible bonds due 15 August 2010 (the 2010 Convertible Bonds) which are convertible at the option of the holder, at any time after 26 September 2003, into 3.95% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2010 Convertible Bonds are guaranteed by Xstrata and were issued at par and bear a coupon of 3.95% per annum. Interest on the 2010 Convertible Bonds is payable semi-annually in arrear in equal instalments on 15 February and 15 August each year. The initial exchange price was £6.10 and an adjustment to the exchange price as a result of the Rights Issue will be announced in accordance with the terms of the 2010 Convertible Bonds. Unless previously redeemed or converted or purchased and in each case cancelled, the 2010 Convertible Bonds will be redeemed on 15 August 2010 (the "2010 Convertible Bonds Final Maturity Date") at their principal amount plus unpaid accrued interest (if any). Prior to the 2010 Convertible Bonds Final Maturity Date, Xstrata Capital may, in certain circumstances, on giving notice, redeem all but not some only of the 2010 Convertible Bonds then outstanding at their principal amount plus unpaid accrued interest (if any).

Relationship Agreement

22.35 The Relationship Agreement dated 20 March 2002 between the Company and Glencore International regulating the continuing relationship between the parties and ensuring the Company is capable of carrying on its business independently of Glencore and of Glencore International as controlling shareholder, a description of which is set out in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Relationship with controlling shareholder".

23. Related party transactions

The following are descriptions of the material provisions of agreements and other arrangements between Xstrata and various individuals and entities that may be deemed to be related parties:

(a) the Cerrejón Acquisition Agreement, a description of which is set out in paragraph 22.14 of this Part VIII;

(b) the transactions and arrangements described in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore";

(c) the related party transactions and arrangements described in the following parts of the following documents, which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference":

  (i) page 66 of the 2006 Xstrata Interim Report for the six months ended 30 June 2006;

  (ii) pages 104 to 108 inclusive of the Financial Statements included in the Xstrata Annual Report and Accounts for the financial year ended 31 December 2005;

  (iii) pages 145 to 148 (inclusive) of the Xstrata Annual Report and Accounts for the financial year ended 31 December 2004;

  (iv) pages 149 to 151 (inclusive) of the Xstrata Annual Report and Accounts for the financial year ended 31 December 2003.

The Falconbridge Group has also entered into related party transactions as described in Note 19 ("Related-party Transactions") of Part X – "Financial Information Relating to the Falconbridge Group – Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003".

24. Working capital

Xstrata is of the opinion that, taking into account the net proceeds of the Rights Issue and the bank and other facilities available to the Enlarged Xstrata Group, the Enlarged Xstrata Group has sufficient working capital for its present requirements, that is for at least 12 months from the date of publication of this document.

25. Significant changes

Falconbridge break fees

Following the expiry of the Inco Offer for Falconbridge on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement.

Falconbridge Special Dividend

Falconbridge paid a special cash dividend of C$0.75 per Falconbridge Share on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006, being cash payments of approximately C$278.1 million (approximately US$249.2 million) and approximately US$3.6 million in aggregate, of which approximately C$55.2 million (approximately US$49.5 million) was received by the Former Xstrata Group in respect of its Falconbridge Shares held on the record date.

Falconbridge Acquisition

On 28 July 2006, Xstrata Alberta purchased for cash 18,556,430 Falconbridge Shares through the TSX, representing approximately 5% of the then outstanding Falconbridge Shares, at an average price of C$62.25 per Falconbridge Share, or approximately C$1,155.1 million (approximately US$1,035.2 million) in aggregate.

On 15 August 2006, Xstrata Canada acquired for cash 257,700,100 Falconbridge Shares under the Xstrata Offer, representing approximately 67.8% of the then outstanding Falconbridge Shares, at the Xstrata Offer price of C$62.50 per Falconbridge Share, or approximately C$16,106.3 million (approximately US$14,434.8 million) in aggregate.

On 25 August 2006, Xstrata Canada acquired for cash 18,637,431 Falconbridge Shares under the Xstrata Offer, representing approximately 4.9% of the then outstanding Falconbridge Shares, at the Xstrata Offer price, or approximately C$1,164.8 million (approximately US$1,043.9 million) in aggregate.

As a result of these transactions and acquisitions in August and September 2005 by Xstrata Alberta of approximately 19.9% of the then outstanding Falconbridge Shares, Xstrata now beneficially owns approximately 97.1% of the outstanding Falconbridge Shares on a fully-diluted basis. Since the Xstrata Offer was accepted by holders of more than 90% of Falconbridge Shares, Xstrata has begun a compulsory acquisition process to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006.

The market purchases of Falconbridge Shares and the Xstrata Offer were, and the compulsory acquisition procedure will be, financed by the Former Xstrata Group's existing cash resources and its debt facilities, which are to be refinanced in part using the net proceeds of the Rights Issue.

ARM Coal

On 24 August 2006, the transaction announced by the Company in February 2006 between the Former Xstrata Group and African Rainbow Minerals, to establish a new black controlled South African coal mining company called ARM Coal, completed. The transaction was valued in aggregate at approximately ZAR2.4 billion (approximately US$310.3 million). The Former Xstrata Group paid ZAR384 million (approximately US$49.6 million) to subscribe for 49% of the issued share capital of ARM Coal, which holds a 20% interest in the coal operations of Xstrata South Africa excluding the Goedgevonden project, and a direct 51% interest in the Goedgevonden project. In August 2006, ARM exercised an option to increase its direct interests in the coal operations of Xstrata South Africa (excluding the Goedgevonden project) for a cash investment of ZAR400 million (approximately US$51.7 million). As a result, historically disadvantaged South Africans will now control approximately 36% of the Enlarged Xstrata Group's South African coal business. The Former Xstrata Group also provided debt funding of ZAR765 million (approximately US$98.9 million) to ARM Coal to acquire the 51% interest in the Goedgevonden project.

Redemption of Falconbridge preference shares

Falconbridge announced on 15 September 2006 its intention to redeem its outstanding Cumulative Redeemable Preferred Shares, Series F and Series G, and Cumulative Preferred Shares, Series 1 (together, the "Redeemed Shares"). Falconbridge will redeem all of the outstanding Redeemed Shares on 1 November 2006 as follows: each Series F share will be redeemed for C$25.50 in cash, each Series G share will be redeemed for C$25.00 in cash and each Series 1 share will be redeemed for C$10.00 in cash, plus accrued and unpaid dividends in respect of each share up to, but excluding, 1 November 2006. The Enlarged Xstrata Group intends to utilise its internal cash resources to fund the aggregate redemption price of approximately C$306 million (approximately US$274.2 million).

Rights Issue

On 3 October 2006, the Company announced the Rights Issue.

Other than as outlined in this paragraph 25 above, there has been no significant change in the financial or trading position of the Enlarged Xstrata Group since 30 June 2006, the date to which the latest unaudited interim published financial information of the Former Xstrata Group was prepared.

26. Dividend policy

The Company currently intends to pay annual interim and final dividends on the Ordinary Shares, which will normally be paid in October and May, respectively. Dividends will be declared and paid in US dollars, although Shareholders may elect to receive dividends in Sterling, Euros or Swiss Francs.

The Directors have hitherto adopted a progressive dividend policy taking takes into account the underlying growth in earnings of the Former Xstrata Group, as well as its capital requirements and cash flows, whilst maintaining an appropriate level of dividend cover. Following completion of the Falconbridge Acquisition and the Rights Issue, Xstrata intends to maintain this dividend policy, increasing dividends broadly in line with underlying earnings growth of the Enlarged Xstrata Group.

The New Shares will rank *pari passu* in all respects with the Existing Shares, including the right to receive all dividends or other distributions declared after the date of the New Shares Issue. For the avoidance of doubt, the New Shares shall not be entitled to participate in the dividend of US$0.13 per share declared on 2 August 2006 and payable on 13 October 2006 in the respect of Existing Shares held on the record date of 22 September 2006. Xstrata intends to adjust future dividend payments per Ordinary Share pro rata to take account of New Shares issued in connection with the Rights Issue.

27. Litigation

Except as set out in this paragraph 27 below, no member of the Enlarged Xstrata Group is engaged in or, so far as Xstrata is aware, has pending or threatened, any governmental, legal or arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on the Company's and/or the Enlarged Xstrata Group's financial position or profitability.

Total Coal arbitration and court proceedings

There are arbitration proceedings between Tavistock Collieries (Proprietary) Limited ("Tavistock"), a member of the Former Xstrata Group, and Total Coal South Africa (Proprietary) Limited ("Total Coal"). The aforesaid arbitration proceedings relate to a joint venture agreement between Tavistock and Total Coal. The joint venture agreement has been cancelled. The arbitration proceedings are concerned with, amongst other things:

(a) the dissolution of the joint venture and the manner in which the assets contributed to the joint venture by the parties are to be distributed;

(b) a determination as to which party breached the joint venture agreement;

(c) a claim for damages by Tavistock from Total Coal of an amount of ZAR835,963,019.19 (approximately US$108.1 million); and

(d) a claim for damages by Total Coal from Tavistock of an amount of ZAR1,734,082,000.00 (approximately US$224.2 million).

The aforesaid claims for damages are amounts referred to in the pleadings exchanged between the parties and remain subject to determination in terms of the arbitration proceedings. The Company is of the view that Tavistock is entitled to dissolve the joint venture as a result of a breach by Total Coal.

On 2 May 2006, summonses were served on Tavistock, Xstrata South Africa, Duiker Mining (Pty) Ltd ("Duiker"), Phoenix Collieries (Pty) Ltd ("Phoenix") and other parties outside of the Enlarged Xstrata Group in respect of a South African High Court action instituted by Total Coal. The relief claimed by Total Coal in the action is concerned with following:

(a) various declaratory orders relating to, amongst other things, Total Coal's alleged undivided interest in the ATCOM mining area and the alleged obligations of Tavistock, Xstrata South Africa and Duiker in terms of a letter agreement dated 15 August 2002 between Total Coal, Tavistock, Xstrata South Africa (Proprietary) Limited and Duiker Mining (Pty) Ltd concerning the mining authorisation and subsequent mining right in respect of the ATC and ATCOM mining areas (the "Letter Agreement");

(b) alternatively, an order that Tavistock, Xstrata South Africa and Duiker pay damages to Total Coal amounting to ZAR1,494,854,000.00 (approximately US$193.3 million); and

(c) that the arbitration agreement between Tavistock and Total Coal be ordered in terms of section 3(2) of the South African Arbitration Act 42 of 1965 to cease to have effect in relation to all issues arising from this action.

Prior to Total Coal amending the relief sought by it in the arbitration, Total Coal sought, amongst other things, an order that Tavistock take all reasonable steps to ensure that the mining authorisation was reflected as vesting in Tavistock and Total Coal jointly in the relevant permits and/or records and/or registry of the relevant authorities.

Total Coal also sought a declaration that in the event that either of the parties subsequently seeks partition of the property rights co-owned by the parties to the joint venture, that such partition is to be effected by dividing the joint operating assets equally between them.

Total Coal relied upon, amongst other things, the provisions of the Letter Agreement, which provides that Tavistock, Duiker and Xstrata undertake to deal with the mining authorisation as if Total Coal is the registered co-holder thereof.

After the amendment effected by Total Coal to its relief sought in the arbitration, it now seeks substantially the same relief in the High Court proceedings.

Arbitration proceedings were conducted between the parties during the period from 22 May 2006 to 15 June 2006. At the conclusion of the arbitration session (on 15 June 2006) the arbitration tribunal issued an award which has substantially disposed of the issue relating to the manner in which the assets contributed by the parties to the joint venture are to be distributed. Further arbitration proceedings were conducted in September 2006. The purpose of such arbitration proceedings was to deal, amongst other things, with the effect of the Letter Agreement. Currently, various interlocutory applications pertaining to the Letter Agreement remain pending before the arbitration panel and the merits concerning the effect of Letter Agreement have not been fully dealt with. The arbitration proceedings have now been adjourned until February 2007.

It is not possible to state with any certainty when all of the disputes between Tavistock and Total Coal will be finalised.

Based on legal advice obtained, the Company is of the view that the Enlarged Xstrata Group's prospects of success in the arbitration and in the High Court proceedings are good.

Hualfin proceedings

The Argentinean Municipality of Hualfin and its directors notified Minera Alumbrera Limited ("MAA"), in which the Enlarged Xstrata Group has a 50% interest, of proceedings against MAA in April 2005. The claim, for an amount of ARS474 million (approximately US$152.8 million) (relating to principal, interest and penalties) which was notified to MAA in May 2006, is in respect of alleged unpaid tax and royalties for the period from 1999 to 2004. MAA's position is that the claim is unjustified and/or unconstitutional and the existing Fiscal Stability Regime and Argentinean Constitution provide MAA with the requisite protection. MAA has filed a remedy with the Municipality for it to revoke the resolution specifying the amount of the claim. The remedy has not yet been resolved by the Municipality and negotiations with the Municipality continue. Based on legal advice obtained, the Company is of the view that the prospects of MAA being liable for the claim are low.

Sulphuric acid class action lawsuits

Class action lawsuits have been filed in various jurisdictions in the United States with respect to alleged sulphuric acid marketing and sales anti-trust violations by the Falconbridge Group. These lawsuits have been consolidated into the District Court in Chicago, with those filed in state court in California having been consolidated into the San Francisco state court. Falconbridge is vigorously defending these actions and has asserted they are without merit. The plaintiffs claim actual damages in the amount of approximately US$160 million, before trebling, plus attorney fees and costs. Under the relevant US antitrust law, if the plaintiffs were to be successful then the actual damages assessed by the jury would be automatically trebled. Based on the strength of the available defences, the weakness of the plaintiffs' claims, the amount of previously negotiated settlements by third parties and legal advice obtained, the Company believes that it is unlikely that the plaintiffs will recover the damages sought.

28. Consent

28.1 Deutsche Bank has given and not withdrawn its written consent to the inclusion herein of the references to its name in the form and context in which they appear.

28.2 JPMorgan Cazenove has given and not withdrawn its written consent to the inclusion herein of the references to its name in the form and context in which they appear.

28.3 JPMSL has given and not withdrawn its written consent to the inclusion herein of the references to its name in the form and context in which they appear.

28.4 Brook Hunt has given and not withdrawn its written consent to the inclusion herein of the references to its name and the references to the cost curve information produced by it in the form and context in which they appear.

28.5 CRU has given and not withdrawn its written consent to the inclusion herein of the references to its name and the references to the cost curve information produced by it in the form and context in which they appear.

28.6 Barlow Jonker has given and not withdrawn its written consent to the inclusion herein of the references to its name and the references to the cost curve information produced by it in the form and context in which they appear.

28.7 Ernst & Young LLP has given and not withdrawn its written consent to the inclusion herein of its report in Part III – "Unaudited Pro Forma Financial Information", in the form and context in which it appears, and has authorised the contents of the part of this document which comprises its report for the purposes of Rule 5.5.3R(2)(f) of the *Prospectus Rules*.

29. Bases and sources

General

The Enlarged Xstrata Group operates in industries in which it is difficult in certain cases to obtain precise industry and market information. Unless the source is otherwise stated and except as described below in relation to third party information:

- the industry and market data in this document have been extracted without material amendment from the Enlarged Xstrata Group's management records;
- the non-financial operating data included in this document have been extracted without material amendment from the Enlarged Xstrata Group's management records;
- the unaudited pro forma financial information included in this document in respect of the Enlarged Xstrata Group has been extracted without material amendment from the pro forma financial information contained in Part III – "Unaudited Pro Forma Financial Information";
- the financial information included in this document in respect of the Former Xstrata Group has been extracted without material amendment from the financial statements contained in the 2006 Xstrata Interim Report, the Xstrata Annual Reports and Accounts and the Company's accounting records;
- the financial information included in this document in respect of the Falconbridge Group has been extracted without material amendment from the financial statements and financial information contained in Part X – "Financial Information Relating to Falconbridge Group" and the Falconbridge Group's accounting records;
- the financial information included in this document in respect of Cerrejón and the Cerrejón Business has been extracted without material amendment from the audited financial statements in respect of Cerrejón and Cerrejón's accounting records; and
- the financial information included in this document in respect of Tintaya has been extracted without material amendment from the audited financial statements of Tintaya and Tintaya's accounting records.

Information from third party sources

The information contained in this document that has been extracted from a third party source comprises the market capitalisation information referred to in the section of this document headed "Presentation of Information – Market and industry information – Competitive statements" which is sourced from Bloomberg and Datastream and trading price information in respect of the Ordinary Shares on the London Stock Exchange which is sourced from Bloomberg, and cost curves information, as to which see the section of this document headed "Presentation of information – Cost curves". This information has been accurately reproduced and, so far as the Company is aware, and so far as it is able to ascertain from information published by that third party, no facts have been omitted which would render the reproduced information inaccurate or misleading.

30. Expenses of the Rights Issue

Xstrata intends to raise approximately £2.9 billion (approximately US$5.5 billion) (net of costs and expenses) through the Rights Issue. Xstrata estimates that the aggregate costs and expenses of the Rights Issue will be approximately £54 million (*approximately* US$102 million).

31. Documents available for inspection

Copies of the following documents are available for inspection during usual business hours on any weekday (Saturdays, Sundays and public holidays excepted) for so long as the Rights Issue remains open for acceptance for a period of 12 months following the date of publication of this document at the registered office of the Company and at the offices of Freshfields Bruckhaus Deringer, 65 Fleet Street, London EC4Y 1HS:

(a) the memorandum and articles of association of Xstrata;

(b) the Xstrata Annual Reports and Accounts, including the audited consolidated accounts and the independent auditors' reports for each of the years ended 31 December 2003, 2004 and 2005;

(c) the 2006 Xstrata Interim Report, including unaudited consolidated accounts for the six months ended 30 June 2006;

(d) the consent letters referred to in paragraph 28 of this Part VIII;

(e) the report of Ernst & Young LLP set out in Part III – "Unaudited Pro Forma Financial Information";

(f) the Provisional Allotment Letter;

(g) the documents incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference"; and

(h) this Prospectus.

32. Announcement of results of Rights Issue

The Company expects to make an appropriate announcement to a Regulatory Information Service giving details of the results of the Rights Issue and details of the sale of New Shares not taken up on Monday, 30 October 2006.

Part IX

Ore Reserves and Mineral Resources Information

[This page is intentionally left blank]

1. Former Xstrata Group Ore Reserves and Mineral Resources Report

The following is extracted without material amendment from the "Ore Reserves and Mineral Resources Report" published by Xstrata on 1 March 2006:

Ore Reserves and Mineral Resources in this report are reported in accordance with the 2004 Australasian Code for Reporting Exploration Results, Mineral Resources and Ore Reserves (the JORC Code), December 2004 unless otherwise stated. South African Coal Ore Reserves and Mineral Resources have been calculated according to the SAMREC Code (South African Code for Reporting of Mineral Resources and Mineral Reserves) this being similar to the JORC Code with only minor variations.

Ore Reserve and Mineral Resource information in the tables below is based on information compiled by Competent Persons (as defined by the JORC Code).

Each of the Competent Persons has the appropriate professional membership and the relevant experience in relation to the Mineral Resources and/or Ore Reserves being reported by them to qualify as a Competent Person as defined in the JORC Code. The Competent Persons have consented to the inclusion in the report of the matters based on their information in the form and context in which it appears.

The Ore Reserves and Mineral Resources figures in the following tables are as at 30 June 2005 unless otherwise stated.

Metric units are used throughout. All data is presented on a 100% basis. All tonnes and grade information has been rounded to reflect the relative uncertainty in the estimates; there may therefore be small differences in the totals. Mineral Resources are reported inclusive of those Mineral Resources modified to produce Ore Reserves.

Commodity prices and exchange rates used to estimate the economic viability of Ore Reserves are based on Xstrata long term forecasts at the time the estimate was calculated.

Definitions

The following definitions (as per the JORC Code 2004), or similar, have been applied in estimating the Ore Reserves and Mineral Resources position of the Former Xstrata Group disclosed within this document.

Mineral Resource: a concentration or occurrence of material of intrinsic economic interest in or on the Earth's crust in such form, quality and quantity that there are reasonable prospects for eventual economic extraction. The location, quantity, grade, geological characteristics and continuity of a Mineral Resource are known, estimated or interpreted from specific geological evidence and knowledge. Mineral Resources are sub-divided, in order of increasing geological confidence, into Inferred, Indicated and Measured categories.

Inferred Mineral Resource: that part of a Mineral Resource for which tonnage, grade and mineral content can be estimated with a low level of confidence. It is inferred from geological evidence and assumed but not verified geological and/or grade continuity. It is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes which may be limited or of uncertain quality and reliability.

Indicated Mineral Resource: that part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a reasonable level of confidence. It is based on exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes. The locations are too widely or inappropriately spaced to confirm geological and/or grade continuity but are spaced closely enough for continuity to be assumed.

Measured Mineral Resource: that part of a Mineral Resource for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of confidence. It is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes. The locations are spaced closely enough to confirm geological and grade continuity.

Ore Reserve: the economically mineable part of a Measured and/or Indicated Mineral Resource. It includes diluting materials and allowances for losses, which may occur when the material is mined. Appropriate assessments and studies have been carried out, and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified. Ore Reserves are sub-divided in order of increasing confidence into Probable Ore Reserves and Proved Ore Reserves.

Probable Ore Reserve: the economically mineable part of an Indicated, and in some circumstances, a Measured Mineral Resource. It includes diluting materials and allowances for losses which may occur when the material is mined. Appropriate assessments and studies have been carried out, and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified.

Proved Ore Reserve: the economically mineable part of a Measured Mineral Resource. It includes diluting materials and allowances for losses which may occur when the material is mined. Appropriate assessments and studies have been carried out, and include consideration of and modification by realistically assumed mining, metallurgical, economic, marketing, legal, environmental, social and governmental factors. These assessments demonstrate at the time of reporting that extraction could reasonably be justified.

Notes

- Xstrata Alloy's chrome mining operations are all mining the chromitite deposits developed within the world renowned Bushveld Complex of South Africa. The Bushveld Complex is the largest known deposit of chrome ore in the world. The chrome ore are mined from shallow dipping (10 – 14) tabular ore bodies referred to as the LG6/LG6A Chromitite Layers and the MG1 Chromitite Layer. The chromitite layers are mined mainly underground using trackless mechanized mining methods on a board-and-pillar mine lay-out design.
- Changes in the year on year tonnage and grade estimates are mainly due to mining depletion, and re-categorisation of resources and reserves due to additional geological information gained through exploration.
- The Ore Reserves have been estimated as ROM Ore Reserves and Saleable Ore Reserves to reflect the mining dilution and beneficiation process.

[a] Under the Pooling and Sharing Venture with Merafe Mineral Resources established in July 2004, Xstrata maintains 100% ownership but participates in pooled EBITDA as follows – Year 1: 89.0%, Year 2: 86.0%, Year 3: 82.5%. Vanadium assets are 100% owned and 100% attributable to Xstrata

[b] Marikana East is reported as a Resource subject to the conditions contained in the purchase agreement with SamancorCr.

[c] Klipfontein/Waterval Reserve is reported as a Resource subject to the conditions contained in the purchase agreement with Anglo Platinum.

[d] Marikana West is reported as a Resource subject to the conditions contained in the purchase agreement with SamancorCr.

Notes

- The Mineral Resources and Ore Reserve estimates are tabulated on a total mine basis as at 30 June 2005.
- The Measured and Indicated Mineral Resources are inclusive of those Mineral Resources modified to produce Ore Reserves.
- PGM grades are quoted as 3PGE + Au in g/t
- Xstrata Alloys' platinum mining operation is mining the platinum bearing UG2 Chromitite Layer of the Bushveld Complex of South Africa. The Bushveld Complex is the largest known deposit of PGM's in the world. The PGM ore is mined a shallow dipping (10° – 14°) tabular ore-body refered to as the UG2 Chromitite Layer. The chromitite layer will be mined underground using a trackless mechanized mining method on a board-and-pillar mine lay-out design.
- Vanadium grades are quoted as %V2O5
- Xstrata Alloys' vanadium mining operation is mining the metalifferous magnetite deposits developed within the Bushveld Complex of South Africa. The Bushveld Complex is one of the largest known deposits of magnetite ore in the world. The magnetite ore are mined from shallow dipping (6° – 25°) tabular ore bodies. The magnetite ore are mined in opencast pits.
- Changes in the year on year vanadium tonnage and grade estimates are solely due to mining depletion

Definitions
OC = open-cut; UG = underground
Notes
- With the exception of Rolleston ML, Teralba, Cardiff Borehole and Mitchells Flat, which were estimated in accordance with the September 1999 JORC Code, the estimates of Coal Resources and Coal Reserves presented in this table have been carried out in accordance with the "2004 Australasian Code for Reporting Exploration Results, Coal Resources and Coal Reserves (The JORC Code)" prepared by the Joint Ore Reserves Committee of the Australasian Institute of Mining and Metallurgy, Australian Institute of Geoscientists and Minerals Council of Australia.
- Coal Resources and Coal Reserves stated on a total mine basis include interests in Coal Resources and Coal Reserves attributable to minority interests in controlled entities and the interests of joint venture partners.
- Coal Resource and Coal Reserve estimates are subject to rounding and therefore totals may not add up.
- Unless otherwise stated, the product yields used to estimate Marketable Coal Reserves were derived from the "Resource Mastor" software developed by A&B Mylec. Inputs to this model are coal ply thickness and dilution. The model includes adjustments for plant efficiencies to calculate practical yields. The model is calibrated to historical plant performance and includes the closest large diameter borehole data to each mining block.
- Coal Resources are contained within the Sydney Basin (New South Wales), the Bowen Basin (Queensland) and the Surat Basin (Wandoan, Queensland).
- Coal Resources have been estimated for potentially mineable seams within mining or exploration leases and are limited by major cadastral, geological and economic boundaries. They are also constrained by the occurrence and quality of geological information.
- Coal Resources exclude areas where the seam has been affected by igneous bodies, extracted by mining and areas where coal has been sterilized by mining to 30 June 2005.
- Coal Resources are reported for the full coal seam thickness to a minimum thickness of typically 0.3m to 0.5m for opencut Coal Resources, and 1.5m to 2m for underground Coal Resources.
- Coal Resources do not include out-of-seam dilution. Underground Coal Resources are typically reported on a full seam or working section basis, and may contain a small amount of interseam dilution.
- Coal Resource tonnes have been reported using an appropriate in situ moisture basis for each deposit, ranging from 3% to 10% moisture. United Coal Resources are reported on an air dried basis.
- Coal Resources have been re-estimated for inclusion in this summary table (with the exception of Rolleston where the previous estimate has been adjusted for lease changes and Cook where the previous estimate has been adjusted for production). Revision of the totals includes changes to classifications of Coal Resource status due to exploration, geological reinterpretation and remodelling and changes to lease holdings.
- Adherence to the 2003 Australian Guidelines for Estimating and Reporting of Inventory Coal, Coal Resources and Coal Reserves has resulted in some Measured Coal Resources being reclassified as Indicated and some Indicated Coal Resources being reclassified as Inferred when compared to the previous year.
- Other changes and notes relevant to the estimation of Coal Resources and Coal Reserves are listed below for specific projects.

