Those Shareholders who do not participate in the equity offering(s) undertaken by the Company to raise the Equity Refinancing Amount (either by taking up their full entitlement under the offer in the case of a pre-emptive issue or otherwise) will suffer a reduction, which might, depending on the number of Ordinary Shares issued, be significant, in their proportionate ownership and voting interest in the ordinary share capital of the Company as represented by their holding of Ordinary Shares immediately following the issue of Ordinary Shares pursuant to the equity offering(s).

Possible volatility of the price of Ordinary Shares

The market price of Ordinary Shares could be subject to significant fluctuations due to a change in sentiment in the market regarding the Ordinary Shares (or securities similar to them), including, in particular, the likelihood of completion of the Proposed Acquisition and/or in response to various facts and events, including any regulatory changes affecting the Xstrata Group's and/or the Falconbridge Group's operations, variations in the Xstrata Group's and/or the Falconbridge Group's operating results and/or business developments of the Xstrata Group and/or the Falconbridge Group and/or their competitors. Stock markets have from time to time experienced significant price and volume fluctuations that have affected the market prices for securities and which may be unrelated to the Xstrata Group's and/or the Falconbridge Group's operating performance or prospects. Furthermore, the Xstrata Group's and/or the Falconbridge Group's operating results and prospects from time to time may be below the expectations of market analysts and investors. Any of these events could result in a decline in the market price of Ordinary Shares.

Major shareholders

As at the date of this document, CSSEL and Glencore International hold approximately 22% and 14%, respectively, of the issued ordinary share capital of Xstrata. Each of CSSEL and Glencore International are currently able to exercise a significant degree of influence over matters requiring Shareholder approval, including the approval of significant corporate transactions and this may have the effect of delaying, preventing or deterring a change in control of the Xstrata Group, could deprive Shareholders of an opportunity to receive a premium for their Ordinary Shares as part of a sale of the Xstrata Group and might affect the market price of the Ordinary Shares and/or other securities of the Xstrata Group. In addition, any decision by either of CSSEL or Glencore International to sell all or a portion of the Ordinary Shares held by it could adversely affect the market price of the Ordinary Shares and/or other securities of the Xstrata Group.

Possible unavailability of pre-emptive rights for US and other non-UK holders of Ordinary Shares

In the case of an increase of the share capital of the Company for cash, the existing Shareholders are generally entitled to pre-emption rights pursuant to the Companies Act unless such rights are waived by a special resolution of the Shareholders at a general meeting or in certain circumstances stated in the Articles. To the extent that pre-emptive rights are granted, US and certain other non-UK holders of the Ordinary Shares may not be able to exercise pre-emptive rights for their Ordinary Shares unless the Company decides to comply with applicable local laws and regulations and, in the case of US holders, unless a registration statement under the Securities Act is effective with respect to those rights, or an exemption from the registration requirements thereunder is available. The Company intends to evaluate at the time of any future rights offering the costs and potential liabilities, direct and indirect, associated with any such compliance or registration statement. At such time, the Company also intends to evaluate the indirect benefits to it of enabling the exercise by US and other non-UK holders of the Ordinary Shares of pre-emptive rights and any other factors the Company considers appropriate at the time. On the basis of this evaluation, the Company will then need to make a decision as to how to proceed and whether to file such a registration statement or otherwise or any other steps necessary to enable Shareholders in such other non-UK jurisdictions to exercise their pre-emptive rights. No assurance can be given that any steps will be taken in any jurisdiction or that any registration statement will be filed to enable the exercise of such holders' pre-emptive rights.

Part III

Information on the Falconbridge Group

[This page is intentionally left blank]

Information on the Falconbridge Group

This Part III has been written solely on the basis of publicly available information and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors. Nothing in the previous sentence is intended to qualify the statements in paragraph 1 of Part VI – "Additional Information – Responsibility". See "Presentation of information – presentation of information on the Falconbridge Group" and the risk factor "Lack of due diligence access to Falconbridge" in Part II – "Risk Factors".

Introduction

Falconbridge, which is incorporated in the Province of Ontario, Canada and listed on the Toronto and New York stock exchanges, is a leading international copper and nickel company with investments in fully integrated zinc and aluminium assets. Falconbridge is one of the world's largest producers of zinc and nickel and a significant producer of copper, primary and fabricated aluminium, cobalt, lead, molybdenum, silver, gold and sulphuric acid. It is also one of the world's largest recyclers and processors of metal-bearing materials.

Falconbridge's principal products are copper, nickel, zinc and aluminium, with the balance of its products coming from by-products and co-products that include silver, gold, platinum group metals, lead, selenium, tellurium, cadmium, indium, cobalt, nickel sulphate and sulphuric acid.

The principal markets for Falconbridge's products include the steel, refinery and foundry, construction, telecommunications, automotive, agricultural and chemical industries.

Falconbridge was created on 30 June 2005 on completion of a merger transaction between Noranda and its consolidated subsidiary, Former Falconbridge, following approval of the amalgamation of the two companies by the shareholders of each company. Prior to the amalgamation, as of 31 December 2004, Noranda had an interest in approximately 59% of the voting securities of Former Falconbridge.

Historical financial information in this document for the Falconbridge Group has been extracted without material amendment from published information, is presented in US dollars and has been prepared in accordance with Canadian GAAP. Historical financial information for the Xstrata Group in this document is presented in US dollars and has been prepared in accordance with IFRS.

UK GAAP (in accordance with which Xstrata previously prepared its financial information) and IFRS differ in certain relevant respects from Canadian GAAP. For a discussion of certain significant differences between UK GAAP and Canadian GAAP and IFRS and Canadian GAAP, see paragraph 2.3 of Part IV – "Information on the Expected Impact of the Proposed Acquisition on the Assets, Liabilities and Earnings of the Enlarged Group – Principal differences in the application of Xstrata's accounting policies and those applied by Falconbridge".

The Falconbridge Group's financial information table

The following table sets out selected financial information regarding the Falconbridge Group for the three financial years ended 31 December 2005, 31 December 2004 and 31 December 2003.

The information presented herein is extracted without material amendment from the section headed "Financial Information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003", in this Part III below. You should read the information below in conjunction with that section and the other detailed information included in this Part III and elsewhere in this document and should not rely solely on key and summarised information.

	Audited Canadian GAAP Year ended 31 December			
	2003	2004 As reported	2004 Restated[1]	2005
	US$m (except as otherwise stated)			
Turnover	4,657	6,978	6,764	8,148
Income generated by operating assets	397	1,380	1,391	1,820
EBITDA[2]	778	1,766	1,771	2,236
Profit before taxation	43	884	945	1,391
Basic (loss)/earnings per Ordinary Share (US$)	–	1.78	1.71	2.52
Dividends per common share (US$)	0.46	0.37	0.37	0.39
Net debt[3]	2,694	2,324	2,544	2,941
Net assets excluding net debt	5,291	5,383	5,383	7,972
Shareholders' equity	2,597	3,059	2,839	5,031

Note:

(1) During 2005, the Falconbridge Group changed its accounting policy with respect to the accounting treatment of convertible debentures, preferred shares, Series H and Variable Interest Entities, leading to a restatement of its financial statements for the year ended 31 December 2004.

(2) EBITDA has been calculated as income generated from operating assets adding back depreciation, amortisation and accretion, less corporate and general administration costs and research, development and exploration costs.

(3) Net debt has been calculated as long term debt and debt due within one year, less cash and cash equivalents and short term investments.

Description of the business of the Falconbridge Group

The description of the businesses of Falconbridge, Noranda and Former Falconbridge contained in this Part III has been extracted without material amendment from the following sources:

1) ***the Falconbridge Annual Information Form dated 22 March 2006;***

2) ***Noranda's F80 SEC filing dated 8 June 2005;***

3) ***Falconbridge's material public announcements issued and filed with the Canadian Securities Administrators between 31 December 2005 and 29 May 2006 (being the latest practicable date prior to the publication of this document);***

4) ***Noranda's Management's Discussion and Analysis as disclosed in Noranda's 2003 Annual Report;***

5) ***Noranda's Management's Discussion and Analysis as of 3 February 2005 as disclosed in Noranda's 2004 Annual Report;***

6) ***Falconbridge's Management's Discussion and Analysis as of 22 February 2006 as disclosed in Falconbridge's 2005 Annual Report;***

7) ***Falconbridge's Management's Discussion and Analysis as of 25 April 2006, as filed with the Canadian Securities Administrators on 1 May 2006; and***

8) ***the audited financial statements of Falconbridge for the year ended 31 December 2005 as disclosed in Falconbridge's annual accounts for that period and the audited financial statements of Noranda for the years ended 31 December 2004 and 31 December 2003 as disclosed in Noranda's annual accounts for those periods,***

and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors.

The following description of the business of Falconbridge has been extracted without material amendment from the Falconbridge Annual Information Form dated 22 March 2006 and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors.

Nothing in this paragraph headed "Description of the business of the Falconbridge Group" is intended to qualify the statements in paragraph 1 of Part VI – "Additional Information – Responsibility".

Glossary of Terms

anode	a rectangular plate of metal cast in a shape suitable for refining by the electrolytic process. An anode is the finished product of the copper smelting process.
bankable feasibility study	a comprehensive study of a deposit in which all geological, engineering, operating, economic and other relevant factors are considered in sufficient detail that it could reasonably serve as a basis for a financial decision by a financial institution to finance the development of the deposit for mineral production.
blister copper	a crude form of copper (assaying about 99%) produced in a smelter, which requires further refining before being used for industrial purposes.
capacity	the design number of units that can be produced in a given time period based on operations with a normal number of shifts and maintenance interruptions.

cathode	a rectangular plate of metal, produced by electrolytic refining, which is melted into commercial shapes such as billets, ingots, etc. A cathode is typically the finished product of the copper refining process.
COMEX	The New York Commodity Exchange.
concentrate	a product containing valuable minerals from which most of the waste material in the ore has been separated.
ferronickel	an alloy containing nickel and iron (approximately 38% nickel and 62% iron in the case of ferronickel produced by Falcondo). The volumes produced are expressed in terms of the nickel contained.
LME	London Metal Exchange.
matte	a mixture of metal sulphides enriched with nickel, cobalt, copper, silver, gold and platinum group metals.
mill	a plant where ore is ground and undergoes physical or chemical treatment to extract and produce a concentrate of the valuable minerals.
mineral resource[1]	a concentration or occurrence of diamonds, natural solid inorganic material, or natural solid fossilized organic material including base and precious metals, coal, and industrial minerals in or on the Earth's crust in such form and quantity and of such a grade or quality that it has reasonable prospects for economic extraction. The location, quantity, grade, geological characteristics and continuity of a mineral resource are known, estimated or interpreted from specific geological evidence and knowledge.
inferred mineral resource[1]	part of a mineral resource for which quantity and grade or quality can be estimated on the basis of geological evidence and limited sampling and reasonably assumed, but not verified, geological and grade continuity. The estimate is based on limited information and sampling gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes.
indicated mineral resource[1]	part of a mineral resource for which quantity, grade or quality, densities, shape and physical characteristics, can be estimated with a level of confidence sufficient to allow the appropriate application of technical and economic parameters, to support mine planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration and testing information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes that are spaced closely enough for geological and grade continuity to be reasonably assumed.
measured mineral resource[1]	part of a mineral resource for which quantity, grade or quality, densities, shape, physical characteristics are so well established that they can be estimated with confidence sufficient to allow the appropriate application of technical and economic parameters, to support production planning and evaluation of the economic viability of the deposit. The estimate is based on detailed and reliable exploration, sampling and testing information gathered through appropriate techniques from locations such

	as outcrops, trenches, pits, workings and drill holes that are spaced closely enough to confirm both geological and grade continuity.
mineral reserve[1]	economical mineable part of a measured or indicated mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified. A mineral reserve includes diluting materials and allowances for losses that may occur when the material is mined.
NI 43-101[1]	National Instrument 43-101 "Standards of Disclosure for Mineral Projects" of the Canadian Securities Administrators.
probable mineral reserve[1]	economical mineable part of an indicated, and in some circumstances a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction can be justified.
proven mineral reserve[1]	economical mineable part of a measured mineral resource demonstrated by at least a preliminary feasibility study. This study must include adequate information on mining, processing, metallurgical, economic, and other relevant factors that demonstrate, at the time of reporting, that economic extraction is justified.
platinum group metals	platinum, palladium, rhodium and related metals present in some nickel/copper ores.
refinery	a plant where concentrates or matte are processed into one or more refined metals.
smelter	a plant in which concentrates are processed into an upgraded product.
SX-EW	solvent extraction-electrowinning is a metallurgical technique, so far applied only to copper ores, in which metal is dissolved from the rock by organic solvents and recovered from solution by electrolysis.

Currency

All references in this annual information form to "dollars" or "$" are to United States dollars, unless otherwise indicated.

Metric/Imperial Conversion Table

The imperial equivalents of the metric units of measurement used in this Annual Information Form are as follows:

Wherever referred to in this Annual Information Form:	Metric Unit	Metric Symbol	Imperial Equivalent
"kg" means kilogram	Tonne	mt	1.102311 tons
"lb" means pound	Kilogram	kg	2.20462 pounds
"oz" means troy ounces	Gram	g	0.032151 troy ounces
"tonne" or "mt" means 1,000 kilograms	Metre	m	3.2808 feet
	Cubic metre	m^3	35.315 cubic feet
	Kilometre	km	0.6214 miles
	Hectare	ha	2.4711 acres

Exchange Rate Data

We have historically published our consolidated financial statements in Canadian dollars. Effective July 1, 2003, we began reporting our financial results in U.S. dollars. In this Annual Information Form, unless otherwise specified or the context otherwise requires, all dollar amounts are expressed in United States dollars and references to $ or "US$" are to United States dollars and references to "Cdn$" are to Canadian dollars.

The following table sets forth, for each period indicated, information concerning the exchange rates between U.S. dollars and Canadian dollars based on the noon buying rate in the City of New York for cable transfers as certified for customs purposes by the Federal Reserve Bank of New York (the "noon buying rate"). The table illustrates how many Canadian dollars it would take to buy one United States dollar.

	Year ended December 31,		
	2003	2004	2005
Low	1.2923	1.1775	1.1507
High	1.5750	1.3970	1.2703
Average[1]	1.3916	1.2984	1.2083
Period End	1.2923	1.2034	1.1656

Notes
(1) The average of the daily noon buying rates on the last business day of each month during the applicable period.

Forward-Looking Statements

Certain statements contained in this Annual Information Form are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our assessment of the outlook for metal markets in 2006, (ii) Inco's offer to acquire all of the common shares of Falconbridge Limited and the benefits of such combination, (iii) our future financial requirements and funding of those requirements, (iv) our expectations with respect to our development projects, (v) our production forecast for 2006, (vi) our capital expenditure forecasts, and (vii) our dividend schedule. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this Annual Information Form. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of Inco's offer to acquire all of our common shares, the ability to successfully compete against global metals and mining and exploration companies by creating through such a combination an enterprise of increased scale; strong demand for nickel, copper and other metals in emerging markets such as China; approximately $350 million per annum in pre-tax operating and other synergies and cost savings, and other benefits being realized based on the achievement of operational efficiencies from restructuring, integration and other initiatives relating to the combination of Falconbridge and Inco; the approvals or clearances required to be obtained by Inco and Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner; divestitures required by regulatory agencies being acceptable and completed in a timely manner; there being limited costs, difficulties or delays related to the integration of the Falconbridge's operations with those of Inco; the timely completion of the steps required to be taken for the eventual combination of the two companies; business and economic conditions generally; exchange rates, energy and other anticipated and unanticipated costs and pension contributions and expenses; the supply and demand for, deliveries of, and the level and volatility of prices of, nickel, copper, aluminum, zinc and other primary metals products and other metal products Inco and Falconbridge produce; the timing of the receipt of remaining regulatory and governmental approvals for the development projects and other operations; the continued availability of financing on appropriate terms for development projects; Falconbridge's costs of production and production and productivity levels, as well as those of its competitors; market competition; mining, processing, exploration and research and development activities; the accuracy of ore/mineral reserve estimates; premiums realized over LME cash and other benchmark prices; tax benefits/charges; the resolution of environmental and other proceedings and the impact on the combined company of various environmental regulations and initiatives; assumptions concerning political and economic stability in countries or locations in which Falconbridge operates or otherwise and the ability to continue to pay quarterly cash dividends in such amounts as Falconbridge's Board of Directors may determine in light of other uses for such funds and other factors.

While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this

Annual Information Form. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco and Falconbridge.

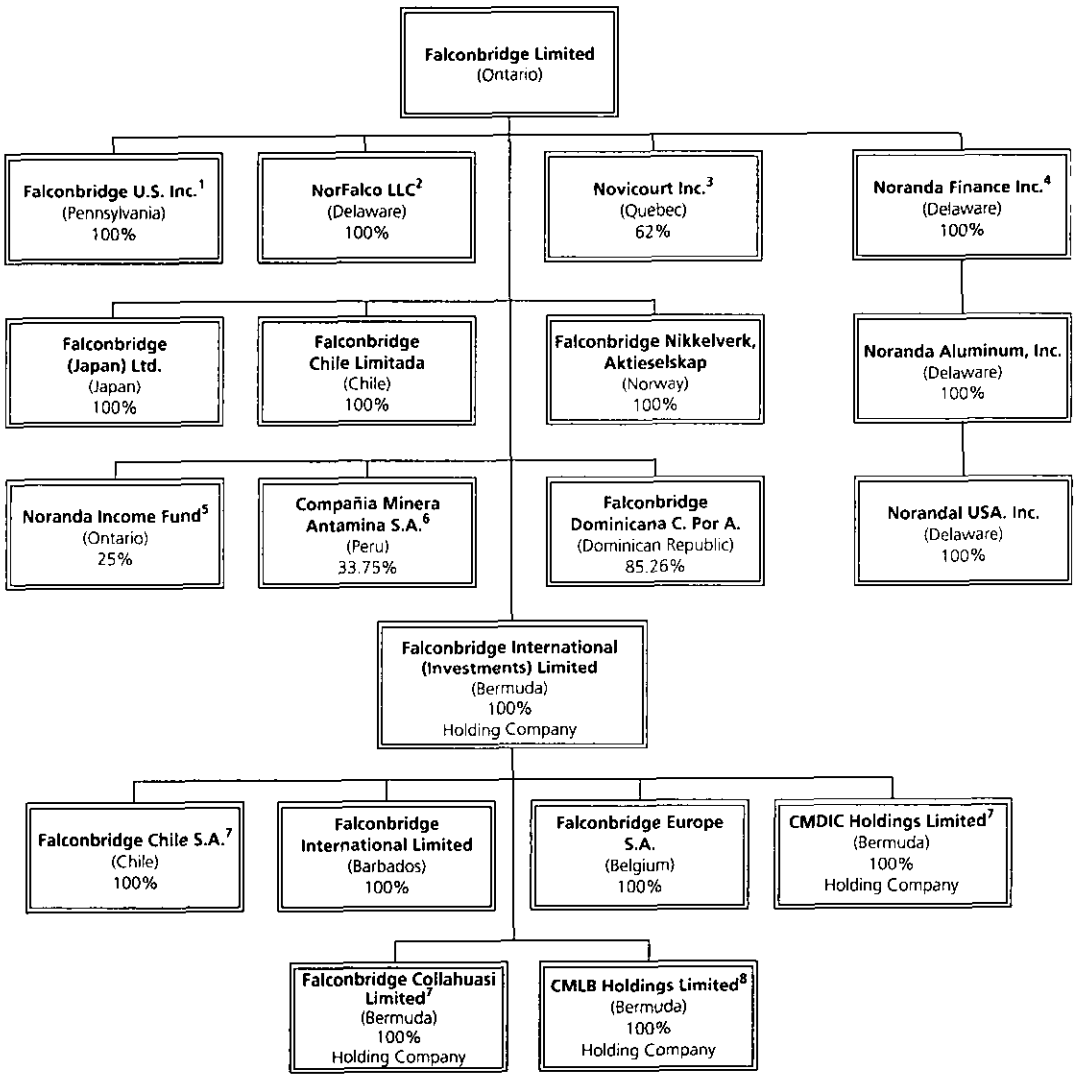
Information on the Falconbridge Group

1. Corporate Structure

1.1 Incorporation

Falconbridge Limited is the continuing corporation resulting from the amalgamation under the *Business Corporations Act* (Ontario) on June 30, 2005 of Noranda Inc. ("Noranda") and the former Falconbridge Limited ("Former Falconbridge"). Predecessors of the Company have carried on business under the Falconbridge Limited name since 1928 and under the Noranda Inc. name since 1922. The registered and head office of the Company is at BCE Place, Suite 200, 181 Bay Street, Toronto, Ontario, M5J 2T3. The principal operation's office of the Company is at Queen's Quay Terminal, 207 Queen's Quay West, Suite 800, Toronto, Ontario, M5J 1A7.

In this Annual Information Form, Falconbridge Limited and its wholly-owned subsidiaries may be collectively referred to as the "Company", and the Company, together with its other subsidiaries and joint ventures, may also be referred to as "Falconbridge", "we", "us" or "ours".



1.2 Corporate Profile

We are a leading international copper and nickel company with investments in fully integrated zinc and aluminum assets. Our primary focus is the identification and development of world-class copper and nickel mining deposits.

We are one of the world's largest producers of zinc and nickel and a significant producer of copper, primary and fabricated aluminum, cobalt, lead, molybdenum, silver, gold and sulphuric acid. We are also one of the world's largest recyclers and processors of metal-bearing materials. We sell commodity and value-added products to customers around the world.

1.3 Organizational Chart

The principal direct and indirect subsidiaries of the Company and the jurisdictions in which they were incorporated or organized are set out below:

Notes:

1. The Corporation owns 100% of the shares of Natresco Incorporated which, in turn, owns 100% of the shares of Falconbridge U.S., Inc.
2. NorFalco LLC is indirectly wholly-owned by the Corporation, through its subsidiaries Noranda Commodities, Inc. (65%) and NACID, Inc. (35%).
3. The common shares of Novicourt Inc. are listed and posted for trading on the Toronto Stock Exchange.
4. The Corporation owns 100% of the shares of 3086143 Nova Scotia Company which, in turn, owns 100% of the shares of Noranda Finance Inc.
5. The Corporation holds a 25% interest in the Noranda Income Fund, a trust formed under the laws of Ontario, which indirectly owns a zinc processing facility in Valleyfield, Québec.
6. The Corporation holds 100% of the shares of Noranda Antamina Ltd. which, in turn, owns 33.75% interest in Compañia Minera Antamina S.A.
7. Falconbridge Chile S.A., CMDIC Holdings Limited and Falconbridge Collahuasi Limited own 19.93%, 20.09% and 3.98% respectively, and 44%, collectively, of the shares of Compañia Minera Doña Inés de Collahuasi S.C.M.("Collahuasi"), which owns 100% of Collahuasi.
8. CMLB Holdings Limited owns 100% of the shares of Compañia Minera Falconbridge Lomas Bayas ("Lomas Bayas"), which owns 100% of Lomas Bayas.

2. General Business Developments

2.1 Three-Year History

Recent Developments

The Company announced on March 15, 2006 that it intends to make an offer by way of a takeover bid for all of the outstanding shares of Novicourt Inc. ("Novicourt") that it does not already own at a cash offer price of Cdn$2.30 per Novicourt share. The Company presently holds approximately 62.1% of the outstanding common shares of Novicourt. The proposed offer would be subject to a number of conditions including that not less than 50% of the shares of Novicourt not already owned by the Company are tendered.

The Company announced on March 16, 2006 that it intends to redeem a total of 20,000,000, or $500 million, of its outstanding junior preference shares. The junior preference shares will be redeemed on April 26, 2006 from holders of record on March 22, 2006. The Company intends to utilize its internal cash resources to fund the redemption.

The Company announced on March 21, 2006 that it had enacted a new shareholder rights plan, effective on that date, to replace the September 22, 2005 rights plan previously enacted by the Company. The new rights plan is designed to prevent a creeping takeover of the Company and preserve its ability to obtain the best value for all shareholders. The plan is also designed to provide the share ownership stability to protect the opportunity for shareholders to tender to the existing Inco Limited takeover offer or any other bid for the Company. The full text of the plan is available at www.sedar.com.

2005

Major developments in 2005 included:

- The continued progress on the Raglan Optimization project, which is expected to increase annual production by approximately 5,000 tonnes of nickel per year, beginning in 2007;
- The construction at the molybdenum recovery plant, with scheduled start-up in early 2006, at Compañia Minera Doña Inés de Collahuasi S.C.M. ("Collahuasi");
- The continuation of the feasibility study on the second expansion of the copper concentrator at Collahuasi;
- The development of the new leaching pad for run-of-mine ore at Lomas Bayas;
- The Kidd Mine D shaft progress with the ramp and lateral development being at 97% of plan;
- The finalization of a joint-venture agreement between Falconbridge and Barrick Gold Corporation regarding the Kabanga nickel deposit in Tanzania and related concessions;
- The earn-in of a 70% joint venture interest in the El Morro (Chile) copper/gold property from Metallica Resources Inc.
- The completion on May 5, 2005, of Noranda's issuer bid to exchange Noranda common shares for new Junior Preference Shares. A total of 63,377,140 Noranda common shares were repurchased as a result of this offer and a total of 50,000,000 new junior preference shares were issued as consideration;
- The completion of Noranda's takeover bid of the Former Falconbridge whereby it offered to exchange 1.77 Noranda common shares for each outstanding Former Falconbridge common share that it did not own. 58,476,589 Former Falconbridge common shares were validly deposited under the offer, increasing Noranda's ownership to 164,235,689 or 91% of the outstanding Former Falconbridge common shares;
- The issue and sale of $250 million of 12-year 5.5% and $250 million of 30-year 6.2% unsecured notes of Noranda;
- The redemption of $500 million (20,000,000 shares) of the Company's outstanding Junior Preference Shares;
- The sale of the assets and liabilities of the Company's Lockerby Mine in Sudbury, including all closure obligations, to First Nickel Inc.

- The approval on June 30, 2005 by Noranda and Former Falconbridge shareholders of the amalgamation of the two companies. The amalgamated company chose to continue under the operating name Falconbridge Limited and effective July 6, 2005 began trading under a new stock symbol (TSX: FAL.LV and NYSE: FAL);

- The depletion of ore reserves at the Louvicourt mine and final production on July 12, 2005. The Louvicourt mine was a major supplier of copper and zinc concentrates to the Company's Horne smelter;

- The commencement of molybdenum production at the Company's Altonorte Smelter following the completion of the roaster transformation;

- The sale by the Company's subsidiary Noranda Aluminum Inc. of its aftermarket automobile wheel manufacturing and distribution operations, American Racing Equipment, to Platinum Equity for proceeds of $40.5 million;

- The acquisition by Switzerland-based Xstrata plc ("Xstrata") of 73.1 million common shares of the Company, or approximately 19.9% of the outstanding common shares, from Brascan Corporation (now Brookfield Asset Management Inc.) ("Brascan") at a price of Cdn$28 per share making Xstrata the largest single Falconbridge shareholder;

- The announcement that the Board of Directors of the Company has adopted a shareholder rights plan effective September 22, 2005, designed to enhance the Company's ability to obtain the best value for all shareholders and prevent a bidder from acquiring control of Falconbridge in a manner detrimental to shareholders. This plan expired on March 21, 2006. See "2.1 Three Year History – Recent Developments";

- The realization of a pre-tax gain of $13 million on the sale of the Company's stake in Canico Resources Inc. following its acquisition by another metals and mining company;

- The settlement of a Falconbridge Limited Kidd Metallurgical Division new three-year collective Agreement with Canadian Auto Workers – Local 599 which represents the facility's production and maintenance employees;

- The announcement on October 11, 2005 of a friendly takeover bid by Inco Limited for all of the outstanding shares of Falconbridge and endorsement of the acquisition offer by both Boards of Directors and the recommendation by the Falconbridge board that the Company's shareholders tender their shares to the offer. The offer remains outstanding as the parties seek various regulatory approvals;

- The announcement on December 23, 2005 that Falconbridge reached an agreement on the financing of the Koniambo nickel project with Societé Minière du Sud Pacifique S.A. ("SMSP"), its joint venture partner in the Koniambo nickel project in New Caledonia; and

- The satisfaction of the two conditions precedents under the Bercy Accord prior to December 31, 2005, allowing for the eventual transfer of the Koniambo property to Koniambo Nickel, a company owned 49% by the Company and 51% by its partners SMSP.

2004

Major developments in 2004 included:

- The achievement of increased profitability in all four business units, including zinc and aluminum;

- The advancement of new production capacity at the Collahuasi mine;

- The commencement of an underground definition program at the Nickel Rim South project with production targeted for 2009;

- The successful ramp-up at Lomas Bayas following completion of the crusher expansion project ahead of schedule and under budget;

- The achievement of planned nickel production following the three week strike at the Sudbury mines;
- The advancement of Phase One of the Raglan Optimization Program, which is expected to increase annual production by approximately 5,000 tonnes of nickel per year;
- The procurement of additional long-term zinc concentrate supply for the Kidd Creek refinery;
- The execution of an agreement to acquire a 50% interest in the Lennard Shelf zinc mine in Australia;
- The acquisition of a 50% interest in Kaiser Aluminum's Gramercy alumina plant in Gramercy, Louisiana, and related bauxite mining assets in Jamaica;
- The completion of the removal of residual lake sediment at the Antamina copper/zinc mine enabling access to higher-grade ores;
- The advancement and near completion of the Kidd Mine D expansion project;
- The commencement of scoping studies for further expansions at Falcondo, Lomas Bayas and Collahuasi;
- The completion of the bankable feasibility study for the Koniambo project in New Caledonia;
- The renewal of collective labour agreements at the Collahuasi mine, CCR refinery, CEZ refinery, Matagami mine, Noranda Recycling – Roseville, Nikkelverk, Altonorte and American Racing;
- The completion of the Montcalm mine development, ahead of time, and under budget, with the milling of ore commencing in October;
- The continued advancement of exploration programs at Raglan and Sudbury, Canada and West Wall and El Morro, Chile; and
- The announcement by Noranda that it had entered into exclusive negotiations with China Minmetals Corporation regarding the acquisition of Noranda, and the subsequent announcement by Noranda in November 2004 that the period for such exclusive negotiations would not be extended.

2003

Major developments in 2003 included:

- The announcement of our plans to rationalize our magnesium business and the temporary shutdown of our Magnola magnesium plant in Danville, Québec, as a result of adverse market conditions. The plant was closed in April 2003 and is expected to remain closed until market conditions improve. A further $33 million pre-tax charge related to costs incurred to shut down the plant was recorded in 2003;
- The advancement of important development programs at Collahuasi and Kidd Creek, ensuring copper productions levels are maintained;
- The shut down of the zinc refining operations located at the Kidd Metallurgical site in Timmins, Ontario for 13 weeks during the summer for market and supply-related reasons;
- The completion by the Altonorte smelter, in Chile, of a major modernization and $170 million Phase 3 expansion project;
- The public offering by Noranda of 6,000,000 Cumulative Redeemable Series H Shares with a quarterly cumulative dividend at a rate of 6.25% per annum (the "Series H Shares") for gross proceeds of Cdn$150 million;

- Noranda's private placement by the Company of 6,000,000 Cumulative Preferred Shares, Series I with a quarterly cumulative dividend at a rate of 8% per annum (the "Series I Shares") for gross proceeds of Cdn$150 million. All of the Series I Shares were purchased by Brascan pursuant to the exercise by the Company of a put option previously granted by Brascan. The Series I Shares were redeemed by Noranda in August 2003 in accordance with their terms;

- Purchase of a 3.3% net proceeds interest relating to the Antamina copper and zinc mine in Peru from Inmet Mining Corporation for $22.5 million. The purchase was completed under a put-call agreement entered into between the companies in February 2002;

- Advancement on the work at the Koniambo Project in New Caledonia including the mobilization of the project team to begin the bankable feasibility study and financing discussions progression with the French government;

- The completion of the following transactions, among others, as part of the Company's recapitalization plan to improve the Company's balance sheet by reducing debt:

  (a) The reduction of Noranda's quarterly dividend from Cdn$0.20 per share to Cdn$0.12 per share;

  (b) The release of guarantees of Noranda in the amount of $442 million on July 1, 2003 with respect to the Antamina project loan by converting these facilities to a non-recourse basis;

  (c) The secondary offering of Noranda's remaining 11,984,900 Priority Units of the Noranda Income Fund in July 2003 for gross proceeds of approximately $84 million. Subsequent to the offering, we retained a 25% interest in the Noranda Income Fund through our holding of Ordinary Units of Noranda Income Limited Partnership, which are exchangeable on a one for one basis for Priority Units of Noranda Income Fund upon the occurrence of certain events;

  (d) The issue and sale in August 2003 of 28.52 million common shares of Noranda to a syndicate of underwriters and of 20 million common shares to Brascan, for total net proceeds of approximately Cdn$601 million. The outstanding Series I Shares were redeemed as part of this transaction;

  (e) The issue and sale in September 2003, of 12-year 6% unsecured notes of Noranda in an aggregate principal amount of $350 million;

- Our announcement that the ore reserves at the Bell Allard zinc mine in Matagami, Québec will be depleted in 2004 and that operations at the Bell Allard mine would cease in the fourth quarter of 2004;

- The retirement of Lars-Eric Johansson from his position as Executive Vice-President and Chief Financial Officer of Noranda and the appointment of Steven Douglas, previously the Executive Vice-President and Chief Financial Officer of real estate company Brookfield Properties Corporation, as his successor; and

- Our signing of new collective agreements in respect of our operations at:

– Brunswick Mine	– Lomas Bayas
– Brunswick Smelter	– Antamina
– Brunswick Smelter Bulk Handling	– Norandal Salisbury
– General Smelting	– Noranda Recycling – Roseville
– Horne	– Altonorte

2.2 Principal Products

Our principal products are copper, nickel, zinc and aluminum, with the balance of our products coming from by-products and co-products that include silver, gold, platinum group metals, lead, selenium, tellurium, cadmium, indium, cobalt, nickel sulphate and sulphuric acid.

The principal markets for our products include the steel, refinery and foundry, construction, telecommunications, automotive, agricultural and chemical industries. The United States was the principal market for our products in 2005,

accounting for 36% of consolidated sales (2004 – 36%), with Canada accounting for 16% of consolidated sales (2004 – 17%), Europe 23% of consolidated sales (2004 – 26%) and other countries 25% of consolidated sales (2004 – 21%).

Principal Metals

Nickel

Nickel is a metal with the characteristics of corrosion resistance, high strength over a wide range of temperatures, and high ductility. The principal uses for nickel include stainless steel, nickel-based alloys, electroplating, low-alloy steel, foundry products and copper-based alloys. Nickel is also used in batteries and catalysts.

We market and sell nickel and ferronickel to customers in 31 countries. The largest markets are Western Europe, the United States and Asia/Pacific, which in 2005 accounted for approximately 50%, 22% and 28%, respectively, of total nickel sales.

Copper

Copper is a metal with inherent characteristics of excellent electrical conductivity, heat transfer and resistance to corrosion. The principal use of copper is for electrical wire and cable products, a sector which consumes approximately 60% of all refined copper. Other significant end-use markets are tubing for plumbing and air-conditioning and copper alloy strips and rods used in the electrical/electronic, construction and transportation markets.

Falconbridge markets copper cathodes directly to producers of industrial products from our CCR refinery in Montreal-East, Québec, the Kidd Creek refinery in Timmins, Ontario, and the Lomas Bayas operation in Chile. Falconbridge Chile also markets cathodes made available via toll refining agreements with Altonorte anodes. Altogether, sales of copper metal cathodes in 2005 were made to more than 30 customers in ten countries. Approximately 80% of our sales of copper metal in 2005 were made in North America and the balance was made in Europe and Asia. Falconbridge Chile produces approximately 280,000 tonnes of copper anodes per year that are sold in Canada, Chile, Europe and Asia.

Copper production is dependent on mine concentrates and secondary recycled materials purchased from third parties. Mine concentrates are sourced globally while recycled materials are primarily of North American origin. In 2005, 74% of Horne, 73% of Altonorte, and 13% of Kidd Creek's primary feedstocks came from non–related third parties. In addition, approximately 12% of Falconbridge's Horne smelter's feed tonnage came from recycled electronics and other copper and precious metal bearing secondary materials, which were sourced from third parties. Antamina copper concentrates are sold to customers globally.

Zinc

Zinc is a metal with many important uses in industry, as well as in health and nutrition. Its major use, accounting for approximately 49% of total World consumption, is for galvanizing steel sold to the construction and automobile industries. Galvanizing involves coating steel with zinc to protect the steel from corrosion. Zinc is also used in the production of die-cast alloys for precision machine parts, brass alloys used in a wide range of industrial parts and household wares, and zinc powders, oxides and dusts used in the manufacture of batteries, tires and pigments.

Falconbridge markets zinc metal directly from its Kidd Creek division and acts as a marketing agent for the Noranda Income Fund's Canadian Electrolytic Zinc refinery (CEZ). Most of the production from these facilities is sold directly to the steel industry and other major consumers of zinc. CEZ and Kidd Creek are jointly a major supplier of zinc metal and zinc powders, accounting for approximately 4% of world refined production. In 2005, over 95% of Falconbridge's consolidated sales of zinc on behalf of Kidd Creek and CEZ were in North America, with the balance sold to customers in Europe and Asia. The galvanizing sector represented approximately 55% of Falconbridge's consolidated zinc sales on behalf of Kidd Creek and CEZ in 2005.

Zinc production is dependent on concentrates from mines. The raw material feed stream for the CEZ and Kidd Creek zinc refineries is managed through a combination of third-party purchases and the integrated mine production of Falconbridge. This allows us to take advantage of transportation, cost differentials and the treatment capabilities of our refineries. Concentrate purchases originate with both local mines and, subject to market conditions, foreign mines. Antamina zinc concentrates are sold to customers globally.

Aluminum

Aluminum is a metal with many desirable characteristics. It is ductile, malleable and an efficient conductor of heat and electricity. Although very reactive chemically, aluminum resists corrosion and has a high strength-to-weight ratio.

Alumina (aluminum oxide) is produced from bauxite, the basic aluminum-bearing ore, by a chemical process. Aluminum is, in turn, produced from alumina by an electrolytic process which uses large quantities of electrical energy to separate the aluminum from the oxygen in alumina. The smelting of one tonne of aluminum requires between 14 and 18.5 megawatt-hours of electric energy. Depending upon quality, between four and five tonnes of bauxite are required to produce approximately two tonnes of alumina, which yield approximately one tonne of aluminum.

Our aluminum products include primary aluminum in the form of 1,500 lb. standard ingots (sows), billet, electrical conductor rod and foundry alloy. Our aluminum fabricated products include fin stock for the air conditioning, refrigeration and automotive industries; container stock used for semi-rigid food packaging and disposable cookware; converter foil used in flexible packaging for the food, juice and pharmaceutical industries; conductor strip for transformers.

In 2005, 94% of our consolidated aluminum sales were made in North America.

Other Products

Lead Metal

Worldwide, approximately 79% of lead metal is used in the production of lead-acid batteries for end-uses such as the automotive industry and back-up power systems for the computer and telecommunications markets.

Falconbridge is engaged in the mining of lead and the refining and recycling of lead metal at our wholly-owned Brunswick Mine and Brunswick Smelter. The marketing of lead metal and its alloys is carried out from offices in Toronto, Canada, Cleveland, Ohio, USA, and Zug, Switzerland. In 2005, over 90% of our consolidated lead metal sales were made in Canada and the United States.

As is the case for copper and zinc production, lead production is dependent upon the availability of mine concentrates. In 2005, approximately 65% of the Brunswick lead smelter feed was supplied by our Brunswick Mine, with the balance sourced from lead/silver concentrates and metal-bearing residues.

Sulphuric Acid

Sulphur dioxide gas is a by-product of smelting and refining operations. Most of the sulphur dioxide gas produced at Falconbridge's Canadian and Chilean smelters is captured before stack emission and converted into sulphuric acid or liquid sulphur dioxide in order to comply with sulphur dioxide emission limits. The Canadian sulphuric acid production is sold to NorFalco, which markets, transports and distributes sulphuric acid in North America. In 2005, NorFalco and its wholly-owned Canadian subsidiary marketed approximately 1.9 million tonnes of sulphuric acid from us and third-party suppliers. Sulphuric acid produced at Falconbridge's Chilean smelter is sold by Falconbridge Chile Limitada locally to mining companies using this product for their copper leaching operations.

Magnesium

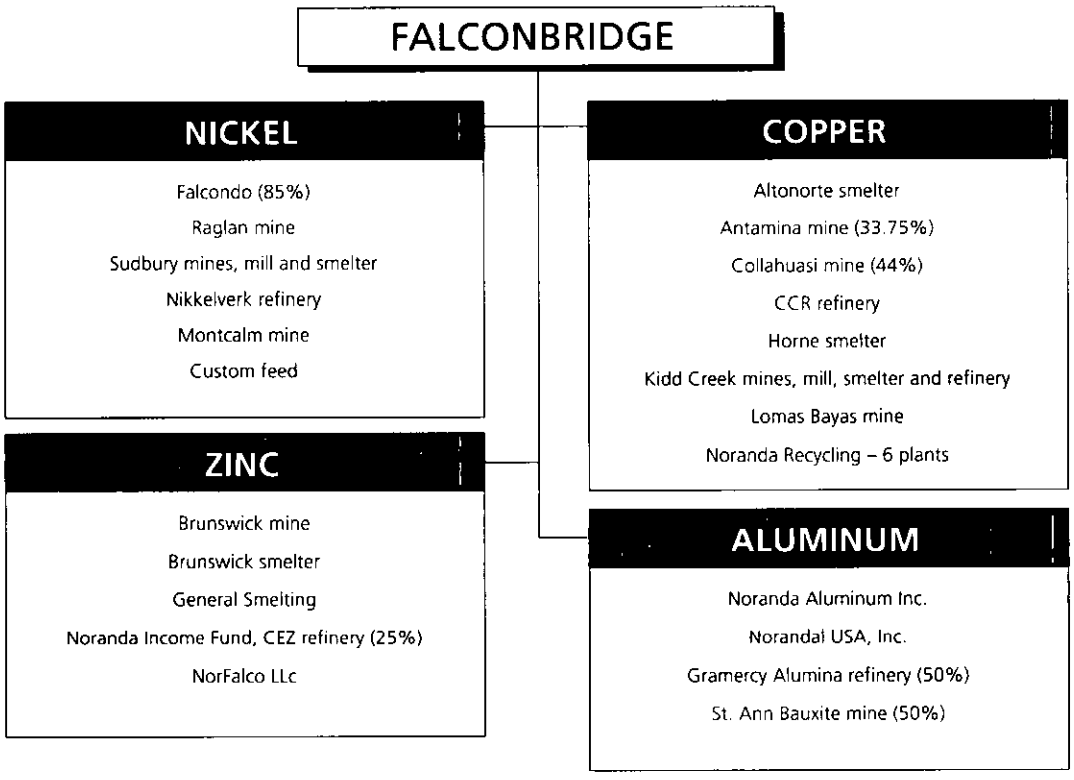
Falconbridge's Danville Québec magnesium plant has a design capacity of 58,000 tonnes of pure and alloy magnesium products and is owned 80% by Falconbridge and 20% by Société générale de financement du Québec.

Magnesium is classified as a light metal. By volume, it is approximately two-thirds the weight of aluminum and one quarter the weight of steel. Magnesium is used in several applications, including the production of aluminum alloys typically containing between 0.5% and 3.5% magnesium (can stock for aluminum beverage containers is the largest application) and die-casting of component parts for the automotive, electronics and manufacturing industries. Magnesium die-cast alloys have excellent strength-to-weight ratios and are attractive for many applications.

Metals Marketing

Our marketing and sales strategy is to sell our production at prices that are equal to or greater than the average cash price reported on Comex, the LME or other relevant terminal markets. Premiums above the Comex or LME settlement price are negotiated based on product form and quality, packaging, delivery terms, supply commitments, delivery location and availability of product. For the intermediate copper products sold by Falconbridge Chile Limitada (blister and anodes),

discounts are negotiated periodically from LME prices which largely reflect inherent third party processing charges. For products for which there is no terminal market, our objective is to obtain prices that equal or exceed benchmarks that reflect the average price realized in the marketplace.



We procure custom feed materials for processing in the metallurgical facilities. In order to minimize metal price risk exposure on purchased metals and fluctuations in inventory levels, and to obtain the average Comex/LME prices or better, the Company employs the use of derivatives in the form of forward or options contracts to hedge these risks. Generally, we do not hedge the price we realize on the sale of our own production, and accept prices based on the market price prevailing around the time of delivery of these metals. From time to time, however, we may fix the metal price associated with our own future production to lock in certain profits or cash flows.

Fluctuations in currency exchange rates, principally the Canadian/US dollar exchange rate, significantly affect our earnings and cash flows. Most of our debt is denominated in US dollars, whereas a significant portion of our Canadian operating costs are incurred in Canadian dollars.

3. Description of the Business

Our operations explore for, develop, mine, process and market metals and minerals. We conduct these activities through our four operating business units: Nickel, Copper, Aluminum and Zinc.

We are one of the world's largest producers of zinc and nickel and a significant producer of copper, primary and fabricated aluminum, lead, silver, gold, sulphuric acid and cobalt. We are also a major recycler of secondary copper, nickel and precious metals.

The following table shows revenue by operating segment and the relative percentage of each operating segment's contribution to total revenue for the past three years:

	2005		2004		2003 (unaudited)	
			($ millions)			
Nickel	2,146	26%	1,824	27%	1,288	29%
Copper	4,421	55%	3,592	53%	2,119	48%
Zinc	504	6%	415	6%	363	8%
Aluminum	1,077	13%	935	14%	686	15%
Other	–	–	(2)	–	–	–
Total Revenue	8,148	100%	6,764	100%	4,456	100%

3.1 Main Businesses

3.1.1 Nickel

Falconbridge is the fourth largest producer of refined nickel in the world, and one of the largest recyclers and processors of nickel and cobalt-bearing materials. Our operations include mines and processing facilities in Canada, Norway and the Dominican Republic.

Falconbridge Dominicana C. por A. ("Falcondo")

Falconbridge owns 85.26% of the outstanding shares of Falcondo. Of the balance, the Government of the Dominican Republic owns approximately 10%, Redstone Resources Inc. owns approximately 4.1% and various individuals own the remainder. Falcondo holds a mining concession and owns mining and mineral processing facilities for the production of ferronickel located near the town of Bonao, approximately 80 kilometres northwest of Santo Domingo, Dominican Republic.

Properties and Mines

Falcondo has been mining and processing nickel laterite ore in the Dominican Republic since 1971. Falcondo's mining concession covers approximately 21,830 hectares. Falcondo owns 4,831 hectares, 4,802 of which are inside the mining concession and include the mining areas and the mineral processing facilities, and 29 of which are outside the mining concession and include the townsite at Bonao. The term of the mining concession is for an unlimited period.

Mining at Falcondo is carried out from the surface using bulldozers, hydraulic shovels and trucks. Falcondo's total mine production for the year ended December 31, 2005, as obtained through a metallurgical balance calculation, was 3,920,220 dry tonnes (2004 – 3,736,800 dry tonnes) of ore at an average nickel grade of 1.18%.

Mineral Reserves and Resources[1]

As of December 31, 2005, proven and probable reserves totaled 54,373,000 tonnes averaging 1.19% nickel. Indicated resources in addition to mineral reserves total 13,840,000 tonnes with an average grade of 1.53% nickel. Inferred resources total 6,300,000 tonnes grading 1.4% nickel.

Mineral resources are reported using cut-off grades and minimum mining widths appropriate to the particular mining deposit and mining method. Dilution and mining extraction recovery factors are applied to the mineral resource to arrive at the mineral reserves. The assumed metal price was nickel $3.25 per lb.

The proven and probable mineral reserves at Falcondo showed a total decrease of 3.0 million tonnes after production of 3.9 million tonnes in 2005. Gains of 2.0 million tonnes in previously undrilled areas and a gain of 1.3 million tonnes due to revisions to tonnage and grade factors were mostly offset by a write-down of 2.4 million tonnes in three large reserve blocks in Caribe and Peguera deposits following an economic evaluation study.

At planned operating rates, mineral reserves at Falcondo are equal to approximately 14 years of production, not including 13.8 million tonnes of indicated resources that are in large part anticipated to be converted into reserves.

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

Milling, Smelting, Refining and Marketing

The ore mined at Falcondo is milled, smelted and refined at Falcondo's mineral processing facilities, which have a capacity of approximately 29,000 tonnes of nickel contained in ferronickel per year. The facilities include a metallurgical treatment plant, a crude oil processor and a 200-megawatt thermal power plant. In 2005, Falcondo rented back up power energy from the national grid during the period of maintenance of the three owned units and that initiative allowed the metallurgical plant to comply with the production budget. Falcondo has dock facilities and a crude oil tank farm at the port of Haina (near Santo Domingo) and a 70-kilometre crude oil pipeline from the port to its mineral processing facilities. Falcondo's production of nickel in ferronickel for 2005 was 28,700 tonnes (2004 – 29,500 tonnes).

Marketing and sales of ferronickel produced at Falcondo are conducted through Falconbridge U.S., Inc., Falconbridge Europe S.A. and Falconbridge (Japan) Limited.

Raglan

Mining Operation

The Raglan property is located 105 kilometres south of the northern tip of the Ungava (Nunavik) Peninsula in the Province of Quebec, approximately 1,800 kilometres north of Montreal. The property comprises 1,226 map-designated claims covering 48,149 hectares and ten 20-year mining leases covering 963 hectares. The first of the leases expires in June 2016. All are renewable for three 10-year terms, provided that mining has taken place for at least two of the preceding ten years. One mining lease application covering 32 hectares remains outstanding from 2004.

Commercial production at Raglan began on April 1, 1998. Raglan's annual production capacity is one million tonnes of ore milled per year. Net production for 2005 totaled 22,200 tonnes of nickel (26,600 tonnes in 2004), 5,800 tonnes of copper (6,900 tonnes in 2004) and 350 tonnes of cobalt (400 tonnes in 2004).

Mineral Reserves and Resources[1]

As of December 31, 2005, proven and probable reserves totaled 14,850,000 tonnes averaging 2.80% nickel and 0.77% copper. The overall Mineral Reserve was decreased by 0.8 million tonnes in 2005, resulting from production of 934,000 tonnes and minor reserve adjustment related to delineation drilling, a cut-off grade change for open pit production and incremental ore additions during underground mining. At the current mill operating rates, the Proven and Probable mineral reserves are equal to approximately 15 years of production.

As of December 31, 2005, Measured and Indicated Resources totalled 3,390,500 tonnes with an average grade of 2.42% nickel and 0.80% copper, Inferred Resources totalled 7,700,000 tonnes grading 3.0% nickel and 0.8% copper. A negative adjustment of 374,000 tonnes was realised for Indicated Resources in 2005, while Inferred Resources increased by 2,500,000 tonnes due to new discoveries and additions through exploration at Zone 5-8, Donaldson, West Boundary, East Lake, and Mine 3.

Mineral resources are reported using cut-off grades and minimum mining widths appropriate to the particular ore zone and mining method. Dilution (planned, overbreak and fill) and mining extraction recoveries are applied to the mineral resource to arrive at the mineral reserves. Assumed metal prices and exchange rate were nickel $3.25 per lb., copper $0.90 per lb. and Cdn$1.50 for US$1.00.

Milling Operation

The ore from the Raglan mines is crushed, ground and treated at the Raglan mill to produce nickel/copper concentrate. Raglan concentrate is trucked to Deception Bay for marine shipment to Québec City and then transported by rail to the Sudbury smelter for treatment. There were six shipments from Deception Bay during 2005.

The current mill throughput is 3,000 tonnes of ore per day. Total ore milled in 2005 was 934,000 tonnes (935,000 tonnes in 2004).

Sudbury

Mining Operations

We have been mining nickel/copper ores in the Sudbury area of northern Ontario since 1929. The Sudbury Mines/Mill principal nickel/copper producing properties in the Sudbury area are located in the Townships of Falconbridge, Levack,

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

Garson, Dowling and Blezard. The properties comprise 2,345 hectares owned by the Company and 14 hectares held under two licences of occupation of mining rights from the Province of Ontario. The licences of occupation are held in perpetuity.

Mines/Mill

Sudbury Mines/Mill operates three underground nickel/copper mines in the Sudbury area: the Craig, Fraser and Lindsley mines. In 2005, the Craig mine provided 42% of Sudbury Mines/Mill's ore production.

Metal in concentrate produced during 2005 amounted to 19,700 tonnes of nickel (2004 – 22,600 tonnes), 23,400 tonnes of copper (2004 – 24,700 tonnes) and 525 tonnes of cobalt (2004 – 565 tonnes).

The ore from Sudbury Mines/Mill is crushed and ground and the nickel/copper bearing sulphide materials contained in the ore are separated from waste materials at the Strathcona mill to produce nickel/copper concentrate and copper concentrate. The Sudbury Mines/Mill total ore milled for 2005 was 2,248,000 tonnes (2004 – 2,259,000 tonnes). The Strathcona mill has a capacity of approximately 8,500 tonnes of ore per day. The copper concentrate from the Strathcona Mill is delivered to Kidd Creek Metallurgical's mineral processing facilities for smelting and refining. The nickel/copper concentrate from the Strathcona mill is delivered to the Sudbury smelter for smelting.

Mineral Reserves and Resources[1]

Our exploration successes in the Sudbury basin over the course of the last few years have significantly increased the overall mineral resources available for the INO Sudbury Mines Mill Business Unit. There are 20.5 million tonnes of Measured and Indicated Mineral Resources with an average grade of 2.30% nickel and 1.02% copper and 29.0 million tonnes of Inferred Mineral Resources grading 1.8% nickel and 2.6% copper. Measured and Indicated Resources decreased by 1.2 million tonnes in 2005 and Inferred Resources by 0.7 million tonnes during the same period mainly due to the provisional sale of properties containing resources. Total mineral reserves in Sudbury consist of 8.1 million tonnes in the Proven and Probable categories averaging 1.18% nickel and 1.47% copper. After production of 2.2 million tonnes, proven and probable reserves were further decreased by 1.6 million tonnes due to new detailed drill information in the mines plus revised cut-off grades and engineering studies.

As of December 31, 2005, Nickel Rim South is estimated to contain 13.4 million tonnes grading 1.8% nickel and 3.3% copper. Drilling at Fraser Morgan Zones 8, 9, 10 and a newly discovered Zone 11 upgraded the geological confidence and added to the available Mineral Resources. The Fraser Morgan Mineral Resource as of December 31, 2005, consisted of 3.3 million tonnes of measured resources grading 1.85% nickel and 0.61% copper, 1.6 million tonnes of indicated resources grading 1.69% nickel, 0.46% copper and 2.4 million tonnes of inferred resources grading 1.8% nickel, 0.5% copper.

Mineral Resources are reported using short-term and long-term price forecasting, cut-off grades and minimum mining widths appropriate to the particular deposit, production forecast and mining method. Engineering design, dilution and mining recoveries are applied to the Mineral Resource to arrive at the Mineral Reserve.

Approximately 2,171,000 tonnes of Proven and Probable Mineral Reserves were milled in 2005. At planned operating rates, existing Proven and Probable Mineral Reserves, not including new Mineral Resources largely anticipated to be converted to Mineral Reserves in the future, represent approximately 4 years of production. The upgrade of mineral resources to reserves by planned future work would result in an extension of the operating life of the Sudbury mines, mill and smelter. The Nickel Rim South deposit currently under development is projected to support mining operations until approximately 2021.

Smelter

The nickel/copper concentrate from the Strathcona mill is treated at the Sudbury smelter along with Raglan and Montcalm concentrates and custom feed from other sources. The smelter produces a matte containing nickel, copper and cobalt, as well as silver, gold and platinum group metals. The Sudbury smelter has the capacity to produce approximately 130,000 tonnes of matte per year. The matte produced is shipped by rail to Québec City and by sea to the Nikkelverk refinery in Norway for further processing.

The Sudbury smelter's output for 2005 from all sources was 63,090 tonnes of nickel (2004 – 52,600 tonnes), 20,800 tonnes of copper (2004 – 18,400 tonnes) and 2,420 tonnes of cobalt (2004 – 1,840 tonnes). Copper concentrate sent to

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

the Kidd Creek smelter contained 18,125 tonnes of copper (2004 – 17,600 tonnes). Sulphuric acid produced as a result of smelting activity in Sudbury was 310,600 tonnes in 2005 (2004 – 244,600 tonnes).

Falconbridge Nikkelverk, AS ("Nikkelverk")

Nikkelverk, a wholly-owned subsidiary of Falconbridge, operates a refinery and a sulphuric acid plant at Kristiansand, Norway. The refinery processes the matte produced by the Sudbury smelter as well as custom feed from other sources, which includes the treatment of the silver, gold and platinum group metals contained in the matte and custom feed. The refinery has an annual capacity of approximately 86,000 tonnes of nickel, 39,000 tonnes of copper and 5,200 tonnes of cobalt. The sulphuric acid plant has a capacity of approximately 115,000 tonnes of sulphuric acid per year. In 2005, the refinery produced 84,900 tonnes of nickel (2004 – 71,400 tonnes), 38,700 tonnes of copper (2004 – 35,600 tonnes), 5,020 tonnes of cobalt (2004 – 4,670 tonnes) and 108,800 tonnes of sulphuric acid (2004 – 95,200 tonnes).

Mattes from the Sudbury smelter and from BCL Limited ("BCL") in Botswana were the main sources of nickel/copper feed materials for the Nikkelverk refinery during the year.

In 2005 the refinery produced approximately 405,500 ounces of platinum group metals (2004 – 438,000 ounces).

Significant expansion of the nickel and cobalt capacity, based on matte or laterite intermediates, are possible if market conditions warrant such expansion.

Montcalm

The Montcalm nickel mine was brought into production in 2004. It is located 100 kilometres east of the Kidd Metallurgical Site in Montcalm Township in the Province of Ontario and comprises four 21 year leases covering mining and surface rights over 831 hectares.

The Montcalm project reached its designed production capacity of 750,000 tonnes annually during the fourth quarter of 2004. This included conversion of a redundant mill line at the Kidd concentrator to handle the Montcalm ores. Two concentrates are produced, a copper concentrate which is treated at the Kidd Metallurgical Complex and a nickel concentrate which is transported to Falconbridge's smelter in Sudbury.

In 2005 a total of 750,070 tonnes of Montcalm ore were milled (2004 – 220,570 tonnes) grading 1.52% nickel and 0.79% copper. During 2005 both the mine and mill were successfully test run at an 875,000 tonne annualized rate (116% of design capacity). The current plan is to increase Montcalm mine and mill production to the 875,000 tonne a year rate starting in the second half of 2006, effectively milling 845,000 tonnes in 2006 and 875,000 tonnes a year thereafter until the mine is depleted.

Mineral Reserves and Resources[1]

As of December 31, 2005, proven and probable reserves totaled 4,507,000 tonnes averaging 1.46% nickel and 0.68% copper. Montcalm is expected to contribute approximately 9,000 tonnes of nickel annually to output from the Sudbury smelter.

Mineral resources are estimated using cut-off grades and minimum mining widths appropriate to the particular ore zone and mining method. Dilution (planned and overbreak) and mining extraction recoveries are applied to the mineral resource to arrive at the mineral reserves. Assumed metal prices and exchange rate were nickel $3.25 per lb., copper $0.90 per lb. and the Cdn$1.50 for US$1.00.

Mineral reserves decreased from 4.9 million tonnes to 4.5 million tonnes due to a 2005 production total of 0.8 million tonnes which was partly replaced by 0.4 million tonnes from upgrade drilling on the final mineral resources at the mine. No mineral resources remain. At planned operating rates, the mineral reserves are equal to approximately 5 years of production.

Falconbridge International Limited ("FIL")

FIL, through its offices in Bridgetown, Barbados and Brussels, Belgium, is responsible for managing the INO's custom feed business outside Canada. Custom feed, or third-party primary smelter mine production (concentrate), primary smelter production (matte) and secondary raw materials, provides a significant source of feed to the Sudbury Smelter and the

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

Nikkelverk refinery. The availability of and profit margins associated with the custom feed processed at the Sudbury Smelter and the Nikkelverk refinery are largely a function of metal grade and the level and relationship of nickel, copper, cobalt, silver, gold and platinum group metals prices and competition for such materials.

The custom feed processed at the Sudbury Smelter consists largely of nickel/copper/cobalt secondary raw materials and nickel concentrates. Most secondary raw materials are sourced on a spot basis or under contracts of one to three years' duration. Concentrates are sourced on a spot basis and multi-year contracts. In 2005, Sudbury Smelter's output from all third-party feeds included 9,300 tonnes of nickel, 6,600 tonnes of copper and 1,360 tonnes of cobalt.

In 1985, FIL entered into a long-term agreement with BCL to treat complex nickel/copper matte from BCL's smelter in Botswana. The BCL matte represented approximately 65% of the nickel and copper-bearing custom feeds processed at the Nikkelverk refinery in 2005. Under the agreement, which was extended in 2002 to the end of 2015, BCL has agreed to deliver approximately 10,000 tonnes of nickel in matte per year.

Custom Feed Production at the Refinery

In 2005, custom feed represented approximately 37% of the nickel (2004 – 34%), 64% of the copper (2004 – 59%) and 80% of the cobalt (2004 – 83%) output at the Nikkelverk refinery.

3.1.2 Copper

The copper business unit is a fully-integrated producer of copper metal and concentrate. The copper business unit includes the operation of the Company's 33.75%-owned Antamina copper and zinc mine in Peru and the 100%-owned Altonorte copper smelter located near Antofagasta, Chile, Falconbridge's 44% stake in the Collahuasi copper mine in Chile and 100% interest in the Lomas Bayas operations, as well as refining, smelting and recycling facilities in Canada and in the United States, which are referred to as Canadian Copper and Recycling ("CC&R").

Altonorte Smelter

We own 100% of the Altonorte copper smelter located in northern Chile. The smelter recently completed a major modernization and $170 million Phase 3 expansion project, which more than doubled its capacity to a nominal 835,000 tonnes/year of copper concentrate throughput, copper anode output capacity to approximately 290,000 tonnes and sulphuric acid capacity to 790,000 tonnes.

The Altonorte custom smelter processes copper concentrate from third-party mines located mainly in Chile. Approximately 35% of the Altonorte smelter's production is sold to Codelco and is refined at Codelco's Chuquicamata refinery near Calama, Chile, a portion of which is returned to us in the form of cathodes. The balance of the smelter's blister anode production is exported. The smelter's sulphuric acid production is sold to customers located in the northern region of Chile. In 2005, Altonorte processed 894,700 tonnes of feed material (2004 – 832,800 tonnes), produced 297,600 tonnes of copper anodes (2004 – 266,400 tonnes) and produced 808,200 tonnes of sulphuric acid (2004 – 751,300 tonnes).

Compañía Minera Antamina S.A. ("Antamina")

History and Location

Located in the Andes mountains in Peru, approximately 270 kilometres north of Lima and at an elevation of 4,300 metres, the Antamina deposit is one of the largest copper/zinc orebodies in the world, with a milling rate of 100,000 tonnes per day. Antamina is expected to produce 277,000 tonnes of copper and 163,000 tonnes of zinc annually over an 18-year mine life, producing an annual average of 710 million pounds of copper and 625 million pounds of zinc in the next 10 years.

A capital investment of $2,148 million was made to bring Antamina into production. Of this amount, $1,320 million was financed using senior project debt.

Our beneficial interest in Antamina is 33.75%, with the beneficial owners comprising BHP Billiton PLC at 33.75%, Teck Cominco Limited at 22.5% and Mitsubishi Corporation with a 10% interest.

Operations

Antamina began commercial production in October 2001. In 2005, Antamina produced 1,287,257 tonnes of copper concentrate grading 29.10% copper, 343,559 tonnes of zinc concentrate grading 53.66% zinc and 12,875 tonnes of molybdenite concentrate containing 52.20% molybdenum. In 2005, payable copper contained on the concentrates sales

was 815,703 pounds of copper, 355,711 pounds of zinc, 16,124 pounds of molybdenum and 8,797 metric ounces of Silver.

Mineral Reserves and Resources[1]

Antamina is classified as a copper-zinc-silver skarn deposit and occurs at the contact between a quartz monzonite intrusive of Tertiary Age (< 70 million years) and limestone of Cretaceous Age (70-135 million years).

Proven and probable mineral reserves total 450,000,000 tonnes with an average grade of 1.18% copper, 0.93% zinc, 0.031% molybdenum and 12.9 grams of silver per tonne. Proven and probable mineral reserves are based on the mineral resource model after applying open-pit design and cut-off criteria. Measured and indicated resources, in addition to mineral reserves in the current pit design, total 60,000,000 tonnes with an average grade of 0.49% copper, 0.33% zinc, 0.030% molybdenum and 6.7 grams of silver per tonne. Inferred mineral resources total 41,000,000 tonnes with a grade of 0.8% copper, 0.6% zinc, 0.02% molybdenum and 16 grams of silver per tonne.

Due to the polymetallic nature of the deposit, multiple ore types, and variable metallurgical recoveries, proven and probable mineral reserves are reported using a profitability economic cut-off value (US$1500/hour) and also include all measured and indicated material with a positive net value to be processed directly through the concentrator in the life-of-mine plan. Low grade ore has a value between US$1500/hour and the high grade ore value of ⩾US$14,000/hour. Marginal material is specified as having a value between that of material treated as waste and the low-grade cut-off value. Measured resources are specified as all in-situ pit measured marginal material. Indicated resources are specified as all in-pit indicated marginal value blocks. Inferred resources are estimated for all other inferred in-pit high grade, low grade and marginal material.

The mineral resource and mineral reserve estimates were prepared under the supervision of Dan Gurtler, Mine Manager, and Eric Lipten, Geology Superintendent who are qualified persons for the purposes of NI 43-101. Assumed metal prices were zinc $0.50 per lb., copper $0.95 per lb., molybdenum $5.00 per lb. and silver $5.00 per troy ounce.

The Antamina orebody is highly variable and is currently described by more than six different ore classifications. The current reserve estimate is the result of a three year program of diamond drilling plus significant geological, engineering and metallurgical input. The estimate includes substantive improvements in geological interpretation and modelling interpolation methodologies. The new resource model provides increased geological information and a superior reserve estimate for production purposes.

At planned operating rates, the proven and probable mineral reserves are equal to approximately 14 years of mine production. Mill operations could continue for another few years on stockpiled material. The mineral reserves decreased by 18 million tonnes in 2005 due to production. There was 30 million tonnes of production which was partly replaced by the addition of 12 million tonnes of ore resulting from a major infill drilling campaign and a new reserve estimation.

Compañia Minera Doña Inés de Collahuasi ("Collahuasi")

Falconbridge owns a 44% interest in Compañía Minera Doña Inés de Collahuasi S.C.M., an independent company which owns the mining and water rights and other assets comprising the Collahuasi operation, together with Anglo American Plc which also holds a 44% interest, and a Japanese consortium holding the remaining 12% interest.

A capital investment of $1,792 million was required to bring Collahuasi into commercial production. The financing requirement, including working capital, was approximately $1,870 million.

The Collahuasi property covers 446 exploitation concessions over 133,803 hectares and 185 exploration concessions over 66,500 hectares. The property is located in northern Chile, about 180 kilometres southeast of the port of Iquique, at an elevation of 4,300 metres. It contains two separate porphyry copper deposits, known as Ujina and Rosario: the Ujina high grade secondary enrichment has been mined already but an important reserve of primary copper ore remains; Rosario has large tonnages of high grade primary ore and important secondary enrichment zones. The Huinquintipa oxide copper deposit is located downstream from the Rosario deposit. In addition, the property contains high-grade copper mineralization at the adjacent Rosario Oeste deposit.

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

Mining and Milling Operations

Commercial production at the Collahuasi operation began in January 1999. Production is expected to average 350,000 tonnes per year of copper in concentrates and 50,000 tonnes per year of copper cathode during the initial 10 years of mine life. The mine site is serviced under a 20-year power supply contract with Empresa Nacional de Electricidad S.A., a Chilean electric utility company.

During 2005, 161.3 million tonnes of material was mined (2004 – 165.6 million tonnes), 40.1 million tonnes of ore was milled at the concentrator (2004 – 34.8 million tonnes) and 6.5 million tonnes of ore was processed at the copper oxide leaching plant (2004 – 6.6 million tonnes). Falconbridge's share of copper produced by Collahuasi during 2005 was 26,700 tonnes of cathode copper and 155,600 payable tonnes (161,200 contained tonnes) of copper in concentrate (2004 – 211,600 copper tonnes was produced considering cathodes and concentrates).

The Ujina pit was practically depleted during the year 2004 and ore extraction ramped-up in the Rosario Pit during the year 2004. In the last months of 2004, production at the Rosario Pit had achieved its full capacity.

Mineral Reserves and Mineral Resources[1]

As of December 31, 2005, proven and probable mineral reserves totaled 1,804,332,000 tonnes with an average grade of 0.90% copper. Measured and indicated resources are in addition to mineral reserves and totaled 478,360,000 tonnes with an average grade of 0.64% copper. Inferred mineral resources totaled 1,820,000,000 tonnes with a grade of 0.75% copper.

Proven and probable mineral reserves are based on the mineral resource model after applying open-pit design and cutoff criteria. Proven and probable mineral reserves are reported using a 0.45% copper cut-off for sulphide ore, 0.40% cut-off for oxide ore and 0.50% copper for mixed ore, and include all stockpiled material above the cut-off grade. The assumed metal price was $0.95 per lb. of copper. Mineral resources are in addition to mineral reserves and are estimated using an average 0.40% copper cut-off grade. Measured and indicated mineral resources consist of material inside an encompassing pit outline based on a copper price of $1.15 but excluding the mineral reserves contained in the interior reserve pit outline. Inferred resources were estimated for material contained in both pit designs.

At planned operating rates, the proven and probable mineral reserves are equal to more than 40 years of production not including substantial measured and indicated mineral resources of 478.4 million tonnes and 1.8 billion tonnes of inferred resources. The December 31, 2005 total mineral reserves were decreased solely by production of 45,273,000 tonnes from the reserves.

Canadian Copper and Recycling ("CC&R")

CC&R mines and procures copper and precious metal concentrates and secondary materials for processing at our copper smelters and refineries and markets copper and related by-products.

Mineral Reserves and Mineral Resources[1]

The Kidd Creek ore body is intersected by a number of major faults and other discontinuities. Mining and the resulting stress redistribution cause periodic ground adjustment along these faults resulting in seismic activity. Falconbridge has taken steps to minimize the impact of seismic activity on its Kidd Creek mining operations. These steps include the use of seismic monitoring equipment and the development and use of safe and cost-effective mining systems and procedures. On occasion a seismic event may occur that has the potential to cause personal injury, equipment damage or production interruption. Such events have been infrequent.

As of December 31, 2005, Kidd Creek reported reserves of 19.0 million tonnes grading 1.84% copper and 5.53% zinc. At planned operating rates (~2.4 million tonnes/year), the mineral reserves at Kidd Creek Mining Division are equal to approximately 8 years of production. Mineral resources below the 88 level in Mine D are currently undergoing evaluation to determine if they can be converted to mineral reserves and extend the life of the mine for another 5 years.

Mining Operations

Falconbridge and its predecessors in title have been mining the Kidd Creek copper/zinc deposits since 1966. The Kidd Creek mining operation's principal copper/zinc properties in the Timmins area are located in Kidd Township, Porcupine

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

mining division, Ontario. The property in the Timmins area of northern Ontario comprises six half lots, or 960 acres, in the Porcupine Mining Division, District of Cochrane, Ontario. The property parcel numbers are: 12757 SEC, 14980 SEC, 13574 SEC, 15114 SEC, 13571 SEC, 13569 SEC and are 100% held by the Company. The Kidd Creek deposits are mined through two separate shafts, accessing mining areas known as the upper and lower mines, which access progressively deeper levels. In 2005, the upper mine (formerly No. 1 and No. 2 mines) accounted for 23% of production, the lower mine (formerly No. 3 mine) accounted for 56%, and Mine D 21% of the Kidd Creek Mining Division's mine ore production.

Ore production at the Kidd Creek Mining Division ("Kidd Creek Mining") for 2005 was approximately 2.38 million tonnes (2004 Actual – 2.09 million tonnes) The 2005 milled grades as at the end of December were; copper 1.99%, and zinc 6.21% (2004 Actual – copper grade 2.09%, zinc 5.04%). Metals in concentrate produced as at the end of December 2005 totaled 42,700 tonnes of copper (2004 Actual – 41,000 tonnes); and 120,000 tonnes of zinc (2004 Actual – 87,800).

In 2000, the Company approved the development of Mine D, the depth extension of the Kidd Creek ore body beyond the limits of the No. 3 mine at 6,800 feet (2,070 metres) to a depth of 8,800 feet (2,682 metres) for Stage 1. Stage 2, going down to 10,200 feet (3,109 meters) is still under feasibility study. Production from Mine D began in the second half of 2004 and production reached 480,000 tonnes in 2005 with ramp-up continuing into 2006. Mine D, Stage 1 of the project is scheduled to be completed in 2006.

Metallurgical Operations

CC&R operates the Horne copper smelter located in Rouyn-Noranda, Québec, the Canadian Copper and Recycling refinery ("CCR refinery") in Montreal-East, Québec, the Kidd Creek Metallurgical Division, a copper-zinc complex located in Timmins, Ontario and five recycling facilities located in the United States and Canada.

CC&R has the capacity to process approximately 1,300,000 tonnes per year of copper and precious metal-bearing feed materials at the Horne and Kidd Creek smelters. In 2005, Falconbridge processed 1,102,100 tonnes of feed at the Horne and Kidd Creek smelters (2004 – 1,058,300 tonnes). In 2005, approximately 75% of the CC&R feed was procured from North America with the balance mainly from South America.

The ore from Kidd Creek Mining Division is transported by a company-owned railway to the Kidd Creek Metallurgical Division's mineral processing facilities, located 27 kilometers southeast of the mine. The mill produces copper and zinc concentrates, and treats all ores from the Kidd Creek Mining Division in two of four circuits. The remaining two circuits are available to process custom feed. In 2004, one of these circuits was rehabilitated and converted to treat 750,000 tonnes per year of nickel ore from Falconbridge's new Montcalm mine, located approximately 100 kilometers west of the metallurgical site. Nickel concentrate from the circuit is shipped to Sudbury for processing. The Kidd copper concentrate produced as well as the by-product Montcalm copper concentrate, are processed at the Kidd Creek Metallurgical Division's copper smelter. In addition to these feeds, the smelter also treats copper concentrate from Falconbridge's Sudbury Strathcona mill as well as other copper custom feeds. The smelter has the capacity to produce 150,000 tonnes of blister copper per year. The 119,000 tonnes (2004 – 118,200 tonnes) of blister produced at the Kidd Creek smelter in 2005 were either sent as anode for refining at its refinery, or shipped to the Company's CCR refinery. In 2005, the Kidd Creek copper refinery produced 111,200 tonnes (2004 – 115,600 tonnes) of copper cathode.

The Kidd Creek zinc plant has the capacity to produce 147,000 tonnes of zinc per year. In October 2004 a new precious metal recovery circuit was commissioned in the zinc plant. The new circuit allows the plant to process Agnico-Eagle's Laronde Mine precious metal bearing zinc concentrates, and to recover the gold and silver as precious metals/lead residue that is further refined at Falconbridge's Brunswick smelter. Approximately 100,000 tonnes of Laronde zinc concentrate are received on an annual basis. The balance of the zinc plant's feed is Kidd zinc concentrate, and any surplus Kidd zinc concentrate is available for processing at facilities such as the Noranda Income Trust's CEZ refinery located in Valleyfield Quebec. In 2005, the Kidd Creek zinc plant produced 113,700 tonnes (2004 – 121,600 tonnes) of saleable zinc.

In addition to the mineral processing facilities, the copper smelter, the copper refinery and the zinc plant, the Kidd Creek Metallurgical Division also operates a cadmium plant, an indium plant, two sulphuric acid plants, and a liquid SO2 plant. In 2005 the Kidd Creek Metallurgical Division produced 472,300 tonnes of sulphuric acid.

In October 2005, the copper, zinc, and milling operations of the Kidd Creek Metallurgical Division were impacted to varying degrees by a 4 week strike by the site's unionized workforce, CAW local 599.

The Horne smelter utilizes two technologies that work together to optimize its production; concentrate injection and continuous smelting. Through its continuous smelting process, the Horne smelter is able to treat concentrates containing impurities such as arsenic, antimony, bismuth and other materials in addition to conventional copper concentrates. In 2005, of the total volumes treated by the Horne smelter, approximately 22% of this feed was obtained from the Louvicourt, Antamina and Collahuasi mines and the balance was sourced from third parties under contracts having durations of one to three years or purchased on a spot basis. In September 2005, the NCV (Noranda Converter) at the Horne smelter was brought back on line. The operating rate increased from 600,000 tonnes to 790,000 tonnes of concentrate. Anode production capacity increased to 170,000 tonnes from 140,000 tonnes. This increase in operations was based on the availability of concentrates at economical treatment terms. Anode output from the Horne smelter totaled 147,000 tonnes in 2005 (2004 –149,700 tonnes). All anodes produced at the Horne copper smelter were refined at the Company's CCR refinery. The smelter also produced 517,900 tonnes of sulphuric acid in 2005.

The CCR refinery processes copper anodes from the Horne, Altonorte and Inco smelters as well as other unrefined copper and precious metals from Falconbridge and third-party sources. In 2005, the refinery produced 304,200 tonnes (2004 – 288,400 tonnes) of copper cathode, approximately 908,350 thousand ounces of gold (2004 – 1.1 million), 33.2 million ounces of silver (2004 – 37.3 million) and other by-products including selenium, tellurium, nickel sulphate, and a concentrate of platinum group metals. A contract was signed in early 2005 for the refining of Inco anodes at CCR with shipments commencing in August 2005. In September, the CCR refinery moved to a 7 day operation in preparation to increase 2006 production to 372,000 tonnes.

CC&R is a leader in the recovery of copper, gold, silver and platinum group metals from the recycling of electronics and other copper and precious metal-bearing secondary materials. Prior to processing at the Horne smelter, a portion of the secondary stream is received and sampled. Falconbridge operates two sampling facilities in California and Rhode Island. In addition, the Company operates plants in Roseville, California, Lavergne, Tennessee and Brampton, Ontario that provide asset management and recycling services for end-of-life electronic hardware for Hewlett-Packard-a strategic partner, and other original equipment manufacturers. During 2005, a new commercial office and warehouse was opened in Penang, Malaysia to assist Asian based customers with the collection and shipment of electronic scrap from production facilities to the sampling plants in San Jose or Rhode Island. This new company is called Noranda Recycling Malaysia.

Falconbridge's processing plants and technology enable the treatment of large tonnages of recycled materials. In 2005, recycled materials comprised 12% (2004 –11%) of the feed for the copper smelters and approximately 17% of the copper (2004 – 9%), 20% of the gold (2004 –18%), 10% of the silver (2004 – 8 %) and 95% of the platinum group metals (2004 – 80%) produced by the CCR refinery.

Lomas Bayas

The Lomas Bayas mine comprises seven exploitation concessions covering approximately 2,022 hectares. The Fortuna de Cobre deposit comprises 11 exploitation concessions covering approximately 1,216.5 hectares. Falconbridge also holds 25 exploitation concessions and two exploitation concession application covering approximately 4,669 hectares between the Lomas Bayas mine and the Fortuna de Cobre deposit as well as 61 exploration concessions and two exploitation concession applications covering an area around the Fortuna de Cobre deposit.

The Lomas Bayas mine is located in the Second Region of Chile, approximately 110 kilometres north-east of the port city of Antofagasta. The mine is situated at an altitude of 1,500 metres in the Atacama Desert. The Fortuna de Cobre deposit is situated 3 kilometres to the south of the Lomas Bayas mine.

Mining Operations

In July 2001, Falconbridge acquired 100% of the Lomas Bayas copper mine and adjacent Fortuna de Cobre copper deposit from Boliden Limited for a cash payment of $66 million. Falconbridge is also required to pay $15 million if it exercises its right to retain the Fortuna de Cobre deposit before the fifth anniversary of closing. The Fortuna de Cobre deposit could expand production or extend the mine life by five years, to 2020.

Mining and Processing

Lomas Bayas currently operates one open pit mine. Heap-leach grade ore is crushed and placed on leach pads by a series of portable conveyors and a stacking system. Lower-grade ore that does not economically justify the cost of crushing and additional handling is placed directly on separate leach pads by mine haulage trucks. Solutions containing sulphuric acid are

then applied to leach the ores and copper recovery occurs by a solvent extraction-electrowinning process. The copper cathode is transported by truck and rail to the port at Antofagasta and shipped to customers overseas. Lomas Bayas is serviced by the electrical grid of northern Chile under long-term contracts with a local electricity supplier.

In 2005, Lomas Bayas mined 35.8 million tonnes (30.4 million tonnes in 2004) of ore from which 63,100 tonnes of cathode copper were produced (62,000 tonnes were produced in 2004).

Mineral Reserves and Mineral Resources[1]

As of December 31, 2005, proven and probable mineral reserves totaled 239,220,000 tonnes with an average grade of 0.36% copper. Measured and indicated resources are in addition to mineral reserves and totaled 280,618,000 tonnes with an average grade of 0.28% copper. Inferred mineral resources totaled 31,000,000 tonnes with a grade of 0.3% copper.

Proven and probable mineral reserves are based on the mineral resource model after applying open-pit design and cut-off criteria. Proven and probable mineral reserves are reported as percent total copper using an average 0.08% recoverable copper cut-off and include all stockpiled material above the cut-off grade. The assumed metal price was $0.90 per lb. of copper. Mineral resources are in addition to mineral reserves and are estimated using a 0.08% recoverable copper cut-off grade. Measured and indicated mineral resources consist of material inside an encompassing pit outline based on a copper price of $1.15 but excluding the mineral reserves contained in the interior pit outline. Inferred resources were estimated for material contained in both pit designs.

At current operating rates, the proven and probable mineral reserves are equal to approximately 7 years of production. The mineral reserves decreased by 103.5 million tonnes due to mine production of 34.3 million tonnes and negative reserve adjustments of 69.2 million tonnes. The negative impact on the reserve total resulted from a new reserve estimation which is based on 23,000 metres of new infill drilling and new estimation parameters including significantly higher mining, processing and sales costs. A large percentage of the material removed from the reserves and mining plan at the current long term copper price can be moved back into the mine plan if the long term copper price is increased.

Much of the material deleted from the reserves was downgraded to resources resulting in an increase of 35.6 million tonnes to the measured and indicated resources. It is likely that these resources will be mined at a future date if copper prices remain above US$1.15.

3.1.3 Aluminum

The Company operates six plants in the United States that produce alumina, primary aluminum and aluminum foil, as well as a mining operation in St. Ann, Jamaica. The alumina plant and the bauxite mining operations are operated under a 50% joint interest with Century Aluminum, Inc. In 2005, approximately 94% (2004 – 95%) of sales were to United States customers.

Our fabricated products operations purchase the majority of our primary metal requirements from third parties. This allows the primary reduction plant to optimize product mix by selling value-added products to third parties. St. Ann Bauxite produces all of the bauxite used at the Gramercy alumina refinery, and sells excess bauxite to third parties. The Gramercy alumina refinery, which currently has the capacity to produce just over one million tonnes of smelter grade alumina, plus an additional 200,000 tonnes of chemical grade alumina, supplies all of the alumina used at our New Madrid smelter, and sells the balance of its alumina to Century Aluminum Inc. or third parties.

Primary Products

Alumina requirements were supplied under medium-term contracts with third parties at prices that generally varied with aluminum prices until September 30, 2004. On October 1, 2004, Noranda and Century Aluminum Inc. each purchased, from Kaiser Aluminum Inc., a 50% ownership interest in Gramercy Alumina LLC ("Gramercy") in Louisiana, and a 50% economic interest in the St. Ann Bauxite mine in Jamaica.

We operate a primary aluminum reduction plant located adjacent to the Mississippi River, near New Madrid, Missouri. The plant has three potlines that produced 245,600 tonnes of molten aluminum in 2005 (2004 – 247,500 tonnes), a carbon

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

plant that produces anodes for the reduction cells, and a cast house capable of producing 1,500 lb. standard ingots and value-added products such as billet, electrical conductor rod and foundry alloy.

Our aluminum smelter in New Madrid, Missouri uses approximately 500 megawatts of power annually. Our previous two-year power contract expired May 31, 2005. A 15 year contract for all of the plant's power needs was signed with Ameren A.E. Power Company of Missouri in March 2005. The contract provides for power mill rates at approximately $35/MWh, with any future rate changes subject to approval by the regulatory authorities of the State of Missouri.

Fabricated Products

We operate four plants in the South-eastern United States that combine to serve a broad range of customer needs. We are the second largest producer of aluminum foil products in North America. In 2005, third-party shipments increased by 2% totaling 178,000 tonnes, (2004 – 174,000 tonnes). Our market share in North America increased to 23% of its target markets.

The original Huntingdon, Tennessee plant, which we have operated since 1979, has an approximate annual production capacity of 60,000 tonnes. It produces heavy-gauge foil from continuous cast metal, serving the electrical, simi-rigid container and air conditioning fin stock markets. The Salisbury, North Carolina plant also operates continuous casters and has an approximate annual production capacity of 45,000 tonnes of light and heavy-gauge foil. The Newport, Arkansas facility processes re-roll material into lighter gauge coated and uncoated foil. It can produce approximately 15,000 tonnes annually. The major products produced at the Salisbury and Newport plants are flexible packaging materials, air-conditioning fin stock and converter foil used in food containers.

We recently completed construction of a modern aluminum foil plant at a cost of $226 million (excluding financing) to reinforce our position as a leading, low-cost supplier of heavy-gauge foil products. The foil plant is located adjacent to the existing Huntingdon plant and has an annual production capacity of approximately 107,000 tonnes of heavy-gauge foil, bringing our total foil production capacity to 227,000 tonnes. The plant utilizes state-of-the-art technology in casting, rolling and material handling. The new foil plant includes four new continuous casting machines, a high-speed, wide-width rolling mill with associated finishing equipment and an automated product storage and retrieval system. The automated storage and retrieval system is designed to reduce cooling time and lower handling costs. The high speed, low-gauge casters and wide-width rolling mill are designed to improve product quality, lower scrap rates and increase productivity.

St. Ann Bauxite

Mineral Reserves and Resources[1]

The Discovery Bay bauxite deposits are classic karst-hosted Jamaican bauxite deposits. The individual zones occur in basin like areas that represent karst depressions between steep hills of limestone. The host unit is a very pure white Eocene limestone. The origin of the bauxite is thought to be the bauxitization of Tertiary volcanic tuffs or other rocks that were alluvially transported into karst depressions after weathering. The Tertiary volcanics have up to 20% Al_2O_3 and consequently would require relatively little volume reduction in order to achieve bauxite grades of 45-50% Al_2O_3.

The mineral reserve estimate is based on assays from tractor-mounted auger drilling and geological interpretation of the dimensions of the mineralized basin. The data is entered into Arcinfo for polygonal estimation of the reserve. Proven reserves are based on a 50 foot spaced drill grid and probable reserves are based on a 100 foot spaced drill grid.

Proven and probable reserves as at December 31, 2005, total 29.3 million tonnes averaging 25.1% aluminum. Approximately 4.1 million tonnes grading 24.8% aluminum was produced in 2005. At forecast mining rates, the reserves are sufficient for 6 years of production. Other mineralized basins exist on the mining leases which need to be sampled prior to inclusion in the mineral reserves or resources. From past experience, it is estimated that there is approximately 25 million tonnes of this material. As well, an agreement with the Government of Jamaica conditionally grants access to other bauxite leases as necessary to provide sufficient feed to produce 4.5 million tonnes per year until the year 2030.

The St. Ann Bauxite reserves estimate has been prepared, classified and forwarded by St. Ann Jamaica Bauxite Partners, the operator of the joint venture.

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

3.1.4 Zinc

Our Zinc business unit produces zinc concentrate and copper concentrates at our mines and procures and processes zinc concentrate at the Canadian Electrolytic Zinc Limited ("CEZ") refinery owned by the Noranda Income Fund. The zinc business unit also produces lead concentrates at the Brunswick mine and procures and processes lead/silver concentrates, residues and recycle materials at the Brunswick smelter. Marketing of the CEZ refinery and Falconbridge's zinc metal and related alloys, as well as the Company's lead metal and related alloys, is carried out through our head office in Toronto, Ontario and affiliated marketing offices in Zug, Switzerland and Cleveland, Ohio. The marketing office in Zug also purchases and sells base metals within the European market. In addition, the zinc business unit operates the General Smelting of Canada foundry in Lachine, Québec, which produces various lead and zinc alloys and anodes. The zinc business unit also operates NorFalco LLC, which markets, transports and distributes Falconbridge's sulphuric acid in North America.

Brunswick Mine

History and Location

The Brunswick mine was developed and commenced operations in the early 1960s. We acquired a controlling interest in the mine in 1971 and a 100% interest in 1996. The mine is located approximately 27 kilometres southwest of Bathurst, New Brunswick. We have surface rights and 100% ownership of the mineral rights on 1,030 hectares comprising the No. 12 Crown Grant (Nos. 35097 and 34300).

Mineral Reserves and Resources[1]

The Brunswick ore body is hosted in steeply dipping volcanic and sedimentary rock units. The deposit comprises massive sulphides intimately associated with various iron formation facies, with zinc, lead, copper and silver being the principal metals produced. The host rocks and the mineralization have undergone four significant deformation events, resulting in intense folding and faulting.

Mineral resource and mineral reserve estimates are based on assays from diamond drilling and geological interpretation of drilling and underground mapping of development areas. The data are interpreted by the mine's geologists and used to develop a three-dimensional model of the geology, mineralization and underground development areas.

Proven and probable mineral reserves as at December 31, 2005, total 14.7 million tonnes averaging 8.77% zinc, 3.53% lead, 0.36% copper and 104 grams of silver per tonne. Measured and indicated mineral resources in addition to mineral reserves total 3.5 million tonnes with an average grade of 9.36% zinc, 3.83% lead, 0.32% copper and 98 grams of silver per tonne.

All mineral reserve stope blocks and additional mineral resource blocks are designed by the mining engineers based on the geological model and grade block model. Parameters such as mineralization geometry, NSR value distribution, ground conditions, accessibility, condition of adjacent mined out stopes are considered during stope design. Estimated dilution (planned and wall), estimated extraction recoveries and economics are applied to the mineral reserve blocks only (mineral resource figures contain no dilution). The assumed metal prices and exchange rate for the mineral reserves and resources were zinc $0.65 per lb., copper $1.50 per lb., lead $0.35 per lb., silver $6.50 per troy ounce and Cdn$1.25 for US$1.00.

At planned operating rates, the Brunswick Mine has an estimated life of 4 years. The mineral reserves decreased by 2.7 million tonnes to 14.7 million tonnes. The decrease is due to production of 3.5 million tonnes of ore which was partly replaced by a gain of 0.8 million tonnes of reserves due to comprehensive mining evaluations to upgrade some mineral resource blocks to mineral reserve status and the on-going optimization of several reserve stope blocks based on more favourable metal price forecasts. Detailed technical and economic studies of the additional mineral resources and other mining remnants located throughout the mine are continuing. If this evaluation is successful in converting remaining resources to reserves, the 4 year mine life could be extended by an additional year of operation, subject to the risks and hazards associated with the mining business and the mine in its final stage of extraction.

Operations

Production occurs on five main levels to a depth of 1,125 metres. Two shafts provide access. The No. 3 shaft is 1,337 metres deep and is used to hoist personnel, ore and equipment. The No. 2 shaft is 963 metres deep and is used to hoist

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

personnel and supplies. This shaft carries all compressed air and water services for the mine. The remaining cage hoist is used intermittently as a backup to the No. 3 shaft facilities and a second means of egress from the mine.

Mining methods are open stoping with delayed backfill including pillar-less, pyramid-shaped open stope sequences and end-slicing. The ore body consists of a series of sub-parallel ore lenses with an average dip of 70 degrees, a composite width of up to 200 metres, a maximum strike length of 1,300 metres and a maximum depth of 1,150 metres.

Ore is processed in the concentrator using grinding, differential flotation, concentrate filtering and drying technologies to produce four products, including zinc, lead, bulk and copper concentrate. Flotation tailings are sent to a paste plant for recovery and production of required amount of paste backfill. Residual tailings are sent to the tailings impoundment facility. Process water is recycled back to the concentrator while the excess runs through an effluent treatment facility prior to discharge to the environment.

Mine ore processed increased to 9,700 tonnes per day average in 2005 (2004 - 9,400 tonnes per day) and produced 265,600 tonnes of zinc in concentrate (2004 - 268,100 tonnes). Zinc recoveries in the mill were 88% (2004 - 88%). A rock burst on the 1,000 metre level negatively affected production in the fourth quarter.

The 425 Main Ore Zone project was fully commissioned and produced 17% of the mined tonnage.

Matagami Division

History and Location

The Bell Allard zinc/copper mine commenced commercial production in January 2000 with an anticipated life of approximately five years. As planned, mineral reserves at the Bell Allard mine were depleted in 2004. As a result, we ceased operations at the mine during the fourth quarter of 2004.

The Matagami concentrator and other support facilities were placed on care and maintenance to support other potential mining projects such as Perseverance in this favorable geologic area. The facilities are located 10 kilometres southwest of the town of Matagami in northwestern Quebec.

Brunswick Smelter

The Brunswick smelter, located in Belledune, New Brunswick, is a lead smelter that processes lead concentrates from the Brunswick mine as well as a wide range of offshore lead and lead/silver concentrates and residues. Consistent with our strategy of increasing our flexibility to treat complex feed materials, construction was completed on a new silver refinery in the first quarter of 2001.

The Brunswick smelter also operates a battery recycling facility in Belledune, New Brunswick with a processing capacity of 15,000 tonnes of batteries per year. Most of the used batteries are sourced from the Atlantic Provinces with Québec and the New England states providing the balance.

In December 2002, we announced that the Brunswick smelter would change to a seasonal operation effective July 1, 2003 due to the shortage of economic feed material. Under a seasonal operation the plant will run for eight months a year on Brunswick mine concentrates and third-party sulphates and other third-party material and will be shut down for the remaining four months each year. However, in 2004 and 2005, the plant ran for over nine months due to the availability of concentrate and other materials.

CEZ Refinery

The CEZ refinery (in which we have a 25% interest through our interest in the Noranda Income Fund) located in Salaberry-de-Valleyfield, Québec procures and processes zinc concentrate for the production of zinc metal and powders. It is located near the St. Lawrence Seaway and has access to road, rail and sea transportation links. In 2003, 2004 and 2005, over 80% of the zinc concentrate processed at the CEZ refinery was sourced from mines owned or partly owned by us, including the Brunswick mine, Bell Allard mine and Antamina. The refinery's products are marketed in the United States, Canada, Europe and Asia.

A plant optimization project increased nominal annual plant capacity from 225,000 tonnes to 255,000 tonnes in 1999. Further plant debottlenecking and continuous improvement projects are proceeding and in 2004 the plant achieved a

record output of 277,300 tonnes. In 2005, the plant achieved near record production of 272,400. Production was negatively impacted by the higher iron levels in the feed mix.

In May 2002, Noranda sold the CEZ processing facility to the Noranda Income Fund for a combination of cash and ordinary and priority units of the Fund. These priority units were then sold by Noranda pursuant to two separate public offerings. Falconbridge continues to own a 25% interest in the Fund in the form of ordinary units, which are subordinated in respect of cash distributions to the priority units until 2017.

Falconbridge has entered into a processing agreement to sell to the refinery up to 550,000 tonnes of zinc concentrate annually until 2017, an amount expected to support 100% of its annual production at planned rates for that period. The refinery pays Falconbridge for the concentrate based on the LME price for "payable zinc metal" contained in the concentrate less a treatment charge or processing fee, initially set at Cdn$0.352 per pound of payable zinc metal. The processing fee is adjusted annually to reflect changes in certain costs and was Cdn $0.361 per pound in 2005.

Pursuant to various management agreements, Falconbridge will continue to operate and manage the refinery and also provide management, marketing and other administrative services to the Fund.

NorFalco LLC ("NorFalco")

In April 1998, Noranda, Falconbridge and DuPont agreed to form Noranda DuPont LLC, a joint venture to market, transport and distribute sulphuric acid in North America. On June 29, 2001, Noranda DuPont LLC redeemed DuPont's 50% voting interest in Noranda DuPont LLC and its name was changed to NorFalco LLC. NorFalco purchases and resells to consumers all of the Company's Canadian sulphuric acid production.

NorFalco has developed an extensive distribution infrastructure of tank cars, trucks, marine tankers and terminals in order to supply approximately 1.9 million tonnes of sulphuric acid to consumers in North America. Its staff is based at its head office near Cleveland, Ohio and at the office of its wholly-owned Canadian subsidiary, NorFalco Sales Inc., near Toronto, Ontario. NorFalco was owned by Noranda (65%) and Former Falconbridge (35%) prior to the amalgamation and is now 100% owned by Falconbridge.

3.1.5 Exploration and Project Development

The Falconbridge exploration group is organized around four activities: exploration support for existing operations; project and business development support; world-wide "greenfields" exploration and project generation; and technical support, technology and mineral reserve/resource estimation and reporting.

The mandate of the Falconbridge exploration group is to add mineral reserves at the existing operations; add new low cost nickel and copper mineral reserves through exploration or acquisitions to enable Falconbridge to pursue profitable growth. In addition to exploration activities, the exploration group provides support to business development within the Company through participation in advanced project evaluations. Our exploration management is committed to environmentally and socially responsible exploration. The group also emphasizes utilization of best exploration technologies to achieve competitive advantage and increase the likelihood of success.

Exploration in support of existing operations in Canada is conducted from offices in Sudbury, at the Kidd Creek mine site and from a field office at the Raglan site. Greenfields exploration in North America is carried out from an office in Laval, Quebec. International greenfields exploration is conducted from Falconbridge's Toronto office and from offices in Brisbane, Australia, Belo Horizonte, Brazil, Santiago, Chile and Hermosillo, Mexico. Administration, accounting, legal and technical support is provided from Falconbridge's Toronto corporate office.

At December 31, 2005, Falconbridge had a permanent exploration staff of 119, including 92 geologists and geophysicists.

Falconbridge's exploration expenditures, excluding capitalized expenditures, for the two years ended December 31, 2005 and its planned exploration expenditures for 2006 are as follows:

	2006 (Planned)	2005	2004
	($ millions) (unaudited)		
Support of core operations in Canada	16	20	16
Exploration projects in Canada	4	5	6
Exploration projects outside Canada	29	22	13
Total	49	47	35

During 2006, exploration projects are planned in Canada (Québec, New Brunswick, the Yukon and British Columbia) and internationally (Mexico, Brazil, Chile, Norway, Turkey, Mongolia, Papua New Guinea and Australia). Exploration activity in other areas will be predicated on suitable acquisitions or new projects that meet corporate objectives.

Sudbury Operations, Ontario

The Sudbury area is one of the world's largest sources of nickel and contains significant copper, cobalt, silver, gold and platinum group metals. In addition to its operating mines, Falconbridge has large property holdings covering favourable geology of the Sudbury Igneous Complex.

Exploration has defined a mineral resource at Nickel Rim South located 2.7 kilometres north of the airport at a depth of approximately 1100-1600 metres. The inferred resource consists of 13.4 million tonnes of 1.8% nickel, 3.3% copper, 1.8 grams per tonne platinum, 2.0 grams per tonne palladium and 0.8 grams per tonne gold. A decision to proceed with a five-year underground definition program costing $368 million was announced on March 11, 2004 and preliminary underground drilling on the resource will begin in 2006. Drilling on the Fraser Morgan zones resulted in measured plus indicated resources totalling 4.9 million tonnes grading 1.80% nickel and 0.56% copper. Fraser Morgan also contains 2.4 million tonnes of inferred resources grading 1.8% nickel and 0.5% copper.

Falconbridge spent $12.8 million on exploration in support of the Sudbury operations in 2005 and plans to spend $17.4 million in 2006. This includes diamond drilling and other exploration that was carried out on certain of Falconbridge's properties by option and joint venture partners, who also have exploration programs planned for 2006.

Raglan, Quebec

An annual exploration program in 2005 resulted in the discovery of approximately 2.5 million tonnes of mineral resources at Zones 3, 5-8, West Boundary, Donaldson and East Lake. This is more than double the annual production rate at Raglan which milled 934,000 tonnes of ore in 2005. The most significant result was the expansion of lens 8H which now is estimated to contain 2.3 million tonnes grading 2.8% nickel. This is the largest single lens ever discovered in Raglan. This lens along with other adjacent lenses in Zone 7 and 8 will be placed in the Mining Stage Gate Process and may become the next major mining centre at Raglan.

Falconbridge spent $10.8 million ($6.2 million after Quebec tax credits) in 2005 in support of the Raglan operation, and plans to spend $20.7 million ($11.6 million after Quebec tax credits) in 2006.

Kidd Creek Operations, Ontario

Exploration support of the Kidd Creek operations in 2005 were conducted in three areas within 200 kilometres of Falconbridge's core infrastructure in Timmins. Exploration was undertaken in conjunction with junior mining company partners as part of a plan to test all prospective airborne EM targets on properties in the Detour-Normetal, Halliday Dome and FedNor areas by the end of 2007. No significant results were returned in 2005.

Significantly, the exploration expenditures in 2006 are starting to shift back to the Focused Exploration Zone - a region underlain by 150 square kilometers of highly prospective base metal stratigraphy immediately north of Kidd Mine. Previously, the Company conducted exploration in this same area but aimed above a depth of 200m below surface. Now with plans to use the Titan-24 ground geophysics system which is capable of seeing to greater than 500m in vertical depth, anomalies between 200 and 500m depth will be tested over the next 2 years. This work will be entirely funded by our exploration partner.

Ongoing exploration at the Kidd Creek mine is focused in Mine D between the 98 and 102 levels to upgrade the mineralization to the inferred resource category.

El Pachón, Argentina

The acquisition of the El Pachón project was completed in September 2001. The property is located in the province of San Juan, Argentina at an elevation of 3,600 to 4,100 metres about three kilometres from the Chilean border and seven kilometres from the Los Pelambres mine. Diamond drilling, geological mapping and reinterpretation of the resource model were completed in 2003 with the objective to identify higher grade resources within the known resource and test exploration targets. Geological work and the drilling campaign resulted in the estimation of mineral resources as follows:

Mineral Resources at a 0.4% Cu Cut-off Grade

Classification	*Tonnage Mt*	*% Copper*	*% Molybdenum*	*g/t Silver*
Measured	37	1.15	0.033	4.0
Indicated	687	0.62	0.014	2.5
Sub-total	**724**	**0.65**	**0.015**	**2.6**
Inferred	560	0.52	0.014	2.6

Work in 2004 included an external review of the resource estimate and work to update the Feasibility Study prepared by Cambior in 1997. A proposal to place the project in the Prefeasibility Stage of the Mining Stage Gate Process was presented to senior management in 2005. Work on the Prefeasibility Study will begin in 2006.

El Morro, Chile

The El Morro property is located in Region III, 140 kilometres east of the port of Huasco at an elevation of 4,000 to 4,300 metres. The La Fortuna zone on the El Morro property contains an inferred mineral resource estimated at 466 million tonnes grading 0.61 percent copper and 0.50 grams per tonne gold at a copper cut-off of 0.4 percent copper. The El Morro resource, located five kilometres west-northwest of La Fortuna, contains an inferred mineral resource estimated at 45 million tonnes grading 0.5% copper and 0.2 gram per tonne gold at a cut-off grade of 0.4% copper.

We have earned a 70% interest in the El Morro property from Metallica Resources Inc. by paying $10 million in cash to Metallica Resources Inc. and are now preparing a feasibility study due by September 14, 2007. If either party dilutes its interest in the property to 10% or less, their interest will convert to 2% net smelter royalty. Other agreement obligations have been met, including an initial cash payment of $300,000, subscribing for $1 million in shares of Metallica Resources Inc. and completing aggregate expenditures on the property of more than $10 million. We intend to maintain the property and satisfy its outstanding legal and environmental obligations. In 2006 pre-feasibility level work will be carried out. Key elements of this work include metallurgical studies as well as an infill diamond drill program designed to upgrade the La Fortuna resource to the measured and indicated categories.

Rosario Oeste, Chile

The first stage of the Inferred Resource estimate on Collahuasi's Rosario Oeste zone was completed in 2005. Exploration results indicate the Rosario Oeste zone contains an inferred mineral resource estimated at 248 million tonnes grading 1.54% copper at a 0.4% copper cut-off. The joint venture partners (Anglo American plc, Falconbridge Limited and a Japanese consortium led by Mitsui & Co., Ltd.) believe that these exploration results further demonstrate the potential of developing resources at Collahuasi.

The mineral resource is located in the central part of the Rosario Oeste zone, and only 300 metres from the projected edge of the Rosario open pit. The mineralized zone, as currently defined, remains open to the north, south and at depth, and is thought to occupy approximately 50% of the total prospective area.

Copper mineralization is principally contained in a structurally controlled chalcocite supergene blanket that formed over a swarm of high sulfidation veins. These results indicate potential to extend the life of the current operation, and add leachable resources to the existing reserve base. Portions of the resource contain elevated arsenic content that will be subject to further study.

Collahuasi will extend the drill program into 2006. Although Rosario Oeste is the main focus of the current diamond-drill campaign, exploration drilling is also in progress on the Poderosa zone, located immediately southeast of the Rosario operation, where geophysical surveys have yielded strong anomalies.

West Wall, Chile

The West Wall property is located in Region V, about 100 kilometres north of Santiago, Chile at an elevation of 3,000 – 3,700 metres. The company has satisfied all outstanding earn-in obligations in 2005 under a joint venture with Minera Anglo American Chile, and is currently vested at 50%. A low grade porphyry resource was identified on the property in the 1980's by Minera Anglo-American Chile and Noranda discovered a new porphyry system, referred to as the Lagunillas zone, located three kilometres to the southwest. Diamond drilling in 2002 and 2005 outlined a secondary enriched blanket of copper mineralization underlain by significant primary mineralization. The zone extends over an area of 1,200 metres north-south and ranges from 350 to 450 metres in width. Following the 2005 drill campaign, a preliminary resource estimate of the Lagunilla zone was prepared using the results of 15,563 metres of drilling in forty drill holes. Economic evaluation of the mineralization revealed the zone to be uneconomic due to moderate grade and significant thickness of barren leach cap.

The plan for 2006 is to maintain the property. Anglo American has agreed to conduct their technical due diligence by September 30, 2006 to determine their level of interest and future participation.

Frieda River, Papua New Guinea

We optioned the Frieda River property in Papua New Guinea from Highlands Pacific Ltd. ("Highlands Pacific") in January 2002. The property is located in northern Papua New Guinea and contains mineral resources in three separate copper deposits (Horse-Ivaal-Trukai, Koki and Nena). The agreement with Highlands Pacific allows for the Company to earn a 72% interest in any or all of the properties by spending an aggregate $5 million over five years and completing a feasibility study on an elected property or properties. The 72% interest is subject to reduction if the Papua New Guinea government exercises its right to acquire up to a 30% interest in the project. During the option period, the Company may acquire 72% of the Nena copper-gold deposit, which is located within the Frieda River Property by paying $10.8 million and completing a feasibility study.

As part of a 1996 prefeasibility study, Highlands Pacific estimated an inferred resource of 270 million tonnes of 0.4% copper and 0.3 grams per tonne gold, at a 0.2% copper cut-off grade for the Koki system and the Nena deposit was estimated to contain measured and indicated resources totaling 49.8 million tonnes at 2.2% copper and 0.6 grams of gold per tonne at a 0.5% copper cut-off grade. Incorporation of more recent drilling into a revised block model in 2003, followed by an optimization study in 2004, estimated the Horse-Ivaal-Trukai deposit to contain indicated mineral resources totaling 74.6 million tonnes at a grade of 0.63% copper and 0.37 grams per tonne gold plus inferred mineral resources totaling 360 million tonnes grading 0.6% copper and 0.38 grams per tonne gold in a potential open pit.

The 2005 work program on the Frieda River project closed off the northern and southern extensions of the Nena deposit and focused on identifying high grade Nena-style copper-gold mineralization at North Debom, Hiro Ridge and Ekwai Debom. The best intersections came from Ekwai Debom where hole 053NOR05 cored 204m of 0.81% copper and 0.22 g/t gold, including 48m of 1.85% copper and 0.22grams per tonne Au (18m to 66m). A follow-up hole (076NOR05) located 50m to the north intersected 24m of 3.20% copper, 0.36 grams per tonne gold starting at a hole depth of 42m. Drilling in 2004-2005 increased the Nena mineral resource in-situ copper tonnes by 20%. The new optimized resource stands at 42.7 million tonnes at 3.09% Cu and 0.59 g/t Au in a potential open pit. A metallurgical drilling program in 2005 has been successful in collecting geological end members for processing at the Falconbridge Technology Centre. The overall objective is aimed at enhancing potential recoveries and concentrate grades within the Nena high sulfidation system.

The planned work program for 2006 will concentrate on increasing the porphyry hypogene mineral resource in order to facilitate a large tonnage mining and processing operation. Areas such as Kokomo, Koki, Horse East and Guria are considered to have the highest potential for discovering additional tonnes. Higher grade, near surface secondary enriched zones associated with the porphyries will also be targeted. Pending a favorable outcome of the phase 1 metallurgical tests, phase 2 will be implemented involving laboratory flotation tests in order to arrive at a statement of expected grades and recoveries. Hydrometallurgical test work will be undertaken to further explore the leaching process alternatives.

Perseverance Deposits, Quebec
The Perseverance deposits are located close to our existing mill infrastructure in Matagami, Quebec. A feasibility study on the Perseverance and Equinox deposits has been completed under the Company's internal review process. The Company has not yet taken a decision on the timing of any production.

The Perseverance property is controlled under the terms of a joint venture agreement between us and Société de Développement de la Baie James ("SDBJ"). Under the terms of the agreement, we hold a 90% interest in the property and SDBJ has the right to participate to the extent of a 10% interest in the property after completion of a positive feasibility study or to convert its interest to a 2% net smelter royalty. Should SDBJ elect to participate, it will be required to fund its share of development costs. Should SDBJ convert its interest to a 2% net smelter royalty, we will hold a 100% interest in the property and will have the option to reduce the royalty to a 1% net smelter royalty by making a payment of Cdn$1 million to SDBJ.

A feasibility update is currently underway on the Perseverance project to assess the benefits of an increase in the mining rate to 2,600 tonnes per day. In anticipation of a positive decision on this project a four-year collective agreement was negotiated in 2004 with the local union to cover the closure of the Bell Allard mine, facilitate the standby period and the possible opening of Perseverance during the four-year term.

Lady Loretta, Australia
The Lady Loretta project is located north of Mount Isa, in Queensland, Australia. After completing a preliminary feasibility on the project, the Company exercised its option to acquire a 75% interest in the Lady Loretta project in December, 2000 from its partner, BUKA Minerals Limited. Permitting is complete. Queensland government approval has been granted for the transfer to BUKA Minerals Limited of the Lady Annie part of the property, defined as the Lady Annie sublease. We have not yet taken a decision on the timing of any production.

Lennard Shelf, Australia
In April 2004, we entered into an agreement with Teck Cominco Limited ("Teck Cominco") to earn a 50% interest in the Lennard Shelf mineral properties, plant and equipment and infrastructure in Western Australia. In order to earn its 50% interest, Falconbridge will be required to effectively invest approximately A$26 million in exploration, operating, capital expenditures or other advances in Lennard Shelf. The property was acquired by Teck Cominco from Western Metals Limited ("Western Metals") in October 2003 for A$26 million (A$1=US$0.68).

Lennard Shelf, located in the Kimberly region of Western Australia, 2,500 kilometres north-east of Perth, consists of a number of Mississippi Valley type lead/zinc deposits and a mill with an annual capacity of 3.1 million tonnes of ore. In the year ended June 30, 2003, Lennard Shelf produced 176,000 tonnes of zinc and 70,000 tonnes of lead. Work was suspended by Western Metals in late November 2003.

The Lennard Shelf mines are currently on care and maintenance. We and Teck Cominco are endeavouring to produce a redevelopment plan for the assets. Work includes a detailed review of resources, as well as mine planning and other optimization work, and an exploration program to expand the current resources. A revised block model was completed in 2004 and used as a basis for a preliminary mine planning exercise. A mineral resource was estimated to contain measured and indicated resources of 2.8 million tonnes grading 8.47% zinc and 1.96% lead. Inferred resources totaling 300,000 tonnes grading 8.2% zinc and 1.7% lead were also estimated. These resources contain factors for mining recovery and dilution because they were derived from the mining study.

In 2005, a total of 18,066m in 33 holes tested targets at Pilijippa (9,431m in 14 holes), Limestone Billy Hills (3,473m in 8 holes), Road Gossan (1,556m in 5 holes) and Pillara Range North (3,603m in 7 holes). The best grades and intersections came from the Pilijippa area, however, a detailed review of results is required to determine whether follow-up drilling is warranted. The 2005 program was aided with 52.2 km of Gradient IP, 22 km of MIMDAS, 2,690 station gravity survey, along with 2 soil surveys. An integration of these data sets will help in selecting the 2006 drill targets.

Teck Cominco Limited has provided a 2006 work plan that has been reviewed and approved by the Joint Venture Operating Committee. The objective of the program is to identify sufficient additional resources that would justify the reopening of the mine site. An aggressive drill program comprised of 32,000m in 52 holes is planned to evaluate the

Emanuel Range and Pillara areas with the assistance of additional IP and gravity geophysics. IP surveying is planned for the Mt. Talbot area.

Koniambo Project, New Caledonia

Good progress was made during 2005 in advancing Falconbridge's objectives with respect to the Koniambo ferronickel project in the Northern Province of New Caledonia. Final agreements were put in place by and among Falconbridge, Société Minière du Sud Pacifique S.A. ("SMSP"), and other relevant parties to provide for the transfer of the Koniambo ore body in New Caledonia to Koniambo Nickel SAS, a company owned 49% by Falconbridge and 51% by SMSP. Falconbridge had announced in late December 2005 that it had met the relevant conditions of the Bercy Accord for this transfer to take place, including having placed firm orders for at least $100 million in total for equipment and services relating to the project.

It is currently planned that the Koniambo project will encompass the construction of a 60,000 tonne per year ferronickel processing plant and related development of the mine site and infrastructure. A detailed feasibility study was completed in December 2004. The feasibility study was subject to two independent reviews in 2005 by two international engineering firms and feedback from both reviews has been positive.

The capital cost of the project is estimated to be $2.2 billion in 2004 dollars excluding interest to be incurred during construction and initial working capital requirements. The capital cost of $2.2 billion includes the construction of a $600 million power station with an installed generating capacity of 390 MW. The remaining $1.6 billion relates to the metallurgical plant, mine development, and other infrastructure such as the port and road facilities.

Detailed engineering for the project continues in 2006. Falconbridge expects to receive the necessary construction and operating permits in 2006, enabling the construction phase to commence in 2007. Based on these key milestones being met as currently planned, start-up of the project is expected to occur in 2009/2010.

Falconbridge has, subject to certain terms and conditions, agreed to arrange for or provide up to 100 percent of the financing required for the project. Given these financing arrangements, the project's free cash flow would first be used to service and repay debt incurred to finance the construction of the project before any distributions would be available to the equity owners in the project.

At a 2.0% nickel cut-off grade, the Koniambo deposit contains measured plus indicated resources of 75.6 million tonnes at 2.47% nickel plus inferred resources of 82.7 million tonnes grading 2.5% nickel. The measured and indicated resources were converted to proven and probable reserves totalling 62.5 million tonnes grading 2.40% nickel. In addition, the project has an inferred limonite resource estimated at 100 million tonnes at 1.6% nickel and 0.2% cobalt that could be developed at a later date.

In 1998, Falconbridge entered into a joint-venture agreement with SMSP and its controlling shareholder, Société de Financement et d'Investissement de la Province Nord, for the evaluation and development of the 60,000-tonne per year nickel in ferronickel mining and smelting complex.

When developed, Koniambo will be one of the largest nickel producers in the world with initial production of 60,000 tonnes per year. In addition, future expansion could take advantage of the large resource base, which has an estimated life in excess of 50 years.

Kabanga, Tanzania

In April 2005, Falconbridge announced a joint venture agreement with Barrick Gold Corporation on the Kabanga nickel deposit, located in northwestern Tanzania. The current estimated inferred resource is 26.4 million tonnes grading 2.6% nickel. Under the terms of the agreement, Falconbridge acquired a 50% indirect joint venture interest in respect of the Kabanga Project for $15 million and will be the operator of the joint venture. Over the next several years, Falconbridge will fund and conduct a further $50-million work plan. Current work, including exploration and infill diamond drilling, metallurgical testing and engineering study work will lead to the completion of a scoping study in the first quarter of 2006.

Araguaia, Brazil

Falconbridge announced in September 2005 that it had discovered two new significant nickel laterite deposits on its Araguaia properties in the Para State of northern Brazil. These are new grassroots discoveries in an area where the first recorded drilling for base metals was completed by Falconbridge's exploration team in October 2004.

The Araguaia Belt includes a number of ophiolitic complexes that were obducted along the border of the Araguaia Neoproterozoic mobile belt. It comprises a variety of sedimentary rocks and several large ultramafic bodies that extends in excess of 400 kilometers in the north-south direction. Development of significant laterite profiles with nickel grades above 1% and thicknesses ranging from 10 to 110m have been identified overlying some of these ophiolite bodies.

Approximately 40% of the entire belt has been subjected to an airborne geophysical survey, including radiometric and magnetic data covering covered some 32,700 line-km at 500 meter line spacing. Falconbridge has drilled 786 holes (30,412) in the Araguaia Belt which are distributed as follows:

Target	# Holes	Meters
Serra do Tapa	399	19,308
Vale Sonhos	152	4,257
Cinzeiro Scout	53	1,498
Quatipuru	137	4,192
Muricilandia	20	601
Santa Tereza	13	321
Arapoema	12	235
TOTAL	**786**	**30,412**

Serra do Tapa is the top priority target identified to date based on significant nickel intercepts particularly in the north part of the target. The target is at least 4.5 km long in a north-south direction and ranges from approximately 500m to 1000m wide based on 320m by 80m drilling carried out to date. The southern extension is also being tested with scout drill holes. Vale dos Sonhos is located approximately 15 km southeast of the Serra do Tapa deposit. The target area extends 2.5 km in a north-south direction, is open to the north and south and averages approximately 800m wide based on current drilling.

Work in 2006 will include 14,000m of drilling at Serra do Tapa and Vale do Sonhos to close the drill grid to a spacing of 80m by 160m, followed by resource estimation when assay results are obtained. The drill program continues with the objective of achieving a drill spacing of 80m by 80m to improve the level of confidence in the resource estimate. Other drilling is planned to test the southern extensions of these zones as well as continue regional scout drilling along the Araguaia belt.

The project area is well positioned with respect to infrastructure. Ample hydro power is available and the distance to main transmission lines is 20-100km. Rail service is available within 100-200 km, while roads and rail lines are being upgraded and extended to the South Network at 100km per year. Barge access to a sea port is possible from Maraba (200km from Cinzeiro) on the completion of the lock system at Tucurui which is planned for the end of 2007.

The deposits occur on properties owned by Falconbridge or where Falconbridge has the right to earn a 100% interest by completing a series of cash payments totaling $2.4 million staged over eight years. On the basis of airborne surveys covering approximately 22,000 square kilometres in the region, Falconbridge has consolidated its ground position over the key targets such that it now controls mineral rights (Exploration Licenses) to almost 5,400 square kilometres (539,000 hectares).

3.2 Other Subsidiaries

Novicourt Inc. ("Novicourt")

We own approximately 62% interest in Novicourt Inc., a publicly traded Quebec company. Novicourt is a Canadian exploration and development company focused on the discovery of new mineral deposits mainly in Canada and Brazil. Novicourt's primary asset until the depletion of ore in July 2005 was a 45% direct interest in the Louvicourt copper/zinc

[1] For Qualified Person information with respect to the mineral reserve and mining resource estimate, see "Mineral Reserves and Resources" in Item 3.9.3 of this Annual Information Form.

mine located near Val-d'Or, Quebec. Novicourt also owns a 45% interest in the Louvaur/Alexis Joint Venture, which carries out exploration on land surrounding the Louvicourt deposit. Novicourt also participates in exploration joint ventures with others, including Falconbridge.

On July 12, 2005, the Louvicourt mill completed the processing of the final ore produced from the Louvicourt Mine as the ore reserves were depleted.

Copper production from the Louvicourt mine in 2005 was 17,000 tonnes (2004 – 33,000 tonnes) reflecting the reduced ore production and lower copper ore grades averaging 2.2% (2004 – 2.8%). Zinc production was 13,000 tonnes of contained zinc (2004 – 21,000 tonnes). Due to the mine's closure in July 2005, Novicourt's total net revenue in 2005 was Cdn$36.6 million, 40% lower than the total net revenue of Cdn$59.8 million in 2004.

Mineral Reserves and Resources[1]

Mining of the deposit was completed in July 2005. All mineral reserves were depleted leaving no proven and probable mineral reserves at December 31, 2005. Approximately 819,920 tonnes of mineral reserves were milled in 2005.

The Louvicourt mine reserves estimate was prepared and classified by AUR Resources Inc. as operator of the Louvicourt Joint Venture. Mineral reserve estimates were the responsibility of Sylvie Lampron (P.Eng, Chief Engineer, Louvicourt Mine).

Magnola Metallurgy Inc. ("Magnola")

In January 2003, we announced plans for a temporary shutdown of our magnesium business, which is held by Magnola, a company owned 80% by us, in response to major structural changes which had taken place in the global magnesium industry. A pre-tax charge of $520 million was recorded in the Company's 2002 year-end financial results to reduce the carrying value of the magnesium project, as a result of the market conditions.

In 1997 when the decision to proceed with the Magnola project was made, magnesium offered very attractive growth opportunities, on the premise of its inherent strength-to-weight characteristics and the potential demand in the automobile industry. Since that time, exports of low-cost Chinese production have continued to grow and have depressed prices.

At the time of the announcement of the shutdown, there were approximately 380 employees located at the magnesium operations in Danville, Québec.

In 2003, a further $33 million pre-tax charge related to costs incurred to shut down the plant was recorded in the first quarter. As of December 31, 2005 the book value of our magnesium business is approximately $280 million (December 31, 2004 – $272 million).

3.3 Technology

Falconbridge participates in a number of focused explorations research projects designed to reduce the cost of mineral exploration and increase the likelihood of success. Projects include the areas of geophysics, geology, geochemistry and remote sensing.

Falconbridge is also involved in the development, acquisition and application of technologies to improve the performance of its mining and metallurgical businesses and create opportunities for business growth.

Falconbridge has metallurgical technology facilities at the Falconbridge Technology Centre in Sudbury and the Nikkelverk refinery. Research is conducted at these facilities to provide mineral analyses, to develop new methods for treating ores and custom feeds, to improve nickel, copper and cobalt products and to develop environmentally sustainable production technologies.

The primary focus at the Technology Centre in Sudbury is on developing new technologies for Falconbridge in hydrometallurgy and pyrometallurgy for nickel laterites and nickel and copper sulphides. The majority of the technical support is provided to the Nickel Business unit. Other business units receive support on an as-needed basis. Pilot plant facilities for metallurgical testing are located at Sudbury, the Nikkelverk refinery, Kidd Creek Metallurgical site, and at Lomas Bayas. In 2005 several industrial scale metallurgical tests were also conducted including testing at the Sudbury Smelter, at Kidd Creek in Timmins and at CCR in Montreal.

Expenditures by Falconbridge on research and process development for the two years ended December 31, 2004 and 2005 were $22 million and $29 million, respectively.

3.4 Environment

The mining and mineral processing operations of Falconbridge are subject to extensive government regulations relating to the protection of the environment, including those relating to air and water quality, solid and hazardous waste handling and disposal, mine reclamation and closure, and occupational health and safety. In addition to mandated environmental safeguards, Falconbridge has many initiatives to improve both the internal and external environment, such as health research, auditing and risk management programs. These aspects are aligned with and support Falconbridge's commitments to sustainable development, where economic prosperity, environmental quality and social equity drive business activities. At Falconbridge, *sustainable development* is the implementation of practices and policies that contribute to the well-being of the environment, economy and society to address the needs of customers, suppliers, shareholders, employees, government, the general public and the communities in which it operates, without compromising the ability of future generations to meet their own needs.

Falconbridge has in place a comprehensive environmental management system consisting of a sustainable development policy, codes of practice, audit frameworks, job descriptions and procedures, roles and responsibilities, employee training, public and employee reporting, emergency prevention and response, risk management and community awareness.

All operations are guided by an Environment, Health and Safety (EHS) and Sustainable Development Operating Manual that assists corporate, site, project managers and EHS professionals to implement the elements of the Falconbridge Limited Sustainable Development Policy.

All operations are also guided by the Falconbridge Code of Ethics which sets a high standard of ethical behaviour throughout the Company. The code requires that decision-making include due consideration for human rights, the provision of a living wage to all workers worldwide, a diverse workforce that encourages upward mobility, respect for indigenous rights, environmental improvement, transparency in our conduct and a commitment to sustainable communities. A procedure exists for employees to confidentially report issues of non-compliance to designated individuals or through the Company's Ethics Hotline.

Falconbridge's objective is to meet or surpass environmental standards set by relevant legislation, through the application of innovative and technically-proven economic measures in advance of prescribed deadlines. In addition, Falconbridge incurs substantial waste removal and site restoration costs on an ongoing basis, which it believes will minimize future liabilities for site closure.

3.5 Labour Relations

At December 31, 2005, we had approximately 14,500 employees in 18 countries. Falconbridge is a party to collective agreements with unions representing employees at a number of operations. In 2005, collective agreements were signed in respect of the following operations:

Three-year agreements:

- Norandal – Newport
- Kidd Metallurgical Division
- St. Ann Bauxite Mine (Production & Maintenance, Staff)
- Falcondo

Five-year agreement:

- Gramercy Alumina Refinery

Collective bargaining agreements for the following operations have expired or are scheduled to expire in 2006 in the months indicated:

- General Smelting (Montreal) – January 31
- Brunswick Mine (Bathurst) – February 28
- Brunswick Smelter (Bathurst) – February 28
- Horne Smelter (Rouyn) – March 1
- Bulk Handling Operation (Bathurst) – March 31
- Raglan Mine (Rouyn) – April 30
- Lomas Bayas (Chile) – April 30

- Nikkelverk (Norway) – April 1
- Antamina (Peru) – July 24
- Norandal – Salisbury (Salisbury) – November 20
- Altonorte (Chile) – December 12

3.6 Legal Proceedings

The United States Department of Justice convened a grand jury in 1999 to investigate possible criminal antitrust violations by Falconbridge and other sulphuric acid producers in the United States. While still technically open, the Company is unaware of any ongoing activity and believes the investigation can be properly considered dormant.

In connection with this matter, class action lawsuits filed in various jurisdictions in the United States have been consolidated into the District Court in Chicago. In addition, class actions filed in state court in California have been consolidated in the San Francisco state court. Falconbridge is vigorously defending these actions and has asserted that they are without merit.

3.7 Combination of Noranda and Former Falconbridge

Following the successful issuer bid of Noranda and its takeover bid for all of the common shares of Former Falconbridge that it did not already own, on June 30, 2005 Noranda and Former Falconbridge amalgamated under the laws of the Province of Ontario and continued as one company under the name "Falconbridge Limited". Further details of this amalgamation are set out in the joint management circular of these companies dated June 2, 2005.

3.8 Trends, Risks and Uncertainties

Fluctuating Metal Prices

Falconbridge's earnings are affected by fluctuations in the prices of the metals it produces. Their prices are subject to volatile price movements over short periods of time. Falconbridge generally does not hedge prices of the metals we produce. Market prices can be affected by numerous factors beyond our control, including expectations for inflation, speculative activities, relative exchange rates to the U.S. dollar, production activities of our competitors, global and regional demand and supply, political and economic conditions including availability of subsidies and tax incentives to our competitors and production costs in major producing regions. The prices for copper, nickel, zinc, aluminum or other metals produced by us may decline significantly from current levels. A reduction in the prices of one or more of these metals could materially adversely affect the value and amount of our reserves and our business, financial condition, liquidity and operating results.

Mining and Processing Risks

The business of mining and processing of metals is generally subject to a number of risks and hazards, including unusual or unexpected geological conditions, ground conditions, phenomena such as inclement weather conditions, floods and earthquakes and the handling of hazardous substances, the emissions of contaminants and other liability exposures. Such risks and hazards could result in personal injury or death, damage to, or destruction of, mineral properties, processing or production facilities or the environment, monetary losses and possible legal liability. Falconbridge's business, financial condition, liquidity and operating results could be materially adversely affected if any of these developments were to occur.

Although Falconbridge maintains insurance which Falconbridge believes is consistent with mining industry practice to the extent available to cover some of these risks and hazards, no assurance can be given that such insurance will continue to be available, or that it will be available at economically feasible premiums. Falconbridge's property, business interruption and liability and other insurance may not provide sufficient coverage for losses related to these or other risks or hazards. In such event, Falconbridge's business, financial condition, liquidity and results of operations could be materially adversely affected.

Environmental Risks

Environmental legislation affects nearly all aspects of our operations worldwide. This type of legislation requires Falconbridge to obtain operating licenses and imposes standards and controls on activities relating to mining, exploration, development, production, closure and the refining, distribution and marketing of copper, nickel, zinc and other metals products. Environmental assessments are required before initiating most new products or undertaking significant changes to existing operations. Compliance with environmental legislation can require significant expenditures, including expenditures for clean-up costs and damages arising out of contaminated properties. In addition to current requirements, Falconbridge expects that additional environmental regulations will likely be implemented to protect the environment and

quality of life, given issues of sustainable development and other similar requirements which governmental and supragovernmental organizations and other bodies have been pursuing. Some of the issues currently under review by environmental regulatory agencies include reducing or stabilizing various emissions, including sulphur dioxide and greenhouse gas emissions, mine reclamation and restoration, and water, air and soil quality and absolute liability for spills and exceedences.

Canada ratified the Kyoto Protocol to the United Nations Framework Convention on Climate Change in late 2002. The protocol entered into force in February 2005. Various levels of government in Canada are developing a number of policy measures in order to meet Canada's emission reduction obligations under the protocol. While the impact of the protocol and measures cannot be quantified at this time, the likely effect will be to increase costs for fossil fuels, electricity and transportation, restrict industrial emission levels, impose added costs for emissions in excess of permitted levels and increase costs for monitoring, reporting and financial accounting. Compliance with these initiatives could have a material adverse effect on our business, financial condition, liquidity and operating results.

Further changes in environmental laws, new information on existing environmental conditions or other events, including legal proceedings brought based upon such conditions or an inability to obtain necessary permits, could have a material adverse effect on product demand, product quality and methods of production and distribution or could require increased financial reserves or compliance expenditures or otherwise have a material adverse effect on Falconbridge's business, financial condition, liquidity and operating results.

Failure to comply with environmental legislation may result in the imposition of fines and penalties, liability for clean-up costs, damages and the loss of important permits. There can be no assurance that Falconbridge will at all times be in compliance with all environmental regulations or that steps required to bring us into compliance would not materially adversely affect Falconbridge's business, financial condition, liquidity or operating results.

In view of the uncertainties concerning future removal and site restoration costs on Falconbridge's properties, the ultimate costs for future removal and site restoration to Falconbridge could differ from the amounts estimated. The estimate for this future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively as a change in an accounting estimate. In addition, regulatory authorities in various jurisdictions around the world may require Falconbridge to post financial security to secure in whole or in part future reclamation and restoration obligations in such jurisdictions. In some instances, Falconbridge has already provided this security. In other instances, such security may be required to be posted upon the occurrence of certain events including if Falconbridge ceases to maintain a minimum investment grade credit rating, if the regulatory authority ceases to accept alternative forms of comfort to secure the obligation or as a property nears the end of its operation. Although the posting of this security does not increase the future reclamation and restoration costs (other than costs associated with posting such security), a portion of Falconbridge's credit may be required to back up these commitments, which could adversely affect Falconbridge's liquidity.

Labour Relations

Collective agreements covering our unionized employees at Norandal-Newport, St. Ann (production & maintenance employees), and Gramercy were all renewed in 2005. At the Timmins Metallurgical site, a collective agreement was signed with the CAW after a one month strike in October, 2005. Bargaining has just been completed for the renewal of the collective agreements at Falcondo and St. Ann (staff employees only).

Eleven collective agreements have expired or will expire in 2006:

- General Smelting (Montreal) – January 31
- Brunswick Mine (Bathurst) – February 28
- Brunswick Smelter (Bathurst) – February 28
- Horne Smelter (Rouyn) – March 1
- Bulk Handling Operation (Bathurst) – March 31
- Raglan Mine (Rouyn) – April 30
- Lomas Bayas (Chile) – April 30
- Nikkelverk (Norway) – April 1
- Antamina (Peru) – July 24

- Norandal – Salisbury (Salisbury) – November 20
- Altonorte (Chile) – December 12

Collective agreements covering our unionized hourly employees at CEZ, CEZ (Effluent Treatment Operators), CCR, CCR (Security), Noranda Recycling -Roseville (two agreements), Noranda Recycling – San Jose, Sudbury Operations (Production & Maintenance), Sudbury Operations (Office, Clerical & Technical), Collahuasi, New Madrid, Norandal – Newport, Gramercy, St. Ann (Production & Maintenance) and Kidd Metallurgical division are currently in place and will expire between 2007 and 2008.

Uncertainty of Reserve Estimates and Production Estimates

Falconbridge's reported mineral reserves as of December 31, 2005 are estimated quantities of proven and probable ore that under present and anticipated conditions can be legally and economically mined and processed by the extraction of their mineral content. Falconbridge determines the amount of our mineral reserves in accordance with the requirements of the applicable Canadian securities regulatory authorities and established mining standards. Falconbridge does not use outside sources to verify our reserves. The volume and grade of reserves actually recovered and rates of production from Falconbridge's present mineral reserves may be less than geological measurements of the reserves. Market price fluctuations in nickel, copper, other metals and exchange rates, and changes in operating and capital costs, may in the future render certain mineral reserves uneconomic to mine. In addition, short-term operating factors relating to the mineral reserves, such as the need for orderly development of ore bodies or the processing of new or different ore grades, may cause mineral reserves to be modified or Falconbridge's operations to be unprofitable in any particular fiscal period.

No assurance can be given that the estimated amount of ore will be recovered or that it will be recovered at the prices assumed by Falconbridge in determining reserves. Mineral reserve estimates are based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire orebody. As more knowledge and understanding of the orebody are obtained, the reserve estimates may change significantly, either positively or negatively.

Falconbridge prepares estimates of future production for particular operations. These production estimates are based on, among other things, reserve estimates; assumptions regarding ground conditions and physical characteristics of ores, such as hardness and presence or absence of particular metallurgical characteristics; and estimated rates and costs of mining and processing. Falconbridge's actual production may vary from estimates for a variety of reasons, including actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors relating to the mineral reserves, such as the need for sequential development of ore bodies and the processing of new or different ore grades; risks and hazards associated with mining; natural phenomena, such as inclement weather conditions, floods, and earthquakes; and unexpected labour shortages or strikes. No assurance can be given that production estimates will be achieved. Failure to achieve production estimates could have a material adverse impact on Falconbridge's future cash flows, earnings, results of operations and financial condition.

Exchange Rate Fluctuations

Fluctuations in currency exchange rates, principally the Canadian/U.S. dollar exchange rate and, to a lesser extent, Chilean Peso, Peruvian Sole, Norwegian Kroner and Euro exchange rates against the U.S. dollar, can significantly impact Falconbridge's earnings and cash flows. These exchange rates have fluctuated substantially over time, including over the last five years. Most of Falconbridge's revenues and debt are denominated in U.S. dollars, whereas a significant portion of operating costs at Falconbridge's Canadian sites are incurred in Canadian dollars. Furthermore, a portion of Chilean operating costs are Peso denominated and Nikkelverk's costs are incurred in Norwegian kroner. Falconbridge has been reporting its financial results in U.S. dollars since July 1, 2003. Fluctuations in exchange rates between the U.S. dollar and the Canadian dollar and between the U.S. dollar and other currencies may give rise to foreign currency exposure and gains and losses, either favourable or unfavourable, which may in the future materially impact Falconbridge's financial results. Falconbridge, from time to time, may hedge a portion of its currency exposures and requirements to try to limit any adverse effect of exchange rate fluctuations with respect to Falconbridge's Canadian dollar and other costs, but there can be no assurance that such hedges will eliminate the potential material adverse effect of such fluctuations.

Interest Rate and Counterparty Risk

Falconbridge's exposure to changes in interest rates results from investing and borrowing activities undertaken to manage Falconbridge's liquidity and capital requirements. Falconbridge has entered into interest rate swap agreements to manage the interest rate risk associated with a portion of our fixed-rate debt. The interest rate swap changes our exposure to

interest risk by effectively converting a portion of our fixed-rate debt to a floating rate. Falconbridge may elect in the future to enter into interest rate swaps to effectively convert floating-rate debt to fixed-rate debt or to enter into additional fixed-rate to floating-rate swaps. There can be no assurance that Falconbridge will not be materially adversely affected by interest rate changes in the future, notwithstanding our use of interest rate swaps.

In addition, Falconbridge's interest rate swaps, metals hedging and foreign currency and energy risk management activities expose us to the risk of default by the counterparties to such arrangements. Any such default could have a material adverse effect on Falconbridge's business, financial condition and results of operations.

Energy Supply and Prices

Falconbridge's operations and facilities are intensive users of natural gas, electricity and oil. The procurement dynamics of these energy types are becoming more connected as supply and demand conditions become more interdependent on a global basis. Uncontrollable factors such as strong demand from the Asia-Pacific region, political, regulatory and economic uncertainties, and the cost of emissions from fossil fuels, as well as problems related to local production and delivery conditions, continue to put upward pressure on prices. Falconbridge's supply contracts are governed by standard energy risk management principles, which ensure that supply, price and credit risks are managed effectively.

The security of energy supply is of primary importance. Falconbridge's business operations could be adversely affected, including loss of production and damage to our plants and equipment, if, even temporarily, the supply of energy to one or more of our facilities was interrupted. Additionally, prolonged loss of supply could materially adversely affect our business, financial condition, liquidity and results of operations. As a significant portion of Falconbridge's costs relate to energy consumption, Falconbridge's earnings are directly related to fluctuations in the cost of natural gas, electricity and oil. The current trend of increasing energy prices is expected to continue and as a result there is an increased focus within the operations on the management of energy use and the impact of rising energy costs on financial performance.

Foreign Operations

Some of Falconbridge's activities and related assets are located in countries outside North America, some of which may be considered to be, or may become, politically or economically unstable. Exploration or development activities in such countries may require protracted negotiations with host governments, international organizations and other third parties, including nongovernmental organizations, and are frequently subject to economic and political considerations, such as taxation, nationalization, inflation, currency fluctuations and governmental regulation and approval requirements, which could adversely affect the economics of projects. These projects and investments could be adversely affected by war, civil disturbances and activities of foreign governments which limit or disrupt markets, restrict the movement of funds or supplies or result in the restriction of contractual rights or the taking of property without fair compensation.

Falconbridge performs a thorough risk assessment on a country-by-country basis when considering foreign activities and attempt to conduct our business and financial affairs so as to protect against political, legal, regulatory and economic risks applicable to operations in the various countries where we operate, but there can be no assurance that Falconbridge will be successful in so protecting ourselves. These projects and investments could also be adversely affected by changes in Canadian laws and regulations relating to foreign trade, investment and taxation.

Market Access

Global and regional demand for metals is influenced by regulatory and voluntary initiatives to restrict or eliminate the use of certain metals in particular products or applications. Impacts of such measures can be global, creating non-tariff barriers to international trade and affecting product design and specifications on a global basis. Such measures could affect the balance between supply and demand and depress metal prices and treatment/refining charges. Metals with a limited number of major applications are most susceptible to changes in demand and price in response to such measures.

Production Technology

Falconbridge believes that the technology we use to produce and process metals is significantly advanced and, in part due to high investment costs, subject only to slow technological change. However, there can be no assurance that more economical production or processing technology will not be developed or that the economic conditions in which current technology is applied will not change.

Legal Proceedings

The nature of Falconbridge's business subjects us to numerous regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of our business. The results of these legal proceedings cannot be predicted with certainty. There can be no assurance that these matters will not have a material adverse effect on our results of operations in any future period, and a substantial judgment could have a material adverse impact on Falconbridge's business, financial condition, liquidity and results of operations.

Sulphuric Acid

Sulphur dioxide is a by-product from the smelting of copper, zinc, nickel and lead sulphide concentrates. Falconbridge captures sulphur dioxide to minimize acid rain emissions, and converts it into sulphuric acid. Due to increasingly strict environmental standards worldwide for sulphur dioxide emissions, involuntary production of sulphuric acid by smelters is growing. The balance of world acid production is largely based on elemental sulphur, whose supply is now a by-product of oil and gas production, and growing more rapidly than demand. Long term, these factors may make it more difficult for us to obtain satisfactory prices for our sulphuric acid. However, Falconbridge's production of sulphuric acid cannot be reduced in response to low prices, or dropping sales volumes, without a corresponding reduction in our production of metals.

Raw Material Procurement Risks

Procurement of raw materials involves the risks typically connected with commercial transactions, which can include trade barriers, political instability and problems due to local production conditions. In addition, Falconbridge's supply contracts provide that suppliers of concentrate may be released from their delivery obligations to us if certain "force majeure" events occur. Falconbridge's business operations could be adversely affected, at least temporarily, if supplies of raw materials are interrupted as a result of the imposition of trade barriers or other events and if Falconbridge is unable, on short notice, to shift to alternative sources of supply. Falconbridge also processes copper scrap, the availability of which in past years has been subject to significant fluctuations. The availability of scrap, blister copper and other material we process can be significantly affected by competing demand from industrializing nations along with unforeseen production and logistical disruptions.

Takeover Bid

The Company is currently the subject of a takeover bid by Inco Limited. Upon successful completion of this transaction, there could be significant changes to the business, operations and management of the Company. Should the takeover not be completed, the Company expects to continue operating as it has in the past and the anticipated benefits from the combination of Inco and the Company, as previously discussed, would not occur.

3.9 Statistical Tables

3.9.1 Production Volumes

The following table set out our mine, smelter and refinery production, as well as our primary aluminum production for the three years ended December 31, 2005:

Mine Production – Metal in concentrate[1]

	Falconbridge's Average Beneficial Interest[3]	2005[2][3]	2004[2][3]	2003[2][3]
	(%)		(tonnes)	
Copper				
Antamina	33.75	126,417	122,205	85,188
Collahuasi	37.3	182,248	205,116	168,578
Kidd Creek	84.9	42,738	41,029	46,409
Lomas Bayas	84.9	63,147	62,041	60,427
Louvicourt	28.0	7,452	14,387	17,002
Montcalm	84.9	4,996	1,188	–
Raglan	84.9	5,842	6,867	6,628

Notes:
(1) All production figures are shown on a 100% basis, except as otherwise noted and with the exception of Collahuasi, which represents Falconbridge's 44% joint-venture interest, Louvicourt, which represents Novicourt's 45% joint-venture interest, Antamina, which represents Falconbridge's 33.75% joint-venture interest, St. Ann, which represents Falconbridge's 50% joint-venture interest and Gramercy, which represents Falconbridge's 50% joint-venture interest.
(2) Falconbridge's average beneficial interest in Louvicourt was 62.1% in 2005, 2004 and 2003.
(3) Noranda Inc. amalgamated with Former Falconbridge on June 30, 2005 and was renamed to Falconbridge Limited ("the amalgamated Company"). After June 30, 2005, the amalgamated Company owned a 100% beneficial interest in the operations of the old Falconbridge and the annual weighted average beneficial interest in the old Falconbridge held by the amalgamated Company was 84.9% (2004 – 58.9% and 2003 – 59.5%).
(4) The Company sold the CEZ refinery to the Noranda Income Fund in May 2002 and sold the remainder of its priority units in a secondary offering in 2003. It currently owns 25.0% of the Noranda Income Fund's outstanding units.

3.9.2 Sales Volumes and Realized Prices

The following tables present Falconbridge's metal sales and concentrate sales, as well as average realized prices for the three years ended December 31, 2005.

Metal Sales – payable metal[1]

Notes:

[1] All sales figures are shown on a 100% basis, with the exception of Collahuasi, which represents Falconbridge's 44% joint-venture interest, Antamina, which represents Falconbridge's 33.75% joint-venture interest, St. Ann, which represents Falconbridge's 50% joint-venture interest and Gramercy, which represents Falconbridge's 50% joint-venture interest

[2] Noranda Inc. amalgamated with Former Falconbridge on June 30, 2005 and was renamed to Falconbridge Limited ("the amalgamated Company"). After June 30, 2005, the amalgamated Company owned 100% beneficial interest in the operations of the old Falconbridge and the annual weighted average beneficial interest in the old Falconbridge held by the amalgamated Company was 84.9% (2004 – 58.9%, 2003 – 59.5%).

[3] Falconbridge sold the CEZ zinc refinery to the Noranda Income Fund in May 2002 and sold its priority units in a secondary offering in 2003. It currently owns *indirectly* 25.0% of the Noranda Income Fund's outstanding units.

3.9.3 Mineral Reserves and Resources

Unless otherwise indicated, all estimates of mineral reserves and mineral resources:

- have been estimated in accordance with the CIM Definition Standards on Mineral Resources and Reserves, adopted by CIM Council on November 14, 2004, and the CIM Estimation of Mineral Resources and Mineral Reserves Best Practice Guidelines, adopted by the CIM council on November 23, 2003 using geostatistical or classical methods, plus economic and mining parameters appropriate to each operation.
- were compiled, indirectly supervised and verified by Chester Moore who is Falconbridge's Director, Mineral Reserve Estimation and Reporting, a member of the Professional Geoscientists of Ontario with over 30 years experience as a geologist and is a qualified person as defined in NI 43-101.
- are shown on a 100% basis.
- Used the following long term metal prices for estimates: nickel $3.25/lb, copper $0.90/lb, zinc $0.50/lb with a nickel premium added at Sudbury Operations. Exchange rate of CDN$1.50 to US$1.00.
- have no known environmental, permitting, legal, taxation, political or other relevant issues that would materially affect the estimates.

Notes:

[1] No adjustments have been made for metal losses during processing.

[2] The Collahuasi mineral reserves have been estimated and provided by the operator of the joint venture based on a copper price of $0.95. The mineral reserves are estimated and classified using the Australasian code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code). The estimates are inspected annually by Chester Moore. Proven plus probable molybdenum reserves at the Rosario deposit total 1,055,694 tonnes at 0.025% molybdenum and are part of the total reserves as stated.

[3] The Antamina mineral reserves have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore. Estimates used the following metal prices: copper $0.95/lb, zinc $0.50/lb, molybdenum $5.00/lb, and silver $5.00/oz.

[4] Estimates used the following metal prices and exchange rate: zinc $0.65/lb, copper $1.50/lb, lead $0.35/lb, silver $6.50/oz and Cdn$1.50 for US$1.00.

[5] The St. Ann Bauxite mineral reserves have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore.

Notes:

[1] Mineral resources do not include allowances for dilution or mining recovery.

[2] The mineral resources have been estimated and provided by the operator of the joint venture based on a copper price of $1.15. The mineral resources are estimated and classified using the Australasian code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code). The estimates are inspected annually by Chester Moore. The inferred resource total does not include the inferred resource estimate of 248 million tonnes grading 1.5% copper at Rosario Oeste.

[3] The Antamina mineral resources have been estimated and provided by the operator of the joint venture. The estimates are inspected annually by Chester Moore. Estimates used the following metal prices: copper $0.95/lb, zinc $0.50/lb, molybdenum $5.00/lb, and silver $5.00/oz.

[4] Mineral resource total does not contain limonite inferred resource of 100 million tonnes grading 1.6% nickel and 0.2% cobalt.

3.9.4 Reconciliation of Mineral Reserves

The reconciliation of mineral reserves at each of the mines as at December 31, 2004 to December 31, 2005 are as follows:

		Falconbridge's beneficial interest (%)	December 31, 2004 (000 mt)	Ore treated in 2005 (000 mt)	Additions/ revisions (000 mt)	December 31, 2005 (000 mt)

Notes:
[1] The mineral resources/reserves are shown on a 100% basis.
[2] Subject to fulfillment of certain conditions.
[3] The mineral resources are supplied by the operator of the Collahuasi joint venture
[4] Mineral reserves and resources estimated by Highlands Pacific Limited, the optionor of the property.
[5] Also included as part of the Kidd Creek mineral resources on the Mineral Reserves and Mineral Resources table in this Item 3.9.4.
[6] Option to purchase.
[7] Also included as part of the Sudbury mineral resources on the Mineral Reserves and Mineral Resources table in this Item 3.9.4.
[8] The mineral resources were estimated and classified using the Australasian Code for Reporting of Mineral Resources and Ore Reserves (the "JORC" code) which are comparable to the NI 43-101 definitions. These estimates would not have been materially different if made using the CIM definitions.
[9] Resource estimate supplied by Teck Cominco Limited. Estimate developed as part of economic evaluation study with dilution and mining recovery included.

4. Dividend Policy

The Company views common share dividends as an important part of a shareholder's return on investment. As a result, the Company attempts to pay a common share dividend at all points of the economic cycle, so long as the payment does not impair the Company's financial position. It is expected that the common share dividend will increase or decrease to reflect the Company's operating results and financial position.

The preferred shares of each series issued by the Company, rank in priority to the common shares with respect to the payment of dividends. The following chart shows the amount of cash dividends declared per share for each class of the Company's shares for the last three years.

Dividends (unaudited)	2005	2004	2003
Per common share	Cdn$0.48	Cdn$0.48	Cdn$0.64
Per preferred share			
Series F (floating dividend)	Cdn$0.94	Cdn$0.99	Cdn$1.17
Series G	Cdn$1.53	Cdn$1.53	Cdn$1.53
Series H[1]	Cdn$1.63	Cdn$1.63	Cdn$1.25
Series 1	Cdn$0.08	Cdn$0.08	Cdn$0.08
Series 2 (floating dividend)	Cdn$0.98	Cdn$0.74	Cdn$1.47
Series 3[2]	Cdn$1.15	Cdn$0.86	–
Per junior preference share[3]			
Series 1	US$0.98	–	–
Series 2	US$1.03	–	–
Series 3	US$1.07	–	–

Notes:
(1) The Preferred Shares, Series H were issued on March 25, 2003. Amounts shown in respect of 2003 represent total dividends paid during the period from March 25, 2003 to December 31, 2003.
(2) The Preferred Shares, Series 3 were issued on March 1, 2004. Amounts shown in respect of 2004 represent total dividends paid from March 1, 2004 until December 31 2004.
(3) The junior preference shares were issued on March 24, 2005. Amounts shown in respect of 2005 represent total dividends paid during the period March 25, 2005 to December 31, 2005.

5. Capital Structure of the Company

The Company's capital structure consists of an unlimited number of common shares, an unlimited number of preferred shares issuable in series, an unlimited number of junior preference shares issuable in series and an unlimited number of participating shares issuable in series of which, as at December 31, 2005, 370,688,138 common shares, 3,246,057 Preferred Shares, Series F, 8,753,943 Preferred Shares, Series G , 6,000,000 Preferred Shares, Series H, 89,835 Preferred Shares, Series 1, 4,787,283 Preferred Shares, Series 2, 3,122,882 Preferred Shares, Series 3, 11,999,899 Junior Preference Shares, Series 1, 11,999,899 Junior Preference Shares, Series 2, 5,999,903 Junior Preference Shares, Series 3 and no Participating Shares were issued and outstanding.

The Falconbridge Common Shares, Preferred Shares, Junior Preference Shares and Participating Shares will have attached thereto the provisions summarized below. Falconbridge will furnish upon request a copy of the text of the provisions attaching to any class or series of Falconbridge shares.

Common Shares

Each Common Share entitles the holder to dividends if, as and when declared by the board of directors of Falconbridge, to one vote at all meetings of shareholders and to participate rateably in any distribution of the assets of Falconbridge upon liquidation, dissolution or winding-up, subject to the prior rights of holders of Preferred Shares and Junior Preference Shares.

See "2.1 Three Year History – Recent Developments" for a description of the Shareholder Rights Plan in relation to the Common Shares.

Preferred Shares
The Preferred Shares may at any time or from time to time be issued in one or more series. Falconbridge's board of directors may by resolution fix the number of shares in, and determine the designation, rights, privileges, restrictions and conditions attaching to the shares of, each series of Preferred Shares.

The Preferred Shares will be entitled to a preference over the Common Shares, the Junior Preference Shares and any other of Falconbridge's shares ranking junior to the Preferred Shares in the distribution of assets in the event of Falconbridge's liquidation, dissolution or winding-up or other distribution of its assets among its shareholders for the purpose of winding-up its affairs.

Each series of Preferred Shares will rank in parity with every other series of Preferred Shares with respect to priority in the payment of dividends and in the distribution of assets in the event of Falconbridge's liquidation, dissolution or winding-up or other distribution of its assets among its shareholders for the purpose of winding-up its affairs.

In the event of the liquidation, dissolution or winding-up of Falconbridge or any other distribution of assets of Falconbridge among its shareholders for the purpose of winding-up its affairs, the holders of Preferred Shares will be entitled to payment of an amount equal to the amount paid up on such shares in the case of any liquidation, dissolution, winding-up or other distribution which is involuntary, and to payment of an amount equal to the amount paid up thereon plus the premium on redemption applicable at the date thereof, if any, if the same is voluntary, together in all cases with all unpaid dividends accrued thereon (which will for such purpose be treated as accruing up to the date of distribution), the whole before any amount is paid or any assets of Falconbridge are distributed to the holders of any Common Shares, Junior Preference Shares or shares of any other class ranking junior to the Preferred Shares but the whole subject to the rights of the holders of any other class of shares of Falconbridge entitled to receive the assets of Falconbridge upon such distribution in priority to or rateably with the holders of the Preferred Shares. Upon payment to the holders of the Preferred Shares of the amount so payable to them, they will not be entitled to share in any further distribution of assets of Falconbridge.

Preferred Shares, Series F
The Preferred Shares, Series F will have attached thereto the series provisions summarized below.

Definitions of Terms
The following definitions are relevant to the Preferred Shares, Series F:

"Banks" means any two of Royal Bank of Canada, Bank of Montreal, The Bank of Nova Scotia, The Toronto-Dominion Bank and Canadian Imperial Bank of Commerce and any successor of any of them as may be designated from time to time by the board of directors of Falconbridge by notice given to the transfer agent for the Preferred Shares, Series F, such notice to take effect on, and to be given at least two (2) business days prior to, the commencement of a particular Dividend Period and, until such notice is first given, means Canadian Imperial Bank of Commerce and The Bank of Nova Scotia.

"Calculated Trading Price" for any month means:

(a) the aggregate of the Daily Adjusted Trading Value for all Trading Days in such month;

divided by

(b) the aggregate of the Daily Trading Volume for all Trading Days in such month.

"Daily Accrued Dividend Deduction" for any Trading Day means:

(a) the product obtained by multiplying the dividend accrued on an Preferred Share, Series F in respect of the month in which the Trading Day falls by the number of days elapsed from but excluding the day prior to the Ex-Dividend Date immediately preceding such Trading Day to and including such Trading Day (or if such Trading Day is an Ex-Dividend Date, by one (1) day);

divided by

(b) the number of days from and including such Ex-Dividend Date to but excluding the following Ex-Dividend Date.

"Daily Adjusted Trading Value" for any Trading Day means:

(a) the aggregate dollar value of all transactions of Preferred Shares, Series F on the Exchange (made on the basis of the normal settlement period in effect on the Exchange) occurring during such Trading Day;

less

(b) the Daily Trading Volume for such Trading Day multiplied by the Daily Accrued Dividend Deduction for such Trading Day.

"Daily Trading Volume" for any Trading Day means the aggregate number of Preferred Shares, Series F traded in all transactions (made on the basis of the normal settlement period in effect on the Exchange) occurring during such Trading Day on the Exchange.

"Deemed Record Date" means the last Trading Day of a month with respect to which no dividend is declared by the board of directors of Falconbridge.

"Dividend Payment Date" means the 12th day of each month.

"Dividend Period" means a month.

"Exchange" means the TSX or such other exchange or trading market in Canada as may be determined from time to time by Falconbridge as being the principal trading market for the Preferred Shares, Series F.

"Ex-Dividend Date" means:

(a) the Trading Day which, under the rules or normal practices of the Exchange, is designated or recognized as the Ex-Dividend Date relative to any dividend record date for the Preferred Shares, Series F; or

(b) if the board of directors of Falconbridge fails to declare a dividend in respect of a month, the Trading Day which, under the rules or normal practices of the Exchange, would be recognized as the Ex-Dividend Date relative to any Deemed Record Date for the Preferred Shares, Series F.

"Prime" for a month means the average (rounded to the nearest one-thousandth (1/1000) of one percent (1%)) of the Prime Rate in effect on each day of such month.

"Prime Rate" for any day means the average (rounded to the nearest one-thousandth (1/1000) of one percent (1%)) of the annual rates of interest announced from time to time by the Banks as the reference rates then in effect for such day for determining interest rates on Canadian dollar commercial loans made to prime commercial borrowers in Canada. If one of the Banks does not have such an interest rate in effect on a day, the Prime Rate for such day shall be such interest rate in effect for that day of the other Bank; if both Banks do not have such an interest rate in effect on a day, the Prime Rate for that day shall be equal to 1.5% per annum plus the average yield expressed as a percentage per annum on 91-day Government of Canada Treasury Bills, as reported by the Bank of Canada, for the weekly tender for the week immediately preceding that day; and if both of such Banks do not have such an interest rate in effect on a day and the Bank of Canada does not report such average yield per annum, the Prime Rate for that day shall be equal to the Prime Rate for the next preceding day. The Prime Rate and Prime shall be determined from time to time by an officer of Falconbridge from quotations supplied by the Banks or otherwise publicly available. Such determination shall, in the absence of manifest error, be final and binding upon Falconbridge and upon all holders of Preferred Shares, Series F.

"Trading Day" means, if the Exchange is a stock exchange in Canada, a day on which the Exchange is open for trading or, in any other case, a business day.

Series F, and a written instrument of surrender in form satisfactory to Falconbridge duly executed by the holder or their attorney authorized in writing.

Falconbridge shall, not less than 45 days nor more than 60 days prior to the applicable Conversion Date, give notice in writing to the then holders of the Preferred Shares, Series F of the above-mentioned conversion right and of the Selected Percentage Rate (as defined below under "Preferred Shares, Series G") determined by the board of directors of Falconbridge to be applicable for the next succeeding Fixed Dividend Rate Period (as defined below under "Preferred Shares, Series G") applicable to the Preferred Shares, Series G. Falconbridge shall give notice as provided under "Preferred Shares, Series G" of the Annual Dividend Rate (as defined below under "Preferred Shares, Series G") applicable to the Preferred Shares, Series G for such Fixed Dividend Rate Period.

Holders of Preferred Shares, Series F shall not be entitled to convert their shares into Preferred Shares, Series G if, following the close of business on the 14th day preceding a Conversion Date, Falconbridge determines that there would remain outstanding on a Conversion Date less than 1,000,000 Preferred Shares, Series G, after having taken into account all Preferred Shares, Series F tendered for conversion into Preferred Shares, Series G and all Preferred Shares, Series G tendered for conversion into Preferred Shares, Series F. Falconbridge shall give notice in writing thereof to all the holders of the Preferred Shares, Series F at least seven (7) days prior to the applicable Conversion Date and will issue, prior to such Conversion Date, to the holders of Preferred Shares, Series F who have tendered Preferred Shares, Series F for conversion, new certificates evidencing the Preferred Shares, Series F tendered for conversion. Furthermore, if following the close of business on the 14th day preceding a Conversion Date Falconbridge determines that there would remain outstanding on a Conversion Date less than 1,000,000 Preferred Shares, Series F after having taken into account all Preferred Shares, Series F tendered for conversion into Preferred Shares, Series G and all Preferred Shares, Series G tendered for conversion into Preferred Shares, Series F, then, all, but not part, of the remaining outstanding Preferred Shares, Series F shall automatically be converted into Preferred Shares, Series G on the basis of one Falconbridge Preferred Share, Series G for each Falconbridge Preferred Share, Series F on the applicable Conversion Date and Falconbridge shall give notice in writing thereof to the holders of such remaining Preferred Shares, Series F at least seven (7) days prior to the Conversion Date.

If Falconbridge gives notice to the holders of the Preferred Shares, Series F of the redemption on a Conversion Date of all Preferred Shares, Series F, Falconbridge shall not be required to give notice as provided hereunder to the holders of the Preferred Shares, Series F of a Selected Percentage Rate of the Preferred Shares, Series G or of the conversion right of holders of Preferred Shares, Series F and the right of any holder of Preferred Shares, Series F to convert such Preferred Shares, Series F shall cease and terminate in that event.

Preferred Shares, Series G

The Preferred Shares, Series G will have attached thereto the series provisions summarized below.

Definitions of Terms

The following definitions are relevant to the Preferred Shares, Series G:

"Annual Dividend Rate" means for any Fixed Dividend Rate Period the rate of interest expressed as a percentage per annum (rounded to the nearest one-thousandth (1/1000) of one percent (1%)) which is equal to the Government of Canada Yield multiplied by the Selected Percentage Rate for such Fixed Dividend Rate Period.

"Fixed Dividend Rate Period" means for the initial Fixed Dividend Rate Period, the period ending on and including October 31, 2006, and for each succeeding Fixed Dividend Rate Period, the period commencing on the day immediately following the end of the immediately preceding Fixed Dividend Rate Period and ending on and including October 31 in the fifth year immediately thereafter.

"Government of Canada Yield" on any date shall mean the average of the yields determined by two registered Canadian investment dealers, selected by the board of directors of Falconbridge, as being the yield to maturity on such date compounded semi-annually and calculated in accordance with generally accepted financial practice, which a non-callable Government of Canada Bond would carry if issued in Canadian dollars in Canada at 100% of its principal amount on such date with a term to maturity of five years.

"Selected Percentage Rate" for each Fixed Dividend Rate Period means the rate of interest, expressed as a percentage of the Government of Canada Yield, determined by the board of directors of Falconbridge as set forth in the notice to the holders of the Preferred Shares, Series G, which rate of interest shall be not less than 80% of the Government of Canada Yield.

Stated Value
The Preferred Shares, Series G will have a stated value of Cdn$25.00 per share.

Dividends
The holders of the Preferred Shares, Series G will be entitled to receive fixed cumulative preferred cash dividends as and when declared by the board of directors of Falconbridge, in the amount per share per annum determined by multiplying the Annual Dividend Rate by Cdn$25.00, to accrue from the date of issue and payable quarterly in respect of each 12 month period on the first day of February, May, August and November.

The board of directors of Falconbridge will, not less than 45 days nor more than 60 days prior to each Conversion Date (as defined below), determine the Selected Percentage Rate to be applicable to the following Fixed Dividend Rate Period and give notice in writing thereof to the then holders of the Preferred Shares, Series G.

The Annual Dividend Rate for each Fixed Dividend Rate Period will be calculated by Falconbridge on the 21st day prior to the first day of each Fixed Dividend Rate Period based upon the Selected Percentage Rate determined with respect to the relevant Fixed Dividend Rate Period and the Government of Canada Yield in effect at 10:00 a.m. (Toronto time) on the said 21st day prior to the first day of the relevant Fixed Dividend Rate Period. Notice of each Annual Dividend Rate shall be provided by Falconbridge within one business day following its determination to all stock exchanges in Canada on which the Preferred Shares, Series G are listed for trading, and within three business days following its determination by publication once in the national edition of the *Globe and Mail* in the English language and once in the City of Montreal in both the French and English languages in a daily newspaper of general circulation in Montreal.

Redemption
The Preferred Shares, Series G will not be redeemable prior to November 1, 2006. The Preferred Shares, Series G will be redeemable, subject to applicable law and to the restrictions described under "— Restrictions on Dividends and Retirement of Shares", on November 1, 2006 or on November 1 in every fifth year thereafter, at the option of Falconbridge in whole but not in part at Cdn$25.00 per share, plus an amount equal to all accrued and unpaid dividends up to but excluding the date of redemption. Notice of the redemption will be given by Falconbridge not less than 45 days nor more than 60 days prior to the date fixed for redemption.

Conversion of Preferred Shares, Series G into Preferred Shares, Series F
Holders of Preferred Shares, Series G shall have the right, at their option, on November 1, 2006 and on November 1 in every fifth year thereafter (a "Conversion Date"), to convert, subject to the terms and conditions attaching to such shares, all or any Preferred Shares, Series G registered in their name into Preferred Shares, Series F on the basis of one Falconbridge Preferred Share, Series F for each Falconbridge Preferred Share, Series G. The conversion of Preferred Shares, Series G may be effected by surrender of the certificate(s) representing the same not earlier than 45 days prior to the Conversion Date but not later than the close of business on the 14th day preceding the Conversion Date at any office of any transfer agent of Falconbridge at which the Preferred Shares, Series G are transferable accompanied by payment or evidence of payment of the tax (if any) payable, as provided in the terms and conditions attaching to the Preferred Shares, Series G, and a written instrument of surrender in form satisfactory to Falconbridge duly executed by the holder or their attorney authorized in writing.

Falconbridge shall, not less than 45 days nor more than 60 days prior to the applicable Conversion Date, give notice in writing to the then holders of the Preferred Shares, Series G of the above-mentioned conversion right and of the Selected Percentage Rate determined by the board of directors of Falconbridge to be applicable for the next succeeding Fixed Dividend Rate Period.

Holders of Preferred Shares, Series G shall not be entitled to convert their shares into Preferred Shares, Series F if, following the close of business on the 14th day preceding a Conversion Date, Falconbridge determines that there would remain outstanding on a Conversion Date less than 1,000,000 Preferred Shares, Series F, after having taken into account all

Preferred Shares, Series G tendered for conversion into Preferred Shares, Series F and all Preferred Shares, Series F tendered for conversion into Preferred Shares, Series G. Falconbridge shall give notice in writing thereof to all the holders of the Preferred Shares, Series G at least seven (7) days prior to the applicable Conversion Date and will issue, prior to such Conversion Date, to the holders of Preferred Shares, Series G who have tendered Preferred Shares, Series G for conversion, new certificates evidencing the Preferred Shares, Series G tendered for conversion. Furthermore, if following the close of business on the 14th day preceding a Conversion Date Falconbridge determines that there would remain outstanding on a Conversion Date less than 1,000,000 Preferred Shares, Series G after having taken into account all Preferred Shares, Series G tendered for conversion into Preferred Shares, Series F and all Preferred Shares, Series F tendered for conversion into Preferred Shares, Series G, then, all, but not part, of the remaining outstanding Preferred Shares, Series G shall automatically be converted into Preferred Shares, Series F on the basis of one Falconbridge Preferred Share, Series F for each Falconbridge Preferred Share, Series G on the applicable Conversion Date and Falconbridge shall give notice in writing thereof to the holders of such remaining Preferred Shares, Series G at least seven (7) days prior to the Conversion Date.

If Falconbridge gives notice to the holders of the Preferred Shares, Series G of the redemption on a Conversion Date of all the Preferred Shares, Series G, Falconbridge shall not be required to give notice as provided hereunder to the holders of the Preferred Shares, Series G of a Selected Percentage Rate or of the conversion right of holders of Preferred Shares, Series G and the right of any holder of Preferred Shares, Series G to convert such Preferred Shares, Series G shall cease and terminate in that event.

Purchase for Cancellation

Falconbridge may at any time or times purchase for cancellation all or any part of the Preferred Shares, Series G in the open market, by private agreement or otherwise at the lowest price or prices at which in the opinion of the board of directors of Falconbridge such shares are obtainable.

Restrictions on Dividends and Retirement of Shares

Falconbridge will not, without the approval of the holders of outstanding Preferred Shares, Series G:

(a) declare, pay or set apart for payment any dividends (other than stock dividends payable in shares of Falconbridge ranking junior to the Preferred Shares, Series G) on Falconbridge Shares of or any other shares of Falconbridge ranking junior to the Preferred Shares, Series G;

(b) redeem, purchase or otherwise retire or make any capital distribution on or in respect of the Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series G (except out of the net cash proceeds of a substantially concurrent issue of shares of Falconbridge ranking junior to the Preferred Shares, Series G);

(c) purchase or otherwise retire less than all the Preferred Shares, Series G then outstanding; or

(d) redeem, purchase or otherwise retire (except in connection with the exercise of any retraction privilege or mandatory redemption obligation attaching thereto) any other shares of Falconbridge ranking on a parity with the Preferred Shares, Series G;

unless, in each such case, all dividends on outstanding Preferred Shares, Series G accrued up to and including the dividend payable on the last preceding payment date shall have been declared and paid. Any approval of the holders of the Preferred Shares, Series G required with respect to the foregoing may be given by the affirmative vote of the holders of the majority of the shares represented at a meeting, or adjourned meeting, of the holders of Preferred Shares, Series G duly called for the purpose and at which a quorum is present.

Rights on Liquidation

In the event of any liquidation, dissolution or winding-up of Falconbridge, the holders of the Preferred Shares, Series G will be entitled to receive Cdn$25.00 per Falconbridge Preferred Share, Series G plus an amount equal to all accrued and unpaid dividends up to but excluding the date of payment or distribution before any payment or distribution is made to the holders of the Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series G. Upon payment of such amounts, the holders of the Preferred Shares, Series G will not be entitled to share in any further distribution of assets of Falconbridge.

Voting Rights
The holders of Preferred Shares, Series G will not be entitled (except as otherwise provided by law) to receive notice of, attend, or vote at, any meeting of the shareholders of Falconbridge unless Falconbridge shall have failed to pay eight dividends on the Preferred Shares, Series G, whether or not consecutive. In that event, and for only so long as any such dividends remain in arrears, the holders of Preferred Shares, Series G will be entitled to receive notice of and to attend all shareholders' meetings, and to one vote for each share held, except meetings at which only holders of another specified class or series are entitled to vote.

In connection with any action to be taken by Falconbridge which requires the approval of the holders of Preferred Shares, Series G voting as a series or as part of the class, each such share shall entitle the holder thereof to one vote.

Tax on Dividends
Falconbridge will elect, in the manner and within the time provided under Part VI.I of the Tax Act to pay tax at a rate such that holders of Preferred Shares, Series G will not be required to pay tax on dividends received on the Preferred Shares, Series G under Part IV.1 of the Tax Act.

Modification
The provisions attaching to the Preferred Shares, Series G as a series may be repealed, altered, modified or amended with such approvals as may then be required by the OBCA currently being at least two-thirds of the votes cast at a meeting or adjourned meeting of the holders of Preferred Shares, Series G duly called for the purpose and at which a quorum is present.

Preferred Shares, Series H
The Preferred Shares, Series H will have attached thereto the series provisions summarized below.

Stated Value
The Preferred Shares, Series H will have a stated value of Cdn$25.00 per share.

Dividends
The holders of the Preferred Shares, Series H will be entitled to receive fixed cumulative preferential cash dividends, if, as and when declared by Falconbridge's board of directors, in an amount per share per annum equal to Cdn$1.625, accruing daily from the date of issue payable quarterly, in equal instalments of Cdn$0.40625 per share, on the last day of March, June, September and December in each year.

Redemption
The Preferred Shares, Series H are not redeemable before March 31, 2008. On or after March 31, 2008, but subject to applicable law and to the provisions described under "— Restrictions on Dividends and Retirement and Issue of Shares", Falconbridge may, at its option, at any time redeem all, or from time to time any part, of the then outstanding Preferred Shares, Series H by the payment of an amount in cash for each such share so redeemed of Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption (less any tax required to be deducted and withheld by us).

Falconbridge will give notice of any redemption not less than 30 days nor more than 60 days prior to the date fixed for redemption. If less than all the outstanding Preferred Shares, Series H are at any time to be redeemed, the shares will be redeemed on a pro-rata basis.

Purchase for Cancellation
Subject to applicable law and to the provisions described under "— Restrictions on Dividends and Retirement and Issue of Shares" below, Falconbridge may at any time or times purchase for cancellation all or any part of the Preferred Shares, Series H in the open market, by private agreement or otherwise at the lowest price or prices at which, in the opinion of Falconbridge's board of directors, such shares are obtainable.

Conversion at the Option of Falconbridge
Falconbridge will not be entitled to convert the Preferred Shares, Series H prior to March 31, 2008. On or after this date, Falconbridge may, subject to applicable law and any requirement to obtain regulatory relief, and upon notice, convert all,

or from time to time any part, of the then outstanding Preferred Shares, Series H into that number of Falconbridge Common Shares determined (per Cumulative Preferred Share, Series H) by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the weighted average trading price of Falconbridge Common Shares on the TSX or, if not then traded on that exchange, on another exchange or market chosen by the Falconbridge board of directors on which Falconbridge common shares are then traded, during the 20 consecutive trading-day period ending on the fourth day immediately prior to the date of redemption, or, if that fourth day is not a trading day, on the immediately preceding trading day (the **"Current Market Price"**). Fractional Falconbridge Common Shares will not be issued on any conversion of Preferred Shares, Series H but in lieu thereof Falconbridge will make cash payments.

Notice of any conversion will be given by Falconbridge not less than 30 days nor more than 60 days prior to the date fixed for conversion. If less than all the outstanding Preferred Shares, Series H are at any time to be converted, the shares to be converted will be selected on a pro-rata basis.

If Falconbridge exercises its right to convert Preferred Shares, Series H into Falconbridge Common Shares, Falconbridge reserves the right not to issue Falconbridge Common Shares to any person whose address is in, or whom Falconbridge or its transfer agent has reason to believe is a resident of, any jurisdiction outside Canada, to the extent that such issue would require compliance by Falconbridge with the securities or other laws of such jurisdiction.

Conversion at the Option of the Holder

Subject to applicable law and Falconbridge's rights described below, on or after June 30, 2008, each Series H Share will be convertible at the option of the holder on the last day of each of March, June, September and December in each year on at least 30 days notice (which notice will be irrevocable) into that number of Falconbridge Common Shares determined (per Falconbridge Preferred Share, Series H) by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the then Current Market Price. Fractional Falconbridge Common Shares will not be issued on any conversion of Preferred Shares, Series H, but in lieu thereof, Falconbridge will make cash payments.

Upon exercise of the conversion privilege by the holder of Preferred Shares, Series H, Falconbridge reserves the right not to issue Falconbridge Common Shares to any person whose address is in, or whom Falconbridge or its transfer agent has reason to believe is a resident of, any jurisdiction outside Canada, to the extent that such issue would require compliance by Falconbridge with the securities or other laws of such jurisdiction.

Falconbridge may, subject to the provisions described under "— Restrictions on Dividends and Retirement and Issue of Shares", as applicable, by notice given not later than 20 days before the date fixed for conversion to all holders who have given a conversion notice, either (i) redeem on the first business day after the date fixed for conversion all or any part of the Preferred Shares, Series H forming the subject matter of the applicable conversion notice, or (ii) cause the holder of such Preferred Shares, Series H to sell on the first business day after the date fixed for conversion all or any part of such Preferred Shares, Series H to another purchaser or purchasers in the event that a purchaser or purchasers willing to purchase all or any part of such Preferred Shares, Series H is or are found. Any such redemption or purchase shall be made by the payment of an amount in cash of Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption or purchase (less any tax required to be deducted and withheld by Falconbridge). As a result, the Preferred Shares, Series H to be so redeemed or purchased will not be converted on the date set forth in the conversion notice.

If Falconbridge elects to redeem or arrange for the purchase of any Preferred Shares, Series H that are the subject of a conversion notice (the **"Subject Shares"**), Falconbridge will, at least 20 days prior to the conversion date, give notice to all holders who have given Falconbridge a conversion notice, stating:

(a) the number of Subject Shares to be redeemed for cash by Falconbridge;

(b) the number of Subject Shares to be sold to another purchaser; and

(c) the number of Subject Shares to be converted into Falconbridge Common Shares,

such that all of the Subject Shares will be redeemed, purchased or converted on or before the first business day after the date fixed for conversion and that the proportion of the Subject Shares which are either redeemed, purchased or converted on that conversion date will, to the extent practicable, be the same for each holder delivering a conversion notice.

Rights on Liquidation

In the event of the liquidation, dissolution or winding-up of Falconbridge or any other distribution of assets of Falconbridge among its shareholders for the purpose of winding-up its affairs, the holders of the Preferred Shares, Series H will be entitled to receive Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date of payment or distribution (less any tax required to be deducted or withheld by Falconbridge), before any amount is paid or any assets of Falconbridge are distributed to the holders of any Falconbridge shares ranking junior as to capital to the Preferred Shares, Series H. Upon payment of such amounts, the holders of the Preferred Shares, Series H will not be entitled to share in any further distribution of assets of Falconbridge.

Restrictions on Dividends and Retirement and Issue of Shares

So long as any of the Preferred Shares, Series H are outstanding, Falconbridge will not, without the approval of the holders of the Preferred Shares, Series H:

(a) declare, pay or set apart for payment any dividends (other than stock dividends payable in Falconbridge shares ranking as to capital and dividends junior to the Preferred Shares, Series H) on shares of Falconbridge ranking as to dividends junior to the Preferred Shares, Series H;

(b) except out of the net cash proceeds of a substantially concurrent issue of Falconbridge shares ranking as to return of capital and dividends junior to the Preferred Shares, Series H, redeem or call for redemption, purchase or otherwise pay off, retire or make any return of capital in respect of any Falconbridge shares ranking as to capital junior to the Preferred Shares, Series H;

(c) redeem or call for redemption, purchase or otherwise retire for value or make any return of capital in respect of less than all of the Preferred Shares, Series H then outstanding;

(d) except pursuant to any purchase obligation, sinking fund, retraction privilege or mandatory redemption provisions attaching thereto, redeem or call for redemption, purchase or otherwise pay off, retire or make any return of capital in respect of any Preferred Shares, ranking as to the payment of dividends or return of capital on a parity with the Preferred Shares, Series H; or

(e) issue any additional Preferred Shares, Series H or any shares ranking as to the payment of dividends or the return of capital prior to or on a parity with the Preferred Shares, Series H,

unless, in each such case, all accrued and unpaid dividends up to and including the dividend payable for the last completed period for which dividends were payable on the Preferred Shares, Series H and on all other shares of Falconbridge ranking prior to or on a parity with the Preferred Shares, Series H with respect to the payment of dividends have been declared paid or set apart for payment.

Shareholder Approvals

In addition to any other approvals required by law, the approval of all amendments to the rights, privileges, restrictions and conditions attaching to the Preferred Shares, Series H as a series and any other approval to be given by the holders of the Preferred Shares, Series H may be given by a resolution carried by an affirmative vote of at least 66⅔% of the votes cast at a meeting at which the holders of a majority of the outstanding Preferred Shares, Series H are present or represented by proxy or, if no quorum is present at such meeting, at an adjourned meeting at which the holders of Preferred Shares, Series H then present would form the necessary quorum. At any meeting of holders of Preferred Shares, Series H as a series, each such holder shall be entitled to one vote in respect of each Falconbridge Preferred Share, Series H held.

Voting Rights

The holders of the Preferred Shares, Series H will not (except as otherwise provided by law and except for meetings of the holders of Preferred Shares as a class and meetings of all holders of Preferred Shares, Series H as a series) be entitled to receive notice of, attend, or vote at, any meeting of Falconbridge shareholders unless and until Falconbridge has failed to

(a) the product obtained by multiplying the dividend accrued on an Falconbridge Preferred Share, Series 2 in respect of the month in which the Trading Day falls by the number of days elapsed from but excluding the day prior to the Ex-Dividend Date immediately preceding such Trading Day to and including such Trading Day (or if such Trading Day is an Ex-Dividend Date, by one day);

divided by

(b) the number of days from and including such Ex-Dividend Date to *but* excluding the following Ex-Dividend Date.

"Daily Adjusted Trading Value" for any Trading Day means:

(a) the aggregate dollar value of all transactions of Preferred Shares, Series 2 on the Exchange (made on the basis of the normal settlement period in effect on the Exchange) occurring during such Trading Day,

less

(b) the Daily Trading Volume for such Trading Day multiplied by the Daily Accrued Dividend Deduction for such Trading Day.

"Daily Trading Volume" for any Trading Day means the aggregate number of Preferred Shares, Series 2 traded in all transactions (made on the basis of the normal settlement period in effect on the Exchange) occurring during such Trading Day on the Exchange.

"Deemed Record Date" means the last Trading Day of a month with respect to which no dividend is declared by the board of directors of Falconbridge.

"Dividend Payment Date" means the 12th day of each month.

"Dividend Period" means a month.

"Exchange" means the TSX or such other exchange or trading market in Canada as may be determined from time to time by Falconbridge as being the principal trading market for the Preferred Shares, Series 2.

"Ex-Dividend Date" means:

(a) the Trading Day which, under the rules or normal practices of the Exchange, is designated or recognized as the Ex-Dividend Date relative to any dividend record date for the Preferred Shares, Series 2; or

(b) if the board of directors of Falconbridge fails to declare a dividend in respect of a month, the Trading Day which, under the rules or normal practices of the Exchange, would be recognized as the Ex-Dividend Date relative to any Deemed Record Date for the Preferred Shares, Series 2.

"Prime" for a month means the average (rounded to the nearest one-thousandth (1/1000) of one percent (1%)) of the Prime Rate in effect on each day of such month.

"Prime Rate" for any day means the average (rounded to the nearest one-thousandth (1/1000) of one percent (1%)) of the annual rates of interest announced from time to time by the Banks as the reference rates then in effect for such day for determining interest rates on Canadian dollar commercial loans made to prime commercial borrowers in Canada. If one of the Banks does not have such an interest rate in effect on a day, the Prime Rate for such day shall be such interest rate in effect for that day of the other Bank; if both Banks do not have such an interest rate in effect on a day, the Prime Rate for *that day shall* be equal to 1.5% per annum plus the average yield expressed as a percentage per annum on 91-day Government of Canada Treasury Bills, as *reported* by the Bank of Canada, for the weekly tender for the week immediately preceding that day; and if both of such Banks do not have such an interest *rate* in effect on a day and the Bank of Canada does not report such average yield per annum, the Prime Rate for that day shall be equal to the Prime Rate *for the* next preceding day. The Prime Rate and Prime shall be determined from time to time by an officer of Falconbridge from

quotations supplied by the Banks or otherwise publicly available. Such determination shall, in the absence of manifest error, be final and binding upon Falconbridge and upon all holders of Preferred Shares, Series 2.

"Trading Day" means, if the Exchange is a stock exchange in Canada, a day on which the Exchange is open for trading or, in any other case, a business day.

Dividends

The holders of the Preferred Shares, Series 2 will be entitled to receive floating adjustable cumulative preferential cash dividends, as and when declared by the Falconbridge board of directors, to accrue from the Effective Date and to be paid on the 12th day of each month. The dividend rate will float in relation to changes in Prime and will be adjusted upwards or downwards on a monthly basis by an adjustment factor whenever the Calculated Trading Price of the Preferred Shares, Series 2 is Cdn$24.875 or less or Cdn$25.125 or more, respectively. The maximum monthly adjustment for changes in the Calculated Trading Price will be ±4.00% of Prime. The annual floating dividend rate applicable for a month will in no event be less than 50% of Prime or greater than Prime.

The Adjustment Factor for a month will be based on the Calculated Trading Price of the Preferred Shares, Series 2 for the preceding month determined in accordance with the following table:

If the Calculated Trading Price for the Preceding Month is	The Adjustment Factor as a Percentage of Prime shall be
Cdn$25.50 or more	–4.00%
Cdn$25.375 and less than Cdn$25.50	–3.00%
Cdn$25.25 and less than Cdn$25.375	–2.00%
Cdn$25.125 and less than Cdn$25.25	–1.00%
Greater than Cdn$24.875 and less than Cdn$25.125	nil
Greater than Cdn$24.75 to Cdn$24.875	1.00%
Greater than Cdn$24.625 to Cdn$24.75	2.00%
Greater than Cdn$24.50 to Cdn$24.625	3.00%
Cdn$24.50 or less	4.00%

The maximum Adjustment Factor for any month will be ±4.00% of Prime.

If in any month there is no trade of at least a board lot of the Preferred Shares, Series 2 on the Exchange, the Adjustment Factor for the following month will be nil.

The annual floating dividend rate for a month will be calculated by Falconbridge as promptly as practicable, and notice thereof will be given to each stock exchange on which the Preferred Shares, Series 2 are listed for trading.

Redemption

The Preferred Shares, Series 2 will be redeemable at the option of Falconbridge, in whole but not in part, at Cdn$25.50 per share, plus an amount equal to all accrued and unpaid dividends up to but excluding the date of redemption. Notice of the redemption will be given by Falconbridge not less than 45 days nor more than 60 days prior to the date fixed for redemption.

Conversion

Holders of Preferred Shares, Series 2 shall have the right, at their option, on March 1, 2009 and on March 1 in every fifth year thereafter (a "**Conversion Date**"), to convert, subject to the terms and conditions attaching to such shares, all or any Preferred Shares, Series 2 registered in their name into Preferred Shares, Series 3 of Falconbridge on the basis of one Falconbridge Preferred Share, Series 3 for each Falconbridge Preferred Share, Series 2. The conversion of Preferred Shares, Series 2 may be effected by surrender of the certificate(s) representing the same not earlier than 45 days prior to the Conversion Date but not later than the close of business on the 14th day preceding the Conversion Date at any office of any transfer agent of Falconbridge at which the Preferred Shares, Series 2 are transferable accompanied by payment or evidence of payment of the tax (if any) payable, as provided in the terms and conditions attaching to the Preferred Shares, Series 2, and a written instrument of surrender in form satisfactory to Falconbridge duly executed by the holder or their attorney authorized in writing.

Falconbridge shall, not less than 45 days nor more than 60 days prior to the applicable Conversion Date, give notice in writing to the then holders of the Preferred Shares, Series 2 of the above-mentioned conversion right and of the Selected Percentage Rate (as defined below under "Preferred Shares, Series 3") determined by the Falconbridge board of directors to be applicable for the next succeeding Fixed Dividend Rate Period (as defined below under "Preferred Shares, Series 3") applicable to the Preferred Shares, Series 3. Falconbridge shall give notice as provided under "Preferred Shares, Series 3" of the Annual Dividend Rate (as defined below under "Preferred Shares, Series 3") applicable to the Preferred Shares, Series 3 for such Fixed Dividend Rate Period.

Holders of Preferred Shares, Series 2 shall not be entitled to convert their shares into Preferred Shares, Series 3 if, following the close of business on the 14th day preceding a Conversion Date, Falconbridge determines that there would remain outstanding on a Conversion Date less than 500,000 Preferred Shares, Series 3, after having taken into account all Preferred Shares, Series 2 tendered for conversion into Preferred Shares, Series 3 and all Preferred Shares, Series 3 tendered for conversion into Preferred Shares, Series 2. Falconbridge shall give notice in writing thereof to all the holders of the Preferred Shares, Series 2 at least seven (7) days prior to the applicable Conversion Date and will issue, prior to such Conversion Date, to the holders of Preferred Shares, Series 2 who have tendered Preferred Shares, Series 2 for conversion, new certificates evidencing the Preferred Shares, Series 2 tendered for conversion. Furthermore, if following the close of business on the 14th day preceding a Conversion Date Falconbridge determines that there would remain outstanding on a Conversion Date less than 500,000 Preferred Shares, Series 2 after having taken into account all Preferred Shares, Series 2 tendered for conversion into Preferred Shares, Series 3 and all Preferred Shares, Series 3 tendered for conversion into Preferred Shares, Series 2, then, all, but not part, of the remaining outstanding Preferred Shares, Series 2 shall automatically be converted into Preferred Shares, Series 3 on the basis of one Falconbridge Preferred Share, Series 3 for each Falconbridge Preferred Share, Series 2 on the applicable Conversion Date and Falconbridge shall give notice in writing thereof to the holders of such remaining Preferred Shares, Series 2 at least seven (7) days prior to the Conversion Date.

If Falconbridge gives notice to the holders of the Preferred Shares, Series 2 of the redemption on a Conversion Date of all Preferred Shares, Series 2, Falconbridge shall not be required to give notice as provided hereunder to the holders of the Preferred Shares, Series 2 of a Selected Percentage Rate of the Preferred Shares, Series 3 or of the conversion right of holders of Preferred Shares, Series 2 and the right of any holder of Preferred Shares, Series 2 to convert such Preferred Shares, Series 2 shall cease and terminate in that event.

Purchase for Cancellation

Subject to applicable law and to the provisions described below under "— Restrictions on Dividends and Retirement of Shares", Falconbridge may at any time purchase for cancellation any Preferred Shares, Series 2 at the lowest price or prices at which, in the opinion of the Falconbridge board of directors, such shares are obtainable.

Rights on Liquidation

In the event of the liquidation, dissolution or winding-up of Falconbridge, the holders of the Preferred Shares, Series 2 shall be entitled to receive Cdn$25.00 per share, together with all dividends accrued and unpaid to the date of payment before any amount shall be paid or any assets of Falconbridge distributed to the holders of any shares ranking junior to the Preferred Shares, Series 2. Upon such payment, the holders of the Preferred Shares, Series 2 shall not be entitled to share in any further distribution of the assets of Falconbridge.

Restrictions on Dividends and Retirement of Shares

So long as any of the Preferred Shares, Series 2 are outstanding, Falconbridge will not, without the approval of the holders of the Preferred Shares, Series 2:

(a) declare, pay or set apart for payment any dividends on the Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series 2 (other than stock dividends in shares of Falconbridge ranking junior to the Preferred Shares, Series 2); or

(b) redeem, purchase or otherwise retire or make any capital distribution on or in respect of any Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series 2 (except out of the net cash proceeds of a substantially concurrent issue of shares ranking junior to the Preferred Shares, Series 2); or

(c) purchase or otherwise retire less than all the Preferred Shares, Series 2; or

(d) except pursuant to any purchase obligation, sinking fund, retraction privilege or mandatory redemption provisions attaching to any series of Preferred Shares, redeem, purchase or otherwise retire any other shares ranking on a parity with the Preferred Shares, Series 2;

unless, in each case, all dividends on outstanding Preferred Shares, Series 2 accrued up to and including the dividend payment payable on the last preceding dividend payment date shall have been declared and paid. Any approval of the holders of the Preferred Shares, Series 2 required with respect to the foregoing may be given by the affirmative vote of the holders of the majority of the shares represented at a meeting, or adjourned meeting, of the holders of Preferred Shares, Series 2 duly called for the purpose and at which a quorum is present.

Modification

The provisions attaching to the Preferred Shares, Series 2 as a series may be repealed, altered, modified or amended with such approvals as may then be required by the OBCA, currently being at least two-thirds of the votes cast at a meeting or adjourned meeting of the holders of Preferred Shares, Series 2 duly called for the purpose and at which a quorum is present.

Voting Rights

The holders of the Preferred Shares, Series 2 will be entitled to vote if Falconbridge shall have failed to pay twenty-four dividends on the Preferred Shares, Series 2, in each case whether or not consecutive. In that event, and for only so long as any such dividends remain in arrears, the holders of Preferred Shares Series 2 will be entitled to receive notice of and to attend all meetings of shareholders and to one vote for each share held, except meetings at which only holders of another class or series are entitled to vote.

Tax on Dividends

Falconbridge will elect, in the manner and within the time provided under Part VI.I of the Tax Act to pay tax at a rate such that holders of Preferred Shares, Series 2 will not be required to pay tax on dividends received on the Preferred Shares, Series 2 under Part IV.I of the Tax Act.

Preferred Shares, Series 3

The Preferred Shares, Series 3 will have attached thereto the series provisions summarized below.

Definitions of Terms

The following definitions are relevant to the Preferred Shares, Series 3:

"Annual Dividend Rate" means for any Fixed Dividend Rate Period the rate of interest expressed as a percentage per annum (rounded to the nearest one thousandth (1/1000) of one percent (1%)) which is equal to the Government of Canada Yield multiplied by the Selected Percentage Rate for such Fixed Dividend Rate Period.

"Fixed Dividend Rate Period" means for the initial Fixed Dividend Rate Period, the period ending on and including February 28, 2009, and for each succeeding Fixed Dividend Rate Period, the period commencing on the day immediately following the end of the immediately preceding Fixed Dividend Rate Period and ending on and including the last day of February in the fifth year immediately thereafter.

"Government of Canada Yield" on any date shall mean the average of the yields determined by two registered Canadian investment dealers, selected by the Falconbridge board of directors, as being the yield to maturity on such date compounded semi-annually and calculated in accordance with generally accepted financial practice, which a non-callable Government of Canada Bond would carry if issued in Canadian dollars in Canada at 100% of its principal amount on such date with a term to maturity of five years.

"Selected Percentage Rate" for each Fixed Dividend Rate Period means the rate of interest, expressed as a percentage of the Government of Canada Yield, determined by the Falconbridge board of directors as set forth in the notice to the holders of the Preferred Shares, Series 3, which percentage shall be not less than 80%.

Dividends

The holders of the Preferred Shares, Series 3 will be entitled to receive fixed cumulative preferential cash dividends, as and when declared by the Falconbridge board of directors, in the amount per share per annum determined by multiplying the Annual Dividend Rate by Cdn$25.00; to accrue from the date of issue and payable quarterly in respect of each 12 month period on the first day of March, June, September and December.

The Falconbridge board of directors will, not less than 45 days nor more than 60 days prior to each Conversion Date (as defined below) determine the Selected Percentage Rate to be applicable to the following Fixed Dividend Rate Period and give notice in writing thereof to the then holders of the Preferred Shares, Series 3.

The Annual Dividend Rate for each Fixed Dividend Rate Period will be calculated by Falconbridge on the 21st day prior to the first day of each Fixed Dividend Rate Period based upon the Selected Percentage Rate determined with respect to the relevant Fixed Dividend Rate Period and the Government of Canada Yield in effect at 10:00 a.m. (Toronto time) on the said 21st day prior to the first day of the relevant Fixed Dividend Rate Period. Notice of each Annual Dividend Rate shall be provided by Falconbridge within one business day following its determination to all stock exchanges in Canada on which the Preferred Shares, Series 3 are listed for trading, and within three business days following its determination by publication once in the national edition of the *Globe and Mail* in the English language and once in the City of Montreal in both the French and English languages in a daily newspaper of general circulation in Montreal.

Redemption

The Preferred Shares, Series 3 will not be redeemable prior to March 1, 2009. The Preferred Shares, Series 3 will be redeemable, subject to applicable law and to the restrictions described under "— Restrictions on Dividends and Retirement of Shares", on March 1, 2009 or on March 1 in every fifth year thereafter, at the option of Falconbridge, in whole but not in part, at Cdn$25.00 per share, plus an amount equal to all accrued and unpaid dividends up to but excluding the date of redemption. Notice of the redemption will be given by Falconbridge not less than 45 days nor more than 60 days prior to the date fixed for redemption.

Conversion of Preferred Shares, Series 3 into Preferred Shares, Series 2

Holders of Preferred Shares, Series 3 shall have the right, at their option, on March 1, 2009 and on March 1 in every fifth year thereafter (a "**Conversion Date**"), to convert, subject to the terms and conditions attaching to such shares, all or any Preferred Shares, Series 3 registered in their name into Preferred Shares, Series 2 on the basis of one Falconbridge Preferred Share, Series 2 for each Falconbridge Preferred Share, Series 3. The conversion of Preferred Shares, Series 3 may be effected by surrender of the certificate(s) representing the same not earlier than 45 days prior to the Conversion Date but not later than the close of business on the 14th day preceding the Conversion Date at any office of any transfer agent of Falconbridge at which the Preferred Shares, Series 3 are transferable accompanied by payment or evidence of payment of the tax (if any) payable, as provided in the terms and conditions attaching to the Preferred Shares, Series 3, and a written instrument of surrender in form satisfactory to Falconbridge duly executed by the holder or their attorney authorized in writing.

Falconbridge shall, not less than 45 days nor more than 60 days prior to the applicable Conversion Date, give notice in writing to the then holders of the Preferred Shares, Series 3 of the above-mentioned conversion right and of the Selected Percentage Rate determined by the Falconbridge board of directors to be applicable for the next succeeding Fixed Dividend Rate Period.

Holders of Preferred Shares, Series 3 shall not be entitled to convert their shares into Preferred Shares, Series 2 if, following the close of business on the 14th day preceding a Conversion Date, Falconbridge determines that there would remain outstanding on a Conversion Date less than 500,000 Preferred Shares, Series 2, after having taken into account all Preferred Shares, Series 3 tendered for conversion into Preferred Shares, Series 2 and all Preferred Shares, Series 2 tendered for conversion in Preferred Shares, Series 3. Falconbridge shall give notice in writing thereof to all the holders of the Preferred Shares, Series 3 at least seven (7) days prior to the applicable Conversion Date and will issue, prior to such Conversion Date, to the holders of Preferred Shares, Series 3 who have tendered Preferred Shares, Series 3 for conversion, new certificates evidencing the Preferred Shares, Series 3 tendered for conversion.