(a) Bulga Opencut: Planned final highwall has been straightened increasing Coal Reserves by approximately 1.4Mt ROM.
(b) Beltana Underground: Changes in cutting height for Blakefield Seam increases Coal Reserves by approximately 14.1Mt ROM.
(c) Baal Bone Underground: Longwall block (LW) 25 shortened by 221m reducing Coal Reserves by 0.2Mt ROM.
(d) West Wallsend Mine plan has been significantly redesigned resulting in less overall longwall length and a decrease in Coal Reserves of 9.0Mt ROM. Yield has been re-correlated to washplant performance resulting in an overall decrease in Marketable Coal Reserves of 0.8Mt.
(e) Westside: Coal Resources reported for the Great Northern Seam include areas where this seam has been previously extracted by bord and pillar methods. Details of this extraction have been obtained from historical mine record tracings. The Coal Reserves are then further modified to account for additional losses incurred in the mining process.
(f) Cumnock – Opencut Other: In an area where leases overlap, Coal Resources have been classified as having potential for opencut extraction, assuming Ravensworth West will first mine several overlying seams.
(g) Mount Owen: Coal Resources in an area of high geological complexity have been classified as Indicated, although it may appear that sufficient information exists for classification as Measured status.
(h) United – Planned mains development moved away from the river/fault system; LWs 6, 7 & 8 shortened outbye; LWs 7 & 8 lengthened inbye through agreement with overlying Wanbo Mine; LWs 10 & 11 added in North East. These changes have resulted in an overall increase in Coal Reserves of 2.4Mt ROM.
(i) Ulan #3 Underground: Recent exploration has resulted in a change in the interpreted position of a major bounding fault, the Spring Gully Fault, which has reduced the overall Coal Resources by approximately 9Mt. The Ulan underground mine currently extracts the basal 3m of the 6-7m thick Ulan Seam. Coal plies above the underground mining section have been reported and included in the total Coal Resource. Coal Reserves for Ulan #3 UG are based on continuing to mine the basal 3m.
(j) Ulan West Underground: Coal Reserves for Ulan West Underground are based on mining the basal 3m as in Ulan #3 Underground, although investigations are underway for mining the upper plies by Longwall Top Coal Caving technique.
(k) Oaky Creek No. 1: Changes to the layout of the No. 1 Underground Mine to allow for the introduction of a second longwall unit has resulted in an increase in Coal Reserves of 15.3Mt ROM.
(l) Oaky Creek North: Provision has been made for more dilution for the Northern Underground Mine which has increased the Coal Reserves by 6.7Mt ROM.
(m) Newlands Opencut: Investigation of the extent of intrusives and LOX allow increase of Coal Resources (+85Mt) and Opencut Coal Reserves at Wollombi (+52.8Mt ROM).
(n) Newlands Southern Underground: Areas available for remnant pillar mining in the Southern Underground have been incorporated into the mine plan (+0.8Mt ROM).
(o) Cook: 2004 Coal Resources adjusted for mining in period 1 January 2005 to 30 June 2005 (not re-estimated).
(p) Rolleston: ML Coal Resource estimate of 2002 adjusted for exclusion of MDL/EPC areas which were re-estimated in June 2005.

Notes

- The estimates of Coal Resources and Coal Reserves presented in this table have been calculated according to the SAMREC Code (South African Code for Reporting of Coal Resources and Coal Reserves) and are also JORC (Australasian Code for reporting of Exploration Results, Mineral Resources and Ore Reserves) compliant.
- Coal Resources and Coal Reserves stated on a total mine basis include interests in Coal Resources and Coal Reserves attributable to minority interests in controlled entities and the interests of joint venture partners. Figures are subject to rounding and therefore totals may not add up.
- Coal Resources and Recoverable Coal Reserves are quoted on an air dried moisture basis.
- Marketable Coal Reserves are quoted on an as-received moisture basis, with the exception of Ingwe managed mines which are quoted on air dried basis.
- Marketable Coal Reserves for managed operations are based on theoretical yields for a 27.5MJ/kg export quality product, adjusted by practical plant factors based on current operational performance.
- Marketable Coal Reserves for Tavistock are based on a 27.5MJ/kg primary wash, plus a 25MJ/kg wash of the primary rejects.
- Marketable Coal Reserves for Waterpan, Boschmans, Witcons and Goedgevonden are based on a 27.5MJ/kg primary wash for the select seams and a 22MJ/kg (domestic power generation product) primary wash for the Upper Seams
- Marketable Coal Reserves for Ingwe managed mines are as received from Ingwe, based on a mix of export and domestic products.
- Coal Resources and Coal Reserves for operations are contained within fully permitted areas, with the exception of those stated under individual operations.
- The undeveloped Coal Resources are not fully permitted.

[a] Waterpan: ROM Reserve – 0.4 Mt mined from Jan 05 to June 05, 14.5 Mt of low quality upper seam (domestic power generation) included as opencast reserves , 9.1 Mt of 2 Seam stooping included, 3.8 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling, 3.0 Mt increase due to higher extraction factor after reclassification of 4 seam underground to opencast,1.2 Mt increase in 5 seam due to higher extraction factor used to calculate reserves. Resource – 0.6 Mt mined from Jan 05 to June 05, 19.9 Mt of low quality upper seam (domestic power generation) included as opencast reserves, 16.1 Mt of 2 Seam stooping included, 5.3 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling.

[b] Boschmans: ROM Reserve – 1.7 Mt mined from Jan 05 to June 05, 4.2 Mt of low quality upper seam (domestic power generation) included as opencast reserves , 1.9 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling,1.7 Mt increase in 1 seam from re-modelling and re-classification, 5.5 Mt additional 2 seam reserves planned as opencast reserves after re-classification, 2.6 Mt additional 4 seam reserves planned as underground reserves after re-classification. Resource – 3.6 Mt mined from Jan 05 to June 05, 5.1 Mt of low quality upper seam (domestic power generation) included as opencast reserves , 2.7 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling, 2.2 Mt increase in 1 seam from re-modelling and re-classification, 20.7 Mt 2 seam resources excluded due to poor quality and sub-outcrop changes from re-modelling and re-classification after infill drilling, 8.4 Mt decrease from exclusion of 4 seam pillar resources.

[c] Witcons: ROM Reserve – 1.0 Mt mined from Jan 05 to June 05, 4.4 Mt of low quality upper seam (domestic power generation) included as opencast reserves, 1.2 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling, 1.7 Mt increase in 4 seam from ATC re-allocation, 2.1 Mt increase in 2 seam from increase in select mining horizon thickness after re-interpretation and re-modelling. Resource – 1.2 Mt mined from Jan 05 to June 05, 6.1 Mt of low quality upper seam (domestic power generation) included as opencast reserves, 1.7 Mt additional 4 seam opencast from sub outcrop drilling and re-modelling, 3.0 Mt increase in 4 seam from ATC re-allocation, 3.0 Mt increase in 2 seam from increase in select mining horizon thickness after re-interpretation and re-modelling.

[d] South Witbank: ROM Reserve – 1.9 Mt mined from Jan 05 to June 05, 3.1 Mt increase in 2 seam from additional drilling and re-modelling, 5.7 Mt decrease from 4 seam allocated to Tavistock, 7.1 Mt increase in 4 seam from increase in select mining horizon thickness after re-interpretation and re-modelling, 10.0 Mt decrease in 4 seam from exclusion of stooping reserves due to geotechnical considerations, 4.6 Mt increase in 4 seam pillars from re-calculation of primary extraction. Resource – 3.4 Mt mined from Jan 05 to June 05, 3.7 Mt increase in 2 seam from additional drilling and re-modelling, 9.7 Mt decrease from 4 seam allocated to Tavistock, 9.5 Mt increase in 4 seam from increase in select mining horizon thickness after re-interpretation and re-modelling, 17.9 Mt decrease in 4 seam from exclusion of stooping reserves due to geotechnical considerations,7.4 decrease in 4 seam from re-classification and re-modelling. 8.1 Mt increase in 4 seam pillars from re-calculation of primary extraction.

[e] Goedgevonden: ROM Reserve – 0.5 Mt mined from Jan 05 to June 05, 91.7 Mt increase from re-classification and inclusion of additional opencast in mine plan, 170.5 Mt of low quality upper seam (domestic power generation) included in opencast. Includes 81.8 Mt in Zaaiwater block which is not fully permitted. Resources – 0.6 Mt mined from Jan 05 to June 05, 288.5 Mt increase from reporting full seam, 3 Mt decrease in 5 seam from sub outcrop drilling and re-modelling.

[f] Phoenix: ROM Reserve – 0.8 Mt mined from Jan 05 to June 05, 1.4 Mt decrease in 4 seam from suboutcrop drilling and re-modelling, 1.0 Mt 2 seam excluded due to low CV and Vols from infill drilling and re-modelling. Resources – 1.4 Mt mined from Jan 05 to June 05, 4.5 Mt increase in 4 seam resources from re-classification and re-modelling, 7 Mt 2 seam excluded due to low CV and Vols from infill drilling and re-modelling.

[g] Tavistock: ROM Reserve – 1.9 Mt mined from Jan 05 to June 05, 5.7 Mt increase from 4 seam re-allocated from South Witbank, 4.0 Mt increase in 4 Seam from re-classification and remodelling. Resources – 3.4 Mt mined from Jan 05 to June 05, 9.7 Mt increase from 4 seam re-allocated from South Witbank.

(h) ATC: ROM Reserve – 1.2 Mt mined from Jan 05 to June 05, 1.7 Mt decrease from 4 seam opencast re-allocated to Witcons, 3.5 Mt decrease in 2 Seam stooping due to geotechnical considerations. Resources – 2.1 Mt mined from Jan 05 to June 05, 3.0 Mt decrease from 4 seam opencast re-allocated to Witcons, 4.5 Mt decrease in 2 Seam stooping due to geotechnical considerations, 4.4 Mt decrease in 2 and 4 seam allocated back to Rietspruit .

(i) ATCOM: ROM Reserve – 2.0 Mt mined from Jan 05 to June 05, 7 Mt increase in 4 seam from additional opencast included, 9 Mt decrease from 2 seam excluded along sub outcrop due to quality constraints. Resources – 2.3 Mt mined from Jan 05 to June 05, 2.0 Mt increase in 1 seam from re-classification and re-modelling.

(j) Tslentis: ROM Reserve – 1.8 Mt mined from Jan 05 to June 05. Resources – 3.0 Mt mined from Jan 05 to June 05.

(k) Spitzkopf: ROM Reserve – 0.7 Mt mined from Jan 05 to June 05, 14.0 increase in B and C seam from re-classification and re-modelling. Resources – 1.2 Mt mined from Jan 05 to June 05, 45.7 Mt increase in B and C seam from re-classification and re-modelling.

(l) ROM Reserve – 31.2 Mt mined from June 04 to June 05, 5.9 Mt increase from revised mining lay-out for Kleinkopje/Steenkoolspruit, 9.81 Mt decrease from re-modelling. Resources – increase from pillars included.

(m) Due to the promulgation of the new Mineral and Petroleum Resources Development Act, 2002 (Act No. 28 of 2002) no new drilling programs were conducted on any of the Undeveloped Resource areas as at 30 June 2005. With the implementation of the new Act all valid prospecting permits reverted back to Un-used Old Order Rights. Xstrata Coal South Africa has applied for New Order Prospecting rights over all the undeveloped Resource areas. New Order Prospecting rights were isued over Zaalwater, Mooifontein, and Sara-Buffels and work has commenced on these projects. The resources reported as at 30 June 2005 are identical to those reported as at 31 December 2004.

Notes

- All Ore Reserve and Mineral Resource estimates in the table represent the position at 30 June 2005, with the exception of Bajo de la Alumbrera for which the Ore Reserve and Mineral Resource estimates presented are current as of 31 December 2005
- The term 'Ore Reserve', as used in this public statement in accordance with Australian practice, has the same meaning as 'Mineral Reserve' as defined in The Code for Reporting of Mineral Exploration Results, Mineral Resources and Ore Reserves (The Reporting Code), October 2001 edition
- Rounding to two significant figures has been applied generally to tonnage and grade estimates with rounding to one significant figure applied in most cases to Inferred Mineral Resources.

[a] Mount Isa X41 Copper Mine 1100 and 1900 Orebodies: Mineral Resource categorisation is based on assessment of orebody continuity, structural complexity and adequacy of data coverage. Additions to Ore Reserves of 13 million tonnes at 2.0% copper have resulted from the engineering reviews carried out during the year. Further work is continuing to evaluate the Measured and Indicated Mineral Resources for conversion to Ore Reserves using different mining methods and economic parameters. Mine production of 2.5 million tonnes at 2.4% copper since end June 2004 depleted the Ore Reserve and Mineral Resource. Additional depletion of the Mineral Resource and Ore Reserve has occurred due to sterilisation of ground adjacent to stopes mined out during the year. Mineralisation occurs generally as breccia hosted massive to disseminated chalcopyrite in "silica dolomite" altered pyritic dolomitic siltstone.

[b] Enterprise Mine 3000 and 3500 Orebodies: Mineral Resource categorisation is based on assessment of orebody continuity, structural complexity and adequacy of data coverage. Additions to the Ore Reserve of 2.0 million tonnes at 3.2% copper have resulted from the engineering reviews carried out during the year. Further work is continuing to evaluate the Measured and Indicated Mineral Resources for conversion to Ore Reserves using different mining methods and economic parameters. Mine production of 3 million tonnes at 3.97% copper since end June 2004 depleted the Ore Reserve and Mineral Resource. Additional depletion of the Mineral Resource and Ore Reserve has occurred due to sterilisation of ground adjacent to stopes mined out during the year. Mineralisation occurs generally as breccia hosted massive to disseminated chalcopyrite in "silica dolomite" altered pyritic dolomitic siltstone.

[c] Mount Isa Open pit: Mineral Resource categorisation is based on assessment of orebody continuity, structural complexity and adequacy of data coverage. The Mineral Resource estimate is based on a block model built with grade interpolation by ordinary kriging. The Mineral Resource has been reported inside an optimised pit shell using a cut off grade of 0.5% Cu. The Mineral Resource has been re-modelling and recategorised on the basis of the drilling performed for pre-feasibility study of the Mount Isa Open Pit during the previous two years. Copper mineralisation occurs generally as breccia hosted massive to disseminated

copper minerals in "silica dolomite" altered pyritic dolomitic siltstone. Approximately 60% of the copper resource is in primary chalcopyrite, the remainder being oxidised or partially oxidised, with a minor amount of supergene chalcocite mineralisation.

(d) Underground -Open Pit Overlap: In estimating the open pit Mineral Resource, some overlap exists between the X41 Mine underground copper Mineral Resource and the open pit. The extent of double counting in copper Mineral Resources between open pit and underground is indicated by the following tonnages of X41 underground copper Mineral Resource as reported above which are included also in the above open pit copper Mineral Resource (Measured: 1.2 Mt @ 1.6% Cu, Indicated: 4.4 Mt @ 1.6% Cu, 13.3 Mt @ 2.2% Cu)

(e) Ernest Henry: Ore processing of 11.3 million tonnes at 1.22% Cu, 0.62 g/t Au since end June 2004 depleted the Ore Reserve and Mineral Resource. Ore Reserve and Mineral Resource estimates are based on the current block model built with grade interpolation by ordinary kriging reporting to blocks with dimensions of 20m x 20m x 16m. The block model is developed from approximately 118,143 metres of resource drilling, predominantly diamond core and lesser reverse circulation percussion of which approximately 84,593 metres has been sampled and assayed. First pass classification of resource blocks to Measured, Indicated and Inferred categories for the open pit Mineral Resource estimate is based on a three-stage search strategy. Blocks estimated using a smaller search volume are categorised as Measured with blocks estimated using a larger search volume categorised as Indicated. Inferred blocks are categorised using the Indicated search volume but with relaxation of sample selection criteria. Individual blocks categorised as Inferred on first pass were upgraded to Indicated where the block was completely surrounded by Measured and/or Indicated blocks. The categorisation is over-ridden manually in areas of sparse drilling and geological uncertainty. Quantified copper grade errors for Measured, Indicated and Inferred are ±5%, ±10% and ±30% respectively at 90% confidence limits over a quarterly (3 month) production period. These errors are based on a forward-looking conditional simulation study and are supported by historical mill reconciliation data. For the underground Mineral Resource estimate, blocks which would be categorised as Indicated and Inferred according to the above categorisation strategy are assigned to the Inferred category while blocks which would be categorised as Measured are assigned to the Indicated category, reflecting lower confidence in the estimate at the higher underground cut-off grade. Open pit Mineral Resources occur inside the Stage 7 life-of-mine pit design utilising Measured, Indicated and Inferred resource blocks and are reported above a cut-off grade of 0.27% Cu. Proved and Probable Ore Reserves are defined as all mineralisation of the appropriate confidence category above cut-off grade within the designed life-of-mine ultimate pit. Underground Mineral Resource includes all material below (down dip from) the current life of mine plan pit above a 1.5% copper equivalent cut off, where the copper equivalent credits both copper and gold values on the basis of CuEq = Cu % + 0.73 x Au g/t. The underground Mineral Resource remains open at depth. Copper and gold mineralisation occurs in a breccia comprised of strongly altered and replaced intermediate volcanic fragments in a matrix assemblage of predominantly magnetite, chalcopyrite and carbonate. Copper occurs as chalcopyrite and gold is strongly associated with chalcopyrite.

(f) Bajo de la Alumbrera: As at 31 December 2005. The Proven Reserves include 100 million tonnes @ 0.35 % Cu, 0.40 g/t Au of Medium and Low-Grade material stockpiled for future treatment. This Statement is calculated based on a Resource Block Model (ALUJ) which was constructed using Ordinary Kriging interpolation within geological constraints from an assay database comprising some 79,000 metres of diamond drilling and 14,000 metres of reverse circulation drilling. Ore Reserves are based on a pit optimisation (Pit 637) performed on the ALUJ Resource Block Model, and are reported using an economic cut-off grade of 0.27% copper equivalent. The economic cut-off is based on appropriate dilution factors and metallurgical recoveries, and uses commodity prices of US$350 per ounce of gold and US$0.90 per pound of copper. The Stripping Ratio (S.R.) for Pit 637 is 1.9; S.R. is defined as the in-pit tonnes of waste divided by the in-pit tonnes of ore. No stockpiled ore is considered in this figure. Identified Mineral Resources are generated from pit optimisation studies using possible future technical and economic scenarios (Pit 636), to define mineralisation which might in whole or in part become economically extractable. Identified Mineral Resources are reported on the basis of a payable copper equivalent grade of 0.27%. 18.0 million tonnes of Proven and Probable Reserves have been mined and processed during the six months to December 31st 2005 from the June 30th, 2005 Ore Reserve. The ultimate pit slopes design was based on Call & Nicholas Inc. recommendations (CNI, Tucson AZ, USA). Primary sulphide mineralisation comprises disseminated, vein and fracture controlled chalcopyrite in altered Dacite and Andesite host rocks, with chalcocite and covellite in the Enriched zone.

(g) Las Bambas:

- The Las Bambas district is located in the central part of the Andahuaylas-Yauri copper (Mo, Au) skarn-porphyry belt in south-central Peru 75 kms south-southwest of Cuzco. Access to Las Bambas is by 224 kms of unimproved road from Cuzco.
- The Las Bambas district consists of a thick sequence of tightly folded Cretaceous sedimentary rocks that have been intruded by irregularly shaped plutons, stocks, sills and dikes of the Oligocene to Miocene Andahuaylas-Yauri batholith. Skarn-related alteration and mineralization is associated with the younger quartz monzodiorite to granodiorite suite of intrusive rocks that are in contact with carbonate rocks of the Ferrobamba Formation. The porphyry-style alteration and mineralization occurs in the quartz monzodiorite to granodiorite intrusive rocks. The main copper-bearing minerals are sulphides (bornite, chalcopyrite, and chalcocite) with oxides and carbonates near surface.
- Exploratory and resource delineation drilling during 2005 was concentrated on three potential open-pit deposits within the Las Bambas district, Ferrobamba, Chalcobamba and Sulfobamba. Drilling at Ferrobamba has defined a Resource with a horizontal dimension of 1,200 m east to west and north to south and to an average depth of 205 m below the surface. At Chalcobamba, drilling has defined a Resource with an east-west and north-south dimension of 1,000 m and to an average depth below surface of 180 m. Drilling at Sulfobamba has defined a Resource with a horizontal dimension of 1,200 m east to west, 1,000 m north to south and to an average depth of 215 m below surface.
- Mineral Resource estimates are based on diamond drilling completed in 2005: 109 drill holes with a total length of 26,840 m at Ferrobamba, 66 drill holes with a total length of 14,764 m at Chalcobamba and 62 drill holes with a total length of 14,406 m at Sulfobamba. In addition, 40 pre-2005 drill holes from past explorers, with a total length of 5,156 m, were included in the Mineral Resource estimation.
- AMEC (Peru) S.A. was retained by Xstrata Copper (Peru) S.A. to monitor and report quality assurance/quality control (QA/QC) results for Xstrata's 2005 Las Bambas drill program. The drill program submitted a total of 30,045 core samples to the primary Lab, BS Inspectorate laboratory, including 3,562 QA/QC samples. The Cu assays of the 2005 drilling exploration campaign at Las Bambas are considered to be sufficiently precise and accurate for resource estimation.
- QA/QC coverage of the pre-2005 drill holes was reviewed and found to be deficient. As a result, those parts of the Mineral Resources which would have been categorised as Indicated but which were majority dependant on pre-2005 drilling were reclassified to Inferred.
- Grade interpolation for Cu, Mo, and Au was completed within lithological domains using inverse distance weight techniques with composites of 15 m length interpolating to blocks 20x20x15 m. Mineral Resources were categorised as Indicated based on a minimum of 3 composites, a maximum of 6 composites, with a maximum of 2 composite per drill hole and within 50 m to the nearest composite. Drill hole spacing for Indicated Resource would broadly correspond to a 70 m grid. AMEC (Peru) S.A. has calculated the confidence limits for determining appropriate drill grid spacing for Indicated Resource. The statistical criterion used for Indicated Resource is that a yearly ore production should be known to at least +/-15 percent with 90 percent confidence. A drill grid spacing of 70 m gives a 90 percent confidence interval of +/-8 percent on an annual basis. The drill spacing of 70 m is well within the suggested limits of +/-15 percent. The drill spacing of 70 m was selected to ensure that the continuity of grade, along with the extent and shape of the mineralization, is sufficiently delineated to give a reliable estimate of tonnes and grade.
- Inferred Resource was based on a minimum of one composite, to a maximum of 6 composite, with a 1 drill hole minimum, and a distance of 75 m to nearest composite. Drill hole spacing for Inferred would correspond to a 100 m grid.
- A comprehensive coverage of density measurements from the various rock types was generated during the 2005 drilling program. Model blocks were tagged with the corresponding rock type and subsequently assigned the average density for that rock type.
- No metallurgical assumptions have been made in the resource estimation. No differentiation between oxide, transitional and sulphide zones has been attempted in this initial estimate.
- Mineral Resource estimates in the table are reported to a cut-off grade of 0.5% total copper. While no specific economic studies were undertaken to justify this cut-off grade, it is considered to be a reasonable first approximation to an economic cut-off for the type and scale of operation anticipated for the Las Bambas deposits.
- All deposits remain open at depth with no indication that mineralization is decreasing in quality or quantity; therefore, there is good potential that additional Mineral Resources will be added with continued deeper drilling. In addition, near-surface Mineral Resources have not been completely closed off so that potential exists for incremental increases in tonnage with further drilling.
- A drilling program of 100,000 m is planned for 2006. The program will focus on further resource delineation at the three deposits drilled in 2005, including the search for resource extensions to depth. Initial drill tests of two other deposits, Charcas and Azuljaja, will also be completed.

(h) Competent Person for Mineral Resource / Competent Person for Ore Reserve; where only one set of initials are listed, the same Competent Person is responsible for both Mineral Resources and Ore Reserves

Competent persons
MJ = Myles Johnston, Xstrata Copper (AusIMM)
IH = Ian Holland, Xstrata Copper (AusIMM)
CS = Cameron Schubert, Xstrata Copper (AusIMM)
JM = Jeffrey Moncrieff, Xstrata Copper (AusIMM)
LR = Luis Rivera, Xstrata Copper (AusIMM)
EO = Edward Orbock, Amec (AusIMM)

Notes

- Rounding to two significant figures has been applied generally to tonnage and grade estimates with rounding to one significant figure applied in most cases to Inferred Mineral Resources.
- The term 'Ore Reserve', as used in this public statement in accordance with Australian practice, has the same meaning as 'Mineral Reserve' as defined in The Code for Reporting of Mineral Exploration Results, Mineral Resources and Ore Reserves (The Reporting Code), October 2001 edition.

[a] Mount Isa Lead Mine: Lead-zinc-silver mineralisation occurs in galena- and sphalerite-rich bedding parallel horizons in dolomitic and variably carbonaceous pyritic shales and siltstones. Mine production totalling 0.8 million tonnes at 4.4 % Pb, 5.1 % Zn and 122 g/t Ag depleted the Ore Reserve and Mineral Resource. Resource categorisation is based upon consideration of orebody continuity, structural complexity, metallurgical knowledge and data coverage. The reduction in the resource reflects the elimination of the Isa Pit / Lead mine overlap. The reserve tonnage reflects the production schedule for the last six months of the mine's life.

[b] Black Star Open Cut: Lead-zinc-silver mineralisation occurs in galena and sphalerite-rich bedding parallel horizons in dolomitic and variably carbonaceous pyritic shales and siltstones. Approximately 85% of the lead-zinc-silver Resource is primary sulphide, the remainder being considered as transitional (mixed primary sulphide and secondary oxide/carbonate) mineralisation. Mine production totalling 0.3 million tonnes at 4.6 % Zn 3.2 % pb and 45 g/t Ag depleted the Ore Reserve and Mineral Resource. Mineral Resource categorisation is based on assessment of orebody continuity, structural complexity and adequacy of data coverage. The resource mineralisation occurs inside a designed Stage 4 pit utilising Measured. Indicated and inferred resource blocks. It is reported above a 16.55 NSR (Net Smelter Return). The Mineral Resource estimate is based on a block model built with grade interpolation by ordinary kriging reporting to blocks with dimensions of 6mE x 15mN x 8mRl. The Resource model is developed from approximately 1,020,350m of diamond drilling, 18,400m of RC drilling and 168,200m of underground sampling. Potential revenue from the oxidised portion of the silver-lead-zinc mineralisation has not been used in the optimisation nor has this mineralisation been reported as Mineral Resource. The Black Star Proved and Probable reserve does not include the Lead Mine Proved and Probable reserve within the Black Star pit.

[c] Mount Isa Open Pit: Lead-zinc-silver mineralisation occurs in galena and sphalerite-rich bedding parallel horizons in dolomitic and variably carbonaceous pyritic shales and siltstones. Approximately 85% of the lead-zinc-silver Resource is primary sulphide, the remainder being considered as transitional (mixed primary sulphide and secondary oxide/carbonate) mineralisation. The Identified Mineral Resource has been re-modelling and reclassification on the basis of the pre-feasibility drilling performed for Isa Open Pit as well as the feasibility drilling for the Black Star Open Cut during the previous two years. The Black Star Open Cut Resource has been removed from the Isa Open Pit and is reported separately. Mineral Resource categorisation is based on assessment of orebody continuity, structural complexity and adequacy of data coverage. Pit optimisation was applied to the new Resource block model, using Measured, Indicated and Inferred Mineral Resources, and a pit shell was generated. Mineral Resources have been reported inside this pit shell using a cut off 16.55 NSR (Net Smelter Return). The NSR is calculated on a recoverable payable basis, taking lead, zinc and silver grades, metallurgical recoveries, prices and realisation costs into account. Depending on lead silver credits. Potential revenue from the oxidised portion of the silver-lead-zinc mineralisation has not been used in the optimisation nor has this mineralisation been reported as Mineral Resource.