Furthermore, if following the close of business on the 14th day preceding a Conversion Date Falconbridge determines that there would remain outstanding on a Conversion Date less than 500,000 Preferred Shares, Series 3 after having taken into

account all Preferred Shares, Series 3 tendered for conversion into Preferred Shares, Series 2 and all Preferred Shares, Series 2 tendered for conversion into Preferred Shares, Series 3, then, all, but not part, of the remaining outstanding Preferred Shares, Series 3 shall automatically be converted into Preferred Shares, Series 2 on the basis of one Falconbridge Preferred Share, Series 2 for each Falconbridge Preferred Share, Series 3 on the applicable Conversion Date and Falconbridge shall give notice in writing thereof to the holders of such remaining Preferred Shares, Series 3 at least seven (7) days prior to the Conversion Date.

If Falconbridge gives notice to the holders of the Preferred Shares, Series 3 of the redemption on a Conversion Date of all Preferred Shares, Series 3, Falconbridge shall not be required to give notice as provided hereunder to the holders of the Preferred Shares, Series 3 of a Selected Percentage Rate of the Preferred Shares, Series 3 or of the conversion right of holders of Preferred Shares, Series 3 and the right of any holder of Preferred Shares, Series 3 to convert such Preferred Shares, Series 3 shall cease and terminate in that event.

Purchase for Cancellation

Subject to applicable law and to the provisions described below under "— Restrictions on Dividends and Retirement of Shares", Falconbridge may at any time purchase for cancellation any Preferred Shares, Series 3 at the lowest price or prices at which, in the opinion of the Falconbridge board of directors, such shares are obtainable.

Rights on Liquidation

In the event of the liquidation, dissolution or winding-up of Falconbridge, the holders of the Preferred Shares, Series 3 shall be entitled to receive Cdn$25.00 per share, together with all dividends accrued and unpaid to the date of payment before any amount shall be paid or any assets of Falconbridge distributed to the holders of any shares ranking junior to the Preferred Shares, Series 3. Upon such payment, the holders of the Preferred Shares, Series 3 shall not be entitled to share in any further distribution of the assets of Falconbridge.

Restrictions on Dividends and Retirement of Shares

So long as any of the Preferred Shares, Series 3 are outstanding, Falconbridge will not, without the approval of the holders of the Preferred Shares, Series 3:

(a) declare, pay or set apart for payment any dividends on the Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series 3 (other than stock dividends in shares of Falconbridge ranking junior to the Preferred Shares, Series 3); or

(b) redeem, purchase or otherwise retire or make any capital distribution on or in respect of any Falconbridge Common Shares, Junior Preference Shares or any other shares of Falconbridge ranking junior to the Preferred Shares, Series 3 (except out of the net cash proceeds of a substantially concurrent issue of shares ranking junior to the Preferred Shares, Series 3); or

(c) purchase or otherwise retire less than all the Preferred Shares, Series 3; or

(d) except pursuant to any purchase obligation, sinking fund, retraction privilege or mandatory redemption provisions attaching to any series of Preferred Shares, redeem, purchase or otherwise retire any other shares ranking on a parity with the Preferred Shares, Series 3;

unless, in each case, all dividends on outstanding Preferred Shares, Series 3 accrued up to and including the dividend payment payable on the last preceding divided payment date shall have been declared and paid. Any approval of the holders of the Preferred Shares, Series 3 required with respect to the foregoing may be given by the affirmative vote of the holders of the majority of the shares represented at a meeting, or adjourned meeting, of the holders of Preferred Shares, Series 3 duly called for the purpose and at which a quorum is present.

Modification

The provisions attaching to the Preferred Shares, Series 3 as a series may be repealed, altered, modified or amended with such approvals as may then be required by the OBCA, currently being at least two-thirds of the votes cast at a meeting or adjourned meeting of the holders of Preferred Shares, Series 3 duly called for the purpose and at which a quorum is present.

Voting Rights
The holders of the Preferred Shares, Series 3 will be entitled to vote if Falconbridge shall have failed to pay eight dividends, whether or not consecutive, on the Preferred Shares, Series 3. In that event, and for only so long as any such dividends remain in arrears, the holders of Preferred Shares, Series 3 will be entitled to receive notice of and to attend all meetings of shareholders and to one vote for each share held except meetings at which only holders of another class or series are entitled to vote.

Tax on Dividends
Falconbridge will elect, in the manner and within the time provided under Part VI.1 of the Tax Act, to pay tax at a rate such that holders of Preferred Shares, Series 3 will not be required to pay tax on dividends received on the Preferred Shares, Series 3 under Part IV.I of the Tax Act.

Junior Preference Shares
The Junior Preference Shares may at any time or from time to time be issued in one or more series. The Falconbridge board of directors may by resolution fix the number of shares in, and determine the designation, rights, privileges, restrictions and conditions attaching to the shares of, each series of Junior Preference Shares.

The Junior Preference Shares rank junior to the Preferred Shares with respect to priority in the payment of dividends and in the distribution of assets in the event of Falconbridge liquidation, dissolution or winding up or other distribution of Falconbridge assets among its shareholders for the purpose of winding-up its affairs.

The Junior Preference Shares of each series rank in a parity with the Junior Preference Shares of every other series with respect to priority in the payment of dividends and in the distribution of assets in the event of Falconbridge liquidation, dissolution or winding-up or other distribution of Falconbridge assets among its shareholders for the purpose of winding-up its affairs.

As long as any of the Preferred Shares are outstanding, Falconbridge must not at any time, without the approval of the holders of each series of Preferred Shares then outstanding, given in accordance with the terms of the Preferred Shares, declare, pay or set apart for payment any dividends (other than stock dividends payable in shares of Falconbridge) on the Junior Preference Shares or redeem or call for redemption, purchase or otherwise pay off, retire or make any return of capital in respect of any series of Junior Preference Shares, if such action is prohibited by the terms of the Preferred Shares or the terms of any series of Preferred Shares that are then outstanding.

In the event of the liquidation, dissolution or winding-up of Falconbridge or any other distribution of assets of Falconbridge among its shareholders for the purpose of winding-up its affairs, the holders of the Junior Preference Shares will be entitled to payment of an amount equal to the amount paid up on such shares in the case of any liquidation, dissolution, winding-up or other distribution which is involuntary, and to payment of an amount equal to the amount paid up thereon plus the premium on redemption applicable at the date thereof, if any, if the same is voluntary, together in all cases with all unpaid dividends accrued thereon (which will for such purpose be treated as accruing up to the date of distribution), the whole before any amount is paid or any assets of Falconbridge distributed to the holders of any Falconbridge Common Shares or shares of any other class ranking junior to the Junior Preference Shares but the whole subject to the rights of the holders of any other class of shares of Falconbridge entitled to receive the assets of Falconbridge upon such distribution in priority to or rateably with the holders of the Junior Preference Shares. Upon payment to the holders of the Junior Preference Shares of the amount so payable to them, they will not be entitled to share in any further distribution of assets of Falconbridge.

The three series of Junior Preference Shares will have attached thereto the series provisions summarized below.

Certain Provisions of the Three Series of Junior Preference Shares

The definitions set out below are relevant to the Junior Preference Shares.

Stated Value:
$25 per Falconbridge Junior Preference Share.

Dividends:
Junior Preference Shares, Series 1: Holders of the Junior Preference Shares, Series 1 will be entitled to receive fixed preferential cumulative cash dividends, if, as and when declared by the board of directors of Falconbridge, in an amount equal to $1.50 per share per annum, payable quarterly in equal instalments on the last day of March, June, September and December of each year.

Junior Preference Shares, Series 2: Until June 30, 2010, holders of the Junior Preference Shares, Series 2 will be entitled to receive fixed preferential cumulative cash dividends, if, as and when declared by the board of directors of Falconbridge, in an amount equal to $1.5625 per share per annum, payable quarterly in equal instalments on the last day of March, June, September and December of each year.

From June 30, 2010 until June 30, 2012, holders of Junior Preference Shares, Series 2 will be entitled to fixed preferential cumulative cash dividends at a rate per annum equal to the greater of (i) 6.25%; and (ii) a rate equal to 2.05% over the seven year US treasury bond yield, at the commencement of such subsequent fixed rate period, payable quarterly in equal instalments on the last day of March, June, September and December of each year.

Junior Preference Shares, Series 3: Until June 30, 2010, holders of the Junior Preference Shares, Series 3 will be entitled to receive fixed preferential cumulative cash dividends, if, as and when declared by the board of directors of Falconbridge in an amount equal to $1.625 per share per annum, payable quarterly in equal instalments on the last day of March, June, September and December of each year.

From June 30, 2010 until June 30, 2012 and for each succeeding 2-year (or less, as applicable) subsequent fixed rate period until June 30, 2015, holders of Junior Preference Shares, Series 3 will be entitled to fixed preferential cumulative cash dividends at a rate per annum equal to the greater of (i) 6.5%; and (ii) a rate equal to 2.35% over the ten year US treasury bond yield at the commencement of each subsequent fixed rate period, payable quarterly in equal instalments on the last day of March, June, September and December of each year.

Payment Options:
Falconbridge will be entitled to satisfy payment of the quarterly dividend payments in:

(i) cash; and/or

(ii) that number of freely tradeable Falconbridge Common Shares determined by dividing the declared dividend amount by 95% of the US dollar equivalent of the volume weighted average trading price of the Falconbridge Common Shares on the TSX for a period of 20 consecutive trading days ending on the fourth day prior to the date (if such date is a trading day) specified for payment of the dividend, provided that (A) the issuance or delivery of such Falconbridge Common Shares is not prohibited pursuant to any agreement or arrangement entered into by Falconbridge to assure Falconbridge solvency or continued operation, (B) the issuance or delivery of such Falconbridge Common Shares is not prohibited by law or by any regulatory or other authority having jurisdiction over Falconbridge and acting in conformity with law; (C) Falconbridge is able to issue and deliver such Falconbridge Common Shares; and (D) such Falconbridge Common Shares are listed on each exchange on which the Falconbridge Common Shares are then listed for trading

Redemption:
Subject to applicable law and to the provisions described under "Restrictions on Dividends and Retirement and Issue of Shares":

Junior Preference Shares, Series 1: The Junior Preference Shares, Series 1 (i) are redeemable, in cash, by Falconbridge at any time on at least 30 and not more than 60 days prior notice, on or before June 30, 2008 at $25.25 per share plus all accrued and unpaid dividends and thereafter at $25.00 per share plus all accrued and unpaid dividends, and (ii) must be redeemed by Falconbridge on the date that is five years from the date of issue of the Junior Preference Shares, Series 1 at $25.00 per share plus accrued and unpaid dividends thereon (the **"Series 1 Final Redemption Date"**).

Any redemptions of Junior Preference Shares, Series 1 prior to June 30, 2009 must be made on a pro rata basis with all other Junior Preference Shares then outstanding.

Junior Preference Shares, Series 2: The Junior Preference Shares, Series 2 (i) are redeemable, in cash, by Falconbridge at any time on at least 30 and not more than 60 days prior notice, on or before June 30, 2010 at $25.25 per share plus all accrued and unpaid dividends and thereafter until June 29, 2012 at $25.00 per share plus all accrued and unpaid dividends, and (ii) must be redeemed by Falconbridge on June 30, 2012 at $25.00 per share plus accrued and unpaid dividends thereon (the **"Series 2 Final Redemption Date"**).

Any redemptions of Junior Preference Shares, Series 2 prior to June 30, 2011 must be made on a pro rata basis with all other Junior Preference Shares then outstanding. From June 30, 2010 to June 29, 2012, no Junior Preference Shares, Series 2 may be redeemed until all the Junior Preference Shares, Series 1 have been redeemed. Following June 30, 2012, any redemption of the Junior Preference Shares, Series 2 must be made on a pro rata basis with any Junior Preference Shares, Series 1 then outstanding.

Junior Preference Shares, Series 3: The Junior Preference Shares, Series 3 (i) are redeemable, in cash, by Falconbridge at any time on at least 30 and not more than 60 days prior notice, on or before June 30, 2013 at $25.25 per share plus all accrued and unpaid dividends and thereafter until June 29, 2015 at $25.00 per share plus accrued and unpaid dividends, and (ii) must be redeemed by Falconbridge on June 30, 2015 at $25.00 per share plus accrued and unpaid dividends thereon (the **"Series 3 Final Redemption Date"**).

Any redemptions of Junior Preference Shares, Series 3 prior to June 30, 2012 must be made on a pro rata basis with all other Junior Preference Shares then outstanding. From June 30, 2012 to June 29, 2015, no Junior Preference Shares, Series 3 may be redeemed until all Junior Preference Shares, Series 2 have been redeemed. Following June 30, 2015, any redemption of the Junior Preference Shares, Series 3 must be made on a pro rata basis with any Junior Preference Shares, Series 1 and Junior Preference Shares, Series 2 outstanding.

Conversion into Falconbridge Common Shares by Falconbridge on the Final Redemption Date:
On the Series 1 Final Redemption Date, the Series 2 Final Redemption Date and the Series 3 Final Redemption Date, so long as:

(i) a Change of Control Event (as defined below) has not occurred (unless the applicable take-over bid or control transaction has been withdrawn, is terminated or expires without any person other than Brascan Corporation, any affiliate of Brascan Corporation or any party acting jointly or in concert with Brascan Corporation or any of its affiliates (collectively, **"Brascan"**) beneficially owning 30% or more of the voting shares of Falconbridge);

(ii) an Extraordinary Dividend (as defined below) has not been paid; and

(iii) (A) the issuance or delivery of such Falconbridge Common Shares is not prohibited pursuant to any agreement or arrangement entered into by Falconbridge to assure Falconbridge's solvency or continued operation, is (B) the issuance or delivery of such Falconbridge Common Shares is not prohibited by law or by any regulatory or other authority having jurisdiction over Falconbridge and acting in conformity with law; (C) Falconbridge is able to issue and deliver such Falconbridge Common Shares; and (D) such Falconbridge Common Shares are listed on each exchange on which the Falconbridge Common Shares are then listed for trading;

the Junior Preference Shares are convertible, in whole or in part, at the option of Falconbridge, on at least 30 and not more than 60 days prior notice into that number of freely tradable Falconbridge Common Shares determined by dividing the aggregate of $25.00, plus an amount equal to accrued and unpaid dividends up to but excluding the final redemption date, by the greater of $2.00 (as adjusted) and 90% of the US dollar equivalent of weighted average trading price of the Falconbridge Common Shares on the TSX (or, if traded on the TSX in U.S. dollars, the volume weighted average trading price of the Falconbridge Common Shares on the TSX) for a period of 20 consecutive trading days ending on the fourth day prior to the date (if such date is a trading day) specified for conversion.

"Change of Control Event" means the occurrence of:

(i) the first date of public announcement (which, for purposes of this definition, includes, without limitation, a report filed pursuant to section 101 of the *Securities Act* (Ontario)) by Falconbridge or a person who beneficially owns 30% or

more of the outstanding voting shares of Falconbridge (other than Brascan and except in certain limited circumstances, an **"Acquiring Person"**) of facts indicating that an Acquiring Person has become such;

(ii) the date of the commencement of, or first public announcement of the intent of any person (other than Brascan, Falconbridge or any subsidiary of Falconbridge) to commence a bid to acquire 30% or more of the voting shares of Falconbridge (other than by Brascan, Falconbridge, or any subsidiary of Falconbridge); or

(iii) the date of the commencement of, or first public announcement of the intent of any person (other than Brascan) to commence, a transaction which would result in any person beneficially owning 30% or more of the voting shares of Falconbridge (other than by Brascan, Falconbridge or any subsidiary of Falconbridge).

Retraction Rights:
Upon the occurrence of a Change of Control Event (unless the applicable bid or control transaction has been withdrawn, is terminated or expires without any person beneficially owning 30% of more of the voting shares of Falconbridge), a holder of Junior Preference Shares has the right to require Falconbridge to redeem all of the holder's then outstanding Junior Preference Shares at the same prices as set out under "Redemption".

Purchase for Cancellation:
Subject to applicable law and to the provisions described under "Restrictions on Dividends and Retirement and Issue of Shares", Falconbridge may at any time or times purchase for cancellation all or any part of the Junior Preference Shares in the open market, by private agreement or otherwise at the lowest price or prices at which, in the opinion of Falconbridge's board of directors, such shares are obtainable.

Voting Rights and Election of Directors:
Except as otherwise provided by law or as specifically set out in the Falconbridge Junior Preference Share provisions, and except for meetings of the Junior Preference Shares as a class and meetings of the Junior Preference Shares as series, the holders of Junior Preference Shares will not be entitled as such to receive notice of, or to attend, or to vote at, any meeting of shareholders of Falconbridge.

The Junior Preference Shares will be entitled, voting collectively, to elect two directors to the board of directors at each meeting of shareholders of Falconbridge at which directors are to be elected.

Forthwith upon the occurrence of a Board Event (as defined below), and for so long as it is continuing, the holders of the Junior Preference Shares will be entitled, voting collectively, to elect three additional directors (for a total of five).

"Board Event" means any one of the following events:

(i) if four quarterly dividends on the Junior Preference Shares are in arrears, whether or not such dividends have been declared and whether or not there are any monies of Falconbridge properly applicable to the payment of dividends; or

(iii) if the Adjusted Net Worth for any fiscal quarter is less than $2,500,000,000.

"Adjusted Net Worth" means, as at the end of any fiscal quarter, the aggregate value of:

(i) the outstanding share capital for all shares ranking junior to Falconbridge the Junior Preference Shares;

(ii) without duplication, any surplus, whether contributed or capital;

(iii) retained earnings; and

(iv) consolidated non-controlling interest,

all as set forth in Falconbridge's consolidated balance sheet for such fiscal quarter filed in accordance with applicable securities laws.

Shareholder Approvals:
In addition to any other approvals required by law, the approval of all amendments to the rights, privileges, restrictions and conditions attaching to the any of the Junior Preference Shares as a series and any other approval to be given by the holders of any of the Junior Preference Shares as a series may be given by a resolution carried by an affirmative vote of at least 66⅔% of the votes cast at a meeting at which the holders of a majority of the outstanding Junior Preference Shares of that series are present or represented by proxy or, if no quorum is present at such meeting, at an adjourned meeting at which the holders of Junior Preference Shares of that series then present would form the necessary quorum. At any meeting of holders of Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3, as a series, each such holder will be entitled to one vote in respect of each Falconbridge Junior Preference Share of that series held.

Covenants:
As long as the Junior Preference Shares having an aggregate issue price of at least $300 million remain outstanding, Falconbridge will not at any time, without the approval of the holders of the Junior Preference Shares, pay or set apart for payment any Extraordinary Dividend.

"Extraordinary Dividend" means:

(i) any dividend, other than a stock dividend paid wholly in Falconbridge Common Shares, declared or paid on the Falconbridge Common Shares that is, when taken together with the amount or value of all other dividends declared or paid in the 12 month period preceding the date of declaration of the dividend (the **"measurement period"**) more than 125% of the aggregate amount or value of the dividends declared or paid on the Falconbridge Common Shares, other than stock dividends paid wholly in Falconbridge Common Shares, during the 12 month period ended on the day prior to the measurement period (or, where there were no dividends paid in the 12 month period ended on the day prior to the measurement period, the period of 12 months ending on the date on which Falconbridge last paid a dividend, other than a stock dividend paid wholly in Falconbridge Common Shares, on the Falconbridge Common Shares); or

(ii) any dividend, other than a stock dividend paid wholly in Falconbridge Common Shares, declared or paid on the Falconbridge Common Shares that results in the Falconbridge Annual Dividend Rate exceeding a 10% compound annual growth rate, measured from and following May 4, 2005. For this purpose, the **"Falconbridge Annual Dividend Rate"** is initially the aggregate amount or value of all dividends declared or paid on the Falconbridge Common Shares, other than stock dividends paid wholly in Falconbridge Common Shares, in the 12 month period immediately preceding May 4, 2005 and thereafter is the aggregate amount or value of all dividends declared or paid in any 12 month period immediately preceding the date of declaration of any other dividend on the Falconbridge Common Shares, together with the dividend then being declared; or

(iii) any other "special" dividend on, or distribution with respect to, the Falconbridge Common Shares which is, by its terms or declared intent, declared and paid outside the normal operations or normal dividend procedures of Falconbridge.

From and after June 30, 2010, Falconbridge will apply the full net proceeds from (i) the issuance of Falconbridge Common Shares, Preferred Shares, Junior Preference Shares or any securities that, under Canadian generally accepted accounting principles, would be treated as equity on the balance sheet of Falconbridge (collectively, **"Equity Securities"**) for cash (other than in certain limited circumstances) or (ii) the sale of any capital assets outside of the ordinary course of business with a sale price exceeding Cdn$250 million, to the redemption of the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 and Junior Preference Shares, Series 3.

Restrictions on Dividends and Retirement and Issue of Shares:
As long as any Junior Preference Shares are outstanding, Falconbridge may not at any time, without the approval of the holders of the Junior Preference Shares:

(i) declare, pay or set apart for payment any dividends (other than stock dividends payable in shares of Falconbridge ranking junior to the Junior Preference Shares, Series 1) on shares of Falconbridge ranking junior to the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3;

(ii) except out of the net cash proceeds of a substantially concurrent issue of shares of Falconbridge ranking junior to the Junior Preference Shares, Series 1, redeem or call for redemption, purchase or otherwise pay off, retire or make any return of capital in respect of any shares of Falconbridge ranking as to capital junior to the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3;

(iii) redeem or call for redemption, purchase or otherwise retire for value or make any return of capital in respect of less than all of the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3 then outstanding;

(iv) except pursuant to any purchase obligation, sinking fund, retraction privilege or mandatory redemption provisions attaching thereto, redeem or call for redemption, purchase or otherwise pay off, retire or make any return of capital in respect of any Preferred Shares, ranking on a parity with the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3; or

(v) issue any additional Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3 or any shares ranking senior to or on a parity with the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3

unless, in each such case, all accrued dividends up to and including those payable on the dividend payment date for the last completed period for which dividends are payable on the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3 in respect of which the rights of holders have not been extinguished, and all dividends then accrued on all other shares ranking senior to or on a parity with the Junior Preference Shares, Series 1, Junior Preference Shares, Series 2 or Junior Preference Shares, Series 3 with respect to the payment of dividends up to the immediately preceding respective date or dates for payment in respect of which the rights of holders of those shares have not been extinguished, have been declared, paid or set apart for payment.

Additional Series:
As long as any of the Junior Preference Shares are outstanding, Falconbridge may not issue any additional Preferred Shares, other than Preferred Shares, Series F issuable upon the conversion of Preferred Shares, Series G, Preferred Shares, Series G issuable upon the conversion of Preferred Shares, Series F, Preferred Shares, Series 2 issuable upon the conversion of Preferred Shares, Series 3 and Preferred Shares, Series 3 issuable upon the conversion of Preferred Shares, Series 2 without the approval of the holders of the Junior Preference Shares, expressed by resolution of the holders of all such shares voting together, given by a resolution carried by an affirmative vote of at least 66⅔% of the votes cast at a meeting at which the holders of a majority of the outstanding Junior Preference Shares are present or represented by proxy or, if no quorum is present at such meeting, at an adjourned meeting at which the holders of Junior Preference Shares then present would form the necessary quorum.

Tax on Dividends:
Corporate holders of Junior Preference Shares will not be required to pay tax under Part IV.1 of the Tax Act on dividends received on such shares.

Falconbridge Participating Shares

The Falconbridge board of directors may, by resolution, fix from time to time before the issue thereof, the number of Falconbridge Participating Shares in, and determine the designation, rights, privileges, restrictions and conditions attaching to the shares of each series of Falconbridge Participating Shares. Each Falconbridge Participating Share entitles the holder to participate rateably with the holders of Common Shares in any distribution of the assets of Falconbridge upon liquidation, dissolution or winding-up, subject to the prior rights of Preferred Shares. Each series of Falconbridge Participating Shares ranks on a parity with shares of every other series with respect to priority, in the distribution of assets upon liquidation, dissolution or winding-up.

6. Market for Securities

Our common shares are listed and posted for trading on the Toronto Stock Exchange ("TSX") (trading symbol "FAL.LV") and on The New York Stock Exchange (trading symbol "FAL"). Our Preferred Shares, Series F (FAL.PR.F), Series G (FAL.PR.G), Series H (FAL.PR.H), Series 2 (FAL.PR.A), and Series 3 (FAL.PR.B) as well as our Junior Preference Shares, Series 1 (FAL.PR.X), Series 2 (FAL.PR.Y) and Series 3 (FAL.PR.Z) are also listed and posted for trading on the TSX.

6.1 Trading Price and Volume

The following table sets forth the price range per share and trading volume on the TSX for the Common Shares, for the fiscal year ended December 31, 2005.

	Common Shares		
2005	Volume (millions)	High (Cdn$)	Low
January	12.1686	20.98	19.67

6.2 Prior Sales

Our Preferred Shares, Series 1 are not listed or quoted on a marketplace. During the most recently completed financial year, no Preferred Shares, Series 1 have been sold.

6.3 Ownership of Common Shares

As of December 31, 2005, we estimate that approximately 63.6% of our common shares are held by shareholders of record resident in Canada, 16.5% by shareholders of record resident in the United States and 19.9% by shareholders of record resident in other countries.

7. Credit Ratings

The Company currently has the following ratings on its publicly traded debt and preferred share securities:

Approved Rating Organization	Long Term Debt	Short Term Debt	Preferred Shares
Dominion Bond Rating Service	BBB (high)	R-1(low)	Pfd-3 (high)
Moody's Investor Service	Baa3		
Standard & Poor's	BBB–	A-3	P-3

Standard & Poor's ("S&P") long-term ratings are on a rating scale that ranges from AAA to D, which represents the range from highest to lowest quality of such securities rated. According to the S&P rating system, debt securities rated BBB exhibit adequate protection parameters. The ratings from AA to CCC may be modified by the addition of a plus (+) or minus (–) sign to show relative standing within the major rating categories.

On March 9, 2005 following the announcement of Noranda's plans to acquire the remainder of Former Falconbridge and to issues $1.25 billion of Junior Preference Shares, S&P placed us on Credit Watch (negative). On May 25, 2005, following the successful completion of the announced transaction, S&P affirmed the Company's BBB- credit rating and removed us from their Credit Watch (negative) list. On October 11, 2005, S&P once again placed the Company's ratings on CreditWatch (negative) following the announcement by Inco Limited that it had made a friendly offer to acquire 100% of the outstanding common shares of the Company.

Moody's Investors Service ("Moody's") long-term ratings are on a rating scale from Aaa to C, which represents the range from highest to lowest quality of such securities rated. According to the Moody's rating system, debt securities rated Baa are considered as medium grade obligations. Moody's applies numerical modifiers 1, 2, and 3 in each generic rating classification from Aa through Caa in its corporate bond rating system. The modifier 1 indicates that the issue ranks in the higher end of its generic rating category, the modifier 2 indicates a mid-range ranking and the modifier 3 indicates that the issue ranks in the lower end of its generic rating category.

On May 26, 2005, following the successful takeover bid of Former Falconbridge, Moody's affirmed the Company's debt ratings. Moody's also affirmed our long-term debt ratings at Baa3 on October 11, 2005, following Inco Limited's announced offer to acquire 100% of the outstanding common shares of the Company.

Dominion Bond Rating Service's ("DBRS") long-term ratings are on a rating scale that ranges from AAA to D, which represents the range from highest to lowest quality of such securities rated. According to the DBRS rating system, debt securities rated BBB are of adequate credit quality. The assignment of a "(high)" or "(low)" modifier within each rating category indicates relative standing within such category.

On June 30, 2005, following the formal amalgamation of Noranda Inc. and Former Falconbridge, DBRS upgraded the Company's Senior Debt rating from BBB (low) to BBB (high), and the Company's Short-term Debt rating from R2 (high) to R1 (low). On October 11, 2005, DBRS placed the ratings of the Company "Under Review with Developing Implications," following Inco Limited's announced offer to acquire 100% of the outstanding common shares of the Company.

The credit ratings assigned by the rating organizations are not recommendations to buy, sell, or hold securities and may be subject to revision or withdrawal at any time by the rating organization.

8. Directors and Executive Officers

8.1 Directors

The names, committee memberships (as at the date hereof), province or state of residence, principal occupations within the five preceding years and periods of service of our directors as directors of Falconbridge are as follows:

As of December 31, 2005, the directors and executive officers of the Company, as a group, beneficially owned, directly or indirectly, or exercised control or direction over approximately 396,239 common shares, representing less than 1% of the Company's outstanding common shares, and less than 1% of each class of voting securities of any of the Company's subsidiaries. The information as to securities beneficially owned or over which control or direction is exercised, not being within our knowledge, has been furnished by our directors and executive officers individually.

8.3 Cease Trade Orders, Bankruptcies, Penalties or Sanctions

To the knowledge of the Company, after reasonable enquiry, no director or executive officer of the Company is or has been, in the last 10 years, a director or executive officer of a company that, while that person was acting in that capacity or within a year of that person ceasing to act in that capacity, was the subject of a cease trader order, became bankrupt or made a proposal under any legislation relating to bankruptcy or insolvency, except for Mr. G. Edmund King who was, but is no longer, a member of the board of directors of Afton Food Group Inc., which filed for creditor protection under the *Companies' Creditors Arrangement Act* (Canada) in 2004.

9. Audit Committee

Audit Committee Mandate

The text of the Audit Committee terms of reference (acting as its mandate) adopted by the Company's Board of Directors is attached hereto as Schedule "A".

Composition of the Audit Committee

Prior to the amalgamation of Noranda and Former Falconbridge, the Audit Committee of Noranda consisted of André Bérard (Chair), James W. McCutcheon and Norman R. Gish. The Audit Committee of Falconbridge presently comprises André Bérard (Chair), James W. McCutcheon, Mary A. Mogford and Neville W. Kirchmann.

The Board of Directors believes that the composition of the Audit Committee reflects a high level of financial literacy and expertise. Each member of the Audit Committee has been determined by the Board to be "independent" and "financially literate" as such terms are defined under Canadian and United States securities laws and stock exchange rules. In addition,

the Board has determined that at least one member, Mr. Bérard, the Chair of the Audit Committee, is an "audit committee financial expert" for the purposes of audit committee rules adopted by the United States Securities and Exchange Commission. The Board has made these determinations based on the education as well as the breadth and depth of experience of each member of the Committee. The following is a brief summary of the education and experience of each member of the Committee that is relevant to the performance of his or her responsibilities as an Audit Committee member:

1) André Bérard

Mr. Bérard was appointed to the Company's Board in 1990. Mr. Bérard has spent over four decades with the National Bank of Canada including as its former Chief Executive Officer and Chairman of the Board, and he now serves as a Director. Mr. Bérard is also a member of the Advisory Committee to the Prime Minister on the Business/Government Executive Exchange Program and of the Policy Committee of the Business Council on National Issues.

2) James W. McCutcheon

Mr. McCutcheon was appointed to the Company's Board in 1993. He received his LLB from Osgoode Hall Law School in 1960 and was legal counsel in the Corporate Finance and Mergers and Acquisition Group at McCarthy Tétrault LLP. As a lawyer who has acted throughout his career for both public and private corporations, Mr. McCutcheon participated in complex business transactions requiring an in-depth knowledge of financial statements.

3) Mary A. Mogford

Ms. Mogford was appointed to the Company's Board in 1995. In her role as former Ontario Deputy Minister of Finance (Treasury and Economics), Ms. Mogford assisted the Minister of Finance in managing the fiscal, financial and related regulatory affairs of the Province of Ontario. Ms. Mogford has also served on the boards of directors of other TSX and NYSE-listed public companies since 1990, and has been a member of five audit committees during this time period.

4) Neville W. Kirchmann

Mr. Kirchmann was appointed to the Company's Board in 1997. Mr. Kirchmann acquired significant experience and exposure to complex accounting and financial reporting issues in the course of his 30 years with The Coca-Cola Company, during which time he served as President and CEO of Coca-Cola, Canada and South Africa. Mr. Kirchmann is a Chartered Accountant (South Africa).

Pre-Approval Policies and Procedures

The Audit Committee has instituted a policy to pre-approve audit and non-audit services. The Chair of the Audit Committee is given limited delegated authority from time to time by the Committee to pre-approve permitted non-audit services. The Audit Committee also considers on a continuing basis whether the provision of non-audit services is compatible with maintaining the independence of the external auditors.

External Auditor Service Fees

Aggregate fees billed to the Company and its reporting issuer subsidiaries for the fiscal years ended December 31, 2005 and 2004 by Ernst & Young are set forth in the following table:

	Falconbridge (Cdn$) 2005/2004	Reporting Issuer Subsidiaries (Cdn$) 2005/2004	Total (Cdn$) 2005/2004
Audit fees	3,644,869/2,031,663	27,500/14,939	3,672,369/2,046,602
Audit-related fees	1,411,313/392,914	—/20,393	1,411,313/413,307
Tax fees	1,233,735/2,485,579	—/97,525	1,233,735/2,583,104
All other fees	125,000/—	—/—	125,000/—
Total	6,414,917/4,910,156	27,500/132,857	6,442,417/5,043,013

Fees for audit services include fees associated with the annual audit and fees associated with regulatory filings. Audit-related fees are for services provided by Ernst & Young that are reasonably related to its role as auditor, and consist

principally of audits of employee benefit funds and advice on accounting standards and other specific transactions. Tax fees include tax compliance, tax advice and tax planning, including expatriate tax services. All other fees would principally include all other support and advisory services.

It is the Company's policy not to engage its auditors to provide services in connection with financial information systems design and implementation.

10. Interest of Management and others in Material Transactions

Brascan, which was a majority shareholder of the Company prior to the amalgamation of Noranda and Former Falconbridge, sold its ownership in the Company in August, 2005. The transactions of the Company with Brascan and its subsidiaries prior to the sale of its ownership are as follows:

Noranda Aluminum Inc. ("Aluminum"), a wholly-owned subsidiary of Noranda, entered into a power supply agreement with Brascan Energy Marketing Inc. ("BEMI"), a wholly-owned subsidiary of Brascan, on June 1, 2003. Under the arrangement, BEMI is obliged to provide Aluminum's New Madrid primary aluminum smelter with up to 490 MWh of electricity annually for a two-year period commencing June 1, 2003 at rates with a variable component based on market prices. Aluminum has purchased $52 million (2004 - $127) under this contract. Upon completion of the contract on June 1, 2005, the contract was not renewed.

The Company has sold certain trade receivables to a securitization trust which is owned by Brascan for a total of $4 (2004- $315) in cash, under an agreement that came into effect in November 2003. The arrangement was terminated in October, 2005.

Brascan Financial Corporation, a subsidiary of Brascan, provided the Company with a committed credit facility in the principal amount of Cdn$25 million with an expiry date of January 31, 2006. The facility was cancelled after it sold its ownership in the Company in August, 2005.

11. Transfer Agents And Registrars

The transfer agent and registrar of all of the Company's outstanding shares is CIBC Mellon Trust Company, P.O. Box 7010 Adelaide Street Postal Station Toronto, Ontario, M5C 2W9.

12. Experts

12.1 Names of Experts

Ernst & Young LLP ("Ernst & Young") have prepared the auditor report on the audited consolidated financial statements of the Company as at December 31, 2005 and 2004 and for the years then ended.

Deloitte & Touche LLP ("Deloitte & Touche") have prepared their auditor report on the consolidated statements of financial position of Former Falconbride as at December 31, 2004 and 2003; and the consolidated statements of earnings, shareholders' equity and cash flows for the years then ended.

McCarthy Tétrault LLP ("McCarthy Tétrault") have prepared a tax opinion in connection with the joint management information circular of Noranda and Former Falconbridge dated June 2, 2005.

Fried, Frank, Harris, Shriver & Jacobson LLP ("Fried Frank") have prepared a tax opinion in connection with the joint management information circular of Noranda and Former Falconbridge dated June 2, 2005.

TD Securities Inc. ("TD Securities"), the independent valuator retained by the Special Committee of Former Falconbridge in connection with its consideration of the offer by Noranda to acquire all of the outstanding common shares of Former Falconbridge not owned by Noranda or any of its affiliates, prepared a Valuation and Fairness Opinion.

12.2 Interests of Experts

As of December 31, 2005, neither Deloitte & Touche, McCarthy Tétrault nor Fried Frank beneficially owned, directly or indirectly, or exercised control or direction over more than 1% of the Company's outstanding common shares or more than 1% of each class of voting securities of any of the Company's subsidiaries. The information as to securities beneficially

owned or over which control or direction is exercised, not being within our knowledge, has been furnished by such experts.

Ernst & Young is independent with respect to the Company within the meaning of the Rules of Professional Conduct of the Institute of Chartered Accountants of Ontario.

TD Securities acts as a trader and a dealer, both as principal and agent, in major financial markets and, as such, may have and may in future have positions in the securities of the Company and, from time to time, may have executed or may execute transactions on behalf of such companies or other clients for which it may have received or may receive compensation. As an investment dealer, TD Securities conducts research on securities and may, in the ordinary course of business, provide research reports and investment advice to its clients on investment matters with respect to the Company.

13. Material Contracts

The only material contracts entered into by Falconbridge within the last year other than in the ordinary course of business are as follows:

- **Amalgamation Agreement dated June 30, 2005** – On June 30, 2005, Noranda completed the second step of the acquisition by proceeding with its intent to acquire the remaining 9.2% of the Former Falconbridge common shares and assumed 100% of the preferred shares and stock options obligations of the Former Falconbridge. The second step of the acquisition was completed by way of an amalgamation of Noranda and the Former Falconbridge and the newly amalgamated company is continued under the name Falconbridge Limited.

- **Support Agreement dated October 10, 2005, as amended on January 12, 2006, February 20, 2006 and March 21, 2006** – On October 10, 2005, Falconbridge and Inco Limited entered into a support agreement pursuant to which Inco agreed that, subject to the terms and conditions of the Support Agreement, it would make an offer (the "Offer") to acquire all of the outstanding common shares of Falconbridge, pursuant to which each holder of Falconbridge common shares may elect to receive either Cdn$34.00 in cash per Falconbridge common share held or 0.6713 of a common share of Inco plus Cdn$0.05 in cash for each Falconbridge common share held, subject, in each case, to proration based upon the maximum amount of cash available, and the maximum number of Inco common shares available under the Offer.

14. Additional Information

The Company will provide to any person without charge, upon request to the Corporate Secretary of the Company at its registered office, BCE Place, 181 Bay Street, Suite 200, Toronto, Ontario M5J 2T3, one copy of:

(i) this Annual Information Form;

(ii) the Company's most recent Management Information Circular; and

(iii) any unaudited interim reports to shareholders issued subsequent to such Consolidated Financial Statements.

Additional information, including directors' and officers' compensation, personal loans to directors and officers, principal holders of Falconbridge's securities and securities authorized for issuance under equity compensation plans, if applicable, is contained in our management information circular for our most recent annual meeting of shareholders that involved the election of directors.

Current financial information on the Company is provided in the Company's comparative financial statements and Management's Discussion and Analysis of Financial Condition and Results of Operations for the most recently completed financial year.

These documents, as well as the Company's annual and quarterly reports and news releases, are also available on Falconbridge's website at www.falconbridge.com.

Additional information relating to Falconbridge is available on SEDAR at www.sedar.com and on EDGAR at www.sec.gov.

SCHEDULE "A"
FALCONBRIDGE LIMITED

AUDIT COMMITTEE – TERMS OF REFERENCE

The purpose of the Audit Committee shall be to assist the Board in its oversight of the integrity of the financial statements of the Company, of the Company's compliance with legal and regulatory requirements, of the independence and qualification of the independent auditor, and of the performance of the Company's internal audit function and its independent auditors.

Chair

The Board appoints or re-appoints the Chair of the Committee annually when it completes the appointments for all Board committee members following the Annual General Meeting of shareholders. In selecting the Chair, the Board takes into consideration those directors who bring background skills and experience relevant to financial statement review and analysis. The Chair shall also be "financially literate" and considered an "audit committee financial expert", as such terms are defined under applicable Canadian and U.S. regulatory requirements.

The Chair shall provide leadership to Committee members in fulfilling the mandate set out in these terms of reference. He or she shall work with the Chief Executive Officer and the Chairman of the Board, liaising with the Secretary, in planning Committee meetings and agendas. The Chair of the Committee reports to the Board on behalf of the Committee on the matters and issues covered or determined at each Committee meeting.

Responsibilities

In assisting the Board in fulfilling its responsibilities relating to the Company's corporate accounting and reporting practices the Audit Committee shall:

1. review and discuss with management and the independent auditor, the annual audited financial statements, the quarterly financial statements, Management's Discussion and Analysis accompanying such financial statements and any other matter required to be reviewed under applicable legal, regulatory or stock exchange requirements, and report thereon to the Board;

2. review the results of the external audits and any changes in accounting practices or policies and the financial statement impact thereof;

3. review the Annual Information Form of the Company and to report thereon to the Board;

4. review the terms of engagement and audit plans of the external auditors and determine through discussion with the auditors that no restrictions were placed by management on the scope of their examination or on its implementation;

5. assess management's programs and policies regarding the adequacy and effectiveness of internal controls over the accounting and financial reporting system within the Company;

6. evaluate and recommend to the Board a firm of independent auditors for appointment by the shareholders and report to the Board on the fees and expenses of such auditors. The Committee shall have the authority and responsibility to, if necessary, replace the independent auditor. The Committee shall have the authority to approve all audit engagement fees and terms and the Committee, or a member of the Committee, must review and pre-approve any non-audit service provided to the Company by the Company's independent auditor and consider the impact on the independence of the auditor;

7. enquire into and report regularly to the Board, with associated recommendations, on any matter referred to the Committee;

8. discuss with management and the independent auditor, as appropriate, earnings press releases and any financial information provided to analysts and rating agencies;

9. discuss with management and the independent auditor, as appropriate, any audit problems or difficulties and management's response, and the Company's risk assessment and risk management policies, including the Company's major financial risk exposure and steps taken by management to monitor and mitigate such exposure;

10. obtain and review at least annually a formal written report from the independent auditor delineating: the auditing firm's procedures for reviewing internal controls; any material issues raised within the preceding five years by the auditing firm's internal quality-control reviews, by peer reviews of the firm, or by any governmental or other inquiry or investigation relating to any audit conducted by the firm. The Committee will also review steps taken by the auditing firm to address any findings in any of the foregoing reviews. Also, in order to assess auditor independence, the Committee will review at least annually all relationships between the independent auditor and the Company;

11. prepare and publish an annual committee report in the Company's proxy circular;

12. conduct an annual self-evaluation in respect of the effectiveness of the Committee;

13. set clear hiring policies for employees or former employees of the independent auditors; and

14. establish procedures for the receipt, retention and treatment of complaints regarding accounting, internal accounting controls or auditing matters, including procedures for the confidential, anonymous submission by employees of the Company of concerns regarding questionable accounting or auditing matters.

At each meeting, the Committee shall hold an *in camera* session without members of management present.

The Committee shall have authority to retain such outside counsel, experts and other advisors as the Committee may deem appropriate in its sole discretion. The Committee shall have sole authority to approve related fees and retention terms.

The Committee shall meet separately at least quarterly with each of management and the Company's independent auditors.

The Committee shall review at least annually the adequacy of this charter and recommend any proposed changes to the Board for approval.

Committee Composition:

Three or more members, none of whom shall be considered an affiliated person under the *Sarbanes-Oxley Act of 2002*, and all of whom shall be independent directors pursuant to Multilateral Instrument 52-110 *Audit Committees* and under the standards of applicable stock exchange rules including the New York Stock Exchange's rules for members of the audit committee; provided that, none of the Committee members shall be related to the principal shareholder of the Company. All members shall have sufficient financial experience, financial literacy and ability to enable them to discharge their responsibilities and at least one member shall be an "audit committee financial expert" (under applicable U.S. regulatory requirements).

The Company's Governance Committee shall, on an annual basis and in consultation with the Chair of the Committee, review the Committee membership for any appropriate changes or changes to its structure, as well as the required qualifications for any new members.

Quorum:

Majority of members.

This is the end of the description of the business of Falconbridge as extracted without material amendment from the Falconbridge Annual Information Form dated 22 March 2006.

Pro forma financial information on the amalgamation of Noranda and Former Falconbridge for the three months ended 31 March 2005 and the year ended 31 December 2004

The following financial information, on pages 135 to 142, has been extracted without material amendment from Noranda's F80 SEC filing dated 8 June 2005. The financial information comprises an unaudited pro forma consolidated balance sheet and a pro forma consolidated statement of operations in addition to notes to the pro forma consolidated financial statements and has been included for illustrative purposes only. This financial information does not represent pro forma financial information provided to illustrate how a significant gross change arising from a transaction might have affected the assets and liabilities and earnings of a company for the purposes of paragraph 20.2 of Annex I and Annex II of Commission Regulation (EC) No. 809/2004.

Notes to Pro Forma Consolidated Financial statements
Year ended December 31, 2004 and three months ended March 31, 2005
(unaudited)
(millions of US dollars, except per share amounts)

1. Basis of Presentation

The unaudited pro forma consolidated financial statements of Falconbridge Limited (the amalgamated company resulting from the amalgamation of Noranda Inc. ("Noranda") and Falconbridge Limited ("Falconbridge"), referred to herein as "Amalco") have been prepared in accordance with Canadian generally accepted accounting principles for inclusion of the following events:

(a) the transaction to purchase (the "Issuer Bid") 63,377,140 of its common shares in exchange for up to 50m junior preference shares of Noranda with an aggregate stated value of US$1,250m, which was completed on May 4, 2005 pursuant to the Offer to Exchange and Circular of Noranda dated March 24, 2005.

(b) the transaction to purchase 58,476,589 common shares of Falconbridge not already owned by Noranda or its affiliates on the basis of 1.77 Noranda common shares for each Falconbridge common share, which was completed on May 11, 2005 pursuant to the Offer to Exchange and Circular of Noranda dated March 24, 2005 ("the Noranda Offer") and brought Noranda ownership in Falconbridge common equity to 91%.

(c) the planned completion of the Noranda Offer and amalgamation of Noranda and Falconbridge under the Business Corporations Act (Ontario) by providing Falconbridge minority common shareholders, who represent 9% of Falconbridge common equity, the same consideration of 1.77 Noranda common shares for each Falconbridge common share as was offered under the Xstrata Offer, which is planned to be completed on or about June 30, 2005 pursuant to the Notice of Special Meetings and Joint Management Information Circular of Noranda Inc. and Falconbridge Limited dated June 2, 2005.

Subsequent, to these transactions each Falconbridge stock option, outstanding at the time of amalgamation will be exchanged for 1.77 Amalco stock options with vesting periods equal to the Falconbridge stock options originally granted. Holders of Noranda preferred shares or junior preference shares and holders of Falconbridge preferred shares will receive an equal number of preferred shares or junior preference shares of Amalco having the same attributes as the preferred shares held by them immediately prior to the amalgamation.

These unaudited pro forma consolidated financial statements are not intended to reflect the financial position and results of operations which would have actually resulted had the transactions and other adjustments been effected on the dates indicated. Further, the pro forma results of operations are not necessarily indicative of the results of operations that may be obtained by Amalco in the future.

2. Changes in Accounting Standards

The consolidated statement of operations for the year ended December 31, 2004 are adjusted to reflect Noranda's adoption of the new Canadian Institute of Chartered Accountants (CICA) recommendations for presentation of convertible debentures and preferred shares (CICA 3860).

(a) Convertible Debentures

In accordance with the amended standard under CICA 3860, Noranda has presented the liability component of its Cdn$150 convertible debentures as long term debt and the equity component as contributed surplus. The liability represents the present value of the principal payment of the debentures and the equity component represents the fair value of the holder's conversion feature. The stated interest payments and accretion expense from adjusting the time value of the principal of the debenture over time are recorded as interest expense in the consolidated statement of operations. The related foreign exchange difference from translation of the Canadian convertible debentures is included in the cost of operations.

(b) Preferred Shares Series H

Noranda has Cdn$150m of cumulative preferred shares, series H, which provide the holders with an entitlement to convert the shares to Noranda common shares after a specified date and were previously reported as equity instruments in accordance with their legal form. As a result of the new accounting recommendations under CICA 3860 on presentation of financial instruments, the preferred shares have been reclassified as liabilities because their conversion feature represents a fixed obligation to Noranda. The dividends paid are reported as interest expense in the consolidated statement of operations. The related foreign exchange difference from translation of the Canadian preferred shares is included in the cost of operations.

3. Pro Forma Assumptions and Adjustments

(a) The unaudited pro forma consolidated financial statements have been prepared assuming that the following transactions had been completed and adjustments had been effected as of January 1, 2004 for the consolidated statement of operations and as of March 31, 2005 for the consolidated balance sheet:

(i) the completion of the Issuer Bid resulting in Noranda exchanging 63,377,140 common shares for 20 million Junior Preference Shares, Series 1 (the "Series 1 Shares"), 20 million Junior Preference Shares, Series 2 (the "Series 2 Shares") and 10 million Junior Preference Shares, Series 3 (the "Series 3 Shares") with an aggregate assumed fair value of US$1,250m; and

(ii) the completion of the Noranda offer resulting in Noranda exchanging 1.77 Noranda common shares for each Falconbridge common share. As of March 31, 2005, there were 74,964,198 Falconbridge common shares outstanding that Noranda did not already own and from April 1 to May 24, 2005, approximately 67,534 Falconbridge stock options were exercised. In calculating the purchase price, these exercised Falconbridge stock options are included in the number of Falconbridge common shares to be purchased by Noranda. It is assumed that 132,806,165 Noranda common shares would be issued on completion of the Noranda offer.

(b) As a result of the Noranda Offer, Noranda will own 100% of the common shares of Falconbridge. The acquisition is accounted for using the purchase method of accounting. The pro forma adjustments reflect Noranda's acquisition of the remaining 41.50% of Falconbridge's net assets at their fair values as at March 31, 2005 and accounting for Falconbridge as a wholly-owned subsidiary.

The determination of the purchase price based on management's preliminary estimate is as follows:

Purchase price (unaudited)

(US$ millions)	
Consideration in Noranda common shares	2,533
Transaction costs	20
Total	2,553

The purchase price was calculated using the following assumption:

The price at which Noranda common shares are issued is Cdn$23.21, the average closing price on the Toronto Stock Exchange for the three days prior to, and three days after, the announcement of the Noranda Offer, at a U.S. exchange rate of Cdn$1 = US$0.8218, the noon rate on March 8, 2005.

The allocation of the purchase price of the remaining 41.50% of Falconbridge common equity, based on management's preliminary estimate, is as follows:

On 8 February 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE 2005 NET INCOME INCREASES 67% TO US$872 MILLION
Reports fourth quarter 2005 net income of $280 million

TORONTO, Ontario, February 8, 2005 – Falconbridge Limited today reported 2005 net income of $872 million (basic earnings per share of $2.52 and diluted earnings per share of $2.50). This compares with 2004 net income of $521 million (basic earnings per share of $1.71 and diluted earnings per share of $1.70). Net income was $280 million (basic earnings per share of $0.75 and diluted earnings per share of $0.74) for the fourth quarter of 2005. This compares with net income of $143 million (basic earnings per share of $0.47 and diluted earnings per share of $0.47) for the fourth quarter of 2004.

(Note: 2004 financial results, as presented in this press release, represent the consolidated results of Noranda Inc., which was renamed Falconbridge Limited after the amalgamation on June 30, 2005. This press release contains forward-looking information. See "Forward-looking Information".)

Commentary

"Falconbridge took advantage of the strong fundamentals of our business in 2005," said Derek Pannell, Chief Executive Officer of Falconbridge. "Higher prices for all of our metals, along with strong operational performance, resulted in outstanding financial results. We also created value for our shareholders with the amalgamation of Noranda and Falconbridge, followed by the proposed friendly takeover of the combined company by Inco."
"Heading into 2006, metals prices continue to climb, operations continue to perform and we are due to come together with Inco in the first half of the year, creating a premier global nickel and copper mining and metals company. We are confident that the combination of Inco and Falconbridge offers great value for shareholders, in both the near and long term."

2005 Highlights

Financial Results and Position

$ millions, except per share information	Q4 2005	Q4 2004	Y-O-Y Change	FY 2005	FY 2004	Y-O-Y Change
Revenues	**2,165**	**1,867**	**16%**	**8,148**	**6,764**	**20%**
Income generated by operating assets*	**463**	**369**	**25%**	**1,820**	**1,391**	**31%**
Net income	**280**	**143**	**96%**	**872**	**521**	**67%**
Basic earnings per common share	**0.75**	**0.47**	**60%**	**2.52**	**1.71**	**47%**
Diluted earnings per common share	**0.74**	**0.47**	**57%**	**2.50**	**1.70**	**47%**

* Defined as earnings before net interest, corporate and general administration, research, development, exploration, minority interest, taxes, and other income

- Achieved net income of $872 million in FY 2005, a 67% increase from FY 2004
- FY 2005 realized prices were higher (vs. FY 2004) for all metals: copper 32%, nickel 7%, zinc 35%, aluminum 8%; partially offset by increased energy costs and a weaker U.S. dollar
- Repaid approximately $1 billion in debt including $400 million of maturing debentures and $500 million in Junior Preference Shares

Production, Operations & Projects

- Increased output of copper anodes, copper cathodes and refined nickel by 5%, 3% and 13%, respectively, in FY 2005, versus FY 2004
- Record refined nickel production of 114,000 tonnes; continued strong performance at Altonorte smelter, Lomas Bayas mine and Antamina mine, which also achieved significant improvements on molybdenum recoveries; lower head grades and material handling problems at Collahuasi led to lower mined copper production
- Capacity enhancements included increased capacity at Horne copper smelter and CCR refinery, commercial tolling of molybdenum concentrates at Altonorte and a new molybdenum recovery circuit at Collahuasi

- Advanced growth opportunities: Nickel Rim South development, Kidd Creek mine deepening, Raglan optimization, Kabanga scoping study and Koniambo orebody vesting

- Completed 154 Six Sigma projects during 2005 for total annualized benefit of $60 million at an average savings value of $390,000 per project

Falconbridge Endorses Inco Offer

On October 11, 2005, Inco Limited announced an offer to acquire all outstanding common shares of Falconbridge. The offer is comprised of part cash and part Inco common shares, which when prorated subject to the maximum amounts offered would provide Cdn$7.50 and 0.524 Inco shares for each Falconbridge common share. Both Boards of Directors unanimously endorsed the acquisition offer and the Falconbridge Board recommended the Company's shareholders tender their shares to the offer, which remains open for acceptance to February 28, 2006.

The combined organization, which would be known as Inco Limited, will be one of the world's premier mining and metals companies. It would be the world's largest producer of nickel and eighth-largest producer of copper, and would also operate integrated zinc and aluminum businesses. The new company would have one of the mining industry's most attractive portfolios of low-cost, profitable growth projects. The new Inco would benefit from estimated annual synergies of approximately $350 million.

Inco has obtained regulatory clearances from the Canadian Competition Bureau. It continues to proceed on an expedited basis to meet all information and other requests from antitrust/competition authorities reviewing the pending acquisition and to work with the U.S. Department of Justice and competition authorities in Europe to obtain the remaining required regulatory clearances for the transaction.

Statements regarding the combination of Falconbridge and Inco are subject to various risks and assumptions. See "Forward-looking Information".

Financial Results

FY 2005

Total revenues increased to $8.1 billion during 2005, a 19% increase over the $6.8 billion in revenue generated in 2004, due to stronger metals prices and higher copper and nickel sales volumes. Falconbridge generated net income of $872 million, or $2.50 per share on a diluted basis, an increase of $351 million from the net income of $521 million, or $1.70 per share on a diluted basis in 2004. The improved results were mostly attributable to higher base metals prices. This was partially offset by the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations and increasing energy and supply costs throughout the operations.

Net income for 2005 includes a loss of $8 million, or $0.02 per basic share and $0.02 per diluted share from discontinued operations. This compares to a loss of $73 million, or $0.25 per basic share and $0.25 per diluted share from discontinued operations in 2004.

Discontinued operations reflect the operating results of American Racing prior to its disposal in June 2005 and the net gain recorded from its disposal.

Fourth Quarter 2005

Revenues for the fourth quarter of 2005 were $2.2 billion, 16% higher than revenues of $1.9 billion in the same period of 2004. The increase was mainly due to higher realized metal prices and copper and nickel sales volumes, increased revenue contribution from by-product molybdenum credits and improved copper concentrate treatment and refining terms. Business unit revenues were 28% higher for copper, 1% lower for nickel, 30% higher for zinc and 5% lower for aluminum.

Operating expenses totaled $1.7 billion in the fourth quarter, 13% higher than $1.5 billion in the same period last year. Mining, processing and refining costs increased to $685 million from $547 million in the fourth quarter of 2004 due to the higher levels of copper anode and cathode production, increased refined nickel production, higher energy and supplies/consumables costs, and the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations. In addition, 2005 mining, processing and refining costs include a full quarter of costs from Gramercy and St.

Ann aluminum operations and the Montcalm nickel mine. The average value of the Canadian dollar increased to US$0.85 versus US$0.82 during the fourth quarter of 2004. Included in the cost of operations was a charge of $13 million related to the fair market value increments assumed as a result of the merger of Noranda and former Falconbridge at the end of June 2005.

The value of raw materials purchases was $867 million, 6% higher than $816 million in 2004 due to higher metal prices and increased custom feed processing at the Nikkelverk nickel refinery and at all copper smelting and refining operations. Higher purchased raw material values are recovered at the time of sale of the metals contained in the materials treated.

Depreciation, amortization and accretion expense increased to $150 million from $135 million a year ago, primarily due the amortization of the fair value increment related to the purchase of the Falconbridge minority shareholders' interest and the resulting increase in the book value of the assets acquired. Net interest expense increased to $36 million from $28 million in the fourth quarter of last year due to the impact of dividends paid on the junior preferred share liabilities issued pursuant to the issuer bid completed in early May 2005.

Minority interest in earnings of subsidiaries decreased to $1 million from $78 million, largely as a result of the elimination of the former Falconbridge minority share ownership. Tax expenses recorded increased to $118 million from $104 million during the fourth quarter of 2004, due to the overall increase in profitability.

Income generated by operating assets for the fourth quarter was $463 million, 25% higher than $369 million in the fourth quarter of 2004. Income from operating assets increased to $359 million in the copper business, decreased to $75 million in the nickel business, increased to $24 million in the zinc business and decreased to $21 million in the aluminum business.

Net income totaled $280 million, or $0.75 per basic common share and $0.74 per diluted common share for the fourth quarter 2005, 96% higher than net income of $143 million or $0.47 per basic and $0.47 per diluted common share in the same period of 2004. Higher net income reflects higher realized metal prices, significantly higher Antamina molybdenum concentrate sales and higher treatment and refining charges received at copper smelters and refineries.

Consolidated assets totaled $12.4 billion as at Dec. 31, 2005, compared with $9.6 billion at the end of 2004. The increase is primarily due to the increase in carrying values of assets in recognition of the value paid by Noranda to the former Falconbridge minority shareholders and the investment of additional capital in advancing brownfield expansion development projects.

Liquidity And Capital Initiatives

Falconbridge maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. Falconbridge's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new long and short term borrowings.

The Company's five-year committed bank facilities total $780 million. At December 31, 2005, these lines were essentially undrawn.

Cash generated from operations, before the net change in accounts receivables, payables and inventories, was $383 million during the fourth quarter of 2005 and $1,650 million for the entire year. Total liquidity remains strong, with over $1.6 billion of cash and undrawn lines at December 31, 2005. Long-term debt was $2.6 billion at year end. Falconbridge's net-debt-to-capitalization ratio stood at 36.7% at year end.

Investments in new production capacity such as the Nickel Rim South and Koniambo nickel projects totaled $126 million during the fourth quarter. For 2005, the Company's capital investments were $328 million for sustaining capital expenditures and approximately $409 million in new investments.

Statements regarding future financial requirements and fund of those requirements are subject to various risks and assumptions. See "Forward-looking Information".

Review of Operations

Copper Business Unit

	Q4 2005	Q4 2004	Y-O-Y Change (%)	FY 2005	FY 2004	Y-O-Y Change (%)
Production: mined copper (MT)	**108,800**	117,500	**(7%)**	**414,600**	430,400	**(4%)**
refined copper (MT)	**120,900**	133,800	**(10%)**	**505,300**	491,600	**3%**
mined zinc (MT)	**27,600**	38,900	**(29%)**	**182,200**	152,000	**20%**
refined zinc (MT)	**8,500**	33,900	**(75%)**	**113,700**	121,600	**(6%)**
Sales: contained copper (MT)	**231,500**	242,600	**(5%)**	**894,200**	886,900	**1%**
contained zinc (MT)	**31,900**	44,700	**(29%)**	**198,800**	187,200	**6%**
Revenues ($ millions)	**1,276**	997	**28%**	**4,421**	3,592	**23%**
Realized copper price ($/lb.)	**1.99**	1.43	**39%**	**1.71**	1.30	**32%**
Mining, processing and refining costs ($ millions)	**246**	227	**8%**	**993**	803	**24%**
Cash costs ($/lb. of copper)	**0.35**	0.43	**(19%)**	**0.31**	0.38	**(18%)**
Income from operating assets ($ millions)	**359**	170	**111%**	**1,086**	673	**61%**

Revenues: For the fourth quarter of 2005, consolidated revenues of $1,276 million increased 28% from $997 million in the fourth quarter of 2004. The increase reflects higher average realized copper, zinc, molybdenum and precious metals prices. Total sales of copper during the quarter were 231,500 tonnes versus 242,600 tonnes in the same period in 2004. Increased sales of CCR cathodes, Antamina concentrates, Altonorte anodes and Horne concentrates were more than offset by decreased sales of Collahuasi concentrates and Kidd Creek cathodes. Sales of by-product zinc metal from Kidd Creek were lower due to the one-month labour disruption at the Kidd Creek metallurgical operations. The realized copper price of $1.99/lb. increased by 39% in the quarter compared to $1.43/lb. realized in the same period in 2004.

Costs: Total operating expenses increased to $917 million from $827 million in the fourth quarter of 2004. Mining, processing and refining costs increased to $246 million from $227 million in the same period last year as a result of the impact of a weaker U.S. dollar and higher energy and supply costs. Purchased raw materials increased to $600 million from $534 million in the fourth quarter of 2004 due to the rise in copper prices. The operating cash cost of producing a pound of copper in the fourth quarter of 2005 decreased to $0.35/lb. from $0.43/lb. in the fourth quarter of 2004.

Income Generated by Operating Assets: Income generated by operating assets for the Copper Business in the fourth quarter of 2005 increased to $359 million from $170 million a year ago due to the impact of higher copper, zinc and molybdenum prices. Offsetting the stronger revenues were increased costs resulting from the impact of a weaker U.S. dollar on Canadian and South American operating costs, as well as higher energy and supply costs.

Production: During the fourth quarter of 2005, copper mine production from Canadian and South American operations totaled 108,800 tonnes, compared to 117,500 tonnes a year ago. Lower copper grades at Collahuasi more than offset higher production from Antamina and Kidd Creek. Refined copper production was 120,900 tonnes of copper cathode in the fourth quarter of 2005 versus 133,800 tonnes in the fourth quarter of 2004 as lower production from Kidd Creek more than offset increased production from CCR. Kidd Creek production of refined copper and zinc were impacted by a one-month strike in October 2005. By-product zinc-in-concentrate production decreased to 27,600 tonnes from 38,900 tonnes in the fourth quarter of 2004 due to lower zinc grades. Mined molybdenum-in-concentrate at Antamina increased to 800 tonnes from 600 tonnes due to improved recoveries.

Cash costs ($/lb. of nickel)	**4.03**	3.03	**33%**	**3.46**	2.93	**18%**
Income from operating assets ($ millions)	**75**	168	**(55%)**	**597**	637	**(6%)**

Revenues: For the fourth quarter of 2005, consolidated revenues of $489 million decreased from $495 million in the fourth quarter of 2004. Sales volumes of refined nickel increased 4% to 20,500 tonnes from 19,800 tonnes in the fourth quarter of 2004. At Falcondo, ferronickel sales volumes increased by 2% to 8,300 tonnes from 8,100 tonnes in the fourth quarter of 2004. In the fourth quarter 2005, by-product copper sales volumes of 13,700 tonnes increased 10% from 12,500 tonnes in the same period a year ago. Cobalt sales volumes decreased by 18% to 900 tonnes. Realized nickel prices of $5.88/lb. decreased by 9% in the quarter compared with $6.45/lb. in the same period in 2004. Realized ferronickel prices of $5.93/lb. decreased by 8% in the quarter compared with $6.42/lb. in the same period in 2004. Precious metals revenues increased by $5 million in the fourth quarter of 2005 compared to the same period in 2004.

Costs: Total operating expenses increased to $414 million from $327 million in the fourth quarter of 2004. Mining, processing and refining costs increased to $235 million from $174 million in the same period last year largely due to the exchange rate impact on operating costs at Canadian operations and increases in energy prices. In addition, 2005 mining, processing and refining costs include a full quarter of costs from the Montcalm nickel mine. The value of purchased raw materials increased to $131 million from $105 million in the fourth quarter of 2004 due to increased sales volumes. The operating cash cost per pound of mined nickel for all of Falconbridge (including INO and Falcondo) was $4.03 in the fourth quarter of 2005 compared with $3.05 for the same period in 2004. The operating cash cost of producing a pound of nickel from INO mines, was $3.52. The $1.06/lb., or 43%, increase from 2004 costs was the result of the impact of the stronger Canadian dollar on operating costs at Canadian operations, higher energy costs, the impact on costs and mine production of the mill conversion at Raglan, and lower ore grades, which offset the impact of increased by-product credits due to higher metal prices. At Falcondo, operating cash cost per pound of ferronickel was $4.80 in 2005 compared with $4.17 in 2004. The increase in costs was largely due to the increase in the oil price, as average oil costs rose from $42.34 per barrel in 2004 to $55.63 per barrel in 2005. Oil is the source of fuel for the electricity plant operated on site. Fuel oil represented 73% of total operating costs at Falcondo during the fourth quarter of 2005.

Income generated by operating assets: Fourth quarter income generated by operating assets for the nickel business totaled $75 million, compared to $168 million in the fourth quarter of 2004. The $93 million decrease was mainly due to the impact of lower nickel and cobalt prices, higher unit costs, higher energy costs and the impact of the stronger Canadian dollar.

Production: Total mined nickel production was 18,100 tonnes during the quarter versus 21,100 tonnes during the same period in 2004. Sudbury mines production was 3,900 tonnes of nickel and 4,200 tonnes of copper during the fourth quarter of 2005, compared with 5,700 tonnes of nickel and 6,800 tonnes of copper during the same period in 2004. The reduction in mine output relates primarily to lower ore grades and unplanned ore pass repairs at the Thayer Lindsley mine.

At Raglan, nickel-in-concentrate production in the quarter was 4,600 tonnes and copper production was 1,200 tonnes, compared with 6,700 tonnes of nickel and 1,700 tonnes of copper in 2004. Mill output in the quarter was reduced due to the planned conversion of the mill and lower mine ore grades.

At Montcalm, nickel production in the quarter was 2,300 tonnes.

At the Sudbury smelter, nickel-in-matte production in the fourth quarter of 2005 decreased to 16,100 tonnes from 18,100 tonnes in the same period of 2004 as a result of the treatment of lower concentrate tonnages with lower feed grades. Total refined nickel production was 20,800 tonnes in the fourth quarter of 2005 compared to 20,500 tonnes in the same period in 2004.

In the fourth quarter of 2005, Falcondo produced 7,300 tonnes of nickel in ferronickel, a 1% increase from 7,200 tonnes in the fourth quarter of 2004.

Zinc Business Unit

[1] 25% of CEZ refinery refined zinc
[2] Brunswick mine concentrate contained zinc

Revenues: Total zinc revenues increased to $155 million or 30% higher than $119 million recorded during the fourth quarter of 2004. In the fourth quarter of 2005, sales volumes of zinc-in-concentrates decreased 39% to 39,800 tonnes from 64,800 tonnes in the fourth quarter of 2004. Fourth quarter 2005 lead metal sales decreased to 19,500 tonnes from 23,100 tonnes in the same period a year ago, primarily as a result of lower tonnage processed at the Brunswick lead smelter. The average realized price per pound of zinc during the fourth quarter was $0.80/lb. versus $0.56/lb. in the same period last year. The average realized price per pound of lead during the fourth quarter was $0.54/lb. versus $0.46/lb. in the same period last year.

Costs: Total operating expenses increased to $131 million from $114 million in the fourth quarter of 2004. Mining, processing and refining costs decreased to $33 million from $45 million in the same period last year, while the value of purchased raw materials increased to $91 million from $60 million in the fourth quarter of 2004. The value of raw materials increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to $0.48 in the fourth quarter of 2005 from $0.32 for the same period in 2004 due to higher costs and reduced mine production volumes.

Income generated by operating assets: The fourth quarter 2005 income generating from operating assets for the Zinc Business was $24 million compared to $5 million for the fourth quarter of 2004. The $19 million increase was due to the impact of higher metal prices and decreased depreciation and amortization charges which were partially offset by the impact of lower sales volumes, and an unfavourable impact on costs due to the foreign exchange variance caused by the strengthening of the Canadian dollar.

Production: Contained zinc production was 59,300 tonnes in the fourth quarter of 2005, compared to 74,900 tonnes in the same period in 2004. The decrease was due to the closure of the Bell Allard mine in October, 2004 and also attributable to ore pass operating issues and a rock burst at Brunswick mine.

The Brunswick lead smelter processed 57,100 tonnes of lead concentrates and secondaries during the fourth quarter of 2005, compared to 61,700 tonnes during the same period in 2004. Lead metal production was 23,900 tonnes in the fourth quarter of 2005, compared to 25,900 tonnes in the same period in 2004. The decreased feed consumption and lead metal output at the Brunswick smelter was due to process reliability issues, which are currently being addressed.

El Morro

Favourably situated close to two copper smelters, the deposit is a large copper porphyry with high gold co-product credits that would result in low net copper cash costs. El Morro also features a high-grade resource core and a low pre-stripping ratio, as well as further exploration potential. In 2005, Falconbridge paid $10 million to earn a 70% interest in the El Morro property from Metallica Resources Inc. In 2006, Falconbridge expects to begin feasibility-level work, including a 30,000 metre drilling program for in-fill drill and metallurgical test work.

El Pachón

El Pachón is an attractive copper mine development project situated less than five kilometres from the Chilean border and the Las Pelambres copper mine. It features a high grade core, unusually low strip ratio and favourable metallurgical recoveries which will substantially reduce mining and capital costs. The orebody has the potential to produce over 200,000 tonnes of copper-in-concentrate per year over a life of more than 20 years. During 2005, a conceptual study of the El Pachón project was completed. Two bulk samples were extracted from an existing exploration tunnel and processed, engineering studies were completed and environmental information was compiled to add to the environmental base line. In addition, important advances were realized on El Pachón's specific protocol within the Mining Integration Treaty between Chile and Argentina. In 2006, work is expected to progress in road re-opening, field studies, engineering studies and environmental data collection.

Nickel Projects

Koniambo Project

In December 2005, Falconbridge, along with its 51% partner Société Minière du Sud Pacifique S.A. (SMSP) fulfilled the requirements of the Bercy Accord, including completion of a positive technical feasibility study and placement of firm orders of at least $100 million for equipment and services relating to the project. This will result in the transfer of the ownership of the Koniambo property to Koniambo Nickel SAS, a company owned 49% by Falconbridge and 51% by SMSP. In addition, Falconbridge and SMSP reached an agreement on the financing framework for the project. Under the terms of the financing agreement, the common equity ownership of Koniambo remains at 51% (SMSP) and 49% (Falconbridge); Falconbridge has agreed to assume responsibility for financing of up to 100% of the project; cash generated by the project will be exclusively dedicated to debt retirement prior to shareholder distributions; and, the capital cost to be financed is $2.2 billion (in 2004 dollars). This excludes working capital and interest during construction.

Next steps for Koniambo include advancing detailed engineering in 2006. Once the necessary permits are in place and the details of the financing are finalized, Falconbridge expects the start of the construction phase in 2007. Based on the foregoing, start-up of the operation is expected to occur in 2009/2010.

Raglan Mine Optimization Project

The conversion of the mill from autogenous to semi-autogenous grinding was completed in October 2005. This conversion will increase the level of annual throughput to approximately one million tonnes of ore per year and increase the mill's ability to process harder ore. This project was completed on schedule and on budget with total project investment of Cdn$33 million.

Phase two, expected to be completed in early 2008, will focus on utilizing increased mill capacity by expanding site infrastructure and ore production to allow for the mining, milling and processing of 1.3 million tonnes of ore annually, resulting in approximately 30,500 tonnes of annual contained nickel production.

Nickel Rim South Project

Vent shaft sinking, which began in February 2005, was at 1,092 metres at the end of 2005. Main shaft sinking began in April 2005 and was at 467 metres at the end of 2005.

Kabanga Project

In April 2005, Falconbridge announced a joint-venture agreement with Barrick Gold Corporation on the Kabanga nickel deposit, located in northwestern Tanzania. Under the terms of the agreement, Falconbridge acquired a 50% indirect joint-venture interest in respect of the Kabanga Project for $15 million and will be the operator of the joint venture. Over the next several years, Falconbridge expects to fund and conduct a further $50-million work plan. Current work, including exploration and infill diamond drilling, metallurgical testing and engineering study work will lead to the completion of a scoping study in the first quarter of 2006.

Expectations with respect to development projects are subject to various risks and assumptions. See "Forward-looking Information".

Exploration Update

Since the end of the previous quarter, Falconbridge has provided an exploration update on Collahuasi's Rosario Oeste zone, which contains an Inferred Mineral Resource estimated at 248 million tonnes grading 1.54% copper at a 0.4% copper cut-off. These exploration results demonstrate the potential of developing further resources at Collahuasi. The mineral resource is located only 300 metres from the projected edge of the Rosario open pit.

OTHER

Under the terms of the Support Agreement between Inco and Falconbridge, the Corporation is not permitted to issue any additional shares (other than in respect of existing options and other convertible securities). The Corporation has therefore suspended its Dividend Re-Investment Plan. Common shareholders will continue to receive their dividends in cash.

SHARES OUTSTANDING AND DECLARED DIVIDENDS

Shares Outstanding (as at February 7, 2006)

On 21 February 2006, Falconbridge made the following public announcement:
"INCO ANNOUNCES EXTENSION OF ITS OFFER FOR FALCONBRIDGE

Toronto, February 21, 2006 – Falconbridge Limited announced today that, based upon the results of recent discussions with competition authorities in the United States and Europe, Inco Limited (TSX, NYSE:N) plans to extend the date that its offer to acquire all of the common shares of Falconbridge will remain open for acceptance from February 28, 2006 to June 30, 2006. This extension is intended to provide additional time for the competition authorities to complete their review of the pending transaction.

For more information, visit www.inco.com/newscentre/newsreleases/ to view Inco's press release.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com.

This news release contains forward-looking statements regarding Inco's offer to purchase all of the common shares of Falconbridge Limited, including statements regarding the anticipated timing of achievement of milestones in the regulatory clearance process. Actual results and developments may differ materially from those contemplated by these statements depending on, among others, the risks that Inco will not be able to obtain the required approvals or clearances from regulatory and other agencies and bodies on a timely basis, or divestitures or other remedies required by regulatory agencies may not be acceptable or may not be completed in a timely manner, and other risk factors listed from time to time in Inco's and Falconbridge's reports filed with the U.S. Securities and Exchange Commission. The forward-looking statements included in this release represent Inco's views as of the date of this release. While Falconbridge anticipates that subsequent events and developments may cause its views to change, it specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing its views as of any date subsequent to the date of this release.

Important Legal Information
This communication is being made in respect of the share exchange takeover bid by Inco Limited for common shares of Falconbridge Limited. Inco has filed with the U.S. Securities and Exchange Commission ("SEC") a registration statement on Form F-8 containing a share exchange take-over bid circular. Inco, if required, will file other documents regarding the transaction with the SEC. INVESTORS ARE URGED TO READ THE REGISTRATION STATEMENT AND ANY OTHER RELEVANT DOCUMENTS FILED OR TO BE FILED WITH THE SEC WHEN THEY BECOME AVAILABLE BECAUSE THEY WILL CONTAIN IMPORTANT INFORMATION. Investors will be able to obtain the documents filed with the SEC free of charge at the SEC's website (www.sec.gov). Canadian investors will also be able to obtain information filed in respect of this bid at www.sedar.com."

On 2 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE LIMITED'S HORNE SMELTER IN ROUYN-NORANDA REACHES AN AGREEMENT IN PRINCIPLE WITH UNION ON COLLECTIVE AGREEMENT

Rouyn-Noranda, March 2, 2006 – Falconbridge Limited is pleased to announce that it has reached an agreement in principle for the renewal of a collective agreement with the Union bargaining team representing its employees at the Horne Smelter in Rouyn-Noranda in Quebec.

"Both parties worked hard since the beginning of negotiations and very long hours in the past few days to reach this agreement. I salute the professionalism of all participants and their efforts to arrive at this result. We believe at Falconbridge that we have a fair agreement which balances the needs of employees as well as of those of the Company," said Marcel Faucher, General Manager of Falconbridge's Horne Smelter.

Union Executives from the Syndicat des travailleurs de la mine Noranda (CSN) will submit the agreement in principle to employees on Friday March 3 for a ratification vote. The agreement covers a three-year period from 2006 to 2009.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500

people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 3 March 2006, Falconbridge made the following public announcement:
"UNION MEMBERS OF FALCONBRIDGE'S HORNE SMELTER APPROVE AGREEMENT IN PRINCIPLE

Rouyn-Noranda, March 3, 2006 – Falconbridge Limited is pleased to announce that the members of the Syndicat des travailleurs de la Mine Noranda – CSN voted in favour of the agreement in principle for the renewal of the collective agreement concluded between Union executives and the Company. 74% of employees attending the meeting voted to ratify the agreement.

"We are very pleased that employees approved the agreement. I believe we are entering a new constructive era in our labour relations and the negotiations we just concluded position us well for the future," stated Marcel Faucher, General Manager of Falconbridge's Horne Smelter.

The new collective agreement provides for a salary increase of close to 6% over three years. We have made notable progress regarding the following issues:

- Giving access to positions while respecting workers' seniority
- Improving the training process
- Making the employee turnover mechanism more efficient
- Securing employees with regards to subcontracting
- Voluntary early retirement opportunities

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. On 7 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE PROVIDES UPDATE AND PRELIMINARY RESOURCE ESTIMATE FOR THE ARAGUAIA NICKEL PROJECT, PARA STATE, BRAZIL

Toronto, March 7, 2006 – Falconbridge Limited's wholly-owned Brazilian subsidiary, Falconbridge Brasil Ltda., today announced a preliminary inferred resource estimate for two new significant nickel deposits on its Araguaia Nickel Laterite properties in the Para State of northern Brazil. An extensive exploration program on these promising properties is being conducted by the Company.

Background information with respect to the project can be obtained by referring to the previous release dated, September 6, 2005. A complete listing of the diamond drill information and location maps may be viewed on the company's web site at www.falconbridge.com. The company will be making a presentation on the project at the New Discoveries Session at the Prospectors and Developers Association convention in Toronto, Canada on March 8.

These are completely new grassroots discoveries in an area where the first recorded drilling for base metals was completed by Falconbridge's exploration team in October of 2004.

Diamond drilling on the Araguaia Nickel Project continues with three diamond drills. Two deposits are being delineated on the project, the largest at this point being the Serra do Tapa deposit. The second deposit, Vale dos Sonhos, is located 10 kilometres to the southeast. To date, inferred mineral resource estimate using a 1% nickel grade cut off is as follows:

Inferred Mineral Resources @ 1.0% Ni cut-off grade

TARGET	RESOURCE Mt	Ni (%)	Co (%)	Fe (%)	MgO (%)	SiO2 (%)	Si/Mg Ratio
SERRA DO TAPA	60.3	1.5	0.05	18.0	16.5	40.0	2.4
VALE DOS SONHOS	13.0	1.5	0.07	20.3	19.4	32.0	1.6
GLOBAL	73.3	1.5	0.06	18.4	17.0	38.6	2.3

The resource is based on 551 diamond drill holes (23,565 metres) completed on a 160-metre by 80-metre grid. The resource was calculated using a Plan Polygonal method with a 90-metre radius from each drill hole and a 2-metre maximum waste gap. Of the holes drilled at the deposits to date, 350 contain mineralized intercepts with grades greater than 1% nickel and 186 were below cut-off. The Serra do Tapa deposit has been almost completely delineated but has potential for modest expansion along its eastern margin where it is not fully closed off. The Vales dos Sonhos deposit remains open to the north and south and current drilling indicates it has potential to expand to the southeast. Composites are calculated using 2-metre minimum intervals. Specific Gravity (SG) has been characterized for various facies of mineralization and average for the deposits is SG = 1.2.

Overburden at the Serra do Tapa deposits ranges from 0 – 49 metres and averages 9 metres thick. At the Vale dos Sonhos deposit, overburden ranges from 0 – 19 metres and averages 5 metres thick. The mineralized intervals at Serra do Tapa range from 2 – 84 metres thick and average 18 metres thick, at Vale dos Sonhos the range is 2 – 21 metres with an average of 8 metres.

The resource estimates was prepared by Falconbridge geologist Chris Wright, P. Geo., Senior Project Geologist under the supervision of Marc Antoine Audet, P.Geo., Director of International Nickel Laterite Exploration. Both of whom are Qualified Persons as defined under National Instrument 43-101.

The mineralization is predominantly characterized as saprolite and transitional material and only a minor component of limonite (approximately 12%). In-fill drilling is continuing in select areas to reduce the drill spacing to 80 metres by 80 metres and work is in progress to establish a protocol for completing sampling for initial metallurgical test work that will be used to support an economic scoping study. In addition, drilling continues to delineate extensions of the known resources. This work will continue through 2006.

Quality Control

Direct supervision of the project is by Helio Diniz, the Company's Exploration Manager in Brazil with oversight by David Gower (P.Geo). Mr. Gower is the General Manager of Nickel Exploration and a Qualified Person under National Instrument 43-101 guidelines. The company employs a QA/QC protocol on all aspects of the analytical procedures. Core samples are split on plastic sheets in order to preserve fines and one half of the core is restored to the core box for future reference. Samples are taken in one-metre intervals or less. Initially sample preparation was completed at the SGS-Lakefield preparation lab at Parauapebas and assayed at SGS-Lakefield lab in Belo Horizonte using XRF. Since sample preparation is now completed on site in a sample preparation facility operated by SGS-Lakefield. A blank sample is inserted every forty samples and standard samples representing a range of grades are inserted at intervals of twenty samples. Five percent of pulps are re-analysed at ALS-Chemex, Vancouver.

On 9 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE PROVIDES UPDATE ON STATUS OF LABOUR NEGOTIATIONS

Toronto, Ontario – March 9, 2006 – Falconbridge Limited today provided the following update on labour negotiations occurring within the company:

Completed Negotiations

Agreements at Falcondo, the Horne smelter and St. Ann bauxite mine were achieved earlier in the year.

Falcondo

On February 17, Falcondo (Falconbridge Dominicana C. por A.) signed a letter of intent on the terms of a new collective agreement with its union, Sindicato Unido de Trabajadores de la Falconbridge Dominicana (SUTRAFADO). The terms of the agreement are retroactive to December 4, 2005.

The prior collective agreement expired in December 2005 and the company and the union agreed to negotiate beyond deadline, as was the case in the negotiation of prior agreements. The new agreement was achieved without work disruption and was ratified by employees on February 22.

Falcondo is a surface mining operation that has the capacity to produce 29,000 tonnes of nickel contained in ferronickel annually. Ferronickel is a combination of iron and nickel used almost exclusively by the stainless steel industry. The property is situated in the Dominican Republic, in the town of Bonao, 80 kilometres north of Santo Domingo. The facilities include a metallurgical treatment plant, a crude oil refinery and a 200-megawatt thermal power plant. Falconbridge owns 85.26% of the outstanding shares of Falcondo.

Horne Smelter

On March 1, Falconbridge signed an agreement in principle on a new collective agreement with Le Syndicat de travailleurs de la mine Noranda (CSN), the union representing approximately 380 workers at the Company's Horne smelter in Rouyn-Noranda, Quebec. The prior collective agreement expired the same day.

The new agreement was achieved without work disruption and was ratified by employees on March 3. The new collective agreement expires on March 1, 2009.

The Company is pleased that negotiations progressed constructively and that an agreement was reached without disruption. The Horne smelter is a custom copper smelter that uses both copper concentrates and precious metal-bearing recyclable materials as its feedstock to produce a 99.1% copper anode. In October 2005, the smelter returned to operating at full capacity. It processes 800,000 tonnes of copper and precious metal-bearing materials per year, yielding 180,000 tonnes of anode copper and 600,000 tonnes of sulphuric acid.

St. Ann Bauxite mine

In February, St. Ann's Union of Technical, Administrative and Supervisory Personnel reached an agreement with the company. There were no production disruptions during this time as a result of the negotiations. There are approximately 60 employees represented in the bargaining unit.

The contract is retroactively effective to January 1, 2004 and expires on December 31, 2007. The St. Ann Bauxite mine is located on the north coast of Jamaica in Discovery Bay. Falconbridge acquired a 50% interest in the mine in October 2004. The mine provides raw materials for Falconbridge's New Madrid, Missouri, primary aluminum reduction facility. Annual bauxite production capacity is 4.5 million tonnes of ore. The mine employs approximately 450 people.

Negotiations to be Completed

Ten additional collective agreements with Falconbridge will be negotiated during 2006. They are:

- Brunswick Mine and Brunswick Smelter, New Brunswick – Contracts expired on February 28. The company and union locals agreed to negotiate beyond the contract expiry date, as was the case during the last negotiations in 2003. Both locations continue to operate normally.

- General Smelting, Quebec – Contract expired January 31. The Company and union agreed to negotiate beyond the expiry of the contract. The facility continues to operate normally.

- Bulk Handling Operation, Bathurst, New Brunswick – contract expires March 31

- Raglan, Quebec – contract expires April 30

- Lomas Bayas, Chile – contract expires April 30

- Nikkelverk, Norway – contract expires May 31
- Antamina, Peru – contract expires July 24
- Norandal, Salisbury, North Carolina – contract expires November 20
- Altonorte smelter, Chile – contract expires December 12

On 15 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE LIMITED ANNOUNCES ITS INTENTION TO MAKE AN OFFER FOR ALL OF THE SHARES OF ITS SUBSIDIARY NOVICOURT INC. NOT ALREADY OWNED BY FALCONBRIDGE

TORONTO, March 15, 2006 – Falconbridge Limited ("Falconbridge") announces that it intends to make an offer by way of a takeover bid for all of the outstanding common shares of Novicourt Inc. ("Novicourt") that it does not already own at a cash offer price of Cdn$2.30 per Novicourt share. Falconbridge presently holds approximately 62.1% of the outstanding common shares of Novicourt.

The proposed offer would be subject to not less than 50% of the shares of Novicourt not already owned by Falconbridge being tendered.

Falconbridge has communicated its intention to make this offer to the Board of Directors of Novicourt. Falconbridge understands that the Novicourt Board of Directors has formed a special committee of independent directors to review the offer and to supervise a formal valuation of Novicourt in accordance with applicable securities laws. Falconbridge is expected to issue and mail its offer to the shareholders of Novicourt as soon as practicable following the completion of the formal valuation.

The cash offer price represents an 11.6% premium to the average closing share price of Novicourt shares over the past 90 days and an approximate 21.1% premium to the present estimated net asset value of Novicourt.

On successful completion of the bid Falconbridge, if necessary, intends to initiate a second step acquisition transaction for the remaining shares of Novicourt in order that Novicourt continue as a wholly-owned private company subsidiary of Falconbridge.

Falconbridge Limited
Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mineral deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com.

FORWARD-LOOKING INFORMATION
Certain statements contained in this News Release are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our intention to make the offer, and (ii) our intention to undertake a second step transaction. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this News Release. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and making of the offer to acquire all of Novicourt's common shares; the approvals or clearances required to be obtained by Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner. Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings

by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this news release. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco and Falconbridge."

On 16 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE ANNOUNCES REDEMPTION OF US$500 MILLION IN JUNIOR PREFERENCE SHARES

TORONTO, March 16, 2006 – Falconbridge Limited today announced that it intends to redeem a total of 20,000,000, or US$500 million, of its outstanding Junior Preference Shares. The Junior Preference Shares will be redeemed on April 26, 2006 from holders of record on March 22, 2006. Falconbridge intends to utilize its internal cash resources to fund the redemption.

In accordance with the terms of the Junior Preference Shares, Falconbridge will redeem shares of each series of the Junior Preference Shares on a pro rata basis as follows: 8,000,000 Junior Preference Shares, Series 1 (approximately 67% of shares outstanding, TSX: NRD.PR.X), 8,000,000 Junior Preference Shares, Series 2 (approximately 67% of shares outstanding, TSX: NRD.PR.Y), and 4,000,000 Junior Preference Shares, Series 3 (approximately 67% of shares outstanding, TSX: NRD.PR.Z). The number of shares to be redeemed from each holder within each series of Junior Preference Shares will also be determined on a pro rata basis. Each Junior Preference Share will be redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from and including March 31, 2006 to and including April 25, 2006.

After giving effect to the redemption of the 20,000,000 Junior Preference Shares, the company will have outstanding 3,999,899 Junior Preference Shares, Series 1, 3,999,899 Junior Preference Shares, Series 2, and 1,999,903 Junior Preference Shares, Series 3.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mineral deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com.

Note: This press release may contain "forward-looking statements" within the meaning of Section 27A of the Securities Act of 1933, as amended, and Section 21E of the Securities Exchange Act of 1934, as amended. The words "believe", "expect", "anticipate", "intend", "estimate", "will" and other expressions which are predictions of or indicate future events and trends and which do not relate to historical matters identify forward-looking statements. Reliance should not be placed on forward-looking statements because they involve known and unknown risks, uncertainties and other factors, which may cause the actual results, performance or achievements of Falconbridge, to differ materially from anticipated future results, performance or achievement expressed or implied by such forward-looking statements. Factors that could cause actual results to differ materially from those set forward in the forward-looking statements include general economic conditions, interest rates, availability of equity and debt financing and other risks detailed from time to time in Falconbridge's Annual Report on form 40-F filed with the Securities and Exchange Commission. Falconbridge does not undertake any obligation to publicly update or revise any forward-looking statements, whether as a result of new information, future events or otherwise."

On 21 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE ENACTS SHAREHOLDER RIGHTS PLAN TO PREVENT CREEPING TAKEOVER

Toronto, Ontario – March 21, 2006 – Falconbridge Limited announced today that the Company has enacted a new shareholder rights plan, effective immediately. This plan is designed to prevent a creeping takeover of the Company and preserve its ability to obtain the best value for all shareholders. The plan will also provide the share ownership stability to

protect the opportunity for shareholders to tender to the existing Inco Limited takeover offer or any other bid for the Company. The Board continues to be of the view that a creeping takeover would be detrimental to the best interests of the shareholders and not in the best interest of the Company.

The rights plan will not prevent an offer made to all shareholders for all of their shares.

During recent shareholder visits in North America and in Europe, many of the Company's shareholders have voiced both the need to permit any offer for all shares and their concerns with the possibility of a creeping takeover. The plan gives the Board of Directors an effective tool in responding to an attempt to acquire control through a progressive increase in ownership without an offer to all shareholders.

The rights issued under the rights plan become exercisable when a person, together with any parties related to it, acquires or announces its intention to acquire 20% or more of the Corporation's outstanding common shares without complying with the "Permitted Bid" provisions of the rights plan or without approval of the Board of Directors of the Corporation. Should such an acquisition occur, rights holders (other than the acquiring person and related persons) can purchase common shares of the Corporation at half the prevailing market price at the time the rights become exercisable.

Under the rights plan, a Permitted Bid is a bid made to all holders of the Corporation's common shares for all of their shares. If at the expiry of the bid at least 50% of the outstanding shares, other than those owned by the offeror and certain related parties have been tendered, the offeror may take up and pay for the shares.

The issuance of the shares upon exercise of the rights is subject to receipt of certain regulatory approvals. The rights plan must be confirmed by shareholders within six months.

Advisory Support
The Company has retained the services of CIBC World Markets as financial advisors and McCarthy Tétrault LLP as legal advisors.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel orebodies. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 27 March 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE ANNOUNCES WEBCAST OF FIRST QUARTER 2006 FINANCIAL RESULTS CONFERENCE CALL

TORONTO, March 27, 2006 – Falconbridge Limited announced today that it will webcast on a live, listen-only basis, its first quarter financial results conference call on Tuesday April 25, 2006 at 2:00 p.m. EDT. The results for the Company will be released via CCNMatthews on Tuesday April 25, 2006 before markets open.

During the meeting, senior management from the Company will review first quarter financial and operating results. The live, interactive webcast and slide presentation will be accessible at www.falconbridge.com under the "Investor Relations" section.

If you are unable to participate during the live webcast, the call will be archived on Falconbridge's website at www.falconbridge.com.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mineral deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 10 April 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE SHARES CDN$9.3 MILLION OF RAGLAN'S OPERATING PROFIT WITH INUIT COMMUNITIES

Montréal, Québec, April 10, 2006 – Falconbridge Limited is pleased to announce that it has presented a cheque in the amount of Cdn$9.3 million to the Makivik Corporation during a ceremony held in the Inuit community of Kangirsuk, representing the share of the profits generated by the operations of the Raglan nickel mine located in the Nunavik Territory of Northern Quebec.

"We continue to work with Inco to seek U.S. and European regulatory approval for the proposed combination of Inco and Falconbridge. Discussions with officials at both the U.S Department of Justice and the European Commission continue to be constructive as we await approvals from both regulatory bodies."

Corporate Developments

Inco Offer

On October 11, 2005, Inco Limited announced an offer to acquire all outstanding common shares of Falconbridge. The offer was comprised of part cash and part Inco common shares, which when pro-rated subject to the maximum amounts offered would provide Cdn$7.50 and 0.524 Inco shares for each Falconbridge common share. (At the closing market price of Inco's stock on April 24, 2006, the offer is valued at approximately Cdn$40.67 per Falconbridge common share). Both Boards of Directors unanimously endorsed the acquisition offer and the Falconbridge Board recommended the Company's shareholders tender their shares to the offer, which remains open for acceptance to June 30, 2006.

The combined organization, which would be known as Inco Limited, would be one of the world's premier mining and metals companies. It would be the world's largest producer of nickel and eighth-largest producer of copper, and would also operate integrated zinc and aluminum businesses. The new company would have one of the mining industry's most attractive portfolios of low-cost, profitable growth projects and would benefit from estimated annual synergies of approximately $350 million – with this run rate beginning in mid-2008.

Inco has obtained regulatory clearances from the Canadian Competition Bureau and it continues to proceed to meet all information and other requests from the U.S. Department of Justice and the E.U. competition authorities.

Statements regarding the combination of Falconbridge and Inco are subject to various risks and assumptions. See "Forward-looking Information" on page 182.

Redemption of Junior Preference Shares

On March 16, 2006, Falconbridge announced its plans to redeem a total of 20 million shares, or $500 million, of its outstanding Junior Preference Shares, on April 26, 2006, based upon shareholders of record on March 22, 2006. Falconbridge will utilize existing cash balances to fund the redemption.

Statements regarding the financing activities of Falconbridge are subject to various risks and assumptions. See "Forward-looking Information".

Financial Results

Revenues for the first quarter of 2006 were $2.9 billion, 51% higher than revenues of $1.9 billion in the same period of 2005. The increase was mainly due to higher realized metal prices and copper and nickel sales volumes, increased revenue contribution from by-product molybdenum credits and improved copper concentrate treatment and refining terms charged by Falconbridge copper smelters. Business unit revenues were 83% higher for copper, 9% higher for nickel, 67% higher for zinc and 14% higher for aluminum.

Operating expenses totaled $2.1 billion in the first quarter, compared to $1.4 billion in the same period last year, primarily due to the higher value of raw material feeds. Mining, processing and refining costs increased to $743 million from $595 million in the first quarter of 2005 due to higher levels of copper anode and copper cathode production, increased refined nickel production, higher energy and supplies/consumables costs, and the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations. The average value of the Canadian dollar increased 6% to US$0.87 from US$0.82 during the first quarter of 2005.

The value of raw material feed purchases was $1,207 million, 67% higher than $722 million in 2005 due to higher metal prices and increased custom feed processing at the Nikkelverk nickel refinery and at all copper smelting and refining operations. Higher purchased raw material values are recovered at the time of sale of the metals contained in the materials treated and are hedged at the time of purchase.

Depreciation, amortization and accretion expense increased to $169 million from $118 million a year ago, with $30 million of the increase being attributable to the amortization of the fair value increment related to the purchase of the former Falconbridge minority shareholders' interest and the resulting increase in the book value of the assets acquired. Net interest

expense increased to $32 million from $28 million in the first quarter of last year due to the impact of junior preferred share liabilities issued pursuant to the issuer bid completed in early May 2005. Minority interest in earnings of subsidiaries decreased to $2 million from $94 million largely as a result of the elimination of the former Falconbridge minority share ownership. Tax expenses recorded increased to $222 million from $124 million during the first quarter of 2005, due to the overall increase in profitability.

Income generated by operating assets for the first quarter was $739 million, 61% higher than $459 million in the first quarter of 2005. Income generated by operating assets increased 112% to $489 million in the copper business, decreased 24% to $148 million in the nickel business, increased from $6 million to $64 million in the zinc business and increased 34% to $47 million in the aluminum business.

Net income totaled $462 million, or $1.23 per basic common share and $1.21 per diluted common share, for the first quarter 2006, 163% higher than net income of $176 million or $0.58 per basic and $0.57 per diluted common share in the same period of 2005. Higher net income reflects higher realized metal prices and higher treatment and refining charges received at copper smelters and refineries.

Consolidated assets totaled $12.9 billion as at March 31, 2006, compared with $12.4 billion at the end of 2005. The increase is primarily due to the investment of additional capital in advancing brownfield and greenfield expansion development projects, higher working capital levels due to increasing metals prices and cash retained in the business generated by higher earnings.

Liquidity And Capital Initiatives

Falconbridge maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. Falconbridge's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new long- and short-term borrowings.

The Company's committed bank facilities, which expire in 2010, total $780 million. At March 31, 2006, these lines were essentially undrawn.

Cash generated from operations, before the net change in accounts receivables, payables and inventories, was $668 million during the first quarter of 2006. Total liquidity remains strong, with over $1.8 billion of cash and undrawn lines at March 31, 2006. Long-term debt was $2.5 billion at quarter end excluding preferred share liabilities. Falconbridge's net-debt-to-capitalization ratio stood at 33.3% at the end of the quarter, a reduction of 300 basis points since the end of 2005.

On March 16, 2006, Falconbridge announced its plans to redeem a total of 20 million shares, or $500 million, of its outstanding Junior Preference Shares, on April 26, 2006, based upon shareholders of record on March 22, 2006. Falconbridge has benefited from high earnings and cashflow generation and will utilize existing cash balances to fund the redemption.

Investments in new production capacity such as the Nickel Rim South and Koniambo nickel projects totaled $98 million during the first quarter. For 2006, the Company's projected capital investments are approximately $315 million for sustaining capital expenditures and other smaller projects and approximately $435 million in new copper and nickel investments.

Statements regarding future financial requirements and fund of those requirements are subject to various risks and assumptions. See "Forward-looking Information".

Realized nickel prices of $6.84/lb. decreased by 3% in the quarter compared with $7.03/lb. in the corresponding period in 2005. Realized ferronickel prices of $6.63/lb. decreased by 1% from $6.70/lb. in the first quarter of 2005. Realized cobalt prices of $12.41/lb. decreased by 29% in the quarter, compared with $17.44/lb. in the same period in 2005.

Costs

Total operating expenses increased to $433 million from $341 million in the first quarter of 2005. Mining, processing and refining costs increased to $214 million from $170 million in the same period last year largely due to the exchange rate impact on operating costs at Canadian operations, increases in energy prices and increased sales volumes. The value of purchased raw material feeds increased to $166 million from $142 million in the first quarter of 2005 due to increased purchased material volumes and higher payable copper prices. The operating cash cost per pound of mined nickel for all of Falconbridge (including INO and Falcondo) was $3.38 in the first quarter of 2006 compared with $2.94 for the same period in 2005. The operating cash cost of producing a pound of nickel from INO mines was $2.60. The $0.09/lb., or 4%, increase from 2005 costs was the result of the stronger Canadian dollar on operating costs at Canadian operations, higher energy costs, and lower ore grades. These higher costs offset the impact of increased by-product credits that resulted from higher by-product metal prices.

At Falcondo, operating cash cost per pound of ferronickel was $4.82 in 2006 compared with $3.88 in 2005. The increase in costs was largely due to the increase in the oil price, as average oil costs rose from $38.83 per barrel in 2005 to $52.15 per barrel in 2006. Oil is the source of fuel for the electricity plant operated on site and represented 71% of total operating costs at Falcondo during the first quarter of 2006.

Income generated by operating assets

First quarter operating income for the nickel business totaled $148 million, compared to $194 million in the first quarter of 2005. The $46 million decrease was mainly due to the impact of higher costs of operations, including higher energy costs and the higher value of purchased raw materials. Depreciation charges increased due to the amortization of the fair value increment associated with the merger with Noranda. Higher costs offset the beneficial impact of slightly higher sales volumes during the quarter versus the same period a year ago.

Production

Total refined nickel production increased 2% to 28,400 tonnes during the quarter versus 27,900 tonnes during the same period in 2005. Total mined nickel production was 1,000 tonnes lower at 19,500 tonnes.

Sudbury mines production was 4,500 tonnes of nickel and 6,200 tonnes of copper during the first quarter of 2006, compared with 6,100 tonnes of nickel and 6,000 tonnes of copper in the first quarter of 2005. Sudbury mined nickel production was lower due to challenging ground conditions at the Thayer Lindsley mine and lower nickel ore grades. At Raglan, nickel-in-concentrate production in the quarter was 5,300 tonnes and copper production was 1,300 tonnes, compared with 6,000 tonnes of nickel and 1,500 tonnes of copper in 2005. The decrease in Raglan production was due to the impact of lower ore grades. The Montcalm mine produced 2,800 tonnes of nickel and 1,400 tonnes of copper compared to 2,000 tonnes and 1,100 tonnes of nickel and copper respectively in 2005. The increases in production at Montcalm were due to increases in tonnes mined and improved ore grades.

At the Sudbury smelter, nickel-in-matte production in the first quarter of 2006 decreased to 15,800 tonnes from 17,400 tonnes in the same period of 2005, as a result of the treatment of lower concentrate tonnages (due to reduced mine feeds) with lower feed grades.

At the Nikkelverk refinery, nickel production during the quarter was 21,500 tonnes in the first quarter of 2006, essentially unchanged from the same period in 2005.

The Falcondo ferronickel refinery produced 6,900 tonnes of nickel in ferronickel, compared with 6,500 tonnes in the first quarter of 2005.

Other Developments

A two-week Sudbury smelter shutdown is planned in May 2006 as part of the Company's ongoing preventative maintenance program.

Zinc Business Unit (unaudited)

		Q1 2006	Q1 2005	Y-O-Y Change (%)
Production:	mined zinc (MT)	**64,800**	67,100	(3%)
	refined zinc (MT)[1]	**15,400**	16,700	(8%)
	mined lead (MT)	**19,000**	18,900	1%
	refined lead (MT)	**22,400**	21,600	4%
Sales:	contained zinc (MT)[2]	**68,400**	94,800	(28%)
	contained lead (MT)	**29,700**	26,500	12%
Revenues ($ millions)		**199**	119	67%

(1) 25% of the Noranda Income Fund CEZ refinery zinc production
(2) Brunswick mine concentrate contained zinc and third party purchased concentrate sales to Noranda Income Fund

Revenues

Zinc business revenues increased to $199 million, an increase of 67% compared to the $119 million recorded during the first quarter of 2005. The increased revenue was due to higher prices realized for zinc and other by-products. The average realized price per pound of zinc during the first quarter was $1.07/lb., an increase of 70% compared to $0.63/lb. in the same period last year. The average realized price per pound of refined lead during the first quarter was $0.63/lb., versus $0.49/lb. in the same period last year. Silver LME prices increased to $9.69 per ounce from $6.97 per ounce in the same quarter a year ago.

In the first quarter of 2006, sales volumes of zinc-in-concentrates decreased 28% to 68,400 tonnes from 94,800 tonnes in the first quarter of 2005. Lower zinc sales volumes reflect the build-up of inventory to be shipped to the Noranda Income Fund in the second quarter and the timing of vessel shipments and arrivals. First quarter 2006 lead metal sales increased to 29,700 tonnes from 26,500 tonnes in the same period a year ago.

Costs

Mining, processing and refining costs increased to $52 million from $50 million in the same period last year, while the value of purchased raw materials increased to $76 million from $54 million in the first quarter of 2005. The value of raw material feeds increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to $0.41 in the first quarter of 2006 from $0.40 for the same period in 2005 due to a stronger Canadian dollar and lower production at the Brunswick Mine, partially offset by the benefits from higher by-product copper and silver sales prices.

Income generated by operating assets

The first quarter 2006 operating income of the zinc business was $64 million, compared with $6 million for the first quarter of 2005. The $58 million improvement resulted primarily from the higher metal prices.

Production

Contained zinc production was 64,800 tonnes in the first quarter of 2006, compared to 67,100 tonnes in the same period in 2005. The decrease in production is primarily attributable to lower ore head grades and the residual effects of a rock burst which occurred at the Brunswick Mine in November, 2005. Falconbridge's share of refined zinc production at the Noranda Income Fund CEZ Refinery totaled 15,400 tonnes, versus 16,700 tonnes during the first quarter of 2005. By-product copper-in-concentrate production at the Brunswick mine increased to 2,200 tonnes from 1,300 tonnes during the first quarter of 2005, primarily due to a higher copper grade and improved recoveries in 2006.

Lead metal production at the Brunswick smelter was 22,400 tonnes in the first quarter of 2006 compared to 21,600 tonnes in the same period in 2005, due to an unplanned maintenance shutdown during first quarter 2005 which resulted in lower production.

Aluminum Business Unit (unaudited)

	Q1 2006	Q1 2005	Y-O-Y Change (%)
Production: primary (MT)	**62,300**	**61,400**	**1%**
Sales: primary (MT)	**56,400**	**56,600**	**–**
Shipments: fabricated (MT)	**46,400**	**45,600**	**2%**
Revenues ($ millions)	**310**	**271**	**14%**
Realized aluminum price ($/lb.)	**1.13**	**0.92**	**23%**
Mining, processing and refining costs ($ millions)	**156**	**139**	**12%**
Cash costs ($/lb. of aluminum)	**0.67**	**0.59**	**14%**
Income from operating assets ($ millions)	**47**	**35**	**34%**

Revenues

Aluminum business revenues increased to $310 million, 14% higher than the $271 million recorded during the first quarter of 2005. Third-party sales of primary aluminum were essentially the same at 56,400 tonnes, compared to the first quarter of 2005. First quarter rolled products sales volumes also increased by 2% to 46,400 tonnes compared to 45,600 tonnes the same period a year ago. The realized primary aluminum price increased 23% to $1.13/lb. versus $0.92/lb. in the same period in 2005.

Costs

Aluminum business operating expenses increased 11% to $263 million compared to $236 million during the first quarter of 2005. Mining, processing and refining costs increased to $156 million from $139 million in the same period last year. Operating costs were impacted by significantly higher natural gas costs at the Gramercy alumina refinery and at the rolling mills, along with increased electrical energy costs at the New Madrid smelter. The increased electrical energy costs came into effect under the new fifteen-year electricity supply contract. These rates compare very favourably with electricity costs incurred by other U.S. aluminium producers. The value of purchased raw materials increased to $94 million in the first quarter 2006 compared to $85 million the same period last year, due to increased aluminum prices.

The operating cash cost per pound of primary aluminum metal production was $0.67/lb. in the first quarter of 2006, an increase from $0.59/lb. for the same period in 2005. Higher electrical energy and natural gas costs were the major contributors to the higher unit costs. The cost per pound at the rolled products division was 7% higher in the first quarter of 2006, compared with the same period in 2005, resulting from higher natural gas and purchased aluminum metal costs.

Income generated by operating assets

First quarter 2006 operating income for the aluminum business was $47 million compared with $35 million for the first quarter of 2005. The $12 million increase was mainly due to the higher realized aluminum price, partly offset by higher power and natural gas costs.

Production

In the first quarter of 2006, primary aluminum production was higher at 62,300 tonnes, compared to 61,400 tonnes in the same period in 2005. For the rolled products operations, shipments were higher at 46,400 tonnes compared with 45,600 tonnes for the first quarter of 2005.

Other Developments

At the Huntingdon rolling mill, the installation and ramp-up of a new hot aluminum caster was completed, two months ahead of schedule. With additional annualized capacity of 33 million pounds, the new caster was running at capacity levels by the end of the first quarter, allowing the rolled products division to take advantage of exceptionally strong end-use markets for aluminum sheet and foil in North America.

Production Forecast

Production		2006 Forecast (tonnes)	2005 Actual (tonnes)
Copper:	Mined	**475,000**	462,000
	Refined	**635,000**	544,000
Nickel:	Mined	**82,000**	80,000
	Refined	**115,000**	114,000
Zinc:	Mined	**460,000**	454,000
	Refined[1]	**210,000**	182,000
Aluminum	Primary	**250,000**	246,000
	Fabricated	**195,000**	178,000

[1] Includes 100% of Kidd Creek refinery production and 25% of the Noranda Income Fund CEZ Refinery production

Labour Agreements

During the quarter, labour agreements were achieved at the Falcondo ferronickel operation in the Domincan Republic, the Horne smelter in Rouyn, Quebec and with supervisory and administrative personnel at the St. Ann bauxite mine in Jamaica. Negotiations at the Brunswick Mine, Brunswick Smelter and Bulk Handling Operations in New Brunswick, as well as General Smelting in Quebec, are ongoing.

In the second quarter of 2006, the following collective agreements are up for renewal:

- Raglan Mine (Quebec) – April 30
- Lomas Bayas (Chile) – April 30
- Nikkelverk (Norway) – May 31

Development Projects Update

Copper Projects

Collahuasi, Chile

The completion of the mill expansion and transfer of mining operations to the Rosario pit was completed in 2005 and since start-up the operating experience has demonstrated the potential to increase the throughput of Collahuasi from the initial design capacity of 110,000 tonnes per day to over 150,000 tonnes per day. The focus of the management team is on the continued optimization of the current facilities through a series of debottlenecking initiatives which will allow for increased production.

Further expansion is also being assessed due to the existing large and growing resource base. Although the current resource base could support further expansion on its own, exploration efforts have also identified a new high grade zone (named "Rosario West"), which is approximately 250 metres south of the Rosario pit. In addition, other geological anomalies have also been identified which could further increase the size of the Rosario West resource, currently estimated to be in excess of 250 million tonnes of 1.5% copper. The strategy is to further define the potential of this new resource which, given its size and high copper grades, could provide the most profitable ore to support a further expansion in copper production.

Antamina, Peru

Adding additional grinding capacity is being assessed with the potential installation of a pebble crushing circuit which would assist in the crushing of ores and increase the overall throughput and production of metal in concentrate. Engineering is currently being completed with a decision to implement expected in 2006.

Lomas Bayas Expansion, Chile

As part of the Company's review of the Fortuna de Cobre deposit, the development of the exploration tunnel began in March 2005 and is now complete. Construction of the pilot plant was completed in August 2005 and pilot testing is expected to be completed in August 2006. The results of conceptual studies to optimize the development of Fortuna and integration with Lomas are being assessed. A decision on which alternative to pursue will be made later in 2006.

Kidd Mine D Project, Canada

Work on the shaft bottom and lateral development was completed in the first quarter of 2006. Production from block three is expected to begin in the third quarter of 2006, with project completion expected by the end of 2006.

El Pachón, Argentina

Located in Argentina and situated less than five kilometres from the Chilean border and the Las Pelambres copper mine, El Pachón is a larger copper deposit with measured and indicated resources of 724 million tonnes of copper grading 0.65%. In 2006, work will progress in road re-opening, environmental baseline data collection, and progression of the project towards the feasibility gate. The study has been initiated and selection of an engineering firm is targeted for the beginning of May 2006.

El Morro, Chile

The El Morro deposit is a large copper porphyry with high gold co-product credits with measured and indicated resources of 466 million tonnes of 0.61% copper and 0.50 g/t gold. In April 2006, Falconbridge will complete a 30,000-metre drilling program (delineation, in-fill and metallurgical drilling) required to support the work plan to achieve the feasibility stage. Samples for metallurgical test work are being collected and laboratory work has started.

Nickel Projects

Raglan Mine Optimization, Canada

With the first phase complete, focus has shifted to developing the phase II scope. The second phase of Raglan's optimization will focus on utilizing increased mill capacity by expanding site infrastructure and ore production to allow for the mining, milling and processing of 1.3 million tonnes of ore annually, resulting in approximately 30,500 tonnes of annual contained nickel production. Scoping study work has been initiated. This phase is targeted to be completed in early 2008.

Nickel Rim, Canada

Vent shaft sinking, which began in February 2005, is now at 1,307 metres and is ahead of schedule. Main shaft sinking began in April 2005 and is now at 672 metres. This project is expected to be completed in 2009, with production starting in 2009.

Koniambo, New Caledonia

Falconbridge continued to advance the Koniambo ferronickel project in New Caledonia, a joint venture between Falconbridge and SMSP. The current focus is on the advancement of detailed engineering and on early construction activities with a focus on site preparation. Discussions continue with government authorities to refine the necessary operating and construction permits. Koniambo Nickel SAS will produce 60,000 tonnes of nickel with startup expected in 2009/2010.

Kabanga, Tanzania

The Kabanga deposit is a joint venture between Falconbridge and Barrick Gold in Tanzania. The scoping study drilling program and engineering studies are now complete and the scoping study documentation was delivered at the end of the first quarter of 2006. The companies continued to upgrade the resource to measured and indicated categories to support the work plan and diamond drilling is ongoing with seven drills in the ground to define and expand the resource. In addition, systematic exploration of the under-explored Kabanga licence have been initiated and select regional targets are being evaluated.

Zinc Projects

Lennard Shelf, Australia

Falconbridge's Board of Directors has approved the restart of the Lennard Shelf mining operations in Australia, in which the Company has a 50% earn-in right. The other 50% is held by Teck Cominco. The operations are presently under care and maintenance. The mine is expected to produce 70,000 to 80,000 tonnes of zinc per year, on a 100%-basis, for four to five years. The estimated capital cost of the restart is A$23 million on a 100% basis, with an additional A$5 million in pre-production costs. First concentrate production is planned for early 2007.

Exploration Update

Brazil

During the quarter, Falconbridge announced a preliminary inferred resource estimate for two new significant nickel deposits on its Araguaia Nickel Laterite properties in the Para State of northern Brazil. An extensive exploration program on these promising properties is being conducted and diamond drilling continues with six diamond drills. Two deposits are being delineated on the project, the largest at this point being the Serra do Tapa deposit. The second deposit, Vale dos Sonhos, is located 10 kilometres to the southeast.

Of the holes drilled at the deposits to date, 350 contain mineralized intercepts with grades greater than 1% nickel and 186 were below cut-off. Work is in progress to establish a protocol for completing sampling for initial metallurgical test work that will be used to support an economic scoping study. In addition, drilling continues to delineate extensions of the known resources. This work will continue through 2006. Background information with respect to the project can be obtained by referring to the previous press release dated, September 6, 2005.

Other

Under the terms of the Support Agreement between Inco and Falconbridge, the Corporation is not permitted to issue any additional shares (other than in respect of existing options and other convertible securities). The Corporation has therefore suspended its Dividend Re-Investment Plan. Common shareholders will continue to receive their dividends in cash.

Shares Outstanding and Declared Dividends

Louvicourt Mine Production – 2005

Not included in the above totals are Falconbridge's share of production from the now closed Louvicourt copper/zinc mine. The Louvicourt mine produced the following volumes of metal contained in concentrate that was transferred to the Horne smelter.

(Falconbridge's equity share of contained tonnes or millions of ounces)

Production:	2005 Q1
Copper	3,321
Zinc	2,588
Silver	66

Note: 2005 production and sales figures have been restated to conform to the current year's presentation.
Note 1: Sales are defined as sales to third parties and are net of all intra-company transfers.
Note 2: Realized prices are the average from all sales across all business units
Detailed production and sales volume reports by business unit are available in the Supplemental Slides presentation accessible on Falconbridge's website at www.falconbridge.com in the Investor Relations >> Quarterly Earnings section."

On 27 April 2006, Falconbridge made the following public announcement:

"FALCONBRIDGE AND THE UNITED STEELWORKERS REACH A TENTATIVE AGREEMENT ON RAGLAN MINE LABOUR CONTRACT

Rouyn-Noranda, April 27, 2006 – Falconbridge Limited and the United Steelworkers of America, Local 9449 are pleased to announce that they have reached a tentative agreement to renew the collective agreement of the Raglan Mine located in Nunavik in Northern Quebec, scheduled to expire on April 30, at midnight.

It is expected that employees will vote on the agreement by May 26, 2006. Both the company and union bargaining teams unanimously recommend the tentative agreement.

Details of the agreement will be released once it has been ratified.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 1 May 2006, Falconbridge published the following financial information:

Falconbridge Limited
Notes to Consolidated Financial Statements

(Millions of US dollars, except per share amounts and as otherwise indicated)
(Unaudited)

1. Accounting Policies

These unaudited interim consolidated financial statements have been prepared using disclosure standards appropriate for interim financial statements and do not contain all the explanatory notes, descriptions of accounting policies or other disclosures required by Canadian generally accepted accounting principles for annual financial statements. Such notes, descriptions of accounting policies and other disclosures have been included in Falconbridge Limited's 2005 annual consolidated financial statements. Accordingly, these unaudited interim consolidated financial statements should be read in conjunction with Falconbridge's audited annual consolidated financial statements and the accompanying notes included in the 2005 Annual Report.

As is further described in Note 2, during 2005 Noranda Inc. ("Noranda") acquired all of the issued and outstanding common shares of Falconbridge Limited ("the former Falconbridge") that it did not previously own. On June 30, 2005, Noranda amalgamated with the former Falconbridge and the newly amalgamated company ("Falconbridge" or the "Company") was continued under the name Falconbridge Limited.

2. Business Combination

On June 30, 2005, the Company completed the two-step acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own, pursuant to the offer to purchase dated March 9, 2005. The acquisition was completed by way of an amalgamation of Noranda Inc. and the former Falconbridge Limited ("the Amalgamation") and the newly amalgamated company is continued under the name, Falconbridge Limited. The acquisition was done on a share-exchange basis with one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The former Falconbridge is a producer of nickel, copper, cobalt and platinum and has mining and metallurgical operations mainly in Canada and South America.

The first step of the acquisition was completed on May 5, 2005 when the Company successfully acquired 32.3% of all the issued and outstanding common shares of the former Falconbridge, increasing its ownership to 90.8% of the outstanding former Falconbridge common shares. On June 30, 2005, the Company completed the second step of the acquisition by proceeding with its intent to acquire the remaining 9.2% of the former Falconbridge common shares and assumed 100% of the preferred shares and stock options obligations of the former Falconbridge. The results of operation of the former Falconbridge from January 1, 2005 to May 4, 2005 have been included in the Company's consolidated statements of earnings at 58.5% and from May 5, 2005 to June 30, 2005 at 90.8%. Beginning July 1, 2005, 100% of the results from operations have been included in the Company's consolidated statement of earnings.

The acquisition has been accounted for using the purchase method, whereby the purchase consideration was allocated to the estimated fair values of the assets acquired and liabilities assumed on the date of acquisition. The Company has not yet finalized the allocation of the purchase cost for the acquisition. The allocation of the purchase price related to this acquisition is preliminary and will be refined as information relating to the valuation of operating capital assets and development projects is finalized.

3. Stock-Based Compensation

The Company has a stock option plan through which options may be granted to directors, officers and employees for the purchase of common shares. On the date of grant, the value associated with granted stock options is established using the Black-Scholes valuation model. The value is being charged to net income over its vesting periods.

No new stock options were granted by the Company during the three months ended March 31, 2006. Corporate and general administration, for the three months ended March 31, 2006, include compensation costs of $2 (2005 - $1), relating to outstanding options.

4. Exchange Gains and Losses on Hedges of Foreign-denominated Exposures

The majority of the Company's products are denominated in US dollars or indexed to US dollar prices. In addition, operating costs of the Company's assets are also denominated in their local currency and exposed to exchange volatility. From time to time, the Company may hedge its local currency costs using foreign currency exchange contracts.

The Company's operating costs for the three months ended March 31, 2006 include realized exchange losses of $1 (2005 – gains of $20) from the settlement of various cost hedge contracts.

Hedges of the foreign currency denominated monetary assets and liabilities, generated a gain of $13 (2005 - $1) for the three months ended March 31, 2006.

5. Capitalized Interest

During the three months ended March 31, 2006, the Company capitalized $18 of interest costs associated with projects under development (2005 - $9).

6. Post – employment benefits

Post-employment benefit expenses for the three months ended March 31, 2006 and 2005 are summarized as follows:

Unaudited, three months ended March 31,	2006	2005
Defined benefit plans	**8**	14
Defined contribution plans	**4**	3
Other benefits plans	**9**	7
	21	24

7. Shareholders' Rights Plan

On March 21, 2006, the Company enacted a new shareholder rights plan, designed to prevent a bidder from acquiring control of the Company in a manner detrimental to shareholders. The rights issued under the rights plan become exercisable when a person, together with any parties related to it, acquires or announces its intention to acquire 20% or more of the Company's outstanding common shares without complying with the "Permitted Bid" provisions of the rights plan or without approval of the Board of Directors of the Corporation. Should such an acquisition occur rights holders (other than the acquiring person and related persons) can purchase common shares of the Corporation at half the prevailing market price at the time the rights become exercisable. Under the rights plan, a Permitted Bid is a bid made to all holders of the Corporation's common shares for all of their shares. If at the expiry of the bid at least 50% of the outstanding shares, other than those owned by the offeror and certain related parties have been tendered, the offeror may take up and pay for the shares. The rights plan will not prevent an offer made to all shareholders for all of their shares.

8. Preferred Shares Liabilities

On March 16, 2006, the Company announced that it will redeem a total of 20 million or $500, of its outstanding Junior Preference Shares on April 26, 2006 based upon shareholders of record on March 22, 2006. The Company will redeem 8 million Junior Preference Shares, Series 1, 8 million Junior Preference Shares, Series 2, and 4 million Junior Preference Shares, Series 3. Each Junior Preference Share will be redeemed at a price of $25.25 plus accrued and unpaid dividends for the period from April 1, 2006 to and including April 25, 2006. The Company will use cash balances to fund the redemption. This amount has been classified as a current liability as at March 31, 2006.

Canadian copper and recycling operations is from recyclable materials. Gross value of recyclable raw materials is more than $300 million annually. Noranda Recycling is 100%-owned by Falconbridge Limited.

Falconbridge Limited is a leading copper and nickel company with investments in fully integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 6 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE REACHES AN AGREEMENT ON LOMAS BAYAS LABOUR CONTRACT

Santiago, Chile, May 6, 2006 – Falconbridge Limited is pleased to announce it has reached an agreement with the Sindicato de Empresa Compañía Minera Lomas Bayas for the renewal of the collective agreement at the Lomas Bayas copper mine located in Chile.

Employees voted in favour of the agreement this morning, and it will supersede the prior agreement which expired on April 30, 2006.

"Both parties worked diligently throughout the negotiations, and we are pleased to have successfully reached an agreement that balances the needs of the company and employees," said Marcelo Jo, General Manager of Lomas Bayas.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 8 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE COMMENTS ON INCO-FALCONBRIDGE COMBINATION

Toronto, Ontario, May 8, 2006 – Falconbridge Limited today said that Inco and Falconbridge continue to believe there is a strong value proposition in the Inco and Falconbridge transaction and the companies are determined to complete it in accordance with the existing agreement.

"Our agreement with Inco is an excellent transaction and offers compelling value to shareholders of both our companies, with the potential for a re-rating in the capital markets," said Derek Pannell, Falconbridge's Chief Executive Officer. "The transaction would result in the creation of the world's number one nickel producer and a leading copper producer. Furthermore, it would have a portfolio of world-class growth projects."

"We are surprised that Teck Cominco has taken this step to interfere in our transaction and will review the implications of what they have done," added Pannell.

Synergies of Inco-Falconbridge Transaction Are Real and Unique to These Two Companies
Inco and Falconbridge have conservatively estimated synergies stemming from their transaction of at least US$350 million per year, based on lower commodity prices prevailing in 2005. The estimated synergies were the result of a rigorous review by the companies' respective teams and derived from in-depth discussions and analysis. The companies believe they are better equipped than any other party to achieve significant operating and other synergies, especially given Falconbridge's recent experience at merging companies.

Update on Regulatory Approvals
The following is an update on the regulatory process by the European Commission ("EC") and the U.S. Department of Justice ("DOJ").

Falconbridge and Inco understand that the EC will be issuing its Statement of Objections ("SO") shortly. This is part of their normal procedures in their second phase review of pending acquisitions like our transaction. The companies have been discussing with the EC the competitive concerns they have identified and which they expect will be in the SO. They will be submitting their responses to the SO in the time provided for in this process. Inco and Falconbridge also plan to submit a

remedy intended to address the competitive concerns of the EC. They look forward to continuing to work with the EC as they move through their second phase process. This element of the process is one of the standard steps leading to a decision by July 12th, 2006.

The companies continue to have constructive discussions with the DOJ in anticipation of approval.

FORWARD-LOOKING INFORMATION

Certain statements contained in this News Release are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our assessment of the outlook for metal markets in 2006, (ii) Inco's offer to acquire all of the common shares of Falconbridge Limited and the benefits of such combination, (iii) our future financial requirements and funding of those requirements, (iv) our expectations with respect to our development projects, (v) our production forecast for 2006 and (vi) our dividend schedule. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this News Release. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of Inco's offer to acquire all of our common shares, the ability to successfully compete against global metals and mining and exploration companies by creating through such a combination an enterprise of increased scale; strong demand for nickel, copper and other metals in emerging markets such as China; approximately $350 million per annum in pre-tax operating and other synergies and cost savings, and other benefits being realized based on the achievement of operational efficiencies from restructuring, integration and other initiatives relating to the combination of Falconbridge and Inco; the approvals or clearances required to be obtained by Inco and Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner; divestitures required by regulatory agencies being acceptable and completed in a timely manner; there being limited costs, difficulties or delays related to the integration of the Falconbridge's operations with those of Inco; the timely completion of the steps required to be taken for the eventual combination of the two companies; business and economic conditions generally; exchange rates, energy and other anticipated and unanticipated costs and pension contributions and expenses; the supply and demand for, deliveries of, and the level and volatility of prices of, nickel, copper, aluminum, zinc and other primary metals products and other metal products Inco and Falconbridge produce; the timing of the receipt of remaining regulatory and governmental approvals for the development projects and other operations; the continued availability of financing on appropriate terms for development projects; Falconbridge's costs of production and production and productivity levels, as well as those of its competitors; market competition; mining, processing, exploration and research and development activities; the accuracy of ore/mineral reserve estimates; premiums realized over LME cash and other benchmark prices; tax benefits/charges; the resolution of environmental and other proceedings and the impact on the combined company of various environmental regulations and initiatives; assumptions concerning political and economic stability in countries or locations in which Falconbridge operates or otherwise and the ability to continue to pay quarterly cash dividends in such amounts as Falconbridge's Board of Directors may determine in light of other uses for such funds and other factors.

Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this news release. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco and Falconbridge.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel orebodies. It employs 14,500

Important Legal Information

This communication is being made in respect of the share exchange takeover bid by Inco Limited for common shares of Falconbridge Limited. Inco has filed with the U.S. Securities and Exchange Commission ("SEC") a registration statement on Form F-8 containing a share exchange take-over bid circular. Inco, if required, will file other documents regarding the transaction with the SEC. INVESTORS ARE URGED TO READ THE REGISTRATION STATEMENT AND ANY OTHER RELEVANT DOCUMENTS FILED OR TO BE FILED WITH THE SEC WHEN THEY BECOME AVAILABLE BECAUSE THEY WILL CONTAIN IMPORTANT INFORMATION. Investors will be able to obtain the documents filed with the SEC free of charge at the SEC's website (www.sec.gov). Canadian investors will also be able to obtain information filed in respect of this bid at www.sedar.com.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel orebodies. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 17 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE RESPONDS TO ANNOUNCEMENT BY XSTRATA

TORONTO, May 17, 2006 – Falconbridge Limited has reviewed the press release issued today by Xstrata plc indicating that Xstrata intends to make an unsolicited offer to purchase for cash all of the outstanding common shares of Falconbridge.

Upon receipt of the actual offer, the Falconbridge Board of Directors will evaluate its terms and provide Falconbridge shareholders with a formal response.

"I don't believe that the Cdn$52.50 cash price per share proposed by Xstrata reflects the full and fair value of Falconbridge shares, given its current earnings prospects," said Derek Pannell, Falconbridge's Chief Executive Officer.

"The proposed offer is conditional and does not take into account the unique and real synergies that are available from the Inco/Falconbridge combination. Furthermore, a cash offer would deprive our shareholders of the opportunity of participating in the growth profile that is embedded in Falconbridge's outstanding asset base, and which is further enhanced by the proposed combination with Inco," he said.

"In addition, with Falconbridge shares closing yesterday, May 16, 2006, at Cdn$54.00, the proposed offer is unlikely to be attractive to Falconbridge shareholders," said Pannell.

"The all-cash Xstrata offer has to be compared with Inco's revised offer, which provides Falconbridge shareholders with continued participation both in the growth of a global mining company and in an industry which is consolidating," added Pannell.

FORWARD-LOOKING INFORMATION

Certain statements contained in this News Release are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning the date of redemption of the shares. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of the redemption. Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. On 18 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE ANNOUNCES APRIL 2006 NET INCOME INCREASES 194% TO $238 MILLION

TORONTO, Ontario, May 18, 2006 – Falconbridge Limited today reported April 2006 net income of $238 million (earnings per share of $0.64 basic; $0.63 diluted). This compares with April 2005 net income of $81 million (earnings per share of $0.27 basic; $0.27 diluted).

April 2006 Highlights

Financial Results (unaudited)

$ millions, except per share information	**April 2006**	April 2005	**Q1 2006**	Q1 2005
Revenues	**1,288**	663	**2,858**	1,894
Income generated by operating assets*	**422**	165	**739**	459
Net income	**238**	81	**462**	176
Basic earnings per common share	**0.64**	0.27	**1.23**	0.58
Diluted earnings per common share	**0.63**	0.27	**1.21**	0.57

* Please see the detailed definition provided under Supplemental Performance Measures on page 208

- Revenues almost doubled to $1.3 billion from the month ended April 30, 2005
- Achieved income from operating assets of $422 million, a 156% increase from April 2005
- Realized net income of $238 million, a 194% increase from April 2005
- April 2006 realized prices were significantly higher (vs. April 2005): copper was up 87%, nickel up 6%, zinc up 118%, aluminum up 22%
- In light of the strong cash generation, will redeem the remaining outstanding Junior Preference Shares for approximately $253 million

LME Prices/lb. – April 2006 Average versus Current

LME Official Cash Price	**Copper**	**Nickel**	**Zinc**	**Aluminum**
April 2006 Avg.	$2.90	$8.14	$1.40	$1.19
Current*	$3.70	$9.63	$1.59	$1.29

* As at May 18, 2006

Commentary

"Falconbridge's performance for the month of April further demonstrates our leverage to strong metals prices," said Derek Pannell, Chief Executive Officer of Falconbridge. "Our operations again capitalized on the higher prices with their strong performance. Our earnings leverage to current metals prices is creating the backdrop for impressive earnings and free cash flow generation. While we realize that the release of monthly results is unusual, and we will not make a habit of it, we felt it was important that shareholders understand the magnitude of the earnings that we are generating at this crucial time."

Corporate Developments

Xstrata Offer

On May 18, 2006, Xstrata PLC made its unsolicited offer to purchase for cash all of the outstanding common shares of Falconbridge. The Xstrata offer is conditional on the approval by Xstrata shareholders and on the receipt of all required regulatory clearances. The Falconbridge Board of Directors will evaluate the terms of the offer and provide Falconbridge shareholders with a formal response.

Inco Offer

On May 13, 2006, Inco Limited announced an improved offer to acquire all outstanding common shares of Falconbridge. The improved offer is comprised of part cash and part Inco common shares, which when pro-rated subject to the

maximum amounts offered would provide Cdn$12.50 and 0.524 of an Inco common share for each Falconbridge common share. Assuming the full pro-ration, the amended Inco offer provides Falconbridge shareholders with an additional Cdn$5.00 per common share or a total of Cdn$1.9 billion more in value compared to the original offer. Both Boards of Directors unanimously endorsed the Inco offer and the Falconbridge Board has recommended that the Company's shareholders tender their shares to the offer, which remains open for acceptance to June 30, 2006.

The combined organization, which would be known as Inco Limited, would be one of the world's premier mining and metals companies. It would be the world's largest producer of nickel and eighth-largest producer of copper, and would also operate integrated zinc and aluminum businesses. The new company would have one of the mining industry's most attractive portfolios of low-cost, profitable growth projects and would benefit from estimated annual synergies of approximately $390 million – a revised higher estimate than the original $350 million synergies estimate due to the impact of higher metals prices.

Inco and Falconbridge continue to work with the U.S. Department of Justice and the European Commission in connection with their respective reviews of the pending transaction.

Statements regarding the combination of Falconbridge and Inco are subject to various risks and assumptions. See "Forward-looking Information" on page 210.

Redemption of Junior Preference Shares

Today, Falconbridge announced its intention to redeem the remaining balance of its 9,999,701 outstanding Junior Preference Shares for a total of approximately $253 million. The Junior Preference Shares will be redeemed on June 28, 2006 under a notice of redemption to be sent to shareholders of record on May 25, 2006. Falconbridge intends to utilize its internal cash resources to fund the redemption and will have no Junior Preference Shares outstanding upon redemption.

In accordance with the terms of the Junior Preference Shares, Falconbridge will redeem the remaining balance of shares of each series of the Junior Preference Shares as follows: 3,999,899 Junior Preference Shares, Series 1 (TSX: FAL.PR.X), 3,999,899 Junior Preference Shares, Series 2 (TSX: FAL.PR.Y), and 1,999,903 Junior Preference Shares, Series 3 (TSX: FAL.PR.Z). Each Junior Preference Share will be redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from and including March 31, 2006 to and including June 27, 2006.

Statements regarding the redemption of Junior Preference Shares of Falconbridge are subject to various risks and assumptions. See "Forward-looking Information".

Financial Results

Revenues for the month of April of 2006 were $1,288 million, 94% higher than revenues of $663 million in the same month of 2005. The increase was mainly due to higher realized metal prices and product premiums and higher copper sales volumes and increased revenue contribution from by-product credits. Business unit revenues were 147% higher for copper, 11% higher for nickel, 278% higher for zinc and 27% higher for aluminum.

Operating expenses were higher at $866 million in April 2006, compared to $498 million in the same month last year, primarily due to the higher value of raw material feeds and continual pressure on costs from energy and supply costs, as well as the effects of the weakening U.S. dollar. Mining, processing and refining costs increased to $275 million from $194 million in April of 2005 due to higher levels of mined and refined copper production, higher energy and supplies/ consumables costs, and the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations. The average value of the Canadian dollar increased 7% to US$0.87 from US$0.81 in April of 2005.

The value of raw material feed purchases was $537 million, compared to $260 million in April 2005, due to higher metal prices and increased custom feed processing at copper operations. Higher purchased raw materials values are recovered at the time of sale of the metals contained in the materials treated and are generally hedged at the time of purchase.

Depreciation, amortization and accretion expense increased to $54 million from $44 million in April 2005, with $10 million of the increase being attributable to the amortization of the fair value increment related to the purchase of the former Falconbridge minority shareholders' interest and the resulting increase in the book value of the assets acquired. Net interest expense increased to $15 million from $9 million in April of last year due mostly to the impact of the junior preferred share

liabilities issued pursuant to the issuer bid completed in early May 2005. Interest expense included a one-time early redemption premium of $5 million paid to the holders at the time of the partial redemption of the junior preference shares in April 2006. Minority interest in earnings of subsidiaries decreased to $1 million from $35 million largely as a result of the elimination of the former Falconbridge minority share ownership. Tax expenses recorded increased to $155 million from $24 million in April of 2005, due to the overall increase in profitability.

Income generated by operating assets for April 2006 was $422 million, 156% higher than $165 million generated in April of 2005. Income generated by operating assets increased $242 million to $300 million in the copper business, decreased $17 million to $69 million in the nickel business, increased $47 million to $59 million in the zinc business and increased $7 million to $20 million in the aluminum business.

For April 2006, net income totaled $238 million, or $0.64 per basic common share and $0.63 per diluted common share, 194% higher than net income of $81 million or $0.27 per basic and $0.27 per diluted common share in April 2005. Higher net income reflects higher realized metal prices, higher treatment and refining charges received at copper smelters and refineries and the impact of increased by-product revenue credits.

Supplemental Performance Measures

The press release contains a number of measures that are not defined by generally accepted accounting principles ("GAAP"). The measures, as calculated by the Company, may not be comparable to similar measures presented by other issuers.

Income generated from operating assets is defined as follows: net income before interest expense, net; corporate and general administration; research, development and exploration; minority interest in earnings of subsidiaries; gain, net of restructuring costs and other; and tax expense. Since this measure captures the Company's key revenues and operating expenses of assets currently in operation, income generated from operating assets is a key performance measurement that management uses to evaluate the performance of both individual assets and business units.

Net-debt-to-capitalization ratio is calculated as follows:

(US$ millions)		April 30, 2006	Dec. 31, 2005
Long-term debt		**2,545**	2,598
Preferred share liabilities[1]		**381**	876
Debt due within one year[2]		**353**	353
Cash and cash equivalents		**(465)**	(886)
Net debt	(1)	**2,814**	2,941
Interests of other shareholders		**57**	54
Shareholders' equity		**5,715**	5,031
Stockholders' interests (equity)	(2)	**5,772**	5,085
Net debt plus capitalization	(3)=(1)+(2)	**8,586**	8,026
Net-debt-to-capitalization ratio	(1)/(3)	**32.8%**	36.7%

[1] April 30, 2006, includes the current portion of $250 million of preferred share liabilities which will be redeemed on June 28, 2006, as announced.
[2] April 30, 2006, excludes the current portion of $250 million of preferred share liabilities which will be redeemed on June 28, 2006, as announced.

Management believes the presentation of this measure is relevant and useful for investorswhen assessing the Company's liquidity and its ability for growth and investment. This measure should not be considered an alternative to liquidity as determined under generally accepted accounting principles.

Realized Prices

(US$/lb.)	**April 2006**	April 2005	**Q1 2006**	Q1 2005

Liquidity and Capital Initiatives

Long-term debt was $2.5 billion at the end of April excluding preferred share liabilities. Falconbridge's net-debt-to-capitalization ratio stood at 32.8% at the end of April 2006, a reduction of almost 400 basis points since the end of 2005.

Today, Falconbridge announced its plan to redeem for cash of $253 million, its remaining outstanding Junior Preference Shares on June 28, 2006. Falconbridge has benefited from high earnings and cashflow generation and will utilize existing cash balances to fund the redemption.

For 2006, the Company's projected capital investments are approximately $315 million for sustaining capital expenditures and other smaller projects and approximately $435 million in new copper and nickel investments.

Falconbridge maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. Falconbridge's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new long- and short-term borrowings. The Company's committed bank facilities, which expire in 2010, total $780 million. At April 30, 2006, these lines were essentially undrawn.

Statements regarding future financial requirements and funding of those requirements are subject to various risks and assumptions. See "Forward-looking Information".

Review of Operations

Copper: Production of mined copper in concentrate for the month was 42,800 tonnes versus 35,000 tonnes during April 2005, an increase of 22% due to increased output at Antamina, Collahuasi and Kidd Creek. Refined copper production for the month was 53,200 tonnes versus 41,400 tonnes during April 2005, an increase of 29% from a year ago.

Sales of copper in concentrate to third parties in April was 16,100 tonnes versus 18,000 tonnes during April 2005, a decrease of 11% from a year ago. Sales of refined copper for the month was 50,400 tonnes versus 37,900 tonnes during April 2005, an increase of 33% from a year ago. Realized copper premiums above LME prices were greater than $0.07/lb.

Nickel: Production of mined nickel in concentrate for the month was 4,100 tonnes versus 4,000 tonnes during April 2005, an increase of 3% from a year ago. Refined nickel production for the month was 7,200 tonnes versus 7,100 tonnes during April 2005. Ferronickel production for the month was 2,500 tonnes versus 2,400 tonnes during April 2005, an increase of 4% from a year ago.

Total nickel sales for the month were 2% higher at 10,000 tonnes. Sales of refined nickel for the month was 6,900 tonnes versus 7,600 tonnes during April 2005. Sales of ferronickel for the month was 3,100 tonnes versus 2,200 tonnes during April 2005. Stainless steel production has been particularly robust in the U.S. and China, resulting in nickel cathode and melting grade premiums having risen to $0.35/lb.

Zinc: Production of mined zinc in concentrate for the month was 33,200 tonnes versus 41,100 tonnes during April 2005, a decrease of 19% from a year ago. Mined zinc production and sales are lower year over year due to mostly to higher copper versus zinc grades at Antamina and the closure of the Louvicourt mine in the second half of 2005. Kidd Creek refined zinc production for the month was 12,400 tonnes versus 10,900 tonnes during April 2005, an increase of 14% from a year ago. Refined lead production for the month was 7,500 tonnes versus 7,900 tonnes during April 2005.

Sales of zinc in concentrate for the month was 56,100 tonnes versus 31,600 tonnes during April 2005, an increase of 78% from a year ago. Sales of zinc concentrate were higher during the month due to the timing of vessel shipments. Sales of refined zinc for the month was 12,300 tonnes versus 12,900 tonnes during April 2005, a decrease of 5% from a year ago. Zinc sales in North America are experiencing strong demand after the closure of a U.S. zinc smelter earlier this year and the rise in spot market premiums to US$0.08/lb. have reflected this tightness.

Aluminum: Primary aluminum production for the month was 20,800 tonnes versus 20,500 tonnes during April 2005, an increase of 1% from a year ago.

Sales of primary aluminum for the month was 16,700 tonnes versus 17,700 tonnes during April 2005, a decrease of 6% from a year ago. Fabricated aluminum shipments were 15,800 tonnes versus 14,300 tonnes during the month of April 2005, an increase of 10% from a year ago. Primary aluminum and fabricated aluminum sales continue to benefit from strong mid-West U.S. demand.

FORWARD-LOOKING INFORMATION

Certain statements contained in this News Release are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our assessment of the outlook for metal markets in 2006, (ii) Inco's offer to acquire all of the common shares of Falconbridge Limited and the benefits of such combination, (iii) Xstrata's offer to acquire all of the common shares of Falconbridge Limited and the effects of such combination (iv) our future financial requirements, including to redeem the junior preference shares, and funding of those requirements, (v) our expectations with respect to our development projects, and (vi) our production

forecast for 2006. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this News Release. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of Inco's offer to acquire all of our common shares, the ability to successfully compete against global metals and mining and exploration companies by creating through such a combination an enterprise of increased scale; strong demand for nickel, copper and other metals in emerging markets such as China; approximately $390 million per annum in pre-tax operating and other synergies and cost savings, and other benefits being realized based on the achievement of operational efficiencies from restructuring, integration and other initiatives relating to the combination of Falconbridge and Inco; the approvals or clearances required to be obtained by Inco and Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner; divestitures required by regulatory agencies being acceptable and completed in a timely manner; there being limited costs, difficulties or delays related to the integration of the Falconbridge's operations with those of Inco; the timely completion of the steps required to be taken for the eventual combination of the two companies; business and economic conditions generally; exchange rates, energy and other anticipated and unanticipated costs and pension contributions and expenses; the supply and demand for, deliveries of, and the level and volatility of prices of, nickel, copper, aluminum, zinc and other primary metals products and other metal products Inco and Falconbridge produce; the timing of the receipt of remaining regulatory and governmental approvals for the development projects and other operations; the continued availability of financing on appropriate terms for development projects; Falconbridge's costs of production and production and productivity levels, as well as those of its competitors; market competition; mining, processing, exploration and research and development activities; the accuracy of ore/mineral reserve estimates; premiums realized over LME cash and other benchmark prices; tax benefits/charges; the resolution of environmental and other proceedings and the impact on the combined company of various environmental regulations and initiatives; assumptions concerning political and economic stability in countries or locations in which Falconbridge operates or otherwise and the ability to continue to pay quarterly cash dividends in such amounts as Falconbridge's Board of Directors may determine in light of other uses for such funds and other factors.

Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this news release. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco and Falconbridge.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com.

Note: All dollar amounts are expressed in U.S. dollars unless otherwise noted. Condensed consolidated financial statements are attached.

Important Legal Information

This communication is being made in respect of Inco Limited's proposed combination with Falconbridge Limited. Inco has filed with the U.S. Securities and Exchange Commission ("SEC") a registration statement on Form F-8 (containing an offer to purchase and a share exchange take-over bid circular) and amendments thereto, and, if required, will file other documents with the SEC in connection with the proposed combination. Falconbridge has filed a Schedule 14D-9F with the SEC in connection with Inco's offer and has filed and, if required, will file other documents regarding the proposed combination with the SEC.

Information on the Falconbridge Group

INVESTORS AND SECURITYHOLDERS ARE URGED TO READ THE REGISTRATION STATEMENT AND ANY OTHER RELEVANT DOCUMENTS FILED OR TO BE FILED WITH THE SEC WHEN THEY BECOME AVAILABLE BECAUSE THEY WILL CONTAIN IMPORTANT INFORMATION.

Investors and security holders may obtain copies of the registration statement and Inco's and Falconbridge's SEC filings free of charge at the SEC's website (www.sec.gov). In addition, documents filed with the SEC by Inco may be obtained free of charge by contacting Inco's media or investor relations departments. Documents filed with the SEC by Falconbridge may be obtained free of charge by contacting Falconbridge's investor relations department.

Filings made by Inco and Falconbridge with Canadian securities regulatory authorities, including filings made in connection with the offer, are available at www.sedar.com.

Louvicourt Mine Production – 2005

Not included in the above totals are Falconbridge's share of production from the now closed Louvicourt copper/ zinc mine. The Louvicourt mine produced the following volumes of metal contained in concentrate that was transferred to the Horne smelter.

(Falconbridge's equity share of contained tonnes or millions of ounces)

Production:	April 2005
Copper	1,335
Zinc	758
Silver	26

Note: Production and sales figures have been restated to conform to the current year's presentation.
Note 1: Sales are defined as sales to third parties and are net of all intra-company transfers.
Note 2: Realized prices are the average from all sales across all business units

On 19 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE LIMITED'S BRUNSWICK MINE EMPLOYEES RATIFY COLLECTIVE AGREEMENT

Bathurst, New Brunswick, May 19, 2006 – Falconbridge Limited announced today that employees at Brunswick Mine, members of United Steelworkers of America, Local 5385, have voted in favour of a new collective agreement.

The new agreement will be in effect up to and including closure of the Brunswick mine scheduled for early 2010. Highlights of the agreement include:

- A downsizing provision at closure that defines how seniority will apply, how termination will be carried out and how pensions and severances will be provided to workers
- Wage increases of Cdn$0.25 per hour for each year of the agreement.
- An increase in the basic pension from Cdn$47 per month per year of service to Cdn$52 at closure.

The Brunswick mine, located 30 kilometres south of Bathurst, New Brunswick, employs over 800 people, with approximately 670 being members of the USWA-Local 5385.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mineral deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

On 24 May 2006, Falconbridge made the following public announcement:
"FALCONBRIDGE AND USW RATIFY FIVE-YEAR COLLECTIVE AGREEMENT AT RAGLAN MINE

TORONTO, ONTARIO, May 24, 2006 – Falconbridge Limited and the United Steelworkers (USW), Local 9449, announced today that employees at Raglan Mine have voted in favour of a new collective agreement. The prior collective agreement expired on April 30.

The new collective agreement expires April 30, 2011. Highlights include:

- Wage increase of 2.2% each year of the collective agreement;
- Productivity and Profit Sharing program improvements;
- Signing bonus of Cdn$1,500 upon the execution of the collective agreement and an additional Cdn$375 in each remaining year of the collective agreement.

The Raglan Mine is located in Nunavik in Northern Quebec and employs approximately 500 people, with some 300 being members of Local 9449 of the USW."

This is the end of the section including Falconbridge's material public announcements issued and filed with the Canadian Securities Administrators between 31 December 2005 and 29 May 2006 (being the latest practicable date prior to the publication of this document).

The following description of the business of Noranda has been extracted without material amendment from Noranda's Management's Discussion and Analysis as disclosed in Noranda's 2003 Annual Report.

Corporate Overview

Noranda is a leading copper and nickel producer with investments in integrated zinc and aluminum assets. The Company employs approximately 15,000 people at its operations and offices in 18 countries and is listed on both the New York and Toronto Stock Exchanges.

Noranda's goal is to deliver superior return to shareholders by owning, developing and efficiently managing integrated copper, nickel, zinc and aluminum operations.

Financial Summary

Effective July 1, 2003, the Company's functional and reporting currency was converted to U.S. dollars. Unless otherwise noted, all amounts in this report are expressed in U.S. dollars.

$ millions, except per share data	2003	2002
Results of operations		
Revenues	4,657	3,873
Income generated by operating assets*	409	114
Net income (loss)	34	(447)
Net income (loss) per common share	$0.04	$(1.93)
Cash flow		
Cash flow from operations	577	348
Investment in growth projects (unaudited)	307	382
Sustaining capital expenditures (unaudited)	182	146
Financial position		
Cash and short-term investments	630	293
Operating capital assets	4,682	4,652
Development projects (unaudited)	973	603
Total assets	8,245	7,102
Long-term debt	2,893	3,014
Shareholders' equity	2,636	1,858
Net-debt-to-equity ratio	43%	54%

* Defined as earnings before interest, corporate and general administration, research, development, exploration, minority interest, taxes, restructuring costs and gain on sale of investments.

Financial Profile

Noranda's consolidated assets totalled $8.2 billion as at December 31, 2003 on a book value basis compared with $7.1 billion at the end of 2002. The increase is primarily due to the investment of additional capital in advancing brownfield expansion development projects and debt and equity issues completed in 2003. Total revenues increased to $4.7 billion during 2003, an increase of $800 million over the $3.9 billion in revenue generated in mainly due to stronger metals prices and higher production levels. Noranda returned to profitability in 2003, generating net income of $34 million, or $0.04 per share diluted, an increase of $481 million from the loss of $447 million in 2002. The improved results were attributed to higher base metal prices and a lower cost structure in 2003. This was partially offset by the impact of the strengthening Canadian dollar, which increased Canadian-based operating costs when converted to U.S. dollars. 2002 net income included a reduction in the carrying value of the Company's magnesium operations of $520 million in recognition of the lower than expected magnesium prices.

At December 31, 2003, Noranda held cash and short-term investments of $630 million as a result of improved operating cash flows and the proceeds of debt and equity issues completed in September 2003, which generated $880 million. These cash resources, combined with undrawn credit facilities of over $1 billion, provide the Company with sufficient liquidity to complete its development projects, pursue new investment and development opportunities currently contemplated and repay near-term debt maturities.

Operating Assets

Of the $8.2 billion of assets, the capital assets which are currently contributing to earnings totalled $4.7 billion, while projects under development, which are not currently contributing to earnings, totalled $1 billion. Combined, these assets represent 70% of the total asset base of the Company. The operating assets are distributed in the Company's core metals as follows:

$ millions	2003	2002
Operating capital assets		
Copper	2,740	2,702
Nickel	1,052	982
Zinc	223	244
Aluminum	579	598
Other	88	126
Total	4,682	4,652

Capacity Enhancements

Since 1998, Noranda has invested in excess of $4 billion in the expansion of its operating capacity with the addition of world-class, low-cost assets and the improvement of existing operations. The Company increased its copper, nickel and zinc ore reserves, enhanced its copper and nickel processing capacity and expanded its primary and fabricated production capacity. These investments have substantially increased the Company's base-line earnings and its leverage to metal prices. The following is a summary of these initiatives and their impact on Noranda.

Business	Initiative	Impact	Completed
Copper	Collahuasi mine	Additional ore reserves of 1,983 million tonnes grading 0.92% copper	1998
	Antamina mine	Additional ore reserves of 530 million tonnes grading 1.22% copper and 1.01% zinc	2001
	Lomas Bayas	Additional ore reserves of 397 million tonnes grading 0.32% copper	2001
	Recycling plant – Tennessee	Additional throughput capacity of 20,000 tonnes	2001
	Altonorte smelter expansion	Additional throughput capacity of 440,000 tonnes	2003
	Recycling plant – Ontario	Annual throughput capacity of over 5,000 tonnes of electronic recyclables	2003
Nickel	Raglan mine	Additional ore reserves of 22.1 million tonnes grading 3.12% nickel	1998
	Nikkelverk refinery expansion	Increased throughput capacity by 23% to 85,000 tonnes	2001
Aluminum	Primary aluminum expansion	Increased annual production capacity by 15% to 250,000 tonnes	2001
	Huntingdon foil plant	Additional 125,000 tonnes of production capacity	2002

Projects Under Development

Investments in development projects at the end of the year totalled $973 million, an increase of $370 million since 2002, primarily due to capital invested in two major sources of copper production. The Collahuasi transition/expansion project will increase the mine's annual production capacity by 24% to 410,000 tonnes of copper in concentrate compared to 2003. Kidd Creek Mine D will give access to an additional 10.3 million tonnes of reserves and 14.1 tonnes of resources. While the annual production level of the Kidd Creek mine is expected to be similar to that of 2003, the cost structure will be lower and significantly more stable. Total investments in the Collahuasi and Kidd projects during 2003 totalled $160 million and $85 million, respectively.

Nickel and copper mining is the focus of the Company's growth program. As shown in the following table, Noranda has expansion projects in both these commodities that are currently under development. With the exception of Koniambo and Nickel Rim South, all projects underway are expected to be in production before mid-2005.

Projects Under Development

	Noranda's Beneficial Interests	Book Value (unaudited)	Planned Completion	Resources Category	Tonnes	Copper	Grade Nickel	Zinc
	(%)	($ millions)			(millions)	(%)	(%)	(%)
Copper								
Kidd Creek Mine D, Ontario	59.2	$276	2004	Inferred	14.1	3.40	–	4.90
Collahuasi extension, Chile	59.2	207	2004	Proven	254.1	1.01	–	–
				Probable	1,554.1	0.90	–	–

Montcalm, Ontario	59.2	17	2005	Probable	5.1	0.71	1.46	–
Koniambo, New Caledonia	29.0	123	2008	Measured	32.4	–	2.21	–
				Indicated	109.7	–	2.10	–
				Inferred	156.0	–	2.20	–
Nickel Rim South, Ontario	59.2	5	2008	Inferred	11.7	3.70	1.60	–
Other brownfield and greenfield developments		345	2005-2008	–	–	–	–	–
Total		$973						

Montcalm

One of the most advanced of these projects is the Montcalm nickel project which has secured all the necessary regulatory approvals for development and began construction in November 2003. It is scheduled to start operations in 2005 after an investment of $75 million. This project, located in Ontario, near existing metallurgical plants, is expected to add 8,000 tonnes of nickel production on an annual basis at an operating cost of $2.47 per pound.

Koniambo

The Koniambo nickel project in New Caledonia is one of the world's highly-coveted, undeveloped nickel deposits with total measured and indicated resources of 142 million tonnes grading 2.13% nickel and inferred resources of 156 million tonnes grading 2.20% nickel. Our partner, Société Minière du Sud Pacifique (largely owned by the North Province of New Caledonia), owns 51% of the project. A pre-feasibility study was completed in 2003 and a bankable feasibility study is scheduled for completion in 2004. The project is based on a proven smelting process similar to the one that has been employed for over 20 years at the ferronickel facility in the Dominican Republic. The expected capital investment to develop the project is $1,120 million, excluding a power-generation project expected to require an investment of $450 million. The partners intend to be in a position to make a decision on the development of the project before the end of 2004, following the completion of the bankable feasibility study. If this project is developed, Noranda's beneficial interest in mined nickel production will almost double.

Nickel Rim South

The Nickel Rim South project is located in the Sudbury basin in close proximity to our existing nickel operations and their infrastructure. The project is expected to add 11.7 million tonnes to resources, with exploration work continuing to further expand the reserves.

In addition to the projects outlined on this page, there are opportunities to expand the mines and extend the copper ore reserves efficiently with minimal capital investment at the currently operating Collahuasi, Lomas Bayas, and Antamina mines. These development opportunities are generally lower-risk in nature as they are typically integrated with current operations in known environments and geological areas. Similarly, in the vicinity of our Sudbury operations and our Raglan mine, our exploration efforts have identified several areas to add to the nickel reserves and further extend the mines' lives. While the scope of the opportunities have not, in all cases, been identified they present an option for us to ensure we maintain and enhance our future production profile. The following is a list of some of those opportunities:

Brownfield Opportunities

Copper	Antamina mine, Peru	Production capacity expansion
	Collahuasi mine, Chile	Production capacity expansion; water rights already secured
	Lomas Bayas mine, Chile	Adjacent Fortuna de Cobre deposit; would extend mine life beyond 15 years
Nickel	Fraser Morgan mine, Canada	Indicated resources of 6.3 million tonnes of 1.6% nickel and 0.52% copper; access from existing infrastructure
	Raglan mine, Canada	Opportunity to increase nickel production capacity by 20%
Zinc	Perseverance mine, Canada	Measured and indicated resources of 5.12 million tonnes grading 15.82% zinc and 1.24% copper; would utilize existing infrastructure from Bell Allard mine

Greenfield Opportunities

Greenfield opportunities, or those potential projects which are located at previously undeveloped locations (from a Noranda perspective), also represent significant growth potential to Noranda. Projects currently being reviewed for development are as follows:

Copper	El Pachón, Argentina	*Measured and indicated resources of 724 million tonnes grading 0.65% copper*
	El Morro, Chile	Inferred resources of 466 million tonnes grading 0.61% copper and 0.50 grams per tonne gold
	Frieda River, Papua New Guinea	Measured, indicated and inferred resources of 785 million tonnes grading 0.70% copper and 0.38 grams per tonne gold
Zinc	Lady Loretta, Australia	Measured and indicated resources of 11.6 million tonnes grading 16.1% zinc

Planned Capital Investments

Capital investments for 2004 are expected to total $595 million as the development of the Collahuasi, Kidd Mine D, Montcalm and Nickel Rim South projects are advanced towards operating status. Sustaining capital expenditures average approximately $200 million annually. All of the currently projected capital investments can be funded from the current capital structure. Noranda's capital investment projections and its major components are shown in the following table.

			Capital Investments (unaudited)		
Business	Growth Project	Impact	2003	2004F	2005F
				($ millions)	
Copper	Altonorte smelter expansion	Additional throughput capacity of 440,000 tonnes	$15	$–	$–
	Collahuasi mine	Restore annual production to 410,000-tonne level	160	80	–
	Kidd Mine D	Access to additional 10.3 million tonnes of ore reserves with 2.25% copper and 6.98% zinc	85	105	90
Nickel	Nickel Rim South	5-year development timeframe; inferred resources of 11.7 million tonnes of 1.6% nickel and 3.7% copper; significant PGMs	11	75	50
	Montcalm	8,000 tonnes per year operation for 7 years	13	55	20
	Koniambo	60,000 tonnes per year operation with measured and indicated resources of 142 million tonnes grading 2.13% nickel	23	55	105
	Fraser Morgan	Indicated resources of 6.3 million tonnes of 1.71% nickel and 0.52% copper	–	5	20
	Raglan	*Increase milling capacity by 40%*	–	10	40
			307	385	325
Sustaining Capital			182	210	205
Total Capital Investments			$489	$595	$530

F: Forecast

Risk Assessment and Reduction in the Evaluation, Selection and Implementation of Projects

Noranda's preference for low-risk brownfield expansion projects provides inherent risk reduction due to the Company's knowledge of the environment in which the expansion project is to be undertaken. Where Noranda's growth demands development of greenfield projects, risk assessment and reduction is our top priority.

Managing Project Evaluation, Selection and Implementation

Noranda has taken several steps to ensure the success of all its current and future capital projects:

- Creation of a highly-experienced projects group with world-class project leaders dedicated to securing the investment performance of major capital projects;
- Implementation of Six Sigma-based Stage-gate process for project evaluation. This process is a disciplined system which addresses and quantifies key sources of project impact and risk in support of management decision making;
- Addition of parameters in our Stage-gate process that measure social, business and strategic elements;
- Recognition of investment returns as the primary metric of project success; and
- Assignment of accountability.

Exploration

The exploration team conducts worldwide exploration focused on copper, nickel and platinum group metals. The mandate is to discover and delineate mineral resources that merit approval to proceed to development and production. The team targets mineral resources of strategic size, in locations with acceptable country risk, with after-tax rates of return on investment of greater than 15% and operating costs below the industry mid-point.

This group's goal is to conduct safe and environmentally responsible exploration utilizing the latest appropriate technological advances in exploration methodology to improve efficiency and the likelihood of success. Joint-venture arrangements are pursued with both junior and senior mining companies to increase the level of focused activity and to share cost and risk. The exploration budget for 2004 is forecast to be $35 million. Worldwide joint-venture participants, plus tax credits and grants provided by the Quebec and New Brunswick provincial governments to stimulate exploration activity are expected to provide external funding that will have the effect of increasing the internal budget to an estimated $50 million.

Exploration is currently being carried out primarily in Canada, Mexico, Brazil, Chile, South Africa, Norway, Australia and Papua New Guinea.

Copper and Copper-Zinc Exploration

Global copper exploration during 2003 was focused primarily on Chile, Argentina, Brazil, Mexico, Papua New Guinea, Canada and Australia. Exploration in support of the Canadian operations focused on the Abitibi region of Quebec and Ontario.

Nickel and Platinum Group Metals Exploration

Advanced exploration is focused in Sudbury, Ontario and Raglan, Quebec near our existing operations. Diamond drilling at the Nickel Rim South discovery at Sudbury has increased the estimated inferred mineral resource from 6.3 million tonnes to 11.7 million tonnes of 1.6% nickel, 3.7% copper, 2.0 grams per tonne platinum, 2.3 grams per tonne palladium and 0.7 grams per tonne gold. Exploration at Raglan during 2003 has resulted in 1.7 million tonnes being added to the mineral reserves and resources.

Results of Operations

New production which has come on stream, recent inefficient-capacity shutdowns, staffing reductions, and increased base metal prices have enabled Noranda to continue to report quarter-over-quarter improvements in earnings over the past twelve months.

Quarterly Earnings

$ millions, except per share data	Q1*	Q2*	Q3*	Q4*	2003	Q1*	Q2*	Q3*	Q4*	2002

* Unaudited

Results of Operations

Net income for the year ended December 31, 2003 was $34 million or $0.04 per common share on a diluted basis, compared with a loss of $447 million or $1.93 per share for 2002. The improved results in 2003 are due to higher average realized prices for all four main metals and cost-containment initiatives undertaken in the past three years, which will continue to add to the core earnings of the Company. The net income in 2003 included a gain of $38 million pre-tax on the sale of the remaining priority units of the Noranda Income Fund and other investments. This was offset by $62 million pre-tax of restructuring costs related to the shutdown of unprofitable operations. The 2002 results included a restructuring provision of $520 million pre-tax against the Company's magnesium investment, other restructuring costs of $41 million, and a gain realized on the sale of the Company's CEZ facility which totalled $63 million pre-tax.

Income generated by operating assets increased to $409 million in 2003 compared to $114 million in 2002. The contribution from operating assets is expected to rise as capacity expansions begin contributing to operating earnings in 2004 and 2005. This includes the expansion of the Kidd Creek and Collahuasi mines and realization of benefits from cost-saving initiatives which were undertaken in 2003.

Revenues increased to $4.7 billion in 2003, an increase of 21% over 2002 revenues of $3.9 billion, due to additional capacity brought on stream, and higher realized prices during 2003. Average realized prices, as well as estimated current realized prices which will positively impact 2004, are as follows:

Average Realized Prices

$ per pound	Estimated current Price*	2003	2002
Copper	$1.30	$0.82	$0.74
Nickel	$7.10	$4.40	$3.14
Ferronickel	$6.65	$4.20	$3.16
Zinc	$0.51	$0.43	$0.40
Aluminum	$0.82	$0.68	$0.65
Lead	$0.42	$0.27	$0.23
Cobalt	$25.00	$10.41	$7.02

* As of February 18, 2004

Cost of operations increased to $2.0 billion, an 8% increase from 2002 levels of $1.9 billion, largely as a result of the strength of the Canadian dollar relative to the U.S. dollar, which appreciated approximately 20% during 2003, and increasing energy costs throughout the operations. Approximately 50% of the Company's operating costs are incurred in Canadian dollars. Purchased raw materials, including costs incurred to purchase custom feed, increased to $1.7 billion

in 2003 from $1.4 billion in 2002, due to higher average metal prices and the impact of the stronger Canadian dollar. The settlement price for purchased custom feed is based on metal content and the prevailing market prices of the metals.

Earnings per share is calculated as follows:

$ millions, except per share information	2003	2002
Net income (loss)	34	(447)
Deduct		
Preferred share dividends	21	11
Interest on convertible debentures	3	2
Income (loss) available to common shareholders	10	(460)
Weighted average shares outstanding – 000s	261,618	238,824
Net income (loss) per common share	$0.04	$(1.93)

Net income for the fourth quarter of 2003 was $64 million, or $0.21 per share diluted compared to a loss of $442 million or $1.86 per share diluted for the same period in 2002. This increase was as a result of significantly higher metals prices realized in the fourth quarter of 2003 versus 2002 offset by the impact of a strong Canadian dollar. Nickel prices realized in the fourth quarter of 2003 averaged $5.57 per pound, a 70% increase over $3.28 per pound realized in the fourth quarter of 2002, while realized copper prices increased to $0.93 per pound in the fourth quarter of 2003 compared with $0.72 per pound realized in the same period of 2002. The fourth quarter of 2002 also included a charge reducing the carrying value of the Company's magnesium operations of $520 million pre-tax.

With the addition of new mine capacity to Noranda's operating base, the Company's net income sensitivity to improvement in metal prices has increased significantly. The following table shows the annualized impact on Noranda's net income from changes in metals prices and the U.S./Canadian dollar exchange rate.

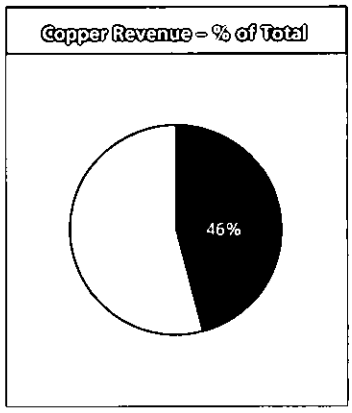
		Impact on	
	Change in US$/lb. Price	Net income	Income per share
		($ millions)	
Copper	$0.05	$27	$0.09
Nickel	$0.10	$7	$0.02
Zinc	$0.05	$40	$0.14
Aluminum	$0.05	$19	$0.06
Lead	$0.05	$5	$0.02
Exchange rate Cdn$ = US$	1¢	$5	$0.02

Integrated Operations

As an integrated producer of metals, Noranda's operations include mines and metallurgical facilities which provide the Company with maximum flexibility in both minimizing costs and maximizing operating performance in processing its ore. This integration also reduces the Company's exposure to treatment charge fluctuations and shipping rate volatility.

When milling, smelting or refining capacity exceeds the Company's own mine production, Noranda acquires third-party ores to utilize this capacity and realize incremental treatment charges. These treatment charges provide incremental income to the Company and absorb fixed costs at metallurgical sites, with custom milling and refining operations being conducted throughout the Company as capacity allows. Operations conducting custom feed processing of copper and nickel feeds are located in North and South America, and Norway. This integration allows Noranda to maintain some of the lowest cash cost operations in the industry. In 2003, Noranda's integrated cost to produce a pound of copper was $0.30 per pound while the trading price for copper averaged $0.81 per pound, and was in mid-February 2004 approximately $1.30. The flexibility of the processing facilities also enables the Company to treat complex ore which may otherwise render a deposit uneconomic due to high treatment costs.

The price paid to suppliers of these custom feed ores varies with the prevailing price of the metals being treated and as such, Noranda's exposure to increasing metals prices is primarily based upon its own mine production. Noranda's continued focus on the identification and development of long-life, high-quality copper and nickel mining assets will continue to increase its leverage to copper and nickel while current metallurgical site infrastructure will minimize the investment required to bring new deposits into commercial production.



Copper

The Copper business is a fully-integrated producer of copper metal and concentrate. It is comprised mostly of long-life, low-cost mines located primarily in South America. They include Noranda's interest in the Antamina copper and zinc mine in Peru, the Collahuasi and Lomas Bayas mines in Chile and the Kidd Creek mine in Ontario, Canada. In addition to these mines, the operations include the Altonorte copper smelter in Chile, as well as refining, smelting and recycling facilities in Canada and the U.S. As discussed previously, the mines have several potential brownfield and greenfield expansion opportunities which can further increase earnings from this business.

	2003	2002
Revenues – $ millions	2,165	1,906
Purchased raw materials – $ millions	1,064	947
Operating cash cost** – per pound of copper	$0.30	$0.34
Income generated by operating assets – $ millions	164	58
Sales and throughput (000 tonnes)*		
Copper in concentrates	219	256
Copper metal	436	488
Zinc metal	99	145
Zinc in concentrates	112	75
Sulphuric acid	651	322
Concentrate processed	1,436	1,286

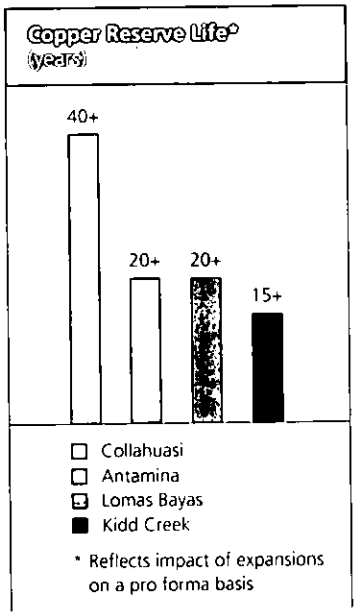
* 100% basis except for Collahuasi and Antamina.
** Includes all cash production and selling costs, net of by-product credits, but excludes interest, corporate, research, exploration costs and custom feed profits. Continuing costs incurred during shutdowns or strikes are excluded.

Total revenue for the Copper business increased to $2.2 billion during 2003, an increase of 14% over 2002 revenue of $1.9 billion, on the strength of increased production levels and higher prices. During 2003, average realized prices increased from $0.80 per pound in the first quarter of 2003 to $0.93 per pound in the fourth quarter of 2003. Copper prices in February 2004 were approximately $1.30 per pound on the LME, which should contribute to further increases in earnings contribution from these operations in 2004.

The integrated nature of the Copper business enables the Company to maintain maximum flexibility in ore processing and will minimize future investment in the development of brownfield expansions. The integrated cash costs to produce a pound of copper declined from $0.34 to $0.30 as a result of the increased capacity at the Altonorte smelter and improved operations at the recycling operations.

Operating highlights for each of the major assets in the copper group are as follows:

- Collahuasi – 2003 production totalled 168,578 tonnes of copper concentrate at an operating cash cost of $0.38, a decrease of $0.01 per pound over 2002 despite lower grades. These lower grades also accounted for a decrease in copper production of 9% compared to 2002 levels of 185,014 tonnes. The concentrator processing capacity is currently being expanded to 110,000 tonnes per day and, when combined with a transition to higher-grade ores, should increase refined copper production during 2004 to a planned level of 178,000 tonnes;

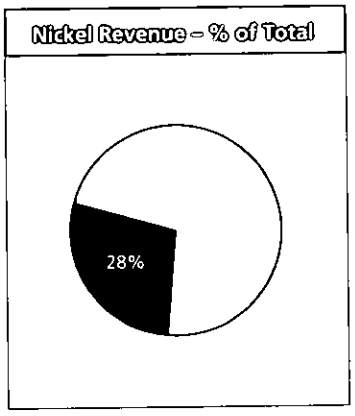


- Antamina – 2003 copper production decreased to 85,188 tonnes as access to the higher-grade copper-only ores was restricted as a result of residual lake sediment. However, zinc production was over 56% higher as ores processed were of a higher zinc content compared to 2002. In 2004, copper production is expected to increase as the removal of the lake residue is completed and the higher-grade copper can be accessed.

  The Antamina orebody is highly variable and is currently described by more than six different ore classifications. Since mill start-up in June 2001, Antamina has experienced difficulty in predicting the distribution of ore types that affect production, recoveries and concentrate quality, and in reconciling production tonnage and grades to the reserve model. In order to enhance the predictive ability of the current reserve model and to facilitate better short- and long-term mine planning, Antamina is undertaking 112,000 metres of infill drilling and drilling at depth, at a cost of $14 million. This drill program and associated analyses are expected to be completed in the first half of 2005. Results will be reviewed periodically during the course of the program and, as warranted, will be incorporated in reserve and resource estimates for the deposit;

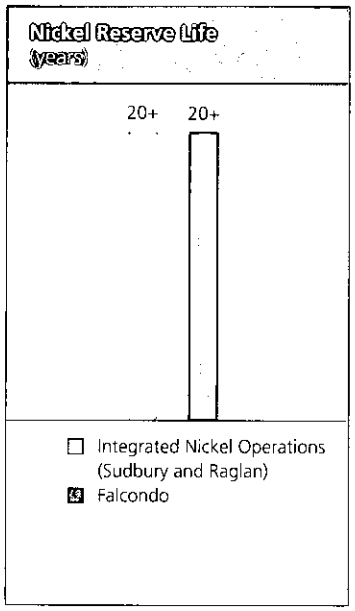
- Lomas Bayas – During 2003 Lomas Bayas achieved record production levels, producing 60,427 tonnes of copper cathode in 2003 compared to 59,304 tonnes in 2002. Current operating cash cost per pound is $0.48 per pound, a slight increase over $0.45 per pound due to an increase in the Chilean peso relative to the U.S. dollar. A total of 81.1 million tonnes of mineral resources were added during 2003, increasing proven and probable mineral reserves to 363.9 million tonnes at December 31, 2003;

- Kidd Creek – The mining operations at Kidd Creek mined 2.1 million tonnes in 2003, a 5% decrease compared to 2002 levels due to difficult ground control conditions in the upper mine and a delay in stope rehabilitation in the lower portion of the mine. Copper ore grade in 2003 was 2.3% compared to 2.1% in 2002, and the zinc ore grade declined slightly to 4.27% compared with 5.9% in 2002. As a result of lower than expected production, increasing energy costs and the strength of the Canadian dollar, mining cash costs increased to $0.87 per pound of copper compared with $0.62 per pound of copper in 2002. The Company continued with its Mine D expansion at Kidd during 2004, a project which is expected to add additional production of 1.8 million tonnes of ore once full production is achieved; and,



- Processing facilities – The copper group has three smelters and two refinery complexes within its operations located at: Altonorte in Chile, and the Kidd Creek and Horne/CCR operations in Canada. The geographic diversity of the sites and the ability of the operations to treat highly complex ore and recycled materials provides Noranda with a high degree of flexibility in deciding what site is the most appropriate location to treat the ore mined at its various operations. These metallurgical sites also purchase custom feed to absorb capacity and generate incremental treatment charges from third parties to the extent that Noranda mines do not provide sufficient ore to fill capacity. The development of the Montcalm nickel mine near Timmins, Ontario will see some concentrator capacity at Kidd Creek be converted to the treatment of this nickel ore, commencing in early 2005. This modification, coupled with the increased ore generated by the production expansion at Mine D at the Kidd mine, will significantly improve the profitability of the Kidd metallurgical site. In 2003, the revenue contribution from the processing operations was reduced because of low treatment terms. This trend will likely continue for the short term due to continued over-capacity in world smelting and refining capacity and reduced copper mine production throughout the world.

During 2003, the Copper business produced 436,000 tonnes of copper in cathode and 219,000 tonnes of copper in concentrate, compared to 488,000 tonnes and 256,000 tonnes respectively, in 2002. In addition to copper, zinc metal produced at Kidd Creek declined to 94,719 tonnes in 2003 from 145,309 tonnes in 2002 due to a planned shutdown in response to low zinc prices during 2003. Zinc concentrate production increased to 122,422 tonnes, a 56% increase from 2002 production levels of 77,876 tonnes as ore processed from the Antamina operation consisted of higher zinc grades during 2003.

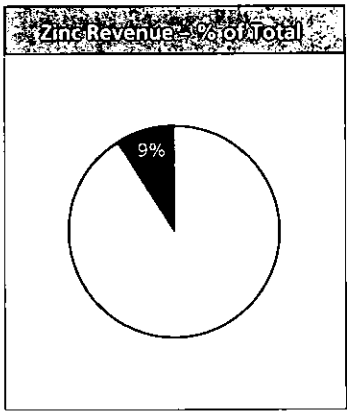


Nickel

The Nickel business is comprised of nickel mines and processing facilities in Sudbury and Raglan, Canada, a refinery in Kristiansand, Norway, and a ferronickel operation at Falcondo in the Dominican Republic. Processed ore is acquired from both the Company's mining operations and through purchased custom feed.

	2003	2002
Revenues – $ millions	1,297	842
Purchased raw materials – $ millions	280	146
Operating cash cost – per pound of nickel	$2.64	$1.96
Operating cash cost – per pound of ferronickel	$3.04	$2.76
Income generated by operating assets – $ millions	296	94
Sales (000 tonnes) – 100% basis		
Nickel	79	71
Ferronickel	27	21
Cobalt	3	3

Revenues for 2003 increased by 54% to $1,297 million when compared to 2002. In addition to the improved nickel price, sales volumes increased as higher ore grades at the Raglan mine, a higher operating level at Falcondo and increased custom feed deliveries at the Sudbury smelter and Kristiansand refinery offset lower mine production in the Integrated Nickel Operations ("INO").



The operating cash cost of producing a pound of nickel from the mines in the INO, was $2.64 per pound of nickel. The $0.68, or 35%, increase over 2002 costs resulted from the strengthening of the Canadian dollar on operating costs, higher spending levels in the Canadian operations and lower ore grades, which were partially offset by higher by-product credits as a result of the increase in metal prices. Falcondo's operating cash cost per pound of ferronickel increased by 10% in 2003, to $3.04 per pound due to the increase in oil prices.

Income generated by the nickel business in 2003 was $296 million compared to $94 million for 2002. The $202 million increase was attributable to the impact of increased metal prices and higher sales volumes which were partially offset by higher unit production costs and increases in charges for depreciation caused, in part, by the strengthening of the Canadian dollar.

The collective agreements with the production and maintenance workers at Sudbury expired on January 31, 2004 and a settlement was achieved on February 21, 2004, after a three-week strike. The collective agreement with the office, clerical and technical workers expired February 28, 2004 and was renewed for a three-year term at that time.

Zinc

The Zinc business includes the Brunswick and Bell Allard mining operations, the Brunswick lead metallurgical operations (lead smelter, lead refinery and silver refinery), General Smelting, the NorFalco sulphuric acid marketing operations, sales offices in Independence, Ohio and Zug, Switzerland, and Noranda's interest in a zinc refinery held through the Noranda Income Fund.

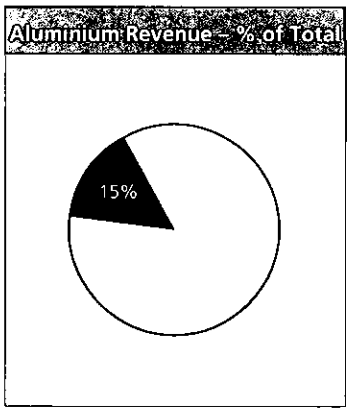
	2003	2002
Revenues – $ millions	410	399
Purchased raw materials – $ millions	175	144
Operating cash cost – per pound of zinc	$0.32	$0.32
Income generated by operating assets	(68)	(52)
Sales (000 tonnes)		
Zinc in concentrates	335	257
Lead metal	60	91

The 2003 revenues for the Zinc business were $410 million compared to $399 million in 2002. In 2003, higher zinc and lead prices, and higher production from the Brunswick and Bell Allard mines, more than offset a reduction in output from the Brunswick smelter related to the move to an eight-month seasonal operation.

The amount of contained zinc in the concentrates produced increased by 9% in 2003 as a result of record zinc recoveries at the Brunswick mine and a 17% increase in mill throughput at the Bell Allard mine.

The cost to produce a pound of zinc at the Brunswick mine was up slightly over 2002 on account of higher energy costs and a stronger Canadian dollar. At the Bell Allard mine, unit costs improved slightly as higher ore grades, zinc recoveries and mill throughput offset the stronger Canadian dollar. Overall operating cash costs were $227 million compared to $242 million in 2002. The lower costs reflect the transition of the Brunswick smelter to an eight-month operation and the change in the ownership of CEZ in 2002. These were offset somewhat by the impact of the stronger Canadian dollar and higher energy costs.

The loss generated by operating assets of $68 million compares with a loss of $52 million in 2002. In 2003, improved zinc and lead prices and higher production from Brunswick and Bell Allard mines were offset by the impact of the weaker U.S. dollar, higher energy costs and the fact that CEZ was 100% owned for the first four months of the year in 2002.



Production levels in 2004 should approximate the level achieved in 2003 as higher forecasted production from the Brunswick mine is expected to offset the depletion of the Bell Allard mine ore reserves in the fourth quarter of 2004.

On May 3, 2002, the Company successfully completed an initial public offering of the Noranda Income Fund (the "Fund") after which the Company's participation in the Fund was 48.97%. During July 2003, the Company further reduced its participation in the Fund to 25%. The Fund was created to acquire the Company's CEZinc refinery. As a result of the transaction, the Company has accounted for its share of the Fund on an equity basis from May 2002. Under a supply agreement with the Fund, Noranda has assumed responsibility for securing the refinery's annual zinc concentrate requirements for a 15-year period at prevailing market zinc prices less a fixed processing fee of Cdn$0.352 per pound.

Aluminum

Noranda's Aluminum business is comprised of one primary smelter and four downstream fabrication plants. The group produces primary aluminum, aluminum foil and light sheet.

	2003	2002
Revenues – $ millions	688	662
Purchased raw materials – $ millions	238	241
Average fabricating spread – per pound of foil	$0.44	$0.45
Operating cash cost – per pound of aluminum	$0.55	$0.50
Income generated by operating assets – $ millions	20	34
Sales (000 tonnes)		
Primary aluminum	247	242
Aluminum foil	147	128

Noranda's aluminum operations consist of a primary aluminum reduction facility, accounting for 9% of aluminum production in the U.S., and four modern aluminum rolling mills, capable of producing a variety of foil sheets to fulfill numerous applications. During 2003, the foil operations supplied in excess of 20% of North American demand for foil sheet.

During 2003, the primary facility produced 244,044 tonnes of aluminum metal. In addition to aluminum metal for sales to customers, the primary aluminum facility adds further value to its finished products through the production of extrusion billets and aluminum rod, with both products attracting significant premiums over unprocessed metal. The primary operations currently have a seven-year contract for the supply of alumina, a key element in the manufacturing of aluminum, which presently allows Noranda to acquire alumina at approximately 50% of current spot prices. The aluminum foil operations produced 147,000 tonnes of foil, with the largest contributor to sales represented by fin stock sales, used primarily in heat exchangers for automotive and heating, ventilation and air conditioning applications.

Revenues for the Aluminum business increased 4% year over year as the higher aluminum price and record production from both the primary and fabricating operations more than offset lower average fabrication prices from a less favourable product mix. The change in product mix was necessitated by weakness in the light foil sector. At the primary operation, value-added products accounted for approximately 67% of total production. This was reduced from 82% in 2002 reflecting the weakness in the North American manufacturing industry in the first nine months of the year. In the fourth quarter, demand for value-added products improved and higher sales volumes are expected in 2004.

Operating costs were higher in 2003 reflecting the higher production level, the increase in natural gas prices and higher terms on a new electrical power contract at the primary smelter.

Income generated by operating assets of $20 million for 2003 compares to $34 million in 2002.

For 2004, foil shipments are expected to increase by a further 20%, as the aluminum foil plant continues to ramp up its production and to increase market share within the context of a recovering North American economy.

Other Expenses

Interest expense increased to $129 million in 2003, an increase of 32% over $98 million in 2002 due to the impact of the stronger Canadian dollar on Canadian-denominated debt and associated interest costs, and higher average interest costs due to the extension of the average term of the Company's long-term debt.

Corporate and general administration costs as well as research and development costs remained relatively unchanged over 2002 levels, and are expected to decline marginally in the near term as the Company continues to pursue cost reductions.

Minority interest in earnings increased to $89 million in 2003 from $26 million in 2002 due to the higher contribution to earnings of the Nickel business unit, which is 59.2%-owned by Noranda.

Tax expense increased to $24 million in 2003 reflecting the profitability of the Company in 2003, as compared to a tax recovery of $168 million on a consolidated basis in 2002, primarily due to the tax impact of restructuring expenses incurred in 2002.

Pre-tax restructuring costs incurred and gains on sale of investments in 2003 and 2002 are as follows:

As at December 31	2003	2002
Magnesium impairment and closure costs	$33	$520
Other restructuring costs	29	41
Gain on sale of CEZ facility/investments	(38)	(63)
	$24	$498

Financial Position and Liquidity

Noranda maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding requirements. Noranda's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new borrowings. The Company does not currently anticipate issuing additional common shares to meet these needs.

Working capital, excluding cash, short-term investments and short-term indebtedness, increased to $852 million from $652 million at the end of 2002. During the year, Noranda repositioned its balance sheet and operating capacity to support its strategic objective of maintaining a strong balance sheet meeting investment grade criteria. This will allow the Company to benefit more fully from improving fundamentals in the copper and nickel sectors. The repositioning plan included:

- Issuing preferred and common shares for net proceeds of $99 million and $434 million in March and August, respectively; and,
- Issuing 6% notes due in 2015 for gross proceeds of $350 million in September and the sale of Priority Units of the Noranda Income Fund for gross proceeds of $84 million. The Company also raised net proceeds of $250 million from its issuance of a 12-year debenture in May 2003, through a partially-owned subsidiary.

Cash and cash equivalents at December 31, 2003 totalled $501 million compared to $293 million at December 31, 2002. In addition to its cash balances, Noranda's liquidity and financial flexibility is augmented by revolving credit facilities. Committed lines of credit at December 31, 2003 totalled $1,132 million of which $68 million had been drawn or utilized. These lines of credit are primarily with various Canadian chartered banks and syndicates of U.S. and international banks. These bank facilities currently have committed terms of up to three years and are unsecured. Liquidity was further enhanced during the year with the release of corporate guarantees in the amount of $442 million following the conversion of the Antamina project's debt to a non-recourse basis.

Long-term debt, excluding the amount due in less than one year, amounted to $2,893 million at December 31, 2003 compared to $3,014 million a year earlier. The Company and its partially-owned subsidiary currently have $250 million and $600 million, respectively, available for public debt issuance under shelf prospectuses filed in September 2003 and January 2004, respectively. Noranda continues to monitor capital markets worldwide, seeking opportunities to diversify its

financing sources. At December 31, 2003, Noranda's consolidated net debt-to-total-capitalization ratio was 43% compared to 54% at December 31, 2002. Noranda's long-term public debt ratings at December 31 are noted below:

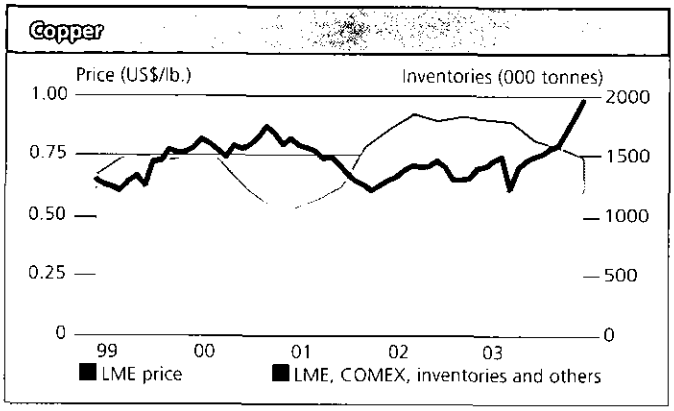
	2003	2002
Standard & Poor's	BBB	BBB-
Moody's	Baa3	Baa3
Dominion Bond Rating Services	BBB	BBB

Shareholders' equity at the end of 2003 was $2.6 billion after the inclusion of common and preferred share equity issues that occurred during the year.

Cash Flows

Cash generated from operations, before net changes in non-cash working capital, totalled $577 million in 2003, up from $348 million in 2002. The increase is primarily the result of higher sales and production volumes, lower operating costs and higher metal prices, despite the adverse impact of foreign exchange rates.

Capital investments totalled $489 million in 2003 compared to $528 million in 2002. Major capital expenditures during 2003 included the expansion of the Altonorte copper smelter, the expansion and transfer of mining operations at the Collahuasi copper mine and the Kidd Creek Mine D underground extension.



Capital investments for 2004 are budgeted to be $595 million. A more detailed discussion is provided on page 220.

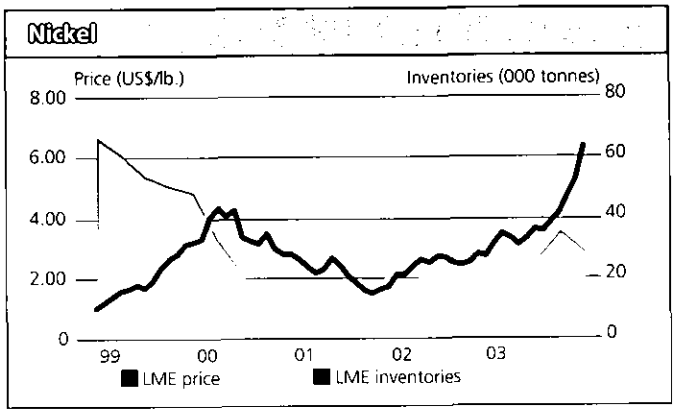
In 2003, Noranda's common and preferred share dividend obligations were reduced by $14 million to $123 million compared to $137 million in 2002, despite an increase in both the number and amount of common and preferred shares outstanding. The annual common share dividend was reduced from Cdn$0.80 per share to Cdn$0.48 per share to bring it into line with those of other major metal and mining companies.

Metal Markets

Copper Market

LME copper prices traded in the $0.72 to $0.77 per pound range for the first nine months of 2003 then broke through $1.00 in December with current levels at $1.30.

Improved market sentiment was supported by mine disruptions, smelter cutbacks, strong Asian demand, and declining metal stocks. The weakening U.S. dollar has had a profound impact on U.S. dollar-based metal prices and accounted for a substantive part of the overall increase. China continues to drive global metal demand and its copper consumption for 2003 is expected to total 3.1 million tonnes, a 22% increase over 2002. Total exchange inventories dropped 464,500 tonnes to end the year at 793,000 tonnes. This was partially offset as Codelco, a major Chilean copper mining company, stockpiled approximately 200,000 tonnes of copper.



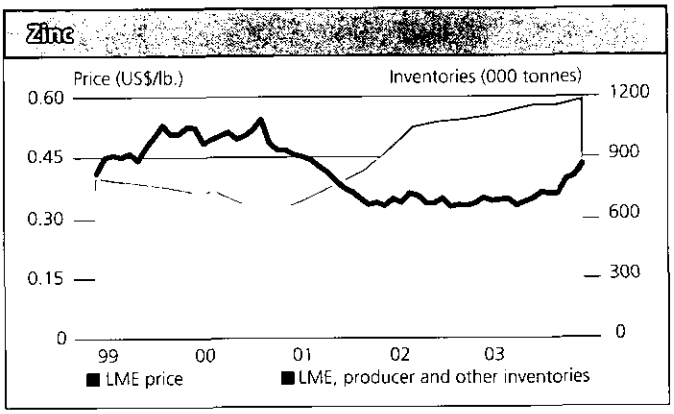
Despite the release of the Codelco stockpile and new expanded, and restarted mine production planned for the second half of the year, the overall market is expected to end in a slight deficit for another year. Continued strong demand in

China and marked improvement in the U.S. economy are expected to create further upside for the copper price and premiums.

Nickel Market

In 2003, the nickel price rose from a low of $3.27 per pound at the start of the year to $7.55 per pound by year end with much of the increase occurring in the second half of the year. Supply-side fundamentals were the main driver behind this run-up, accentuated by the very strong demand for metals in China. In 2003, world production of nickel grew by only 1.7%, less than half the growth seen in 2002. Disruptions at producers reduced supply in the first half of the year. This was followed by a three-month strike at Inco's Sudbury operations during the summer, which removed approximately 30,000 tonnes of nickel from the market.

Consumption of nickel grew 5.9% in 2003, with one-third of the growth coming from China. Stainless steel production beat expectations for the year, growing at 6.3%, well above the trend growth rate, and almost at the high levels of the previous year. The first half of the year was particularly strong as mills in all geographic market sectors, with the exception of the U.S., produced at record levels. The second half did not have as strong a showing, as delayed global economic recovery translated into weak demand for stainless steel in the U.S. and Europe for the balance of the year. Growth in the availability of global external scrap kept pace with the growth in stainless steel production, with the net effect that stainless steel scrap availability remained tight. In the non-stainless steel sectors, electronic alloys and batteries showed some signs of recovery, but both the aerospace and land-based gas turbine markets remained weak.



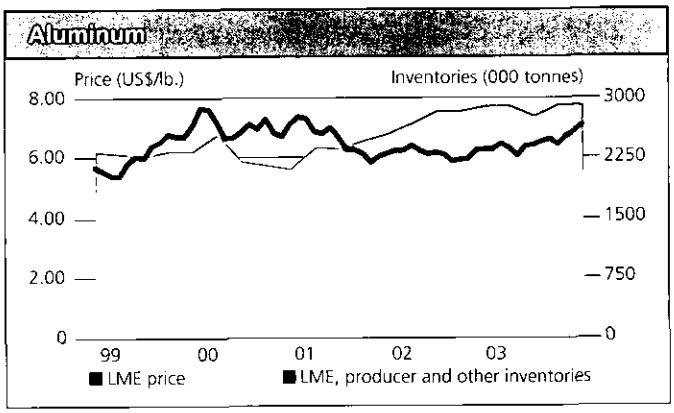
When factoring in the Inco strike, the nickel market deficit increased to 56,000 tonnes. However, the release of the 60,000-tonne collateral stocks by Norilsk more than offset the deficit, creating an implied surplus of 4,000 tonnes for 2003.

The prospect of synchronized growth in the three major Western World economies (USA, Europe, Japan), together with the robust growth continuing in the non-OECD countries (China, Russia, India, Latin America), should underpin a strong pick-up in metal consumption. As a robust period of demand growth is forecast in 2004, the nickel market is expected to remain in significant deficit.

Zinc Market

Zinc prices in 2003 traded in a narrow range of $0.34 to $0.37 per pound for the first nine months, before staging a strong recovery in the fourth quarter. The LME cash settlement price climbed from $0.38 in early October to a high for the year of $0.46 on December 31 and $0.51 currently. The price improvement is partly attributable to weakness in the U.S. dollar, as well as bullish investor sentiment for an improved market outlook in 2004. LME stocks increased during the year by 89,000 tonnes to 740,400 tonnes at year end.

While global smelting capacity continues to expand, principally in China, actual refined production levels in 2003 were believed to be unchanged from 2002 levels as a result of the tight zinc concentrate supply. Low treatment charges, combined with strong domestic currencies, have forced many smelters to cut back operations or permanently close due to the poor smelting margins. Zinc demand remains very strong in China, such that China is now a net importer of zinc. Combined imports of zinc concentrates and zinc alloys exceeded metal exports, which were 15% lower year over year during the first 10 months of 2003. During the fourth quarter, U.S. consumption improved markedly resulting in an increase in premiums in the $0.03 to $0.035 range.



The world zinc market is estimated to have been in balance for 2003 following two years of surplus. Most analysts expect that limited mine supply growth combined with higher metal demand in Asia, the U.S. and Western Europe will result in a significant supply deficit in 2004 and higher average prices than 2003 levels.

Aluminum Market

LME cash prices for 2003 ranged from a low of $0.60 in April, to a high of $0.72, on December 31 and $0.82 currently. Despite weaker fundamentals than some other base metals, aluminum's 20% recovery from its lows in 2003 is substantial and meaningful. Continued weakening of the U.S. dollar coupled with speculative fund buying propelled the price to its highest level in 34 months in December.