[d] George Fisher North & South Orebodies: Lead-zinc-silver mineralisation occurs in galena- and sphalerite-rich bedding parallel horizons in dolomitic and variably carbonaceous pyritic shales and siltstones. Mine production totalling 2.6 million tonnes at 5.1% Pb, 8.7% Zn and 114 g/t Ag depleted the Ore Reserve and Mineral Resource. Orebody re-interpretation, re-modelling and reclassification of the Identified Mineral Resources were completed on the basis of additional geological information and operating experience during the year. Classification is based on assessment of orebody continuity, structural complexity and

adequacy of data coverage. Total Ore Reserve tonnage increased by 15.7 million tonnes due to additional drilling, improved resource to reserve conversion favourable metal prices and orebody re-interpretation. 2005 reserve Silver, Lead and Zinc grades were lower than 2004 grades mainly due to change in the dilution estimation process and favourable metal prices. Stope geotechnical performance in C and D ore bodies was continually monitored in 2004/05. Modified Dilution Graph, RQD Plots & Stable Beam Theory based stope designs were used in C and D orebody. Historical dilution values were used where limited geotechnical data was available.

[e] McArthur River: Underground Mine production of 1.52 million tonnes at 12.1% Zn, 5.3% Pb and 52 g/t Ag depleted the Ore Reserve and Mineral Resource during 2004-2005. As of 1 July 2005, all identified Mineral Resource and reserves tabulated here except for Woyzbun south are reported within designed pit shells and there is a reasonable prospect that these resources will be mined at some stage in the future by open pit methods. Resource that fall outside the ulimate pit shell (other than Woyzbun south) are not reported. The reported open pit resources include the depletion of 10 years of reconciled underground mining production totalling 10MT of measured resource. Measured Resource are classified by successful underground mining, miling and reconciliation of areas of number 2, 2/3, 3, 4 and 5 ore bodies where there is greatest structural and grade continuity. Indicated Rsources are classified based on areas of increased strucutural uncertainty due to faulting and folding and increased grade variation due to the proximity of the ore bodyfringe. By default, Number 6, 7 and 8 ore bodies and all transitional ore are classed as indicated due to the uncertainty of their metallurgical characteristics. Conversion of Measured Resources into the highest confidence category of Proven Reserve has not been undertaken due to a lower certainty of geotechnical, environmental and hydrological factors. All resources have been converted into probable reserve on the basis of an estimated 15% dilution of waste breccia interbeds and 10% mining losses within Pit shell Stage 6. This pit design is based on the optimal pit when minning 1.8Mtpa of ore to produce a bulk concetrate. Woyzbun South resources are parallel sphalente and galena rich bands hosted by dolomitic and carbonaceous pyritic siltstones, graded beds and chaotic debris flow breccias.

2. Alumbrera Ore Reserves and Mineral Resources Report

The following is extracted without material amendment from the reserves and mineral resources report published by Xstrata on 30 June 2006 in respect of the Bajo de la Alumbrera operation in Argentina in which the Enlarged Xstrata Group has a 50% interest:

COPPER – Bajo de la Alumbrera

30 June 2006

As a consequence of the announced increase in the Bajo de la Alumbrera Ore Reserves, the new statement is:

Ore Reserves*

Proved	380 Mt	@ 0.45 %Cu & 0.49 gpt Au
Probable	24 Mt	@ 0.42 %Cu & 0.43 gpt Au
Total	400 Mt	@ 0.45 %Cu & 0.49 gpt Au

Mineral Resources*

(Inclusive of those Mineral Resources modified to produce the Ore Reserves)

Measured	400 Mt	@ 0.45 %Cu & 0.48 gpt Au
Indicated	24 Mt	@ 0.42 %Cu & 0.43 gpt Au
Total	420 Mt	@ 0.45 %Cu & 0.48 gpt Au

The Competent Person for this Ore Reserve and Mineral Resource estimate is Mr. Luis Rivera who is a member of the Australasian Institute of Mining and Metallurgy. Mr. Rivera is a full-time employee of Minera Alumbrera Limited. Mr. Rivera has sufficient experience which is relevant to the style of mineralization and type of deposit under consideration and the activity which he is undertaking to qualify as a Competent Person as defined in the 'Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves'. Mr. Rivera consents to the inclusion in this website posting of the matters based on his information in the form and context in which it appears.

These Ore Reserve and Mineral Resource estimates represent the position at 30 June 2006.

The term 'Ore Reserve', as used in this public statement in accordance with Australian practice, has the same meaning as 'Mineral Reserve' as defined in The Code for Reporting of Mineral Exploration Results, Mineral Resources and Ore Reserves (The Reporting Code), October 2001 edition.

Rounding to two significant figures has been generally to tonnage and grade estimates.

The Proved Reserves include 100 million tonnes @ 0.35 % Cu, 0.40 g/t Au of medium and low grade material stockpiled for future treatment. This estimate is based on a resource block model (ALUK) which was constructed using Ordinary Kriging interpolation within geological constraints from an assay database comprising some 90,000 metres of diamond drilling and 15,000 metres of reverse circulation drilling.

Ore Reserves are based on a pit optimisation (Pit 729) performed on the ALUK resource block model, and are reported using an economic cut-off grade of 0.27% copper equivalent. The economic cut-off is based on appropriate dilution factors and metallurgical recoveries, and uses commodity prices of US$400 per ounce of gold and US$1.00 per pound of copper. The stripping ratio (S.R.) for Pit 729 is 2.0; S.R. is defined as the in-pit tonnes of waste divided by the in-pit tonnes of ore. No stockpiled ore is considered in this figure.

18.0 million tonnes of Proved and Probable Reserves have been mined and processed during the six months to June 30th 2006 from the December 31st, 2005 Ore Reserve and additional 40 million tonnes of ore defined under and surrounding the previous pit bottom ring have been included in the Reserves. Identified Mineral Resources are generated from pit optimisation studies using possible future technical and economic scenarios (Pit 730), to define mineralisation which might in whole or in part become economically extractable.

Identified Mineral Resources are reported on the basis of a payable copper equivalent grade of 0.27%. The ultimate pit slopes design was based on Call & Nicholas Inc. recommendations (CNI, Tucson AZ, USA). Primary sulphide mineralisation comprises disseminated, vein and fracture controlled chalcopyrite in altered Dacite and Andesite host rocks, with chalcocite and covellite in the enriched zone.

3. Falconbridge Group Mineral Reserves and Mineral Resources Information

Unless otherwise indicated, in this document mineral reserves and mineral resources information in relation to the Falconbridge Group is reported as at 31 December 2005.

The following is extracted without material amendment from Falconbridge's Annual Information Form dated 22 March 2006:

Mineral Reserves[1]

		Total	29,301	–	–	–	–	–	–	25.06

Notes:

(1) No adjustments have been made for metal losses during processing.

(2) The Collahuasi mineral reserves have been estimated and provided by the operator of the joint venture based on a copper price of $0.95. The mineral reserves are estimated and classified using the Australasian code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code). The estimates are inspected annually by Chester Moore. Proven plus probable molybdenum reserves at the Rosario deposit total 1,055,694 tonnes at 0.025% molybdenum and are part of the total reserves as stated.

(3) The Antamina mineral reserves have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore. Estimates used the following metal prices: copper $0.95/lb, zinc $0.50/lb, molybdenum $5.00/lb, and silver $5.00/oz.

(4) Estimates used the following metal prices and exchange rate: zinc $0.65/lb, copper $1.50/lb, lead $0.35/lb, silver $6.50/oz and Cdn$1.50 for US$1.00.

(5) The St. Ann Bauxite mineral reserves have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore.

Notes:

[1] Mineral resources do not include allowances for dilution or mining recovery.

[2] The mineral resources have been estimated and provided by the operator of the joint venture based on a copper price of $1.15. The mineral resources are estimated and classified using the Australasian code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code).
The estimates are inspected annually by Chester Moore. The inferred resource total does not include the inferred resource estimate of 248 million tonnes grading 1.5% copper at Rosario West.

[3] The Antamina mineral resources have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore. Estimates used the following metal prices: copper $0.95/lb, zinc $0.50/lb, molybdenum $5.00/lb, and silver $5.00/oz.

[4] Mineral resource total does not contain limonite inferred resource of 100 million tonnes grading 1.6% nickel and 0.2% cobalt.

The reconciliation of mineral reserves at each of the mines as at December 31, 2004 to December 31, 2005 are as follows:

		Falconbridge's beneficial interest (%)	December 31, 2004 (000 mt)	Ore treated in 2005 (000 mt)	Additions/ revisions (000 mt)	December 31, 2005 (000 mt)

Notes:
[1] The mineral resources/reserves are shown on a 100% basis.
[2] Subject to fulfillment of certain conditions.
[3] The mineral resources are supplied by the operator of the Collahuasi joint venture
[4] Mineral reserves and resources estimated by Highlands Pacific Limited, the optionor of the property.
[5] Also included as part of the Kidd Creek mineral resources on the Mineral Reserves and Mineral Resources table in this Item 3.9.4.
[6] Option to purchase.
[7] Also included as part of the Sudbury mineral resources on the Mineral Reserves and Mineral Resources table in this Item 3.9.4.
[8] The mineral resources were estimated and classified using the Australasian Code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code) which are comparable to the NI 43-101 definitions. These estimates would not have been materially different if made using the CIM definitions.
[9] Resource estimate supplied by Teck Cominco Limited. Estimate developed as part of economic evaluation study with dilution and mining recovery included.

Financial Information Relating to the Falconbridge Group

[This page is intentionally left blank]

Financial Information Relating to the Falconbridge Group

Introduction

The following financial information relating to the *Falconbridge Group* is set out in this Part X:

(a) the unaudited consolidated financial statements of Falconbridge prepared in accordance with Canadian GAAP for the six-month period ended 30 June 2006 (which include, for comparative purposes, financial information for the six-month period ended 30 June 2005 and financial information for the three-month periods ended 30 June 2006 and 30 June 2005) including notes thereto; and

(b) a comparative table and notes which are extracted without material amendment from the following financial information prepared in accordance with Canadian GAAP:

(i) the audited consolidated financial statements of Falconbridge for the year ended 31 December 2005; and

(ii) the audited consolidated financial statements of Noranda for the years ended 31 December 2004 (as reported and as restated to reflect subsequent changes in accounting policies (with such restatements described in the notes)) and 31 December 2003.

Differences between accounting policies applied by the Former Xstrata Group and the Falconbridge Group

Xstrata's historical financial information for each of the two years ended 31 December 2003 and 31 December 2004 has been prepared in accordance with UK GAAP. Xstrata's historical financial information for the year ended *31 December 2005* (and, for comparative purposes, the year ended 31 December 2004) and the six-month period ended 30 June 2006 (and, for comparative purposes, the six-month period ended 30 June 2005) has been prepared in accordance with IFRS.

The Falconbridge Group's historical financial information for each of the three years ended 31 December 2003, 31 December 2004 and 31 December 2005 and the six month-period ended 30 June 2006 has been prepared in accordance with Canadian GAAP. Significant differences exist between UK GAAP and Canadian GAAP and between IFRS and Canadian GAAP which might be material to such financial information.

See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP". Differences exist between UK GAAP and Canadian GAAP and between IFRS and Canadian GAAP which could significantly affect balance sheet classifications, income statements and the amount and type of disclosures that would have been needed to have been made if the Falconbridge Group's historical financial statements were prepared in accordance with UK GAAP or IFRS.

See also Part III – "Unaudited Pro Forma Financial Information - Notes to the unaudited pro forma financial information – IFRS reconciliation statements" for unaudited reconciliations converting statements of the financial performance and position of Falconbridge *from Canadian GAAP to IFRS*, as applied by Xstrata, as at and for the six-month period ended 30 June 2006 and for the year ended 31 December 2005.

Louvicourt Mine Production - 2005

Not included in the above totals are Falconbridge's share of production from the now closed Louvicourt copper/ zinc mine. The Louvicourt mine produced the following volumes of metal contained in concentrate that was transferred to the Horne smelter.

(Falconbridge's equity share of contained tonnes or millions of ounces)

Production:	Q2 - 2005
Copper	3,959
Zinc	2,539
Silver	103

Note 2005 production and sales figures have been restated to conform to the current year's presentation

Note 1 Sales are defined as sales to third parties and are net of all intra-company transfers

Note 2: Realized prices are the average from all sales across all business units

Detailed production and sales volume reports by business unit are available in the Supplemental Slides presentation accessible on Falconbridge's website at www.falconbridge.com in the Investor Relations >> Quarterly Earnings section

Louvicourt Mine Production - 2005

Not included in the above totals are Falconbridge's share of production from the now closed Louvicourt copper/ zinc mine. The Louvicourt mine produced the following volumes of metal contained in concentrate that was transferred to the Horne smelter.

(Falconbridge's equity share of contained tonnes or millions of ounces)

Production:	YTD - 2005
Copper	7,280
Zinc	5,127
Silver	169

Note: 2005 production and sales figures have been restated to conform to the current year's presentation.

Note 1: Sales are defined as sales to third parties and are net of all intra-company transfers.

Note 2: Realized prices are the average from all sales across all business units

Detailed production and sales volume reports by business unit are available in the Supplemental Slides presentation accessible on Falconbridge's website at www.falconbridge.com in the Investor Relations >> Quarterly Earnings section.

FALCONBRIDGE LIMITED
NOTES TO CONSOLIDATED FINANCIAL STATEMENTS

(Millions of US dollars, except per share amounts and as otherwise indicated) (Unaudited)

1. Accounting Policies

These unaudited interim consolidated financial statements have been prepared using disclosure standards appropriate for interim financial statements and do not contain all the explanatory notes, descriptions of accounting policies or other disclosures required by Canadian generally accepted accounting principles for annual financial statements. Such notes, descriptions of accounting policies and other disclosures have been included in Falconbridge Limited's 2005 annual consolidated financial statements. Accordingly, these unaudited interim consolidated financial statements should be read in conjunction with Falconbridge's audited annual consolidated financial statements and the accompanying notes included in the 2005 Annual Report.

As is further described in Note 2, during 2005 Noranda Inc. ("Noranda") acquired all of the issued and outstanding common shares of Falconbridge Limited ("the former Falconbridge") that it did not previously own. On June 30, 2005, Noranda amalgamated with the former Falconbridge and the newly amalgamated company ("Falconbridge" or the "Company") was continued under the name Falconbridge Limited.

2. Business Combination

On June 30, 2005, the Company completed the two-step acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own, pursuant to the offer to purchase dated March 9, 2005. The acquisition was completed by way of an amalgamation of Noranda Inc. and the former Falconbridge Limited ("the Amalgamation") and the newly amalgamated company is continued under the name, Falconbridge Limited. The acquisition was done on a share-exchange basis with one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The former Falconbridge is a producer of nickel, copper, cobalt and platinum and has mining and metallurgical operations mainly in Canada and South America.

The first step of the acquisition was completed on May 5, 2005 when the Company successfully acquired 32.3% of all the issued and outstanding common shares of the former Falconbridge, increasing its ownership to 90.8% of the outstanding former Falconbridge common shares. On June 30, 2005, the Company completed the second step of the acquisition by proceeding with its intent to acquire the remaining 9.2% of the former Falconbridge common shares and assumed 100% of the preferred shares and stock options obligations of the former Falconbridge. The results of operation of the former Falconbridge from January 1, 2005 to May 4, 2005 have been included in the Company's consolidated statements of earnings at 58.5% and from May 5, 2005 to June 30, 2005 at 90.8%. Beginning July 1, 2005, 100% of the results from operations have been included in the Company's consolidated statement of earnings.

The acquisition has been accounted for using the purchase method, whereby the purchase consideration was allocated to the estimated fair values of the assets acquired and liabilities assumed on the date of acquisition. Any excess of purchase cost over the net identifiable tangible and intangible assets acquired represents goodwill. The Company has finalized the allocation of the purchase price related to this acquisition during the quarter. The impact of the finalization of the purchase price allocation on June 30, 2006 from the preliminary purchase price allocation is to decrease operating capital assets by $789 million, decrease development projects by $266 million, increase investments and other assets by $116 million, increase goodwill by $529 million and decrease future income taxes by $410 million. The following table represents the allocation of the purchase consideration to assets and liabilities acquired, based on their fair values.

	US$ millions except share price and number of shares
Calculation of allocation of purchase price:	
Common shares of the Company issued to the former Falconbridge shareholders	**132,840,681**
The average closing market price of the Company's shares over the six trading days from March 4 through March 11, 2005 (the purchase offer announcement date was March 9, 2005)	$ 19.07
Fair value of the Company's common stock issued	$2,534
Fair value of options to be assumed by the Company (24% vested)	6
Direct acquisition costs incurred by the Company	22
Total purchase price	$ 2,562
Fair value of assets acquired by the Company	
Cash and cash equivalents	353
Accounts receivable	178
Metals and other inventories	308
Operating capital assets	2,366
Development projects	299
Investments and other assets	161
Goodwill	529
Fair value of liabilities assumed by the Company	
Accounts and taxes payable	(177)
Debt due within one year	(106)
Long-term debt	(480)
Future income taxes	(467)
Asset retirement obligation, pension and other provisions	(257)
Interests of other shareholders	(15)
Preferred shares assumed by the company	(130)
Net assets purchased	$2,562

3. Stock-Based Compensation

The Company has a stock option plan through which options are granted to directors, officers and employees for the purchase of common shares. On the date of grant, the value associated with granted stock options is established using the Black-Scholes valuation model. The value is being charged to net income over its vesting periods.

No new stock options were granted by the Company during the three months ended June 30, 2006. Corporate and general administration, for the three and six months ended June 30, 2006, include compensation costs of $2 million and $4 million (2005 – $1 million and $2 million, respectively), relating to outstanding options.

4. Exchange Gains and Losses on Hedges of Foreign-denominated Exposures

The majority of the Company's products are denominated in US dollars or indexed to US dollar prices. In addition, operating costs of the Company's assets are also denominated in their local currency and exposed to exchange volatility. From time to time, the Company may hedge its local currency costs using foreign currency exchange contracts.

The Company's operating costs for the three and six months ended June 30, 2006 include realized exchange losses of $nil and $1 million (2005 – gains of $12 million and $32 million, respectively) from the settlement of various cost hedge contracts.

Hedges of the foreign currency denominated monetary assets and liabilities, generated gains of $31 million and $44 million (2005 – losses of $11 million and $10 million, respectively) for the three and six months ended June 30, 2006.

5. Capitalized Interest

During the three and six months ended June 30, 2006, the Company capitalized $19 million and $37 million of interest costs associated with projects under development (2005 – $10 million and $19 million, respectively).

6. Post – employment benefits

Post-employment benefit expenses for the three and six months ended June 30, 2006 and 2005 are summarized as follows:

	Three months		Six months	
Periods ending June 30,	**2006**	**2005**	**2006**	**2005**
Defined benefit plans	**8**	11	**16**	25
Defined contribution plans	**5**	3	**9**	6
Other benefits plans	**10**	8	**19**	15
	23	22	**44**	46

7. Preferred Shares Liabilities

On April 26, 2006, the Company redeemed a total of 20 million or $500 million, of its outstanding Junior Preference Shares. On June 28, 2006, the Company redeemed the remaining balance of approximately 10 million or $250 million, of its outstanding Junior Preference Shares. Each Junior Preference Share was redeemed at a price of $25.25 plus accrued and unpaid dividends. Upon these redemptions, the Company had no more outstanding Junior Preference Shares.

8. Variable Interest Entity

During the quarter, a joint venture was formed by the Company and its partner, SMSP, for the Koniambo Nickel project. The joint venture is 49% owned by the Company and 51% owned by SMSP. The formation of the project reflects the contribution of mining rights and bankable feasibility studies by the two partners to the project respectively. The joint venture was determined to be a variable interest entity in which the Company, as the financier and manager of the project, is the primary beneficiary. As a result, the Company consolidated 100% of the net assets of the joint venture and recorded the related minority interest, which represents the 51% of the project net assets owned by SMSP. The consolidation of the joint venture resulted in an increase to the operating capital assets by $183 million and a corresponding increase to the interest of other shareholders on the balance sheet as at June 30, 2006.

9. Shareholders' Rights Plan

On March 21, 2006, the Company enacted a new shareholder rights plan, designed to prevent a bidder from acquiring control of the Company in a manner detrimental to shareholders. The rights issued under the rights plan become exercisable when a person, together with any parties related to it, acquires or announces its intention to acquire 20% or more of the Company's outstanding common shares without complying with the "Permitted Bid" provisions of the rights plan or without approval of the Board of Directors of the Corporation. Should such an acquisition occur, rights holders (other than the acquiring person and related persons) can purchase common shares of the Corporation at half the prevailing market price at the time the rights become exercisable. Under the rights plan, a Permitted Bid is a bid made to all holders of the Corporation's common shares for all of their shares. If at the expiry of the bid at least 50% of the outstanding shares, other than those owned by the offeror and certain related parties have been tendered, the offeror may take up and pay for the shares. The rights plan will not prevent an offer made to all shareholders for all of their shares. On June 30, 2006, in response to the application by Xstrata plc to terminate the rights plans, the Ontario Securities Commission issued an order stating that the Falconbridge Shareholder Rights Plan will remain in place until the earlier of Xstrata plc obtaining a majority of the outstanding common shares of Falconbridge it does not own based on its offer dated May 18, 2006 (revised on July 11, 2006 and revised again on July 19, 2006) to acquire 100% of Falconbridge shares at C$62.50 per common share in cash, or July 28, 2006.

10. Subsequent event

On July 16, 2006, the Company declared a special dividend of C$0.75 per common share payable on August 10, 2006 to shareholders of record at close of business on July 26, 2006. This amount was accrued on the date of declaration.

11. Contingent liabilities

During the quarter, the Company secured a letter of credit of Cdn $200 million for the pension liabilities of the Company's Canadian operations.

On May 13, 2006, the Company amended the terms of its support agreement with Inco Limited ("Inco") which was initially endorsed by Inco and the Company in October, 2005 for a take-over bid for all the outstanding shares of the Company by Inco payable in cash and Inco shares. The completion of the take-over bid requires acceptance of 50.01% of all common shareholders of the Company on a fully-diluted basis. In accordance with the revised support agreement, the Company will be required to provide for a payment of up to $450 million to Inco in the event that the acquisition is not completed for certain reasons.

As part of the process of obtaining regulatory approvals for the Inco take-over bid, on June 7, 2006, the Company and Inco reached a definitive agreement with LionOre Mining International Ltd. ("LionOre") covering the sale to LionOre of Falconbridge's Nikkelverk refinery in Norway and the Falconbridge marketing and custom feed organizations that market and sell the finished nickel and other products produced at Nikkelverk and obtain third party feeds for this facility. The purchase price to be paid by LionOre for the operations to be sold is $650 million, of which $400 million will be in cash and $250 million of LionOre common shares. The closing of the sale is conditional on Inco taking up and paying for Falconbridge shares pursuant to its offer and certain other standard terms and conditions to closing. If this condition is not met, the Company would be required to provide for the payment of $32.5 million which is included in the fee of $450 million paid to Inco if the Inco take-over bid is not completed.

14 Comparative Figures

The comparative consolidated financial statements have been reclassified from statements previously presented to conform to the presentation of the 2006 consolidated statements.

Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003

Nature of the financial information

On 30 June 2005 Noranda and Former Falconbridge completed their merger transaction, whereby Noranda increased its majority interest in Former Falconbridge. Following the transaction Noranda operates under the name Falconbridge. The financial information presented relates to Falconbridge for the year ended 31 December 2005 and Noranda for the two years ended 31 December 2004 and 31 December 2003 on the basis that Noranda consolidated Former Falconbridge within its accounts for the two years ended 31 December 2004 and 31 December 2003. This financial information therefore provides a consistent record of financial information for the ongoing Falconbridge business.

The financial information presented in this section, relating to the Falconbridge Group, has been extracted without material amendment from the audited financial statements for the year ended 31 December 2005 disclosed in Falconbridge's (formerly Noranda) annual accounts and for the two years ended 31 December 2004 and 31 December 2003 disclosed in Noranda's annual accounts, in each case as filed with the Canadian Securities Administrators (CSA) and CDS INC, a subsidiary of The Canadian Depositary for Securities Limited. The financial statements are prepared in accordance with Canadian GAAP.

Ernst & Young LLP (Canada) has issued audit reports on the financial statements of Falconbridge for the year ended 31 December 2005 and of Noranda for the two years ended 31 December 2004 and 31 December 2003. Each such audit report was unqualified.

All amounts included in the following financial information table are presented in US dollars unless otherwise indicated.

Comparability of financial information

During 2005 Falconbridge changed its accounting policy with respect to the accounting for convertible debentures, preferred shares, Series H and variable interest entities. Within its 2005 accounts Falconbridge retrospectively restated its financial information for the year ended 31 December 2004. Publicly available results for the year ended 31 December 2003 were not available on a restated basis. To aid the comparability of the financial information for the year ended 31 December 2003, the results for the year ended 31 December 2004 as they were reported (ie: prior to the application of the accounting policy change) have also been included.

On 1 June 2004, Noranda changed its accounting policy with respect to the accounting for asset retirement obligations. Within its 2004 annual accounts Noranda retrospectively restated its financial information for the year ended 31 December 2003. The financial information presented for the year ended 31 December 2003 has been extracted from the Noranda 2004 annual accounts.

The impact of these accounting policy changes is further discussed in Note 2 to the financial information.

In respect of notes 13 and 20 below, additional disclosures were provided for the years ended 31 December 2004 and 31 December 2003 (which were not provided for the year ended 31 December 2005) and these have also been included within the financial information presented below.

Historical financial information for the Former Xstrata Group in this document is presented in US dollars and has been prepared in accordance with IFRS and UK GAAP. Historical financial information for the Falconbridge Group in this document is presented in US dollars and has been prepared in accordance with Canadian GAAP.

UK GAAP (in accordance with which Xstrata previously prepared its financial information) and IFRS differ in certain significant respects from Canadian GAAP. See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP".

Please note that in the following financial information where Falconbridge is referenced this refers to: Falconbridge (formerly Noranda) for the year ended 31 December 2005; and Noranda for the years ended 31 December 2004 and 31 December 2003.

Consolidated Balance Sheet

Notes to the Consolidated Financial Statements for the years ended 31 December 2003, 2004 and 2005

1. Accounting Policies

Basis of Presentation of the Consolidated Financial Statements

The accompanying consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles which are in conformity, in all material respects, with United States generally accepted accounting principles, except as described in Note 22. The consolidated financial statements include the accounts of Falconbridge (formerly Noranda prior to the merger transaction on 30 June 2005, see note 3) and all of its subsidiaries and joint ventures (together, "Falconbridge" or "the Company"). Long-term investments in companies in which Noranda has significant influence are accounted for on the basis of cost plus equity in undistributed earnings since the dates of investment. The interests of the Company, Falconbridge Limited ("Falconbridge") and Novicourt Inc. ("Novicourt") in their joint ventures are proportionately consolidated. The difference between the cost of the shares of acquired companies and the underlying net book value of the assets is amortized over the estimated economic life of the assets to which the difference is attributed.

Reporting Currency and Translation of Foreign Currencies

Effective July 1, 2003, the United States dollar ("U.S. dollar") was adopted as the unit of measure of Falconbridge's Canadian operations which reflects significant operational exposure to the U.S. dollar and predominantly the U.S. dollar-based asset and investment base of the Company. Concurrent with this change in functional currency, Noranda adopted the U.S. dollar as its reporting currency. In accordance with Canadian generally accepted accounting principles, the Company restated all amounts presented for comparative purposes into U.S. dollars using the current rate method whereby all revenues, expenses and cash flows are translated at the average rates that were in effect during these periods and all assets and liabilities are translated at the prevailing noon rate in effect at the end of these periods. Equity transactions have been translated at historic rates; with opening equity restated at the rate of exchange on January 1, 1999. The resulting net translation adjustment on the change in functional currency has been credited to the cumulative translation account.

For periods after July 1, 2003, the assets and liabilities of Falconbridge's self-sustaining operations having a functional currency other than the U.S. dollar are translated into U.S. dollars using the exchange rate in effect at the period end and revenues and expenses are translated at the average rate during the period. Cumulative exchange gains and losses on translation of the Company's net equity investment in these operations are deferred as a separate component of shareholders' equity. Gains or losses on foreign currency loans and transactions that are designated as hedges of a net investment in self-sustaining foreign operations are reported in shareholders' equity in the same manner as translation adjustments.

Foreign currency balances and the financial statements of integrated foreign operations are translated into U.S. dollars using the temporal method. Under the temporal method, foreign-denominated monetary assets and liabilities are translated at the exchange rates prevailing at the year end, and revenue and expenses (other than depreciation and amortization) at average rates of exchange during the year. Exchange gains and losses arising on the translation of the accounts are included in the consolidated statement of income (loss). Non-monetary assets and liabilities are translated at historical rates of exchange and depreciation and amortization are translated at the same rates as the assets to which they relate.

Prior to July 1, 2003, Noranda's Canadian operations have been measured in Canadian dollars and consolidated financial statements have been expressed in Canadian dollars. The accounts of self-sustaining foreign operations were translated using the current rate method, under which all assets and liabilities were translated at the exchange rate prevailing at year end, and revenues and expenses at average rates of exchange during the year. Gains or losses on translation of these account balances were not included in the consolidated statements of loss, but deferred and shown as a separate item in shareholders' equity. Gains or losses on foreign currency loans and transactions that were designated as hedges of a net investment in self-sustaining foreign operations were reported in shareholders' equity in the same manner as translation adjustments.

Cash and Cash Equivalents

Cash and cash equivalents include cash on account, demand deposits and short-term investments with original maturities of three months or less and are stated at cost, which approximates market value. Cash and cash equivalents of US$886m

(2004 – US$884m; 2003 – US$501m) include US$34m of restricted cash (2004 – US$35m; 2003 – US$33m) to be used for repayment of senior debt of the Antamina project.

Short-term Investments

Investments in corporate commercial paper issues have original maturities between four and nine months and are stated at cost, which approximates market value.

Valuation of Inventories

Mining and metallurgical product inventories are valued at the lower of net realizable value and average cost, where costs are comprised of direct costs and an allocation of production overheads and depreciation of production-related assets. Nickel, aluminium and fabricated product inventories are valued at the lower of cost (determined on a first-in, first-out basis, comprised of direct costs and an allocation of production overheads and depreciation of production-related assets) and net realizable value. Inventories of operating supplies and raw materials are valued at the lower of average direct acquisition cost and replacement value.

Revenue Recognition

Revenues from the sale of base metals, aluminium and fabricated products and from by-product materials are recorded at the time of sale, when the rights and obligations of ownership pass to the buyer. Under the terms of concentrate sales contracts with third parties, final prices for metals in the concentrate are set based on the prevailing spot metal prices on a specified future date based on the date that the concentrate is delivered. The Company records revenues under these contracts based on the forward prices at the time of the sale and the revenues are adjusted at each subsequent balance sheet date to the then current forward prices. Price changes for shipments which at year end are awaiting final pricing could have a material effect on future revenues.

Financial Instruments

Falconbridge enters into interest rate swap agreements to alter the interest characteristics of a portion of its outstanding debt from a fixed to a floating rate basis. These agreements involve the receipt of fixed-rate amounts in exchange for floating rate interest payments over the life of the agreement without an exchange of the underlying principal amount. Falconbridge also enters into interest rate swap agreements that involve the payment of fixed-rate amounts in exchange for the receipt of floating rate interest over the life of the agreement. The differential paid or received on the interest rate swap agreements that qualify for hedge accounting is reflected as an addition to a reduction from interest on the statements of earnings. For those contracts that do not qualify for hedge accounting, or for those which Falconbridge does not seek hedge accounting, the net interest received/paid on those positions is shown as a component of gain, net of restructuring costs and other, together with the change in fair value of those contracts during the period.

Falconbridge uses forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures and futures, and forward and option contracts to hedge the effect of price changes on a portion of the commodities it sells. Gains and losses on these contracts are reported as a component of the related transactions. Gains and losses on early termination of hedging contracts are deferred until the hedged items are recognized in earnings. From time to time, Falconbridge enters into futures and forward contracts for the purchase or sale of commodities and currencies not related to production, or not designated as hedges. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Falconbridge also uses cross-currency swap agreements which are used to hedge the interest rate risk and foreign currency exposures related to its non-U.S. dollar-denominated debt. Gains or losses on these contracts are accounted for in the same manner as the interest rate swap agreements and forward exchange contracts discussed above.

Financial instruments designated as hedges are tested for effectiveness on a quarterly basis. Gains and losses on those contracts that are proven to be effective are reported as a component of the related transaction. Falconbridge uses the critical terms method and regression analysis to assess the hedge effectiveness of interest rate swaps, and uses match-terms and the dollar-offset approach to assess the hedge effectiveness of its foreign exchange contracts.

Falconbridge formally documents all relationships between hedging instruments and hedged items, as well as its risk management objective and strategy for undertaking various hedge transactions. This process includes linking all derivatives to specific firm commitments or forecasted transactions.

Falconbridge does not consider the credit risk associated with its financial instruments to be significant. Interest rate swaps, foreign currency contracts and commodity hedge contracts are maintained with high-quality counterparties, and Falconbridge does not anticipate that any counter-party will fail to meet its obligations.

As of January 1, 2004, Falconbridge adopted the recommendations of AcG 13 which provide for more restrictive conditions as to when hedge accounting may be used (see note 2).

Depreciation, Amortization

Depreciation of property, plant and equipment is based on the estimated service lives of the assets (4 to 40 years), calculated primarily on a straight-line basis for metallurgical operations and on a unit-of-production basis for mining operations. Resource properties are depleted and preproduction and mine development expenditures are amortized over a unit-of-production method. Depreciation and amortization under the unit-of-production method is measured as the net book value of the related asset multiplied by the ratio of tonnes milled during the period over proven and probable reserves at the start of the period. Construction in progress will be depreciated once the project is substantially completed.

Asset Retirement Obligations

Effective January 1, 2004, Falconbridge adopted the new Canadian Institute of Chartered Accountants (CICA) standards for Asset Retirement Obligations (CICA 3110) (see note 2).

In accordance with CICA 3110, asset retirement obligations are recognized when incurred and recorded as liabilities at fair value. The amount of the liability is subject to re-measurement at each reporting period. The liability is accreted over time through periodic charges to earnings. In addition, the asset retirement cost is capitalized as part of the asset's carrying value and amortized over the estimated life of the mine. The key assumptions on which the fair value of the asset retirement obligations is based includes the estimated future cash flows, the timing of those cash flows and the credit-adjusted risk-free rate or rates on which the estimated cash flows have been discounted.

The asset retirement obligation and closure costs may change materially based on future changes in operations, costs of reclamation and closure activities, regulatory requirements and the outcome of legal proceedings.

Preproduction Costs

Preproduction costs related to major projects are deferred until the facilities achieve commercial production or are deemed to be uneconomic. These deferred costs are amortized on a unit-of-production method over the estimated useful life of the project or are written off when the project is determined to be uneconomic.

Asset Valuation

The Company assesses long-lived assets, such as operating capital assets, for recoverability whenever indicators of impairment exist. When the carrying value of a long-lived asset is less than its net recoverable value as determined on an undiscounted basis, an impairment loss is recognized to the extent that its fair value, measured as the discounted cash flows over the life of the asset when quoted market prices are not readily available, is below the asset's carrying value.

Exploration

Mining exploration expenditures are charged against current earnings unless they relate to properties that have been subjected to sufficient pre-feasibility work that indicates future mine production is reasonably certain. Gains on the sale of mining exploration properties or recoveries of costs previously written off are credited against exploration expense.

Income and Production Taxes

Current taxes are recognized for the estimated income and mining taxes payable for the current year.

Future tax assets and liabilities are recognized for temporary differences between the tax and accounting bases of assets and liabilities as well as for the benefit of losses available to be carried forward to future years for tax purposes that are

more likely than not to be realized. Future taxes are measured using the tax rates and laws that will be in effect when the differences are expected to reverse or the losses to be realized.

Interest

Interest incurred is charged to earnings, except for interest that can be identified with a major capital expenditure program. Under the policy, interest is capitalized as it arises from indebtedness incurred to finance major projects, either directly or indirectly, until the project achieves commercial production.

Employee Future Benefit Plans

The cost of retirement benefits and certain post-employment benefits are recognized as the benefits are earned by the employees. Falconbridge uses the accrued benefit method pro-rated on length of service and management's best estimate assumptions to value its pensions and other retirement benefits. Assets are valued at fair value for the purpose of calculating the expected return on plan assets. Past service costs from plan amendments are amortized on a straight-line basis over the term of the collective agreements being ratified. The excess of the net actuarial gain (loss) over 10% of the greater of the benefit obligation and the fair value of plan assets is amortized over the expected average remaining service period of active employees.

Under its defined contribution retirement savings program, Falconbridge makes payments based on employee earnings and partially matches employee contributions, to a defined maximum. Employees may receive profit sharing credits based on earnings.

When a defined benefit plan gives rise to an accrued benefit asset, Falconbridge recognizes a valuation allowance for the excess of the adjusted benefit asset over the expected future benefit to be realized from the plan asset. Changes in the allowance are included in the determination of pension expense.

Stock-based Compensation Plans

The Company has stock-based compensation plans. The Company accounts for stock options using the fair value method. Under this method, compensation expense for stock options granted since January 1, 2002 is measured at fair value at the grant date using the Black-Scholes valuation model and recognized over the vesting period of the options granted.

The Company also has an employee share savings plan through which employees can purchase shares of the Company at market prices. For each dollar employees contribute to the plan, the Company contributes a prescribed percentage, which is expensed as employee compensation. For the Company's deferred unit plans, a liability is recorded to the extent that the Company's common share price exceeds the notional purchase price of the units. Notional dividends on the units are recorded as a direct charge to retained earnings.

Earnings Per Share

Earnings per share is determined by dividing net earnings, after deducting preferred share dividends by the weighted-average number of common shares outstanding during the year, excluding shares securing employee share purchase loans.

Diluted earnings per share assumes that outstanding dilutive stock options are exercised at the beginning of the period (or at the time of issuance, if later) and the proceeds are used to purchase common stock at the average market price during the period, and that dilutive convertible debentures are converted into common shares at the beginning of the period.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions. These estimates affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

Comparative Consolidated Financial Statements

The 2004 comparative consolidated financial statements have been reclassified from statements previously presented to conform to the presentation of the 2005 consolidated financial statements.

The 2003 comparative consolidated financial statements have been reclassified from statements previously presented to conform to the presentation of the 2004 consolidated financial statements.

2. Changes in Accounting Policies

(a) Convertible Debentures

The principal amount of Falconbridge's outstanding convertible debentures of Cdn$131m (Note 11) due on April 30, 2007 was previously classified as an equity instrument due to the company's ability to settle principal payment by issuance of its shares. In accordance with the amended standard under CICA 3680 – *Financial Instrument – Presentation and Disclosure*, the convertible debenture is a compound financial instrument that contains both a liability element and an equity element and therefore should be bifurcated into separate liability and equity elements. Falconbridge's obligation to make scheduled interest payments in cash and Falconbridge's option to redeem the debentures in a variable number of common shares of the Company constitutes a financial liability. The holder's option to convert the liability into equity of the Company is an equity instrument.

The carrying value of the liability element which represents the present value of the Company's obligations to make future interest payments in cash and to settle the redemption value of the debentures in a variable number of shares is presented as a long-term debt on the consolidated balance sheet. The stated interest payments and accretion expense from adjusting the time value of the principal of the debentures over time using the effective interest method of amortization are recorded as interest expense on the consolidated statement of earnings. The equity component represents the fair value of the holder's conversion option established at the issuance of the debentures and is presented as a component of shareholders' equity. Upon conversion, when the Company settles the obligations in the common shares of the Company, the carrying amount of the equity element and the carrying amount of the liability are transferred to share capital.

The cumulative impact of the adoption of the standard on January 1, 2004 was to decrease retained earnings by US$33m, increase the liability component of convertible debentures by US$82m, decrease equity by US$41m and decrease the cumulative translation adjustment by US$8m. The adoption of this standard resulted in a decrease by US$14m to the previously reported earnings for the year ended December 31, 2004. and a decrease by US$44m to the previously reported retained earning as at December 31, 2004. Further disclosure regarding the convertible debentures is presented in note 11.

(b) Preferred Shares, Series H

The company has Cdn$150m (Note 12) of Cumulative Preferred Shares, Series H, which provide the holders with an entitlement to convert the shares to the Company's common shares after a specified date and were previously reported as equity instruments in accordance with their legal form. The new accounting recommendations under CICA 3860, on presentation of financial instruments, provide that the preferred shares are reclassified as liabilities because their conversion feature represents a fixed obligation to the Company. The dividends paid are reported as interest expense in the consolidated statement of earnings.

The cumulative impact of the adoption of the standard on January 1, 2004 was to decrease retained earnings by US$5m, increase liabilities by US$113m, decrease equity by US$99m, and decrease cumulative translation adjustment by US$9m. Adoption of the new standard reduced previously reported earnings by US$16m for the year ended December 31, 2004 and resulted in a decrease by US$13m to the previously reported retained earnings as at December 31, 2004. Further disclosure regarding the liabilities for the Preferred Shares, Series H, is presented in Note 12.

(c) Variable Interest Entities ("VIEs")

As of January 1, 2005 the Company adopted the recommendations of AcG-15 requiring Falconbridge to identify variable interest entities, in which it has significant variable interest, to determine whether Falconbridge is the primary beneficiary of such entities and, if so, consolidate them. VIEs include entities where the equity invested is considered insufficient to finance the entity's activities without additional subordinated financial support from other parties. The recommendations require the Company to consolidate VIEs if the investment it holds in these entities and/or the relationship it has with them result in it being exposed to a majority of their expected losses, being able to benefit from a majority of their expected residual returns, or both.

The adoption of the recommendations resulted in the Company consolidating a customer securitization vehicle, which was operated as a trust and purchased trade accounts receivable from the Company. The application of the recommendations had no impact on the Company's financial statements on January 1, 2004. The cumulative impact of the consolidation of the vehicle on January 1, 2005 was to increase current assets by US$17m and increase current liabilities by US$17m with

no impact on opening retained earnings. In 2005, the receivable purchase agreement between the Company and the trust was terminated and the trust is no longer a VIE of the Company.

(d) Asset Retirement Obligations

Effective January 1, 2004, Falconbridge adopted the new CICA standard for Asset Retirement Obligations (CICA 3110). Previously, Falconbridge expensed costs related to ongoing site restoration programs when incurred, while a provision for future site reclamation and closure costs was charged to earnings over the life of the operations.

In accordance with CICA 3110, asset retirement obligations are recognized when incurred and recorded as liabilities at fair value. The amount of the liability is subject to re-measurement at each reporting period. The liability is accreted over time through periodic charges to earnings. In addition, the asset retirement cost is capitalized as part of the asset's carrying value and amortized over the estimated life of the mine. The key assumptions on which the fair value of the asset retirement obligations is based includes the estimated future cash flows, the timing of those cash flows and the credit-adjusted risk-free rate or rates on which the estimated cash flows have been discounted. Cash outflows totalling US$1,551m are expected to be incurred over a period extending to 62 years. These cash outflows are discounted using a rate ranging from 5% to 9%. This change in accounting policy was applied retroactively and, accordingly, the consolidated financial statements of prior periods were restated.

As a result of this change, the cumulative impact from the adoption of this standard at January 1, 2003 was to decrease retained earnings by US$27m, increase capital assets by US$70m, increase the provision for asset retirement by US$97m, decrease future income taxes by US$5m and increase interest of other shareholders by US$5m. Adoption of the new standard reduced net income by US$11m for the year ended December 31, 2003.

(e) Hedging Relationships

Effective January 1, 2004, Falconbridge adopted the new CICA standard for Hedging Relationships (AcG 13). This standard is applied prospectively without restatement of prior period results. As of January 1, 2004, Falconbridge adopted the recommendations of AcG 13 which provide for more restrictive conditions as to when hedge accounting may be used. On implementation of this standard at January 1, 2004, the Company's partially-owned subsidiary, Falconbridge, recorded a deferred mark-to-market gain of US$27m on its interest rate hedges while recording a long-term receivable and long-term payable of US$67m and US$40m, for those contracts in a gain and loss position, respectively. Amortization of US$7m of this deferred gain was amortized into income during 2004, as a reduction of interest expense. Since the interest rate hedge contracts were not eligible for hedge accounting, the change in fair value on these positions are shown as a component of other income.

Falconbridge recorded a mark-to-market loss of US$1m during 2004 respectively, for those contracts which were not eligible for hedge accounting.

At January 1, 2004, Falconbridge recorded a deferred mark-to-market gain of US$3m, for energy price hedge contracts not eligible for hedge accounting, US$2m of this deferred gain was amortized into income during 2004. In addition, Falconbridge recorded a US$1m mark-to-market gain on those contracts during 2004.

Under the provisions of the new standard, Falconbridge continued to be eligible for hedge accounting on its fixed forward price hedges and on its forward and option contracts used as a currency hedge of Canadian dollars operating costs. Falconbridge did not seek hedge accounting for its contracts used as an economic currency hedge of Canadian dollar monetary assets and liabilities and accordingly continues to mark these to market.

3. Business Combination

On June 30, 2005, the Company completed the two-step acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own, pursuant to the offer to purchase dated March 9, 2005. The acquisition was completed by way of an amalgamation (the "Amalgamation") of Noranda Inc. and the former Falconbridge Limited (the "former Falconbridge") and the newly amalgamated company continued under the name Falconbridge Limited. The acquisition was done on a share-exchange basis with one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The former Falconbridge was a producer of nickel, copper, cobalt and platinum with mining and metallurgical operations mainly in Canada and South America.

The first step of the acquisition was completed on May 5, 2005 when the Company successfully acquired 32.3% of all the issued and outstanding common shares of the former Falconbridge, increasing its ownership to 90.8% of the outstanding

former Falconbridge common shares. On June 30, 2005 the Company completed the second step of the acquisition of the remaining 9.2% of the former Falconbridge common shares and assumed 100% of the preferred shares and stock option obligations of the former Falconbridge. The results of operations of the former Falconbridge from January 1, 2005 to May 4, 2005 have been included in the Company's consolidated statement of earnings at 58.5% and from May 5, 2005 to June 30, 2005 at 90.8%. Beginning July 1, 2005, 100% of the results from operations have been included in the Company's consolidated statement of earnings.

The acquisition has been accounted for using the purchase method, whereby the purchase consideration was allocated to the estimated fair values of the assets acquired and liabilities assumed on the date of acquisition. The Company has not yet finalized the allocation of the purchase price related to this acquisition and it will be refined as information relating to the valuation of operating capital assets and development projects is finalized. The preliminary fair values of the assets and liabilities of the former Falconbridge and the preliminary allocation of the purchase consideration are as follows:

(US$ millions, except share price and number of shares)	2005
Calculation of preliminary allocation of purchase price	
Common shares of the Company issued to the former Falconbridge shareholders	132,840,681
The average closing market price of the Company's shares over the six trading days from March 4 through March 11, 2005 (the purchase offer announcement was March 9, 2005)	19.07
Fair Value of the Company's common stock Issued	2,534
Fair Value of vested options assumed by the Company	6
Direct acquisition costs incurred by the Company	22
Total purchase price	2,562
Preliminary fair value of assets acquired by the Company	
Cash and cash equivalents	353
Accounts receivable	178
Metals and other inventories	308
Operating capital assets	3,154
Development projects	565
Investments and other assets	45
Preliminary fair value of liabilities assumed by the Company	
Accounts and taxes payable	(177)
Debt due within one year	(106)
Long-term debt	(480)
Future Income taxes	(876)
Asset retirement obligation, pension and other provisions	(257)
Interests of other shareholders.	(15)
Preferred shares assumed by the Company	(130)
Net assets purchased	2,562

	(17)	(84)	(33)	28

American Racing Impairment

American Racing is a subsidiary of Noranda that manufactures and distributes aluminium wheels. In 2004, Noranda recorded an impairment loss of US$50m which was applied to the carrying value of the operations in the United States. The impairment loss was determined using a discounted cash flow analysis.

On July 17, 2003, Falconbridge sold its remaining 11,984,900 Priority Units of the Noranda Income Fund for gross proceeds of US$84m. The pre-tax gain on the sale was US$35m. The proceeds were used to repay debt. Falconbridge's participation in the Fund decreased to 25% following the sale, representing all of the outstanding Ordinary Units of the Fund. Falconbridge's investment is accounted for on an equity basis.

Other Restructuring Costs

In 2003, employee reductions at Horne, Brunswick smelter and Kidd Creek operating sites and restructuring provisions at American Racing were recorded in the amount of US$33m.

5. Discontinued Operations

In June 2005, Falconbridge disposed of a subsidiary that manufactures and distributes aluminium wheels. The subsidiary was sold for proceeds of US$40.5m, amounting to a net gain on sale of US$1m. Included in discontinued operations, net of tax is a loss of US$9m (2004 – US$40m) from operations prior to the sale. In 2004, Falconbridge recorded an impairment loss of US$50m related to the subsidiary determined using a discounted cash flow analysis. The impact from discontinued operations on the consolidated balance sheets and consolidated statements of cash flows has not been separately disclosed, as it is not considered material.

6. Joint Ventures

Falconbridge's share of the assets, liabilities and equity, revenues and expenses and cash flows of its major joint ventures for the years ended December 31, 2005, 2004 and 2003 are as follows:

	2005

Falconbridge holds a 33.75% interest in Antamina, a copper/zinc mine project in Peru. Falconbridge holds a 44% interest in Compania Minera Dona Ines de Collahuasi S.C.M. ("Collahuasi"), a corporation which owns the mining and water rights and other assets relating to the Collahuasi mine, and which secured financing, conducts the operations and markets the products of the property.

Falconbridge owns an 80% joint-venture interest in the Magnesium project, a facility for the extraction of magnesium from mining residues in Danville, Quebec. As a result of depressed global magnesium prices, the Company temporarily shut

down its Magnesium operation in April 2003. Included in restructuring costs in 2003 is a charge of US$33m related to this closure.

The Company holds through its 62.1%-owned subsidiary, Novicourt, a 45% joint-venture interest in the Louvicourt copper/zinc mine in northwestern Quebec which closed in 2005.

In October 2004, the Company assumed a 50% interest in Kaiser Aluminum's Gramercy alumina plant in Gramercy, Louisiana and Kaiser Aluminum's related bauxite assets in Jamaica, in exchange for the settlement of an alumina supply contract and US$11.5m. The Company recorded a gain of US$80m on the settlement of the contract (Note 4). The total consideration of US$91.5m, comprised of cash and the gain on the settlement of the contract, was allocated as US$11.5m to working capital, US$129m to capital assets and US$49m to future income taxes.

In 2005, approximately US$1,966m was allocated to the operating assets as preliminary fair market value increments from the purchase accounting pertaining to the acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own (Note 3). The preliminary fair market value increments are allocated to different business units as other operating capital assets, based on the preliminary allocation of the purchase cost for the acquisition.

8. Development Projects

Development projects consist of brownfield and greenfield projects that are expected to contribute to earnings upon completion of construction and advancement to commercial production.

Major projects in the category are as follows:

	As at December 31		
(US$ millions)	2005	2004	2003
Collahuasi expansion	–	–	207
Kidd Creek – deep expansion	518	404	277
Koniambo – New Caledonia	276	180	123
Nickel Rim South	173	101	5
Magnesium	280	272	252
Other development projects	205	209	109
Preliminary allocation of fair market value increments (Note 3)	255	–	–
	1,707	1,166	973

During 2003, an additional US$370m of capital was invested into the projects. No additional capital was expended in the magnesium operations during 2003. The increase in carrying value attributed to the magnesium operations in 2003 is as a result of capitalization of operating costs during the first quarter of 2003 and the appreciation of the Canadian dollar compared to the U.S. dollar during 2003.

The increase in carrying value attributed to the magnesium operations in 2005 and 2004 is a result of the appreciation of the Canadian dollar compared to the U.S. dollar during 2005 and 2004. The Collahuasi expansion went into commercial production during the third quarter of 2004.

9. Investments and Other Assets

	As at December 31			
(US$ millions)	2005	2004 Restated	2004 As reported	2003
Equity accounted investment – Noranda Income Fund	40	43	43	46

Debt due within one year		353								570
Long-term debt		3,474								2,858

(1) weighted average interest rates after swap contracts, as at December 31, 2005.

(a) Senior debentures of US$2,342m (2004 – US$2,245m) are direct unsecured obligations of the Company.

On June 8, 2005 Falconbridge issued US$250m of 12-year notes and US$250m of 30-year notes under the Company's base shelf prospectus. The 12-year notes, which are unsecured, bear interest at the rate of 5.5% per annum and mature on June 15, 2017. The 30-year notes, which are also unsecured bear interest at the rate of 6.2% per annum and mature on June 15, 2035. Both series of notes are redeemable in whole or in part at any time at a redemption price equal to 100% of their principal amount plus a make-whole premium.

(b) Other loans and capital leases include borrowings under demand lines and unsecured committed bank lines of credit that are structured to provide the Company with the right to borrow at floating rates and repay these amounts over the next five years. At December 31, 2005, Falconbridge had utilized US$nil (2004 – US$246m) from its total committed lines of US$780m (2004 – US$1,112m).

The Company has an uncommitted letter of credit facility of US$20m and Cdn$85m (2004 – US$21m). Letters of credit of US$46m (2004 – US$17m) were outstanding under this facility at December 31, 2005.

(c) Debt of joint ventures includes US$188m, Falconbridge's 33.75% share of the US$557m of borrowings under Antamina's original US$1,320m senior credit facilities. These facilities, provided by a consortium of international banks and national import/export credit agencies, have maturity dates ranging from less than one year to five years. With the exception of US$228m, all of these facilities are insured for political risks or are otherwise guaranteed for political risk by multilateral, national or private sector institutions. Falconbridge's guarantee of Antamina's debt was removed during 2003 as the completion tests were met.

(d) After taking into account current interest rates and credit spreads, the fair value of the Company's debt, excluding the debt of joint ventures, at December 31, 2005 was greater than book value by US$129m (2004 – US$206m).

(e) Interest rate swap agreements of US$1,250m (2004 – US$1,050m) have been entered into by the Company, whereby fixed rates of interest are received and floating rates are paid for terms up to 9.5 years. In addition, interest rate swap agreements of US$250m (2004 – US$550m) have been entered into by the Company, whereby fixed rates of interest are paid and floating rates are received for a period up to 6.5 years. As at December 31, 2005, the estimated aggregate fair value of the interest rate swap agreements of the Company had a mark-to-market gain of US$7m (2004 – US$41m).