The firming belief in a broad economic recovery is creating a bullish view of aluminum going into 2004. However, despite the growing optimism, issues and concerns remain. Among the issues in question is the direction of the Chinese market. Reductions in export rebates in conjunction with a substantial rise in spot alumina costs and regional power constraints could significantly impact the amount of aluminum China sends to the West, but it remains uncertain how Chinese producers and their supporters will respond to these issues.

The potential reduction of Chinese exports and the anticipated demand growth resulting from the economic recovery could lead to a more balanced market. Improving fundamentals should continue to support the price and provide the potential for further price improvement in aluminum during the coming year. The weaker U.S. dollar bodes well for American producers and fabricators exporting goods as their ability to be competitive on pricing is enhanced.

Risk Factors

Fluctuating Metal Prices

Noranda's earnings are affected by fluctuations in the prices of the metals it produces. Their prices are subject to volatile price movements over short periods of time. We generally do not hedge prices of the metals we produce. Market prices

can be affected by numerous factors beyond our control, including expectations for inflation, speculative activities, relative exchange rates to the U.S. dollar, production activities of our competitors, global and regional demand and supply, political and economic conditions including availability of subsidies and tax incentives to our competitors and production costs in major producing regions. The prices for nickel, zinc, copper or other metals produced by us may decline significantly from current levels. A reduction in the prices of one or more of these metals could materially adversely affect the value and amount of our reserves and our business, financial condition, liquidity and operating results.

Mining and Processing Risks

The business of mining and processing of metals is generally subject to a number of risks and hazards, including unusual or unexpected geological conditions, ground conditions, phenomena such as inclement weather conditions, floods and earthquakes and the handling of hazardous substances and emissions of contaminants. Such risks and hazards could result in personal injury or death, damage to, or destruction of, mineral properties, processing or production facilities or the environment, monetary losses and possible legal liability. Our business, financial condition, liquidity and operating results could be materially adversely affected if any of these developments were to occur.

Although we maintain insurance which we believe is consistent with mining industry practice to the extent available to cover some of these risks and hazards, no assurance can be given that such insurance will continue to be available, or that it will be available at economically feasible premiums. Our property, business interruption and liability insurance may not provide sufficient coverage for losses related to these or other risks or hazards. In such event, our business, financial condition, liquidity and results of operations could be materially adversely affected.

Environmental Risks

Environmental legislation affects nearly all aspects of our operations worldwide. This type of legislation requires us to obtain operating licenses and imposes standards and controls on activities relating to mining, exploration, development, production, closure and the refining, distribution and marketing of copper, nickel, zinc and other metals products. Environmental assessments are required before initiating most new products or undertaking significant changes to existing operations. Compliance with environmental legislation can require significant expenditures, including expenditures for clean-up costs and damages arising out of contaminated properties. In addition to current requirements, we expect that additional environmental regulations will likely be implemented to protect the environment and quality of life, given issues of sustainable development and other similar requirements which governmental and supragovernmental organizations and other bodies have been pursuing. Some of the issues currently under review by environmental regulatory agencies include reducing or stabilizing various emissions, including sulphur dioxide and greenhouse gas emissions, mine reclamation and restoration, and water, air and soil quality.

Canada ratified the Kyoto Protocol to the United Nations Framework Convention on Climate Change in late 2002. The protocol has not come into force but may do so in the future. Various levels of government in Canada are developing a number of policy measures in order to meet Canada's emission reduction obligations under the protocol. While the impact of the protocol and measures cannot be quantified at this time, the likely effect will be to increase costs for fossil fuels, electricity and transportation, restrict industrial emission levels, impose added costs for emissions in excess of permitted levels and increase costs for monitoring and reporting. Compliance with these initiatives could have a material adverse effect on our business, financial condition, liquidity and operating results.

Further changes in environmental laws, new information on existing environmental conditions or other events, including legal proceedings brought based upon such conditions or an inability to obtain necessary permits, could have a material adverse effect on product demand, product quality and methods of production and distribution or could require increased financial reserves or compliance expenditures or otherwise have a material adverse effect on our business, financial condition, liquidity and operating results.

Failure to comply with environmental legislation may result in the imposition of fines and penalties, liability for clean-up costs, damages and the loss of important permits. There can be no assurance that we will at all times be in compliance with all environmental regulations or that steps required to bring us into compliance would not materially adversely affect our business, financial condition, liquidity or operating results.

In view of the uncertainties concerning future removal and site restoration costs on our properties, the ultimate costs for future removal and site restoration to us could differ from the amounts estimated. The estimate for this future liability is

subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively as a change in an accounting estimate.

In view of the uncertainties concerning future removal and site restoration costs on our properties, the ultimate costs for future removal and site restoration to us could differ from the amounts estimated. The estimate for this future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively as a change in an accounting estimate.

In addition, regulatory authorities in various jurisdictions around the world may require us to post financial security to secure in whole or in part future reclamation and restoration obligations in such jurisdictions. In some instances, we have already provided this security. In other instances, such security may be required to be posted upon the occurrence of certain events including if we cease to maintain a minimum investment grade credit rating, if the regulatory authority ceases to accept alternative forms of comfort to secure the obligation or as a property nears the end of its operation. Although the posting of this security does not increase the future reclamation and restoration costs (other than costs associated with posting such security), a portion of our credit may be required to back up these commitments, which could adversely affect our liquidity.

Labour Relations

Collective agreements covering our unionized employees at CEZ, Matagami, CCR (Plant workers), CCR (Security guards), Noranda Recycling – Roseville, Micro Metallics – San Jose, Nikkelverk, Collahuasi, and American Racing Equipments will expire in 2004. At Sudbury, a collective agreement was signed with the Mine, Mill and Smelter Workers Union after a three-week strike in February 2004. The collective agreement covering the Office, Clerical & Technical at Falconbridge's Sudbury Operations was renewed on February 28, 2004. Collective agreements covering our unionized hourly employees and workers at Brunswick Mine, Brunswick Smelter, Brunswick Smelter Bulk Handling, General Smelting, Horne Smelter, Kidd Metallurgical Division, Raglan Operations, Falcondo, Lomas Bayas, Altonorte, Antamina, New Madrid, and the aluminum foil operations at Newport and Salisbury are currently in place and will expire between 2005 and 2007.

Uncertainty of Reserve Estimates and Production Estimates

Our reported ore reserves as of December 31, 2003 are estimated quantities of proven and probable ore that under present and anticipated conditions can be legally and economically mined and processed by the extraction of their mineral content. We determine the amount of our ore reserves in accordance with the requirements of the applicable Canadian securities regulatory authorities and established mining standards. We do not use outside sources to verify our reserves. The volume and grade of reserves actually recovered and rates of production from our present ore reserves may be less than geological measurements of the reserves. Market price fluctuations in nickel, copper, other metals and exchange rates, and changes in operating and capital costs, may in the future render certain ore reserves uneconomic to mine. In addition, short-term operating factors relating to the mineral reserves, such as the need for orderly development of ore bodies or the processing of new or different ore grades, may cause mineral reserves to be modified or our operations to be unprofitable in any particular fiscal period.

No assurance can be given that the indicated amount of ore will be recovered or that it will be recovered at the prices assumed by us in determining ore reserves. Ore reserve estimates are based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire orebody. As more knowledge and understanding of the orebody are obtained, the reserve estimates may change significantly, either positively or negatively.

We prepare estimates of future production for particular operations. These production estimates are based on, among other things, reserve estimates; assumptions regarding ground conditions and physical characteristics of ores, such as hardness and presence or absence of particular metallurgical characteristics; and estimated rates and costs of mining and processing. Our actual production may vary from estimates for a variety of reasons, including actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors relating to the ore reserves, such as the need for sequential development of ore bodies and the processing of new or different ore grades; risks and hazards associated with mining; natural phenomena, such as inclement weather conditions, floods, and earthquakes; and unexpected labour shortages or strikes. No assurance can be given that production estimates will be

achieved. Failure to achieve production estimates could have a material adverse impact on our future cash flows, earnings, results of operations and financial condition.

Exchange Rate Fluctuations

Fluctuations in currency exchange rates, principally the Canadian/U.S. dollar exchange rate and, to a lesser extent, Chilean Pesos, Norwegian Kroner and Euros exchange rates against the U.S. dollar, can significantly impact our earnings and cash flows. These exchange rates have varied substantially over time, including over the last five years. Most of our revenues and debt are denominated in U.S. dollars, whereas most of the operating costs at our Canadian sites are incurred in Canadian dollars and Nikkelverk's costs are incurred in Norwegian kroner. Effective July 1, 2003 we are reporting our financial results in U.S. dollars. Fluctuations in exchange rates between the U.S. dollar and the Canadian dollar and between the U.S. dollar and other currencies may give rise to foreign currency exposure, either favourable or unfavourable, which may in the future materially impact our financial results. We, from time to time, may hedge a portion of our currency requirements to limit any adverse effect of exchange rate fluctuations with respect to our costs, but there can be no assurance that such hedges will eliminate the potential material adverse effect of such fluctuations.

Interest Rate and Counterparty Risk

Our exposure to changes in interest rates results from investing and borrowing activities undertaken to manage our liquidity and capital requirements. We have entered into interest rate swap agreements to manage the interest rate risk associated with a portion of our fixed-rate debt. The interest rate swap changes our exposure to interest risk by effectively converting a portion of our fixed-rate debt to a floating rate. We may elect in the future to enter into interest rate swaps to effectively convert floating-rate debt to fixed-rate debt and enter into additional fixed-rate to floating-rate swaps. There can be no assurance that we will not be materially adversely affected by interest rate changes in the future, notwithstanding our use of interest rate swaps.

In addition, our interest rate swaps, metals hedging and foreign currency and energy risk management activities expose us to the risk of default by the counterparties to such arrangements. Any such default could have a material adverse effect on our business, financial condition and results of operations.

Energy Supply and Prices

Our operations and facilities are intensive users of natural gas, electricity and oil. Procurement of these types of energy can be affected by numerous factors beyond our control, including global and regional supply and demand, political and economic conditions and problems related to local production and delivery conditions. Our supply contracts typically provide that suppliers may be released from their delivery obligations to us if certain "force majeure" events occur. Our business operations could be adversely affected, including loss of production and damage to our plants and equipment, if, even temporarily, the supply of energy to one or more of our facilities was interrupted.

A prolonged shortage of supply of energy used in our operations could materially adversely affect our business, financial condition, liquidity and results of operations. As a significant portion of our costs relate to energy consumption, our earnings are directly related to fluctuations in the cost of natural gas, electricity and oil. Energy prices can be affected by numerous factors beyond our control, including global and regional demand and supply, and applicable regulatory regimes. The prices for various sources of energy we use may increase significantly from current levels. An increase in energy prices could materially adversely affect our business, financial condition, liquidity and operating results.

Foreign Operations

Some of our activities and related assets are located in countries outside North America, some of which may be considered to be, or may become, politically or economically unstable. Exploration or development activities in such countries may require protracted negotiations with host governments, international organizations and other third parties, including non-governmental organizations, and are frequently subject to economic and political considerations, such as taxation, nationalization, inflation, currency fluctuations and governmental regulation and approval requirements, which could adversely affect the economics of projects. These projects and investments could be adversely affected by war, civil disturbances and activities of foreign governments which limit or disrupt markets, restrict the movement of funds or supplies or result in the restriction of contractual rights or the taking of property without fair compensation.

We perform a thorough risk assessment on a country-by-country basis when considering foreign activities and attempt to conduct our business and financial affairs so as to protect against political, legal, regulatory and economic risks applicable

to operations in the various countries where we operate, but there can be no assurance that we will be successful in so protecting ourself. These projects and investments could also be adversely affected by changes in Canadian laws and regulations relating to foreign trade, investment and taxation.

Market Access

Global and regional demand for metals is influenced by regulatory and voluntary initiatives to restrict or eliminate the use of certain metals in particular products or applications. Impacts of such measures can be global, creating non-tariff barriers to international trade and affecting product design and specifications on a global basis. Such measures could affect the balance between supply and demand and depress metal prices and treatment/refining charges. Metals with a limited number of major applications are most susceptible to changes in demand and price in response to such measures.

Production Technology

We believe that the technology we use to produce and process metals is significantly advanced and, in part due to high investment costs, subject only to slow technological change. However, there can be no assurance that more economical production or processing technology will not be developed or that the economic conditions in which current technology is applied will not change.

Legal Proceedings

The nature of our business subjects us to numerous regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of our business. The results of these legal proceedings cannot be predicted with certainty. There can be no assurance that these matters will not have a material adverse effect on our results of operations in any future period, and a substantial judgment could have a material adverse impact on our business, financial condition, liquidity and results of operations.

Sulphuric Acid

Sulphur dioxide is a by-product from the smelting of copper, zinc, nickel and lead sulphide concentrates. We process sulphur dioxide into sulphuric acid to meet our environmental commitments. Due to increasingly strict environmental standards worldwide for sulphur dioxide emissions, involuntary production of sulphuric acid by smelters is growing. The balance of world acid production is largely based on elemental sulphur, whose supply is now a by-product of oil and gas production, and growing more rapidly than demand. Long term, these factors may make it more difficult for us to obtain satisfactory prices for our sulphuric acid. However, our production of sulphuric acid cannot be reduced in response to low prices, or dropping sales volumes, without a corresponding reduction in our production of metals.

Raw Material Procurement Risks

Procurement of raw materials involves the risks typically connected with commercial transactions, which can include trade barriers, political instability and problems due to local production conditions. In addition, our supply contracts provide that suppliers of concentrate may be released from their delivery obligations to us if certain "force majeure" events occur. Our business operations could be adversely affected, at least temporarily, if supplies of raw materials are interrupted as a result of the imposition of trade barriers or other events and if we are unable, on short notice, to shift to alternative sources of supply. We also process copper scrap, the availability of which in past years has been subject to significant fluctuations and the supply of which has been declining since the mid-1990s. The availability of scrap, blister copper and other material we process can be significantly affected by fluctuations in prices.

This is the end of the description of the business of Noranda as extracted without material amendment from Noranda's Management's Discussion and Analysis as disclosed in Noranda's 2003 Annual Report.

The following description of the business of Noranda has been extracted without material amendment from Noranda's Management's Discussion and Analysis as disclosed in Noranda's 2004 Annual Report.

Management's Discussion and Analysis

The following analysis and discussion of the Company's activities take into account management's knowledge of all material facts and events up to and including February 3, 2005.

Selected Annual Information

The analysis contained herein is based upon the financial position, results of operations and cash flows of the Company in accordance with Canadian Generally Accepted Accounting Principles. The Company's functional reporting currency was converted to U.S. dollars on July 1, 2003 and unless otherwise noted, all amounts in this report are expressed in U.S. dollars.

$ millions, except per share data	2004	2003	2002
Results of operations			
Revenues	$ 6,978	$ 4,657	$ 3,873
Income generated by operating assets[1]	1,380	397	151
Net income (loss)	551	23	(414)

[1] Defined as earnings before interest, corporate and general administration, research, development, exploration, minority interest, taxes, gains net of restructuring costs and other.

Noranda is a global integrated metals producer focused on the extraction and processing of copper and nickel, and has investments in zinc and aluminum producing assets. Noranda is focused on increasing the profitability of its core operations through cost reductions and capacity expansions while identifying and defining orebodies for future development.

Total revenues have increased from $3.9 billion for the year ended December 31, 2002 to almost $7.0 billion for the year ended December 31, 2004 primarily due to the significant increase in realized metal prices during that period. Since 2002, average copper prices realized increased from $0.74/lb. to $0.82/lb. for the year ended December 31, 2003, and rising to $1.30/lb. for the year ended December 31, 2004. Prices realized for nickel increased from $3.14/lb. in 2002, to $4.40/lb. in 2003, with realized prices in 2004 averaging $6.40/lb. Prices realized for zinc increased from $0.40/lb. in 2002, to $0.43/lb. in 2003, with realized prices in 2004 averaging $0.52/lb. Prices realized for aluminum increased from $0.65/lb. in 2002, to $0.68/lb. in 2003, with realized prices in 2004 averaging $0.84/lb. Prices for by-product materials such as lead, cobalt and precious metals, which are found and processed in conjunction with our core metals, have also experienced similar price increases during these periods.

Production of nickel, zinc and aluminum all increased in 2003 over 2002 levels, while copper declined slightly due to grade reductions at Collahuasi and decreased copper production from the Antamina copper-zinc deposit, where higher zinc-yielding ore was mined, offsetting reduced copper production with increased zinc recoveries. During 2004, mined copper production increased 14% due to the impact of expansions at Collahuasi and the accessing of the high-grade copper zone at Antamina. Nickel and aluminum production also increased during 2004, while zinc production declined due to the

closure of the Bell Allard mine at Matagami, Quebec, which ceased production in October 2004. Zinc production from Antamina also declined as production was shifted to high-grade copper zones following the removal of sediment in June 2004. Further information on production levels is found on page 87 of Noranda's 2004 Annual Report.

The increase in production and metals prices, coupled with the various cost reduction initiatives yielded an increase in net income per common share from a loss of $1.79 for the year ended December 31, 2002, to net income per common share of $1.78 for the year ended December 31, 2004. Offsetting the impact of price increases and cost containment initiatives was the influence of rising energy costs across all elements of the operations and the impact of the weakening of the U.S. dollar relative to both the Canadian dollar and Chilean peso, thereby increasing operating costs in those jurisdictions relative to our U.S. dollar revenue base. Approximately 50% of Noranda's operating costs are incurred in Canadian dollars.

Total assets have increased from $7.2 billion at December 31, 2002 to in excess of $9.6 billion at December 31, 2004 due to the following:

- Increased investment in production expansion projects to enhance the Company's operating base, which has seen in excess of $1.0 billion in investment since December 31, 2002
- Increased investment in working capital investment due to higher realized prices and increased production levels
- Increased cash retained due to higher earnings levels

Long-term financial liabilities have declined from $3.0 billion at December 31, 2002 to $2.6 billion primarily due to the use of operating cash flow to reduce overall consolidated leverage ratios, despite increased capacity investment.

Corporate Developments

During the third quarter of 2004, Noranda announced that it entered into exclusive negotiations with China Minmetals concerning a proposal from Minmetals to acquire 100% of the outstanding common shares of Noranda. Noranda's exclusive negotiations with China Minmetals ended on November 16, 2004. While discussions with China Minmetals are currently continuing on a non-exclusive basis, the Special Committee of the Noranda Board of Directors now has the opportunity to advance other alternatives, both on a stand-alone basis and with other parties.

Asset Profile

Noranda's consolidated assets totaled $9.6 billion as at December 31, 2004 on a book-value basis compared with $8.3 billion at the end of 2003. The increase is primarily due to the investment of additional capital in both completing and advancing brownfield expansion development projects and income generated in excess of debt repaid. Total revenues increased to $7.0 billion during 2004, an increase of $2.3 billion over the $4.7 billion in revenue generated in 2003, due to stronger metal prices and higher production levels. Noranda generated net income of $551 million, or $1.75 per share on a diluted basis, an increase of $528 million from the net income of $23 million, or nil per share on a diluted basis in 2003. The improved results were attributed to higher base metal prices, increased production levels and a lower cost structure in 2004. This was partially offset by the impact of the stronger Canadian dollar relative to the U.S. currency, which increased Canadian-based operating costs when converted to U.S. dollars.

At December 31, 2004, Noranda held cash and cash equivalents of $884 million as a result of improved operating cash flows. During 2004, Noranda's consolidated net debt to capitalization declined by over 800 basis points to 35%. Cash resources, combined with undrawn credit facilities of over $1.7 billion, provide the Company with sufficient liquidity to complete its development projects, pursue new investment and development opportunities currently contemplated and repay near-term debt maturities.

Operating Assets

Of the $9.6 billion of assets, the book value of capital assets which are currently contributing to earnings totaled $4.9 billion, while projects under development, which are not currently contributing to earnings, totaled $1.2 billion. Combined, these assets represent 63% of the total asset base of the Company. During 2004, Noranda completed the construction of the Collahuasi expansion. This project, which was completed ahead of schedule and below budget, resulted in $272 million being transferred from projects under development to operating capital assets. The operating assets are distributed in the Company's core metals as follows:

$ millions	2004	2003
Operating capital assets		
Copper	2,890	2,757
Nickel	1,078	1,107
Zinc	158	234
Aluminum	702	579
Other	42	88
Total	4,870	4,765

Capacity Enhancements

Since 1998, Noranda has invested significant capital in the expansion of its operating capacity with the addition of world-class, low-cost assets and the improvement of existing operations. The Company increased its copper, nickel and zinc mineral reserves, enhanced its copper and nickel processing capacity, expanded its primary and fabricated production capacity and acquired bauxite mining and alumina refining assets to fully integrate its aluminum operations. These investments have substantially increased the Company's baseline earnings and its leverage to metal prices. The following is a summary of these initiatives and their impact on Noranda.

Business	Initiative	Impact	Completed
Copper	Collahuasi mine	Additional reserves of 2,010 million tonnes grading 0.83% copper	1998
	Antamina mine	Additional reserves of 559 million tonnes grading 1.23% copper and 1.03% zinc	2001
	Lomas Bayas	Additional reserves of 397 million tonnes grading 0.32% copper	2001
	Recycling plant – Tennessee	Additional throughput capacity of 20,000 tonnes	2001
	Altonorte smelter expansion	Additional throughput capacity of 440,000 tonnes	2003
	Recycling plant – Ontario	Annual throughput capacity of over 5,000 tonnes of electronic recyclables	2003
	Collahuasi	Completed the Ujina-Rosario transition and Phase II expansion project, began molybdenum recovery circuit	2004
Nickel	Raglan mine	Additional reserves of 22.1 million tonnes grading 3.12% nickel	1998
	Nikkelverk refinery expansion	Increased throughput capacity by 23% to 85,000 tonnes	
	Montcalm mine	Developed deposit and began mining reserves of 5.1 million tonnes grading 1.46% nickel and 0.71% copper.	2004
Aluminum	Primary aluminum expansion	Increased annual production capacity by 15% to 250,000 tonnes	2001
	Huntingdon foil plant	Additional 125,000 tonnes of production capacity	2002
	New Madrid Smelter	Renewed operating permit that will allow a 2% higher rate of capacity utilization, providing another 5,000 - 6,000 tonnes per year of output	2004

Projects Under Development

Investments in development projects at the end of the year totaled $1,166 million, an increase of $193 million since December 31, 2003, primarily due to capital invested in brownfield expansions offset by the completion of the Collahuasi

mine expansion in 2004. The Collahuasi transition/expansion project increased the mine's concentrator design capacity to 110,000 tonnes per day from 70,000 tonnes per day. This capacity increase will help compensate for an expected decline in ore grade and thereby enable Collahuasi to maintain copper production at current levels. Kidd Creek Mine D gave access to an additional 9.1 million tonnes of reserves and 15.3 tonnes of resources. While the future annual production level of the Kidd Creek mine is expected to be similar to that of 2003, the cost structure will be lower and significantly more stable. Total investments in the Collahuasi and Kidd projects during 2004 totaled $65 million and $127 million, respectively.

Nickel and copper mining remains the focus of the Company's growth program. As shown in the following table, Noranda has expansion projects that are currently under development in both these commodities.

Projects Under Development – Capital Spending 2004 (unaudited)

	Noranda Inc.'s Beneficial Interests (%)	Book Value at Dec 31, 2003 ($ millions)	Expenditures ($ millions)	Transferred to Operating Assets ($ millions)	Book Value at Dec 31, 2004 ($ millions)
Copper					
Collahuasi	25.9	$207	$65	$(272)	$–
Kidd Creek Mine D, Ontario	58.8	277	127	–	404
Nickel					
Koniambo, New Caledonia	28.8	123	57	–	180
Nickel Rim South, Ontario	58.8	5	96	–	101
Other	–	361	120	–	481
Total		$973	$465	$(272)	$1,166

Kidd Mine D

At Kidd Mine D, work is progressing as planned as Kidd continues to develop the Mine Depth extension of the Kidd orebody. Mine D will allow the mine to produce 2.4 million tonnes of ore annually once in full production. Shaft progress advanced to 93% of plan and is now below the 8800 level. The Operations group has assumed control of the Block 1 Ore Handling System. Production began in late 2004. In 2004, $127 million, including capitalized interest was spent on Mine D development, with a total of $404 million spent to date. The cost of Mine D Stage I has been estimated at $500 million, excluding capitalized interest.

Montcalm

The Montcalm nickel project, near Timmins, Ontario, was completed in December 2004 after an investment of $75 million. This project is expected to add 8,000 to 9,000 tonnes of nickel production on an annual basis at an operating cost of $2.47/lb.

Nickel Rim South

The Nickel Rim South project is progressing on schedule and within budget. Site preparation, services and installation of electrical systems were completed in 2004. Both the vent shaft and main shaft construction programs are on track. The updated inferred mineral resource estimate at December 31, 2004 was 13.4 million tonnes grading 1.8% nickel and 3.3% copper with significant platinum and palladium.

Koniambo

Work continued throughout the year on the Koniambo ferronickel project in the Northern Province of New Caledonia, near the provincial capital of Kone. At a 1.5% nickel cut-off grade, the deposit contains measured plus indicated resources totaling 142.1 million tonnes at 2.13% nickel. Together with additional inferred resources of 156 million tonnes at 2.2% nickel, Koniambo is one of the world's largest and highest grade nickel laterite deposits. At a 2.0% nickel cut-off grade, the deposit contains measured plus indicated resources of 75.6 million tonnes at 2.47% nickel. In addition, the project has an inferred limonite resource estimated at 100 million tonnes at 1.6% nickel and 0.2% cobalt that could be developed at a later date.

In 1998, Falconbridge entered into a joint-venture agreement with Société Minière du Sud Pacifique S.A. (SMSP) and its controlling shareholder, Société de Financement et d'Investissement de la Province Nord, for the evaluation and development of the 60,000-tonne per year nickel in ferronickel mining and smelting complex. By signing its joint-venture

Greenfield Opportunities

Greenfield opportunities, or those potential projects which are located in regions where Noranda does not currently operate, represent significant growth potential to Noranda. Projects currently being reviewed for development are as follows:

Copper	El Pachón, Argentina	A very large and promising deposit with measured and indicated resources of 724 million tonnes grading 0.65% copper; capable of producing approximately 200,000 tonnes per year of copper-in-concentrate.
	El Morro, Chile	A porphyry copper deposit with inferred resources of 466 million tonnes grading 0.61% copper and 0.50 grams per tonne gold.
	West Wall, Chile	With an active drilling program underway, Noranda will vest 50% ownership in this promising copper porphyry in 2005.
	Frieda River, Papua New Guinea	The Frieda River project contains three significant copper deposits. Currently the focus of exploration is on the Nena deposit. With measured and indicated resources of 50 million tonnes grading 2.21% copper and 0.60 grams per tonne gold, this deposit is being further explored to expand and improve precision of the resource estimates.
Zinc	Lady Loretta, Australia	Studying the optimal timing to develop this deposit. Located near the Mt. Isa camp in a known area of mineralization. Measured and indicated resources of 11.6 million tonnes grading 16.1% zinc and 5.7% lead.

Planned Capital Investments

Capital investments for 2005 are expected to total $681 million as the development of the Nickel Rim South and other Brownfield expansions are advanced towards operating status. Additional capital will be spent on Koniambo during the year to advance engineering of the project. Sustaining capital expenditures average approximately $200 million annually. All of the currently projected capital investments can be funded from the current capital structure. Noranda's capital investment projections and its major components are shown in the following table.

Metal ($	Growth Project millions)	Impact	Capital Investments (unaudited) 2004	2005F	2006F
				($ millions)	
Copper	Kidd Mine D	Existing mine deepening to provide access to additional 15.3 million tonnes of inferred reserves with 3.0% copper and 4.6% zinc.	$127	$86	$65
Nickel	Nickel Rim South	Potential new nickel/copper mine with inferred resources of 13.4 million tonnes of 1.8% nickel and 3.3% copper and significant platinum group metals; 5-year development timeframe.	96	61	75
	Koniambo	Potential new nickel mine envisioning a 60,000 tonne-per-year operation. Measured and indicated resources of 142 million tonnes grading 2.13% nickel.	57	146	70
	Raglan	Increase milling capacity by 40% to enable mine output increase.	–	21	38
	Other		152	102	69
			432	416	317
Sustaining Capital			234	265	226
Total Capital Investments			$666	$681	$543

F: Forecast

Risk Assessment and Reduction in the Evaluation, Selection and Implementation of Projects

Noranda's preference for lower-risk brownfield expansion projects provides inherent risk reduction due to the Company's knowledge of the environment in which the expansion project is to be undertaken and its ability to tap into existing human and physical resources. Where Noranda chooses to invest and grow via the development of greenfield projects, away from existing infra-structure, risk assessment and reduction is a top priority.

Managing Project Evaluation, Selection and Implementation

Noranda has taken several steps to ensure the success of all its current and future capital projects including the following:

- Creation of a highly-experienced projects group with world-class leaders dedicated to securing the investment performance of major capital projects
- Implementation of Six Sigma-based Stage Gate process for project evaluation. This process is a disciplined system which addresses and quantifies key sources of project impact and risk in support of management decision making
- Addition of parameters in the Stage Gate process that measure social, business and strategic elements
- Recognition of investment returns as the primary metric of project success
- Assignment of accountability

Exploration

The objectives of the exploration team are aligned with those of the copper, nickel and zinc business units and are aligned with the corporate strategy of focusing primarily on copper and nickel growth opportunities worldwide. The Company's goal is to be the most valued and sought after partner in the mining and metals business. The Company's approach is one of consistently being a fair and honest partner, complemented by strong technical skills and a solid track record with a "win-win" philosophy. Joint-venture arrangements are pursued with both junior and senior mining companies to increase the level of focused exploration activity, thereby sharing cost and risk, and improving the likelihood of success. The exploration team is supported by an experienced mergers and acquisitions team and a strong project engineering team with significant experience building mines around the world.

As a Founding Patron of the Association of Professional Geoscientists of Ontario and a Founding Partner of the Prospector and Developers Association of Canada's Environmental Excellence in Exploration initiative, the team of geoscientists is committed to being fully compliant with National Instrument 43-101 requirements and in consistently conducting safe and environmentally responsible global exploration.

The exploration team consists of 107 employees, including 87 geologists and geophysicists. Noranda forecasts exploration expenditures for 2005 at $46.2 million compared to $42.5 million invested in 2004. Exploration activity is primarily focused on Canada, Chile, Brazil, Mexico, Norway, Australia, Africa, Papua New Guinea and China.

Interesting 2004 exploration results that will be pursued further in 2005 include:

1. A new nickel sulphide discovery east of Fraser Mine at Sudbury, Ontario, referred to as Fraser-Morgan West.

2. A new nickel sulphide discovery in Norway, a joint venture with Blackstone Ventures Inc.

3. The discovery of a new zinc occurrence at Matagami, Quebec.

4. Encouraging copper intersections at the Frieda River project in PNG, a joint venture with Highlands Pacific Limited.

Planned 2005 exploration also includes 8,000-metre diamond-drilling programs at each of two porphyry copper projects in Chile: the West Wall project, a joint venture with Anglo American, and the El Morro project, a joint venture with Metallica Resources.

Results of Operations

Net income for the year ended December 31, 2004 was $551 million or $1.75 per common share on a diluted basis, compared with a net income of $23 million or $0.00 per share for 2003. The significant improvement in 2004 results is due to higher average realized prices for all four primary metals as well as by-products, and strong operational performance from each business unit. Net income in 2004 included a gain of $80 million on the settlement of a favourable alumina purchase agreement offset by an asset impairment provision of $50 million realized against the assets of American Racing.

In 2003, net income included a gain of $38 million pre-tax on the sale of the remaining priority units of the Noranda Income Fund and other investments. This was offset by $66 million pre-tax of restructuring costs related to the shut-down of unprofitable operations.

Revenues increased to $7.0 billion in 2004, an increase of 49% over 2003 revenues of $4.7 billion due to additional capacity brought on stream, and higher realized prices during 2004. Income generated by operating assets increased to $1,380 million in 2004 compared to $397 million in 2003. The contribution from operating assets is expected to rise as capacity expansions begin contributing to operating earnings in 2005 and beyond.

$ millions, except per share information	2004	2003
Revenue	$6,978	$4,657
Operating expenses		
Cost of operations	2,094	1,948
Purchased raw materials	3,005	1,822
Depreciation, amortization and reclamation	499	490
Total operating expenses	5,598	4,260
Income generated by operating assets	1,380	397
Corporate costs[1]	232	238
Minority interest	297	88

[1] Corporate costs include interest, corporate and general administration, research, development and exploration costs.

Average Realized Prices

Average realized prices during 2004 and 2003, as well as estimated current realized prices which will positively impact 2005, are as follows:

$ per pound	Estimated Current Price*	2004	2003
Copper	$1.50	$1.30	$0.82
Nickel	$7.10	$6.40	$4.40
Zinc	$0.62	$0.52	$0.43
Aluminum	$0.88	$0.84	$0.68
Lead	$0.45	$0.43	$0.27
Cobalt	$18.60	$22.48	$9.42
Molybdenum	$30.00	$14.09	$4.51

* As at February 23, 2005

Cost of operations increased to $2.1 billion, a 7% increase from 2003 levels of $1.9 billion, largely as a result of the strength of the Canadian dollar relative to the U.S. dollar, and increasing energy costs throughout the operations. Approximately 50% of the Company's operating costs are incurred in Canadian dollars. Purchased raw materials, including costs incurred to purchase custom feed, increased to $3.0 billion in 2004 from $1.8 billion in 2003, due to higher average

metal prices paid for in purchased feeds. The settlement price for purchased custom feed is based on metal content and the prevailing market prices of the metals at the time of settlement.

With the addition of new mine capacity to Noranda's operating base, the Company's net income sensitivity to improvement in metal prices has increased significantly. The following table shows the annualized impact on Noranda's net income from changes in metals prices and the U.S./Canadian dollar exchange rate.

	Change in US$/lb.	Impact on	
	Price	Net income ($ millions)	Income per share
Copper	$0.05	$29	$0.10
Nickel	$0.50	$35	$0.12
Zinc	$0.05	$32	$0.11
Aluminum	$0.05	$19	$0.06
Lead	$0.05	$5	$0.02
Exchange rate Cdn$ = US$	$0.01	$5	$0.02

Integrated Operations

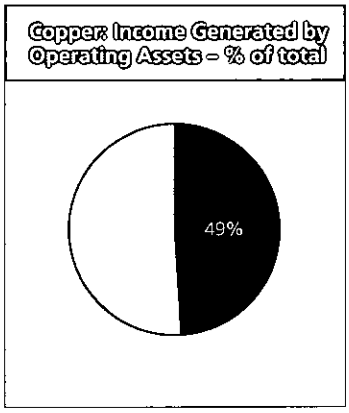
As an integrated producer of metals, Noranda's operations include mines and metallurgical facilities which provide the Company with maximum flexibility in both minimizing costs and maximizing operating performance by processing its own ores. This integration also reduces the Company's exposure to treatment charge fluctuations and shipping rate volatility on a consolidated basis.

When milling, smelting or refining capacity exceeds the Company's own mine production, Noranda acquires third-party ores to utilize this capacity and realize incremental treatment charges. These treatment charges provide incremental income to the Company and absorb fixed costs at metallurgical sites, with custom milling and refining operations being conducted throughout the Company as capacity allows. Operations conducting custom feed processing of copper and nickel feeds are located in North and South America and Norway. This integration allows Noranda to maintain some of the lowest cash cost operations in the industry. The flexibility of the processing facilities also enables the Company to treat complex ore which may otherwise render a deposit uneconomic due to high treatment costs. The Company also fixes the sulphur content of the ores that it treats at its metallurgical sites and produces sulphuric acid as a marketable by-product, which provides incremental revenues that help reduce cash operating costs at current sulphuric acid price levels.

The price paid to suppliers of these custom feed ores varies with the prevailing price of the metals being treated, and as such, Noranda's exposure to increasing metals prices is primarily based upon its own mine production. Noranda's continued focus on the identification and development of long-life, high-quality copper and nickel mining assets will continue to increase its leverage to copper and nickel. Current metallurgical sites provide a source of treatment charge revenue and act as a hedge for the Company on the fluctuations in market treatment charges.

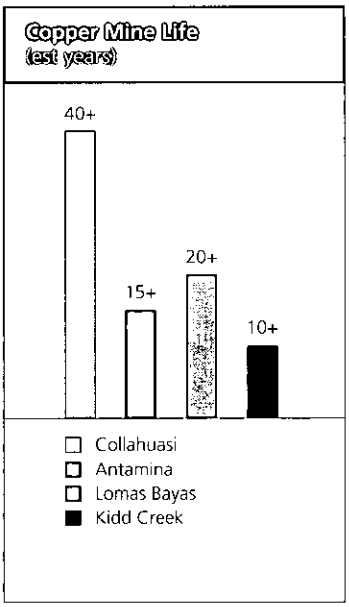
Integrated cash costs are calculated as follows:

	Copper (Integrated)		Nickel (Integrated)		Zinc (Mining)		Aluminium[1] (Smelting)	
$ millions, except as noted	2004	2003	2004	2003	2004	2003	2004	2003
Cost of operations, as reported	$841	$710	$615	$587	$158	$204	$282	$263
Non-mining costs*	–	–	–	–	(73)	(71)	–	–
By-product and processing credits*	(613)	(463)	(206)	(144)	(68)	(45)	(76)	(50)
Processing fee on sale of concentrates*	125	82	–	–	127	112	–	–
Purchases of raw materials*	–	–	–	–	–	–	103	86
Other operating and non-cash costs*	(2)	(6)	106	25	72	31	12	7
Cash costs – net*	$351	$323	$515	$468	$216	$231	$321	$306
Volumes – (000s lbs.) [2]	921,900	798,035	176,030	168,609	684,530	733,603	548,900	543,964
Cash cost per pound – $ [3]	0.38	0.40	2.93	2.78	0.32	0.32	0.58	0.56



[1] Represents Primary operations only: Aluminum segment cost of operations reported for 2004 totals $420 million (2003 – $388 million), which includes foil processing and other costs of $138 million (2003 – $125 million).

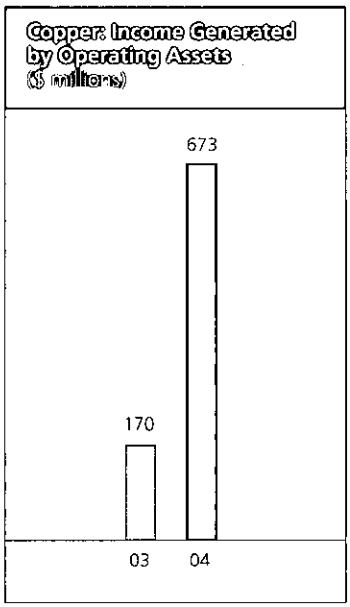
[2] Volumes as shown are based on production, except for Aluminum business, which represent shipments of primary aluminum.



[3] While not defined under generally accepted accounting principles ("GAAP"), this measure is based on practices used in the mining and metals industry. It is not intended to be considered as an alternative to determining "cost of operations" as determined under GAAP.

* Unaudited

Copper

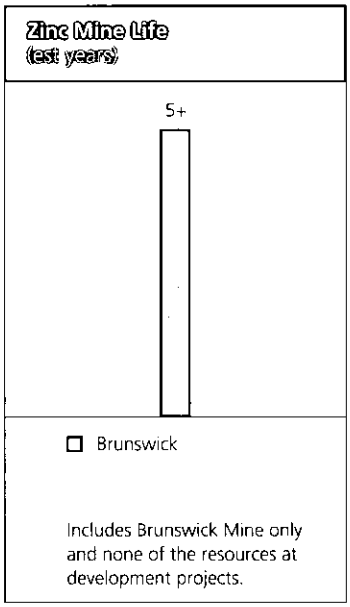


The Copper Business is a fully-integrated producer of copper metal and concentrate, precious metals and sulphuric acid. It comprises mostly long-life, low-cost mines located primarily in South America. They include Noranda's interest in the Antamina copper and zinc mine in Peru, the Collahuasi and Lomas Bayas mines in Chile and the Kidd Creek mine in Ontario, Canada. In addition to these mines, the operations include the Altonorte copper smelter in Chile, as well as refining, smelting and recycling facilities in Canada and the U.S. The Copper Business also operates one of the world's largest electronic scrap collection and smelting/refining operations and provides end-of-life electronics disposal services for companies like Hewlett Packard. As discussed previously, there are several potential brownfield and greenfield expansion opportunities which can further increase earnings from this business.

	2004	2003
Revenues – $ millions	3,630	2,147
Purchased raw materials – $ millions	1,882	1,067
Operating cash cost** – per pound of copper	$0.38	$0.40
Income generated by operating assets – $ millions	673	170
Sales and throughput (000 tonnes)*		
Copper-in-concentrates	275	212
Copper metal	612	604
Zinc metal	135	111
Zinc-in-concentrates	52	100
Sulphuric acid	749	651
Concentrate processed	1,810	1,793

* 100% basis except for Collahuasi (44%) and Antamina (33.75%).
** Includes all cash production and selling costs, net of by-product credits, but excludes interest, corporate, research, exploration costs and custom feed profits. Continuing costs incurred during shutdowns or strikes are excluded.

Revenues: For the year, consolidated revenues for the Copper Business were $3.63 billion, an increase of 69% over the $2.15 billion for the same period of 2003. Higher copper sales and metal prices and by-product revenues accounted for the increase as well as increased production levels of copper as expansions at Collahuasi and the completion of the removal of sediment from the high-grade copper zone at Antamina led the increase in production. The realized copper price averaged $1.30/lb. compared to $0.82/lb. in 2003.



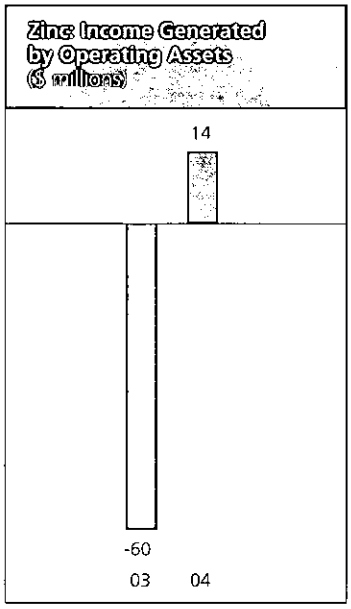
Costs: Total Copper Business operating expenses totaled $2,957 million in 2004 versus $1,977 million in 2003. Cost of operations totaled $841 million in 2004 versus $710 million in 2003. Cost of purchased raw materials increased to $1,882 million from $1,067 million, a 76% increase year-over-year due to higher metal prices. In 2004, the operating cash cost of producing a pound of copper was $0.38/lb. versus $0.40/lb. in 2003.

Income generated by operating assets: In 2004, the Copper Business operating income was $673 million compared to $170 million in the same period for 2003. The $503 million increase was mainly attributable to higher realized prices and production volumes.

Production: For 2004, mined copper production totaled 430,391 tonnes compared to 360,602 tonnes respectively, during 2003. Production was higher due to the completion of the Collahuasi expansion and open pit transition project, the removal of lake sediment at the Antamina mine allowing access to better copper grades, and due to the record production at the Lomas Bayas operation.

Production: Refined nickel production totaled 100,887 tonnes in 2004, compared to 104,410 tonnes in the same period in 2003. During 2004, Sudbury mines nickel production was 22,602 tonnes, compared with 24,143 tonnes in 2003. The reduction in nickel production was attributable to the strike in the first quarter of 2004 and the subsequent ramp-up of production (which reduced the annual production by 3,500 tonnes). For 2004, Raglan nickel-in-concentrate production was 26,552 tonnes, compared with 25,110 tonnes of nickel in 2003. Increased ore tonnages offset the impact of lower ore grades. In Sudbury, smelter production of nickel-in-matte was 52,595 tonnes in 2004 compared with 59,831 tonnes in 2003, largely as a result of the strike at Sudbury and lower concentrate grades. At Nikkelverk, 2004 nickel production of 71,410 tonnes was lower than the 77,183 tonnes produced in 2003 due to lower shipments of material from Sudbury. Nikkelverk cobalt production set a new record at 4,670 tonnes. The Falcondo ferronickel operation increased production by 8% to 29,477 tonnes of nickel in ferronickel compared to 27,227 tonnes in 2003.

Zinc



In 2004, the Zinc Business included the Brunswick mine and the Brunswick lead metallurgical operations (lead smelter, lead refinery and silver refinery), the Bell Allard mine (which was depleted and permanently closed in October), General Smelting (alloy foundry), the NorFalco sulphuric acid marketing operations, sales offices in Independence, Ohio and Zug, Switzerland, and Noranda's 25% interest in the Canadian Electrolytic Zinc refinery held through the Noranda Income Fund. The Zinc Business is a fully-integrated operation that produces and sells zinc and lead concentrates and refines and markets zinc and lead metal and a significant amount of by-product silver and sulphuric acid.

	2004	2003
Revenues – $ millions	415	363
Purchased raw materials – $ millions	187	155
Operating cash cost – per pound of zinc	$0.32	$0.32
Income generated by operating assets	14	(60)
Sales (000 tonnes)		
Zinc-in-concentrates	293	335
Lead metal	83	60

Revenues: For the year, consolidated revenues for the Zinc Business increased 14% to $415 million from $363 million in 2003. Sales volumes of zinc-in-concentrate decreased in 2004 by 13% from 292,512 tonnes compared to 335,059 tonnes in 2003, principally due to the closure of the Bell Allard mine in October 2004. Lead metal sales volumes increased in 2004 by 38% to 83,194 from 60,452 tonnes in 2003. The increase in lead metal sales is primarily due to a shorter seasonal shutdown in 2004 versus 2003.

Costs: Total Zinc Business operating expenses totaled $401 million in 2004, a decrease from $423 million in 2003. Cost of zinc operations totaled $158 million in 2004 versus $204 million in 2003, a decrease of $46 million. Cost of purchased raw materials increased from $155 million to $187 million due to higher metal prices. In 2004, the operating cash cost of producing a pound of zinc was $0.32, unchanged from 2003. Costs remain unchanged from the same period last year with higher by-product revenue offsetting increased transportation and smelting charges.

Income generated by operating assets: For 2004, the Zinc Business operating income was $14 million compared with a loss of $60 million for 2003. The $74 million increase was mainly due to higher metal prices, which were offset by lower sales volumes and the negative effect of the stronger Canadian dollar on costs.

Production: During 2004, contained zinc in mine production was 366,969 tonnes in 2004, compared to 396,136 tonnes in 2003. Brunswick Mine production was 268,068 tonnes zinc-in-concentrate, compared with 286,457 tonnes zinc-in-concentrate in 2003. The decrease in zinc production was attributable to ore pass operating issues during the fourth quarter of 2004. Bell Allard mine production during 2004 was 98,901 tonnes zinc-in-concentrate, compared with 109,679 tonnes zinc-in-concentrate in 2003. The decrease in 2004 was due to the closure of Bell Allard in October 2004 due to the depletion of reserves and planned closure of the mine. During 2004, Brunswick Smelter consumed 205,473 tonnes of feed, compared to 153,207 tonnes of feed in 2003. Refined lead production totaled 83,829 tonnes in 2004 versus 60,776 tonnes in 2003, an increase of 38% for the year. The increase during 2004 was due to the earlier re-start of the smelter following its seasonal shutdown.

The gain on contract settlement recorded in 2004 reflects the fair value at the time of termination of the alumina supply contract in the Company's alumina operations. The amount of the gain was capitalized to the carried value of the assets received and is allotted to capital assets. The contract, originally signed in June 2000 provided the full alumina requirement of the New Madrid smelter until the year 2010 at a price equal to 12.35% of the then prevailing LME price for aluminum. The counterparty to the contract agreed to transfer ownership of the alumina refinery in Gramercy, Louisiana, and a 25% interest in the St. Ann bauxite mine in Jamaica in exchange for cancellation of the contract plus $11.5 million in cash.

Noranda recorded an impairment charge of $50 million against the carried value of the Company's investment in American Racing.

Fourth Quarter 2004 Results

Quarterly Earnings

Net income for the fourth quarter of 2004 was $158 million, or $0.50 per share on a diluted basis compared to $55 million or $0.18 per share on a diluted basis for the same period in 2003. This increase was as a result of significantly higher metal prices realized in the fourth quarter of 2004 versus 2003 offset by the impact of a strong Canadian dollar. Realized copper prices increased to $1.43/lb. in the fourth quarter of 2004 compared with $0.93/lb. realized in the same period of 2003, while nickel prices realized in the fourth quarter of 2004 averaged $6.45/lb. versus $5.57/lb. realized in the fourth quarter of 2003. Zinc prices realized in the fourth quarter of 2004 averaged $0.56/lb. versus $0.47/lb. realized in the fourth quarter of 2003, while realized aluminum prices increased to $0.89/lb. in the fourth quarter of 2004 compared with $0.71/lb. realized in the same period of 2003.

* Unaudited

Copper

Revenues: For the fourth quarter of 2004, consolidated revenues of $1,009 million increased 59% from $633 million in the fourth quarter of 2003. The increase reflects higher average realized copper, zinc and precious metal prices, and higher copper sales volumes, mostly from the Antamina and Collahuasi mines. Total sales of copper during the quarter were 242,627 tonnes versus 233,685 tonnes in the same period in 2003. Increased sales of copper from Antamina and Collahuasi were offset by decreased sales of Altonorte anodes and Horne concentrates. Increased sales of zinc metal from Kidd Creek were offset by decreased sales of zinc-in-concentrate from Antamina. The realized copper price of $1.43/lb. increased by 54% in the quarter compared to $0.93/lb. realized in the same period in 2003.

Costs: Total operating expenses increased to $839 million from $546 million in the fourth quarter of 2003. Cost of operations increased to $239 million from $199 million in the same period last year, while cost of purchased raw materials increased to $534 million from $301 million in the fourth quarter of 2003. Cost of raw materials increased due to the rise in copper prices. The operating cash cost of producing a pound of copper in the fourth quarter of 2004 increased to $0.43/lb. from $0.39/lb. in the fourth quarter of 2003.

Operating income: Operating income for the Copper Business in fourth quarter 2004 increased to $170 million from $87 million a year ago due to the impact of higher copper, zinc and precious metal prices and higher copper sales volumes. Offsetting the stronger revenues were increased costs resulting from the impact of a weaker U.S. dollar on Canadian and South American operating costs.

Production: During the fourth quarter of 2004, copper mine production from Canadian and South American operations totaled 117,450 tonnes, compared to 90,914 tonnes a year ago. Significant increases in mined copper output were achieved at the Antamina and Collahuasi mines. Refined copper production was 133,843 tonnes of copper cathode in the fourth quarter of 2004 versus 130,122 tonnes in the fourth quarter of 2003. Zinc-in-concentrate production at Kidd Creek increased to 30,761 tonnes from 18,095 tonnes in the fourth quarter of 2003, while zinc-in-concentrate production at Antamina decreased to 8,193 tonnes from 31,799 tonnes due to a shift in the mine plan towards higher copper ores.

Nickel

Revenues: For the fourth quarter of 2004, consolidated revenues of $499 million increased from $411 million in the fourth quarter of 2003. Sales volumes of nickel decreased 3% to 19,799 tonnes from 20,468 tonnes in the fourth quarter of 2003. At Falcondo, ferronickel sales volumes increased by 20% to 8,104 tonnes from 6,781 tonnes in the fourth quarter of 2003. Fourth quarter 2004 copper sales volumes of 12,521 tonnes decreased 24% from 16,506 tonnes in the same period a year ago as a result of lower copper production due to lower ore grades from the mines and reduced feed from custom shippers. Cobalt sales volumes increased by 19% to 1,072 tonnes in response to higher deliveries from custom shippers. Realized nickel prices of $6.45/lb. increased by 16% in the quarter compared with $5.57/lb. in the same period in 2003. Realized ferronickel prices of $6.42/lb. increased by 23% in the quarter compared with $5.21/lb. in the same period in 2003. Precious metal revenues increased by $7 million in the fourth quarter of 2004 compared to the same period in 2003.

Costs: Total operating expenses increased to $331 million from $270 million in the fourth quarter of 2003. Cost of operations increased to $178 million from $129 million in the same period last year, while cost of purchased raw materials increased to $105 million from $101 million in the fourth quarter of 2003. The operating cash cost per pound of mined nickel for all of Falconbridge (including INO and Falcondo) was $3.05 in the fourth quarter of 2004, compared with $3.06 for the same period in 2003. The operating cash cost of producing a pound of nickel from INO mines, was $2.46. The $0.62/lb., or 20%, decrease from the 2003 costs was the result of increased mine production and higher by-product credits due to the increase in metal prices, which offset the impact of the stronger Canadian dollar, increased costs to access the ore at the Canadian operations and lower ore grades. Falcondo's operating cash cost per pound of ferronickel increased by 35% in the fourth quarter of 2004 to $4.17, mainly due to the increase in oil prices and maintenance costs. Oil costs rose from $28.53 per barrel in the fourth quarter of 2003 to $42.34 in the most recent quarter.

Income generated by operating assets: Fourth quarter operating income for the Nickel Business totaled $168 million, compared to $141 million in the fourth quarter of 2003. The $27 million increase was mainly due to the impact of nickel, copper and cobalt prices, and increased cobalt and precious metal sales volumes, which were offset by the impact of lower nickel and copper sales volumes, increased depreciation and amortization charges and higher unit costs, caused in part by the strengthening of the Canadian dollar.

Production: Total mined nickel production was 13,881 tonnes during the quarter versus 11,286 tonnes during the same period in 2003. Sudbury mines production was 5,674 tonnes of nickel and 6,775 tonnes of copper during the fourth quarter of 2004, which was essentially the same as the fourth quarter of 2003. At Raglan, nickel-in-concentrate production in the quarter was 6,683 tonnes and copper production was 1,734 tonnes, compared with 5,616 tonnes of nickel and 1,518 tonnes of copper in 2003. The increases in production were due to the increase in mined ore tonnages, which more than offset the reduced ore grades. At the Sudbury smelter, nickel-in-matte production in the fourth quarter of 2004 increased to 18,053 tonnes from 17,774 tonnes in the same period of 2003, as a result of the treatment of higher concentrate tonnages with lower feed grades. Total refined nickel production was 27,632 tonnes in the fourth quarter of 2004, compared to 27,058 tonnes in the same period in 2003. At Nikkelverk, fourth quarter refined nickel production level of 20,458 tonnes was essentially the same as in 2003. In the fourth quarter of 2004, Falcondo produced 7,174 tonnes of nickel in ferronickel, an 11% increase from 6,490 tonnes in the fourth quarter of 2003.

Zinc

Revenues: Total zinc revenues increased to $119 million or 53% higher than $78 million recorded during the fourth quarter of 2003. In the fourth quarter of 2004, sales volumes of zinc-in-concentrates decreased 22% to 64,785 tonnes from 82,873 tonnes in the fourth quarter of 2003. The decrease in zinc concentrate sales reflects the closure of the Bell Allard mine in October 2004. Fourth quarter 2004 lead metal sales doubled to 23,139 tonnes from 11,609 tonnes in the same period a year ago, as full smelter production was resumed in the fourth quarter, after a reduced summer outage in 2004 versus 2003. The average realized price per pound of zinc during the fourth quarter was $0.56/lb. versus $0.47/lb. in the same period last year. The average realized price per pound of lead during the fourth quarter was $0.46/lb. versus $0.33/lb. in the same period last year.

Costs: Total operating expenses increased to $114 million from $81 million in the fourth quarter of 2003. Cost of operations decreased to $45 million from $47 million in the same period last year, while cost of purchased raw materials increased to $60 million from $17 million in the fourth quarter of 2003. Cost of raw materials increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc was $0.32 in the fourth quarter of 2004, unchanged from $0.33 for the same period in 2003.

Income generated by operating assets: The fourth quarter 2004 operating income of the Zinc Business was $5 million compared with a loss of $3 million for the fourth quarter of 2003. The $8 million increase was due to the impact of higher metal prices and decreased depreciation and amortization charges which were offset by the impact of lower sales volumes, and an unfavourable impact on costs due to the foreign exchange variance caused by the strengthening of the Canadian dollar.

Production: Contained zinc production was 74,886 tonnes in the fourth quarter of 2004, compared to 102,936 tonnes in the same period in 2003. The decrease in sales is primarily attributable to the planned closure of the Bell Allard mine in October and partially due to ore pass availability issues at the Brunswick mine, which have since been resolved. Brunswick mine production was 67,589 tonnes of zinc-in-concentrate during the fourth quarter of 2004 compared to 72,088 tonnes zinc-in-concentrate for the same period of 2003. Bell Allard mine production was 7,297 tonnes of zinc concentrate during the fourth quarter of 2004 compared to 30,848 tonnes zinc-in-concentrate for the same period of 2003.

The Brunswick lead smelter consumed 61,690 tonnes of lead concentrates and secondaries during the fourth quarter of 2004, compared to 38,825 tonnes during the same period in 2003. Lead metal production was 25,892 tonnes in the fourth quarter of 2004, compared to 12,988 tonnes in the same period in 2003. The increased feed consumption and lead metal output at the Brunswick Smelter is due to the earlier re-start of operations following the seasonal shutdown.

Aluminum

Revenues: Total aluminum revenues increased to $257 million or 50% higher than $171 million recorded during the fourth quarter of 2003. Sales volumes of primary aluminum decreased 5% to 61,662 tonnes from 64,795 tonnes in the fourth quarter of 2003. Fourth quarter 2004 rolled products sales volumes of 42,011 tonnes increased by 23% from 34,267 tonnes in the same period a year ago as a result of the continued ramp-up of the new Huntingdon, TN, West plant and strong product demand. The realized primary aluminum price of $0.89/lb. increased by 25% in the quarter compared with $0.71/lb. in the same period in 2003.

Costs: Total operating expenses increased to $228 million from $169 million in the fourth quarter of 2003. Cost of operations decreased to $102 million from $106 million in the same period last year, while cost of purchased raw materials increased to $116 million from $53 million in the fourth quarter of 2003. Cost of raw materials increased along with the rise in aluminum prices. The operating cash cost per pound of primary aluminum metal, net of metal premiums and by-product credits was $0.57 in the fourth quarter of 2004, unchanged from $0.61 for the same period in 2003. The cost per pound at the rolled products division was 20% lower in the fourth quarter of 2004 compared with the same period in 2003.

Income generated by operating assets: Fourth quarter 2004 operating income for the Aluminum Business was $29 million compared with $2 million for the fourth quarter of 2003. The $27 million increase was mainly due to the impact of higher metal prices, higher volumes and increased metal premiums and fabrication margins.

Production: In the fourth quarter of 2004, primary aluminum production of 62,302 tonnes, compared to 60,985 tonnes in the same period in 2003. For the rolled products operations, shipments were 42,011 tonnes for the fourth quarter compared with 34,267 tonnes for the 2003 fourth quarter.

Financial Position and Liquidity

Noranda maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding requirements. Noranda's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financings and new borrowings. Given the current outlook for its principal products and operating cash flow, the Company does not foresee issuing equity to enhance liquidity.

Working capital, excluding cash, short-term investments and short-term indebtedness, increased to $1,119 million from $852 million at the end of 2003. During the year, Noranda continued to improve its balance sheet and operating capacity to support its strategic objective of maintaining an investment-grade credit rating. This will allow the Company to benefit more fully from improving fundamentals in the copper and nickel sectors. During 2004, the Company:

- Arranged $295 million of three-year revolving credit facilities with six banks.
- Repaid the $300 million 8⅛% debenture maturity.

Cash and cash equivalents and short-term investments at December 31, 2004 totaled $884 million compared to $630 million at December 31, 2003. In addition to its cash balances, Noranda's liquidity and financial flexibility is augmented by revolving credit facilities. Committed lines of credit at December 31, 2004 totaled $1,112 million of which $246 million had been drawn or utilized. These lines of credit are primarily with various Canadian chartered banks and syndicates of U.S. and international banks. These bank facilities currently have committed terms of up to three years and are unsecured.

Long-term debt, excluding the amount due in less than one year, amounted to $2,638 million at December 31, 2004 compared to $2,893 million a year earlier. The Company and its partially-owned subsidiary currently have $250 million and $600 million, respectively, available for public debt issuance under shelf prospectuses filed in September 2003 and January 2004, respectively. Noranda continues to monitor capital markets worldwide, seeking opportunities to diversify its financing sources. At December 31, 2004, Noranda's consolidated net-debt-to-total-capitalization ratio was 35% compared to 43% at December 31, 2003.

"Net-debt-to-total-capitalization" can be calculated as follows:

($ millions)		Dec. 31, 2004	Dec. 31, 2003
Long-term debt		$ 2,638	$ 2,893
Debt due within one year		570	431
Cash, cash equivalents and short-term investments		(884)	(630)
Net debt	(1)	2,324	2,694
Interests of other shareholders		1,197	919
Shareholders' equity		3,059	2,597
Stockholders' interests (equity)	(2)	4,256	3,516
Total capitalization	(3)=(1)+(2)	6,580	6,210
Net-debt-to-total-capitalization ratio (*)	(1)/(3)	35%	43%

(*) The measure of "net-debt-to-total-capitalization" is not defined under GAAP. Management believes the presentation of this measure is relevant and useful for investors when assessing the Company's liquidity and its ability for growth and investment. This measure should not be considered an alternative to liquidity as determined under GAAP.

Noranda's long-term public debt ratings at December 31 are noted below:

	2004	2003
Standard & Poor's	BBB-	BBB-
Moody's	Baa3	Baa3
Dominion Bond Rating Services	BBB	BBB

Cash Flows

Cash generated from operations, before net changes in non-cash working capital, totaled $1,468 million in 2004, up from $577 million in 2003. The increase is primarily the result of higher sales and production volumes, lower operating costs and higher metal prices, despite the adverse impact of foreign exchange rates.

Capital investments totaled $666 million in 2004 compared to $489 million in 2003. Major capital expenditures during 2004 included the expansion and transfer of mining operations at the Collahuasi copper mine, the Kidd Creek Mine D underground extension, the Montcalm nickel mine and the Nickel Rim South underground exploration project initiated in early 2004.

Capital investments for 2005 are budgeted to be $681 million. A more detailed discussion is provided on page 244.

In 2004, Noranda's common and preferred share dividend obligations were $165 million compared to $123 million in 2003. The annual common share dividend was Cdn$0.48 per share in *2004 versus* Cdn$0.64 per share in 2003.

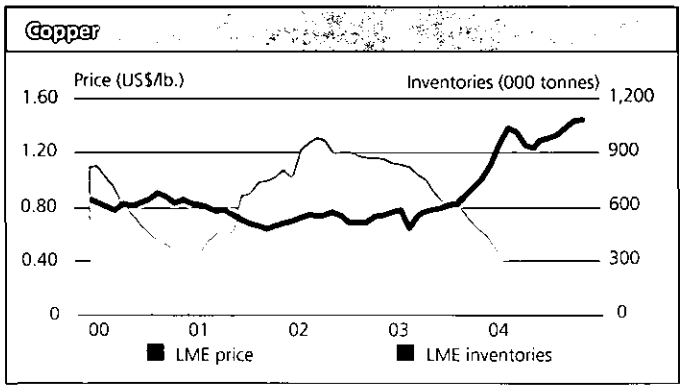
Significant future obligations of Noranda and its partially-owned subsidiaries are summarized as follows:

($ millions)	Payments by year						
Nature of obligation:	2005	2006	2007	2008	2009	Thereafter	Total
Long-term debt	$ 568	$ 353	$ 328	$ 256	$ 83	$ 1,603	$ 3,191
Capital leases	2	2	3	1	1	8	17
Operating leases	29	23	18	14	9	21	114
Total	$ 599	$ 378	$ 349	$ 271	$ 93	$ 1,632	$ 3,322

Metal Markets

In 2004, non-ferrous base metal prices rose significantly across all metals due to a similar combination of factors. Reasons behind the substantial increase in prices included strong current market fundamentals and future market outlooks, lack of immediately available new supply, the impact of the depreciated U.S. dollar on commodity prices and, lastly, bullish market sentiments shared by virtually all market participants and investment funds. Front and centre again was the double-digit economic growth recorded in China and that country's continued strong demand for metal concentrates and refined metals.

Early in the year, metal prices were temporarily affected by China's tightening of its credit policy and nervousness over the impact this might have on capital investment and demand for raw materials. But the effects of this policy proved to be temporary and metals markets had regained their bullishness by the fourth quarter. Nonetheless, high spot prices for raw materials as well as the rising cost and constrained availability of power combined to limit electricity-intensive metal production by Chinese metal refineries.

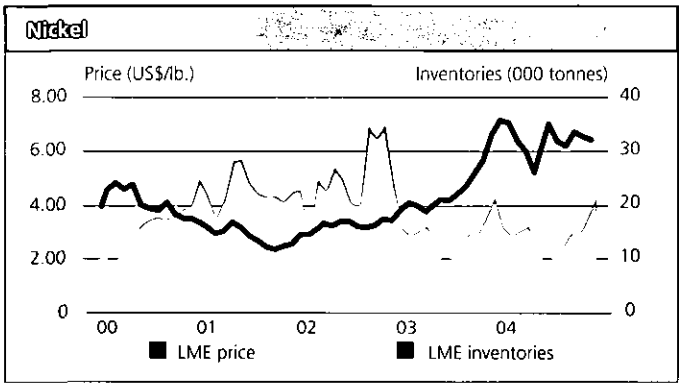


Strong supply/demand fundamentals were witnessed by the magnitude of the declines in exchange stocks and the significant rise in physical delivery premiums in all geographic markets. The continuation of a synchronized global economic recovery allowed the base-metals industry to record its highest prices across the board in many years.

China, India and other developing Asian economies should continue to be *the main* drivers of growth in global demand for metals in the foreseeable future, with their ongoing investments in basic infrastructure and surging domestic demand for consumer products and motor vehicles. Indeed, strong demand from these economies should underpin above-average growth rates for metals consumption over the next few years.

There has been some concern that the impact of the rise in oil prices, combined with inflated currency values in certain countries, could pose a threat to continued global economic growth. However, despite those potential dampers, low inventories of raw materials, a lack of immediately developable large new mines, tightening supplies of finished metals and current robust demand provide optimism for metal market outlooks to remain very positive in 2005.

Copper Market



After breaking through the $1.00/lb. level at the end of 2003, the copper price continued to rise steadily, reaching a high of $1.41/lb. in early April. Copper prices then retracted to the $1.20 – $1.30/lb. range until late September, after which they regained momentum, rising to a high of $1.49/lb. at year end. The average LME cash-settlement price for 2004 was $1.30/lb., 60% above the average price of $0.81/lb. in 2003.

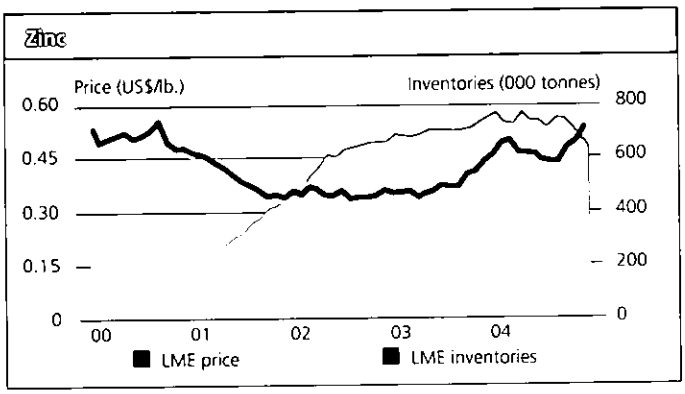
In 2004, the copper market was characterized by extraordinarily strong global consumption growth that, despite supply growth, caused the supply/demand deficit to exceed one million tonnes. Global copper consumption is forecast to have grown a hefty 8.7%, as Western consumption staged a recovery. Chinese consumption growth, having receded from the previous year, still grew at a very robust 18% year-over-year.

During the first few years of the decade, when prices were significantly lower, copper producers exhibited discipline and curtailed copper mine and refinery output. However, the rapid rise in copper prices, which began in late 2003, has led to the restart of de-activated production as well as the emergence of new brownfield and greenfield projects. Copper mine production rose sharply in 2004, spurred by the combination of mine restarts and expansion projects. An estimated 865,000 tonnes of additional mined production entered the market in 2004, mostly from brownfield expansions. Despite the increased mine production, refinery utilization rates still were constrained at around 85%, as a significant portion of the additional mined production was absorbed into concentrate pipelines and smelter stock replenishments.

Despite the increases on the supply side, the strong demand for copper metal outpaced the additional supply, forcing consumers and merchants to draw down physical stocks and exchange stocks in order to fulfill their needs. By year end LME stocks decreased 384,000 tonnes to 49,000 tonnes. Total LME, Comex and Shanghai exchange stocks decreased by 672,000 tonnes over the course of the year.

Nickel Market

After moving above the $4.00/lb. level in the second half of 2003, the nickel price continued to rise and peaked at $8.06/lb. in early January of 2004. For the balance of the year, nickel prices remained volatile, oscillating within a range of $4.78/lb. to $7.53/lb., breaking the trend of the previous decade when the nickel price managed to stay above the



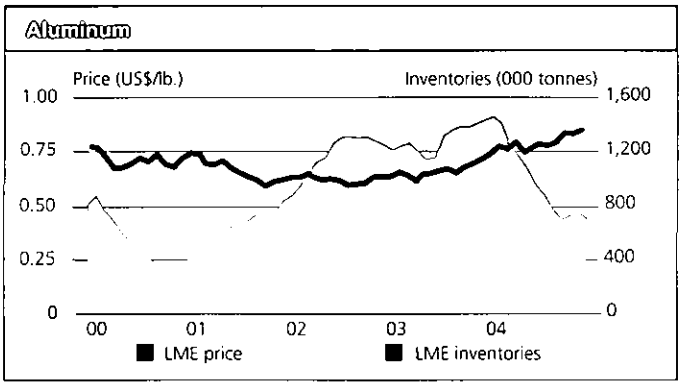
$4.00/lb. level only briefly. The average LME cash-settlement price for 2004 was $6.27/lb., 44% above the average price of $4.37/lb. for 2003.

The surge in nickel prices was driven by constrained supply of both primary nickel and stainless steel scrap and strong demand from the stainless-steel sector, particularly in China. Stainless steel production grew an estimated 8% in 2004. Strong market fundamentals were further supported by investment-fund interest and activity. A continued strengthening of the global economy bolstered other nickel end-use sectors as well, including the high-performance nickel alloys used in jet-engine turbines.

By the start of summer, already low LME nickel inventories fell to critical levels just below 8,000 tonnes. High prices and tight availability caused Chinese traders and consumers to begin de-stocking and also resulted in increased quantities of stainless steel scrap appearing on the market. Some stainless steel producers, particularly in Asia, shifted their production focus onto ferritic grades of stainless steel and/or grades with lower nickel content. This action alleviated the pressure on a tight primary nickel supply and caused the forecast deficit for 2004 to be reduced to 5,000 tonnes from an initial forecast of 25,000 tonnes. LME inventories began to reflect this increased availability, as a steady trickle of small warehouse deposits brought the exchange stocks back up to 20,892 tonnes by the end of the year. At December 31, 2004, LME nickel inventories had declined by 3,180 tonnes from the beginning of the year.

Zinc Market

In 2004, LME zinc prices rose from $0.46/lb. at the beginning of the year to a high of $0.58/lb. on the very last day of the year. Prices first peaked in early March at $0.52/lb. and then eased back to the year's low of $0.43/lb. in September. Prices began to rise strongly again in the fourth quarter, as market analysts began to believe that the projected supply/demand deficit had drawn out most of the unreported, off-exchange stocks. The LME cash-settlement zinc price averaged $0.475/lb. in 2004, a 27% increase over the average of $0.375/lb. in 2003.



Historically low zinc prices over the past few years led to the depletion and closure of older, uneconomic mines, with the result that mine concentrate availability became very tight. The past 24-month recovery in global economic activity and industrial output led to a resurgence in zinc demand, especially from the steel galvanizing sector. Leading all regions was China, where zinc demand rose approximately 14% in 2004. Demand for zinc also rebounded strongly in the United States, again spurred primarily by the steel sector. Over the past four years, significant capacity and ownership rationalization has contributed to a comeback by the U.S. steel industry and capacity utilization rates began to surge again in 2004.

While smelting capacity has continued to expand, mainly in China, actual refined zinc production is forecast to have increased by less than 2% last year. In China, a tight global market for zinc concentrates, increased electricity costs and frequent electricity shortages, combined with rising domestic demand, resulted in that country becoming a net importer of zinc metal after many years of leading the world in zinc exports. At the beginning of 2004, zinc surpluses accumulated in previous years had raised LME stocks to 740,000 tonnes. By April, off-exchange stocks that continued to be deposited in LME warehouses caused reported inventories to peak at 787,000 tonnes. All that while, though, smaller but steady outflows of the metal continued on a daily basis. By the beginning of the summer, the trend to increased LME zinc stocks had been reversed. LME warehouse stocks subsequently declined to 629,000 tonnes by December 31, a reduction of

111,000 tonnes from the previous year end. The global refined zinc supply/demand balance is estimated to have been in deficit by 200,000 tonnes in 2004.

Aluminum Market

The LME aluminum price moved steadily higher throughout 2004, from $0.73/lb. in January to a near ten-year high of $0.89/lb. by December. The rise in prices was fairly constant throughout the year. The LME cash-settlement aluminum price averaged $0.78/lb. in 2004, a 20% increase over the average of $0.65/lb. in 2003.

Aluminum's supply/demand fundamentals improved significantly in 2004. Market surpluses of the past few years finally were reversed, with a deficit of more than 450,000 tonnes forecast for 2004. Most of the improvement was led by increased demand in China and the United States. Other major industrial economies demonstrated somewhat lesser – but still positive – rates of demand growth. Production increases have been unable to keep pace with demand growth as both power and alumina costs rose significantly during the year. Smelter strikes also impacted production, especially in Canada. LME inventories began 2004 with 1.4 million tonnes in warehouse, but by year's end this stockpile had decreased more than 50% to 695,000 tonnes. This decline in stocks and the continued depreciation of the U.S. dollar added further support to aluminum prices throughout the year.

Both the Chinese and U.S. economies are expected to support strong demand again during 2005. Effective January 1, 2005, China was to begin applying an export tax on aluminum, copper and nickel exports. Given that the country has been a significant exporter of aluminum, the export tax should curtail the growth of Chinese aluminum production and exports – and could possibly cause inefficient Chinese producers to close or consolidate. These supply/demand fundamentals coupled with a weak U.S. dollar should continue to benefit aluminum prices over the coming year.

Off-Balance Sheet Arrangements

Noranda does not have any unconsolidated affiliates. The Company does not enter into material off-balance sheet arrangements with special purpose entities in the normal course of business. Its only significant off-balance sheet arrangements are the Canadian dollar expenditure hedges discussed under the "Financial Instruments and other Instruments" section of this document.

Transactions with Related Parties

Related-party transactions for the year ended 2004 and the fourth quarter of 2004 are summarized as follows:

Year ended December 31, 2004:

($ millions) Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	127	56	–	27	–
Noranda Income Fund	Trading activity	5	–	29	1	8
Antamina	Trading activity	–	–	159	–	42
Other Affiliates	Power supply contract	–	–	127	–	–
Other Affiliates	Trading activity	–	–	3	–	–

Quarter ended December 31, 2004:

($ millions) (unaudited) Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	35	17	–	27	–
Noranda Income Fund	Trading activity	3	–	7	1	8
Antamina	Trading activity	–	–	59	–	42
Other Affiliates	Power supply contract	–	–	31	–	–
Other Affiliates	Trading activity	–	–	1	–	–

Critical Accounting Estimates

Management is required to make estimates in preparing its financial statements in conformity with generally accepted accounting principles. These estimates affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Changes to these estimates would result in material changes to these line items. The critical accounting estimates made by Noranda relate to our accounting for the following items:

- Property, plant and equipment
  - The determination of mineral reserves
  - Impairment assessments of long-lived assets
  - Amortization of property, plant and equipment
- Employee future benefits
- Asset retirement obligations
- The determination of taxes

Property, plant and equipment
Included in Operating capital assets of $4.9 billion at December 31, 2004, was a property, plant and equipment carrying value of $4.2 billion. This represents 86% of the book value of the asset base. As such, the estimates used in accounting for property, plant and equipment and the related depreciation and amortization charges are critical and have a material impact on the Company's financial condition and earnings. Property, plant and equipment and related capitalized interest and development and pre-production expenditures are recorded at cost and are subject to impairment testing as discussed below.

Determination of mineral reserves
One of the most significant estimates which impacts the accounting for property, plant and equipment and the related depreciation and amortization, is the estimate of proven and probable mineral reserves. The process of estimating reserves is complex; requiring significant assumptions, estimates and decisions regarding economic (i.e. metal prices, production costs, and exchange rates), engineering, geophysical and geological data. A material revision to existing reserve estimates could occur because of changes to any of these inputs. Changes in reserves could result in impairment of the carrying amount of property, plant and equipment and a change in amortization expense.

Impairment assessments of long-lived assets
We review and evaluate our long-lived assets for impairment when events or changes in circumstances indicate that the carrying amount may not be recoverable. In 2004, an asset impairment charge of $50 million was realized with respect to a wholly-owned subsidiary, American Racing Equipment, a wheel manufacturing subsidiary located in the United States. Asset impairment is considered to exist if the total estimated future cash flows on an undiscounted basis are less than the carrying amount of the asset. An impairment loss is measured and recorded based on recoverable minerals, expected commodity prices (considering current and historical prices, price trends and related factors), production levels, capital and reclamation costs, and are all based on detailed life-of-mine plans. The term "recoverable minerals" refers to the estimated amount of metal that will be obtained from proven and probable mineral reserves, after taking into account losses during ore processing and treatment. Significant management judgment is involved in estimating these factors, which include inherent risks and uncertainties. The assumptions Noranda uses are consistent with its internal planning. Management periodically evaluates and updates the estimates based on the conditions that influence these factors. The variability of these factors depends on a number of conditions, including uncertainty about future events, and thus accounting estimates may change from period to period. If other assumptions and estimates had been used in the current period, the asset balances could have been materially impacted. If management uses different assumptions or if different conditions occur in future periods, future operating results could be materially impacted.

In estimating future cash flows, assets are grouped at the lowest levels for which there are identifiable cash flows that are largely independent of future cash flows from other asset groups, taking into consideration movements of intermediate products to ensure the utilization of available capacity across our operations. All assets at a particular operation are considered together for purposes of estimating future cash flows.

Amortization of property, plant and equipment
The Company generally depreciates plant and equipment on a straight-line basis over the lesser of their useful service lives or the lives of the producing mines to which they relate. Mine facilities are depreciated over the estimated lives of the mines based on the unit of production basis. Depletion of resource properties is provided over the estimated lives of the resources recoverable from the properties on the unit of production basis. Development and pre-production expenditures, together with certain subsequent capitalized development expenditures are amortized over periods not exceeding the lives of the producing mines and properties.

The most critical estimates which impact the above accounting policy are the estimated quantities of proven and probable mineral reserves which are the underlying bases for the calculation of the depletion of resource properties using the unit of production method. Changes in the quantity of reserves would result in changes in amortization expense in the periods subsequent to the revision.

Employee future benefits
Assets are valued at current market value. The expected return on plan assets, currently 7%, is based on current bond yields and expected long-term rate of return on equities. The long-term rate of return on assets assumption is reviewed on an annual basis.

Liabilities are determined as a present value of future anticipated cash flows using a discount rate based on corporate AA bond yields at the valuation date and an inflation expectation consistent with the corporate AA bond yield curve. Differences between the estimated future results and actual future results are amortized (to the extent that the cumulative experience gain or loss is in excess of the permitted 10% corridor under Canadian GAAP) over the expected average remaining service life of the active members (EARSL). This 10% corridor represents 10% of the greater of the post-retirement benefits obligations and the fair value of plan assets. The return on assets assumption and the discount rate, salary and inflation assumptions used to value the liabilities are reviewed annually and are determined based on a consistent framework from year-to-year. The most significant risk is that the assumption will prove to be either too high or too low in the long term. It is reasonable to assume that there will be a significant variation between the assumptions (which are set within the framework of a long-term commitment) and actual experience in any one year, but are expected to produce an appropriate reflection of costs over the long term.

For post-employment benefits other than pensions, the discount rate is the same as for pensions. The inflation rate assumed for medical costs is based on our history of healthcare spending. The assumption for the ultimate healthcare trend rates relates to the overall economic trends.

We currently estimate that a 0.5% increase or decrease in the return on assets assumption would result in a corresponding $9 million increase or decrease in annual pension expense. Changes to the return on asset assumption would have no significant effect on funding requirements, as our contributions are primarily determined based on the applicable Canadian regulatory solvency funding requirements. Under this valuation methodology, liabilities for solvency valuation are based on market bond yields and the excess of liabilities over assets must be amortized over a five-year period. We estimate that a 0.5% increase or decrease in the discount rate assumption would result in a corresponding $4 million increase or decrease in the pension expense.

Asset retirement obligations

As a result of our mining activities, we incur legal obligations associated with the retirement of tangible long-lived assets, from the acquisition, construction, development or normal operations of those assets, which an entity is required to settle as a result of an existing or enacted law or contract. CICA 3110, which was adopted January 1, 2004, requires that, when a legal obligation is incurred, we record the fair value of our estimated asset retirement obligations and a corresponding deferred charge presented as an asset grouped with property plant and equipment. The liabilities are accreted to full value over time through a charge to earnings. The asset is depreciated over the useful life of the associated long-lived asset on a straight-line basis. The fair value of the obligation as of December 31, 2004 was $436 million.

The fair value of these obligations are determined by discounting the projected cash flows required to settle the legal obligations at our credit adjusted risk free interest rate over the time periods over which the obligations were incurred. The future cash flows required to settle the obligations were determined by detailed engineering and environmental reviews assuming the most probable outcome based on present facts, circumstances and legislation.

Critical estimates and judgments were made by management in the determination of the fair value of our obligations. Cash outflows to settle these obligations will be incurred during periods ranging from one to 62 years. Due to the combined effect of the uncertainty associated with such extended time periods, the estimated discount and inflation factors and potential changes to applicable legislation, the fair value of our asset retirement obligations could materially change from period-to-period.

Income and mining taxes

The provision or relief for income taxes is calculated based on the expected tax treatment of transactions recorded in our consolidated financial statements. The objectives of accounting for income and mining taxes are to recognize the amount of taxes payable or refundable for the current year and deferred tax liabilities and assets for the future tax consequences of events that have been recognized in our consolidated financial statements or tax returns. In determining both the current and future components of income and mining taxes, we interpret tax legislation in a variety of jurisdictions as well as make assumptions about the expected timing of the reversal of future tax assets and liabilities. If our interpretation differs from those of tax authorities or if the timing of reversals is not as anticipated, the provision or relief for income and mining taxes could increase or decrease in future periods. In estimating deferred income and mining tax assets, a valuation allowance is determined to reduce the future income tax assets to the amount that is more likely than not to be realized.

Changes in Accounting Policies Including Initial Adoption

Asset retirement obligations

Under the previous standard, costs related to ongoing site restoration programs were expensed when incurred. A provision for mine closure and site closure costs was charged to earnings during the life of the operations. Under the new standard, a capital asset and corresponding long-term liability equal to the present value of the legal obligation for asset retirement, at the date that the obligation arose is recorded. Provisions recorded under the prior standard are reversed to retained earnings. The capital asset is depreciated and charged to earnings on a straight-line basis over the life of the related asset. Interest on the obligation is accreted and charged to earnings. This standard is applied retroactively with restatement of prior years.

As of January 1, 2003, the cumulative impact of the adoption of the standard was to decrease retained earnings by $27 million, increase capital assets by $70 million, increase the asset retirement obligation by $97 million, decrease future income taxes by $5 million and increase interest of other shareholders by $5 million. The adoption of the new standard reduced net income by $11 million for the year ended December 31, 2003.

Hedging relationships

As of January 1, 2004, the Company adopted CICA guideline AcG 13, which establishes new standards for when hedge accounting may be applied. Under the provisions of the standard, the Company's interest rate hedge positions and certain energy price hedges were not eligible for hedge accounting. As a result of the implementation of this standard, on January 1, 2004 Noranda recorded a deferred mark-to-market gain of $27 million on its interest rate hedges while recording a long-term receivable and long-term payable of $67 million and $40 million, for those contracts in a gain and loss position, respectively. During the year ended December 31, 2004 $7 million of this deferred gain was amortized into income as an adjustment of interest expense.

Impending accounting changes

A discussion of impending accounting changes has been included in note 19 to the consolidated financial statements.

Financial Instruments and Other Instruments

Noranda uses financial and other instruments in the following instances:

Foreign currency exposure

Noranda uses forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures. Noranda may hedge up to 50% of its current year Canadian dollar operating cost for the next two years and 25% of the subsequent three years. A summary of these positions is tabled below:

(Positions are in millions of Cdn$, gain/loss are in millions of US$)

	2005		2006 and beyond		Totals as at December 31, 2004			
	Amount	Rate	Amount	Rate	Amount	Rate	Unrealized Gain	Realized Gain
Noranda Inc.	$224	1.5014	$12	1.5157	**$236**	**1.5022**	**$39**	**$24**
Falconbridge*	$274	1.3835	–	–	**$274**	**1.3835**	**$30**	**$53**
Total	$498	1.4366	$12	1.5157	**$510**	**1.4385**	**$69**	**$77**

* Falconbridge's totals include gains/(losses) on foreign exchange option contracts.

Noranda may enter into futures and forward contracts for the purchase or sale of currencies not designated as hedges. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Commodity price exposure

Generally, Noranda does not hedge the price it realizes on the sale of its own production and accepts realizations based on market prices prevailing around the time of delivery of metals to customers. Under certain circumstances, Noranda enters into futures and option contracts to hedge the effect of price changes on a portion of the raw materials it purchases on a custom processing or resale basis. Gains and losses on these contracts are reported as a component of the related transactions. Designated contracts meeting the definition for hedge accounting under GAAP are not recorded. Noranda may also enter into futures and forward contracts for the purchase or sale of commodities not designated as hedges. These

contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Interest rate management

Noranda also enters into interest rate swap agreements, including foreign exchange cross-currency swaps, to modify the interest characteristics of its outstanding debt. The differential to be paid or received, for interest rate swaps for which we receive hedge accounting, is accrued and recognized as an adjustment to interest expense related to the debt. A summary of these positions is tabled below:

Interest rate swaps (notional principal amount in $ millions)	Total
Maturity (2005)	$ 400
Maturity (2006)	325
Maturity (2008) [1]	136
Maturity (2011)	300
Maturity (2012)	350
Maturity (2015)	500
Fair value [2]	86

[1] Includes a cross-currency interest rate swap (with a notional amount of $111.3 million) designated as a hedge of a Canadian dollar debenture. The total fair value of this instrument at December 31, 2004 was $46.3 million of which $34.1 million related to the currency component of the swap and $12.2 million related to the interest component.

[2] Includes the fair value of $34.1 million related to the cross-currency interest rate swap discussed above.

Risk Factors

Fluctuating Metal Prices

Noranda's earnings are affected by fluctuations in the prices of the metals it produces. Their prices are subject to volatile price movements over short periods of time. Noranda generally does not hedge prices of the metals we produce. Market prices can be affected by numerous factors beyond our control, including expectations for inflation, speculative activities, relative exchange rates to the U.S. dollar, production activities of our competitors, global and regional demand and supply, political and economic conditions including availability of subsidies and tax incentives to our competitors and production costs in major producing regions. The prices for copper, nickel, zinc, aluminum or other metals produced by us may decline significantly from current levels. A reduction in the prices of one or more of these metals could materially adversely affect the value and amount of our reserves and our business, financial condition, liquidity and operating results.

Mining and Processing Risks

The business of mining and processing of metals is generally subject to a number of risks and hazards, including unusual or unexpected geological conditions, ground conditions, phenomena such as inclement weather conditions, floods and earthquakes and the handling of hazardous substances and emissions of contaminants. Such risks and hazards could result in personal injury or death, damage to, or destruction of, mineral properties, processing or production facilities or the environment, monetary losses and possible legal liability. Noranda's business, financial condition, liquidity and operating results could be materially adversely affected if any of these developments were to occur.

Although Noranda maintains insurance which Noranda believes is consistent with mining industry practice to the extent available to cover some of these risks and hazards, no assurance can be given that such insurance will continue to be available, or that it will be available at economically feasible premiums. Noranda's property, business interruption and liability insurance may not provide sufficient coverage for losses related to these or other risks or hazards. In such event, Noranda's business, financial condition, liquidity and results of operations could be materially adversely affected.

Environmental Risks

Environmental legislation affects nearly all aspects of our operations worldwide. This type of legislation requires Noranda to obtain operating licences and imposes standards and controls on activities relating to mining, exploration, development, production, closure and the refining, distribution and marketing of copper, nickel, zinc and other metals products. Environmental assessments are required before initiating most new products or undertaking significant changes to existing operations. Compliance with environmental legislation can require significant expenditures, including expenditures for clean-up costs and damages arising out of contaminated properties. In addition to current requirements, Noranda expects that additional environmental regulations will likely be implemented to protect the environment and quality of life, given

issues of sustainable development and other similar requirements which governmental and supragovernmental organizations and other bodies have been pursuing. Some of the issues currently under review by environmental regulatory agencies include reducing or stabilizing various emissions, including sulphur dioxide and greenhouse gas emissions, mine reclamation and restoration, and water, air and soil quality and absolute liability for spills and exceedances.

Canada ratified the Kyoto Protocol to the United Nations Framework Convention on Climate Change in late 2002. The protocol will enter into force in February 2005. Various levels of government in Canada are developing a number of policy measures in order to meet Canada's emission reduction obligations under the protocol. While the impact of the protocol and measures cannot be quantified at this time, the likely effect will be to increase costs for fossil fuels, electricity and transportation, restrict industrial emission levels, impose added costs for emissions in excess of permitted levels and increase costs for monitoring, reporting and financial accounting. Compliance with these initiatives could have a material adverse effect on our business, financial condition, liquidity and operating results.

Further changes in environmental laws, new information on existing environmental conditions or other events, including legal proceedings brought based upon such conditions or an inability to obtain necessary permits, could have a material adverse effect on product demand, product quality and methods of production and distribution or could require increased financial reserves or compliance expenditures or otherwise have a material adverse effect on Noranda's business, financial condition, liquidity and operating results.

Failure to comply with environmental legislation may result in the imposition of fines and penalties, liability for clean-up costs, damages and the loss of important permits. There can be no assurance that Noranda will at all times be in compliance with all environmental regulations or that steps required to bring us into compliance would not materially adversely affect Noranda's business, financial condition, liquidity or operating results.

In view of the uncertainties concerning future removal and site restoration costs on Noranda's properties, the ultimate costs for future removal and site restoration to Noranda could differ from the amounts estimated. The estimate for this future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively as a change in an accounting estimate. In addition, regulatory authorities in various jurisdictions around the world may require Noranda to post financial security to secure in whole or in part future reclamation and restoration obligations in such jurisdictions. In some instances, Noranda has already provided this security. In other instances, such security may be required to be posted upon the occurrence of certain events, including if Noranda ceases to maintain a minimum investment grade credit rating, if the regulatory authority ceases to accept alternative forms of comfort to secure the obligation or as a property nears the end of its operation. Although the posting of this security does not increase the future reclamation and restoration costs (other than costs associated with posting such security), a portion of Noranda's credit may be required to back up these commitments, which could adversely affect Noranda's liquidity.

Labour Relations

Collective agreements covering our unionized employees at CEZ, Matagami, CCR (Plant workers), Noranda Recycling – Roseville (two agreements), Nikkelverk, Collahuasi, Altonorte and American Racing Equipments were all renewed in 2004. At Sudbury, a collective agreement was signed with the CAW after a three-week strike in February 2004. The collective agreement covering the Office, Clerical & Technical employees at Falconbridge's Sudbury Operations was renewed on February 28, 2004. Bargaining is currently ongoing for the renewal of the collective agreements at CCR (Security Guards only).

Three collective agreements will expire in 2005. The contract covering the production and maintenance employees at Norandal's Newport facility will expire on May 31, 2005. The contract covering the production and maintenance employees at the Kidd Metallurgical site will expire on September 30, 2005. The contract covering the production and maintenance employees at Falcondo will expire on November 30, 2005.

Collective agreements covering our unionized hourly employees and workers at Brunswick Mine, Brunswick Smelter, Brunswick Smelter Bulk Handling, General Smelting, Horne Smelter, Raglan Operations, Nikkelverk, Lomas Bayas, Altonorte, Antamina, CCR (Production), CCR (Security), Noranda Recycling – Roseville (two agreements), Sudbury (Production &

Maintenance), Sudbury (OCT), American Racing, New Madrid and the aluminum foil operation at Salisbury are currently in place and will expire between 2006 and 2008.

Uncertainty of Reserve Estimates and Production Estimates

Noranda's reported mineral reserves as of December 31, 2004 are estimated quantities of proven and probable ore that, under present and anticipated conditions, can be legally and economically mined and processed by the extraction of their mineral content. Noranda determines the amount of our mineral reserves in accordance with the requirements of the applicable Canadian securities regulatory authorities and established mining standards. Noranda does not use outside sources to verify our reserves. The volume and grade of reserves actually recovered and rates of production from Noranda's present mineral reserves may be less than geological measurements of the reserves. Market price fluctuations in nickel, copper, other metals and exchange rates, and changes in operating and capital costs, may in the future render certain mineral reserves uneconomic to mine. In addition, short-term operating factors relating to the mineral reserves, such as the need for orderly development of orebodies or the processing of new or different ore grades, may cause mineral reserves to be modified or Noranda's operations to be unprofitable in any particular fiscal period.

No assurance can be given that the indicated amount of ore will be recovered or that it will be recovered at the prices assumed by Noranda in determining mineral reserves. Mineral reserve estimates are based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire orebody. As more knowledge and understanding of the orebody are obtained, the reserve estimates may change significantly, either positively or negatively.

Noranda prepares estimates of future production for particular operations. These production estimates are based on, among other things: reserve estimates; assumptions regarding ground conditions and physical characteristics of ores, such as hardness and presence or absence of particular metallurgical characteristics; and estimated rates and costs of mining and processing. Noranda's actual production may vary from estimates for a variety of reasons, including: actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors relating to the mineral reserves, such as the need for sequential development of orebodies and the processing of new or different ore grades; risks and hazards associated with mining; natural phenomena, such as inclement weather conditions, floods, and earthquakes; and unexpected labour shortages or strikes. No assurance can be given that production estimates will be achieved. Failure to achieve production estimates could have a material adverse impact on Noranda's future cash flows, earnings, results of operations and financial condition.

Exchange Rate Fluctuations

Fluctuations in currency exchange rates, principally the Canadian/U.S. dollar exchange rate and, to a lesser extent, Chilean Peso, Norwegian Kroner and Euro exchange rates against the U.S. dollar, can significantly impact Noranda's earnings and cash flows. These exchange rates have varied substantially over time, including over the last five years. Most of Noranda's revenues and debt are denominated in U.S. dollars, whereas most of the operating costs at Noranda's Canadian sites are incurred in Canadian dollars and Nikkelverk's costs are incurred in Norwegian Kroner. Noranda has been reporting its financial results in U.S. dollars since July 1, 2003. Fluctuations in exchange rates between the U.S. dollar and the Canadian dollar and between the U.S. dollar and other currencies may give rise to foreign currency exposure, either favourable or unfavourable, which may in the future materially impact Noranda's financial results. Noranda, from time to time, may hedge a portion of its currency requirements to limit any adverse effect of exchange rate fluctuations with respect to Noranda's Canadian dollar and other costs, but there can be no assurance that such hedges will eliminate the potential material adverse effect of such fluctuations.

Interest Rate and Counterparty Risk

Noranda's exposure to changes in interest rates results from investing and borrowing activities undertaken to manage Noranda's liquidity and capital requirements. Noranda has entered into interest rate swap agreements to manage the interest rate risk associated with a portion of Noranda's fixed-rate debt. These interest rate swaps change our exposure to interest risk by effectively converting a portion of our fixed-rate debt to a floating rate. Noranda may elect in the future to enter into interest rate swaps to effectively convert floating-rate debt to fixed-rate debt and enter into additional fixed-rate to floating-rate swaps. There can be no assurance that Noranda will not be materially adversely affected by interest rate changes in the future, notwithstanding our use of interest rate swaps.

In addition, Noranda's interest rate swaps, metals hedging and foreign currency and energy risk management activities expose us to the risk of default by the counterparties to such arrangements. Any such default could have a material adverse effect on Noranda's business, financial condition and results of operations.

Energy Supply and Prices

Noranda's operations and facilities are intensive users of natural gas, electricity and oil. Procurement of these types of energy can be affected by numerous factors beyond our control, including global and regional supply and demand, political and economic conditions and problems related to local production and delivery conditions. Noranda's supply contracts typically provide that suppliers may be released from their delivery obligations to us if certain "force majeure" events occur. Noranda's business operations could be adversely affected, including loss of production and damage to our plants and equipment, if, even temporarily, the supply of energy to one or more of our facilities was interrupted.

A prolonged shortage of supply of energy used in our operations could materially adversely affect our business, financial condition, liquidity and results of operations. As a significant portion of Noranda's costs relate to energy consumption, Noranda's earnings are directly related to fluctuations in the cost of natural gas, electricity and oil. Energy prices can be affected by numerous factors beyond Noranda's control, including global and regional demand and supply, and applicable regulatory regimes. The prices for various sources of energy we use may increase significantly from current levels. An increase in energy prices could materially adversely affect Noranda's business, financial condition, liquidity and operating results.

Foreign Operations

Some of Noranda's activities and related assets are located in countries outside North America, some of which may be considered to be, or may become, politically or economically unstable. Exploration or development activities in such countries may require protracted negotiations with host governments, international organizations and other third parties, including non-governmental organizations, and are frequently subject to economic and political considerations, such as taxation, nationalization, inflation, currency fluctuations and governmental regulation and approval requirements, which could adversely affect the economics of projects. These projects and investments could be adversely affected by war, civil disturbances and activities of foreign governments which limit or disrupt markets, restrict the movement of funds or supplies or result in the restriction of contractual rights or the taking of property without fair compensation.

Noranda performs a thorough risk assessment on a country-by-country basis when considering foreign activities and attempts to conduct our business and financial affairs so as to protect against political, legal, regulatory and economic risks applicable to operations in the various countries where we operate, but there can be no assurance that Noranda will be successful in so protecting ourselves. These projects and investments could also be adversely affected by changes in Canadian laws and regulations relating to foreign trade, investment and taxation.

Market Access

Global and regional demand for metals is influenced by regulatory and voluntary initiatives to restrict or eliminate the use of certain metals in particular products or applications. Impacts of such measures can be global, creating non-tariff barriers to international trade and affecting product design and specifications on a global basis. Such measures could affect the balance between supply and demand and depress metal prices and treatment/refining charges. Metals with a limited number of major applications are most susceptible to changes in demand and price in response to such measures.