The Company has entered into several cross-currency interest rate swap transactions whereby rates of interest on debentures in the amount of US$111m (2004 – US$111m) are swapped to floating rates of interest and US$25m (2004 –

US$25m) are swapped to fixed rates of interest for terms of three years. At December 31, 2005, the mark-to-market value of these positions was a gain of US$47m (2004 – US$45m).

Debt due within one year		431								335
Long-term debt		2,893								3,014

(a) Notes payable and revolving term loans include borrowings under unsecured committed bank lines of credit that are structured to provide the Company with the right to borrow at floating rates and repay these amounts over the next three years. At December 31, 2004, Noranda had utilized US$246m (including US$18m by Falconbridge, excluding Collahuasi) from its total committed lines of US$1,112m (including US$475m for Falconbridge, excluding Collahuasi). At December 31, 2003, Noranda had utilized $68m (including US$32m by Falconbridge, excluding Collahuasi) from its total committed lines of US$1,132m (including US$405m for Falconbridge, excluding Collahuasi).

Senior debentures of US$1,150m (2003 – US$1,450m) are direct unsecured obligations of the Company.

(b) On May 28, 2003, Noranda's partially-owned subsidiary Falconbridge issued US$250m 5.375% fixed-rate debentures maturing on June 1, 2015. The proceeds from this offering were used to repay debt outstanding under its commercial paper program, to fund planned expenditures and for other general corporate purposes.

On September 24, 2003, Noranda issued US$350m 6% fixed-rate debentures maturing October 15, 2015. The proceeds from this offering were invested in short-term investments and used for other general corporate purposes

(c) Debt of partially-owned subsidiaries and joint ventures includes US$305m (2003 – US$374m), Noranda's 33.75% share of the US$905m of borrowings under Antamina's US$1,320m senior credit facilities. These facilities, provided by a

consortium of international banks and national import/export credit agencies, have maturity dates ranging from 3.5 to 7.5 years. With the exception of US$118m, all of these facilities are insured for political risks or are otherwise guaranteed for political risks by multilateral, national or private sector institutions. Noranda's guarantee of this facility was removed during 2003 as the completion tests were met. Prior to meeting the completion tests, the average interest rate, inclusive of political risk insurance premiums and guarantee fees, ranges from LIBOR +2.4% to approximately LIBOR +4.1%.

(d) After taking into account current interest rates and credit spreads, the fair value of the debt of the Company at December 31, 2004 was greater than book value by US$112m (2003 – US$120m), and the fair value of the debt of its partially-owned subsidiaries and joint ventures was greater than book value by US$70m (2003 – US$94m).

(e) Interest rate swap agreements of US$650m (2003 – US$650m) have been entered into by the Company, and US$400m (2003 – US$400m) by its partially-owned subsidiaries and joint ventures, whereby fixed rates of interest are received and floating rates are paid for terms up to 10.5 years. In addition, interest rate swap agreements of US$550m (2003 – US$561m) have been entered into by the Company's partially-owned subsidiaries and joint ventures, whereby fixed rates of interest are paid and floating rates are received for a period up to 7.5 years. As at December 31, 2004, the estimated aggregate fair value of the interest rate swap agreements of the Company and its partially-owned subsidiaries and joint ventures had a mark-to-market gain of US$20m and US$21m respectively (2003 – US$14m and US$24m, respectively).

The Company's partially-owned subsidiary Falconbridge has entered into several cross-currency interest rate swap transactions whereby rates of interest on debentures in the amount of US$86m (2003 – US$86m) are swapped to floating and US$25m (2003 – US$25m) are swapped to fixed rates of interest for terms of four years. At December 31, 2004, the mark-to-market value of these positions was a gain of US$45m (2003 – US$31m).

At December 31, 2002, the Company recorded a deferred gain of US$21m on the closure of Cdn$400m interest rate swap agreements. The Company recognized into income US$4m during 2004 (2003 – US$17m).

Interest, net (US$ millions)	2005	2004 (Restated – see note 2)	2004 (As reported)	2003

11. Convertible Debentures

The Cdn$131m (2004 – Cdn$150m) adjustable rate convertible subordinated debentures Series 1, due April 30, 2007, bear interest at a rate which is the greater of 5%, and of 1% plus the percentage that two times the common share dividend paid in the previous six months is of the conversion price. The debentures are convertible at the holder's option into common shares of the Company at a conversion price of Cdn$27.55 per common share, on or before the last business day prior to the maturity date of the debentures, or the last business day prior to redemption. The Company has the option of redeeming the debentures, and upon maturity they are redeemable, at the Company's option, for common shares of the Company.

The Company's convertible debentures contain both debt and equity components (Note 2). At December 31, 2005, the liability component amounted to US$105m (2004 – US$112m) (Note 10). The equity component representing the fair value of the holders' option to convert the debentures into the common shares of the Company was classified as a component of shareholders' equity and amounted to US$37m at December 31, 2005 (2004 – US$42m) (Note 15).

During 2005, debentures with face value of Cdn$19m were converted to the common shares of Falconbridge by the holders (Note 15). Upon conversion, the carrying value of the related liability and the fair value of the holders' option for the converted debentures were reclassified from liability and shareholders' equity respectively to share capital.

Junior Preference Shares

On May 4, 2005, 63.4 million common shares of the Company were repurchased in exchange for 50 million of three series of junior preference shares with a fair value of US$1,250m. These preference shares are accounted for as liabilities since Falconbridge has to redeem these shares by a specific date in the future and this mandatory redeemable feature represents a fixed obligation to Falconbridge. These preference shares were measured at their fair value, being the closing quoted market price on their first trading day of May 5, 2005. These preference shares rank junior to all other preferred shares of Falconbridge with respect to priority in the payment of dividends and the distribution of assets of Falconbridge in the event of any liquidation, dissolution or winding-up of Falconbridge.

On August 11, 2005, the Company redeemed a total of US$500m of 20 million outstanding junior preference shares. The Company redeemed 8 million Junior Preference Shares, Series 1, 8 million Junior Preference Shares, Series 2, and 4 million Junior Preference Shares, Series 3. Each junior preference share was redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from July 1, 2005 to August 10, 2005. Included in interest expense on the consolidated statement of income and retained earnings was US$5m paid as premium on early redemption of the preference shares. The details of each series of the junior preference shares are as follows:

(a) Junior Preference Shares, Series 1

As at December 31, 2005, the Company had 11,999,899 of Junior Preference Shares Series 1 outstanding. The holders of Junior Preference Shares, Series 1 are entitled to receive dividends in the amount of US$1.50 per share, per annum, payable quarterly.

The Junior Preference Shares, Series 1 are redeemable by the Company at any time, on or before June 28, 2008 at US$25.25 per share, and thereafter at US$25.00 per share, and must be redeemed by the Company on May 6, 2010 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares, Series 1 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00, by the greater of US$2.00 and 90% of the U.S. dollar equivalents of the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

(b) Junior Preference Shares, Series 2

As at December 31, 2005, the Company had 11,999,899 of Junior Preference Shares Series 2 outstanding. The holders of Junior Preference Shares, Series 2 are entitled to receive dividends in the amount of US$1.5625 per share, per annum, payable quarterly. From June 30, 2010 until June 30, 2012, holders of Junior Preference Shares Series 2 will be entitled to receive fixed preferential cumulative dividends at a rate per annum equal to the greater of (i) 6.25% and (ii) a rate equal to the seven year U.S. treasury bond yield at the commencement of such subsequent fixed-rate period plus 2.05%.

The Junior Preference Shares Series 2 are redeemable by the Company at any time, on or before June 30, 2010 at US$25.25 per share, and thereafter until June 29, 2012 at US$25.00 per share, and must be redeemed by the Company on June 30, 2012 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares Series 2 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00 by the greater of US$2.00 and 90% of the U.S. dollar equivalents of

the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

(c) Junior Preference Shares, Series 3

As at December 31, 2005, the Company had 5,999,903 of Junior Preference Shares Series 3 outstanding. The holders of Junior Preference Shares Series 3 are entitled to receive dividends in the amount of US$1.625 per share, per annum, payable quarterly. From June 30, 2010 until June 30, 2012 and for each succeeding two-year subsequent fixed-rate period until June 30, 2015, holders of Junior Preference Shares Series 3 will be entitled to receive fixed preferential cumulative dividends at a rate per annum equal to the greater of (i) 6.5%; and (ii) a rate equal to the ten-year U.S. treasury bond yield at the commencement of such subsequent fixed-rate period plus 2.35%. Dividends may be paid in cash or in a number of common shares determined by dividing the declared dividend amount by 95% of the U.S. dollar equivalent of the volume weighted average trading price of the common shares on the TSX for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for payment of the dividend.

The Junior Preference Shares Series 3 are redeemable by the Company at any time, on or before June 30, 2013 at US$25.25 per share, and thereafter until June 29, 2015 at US$25.00 per share, and must be redeemed by the Company on June 30, 2015 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares Series 3 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00 by the greater of US$2.00 and 90% of the U.S. dollar equivalents of the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

Preferred Shares Series H

At December 31, 2005, there were 6,000,000 (2004 – 6,000,000) Series H Preferred Shares outstanding. These preferred shares are presented as liabilities since their conversion feature represents a fixed obligation to Falconbridge (Note 2). Holders of the Series H Preferred Shares are entitled to fixed cumulative preferential cash dividends, if, as and when declared by the Company's Board of Directors, at a rate of Cdn$1.625 per share per annum, payable quarterly, in equal instalments of Cdn$0.40625 per share, on the last day of March, June, September and December of each year.

On and after March 31, 2008, the Company may, at its option (i) redeem the outstanding Series H Preferred Shares in whole at any time or in part from time to time, by the payment of Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption; or (ii) subject, if required, to stock exchange approvals, convert the outstanding Series H Preferred Shares into Falconbridge common shares. The number of common shares into which each Series H Preferred share may be so converted will be determined by dividing the redemption price per Series H Preferred Share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time.

On or after June 30, 2008, each Series H Preferred Share will be convertible at the option of the holder on the last day of March, June, September and December in each year into that number of Falconbridge common shares determined by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time. If a holder of Series H Preferred Shares elects to convert any of those shares into Falconbridge common shares, the Company may, on not less than 20 days notice prior to the conversion date, elect to redeem those Series H Preferred Shares for Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion or arrange for the sale of those shares to substitute purchasers at such price.

13. Asset Retirement Obligation, Pension and Other Provisions

(US$ millions)	As at December 31 2005	2004	2003
Asset retirement obligation (a)	424	436	412
Employee future benefits costs (assets) liability (Note 20)	102	(12)	42
Other provisions	133	171	85
	659	595	539

(US$ millions)	As at December 31, 2004 (As reported) Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Total	As at December 31, 2003 Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Total
Asset retirement obligation	273	163	436	271	141	412
Pension, benefits and other provisions	(56)	215	159	(64)	191	127
	217	378	595	207	332	539

(a) The business conducted by Falconbridge has been, and may in the future be, affected by changes in environmental legislation and other requirements including those related to asset retirement obligations and progressive site restoration costs. As Falconbridge operates in many countries, both the likelihood of changes in legislation and its impact upon Falconbridge are not predictable. Falconbridge's policy is to meet and, if possible, surpass standards set by relevant legislation, through the application of innovative and technically proven economical measures in advance of prescribed deadlines. Falconbridge incurs substantial removal and site restoration costs on an ongoing basis, which, it believes, will mitigate future removal and site restoration costs. A long-term obligation, equal to the fair value of the legal obligation for asset retirement is recorded based on an annual assessment of projected asset retirement and progressive reclamation costs. The key assumptions on which the fair value of the asset retirement obligations are based include the estimated future cash flows, the timing of those cash flows, and the credit-adjusted risk-free rate or rates at which the estimated cash flows have been discounted.

Falconbridge uses discount rates ranging from 5.0% to 8.0%. As of December 31, 2005, undiscounted cash outflows approximating US$1,542m are expected to occur over a period exceeding 50 years. In view of the uncertainties concerning future asset retirement and progressive reclamation costs, the ultimate costs to Falconbridge could differ materially from the amounts estimated. The estimate for the future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively, as a change in an accounting estimate.

The following table explains the change in the asset retirement obligations:

(US$ millions)	Year ended December 31 2005	2004	2003
Asset retirement obligation, beginning of period	(436)	(412)	(334)
Liabilities incurred	–	(5)	(18)
Liabilities settled	62	36	29
Gain on settlement of liabilities	2	5	–
Accretion expense	(37)	(24)	(27)
Revision in estimated cash flows	(4)	(9)	–
Foreign exchange	(11)	(27)	(62)
Asset retirement obligation, end of period	(424)	(436)	(412)

14. Interests of Other Shareholders

Preferred Shares Series F

The Company had 3,246,057 (2004 – 3,246,057; 2003 – 3,246,057) Cumulative, Redeemable Preferred Shares, Series F (the "Series F Preferred Shares") outstanding at December 31, 2005.

Prior to November 1, 2001, holders of Series F Preferred Shares received a quarterly fixed dividend at a rate of 5.8% per annum. On November 1, 2001, the Series F Preferred Shares commenced paying a monthly floating dividend based on a dividend rate that fluctuates over time between 50% and 100% of Prime for each month. The dividend rate is adjusted upwards or downwards on a monthly basis by an Adjustment Factor whenever the Calculated Trading Price, being the market price of the Series F Preferred Shares, is Cdn$24.875 or less or Cdn$25.125 or more, respectively. The Adjustment Factor for a month is based on the Calculated Trading Price of the Series F Preferred Shares for the preceding month. The maximum Adjustment Factor for any month is +/–4.00%. The annual floating dividend rate for any month is Prime multiplied by the Designated Percentage for such month (the Adjustment Factor for such month plus the Designated Percentage for the preceding month).

Holders of Series F Preferred Shares had the right to convert their shares, effective on November 1, 2001, on a one-for-one basis into Cumulative, Redeemable Preferred Shares, Series G (the "Series G Preferred Shares"). Of the 12,000,000 outstanding Series F Preferred Shares, 8,753,943 were converted into Series G Preferred Shares. Holders will again have the right to convert their shares, on a one-for-one basis into Series G Preferred Shares on November 1, 2006, and every five years thereafter. On November 1, 2001, the Series F Preferred Shares became redeemable, at the option of the Company, at Cdn$25.50 per share plus unpaid and accrued dividends.

Preferred Shares Series G

The Company had 8,753,943 (2004 – 8,753,943; 2003 – 8,753,943) Series G Preferred Shares outstanding at December 31, 2005. These Series G Preferred Shares were issued as a result of the conversion of the same number of Series F Preferred Shares into Series G Preferred Shares on November 1, 2001.

For each of the five years commencing November 1, 2001, holders of Series G Preferred Shares will receive, as and when declared by the Board of Directors, a quarterly fixed dividend at a rate of 6.10% per annum. On November 1, 2006, the Series G Preferred Shares will be redeemable, at the option of the Company, at Cdn$25.00 per share plus unpaid and accrued dividends. Subject to certain conditions, holders of Series G Preferred Shares will have the right to convert their shares into Series F Preferred Shares on a one-for-one basis on November 1, 2006 and on November 1 of every fifth year thereafter.

Preferred Shares Series H

The Company completed a public offering of Cumulative Preferred Shares, Series H for aggregate gross proceeds of Cdn$150m on March 25, 2003. At December 31, 2004, there were 6,000,000 (2003 – 6,000,000) Series H Preferred Shares outstanding.

Holders of the Series H Preferred Shares are entitled to fixed cumulative preferential cash dividends, if, as and when declared by the Company's Board of Directors, at a rate of Cdn$1.625 per share per annum, payable quarterly, in equal instalments of Cdn$0.40625 per share, on the last day of March, June, September and December of each year.

On and after March 31, 2008, the Company may, at its option (i) redeem the outstanding Series H Preferred Shares in whole at any time or in part from time to time, by the payment of Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption; or (ii) subject, if required, to stock exchange approvals, convert the outstanding Series H Preferred Shares into Falconbridge common shares. The number of common shares into which each Series H Preferred Share may be so converted will be determined by dividing the redemption price per Series H Preferred Share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time.

On or after June 30, 2008, each Series H Preferred Share will be convertible at the option of the holder on the last day of March, June, September and December in each year into that number of Falconbridge common shares determined by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time. If a holder of Series H Preferred Shares elects to convert any of those shares into Falconbridge common shares, the Company may, on not less than 20 days notice prior to the conversion date, elect to redeem those Series H Preferred Shares for Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion or arrange for the sale of those shares to substitute purchasers at such price.

Preferred Shares Series I

The Company completed a private placement of 6,000,000 Cumulative Preferred Shares, Series I to Brascan Corporation for aggregate gross proceeds of Cdn$150m on April 25, 2003. On August 18, 2003, the Company redeemed all Series I Preferred Shares with a portion of the net proceeds it received from the issuance of the 24,800,000 common shares issued on August 11, 2003. As a result of this redemption, a foreign exchange loss of US$5m was recorded in retained earnings.

Preferred Shares Series 1

On March 7, 1997, the Company issued 8,000,000 Units, at a price of Cdn$10.00 per Unit, with each Unit consisting of one Cumulative Preferred Share Series 1 (the "Preferred Share Series 1") and one Cumulative Preferred Share Series 2 Purchase Warrant (the "Warrant"). Since September 1, 1998, the quarterly cash dividend on Preferred Share Series 1 has

been Cdn$0.02 per share. The holders of the Units had the right to acquire on certain dates, for each Unit held, one Cumulative Preferred Share Series 2 (the "Preferred Share Series 2") of the Company by the combined effect of tendering for conversion one Preferred Share Series 1 and the exercise of one Warrant together with the cash payment of Cdn$15.00 per Warrant. A total of 7,910,165 warrants have been converted into Preferred Shares Series 2. The remaining unexercised warrants cannot be exercised.

Preferred Shares Series 2

Until March 1, 2004, holders of the Preferred Shares Series 2 were entitled to fixed cumulative preferential cash dividends, as and when declared by the Board of Directors, which accrued from the date of issue and were payable quarterly in the amount of Cdn$0.3672 per share of Cdn$1.4688 per share per annum. From March 1, 2004, the Preferred Share Series 2 are entitled to floating adjustable cumulative preferential cash dividends as and when declared by the Board of Directors.

Holders of Preferred Share Series 2 had the right to convert their shares into Cumulative Preferred Share Series 3 (the "Preferred Share Series 3") of the Company, subject to certain conditions, on March 1, 2004, and will continue to have the right every five years thereafter. On March 1, 2004, the Company had the right to redeem for cash the Preferred Share Series 2, in whole but not in part, at the Company's option, at Cdn$25.00 per share plus accrued and unpaid dividends. Subsequent to March 1, 2004, the Company has the right to redeem at any time for cash the Preferred Share Series 2, in whole but not in part, at the Company's option, at Cdn$25.50 per share plus accrued and unpaid dividends. Effective March 1, 2004, the Preferred Share Series 2 shares pay a monthly adjustable floating dividend based on a percentage of the Canadian prime rate. A total of 3,122,882 units have been converted into Preferred Share Series 3.

Preferred Shares Series 3

Holders of Preferred Share Series 3 are entitled to fixed cumulative preferential cash dividends, as and when declared by the Board of Directors, which accrue from March 1, 2004. The dividends are payable quarterly on the first day of March, June, September, and December in the amount of Cdn$0.2863 per share of Cdn$1.1452 per share per annum until March 1, 2009. The Preferred Share Series 3 are not redeemable prior to March 1, 2009. The Preferred Share Series 3 will be redeemable on March 1, 2009 and on March 1 every fifth year thereafter, in whole but not in part, at the Company's option, at Cdn$25.00 per share, together with accrued and unpaid dividends up to but excluding the date of redemption. Holders of Preferred Share Series 3, upon giving notice, will have the right to convert on March 1, 2009, and on March 1 in every fifth year thereafter, their shares into an equal number of Preferred Share Series 2, subject to the automatic conversion provisions.

Common Share Issue

On August 12, 2003, the Company completed a public issue of 48,520,000 common shares at a price of Cdn$12.65 for net proceeds of Cdn$601m. Brascan Corporation subscribed for 20,000,000 shares from this issue.

Non-voting Participating Shares

The authorized and unissued non-voting participating shares participate ratably with the holders of common shares in dividends and distributions of the assets of the Company.

Summary of Common Share Transactions

(US$ millions)	Shares (000)	Amount
Common shares, December 31, 2002	241,289	1,595
Issues of common shares	48,520	434

Issues on exercise of stock options	1,704	22
Issued under dividend re-investment	38	1
Common shares, December 31, 2004	296,970	2,107
Issued upon Amalgamation	132,841	2,534
Repurchased by issuance of junior preferred shares (Note 12)	(63,377)	(451)
Issues on exercise of stock options	3,486	52
Issued upon conversion of debentures (Note 11)	703	21
Issued under dividend re-investment	65	1
Common shares, December 31, 2005	370,688	4,264

Earnings Per Share

During 2005, earnings per share is determined by dividing net income, after deducting preferred share dividends of US$17m (2004 – US$13m), by the weighted average number of common shares outstanding of 339,756,276 (2004 – 296,245,753) during the year, excluding shares securing employee share purchase loans.

For 2004 as reported and 2003, earnings per share is determined by dividing net income, after deducting preferred share dividends of US$20m (2003 – US$21m) and the equity portion of the convertible debenture interest of US$3m (2003 – US$3m), by the weighted-average number of common shares outstanding during the year, excluding shares securing employee share purchase loans of 296,245,753 (2003 – 261,618,375).

Diluted earnings per share assumes that outstanding dilutive stock options are exercised at the beginning of the period (or at the time of issuance, if later) and the proceeds are used to purchase common stock at the average market price during the period, and that dilutive convertible debentures are converted into common shares at the beginning of the period.

During 2005, diluted earnings per share is determined by dividing net income attributable to common shares, after adding the dilutive effect of convertible debentures of US$8m (2004 – US$7m), by the diluted weighted average number of shares of 346,173,501 (2004 – 303,458,182).

For 2004 as reported and 2003, diluted earnings per share is determined by dividing net income (loss) attributable to common shares, after adding the dilutive effect of convertible debentures of US$3m (2003 – US$nil), by the diluted weighted average number of shares 303,789,960 (2003 – 261,618,375).

Share Purchase Plan

In 1998, 2001 and 2002, loans were issued to executives of the Company for the purchase of common shares under the share purchase plan. The loans are repayable on demand, mature in ten years, and were secured by a pledge of 331,950 common shares at December 31, 2004 (2003 – 331,950). Loans receivable at December 31, 2004 of US$3m (2003 – US$3m) were recorded as a reduction of shareholders' equity. The loans were repaid in full in 2005 and the repayment was accounted for as a corresponding increase in shareholders' equity.

Stock Options

The Company has a stock option plan through which options may be granted to directors, officers and employees for the purchase of common shares. Options were granted at prices equal to the five-day average price prior to the grant. Stock options generally have a 10-year term and contain vesting provisions of 20% on the first anniversary following the date of the grant, and a further 20% on each of the four subsequent anniversary dates. Stock options granted from January 1, 2000 to February 28, 2002 have a 10-year term and the same vesting provisions; however, they also contain an accelerated vesting feature specifying that on the first day that the market price of the common shares is 20% greater

than the exercise price of the option, the final tranche of certain unvested options outstanding on that date will immediately vest and be exercisable.

During 2005, three stock option series totaling 1,301,197 options (2004 – 882,000; 2003 – 1,422,500) at a weighted-average price of Cdn$23.32 (2004 – Cdn$20.42; 2003 – Cdn$14.45) were granted. The compensation expense associated with these stock options series was calculated using the Black-Scholes valuation model assuming the following weighted-average parameters; 10-year term (2003 – 8-year term), 25% volatility, expected dividend of 2.41% annually (2004 – 1.86% annually; 2003 – 5.35% annually) and an interest rate of 4.00% (2004 – 4.33%; 2003 – 4.89%). The stock option value is charged against net income over its vesting period.

On June 30, 2005, the Company assumed the stock option obligations of the former Falconbridge upon acquisition of the former Falconbridge (Note 3). The stock options retained their original attributes with the exception that the number of stock options increased by a ratio of 1.77 and the exercise prices decreased by a ratio of 1.77 to reflect the acquisition price of one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The fair value of the unvested stock options as at June 30, 2005 amounted to US$17m. The value of the stock options was calculated using the Black Scholes valuation model, using the following weighted average assumptions: a seven-year exected life, 26% volatility, an expected dividend of 2.34% and an interest rate of 3.58%. The value is being charged against net income over the vesting periods of the stock options.

Corporate and general administration expenses in 2005 include compensation costs of US$6m (2004 – US$4m; 2003 – US$3m) relating to outstanding options granted since January 1, 2002.

A summary of the status of the stock option plan and changes during the years is presented below:

	2005		2004		2004		2003	
			Restated – see note 2		As reported			
(Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)
Outstanding, beginning of year	7,416	16.75	9,584	16.35	9,584	16.35	8,591	16.65
Options assumed upon Amalgamation (Note 3)	3,049	12.91	–	–	–	–	–	–
Granted	1,301	23.32	882	20.42	882	20.42	1,422	14.45
Exercised	(3,486)	16.23	(1,704)	16.24	(1,704)	16.47	(373)	15.92
Cancelled	(738)	15.77	(1,346)	16.64	(1,346)	16.64	(56)	16.85
Outstanding, end of year	7,542	17.37	7,416	16.75	7,416	16.75	9,584	16.35

The following table summarizes information about stock options outstanding at December 31, 2005:

	Options outstanding			Options exercisable	
Range of exercise prices (Cdn$)	Number (000) outstanding at December 31, 2005	Weighted-average remaining contractual life (years)	Weighted-average exercise price (Cdn$)	Number (000) exercisable at December 31, 2005	Weighted-average exercise price (Cdn$)
$ 8.85 to $12.85	1,227	6.7	$9.46	253	$9.56
$13.82 to $15.00	723	7.0	13.87	158	14.05
$15.05 to $19.16	2,860	5.7	16.38	1,981	12.46

	9,584	7.6	$16.35	4,914	$17.21

Director Deferred Stock Unit Plan

Under the Deferred Stock Unit (DSU) Plan for the Company's non-employee directors, each eligible director may elect to be paid annual retainer fees and/or meeting attendance fees in DSUs rather than in cash. A DSU is a notional unit, equivalent in value to a common share.

Deferred stock units are credited with "dividend equivalents" when dividends are paid on the common shares of the Company, and such dividend equivalents are converted into additional units based on the fair market value of common shares on the date credited.

Payment of DSUs is not made until such time as the director leaves the Board, and may be in cash or in common shares of the Company purchased on the open market.

As of December 31, 2005 the total DSUs held by participating directors was 105,336 (2004 – 61,351; 2003 – 44,108), the accrual in respect of which is not significant at December 31, 2005, 2004 and 2003.

Management Deferred Share Unit Plan (MDSUP)

Management deferred share units ("Units") may be granted each year at the discretion of the Board to senior executives in lieu of all or part of their annual cash bonus awards. The annual bonus awards would be converted to Units based on a rate set on the award date. The portion of the annual bonus award elected to be received in Units by the executive may, at the discretion of the H.R. Committee, be increased by a factor of up to two times for purposes of calculating the number of Units to be allocated under the MDSUP.

An executive who holds Units will receive additional Units as dividends are paid on the common shares of the Company, on the same basis as if the dividends were reinvested pursuant to the Company's dividend reinvestment plan. The Units will vest over a five-year period and participants will only be allowed to redeem the Units upon cessation of employment.

The cash value of the Units when redeemed will be equivalent to the market value of an equivalent number of Falconbridge common shares at the time of cessation of employment with the Company.

As of December 31, 2005, a total of 93,866 Units were held by executives of the Company (2004 – 44,274; 2003 – 33,666), the accrual in respect of which is not significant at December 31, 2005, 2004 and 2003.

Dividend Reinvestment Plan

Canadian resident shareholders may elect to reinvest their cash dividends from common shares to purchase additional shares. During 2005, 64,642 (2004 – 37,910; 2003 – 5,046,641) common shares were issued under the dividend reinvestment plan. The dividend reinvestment plan was indefinitely suspended on October 20, 2005 according to the terms of the Inco and Falconbridge support agreement related to the Inco offer to purchase Falconbridge common shares.

16. Income and Production Taxes

The provision for income and production taxes differs from the amount that would have resulted by applying statutory income tax rates to earnings as described below.

(US$ millions)	2005	2004 Restated (see note 2)	2004 As reported	2003
Income before the following:				
Income and production taxes and minority interest	1,546	1,242	1,181	131
Provision based on combined federal and composite provincial tax rate of 33.2% (2004 – 37.6%) (2003 – 38.6%)	513	467	444	51
Increase (decrease) in taxes resulting from:				
Resource and depletion allowances	(32)	(26)	(26)	(6)
Royalties and mineral taxes	22	22	22	7
Rate differences from foreign and manufacturing activities	(76)	(116)	(116)	(50)
Non-taxable items	(7)	(57)	(57)	(20)
Capital taxes	25	7	7	13
Foreign exchange adjustments	46	51	41	18
Non-recurring and other	20	3	18	7
Income and production taxes	511	351	333	20

Consolidated income and production taxes are as follows:

(US$ millions)	2005	2004 Restated (see note 2)	2004 As reported	2003
Current:				
Federal and provincial income taxes	13	25	27	16
Provincial mining taxes	12	5	5	2
Foreign taxes	269	75	75	35
	294	105	107	53
Future:				
Federal and provincial income taxes	24	32	32	(55)
Provincial mining taxes	12	18	18	4
Foreign taxes	181	196	176	18
	217	246	226	(33)
	511	351	333	20

The components of the future tax asset and future tax liability at December 31, 2005, 2004 and 2003 are as follows:

	2005		2004 Restated (see note 2)		2004 As reported		2003	
	Legal entities where		Legal entities where		Legal entities where		Legal entities where	
(US$ millions)	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets

During 2004, the Company has non-resident subsidiaries that have tax losses of US$nil (2003 – US$106m) for which no benefit has been recorded. If the tax benefit had been recorded, the amount would have been US$nil (2003 – US$21m).

As of December 31, 2005, the Company had the following net operating loss carry-forwards which are scheduled to expire in the following years:

Year of Expiry	Net Operating Losses (US$ millions)
2006 – 2015	82
2016 – 2025	243
Indefinitely	299
	624

17. Financial Instruments

Falconbridge uses various strategies to manage its market risk, including the use of derivative contracts to limit, offset or reduce the Company's market exposure. Derivative instruments are used to manage well-defined commodity price, foreign exchange and interest rate risks arising from Falconbridge's primary business activities. The fair values of Falconbridge's derivative instruments, as summarized later in this note, are based on quoted market prices for similar instruments and on market closing prices at year end.

Effective July 1, 2003, Falconbridge's functional currency was changed from the Canadian to U.S. dollar. Following this change, Falconbridge realigned its hedging programs to manage the risk associated with its non-U.S. dollar investments and monetary assets and liabilities, as well as change its cash flow hedging program to now hedge the exposure created by its non-U.S. dollar expenses.

(a) Fixed Forward Price Hedges

Some customers request a fixed sales price instead of the COMEX or London Metal Exchange ("LME") average price in the month of shipment. Falconbridge enters into futures contracts that will allow it to receive the COMEX or LME average price in the month of shipment while customers pay the agreed upon fixed price. Falconbridge accomplishes this by settling the futures contracts during the month of shipment, which generally results in the realization of the COMEX or LME average price.

At December 31, 2005, the mark-to-market value of these positions was a gain of US$6m (2004 – gain of US$8m; 2003 – gain of US$9m).

(b) Commodity Hedges

Falconbridge purchases metal in concentrate or scrap to be processed eventually into refined metal for sale to customers. The raw material feed is purchased from third parties at prices that are often different from the eventual sale price to metal customers, largely due to the timing of processing. To mitigate the price risk resulting from the difference between the timing of purchases and sales, Falconbridge hedges such transactions. The hedge transactions involve the purchase or sale of over-the-counter or LME or COMEX exchange-traded contracts. In the month that the refined metal is sold, the corresponding commodity hedge position is liquidated at the COMEX or LME average price for the month of sale.

As at December 31, 2005, the mark-to-market unrealized loss was US$7m (2004 – unrealized loss of US$1m; 2003 – unrealized loss of US$18m).

(c) Hedges of Foreign-denominated Expenditures

Prior to July 1, 2003, Falconbridge managed a foreign currency cash flow hedging program whereby portions of its forecasted U.S. dollar-denominated revenue were hedged with forward foreign exchange contracts with its banks. At December 31, 2002, Falconbridge had forward contracts to sell US$886m maturing over the following 4.5 years, at an average exchange rate of Cdn$1.53. In addition, Noranda's partially-owned subsidiary had also entered into various short-term option contracts which, if exercised, would have resulted in additional sales of US$125m. The mark-to-market value of these positions at December 31, 2002 was a loss of US$40m.

Since Falconbridge's functional and reporting currency is the U.S. dollar, Falconbridge hedges its Canadian dollar costs using foreign currency exchange contracts. When the Canadian dollar strengthens significantly against the U.S. dollar, the increase in value of future Canadian dollar costs is partially offset by gains in the value of the forward currency contracts designated as hedges. Conversely, when the Canadian dollar weakens, the decrease in the value of future Canadian dollar costs is partially offset by losses in the value of the forward currency contracts.

At December 31, 2003, Falconbridge had forward currency exchange contracts to purchase Cdn$1,097m maturing over the next 3.5 years at an average exchange rate of Cdn$1.50. In addition, Falconbridge's partially-owned subsidiary also had option contracts that, if exercised, would result in the purchase of Cdn$29m over the next four months. The mark-to-market value of these positions at December 31, 2003 was a gain of US$110m.

At December 31, 2004, Falconbridge had forward currency exchange contracts to purchase Cdn$510m maturing over the next 2.5 years at an average exchange rate of Cdn$1.44. In addition, Falconbridge's partially-owned subsidiary also had option contracts that, if exercised, would result in the purchase of Cdn$50m over the next twelve months. The mark-to-market value of these positions at December 31, 2004 was a gain of US$71m.

At December 31, 2005, Falconbridge had forward currency exchange contracts to purchase Cdn$12m maturing over the next one and half years at an average exchange rate of Cdn$1.52. The mark-to-market value of these positions at December 31, 2005 was a gain of US$1m.

In addition, Falconbridge maintains a program to hedge its Norwegian Kroner and Chilean Peso expenditures. At December 31, 2005, Falconbridge entered into other short-term forward foreign exchange contracts to hedge its Norwegian and Chilean commitments, whereby it would purchase notional amounts with a U.S. dollar equivalent of US$19m (2004 – US$9m; 2003 – US$81m) and in 2004, entered into various short-term forward foreign option contracts which, if exercised, would have resulted in the purchase of 135 million Norwegian Kroner (2003 – 210 million). At December

31, 2005, the mark-to-market value of these contracts was nominal (2004 – mark-to-market gain of US$4m; 2003 – mark-to-market gain of US$17m).

Falconbridge's operating costs to December 31, 2005 include realized exchange gains from the settlement of various cost hedge contracts of US$63m (2004 – exchange gain in operating costs of US$77m; 2003 – exchange gain in revenue of US$18m and exchange gain in operating costs of US$16m).

(d) Hedge of Net Investment in Foreign Operations

The Company uses forward foreign exchange contracts and foreign-denominated obligations to protect the value of its investments in its self-sustaining foreign subsidiaries.

At December 31, 2003, the Company had outstanding foreign exchange contracts to sell Cdn$82m, maturing over the next eight years, designated as hedges against Canadian dollar net assets. In addition, a series of short-term foreign exchange contracts to sell Cdn$134m are designated as hedges against foreign-denominated monetary assets of the Company. The Company's partially owned subsidiary had a series of short-term foreign exchange contracts to purchase a notional amount of Cdn$510m as a hedge against foreign-denominated monetary assets and liabilities. As at December 31, 2003, the unrealised loss on these contracts was $27.

At December 31, 2004, the Company had outstanding foreign exchange contracts to sell Cdn$77m, maturing over the next seven years, designated as hedges against Canadian dollar net assets. In addition, a series of foreign exchange contracts to buy Cdn$40m and sell Cdn$23m are designated as hedges against foreign-denominated monetary liabilities and net monetary assets of the Company. The Company's partially-owned subsidiary had a series of short-term foreign exchange contracts to purchase a notional amount of Cdn$520m as a hedge against foreign-denominated monetary assets and liabilities. As at December 31, 2004, the unrealized loss on these contracts was US$75m.

At December 31, 2005, the Company had outstanding foreign exchange contracts to sell Cdn$77 million, maturing over the next six years, designated as hedges against Canadian dollar net assets. In addition, a series of foreign exchange contracts to buy Cdn$516 million are designated as hedges against foreign-denominated monetary liabilities of the Company. As at December 31, 2005, the unrealized loss on these contracts was US$88m.

The Company has also entered into short-term forward foreign exchange contracts to sell £1 million (2004 – £3 million; 2003 – £4 million) and purchase U.S. dollars as a hedge against pounds sterling net assets. At December 31, 2005, 2004 and 2003, the fair value of these contracts approximated their carrying value.

Derivative financial instruments involve credit and market risk. Credit risk arises from the potential for a counterparty to default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the defaulted transaction. The Company minimizes credit risk through the selection, monitoring and diversification of counterparties, use of the International Swaps and Derivatives Association (ISDA) documentation and master netting agreements, collateral and other credit mitigation techniques.

18. Commitments and Contingencies

(a) On July 1, 2003, the senior debt of the Antamina project became non-recourse to its sponsors, the Company, BHP Billiton PLC, Teck Cominco Limited and Mitsubishi Corporation, upon successful completion of a series of tests and following the delivery of the related certificates to the senior lenders.

(b) As a result of the sale of the CEZ processing facility to the Noranda Income Fund in 2002, the Company entered into a 15-year supply and processing agreement with the Fund. The Company has committed to sell up to 550,000 tonnes of zinc concentrate annually to the refinery (its annual concentrate requirement to operate to its full current capacity) at market rates for the payable metal, less a fixed treatment charge initially set at Cdn$0.352/lb of "payable zinc metal." Commencing January 1, 2004, the Processing Fee will be the Processing Fee in the previous year adjusted annually (i) upward by 1% and (ii) upward or downward by 10% of the year-over-year percentage change in the average cost of electricity per megawatt hour for the Processing Facility. "Payable zinc metal" in respect of a quantity of concentrate will be equal to 96% of the assayed zinc metal content in the concentrate under the Supply and Processing Agreement.

The Company has also committed to manage the processing facility through operating and marketing agreements and will act as an agent for the sale of the facility's zinc production for the duration of the supply agreement.

(c) On October 11, 2005, Inco announced a take-over bid for all outstanding common shares of the Company. The offer was comprised of part cash and part Inco shares. The completion of the take-over bid requires acceptance by 66.66% of all common shareholders of the Company on a fully-diluted basis and is subject to regulatory approvals. The Company would be required to provide for the payment of a fee of up to US$320m to Inco in the event that the acquisition is not completed for certain reasons.

(d) On April 19, 2005, Falconbridge and Barrick Gold entered into a joint-venture agreement regarding the Kabanga nickel deposit and related concessions in Tanzania. Under the agreement, Falconbridge acquired a 50% indirect interest in the Kabanga Project for US$15m and became the operator of the joint venture.

Over the next several years, Falconbridge will fund and conduct a US$50m work plan that will include additional exploration, infill drilling, and technical work to update the resource model for Kabanga.

(e) On December 28, 2005, Falconbridge and its joint-venture partner, *Société Minière du Sud Pacifique S.A.* ("SMSP") acquired a 49% and 51% interest, respectively, in the Koniambo Nickel project. Under the Bercy Accord, Falconbridge assumed responsibility for arranging financing of up to 100% of the project. During 2005, Falconbridge committed to providing at least US$100m for equipment and services relating to the project.

(f) From time to time, Falconbridge is involved in litigation, investigations or proceedings relating to claims arising out of its operations in the ordinary course of business. In the opinion of Falconbridge's management, these claims and lawsuits in the aggregate will not have a material adverse effect on the consolidated financial statements.

19. Related-party Transactions

(a) Falconbridge's ownership interest in the Noranda Income Fund was 25% during 2005 and 2004. Included in revenues are US$9m (2004 – US$7m; 2003 – US$7m) representing the Company's share of income from the Fund accounted for under the equity method.

Falconbridge has entered into a Supply and Processing Agreement and a Management Service Agreement with the Fund which have contracted Falconbridge to provide concentrate and services to the Fund on a regular basis (see Note 18). Falconbridge has sold US$210m (2004 – US$127m; 2003 – US$79m) of concentrate to the Fund at terms in accordance with the Supply & Processing Agreement. As of December 31, 2005, Falconbridge has a receivable of US$36m (2004 – US$16m; 2003 – US$9m) from the Fund due to the concentrate sold. Falconbridge has also provided US$65m (2004 – US$61m; 2003 – US$46m) of administration, management and operating services to the Fund at their negotiated value. As of December 31, 2005, Falconbridge has a receivable of US$8m (2004 – US$11m; 2003 – US$7m) from the Fund due to the services provided. In addition, Falconbridge has made purchases of US$35m (2004 – US$29m; 2003 – US$57m) of zinc metals and by-products from the Fund at terms that reflect exchange amounts. Falconbridge has sold metals and operating supplies of US$3m (2004 – US$5m; 2003 – US$5m) to the Fund at terms that reflect market rates. Included in accounts payable as at December 31, 2005 is US$11m (2004 – US$8m; 2003 – US$5m) of amounts due to the Fund. Included in accounts receivable as at December 2005 is US$nil (2004 – US$1m; 2003 – US$1m) of amounts due from the Fund.

(b) Falconbridge has undertaken a number of transactions with Antamina in which Falconbridge has a 33.75% ownership interest. Included in raw material costs are purchases of concentrate of US$260m (2004 – US$159m; 2003 – US$49m) from Antamina that are recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$65m (2004 – US$42m; 2003 – US$13m) to Antamina.

During 2004, Falconbridge has made purchases of goods of US$3m (2003 – US$120m) from its affiliates and provided services of US$nil in 2003. These transactions were measured at their exchange amount. As of December 31, 2004, Falconbridge has a payable of US$nil (2003 – US$12m) to its affiliates.

(c) Falconbridge has undertaken a number of transactions with Gramercy in which Falconbridge has a 50% interest. Included in raw material costs are purchases of alumina of US$136m (2004 – US$14m) from Gramercy that are

recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$6m (2004 – US$2m) to Gramercy.

(d) Falconbridge has undertaken a number of transactions with Collahuasi in which Falconbridge has a 44% interest. Included in raw material costs are purchases of copper cathode of US$109m (2004 – US$79m) from Collahuasi that are recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$25m (2004 – US$19m) to Collahuasi.

(e) Falconbridge has entered into short-term financing transactions with affiliates and associates from time to time at market interest rates. Falconbridge has revolving credit facilities totaling Cdn$25m (2003: Cdn$100m, US$75m of which expired in January 2004) with an affiliate, maturing January 2006. As of December 31, 2004, Falconbridge has made no drawdown against the credit facilities.

(f) Brookfield Asset Management Inc. (formerly Brascan Corporation "Brascan"), which was a major shareholder of the Company prior to the acquisition of the former Falconbridge, sold its ownership in the Company in August, 2005. The transactions of the Company with Brascan and its subsidiaries prior to the sale of its ownership were as follows: Falconbridge Aluminum Inc. ("Aluminum"), a wholly-owned subsidiary of Falconbridge, entered into a power supply contract with Brascan Energy Marketing Inc. ("BEMI"). BEMI, an affiliate of the Company, agreed to provide Aluminum's New Madrid primary aluminium smelter up to 490 MWh of electricity annually for a two-year period commencing June 1, 2003 at rates with a variable component based on market prices. Aluminum has purchased US$52m (2004 – US$127m; 2003 – US$73m) under this contract. Upon completion of the contract on June 1, 2005, the contract was not renewed.

(g) Falconbridge has sold certain trade receivables to a securitization trust which is owned by Brascan Financial Corporation for a total of US$315m (2003 – US$20m) in cash, under an agreement that came into effect on November 13, 2003.

(h) Included in accounts receivable are loans receivable from officers of the Company in the amount of US$2m (2004 – US$3m; 2003 – US$3m), secured by collateral that has market values in excess of cost for both years.

(i) The Company has sold certain trade receivables to a securitization trust which is owned by Brascan Financial Corporation for a total of US$4m (2004 – US$315m) in cash, under an agreement that came into effect in November 2003. The arrangement was terminated in October 2005.

Brascan Financial Corporation, a subsidiary of Brascan, provided the Company with a committed credit facility in the principal amount of Cdn$25 million with an expiry date of January 31, 2006. The facility was cancelled after Brascan sold its ownership in the Company in August, 2005.

The above transactions have been recorded at their exchange amounts.

20. Employee Future Benefit Plans

Falconbridge has a number of defined benefit plans providing pension, health, dental and life insurance benefits to substantially all employees after one or two years of continuous service. Pension benefits are calculated based upon length of service and either final average earnings or a specific amount per year of service. Hourly employees are generally members of negotiated plans.

Defined benefit plan assets consist primarily of cash, equity securities and fixed income securities. The defined benefit plan holds less than 1% of its assets in common shares of Falconbridge and its related parties.

Falconbridge's funding policy is to contribute amounts sufficient to meet minimum funding requirements as set forth by the regulations of the appropriate jurisdictions plus such additional amounts as Falconbridge may determine to be appropriate.

The obligation for benefits and the benefits expenses under these plans are determined through periodic actuarial reports that are based on the following weighted average assumptions:

	Pension Benefit Plans		Other Benefit Plans	
	December 31, 2005	December 31, 2004	December 31, 2005	December 31, 2004
Assumptions used to calculate benefit obligations:				
Discount rate	5.00%	5.75%	5.01%	5.75%
Rate of compensation increase	3.75%	3.61%	3.50%	3.67%
Assumptions used to calculate benefit expense:				
Discount rate	5.75%	6.25%	5.75%	6.25%

na: not applicable

The cost of pension and other post-retirement benefits earned by employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of expected plan investment performance, salary escalation, retirement ages of employees and health care costs. Plan obligations are discounted using rates that reflect the market yields as of the measurement date on high-quality debt instruments with cash flows that match expected benefit payments.

The health care cost trend rate is assumed to be the following:

	December 31, 2005	December 31, 2004
Initial medical trend rate	7.94%	8.44%
Ultimate medical trend rate	4.51%	4.50%
Number of years to reach trend rate	8	9
Initial and ultimate dental trend rate	4.00%	4.00%

	Health Care Cost Trend			
	December 31, 2004		December 31, 2003	
	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures
Initial medical trend rate	8.14%	8.50%	8.20%	9.00%
Ultimate medical trend rate	4.52%	4.50%	4.50%	4.50%
Number of years to reach trend rate	9	8	9	9
Initial and ultimate dental trend rate	4.00%	4.00%	4.00%	4.00%

The health care cost trend rate is assumed to start at 8.50% for 2004 for the Company, its partially-owned subsidiaries and joint ventures (2003 – 9%), decreasing to an ultimate medical trend rate of 4.0% by 2012 for the Company, its partially-owned subsidiaries and joint ventures (2003 – 4.0%).

In 2003, Falconbridge ratified new collective agreements at three of its operations. Included in these agreements was an increase in the pension plan benefits that amounts to an average of 15.5% at the end of three years, as well as provisions for early retirements.

In 2004, Falconbridge ratified new collective agreements at four of its operations that had an impact on pension benefits. Included in these agreements was an increase in the pension plan benefits that amounts to an average of 6.5% at the end of three years, as well as provisions for early retirements.

In 2005, Falconbridge ratified new collective agreements at four of its operations. The impact of these agreements on the employee future benefit costs is nominal.

The funded status of Falconbridge's post-employment benefit plans and net accrued benefit asset (obligation) are as follows:

	Pension Benefit Plans								
	December 31, 2005			December 31, 2004			December 31, 2003		
(US$ millions)	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net
Plan assets	966	1,145	2,111	947	921	1,868	714	889	1,603
Benefit obligations	877	1,415	2,292	833	1,202	2,035	580	1,184	1,764
Excess(deficit) of plan assets over benefit obligations	89	(270)	(181)	114	(281)	(167)	134	(295)	(161)
Net accrued asset			228			289			208

	Other Benefit Plans								
	December 31, 2005			December 31, 2004			December 31, 2003		
(US$ millions)	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net
Plan assets	31	–	31	30	–	30	18	7	25
Benefit obligations	27	412	439	24	349	373	16	309	325
Excess(deficit) of plan assets over benefit obligations	4	(412)	(408)	6	(349)	(343)	2	(302)	(300)
Net accrued liability			(330)			277			250

The measurement date used for financial reporting purposes of the plan assets and benefit obligations is December 31, 2005. For material plans, the most recent actuarial valuations filed for funding purposes were prepared as of December 31, 2004, with the exception of the Retirement Annuity Plan which was prepared as of December 31, 2002. With respect to Falconbridge's significant Canadian pension plans, the most recent actuarial valuations required for funding purposes were prepared as of January 1, 2004 and the effective date of the next required funding actuarial valuations is January 1, 2005. Actuarial valuations are generally required every three years. Falconbridge and U.S. Plans have valuations every year.

The change in the funded status of Falconbridge's post-employment benefit plans was as follows:

Accrued benefit asset(liability), net of valuation allowance	187	21	208	(78)	(172)	(250)

Past service costs resulting from plan amendments are amortized over the remaining average service life of active employees. Past service costs from negotiated plan improvements are amortized over the term of the collective agreement.

For most plans, the net actuarial gain (loss) that exceeds 10% of the greater of the benefit obligation and the value of plan assets is amortized over the remaining service period of active employees. Accrued post-retirement benefits asset (liability) is recorded in pension and other provisions.

Falconbridge's post-employment benefit expense included the following components:

The expected rate of return on plan assets assumption is reviewed annually by management. The assumption is based on expected returns for the various asset classes, weighted by the portfolio allocation. Anticipated future long-term performance of individual asset categories is considered, reflecting expected future inflation and real yields on fixed income securities and equities.

Cash Flows

Falconbridge made cash contributions during 2005 of US$116m (2004 – US$119m) to pension benefit plans and US$19m (2004 – US$20m) to other benefit plans.

Our best estimate of the amounts we expect to contribute for the year ending December 31, 2006 is US$104m (2005 – US$116m) for pension benefit plans and US$23m (2005 – US$20m) for other benefit plans.

The projected benefit payments from the pension benefit plans and other benefit plans in the next 10 years as at 31 December 2005 are estimated as follows:

	As at 31 December 2005	
(US$ millions)	Pension Benefit Plans	Other Benefit Plans
Benefit payments projection:		
2006	140	24
2007	139	26
2008	139	28
2009	140	29
2010	141	31
2011 to 2015	715	176

	As at 31 December 2004			
	Pension Benefit Plans		Other Benefit Plans	
(US$ millions)	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures

2006	68	66	5	16
2007	69	66	6	17
2008	69	65	6	18
2009	68	65	6	19
2010 to 2014	363	317	34	106

21. Segmented Information

Falconbridge has four operating segments: Copper, Nickel, Zinc and Aluminium. Inter-segment sales and purchases are made at market prices and trade terms. As the products and services in each of the reportable segments, except for Corporate, are essentially the same, the reportable segments have been selected at the level where decisions are made on the provision of resources, capital and where performance is measured. For operations forming part of a reportable segment, performance is measured based on production targets, operating costs incurred and unit operating costs. During preparation of the financial statements, the sales and purchases between segments are eliminated. Operations and identifiable assets by operating and geographic segments are presented below:

(a) Operating Segments

(US$ millions)	Year ended December 31, 2005

22 Significant Differences from United States Accounting Principles

These consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). Canadian GAAP varies in certain significant respects from the principles and practices generally accepted in the United States ("U.S. GAAP"). The effect of these principal differences on the Company's financial statements is quantified below and described in the accompanying notes.

Statements of Income (Loss)

(US$ millions)	Years ended December 31

Comprehensive income under U.S. GAAP (a)	862	454	454	322

(a) Comprehensive income is measured in accordance with Statement of Financial Accounting Standards ("FAS") No. 130, "Reporting Comprehensive Income." This standard defines comprehensive income as all changes in equity other than those resulting from investments by owners and distributions to owners. Comprehensive income comprises net earnings and other comprehensive income where other comprehensive income ("OCI") is the change in equity during the period that arises from transactions and other events that are related to non-owner sources. The concept of comprehensive income does not exist under Canadian GAAP.

(b) Effective January 1, 2005, Falconbridge retroactively adopted the amended standard CICA 3860 *Financial Instruments – Presentation and Disclosure*. Further disclosure regarding the convertible debentures is presented in Notes 2 (a) and 11.

Under U.S. GAAP, the entire amount of interest payments on the convertible debentures is accounted for as interest expense. Comparative figures for the year ended December 31, 2004 have been adjusted to reflect this change in accounting policy under Canadian GAAP.

Prior to January 1, 2005 Falconbridge accounts for the convertible debentures in accordance with their substance and, as such, they are presented in the financial statements in their liability and equity component parts. Under U.S. GAAP, the entire face value of the convertible debentures is treated as debt, with interest expense based on the coupon rate of 5.0%.

(c) Under Canadian GAAP, certain financial instruments qualify as a hedge for accounting purposes and therefore gains and losses on these contracts are recognized in revenue at the time the anticipated cash flows are realized. U.S. GAAP, specifically under FAS No. 133 "Accounting for Derivative Instruments and Hedging Activities" and No. 138 "Accounting for Certain Derivative Instruments and Hedging Activities" (together, "FAS 133"), requires a company to recognize all of its derivative instruments, whether designated in hedging relationships or not, on the balance sheet at fair value. The accounting for changes in the fair value (i.e. gains or losses) of a derivative instrument depends on whether it has been designated and qualifies as part of a hedging relationship. For derivatives designated as fair value hedges, the effective portion of the change in the fair value of the derivative is offset by changes in the fair value of its hedged item. For cash flow hedges and hedges of the net investment in self-sustaining operations, the effective portion of the changes in the fair value of the derivative is accumulated in OCI and then is released from OCI and included in income when the hedged item affects earnings. All other derivatives are carried at fair value. FAS 133 establishes certain criteria to be met in order to designate a derivative instrument as a hedge and to deem a hedge as effective.