Production Technology

Noranda believes that the technology we use to produce and process metals is significantly advanced and, in part, due to high investment costs, subject only to slow technological change. However, there can be no assurance that more economical production or processing technology will not be developed or that the economic conditions in which current technology is applied will not change.

Legal Proceedings

The nature of Noranda's business subjects us to numerous regulatory investigations, claims, law-suits and other proceedings in the ordinary course of our business. The results of these legal proceedings cannot be predicted with certainty. There can be no assurance that these matters will not have a material adverse effect on our results of operations in any future period, and a substantial judgment could have a material adverse impact on Noranda's business, financial condition, liquidity and results of operations.

Sulphuric Acid

Sulphur dioxide is a by-product from the smelting of copper, zinc, nickel and lead sulphide concentrates. Noranda processes sulphur dioxide into sulphuric acid to meet our environmental commitments. Due to increasingly strict environmental standards worldwide for sulphur dioxide emissions, involuntary production of sulphuric acid by smelters is growing. The balance of world acid production is largely based on elemental sulphur, the supply of which is now a by-product of oil and gas production, and growing more rapidly than demand. Long term, these factors may make it more difficult for us to obtain satisfactory prices for our sulphuric acid. However, Noranda's production of sulphuric acid cannot be reduced in response to low prices, or dropping sales volumes, without a corresponding reduction in our production of metals.

Raw Material Procurement Risks

Procurement of raw materials involves the risks typically connected with commercial transactions, which can include trade barriers, political instability and problems due to local production conditions. In addition, Noranda's supply contracts provide that suppliers of concentrate may be released from their delivery obligations to us if certain "force majeure" events occur. Noranda's business operations could be adversely affected, at least temporarily, if supplies of raw materials are interrupted as a result of the imposition of trade barriers or other events and if Noranda is unable, on short notice, to shift to alternative sources of supply. Noranda also processes copper scrap, the availability of which in past years has been subject to significant fluctuations in the marketplace and the supply of which has been declining since the mid-1990s. The availability of scrap, blister copper and other material we process can be significantly affected by fluctuations in prices.

This is the end of the description of the business of Noranda as extracted without material amendment from Noranda's Management's Discussion and Analysis as disclosed in Noranda's 2004 Annual Report.

The following description of the business of Falconbridge has been extracted without material amendment from Falconbridge's Management's Discussion and Analysis as disclosed in Falconbridge's 2005 Annual Report.

The following analysis and discussion of the Company's activities take into account management's knowledge of all material facts and events up to and including February 22, 2006. Unless otherwise noted, all amounts in this discussion are expressed in U.S. dollars. The 2004 financial results, as presented in this discussion, represent the consolidated results of "Noranda Inc.", which was renamed "Falconbridge Limited" after the amalgamation of Noranda and the former Falconbridge on June 30, 2005. The 2005 financial results, and the balance of this discussion, represent the results and activities of Falconbridge Limited, the amalgamated company.

Additional information on Falconbridge, including Falconbridge's Annual Information Form, is available on SEDAR at www.sedar.com.

Corporate Overview

Falconbridge Limited is a global integrated copper and nickel producer with investments in integrated zinc and aluminum assets. The Company employs approximately 14,500 people at its operations and offices in 18 countries and is listed on the Toronto Stock Exchange (FAL.LV) and the New York Stock Exchange (FAL).

Falconbridge's goal is to deliver superior returns to shareholders by owning, developing and efficiently managing fully-integrated copper and nickel operations, and opportunistically investing in zinc, aluminum and other mining and metals processing activities. Falconbridge is focused on aggressively managing assets to maximize production, while minimizing invested capital.

Corporate Developments

Merger of Noranda Inc. and Falconbridge Limited

In March 2005, as neither improved fundamentals for base metals nor improvements in Noranda Inc.'s operations were being reflected in the Company's share price, Noranda announced an all-encompassing plan to combine Noranda and the former Falconbridge to create one of North America's largest base-metals companies. This merger resolved the dual public ownership structure of Noranda and Falconbridge (Noranda held 59% of Falconbridge), and brought Noranda's strategic alternatives review process to a close.

Prior to completing the merger, Noranda completed an issuer bid to exchange Noranda common shares for the new Noranda junior preferred shares on May 5, 2005. A total of 63,377,140 Noranda common shares were repurchased as a result of this offer and a total of 50,000,000 new Noranda junior preferred shares were issued as consideration.

On May 6, 2005, Noranda announced the results of its merger offer to former Falconbridge Limited minority common shareholders whereby it offered to exchange 1.77 Noranda common shares for each outstanding former Falconbridge common share that it did not own. Pursuant to the offer, 58,476,589 former Falconbridge common shares were tendered, representing 78% of the shares held by the minority shareholders, increasing Noranda's ownership in former Falconbridge to 164,235,689, or 91% of the outstanding former Falconbridge common shares.

Noranda and former Falconbridge shareholders approved the amalgamation of the two companies on June 30, 2005. The amalgamated company chose to continue operating under the name Falconbridge Limited and effective July 6, 2005, began trading under a new stock symbol (TSX: FAL.LV and NYSE: FAL). The new Falconbridge, with a market capitalization of $10 billion, became a more widely held copper/nickel-focused mining and metals company with simplified governance, improved risk management, increased liquidity and greater financial strength and capacity.

Falconbridge Endorses Inco Offer

On October 11, 2005, Inco Limited announced an offer to acquire all outstanding common shares of Falconbridge. The offer was comprised of part cash and part Inco common shares, which when pro-rated subject to the maximum amounts offered would provide Cdn$7.50 and 0.524 Inco shares for each Falconbridge common share. Both Boards of Directors unanimously endorsed the acquisition offer and the Falconbridge Board recommended the Company's shareholders tender their shares to the offer, which remains open for acceptance to June 30, 2006.

The combined organization, which would be known as Inco Limited, would be one of the world's premier mining and metals companies. It would be the world's largest producer of nickel and eighth-largest producer of copper, and would

also operate integrated zinc and aluminum businesses. The new company would have one of the mining industry's most attractive portfolios of low-cost, profitable growth projects. The new Inco would benefit from estimated annual synergies of approximately $350 million starting in late 2007.

Inco has obtained regulatory clearances from the Canadian Competition Bureau. It continues to proceed to meet all information and other requests from antitrust/competition authorities reviewing the pending acquisition and to work with the U.S. Department of Justice and competition authorities in Europe to obtain the remaining required regulatory clearances for the transaction.

Statements regarding the combination of Falconbridge and Inco are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

Key Factors Affecting Our Business

Falconbridge's business is international in scope and, in essence, is the production and marketing of base metal commodities and the by-products of those production processes and the treatment of custom feed materials. As a result, profitability and cash flows from operations are determined primarily by the price of the metals sold and the Company's ability to produce at a low cost.

Prices and Markets

Historically, the Company has experienced and expects to continue to be subject to volatile commodity prices, which are influenced primarily by the world supply-demand balance for those commodity products and related processing services, and other related factors such as speculative activities by market participants, production activities by competitors, political and economic conditions, as well as production costs in major producing regions. The realized price for metals is also influenced by regional supply-demand factors, the availability and price of secondary or metal containing scrap materials, and other substitute commodity products. Falconbridge generally realizes prevailing market prices and does not hedge the price it realizes on the sale of its own production. A detailed analysis of relevant metal markets is discussed in "Metal Markets" on page 302.

Production Costs

The other primary determinant of profitability and cash flow from operations is the Company's ability to produce at a low cost. Production costs are largely influenced by ore grades, mine planning, processing technology, energy and supply costs and the impact of exchange rate fluctuations on costs of operations.

Business Risks

The primary risks facing Falconbridge are:

- Fluctuating metal prices
- Mining and processing risks
- Environmental risks
- Labour relations
- Uncertainty of reserve and production estimates
- Exchange rate fluctuations
- Interest rate and counter-party risks
- Energy supply and prices
- Foreign operations
- Market access
- Production technology
- Legal proceedings
- Raw material procurement risks

The nature, implications and tools used to manage these risks are discussed in "Risk Factors" starting on page 309.

Capital

Falconbridge's business is capital intensive with significant costs involved in exploration activities, and the development and maintenance of mining and metallurgical facilities. As such, securing low-cost capital is instrumental in profitability. Historically, Falconbridge has sourced capital from common and preferred equity markets, public debt markets and bank debt. A more detailed description of the Company's use of interest rate and foreign currency management instruments is provided in "Financial Instruments and Other Instruments" on page 305.

Supplemental Performance Measures

The Management Discussion and Analysis contains a number of measures that are not defined by generally accepted accounting principles ("GAAP"). The measures, as calculated by the Company, may not be comparable to similar measures presented by other issuers.

Income generated from operating assets is defined as follows: net income before interest expense, net; corporate and general administration; research, development and exploration; minority interest in earnings of subsidiaries; gain, net of restructuring costs and other; and tax expense. Since this measure captures the Company's key revenues and operating expenses of assets currently in operation, income generated from operating assets is a key performance measurement that management uses to evaluate the performance of both individual assets and business units.

Net-debt-to-capitalization ratio is calculated as follows:

($ millions)		Dec. 31, 2005	Dec. 31, 2004
Long-term debt		$3,474	$2,858
Debt due within one year		353	570
Cash and cash equivalents		(886)	(884)
Net debt	(1)	2,941	2,544
Interests of other shareholders		54	1,197
Shareholders' equity		5,031	2,839
Stockholders' interests (equity)	(2)	5,085	4,036
Total capitalization	(3)=(1)+(2)	8,026	6,580
Net-debt-to-total-capitalization ratio	(1)/(3)	36.7%	38.7%

Management believes the presentation of this measure is relevant and useful for investors when assessing the Company's liquidity and its ability for growth and investment. This measure should not be considered an alternative to liquidity as determined under generally accepted accounting principles.

Integrated cash cost or operating cash costs include all cash costs of operations and selling costs, net of processing credits and by-product credits, and are calculated as follows. Continuing costs incurred during shutdowns or strikes are excluded.

	Copper (Integrated)		Nickel (Mined)		Zinc (Mined)		Aluminum[1] (Integrated)	
($ millions, except as noted)	2005	2004	2005	2004	2005	2004	2005	2004
Mining, processing, and refining costs, as reported	$993	$803	$810	$604	$168	$158	$300	$282
Non-mining costs	–	–	–	–	(47)	(73)	–	–
By-product and processing credits*	(899)	(613)	(238)	(206)	(58)	(68)	(76)	(76)
Processing fee on sale of concentrates*	178	125	–	–	121	127	–	–
Purchases of raw materials*	–	–	–	–	–	–	113	103
Other operating and non-cash costs*	8	36	40	117	18	72	9	12
Cash costs – net*	280	351	612	515	202	216	346	321
Volumes – 000s lbs.[2]	900,504	921,900	175,500	176,030	494,677	684,530	546,241	548,900
Cash cost per pound – $	0.31	0.38	3.49	2.93	0.41	0.32	0.63	0.58

[1] Represents Primary operations only: Aluminum segment cost of operations reported for 2005 totals $583 million (2004 – $420 million), which includes foil processing and other costs of $283 million (2004 – $138 million).

[2] Volumes as shown are based on production, except for Aluminum business, which represent shipments of primary aluminum.

* Unaudited

Integrated cash costs are furnished to provide additional information about the cash generating capabilities of the Company's business units and operations. Since this measure captures the key costs of operations and the impact of our processing credits and the prices of our by-products, it is a key performance measurement that management uses to evaluate our costs and operations. Integrated cash costs is not intended to be considered as an alternative to determining "mining, processing and refining costs" as determined under GAAP.

Selected Annual Information

The analysis contained herein is based upon the financial position, results of operations and cash flows defined under Canadian Generally Accepted Accounting Principles. Unless otherwise noted, all amounts in this report are expressed in U.S. dollars.

($ millions, except per share data)	2005	2004	2003
Results of operations			
Revenues	$8,148	$6,764	$4,456

Financial Impact of Merger of Noranda and Falconbridge

Prior to the merger of Noranda and Falconbridge, Noranda had consolidated the results of operations and the financial position of former Falconbridge in its financial statements reflecting its ownership of 58.5% of the common shares. On May 5, 2005, Noranda increased its ownership in Falconbridge to 90.8%, and to 100% on June 30, 2005 through the issuance of approximately $2.5 billion in common shares. Upon completion of the merger, the combined entity was renamed Falconbridge Limited.

The preliminary fair value of the 41.5% of the assets and liabilities acquired from former Falconbridge exceeds the book value of those assets by approximately $1.4 billion, which has been allocated to the assets and liabilities of the acquired assets at their respective preliminary fair values. The preliminary allocation of these values is as follows:

($ millions) (unaudited)	
Preliminary fair value increment of assets acquired by the Company	
Accounts receivable	$ 9
Metals and other inventories	42
Operating capital assets	1,966
Development projects	255
Investments and other assets	(41)
Preliminary fair value increment of liabilities assumed by the Company	
Long-term debt	8
Future income taxes	(708)
Asset retirement obligation, pension and other provisions	(114)
Net assets acquired	$ 1,417
Book value of minority interest and other	1,117
Acquisition value	$ 2,534

Financial Overview

Falconbridge's consolidated assets totaled $12.4 billion as at December 31, 2005 on a book-value basis compared with $9.6 billion at the end of 2004. The increase is primarily due to the acquisition of the common shares of the former Falconbridge Limited that the company did not already own, as discussed in Corporate Developments. Total revenues increased to $8.1 billion during 2005, an increase of $1.3 billion over the $6.8 billion in revenue generated in 2004, due to stronger metals prices and higher copper and nickel sales volumes. Falconbridge generated net income of $872 million, or $2.50 per share on a diluted basis, an increase of $351 million from the net income of $521 million, or $1.70 per share on a diluted basis in 2004. The improved results were mostly attributable to higher base metals prices, partially offset by the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations and increasing energy and supply costs throughout the operations.

Net income for 2005 includes a loss of $8 million, or $0.02 per basic share and $0.02 per diluted share from discontinued operations. This compares to a loss of $73 million, or $0.25 per basic share and $0.24 per diluted share from discontinued operations in 2004. Discontinued operations reflect the operating results of the Company's custom wheel manufacturing operations prior to its disposal in June 2005 and the net gain recorded from its disposal.

At December 31, 2005, Falconbridge held cash and cash equivalents of $886 million. During 2005, Falconbridge's consolidated net-debt-to-capitalization declined to 37% as cash generated from operations was utilized in part to reduce debt instruments issued to effect the reorganization of the Company. Cash resources, combined with undrawn credit facilities of over $1.6 billion, provide the Company with sufficient liquidity to pursue its development projects, new investment and development opportunities currently contemplated and repay near-term debt maturities.

Operating Assets

Of the $12.4 billion of assets, the book value of capital assets currently contributing to earnings totaled $6.8 billion, while projects under development which are not currently contributing to earnings totaled $1.7 billion. Combined, these assets represent 69% of the total asset base of the Company. Included in the $6.8 billion of operating assets is the $2 billion preliminary fair market value increment on the operating assets for the purchase accounting of acquisition of the former Falconbridge, as well as $77 million being transferred from projects under development to operating capital assets for the completion of the new Montcalm nickel/copper mine near Timmins, Ontario. The operating assets are distributed in the Company's business segments as follows:

($ millions)	2005	2004
Operating capital assets		
Copper	$3,807	$2,890
Nickel	2,114	1,078
Zinc	139	158
Aluminum	710	702
Other	33	42
Total	$6,803	$4,870

Integrated Operations

As an integrated producer of metals, Falconbridge's operations include mines and metallurgical facilities which provide the Company with maximum flexibility in both minimizing costs and maximizing operating performance by processing its own minerals. This integration also reduces the Company's exposure to treatment-charge fluctuations and shipping-rate volatility.

When milling, smelting or refining capacity exceeds the Company's own mine production, Falconbridge acquires third-party concentrates and secondary feeds to utilize this capacity and realize incremental treatment revenues. These treatment revenues provide incremental income to the Company and absorb fixed costs at metallurgical sites, with custom milling, smelting and refining operations being conducted throughout the Company as capacity allows. Operations conducting custom feed processing of copper and nickel feeds are located in North and South America, and Norway. This integration allows Falconbridge to maintain what it believes to be some of the lowest cash cost operations in the industry. The flexibility of the processing facilities also enables the Company to treat complex ores, concentrates and secondary feeds. The Company also captures the sulphur content of the concentrates that it treats at its metallurgical sites and produces sulphuric acid as a marketable by-product. This by-product can provide incremental revenues that help reduce cash operating costs.

The price paid to suppliers of custom feeds varies with the prevailing price of the metals being treated and as such, Falconbridge's exposure to increasing metals prices is primarily based upon its own mine production. Falconbridge's continued focus on the identification and development of long-life, high-quality copper and nickel mining assets will continue to increase its leverage to copper and nickel while current metallurgical site infrastructure will minimize the investment required to bring new deposits into commercial production.

Results of Operations

($ millions, except per share information) Years ended December 31	2005	2004
Revenue	$8,148	$6,764
Operating expenses		
Mining, processing and refining costs	2,538	1,976
Purchased raw materials	3,235	2,904
Depreciation, amortization and accretion	555	493
Total operating expenses	6,328	5,373
Income generated by operating assets	1,820	1,391
Corporate costs[1]	291	233
Minority interest	155	297
Gain, net of restructuring costs and other	(17)	(84)
Taxes	511	351
Net income from continuing operations	880	594
Loss on discontinued operations, net of tax	8	73
Net income	872	521
Deduct		
Preferred share dividends	17	13
Income available to common shareholders – basic	855	508
Impact of convertible debentures	9	7
Income available to common shareholders – diluted	864	515
Basic weighted average number of shares – 000s	339,756	296,246
Diluted weighted average number of shares – 000s	346,174	303,458
Net income per common share – basic		
Continuing operations	$2.54	$1.96
Discontinued operations	(0.02)	(0.25)
Net income	$2.52	$1.71
Net income per common share – diluted		
Continuing operations	$2.52	$1.94
Discontinued operations	(0.02)	(0.24)
Net income	$2.50	$1.70

[1] Corporate Costs include net interest, corporate and general administration, research and development and exploration costs.

Revenues

For 2005, total revenues increased to $8.1 billion from $6.8 billion for the year prior primarily due to the significant increase in realized metals prices. Copper reached a new historical high and zinc and aluminum also finished the year at multi-year highs. Average historical realized prices for copper, nickel, zinc and aluminum are as follows:

($ per pound)	2005	2004	2003
Copper	1.71	1.30	0.82
Nickel	6.85	6.40	4.40
Zinc	0.70	0.52	0.43
Aluminum	0.91	0.84	0.68

Prices for by-product metals such as lead, molybdenum and precious metals, which are found and processed in conjunction with core metals, have also experienced similar price increases during these periods.

Sales volumes of refined copper, nickel and fabricated aluminum products were all higher in 2005 than 2004 levels. Due to the closure of the Bell Allard mine in October 2004, mined zinc sales volumes were lower in 2005. Bauxite and alumina

sales to third parties increased as the Company recorded its first full year of joint ownership of the St. Ann and Gramercy operations since their acquisition in October 2004. The Company also recorded significantly higher molybdenum concentrate sales from the Antamina mine and produced its first molybdenum concentrate from the Collahuasi mine in the fourth quarter of 2005.

Operating Expenses

Operating expenses totaled $6.3 billion in 2005, 18% higher than $5.4 billion in the same period last year. Mining, processing and refining costs increased to $2.5 billion, a 28% increase from 2004 levels of $2.0 billion, largely due to the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations and increasing energy costs throughout the operations. Mining, processing and refining costs included $191 million of costs associated with the new operations at the new Montcalm mine and the acquired operations at St. Ann and Gramercy. The average value of the Canadian dollar increased 8% to US$0.83 versus US$0.77 during 2004. Upon completion of the acquisition of former Falconbridge minority shares, the carried value of inventory on hand was increased by $42 million to reflect its preliminary fair value, which is charged to income as the related inventory is sold. As a result, the increased cost reduces 2005 income by $42 million, lowering income in 2005 as a result of the acquisition.

The value of raw material purchases was $3,235 million, 11% higher than $2,904 million in 2004, due to higher metal prices and increased custom feed processing at the Nikkelverk nickel refinery and at all copper smelting and refining operations. Higher purchased raw material values are recovered at the time of sale of the metals contained in the materials treated.

Depreciation, amortization and accretion expense increased to $555 million from $493 million a year ago, with $21 million of the increase being attributable to the amortization of the preliminary fair value increment related to the purchase of the Falconbridge minority shareholders' interest and the resulting increase in the book value of the mining and processing assets acquired. Depreciation, amortization and accretion expense also increased due to the addition of amortization expenses associated with the new operations at Montcalm and the acquired assets at St. Ann and Gramercy.

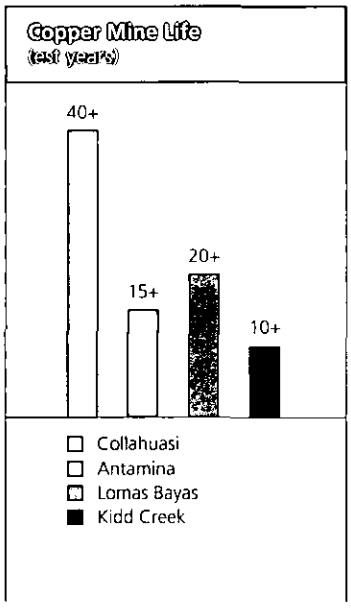
Income from Operating Assets and Net Income

Income generated by operating assets for 2005 was $1,820 million, 31% higher than $1,391 million in 2004. Income from operating assets increased 61% to $1,086 million in the copper business, decreased 6% to $597 million in the nickel business, increased to $60 million in the zinc business and increased 19% to $106 million in the aluminum business.

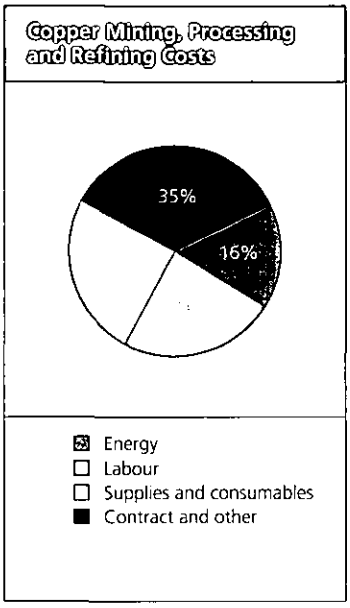
Interest expense increased to $152 million in 2005, an increase of 27% over $120 million in 2004, due mostly to the inclusion of dividends that were paid on the new junior preference shares that were issued in 2005, offset partially by lower average debt levels and interest rates below the levels of 2004. Interest expense included a one-time early redemption premium of $5 million paid to the holders at the time of the partial redemption of the junior preferred shares in August, 2005. Corporate and general administration costs as well as research and development costs increased from 2004 primarily due to strengthening of the Canadian dollar.

Minority interest in earnings of subsidiaries decreased to $155 million from $297 million, largely as a result of the elimination of the former Falconbridge minority share ownership since the completion of the merger on June 30, 2005.

In 2005, the Company also recorded a $17-million gain, net of restructuring costs and other, compared to $84 million in 2004. Included in the $84-million gain in 2004 was the $80-million gain on the settlement of an alumina supply contract upon acquisition of Gramercy alumina joint venture. Tax expenses recorded increased to $511 million from $351 million during 2005, due primarily to the increase in net income from continuing operations before taxes and minority interest to $1,546 million from $1,242 million.



Net income for the year ended December 31, 2005 was $872 million or $2.50 per common share on a diluted basis, compared with a net income of $521 million or $1.70 per common share on a diluted basis for 2004. The significant improvement in 2005 results is due to higher average realized prices for all four primary metals and strong operational performance from each business unit supported by improved by-product credits. Offsetting the impact of price increases and cost containment initiatives was the impact of rising energy costs and supply costs, combined with the further weakening of the U.S. dollar relative to both the Canadian dollar and Chilean peso, thereby increasing operating costs in those jurisdictions.



Production

Production of refined copper and nickel increased substantially in 2005, as increased quantities of concentrates were processed, versus 2004 levels. Copper production benefited from increased anode production at the Altonorte smelter and the ramp-up of cathode production at the CCR refinery. Nickel production benefited from increased custom feed processing. Production of refined zinc was lower than 2004 levels mostly due to a month-long strike at the Kidd Creek metallurgical complex in October. Mined copper production was higher in 2005, at the Antamina, Kidd Creek, Lomas Bayas and Montcalm mines, but was offset by lower production at the Collahuasi mine and reduced production from the Louvicourt mine which closed in July 2005. Mined nickel production was stable in 2005 as the new Montcalm mine contributed its first full year of production offsetting lower production at Raglan and Sudbury mines, resulting from lower grades. Mined zinc production was lower due to the closure of the Bell Allard mine, which closed in October 2004. Primary aluminum production was slightly lower in 2005 than in 2004, due mostly to the impact of the fall hurricanes, while fabricated aluminum products sales were higher versus the year prior. Further information on production and sales volumes can be found on page 103/104 of Falconbridge's 2005 Annual Report.

Copper Business Unit

The Copper Business is a fully-integrated producer of copper metal and concentrate, molybdenum, precious metals and sulphuric acid. It is comprised mostly of long-life, low-cost mines located primarily in South America. They include Falconbridge's interest in the Antamina copper and zinc mine in Peru, the Collahuasi and Lomas Bayas mines in Chile and the Kidd Creek mine in Ontario, Canada. In addition to these mines, the operations include the Altonorte copper smelter in Chile, as well as refining, smelting and recycling facilities in Canada and the United States. There are several potential brownfield and greenfield expansion opportunities which can further increase earnings from this business (see "Capital Expenditures, Capacity Enhancements and Projects Under Development" on page 295).

Note: Statements regarding estimated mine life are subject to risks and uncertainties. See "Forward-looking Information" on page 313.

	2005	2004
Revenues ($ millions)	4,421	3,592
Mining, processing and refining costs ($ millions)	993	803
Purchased raw materials ($ millions)	2,082	1,882
Income generated by operating assets ($ millions)	1,086	673
Realized copper price ($ per pound)	$1.71	$1.30
Operating cash cost ($ per pound of copper)	$0.31	$0.38
Sales and throughput (000s tonnes)[1]		
Copper in concentrates	267	275
Copper metal	627	612
Copper concentrate processed	1,899	1,810
Zinc in concentrates	83	68
Zinc metal	116	120
Sulphuric acid	811	749

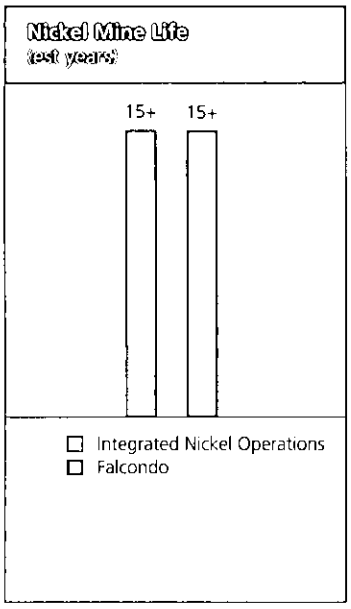
[1] 100% basis except for Collahuasi (44%) and Antamina (33.75%).

Revenues: For the year, consolidated revenues for the Copper Business were $4,421 million, an increase of 23%, over the $3,592 million for the same period of 2004. Higher realized copper, zinc and molybdenum prices accounted for the increase in revenues. During 2005, the realized copper price averaged $1.71/lb., compared to $1.30/lb. in 2004. Sales volumes of refined copper and copper anodes increased 2% in 2005, as a result of increased production at CCR, Altonorte, Kidd Creek and Lomas Bayas. By-product revenues from molybdenum also increased from $19 million in 2004, to $138 million in 2005.

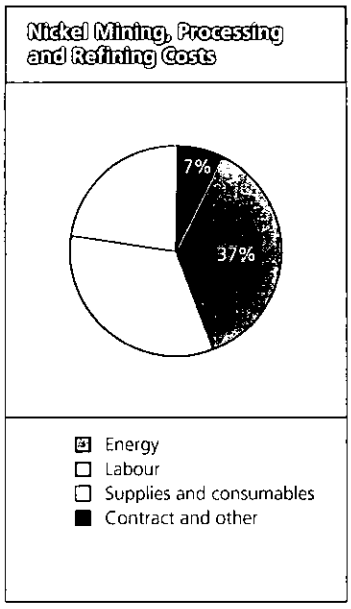
Costs: Total operating expenses were $3,335 million in 2005, versus $2,919 million in 2004. Mining, processing and refining costs totaled $993 million in 2005, versus $803 million in 2004. The increase was due to higher energy costs, supply costs, contractor costs, and the impact of the weaker U.S. dollar. Value of purchased raw materials increased to $2,082 million from $1,882 million, a 11% increase year over year due to higher metal prices and increased throughput at CCR and Altonorte. In 2005, the operating cash cost of producing a pound of copper was $0.31/lb. versus $0.38/lb. in 2004.

Income generated by operating assets: Copper Business income generated by operating assets was $1,086 million in 2005, compared to $673 million in the same period for 2004. The $413 million increase was mainly attributable to higher copper, zinc and molybdenum prices which more than offset lower mine production from Collahuasi and higher operating costs resulting from the impact of a weaker U.S. dollar and higher energy and supply costs.

Production: For 2005, mined copper production totaled 415,000 tonnes, compared to 430,000 tonnes during 2004. Higher production from Antamina, Kidd Creek and Lomas Bayas was more than offset by lower production from Collahuasi. At Antamina, higher recoveries more than offset a 3% reduction in ore milled. At Kidd Creek, higher mill throughput more than offset lower copper grades as the new Mine D expansion provided more stable feed for the mill. At Collahuasi, lower production was a result of lower head grades, material handling issues and temporary problems with one of the mill motors. Copper anode production from copper smelters increased from 534,000 tonnes in 2004 to 563,000 tonnes in 2005 due to increased production at Altonorte. During the fourth quarter, annual production at the Horne smelter was increased from the recent past operating rate of 140,000 tonnes per year to 170,000 tonnes per year.



Copper cathode production at CCR and Kidd Creek increased to 415,000 tonnes from 404,000 tonnes as increased production at CCR more than offset lower production at Kidd Creek, which was affected by a month-long strike in October. CCR refined cathode output benefited from the agreement reached with Inco Limited earlier in the year whereby CCR began the treatment of Inco's Sudbury operations copper anode output. CCR is investing in expanding its capacity to treat anodes that are higher in nickel. This is expected to allow CCR to achieve its full capacity of 370,000 tonnes, compared to an average output of less than 300,000 tonnes in recent years. Total copper cathode production in 2005 was 505,000 tonnes, compared to 492,000 tonnes in the previous year as higher production from CCR, Collahuasi and Lomas Bayas more than offset lower production from Kidd Creek.



During the year, the Company also completed the modification of a former copper roaster at the Altonorte smelter and began the tolling of molybdenum concentrates. Construction of the $6 million project was completed on time and on budget. Tolling operations started at the end of June 2005 and reached the design capacity run-rate of 10,000 tonnes per year shortly thereafter.

By-product mined zinc in concentrate totaled 182,000 tonnes in 2005 versus 152,000 tonnes in 2004. Zinc concentrate volumes increased due to higher mill throughput and higher zinc grades at Kidd Creek. By-product refined zinc volumes in 2005 were 114,000 tonnes versus 122,000 tonnes in 2004, due to the labour disruption at Kidd Creek metallurgical facilities. Mined molybdenum production at Antamina was 2,300 tonnes, compared to 1,200 tonnes in 2004, mainly due to the increase in recoveries.

Nickel Business Unit

The Nickel Business is comprised of Integrated Nickel Operations (INO), which includes nickel mines and processing facilities in Sudbury, Timmins and northern Quebec, Canada, and a refinery in Kristiansand, Norway; and a ferronickel operation at Falcondo in the Dominican Republic. Mine concentrate is acquired from both the Company's mining operations and through purchases of custom feeds. The business produces and sells ferronickel and refines and markets nickel, copper, cobalt and significant quantities of precious and platinum-group metals. Nickel exploration and new mine development is one of the core-growth focuses for the Company.

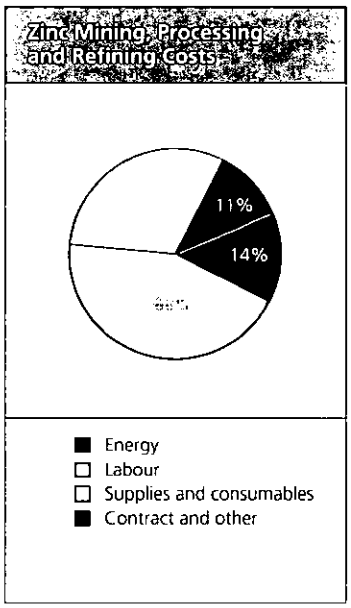
Note: Statements regarding estimated mine life are subject to risks and uncertainties. See "Forward-looking Information" on page 313.

	2005	2004
Revenues ($ millions)	2,146	1,824
Mining, processing and refining costs ($ millions)	810	604
Purchased raw materials ($ millions)	574	447
Income generated by operating assets ($ millions)	597	637
Realized nickel price ($ per pound)	$6.85	$6.40
Realized ferronickel price ($ per pound)	$6.74	$6.37
Operating cash cost ($ per pound of nickel/ferronickel)	$3.49	$2.93
Operating cash cost ($ per pound of nickel)	$2.97	$2.57
Operating cash cost ($ per pound of ferronickel)	$4.40	$3.50
Sales (000s tonnes)		
Nickel	85	71
Ferronickel	26	29
Cobalt	4	4

Revenues: For 2005, consolidated revenues for the nickel business were $2,146 million, an increase of 18%, over the $1,824 million recorded in 2004. At the INO, sales volumes of nickel and copper increased by 20% and 16%, respectively in 2005, as a result of increased production from the Montcalm mine, which achieved commercial production at the end of 2004 and due to increased volumes of custom feeds. Cobalt sales increased 5% from 2004 levels due to increases in production related to custom feeds. At Falcondo, sales volumes decreased 9% to 26,300 tonnes from 28,900 tonnes in 2004, reflecting destocking in the stainless steel market and the lower production level in 2005. Realized nickel prices of $6.85/lb. increased by 7%, compared with $6.40/lb. in 2004. The realized ferronickel price increased 6% in 2005, compared to 2004. Realized cobalt prices decreased by 33% versus 2004.

Costs: Total nickel operating expenses were $1,549 million in 2005 versus $1,187 million in 2004. Mining, processing and refining costs totaled $810 million in 2005, versus $604 million in 2004, an increase of $206 million reflecting a full year of operations at Sudbury (the 2004 results were impacted by a three-week labour strike), new production costs related to the Montcalm mine, increased oil purchase costs at Falcondo and the impact of the change in the value of the Canadian dollar on operating costs at the Canadian operations. The value of purchased raw materials increased from $447 million to $574 million due to higher metal prices and increased volumes.

The weighted average operating cash cost per pound of mined nickel for all of Falconbridge was $3.49 in 2005, compared with $2.93 in 2004. At INO, in 2005, the operating cash cost of producing a pound of nickel from INO mines was $2.97 prior to the inclusion of custom feed processing credits. This cost was $0.40/lb., or 16% higher than the 2004 cost due to the impact of the stronger Canadian dollar on operating costs at the Canadian operations, the impact of lower ore grades on mine production and higher energy costs which offset the impact of increases in byproduct credits due to higher metal prices. At Falcondo, operating cash cost per pound of ferro-nickel was $4.40 in 2005, compared with $3.50 in 2004. The increase in costs was largely due to the significant increase in the oil price. Oil costs rose from $36.63 per barrel in 2004, to $49.09 in 2005. Purchased fuel oil costs accounted for 71% of total operating cash costs in 2005.



Income generated by operating assets: For 2005, nickel business income generated by operating assets was $597 million, compared with $637 million for 2004. The $40-million decrease was mainly due to the amortization of the preliminary fair value increment relating to the Noranda/Falconbridge merger, and higher unit costs, again caused in part by the strengthening of the Canadian dollar, which offset the impact of higher nickel and copper prices and increases in sales volumes.

Production: Refined nickel production totaled 113,600 tonnes in 2005, compared to 100,900 tonnes in 2004, setting a new record for production. During 2005, Sudbury mines nickel production was 19,700 tonnes, compared with 22,600 tonnes in 2004. The reduction in nickel production was attributable to a reduction in ore grade. For 2005, Raglan nickel-in-concentrate production was 22,200 tonnes, compared with 26,600 tonnes of nickel in 2004. The decrease in production from 2004 levels was due to the impact of a lower nickel ore grade. In its first full year after achieving commercial production, the Montcalm mine produced 9,000 tonnes of nickel. In Sudbury, smelter production of nickel in matte, which established a new annual production record, was 63,100 tonnes in 2005, compared with 52,600 tonnes in 2004, as a result of the treatment of higher concentrate tonnages with lower feed grades. At Nikkelverk, 2005 refined nickel production of 84,900 tonnes was higher than the 71,400 tonnes produced in 2004, establishing a new annual production record. Nikkelverk cobalt production also set a new record at 5,000 tonnes. The Falcondo ferronickel operation produced 28,700 tonnes of nickel in ferronickel, compared to 29,500 tonnes in 2004.

Zinc Business Unit

The Zinc Business includes the Brunswick mine and the Brunswick lead metallurgical operations (lead smelter and refinery), General Smelting (zinc and lead alloy foundry), and Falconbridge's 25% interest in the Noranda Income Fund, which owns 100% of the Canadian Electrolytic Zinc refinery. The zinc business is an integrated operation that produces and sells zinc and lead concentrates and refines and markets zinc and lead metal and a significant amount of by-product silver and sulphuric acid.

	2005	2004
Revenues ($ millions)	504	415
Mining, processing and refining costs ($ millions)	168	158
Purchased raw materials ($ millions)	243	187
Income generated by operating assets ($ millions)	60	14
Realized zinc price ($ per pound)	$0.70	$0.52
Realized lead price ($ per pound)	$0.50	$0.43
Operating cash cost ($ per pound of zinc)	$0.41	$0.32
Sales (000s tonnes)		
Zinc in concentrates	219	293
Lead metal	74	83

Revenues: For the year, revenues for the Zinc Business increased 21%, to $504 million from $415 million in 2004, as higher realized prices for zinc and lead more than offset lower production and sales volumes. Sales volumes of zinc in concentrate decreased in 2005, by 25% to 219,400 tonnes, compared to 292,500 tonnes in 2004, principally due to the closure of the Bell Allard mine in Quebec in October 2004. Lead metal sales volumes decreased in 2005, by 11% to 73,700

Costs: Total Aluminum Business operating expenses totaled $971 million in 2005, versus $846 million in 2004, primarily due to the inclusion of Falconbridge's share of the newly acquired St. Ann bauxite mine and Gramercy alumina refinery operating costs, which are offset by the benefits of a fully-integrated aluminum business and certainty of long-term alumina supply. Mining, processing and refining costs totaled $583 million in 2005, versus $420 million in 2004, an increase of $163 million. Operating costs were negatively affected by the temporary production disruption at the Gramercy alumina refinery that resulted from the impact of hurricane Katrina and the resulting higher natural gas costs. Energy costs at the New Madrid smelter were negatively impacted by slightly higher electricity rates that came into effect under the new fifteen-year electricity supply contract, but these contract rates compare very favourably with electricity costs incurred by other U.S. aluminum producers. The value of purchased raw materials decreased to $335 million from $388 million in 2004, due to the fact that alumina purchases in 2004 were from third-parties prior to the fourth quarter acquisition of Gramercy Alumina. The primary aluminum smelter continues to benefit from the secure internal supply of alumina at very favourable cost compared to current spot-market prices.

For the year, the net operating cash cost at the primary division was $0.63/lb., compared with $0.58/lb. in 2004. Higher natural gas and electrical energy costs were the major contributors to the higher unit costs. For the rolled products division, conversion costs on average were down 6% from last year, due in part to a heavier-gauge product mix and improvements in manufacturing efficiencies at all plants offsetting the negative impact of higher natural gas prices.

Income generated by operating assets: For 2005, income generated by operating assets for the Aluminum Business was $106 million, compared with $89 million for 2004. The increase was mainly due to higher metal prices and fabrication margins, improved production levels at the rolled products divisions, and higher margins received on value-added product sales such as rod, billet and rolled aluminum products.

Production: For the year 2005, production of primary aluminum was 245,600 tonnes, compared to 247,500 tonnes in the same period in 2004. For the rolled products operations, shipments were 177,900 tonnes for the year, up 2% compared to 173,900 tonnes in 2004.

Average Realized Prices

Average realized prices for the company's main products during 2005 and 2004, as well as estimated current realized prices in 2006, are as follows:

($ per pound)	Estimated Current Price[1]	2005	2004
Copper	2.24	1.71	1.30
Nickel	6.67	6.85	6.40
Ferronickel	6.29	6.74	6.37
Zinc	1.02	0.70	0.52
Aluminum	1.15	0.91	0.84
Lead	0.65	0.50	0.43
Cobalt	12.46	14.97	22.48
Molybdenum	23.50	31.09	16.21

[1] As at Feb. 16, 2006

Sensitivities

The following table shows the annualized impact on Falconbridge's net income from changes in metals prices and the U.S./Canadian dollar exchange rate.

($ millions)	Change in US$/lb. Price	Impact on Net income	Impact on Income per share
Copper	$0.05	$37	$0.10
Nickel	$0.50	63	0.17
Zinc	$0.05	38	0.10
Aluminum	$0.05	19	0.05
Lead	$0.05	6	0.02
Exchange rate Cdn$ = US$	$0.01	12	0.03

Mining Operations and Recoveries

The following table details the results of milling operations and recoveries at the Company's operating mines in 2005:

		Copper		Nickel		Zinc	
	Ore treated (000s tonnes)	Grade (%)	Recovery (%)	Grade (%)	Recovery (%)	Grade (%)	Recovery (%)
Copper Mines							
Antamina	10,241	1.35	90.3	–	–	0.92	82.7
Collahuasi[1]	20,495	1.15	81.6	–	–	–	–
Kidd Creek	2,320	2.02	93.0	–	–	6.19	83.5
Lomas Bayas – heap leach	13,286	0.50	76.8	–	–	–	–
Lomas Bayas – ROM leach	22,432	0.22	24.6	–	–	–	–

Production Forecast

Production		2006 Forecast (tonnes)	2005 Actual (tonnes)
Copper	Mined	475,000	462,000
	Refined	635,000	544,000
Nickel	Mined	82,000	80,000
	Refined	115,000	114,000
Zinc	Mined	460,000	454,000
	Refined[1]	210,000	182,000
Aluminum	Primary	250,000	246,000
	Fabricated	195,000	178,000

[1] Includes 100% of Kidd Creek refinery production and 25% of the Noranda Income Fund CEZ refinery production

Statements regarding production forecasts are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

At the Sudbury smelter, nickel-in-matte production in the fourth quarter of 2005 decreased to 16,100 tonnes from 18,100 tonnes in the same period of 2004 as a result of the treatment of lower concentrate tonnages with lower feed grades. Total refined nickel production was 20,800 tonnes in the fourth quarter of 2005, compared to 20,500 tonnes in the same period in 2004.

In the fourth quarter of 2005, Falcondo produced 7,300 tonnes of nickel in ferronickel, a 2% increase from 7,200 tonnes in the fourth quarter of 2004.

Zinc Business Unit

Revenues: Total zinc revenues increased to $155 million or 30% higher than $119 million recorded during the fourth quarter of 2004. In the fourth quarter of 2005, sales volumes of zinc in concentrates decreased 39% to 39,800 tonnes from 64,800 tonnes in the fourth quarter of 2004. Fourth quarter 2005 lead metal sales decreased to 19,500 tonnes from 23,100 tonnes in the same period a year ago, primarily as a result of lower tonnage processed at the Brunswick lead smelter. The average realized price per pound of zinc during the fourth quarter was $0.80/lb. versus $0.56/lb. in the same period last year. The average realized price per pound of lead during the fourth quarter was $0.54/lb. versus $0.46/lb. in the same period last year.

Costs: Total operating expenses increased to $131 million from $114 million in the fourth quarter of 2004. Mining, processing and refining costs decreased to $33 million from $45 million in the same period last year, while the value of purchased raw materials increased to $91 million from $60 million in the fourth quarter of 2004. The value of raw materials increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to $0.48 in the fourth quarter of 2005 from $0.32 for the same period in 2004 due to higher costs and reduced mine production volumes.

Income generated by operating assets: The fourth quarter 2005 income generating from operating assets for the Zinc Business was $24 million, compared to $5 million for the fourth quarter of 2004. The $19-million increase was due to the impact of higher metal prices and decreased depreciation and amortization charges which were partially offset by the impact of lower sales volumes, and an unfavourable impact on costs due to the foreign exchange variance caused by the strengthening of the Canadian dollar.

Production: Contained zinc production was 59,400 tonnes in the fourth quarter of 2005, compared to 74,900 tonnes in the same period in 2004. The decrease was due to the closure of the Bell Allard mine in October, 2004 and also attributable to ore-pass operating issues and a rock burst at Brunswick mine.

The Brunswick lead smelter processed 57,100 tonnes of lead concentrates and secondaries during the fourth quarter of 2005, compared to 61,700 tonnes during the same period in 2004. Lead metal production was 23,900 tonnes in the fourth quarter of 2005, compared to 25,900 tonnes in the same period in 2004. The decreased feed consumption and lead metal output at the Brunswick smelter was due to process reliability issues, which are currently being addressed.

Aluminum Business Unit

Revenues: Aluminum business revenues were $244 million, compared to $257 million recorded during the fourth quarter of 2004. Sales volumes of primary aluminum increased to 63,200 tonnes, compared to 61,700 in the fourth quarter of 2004. The fourth quarter rolled-products sales volumes increased by 3% to 43,200 tonnes, compared to 42,000 tonnes the same period a year ago primarily due to manufacturing throughput improvements. The realized mid-west primary aluminum price increased by 6% in the quarter to $0.94/lb., compared with $0.89/lb. in the same period in 2004.

Costs: Aluminum business operating expenses decreased to $223 million from $228 million in the fourth quarter of 2004. Mining, processing and refining costs increased to $162 million from $102 million in the same period last year. In addition, 2005 mining, processing and refining costs include a full quarter of costs from Gramercy and St. Ann aluminum operations. Operating costs were impacted by significantly higher natural gas costs at the Gramercy alumina refinery and increased electrical energy costs at the New Madrid smelter that came into effect under the new fifteen-year electricity supply contract. These rates compare very favourably with electricity costs incurred by other U.S. aluminum producers. The value of purchased raw materials decreased to $44 million in the fourth quarter from $116 million in the fourth quarter of 2004.

The operating cash cost per pound of primary aluminum metal production was $0.68/lb. in the fourth quarter of 2005, an increase from $0.57/lb. for the same period in 2004. Higher electrical energy and alumina costs were the major contributors to the higher unit costs. The cost per pound at the rolled products division was 6% lower in the fourth quarter of 2005, compared the same period in 2004.

Income generated by operating assets: Fourth quarter 2005 income generated by operating for the aluminum business was $21 million, compared with $29 million for the fourth quarter of 2004. The $8-million decrease was mainly due to higher power costs as well as higher natural gas costs. These costs increases were somewhat offset by the benefits of the increased aluminum price.

Production: In the fourth quarter of 2005, primary aluminum production was 62,300 tonnes, unchanged compared to the same period last year. For the rolled products operations, shipments were 43,200 tonnes, compared with 42,000 tonnes for the fourth quarter of 2004.

Financial Position and Liquidity

During 2005, the corporate initiatives undertaken to simplify the ownership structure of Falconbridge resulted in a significant repositioning of the Company to enhance liquidity and reduce the cost of capital.

On May 4, 2005, the Company completed a $1.25-billion issuer bid and acquired for cancellation 63.4 million common shares in exchange for the issue of $1.25 billion of junior preferred shares at a price of Cdn$19.72 per common share. The junior preferred shares were issued in these series as follows:

	Principal Amount	Mandatory Redemption date	Dividend rate
Series 1	$ 500M	June 30, 2008	6.0%
Series 2	$ 500M	June 30, 2010	6.2%
Series 3	$ 250M	June 30, 2013	6.5%
Total	$ 1,250M		

The issuer bid represented an opportunity for the Company to acquire 63.4 million common shares at attractive price levels, and reduced the dilution of common shareholder interest when common shares were subsequently issued to acquire the remaining common shares outstanding of the former Falconbridge.

The junior preferred shares were issued at a time of relative uncertainty regarding the Company's ability to complete the acquisition of the former Falconbridge and therefore have unrestricted access to the cash flow of the combined entity. As such, the junior preferred shares were issued with the Company retaining the right to redeem these shares at any time for 101% of fair value; were issued with an average term to maturity of seven years to provide an opportunity to refinance these instruments without placing undue strain on the liquidity of the Company and; the Company retained the right to repay the junior preferred shares at their maturity in common shares of the Company at the then prevailing common share price. In the event of a change in control of the Company, these instruments are retractable at the option of the holder.

These provisions provided the Company with maximum flexibility. As a result of the share attributes, the junior preferred shares were classified as debt instruments on the balance sheet and dividend payments on these instruments were classified as interest expense.

On June 30, 2005, the Company completed the acquisition of the minority interest in Falconbridge through the two-step transaction and the issuance of 132,840,641 common shares, representing a total acquisition price of $2.5 billion. The consolidation of the ownership and simplification of the capital structure of the combined entity created a financially stronger entity with opportunities to further reduce the weighted average cost of capital of the combined entity.

Following the successful completion of the merger of Noranda and the former Falconbridge, Falconbridge received affirmation of its ratings from its respective rating agencies in recognition of the combined entities continued strong cash flow, liquidity and the sustained strength of metal prices.

The completion of the merger also altered the credit risk profile of the combined entity, and the enhancement of the availability of other long-term sources of capital as a result of the investment grade ratings caused the Company to redeem $500 million of junior preferred shares for cash in August 2005, from available cash resources.

Falconbridge maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. Falconbridge's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financings and new long- and short-term borrowings.

Working capital*, excluding cash and cash equivalents, and debt due within a year, decreased to $1,024 million from $1,119 million at the end of 2004. During the year, Falconbridge continued to improve its balance sheet and operating capacity to support its strategic objective of maintaining an investment grade credit rating.

Cash and cash equivalents at December 31, 2005 totaled $886 million, compared to $884 million at December 31, 2004. In addition to its cash balances, Falconbridge's liquidity and financial flexibility is augmented by revolving credit facilities. Committed lines of credit at December 31, 2005 totaled $780 million, none of which had been drawn upon. These bank lines are provided by various Canadian and international chartered banks and are scheduled to expire in August 2010.

Long-term debt, excluding the amount due in less than one year and junior preferred shares liabilities, amounted to $2,598 million at December 31, 2005, compared to $2,736 million a year earlier. In June 2005, the Company issued $250 million aggregate principal amount of 12-year notes and $250 million aggregate principal amount of 30-year notes. The 12-year notes, which are unsecured, bear interest at the rate of 5.5% per annum and mature on June 15, 2017. The 30-year notes, which are also unsecured, bear interest at the rate of 6.2% per annum and mature on June 15, 2035. Both series of notes are redeemable in whole, or in part, at any time, at a redemption price equal to 100% of their principal amount plus a make-whole premium. At December 31, 2005, Falconbridge's consolidated net-debt-to-total-capitalization ratio was 36.7%, compared to 38.7% at December 31, 2004, following the repayment of in excess of $1 billion in debt during 2005.

Shareholders' equity at the end of 2005 was $5 billion, an increase of $2.2 billion due to the issue of common shares to acquire the minority interest of Falconbridge, retained earnings in excess of dividends paid, offset by the reduction in common equity as a result of the substantial issuer bid completed in May 2005.

Falconbridge's long-term public debt ratings at December 31 are noted below:

	2005	2004
Standard & Poor's	BBB–	BBB–
Moody's	Baa3	Baa3
Dominion Bond Rating Services	BBB	BBB

Note: A security rating is not a recommendation to buy, sell or hold securities, and may be subject to revision or withdrawal at any time by a rating organization.
* Defined as current assets, less current liabilities on the consolidated balance sheets.

Cash Flows

Operating Activities

Cash generated from operations, before net changes in non-cash working capital, totaled $1,650 million in 2005, up from $1,461 million in 2004. The increase is primarily the result of the higher sales volumes, and higher metal prices despite the adverse impact of increasing energy and supply costs and foreign exchange movements on the mining, processing and refining costs. Higher accounts receivable and inventories resulting from higher metal prices were mostly offset by higher accounts and taxes payable as non-cash working capital increased by $15 million during the year.

Investment Activities

Capital investments totaled $737 million in 2005, compared to $666 million in 2004. Major capital expenditures during 2005 included the expansion and transfer of the mining operations at the Collahuasi copper mine, the Kidd Creek Mine D underground extension, the Montcalm nickel mine, the Nickel Rim South underground exploration project (initiated in early 2005) and $100 million for equipment and services relating to the Koniambo project. Capital investments for 2006 are

budgeted to be $750 million. A more detailed discussion is provided on page 298. During 2006, proceeds from dispositions totaled $93 million mostly from the sale of the Company's wholly-owned wheel manufacturer and from the sale of cost-accounted investments.

Financing Activities

In 2005, Falconbridge used $843 million to reduce its net debt outstanding (repaid $1,394 million of debt while issuing $551 million). This does not include the junior preferred share transaction as this did not involve the receipt of any cash by the Company. During 2005, Falconbridge's common and preferred share dividend payments were $150 million, compared to $123 million in 2004. Total dividend obligations increased due to the increase in the total common share outstanding that resulted from the acquisition of the minority interest in former Falconbridge that the Company did not already own. The annual common share dividend was Cdn$0.48 per share in 2005, which remained unchanged from 2004.

Significant future obligations of Falconbridge and its partially-owned subsidiaries, excluding the employee future benefit obligations, are summarized as follows:

($ millions)	Payments by year						
Nature of obligation:	2006	2007	2008	2009	2010	Thereafter	Total
Convertible debentures and other loans	$15	$120	$23	$–	$5	$–	$163
Senior debentures	250	–	150	–	–	1,943	2,343
Preferred share liabilities[1]	–	–	126	–	300	450	876
	265	120	299	–	305	2,393	3,382
Debt of joint ventures	87	87	87	87	40	42	430
Capital leases	1	5	1	1	1	7	16
Operating leases and purchase commitment	172	18	13	9	8	21	241
Total	525	230	400	97	354	2,463	4,069

[1] May be redeemed for common shares

Capital Expenditures, Capacity Enhancements and Projects Under Development

Falconbridge has invested significant capital in the expansion of its operating capacity with the addition of world-class, low-cost assets and the improvement of existing operations. The Company increased its copper and nickel ore reserves, enhanced its copper and nickel processing capacity, added new zinc projects, expanded its primary and fabricated production capacity and acquired bauxite mining and alumina refining assets to fully integrate its aluminum operations. These investments have substantially increased the Company's baseline earnings and its leverage to metal prices. The following is a summary of these initiatives and their impact on Falconbridge.

Investments in development projects at the end of the year totaled $1,707 million, an increase of $541 million since December 31, 2004. Nickel and copper mining remains the focus of the Company's growth program. As shown in the following table, Falconbridge has expansion projects in both these commodities that are currently under development.

Projects Under Development – Capital Spending 2005

	Falconbridge Limited's Interest (%)	Book Value at Dec. 31, 2004 (unaudited) ($ millions)	Book Value at Dec. 31, 2005 (unaudited) ($ millions)
Copper			
El Morro Feasibility	70.0	$12	$16
Kidd Creek Mine			
Extension	100.0	404	518
Nickel			
Koniambo	49.0	180	276
Nickel Rim South	100.0	101	173
Kabanga	50.0	–	34
Other		469	690
Total		$1,166	$1,707

Projects Under Development – 2005

Expectations with respect to development projects are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

El Morro, Region III, Chile

Favourably situated close to two copper smelters, the deposit is a large copper porphyry with high gold co-product credits that would result in low net copper cash costs. It has inferred resources of 466 million tonnes grading 0.61% copper and 0.50 gram of gold per tonne. El Morro also features a high-grade resource core and a low pre-stripping ratio, as well as further exploration potential. In 2005, Falconbridge paid $10 million to earn a 70% interest in the El Morro property from Metallica Resources Inc. In 2006, Falconbridge expects to begin feasibility-level work, including a 30,000 metre drilling program for in-fill drilling and metallurgical test work.

El Pachón, Argentina

El Pachón is an attractive copper mine development project situated less than five kilometres from the Chilean border and the Las Pelambres copper mine. It features a high-grade core, unusually low strip ratio and favourable metallurgical recoveries which will substantially reduce mining and capital costs. The orebody has the potential to produce over 200,000 tonnes of copper in concentrate per year over a life of more than 20 years. During 2005, a conceptual study of the El Pachón project was completed. Two bulk samples were extracted from an existing exploration tunnel and processed, engineering studies were completed and environmental information was compiled to add to the environmental base line. In addition, important advances were realized on El Pachón's specific protocol within the Mining Integration Treaty between Chile and Argentina. In 2006, work is expected to progress in road re-opening, field studies, engineering studies and environmental data collection.

Kidd Creek, Timmins, Canada

Kidd Creek mining operations are transitioning to the newly developed Mine D, which is improving operational stability and predictability, and should lead to improved financial performance. A new target schedule and budget were finalized and approved in mid-2005, becoming the project baseline. Production from block 2 began in the fourth quarter of 2005 and production from block 3 is now expected to begin in the third quarter of 2006. The capital investment is now expected to total Cdn$684 million. The capital expenditures associated with this project increased following the approval of a new target schedule and budget that became the project baseline in April 2005, as well as escalation associated with delineation drilling that will take place in 2006. At the end of 2005, overall project progress was 90% based on this new target schedule and budget.

Koniambo, New Caledonia

Good progress was made during 2005 in advancing Falconbridge's objectives with respect to the Koniambo ferronickel project in the Northern Province of New Caledonia. Final agreements were put in place by and among Falconbridge, Société Minière du Sud Pacifique S.A. (SMSP), and other relevant parties to provide for the transfer of the Koniambo orebody in New Caledonia to Koniambo Nickel SAS, a company owned 49% by Falconbridge and 51% by SMSP.

Falconbridge had announced in late December 2005 that it had met the relevant conditions of the Bercy Accord for this transfer to take place, including having placed firm orders for at least $100 million in total for equipment and services relating to the project.

It is currently planned that the Koniambo project will encompass the construction of a 60,000-tonne-per-year ferronickel processing plant and related development of the mine site and infrastructure. A detailed feasibility study was completed in December 2004. The feasibility study was subject to two independent reviews in 2005, by two international engineering firms and feedback from both reviews has been positive.

The capital cost of the project is estimated to be $2.2 billion in 2004 dollars excluding interest to be incurred during construction and initial working capital requirements. The capital cost of $2.2 billion includes the construction of a $600-million power station with an installed generating capacity of 390 MW. The remaining $1.6 billion relates to the metallurgical plant, mine development, and other infrastructure such as the port and road facilities.

Detailed engineering for the project continues in 2006. Falconbridge expects to receive the necessary construction and operating permits in 2006, enabling the construction phase to commence in 2007. Based on these key milestones being met as currently planned, start-up of the project is expected to occur in 2009/2010.

Falconbridge has, subject to certain terms and conditions, agreed to arrange for or provide up to 100% of the financing required for the project. Given these financing arrangements, the project's free cash flow would first be used to service and repay debt incurred to finance the construction of the project before any distributions would be available to the equity owners in the project.

Koniambo is one of the world's largest and highest grade nickel laterite deposits. At a 2.0% nickel cut-off grade, the deposit contains measured plus indicated resources of 75.6 million tonnes at 2.47% nickel. These resources were converted to proven and probable mineral reserves of 62.5 million tonnes grading 2.4% nickel. In addition, the project has an inferred limonite resource estimated at 100 million tonnes at 1.6% nickel and 0.2% cobalt that could be developed at a later date.

In 1998, Falconbridge entered into a joint-venture agreement with *Société Minière du Sud Pacifique S.A.* (SMSP) and its controlling shareholder, *Société de Financement et d'Investissement de la Province Nord*, for the evaluation and development of the 60,000-tonne-per-year nickel in ferronickel mining and smelting complex.

When developed, Koniambo will be one of the largest nickel producers in the world with initial production of 60,000 tonnes per year. In addition, future expansion could take advantage of the large resource base, which has an estimated life in excess of 50 years.

Nickel Rim South, Sudbury, Canada

In 2001, Falconbridge discovered Nickel Rim South – a high grade 13.4-million tonne resource grading 1.8% nickel, 3.3% copper and significant platinum, palladium and gold. A five-year underground definition and development program was initiated in 2004 at this deposit, located nine kilometres from Falconbridge's Sudbury smelter, and progressed in 2005. Ventilation shaft sinking began in February, 2005 and was 1,092 metres at the end of 2005. Main shaft sinking began in April 2005 and was at 467 metres at the end of 2005. The mine plan was optimized in 2005 to include additional information from the ongoing drilling program. The capital cost of this project is $524 million, reflecting an increase of $100 million in foreign exchange and escalation variations. This project is expected to be completed in 2009, with production expected to begin in 2009.

Kabanga, Tanzania

In April 2005, Falconbridge announced a joint-venture agreement with Barrick Gold Corporation on the Kabanga nickel deposit, located in northwestern Tanzania. Barrick's current estimated inferred resource is 26.4 million tonnes grading 2.6% nickel. Under the terms of the agreement, Falconbridge acquired a 50% indirect joint-venture interest in respect of the Kabanga Project for $15 million and will be the operator of the joint venture. Over the next several years, Falconbridge will fund and conduct a further $50-million work plan. Current work, including exploration and infill diamond drilling, metallurgical testing and engineering study work will lead to the completion of a scoping study in the first quarter of 2006.

Greenfield Opportunities

Greenfield opportunities, or those potential projects which are located in regions where Falconbridge does not currently operate, represent significant growth potential to Falconbridge. Projects currently being reviewed for development are as follows:

Copper	El Pachón, Argentina	A very large and promising deposit with measured and indicated resources of 724 million tonnes grading 0.65% copper; capable of producing over 200,000 tonnes per year for more than 20 years.
	El Morro, Chile	A porphyry copper deposit with inferred resources of 466 million tonnes grading 0.61% copper and 0.50 grams per tonne gold. Feasibility work beginning in 2006.
Nickel	Koniambo, New Caledonia	Potential for a 60,000-tonnes per year operation; detailed engineering plans being advanced in 2006 with the start of construction expected in 2007. Proven and probable mineral reserves are 62.5 million tonnes grading 2.40% nickel.
	Kabanga, Tanzania	This is a joint-venture agreement project with Barrick Gold Corporation on the Kabanga nickel deposit, located in northwestern Tanzania. The current estimated inferred resource is 26.4 million tonnes grading 2.6% nickel. Current work, including exploration and infill diamond drilling, metallurgical testing and engineering study work will lead to the completion of a scoping study in the first quarter of 2006.
Zinc	Lady Loretta, Australia	Falconbridge owns a 75% joint-venture interest in the Lady Loretta deposit, located close to the Mt. Isa, Queensland camp. The orebody has measured and indicated resources of 11.6 million tonnes grading 16.1% zinc and 5.7% lead. Work undertaken to date indicates possible estimated production of more than 125,000 tonnes of zinc in concentrate and 40,000 tonnes of lead in concentrate over more than ten years.

Expectations with respect to development projects are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

Risk Assessment and Reduction in the Evaluation, Selection and Implementation of Projects

Falconbridge's preference for lower-risk brownfield expansion projects provides inherent risk reduction due to the Company's knowledge of the environment in which the expansion project is to be undertaken and its ability to tap into existing human and physical resources. When Falconbridge chooses to invest and grow via the development of greenfield projects, away from existing infrastructure, risk assessment and reduction is the Company's top priority.

Falconbridge has taken several steps to ensure the success of all its current and future capital projects including the following:

- Formation of highly experienced projects group with world-class project leaders dedicated to securing the investment performance of major capital projects;
- Implementation of Six Sigma-based Stage Gate process for project evaluation. This process is a disciplined system which addresses and quantifies key sources of project impact and risk in support of management decision making;
- Addition of parameters in the Stage Gate process that measure social, business and strategic elements;
- Recognition of investment returns as the primary measure of project success; and
- Assignment of accountability.

Six Sigma

Since significant deployment in 1999 and company-wide adoption in 2002, application of Six Sigma has contributed to improving performance at Falconbridge. Six Sigma is a process-centered, step-by-step analytical approach to reviewing operational performance and driving continuous improvement. During 2005, 154 Six Sigma projects were completed for total annualized benefit of $60 million at an average savings value of $390,000 per project.

Exploration

The objectives of the exploration team are aligned with those of the copper, nickel and zinc business units and with the corporate strategy of focusing primarily on copper and nickel growth opportunities, worldwide. The company's goal is to be the most valued and sought after partner in the mining and metals business. The Company's approach is one of consistently being a fair and honest partner, complemented by strong technical skills and a solid track record with a "win-win" philosophy. Joint-venture arrangements are pursued with both junior and senior mining companies to increase the level of focused exploration activity thereby sharing cost and risk, and improving the likelihood of success. The exploration team is supported by an experienced mergers and acquisitions team and a strong project engineering team with a track record of building mines around the world.

As a Founding Patron of the Association of Professional Geoscientists of Ontario and a Founding Partner of the Prospector and Developers Association of Canada's Environmental Excellence in Exploration initiative, the team of geoscientists is committed to being fully compliant with National Instrument 43-101 requirements and in consistently conducting safe and environmentally responsible global exploration.

The exploration team consists of 119 employees, including 92 geologists and geophysicists. For 2006, Falconbridge forecasts exploration expenditures of $49 million, compared to expenditures of $47 million in 2005. Exploration activity is primarily focused on Canada, Chile, Brazil, Mexico, Norway, Australia, Africa, Papua New Guinea, China and Mongolia.

Exploration Highlights – 2005

Copper

- In October 2005, Falconbridge announced a preliminary resource estimate for the Rosario Oeste zone at Collahuasi. The zone, located only 300 metres from the Rosario open pit, is estimated to contain an inferred resource of 248 million tonnes grading 1.54% copper at a 0.4% cut-off grade. The resource remains open to the north, south, and at depth, and these early stage results suggest that Rosario Oeste has the potential to expand the existing reserve base and extend the life of the current operation.

- The Frieda River project in Papua New Guinea contains a primary porphyry copper inferred mineral resource plus higher grade copper-gold mineralization in the Nena deposit. Recent drilling at the Nena deposit firmed up a measured and indicated mineral resource of 42.7 million tonnes of 3.09% copper and 0.59 grams of gold. Exploration of other high-grade targets are expected to be pursued in 2006.

Nickel

- A new nickel laterite deposit has been discovered in Para State, Brazil. A mineral resource estimate will be completed in 2006. The thickness of mineralization intersected to date ranges from 2.0 to 93 metres and averages 15.3 metres with a nickel content ranging from 1.0 to 3.2%.

- The 2005 Raglan, Quebec program returned the best exploration results since the mine commenced production, with 2.5 million tonnes of new resources (mostly inferred resources) discovered, exceeding 2005 production of 934,000 tonnes.

- In Norway, a nickel joint-venture exploration program with Blackstone Ventures Inc. continues to produce promising results in four separate areas (as an example, 7.2 metres of 1.05% nickel, 0.46% copper at Vesle). The joint venture has been expanded to include five new prospective areas in South Norway. Geological/geophysical surveys and diamond drilling will continue in 2006.

Zinc

- New zinc mineralization has been discovered at the Pallas Green project in Ireland where the best intersection to date has been 9.2% zinc over 10.5 metres. Additional diamond drilling will be required to determine the significance of this mineralization.

Exploration Objectives – 2006

Expectations with respect to exploration objectives are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

Copper

- Chile – establish an indicated/measured mineral resource at the El Morro project in support of a feasibility study.
- Chile – establish an indicated mineral resource at the recently discovered Rosario Oeste zone at Collahuasi in support of a feasibility study.
- Papua New Guinea – explore the remaining targets for high-grade mineralization and implement metallurgical test work on the higher grade Nena mineral resource in support of a scoping study.

Nickel

- Canada – establish an indicated mineral resource at Zone 5-8 in support of a feasibility study at Raglan, Quebec.
- Brazil – establish an indicated/inferred mineral resource at the Araguaia laterite discovery by the second quarter 2006 in support of a scoping study.
- Africa – define and expand the North Zone massive sulphides at Kabanga in Tanzania and test additional priority targets within a radius of five kilometres in support of a pre-feasibility study.
- Norway – continue geophysical surveys and diamond drilling to investigate encouraging mineralization at two joint-venture projects.

Zinc

- Ireland – assess the significance of recently discovered zinc mineralization at the Pallas Green project.

Metals Markets

Current global economic growth conditions and prospects remain above trend levels despite hurricanes and high oil prices. Global GDP is expected to grow by over 4% for both 2005 and 2006. Global growth for 2004 to 2006 inclusive, is shaping up to high average levels not experienced since the 1976 to 1978 period.

The resilience of the U.S. economy, a sustained recovery in Japan and a strong Chinese economy, showing no signs of waning, are all reasons to be positive on both global economic prospects and the expected increase in base metals demand.

On the supply side, capacity constraints, low inventory levels, higher energy costs, the likelihood of production disruptions and a shortage of mining materials and labour will continue to be market supportive. Despite the notion that high prices should spur investment activity, the supply response has been muted and there is little sign of an output surge or even large amounts of new capacity coming on stream.

Another positive factor, which cannot be underestimated, is that investment funds are viewing base metals favourably, and expect the market to be stronger for longer. For 2006, strong fundamentals underlying support for above-average base metals prices are forecast.

Expectations and outlooks with respect to metal market projections are subject to various risks and assumptions. See "Forward-looking Information" on page 313.

Copper Market

The expected increase in global mine production in 2005 was hampered by a combination of plant equipment failures, labour disputes and natural disasters. Copper mine production continued to grow as high prices have encouraged all producers to maximize output. In 2005, global mine production is expected to be just over 15.3 million tonnes of contained copper. Mine output growth continues to be driven by restarts and ongoing brownfield expansions triggered in late 2004 and early 2005.

The recovery in mine-concentrate output has allowed smelters to rebuild their depleted concentrate stocks and increase operating rates. Despite a number of maintenance shutdowns and production disruptions, smelter production increased 6.8% in 2005. The area of most rapid growth in smelter capacity and output has been China and as its copper smelting and refining capacity grows, its copper concentrate import requirements will also grow rapidly to fill the shortfall in domestic mine production growth.

On the metal side, 2005 marks the third consecutive year of a global refined copper market deficit. LME stocks increased by only 43,675 tonnes to 92,225 tonnes at the end of 2005 from 48,550 tonnes at year end 2004. Historically high copper prices and sustained low copper exchange inventories likely resulted in a significant de-stocking of refined metal inventories held by producers and consumers. A first-time auctioning of copper by the Chinese SRB in November and December (20,000 tonnes each), combined with deliveries made to exchange warehouses, failed to put significant downward pressure on the copper price. The copper price averaged $1.67/lb. in 2005, $0.37/lb. greater than the 2004 average of $1.30/lb. Robust fundamentals and favourable fund buying in 2005, propelled the copper price to a high of $2.11/lb. in December.

Looking at mine supply, despite the less-than-expected mine output growth in 2005, the concentrate market recovered from critically low levels as mine production expanded. For 2006, the concentrate market is forecast to be in surplus, as higher mine production is expected and smelter capacity should remain somewhat constrained. It is therefore expected that treatment and refining charges should remain above long-term benchmark averages. Declining ore grades, high-energy costs and equipment shortages should continue to act as constraints and put upward pressure on the cash costs.

In 2006, global refined copper production is forecast to be in surplus for the first time in three years. Global copper consumption growth is forecast to decline to 3.6% from 4.7% in 2005, mainly reflecting moderating growth in both China and the U.S. The forecast surplus of 419,000 tonnes of refined metal pales in comparison to the cumulative deficit of 1.4 million tonnes experienced over the past three years. This cumulative deficit contributed to the dramatic reduction in exchange inventories witnessed over those years. Until exchange inventories begin rebuilding and maintaining more normal levels, higher copper prices should continue to prevail.

Nickel Market

The strong demand conditions experienced in the first half of 2005 quickly turned around in the third quarter as stainless steel mills initiated a period of heavy de-stocking for the balance of the year. Nickel prices averaged $7.20/lb. in the first half of the year, but with prolonged shutdowns and cutbacks at the stainless steel mills, nickel prices entered a temporary period of decline averaging $6.17/lb. during the second half. For the year, nickel prices averaged $6.69/lb., a 7% increase over the 2004 average. With nickel producers operating at close to capacity in the first half of the year, surging demand had to be met from LME inventories, which declined from 20,898 tonnes at the start of the year to a low of 4,926 tonnes by mid-May. The fall-off in demand from the stainless steel sector in the latter part of 2005, resulted in LME stocks creeping back up to end the year at 36,042 tonnes.

While demand for nickel was strong overall in the first half of the year, an imbalance developed in stainless steel supply/demand fundamentals by mid-year leading to rising stock levels, declining prices and reduced margins for the mills, precipitating numerous stainless steel production cuts. With the ramp-up of significant new Chinese stainless steel capacity, this curtailed the need for stainless steel imports from Western producers. The net effect was reduced primary nickel consumption and increased stainless steel scrap availability. Consequently, global stainless steel production estimates for 2005 were at the same level as 2004. In addition, the trend towards substitution out of nickel bearing stainless steel grades continued during 2005, as sustained high nickel prices have driven stainless steel mills to switch to greater production of non- or lower nickel bearing grades of stainless steel.

Other nickel consuming sectors are estimated to have grown by 6%, supported by strong high nickel alloy and battery demand. Robust demand is being seen from all end-use sectors across all geographical regions.

As a result of nickel producers pushing their utilization rates, increased production glitches and maintenance outages were experienced in 2005. World nickel production is forecast to have increased by only 1.2% over 2004 given that producers were running near full capacity leaving little room to raise output. Overall, a 15,000 tonne supply/demand surplus was forecast for 2005.

Based on technical analysis, the stainless steel market is anticipated to rebound sometime during the first half of 2006, in line with the accelerating momentum of the industrial production cycle. With a rebound in stainless steel production and continued healthy non-stainless demand, total nickel consumption is expected to grow by over 7% and total global nickel supply is forecast to increase by 6% with a projected balanced market for the year.

For the remainder of this decade, it is expected that the nickel market will continue to benefit from constrained supply, strong demand driven by Chinese stainless steel plant expansions, and limited major greenfield nickel projects coming on stream.

Zinc Market

LME zinc prices started 2005 at $0.55/lb., then fluctuated between $0.53/lb. and $0.65/lb. for most of the year before rising strongly in the fourth quarter to a high of $0.87/lb. on the final day of the year. The LME cash-settlement zinc price averaged $0.63/lb. in 2005, 31% higher than the average of $0.48/lb. in 2004. Prices gained strength on expectations that the ongoing supply/demand deficit may not be alleviated by new mine supply and available metal stocks.

Oversupply and historically low zinc prices at the start of the decade led to the depletion and closure of many mines, and even the demise of some companies. Meanwhile, demand for zinc metal increased, driven by growth in China and the developing world. The result has been not enough zinc mine concentrates to feed zinc smelters, and insufficient new metal to satisfy zinc consumption, in turn driving zinc prices higher. Since 2002, the recovery in global economic activity and industrial output has led to a resurgence in zinc demand, especially from the steel galvanizing sector. Leading all regions has been China, where zinc demand rose approximately 11% in 2005. Demand for zinc metal in the United States declined temporarily as high steel inventories were worked down.

While zinc smelting capacity has continued to expand, mainly in China, actual zinc metal production has only increased by approximately 2% worldwide in 2005, due to the extremely short supply of concentrates from mines. In China, the tight global zinc concentrates market, combined with accelerating domestic demand, resulted in China remaining a net importer of zinc metal for the second year in a row, a significant change from historically being a large zinc metal exporter. With global metal demand outweighing supply, metal steadily flowed out of LME warehouses for most of the year except for the delivery in June of just over 100,000 tonnes of previously unreported stocks. Overall, LME stocks dropped at an average of roughly 20,000 tonnes per month. For 2005, LME stocks plummeted a net 235,575 tonnes to close at 393,550 tonnes by the end of the year. The global refined zinc supply/demand balance is estimated to have been in deficit by 293,000 tonnes in 2005.

Aluminum Market

The LME cash-settlement aluminum price averaged $0.85/lb. in 2005, a 9% increase over the average of $0.78/lb. in 2004. However, the price was somewhat volatile throughout the year. The LME aluminum cash price opened the year 2005 at $0.83/lb. The low point of $0.76/lb. was reached in June. By the end of the year the price was at a sixteen-year high of $1.03/lb.

Aluminum's supply-demand fundamentals were essentially balanced in 2005. LME warehouse inventories were 695,000 tonnes at the beginning of 2005. By year's end this stockpile had decreased to 645,000 tonnes. This decline in LME stocks was offset by combined increases of 122,000 tonnes in NYMEX warehouse stocks and IAI inventories.

Both the Chinese and North American economies are expected to support strong demand again during 2006. Effective January 1, 2005, China began applying an export tax on aluminum, copper, and nickel exports. China is expected to double the tax on primary aluminum exports to 10% in early 2006, in a further move to cool domestic investment in the energy-intensive aluminum sector. Given that the country continues to be a significant exporter of aluminum, the export

tax should help to slow the growth of Chinese aluminum production and exports – causing inefficient Chinese producers to close or consolidate. Additionally, Chinese smelters are in discussions to curtail aluminum production by 10% (600,000 to 700,000 tonnes) in 2006, in an effort to combat the escalating price of alumina. If they carry through with this plan, it should add upward pressure to the aluminum price.

There has been a dramatic shift in the cost base associated with the production of primary aluminum. While virtually all raw material and energy costs have risen significantly, the cost component increases impacting aluminum smelters the most are electrical power and alumina. Together, they account for over two-thirds of total production costs. Global spot-alumina prices increased almost 50% during 2005, from $400/tonne to almost $600/tonne. Power is much more of a localized issue. Smelters faced with renegotiating power contracts, most notably in the U.S. and Europe, have faced substantial cost increases or even lack of available supply. In some cases, the result is permanent closure of the smelters in question.

Operating rates of aluminum rolling mills in the U.S. have been above 90%, a historically high number, for the past two years and will likely continue above this rate through to 2010. The HVAC Fin Stock market in the U.S., Falconbridge's largest flat-rolled aluminum product, is expected to grow by 5 to 10% in 2006, mainly due to increased U.S. government mandated improvements in efficiency ratings of residential air-conditioners.

Outstanding Shares

As at December 31, 2005, Falconbridge's issued and outstanding shares and securities were as follows:

Name of new Falconbridge Security	Trading Symbol	Shares Outstanding
Common Shares[1]	FAL.LV, FAL	370,688,138
Preferred Shares, Series 1	N/A	89,835
Preferred Shares, Series 2	FAL.PR.A	4,787,283
Preferred Shares, Series 3	FAL.PR.B	3,122,882
Preferred Shares, Series F	FAL.PR.F	3,246,057
Preferred Shares, Series G	FAL.PR.G	8,753,943
Preferred Shares, Series H	FAL.PR.H	6,000,000
Junior Preference Shares, Series 1[2]	FAL.PR.X	11,999,899
Junior Preference Shares, Series 2[2]	FAL.PR.Y	11,999,899
Junior Preference Shares, Series 3[2]	FAL.PR.Z	5,999,903

1. Falconbridge common shares trade on the Toronto and New York Stock Exchanges under the symbols FAL.LV and FAL, respectively. Falconbridge common shares also trade in U.S. dollars on the Toronto Stock Exchange under the symbol FAL.LV.U.
2. 8,000,000 junior preference shares, series (X), 8,000,000 junior preference shares, series (Y) and 4,000,000 junior preference shares, series (Z) were redeemed on August 11, 2005, as previously announced.

Financial Instruments and Other Instruments

Falconbridge uses financial and other instruments in the following instances:

Foreign Currency Exposure

Falconbridge may use forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures. Falconbridge may hedge up to 50% of its current-year Canadian dollar operating cost for the next two years and 25% of the subsequent three years. No significant foreign exchange hedge contracts were in place at December 31, 2005.

Falconbridge may enter into futures and forward contracts for the purchase or sale of currencies not designated as hedges. These contracts would be carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts would be recognized in the earnings of the period in which the changes occur.

Commodity Price Exposure

Generally, Falconbridge does not hedge the price it realizes on the sale of its own production and accepts realizations based on market prices prevailing around the time of delivery of metals to customers. Under certain circumstances, Falconbridge enters into futures and option contracts to hedge the effect of price changes on a portion of the raw materials it purchases on a custom processing or resale basis. Gains and losses on these contracts are reported as a component of the related transactions. Designated contracts, meeting the definition for hedge accounting under GAAP, are

not recorded. Falconbridge may also enter into futures and forward contracts for the purchase or sale of commodities not designated as hedges. These contracts are carried at estimated fair values. Gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Interest-rate Management

Falconbridge also enters into interest rate swap agreements, including foreign exchange cross-currency swaps, to modify the interest characteristics of its outstanding debt. The differential to be paid or received, for interest rate swaps for which Falconbridge receives hedge accounting, is accrued and recognized as an adjustment to interest expense related to the debt. A summary of these positions is tabled opposite:

Interest rate swaps (notional principal amount in $millions)	Total
Maturity (2006)	$ 325
Maturity (2008)[1]	136
Maturity (2011)	300
Maturity (2012)	350
Maturity (2015)	550
Fair value[2]	54

[1] Includes a cross-currency interest rate swap (with a notional amount of $111 million) designated as a hedge of a Canadian dollar debenture. The total fair value of this instrument at December 31, 2005 was $47 million of which $39 million related to the currency component of the swap and $8 million related to the interest component.

[2] Includes the fair value of $39 million related to the currency component of the cross currency interest rate swap discussed in Note 1 above.

Off-Balance Sheet Arrangements

Falconbridge does not have any unconsolidated affiliates. The Company does not enter into off-balance-sheet arrangements with special purpose entities in the normal course of business. Its only significant off-balance-sheet arrangements are the Canadian dollar expenditure hedges discussed under the "Financial Instruments and Other Instruments" section of this document.

Transactions With Related Parties

Related-party transactions for the year ended of 2005 and the fourth quarter of 2005 are summarized as follows:

Year ended December 31, 2005

($ millions) Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	$210	$65	$–	$44	$–
Noranda Income Fund	Trading activity	–	3	35	–	11
Antamina	Trading activity	–	–	260	–	65
Gramercy	Trading activity	–	–	136	–	6
Collahuasi	Trading activity	–	–	109	–	25

Quarter ended December 31, 2005

($ millions) Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	$79	$15	$–	$44	$–
Noranda Income Fund	Trading activity	–	1	11	–	11
Antamina	Trading activity	–	–	82	–	65
Gramercy	Trading activity	–	–	90	–	6
Collahuasi	Trading activity	–	–	40	–	25

Critical Accounting Estimates

Management is required to make estimates in preparing its financial statements in conformity with generally accepted accounting principles. These estimates affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Changes to these estimates would result in material changes to these line items. The critical accounting estimates made by Falconbridge relate to the Company's accounting for the following items:

- Property, plant and equipment
  - The determination of mineral reserves
  - Impairment assessments of long-lived assets
  - Amortization of property, plant and equipment
- Employee future benefits
- Asset retirement obligations
- The determination of taxes

Property, Plant and Equipment

Included in operating capital assets of $6.8 billion at December 31, 2005, was primarily property, plant and equipment. As such, the estimates used in accounting for property, plant and equipment and the related depreciation and amortization charges are critical and have a material impact on the Company's financial condition and earnings. Property, plant and equipment and related capitalized interest and development and pre-production expenditures are recorded at cost and are subject to impairment testing as discussed below.

Determination of Mineral Reserves

One of the most significant estimates which impacts the accounting for property, plant and equipment and the related depreciation and amortization, is the estimate of proven and probable mineral reserves. The process of estimating reserves is complex, requiring significant assumptions, estimates and decisions regarding economic (i.e. metal prices, production costs, and exchange rates), engineering, geophysical and geological data. A material revision to existing reserve estimates could occur because of changes to any of these inputs. Changes in reserves could result in impairment of the carrying amount of property, plant and equipment and a change in amortization expense.

Impairment Assessments of Long-lived Assets

We review and evaluate the Company's long-lived assets for impairment when events or changes in circumstances indicate that the carrying amount may not be recoverable. Asset impairment is considered to exist if the total estimated future cash flows on an undiscounted basis are less than the carrying amount of the asset. An impairment loss is measured and recorded based on recoverable minerals, expected commodity prices (considering current and historical prices, price trends and related factors), production levels, capital and reclamation costs, and are all based on detailed life-of-mine plans. The term "recoverable minerals" refers to the estimated amount of metal that will be obtained from proven and probable ore/mineral reserves, after taking into account losses during ore processing and treatment. Significant management judgement is involved in estimating these factors, which include inherent risks and uncertainties. The assumptions Falconbridge uses are consistent with its internal planning. Management periodically evaluates and updates the estimates based on the conditions that influence these factors. The variability of these factors depends on a number of conditions, including uncertainty about future events, and thus accounting estimates may change from period to period. If other assumptions and estimates had been used in the current period, the asset balances could have been materially impacted. If management uses different assumptions or if different conditions occur in future periods, future operating results could be materially impacted.

In estimating future cash flows, assets are grouped at the lowest levels for which there are identifiable cash flows that are largely independent of future cash flows from other asset groups, taking into consideration movements of intermediate

products to ensure the utilization of available capacity across the Company's operations. All assets at a particular operation are considered together for purposes of estimating future cash flows.

Amortization of Property, Plant and Equipment
Depreciation of property, plant and equipment is based on the estimated service lives of the assets (4-40 years), calculated primarily on a straight-line basis for metallurgical operations and on a units-of-production method for mining operations. Resource properties are depleted and preproduction and mine development expenditures are amortized on a units-of-production method. Units-of-production method is defined as tonnes milled during the period over proven and probable ore reserves at the start of the period. Construction in progress will be depreciated once the project is substantially completed.

The most critical estimates which impact the above accounting policy are the estimated quantities of proven and probable mineral reserves which are the underlying bases for the calculation for the units-of-production method. Changes in the quantity of reserves would result in changes in amortization expense in the periods subsequent to the revision.

Employee Future Benefits
Assets are valued at current market value. The expected return on plan assets, currently 7%, is based on current bond yields and expected long-term rate of return on equities. The long-term rate of return on assets assumption is reviewed on an annual basis.

Liabilities are determined as a present value of future anticipated cash flows using a discount rate based on corporate AA bond yields at the valuation date and an inflation expectation consistent with the corporate AA bond yield curve. Differences between the estimated future results and actual future results are amortized (to the extent that the cumulative experience gain or loss is in excess of the permitted 10% corridor under Canadian GAAP) over the expected average remaining service life of the active members (EARSL). This 10% corridor represents 10% of the greater of the post-retirement benefits obligations and the fair value of plan assets. The return on assets assumption and the discount rate, salary and inflation assumptions used to value the liabilities are reviewed annually and are determined based on a consistent framework from year to year. The most significant risk is that the assumption will prove to be either too high or too low in the long term. It is reasonable to assume that there will be a significant variation between the assumptions (which are set within the framework of a long-term commitment) and actual experience in any one year, but are expected to produce an appropriate reflection of costs over the long term.

For post-employment benefits other than pensions, the discount rate is the same as for pensions. The inflation rate assumed for medical costs is based on the Company's history of healthcare spending. The assumption for the ultimate health care trend rates relates to the overall economic trends.

We currently estimate that a 0.5% increase or decrease in the return on assets assumption would result in a corresponding $10-million increase or decrease in annual pension expense. Changes to the return on asset assumption would have no significant effect on funding requirements, as the Company's contributions are primarily determined based on the applicable Canadian regulatory solvency funding requirements. Under this valuation methodology, liabilities for solvency valuation are based on market bond yields, and the excess of liabilities over assets must be amortized over a five-year period. We estimate that a 0.5% increase or decrease in the discount rate assumption would result in a corresponding $10-million increase or decrease in the pension expense.

Asset Retirement Obligations
As a result of the Company's mining activities, we incur legal obligations associated with the retirement of tangible long-lived assets, from the acquisition, construction, development or normal operations of those assets, which an entity is required to settle as a result of an existing or enacted law or contract. CICA 3110, which was adopted January 1, 2004, requires that, when a legal obligation is incurred, we record the fair value of estimated asset retirement obligations and a corresponding deferred charge presented as an asset grouped with property plant and equipment. The liabilities are accreted to full value over time through a charge to earnings. The asset is depreciated over the useful life of the associated long-lived asset on a straight-line basis. The fair value of the obligation as of December 31, 2005 was $424 million.

The fair value of these obligations are determined by discounting the projected cash flows required to settle the legal obligations at the Company's credit adjusted risk-free interest rate over the time periods over which the obligations were

incurred. The future cash flows required to settle the obligations were determined by detailed engineering and environmental reviews assuming the most probable outcome based on present facts, circumstances and legislation.

Critical estimates and judgement were made by management in the determination of the fair value of the Company's obligation. Cash outflows to settle these obligations will be incurred for periods exceeding 50 years. Due to the combined effect of the uncertainty associated with such extended time periods, the estimated discount and inflation factors, and potential changes to applicable legislation, the fair value of the Company's asset retirement obligations could materially change from period to period.

Income and Mining Taxes

The provision or relief for income taxes is calculated based on the expected tax treatment of transactions recorded in the consolidated financial statements. The objectives of accounting for income and mining taxes are to recognize the amount of taxes payable or refundable for the current year and deferred tax liabilities and assets for the future tax consequences of events that have been recognized in the consolidated financial statements or tax returns. In determining both the current and future components of income and mining taxes, we interpret tax legislation in a variety of jurisdictions as well as make assumptions about the expected timing of the reversal of future tax assets and liabilities. If the Company's interpretation differs from those of tax authorities or if the timing of reversals is not as anticipated, the provision or relief for income and mining taxes could increase or decrease in future periods. In estimating deferred income and mining tax assets, a valuation allowance is determined to reduce the future income tax assets to the amount that is more likely than not to be realized.

Risk Factors

Take-over Bid

The Company is currently the subject of a take-over bid by Inco Limited. Upon successful completion of this transaction, there could be significant changes to the business, operations and management of the Company. Should the take-over not be completed, the Company expects to continue operating as it has in the past and the anticipated benefits from the combination of Inco and the Company, as previously discussed, would not occur.

Fluctuating Metal Prices

Falconbridge's earnings are affected by fluctuations in the prices of the metals the Company produces. The prices are subject to volatile price movements over short periods of time. Falconbridge generally does not hedge prices of the metals the Company produces. Market prices can be affected by numerous factors beyond the Company's control, including expectations for inflation, speculative activities, relative exchange rates to the U.S. dollar, production activities of competitors, global and regional demand and supply, political and economic conditions including availability of subsidies and tax incentives to competitors and production costs in major producing regions. The prices for copper, nickel, zinc, aluminum or other metals produced by Falconbridge, may decline significantly from current levels. A reduction in the prices of one or more of these metals could materially adversely affect the value and amount of the Company's reserves and business, financial condition, liquidity and operating results.

Mining and Processing Risks

The business of mining and processing of metals is generally subject to a number of risks and hazards, including unusual or unexpected geological conditions, ground conditions, phenomena such as inclement weather conditions, floods and earthquakes and the handling of hazardous substances, emissions of contaminants and other liability exposures. Such risks and hazards could result in personal injury or death, damage to, or destruction of, mineral properties, processing or production facilities or the environment, monetary losses and possible legal liability. Falconbridge's business, financial condition, liquidity and operating results could be materially adversely affected if any of these developments were to occur.

Although Falconbridge maintains insurance which Falconbridge believes is consistent with mining industry practice to the extent available to cover some of these risks and hazards, no assurance can be given that such insurance will continue to be available, or that it will be available at economically feasible premiums. Falconbridge's property, business interruption and liability and other insurance may not provide sufficient coverage for losses related to these or other risks or hazards. In such event, Falconbridge's business, financial condition, liquidity and results of operations could be materially adversely affected.

Environmental Risks

Environmental legislation affects nearly all aspects of the Company's operations worldwide. This type of legislation requires Falconbridge to obtain operating licenses and imposes standards and controls on activities relating to mining, exploration, development, production, closure and the refining, distribution and marketing of copper, nickel, zinc and other metals products. Environmental assessments are required before initiating most new products or undertaking significant changes to existing operations. Compliance with environmental legislation can require significant expenditures, including expenditures for clean-up costs and damages arising out of contaminated properties. In addition to current requirements, Falconbridge expects that additional environmental regulations will likely be implemented to protect the environment and quality of life, given issues of sustainable development and other similar requirements which governmental and supra-governmental organizations and other bodies have been pursuing. Some of the issues currently under review by environmental regulatory agencies include reducing or stabilizing various emissions, including sulphur dioxide and greenhouse gas emissions, mine reclamation and restoration, and water, air and soil quality and absolute liability for spills and exceedences.

Canada ratified the Kyoto Protocol to the United Nations Framework Convention on Climate Change in late 2002. The protocol entered into force in February 2005. Various levels of government in Canada are developing a number of policy measures in order to meet Canada's emission reduction obligations under the protocol. While the impact of the protocol and measures cannot be quantified at this time, the likely effect will be to increase costs for fossil fuels, electricity and transportation, restrict industrial emission levels, impose added costs for emissions in excess of permitted levels and increase costs for monitoring, reporting and financial accounting. Compliance with these initiatives could have a material adverse effect on the Company's business, financial condition, liquidity and operating results.

Further changes in environmental laws, new information on existing environmental conditions or other events, including legal proceedings brought based upon such conditions or an inability to obtain necessary permits, could have a material adverse effect on product demand, product quality and methods of production and distribution or could require increased financial reserves or compliance expenditures or otherwise have a material adverse effect on Falconbridge's business, financial condition, liquidity and operating results.

Failure to comply with environmental legislation may result in the imposition of fines and penalties, liability for clean-up costs, damages and the loss of important permits. There can be no assurance that Falconbridge will at all times be in compliance with all environmental regulations or that steps required to bring the Company into compliance would not materially adversely affect Falconbridge's business, financial condition, liquidity or operating results.

In view of the uncertainties concerning future removal and site restoration costs on Falconbridge's properties, the ultimate costs for future removal and site restoration to Falconbridge could differ from the amounts estimated. The estimate for this future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively as a change in an accounting estimate. In addition, regulatory authorities in various jurisdictions around the world may require Falconbridge to post financial security to secure in whole or in part future reclamation and restoration obligations in such jurisdictions. In some instances, Falconbridge has already provided this security. In other instances, such security may be required to be posted upon the occurrence of certain events including if Falconbridge ceases to maintain a minimum investment grade credit rating, if the regulatory authority ceases to accept alternative forms of comfort to secure the obligation or as a property nears the end of its operation. Although the posting of this security does not increase the future reclamation and restoration costs (other than costs associated with posting such security), a portion of Falconbridge's credit may be required to back up these commitments, which could adversely affect Falconbridge's liquidity.

Labour Relations

Collective agreements covering unionized employees at Norandal-Newport, St. Ann (production and maintenance employees), and Gramercy were all renewed in 2005. At the Kidd Metallurgical site, a collective agreement was signed with the CAW after a one-month strike in October 2005.

Eleven collective agreements will expire in 2006:

- General Smelting (Montreal) – January 31
- Brunswick mine (Bathurst) – February 28
- Brunswick smelter (Bathurst) – February 28
- Horne smelter (Rouyn) – March 1
- Bulk Handling Operation (Bathurst) – March 31
- Raglan mine (Rouyn) – April 30
- Lomas Bayas mine (Chile) – April 30
- Nikkelverk refinery (Norway) – May 31
- Antamina mine (Peru) – July 24
- Norandal – Salisbury rolling mill (Salisbury) – November 20
- Altonorte smelter (Chile) – December 12

Collective agreements covering unionized hourly employees at CEZ, CEZ (Effluent Treatment Operators), CCR, CCR (Security), Noranda Recycling – Roseville (two agreements), Noranda Recycling – San Jose, Sudbury Operations (Production & Maintenance), Sudbury Operations (Office, Clerical & Technical), Collahuasi, New Madrid, Norandal – Newport, Gramercy, St. Ann (Production & Maintenance) and Kidd Metallurgical division are currently in place and will expire between 2007 and 2008.

Uncertainty of Reserve Estimates and Production Estimates

Falconbridge's reported mineral reserves as of December 31, 2005 are estimated quantities of proven and probable ore that under present and anticipated conditions can be legally and economically mined and processed by the extraction of their mineral content. Falconbridge determines the amount of mineral reserves in accordance with the requirements of the applicable Canadian securities regulatory authorities and established mining standards. Falconbridge does not use outside sources to verify its reserves. The volume and grade of reserves actually recovered and rates of production from Falconbridge's present mineral reserves may be less than geological measurements of the reserves. Market price fluctuations in nickel, copper, other metals and exchange rates, and changes in operating and capital costs, may in the future render certain mineral reserves uneconomic to mine. In addition, short-term operating factors relating to the mineral reserves, such as the need for orderly development of ore bodies or the processing of new or different ore grades, may cause mineral reserves to be modified or Falconbridge's operations to be unprofitable in any particular fiscal period.

No assurance can be given that the estimated amount of ore will be recovered or that it will be recovered at the prices assumed by Falconbridge in determining reserves. Mineral reserve estimates are based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire orebody. As more knowledge and understanding of the orebody are obtained, the reserve estimates may change significantly, either positively or negatively.

Falconbridge prepares estimates of future production for particular operations. These production estimates are based on, among other things, reserve estimates; assumptions regarding ground conditions and physical characteristics of ores, such as hardness and presence or absence of particular metallurgical characteristics; and estimated rates and costs of mining and processing. Falconbridge's actual production may vary from estimates for a variety of reasons, including actual ore mined varying from estimates of grade, tonnage, dilution and metallurgical and other characteristics; short-term operating factors relating to the mineral reserves, such as the need for sequential development of ore bodies and the processing of new or different ore grades; risks and hazards associated with mining; natural phenomena, such as inclement weather conditions, floods, and earthquakes; and unexpected labour shortages or strikes. No assurance can be given that production estimates will be achieved. Failure to achieve production estimates could have a material adverse impact on Falconbridge's future cash flows, earnings, results of operations and financial condition.