Fair Value Hedges

Falconbridge has chosen to designate its fixed forward price hedges and certain interest rate swaps as fair value hedges. These hedging instruments were effective during 2005 and 2004. During the year ended December 31, 2004,

the Company recognized a net loss of US$nil (2003 – US$16m) related to the ineffective portion of these hedging instruments.

Cash Flow Hedges

Falconbridge has chosen to designate its foreign currency-denominated revenue hedges and foreign currency-denominated expenditure hedges as cash flow hedges. No ineffectiveness to these hedging instruments was incurred during 2005, 2004 and 2003. At December 31, 2005, the Company does not expect to reclassify any amount of net losses (2004 – US$55m of net gains; 2003 – US$55m of net gains) on derivative instruments from accumulated OCI to earnings during the next 12 months according to contract settlement dates.

Hedges of Foreign Net Assets

During the year ended December 31, 2005, the Company recognized a net loss of US$5m (2004 – US$6m), included in other comprehensive income, related to the forward foreign exchange contracts and foreign-denominated fixed-rate debt.

During the year ended December 31, 2004, the Company recognized a net loss of US$6m (2003 – net gain of US$288m), included in the cumulative translation adjustment, related to the forward foreign exchange contracts and foreign-denominated fixed-rate debt.

Other Hedges

For all other derivative instruments, Falconbridge has chosen not to designate them as hedging instruments.

(d) Under Canadian GAAP, Falconbridge capitalizes exploration costs when sufficient pre-feasibility work indicates that future mine production is reasonably certain and capitalizes costs incurred during the start-up phase of a project until commercial production commences. Under U.S. GAAP, exploration costs cannot be capitalized until the Company has objective reasonable assurance as to their recovery, generally upon receipt of a bankable feasibility study. Statement of Position 98-5 requires start-up costs to be expensed as incurred. As a result of the differences in the carrying amount of capital assets under Canadian and U.S. GAAP, there are differences in depreciation expense in subsequent periods. Further a difference in depreciation expense arises due to the earlier commencement of depreciation under U.S. GAAP.

(e) Effective January 1, 2002, Falconbridge prospectively adopted FAS No. 123 "Accounting for Stock-based Compensation" whereby compensation expense for options granted or modified after January 1, 2002 is measured at fair value at the grant date or modification date using the Black-Scholes valuation model and recognized over the remaining vesting period of the options granted or modified.

Prior to June 30, 2002, Falconbridge's stock option plan allowed for, at the option of the holder, the exercise of the employee's vested option whereby the difference between the grant price and the market price is paid on exercise by the Company, with no increase in the capital stock issued. Under U.S. GAAP, such a feature requires the mark-to-market obligation to be recognized through the income statement of the Company.

On June 30, 2002 Falconbridge's stock option plan was modified to remove the cash settlement feature. As a result under U.S. GAAP additional compensation expense is being recognized over the remaining vesting period of these modified options to the extent that the fair value of the options outstanding on the modification date exceeded the previously recorded compensation expense of these options.

Under Canadian GAAP, there is no requirement to account for options that contain a cash settlement feature when the cash settlement feature is removed by June 30, 2002.

(f) Under Canadian GAAP, when a defined benefit plan gives rise to an accrued benefit asset, a company must recognize a valuation allowance for the excess of the adjusted benefit asset over the expected future benefit to be realized from the plan asset. U.S. GAAP does not provide for a valuation allowance against pension assets. As a result, a difference between U.S. and Canadian GAAP has been recorded for the effects of recognizing a pension valuation allowance and changes therein under Canadian GAAP. Further differences result from the different transition rules and timing of the adoption of the current U.S. and Canadian standards for post-employment costs.

(g) Effective January 1, 2003, Falconbridge adopted FAS 143, "Accounting for Asset Retirement Obligations" which requires that the fair value of liabilities for asset retirement obligations be recognized in the period in which they are incurred. A corresponding increase to the carrying amount of the related asset is generally recorded and depreciated over the life of the asset. The amount of the liability is subject to re-measurement at each reporting period. The cumulative effect of the change through January 1, 2003 was to increase capital assets by US$70m, increase deferred credits by US$97m, decrease future tax liability by US$5m and increase minority interest in subsidiaries by US$5m, with a one time after-tax charge to net earnings of US$27m (loss of US$0.1 per share). Canadian GAAP adopted the same accounting rule, effective January 1, 2004. Comparative figures for the year ended December 31, 2003 have been adjusted to reflect the re-measurement of the asset retirement obligation under Canadian GAAP.

In accordance with the standard, the Company has not included any provision for reclamation costs associated with assets of indeterminate lives, in particular metallurgical plants, as their lives cannot be reasonably estimated nor reclamation obligations determinable.

(h) Under U.S. GAAP, foreign exchange gains and losses on translation of self-sustaining foreign operations are recorded in OCI. Under Canadian GAAP, such gains and losses are included as a separate component of shareholders' equity referred to as cumulative translation adjustment.

(i) U.S. GAAP requires that certain long-term investments not held for trading be recorded at fair value, with unrealized holding gains and losses excluded from the determination of earnings and reported as a separate component of OCI.

(j) U.S. GAAP requires the recognition of an additional minimum pension liability in the amount of the excess of the Company's unfunded accumulated benefits obligation over the recorded pension benefits liability. An offsetting intangible pension asset is recorded no greater than the unrecognized prior service costs, with any difference recorded as a reduction in accumulated OCI.

(k) U.S. GAAP requires investments in joint ventures to be accounted for under the equity method, while under Canadian GAAP, the accounts of joint ventures are proportionately consolidated. However, under rules promulgated by the Securities and Exchange Commission, a foreign registrant may, subject to the provision of additional information, continue to follow proportionate consolidation for the purposes of registration and other filings notwithstanding the departure from U.S. GAAP. A joint venture is qualified for the accommodation if it is an operating entity, the significant financial operating policies of which are, by contractual arrangement, jointly controlled by all parties having an equity interest in the entity. The joint ventures that the Company has proportionately consolidated for the reporting periods are Antamina, Collahuasi, Magnesium, Louvicourt, and Gramercy. All of the Company's joint ventures qualify for the accommodation as their significant financial operating policies are, by contractual arrangement, jointly controlled by all parties having an equity interest in the entity. Consequently, the consolidated balance sheets, statement of income, and cash flow statements have not been adjusted to restate the accounting for these joint ventures under U.S. GAAP. If the Company was not granted the accommodation, the equity accounting method would be used to account for the investment in Antamina, Collahuasi, Louvicourt, Magnesium and Gramercy. Compared to proportionate consolidation, equity accounting would result in no impact to the net income reported in the U.S. GAAP income statement reconciliation. In terms of the U.S. GAAP balance sheet, each item on the balance sheet would be adjusted to exclude the Company's share of these joint ventures' assets and liabilities. Included in investments and other assets would be the Company's share of the joint ventures' net assets. The U.S. GAAP cash flow statement would need to be adjusted to correspond with the adjustments on the balance sheet

Additional information concerning the Company's interests in these five joint ventures is presented in Note 6, including the Company's share of the assets, liabilities and equities, revenues, expenses and cash flows for the years ended December 31, 2005 and 2004.

(l) U.S. GAAP does not permit the subtotal of cash from operations before net changes in non-cash working capital. The various subtotals presented on the statement of income (loss) under Canadian GAAP are not permitted under U.S. GAAP.

(m) In December 2003, FASB issued a revised interpretation of FIN 46 (FIN 46-R), which supercedes FIN 46 and clarifies and expands current accounting guidance for variable interest entities (VIEs). As a result, Falconbridge determined that the

securitization trust (note 16e) was a VIE of which Falconbridge was the primary beneficiary. FIN 46-R requires that Falconbridge consolidate entities that are considered to be VIEs and that it is the primary beneficiary of. Under Canadian GAAP, the securitization trust would not have been consolidated. This difference resulted in adjustments to the consolidated balance sheet, but did not result in any adjustments to net income.

(n) Under Canadian GAAP, capital stock redeemable at the option of the holder must be recognized as debt and the related dividend payments are recognized as interest expense. Under U.S. GAAP, only capital stock that is mandatorily redeemable for assets of the Company must be recognized as a debt. Since the Company does not have an unconditional obligation to redeem Preferred Shares Series H for assets of the Company (Note 12), the Preferred Shares Series H have been classified as equity under U.S. GAAP and dividend payments on the Preferred Shares Series H have been recognized as a reduction in retained earnings.

Since Preferred Shares Series H is denominated in Canadian dollars, its redeemable value is determined by the foreign exchange rate at the end of the reporting period and is subject to changes at different reporting periods. Under U.S. GAAP, the change in its redeemable value from foreign exchange translation is amortized directly to the retained earnings over the period to the earliest redemption date. As the Preferred Shares Series H is considered a liability under Canadian GAAP, changes in value resulting from fluctuations in foreign exchange rates are recognized immediately into income.

(o) Under U.S. GAAP, the book value of the net assets acquired from the business combination as mentioned in Note 3 are different from their book values under Canadian GAAP. The difference in book values arose from the historical accounting differences between U.S. GAAP and Canadian GAAP for the acquired company prior to the business combination. While the preliminary fair values of the assets acquired and liabilities assumed from the business combination are the same under both U.S. GAAP and Canadian GAAP, the difference in their book values results in a difference in preliminary fair value increments allocated to the assets and liabilities under U.S. GAAP and Canadian GAAP. The difference in fair value increments under U.S. GAAP and Canadian GAAP creates a reduction of US$4m in mining, processing and refining costs and a reduction of US$5m in interest expense under U.S. GAAP after the business combination.

(p) Under Canadian GAAP, a gain or loss equivalent to a proportionate amount of the exchange gains and losses accumulated in the foreign cumulative translation adjustment is recognized into income when there has been a reduction in the net investment which results from a reduction in the equity of a foreign operation as a result of certain capital transactions, such as dividend distributions. Under U.S. GAAP, no gain or loss would be recognized unless substantially all of the investment was liquidated.

The following summarizes the adjustments to the Company's balance sheets and cash flow statements in order to conform to U.S. GAAP.

Balance Sheet

(US$ millions)	Years ended 31 December

Impending Accounting Changes

Canadian GAAP

In 2003, the CICA amended Handbook Section 3860, "Financial Instruments – Disclosure and Presentation" ("CICA 3860"), to require certain obligations that may be settled with an entity's own equity instruments to be reflected as a liability. The amendments must be adopted in the Company's 2005 consolidated financial statements with retroactive application. Upon adoption, the Company's Convertible Debentures will be presented as liabilities, with the exception of the equity value ascribed to the holder's option to convert certain of the Convertible Debentures into Common Shares, and the related liability carrying costs will be presented as a charge to net income. The amendments to CICA 3860 will have no impact on basic or diluted earnings per share.

In 2004, the CICA issued Accounting Guideline AcG-15, "Consolidation of Variable Interest Entities", to provide guidance for applying the principles in Handbook Section 1590, "Subsidiaries", to certain entities. AcG-15 is effective for the

Company's 2005 fiscal year and harmonizes Canadian GAAP with U.S. GAAP accounting for variable interest entities. As a result, the disclosures for U.S. GAAP related to the VIEs will also be required for Canadian GAAP in 2005.

In January 2005, the CICA approved Handbook Sections 1530, "Comprehensive Income", 3855, "Financial Instruments – Recognition and Measurement", and 3865, "Hedges", and 3251, "Equity". The new standards are intended to harmonize Canadian GAAP with U.S. GAAP. The new standards are effective for the Company in the first quarter of 2007, but earlier adoption is permitted.

The standards require that all financial assets be classified as trading, available-for-sale, held to maturity, or loans and receivables. In addition, the standards require that all financial assets, including all derivatives, be measured at fair value with the exception of loans, receivables and investments intended to be held to maturity, which should be measured at amortized cost.

Changes in the fair value of trading securities will continue to be reported in earnings, while changes in the fair value of available-for-sale securities will be reported within other comprehensive income, until the financial asset is disposed of, or becomes impaired.

Similarly, the standards require that all financial liabilities be measured at fair value when they are held for trading or are derivatives. Other financial liabilities should be measured at cost.

The standards permit an entity to designate any financial instrument, on initial recognition, as one that it will measure at fair value with gains and losses recognized in net income in the period in which they arise.

Derivatives will be classified as trading, unless they are specifically designated within an effective hedge relationship. The standards permit three types of hedge relationships: fair value hedges, cash flow hedges, and hedges of net investments in self-sustaining foreign operations. For fair value hedges, the effective portion of changes in the fair value derivative instruments is offset in earnings against the changes in fair value of derivative instruments is offset in earnings against the changes in fair value, attributed to the risk being hedged in the underlying asset, liability or firm commitment. For cash flow hedges, and hedges of net investments in self-sustaining foreign operations, the effective portion of changes in fair value of derivative instruments is offset through other comprehensive income, until the variability in cash flows being hedged is recognized in earnings in future accounting periods or upon de-recognition of the net investment. Where a derivative instrument is designated as a hedge and meets the criteria for hedge effectiveness, earnings offset is available, but only to the extent that the hedge is effective. Any ineffectiveness in a hedge relationship will be recognized in current earnings.

Other comprehensive income will be included on the consolidated balance sheets as a separate component of shareholders' equity (net of tax), and will include net unrealized gains on available-for-sale securities, net unrealized gains on derivative instruments designated within an effective cash flow hedge, and unrealized foreign currency translation gains and losses and offsetting hedges on self-sustaining foreign operations. The Company is presently evaluating the impact of these new standards.

United States GAAP

In 2002, the Company adopted FAS 123 on a prospective basis. In December 2004, an amended Statement of Financial Accounting Standard No. 123 "Share-Based Payment" was issued, which may require the Company to apply a different method for valuing awards of stock options. Beginning in 2005, the Company will have to expense all stock options, including the remaining unrecognized compensation relating to options granted on or before December 31, 2001.

In November 2004, the FASB issued SFAS No. 151, "Inventory Costs – an Amendment of ARB No. 43, Chapter 4." This standard provides clarification that abnormal amounts of idle facility expense, freight handling costs, and spoilage should be recognized as current-period charges. The provisions of this standard are effective for inventory costs incurred during 2006.

In March 2005, the FASB ratified the consensus in EITF 04-06 which concludes that a mining company's costs incurred during production for the removal of overburden and waste material from a mine, in order that the underlying mineral deposit may be extracted (production-related stripping costs), should be considered variable production costs included in

the costs of the inventory produced during the period that the stripping costs are incurred. EITF 04-06 does not address the accounting for stripping costs incurred during the pre-production phase of a mine. As is current general practice, those costs may continue to be accounted for as mine development expenditures subject to capitalization and amortization over the life of the mineral deposit benefited from the expenditure.

The above U.S. GAAP standards are effective for the Company beginning January 1, 2006. The Company is presently evaluating the impact of these new standards.

23. Subsequent Event

The Company announced on March 16, 2006 that it intends to redeem a total of 20,000,000, or US$500m, of its outstanding junior preference shares. The junior preference shares will be redeemed on April 16, 2006 from holders of record on March 22, 2006. The Company intends to utilize its internal cash resources to fund the redemption.

Part XI

Definitions and Glossary of Technical Terms

"Enex"	Enex Resources Limited (now known as Xstrata Coal Investments Australia Pty Limited), a company incorporated in Australia with limited liability
"Enex Group"	Enex and its subsidiaries and subsidiary undertakings and, where the context requires, its associated undertakings
"Enlarged Share Capital"	the issued ordinary share capital of the Company as it will be immediately following the New Shares Issue assuming the maximum number of New Shares are issued under the Rights Issue
"Enlarged Xstrata Group"	the Former Xstrata Group as enlarged by the Falconbridge Group
"Equity Bridge Facility"	the bridge facility provided under the Equity Bridge Facility Agreement
"Equity Bridge Facility Agreement"	the equity bridge facility agreement, details of which are provided in paragraph 22.9 of Part VIII – "Additional Information – Material contracts"
"Equity Refinancing Amount"	the amount to be raised in connection with the Standby Equity Underwriting Letter
"Eskom"	Eskom Holding Limited, the South African State-owned electricity utility
"EU"	the European Union
"Euro" or "€"	the currency introduced at the start of the third stage of the European economic and monetary union pursuant to the Treaty establishing the European Community, as amended
"Executive Directors"	the executive Directors of Xstrata
"Existing Shares"	the existing issued Ordinary Shares
"Expiry Time"	the expiry time from time to time under the Xstrata Offer

"ex-rights date"	Thursday, 5 October 2006
"Falconbridge"	Falconbridge Limited, a corporation amalgamated under the laws of the Province of Ontario, Canada with limited liability
"Falconbridge Acquisition"	the acquisition by the Former Xstrata Group of a majority of Falconbridge Shares on completion of the Xstrata Offer on 15 August 2006 (or, where the context requires, the acquisition by members of the Former Xstrata Group of Falconbridge Shares)
"Falconbridge Amalgamation"	the amalgamation of Noranda and Former Falconbridge which became effective on 30 June 2005 to form the current Falconbridge, upon completion of which, the assets, liabilities and operations of Noranda and Former Falconbridge were combined and managed and operated as an integrated business by Falconbridge
"Falconbridge Copper Business"	the business of the Falconbridge Group comprising its copper operations, including in Peru, Chile, the USA and Canada, as further described in Part V – "Information on the Falconbridge Group's business – Falconbridge Copper Business summary"
"Falconbridge Group"	Falconbridge and its subsidiaries and subsidiary undertakings and, where the context requires, its associated undertakings and, following the Falconbridge Acquisition, the Enlarged Xstrata Group excluding the members of the Former Xstrata Group
"Falconbridge Group Mineral Reserves and Mineral Resources Information"	the mineral reserves and mineral resources information published by Falconbridge in its Annual Information Form dated 22 March 2006 and included in paragraph 3 of Part IX – "Ore Reserves and Mineral Resources Information – Falconbridge Group Mineral Reserves and Mineral Resources Information"
"Falconbridge Shareholders"	the holders of Falconbridge Shares, where the context requires, prior to the completion of the Falconbridge Acquisition
"Falconbridge Shares"	common shares in the capital of Falconbridge, together with the associated SRP Rights while such SRP Rights subsisted
"Falconbridge Special Dividend"	the special cash dividend of C$0.75 per Falconbridge Share declared by the board of directors of Falconbridge on 16 July 2006 and paid by Falconbridge on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006
"Falconbridge Zinc Business"	the business of the Falconbridge Group comprising the zinc mining and zinc concentrate operations as further described in Part V – "Information on the Falconbridge Group's business – Falconbridge Zinc Business summary"
"Falcondo"	Falconbridge Dominicana C. por A., a company incorporated in the Dominican Republic with limited liability
"FIL"	Falconbridge International Limited, a company incorporated in Barbados with limited liability

"Financial Services Authority"	the Financial Services Authority of the UK acting in its capacity as the competent authority for the purposes of Part VI of the FSMA and in the exercise of its functions in respect of admission to the Official List otherwise than in accordance with Part VI of the FSMA
"First Facilities"	the facilities under the First Facility Agreement
"First Facility Agreement"	the facility agreement, details of which are provided in paragraph 22.32 of Part VIII – "Additional Information – Material contracts"
"First Falconbridge Shareholder Rights Plan"	the shareholder rights plan adopted pursuant to an agreement dated as of 22 September 2005 between Falconbridge and CIBC Mellon Trust Company, as rights agent, that expired on 22 March 2006, as described in paragraph 22.19 of Part VIII – "Additional Information – Material contracts"
"First Increased Xstrata Offer"	the offer by Xstrata Canada to purchase all of the outstanding Falconbridge Shares not already owned by the Former Xstrata Group for C$59.00 in cash per Falconbridge Share made under the Offer Document as amended and varied by the First Xstrata Notice of Extension and the First Xstrata Notice of Variation
"First Xstrata Notice of Extension"	the notice of extension of Xstrata Canada, dated 7 July 2006, relating to the extension of the Expiry Time of the Xstrata Offer to 8.00 p.m. (Toronto time) on 21 July 2006
"First Xstrata Notice of Variation"	the notice of variation of Xstrata Canada, dated 11 July 2006, relating to the First Increased Xstrata Offer, which increased the cash consideration under the Xstrata Offer from C$52.50 to C$59.00 per Falconbridge Share, removed the condition that 66⅔% of the Falconbridge Shares outstanding (on a fully diluted basis) be deposited and not withdrawn at the Expiry Time and further extended the Expiry Time to midnight (Vancouver time) on 21 July 2006
"Former Falconbridge"	Falconbridge Limited, a corporation existing under the laws of the Province of Ontario, Canada with limited liability and a predecessor corporation of Falconbridge that existed prior to the amalgamation of Noranda and Former Falconbridge to form Falconbridge on 30 June 2005
"Former Xstrata Group"	Xstrata and its subsidiaries and subsidiary undertakings and, where the context requires, its associated undertakings, excluding the members of the Falconbridge Group
"Former Xstrata Group Copper Business"	the business of the Former Xstrata Group comprising the copper operations in Australia, Argentina and Peru as further described in Part IV – "Information on the Former Xstrata Group's business – Former Xstrata Group Copper Business summary"
"Former Xstrata Group Ore Reserves and Mineral Resources Report"	the Ore Reserves and Mineral Resources Report published by Xstrata on 1 March 2006 and included in paragraph 1 of Part IX – "Ore Reserves and Mineral Resources Information – Former Xstrata Group Ore Reserves and Mineral Resources Report"
"Former Xstrata Group Zinc Business"	the business of the Former Xstrata Group comprising a zinc mining and smelting operation as further described in Part IV – "Information on the

	Former Xstrata Group's business – Former Xstrata Group Zinc Business summary"
"FSMA"	the Financial Services and Markets Act 2000, as amended
"fully-diluted" or "fully-diluted basis"	with respect to Falconbridge Shares calculated pursuant to the Xstrata Offer, only that number of Falconbridge Shares which would have been outstanding if all rights to acquire Falconbridge Shares had been exercised, but excluding Falconbridge Shares issuable upon the exercise of the SRP Rights and, with respect to Falconbridge Shares calculated pursuant to the Inco Offer, only that number of Falconbridge Shares which would have been outstanding if all rights to acquire Falconbridge Shares had been exercised other than those which were not, and could not in accordance with their terms become, exercisable within 120 days following 10 August 2006 and excluding Falconbridge Shares issuable upon exercise of the SRP Rights
"Fully Paid Rights"	rights to subscribe for New Shares, fully paid
"Glencore"	Glencore International and its subsidiaries and affiliates or, as the context requires, any subsidiary or affiliate thereof
"Glencore Exchangeable Bonds"	the US$800,000,000 4.125% guaranteed exchangeable bonds due 2010 issued by Glencore Finance (Europe) S.A. and exchangeable into Ordinary Shares
"Glencore International"	Glencore International AG, a company incorporated in Switzerland and with limited liability
"Glencore International Nominees"	the Xstrata directors nominated by Glencore, currently being Messrs. Strothotte and Glasenberg
"Glencore Underwriting Letter"	the letter dated 30 October 2006 between Glencore International and the Banks pursuant to which Glencore International has irrevocably undertaken to subscribe for certain New Shares on demand by any of the Banks
"Health, Safety, Environment and Community Committee" or "HSEC Committee"	the committee described in paragraph 14 of Part VIII – "Additional Information – Corporate governance and board practices"
"HMRC"	UK HM Revenue & Customs
"IFRS"	International Financial Reporting Standards as adopted by the Council of the EU
"Inco"	Inco Limited, a corporation incorporated under the laws of Canada with limited liability
"Inco Offer"	the offer by Inco to purchase all of the outstanding Falconbridge Shares made under an offer document issued by Inco dated 24 October 2005, as amended and as extended by Inco's notices of extension dated 14 December 2005, 19 January 2006, 27 February 2006 and 13 July 2006, by Inco's notice of variation dated 29 May 2006 and by Inco's notices of variation and extension dated 29 June 2006 and 16 July 2006. The Inco Offer expired on 28 July 2006 without Inco taking up any Falconbridge Shares

"Inco Support Agreement"	the support agreement between Inco and Falconbridge in relation to the Inco Offer, as amended, as described in paragraph 22.17 of Part VIII – "Additional Information – Material contracts"
"Ingwe"	Ingwe Collieries Limited, a South African subsidiary of BHP Billiton
"Investment Canada Act"	the Investment Canada Act of 1985, as amended
"Issue Price"	the price of 1,265 pence per New Share at which each New Share will be offered pursuant to the Rights Issue
"JANE"	a joint arrangement not creating an entity
"Joint Brokers"	Deutsche Bank and JPMorgan Cazenove
"Joint Sponsors"	Deutsche Bank and JPMorgan Cazenove
"Joint Underwriters"	Deutsche Bank and JPMSL
"JPMorgan Cazenove"	JPMorgan Cazenove Limited
"JPMorgan Chase"	JPMorgan Chase Bank, National Association
"JPMSL"	J.P. Morgan Securities Ltd.
"Kagiso"	Kagiso Trust Investments (Proprietary) Limited, a company incorporated in South Africa with limited liability
"KPV"	Kagiso Platinum Venture (Proprietary) Limited, a company incorporated in South Africa with limited liability
"Kroners"	the lawful currency of Norway
"£" or "Sterling" or "GBP" or "pence"	the lawful currency of the United Kingdom
"LIBOR"	London Inter Bank Offering Rate
"LionOre"	LionOre Mining International Ltd.
"LionOre Identified Assets"	certain assets and related operations of Falconbridge previously conditionally agreed to be sold by Falconbridge to LionOre, including Falconbridge's Nikkelverk refinery in Norway and the Falconbridge marketing and custom feed organisations that market and sell the finished nickel and other products produced at Nikkelverk and obtain third party feeds for this facility
"Listing Rules"	the Listing Rules of the Financial Services Authority
"London Stock Exchange"	London Stock Exchange plc
"Magnola"	Magnola Metallurgy Inc., a company incorporated in Canada with limited liability
"Market Advisory Agreement"	the agreement entered into between the Former Xstrata Group and Glencore International whereby Glencore International acts as the Enlarged

	Xstrata Group's market advisor with respect to export production of coal, as described in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore"
"member account ID"	the identification code or number attached to any member account in CREST
"Merafe"	Merafe Resources Limited, a company incorporated in South Africa with limited liability
"MH"	Mototolo Holidngs (Proprietary) Limited, a company incorporated in South Africa with limited liability
"MIM"	MIM Holdings Limited, now known as Xstrata Queensland Limited, a company incorporated in Australia with limited liability which was acquired by the Former Xstrata Group in 2003
"MIM Rights Issue"	the rights issue conducted by the Company in 2003 in connection with the acquisition of MIM
"Minimum Tender Condition"	the condition of the original Xstrata Offer (amended by the First Xstrata Notice of Variation and deleted by the Second Xstrata Notice of Variation) that there shall have been validly deposited under the Xstrata Offer and not withdrawn at the Expiry Time (i) such number of Falconbridge Shares that, together with Falconbridge Shares held by Xstrata Canada and its affiliates (as defined in the OSA), constitutes at least 66⅔% of the Falconbridge Shares then outstanding (calculated on a fully-diluted basis) and (ii) at least a majority of the Falconbridge Shares then outstanding (calculated on a fully-diluted basis), the votes attached to which would be included in the minority approval of a second step business combination or going private transaction pursuant to Rule 61-501 and Regulation Q-27
"Mototolo Joint Venture"	the unincorporated joint venture in respect of platinum group metal resources in Mpumalanga Province in South Africa, as described in paragraphs 22.16 and 22.24 of Part VIII – "Additional Information – Material contracts"
"MPRDA"	the South African Mineral and Petroleum Resources Development Act 28 of 2002
"MTM instruction"	Many-to-Many instruction
"n/a"	not applicable
"New Shares"	new Ordinary Shares issued in connection with the Rights Issue
"New Shares Issue"	the issue of the New Shares in connection with the Rights Issue
"Nickel Business"	the business of the Enlarged Xstrata Group comprising its nickel operations as further described in Part V – "Information on the Falconbridge Group's Business – Nickel Business summary"
"Nikkelverk"	Falconbridge Nikkelverk, AS, a company incorporated in Norway with limited liability