Exchange Rate Fluctuations

Fluctuations in currency exchange rates, principally the Canadian/U.S. dollar exchange rate and, to a lesser extent, Chilean peso, Peruvian sole, Norwegian kroner and euro exchange rates against the U.S. dollar, can significantly impact Falconbridge's earnings and cash flows. These exchange rates have fluctuated substantially over time, including over the last five years. Most of Falconbridge's revenues and debt are denominated in U.S. dollars, whereas a significant portion of operating costs at Falconbridge's Canadian sites are incurred in Canadian dollars. Furthermore, a portion of Chilean operating costs are peso-denominated and Nikkelverk's costs are incurred in Norwegian kroner. Falconbridge has been reporting its financial results in U.S. dollars since July 1, 2003. Fluctuations in exchange rates between the U.S. dollar and

the Canadian dollar and between the U.S. dollar and other currencies may give rise to foreign currency exposure and gains and losses, either favourable or unfavourable, which may in the future materially impact Falconbridge's financial results. Falconbridge, from time to time, may hedge a portion of its currency exposures and requirements to try to limit any adverse effect of exchange rate fluctuations with respect to Falconbridge's Canadian dollar and other costs, but there can be no assurance that such hedges will eliminate the potential material adverse effect of such fluctuations.

Interest Rate and Counterparty Risk

Falconbridge's exposure to changes in interest rates results from investing and borrowing activities undertaken to manage Falconbridge's liquidity and capital requirements. Falconbridge has entered into interest rate swap agreements to manage the interest rate risk associated with a portion of its fixed-rate debt. The interest rate swap changes exposure to interest risk by effectively converting a portion of fixed-rate debt to a floating rate. Falconbridge may elect in the future to enter into interest rate swaps to effectively convert floating-rate debt to fixed-rate debt or to enter into additional fixed-rate to floating-rate swaps. There can be no assurance that Falconbridge will not be materially adversely affected by interest rate changes in the future, notwithstanding its use of interest rate swaps.

In addition, Falconbridge's interest rate swaps, metals hedging and foreign currency and energy risk management activities expose us to the risk of default by the counter-parties to such arrangements. Any such default could have a material adverse effect on Falconbridge's business, financial condition and results of operations.

Energy Supply and Prices

Falconbridge's operations and facilities are intensive users of natural gas, electricity and oil. The procurement dynamics of these energy types are becoming more connected as supply and demand conditions become more interdependent on a global basis. Uncontrollable factors such as strong demand from the Asia-Pacific region, political, regulatory and economic uncertainties, and the cost of emissions from fossil fuels, as well as problems related to local production and delivery conditions, continue to put upward pressure on prices. Falconbridge's supply contracts are governed by standard energy risk management principles, which ensure that supply, price and credit risks are managed effectively.

The security of energy supply is of primary importance. Falconbridge's business operations could be adversely affected, including loss of production and damage to its plants and equipment, if, even temporarily, the supply of energy to one or more of its facilities was interrupted. Additionally, prolonged loss of supply could materially adversely affect the Company's business, financial condition, liquidity and results of operations. As a significant portion of Falconbridge's costs relate to energy consumption, Falconbridge's earnings are directly related to fluctuations in the cost of natural gas, electricity and oil. The current trend of increasing energy prices is expected to continue and as a result there is an increased focus within the operations on the management of energy use and the impact of rising energy costs on financial performance.

Foreign Operations

Some of Falconbridge's activities and related assets are located in countries outside North America, some of which may be considered to be, or may become, politically or economically unstable. Exploration or development activities in such countries may require protracted negotiations with host governments, international organizations and other third parties, including non-governmental organizations, and are frequently subject to economic and political considerations, such as taxation, nationalization, inflation, currency fluctuations and governmental regulation and approval requirements, which could adversely affect the economics of projects. These projects and investments could be adversely affected by war, civil disturbances and activities of foreign governments which limit or disrupt markets, restrict the movement of funds or supplies or result in the restriction of contractual rights or the taking of property without fair compensation.

Falconbridge performs a thorough risk assessment on a country-by-country basis when considering foreign activities and attempts to conduct business and financial affairs so as to protect against political, legal, regulatory and economic risks applicable to operations in the various countries where the Company operates, but there can be no assurance that Falconbridge will be successful in so protecting the Company. These projects and investments could also be adversely affected by changes in Canadian laws and regulations relating to foreign trade, investment and taxation.

Market Access

Global and regional demand for metals is influenced by regulatory and voluntary initiatives to restrict or eliminate the use of certain metals in particular products or applications. Impacts of such measures can be global, creating non-tariff barriers to international trade and affecting product design and specifications on a global basis. Such measures could affect the

balance between supply and demand and depress metal prices and treatment/refining charges. Metals with a limited number of major applications are most susceptible to changes in demand and price in response to such measures.

Production Technology

Falconbridge believes that the technology used to produce and process metals is significantly advanced and, in part due to high investment costs, subject only to slow technological change. However, there can be no assurance that more economical production or processing technology will be developed, nor that the economic conditions in which current technology is applied will remain the same.

Legal Proceedings

The nature of Falconbridge's business subjects the Company to numerous regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of the Company's business. The results of these legal proceedings cannot be predicted with certainty. There can be no assurance that these matters will not have a material adverse effect on results of operations in any future period, and a substantial judgment could have a material adverse impact on Falconbridge's business, financial condition, liquidity and results of operations.

Sulphuric Acid

Sulphur dioxide is a by-product from the smelting of copper, zinc, nickel and lead sulphide concentrates. Falconbridge captures sulphur dioxide to minimize acid rain emissions, and converts it into sulphuric acid. Due to increasingly strict environmental standards worldwide for sulphur dioxide emissions, involuntary production of sulphuric acid by smelters is growing. The balance of world acid production is largely based on elemental sulphur, whose supply is now a by-product of oil and gas production, and growing more rapidly than demand. Long term, these factors may make it more difficult to obtain satisfactory prices for sulphuric acid. However, Falconbridge's production of sulphuric acid cannot be reduced in response to low prices, or dropping sales volumes, without a corresponding reduction in production of metals.

Raw Material Procurement Risks

Procurement of raw materials involves the risks typically connected with commercial transactions, which can include trade barriers, political instability and problems due to local production conditions. In addition, Falconbridge's supply contracts provide that suppliers of concentrate may be released from their delivery obligations if certain "force majeure" events occur. Falconbridge's business operations could be adversely affected, at least temporarily, if supplies of raw materials are interrupted as a result of the imposition of trade barriers or other events and if Falconbridge is unable, on short notice, to shift to alternative sources of supply. Falconbridge also processes copper scrap, the availability of which in past years has been subject to significant fluctuations. The availability of scrap, blister copper and other material the Company processes can be significantly affected by competing demand from industrializing nations along with unforeseen production and logistical disruptions.

Evaluation of Disclosure Controls and Procedures

As of December 31, 2005, an evaluation of the effectiveness of the issuer's disclosure controls and procedures (as such term is defined under the rules adopted by the Canadian securities regulatory authorities and by the U.S. Securities Exchange Commission) was carried out by our management, under the supervision of, and with the participation of, our Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO"). Based upon that evaluation, the CEO and CFO concluded that as of such date our disclosure controls and procedures were effective such that information relating to us, including our consolidated subsidiaries, required to be disclosed by us in the reports we file or submit to such regulatory authorities (a) is recorded, processed, summarized and reported within the time periods specified under applicable securities laws and (b) is accumulated and communicated to our management, including our principal executive and principal financial officers, or persons performing similar functions, as appropriate, to allow timely decisions regarding disclosure.

Forward-Looking Information

Certain statements contained in this Management's Discussion and Analysis are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our assessment of the outlook for metal markets in 2006, (ii) Inco's offer to acquire all of the common shares of Falconbridge Limited and the benefits of such combination, (iii) our future financial requirements and funding of those requirements, (iv) our expectations with respect to our development projects, (v) our production forecast for 2006, (vi) our capital expenditure forecasts, and (vii) our dividend schedule. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those

expressed or implied by the forward-looking statements contained in this Management's Discussion and Analysis. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of Inco's offer to acquire all of our common shares, the ability to successfully compete against global metals and mining and exploration companies by creating through such a combination an enterprise of increased scale; strong demand for nickel, copper and other metals in emerging markets such as China; approximately $350 million per annum in pre-tax operating and other synergies and cost savings, and other benefits being realized based on the achievement of operational efficiencies from restructuring, integration and other initiatives relating to the combination of Falconbridge and Inco; the approvals or clearances required to be obtained by Inco and Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner; divestitures required by regulatory agencies being acceptable and completed in a timely manner; there being limited costs, difficulties or delays related to the integration of the Falconbridge's operations with those of Inco; the timely completion of the steps required to be taken for the eventual combination of the two companies; business and economic conditions generally; exchange rates, energy and other anticipated and unanticipated costs and pension contributions and expenses; the supply and demand for, deliveries of, and the level and volatility of prices of, nickel, copper, aluminum, zinc and other primary metals products and other metal products Inco and Falconbridge produce; the timing of the receipt of remaining regulatory and governmental approvals for the development projects and other operations; the continued availability of financing on appropriate terms for development projects; Falconbridge's costs of production and production and productivity levels, as well as those of its competitors; market competition; mining, processing, exploration and research and development activities; the accuracy of ore/mineral reserve estimates; premiums realized over LME cash and other benchmark prices; tax benefits/charges; the resolution of environmental and other proceedings and the impact on the combined company of various environmental regulations and initiatives; assumptions concerning political and economic stability in countries or locations in which Falconbridge operates or otherwise and the ability to continue to pay quarterly cash dividends in such amounts as Falconbridge's Board of Directors may determine in light of other uses for such funds and other factors.

Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this Management's Discussion and Analysis. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco and Falconbridge.

This is the end of the description of the business of Falconbridge as extracted without material amendment from Falconbridge's Management's Discussion and Analysis as disclosed in Falconbridge's 2005 Annual Report.

Information on the Falconbridge Group

The following description of the business of Falconbridge has been extracted without material amendment from Falconbridge's Management's Discussion and Analysis as of 25 April 2006, as filed with the Canadian Securities Administrators on 1 May 2006.

Information contained in this discussion is given as of April 25, 2006, unless otherwise indicated.

Unless otherwise noted, all amounts in this discussion are expressed in U.S. dollars.

Note: The financial results prior to June 30, 2005, as presented in this discussion, represent the consolidated results of Noranda Inc., which was renamed Falconbridge Limited after the amalgamation of Noranda Inc. and former Falconbridge Limited on June 30, 2005. Additional information on Falconbridge, including Falconbridge's Annual Information Form, is available on SEDAR at www.sedar.com

Corporate Overview

Falconbridge Limited is a global integrated copper and nickel producer with investments in integrated zinc and aluminum assets. The Company employs approximately 14,500 people at its operations and offices in 18 countries and is listed on the Toronto Stock Exchange (FAL.LV) and the New York Stock Exchange (FAL).

Falconbridge's goal is to deliver superior returns to shareholders by owning, developing and efficiently managing integrated copper and nickel operations and opportunistically investing in zinc, aluminum and other mining and metals processing activities. Falconbridge is focused on aggressively managing assets to maximize production, while minimizing invested capital.

References and Forward-Looking Statements

The following discussion and analysis should be read in conjunction with the interim consolidated financial statements of Falconbridge Limited ("Falconbridge" or the "Company") for the three months ended March 31, 2006 and the related financial statements and notes of Falconbridge Limited for the year ended December 31, 2005. This discussion contains forward-looking statements that involve risks, uncertainties and assumptions. Falconbridge's actual financial condition and results of operations could differ materially from those that may be contemplated by these forward-looking statements as a result of those risks, uncertainties and assumptions. For a detailed description of risks associated with forward-looking statements, please see "Forward Looking Information" on page 333.

Financial Summary

Falconbridge's consolidated net income totaled $462 million (basic earnings per share of $1.23 and diluted earnings per share of $1.21) for the first quarter of 2006. This compares with net income of $176 million (basic earnings per share of $0.58 and diluted earnings per share of $0.57) for the first quarter of 2005. Net income increased 163% and earnings per basic share increased 112% versus the same period last year.

Financial Impact of Merger of Noranda and the former Falconbridge

Prior to the merger of Noranda and Falconbridge, Noranda had consolidated the results of operations and the financial position of former Falconbridge in its financial statements reflecting its ownership of 58.5% of the common shares. On May 5, 2005, Noranda increased its ownership in Falconbridge to 90.8%, and to 100% on June 30, 2005 through the issuance of approximately $2.5 billion in common shares. Upon completion of the merger, the combined entity was renamed Falconbridge Limited.

The preliminary fair value of the 41.5% of the assets and liabilities acquired from former Falconbridge exceeds the book value by approximately $1.4 billion, which has been allocated to the acquired assets and liabilities at their respective preliminary fair values. Falconbridge has not yet finalized the allocation of the purchase price related to this acquisition and it will be refined as information relating to the valuation of the assets and liabilities is finalized.

Summary of Earnings, Earnings Per Share, Cashflow and Financial Position

(US$ millions, except per share data)	Three months ended March 31, 2006	March 31, 2005
Results of operations		
Revenues	**2,858**	1,894
Income generated by operating assets[1]	**739**	459
Net income	**462**	176
Net income per common share		
– basic	**$1.23**	$0.58
– diluted	**$1.21**	$0.57

(US$ millions, except per share information)	March 31, 2006	March 31, 2005
Earnings Available to Common Shareholders		
Net income	**462**	176
Deduct		
Preferred share dividends	**6**	3

Total Capital Investments	**156**	110

Financial position – as at (US$ millions)	March 31, 2006	Dec. 31, 2005
Cash and cash equivalents	**1,000**	886
Operating capital assets	**6,728**	6,803
Development projects	**1,794**	1,707
Total assets	**12,876**	12,418
Long-term debt	**2,534**	2,598
Preferred share liabilities[2]	**876**	876
Shareholders' equity	**5,474**	5,031

[1] Please see the detailed definition provided under Supplemental Performance Measures below.
[2] Includes the current portion of $500 million of preferred share liabilities which will be redeemed on April 26, 2006, as previously announced.

Supplemental Performance Measures

The Management Discussion and Analysis contains a number of measures that are not defined by generally accepted accounting principles ("GAAP"). The measures, as calculated by the Company, may not be comparable to similar measures presented by other issuers.

Income generated from operating assets is defined as follows: net income before interest expense, net; corporate and general administration; research, development and exploration; minority interest in earnings of subsidiaries; gain, net of restructuring costs and other; and tax expense. Since this measure captures the Company's key revenues and operating expenses of assets currently in operation, income generated from operating assets is a key performance measurement that management uses to evaluate the performance of both individual assets and business units.

Net-debt-to-capitalization ratio is calculated as follows:

(US$ millions)		March 31, 2006	Dec. 31, 2005
Long-term debt		2,534	2,598
Preferred share liabilities[1]		876	876
Debt due within one year[2]		353	353
Cash and cash equivalents		(1,000)	(886)
Net debt	(1)	2,763	2,941
Interests of other shareholders		56	54
Shareholders' equity		5,474	5,031
Stockholders' interests (equity)	(2)	5,530	5,085
Net debt plus capitalization	(3)=(1)+(2)	8,293	8,026
Net-debt-to-capitalization ratio	(1)/(3)	33.3%	36.6%

[1] Includes the current portion of $500 million of preferred share liabilities which will be redeemed on April 26, 2006, as previously announced.
[2] Excludes the current portion of $500 million of preferred share liabilities which will be redeemed on April 26, 2006, as previously announced.

Management believes the presentation of this measure is relevant and useful for investors when assessing the Company's liquidity and its ability for growth and investment. This measure should not be considered an alternative to liquidity as determined under generally accepted accounting principles.

Integrated cash cost or operating cash costs include all cash costs of operations and selling costs, net of processing credits and by-product credits, and are calculated below. Continuing costs incurred during shutdowns or strikes are excluded. Integrated cash costs are furnished to provide additional information about the cash generating capabilities of the Company's business units and operations. Since this measure captures the key costs of operations and the impact of our processing credits and the prices of our by-products, it is a key performance measurement that management uses to evaluate our costs and operations. Integrated cash cost is not intended to be considered as an alternative to determining "mining, processing and refining costs" as determined under GAAP.

(US$ millions, except as noted)	Copper (Integrated)		Nickel (Mined)		Zinc (Mining)		Aluminum [1] (Integrated)	
	Q1-06	Q1-05	Q1-06	Q1-05	Q1-06	Q1-05	Q1-06	Q1-05
Cost of operations, as reported	320	241	214	170	52	50	77	71
Non-mining costs	–	–	–	–	(20)	(24)	–	–
By-product and processing credits	(305)	(225)	(80)	(58)	(23)	(12)	(20)	(21)
Processing fee on sale of concentrates	48	26	–	–	35	28	–	–
Purchases of raw materials	–	–	–	–	–	–	32	28
Other operating and non-cash costs	5	39	11	21	6	8	4	3
Cash costs – net	68	81	145	133	50	50	93	81
Production – (000s lbs.)[2]	224,618	231,350	43,029	45,247	120,678	124,984	137,875	136,267
Integrated cash cost per pound – $	0.30	0.35	3.38	2.94	0.41	0.40	0.67	0.59

[1] Represents Primary operations only: Aluminum segment cost of operations reported for Q1-06 totals $156 million (Q1-05 $139 million), which includes foil processing and other costs of $79 million (Q1-05 - $68 million).
[2] Volumes as shown are based on production, except for Aluminum business which represents shipments of primary aluminum.

Integrated Operations

As an integrated producer of metals, Falconbridge's operations include mines and metallurgical facilities which provide the Company with maximum flexibility in both minimizing costs and maximizing operating performance in processing its minerals. This integration also reduces the Company's exposure to treatment charge fluctuations and shipping rate volatility.

When milling, smelting or refining capacity exceeds the Company's own mine production, Falconbridge acquires third-party minerals and concentrates to utilize this capacity and realizes incremental treatment revenues. These treatment revenues provide incremental income to the Company and absorb fixed costs at metallurgical sites, with custom milling, smelting and refining operations being conducted throughout the Company as capacity allows. Operations conducting custom feed processing of copper and nickel feeds are located in North and South America, and Norway. The flexibility of the processing facilities also enables the company to treat complex ores, concentrates and secondary feeds.

The price paid to suppliers of the custom feed materials varies with the prevailing price of the metals being treated and as such, Falconbridge's exposure to increasing metals prices is primarily based upon its own mine production. The Company's continued focus on the identification and development of long-life, high-quality copper and nickel mining assets will continue to increase its leverage to copper and nickel while current metallurgical site infrastructure will minimize the investment required to bring new deposits into commercial production.

Financial Results

Revenues for the first quarter of 2006 were $2.9 billion, 51% higher than revenues of $1.9 billion in the same period of 2005. The increase was mainly due to higher realized metal prices and copper and nickel sales volumes, increased revenue contribution from by-product molybdenum credits and improved copper concentrate treatment and refining terms charged by Falconbridge copper smelters. Business unit revenues were 83% higher for copper, 9% higher for nickel, 67% higher for zinc and 14% higher for aluminum.

Realized prices were as follows:

Realized Metal Prices (US$/lb.)	First Quarter 2006	First Quarter 2005	Y-O-Y Change
Copper	2.29	1.54	49%
Nickel	6.84	7.03	(3%)
Zinc	1.07	0.63	70%
Aluminum	1.13	0.92	23%
Lead	0.63	0.49	29%

Operating expenses totaled $2.1 billion in the first quarter, compared to $1.4 billion in the same period last year, primarily due to the higher value of raw material feeds. Mining, processing and refining costs increased to $743 million from $595 million in the first quarter of 2005 due to higher levels of copper anode and copper cathode production, increased refined nickel production, higher energy and supplies/consumables costs, and the impact of a weaker U.S. dollar on operating costs at all Canadian and South American operations. The average value of the Canadian dollar increased 6% to US$0.87 from US$0.82 during the first quarter of 2005.

The value of raw material feed purchases was $1,207 million, 67% higher than $722 million in 2005 due to higher metal prices and increased custom feed processing at the Nikkelverk nickel refinery and at all copper smelting and refining operations. Higher purchased raw materials values are recovered at the time of sale of the metals contained in the materials treated and are hedged at the time of purchase.

Depreciation, amortization and accretion expense increased to $169 million from $118 million a year ago, with $30 million of the increase being attributable to the amortization of the fair value increment related to the purchase of the former Falconbridge minority shareholders' interest and the resulting increase in the book value of the assets acquired. Net interest expense increased to $32 million from $28 million in the first quarter of last year due to the impact of junior preferred share liabilities issued pursuant to the issuer bid completed in early May 2005. Minority interest in earnings of subsidiaries decreased to $2 million from $94 million largely as a result of the elimination of the former Falconbridge minority share ownership. Tax expenses recorded increased to $222 million from $124 million during the first quarter of 2005, due to the overall increase in profitability.

Income generated by operating assets for the first quarter was $739 million, 61% higher than $459 million in the first quarter of 2005. Income generated by operating assets increased 112% to $489 million in the copper business, decreased 24% to $148 million in the nickel business, increased from $6 million to $64 million in the zinc business and increased 34% to $47 million in the aluminum business.

Net income totaled $462 million, or $1.23 per basic common share and $1.21 per diluted common share, for the first quarter 2006, 163% higher than net income of $176 million or $0.58 per basic and $0.57 per diluted common share in the same period of 2005. Higher net income reflects higher realized metal prices and higher treatment and refining charges received at copper smelters and refineries.

Consolidated assets totaled $12.9 billion as at March 31, 2006, compared with $12.4 billion at the end of 2005. The increase is primarily due to the investment of additional capital in advancing brownfield and greenfield expansion development projects, higher working capital levels due to increasing metals prices and cash retained in the business generated by higher earnings.

Summary of Quarterly Results

	Three months ended							
	March 31,		December 31,		September 30,		June 30,	
(US$ millions, except per share data)	2006	2005	2005	2004	2005	2004	2005	2004
Revenues	**2,858**	1,894	2,165	1,867	2,006	1,662	2,052	1,632
Net Income	**462**	176	280	143	214	118	202	108
Basic net income per share	**$1.23**	$0.58	$0.75	$0.47	$0.57	$0.39	$0.62	$0.35
Diluted net income per share	**$1.21**	$0.57	$0.74	$0.47	$0.56	$0.38	$0.61	$0.35

Corporate Developments

Inco Offer

On October 11, 2005, Inco Limited announced an offer to acquire all outstanding common shares of Falconbridge. The offer was comprised of part cash and part Inco common shares, which when pro-rated subject to the maximum amounts offered would provide Cdn$7.50 and 0.524 Inco shares for each Falconbridge common share. (At the market price of Inco's stock on April 24, 2006, the offer is valued at approximately Cdn$40.67 per Falconbridge common share). Both Boards of Directors unanimously endorsed the acquisition offer and the Falconbridge Board recommended the Company's shareholders tender their shares to the offer, which remains open for acceptance to June 30, 2006.

The combined organization, which would be known as Inco Limited, would be one of the world's premier mining and metals companies. It would be the world's largest producer of nickel and eighth-largest producer of copper, and would also operate integrated zinc and aluminum businesses. The new company would have one of the mining industry's most attractive portfolios of low-cost, profitable growth projects and would benefit from estimated annual synergies of approximately $350 million – with this run rate beginning in mid-2008.

Inco has obtained regulatory clearances from the Canadian Competition Bureau and it continues to proceed to meet all information and other requests from the U.S. Department of Justice and the E.U. competition authorities.

Statements regarding the combination of Falconbridge and Inco are subject to various risks and assumptions. See "Forward-looking Information" on page 333.

Redemption of Junior Preference Shares

On March 16, 2006, Falconbridge announced its plans to redeem a total of 20 million shares, or $500 million, of its outstanding Junior Preference Shares, on April 26, 2006, based upon shareholders of record on March 22, 2006. Falconbridge will utilize existing cash balances to fund the redemption.

Statements regarding the financing activities of Falconbridge are subject to various risks and assumptions. See "Forward-looking Information".

Review of Operations

Copper Business Unit

		Q1 2006	Q1 2005	Y-O-Y Change (%)
Production:	mined copper (MT)	**104,800**	106,900	(2%)
	refined copper (MT)	**143,100**	121,600	18%
	mined zinc (MT)	**37,600**	47,600	(21%)
	refined zinc (MT)	**37,300**	38,000	(2%)
Sales:	contained copper (MT)	**280,800**	210,800	33%
	contained zinc (MT)	**41,500**	56,100	(26%)
Revenues ($ millions)		**1,768**	968	83%
Realized copper price ($/lb.)		**2.29**	1.54	49%
Mining, processing and refining costs($ millions)		**320**	242	32%
Cash costs ($/lb. of copper)		**0.30**	0.35	(14%)
Income from operating assets ($ millions)		**489**	231	112%

Revenues

For the first quarter of 2006, copper business revenues increased 83% to $1,768 million from $968 million in the first quarter of 2005, reflecting higher realized copper and zinc prices and higher copper sales volumes. Copper sales volumes totaled 280,800 tonnes, up 30% from the same quarter in 2005, as output from all copper smelters and refineries increased during the quarter. Sales of by-product zinc volumes totaled 41,500 tonnes versus 56,100 tonnes during the first quarter of 2005. The majority of the zinc sales decrease was attributable to lower production at Antamina that resulted from lower zinc grades that were mined.

During the quarter, copper revenues were higher as the realized copper price of $2.29/lb. increased 49% compared to $1.54/lb. realized in the same period in 2005. Also contributing to copper business revenues was significantly higher zinc prices, as well as increased sales of by-product molybdenum concentrate from the Antamina and Collahuasi mines.

Costs

Total operating expenses for the copper business increased to $1,279 million from $737 million in the first quarter of 2005. Mining, processing and refining costs increased to $320 million from $242 million in the same period last year as a result of the impact of a weaker U.S. dollar, higher energy and supply costs, and increased smelter and refinery output. The value of purchased raw material feeds increased to $871 million from $440 million in the first quarter of 2005 due to the significant rise in copper prices and the increased production and sales from the copper smelters and refineries.

Depreciation increased to $88 million from $55 million due to the amortization of the fair value increment related to the acquisition of the former Falconbridge and due to increased copper sales volumes from Kidd Creek. The operating cash cost of producing a pound of copper in the first quarter of 2006 decreased to $0.30/lb. from $0.35/lb. in the first quarter of 2005 due to higher credits from by-product sales and improved smelting and refining charge revenues.

Income generated from operating assets

Operating income for the copper business in the first quarter of 2006 increased 112% to $489 million from $231 million a year ago as a result of significantly higher revenues that were somewhat offset by higher costs. Operating income also benefited from higher treatment and refining charges and increased throughput at all three copper smelters and both copper refineries. Partially offsetting the stronger revenues were increased costs resulting from the impact of a weaker U.S. dollar on operating costs and higher energy and supply costs.

Production

During the first quarter of 2006, copper mine production from Canadian and South American operations totaled 104,800 tonnes, compared to 106,900 tonnes a year ago. Lower copper production at Collahuasi was partially offset by higher production from Antamina and Kidd Creek. By-product zinc-in-concentrate production was 21% lower at 37,600 tonnes versus 47,600 tonnes in the first quarter of 2005. Lower by-product zinc mine production recorded at Antamina was partially offset by higher zinc concentrate production at Kidd Creek.

At Antamina, copper-in-concentrate production was 34,200 tonnes, an increase of 10% from the same quarter in 2005 due to richer copper grades (1.47% vs. 1.41%) resulting from a change in the ore type mix. Partially offsetting higher copper output at Antamina was lower zinc grades and production due to the intrinsic variability for such complex skarn deposits.

Copper production at the Lomas Bayas mine was 15,600 tonnes, down 4% from the same quarter last year, mainly due to adverse weather conditions.

Kidd Creek mined copper production was 23% higher at 13,800 tonnes due to higher copper head grades and mill throughput.

At the Collahuasi mine, the Company's share of production totaled 41,200 tonnes versus 48,400 tonnes in the same quarter a year ago. Production was lower primarily due to lower head grades (1.09% vs. 1.25%) and lower mill throughput associated mostly with material handling problems at the primary crusher and conveyor system and due to an electrical failure of the motor in one of the SAG mills. The 10-day outage of the affected mill occurred in late March.

At the Altonorte smelter, copper anode production of 66,000 tonnes was 14% higher than the same period last year due to improved operations. As well, in 2005 the Altonorte smelter had a scheduled shutdown which reduced production.

Refined copper production was 143,100 tonnes in the first quarter of 2006 versus 121,600 tonnes in the first quarter of 2005. Kidd Creek refinery production was up 7% to 33,700 tonnes due to higher mine production and increased custom feed processing. The CCR refinery cathode production increased to 87,200 tonnes during the first quarter from 67,000 tonnes in the same quarter a year ago, as a result of higher anode production at the Horne smelter and increased processing of Inco sourced copper anodes.

Nickel Business Unit

		Q1 2006	Q1 2005	Y-O-Y Change (%)
Production:	mined nickel (MT)	**19,500**	20,500	(5%)
	refined nickel (MT)	**28,400**	27,900	2%
	mined copper (MT)	**8,900**	8,600	3%
Sales:	contained nickel (MT)	**29,600**	27,800	6%
	contained copper (MT)	**13,200**	15,500	(15%)
Revenues ($ millions)		**581**	535	9%
Realized nickel price ($/lb.)		**6.84**	7.03	(3%)
Realized ferronickel price ($/lb.)		**6.63**	6.70	(1%)
Mining, processing and refining costs ($ millions)		**214**	170	26%
Cash costs ($/lb. of nickel) - INO		**2.60**	2.51	4%
Cash costs ($/lb. of nickel) - Falcondo		**4.82**	3.88	24%
Cash costs ($/lb. of nickel) - NBU		**3.38**	2.94	15%
Income from operating assets ($ millions)		**148**	194	(24%)

Revenues

For the first quarter of 2006, nickel business revenues of $581 million increased from $535 million in the first quarter of 2005. Nickel sales volumes increased 6% to 29,600 tonnes from 27,800 tonnes in the first quarter of 2005. By-product copper sales volumes of 13,200 tonnes decreased 15% from 15,500 tonnes a year earlier.

Integrated Nickel Operations (INO) sales volumes of refined nickel in the quarter were essentially unchanged at 21,400 tonnes. At Falcondo, ferronickel sales volumes increased by 26% to 8,200 tonnes from 6,500 tonnes in the first quarter of 2005, which reflects the depletion of the inventory build-up that resulted from stainless steel market destocking in the second half of 2005. Cobalt sales of 1,100 tonnes in the quarter increased 22% from the same quarter in 2005. Precious metals revenues increased by $14 million in the first quarter of 2006 compared to the same period in 2005.

Realized nickel prices of $6.84/lb. decreased by 3% in the quarter compared with $7.03/lb. in the corresponding period in 2005. Realized ferronickel prices of $6.63/lb. decreased by 1% from $6.70/lb. in the first quarter of 2005. Realized cobalt prices of $12.41/lb. decreased by 29% in the quarter, compared with $17.44/lb. in the same period in 2005.

Costs

Total operating expenses increased to $433 million from $341 million in the first quarter of 2005. Mining, processing and refining costs increased to $214 million from $170 million in the same period last year largely due to the exchange rate impact on operating costs at Canadian operations, increases in energy prices and increased sales volumes. The value of purchased raw material feeds increased to $166 million from $142 million in the first quarter of 2005 due to increased purchased material volumes and higher payable copper prices. The operating cash cost per pound of mined nickel for all of Falconbridge (including INO and Falcondo) was $3.38 in the first quarter of 2006 compared with $2.94 for the same period in 2005. The operating cash cost of producing a pound of nickel from INO mines, was $2.60. The $0.09/lb., or 4%, increase from 2005 costs was the result of the stronger Canadian dollar on operating costs at Canadian operations, higher energy costs, and lower ore grades. These higher costs offset the impact of increased by-product credits that resulted from higher by-product metal prices.

At Falcondo, operating cash cost per pound of ferronickel was $4.82 in 2006 compared with $3.88 in 2005. The increase in costs was largely due to the increase in the oil price, as average oil costs rose from $38.83 per barrel in 2005 to $52.15 per barrel in 2006. Oil is the source of fuel for the electricity plant operated on site and represented 71% of total operating costs at Falcondo during the first quarter of 2006.

Income generated by operating assets

First quarter operating income for the nickel business totaled $148 million, compared to $194 million in the first quarter of 2005. The $46 million decrease was mainly due to the impact of higher costs of operations, including higher energy costs and the higher value of purchased raw materials. Depreciation charges increased due to the amortization of the fair value

increment associated with the merger with Noranda. Higher costs offset the beneficial impact of slightly higher sales volumes during the quarter versus the same period a year ago.

Production

Total refined nickel production increased 2% to 28,400 tonnes during the quarter versus 27,900 tonnes during the same period in 2005. Total mined nickel production was 1,000 tonnes lower at 19,500 tonnes.

Sudbury mines production was 4,500 tonnes of nickel and 6,200 tonnes of copper during the first quarter of 2006, compared with 6,100 tonnes of nickel and 6,000 tonnes of copper in the first quarter of 2005. Sudbury mined nickel production was lower due to challenging ground conditions at the Thayer Lindsley mine and lower nickel ore grades. At Raglan, nickel-in-concentrate production in the quarter was 5,300 tonnes and copper production was 1,300 tonnes, compared with 6,000 tonnes of nickel and 1,500 tonnes of copper in 2005. The decrease in Raglan production was due to the impact of lower ore grades. The Montcalm mine produced 2,800 tonnes of nickel and 1,400 tonnes of copper compared to 2,000 tonnes and 1,100 tonnes of nickel and copper respectively in 2005. The increases in production at Montcalm were due to increases in tonnes mined and improved ore grades.

At the Sudbury smelter, nickel-in-matte production in the first quarter of 2006 decreased to 15,800 tonnes from 17,400 tonnes in the same period of 2005, as a result of the treatment of lower concentrate tonnages (due to reduced mine feeds) with lower feed grades.

At the Nikkelverk refinery, nickel production during the quarter was 21,500 tonnes in the first quarter of 2006, essentially unchanged from the same period in 2005.

The Falcondo ferronickel refinery produced 6,900 tonnes of nickel in ferronickel, compared with 6,500 tonnes in the first quarter of 2005.

Other Developments

A two-week Sudbury smelter shutdown is planned in May 2006 as part of the Company's ongoing preventative maintenance program.

Zinc Business Unit

		Q1 2006	Q1 2005	Y-O-Y Change (%)
Production:	mined zinc (MT)	**64,800**	67,100	(3%)
	refined zinc (MT)[1]	**15,400**	16,700	(8%)
	mined lead (MT)	**19,000**	18,900	1%
	refined lead (MT)	**22,400**	21,600	4%
Sales:	contained zinc (MT)[2]	**68,400**	94,800	(28%)
	contained lead (MT)	**29,700**	26,500	12%
Revenues ($ millions)		**199**	119	67%
Realized zinc price ($/lb.)		**1.07**	0.63	70%
Mining, processing and refining costs ($ millions)		**52**	50	4%
Cash costs ($/lb. of zinc)		**0.41**	0.40	3%
Income from operating assets ($ millions)		**64**	6	

[1] 25% of the Noranda Income Fund CEZ refinery zinc production
[2] Brunswick mine concentrate contained zinc and third party purchased concentrate sales to Noranda Income Fund

Revenues

Zinc business revenues increased to $199 million, an increase of 67% compared to the $119 million recorded during the first quarter of 2005. The increased revenue was due to higher prices realized for zinc and other by-products. The average realized price per pound of zinc during the first quarter was $1.07/lb., an increase of 70% compared to $0.63/lb. in the same period last year. The average realized price per pound of refined lead during the first quarter was $0.63/lb., versus $0.49/lb. in the same period last year. Silver LME prices increased to $9.69 per ounce from $6.97 per ounce in the same quarter a year ago.

In the first quarter of 2006, sales volumes of zinc-in-concentrates decreased 28% to 68,400 tonnes from 94,800 tonnes in the first quarter of 2005. Lower zinc sales volumes reflect the buildup of inventory to be shipped to the Noranda Income Fund in the second quarter and the timing of vessel shipments and arrivals. First quarter 2006 lead metal sales increased to 29,700 tonnes from 26,500 tonnes in the same period a year ago.

Costs

Mining, processing and refining costs increased to $52 million from $50 million in the same period last year, while the value of purchased raw materials increased to $76 million from $54 million in the first quarter of 2005. The value of raw material feeds increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to $0.41 in the first quarter of 2006 from $0.40 for the same period in 2005 due to a stronger Canadian dollar and lower production at the Brunswick Mine, partially offset by the benefits from higher by-product copper and silver prices.

Income generated by operating assets

The first quarter 2006 operating income of the zinc business was $64 million, compared with $6 million for the first quarter of 2005. The $58 million improvement resulted primarily from the higher metal prices.

Production

Contained zinc production was 64,800 tonnes in the first quarter of 2006, compared to 67,100 tonnes in the same period in 2005. The decrease in production is primarily attributable to lower ore head grades and the residual effects of a rock burst which occurred at the Brunswick Mine in November, 2005. Falconbridge's share of refined zinc production at the Noranda Income Fund CEZ Refinery totaled 15,400 tonnes, versus 16,700 tonnes during the first quarter of 2005. By-product copper-in-concentrate production at the Brunswick mine increased to 2,200 tonnes from 1,300 tonnes during the first quarter of 2005, primarily due to a higher copper grade and improved recoveries in 2006.

Lead metal production at the Brunswick smelter was 22,400 tonnes in the first quarter of 2006 compared to 21,600 tonnes in the same period in 2005, due to an unplanned maintenance shutdown during first quarter 2005 which resulted in lower production.

Aluminum Business Unit

	Q1 2006	Q1 2005	Y-O-Y Change (%)
Production: primary (MT)	**62,300**	61,400	1%
Sales: primary (MT)	**56,400**	56,600	–
Shipments: fabricated (MT)	**46,400**	45,600	2%
Revenues ($ millions)	**310**	271	14%
Realized aluminum price ($/lb.)	**1.13**	0.92	23%
Mining, processing and refining costs ($ millions)	**156**	139	12%
Cash costs ($/lb. of aluminum)	**0.67**	0.59	14%
Income from operating assets ($ millions)	**47**	35	34%

Revenues

Aluminum business revenues increased to $310 million, 14% higher than the $271 million recorded during the first quarter of 2005. Third-party sales of primary aluminum were essentially the same at 56,400 tonnes, compared to the first quarter of 2005. First quarter rolled products sales volumes also increased by 2% to 46,400 tonnes compared to 45,600 tonnes the same period a year ago. The realized primary aluminum price increased 23% to $1.13/lb. versus $0.92/lb. in the same period in 2005.

Costs

Aluminum business operating expenses increased 11% to $263 million compared to $236 million during the first quarter of 2005. Mining, processing and refining costs increased to $156 million from $139 million in the same period last year. Operating costs were impacted by significantly higher natural gas costs at the Gramercy alumina refinery and at the rolling mills, along with increased electrical energy costs at the New Madrid smelter. The increased electrical energy costs came into effect under the new fifteen-year electricity supply contract. These rates compare very favourably with electricity costs

incurred by other U.S. aluminium producers. The value of purchased raw materials increased to $94 million in the first quarter 2006 compared to $85 million the same period last year, due to increased aluminum prices.

The operating cash cost per pound of primary aluminum metal production was $0.67/lb. in the first quarter of 2006, an increase from $0.59/lb. for the same period in 2005. Higher electrical energy and natural gas costs were the major contributors to the higher unit costs. The cost per pound at the rolled products division was 7% higher in the first quarter of 2006, compared with the same period in 2005, resulting from higher natural gas and purchased aluminum metal costs.

Income generated by operating assets

First quarter 2006 operating income for the aluminum business was $47 million compared with $35 million for the first quarter of 2005. The $12 million increase was mainly due to the higher realized aluminum price, partly offset by higher power and natural gas costs.

Production

In the first quarter of 2006, primary aluminum production was higher at 62,300 tonnes, compared to 61,400 tonnes in the same period in 2005. For the rolled products operations, shipments were higher at 46,400 tonnes compared with 45,600 tonnes for the first quarter of 2005.

Other Developments

At the Huntingdon rolling mill, the installation and ramp-up of a new hot aluminum caster was completed, two months ahead of schedule. With additional annualized capacity of 33 million pounds, the new caster was running at capacity levels by the end of the first quarter, allowing the rolled products division to take advantage of exceptionally strong end-use markets for aluminum sheet and foil in North America.

PRODUCTION FORECAST

Production		2006 Forecast (tonnes)	2005 Actual (tonnes)
Copper:	Mined	**475,000**	462,000
	Refined	**635,000**	544,000
Nickel:	Mined	**82,000**	80,000
	Refined	**115,000**	114,000
Zinc:	Mined	**460,000**	454,000
	Refined[1]	**210,000**	182,000
Aluminum	Primary	**250,000**	246,000
	Fabricated	**195,000**	178,000

[1] Includes 100% of Kidd Creek refinery production and 25% of the Noranda Income Fund CEZ Refinery production

LABOUR AGREEMENTS

During the quarter, labour agreements were renewed at the Falcondo ferronickel operation in the Dominican Republic, the Horne smelter in Rouyn, Quebec and with supervisory and administrative personnel at the St. Ann bauxite mine in Jamaica. Negotiations at the Brunswick Mine, Brunswick Smelter and Bulk Handling Operations in New Brunswick, as well as at General Smelting in Quebec, are ongoing.

In the second quarter of 2006, the following collective agreements are up for renewal:

- Raglan Mine (Quebec) – April 30
- Lomas Bayas (Chile) – April 30
- Nikkelverk (Norway) – May 31

DEVELOPMENT PROJECTS UPDATE

Copper Projects

Collahuasi, Chile

The completion of the mill expansion and transfer of mining operations to the Rosario pit was completed in 2005 and since start-up the operating experience has demonstrated the potential to increase the throughput of Collahuasi from the initial design capacity of 110,000 tonnes per day to over 150,000 tonnes per day. The focus of the management team is on the continued optimization of the current facilities through a series of debottlenecking initiatives which will allow for increased production.

Further expansion is also being assessed due to the existing large and growing resource base. Although the current resource base could support further expansion on its own, exploration efforts have also identified a new high grade zone (named "Rosario West"), which is approximately 250 metres south of the Rosario pit. In addition, other geological anomalies have also been identified which could further increase the size of the Rosario West resource, currently estimated to be in excess of 250 million tonnes of 1.5% copper. The strategy is to further define the potential of this new resource which, given its size and high copper grades, could provide the most profitable ore to support a further expansion in copper production.

Antamina, Peru

Adding additional grinding capacity is being assessed with the potential installation of a pebble crushing circuit which would assist in the crushing of ores and increase the overall throughput and production of metal in concentrate. Engineering is currently being completed with a decision to implement expected in 2006.

Lomas Bayas Expansion, Chile

As part of the Company's review of the Fortuna de Cobre deposit, the development of the exploration tunnel began in March 2005 and is now complete. Construction of the pilot plant was completed in August 2005 and pilot testing is expected to be completed in August 2006. The results of conceptual studies to optimize the development of Fortuna and integration with Lomas are being assessed. A decision on which alternative to pursue will be made later in 2006.

Kidd Mine D Project, Canada

Work on the shaft bottom and lateral development was completed in the first quarter of 2006. Production from block three is expected to begin in the third quarter of 2006, with project completion expected by the end of 2006.

El Pachón, Argentina

Located in Argentina and situated less than five kilometres from the Chilean border and the Las Pelambres copper mine, El Pachón is a larger copper deposit with measured and indicated resources of 724 million tonnes of copper grading 0.65%. In 2006, work will progress in road re-opening, environmental baseline data collection, and progression of the project towards the feasibility gate. The study has been initiated and selection of an engineering firm is targeted for the beginning of May 2006.

El Morro, Chile

The El Morro deposit is a large copper porphyry with high gold co-product credits with inferred resources of 466 million tonnes 0.61% copper and 0.50 g/t gold. In April 2006, Falconbridge will complete a 30,000-metre drilling program (delineation, in-fill and metallurgical drilling) required to support the work plan to achieve the feasibility stage. Samples for metallurgical test work are being collected and laboratory work has started.

Nickel Projects

Raglan Mine Optimization, Canada

With the first phase complete, focus has shifted to developing the phase II scope. The second phase of Raglan's optimization will focus on utilizing increased mill capacity by expanding site infrastructure and ore production to allow for the mining, milling and processing of 1.3 million tonnes of ore annually, resulting in approximately 30,500 tonnes of annual contained nickel production. Scoping study work has been initiated. This phase is targeted to be completed in early 2008.

Nickel Rim, Canada
Vent shaft sinking, which began in February 2005, is now at 1,307 metres and is ahead of schedule. Main shaft sinking began in April 2005 and is now at 672 metres. This project is expected to be completed in 2009, with production starting in 2009.

Koniambo, New Caledonia
Falconbridge continued to advance the Koniambo ferronickel project in New Caledonia, a joint venture between Falconbridge and SMSP. The current focus is on the advancement of detailed engineering and on early construction activities with a focus on site preparation. Discussions continue with government authorities to refine the necessary operating and construction permits. Koniambo Nickel will produce 60,000 tonnes of nickel with start-up expected in 2009/2010.

Kabanga, Tanzania
The Kabanga deposit is a joint venture between Falconbridge and Barrick Gold in Tanzania. The scoping study drilling program and engineering studies are now complete and the scoping study documentation was delivered at the end of the first quarter of 2006. The companies continued to upgrade the resource to measured and indicated categories to support the work plan and diamond drilling is ongoing with seven drills in the ground to define and expand the resource. In addition, systematic exploration of the under-explored Kabanga licence have been initiated and select regional targets are being evaluated.

Zinc Projects
Lennard Shelf, Australia
Falconbridge's Board of Directors has approved the restart of the Lennard Shelf mining operations in Australia, in which the Company has a 50% earn-in right. The other 50% is held by Teck Cominco. The operations are presently under care and maintenance. The mine is expected to produce 70,000 to 80,000 tonnes of zinc per year, on a 100%-basis, for four to five years. The estimated capital cost of the restart is A$23 million on a 100% basis, with an additional A$5 million in pre-production costs. First concentrate production is planned for early 2007.

Exploration Update

Brazil
During the quarter, Falconbridge announced a preliminary inferred resource estimate for two new significant nickel deposits on its Araguaia Nickel Laterite properties in the Para State of northern Brazil. An extensive exploration program on these promising properties is being conducted and diamond drilling continues with six diamond drills. Two deposits are being delineated on the project, the largest at this point being the Serra do Tapa deposit. The second deposit, Vale dos Sonhos, is located 10 kilometres to the southeast.

Of the holes drilled at the deposits to date, 350 contain mineralized intercepts with grades greater than 1% nickel and 186 were below cut-off. Work is in progress to establish a protocol for completing sampling for initial metallurgical test work that will be used to support an economic scoping study. In addition, drilling continues to delineate extensions of the known resources. This work will continue through 2006. Background information with respect to the project can be obtained by referring to the previous press release dated, September 6, 2005.

Market Review

Copper
The LME cash copper prices ranged from a low of $2.06/lb. to a high of $2.51/lb. and averaged $2.24/lb. during the first quarter of 2006, up from an average of $1.95/lb. during the fourth quarter of 2005. LME stocks rose 28,450 tonnes during the first quarter to 120,675 tonnes. The deliveries made into exchange warehouses, primarily driven by the Chinese SRB short covering, failed to put any downward pressure on the copper price.

While North American cathode demand remained solid during the quarter, high volumes of Chilean imports in December and January negatively impacted spot selling opportunities and premiums. Cathode fundamentals improved considerably in March with consumer order books now full until the third quarter. Critically low exchange stocks continue to riddle the market, particularly in Europe where consumers are relying on the spot market for 20% of their 2006 requirements. U.S spot copper metal premiums dipped to $0.035/lb. early in the quarter, but rebounded to the $0.0575-$0.060/lb. level by quarter end. Meanwhile, European premiums have risen to $150-180/mt due to extremely low inventories.

The global supply of copper concentrate has been adversely affected in the first quarter relative to 2005. In 2006, approximately 250kt of copper in concentrate has been lost so far due to supply disruptions as a result of labor disputes, equipment failures and shortages as well as lower grades and mining rates. Presently, spot treatment and refining terms have weakened and are expected to decline below benchmark terms as growth in smelting capacity, particularly in China and India, competes for diminishing availability of concentrates.

China continues to grow as one of the largest consumers of copper and remains heavily dependent on imports. The ongoing expansion of the Chinese domestic smelting and refining industry, combined with favourable terms for scrap and concentrate, reduced the rate of import growth of refined copper to 1.8% year over year in 2005, but increased scrap and concentrate imports by 22% and 40% respectively.

The copper market remains very vulnerable to supply disruptions, rising capital and operating costs as well as labor/material shortages that may hinder the pace of mine development. Currently, a global market deficit of 118,000 tonnes is forecast for 2006. Higher copper prices are expected to persist as positive fundamentals and fund involvement provide a favorable market environment.

Nickel

The LME cash nickel price ranged from a low of $6.13/lb. to a high of $6.96/lb. and averaged $6.72/lb. during the first quarter of 2006. This compares against an average of $6.96/lb. during the first quarter of 2005. The average price increased $0.98/lb. from the previous quarter as positive stainless steel fundamentals resurfaced and fund buying continued to be price supportive. Reflecting the turnaround in stainless steel markets, LME stocks have reversed trend and finished the quarter at 32,100 tonnes down 3,942 tonnes from the end of the fourth quarter of 2005.

As anticipated, the major change is the strong rebound in the stainless steel market from the destocking period which commenced May 2005. This is reflected in the steady rise in stainless steel transactional prices as well as increased order books. In addition, scrap supplies have tightened and are lagging the increase in production levels. China has become a global competitor for stainless steel scrap and is diverting material away from traditional markets. The stainless steel market is expected to grow by 5.9% and the scrap ratio to drop by 0.5% this year. The non-stainless market continues to power along supported by strong demand conditions in the high nickel alloy, plating and battery sectors across all geographical areas.

Nickel supply is forecast to increase 6.1% in 2006, up from 2.3% in 2005 due mostly to new supply coming on stream from Voisey's Bay, Aneka Tambang and Jinchuan. The market still remains susceptible to supply disruptions as a result of pushing capacity utilization rates. Healthy demand is expected across all geographic regions and all market sectors, boosted by the stainless steel scrap tightness. Consequently, in 2006, the nickel market is forecast to be in deficit by 12,000 tonnes. The combination of synchronized world economic growth, constrained supply both on the primary and secondary side and the constant flow of new investment money into commodities bodes well for the near-term nickel market prospects.

Zinc

LME prices rose sharply in the first quarter, as the outlook for a substantial 2006 supply deficit supported continued buying from commodity investment funds. Zinc LME cash prices increased 40% over the quarter to $1.22/lb. by the end of March. The average for the quarter was $1.02/lb versus $0.60/lb. in the same quarter in 2005. LME stocks dropped 112,950 tonnes during the quarter to 280,600 tonnes. Stocks have dropped 290,000 tonnes year-on-year as of the end of March.

Global zinc mine supply continues to fall short of smelting capacity, thereby constraining refined zinc metal output. Refined production, which increased by 0.6% in 2005, is forecast to increase by 5% in 2006 as mines push maximize production in response to high price levels. Metal consumption, which grew by 2.7% in 2005, is forecast to grow by over 4% this year and next on strong industrial growth in China combined with a recovery in steel demand in the USA, Europe and Japan. With supply struggling to catch up to consumption, a zinc metal deficit of more than 400,000 tonnes is expected for 2006.

Zinc concentrate benchmark treatment charge terms for 2006 were reduced by $64/dry tonne compared to 2005 levels. The benchmark was set at $128/dry tonne at a $1400/tonne zinc price basis compared to a $1000/tonne price basis in previous years. Spot treatment charges are well below benchmark, reflecting the global tightness in concentrate supply. Zinc metal premiums in the United States strengthened from $0.05/lb. to $0.08/lb. at the end of the quarter as galvanized steel inventories declined and demand improved.

Aluminum

The LME aluminum cash price averaged $1.07/lb. during the first quarter, up $0.18/lb from the fourth quarter and up $0.21/lb from the same period a year ago. Regional delivery premiums rose half a cent during the quarter to $0.056/lb. as of March 31, 2006 versus $0.051 at the end of December 2005.

LME aluminum warehouse stock levels rose by 134,400 tonnes during the period to 779,200 tonnes at the end of March 2006, but have since declined to around 745,000 tonnes at mid-April. International Aluminum Institute tracked stocks and COMEX warehouse stocks decreased by approximately 62,000 tonnes during the period.

Energy costs continue to put pressure on primary aluminum smelters with approximately 350,000 tonnes of annual production recently shutdown in Europe and the U.S. as a direct result of the smelter's inability to source economical power. Additional capacity is at risk of closure as old power contracts, favorable to the smelter, near the end of their term and cannot be replaced with similar terms. The pressure brought on by escalating power costs should continue to support to the price of aluminum.

Selected Financial Information

Liquidity and Capital Initiatives

Falconbridge maintains long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. Falconbridge's future financial requirements related to debt maturities, operating costs, the projects currently under development and other capital investments will be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new long- and short-term borrowings.

The Company's committed bank facilities, which expire in 2010, total $780 million. At March 31, 2006, these lines were essentially undrawn.

Cash generated from operations, before the net change in accounts receivables, payables and inventories, was $668 million during the first quarter of 2006. Non-cash working capital increased by $322 million during the quarter due to higher accounts receivable and inventory values resulting from higher metal prices. Total liquidity remains strong, with approximately $1.8 billion of cash and undrawn lines at March 31, 2006. Long-term debt was $2.5 billion at quarter end excluding preferred share liabilities. Falconbridge's net-debt-to-capitalization ratio stood at 33.3% at the end of the quarter, a reduction of 300 basis points since the end of 2005.

On March 16, 2006, Falconbridge announced its plans to redeem a total of 20 million shares, or $500 million, of its outstanding Junior Preference Shares, on April 26, 2006, based upon shareholders of record on March 22, 2006. Falconbridge has benefited from high earnings and cashflow generation and will utilize existing cash balances to fund the redemption.

Investments in new production capacity such as the Nickel Rim South and Koniambo nickel projects totaled $98 million during the first quarter. For 2006, the Company's projected capital investments are approximately $315 million for sustaining capital expenditures and other smaller projects and approximately $435 million in new copper and nickel investments. The major components of the capital investment program are shown in the following table:

Metal	Growth Project	2006 F	2005
Copper	Copper development projects		
	(El Morro, El Pachon, Lomas Bayas)	**$ 50**	$ 4
	Kidd Creek Mine extension	**$ 90**	$ 114
Nickel	Koniambo	**$ 180**	$ 96
	Nickel Rim South	**$ 85**	$ 74
	Nickel development projects (Kabanga, Raglan)	**$ 30**	$ 61
Sustaining capital and other		**$ 315**	$ 388
Total capital investments		***$ 750***	$ 737

(F=Forecast)

Significant Future Obligations

Significant future obligations of Falconbridge and its partially-owned subsidiaries, excluding employee future benefit obligations, are summarized as follows:

(US$ millions)	Total Q1, 2006	Apr. – Dec. 2006	2007	2008	2009	2010	Thereafter
Convertible Debentures and Other Loans	**148**	8	112	23	–	5	–
Senior Debentures	**2,343**	250	–	150	–	–	1,943
Preferred Share Liabilities[1] [2]	**876**	500	–	126	–	100	150
	3,367	758	112	299	–	105	2,093
Debt of Partially-Owned	**380**	63	85	70	59	51	52
Capital Leases	**16**	1	5	1	1	1	7
Operating Leases and Purchase Commitment	**205**	136	18	13	9	8	21
Total	**3,968**	958	220	383	69	165	2,173

[1] May be redeemed for common shares
[2] $500 million of accelerated maturity due to announced redemption on April 26, 2006.

Off-Balance-Sheet Arrangements

Falconbridge does not have any unconsolidated affiliates. The Company does not enter into material off-balance-sheet arrangements with special purpose entities in the normal course of business. Its only significant off-balance-sheet arrangements are the Canadian dollar expenditure hedges discussed under the "Financial Instruments and other Instruments" section of this document.

Revenue Recognition

Revenues from the sale of base metals, aluminum and fabricated products and from by-product materials are recorded at the time of sale, when the rights and obligations of ownership pass to the buyer.

Under the terms of concentrate sales contracts with third parties, final prices for metals in the concentrate are set based on the prevailing spot metal prices on a specified future date based on the date that the concentrate is delivered. The Company records revenues under these contracts based on the forward prices at the time of the sale and the revenues are adjusted at each subsequent balance sheet date to the then current forward prices. Price changes for shipments which at year end are awaiting final pricing could have a material effect on future revenues. As at March 31, 2006, there was $485 million in revenues that was awaiting final pricing.

Transactions with Related Parties

Related party transactions for the first quarter of 2006 and 2005 are summarized as follows:

Quarter ended March 31, 2006 (US$ millions):

Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	121	16	–	72	–
Noranda Income Fund	Trading activity	–	1	10	1	12
Antamina	Trading activity	–	–	80	–	68
Gramercy	Trading Activity	–	–	34	–	11
Collahuasi	Trading Activity	–	–	37	–	22

Quarter ended March 31, 2005 (US$ millions):

Related Party	Description	Revenue	Product Revenue	Service Purchases	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	53	15	–	36	–
Noranda Income Fund	Trading activity	–	1	7	1	7
Antamina	Trading activity	–	–	50	–	39
Gramercy	Trading activity	–	–	30	–	5
Other Affiliates	Power supply contract	–	–	31	–	–
Collahuasi	Trading activity	–	–	19	–	20

Financial Instruments and Other Instruments

Falconbridge uses financial and other instruments in the following instances:

Foreign Currency Exposure

Falconbridge uses forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures. Falconbridge may hedge up to 50% of its current year Canadian dollar operating cost for the next two years and 25% of the subsequent three years. As at March 31, 2006, there were no significant outstanding foreign exchange contracts to hedge Canadian denominated costs.

Falconbridge may enter into options, futures and forward contracts for the purchase or sale of currencies not designated as hedges. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Commodity Price Exposure

Generally, Falconbridge does not hedge the price it realizes on the sale of its own production and accepts realizations based on market prices prevailing around the time of delivery of metals to customers. Under certain circumstances, Falconbridge enters into futures and option contracts to hedge the effect of price changes on a portion of the raw materials it purchases on a custom processing or resale basis. Gains and losses on these contracts are reported as a component of the related transactions. Designated contracts meeting the definition for hedge accounting under GAAP are not recorded. Falconbridge may also enter into futures and forward contracts for the purchase or sale of commodities not designated as hedges. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Interest Rate Management

Falconbridge may enter into interest-rate swap agreements, including foreign exchange cross currency swaps, to modify the interest characteristics of its outstanding debt. The differential to be paid or received, for interest rate swaps for which we receive hedge accounting, is accrued and recognized as an adjustment to interest expense related to the debt. A summary of these positions as at March 31, 2006 is tabled below.

Interest rate swaps (notional principal amount in $ millions)	Total
Maturity (2006)	325
Maturity (2008) [1]	136
Maturity (2011)	300
Maturity (2012)	350
Maturity (2015)	500
Fair value [2]	45

[1] Includes a cross-currency interest rate swap designated as a hedge of a Canadian dollar debenture. The total fair value of this instrument at March 31, 2006 was $46 million of which $39 million related to the currency component of the swap and $7 million related to the interest component.
[2] Includes the fair value of $39 million related to the currency component of the cross currency interest rate swap discussed in Note 1 above.

Counterparty Risk

Foreign currency and interest rate swap contracts are maintained with counterparties with at least an "A" rating or better by a recognized national credit rating agency. As a result, Falconbridge does not anticipate that any counterparties will fail to meet its obligation. If any outstanding foreign exchange or interest rate swap is terminated prior to maturity, then the contract would be settled at the fair value at the time.

Other

The Corporation has suspended its Dividend Re-Investment Plan as under the terms of the Support Agreement between Inco and Falconbridge the Corporation is not permitted to issue any additional shares (other than in respect of existing options and other convertible securities), and Common shareholders will continue to receive their dividends in cash.

Shareholder Rights Plan

On March 21, 2006, the Company enacted a new shareholder rights plan, designed to prevent a creeping takeover of the Company and preserve its ability to obtain the best value for all shareholders. The rights plan will not prevent an offer made to all shareholders for all of their shares.

Shares Outstanding and Declared Dividends

Shares Outstanding (as at April 24, 2006)

Name of new Falconbridge Security	Trading Symbol	Shares Outstanding
Common Shares[1]	FAL.LV, FAL	372,385,672

Additional information relating to Falconbridge, including Falconbridge's Annual Information Form, is on the System for Electronic Document Analysis and Retrieval (SEDAR) at www.sedar.com.

Note: All dollar amounts are expressed in U.S. dollars unless otherwise noted. Condensed consolidated financial statements are attached.

Forward-Looking Information

Certain statements contained in this Management Discussion and Analysis are forward-looking statements (as defined in applicable securities legislation). Examples of such statements include, but are not limited to, statements concerning (i) our assessment of the outlook for metal markets in 2006, (ii) Inco's offer to acquire all of the common shares of Falconbridge Limited and the benefits of such combination, (iii) our future financial requirements and funding of those requirements, (iv) our expectations with respect to our development projects, (v) our production forecast for 2006 and (vi) our dividend schedule. Inherent in forward-looking statements are risks and uncertainties well beyond our ability to predict or control. Actual results and developments are likely to differ, and may differ materially, from those expressed or implied by the forward-looking statements contained in this Management Discussion and Analysis. Such statements are based on a number of assumptions which may prove to be incorrect, including, but not limited to, assumptions about the timing, steps to be taken and completion of Inco's offer to acquire all of our common shares, the ability to successfully compete against global metals and mining and exploration companies by creating through such a combination an enterprise of increased scale; strong demand for nickel, copper and other metals in emerging markets such as China; approximately $350 million per annum in pre-tax operating and other synergies and cost savings, and other benefits being realized based on the achievement of operational efficiencies from restructuring, integration and other initiatives relating to the combination of Falconbridge and Inco; the approvals or clearances required to be obtained by Inco and Falconbridge from regulatory and other agencies and bodies being obtained in a timely manner; divestitures required by regulatory agencies being acceptable and completed in a timely manner; there being limited costs, difficulties or delays related to the integration of the Falconbridge's operations with those of Inco; the timely completion of the steps required to be taken for the eventual combination of the two companies; business and economic conditions generally; exchange rates, energy and other anticipated and unanticipated costs and pension contributions and expenses; the supply and demand for, deliveries of, and the level and volatility of prices of, nickel, copper, aluminum, zinc and other primary metals products and other metal products Inco and Falconbridge produce; the timing of the receipt of remaining regulatory and governmental approvals for the development projects and other operations; the continued availability of financing on appropriate terms for development projects; Falconbridge's costs of production and production and productivity levels, as well as those of its competitors; market competition; mining, processing, exploration and research and development activities; the accuracy of

ore/mineral reserve estimates; premiums realized over LME cash and other benchmark prices; tax benefits/charges; the resolution of environmental and other proceedings and the impact on the combined company of various environmental regulations and initiatives; assumptions concerning political and economic stability in countries or locations in which Falconbridge operates or otherwise and the ability to continue to pay quarterly cash dividends in such amounts as Falconbridge's Board of Directors may determine in light of other uses for such funds and other factors.

Inherent in those statements are known and unknown risks, uncertainties and other factors well beyond the Company's ability to control or predict. Some of these known risks and uncertainties are outlined in filings by Falconbridge with applicable securities regulatory authorities, including in Falconbridge's annual information form. Readers are encouraged to consult such filings. While Falconbridge anticipates that subsequent events and developments may cause Falconbridge's views to change, the Company specifically disclaims any obligation to update these forward-looking statements. These forward-looking statements should not be relied upon as representing the Company's views as of any date subsequent to the date of this Management Discussion and Analysis. Although the Company has attempted to identify important factors that could cause actual actions, events or results to differ materially from those described in forward-looking statements, there may be other factors that cause actions, events or results not to be as anticipated, estimated or intended. There can be no assurance that forward-looking statements will prove to be accurate, as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. These factors are not intended to represent a complete list of the factors that could affect Falconbridge and the combination of Inco\ and Falconbridge.

Falconbridge Limited is a leading copper and nickel company with investments in fully-integrated zinc and aluminum assets. Its primary focus is the identification and development of world-class copper and nickel mining deposits. It employs 14,500 people at its operations and offices in 18 countries. Falconbridge's common shares are listed on the New York Stock Exchange (FAL) and the Toronto Stock Exchange (FAL.LV). Falconbridge's website can be found at www.falconbridge.com."

This is the end of the description of the business of Falconbridge as extracted without material amendment from Falconbridge's Management's Discussion and Analysis as of 25 April 2006, as filed with the Canadian Securities Administrators on 1 May 2006.

Financial information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003

Nature of the financial information

On 30 June 2005 Noranda and Former Falconbridge completed their merger transaction, whereby Noranda increased its majority interest in Former Falconbridge. Following the transaction Noranda operates under the name Falconbridge. The financial information presented relates to Falconbridge for the year ended 31 December 2005 and Noranda for the two years ended 31 December 2004 and 31 December 2003 on the basis that Noranda consolidated Former Falconbridge within its accounts for the two years ended 31 December 2004 and 31 December 2003. This financial information therefore provides a consistent record of financial information for the ongoing Falconbridge business.

The financial information presented on pages 335 to 387, relating to the Falconbridge Group, has been extracted without material amendment from the audited financial statements for the year ended 31 December 2005 disclosed in Falconbridge's (formerly Noranda) annual accounts and for the two years ended 31 December 2004 and 31 December 2003 disclosed in Noranda's annual accounts, in each case as filed with the Canadian Securities Administrators (CSA) and CDS INC, a subsidiary of The Canadian Depositary for Securities Limited. The financial statements are prepared in accordance with Canadian GAAP.

Ernst & Young LLP (Canada) has issued audit reports on the financial statements of Falconbridge for the year ended 31 December 2005 and of Noranda for the two years ended 31 December 2004 and 31 December 2003. Each such audit report was unqualified.

All amounts included in the following financial information table are presented in US dollars unless otherwise indicated.

Comparability of financial information

During 2005 Falconbridge changed its accounting policy with respect to the accounting for convertible debentures, preferred shares, Series H and variable interest entities. Within its 2005 accounts Falconbridge retrospectively restated its financial information for the year ended 31 December 2004. Publicly available results for the year ended 31 December 2003 were not available on a restated basis. To aid the comparability of the financial information for the year ended 31 December 2003, the results for the year ended 31 December 2004 as they were reported (ie: prior to the application of the accounting policy change) have also been included.

On 1 June 2004, Noranda changed its accounting policy with respect to the accounting for asset retirement obligations. Within its 2004 annual accounts Noranda retrospectively restated its financial information for the year ended 31 December 2003. The financial information presented for the year ended 31 December 2003 has been extracted from the Noranda 2004 annual accounts.

The impact of these accounting policy changes is further discussed in Note 2 to the financial information.

In respect of notes 13 and 20 below, additional disclosures were provided for the years ended 31 December 2004 and 31 December 2003 (which were not provided for the year ended 31 December 2005) and these have also been included within the financial information presented below.

Historical financial information for the Xstrata Group in this document is presented in US dollars and has been prepared in accordance with IFRS.

UK GAAP (in accordance with which Xstrata previously prepared its financial information) and IFRS differ in certain relevant respects from Canadian GAAP. For a discussion of certain significant differences between UK GAAP and Canadian GAAP as they relate to Falconbridge and between IFRS and Canadian GAAP as they relate to Falconbridge, see paragraph 2.3 of Part IV – "Information on the Expected Impact of the Proposed Acquisition on the Assets, Liabilities and Earnings of the Enlarged Group – Principal differences in the application of Xstrata's accounting policies and those applied by Falconbridge".

Please note that in the following financial information where Falconbridge is referenced this refers to: Falconbridge (formerly Noranda) for the year ended 31 December 2005; and Noranda for the years ended 31 December 2004 and 31 December 2003.

Notes to the Consolidated Financial Statements for the years ended 31 December 2003, 2004 and 2005

1. Accounting Policies

Basis of Presentation of the Consolidated Financial Statements

The accompanying consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles which are in conformity, in all material respects, with United States generally accepted accounting principles, except as described in Note 22. The consolidated financial statements include the accounts of Falconbridge (formerly Noranda prior to the merger transaction on 30 June 2005, see note 3) and all of its subsidiaries and joint ventures (together, "Falconbridge" or "the Company"). Long-term investments in companies in which Noranda has significant influence are accounted for on the basis of cost plus equity in undistributed earnings since the dates of investment. The interests of the Company, Falconbridge Limited ("Falconbridge") and Novicourt Inc. ("Novicourt") in their joint ventures are proportionately consolidated. The difference between the cost of the shares of acquired companies and the underlying net book value of the assets is amortized over the estimated economic life of the assets to which the difference is attributed.

Reporting Currency and Translation of Foreign Currencies

Effective July 1, 2003, the United States dollar ("U.S. dollar") was adopted as the unit of measure of Falconbridge's Canadian operations which reflects significant operational exposure to the U.S. dollar and predominantly the U.S. dollar-based asset and investment base of the Company. Concurrent with this change in functional currency, Noranda adopted the U.S. dollar as its reporting currency. In accordance with Canadian generally accepted accounting principles, the Company restated all amounts presented for comparative purposes into U.S. dollars using the current rate method whereby all revenues, expenses and cash flows are translated at the average rates that were in effect during these periods and all assets and liabilities are translated at the prevailing noon rate in effect at the end of these periods. Equity transactions have been translated at historic rates; with opening equity restated at the rate of exchange on January 1, 1999. The resulting net translation adjustment on the change in functional currency has been credited to the cumulative translation account.

For periods after July 1, 2003, the assets and liabilities of Falconbridge's self-sustaining operations having a functional currency other than the U.S. dollar are translated into U.S. dollars using the exchange rate in effect at the period end and revenues and expenses are translated at the average rate during the period. Cumulative exchange gains and losses on translation of the Company's net equity investment in these operations are deferred as a separate component of shareholders' equity. Gains or losses on foreign currency loans and transactions that are designated as hedges of a net investment in self-sustaining foreign operations are reported in shareholders' equity in the same manner as translation adjustments.

Foreign currency balances and the financial statements of integrated foreign operations are translated into U.S. dollars using the temporal method. Under the temporal method, foreign-denominated monetary assets and liabilities are translated at the exchange rates prevailing at the year end, and revenue and expenses (other than depreciation and amortization) at average rates of exchange during the year. Exchange gains and losses arising on the translation of the accounts are included in the consolidated statement of income (loss). Non-monetary assets and liabilities are translated at historical rates of exchange and depreciation and amortization are translated at the same rates as the assets to which they relate.

Prior to July 1, 2003, Noranda's Canadian operations have been measured in Canadian dollars and consolidated financial statements have been expressed in Canadian dollars. The accounts of self-sustaining foreign operations were translated using the current rate method, under which all assets and liabilities were translated at the exchange rate prevailing at year end, and revenues and expenses at average rates of exchange during the year. Gains or losses on translation of these account balances were not included in the consolidated statements of loss, but deferred and shown as a separate item in shareholders' equity. Gains or losses on foreign currency loans and transactions that were designated as hedges of a net investment in self-sustaining foreign operations were reported in shareholders' equity in the same manner as translation adjustments.

Cash and Cash Equivalents

Cash and cash equivalents include cash on account, demand deposits and short-term investments with original maturities of three months or less and are stated at cost, which approximates market value. Cash and cash equivalents of US$886m

(2004 – US$884m; 2003 – US$501m) include US$34m of restricted cash (2004 – US$35m; 2003 – US$33m) to be used for repayment of senior debt of the Antamina project.

Short-term Investments

Investments in corporate commercial paper issues have original maturities between four and nine months and are stated at cost, which approximates market value.

Valuation of Inventories

Mining and metallurgical product inventories are valued at the lower of net realizable value and average cost, where costs are comprised of direct costs and an allocation of production overheads and depreciation of production-related assets. Nickel, aluminum and fabricated product inventories are valued at the lower of cost (determined on a first-in, first-out basis, comprised of direct costs and an allocation of production overheads and depreciation of production-related assets) and net realizable value. Inventories of operating supplies and raw materials are valued at the lower of average direct acquisition cost and replacement value.

Revenue Recognition

Revenues from the sale of base metals, aluminum and fabricated products and from by-product materials are recorded at the time of sale, when the rights and obligations of ownership pass to the buyer. Under the terms of concentrate sales contracts with third parties, final prices for metals in the concentrate are set based on the prevailing spot metal prices on a specified future date based on the date that the concentrate is delivered. The Company records revenues under these contracts based on the forward prices at the time of the sale and the revenues are adjusted at each subsequent balance sheet date to the then current forward prices. Price changes for shipments which at year end are awaiting final pricing could have a material effect on future revenues.

Financial Instruments

Falconbridge enters into interest rate swap agreements to alter the interest characteristics of a portion of its outstanding debt from a fixed to a floating rate basis. These agreements involve the receipt of fixed-rate amounts in exchange for floating rate interest payments over the life of the agreement without an exchange of the underlying principal amount. Falconbridge also enters into interest rate swap agreements that involve the payment of fixed-rate amounts in exchange for the receipt of floating rate interest over the life of the agreement. The differential paid or received on the interest rate swap agreements that qualify for hedge accounting is reflected as an addition to a reduction from interest on the statements of earnings. For those contracts that do not qualify for hedge accounting, or for those which Falconbridge does not seek hedge accounting, the net interest received/paid on those positions is shown as a component of gain, net of restructuring costs and other, together with the change in fair value of those contracts during the period.

Falconbridge uses forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures and futures, and forward and option contracts to hedge the effect of price changes on a portion of the commodities it sells. Gains and losses on these contracts are reported as a component of the related transactions. Gains and losses on early termination of hedging contracts are deferred until the hedged items are recognized in earnings. From time to time, Falconbridge enters into futures and forward contracts for the purchase or sale of commodities and currencies not related to production, or not designated as hedges. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognized in the earnings of the period in which the changes occur.

Falconbridge also uses cross-currency swap agreements which are used to hedge the interest rate risk and foreign currency exposures related to its non-U.S. dollar-denominated debt. Gains or losses on these contracts are accounted for in the same manner as the interest rate swap agreements and forward exchange contracts discussed above.

Financial instruments designated as hedges are tested for effectiveness on a quarterly basis. Gains and losses on those contracts that are proven to be effective are reported as a component of the related transaction. Falconbridge uses the critical terms method and regression analysis to assess the hedge effectiveness of interest rate swaps, and uses match-terms and the dollar-offset approach to assess the hedge effectiveness of its foreign exchange contracts.

Falconbridge formally documents all relationships between hedging instruments and hedged items, as well as its risk management objective and strategy for undertaking various hedge transactions. This process includes linking all derivatives to specific firm commitments or forecasted transactions.

Falconbridge does not consider the credit risk associated with its financial instruments to be significant. Interest rate swaps, foreign currency contracts and commodity hedge contracts are maintained with high-quality counterparties, and Falconbridge does not anticipate that any counter-party will fail to meet its obligations.

As of January 1, 2004, Falconbridge adopted the recommendations of AcG 13 which provide for more restrictive conditions as to when hedge accounting may be used (see note 2).

Depreciation, Amortization

Depreciation of property, plant and equipment is based on the estimated service lives of the assets (4 to 40 years), calculated primarily on a straight-line basis for metallurgical operations and on a unit-of-production basis for mining operations. Resource properties are depleted and preproduction and mine development expenditures are amortized over a unit-of-production method. Depreciation and amortization under the unit-of-production method is measured as the net book value of the related asset multiplied by the ratio of tonnes milled during the period over proven and probable reserves at the start of the period. Construction in progress will be depreciated once the project is substantially completed.

Asset Retirement Obligations

Effective January 1, 2004, Falconbridge adopted the new Canadian Institute of Chartered Accountants (CICA) standards for Asset Retirement Obligations (CICA 3110) (see note 2).

In accordance with CICA 3110, asset retirement obligations are recognized when incurred and recorded as liabilities at fair value. The amount of the liability is subject to re-measurement at each reporting period. The liability is accreted over time through periodic charges to earnings. In addition, the asset retirement cost is capitalized as part of the asset's carrying value and amortized over the estimated life of the mine. The key assumptions on which the fair value of the asset retirement obligations is based includes the estimated future cash flows, the timing of those cash flows and the credit-adjusted risk-free rate or rates on which the estimated cash flows have been discounted.

The asset retirement obligation and closure costs may change materially based on future changes in operations, costs of reclamation and closure activities, regulatory requirements and the outcome of legal proceedings.

Preproduction Costs

Preproduction costs related to major projects are deferred until the facilities achieve commercial production or are deemed to be uneconomic. These deferred costs are amortized on a unit-of-production method over the estimated useful life of the project or are written off when the project is determined to be uneconomic.

Asset Valuation

The Company assesses long-lived assets, such as operating capital assets, for recoverability whenever indicators of impairment exist. When the carrying value of a long-lived asset is less than its net recoverable value as determined on an undiscounted basis, an impairment loss is recognized to the extent that its fair value, measured as the discounted cash flows over the life of the asset when quoted market prices are not readily available, is below the asset's carrying value.

Exploration

Mining exploration expenditures are charged against current earnings unless they relate to properties that have been subjected to sufficient pre-feasibility work that indicates future mine production is reasonably certain. Gains on the sale of mining exploration properties or recoveries of costs previously written off are credited against exploration expense.

Income and Production Taxes

Current taxes are recognized for the estimated income and mining taxes payable for the current year.

Future tax assets and liabilities are recognized for temporary differences between the tax and accounting bases of assets and liabilities as well as for the benefit of losses available to be carried forward to future years for tax purposes that are

more likely than not to be realized. Future taxes are measured using the tax rates and laws that will be in effect when the differences are expected to reverse or the losses to be realized.

Interest

Interest incurred is charged to earnings, except for interest that can be identified with a major capital expenditure program. Under the policy, interest is capitalized as it arises from indebtedness incurred to finance major projects, either directly or indirectly, until the project achieves commercial production.

Employee Future Benefit Plans

The cost of retirement benefits and certain post-employment benefits are recognized as the benefits are earned by the employees. Falconbridge uses the accrued benefit method pro-rated on length of service and management's best estimate assumptions to value its pensions and other retirement benefits. Assets are valued at fair value for the purpose of calculating the expected return on plan assets. Past service costs from plan amendments are amortized on a straight-line basis over the term of the collective agreements being ratified. The excess of the net actuarial gain (loss) over 10% of the greater of the benefit obligation and the fair value of plan assets is amortized over the expected average remaining service period of active employees.

Under its defined contribution retirement savings program, Falconbridge makes payments based on employee earnings and partially matches employee contributions, to a defined maximum. Employees may receive profit sharing credits based on earnings.

When a defined benefit plan gives rise to an accrued benefit asset, Falconbridge recognizes a valuation allowance for the excess of the adjusted benefit asset over the expected future benefit to be realized from the plan asset. Changes in the allowance are included in the determination of pension expense.

Stock-based Compensation Plans

The Company has stock-based compensation plans. The Company accounts for stock options using the fair value method. Under this method, compensation expense for stock options granted since January 1, 2002 is measured at fair value at the grant date using the Black-Scholes valuation model and recognized over the vesting period of the options granted.

The Company also has an employee share savings plan through which employees can purchase shares of the Company at market prices. For each dollar employees contribute to the plan, the Company contributes a prescribed percentage, which is expensed as employee compensation. For the Company's deferred unit plans, a liability is recorded to the extent that the Company's common share price exceeds the notional purchase price of the units. Notional dividends on the units are recorded as a direct charge to retained earnings.

Earnings Per Share

Earnings per share is determined by dividing net earnings, after deducting preferred share dividends by the weighted-average number of common shares outstanding during the year, excluding shares securing employee share purchase loans.

Diluted earnings per share assumes that outstanding dilutive stock options are exercised at the beginning of the period (or at the time of issuance, if later) and the proceeds are used to purchase common stock at the average market price during the period, and that dilutive convertible debentures are converted into common shares at the beginning of the period.

Use of Estimates

The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions. These estimates affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from those estimates.

Comparative Consolidated Financial Statements

The 2004 comparative consolidated financial statements have been reclassified from statements previously presented to conform to the presentation of the 2005 consolidated financial statements.

The 2003 comparative consolidated financial statements have been reclassified from statements previously presented to conform to the presentation of the 2004 consolidated financial statements.

2. Changes in Accounting Policies

(a) Convertible Debentures

The principal amount of Falconbridge's outstanding convertible debentures of Cdn$131m (Note 11) due on April 30, 2007 was previously classified as an equity instrument due to the company's ability to settle principal payment by issuance of its shares. In accordance with the amended standard under CICA 3680 – *Financial Instrument – Presentation and Disclosure*, the convertible debenture is a compound financial instrument that contains both a liability element and an equity element and therefore should be bifurcated into separate liability and equity elements. Falconbridge's obligation to make scheduled interest payments in cash and Falconbridge's option to redeem the debentures in a variable number of common shares of the Company constitutes a financial liability. The holder's option to convert the liability into equity of the Company is an equity instrument.

The carrying value of the liability element which represents the present value of the Company's obligations to make future interest payments in cash and to settle the redemption value of the debentures in a variable number of shares is presented as a long-term debt on the consolidated balance sheet. The stated interest payments and accretion expense from adjusting the time value of the principal of the debentures over time using the effective interest method of amortization are recorded as interest expense on the consolidated statement of earnings. The equity component represents the fair value of the holder's conversion option established at the issuance of the debentures and is presented as a component of shareholders' equity. Upon conversion, when the Company settles the obligations in the common shares of the Company, the carrying amount of the equity element and the carrying amount of the liability are transferred to share capital.

The cumulative impact of the adoption of the standard on January 1, 2004 was to decrease retained earnings by US$33m, increase the liability component of convertible debentures by US$82m, decrease equity by US$41m and decrease the cumulative translation adjustment by US$8m. The adoption of this standard resulted in a decrease by US$14m to the previously reported earnings for the year ended December 31, 2004. and a decrease by US$44m to the previously reported retained earning as at December 31, 2004. Further disclosure regarding the convertible debentures is presented in note 11.

(b) Preferred Shares, Series H

The company has Cdn$150m (Note 12) of Cumulative Preferred Shares, Series H, which provide the holders with an entitlement to convert the shares to the Company's common shares after a specified date and were previously reported as equity instruments in accordance with their legal form. The new accounting recommendations under CICA 3860, on presentation of financial instruments, provide that the preferred shares are reclassified as liabilities because their conversion feature represents a fixed obligation to the Company. The dividends paid are reported as interest expense in the consolidated statement of earnings.

The cumulative impact of the adoption of the standard on January 1, 2004 was to decrease retained earnings by US$5m, increase liabilities by US$113m, decrease equity by US$99m, and decrease cumulative translation adjustment by US$9m. Adoption of the new standard reduced previously reported earnings by US$16m for the year ended December 31, 2004 and resulted in a decrease by US$13m to the previously reported retained earnings as at December 31, 2004. Further disclosure regarding the liabilities for the Preferred Shares, Series H, is presented in Note 12.

(c) Variable Interest Entities ("VIEs")

As of January 1, 2005 the Company adopted the recommendations of AcG-15 requiring Falconbridge to identify variable interest entities, in which it has significant variable interest, to determine whether Falconbridge is the primary beneficiary of such entities and, if so, consolidate them. VIEs include entities where the equity invested is considered insufficient to finance the entity's activities without additional subordinated financial support from other parties. The recommendations require the Company to consolidate VIEs if the investment it holds in these entities and/or the relationship it has with them result in it being exposed to a majority of their expected losses, being able to benefit from a majority of their expected residual returns, or both.

The adoption of the recommendations resulted in the Company consolidating a customer securitization vehicle, which was operated as a trust and purchased trade accounts receivable from the Company. The application of the recommendations had no impact on the Company's financial statements on January 1, 2004. The cumulative impact of the consolidation of the vehicle on January 1, 2005 was to increase current assets by US$17m and increase current liabilities by US$17m with

no impact on opening retained earnings. In 2005, the receivable purchase agreement between the Company and the trust was terminated and the trust is no longer a VIE of the Company.

(d) Asset Retirement Obligations

Effective January 1, 2004, Falconbridge adopted the new CICA standard for Asset Retirement Obligations (CICA 3110). Previously, Falconbridge expensed costs related to ongoing site restoration programs when incurred, while a provision for future site reclamation and closure costs was charged to earnings over the life of the operations.

In accordance with CICA 3110, asset retirement obligations are recognized when incurred and recorded as liabilities at fair value. The amount of the liability is subject to re-measurement at each reporting period. The liability is accreted over time through periodic charges to earnings. In addition, the asset retirement cost is capitalized as part of the asset's carrying value and amortized over the estimated life of the mine. The key assumptions on which the fair value of the asset retirement obligations is based includes the estimated future cash flows, the timing of those cash flows and the credit-adjusted risk-free rate or rates on which the estimated cash flows have been discounted. Cash outflows totalling US$1,551m are expected to be incurred over a period extending to 62 years. These cash outflows are discounted using a rate ranging from 5% to 9%. This change in accounting policy was applied retroactively and, accordingly, the consolidated financial statements of prior periods were restated.

As a result of this change, the cumulative impact from the adoption of this standard at January 1, 2003 was to decrease retained earnings by US$27m, increase capital assets by US$70m, increase the provision for asset retirement by US$97m, decrease future income taxes by US$5m and increase interest of other shareholders by US$5m. Adoption of the new standard reduced net income by US$11m for the year ended December 31, 2003.

(e) Hedging Relationships

Effective January 1, 2004, Falconbridge adopted the new CICA standard for Hedging Relationships (AcG 13). This standard is applied prospectively without restatement of prior period results. As of January 1, 2004, Falconbridge adopted the recommendations of AcG 13 which provide for more restrictive conditions as to when hedge accounting may be used. On implementation of this standard at January 1, 2004, the Company's partially-owned subsidiary, Falconbridge, recorded a deferred mark-to-market gain of US$27m on its interest rate hedges while recording a long-term receivable and long-term payable of US$67m and US$40m, for those contracts in a gain and loss position, respectively. Amortization of US$7m of this deferred gain was amortized into income during 2004, as a reduction of interest expense. Since the interest rate hedge contracts were not eligible for hedge accounting, the change in fair value on these positions are shown as a component of other income.

Falconbridge recorded a mark-to-market loss of US$1m during 2004 respectively, for those contracts which were not eligible for hedge accounting.

At January 1, 2004, Falconbridge recorded a deferred mark-to-market gain of US$3m, for energy price hedge contracts not eligible for hedge accounting, US$2m of this deferred gain was amortized into income during 2004. In addition, Falconbridge recorded a US$1m mark-to-market gain on those contracts during 2004.

Under the provisions of the new standard, Falconbridge continued to be eligible for hedge accounting on its fixed forward price hedges and on its forward and option contracts used as a currency hedge of Canadian dollars operating costs. Falconbridge did not seek hedge accounting for its contracts used as an economic currency hedge of Canadian dollar monetary assets and liabilities and accordingly continues to mark these to market.

3. Business Combination

On June 30, 2005, the Company completed the two-step acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own, pursuant to the offer to purchase dated March 9, 2005. The acquisition was completed by way of an amalgamation (the "Amalgamation") of Noranda Inc. and the former Falconbridge Limited (the "former Falconbridge") and the newly amalgamated company continued under the name Falconbridge Limited. The acquisition was done on a share-exchange basis with one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The former Falconbridge was a producer of nickel, copper, cobalt and platinum with mining and metallurgical operations mainly in Canada and South America.

The first step of the acquisition was completed on May 5, 2005 when the Company successfully acquired 32.3% of all the issued and outstanding common shares of the former Falconbridge, increasing its ownership to 90.8% of the outstanding

former Falconbridge common shares. On June 30, 2005 the Company completed the second step of the acquisition of the remaining 9.2% of the former Falconbridge common shares and assumed 100% of the preferred shares and stock option obligations of the former Falconbridge. The results of operations of the former Falconbridge from January 1, 2005 to May 4, 2005 have been included in the Company's consolidated statement of earnings at 58.5% and from May 5, 2005 to June 30, 2005 at 90.8%. Beginning July 1, 2005, 100% of the results from operations have been included in the Company's consolidated statement of earnings.

The acquisition has been accounted for using the purchase method, whereby the purchase consideration was allocated to the estimated fair values of the assets acquired and liabilities assumed on the date of acquisition. The Company has not yet finalized the allocation of the purchase price related to this acquisition and it will be refined as information relating to the valuation of operating capital assets and development projects is finalized. The preliminary fair values of the assets and liabilities of the former Falconbridge and the preliminary allocation of the purchase consideration are as follows:

(US$ millions, except share price and number of shares)	2005
Calculation of preliminary allocation of purchase price	
Common shares of the Company issued to the former Falconbridge shareholders	132,840,681
The average closing market price of the Company's shares over the six trading days from March 4 through March 11, 2005 (the purchase offer announcement was March 9, 2005)	19.07
Fair Value of the Company's common stock Issued	2,534

American Racing Impairment

American Racing is a subsidiary of Noranda that manufactures and distributes aluminum wheels. In 2004, Noranda recorded an impairment loss of US$50m which was applied to the carrying value of the operations in the United States. The impairment loss was determined using a discounted cash flow analysis.

On July 17, 2003, Falconbridge sold its remaining 11,984,900 Priority Units of the Noranda Income Fund for gross proceeds of US$84m. The pre-tax gain on the sale was US$35m. The proceeds were used to repay debt. Falconbridge's participation in the
Fund decreased to 25% following the sale, representing all of the outstanding Ordinary Units of the Fund. Falconbridge's investment is accounted for on an equity basis.

Other Restructuring Costs

In 2003, employee reductions at Horne, Brunswick smelter and Kidd Creek operating sites and restructuring provisions at American Racing were recorded in the amount of US$33m.

5. Discontinued Operations

In June 2005, Falconbridge disposed of a subsidiary that manufactures and distributes aluminum wheels. The subsidiary was sold for proceeds of US$40.5m, amounting to a net gain on sale of US$1m. Included in discontinued operations, net of tax is a loss of US$9m (2004 – US$40m) from operations prior to the sale. In 2004, Falconbridge recorded an impairment loss of US$50m related to the subsidiary determined using a discounted cash flow analysis. The impact from discontinued operations on the consolidated balance sheets and consolidated statements of cash flows has not been separately disclosed, as it is not considered material.

6. Joint Ventures

Falconbridge's share of the assets, liabilities and equity, revenues and expenses and cash flows of its major joint ventures for the years ended December 31, 2005, 2004 and 2003 are as follows:

	2005

Falconbridge holds a 33.75% interest in Antamina, a copper/zinc mine project in Peru. Falconbridge holds a 44% interest in Compania Minera Dona Ines de Collahuasi S.C.M. ("Collahuasi"), a corporation which owns the mining and water rights and other assets relating to the Collahuasi mine, and which secured financing, conducts the operations and markets the products of the property.

Falconbridge owns an 80% joint-venture interest in the Magnesium project, a facility for the extraction of magnesium from mining residues in Danville, Quebec. As a result of depressed global magnesium prices, the Company temporarily shut

down its Magnesium operation in April 2003. Included in restructuring costs in 2003 is a charge of US$33m related to this closure.

The Company holds through its 62.1%-owned subsidiary, Novicourt, a 45% joint-venture interest in the Louvicourt copper/zinc mine in northwestern Quebec which closed in 2005.

In October 2004, the Company assumed a 50% interest in Kaiser Aluminum's Gramercy alumina plant in Gramercy, Louisiana and Kaiser Aluminum's related bauxite assets in Jamaica, in exchange for the settlement of an alumina supply contract and US$11.5m. The Company recorded a gain of US$80m on the settlement of the contract (Note 4). The total consideration of US$91.5m, comprised of cash and the gain on the settlement of the contract, was allocated as US$11.5m to working capital, US$129m to capital assets and US$49m to future income taxes.

In 2005, approximately US$1,966m was allocated to the operating assets as preliminary fair market value increments from the purchase accounting pertaining to the acquisition of 41.5% of all the issued and outstanding common shares of the former Falconbridge that it did not previously own (Note 3). The preliminary fair market value increments are allocated to different business units as other operating capital assets, based on the preliminary allocation of the purchase cost for the acquisition.

8. Development Projects

Development projects consist of brownfield and greenfield projects that are expected to contribute to earnings upon completion of construction and advancement to commercial production.

Major projects in the category are as follows:

(US$ millions)	As at December 31		
	2005	2004	2003
Collahuasi expansion	–	–	207
Kidd Creek – deep expansion	518	404	277
Koniambo – New Caledonia	276	180	123
Nickel Rim South	173	101	5
Magnesium	280	272	252
Other development projects	205	209	109
Preliminary allocation of fair market value increments (Note 3)	255	–	–
	1,707	1,166	973

During 2003, an additional US$370m of capital was invested into the projects. No additional capital was expended in the magnesium operations during 2003. The increase in carrying value attributed to the magnesium operations in 2003 is as a result of capitalization of operating costs during the first quarter of 2003 and the appreciation of the Canadian dollar compared to the U.S. dollar during 2003.

The increase in carrying value attributed to the magnesium operations in 2005 and 2004 is a result of the appreciation of the Canadian dollar compared to the U.S. dollar during 2005 and 2004. The Collahuasi expansion went into commercial production during the third quarter of 2004.

9. Investments and Other Assets

Debt due within one year		353								570
Long-term debt		3,474								2,858

(1) weighted average interest rates after swap contracts, as at December 31, 2005.

(a) Senior debentures of US$2,342m (2004 – US$2,245m) are direct unsecured obligations of the Company.

On June 8, 2005 Falconbridge issued US$250m of 12-year notes and US$250m of 30-year notes under the Company's base shelf prospectus. The 12-year notes, which are unsecured, bear interest at the rate of 5.5% per annum and mature on June 15, 2017. The 30-year notes, which are also unsecured bear interest at the rate of 6.2% per annum and mature on June 15, 2035. Both series of notes are redeemable in whole or in part at any time at a redemption price equal to 100% of their principal amount plus a make-whole premium.

(b) Other loans and capital leases include borrowings under demand lines and unsecured committed bank lines of credit that are structured to provide the Company with the right to borrow at floating rates and repay these amounts over the next five years. At December 31, 2005, Falconbridge had utilized US$nil (2004 – US$246m) from its total committed lines of US$780m (2004 – US$1,112m).

The Company has an uncommitted letter of credit facility of US$20m and Cdn$85m (2004 – US$21m). Letters of credit of US$46m (2004 – US$17m) were outstanding under this facility at December 31, 2005.

(c) Debt of joint ventures includes US$188m, Falconbridge's 33.75% share of the US$557m of borrowings under Antamina's original US$1,320m senior credit facilities. These facilities, provided by a consortium of international banks and national import/export credit agencies, have maturity dates ranging from less than one year to five years. With the exception of US$228m, all of these facilities are insured for political risks or are otherwise guaranteed for political risk by multilateral, national or private sector institutions. Falconbridge's guarantee of Antamina's debt was removed during 2003 as the completion tests were met.

(d) After taking into account current interest rates and credit spreads, the fair value of the Company's debt, excluding the debt of joint ventures, at December 31, 2005 was greater than book value by US$129m (2004 – US$206m).

(e) Interest rate swap agreements of US$1,250m (2004 – US$1,050m) have been entered into by the Company, whereby fixed rates of interest are received and floating rates are paid for terms up to 9.5 years. In addition, interest rate swap agreements of US$250m (2004 – US$550m) have been entered into by the Company, whereby fixed rates of interest are paid and floating rates are received for a period up to 6.5 years. As at December 31, 2005, the estimated aggregate fair value of the interest rate swap agreements of the Company had a mark-to-market gain of US$7m (2004 – US$41m).

The Company has entered into several cross-currency interest rate swap transactions whereby rates of interest on debentures in the amount of US$111m (2004 – US$111m) are swapped to floating rates of interest and US$25m (2004 –

US$25m) are swapped to fixed rates of interest for terms of three years. At December 31, 2005, the mark-to-market value of these positions was a gain of US$47m (2004 – US$45m).

Debt due within one year		431								335
Long-term debt		2,893								3,014

(a) Notes payable and revolving term loans include borrowings under unsecured committed bank lines of credit that are structured to provide the Company with the right to borrow at floating rates and repay these amounts over the next three years. At December 31, 2004, Noranda had utilized US$246m (including US$18m by Falconbridge, excluding Collahuasi) from its total committed lines of US$1,112m (including US$475m for Falconbridge, excluding Collahuasi). At December 31, 2003, Noranda had utilized $68m (including US$32m by Falconbridge, excluding Collahuasi) from its total committed lines of US$1,132m (including US$405m for Falconbridge, excluding Collahuasi).

Senior debentures of US$1,150m (2003 – US$1,450m) are direct unsecured obligations of the Company.

(b) On May 28, 2003, Noranda's partially-owned subsidiary Falconbridge issued US$250m 5.375% fixed-rate debentures maturing on June 1, 2015. The proceeds from this offering were used to repay debt outstanding under its commercial paper program, to fund planned expenditures and for other general corporate purposes.

On September 24, 2003, Noranda issued US$350m 6% fixed-rate debentures maturing October 15, 2015. The proceeds from this offering were invested in short-term investments and used for other general corporate purposes

(c) Debt of partially-owned subsidiaries and joint ventures includes US$305m (2003 – US$374m), Noranda's 33.75% share of the US$905m of borrowings under Antamina's US$1,320m senior credit facilities. These facilities, provided by a

consortium of international banks and national import/export credit agencies, have maturity dates ranging from 3.5 to 7.5 years. With the exception of US$118m, all of these facilities are insured for political risks or are otherwise guaranteed for political risks by multilateral, national or private sector institutions. Noranda's guarantee of this facility was removed during 2003 as the completion tests were met. Prior to meeting the completion tests, the average interest rate, inclusive of political risk insurance premiums and guarantee fees, ranges from LIBOR +2.4% to approximately LIBOR +4.1%.

(d) After taking into account current interest rates and credit spreads, the fair value of the debt of the Company at December 31, 2004 was greater than book value by US$112m (2003 – US$120m), and the fair value of the debt of its partially-owned subsidiaries and joint ventures was greater than book value by US$70m (2003 – US$94m).

(e) Interest rate swap agreements of US$650m (2003 – US$650m) have been entered into by the Company, and US$400m (2003 – US$400m) by its partially-owned subsidiaries and joint ventures, whereby fixed rates of interest are received and floating rates are paid for terms up to 10.5 years. In addition, interest rate swap agreements of US$550m (2003 – US$561m) have been entered into by the Company's partially-owned subsidiaries and joint ventures, whereby fixed rates of interest are paid and floating rates are received for a period up to 7.5 years. As at December 31, 2004, the estimated aggregate fair value of the interest rate swap agreements of the Company and its partially-owned subsidiaries and joint ventures had a mark-to-market gain of US$20m and US$21m respectively (2003 – US$14m and US$24m, respectively).