"Nil Paid Rights"	rights to subscribe for New Shares, nil paid, provisionally allotted to Qualifying Shareholders pursuant to the Rights Issue
"Nominations Committee"	the committee described in paragraph 14 of Part VIII – "Additional Information – Corporate governance and board practices"
"Non-executive Directors"	the non-executive Directors of Xstrata
"Noranda"	Noranda Inc., a corporation incorporated under the laws of the Province of Ontario, Canada with limited liability
"NorFalco"	NorFalco LLC, a company incorporated in Delaware, United States with limited liability
"Novicourt"	Novicourt Inc.
"NYSE"	New York Stock Exchange
"OBCA"	the Business Corporations Act (Ontario), as amended
"Offer Document"	the offer and circular delivered to Falconbridge, filed with Canadian provincial securities regulators and mailed to Falconbridge Shareholders by Xstrata Canada and Xstrata (which has been amended and varied by the Variation Documents) pursuant to which Xstrata Canada made the Xstrata Offer to Falconbridge Shareholders
"Official List"	the Official List of the Financial Services Authority
"Ordinary Shares"	ordinary shares of US$0.50 each in the capital of Xstrata
"OSA"	the Securities Act (Ontario), as amended
"OSC"	Ontario Securities Commission
"Outokumpu"	Outokumpu Oyj, a corporation incorporated in Finland with limited liability
"Overseas Shareholders"	Qualifying Shareholders with registered addresses in, or who are citizens, residents or nationals of jurisdictions outside the United Kingdom
"participant ID"	the identification code or membership number used in CREST to identify a particular CREST member or other CREST participant
"Peruvian GAAP"	accounting principals generally accepted in Peru
"Peruvian Sol"	the lawful currency of Peru
"PFIC"	a passive foreign investment company as described in paragraph 20 of Part VIII – "Additional Information – US taxation"
"Phelps Dodge"	Phelps Dodge Corporation
"Phelps Dodge Inco Combination"	the proposed combination by means of the Phelps Dodge Inco Combination Agreement, pursuant to which Phelps Dodge conditionally agreed to acquire all of the outstanding Inco shares by way of a statutory

	plan of arrangement for C$20.25 in cash and 0.672 common shares of Phelps Dodge for each Inco share, assuming full pro-ration
"Phelps Dodge Inco Combination Agreement"	the combination agreement dated as of 25 June 2006 between Phelps Dodge and Inco (as amended under a waiver and amendment agreement dated 16 July 2006 between Phelps Dodge and Inco and as terminated on 5 September 2006), under which Phelps Dodge and Inco agreed to implement the Phelps Dodge Inco Combination
"Placing"	the placing to institutional investors of 61,994,320 Ordinary Shares announced by the Company on 17 May 2006 consisting of 32,543,344 new Ordinary Shares which were issued by the Company and 29,450,976 Ordinary Shares held by Batiss and sold pursuant to the terms of the ECMP
"Prospectus" or "this document"	this prospectus issued by the Company in respect of the Rights Issue (together with any supplements or amendments thereto)
"Prospectus Rules"	the rules made for the purposes of Part VI of the FSMA in relation to offers of transferable securities to the public and admission of transferable securities to trading on a regulated market and brought into effect on 1 July 2005 pursuant to Commission Regulation (EC) No. 809/2004
"Provisional Allotment Letter" or "PAL"	the provisional allotment letter representing Nil Paid Rights or Fully Paid Rights to be issued to Qualifying non-CREST Shareholders (other than, subject to certain exceptions, Qualifying Shareholders with a registered address in the United States, Australia, Canada, Japan or South Africa)
"Qualified Institutional Buyer" or "QIB"	means a "qualified institutional buyer" within the meaning of Rule 144A under the Securities Act
"Qualifying CREST Shareholders"	Qualifying Shareholders holding Shares in uncertificated form
"Qualifying non-CREST Shareholders"	Qualifying Shareholders holding Shares in certificated form
"Qualifying Shareholders"	Shareholders on the register of members of the Company at the close of business on the Record Date
"Rand" or "ZAR"	the lawful currency of South Africa
"RBS"	The Royal Bank of Scotland plc
"Record Date"	5.00 p.m. London Time (6.00 p.m. Central European Time) on Monday, 2 October 2006
"Registrar"	Computershare Investor Services PLC
"Regulation Q-27"	Regulation Q-27 – *Protection of Minority Securityholders in the Course of Certain Transactions of the Autorité des marchés financiers (Québec), as amended*
"Regulation S"	Regulation S under the Securities Act

"Regulatory Information Service"	one of the regulatory information services authorised by the Financial Services Authority to receive, process and disseminate regulatory information from listed companies
"Relationship Agreement"	the agreement dated 20 March 2002 between the Company and Glencore International, details of which are provided in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Relationship with controlling shareholder"
"Remuneration Committee"	the committee described in paragraph 14 of Part VIII – "Additional Information – Corporate governance and board practices"
"Rights Issue"	the offer by way of rights to Qualifying Shareholders to subscribe for New Shares, on the terms and subject to the conditions set out or referred to in Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue" and, in the case of Qualifying non-CREST Shareholders only, the Provisional Allotment Letter
"RPM"	Rustenburg Platinum Mines Limited, a company incorporated in South Africa with limited liability
"RTGS"	Real Time Gross Settlement
"Rule 144A"	Rule 144A under the Securities Act
"Rule 61-501"	OSC Rule 61-501 – *Insider Bids, Issuer Bids, Business Combinations and Related Party Transactions, as amended*
"SEC"	United States Securities and Exchange Commission
"Second Facility"	the facility under the Second Facility Agreement
"Second Facility Agreement"	the facility agreement, details of which are provided in paragraph 22.22 of Part VIII – "Additional Information – Material contracts"
"Second Falconbridge Shareholder Rights Plan"	the shareholder rights plan adopted pursuant to an agreement dated as of 21 March 2006 between Falconbridge and CIBC Mellon Trust Company, as rights agent, that was cease traded on 28 July 2006, as described in paragraph 22.7 of Part VIII – "Additional Information – Material contracts"
"Second Increased Xstrata Offer"	the offer by Xstrata Canada to purchase all of the outstanding Falconbridge Shares not already owned by the Former Xstrata Group for C$62.50 in cash per Falconbridge Share made under the Offer Document as amended and varied by the First Xstrata Notice of Extension, the First Xstrata Notice of Variation and the Second Xstrata Notice of Variation
"Second Xstrata Notice of Extension"	the notice of extension of Xstrata Canada, dated 15 August 2006, relating to the extension of the expiry time of the Xstrata Offer to midnight (Vancouver time) on 25 August 2006
"Second Xstrata Notice of Variation"	the notice of variation of Xstrata Canada, dated 21 July 2006, increasing the consideration under the Xstrata Offer from C$59.00 to C$62.50, deleting the Minimum Tender Condition, providing that the consideration under the Xstrata Offer would not be reduced by the amount of the Falconbridge Special Dividend, making the Xstrata Offer conditional on

	further Shareholder approval at the extraordinary general meeting of the Company held on 14 August 2006 and further extending the Expiry Time to 8.00 p.m. (Toronto time) on 14 August 2006
"Securities Act"	the US Securities Act of 1933, as amended
"Seez Trading"	Seez Trading Corp. Limited, a company incorporated in Bermuda with limited liability
"Senior Executives"	the members of senior management of the Company set out in Part VI – "Directors and Senior Management of Xstrata"
"Shareholders"	holders of Ordinary Shares
"SIS"	SIS SegaInterSettle AG
"SIS System"	the system and/or facilities of SIS for the settlement of transactions in securities
"South Africa"	the Republic of South Africa
"SRP Rights"	rights issued pursuant to the Second Falconbridge Shareholder Rights Plan
"Standby Equity Underwriting Letter"	the standby equity underwriting letter, details of which are provided in paragraph 22.11 of Part VIII – "Additional Information – Material contracts"
"Stark Claimants"	Stark Trading and Shepherd Investment International Ltd
"stock account"	an account within a member account in CREST to which a holding of a particular share or other security in CREST is credited
"Swiss Admission"	the commencement of dealings in New Shares, nil paid, on the SWX
"Swiss Banks"	Credit Suisse, UBS AG, Zürcher Kantonalbank and certain other Swiss banks who are all SIS accountholders and through which certain Swiss Shareholders hold their interests in Ordinary Shares
"SWX"	SWX Swiss Exchange
"Teck Cominco"	Teck Cominco Limited, a corporation incorporated under the laws of Canada with limited liability
"Tintaya"	Xstrata Tintaya S.A. (formerly BHP Billiton Tintaya S.A.), a company incorporated under the laws of Peru with limited liability
"Tintaya Acquisition"	the acquisition, which completed on 21 June 2006, by the Former Xstrata Group of 99.981% of the issued and outstanding shares of Tintaya pursuant to the Tintaya Acquisition Agreement
"Tintaya Acquisition Agreement"	the sale and purchase agreement in relation to the Tintaya Acquisition, details of which are provided in paragraph 22.12 of Part VIII – "Additional Information – Material contracts"
"TSX"	Toronto Stock Exchange

"Trilon"	Trilon International Inc., a subsidiary of Brookfield
"UK Finance Act"	the UK Finance Act 2006
"UK GAAP"	accounting principles generally accepted in the United Kingdom
"uncertificated" or "in uncertificated form"	recorded on the register of members as being held in uncertificated form in CREST and title to which, by virtue of the CREST Regulations, may be transferred by means of CREST
"Underwriters"	Deutsche Bank and JPMSL
"Underwriting Agreement"	the underwriting agreement dated 3 October 2006 between Xstrata and the Banks described in paragraph 21 of Part VIII – "Additional Information – Summary of the terms of the Underwriting Agreement"
"United Kingdom" or "UK"	the United Kingdom of Great Britain and Northern Ireland
"United States" or "US" or "USA"	the United States of America, its territories and possessions and any state of the United States and the District of Columbia
"US dollars" or "US Dollars" or "US$" or "$US" or "cents"	the lawful currency of the United States
"US$m"	millions of US Dollars
"US GAAP"	accounting principles generally accepted in the United States
"US person"	has the meaning given in Regulation S under the Securities Act
"Vanadium Business"	the business of the Enlarged Xstrata Group comprising the mining, production and conversion of vanadium as further described in Part IV – "Information on the Former Xstrata Group's business – Alloys Business – Vanadium operations"
"Variation Documents"	the First Xstrata Notice of Extension, the First Xstrata Notice of Variation, the Second Xstrata Notice of Variation and the Second Xstrata Notice of Extension
"Xstrata" or the "Company"	Xstrata plc, a public limited company incorporated in England and Wales
"Xstrata AG"	Xstrata AG, a company formerly incorporated in Switzerland with limited liability which was dissolved at the time of the Xstrata Merger
"Xstrata AG Shares"	ordinary bearer shares in the capital of Xstrata AG with a nominal value of 10 Swiss Francs
"Xstrata AG Share Schemes"	the Xstrata AG Management and Employee Share Incentive Scheme (renamed the Xstrata Group Management Share Incentive Scheme following the Xstrata Merger), the Xstrata AG Directors' Option Scheme and the Xstrata AG Directors' Incentive Scheme (renamed the Xstrata Directors' Incentive Scheme following the Xstrata Merger)

"Xstrata Alberta"	1184760 Alberta Limited, a wholly-owned indirect subsidiary of Xstrata and a corporation incorporated in the Province of Alberta, Canada with limited liability
"Xstrata Annual Reports and Accounts"	the annual reports and accounts prepared by Xstrata for the financial years ended 31 December 2003, 31 December 2004 and 31 December 2005
"Xstrata Canada"	Xstrata Canada Inc., a corporation incorporated under the laws of the Province of Ontario, Canada with limited liability
"Xstrata Capital"	Xstrata Capital Corporation A.V.V., a company incorporated in Aruba with limited liability
"Xstrata Coal"	the Coal Business
"Xstrata Coal Marketing"	Xstrata Coal Marketing AG, a company incorporated in Switzerland with limited liability
"Xstrata Coal South America"	Xstrata Coal South America Ltd., a company incorporated in Bermuda with limited liability
"Xstrata Copper"	the Copper Business
"Xstrata Holdings"	Xstrata Holdings Pty Limited ACN 104 160 689, a company incorporated in Australia with limited liability
"Xstrata IPO"	the initial public offering of Ordinary Shares in Xstrata plc announced on 20 March 2002
"Xstrata LTIP"	the Xstrata Long Term Incentive Plan
"Xstrata Merger"	the merger of Xstrata AG and the Company on 25 March 2002 pursuant to which the Company became the ultimate holding company of the Former Xstrata Group
"Xstrata Offer"	the offer by Xstrata Canada to purchase all of the outstanding Falconbridge Shares not already owned by the Former Xstrata Group made under the Offer Document as amended and varied by the Variation Documents
"Xstrata (Schweiz) AG"	Xstrata (Schweiz) AG, a company incorporated in Switzerland with limited liability
"Xstrata Share Schemes"	the Xstrata LTIP, the Xstrata AG Share Schemes, the option granted to Mr Davis in September 2001 and the option granted to Mr Reid in January 2002
"Xstrata SL"	Xstrata Services (UK) Limited, a company incorporated in England and Wales with limited liability
"Xstrata South Africa"	Xstrata South Africa (Proprietary) Limited, a company incorporated in South Africa with limited liability
"Xstrata Zinc"	the Zinc Business

"Zinc Business"	the business of the Enlarged Xstrata Group comprising the Former Xstrata Group Zinc Business and the Falconbridge Zinc Business

Glossary of technical terms

"agglomeration"	binding fine particles together to create coarse particles as part of a mineral processing activity
"anode"	a rectangular plate of metal cast in a shape suitable for refining by the electrolytic process. An anode is the finished product of the copper smelting process
"anthracite"	a hard coal containing a high percentage of fixed carbon and a low percentage of volatile material
"attributable production"	that part of mine or operation production in which the relevant person has an economic interest. It therefore excludes production attributable to minority interests in controlled subsidiaries and the interests of joint venture partners
"attributable reserves"	that part of reserves from a mine in which the relevant person has an economic interest. It therefore excludes reserves attributable to minority interests in controlled subsidiaries and the interests of joint venture partners
"attributable resources"	that part of resources from a mine in which the relevant person has an economic interest. It therefore excludes resources attributable to minority interests in the controlled subsidiaries and the interests of joint venture partners
"attributable sales"	that part of sales from a mine or operation in which the relevant person has an economic interest. It therefore excludes sales attributable to minority interests in controlled subsidiaries and the interests of joint venture partners
"bankable feasibility study"	a comprehensive study of a deposit in which all geological, engineering, operating, economic and other relevant factors are considered in sufficient detail that it could reasonably serve as a basis for a financial decision by a financial institution to finance the development of the deposit for mineral production
"bituminous"	a measure of coal rank. It is a measure of the degree of metamorphosis or change from the original plant or vegetative state
"blister copper"	a crude form of copper (assaying about 99%) produced in a smelter, which requires further refining before being used for industrial purposes
"brownfield"	brownfield development projects are expansions to existing operations with proximity to existing infrastructure and known geological composition
"calcine"	zinc oxide produced from the roasting of zinc concentrates
"calorific value"	the heat of combustion of a unit quantity of coal. It is expressed in British Thermal Units per pound (Btu/Lbi), kilocalories per kilogramme (kcal/kg) or mega joules per kilogramme (MJ/kg). The gross calorific value includes all heat of vaporisation of water. Net calorific value assumes that all water is in the vapour phase

"capacity"	the design number of units that can be produced in a given time period based on operations with a normal number of shifts and maintenance interruptions
"cathode"	a rectangular plate of metal, produced by electrolytic refining, which is melted into commercial shapes such as billets, ingots, etc. A cathode is typically the finished product of the copper refining process
"CGG"	continuous galvanising grade, zinc ingot
"chromite"	$FeCr_2O_4$, the principal chromium ore
"chromitite"	a rock composed chiefly of chromite
"CIM Definition Standards on Mineral Resources and Reserves"	standards for the classification of MRMR estimates into various categories. The category to which a resource or reserve estimate is assigned depends on the level of confidence in the geological information available on the mineral deposit; the quality and quantity of data available on the deposit; the level of detail of the technical and economic information which has been generated about the deposit, and the interpretation of the data. The CIM Definition Standards on Mineral Resources and Reserves were approved by the Canadian Institute of Mining, Metallurgy and Petroleum on 20 August 2000, and updated on 14 November 2004, for the reporting of exploration information, mineral resources and mineral reserves in Canada and are incorporated by reference into NI 43-101
"CIM Estimation of Mineral Resources and Mineral Reserves Best Practice Guidelines"	guidelines intended to assist a Qualified Person in the planning, supervision, preparation and reporting of MRMR estimates. All MRMR estimation work from which public reporting will ensue must be designed and carried out under the direction of a Qualified Person in accordance with NI 43-101. Disclosure of MRMR estimates is to be made in accordance with industry standard definitions approved by the Canadian Institute of Mining, Metallurgy and Petroleum which have been incorporated by reference into NI 43-101
"coal mine"	an operating mine producing coal
"coke"	bituminous coal from which the volatile components have been removed
"coking coal"	coal used to create coke – which is consumed in the steel reduction process
"COMEX"	The New York Commodity Exchange
"concentrate"	material that has been processed to increase the content of contained material or mineral relative to the contained waste
"continuous miner"	mining machine designed to remove coal from the face with the use of cutting machines and to load that coal into shuttle cars or onto conveyors
"CPT"	carriage paid to
"dilution"	the contamination of ore with barren wall rock. The assay of the ore after mining is frequently lower than when sampled in place

"dmt"	dry metric tonnes
"doré"	a gold-silver alloy, an intermediate product from certain gold mines
"ferrochrome"	an alloy of iron and chromium primarily used as an input to stainless steel making
"ferronickel"	an alloy containing nickel and iron (approximately 38% nickel and 62% iron in the case of ferronickel produced by Falcondo). The volumes produced are expressed in terms of the nickel contained
"ferrovanadium"	an alloy of iron and vanadium
"FeV"	Ferrovanadium
"FOB"	free on board
"grade"	the quality of an ore, alloy or metal, usually expressed as a percentage of the primary element
"greenfield"	greenfield development projects are expansions to areas where the Enlarged Xstrata Group does not currently operate
"IAI"	International Aluminium Institute
"inferred mineral resource"[1]	part of a mineral resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes
"inferred resources"	a mineral resource inferred from geoscientific evidence, drill holes, underground openings or other sampling procedures where the lack of data is such that continuity cannot be predicted with confidence and where geoscientific data may not be known with a reasonable level of reliability
"indicated mineral resource"[1]	part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics, can be estimated with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed
"IsaMills"	a high intensity stirred grinding mill developed by Xstrata Technology that significantly increases the efficiency of mineral grinding
"ISASMELT"	a smelting process developed by Xstrata Technogy that has applications for primary and secondary copper and lead smelting, converting, copper/nickel smelting, and treatment of scraps and residues

"ISAPROCESS"	a permanent cathode technology developed by Xstrata Technology for the copper refining industry
"JORC Code"	the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves
"kg"	kilogramme
"Kidd Process"	a permanent cathode technology developed by the Falconbridge Group for the copper refining industry
"kt"	thousand tonnes
"ktpa"	thousand tonnes per annum
"lb"	English pound equivalent to 0.4536 kilogrammes
"LME"	London Metal Exchange
"longwall"	mining method in which a coal face is mined using a shearer mounted on an armoured chain conveyor that runs along the full length of the coal face. Hydraulic jacks support the roof over the worked-out area. As the longwall face advances, the roof behind the jacks is allowed to cave
"managed", "managed basis" or "managed tonnage basis"	in respect of the Coal Business's operations, the commodities managed by the Coal Business on a total mine basis in respect of those mines that the Enlarged Xstrata Group operates and manages regardless of the Enlarged Xstrata Group's attributable interest in them, except for the Douglas/ Tavistock joint venture managed by Ingwe in respect of which only the Enlarged Xstrata Group's attributable interest of 16% is included
"matte"	a mixture of metal sulphides enriched with nickel, cobalt, copper, silver, gold and platinum group metals
"measured mineral resource"[1]	part of a mineral resource for which quantity, grade or quality, densities, shape, physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters, to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough to confirm both geological and grade continuity
"measured resources"	the resources for which tonnage, densities, shape, physical characteristics, grade and mineral content can be estimated with a high level of *confidence*
"mill"	a plant where ore is ground and undergoes physical or chemical treatment to extract and produce a concentrate of the valuable minerals
"mineral reserve"[1]	economical mineable part of a measured or indicated mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of

	reporting, that economic extraction can be justified. A mineral reserve includes diluting materials and allowances for losses that may occur when the material is mined
"mineral resource"[1]	a concentration or occurrence of natural, solid, inorganic or fossilized organic material in or on the Earth's crust in such form and quantity and of such a grade of quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics and continuity of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge
"mineral rights"	the ownership of the minerals on or under a given surface with the right to remove the said minerals
"MRMR"	mineral resource and mineral reserve
"Mt"	million tonnes
"Mtpa"	million tonnes per annum
"MW"	mega watt
"MWh"	mega watt hour
"NI 43-101"	Canadian National Instrument 43-101 – "Standards of Disclosure for Mineral Projects" of the Canadian Securities Administrators
"NYMEX"	New York Mercantile Exchange
"open cut" or "open pit"	method of mining where overlying strata overburden is removed, and ore is extracted directly, without the use of underground workings as the primary means of extraction
"ore"	a mineral or mineral aggregate containing precious or useful minerals in such quantities, grade and chemical combination to make extraction commercially profitable
"oz"	troy ounces
"PCI coals"	pulverised coal injection coals
"PGM" or "platinum group metals"	platinum, palladium, rhodium and related metals present in some nickel/copper ores
"pillar"	a portion of a metal or coal deposit left in place in an underground mine to provide support for the roof
"plant"	fixed or moveable equipment required in the process of winning or processing the ore
"pound"	Imperial pound, equivalent to 0.4536 kilogrammes
"probable mineral reserve"[1]	economical mineable part of an indicated, and in some circumstances a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining,

	processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified
"probable reserves"	measured and/or indicated resources which are not yet proven but of which detailed technical and economic studies have demonstrated that extraction can be justified at the time of determination and under specific economic conditions
"proved reserves"	measured mineral resources of which detailed technical and economic studies have demonstrated that extraction can be justified at the time of determination and under specific economic conditions
"proven mineral reserve"[1]	economical mineable part of a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified
"project"	a coal deposit which is in the pre-operating phase of development and, subject to capital investment, feasibility investigations, statutory and management approvals and business considerations, may be commissioned as a coal mine
"prospecting permit"	permission to prospect for minerals from a mineral rights area
"Qualified Person"	defined in NI 43-101 as "an individual who is an engineer or geoscientist with at least five (5) years of experience in mineral exploration, mine development, mine operation, project assessment or any combination of these; has experience relevant to the subject matter of the mineral project and technical report; and is a member in good standing of a professional association"
"recoverable reserves" or "recovery"	where relating to coal, the tonnages of in-situ reserves that are expected to be recovered. i.e. that portion of the seam which will be extracted
"reductant"	an additive used specifically to drive off oxygen in a metallurgical conversion process
"reef(s)"	a layer, vein or lode containing economic mineralisation
"refinery"	a plant where concentrates or matte are processed into one or more refined metals
"reserves"	those parts of mineral resources for which sufficient information is available to enable detailed or conceptual mine planning and for which such planning has been undertaken. Reserves are classified as either proved or probable
"resources"	all of the potential minerals in a defined area based on points of observation and extrapolations from those points. Potential minerals are defined as minerals which have been or could be beneficiated to give a quality acceptable for commercial usage in the foreseeable future and excludes minor mineral occurrences

"rights" or "surface rights"	the ownership of the surface land under which minerals occur
"roaster"	a furnace which, by applying super-heated air to an ore or concentrate, causes oxidation to take place, allowing the ore or concentrate to be successfully treated
"ROM" or "ROM Reserves" or "run-of-mine"	as mined reserves, taking into account geological losses, mining losses, contamination and as mined moisture adjustments
"royalty"	a share of the product or profit reserved by the owner for permitting another to exploit the property
"SAG-ball grinding"	semi-autogenous grinding and ball milling, a process to reduce rock-sized ore to a suitable size to liberate individual minerals before separation
"saleable reserves"	reserves adjusted for yield losses in the preparation plant (if applicable) and converted to a saleable moisture basis
"SAMREC Code"	South African Code for Reporting of Mineral Resources and Mineral Reserves
"shaft"	a vertical or inclined excavation, commonly from the surface, of limited cross-sectional area compared to its depth. It is used for mining, draining water, ventilation, lowering and hoisting men, product and waste and lowering materials
"SHG"	special high grade, zinc ingot of 99% purity
"skarn"	a mineral deposit at or near a contact between an intrusive body and its host rock
"smelter"	a plant in which concentrates are processed into an upgraded product
"smelting"	thermal processing whereby molten metal is liberated from beneficiated ore or concentrate with impurities speared as lighter slag
"Söderberg"	a type of electrode used for smelting in electric furnaces
"spot price"	the current price of a metal for immediate delivery
"subsidence"	the sinking or settling of material, especially over an underground mining operation
"SX-EW"	solvent extraction-electrowinning is a metallurgical technique, so far applied only to copper ores, in which metal is dissolved from the rock by organic solvents and recovered from solution by electrolysis
"tailings"	finely ground rock from which valuable minerals have been extracted by milling
"thermal coal"	coal used in generating steam for electricity production
"t" or "tonne"	1,000 kilogrammes, equivalent to 2,204.62 pounds
"TC/RC"	treatment and refining charge

	number of tonnes
	tonnes per annum
	a chromitite layer in the Bushveld Complex in Mpumalanga, South Africa, which contains economically viable concentrations of PGM
	vanadium pentoxide
	rock lacking sufficient grade and/or other characteristics or ore to be economic
"wmt"	wet metric tonnes
"zinc concentrate"	product of flotation process typically ranging in zinc content between 45% and 60%

Note.
(1) NI 43-101 definitions

	number of tonnes
	tonnes per annum
	a chromitite layer in the Bushveld Complex in Mpumalanga, South Africa, which contains economically viable concentrations of PGM
	vanadium *pentoxide*
	rock lacking sufficient grade and/or other characteristics or ore to be economic
"wmt"	wet metric tonnes
"zinc concentrate"	product of flotation process typically ranging in zinc content between 45% and 60%

Note.
(1) NI 43-101 definitions

"tonnage"	number of tonnes
"tpa"	tonnes per annum
"UG2"	a chromitite layer in the Bushveld Complex in Mpumalanga, South Africa, which contains economically viable concentrations of PGM
"V_2O_5"	vanadium pentoxide
"waste"	rock lacking sufficient grade and/or other characteristics or ore to be economic
"wmt"	wet metric tonnes
"zinc concentrate"	product of flotation process typically ranging in zinc content between 45% and 60%

Note