The Company's partially-owned subsidiary Falconbridge has entered into several cross-currency interest rate swap transactions whereby rates of interest on debentures in the amount of US$86m (2003 – US$86m) are swapped to floating and US$25m (2003 – US$25m) are swapped to fixed rates of interest for terms of four years. At December 31, 2004, the mark-to-market value of these positions was a gain of US$45m (2003 – US$31m).

At December 31, 2002, the Company recorded a deferred gain of US$21m on the closure of Cdn$400m interest rate swap agreements. The Company recognized into income US$4m during 2004 (2003 – US$17m).

11. Convertible Debentures

The Cdn$131m (2004 – Cdn$150m) adjustable rate convertible subordinated debentures Series 1, due April 30, 2007, bear interest at a rate which is the greater of 5%, and of 1% plus the percentage that two times the common share dividend paid in the previous six months is of the conversion price. The debentures are convertible at the holder's option into common shares of the Company at a conversion price of Cdn$27.55 per common share, on or before the last business day prior to the maturity date of the debentures, or the last business day prior to redemption. The Company has the option of redeeming the debentures, and upon maturity they are redeemable, at the Company's option, for common shares of the Company.

The Company's convertible debentures contain both debt and equity components (Note 2). At December 31, 2005, the liability component amounted to US$105m (2004 – US$112m) (Note 10). The equity component representing the fair value of the holders' option to convert the debentures into the common shares of the Company was classified as a component of shareholders' equity and amounted to US$37m at December 31, 2005 (2004 – US$42m) (Note 15).

During 2005, debentures with face value of Cdn$19m were converted to the common shares of Falconbridge by the holders (Note 15). Upon conversion, the carrying value of the related liability and the fair value of the holders' option for the converted debentures were reclassified from liability and shareholders' equity respectively to share capital.

Junior Preference Shares

On May 4, 2005, 63.4 million common shares of the Company were repurchased in exchange for 50 million of three series of junior preference shares with a fair value of US$1,250m. These preference shares are accounted for as liabilities since Falconbridge has to redeem these shares by a specific date in the future and this mandatory redeemable feature represents a fixed obligation to Falconbridge. These preference shares were measured at their fair value, being the closing quoted market price on their first trading day of May 5, 2005. These preference shares rank junior to all other preferred shares of Falconbridge with respect to priority in the payment of dividends and the distribution of assets of Falconbridge in the event of any liquidation, dissolution or winding-up of Falconbridge.

On August 11, 2005, the Company redeemed a total of US$500m of 20 million outstanding junior preference shares. The Company redeemed 8 million Junior Preference Shares, Series 1, 8 million Junior Preference Shares, Series 2, and 4 million Junior Preference Shares, Series 3. Each junior preference share was redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from July 1, 2005 to August 10, 2005. Included in interest expense on the consolidated statement of income and retained earnings was US$5m paid as premium on early redemption of the preference shares. The details of each series of the junior preference shares are as follows:

(a) Junior Preference Shares, Series 1

As at December 31, 2005, the Company had 11,999,899 of Junior Preference Shares Series 1 outstanding. The holders of Junior Preference Shares, Series 1 are entitled to receive dividends in the amount of US$1.50 per share, per annum, payable quarterly.

The Junior Preference Shares, Series 1 are redeemable by the Company at any time, on or before June 28, 2008 at US$25.25 per share, and thereafter at US$25.00 per share, and must be redeemed by the Company on May 6, 2010 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares, Series 1 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00, by the greater of US$2.00 and 90% of the U.S. dollar equivalents of the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

(b) Junior Preference Shares, Series 2

As at December 31, 2005, the Company had 11,999,899 of Junior Preference Shares Series 2 outstanding. The holders of Junior Preference Shares, Series 2 are entitled to receive dividends in the amount of US$1.5625 per share, per annum, payable quarterly. From June 30, 2010 until June 30, 2012, holders of Junior Preference Shares Series 2 will be entitled to receive fixed preferential cumulative dividends at a rate per annum equal to the greater of (i) 6.25% and (ii) a rate equal to the seven year U.S. treasury bond yield at the commencement of such subsequent fixed-rate period plus 2.05%.

The Junior Preference Shares Series 2 are redeemable by the Company at any time, on or before June 30, 2010 at US$25.25 per share, and thereafter until June 29, 2012 at US$25.00 per share, and must be redeemed by the Company on June 30, 2012 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares Series 2 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00 by the greater of US$2.00 and 90% of the U.S. dollar equivalents of

the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

(c) Junior Preference Shares, Series 3

As at December 31, 2005, the Company had 5,999,903 of Junior Preference Shares Series 3 outstanding. The holders of Junior Preference Shares Series 3 are entitled to receive dividends in the amount of US$1.625 per share, per annum, payable quarterly. From June 30, 2010 until June 30, 2012 and for each succeeding two-year subsequent fixed-rate period until June 30, 2015, holders of Junior Preference Shares Series 3 will be entitled to receive fixed preferential cumulative dividends at a rate per annum equal to the greater of (i) 6.5%; and (ii) a rate equal to the ten-year U.S. treasury bond yield at the commencement of such subsequent fixed-rate period plus 2.35%. Dividends may be paid in cash or in a number of common shares determined by dividing the declared dividend amount by 95% of the U.S. dollar equivalent of the volume weighted average trading price of the common shares on the TSX for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for payment of the dividend.

The Junior Preference Shares Series 3 are redeemable by the Company at any time, on or before June 30, 2013 at US$25.25 per share, and thereafter until June 29, 2015 at US$25.00 per share, and must be redeemed by the Company on June 30, 2015 at US$25.00 per share. On its Final Redemption Date, the Junior Preference Shares Series 3 are convertible, in whole or in part, at the option of the Company, into that number of freely tradable common shares determined by dividing the aggregate of US$25.00 by the greater of US$2.00 and 90% of the U.S. dollar equivalents of the volume weighted average trading price of the common shares on the Toronto Stock Exchange ("TSX") for a period of 20 consecutive trading days ending on the fourth trading day prior to the date specified for conversion.

Preferred Shares Series H

At December 31, 2005, there were 6,000,000 (2004 – 6,000,000) Series H Preferred Shares outstanding. These preferred shares are presented as liabilities since their conversion feature represents a fixed obligation to Falconbridge (Note 2). Holders of the Series H Preferred Shares are entitled to fixed cumulative preferential cash dividends, if, as and when declared by the Company's Board of Directors, at a rate of Cdn$1.625 per share per annum, payable quarterly, in equal instalments of Cdn$0.40625 per share, on the last day of March, June, September and December of each year.

On and after March 31, 2008, the Company may, at its option (i) redeem the outstanding Series H Preferred Shares in whole at any time or in part from time to time, by the payment of Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption; or (ii) subject, if required, to stock exchange approvals, convert the outstanding Series H Preferred Shares into Falconbridge common shares. The number of common shares into which each Series H Preferred share may be so converted will be determined by dividing the redemption price per Series H Preferred Share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time.

On or after June 30, 2008, each Series H Preferred Share will be convertible at the option of the holder on the last day of March, June, September and December in each year into that number of Falconbridge common shares determined by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time. If a holder of Series H Preferred Shares elects to convert any of those shares into Falconbridge common shares, the Company may, on not less than 20 days notice prior to the conversion date, elect to redeem those Series H Preferred Shares for Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion or arrange for the sale of those shares to substitute purchasers at such price.

13. Asset Retirement Obligation, Pension and Other Provisions

	As at December 31

(US$ millions)	As at December 31, 2004 (As reported) Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Total	As at December 31, 2003 Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Total
Asset retirement obligation	273	163	436	271	141	412
Pension, benefits and other provisions	(56)	215	159	(64)	191	127
	217	378	595	207	332	539

(a) The business conducted by Falconbridge has been, and may in the future be, affected by changes in environmental legislation and other requirements including those related to asset retirement obligations and progressive site restoration costs. As Falconbridge operates in many countries, both the likelihood of changes in legislation and its impact upon Falconbridge are not predictable. Falconbridge's policy is to meet and, if possible, surpass standards set by relevant legislation, through the application of innovative and technically proven economical measures in advance of prescribed deadlines. Falconbridge incurs substantial removal and site restoration costs on an ongoing basis, which, it believes, will mitigate future removal and site restoration costs. A long-term obligation, equal to the fair value of the legal obligation for asset retirement is recorded based on an annual assessment of projected asset retirement and progressive reclamation costs. The key assumptions on which the fair value of the asset retirement obligations are based include the estimated future cash flows, the timing of those cash flows, and the credit-adjusted risk-free rate or rates at which the estimated cash flows have been discounted.

Falconbridge uses discount rates ranging from 5.0% to 8.0%. As of December 31, 2005, undiscounted cash outflows approximating US$1,542m are expected to occur over a period exceeding 50 years. In view of the uncertainties concerning future asset retirement and progressive reclamation costs, the ultimate costs to Falconbridge could differ materially from the amounts estimated. The estimate for the future liability is subject to change based on amendments to applicable laws and legislation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and would be reflected prospectively, as a change in an accounting estimate.

The following table explains the change in the asset retirement obligations:

(US$ millions)	Year ended December 31 2005	2004	2003
Asset retirement obligation, beginning of period	(436)	(412)	(334)
Liabilities incurred	–	(5)	(18)

Preferred Shares Series F

The Company had 3,246,057 (2004 – 3,246,057; 2003 – 3,246,057) Cumulative, Redeemable Preferred Shares, Series F (the "Series F Preferred Shares") outstanding at December 31, 2005.

Prior to November 1, 2001, holders of Series F Preferred Shares received a quarterly fixed dividend at a rate of 5.8% per annum. On November 1, 2001, the Series F Preferred Shares commenced paying a monthly floating dividend based on a dividend rate that fluctuates over time between 50% and 100% of Prime for each month. The dividend rate is adjusted upwards or downwards on a monthly basis by an Adjustment Factor whenever the Calculated Trading Price, being the market price of the Series F Preferred Shares, is Cdn$24.875 or less or Cdn$25.125 or more, respectively. The Adjustment Factor for a month is based on the Calculated Trading Price of the Series F Preferred Shares for the preceding month. The maximum Adjustment Factor for any month is +/–4.00%. The annual floating dividend rate for any month is Prime multiplied by the Designated Percentage for such month (the Adjustment Factor for such month plus the Designated Percentage for the preceding month).

Holders of Series F Preferred Shares had the right to convert their shares, effective on November 1, 2001, on a one-for-one basis into Cumulative, Redeemable Preferred Shares, Series G (the "Series G Preferred Shares"). Of the 12,000,000 outstanding Series F Preferred Shares, 8,753,943 were converted into Series G Preferred Shares. Holders will again have the right to convert their shares, on a one-for-one basis into Series G Preferred Shares on November 1, 2006, and every five years thereafter. On November 1, 2001, the Series F Preferred Shares became redeemable, at the option of the Company, at Cdn$25.50 per share plus unpaid and accrued dividends.

Preferred Shares Series G

The Company had 8,753,943 (2004 – 8,753,943; 2003 – 8,753,943) Series G Preferred Shares outstanding at December 31, 2004. These Series G Preferred Shares were issued as a result of the conversion of the same number of Series F Preferred Shares into Series G Preferred Shares on November 1, 2001.

For each of the five years commencing November 1, 2001, holders of Series G Preferred Shares will receive, as and when declared by the Board of Directors, a quarterly fixed dividend at a rate of 6.10% per annum. On November 1, 2006, the Series G Preferred Shares will be redeemable, at the option of the Company, at Cdn$25.00 per share plus unpaid and accrued dividends. Subject to certain conditions, holders of Series G Preferred Shares will have the right to convert their shares into Series F Preferred Shares on a one-for-one basis on November 1, 2006 and on November 1 of every fifth year thereafter.

Preferred Shares Series H

The Company completed a public offering of Cumulative Preferred Shares, Series H for aggregate gross proceeds of *Cdn$150m on March 25, 2003. At December 31, 2004, there were 6,000,000 (2003 – 6,000,000) Series H Preferred* Shares outstanding.

Holders of the Series H Preferred Shares are entitled to fixed cumulative preferential cash dividends, if, as and when declared by the Company's Board of Directors, at a rate of Cdn$1.625 per share per annum, payable quarterly, in equal instalments of Cdn$0.40625 per share, on the last day of March, June, September and December of each year.

On and after March 31, 2008, the Company may, at its option (i) redeem the outstanding Series H Preferred Shares in whole at any time or in part from time to time, by the payment of Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for redemption; or (ii) subject, if required, to stock exchange approvals, convert the outstanding Series H Preferred Shares into Falconbridge common shares. The number of common shares into which each Series H Preferred Share may be so converted will be determined by dividing the redemption price per Series H Preferred Share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time.

On or after June 30, 2008, each Series H Preferred Share will be convertible at the option of the holder on the last day of March, June, September and December in each year into that number of Falconbridge common shares determined by dividing Cdn$25.00, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion, by the greater of Cdn$2.00 and 95% of the current market price of Falconbridge common shares at such time. If a holder of Series H Preferred Shares elects to convert any of those shares into Falconbridge common shares, the Company may, on not less than 20 days notice prior to the conversion date, elect to redeem those Series H Preferred Shares for Cdn$25.00 per share, together with all accrued and unpaid dividends up to but excluding the date fixed for conversion or arrange for the sale of those shares to substitute purchasers at such price.

Preferred Shares Series I

The Company completed a private placement of 6,000,000 Cumulative Preferred Shares, Series I to Brascan Corporation for aggregate gross proceeds of Cdn$150m on April 25, 2003. On August 18, 2003, the Company redeemed all Series I Preferred Shares with a portion of the net proceeds it received from the issuance of the 24,800,000 common shares issued on August 11, 2003. As a result of this redemption, a foreign exchange loss of US$5m was recorded in retained earnings.

Preferred Shares Series 1

On March 7, 1997, the Company issued 8,000,000 Units, at a price of Cdn$10.00 per Unit, with each Unit consisting of one Cumulative Preferred Share Series 1 (the "Preferred Share Series 1") and one Cumulative Preferred Share Series 2 Purchase Warrant (the "Warrant"). Since September 1, 1998, the quarterly cash dividend on Preferred Share Series 1 has been Cdn$0.02 per share. The holders of the Units had the right to acquire on certain dates, for each Unit held, one Cumulative Preferred Share Series 2 (the "Preferred Share Series 2") of the Company by the combined effect of tendering for conversion one Preferred Share Series 1 and the exercise of one Warrant together with the cash payment of Cdn$15.00 per Warrant. A total of 7,910,165 warrants have been converted into Preferred Shares Series 2. The remaining unexercised warrants cannot be exercised.

Preferred Shares Series 2

Until March 1, 2004, holders of the Preferred Shares Series 2 were entitled to fixed cumulative preferential cash dividends, as and when declared by the Board of Directors, which accrued from the date of issue and were payable quarterly in the amount of Cdn$0.3672 per share of Cdn$1.4688 per share per annum. From March 1, 2004, the Preferred Share Series 2 are entitled to floating adjustable cumulative preferential cash dividends as and when declared by the Board of Directors.

Holders of Preferred Share Series 2 had the right to convert their shares into Cumulative Preferred Share Series 3 (the "Preferred Share Series 3") of the Company, subject to certain conditions, on March 1, 2004, and will continue to have the right every five years thereafter. On March 1, 2004, the Company had the right to redeem for cash the Preferred Share Series 2, in whole but not in part, at the Company's option, at Cdn$25.00 per share plus accrued and unpaid dividends. Subsequent to March 1, 2004, the Company has the right to redeem at any time for cash the Preferred Share Series 2, in whole but not in part, at the Company's option, at Cdn$25.50 per share plus accrued and unpaid dividends. Effective March 1, 2004, the Preferred Share Series 2 shares pay a monthly adjustable floating dividend based on a percentage of the Canadian prime rate. A total of 3,122,882 units have been converted into Preferred Share Series 3.

Preferred Shares Series 3

Holders of Preferred Share Series 3 are entitled to fixed cumulative preferential cash dividends, as and when declared by the Board of Directors, which accrue from March 1, 2004. The dividends are payable quarterly on the first day of March, June, September, and December in the amount of Cdn$0.2863 per share of Cdn$1.1452 per share per annum until March 1, 2009. The Preferred Share Series 3 are not redeemable prior to March 1, 2009. The Preferred Share Series 3 will be redeemable on March 1, 2009 and on March 1 every fifth year thereafter, in whole but not in part, at the Company's option, at Cdn$25.00 per share, together with accrued and unpaid dividends up to but excluding the date of redemption. Holders of Preferred Share Series 3, upon giving notice, will have the right to convert on March 1, 2009, and on March 1 in every fifth year thereafter, their shares into an equal number of Preferred Share Series 2, subject to the automatic conversion provisions.

Common Share Issue

On August 12, 2003, the Company completed a public issue of 48,520,000 common shares at a price of Cdn$12.65 for net proceeds of Cdn$601m. Brascan Corporation subscribed for 20,000,000 shares from this issue.

Non-voting Participating Shares

The authorized and unissued non-voting participating shares participate ratably with the holders of common shares in dividends and distributions of the assets of the Company.

Summary of Common Share Transactions

(US$ millions)	Shares (000)	Amount

Issued under dividend re-investment	65	1
Common shares, December 31, 2005	370,688	4,264

Earnings Per Share

During 2005, earnings per share is determined by dividing net income, after deducting preferred share dividends of US$17m (2004 – US$13m), by the weighted average number of common shares outstanding of 339,756,276 (2004 – 296,245,753) during the year, excluding shares securing employee share purchase loans.

For 2004 as reported and 2003, earnings per share is determined by dividing net income, after deducting preferred share dividends of US$20m (2003 – US$21m) and the equity portion of the convertible debenture interest of US$3m (2003 –

US$3m), by the weighted-average number of common shares outstanding during the year, excluding shares securing employee share purchase loans of 296,245,753 (2003 – 261,618,375).

Diluted earnings per share assumes that outstanding dilutive stock options are exercised at the beginning of the period (or at the time of issuance, if later) and the proceeds are used to purchase common stock at the average market price during the period, and that dilutive convertible debentures are converted into common shares at the beginning of the period.

During 2005, diluted earnings per share is determined by dividing net income attributable to common shares, after adding the dilutive effect of convertible debentures of US$8m (2004 – US$7m), by the diluted weighted average number of shares of 346,173,501 (2004 – 303,458,182).

For 2004 as reported and 2003, diluted earnings per share is determined by dividing net income (loss) attributable to common shares, after adding the dilutive effect of convertible debentures of US$3m (2003 – US$nil), by the diluted weighted average number of shares 303,789,960 (2003 – 261,618,375).

Share Purchase Plan

In 1998, 2001 and 2002, loans were issued to executives of the Company for the purchase of common shares under the share purchase plan. The loans are repayable on demand, mature in ten years, and were secured by a pledge of 331,950 common shares at December 31, 2004 (2003 – 331,950). Loans receivable at December 31, 2004 of US$3m (2003 – US$3m) were recorded as a reduction of shareholders' equity. The loans were repaid in full in 2005 and the repayment was accounted for as a corresponding increase in shareholders' equity.

Stock Options

The Company has a stock option plan through which options may be granted to directors, officers and employees for the purchase of common shares. Options were granted at prices equal to the five-day average price prior to the grant. Stock options generally have a 10-year term and contain vesting provisions of 20% on the first anniversary following the date of the grant, and a further 20% on each of the four subsequent anniversary dates. Stock options granted from January 1, 2000 to February 28, 2002 have a 10-year term and the same vesting provisions; however, they also contain an accelerated vesting feature specifying that on the first day that the market price of the common shares is 20% greater than the exercise price of the option, the final tranche of certain unvested options outstanding on that date will immediately vest and be exercisable.

During 2005, three stock option series totaling 1,301,197 options (2004 – 882,000; 2003 – 1,422,500) at a weighted-average price of Cdn$23.32 (2004 – Cdn$20.42; 2003 – Cdn$14.45) were granted. The compensation expense associated with these stock options series was calculated using the Black-Scholes valuation model assuming the following weighted-average parameters; 10-year term (2003 – 8-year term), 25% volatility, expected dividend of 2.41% annually (2004 – 1.86% annually; 2003 – 5.35% annually) and an interest rate of 4.00% (2004 – 4.33%; 2003 – 4.89%). The stock option value is charged against net income over its vesting period.

On June 30, 2005, the Company assumed the stock option obligations of the former Falconbridge upon acquisition of the former Falconbridge (Note 3). The stock options retained their original attributes with the exception that the number of stock options increased by a ratio of 1.77 and the exercise prices decreased by a ratio of 1.77 to reflect the acquisition price of one common share of the former Falconbridge exchanged for 1.77 common shares of the Company. The fair value of the unvested stock options as at June 30, 2005 amounted to US$17m. The value of the stock options was calculated using the Black Scholes valuation model, using the following weighted average assumptions: a seven-year exected life, 26% volatility, an expected dividend of 2.34% and an interest rate of 3.58%. The value is being charged against net income over the vesting periods of the stock options.

Corporate and general administration expenses in 2005 include compensation costs of US$6m (2004 – US$4m; 2003 – US$3m) relating to outstanding options granted since January 1, 2002.

A summary of the status of the stock option plan and changes during the years is presented below:

	2005		2004 Restated – see note 2		2004 As reported		2003	
(Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)	Options (000)	Weighted-average exercise price (Cdn$)
Outstanding, beginning of year	7,416	16.75	9,584	16.35	9,584	16.35	8,591	16.65
Options assumed upon Amalgamation (Note 3)	3,049	12.91	–	–	–	–	–	–
Granted	1,301	23.32	882	20.42	882	20.42	1,422	14.45
Exercised	(3,486)	16.23	(1,704)	16.24	(1,704)	16.47	(373)	15.92
Cancelled	(738)	15.77	(1,346)	16.64	(1,346)	16.64	(56)	16.85
Outstanding, end of year	7,542	17.37	7,416	16.75	7,416	16.75	9,584	16.35

The following table summarizes information about stock options outstanding at December 31, 2005:

	Options outstanding			Options exercisable	
Range of exercise prices (Cdn$)	Number (000) outstanding at December 31, 2005	Weighted-average remaining contractual life (years)	Weighted-average exercise price (Cdn$)	Number (000) exercisable at December 31, 2005	Weighted-average exercise price (Cdn$)
$ 8.85 to $12.85	1,227	6.7	$9.46	253	$9.56
$13.82 to $15.00	723	7.0	13.87	158	14.05
$15.05 to $19.16	2,860	5.7	16.38	1,981	12.46

	9,584	7.6	$16.35	4,914	$17.21

Director Deferred Stock Unit Plan

Under the Deferred Stock Unit (DSU) Plan for the Company's non-employee directors, each eligible director may elect to be paid annual retainer fees and/or meeting attendance fees in DSUs rather than in cash. A DSU is a notional unit, equivalent in value to a common share.

Deferred stock units are credited with "dividend equivalents" when dividends are paid on the common shares of the Company, and such dividend equivalents are converted into additional units based on the fair market value of common shares on the date credited.

Payment of DSUs is not made until such time as the director leaves the Board, and may be in cash or in common shares of the Company purchased on the open market.

As of December 31, 2005 the total DSUs held by participating directors was 105,336 (2004 – 61,351; 2003 – 44,108), the accrual in respect of which is not significant at December 31, 2005, 2004 and 2003.

Management Deferred Share Unit Plan (MDSUP)

Management deferred share units ("Units") may be granted each year at the discretion of the Board to senior executives in lieu of all or part of their annual cash bonus awards. The annual bonus awards would be converted to Units based on a rate set on the award date. The portion of the annual bonus award elected to be received in Units by the executive may, at the discretion of the H.R. Committee, be increased by a factor of up to two times for purposes of calculating the number of Units to be allocated under the MDSUP.

An executive who holds Units will receive additional Units as dividends are paid on the common shares of the Company, on the same basis as if the dividends were reinvested pursuant to the Company's dividend reinvestment plan. The Units will vest over a five-year period and participants will only be allowed to redeem the Units upon cessation of employment.

The cash value of the Units when redeemed will be equivalent to the market value of an equivalent number of Falconbridge common shares at the time of cessation of employment with the Company.

As of December 31, 2005, a total of 93,866 Units were held by executives of the Company (2004 – 44,274; 2003 – 33,666), the accrual in respect of which is not significant at December 31, 2005, 2004 and 2003.

Dividend Reinvestment Plan

Canadian resident shareholders may elect to reinvest their cash dividends from common shares to purchase additional shares. During 2005, 64,642 (2004 – 37,910; 2003 – 5,046,641) common shares were issued under the dividend reinvestment plan. The dividend reinvestment plan was indefinitely suspended on October 20, 2005 according to the terms of the Inco and Falconbridge support agreement related to the Inco offer to purchase Falconbridge common shares.

16. Income and Production Taxes

The provision for income and production taxes differs from the amount that would have resulted by applying statutory income tax rates to earnings as described below.

(US$ millions)	2005	2004 Restated (see note 2)	2004 As reported	2003
Income before the following:				
Income and production taxes and minority interest	1,546	1,242	1,181	131
Provision based on combined federal and composite provincial tax rate of 33.2% (2004 – 37.6%) (2003 – 38.6%)	513	467	444	51
Increase (decrease) in taxes resulting from:				
Resource and depletion allowances	(32)	(26)	(26)	(6)
Royalties and mineral taxes	22	22	22	7
Rate differences from foreign and manufacturing activities	(76)	(116)	(116)	(50)
Non-taxable items	(7)	(57)	(57)	(20)
Capital taxes	25	7	7	13
Foreign exchange adjustments	46	51	41	18
Non-recurring and other	20	3	18	7
Income and production taxes	511	351	333	20

Consolidated income and production taxes are as follows:

(US$ millions)	2005	2004 Restated (see note 2)	2004 As reported	2003
Current:				
Federal and provincial income taxes	13	25	27	16
Provincial mining taxes	12	5	5	2
Foreign taxes	269	75	75	35
	294	105	107	53
Future:				
Federal and provincial income taxes	24	32	32	(55)
Provincial mining taxes	12	18	18	4
Foreign taxes	181	196	176	18
	217	246	226	(33)
	511	351	333	20

The components of the future tax asset and future tax liability at December 31, 2005, 2004 and 2003 are as follows:

	2005		2004 Restated (see note 2)		2004 As reported		2003	
	Legal entities where		Legal entities where		Legal entities where		Legal entities where	
(US$ millions)	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets	assets exceed liabilities	liabilities exceed assets

During 2004, the Company has non-resident subsidiaries that have tax losses of US$nil (2003 – US$106m) for which no benefit has been recorded. If the tax benefit had been recorded, the amount would have been US$nil (2003 – US$21m).

As of December 31, 2005, the Company had the following net operating loss carry-forwards which are scheduled to expire in the following years:

Year of Expiry	Net Operating Losses (US$ millions)
2006 – 2015	82
2016 – 2025	243
Indefinitely	299
	624

17. Financial Instruments

Falconbridge uses various strategies to manage its market risk, including the use of derivative contracts to limit, offset or reduce the Company's market exposure. Derivative instruments are used to manage well-defined commodity price, foreign exchange and interest rate risks arising from Falconbridge's primary business activities. The fair values of Falconbridge's derivative instruments, as summarized later in this note, are based on quoted market prices for similar instruments and on market closing prices at year end.

Effective July 1, 2003, Falconbridge's functional currency was changed from the Canadian to U.S. dollar. Following this change, Falconbridge realigned its hedging programs to manage the risk associated with its non-U.S. dollar investments and monetary assets and liabilities, as well as change its cash flow hedging program to now hedge the exposure created by its non-U.S. dollar expenses.

(a) Fixed Forward Price Hedges

Some customers request a fixed sales price instead of the COMEX or London Metal Exchange ("LME") average price in the month of shipment. Falconbridge enters into futures contracts that will allow it to receive the COMEX or LME average price in the month of shipment while customers pay the agreed upon fixed price. Falconbridge accomplishes this by settling the futures contracts during the month of shipment, which generally results in the realization of the COMEX or LME average price.

At December 31, 2005, the mark-to-market value of these positions was a gain of US$6m (2004 – gain of US$8m; 2003 – gain of US$9m).

(b) Commodity Hedges

Falconbridge purchases metal in concentrate or scrap to be processed eventually into refined metal for sale to customers. The raw material feed is purchased from third parties at prices that are often different from the eventual sale price to metal customers, largely due to the timing of processing. To mitigate the price risk resulting from the difference between the timing of purchases and sales, Falconbridge hedges such transactions. The hedge transactions involve the purchase or sale of over-the-counter or LME or COMEX exchange-traded contracts. In the month that the refined metal is sold, the corresponding commodity hedge position is liquidated at the COMEX or LME average price for the month of sale.

As at December 31, 2005, the mark-to-market unrealized loss was US$7m (2004 – unrealized loss of US$1m; 2003 – unrealized loss of US$18m).

(c) Hedges of Foreign-denominated Expenditures

Prior to July 1, 2003, Falconbridge managed a foreign currency cash flow hedging program whereby portions of its forecasted U.S. dollar-denominated revenue were hedged with forward foreign exchange contracts with its banks. At December 31, 2002, Falconbridge had forward contracts to sell US$886m maturing over the following 4.5 years, at an average exchange rate of Cdn$1.53. In addition, Noranda's partially-owned subsidiary had also entered into various short-term option contracts which, if exercised, would have resulted in additional sales of US$125m. The mark-to-market value of these positions at December 31, 2002 was a loss of US$40m.

Since Falconbridge's functional and reporting currency is the U.S. dollar, Falconbridge hedges its Canadian dollar costs using foreign currency exchange contracts. When the Canadian dollar strengthens significantly against the U.S. dollar, the increase in value of future Canadian dollar costs is partially offset by gains in the value of the forward currency contracts

designated as hedges. Conversely, when the Canadian dollar weakens, the decrease in the value of future Canadian dollar costs is partially offset by losses in the value of the forward currency contracts.

At December 31, 2003, Falconbridge had forward currency exchange contracts to purchase Cdn$1,097m maturing over the next 3.5 years at an average exchange rate of Cdn$1.50. In addition, Falconbridge's partially-owned subsidiary also had option contracts that, if exercised, would result in the purchase of Cdn$29m over the next four months. The mark-to-market value of these positions at December 31, 2003 was a gain of US$110m.

At December 31, 2004, Falconbridge had forward currency exchange contracts to purchase Cdn$510m maturing over the next 2.5 years at an average exchange rate of Cdn$1.44. In addition, Falconbridge's partially-owned subsidiary also had option contracts that, if exercised, would result in the purchase of Cdn$50m over the next twelve months. The mark-to-market value of these positions at December 31, 2004 was a gain of US$71m.

At December 31, 2005, Falconbridge had forward currency exchange contracts to purchase Cdn$12m maturing over the next one and half years at an average exchange rate of Cdn$1.52. The mark-to-market value of these positions at December 31, 2005 was a gain of US$1m.

In addition, Falconbridge maintains a program to hedge its Norwegian Kroner and Chilean Peso expenditures. At December 31, 2005, Falconbridge entered into other short-term forward foreign exchange contracts to hedge its Norwegian and Chilean commitments, whereby it would purchase notional amounts with a U.S. dollar equivalent of US$19m (2004 – US$9m; 2003 – US$81m) and in 2004, entered into various short-term forward foreign option contracts which, if exercised, would have resulted in the purchase of 135 million Norwegian Kroner (2003 – 210 million). At December 31, 2005, the mark-to-market value of these contracts was nominal (2004 – mark-to-market gain of US$4m; 2003 – mark-to-market gain of US$17m).

Falconbridge's operating costs to December 31, 2005 include realized exchange gains from the settlement of various cost hedge contracts of US$63m (2004 – exchange gain in operating costs of US$77m; 2003 – exchange gain in revenue of US$18m and exchange gain in operating costs of US$16m).

(d) Hedge of Net Investment in Foreign Operations

The Company uses forward foreign exchange contracts and foreign-denominated obligations to protect the value of its investments in its self-sustaining foreign subsidiaries.

At December 31, 2003, the Company had outstanding foreign exchange contracts to sell Cdn$82m, maturing over the next eight years, designated as hedges against Canadian dollar net assets. In addition, a series of short-term foreign exchange contracts to sell Cdn$134m are designated as hedges against foreign-denominated monetary assets of the Company. The Company's partially owned subsidiary had a series of short-term foreign exchange contracts to purchase a notional amount of Cdn$510m as a hedge against foreign-denominated monetary assets and liabilities. As at December 31, 2003, the unrealised loss on these contracts was $27.

At December 31, 2004, the Company had outstanding foreign exchange contracts to sell Cdn$77m, maturing over the next seven years, designated as hedges against Canadian dollar net assets. In addition, a series of foreign exchange contracts to buy Cdn$40m and sell Cdn$23m are designated as hedges against foreign-denominated monetary liabilities and net monetary assets of the Company. The Company's partially-owned subsidiary had a series of short-term foreign exchange contracts to purchase a notional amount of Cdn$520m as a hedge against foreign-denominated monetary assets and liabilities. As at December 31, 2004, the unrealized loss on these contracts was US$75m.

At December 31, 2005, the Company had outstanding foreign exchange contracts to sell Cdn$77 million, maturing over the next six years, designated as hedges against Canadian dollar net assets. In addition, a series of foreign exchange contracts to buy Cdn$516 million are designated as hedges against foreign-denominated monetary liabilities of the Company. As at December 31, 2005, the unrealized loss on these contracts was US$88m.

The Company has also entered into short-term forward foreign exchange contracts to sell £1 million (2004 – £3 million; 2003 – £4 million) and purchase U.S. dollars as a hedge against pounds sterling net assets. At December 31, 2005, 2004 and 2003, the fair value of these contracts approximated their carrying value.

Derivative financial instruments involve credit and market risk. Credit risk arises from the potential for a counterparty to default on its contractual obligations and is limited to those contracts where the Company would incur a loss in replacing the defaulted transaction. The Company minimizes credit risk through the selection, monitoring and diversification of counterparties, use of the International Swaps and Derivatives Association (ISDA) documentation and master netting agreements, collateral and other credit mitigation techniques.

18. Commitments and Contingencies

(a) On July 1, 2003, the senior debt of the Antamina project became non-recourse to its sponsors, the Company, BHP Billiton PLC, Teck Cominco Limited and Mitsubishi Corporation, upon successful completion of a series of tests and following the delivery of the related certificates to the senior lenders.

(b) As a result of the sale of the CEZ processing facility to the Noranda Income Fund in 2002, the Company entered into a 15-year supply and processing agreement with the Fund. The Company has committed to sell up to 550,000 tonnes of zinc concentrate annually to the refinery (its annual concentrate requirement to operate to its full current capacity) at market rates for the payable metal, less a fixed treatment charge initially set at Cdn$0.352/lb. of "payable zinc metal." Commencing January 1, 2004, the Processing Fee will be the Processing Fee in the previous year adjusted annually (i) upward by 1% and (ii) upward or downward by 10% of the year-over-year percentage change in the average cost of electricity per megawatt hour for the Processing Facility. "Payable zinc metal" in respect of a quantity of concentrate will be equal to 96% of the assayed zinc metal content in the concentrate under the Supply and Processing Agreement.

The Company has also committed to manage the processing facility through operating and marketing agreements and will act as an agent for the sale of the facility's zinc production for the duration of the supply agreement.

(c) On October 11, 2005, Inco announced a take-over bid for all outstanding common shares of the Company. The offer was comprised of part cash and part Inco shares. The completion of the take-over bid requires acceptance by 66.66% of all common shareholders of the Company on a fully-diluted basis and is subject to regulatory approvals. The Company would be required to provide for the payment of a fee of up to US$320m to Inco in the event that the acquisition is not completed for certain reasons.

(d) On April 19, 2005, Falconbridge and Barrick Gold entered into a joint-venture agreement regarding the Kabanga nickel deposit and related concessions in Tanzania. Under the agreement, Falconbridge acquired a 50% indirect interest in the Kabanga Project for US$15m and became the operator of the joint venture.

Over the next several years, Falconbridge will fund and conduct a US$50m work plan that will include additional exploration, infill drilling, and technical work to update the resource model for Kabanga.

(e) On December 28, 2005, Falconbridge and its joint-venture partner, *Société Minière du Sud Pacifique S.A.* ("SMSP") acquired a 49% and 51% interest, respectively, in the Koniambo Nickel project. Under the Bercy Accord, Falconbridge assumed responsibility for arranging financing of up to 100% of the project. During 2005, Falconbridge committed to providing at least US$100m for equipment and services relating to the project.

(f) From time to time, Falconbridge is involved in litigation, investigations or proceedings relating to claims arising out of its operations in the ordinary course of business. In the opinion of Falconbridge's management, these claims and lawsuits in the aggregate will not have a material adverse effect on the consolidated financial statements.

19. Related-party Transactions

(a) Falconbridge's ownership interest in the Noranda Income Fund was 25% during 2005 and 2004. Included in revenues are US$9m (2004 – US$7m; 2003 – US$7m) representing the Company's share of income from the Fund accounted for under the equity method.

Falconbridge has entered into a Supply and Processing Agreement and a Management Service Agreement with the Fund which have contracted Falconbridge to provide concentrate and services to the Fund on a regular basis (see Note 18). Falconbridge has sold US$210m (2004 – US$127m; 2003 – US$79m) of concentrate to the Fund at terms in accordance with the Supply & Processing Agreement. As of December 31, 2005, Falconbridge has a receivable of

US$36m (2004 – US$16m; 2003 – US$9m) from the Fund due to the concentrate sold. Falconbridge has also provided US$65m (2004 – US$61m; 2003 – US$46m) of administration, management and operating services to the Fund at their negotiated value. As of December 31, 2005, Falconbridge has a receivable of US$8m (2004 – US$11m; 2003 – US$7m) from the Fund due to the services provided. In addition, Falconbridge has made purchases of US$35m (2004 – US$29m; 2003 – US$57m) of zinc metals and by-products from the Fund at terms that reflect exchange amounts. Falconbridge has sold metals and operating supplies of US$3m (2004 – US$5m; 2003 – US$5m) to the Fund at terms that reflect market rates. Included in accounts payable as at December 31, 2005 is US$11m (2004 – US$8m; 2003 – US$5m) of amounts due to the Fund. Included in accounts receivable as at December 2005 is US$nil (2004 – US$1m; 2003 – US$1m) of amounts due from the Fund.

(b) Falconbridge has undertaken a number of transactions with Antamina in which Falconbridge has a 33.75% ownership interest. Included in raw material costs are purchases of concentrate of US$260m (2004 – US$159m; 2003 – US$49m) from Antamina that are recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$65m (2004 – US$42m; 2003 – US$13m) to Antamina.

During 2004, Falconbridge has made purchases of goods of US$3m (2003 – US$120m) from its affiliates and provided services of US$nil in 2003. These transactions were measured at their exchange amount. As of December 31, 2004, Falconbridge has a payable of US$nil (2003 – US$12m) to its affiliates.

(c) Falconbridge has undertaken a number of transactions with Gramercy in which Falconbridge has a 50% interest. Included in raw material costs are purchases of alumina of US$136m (2004 – US$14m) from Gramercy that are recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$6m (2004 – US$2m) to Gramercy.

(d) Falconbridge has undertaken a number of transactions with Collahuasi in which Falconbridge has a 44% interest. Included in raw material costs are purchases of copper cathode of US$109m (2004 – US$79m) from Collahuasi that are recorded at agreed upon exchange amounts. As of December 31, 2005, Falconbridge has a payable of US$25m (2004 – US$19m) to Collahuasi.

(e) Falconbridge has entered into short-term financing transactions with affiliates and associates from time to time at market interest rates. Falconbridge has revolving credit facilities totaling Cdn$25m (2003: Cdn$100m, US$75m of which expired in January 2004) with an affiliate, maturing January 2006. As of December 31, 2004, Falconbridge has made no drawdown against the credit facilities.

(f) Brookfield Asset Management Inc. (formerly Brascan Corporation "Brascan"), which was a major shareholder of the Company prior to the acquisition of the former Falconbridge, sold its ownership in the Company in August, 2005. The transactions of the Company with Brascan and its subsidiaries prior to the sale of its ownership were as follows: Falconbridge Aluminum Inc. ("Aluminum"), a wholly-owned subsidiary of Falconbridge, entered into a power supply contract with Brascan Energy Marketing Inc. ("BEMI"). BEMI, an affiliate of the Company, agreed to provide Aluminum's New Madrid primary aluminum smelter up to 490 MWh of electricity annually for a two-year period commencing June 1, 2003 at rates with a variable component based on market prices. Aluminum has purchased US$52m (2004 – US$127m; 2003 – US$73m) under this contract. Upon completion of the contract on June 1, 2005, the contract was not renewed.

(g) Falconbridge has sold certain trade receivables to a securitization trust which is owned by Brascan Financial Corporation for a total of US$315m (2003 – US$20m) in cash, under an agreement that came into effect on November 13, 2003.

(h) Included in accounts receivable are loans receivable from officers of the Company in the amount of US$2m (2004 – US$3m; 2003 – US$3m), secured by collateral that has market values in excess of cost for both years.

(i) The Company has sold certain trade receivables to a securitization trust which is owned by Brascan Financial Corporation for a total of US$4m (2004 – US$315m) in cash, under an agreement that came into effect in November 2003. The arrangement was terminated in October 2005.

Brascan Financial Corporation, a subsidiary of Brascan, provided the Company with a committed credit facility in the principal amount of Cdn$25 million with an expiry date of January 31, 2006. The facility was cancelled after Brascan sold its ownership in the Company in August, 2005.

The above transactions have been recorded at their exchange amounts.

20. Employee Future Benefit Plans

Falconbridge has a number of defined benefit plans providing pension, health, dental and life insurance benefits to substantially all employees after one or two years of continuous service. Pension benefits are calculated based upon length of service and either final average earnings or a specific amount per year of service. Hourly employees are generally members of negotiated plans.

Defined benefit plan assets consist primarily of cash, equity securities and fixed income securities. The defined benefit plan holds less than 1% of its assets in common shares of Falconbridge and its related parties.

Falconbridge's funding policy is to contribute amounts sufficient to meet minimum funding requirements as set forth by the regulations of the appropriate jurisdictions plus such additional amounts as Falconbridge may determine to be appropriate.

The obligation for benefits and the benefits expenses under these plans are determined through periodic actuarial reports that are based on the following weighted average assumptions:

	Pension Benefit Plans		Other Benefit Plans	
	December 31, 2005	December 31, 2004	December 31, 2005	December 31, 2004
Assumptions used to calculate benefit obligations:				
Discount rate	5.00%	5.75%	5.01%	5.75%
Rate of compensation increase	3.75%	3.61%	3.50%	3.67%

na: not applicable

The cost of pension and other post-retirement benefits earned by employees is actuarially determined using the projected benefit method pro-rated on service and management's best estimate of expected plan investment performance, salary escalation, retirement ages of employees and health care costs. Plan obligations are discounted using rates that reflect the market yields as of the measurement date on high-quality debt instruments with cash flows that match expected benefit payments.

The health care cost trend rate is assumed to be the following:

	December 31, 2005	December 31, 2004
Initial medical trend rate	7.94%	8.44%
Ultimate medical trend rate	4.51%	4.50%
Number of years to reach trend rate	8	9
Initial and ultimate dental trend rate	4.00%	4.00%

	Health Care Cost Trend			
	December 31, 2004		December 31, 2003	
	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures	Company and wholly-owned subsidiaries	Partially-owned subsidiaries and joint ventures
Initial medical trend rate	8.14%	8.50%	8.20%	9.00%
Ultimate medical trend rate	4.52%	4.50%	4.50%	4.50%
Number of years to reach trend rate	9	8	9	9
Initial and ultimate dental trend rate	4.00%	4.00%	4.00%	4.00%

The health care cost trend rate is assumed to start at 8.50% for 2004 for the Company, its partially-owned subsidiaries and joint ventures (2003 – 9%), decreasing to an ultimate medical trend rate of 4.0% by 2012 for the Company, its partially-owned subsidiaries and joint ventures (2003 – 4.0%).

In 2003, Falconbridge ratified new collective agreements at three of its operations. Included in these agreements was an increase in the pension plan benefits that amounts to an average of 15.5% at the end of three years, as well as provisions for early retirements.

In 2004, Falconbridge ratified new collective agreements at four of its operations that had an impact on pension benefits. Included in these agreements was an increase in the pension plan benefits that amounts to an average of 6.5% at the end of three years, as well as provisions for early retirements.

In 2005, Falconbridge ratified new collective agreements at four of its operations. The impact of these agreements on the employee future benefit costs is nominal.

The funded status of Falconbridge's post-employment benefit plans and net accrued benefit asset (obligation) are as follows:

	Pension Benefit Plans								
	December 31, 2005			December 31, 2004			December 31, 2003		
(US$ millions)	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net
Plan assets	966	1,145	2,111	947	921	1,868	714	889	1,603
Benefit obligations	877	1,415	2,292	833	1,202	2,035	580	1,184	1,764
Excess(deficit) of plan assets over benefit obligations	89	(270)	(181)	114	(281)	(167)	134	(295)	(161)
Net accrued asset			228			289			208

	Other Benefit Plans								
	December 31, 2005			December 31, 2004			December 31, 2003		
(US$ millions)	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net	Plans where assets exceed benefit obligations	Plans where benefit obligations exceed assets	Net
Plan assets	31	–	31	30	–	30	18	7	25
Benefit obligations	27	412	439	24	349	373	16	309	325
Excess(deficit) of plan assets over benefit obligations	4	(412)	(408)	6	(349)	(343)	2	(302)	(300)
Net accrued liability			(330)			277			250

The measurement date used for financial reporting purposes of the plan assets and benefit obligations is December 31, 2005. For material plans, the most recent actuarial valuations filed for funding purposes were prepared as of December 31, 2004, with the exception of the Retirement Annuity Plan which was prepared as of December 31, 2002. With respect to Falconbridge's significant Canadian pension plans, the most recent actuarial valuations required for funding purposes were prepared as of January 1, 2004 and the effective date of the next required funding actuarial valuations is January 1, 2005. Actuarial valuations are generally required every three years. Falconbridge and U.S. Plans have valuations every year.

The change in the funded status of Falconbridge's post-employment benefit plans was as follows:

Accrued benefit asset(liability), net of valuation allowance	187	21	208	(78)	(172)	(250)

Past service costs resulting from plan amendments are amortized over the remaining average service life of active employees. Past service costs from negotiated plan improvements are amortized over the term of the collective agreement.

For most plans, the net actuarial gain (loss) that exceeds 10% of the greater of the benefit obligation and the value of plan assets is amortized over the remaining service period of active employees. Accrued post-retirement benefits asset (liability) is recorded in pension and other provisions.

Falconbridge's post-employment benefit expense included the following components:

The expected rate of return on plan assets assumption is reviewed annually by management. The assumption is based on expected returns for the various asset classes, weighted by the portfolio allocation. Anticipated future long-term performance of individual asset categories is considered, reflecting expected future inflation and real yields on fixed income securities and equities.

Cash Flows

Falconbridge made cash contributions during 2005 of US$116m (2004 – US$119m) to pension benefit plans and US$19m (2004 – US$20m) to other benefit plans.

Our best estimate of the amounts we expect to contribute for the year ending December 31, 2006 is US$104m (2005 – US$116m) for pension benefit plans and US$23m (2005 – US$20m) for other benefit plans.

The projected benefit payments from the pension benefit plans and other benefit plans in the next 10 years as at 31 December 2005 are estimated as follows:

2010 to 2014	363	317	34	106

21. Segmented Information

Falconbridge has four operating segments: Copper, Nickel, Zinc and Aluminium. Inter-segment sales and purchases are made at market prices and trade terms. As the products and services in each of the reportable segments, except for Corporate, are essentially the same, the reportable segments have been selected at the level where decisions are made on the provision of resources, capital and where performance is measured. For operations forming part of a reportable segment, performance is measured based on production targets, operating costs incurred and unit operating costs. During preparation of the financial statements, the sales and purchases between segments are eliminated. Operations and identifiable assets by operating and geographic segments are presented below:

22 Significant Differences from United States Accounting Principles

These consolidated financial statements have been prepared in accordance with Canadian generally accepted accounting principles ("Canadian GAAP"). Canadian GAAP varies in certain significant respects from the principles and practices generally accepted in the United States ("U.S. GAAP"). The effect of these principal differences on the Company's financial statements is quantified below and described in the accompanying notes.

Statements of Income (Loss)

(US$ millions)	Years ended December 31

Comprehensive income under U.S. GAAP (a)	862	454	454	322

(a) Comprehensive income is measured in accordance with Statement of Financial Accounting Standards ("FAS") No. 130, "Reporting Comprehensive Income." This standard defines comprehensive income as all changes in equity other than those resulting from investments by owners and distributions to owners. Comprehensive income comprises net earnings and other comprehensive income where other comprehensive income ("OCI") is the change in equity during the period that arises from transactions and other events that are related to non-owner sources. The concept of comprehensive income does not exist under Canadian GAAP.

(b) Effective January 1, 2005, Falconbridge retroactively adopted the amended standard CICA 3860 *Financial Instruments – Presentation and Disclosure*. Further disclosure regarding the convertible debentures is presented in Notes 2 (a) and 11.

Under U.S. GAAP, the entire amount of interest payments on the convertible debentures is accounted for as interest expense. Comparative figures for the year ended December 31, 2004 have been adjusted to reflect this change in accounting policy under Canadian GAAP.

Prior to January 1, 2005 Falconbridge accounts for the convertible debentures in accordance with their substance and, as such, they are presented in the financial statements in their liability and equity component parts. Under U.S. GAAP, the entire face value of the convertible debentures is treated as debt, with interest expense based on the coupon rate of 5.0%.

(c) Under Canadian GAAP, certain financial instruments qualify as a hedge for accounting purposes and therefore gains and losses on these contracts are recognized in revenue at the time the anticipated cash flows are realized. U.S. GAAP, specifically under FAS No. 133 "Accounting for Derivative Instruments and Hedging Activities" and No. 138 "Accounting for Certain Derivative Instruments and Hedging Activities" (together, "FAS 133"), requires a company to recognize all of its derivative instruments, whether designated in hedging relationships or not, on the balance sheet at fair value. The accounting for changes in the fair value (i.e. gains or losses) of a derivative instrument depends on whether it has been designated and qualifies as part of a hedging relationship. For derivatives designated as fair value hedges, the effective portion of the change in the fair value of the derivative is offset by changes in the fair value of its hedged item. For cash flow hedges and hedges of the net investment in self-sustaining operations, the effective portion of the changes in the fair value of the derivative is accumulated in OCI and then is released from OCI and included in income when the hedged item affects earnings. All other derivatives are carried at fair value. FAS 133 establishes certain criteria to be met in order to designate a derivative instrument as a hedge and to deem a hedge as effective.

Fair Value Hedges

Falconbridge has chosen to designate its fixed forward price hedges and certain interest rate swaps as fair value hedges. These hedging instruments were effective during 2005 and 2004. During the year ended December 31, 2004,

the Company recognized a net loss of US$nil (2003 – US$16m) related to the ineffective portion of these hedging instruments.

Cash Flow Hedges

Falconbridge has chosen to designate its foreign currency-denominated revenue hedges and foreign currency-denominated expenditure hedges as cash flow hedges. No ineffectiveness to these hedging instruments was incurred during 2005, 2004 and 2003. At December 31, 2005, the Company does not expect to reclassify any amount of net losses (2004 – US$55m of net gains; 2003 – US$55m of net gains) on derivative instruments from accumulated OCI to earnings during the next 12 months according to contract settlement dates.

Hedges of Foreign Net Assets

During the year ended December 31, 2005, the Company recognized a net loss of US$5m (2004 – US$6m), included in other comprehensive income, related to the forward foreign exchange contracts and foreign-denominated fixed-rate debt.

During the year ended December 31, 2004, the Company recognized a net loss of US$6m (2003 – net gain of US$288m), included in the cumulative translation adjustment, related to the forward foreign exchange contracts and foreign-denominated fixed-rate debt.

Other Hedges

For all other derivative instruments, Falconbridge has chosen not to designate them as hedging instruments.

(d) Under Canadian GAAP, Falconbridge capitalizes exploration costs when sufficient pre-feasibility work indicates that future mine production is reasonably certain and capitalizes costs incurred during the start-up phase of a project until commercial production commences. Under U.S. GAAP, exploration costs cannot be capitalized until the Company has objective reasonable assurance as to their recovery, generally upon receipt of a bankable feasibility study. Statement of Position 98-5 requires start-up costs to be expensed as incurred. As a result of the differences in the carrying amount of capital assets under Canadian and U.S. GAAP, there are differences in depreciation expense in subsequent periods. Further a difference in depreciation expense arises due to the earlier commencement of depreciation under U.S. GAAP.

(e) Effective January 1, 2002, Falconbridge prospectively adopted FAS No. 123 "Accounting for Stock-based Compensation" whereby compensation expense for options granted or modified after January 1, 2002 is measured at fair value at the grant date or modification date using the Black-Scholes valuation model and recognized over the remaining vesting period of the options granted or modified.

Prior to June 30, 2002, Falconbridge's stock option plan allowed for, at the option of the holder, the exercise of the employee's vested option whereby the difference between the grant price and the market price is paid on exercise by the Company, with no increase in the capital stock issued. Under U.S. GAAP, such a feature requires the mark-to-market obligation to be recognized through the income statement of the Company.

On June 30, 2002 Falconbridge's stock option plan was modified to remove the cash settlement feature. As a result under U.S. GAAP additional compensation expense is being recognized over the remaining vesting period of these modified options to the extent that the fair value of the options outstanding on the modification date exceeded the previously recorded compensation expense of these options.

Under Canadian GAAP, there is no requirement to account for options that contain a cash settlement feature when the cash settlement feature is removed by June 30, 2002.

(f) Under Canadian GAAP, when a defined benefit plan gives rise to an accrued benefit asset, a company must recognize a valuation allowance for the excess of the adjusted benefit asset over the expected future benefit to be realized from the plan asset. U.S. GAAP does not provide for a valuation allowance against pension assets. As a result, a difference between U.S. and Canadian GAAP has been recorded for the effects of recognizing a pension valuation allowance and changes therein under Canadian GAAP. Further differences result from the different transition rules and timing of the adoption of the current U.S. and Canadian standards for post-employment costs.

(g) Effective January 1, 2003, Falconbridge adopted FAS 143, "Accounting for Asset Retirement Obligations" which requires that the fair value of liabilities for asset retirement obligations be recognized in the period in which they are incurred. A corresponding increase to the carrying amount of the related asset is generally recorded and depreciated over the life of the asset. The amount of the liability is subject to re-measurement at each reporting period. The cumulative effect of the change through January 1, 2003 was to increase capital assets by US$70m, increase deferred credits by US$97m, decrease future tax liability by US$5m and increase minority interest in subsidiaries by US$5m, with a one time after-tax charge to net earnings of US$27m (loss of US$0.1 per share). Canadian GAAP adopted the same accounting rule, effective January 1, 2004. Comparative figures for the year ended December 31, 2003 have been adjusted to reflect the re-measurement of the asset retirement obligation under Canadian GAAP.

In accordance with the standard, the Company has not included any provision for reclamation costs associated with assets of indeterminate lives, in particular metallurgical plants, as their lives cannot be reasonably estimated nor reclamation obligations determinable.

(h) Under U.S. GAAP, foreign exchange gains and losses on translation of self-sustaining foreign operations are recorded in OCI. Under Canadian GAAP, such gains and losses are included as a separate component of shareholders' equity referred to as cumulative translation adjustment.

(i) U.S. GAAP requires that certain long-term investments not held for trading be recorded at fair value, with unrealized holding gains and losses excluded from the determination of earnings and reported as a separate component of OCI.

(j) U.S. GAAP requires the recognition of an additional minimum pension liability in the amount of the excess of the Company's unfunded accumulated benefits obligation over the recorded pension benefits liability. An offsetting intangible pension asset is recorded no greater than the unrecognized prior service costs, with any difference recorded as a reduction in accumulated OCI.

(k) U.S. GAAP requires investments in joint ventures to be accounted for under the equity method, while under Canadian GAAP, the accounts of joint ventures are proportionately consolidated. However, under rules promulgated by the Securities and Exchange Commission, a foreign registrant may, subject to the provision of additional information, continue to follow proportionate consolidation for the purposes of registration and other filings notwithstanding the departure from U.S. GAAP. A joint venture is qualified for the accommodation if it is an operating entity, the significant financial operating policies of which are, by contractual arrangement, jointly controlled by all parties having an equity interest in the entity. The joint ventures that the Company has proportionately consolidated for the reporting periods are Antamina, Collahuasi, Magnesium, Louvicourt, and Gramercy. All of the Company's joint ventures qualify for the accommodation as their significant financial operating policies are, by contractual arrangement, jointly controlled by all parties having an equity interest in the entity. Consequently, the consolidated balance sheets, statement of income, and cash flow statements have not been adjusted to restate the accounting for these joint ventures under U.S. GAAP. If the Company was not granted the accommodation, the equity accounting method would be used to account for the investment in Antamina, Collahuasi, Louvicourt, Magnesium and Gramercy. Compared to proportionate consolidation, equity accounting would result in no impact to the net income reported in the U.S. GAAP income statement reconciliation. In terms of the U.S. GAAP balance sheet, each item on the balance sheet would be adjusted to exclude the Company's share of these joint ventures' assets and liabilities. Included in investments and other assets would be the Company's share of the joint ventures' net assets. The U.S. GAAP cash flow statement would need to be adjusted to correspond with the adjustments on the balance sheet

Additional information concerning the Company's interests in these five joint ventures is presented in Note 6, including the Company's share of the assets, liabilities and equities, revenues, expenses and cash flows for the years ended December 31, 2005 and 2004.

(l) U.S. GAAP does not permit the subtotal of cash from operations before net changes in non-cash working capital. The various subtotals presented on the statement of income (loss) under Canadian GAAP are not permitted under U.S. GAAP.

(m) In December 2003, FASB issued a revised interpretation of FIN 46 (FIN 46-R), which supercedes FIN 46 and clarifies and expands current accounting guidance for variable interest entities (VIEs). As a result, Falconbridge determined that the

securitization trust (note 16e) was a VIE of which Falconbridge was the primary beneficiary. FIN 46-R requires that Falconbridge consolidate entities that are considered to be VIEs and that it is the primary beneficiary of. Under Canadian GAAP, the securitization trust would not have been consolidated. This difference resulted in adjustments to the consolidated balance sheet, but did not result in any adjustments to net income.

(n) Under Canadian GAAP, capital stock redeemable at the option of the holder must be recognized as debt and the related dividend payments are recognized as interest expense. Under U.S. GAAP, only capital stock that is mandatorily redeemable for assets of the Company must be recognized as a debt. Since the Company does not have an unconditional obligation to redeem Preferred Shares Series H for assets of the Company (Note 12), the Preferred Shares Series H have been classified as equity under U.S. GAAP and dividend payments on the Preferred Shares Series H have been recognized as a reduction in retained earnings.

Since Preferred Shares Series H is denominated in Canadian dollars, its redeemable value is determined by the foreign exchange rate at the end of the reporting period and is subject to changes at different reporting periods. Under U.S. GAAP, the change in its redeemable value from foreign exchange translation is amortized directly to the retained earnings over the period to the earliest redemption date. As the Preferred Shares Series H is considered a liability under Canadian GAAP, changes in value resulting from fluctuations in foreign exchange rates are recognized immediately into income.

(o) Under U.S. GAAP, the book value of the net assets acquired from the business combination as mentioned in Note 3 are different from their book values under Canadian GAAP. The difference in book values arose from the historical accounting differences between U.S. GAAP and Canadian GAAP for the acquired company prior to the business combination. While the preliminary fair values of the assets acquired and liabilities assumed from the business combination are the same under both U.S. GAAP and Canadian GAAP, the difference in their book values results in a difference in preliminary fair value increments allocated to the assets and liabilities under U.S. GAAP and Canadian GAAP. The difference in fair value increments under U.S. GAAP and Canadian GAAP creates a reduction of US$4m in mining, processing and refining costs and a reduction of US$5m in interest expense under U.S. GAAP after the business combination.

(p) Under Canadian GAAP, a gain or loss equivalent to a proportionate amount of the exchange gains and losses accumulated in the foreign cumulative translation adjustment is recognized into income when there has been a reduction in the net investment which results from a reduction in the equity of a foreign operation as a result of certain capital transactions, such as dividend distributions. Under U.S. GAAP, no gain or loss would be recognized unless substantially all of the investment was liquidated.

The following summarizes the adjustments to the Company's balance sheets and cash flow statements in order to conform to U.S. GAAP.

Balance Sheet

Impending Accounting Changes

Canadian GAAP

In 2003, the CICA amended Handbook Section 3860, "Financial Instruments – Disclosure and Presentation" ("CICA 3860"), to require certain obligations that may be settled with an entity's own equity instruments to be reflected as a liability. The amendments must be adopted in the Company's 2005 consolidated financial statements with retroactive application. Upon adoption, the Company's Convertible Debentures will be presented as liabilities, with the exception of the equity value ascribed to the holder's option to convert certain of the Convertible Debentures into Common Shares, and the related liability carrying costs will be presented as a charge to net income. The amendments to CICA 3860 will have no impact on basic or diluted earnings per share.

In 2004, the CICA issued Accounting Guideline AcG-15, "Consolidation of Variable Interest Entities", to provide guidance for applying the principles in Handbook Section 1590, "Subsidiaries", to certain entities. AcG-15 is effective for the

Company's 2005 fiscal year and harmonizes Canadian GAAP with U.S. GAAP accounting for variable interest entities. As a result, the disclosures for U.S. GAAP related to the VIEs will also be required for Canadian GAAP in 2005.

In January 2005, the CICA approved Handbook Sections 1530, "Comprehensive Income", 3855, "Financial Instruments – Recognition and Measurement", and 3865, "Hedges", and 3251, "Equity". The new standards are intended to harmonize Canadian GAAP with U.S. GAAP. The new standards are effective for the Company in the first quarter of 2007, but earlier adoption is permitted.

The standards require that all financial assets be classified as trading, available-for-sale, held to maturity, or loans and receivables. In addition, the standards require that all financial assets, including all derivatives, be measured at fair value with the exception of loans, receivables and investments intended to be held to maturity, which should be measured at amortized cost.

Changes in the fair value of trading securities will continue to be reported in earnings, while changes in the fair value of available-for-sale securities will be reported within other comprehensive income, until the financial asset is disposed of, or becomes impaired.

Similarly, the standards require that all financial liabilities be measured at fair value when they are held for trading or are derivatives. Other financial liabilities should be measured at cost.

The standards permit an entity to designate any financial instrument, on initial recognition, as one that it will measure at fair value with gains and losses recognized in net income in the period in which they arise.

Derivatives will be classified as trading, unless they are specifically designated within an effective hedge relationship. The standards permit three types of hedge relationships: fair value hedges, cash flow hedges, and hedges of net investments in self-sustaining foreign operations. For fair value hedges, the effective portion of changes in the fair value derivative instruments is offset in earnings against the changes in fair value of derivative instruments is offset in earnings against the changes in fair value, attributed to the risk being hedged in the underlying asset, liability or firm commitment. For cash flow hedges, and hedges of net investments in self-sustaining foreign operations, the effective portion of changes in fair value of derivative instruments is offset through other comprehensive income, until the variability in cash flows being hedged is recognized in earnings in future accounting periods or upon de-recognition of the net investment. Where a derivative instrument is designated as a hedge and meets the criteria for hedge effectiveness, earnings offset is available, but only to the extent that the hedge is effective. Any ineffectiveness in a hedge relationship will be recognized in current earnings.

Other comprehensive income will be included on the consolidated balance sheets as a separate component of shareholders' equity (net of tax), and will include net unrealized gains on available-for-sale securities, net unrealized gains on derivative instruments designated within an effective cash flow hedge, and unrealized foreign currency translation gains and losses and offsetting hedges on self-sustaining foreign operations. The Company is presently evaluating the impact of these new standards.

United States GAAP

In 2002, the Company adopted FAS 123 on a prospective basis. In December 2004, an amended Statement of Financial Accounting Standard No. 123 "Share-Based Payment" was issued, which may require the Company to apply a different method for valuing awards of stock options. Beginning in 2005, the Company will have to expense all stock options, including the remaining unrecognized compensation relating to options granted on or before December 31, 2001.

In November 2004, the FASB issued SFAS No. 151, "Inventory Costs – an Amendment of ARB No. 43, Chapter 4." This standard provides clarification that abnormal amounts of idle facility expense, freight handling costs, and spoilage should be recognized as current-period charges. The provisions of this standard are effective for inventory costs incurred during 2006.

In March 2005, the FASB ratified the consensus in EITF 04-06 which concludes that a mining company's costs incurred during production for the removal of overburden and waste material from a mine, in order that the underlying mineral deposit may be extracted (production-related stripping costs), should be considered variable production costs included in

the costs of the inventory produced during the period that the stripping costs are incurred. EITF 04-06 does not address the accounting for stripping costs incurred during the pre-production phase of a mine. As is current general practice, those costs may continue to be accounted for as mine development expenditures subject to capitalization and amortization over the life of the mineral deposit benefited from the expenditure.

The above U.S. GAAP standards are effective for the Company beginning January 1, 2006. The Company is presently evaluating the impact of these new standards.

23. Subsequent Event

The Company announced on March 16, 2006 that it intends to redeem a total of 20,000,000, or US$500m, of its outstanding junior preference shares. The junior preference shares will be redeemed on April 16, 2006 from holders of record on March 22, 2006. The Company intends to utilize its internal cash resources to fund the redemption.

This is the end of the financial information on the Falconbridge Group for the three years ended 31 December 2005, 31 December 2004 and 31 December 2003.

[This page is intentionally left blank]

Part IV

Information on the Expected Impact of the Proposed Acquisition on the Assets, Liabilities and Earnings of the Enlarged Group

2. Impact of the Proposed Acquisition on the assets, liabilities and earnings of the Enlarged Group

The Proposed Acquisition is likely to impact the Enlarged Group in the following key areas:

2.1 Borrowings to finance the acquisition consideration for Falconbridge

The acquisition consideration for Falconbridge will be financed through new debt facilities, as set out in the description of the new debt facilities in paragraphs 8.1(c) and 8.1(d) of Part VI – "Additional Information – Material contracts". It is assumed that these new loan facilities, including the Equity Bridge Facility, would be accounted for as debt.

Impact of raising debt:

- Assets:

Cash would increase by the amount received from the debt raised less the expenses associated with securing the debt.

- Liabilities:

Borrowed funds would increase by the net amount of debt raised to finance the consideration for the Proposed Acquisition.

- Earnings:

The costs associated with raising the debt will be included in the initial measurement of the debt, which would then be amortised over the period until repayment of the debt using the effective interest rate method.

To the extent that tax synergies arise as a result of the acquisition structures, these will be reflected as a reduced income tax charge.

2.2 Acquisition of Falconbridge

It is anticipated that the Xstrata Group would pay an aggregate cash consideration to Falconbridge Shareholders for all of the issued and outstanding common shares of Falconbridge (not already owned by the Xstrata Group) under the terms of the Xstrata Offer.

Under IFRS 3 "Accounting for Business Combinations", Xstrata would account for the Proposed Acquisition as an acquisition and would be required to fair value the tangible, intangible and contingent assets, liabilities and contingent liabilities of Falconbridge acquired at the completion date of the acquisition and to reflect any remaining difference between their fair value and that of the consideration paid and expenses of the transactions as goodwill, where the consideration exceeds the fair value of the net assets acquired. To the extent that the fair value of the net assets acquired exceeds the fair value of the consideration and expenses for each acquisition, the difference (negative goodwill) will be written-off to the income statement.

The costs associated with the transaction would be added to the cost of investment as it is assumed that all costs of the transaction are borne by Xstrata.

Impact of paying the consideration and associated costs and consolidating Falconbridge into the Enlarged Group:

- Assets:

Payment of consideration and associated costs

Cash would decrease by the aggregate cash amount paid as the consideration for Falconbridge Shares and the costs associated with the Proposed Acquisition.

Recognition of Falconbridge's tangible and intangible assets

Consolidated assets are estimated to increase on a line-by-line basis, being the recognition of Falconbridge's tangible and separately identifiable intangible assets at their fair value on acquisition.

Recognition of goodwill
Goodwill would be recognised, being the excess of the fair value of the purchase consideration for each company (comprising the cash consideration and the costs associated with each acquisition) over the fair value of Falconbridge's net assets (excluding minority interests).

The Xstrata Directors have not completed their purchase price allocation process to enable them to allocate the purchase price between goodwill and the net assets of Falconbridge, in accordance with IFRS 3. The fair value of Falconbridge's net assets will be performed as at the date of completion of the Proposed Acquisition.

– Liabilities:

Recognition of Falconbridge's liabilities
Consolidated liabilities are estimated to increase on a line-by-line basis, being the recognition of Falconbridge's total liabilities (including contingent liabilities to be recognised in accordance with IFRS3). Interest bearing liabilities would be reduced to the extent that they are refinanced upon acquisition.

– Earnings:

Earnings would be impacted by consolidating Falconbridge into the Xstrata Group based on the future earnings of the Falconbridge Group from the date of completion of the Proposed Acquisition, taking into account the impact on the earnings arising from the fair value exercises, and allocation of the purchase price to the net assets acquired of each company, performed in accordance with IFRS. This will include, but is not limited to:

- depreciation on any increase in the value of tangible and intangible assets with finite useful lives;
- the impact on interest expense of the refinancing of any interest bearing liabilities upon acquisition; and
- the impact on tax expense of the additional depreciation, and unwinding of any additional deferred tax liability recognised as a result of the Proposed Acquisition.

2.3 Principal differences in the application of Xstrata's accounting policies and those applied by Falconbridge
The historical financial information on the Xstrata Group for the two years ended 31 December 2003 and 31 December 2004 was prepared in accordance with UK GAAP. Financial information on the Xstrata Group for the years ended 31 December 2004 and 31 December 2005 was prepared in accordance with IFRS following the Xstrata Group's adoption of IFRS effective 1 January 2005. The historical financial information on the Falconbridge Group reproduced in Part III – "Information on the Falconbridge Group" has been prepared and presented in accordance with Canadian GAAP. Certain differences exist between UK GAAP and Canadian GAAP, and IFRS and Canadian GAAP, which might be material to the profits and shareholders' equity shown in the financial information herein.

The principal relevant differences between UK GAAP and Canadian GAAP, and between IFRS and Canadian GAAP, that the Directors believe could be material to the Falconbridge Group's profits and shareholders' funds are described below. The Falconbridge Group has not prepared its financial information in accordance with either UK GAAP or IFRS and, accordingly, the Directors cannot offer any assurance that the differences described below are complete or would in fact be the accounting principles creating the greatest differences between financial information of the Falconbridge Group prepared under Canadian GAAP and UK GAAP, and Canadian GAAP and IFRS. The following summary does not include all differences that exist between UK GAAP and Canadian GAAP, or between IFRS and Canadian GAAP, and is not intended to provide a comprehensive listing of all such differences specifically related to the Falconbridge Group or the industries in which it operates.

The differences described below reflect only those differences in accounting policies in force at the time of the preparation of the historical financial information on the Falconbridge Group and has been based on an analysis of the Falconbridge Group's accounting policies as disclosed in the publicly available information relating to Falconbridge. This is based purely on how Falconbridge's accounting policies are described in Falconbridge's publicly available information. There has been no attempt to identify future differences between UK GAAP and Canadian GAAP, or between IFRS and Canadian GAAP, as the result of proscribed changes in accounting standards, transactions or events that may occur in the future. The

Interest payments and accretion expense, arising from adjusting the time value of the principal of the debentures over time, are recorded as an expense.

Preference shares
Under IFRS there is a requirement to split financial instruments such as preference shares into their equity and liability components. The split is determined based on the fair value of the liability. Generally a preference share will have a liability component if the issuer has an obligation, or a potential obligation, to transfer cash or other financial assets to the holder.

Under Canadian GAAP, Falconbridge classifies preference shares based on the substance of the shares.

Under Canadian GAAP prior to 1 January 2005 Falconbridge classified all preference shares as equity.

With effect from 1 January 2005, as a result of new accounting recommendations, some preference shares were reclassified as liabilities because their conversion feature represent a fixed obligation of Falconbridge.

Environmental protection, rehabilitation and closure costs
IFRS and Canadian GAAP both require that liabilities be recognised in respect of environmental protection, rehabilitation and closure costs obligations.

Under IFRS provision is made in the accounting period when the related environmental disturbance occurs, based on the estimated future costs to restore the disturbed area. The provision is discounted where discounting has a material effect. At the time of establishing the provision, a corresponding asset is capitalised (where it gives rise to a future benefit) and depreciated in line with the underlying asset to which it relates. Any provisions are reviewed on an annual basis for changes in cost estimates or life of operations.

Whilst accounting for these liabilities under current Canadian GAAP is broadly consistent with IFRS, there are differences in the way the provisions are calculated which may affect the value of the liability recorded.

Canadian GAAP requires that the provision be based on the fair value of the legal obligations an entity has. The fair value is to be an estimate of the amount of the consideration that would be agreed upon in an arms length transaction between knowledgeable willing parties who have no compulsion to act. This is different to IFRS which requires management to estimate the future cost of restoring the area at the time this is expected to occur for both legal and constructive obligations. The interest rates used to discount these costs may also differ. IFRS requires the use of a pre-tax discount rate that reflects current market assessments of the time value of money and those risks specific to the liability that have not been reflected in the best estimate of expenditure, whereas Canadian GAAP requires the use of a credit-adjusted risk-free interest rate.

There are also differences in the way that changes to original assumptions are accounted for in periods after the initial recognition of the liability. Under IFRS provisions are reviewed and adjusted on an annual basis for changes in both cash flow and discounting assumptions. Under Canadian GAAP no changes can be made to the interest rate used to discount the original provision except in instances where expected future cash flows increase. In this case the incremental cash flows are discounted at the credit-adjusted risk-free interest rate applicable at the date of the revision.

Deferred tax
Under IFRS, deferred tax is recognised on temporary differences. Temporary differences are recognised as the difference between the tax base of the asset or liability and its carrying amount in the balance sheet.

The same approach is followed under Canadian GAAP, however there are slight differences such that it is necessary to determine whether all temporary differences under Canadian GAAP would be temporary differences under IFRS, and vice versa.

Defined benefit pension schemes
Under IFRS and Canadian GAAP, net surpluses and deficits of funded schemes for pensions and other post-retirement benefits are included in the balance sheet and movements are reflected in the income statement with some exceptions. Specifically, an entity may elect under IFRS to: recognise actuarial gains and losses directly in equity in the Statement of

Recognised Income and Expenses, recognise gains or losses immediately in the profit or loss, or recognise the gains and losses in the profit and loss systematically and gradually over subsequent periods using the 'corridor approach'. Under the corridor approach, the minimum amount that should be recorded is the excess of the cumulative unrecorded net actuarial gain or loss at the beginning of the period over the greater of 10% of the beginning-of-the-period balances of the accrued benefit obligations and the fair value or market related value of plan assets. The minimum amount to record is the excess divided by the average remaining service period of active employees. Whilst recognising actuarial gains and losses directly in the profit and loss, or in the profit and loss under the corridor approach, is acceptable under Canadian GAAP, recognising actuarial gains and losses directly in equity is not.

Share-based payments
IFRS requires an expense to be recognised where the entity buys goods or services in exchange for shares or rights over shares (equity-settled transactions). The main impact of this on an entity is the expensing of the employees' and Directors' share options and other share-based incentives by using an option pricing model, with a credit to equity.

Canadian GAAP and IFRS accounting for equity settled transactions is largely converged although there are some slight differences in accounting for employee share purchase plans that provide a discount to employees.

Exploration and evaluation expenditure
Under IFRS the Xstrata Group capitalises exploration and evaluation expenditure for an area of interest provided that: it expects that cost will be recouped through successful development and exploration or through sale; or if exploration and evaluation has not reached a stage which permitted a reasonable assessment of the existence of economically recoverable reserves, significant operations in the area are continuing or are planned for the future.

Whilst Canadian GAAP would generally not preclude this policy, Falconbridge's accounting policy in respect of exploration and evaluation expenses is to charge them against earnings unless enough work has been done to indicate future mine production as reasonably certain.

Property, plant and equipment
Under IFRS, the Xstrata Group has determined the deemed cost of property, plant and equipment at 1 January 2004, the date of transition to IFRS, by reference to its depreciated replacement cost at that date. Under Canadian GAAP, all items of property, plant and equipment are recorded at depreciated historical cost.

2.3.2 Principal differences in the application of UK GAAP by Xstrata and the accounting policies applied by Falconbridge

Impairment
Both UK and Canadian GAAP require that tangible and intangible non-current assets be reviewed for impairment whenever events or changes in circumstances indicate that the carrying amount of an asset may not be recoverable. Impairment, however, may be recognised at different times under UK GAAP and Canadian GAAP.

Under UK GAAP, the impairment test for determining the recoverable amount of non-current assets is the higher of net selling price and value in use, being the discounted future cash flows to be generated by the asset. To the extent that the carrying amount exceeds the recoverable amount, the fixed asset is written down to the recoverable amount.

Under Canadian GAAP, assets are evaluated for impairment first on an undiscounted basis by comparing the estimated sum of the undiscounted cash flows attributable to the asset with its carrying amount. Only if the asset fails this recoverability test will the amount of the impairment loss be calculated by comparing the asset's carrying amount to its fair value.

UK GAAP requires an impairment charge to be reversed for an asset (excluding goodwill in certain circumstances) if there has been a change in the estimates used to determine the asset's recoverable amount since the last impairment loss was recognised. Canadian GAAP does not allow the reversal of impairment losses previously recognised.

Environmental protection, rehabilitation and closure costs
UK and Canadian GAAP both require that liabilities be recognised in respect of environmental protection, rehabilitation and closure costs obligations.

Under UK GAAP provision is made in the accounting period when the related environmental disturbance occurs, based on the estimated future costs to restore the disturbed area. The provision is discounted where discounting has a material effect. At the time of establishing the provision, a corresponding asset is capitalised (where it gives rise to a future benefit) and depreciated in line with the underlying asset to which it relates. Any provisions are reviewed on an annual basis for changes in cost estimates or life of operations.

Whilst accounting for these liabilities under current Canadian GAAP (refer below for discussion of changes in Canadian GAAP) is broadly consistent with UK GAAP, there are differences in the way the provisions are calculated which may affect the value of the liability recorded.

Canadian GAAP requires that the provision be based on the fair value of the legal obligations an entity has. The fair value is to be an estimate of the amount of the consideration that would be agreed upon in an arms length transaction between knowledgeable willing parties under no compulsion to act. This is different to UK GAAP which requires management to estimate the future cost of restoring the area at the time this is expected to occur for both legal and constructive obligations. The interest rates used to discount these costs may also differ. UK GAAP requires the use of a pre-tax discount rate that reflects current market assessments of the time value of money and those risks specific to the liability that have not been reflected in the best estimate of the expenditure, whereas, Canadian GAAP requires the use of credit adjusted risk free interest rate.

There are also differences in the way that changes to original assumptions are accounted for in periods after the initial recognition of the liability. Under UK GAAP provisions are reviewed and adjusted on an annual basis for changes in both cash flow and discounting assumptions. Under Canadian GAAP no changes can be made to the interest rate used to discount the original provision except in instances where expected future cash flows increase. In this case the incremental cash flows are discounted at the credit-adjusted risk-free interest rate applicable at the date of the revision.

The current Canadian GAAP position was applied by the Falconbridge Group for the first time on 1 January 2003. Previously, Canadian GAAP required the expensing of ongoing site restoration costs when they were incurred and the recognition of future restoration liabilities over the life of the operations.

Deferred tax

Under UK GAAP, deferred tax is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date, with some exceptions including:

- provision is made for deferred tax that would arise on remittance of the retained earnings of overseas subsidiaries only to the extent that, at the balance sheet date, dividends have been accrued as receivable; and

- deferred tax assets are recognised only to the extent that the directors consider that it is more likely than not that there will be suitable taxable profits from which the future reversal of the underlying timing differences can be deducted.

Canadian GAAP follows a balance sheet concept of temporary differences in a similar manner to US GAAP and IFRS. Temporary differences include not only timing differences but other differences between the accounting and tax bases of assets and liabilities, such as a revaluation of assets for which no equivalent adjustment is made for tax purposes.

Share based payments – share options

Under UK GAAP, the Xstrata Group did not account for the cost of share options issued whereas it did account for the cost of shares awarded.

Under Canadian GAAP the fair value of share options at the grant date (for options granted since 1 January 2002) is recognised over the vesting period of the options granted, for those options that are likely to vest. Appropriate valuation techniques are utilised to calculate the fair value of the options, for example the Black Scholes model.

Defined benefit pension plans

Under UK GAAP the Xstrata Group applied SSAP 24 'Accounting for Pension Costs'. This standard required that pension costs be charged to the income statement over the employees' working lives with the Xstrata Group. The regular cost was

attributed to individual years using the projected unit method. Actuarial gains and losses were amortised over the average expected remaining working lives of employees in proportion to their expected payroll costs. Differences between the amounts funded and the amounts charged in the profit and loss account were treated as either provisions or prepayments in the balance sheet.

This contrasts with Canadian GAAP whereby net surpluses and deficits of funded schemes for pensions and other post retirement benefits are included in the balance sheet and all movements are reflected in the income statement, except for some specific items including actuarial gains and losses in some instances. Specifically, an entity may elect to recognise actuarial gains and losses in the income statement not as they occur, but systematically and gradually over subsequent periods using the 'corridor approach'. Under the corridor approach, the minimum amount that should be recorded is the excess of the cumulative unrecorded net actuarial gain or loss at the beginning of the period over the greater of 10% of the beginning-of-the-period balances of the accrued benefit obligations and the fair value or market related value of plan assets. The minimum amount to record is the excess divided by the average remaining service period of active employees.

Dividends
Under UK GAAP, dividends are recorded in the year in respect of which they are announced or declared.

Under Canadian GAAP, dividends are recorded in the period in which dividends are declared. This could result in dividends being recorded in a later period under Canadian GAAP.

Financial instruments
Derivatives
The Xstrata Group is party to derivative contracts in respect of some of their future transactions in order to hedge their exposure to fluctuations between certain currencies. Under UK GAAP applied by the Xstrata Group, these contracts were accounted for as hedges whereby gains and losses were deferred and subsequently recognised when the hedged transaction occurred.

Canadian GAAP is broadly similar to UK GAAP except that effective 1 January 2004 Canadian GAAP was altered to provide for more restrictive conditions as to when hedge accounting may be used.

Convertible Debentures
Under UK GAAP, the Xstrata Group classified convertible debentures as liabilities with any interest payable being charged to the income statement in the period in which it is incurred.

Under Canadian GAAP, Falconbridge classifies convertible debentures based on the substance of the debenture. This results in the debentures outstanding being classified in both their equity and debt components. Interest is only expensed to the extent that it related to the debt component of the debenture. Under Canadian GAAP, prior to 1 January 2005 the liability component was calculated as the present value of the interest portion of the debt and the equity element was the principal.

Exploration and evaluation expenditure
Under UK GAAP the Xstrata Group capitalised exploration and evaluation expenditure for an area of interest provided that: it was expected that cost would be recouped through successful development and exploration or through sale; or in circumstances when exploration and evaluation had not reached a stage which permitted a reasonable assessment of the existence of economically recoverable reserves when significant operations in the area were continuing.

Whilst Canadian GAAP would generally not preclude this policy, Falconbridge's accounting policy in respect of exploration and evaluation expenses is to charge them against earnings unless enough work has been done to indicate future mine production as reasonably certain.

Acquisition accounting
Business combinations are accounted for using the purchase method of accounting under both UK GAAP and Canadian GAAP. Under the purchase method, assets and liabilities acquired are accounted for at fair value at the date of acquisition. The excess of the purchase consideration over the fair value of the net assets acquired is capitalised as goodwill and is tested annually for impairment or more frequently if events or changes in circumstances indicate that it might be impaired.

Information on the Expected Impact of the Proposed Acquisition on the Assets, Liabilities and Earnings of the Enlarged Group

Whilst the purchase method of accounting is used under UK GAAP and Canadian GAAP, the balance sheet measurement of the minority interest in an acquired subsidiary differs between the two.

UK GAAP requires that any minority interest arising on acquisitions be stated at the minority's proportion of the fair values of the net assets of the acquired subsidiary. This treatment is not permitted under Canadian GAAP.

The Canadian GAAP treatment would generally result in minority interests being presented at the date of acquisition, in the consolidated balance sheet at an amount equal to the minority's share of the pre-acquisition carrying amount of the subsidiary's net assets. When consolidating the assets and liabilities of an acquired subsidiary that is not wholly-owned, the fair value adjustments are limited to the amount attributable to the parent company's ownership percentage. As a result, the assets and liabilities of the subsidiary are included on a 'mixed' basis in the consolidated financial statements.

Calculating the purchase cost for an acquisition may also differ between UK GAAP and Canadian GAAP. This is for the following reasons:

(i) when the purchase consideration includes equity instruments that have been issued by the acquirer UK GAAP requires that their value be calculated on the date of exchange. Canadian GAAP however specifies that their value be based on a reasonable period of time before and after the date the terms of the acquisition are agreed to and announced. Since there may be an extended period of time between the announcement date and closing date, the difference in the measurement date can cause a significant difference in the measurement of the purchase consideration;

(ii) UK GAAP requires that contingent consideration be recorded at the date of acquisition if it is probable that the conditions for the payment of contingent consideration will be met and the amount can be reliably measured. Any subsequent adjustments to contingent consideration will be reflected in the carrying amount of goodwill. Under Canadian GAAP however contingent consideration only needs to be recorded where a payment is likely beyond reasonable doubt; and

(iii) Canadian GAAP allows the purchase cost to be based on the acquirer's share of the fair value of the net assets or equity instrument acquired if it can be more reliably measured than the purchase consideration. This is not allowable under UK GAAP.

Interest costs

Under UK GAAP the Xstrata Group capitalised interest on borrowings used to fund expenditure on mineral properties and mines, provided the borrowings related directly to the assets.

Under Canadian GAAP Falconbridge capitalises interest for all eligible capital expenditure programs but does not require the borrowings to be directly attributable to the asset.

Joint ventures

Under UK GAAP the Xstrata Group accounted for its interest in incorporated joint ventures under the 'gross equity method' whereby the Xstrata Group's share in the joint venture's turnover and operating profit was disclosed separately on the face of the income statement.

Under Canadian GAAP, the accounts of incorporated joint ventures are proportionately consolidated.

This difference may result in an adjustment to the shareholders' equity amount reported under Canadian GAAP if an incorporated joint venture was reporting losses. This is because the gross equity method applied under UK GAAP would generally be discontinued where accumulated losses are greater than the cost of the investment, whereas proportional consolidation would continue to apply under Canadian GAAP.

Part V

Principal Terms of the Proposed Acquisition

[This page is intentionally left blank]

The following summary of the principal terms of the Xstrata Offer, and the other information in this document in respect of the Xstrata Offer, is subject in its entirety to the actual terms and conditions of the Xstrata Offer which are set out in the Offer Document.

The Xstrata Offer

The Offeror is offering, upon and subject to the terms and conditions of the Xstrata Offer, to purchase at a price of C$52.50 in cash all of the issued and outstanding Falconbridge Shares, together with the associated SRP Rights, other than any Falconbridge Shares owned directly or indirectly by the Xstrata Group, and including Falconbridge Shares that may become issued and outstanding after the date of the Xstrata Offer, but before the Expiry Time, upon the conversion, exchange or exercise of any Falconbridge convertible securities (other than SRP Rights).

Based on publicly available information, the Company believes that as of 16 May 2006 there were 372,619,079 Falconbridge Shares outstanding and a weighted average number of Falconbridge Shares of approximately 379,774,000 on a fully-diluted basis for the month ended 30 April 2006. Xstrata Alberta, a wholly-owned indirect subsidiary of Xstrata, currently beneficially owns 73,665,996 Falconbridge Shares, representing approximately 19.8% of the outstanding Falconbridge Shares as of 16 May 2006 and approximately 19.4% of the Falconbridge Shares on a fully-diluted basis (based on the weighted average for the month ended 30 April 2006).

The Xstrata Offer is made only for Falconbridge Shares and is not made for any Falconbridge stock options, Falconbridge convertible debentures or any other Falconbridge convertible securities (other than the associated SRP Rights).

It is a condition of the Xstrata Offer that the Offeror shall have determined in its sole judgement that, on terms satisfactory to the Offeror: (i) the Shareholder Rights Plan does not provide rights to the Falconbridge Shareholders to purchase any securities of Falconbridge as a result of the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction, and does not and will not adversely affect the Xstrata Offer, the Offeror or Xstrata, either before or on consummation of the Xstrata Offer, or the acquisition by the Offeror of any Falconbridge Shares under the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction; (ii) the board of directors of Falconbridge shall have redeemed all outstanding SRP Rights or waived the application of the Shareholder Rights Plan to the purchase of Falconbridge Shares by the Offeror under the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; (iii) a cease trade order or an injunction shall have been issued that has the effect of prohibiting or preventing the exercise of SRP Rights or the issue of Falconbridge Shares upon the exercise of the SRP Rights; (iv) a court of competent jurisdiction shall have ordered that the SRP Rights are illegal, of no force or effect or may not be exercised in relation to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; or (v) the SRP Rights and the Shareholder Rights Plan shall otherwise have become or been held unexercisable or unenforceable in relation to the Falconbridge Shares with respect to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction.

The Offeror

The Offeror was incorporated under the laws of Ontario on 6 February 2006 and has not carried on any business prior to the date hereof other than in connection with matters directly related to the Xstrata Offer. The Offeror is a wholly-owned indirect subsidiary of Xstrata.

Duration of the Xstrata Offer

The Xstrata Offer is open for acceptance until 8.00 p.m (Toronto time) on Friday, 7 July 2006, or such later or earlier time or times and date or dates as may be fixed by the Offeror from time to time pursuant to the Offer Document, unless the Xstrata Offer is withdrawn in accordance with its terms by the Offeror.

Conditions of the Xstrata Offer

Notwithstanding any other provision of the Xstrata Offer and subject to applicable laws, under the terms of the Offer Document, the Offeror has the right to withdraw or terminate the Xstrata Offer (or amend the Xstrata Offer to postpone taking up and paying for any Falconbridge Shares deposited under the Xstrata Offer), and shall not be required to accept for payment, take up, purchase or pay for, or extend the period of time during which the Xstrata Offer is open and postpone taking up and paying for, any Falconbridge Shares deposited under the Xstrata Offer, unless all of the following conditions are satisfied or waived by the Offeror at or prior to the Expiry Time:

(a) there shall have been validly deposited under the Xstrata Offer and not withdrawn at the Expiry Time (i) such number of Falconbridge Shares that, together with Falconbridge Shares held by the Offeror and its affiliates (as defined in the OSA), constitutes at least 66⅔% of the Falconbridge Shares then outstanding (calculated on a fully-diluted basis) and (ii) at least a majority of the Falconbridge Shares then outstanding (calculated on a fully-diluted basis), the votes attached to which would be included in the minority approval of a second step business combination or going private transaction pursuant to Rule 61-501 and Regulation Q-27 (together, the "Minimum Tender Condition");

(b) the Offeror shall have determined in its sole judgement that, on terms satisfactory to the Offeror: (i) the Shareholder Rights Plan does not provide rights to the Falconbridge Shareholders to purchase any securities of Falconbridge as a result of the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction, and does not and will not adversely affect the Xstrata Offer, the Offeror or Xstrata, either before or on consummation of the Xstrata Offer, or the acquisition by the Offeror of any Falconbridge Shares under the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction; (ii) the board of directors of Falconbridge shall have redeemed all outstanding SRP Rights or waived the application of the Shareholder Rights Plan to the purchase of Falconbridge Shares by the Offeror under the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; (iii) a cease trade order or an injunction shall have been issued that has the effect of prohibiting or preventing the exercise of SRP Rights or the issue of Falconbridge Shares upon the exercise of the SRP Rights; (iv) a court of competent jurisdiction shall have ordered that the SRP Rights are illegal, of no force or effect or may not be exercised in relation to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; or (v) the SRP Rights and the Shareholder Rights Plan shall otherwise have become or been held unexercisable or unenforceable in relation to the Falconbridge Shares with respect to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction;

(c) all government and regulatory approvals, waiting or suspensory periods, waivers, permits, consents, reviews, orders, rulings, decisions and exemptions (including, without limitation, those required under the Investment Canada Act and those of any stock exchange or other securities regulatory authority) that, in the Offeror's sole judgement, are necessary or desirable to complete the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction shall have been obtained or concluded or, in the case of waiting on suspensory periods, expired or been terminated, each on terms and conditions satisfactory to the Offeror in its sole judgement;

(d) without limiting the scope of the condition in paragraph (c), (i): either (x) the Commissioner of Competition shall have issued an Advance Ruling Certificate (an "ARC") under Section 102 of the Competition Act (Canada) in respect of the purchase of the Falconbridge Shares by the Offeror, or (y) the waiting period under Part IX of the Competition Act (Canada) shall have expired or have been waived and the Offeror shall be satisfied in its sole judgement that the Commissioner of Competition does not intend to oppose the purchase of the Falconbridge Shares and shall not have made or threatened to make an application under Part VIII of the Competition Act (Canada) in respect of the purchase of the Falconbridge Shares by the Offeror; (ii) the applicable waiting period (and any extensions thereof) under the HSR Act with respect to the Xstrata Offer shall have expired or been terminated; (iii) the Xstrata Offer shall have been approved or deemed approved under the EC Merger Regulation; and (iv) any applicable waiting periods (and any extensions thereof) under any other competition, merger, control or similar law, rule, regulation or policy or any governmental or regulatory approval or consent in respect of competition or merger control matters, shall have expired or been earlier terminated, or been granted or deemed granted, on terms and conditions satisfactory to the Offeror in its sole judgement;

(e) the Offeror shall have determined in its sole judgement that (i) no act, action, suit or proceeding shall have been threatened or taken before or by any domestic or foreign court, tribunal or governmental agency or other regulatory authority or administrative agency or commission or by any elected or appointed public official or private person (including, without limitation, any individual, corporation, firm, group or other entity) in Canada or elsewhere, whether or not having the force of law, and (ii) no law, regulation or policy shall have been proposed, enacted, promulgated or applied, in either case:

    (i) to cease trade, enjoin, prohibit or impose material limitations or conditions on the purchase by or the sale to the Offeror of the Falconbridge Shares, or the right of the Offeror to own or exercise full rights of ownership of the Falconbridge Shares or the consummation of a Compulsory Acquisition or a Subsequent Acquisition Transaction;

(ii) which, if the Xstrata Offer was consummated, could, in the Offeror's judgement, be expected to have a Material Adverse Effect on Falconbridge, the Offeror or Xstrata, materially and adversely affect the value of the Falconbridge Shares to the Offeror, or the Offeror's ability to effect a Compulsory Acquisition or a Subsequent Acquisition Transaction; or

(iii) which, in the sole judgement of the Offeror, might make it inadvisable for the Offeror to proceed with the Xstrata Offer and/or with the taking up and paying for Falconbridge Shares under the Xstrata Offer;

(f) there shall not exist any prohibition at law against the Offeror making the Xstrata Offer or taking up and paying for any Falconbridge Shares deposited under the Xstrata Offer or completing any Compulsory Acquisition or Subsequent Acquisition Transaction;

(g) the Offeror shall have determined, in its sole judgement, that neither Falconbridge nor any of its affiliates or associates (each as defined in the OSA) nor any other party has taken any action, or disclosed any previously undisclosed action taken by them, that might make it inadvisable for the Offeror to proceed with the Xstrata Offer and/or to take up and pay for Falconbridge Shares deposited under the Xstrata Offer including, without limitation, (i) any action or event with respect to any agreement, proposal, offer or understanding relating to any sale, disposition or other dealing with any of the assets of Falconbridge or any of its affiliates or subsidiaries (other than any such sale, disposition or other dealing between Falconbridge and any affiliate or subsidiary of Falconbridge or in the ordinary course of business consistent with past practice), any issuance of securities (other than in connection with the exercise of options to acquire Falconbridge Shares or convertible debentures of Falconbridge existing on the date of the Offer Document in accordance with their terms as publicly disclosed prior to the date of the Offer Document) or options or rights to purchase securities, the payment of any dividends or other distributions or payments (except in the ordinary course of business consistent with past practice), any incurrence of material debt or project financing or material steps in furtherance of the foregoing, any acquisition from a third party of assets (except in the ordinary course of business consistent with past practice) or securities by Falconbridge or any of its affiliates or subsidiaries, any reorganisation of Falconbridge and its affiliates and subsidiaries or any other action or inaction that would have the effect of preventing the Offeror from obtaining a full tax cost "bump" pursuant to paragraph 88(1)(d) of the Tax Act (Canada) in respect of the shares of any affiliates or subsidiaries and other non-depreciable capital property directly owned by Falconbridge on 16 May 2006, the date immediately preceding the date of the public announcement of the Offeror's intention to make the Offer, or any take-over bid (other than the Xstrata Offer and the Inco Offer on the terms and conditions of the Inco Offer as of the date of the Offer Document), merger, amalgamation, statutory arrangement, recapitalization, business combination, share exchange, joint venture or similar transaction involving Falconbridge or any of its affiliates or subsidiaries or any capital expenditure by Falconbridge or any of its affiliates or subsidiaries not in the ordinary course of business and consistent with past practice, (ii) adopting, establishing or entering into any new employment, change in control, severance compensation or similar agreement, arrangement or plan with or for one or more of Falconbridge's or its affiliates' or subsidiaries' employees, consultants or directors, (iii) adopting, establishing or entering into, or amending or making grants or awards pursuant to, any agreements, arrangements or plans to provide for increased benefits to one or more employees, consultants or directors of Falconbridge or any of its affiliates or subsidiaries, whether or not as a result of or in connection with the transactions contemplated by the Xstrata Offer and Offer Document, (iv) except as may be required by law, taking any action to adopt, establish, terminate or amend any employee benefit plan of Falconbridge or any of its affiliates or subsidiaries, or (v) any proposal, plan or intention to do any of the foregoing, either publicly announced or communicated by or to Falconbridge, or any agreement to engage in any of the foregoing;

(h) the Offeror shall have determined, in its sole judgement, that: (i) no material right, franchise or licence of Falconbridge or of any of its subsidiaries has been impaired (or threatened to be impaired) or adversely affected (or threatened to be adversely affected), whether as a result of the making of the Xstrata Offer, the taking up and paying for Falconbridge Shares deposited under the Xstrata Offer or otherwise; (ii) no covenant, term or condition exists in any instrument or agreement to which Falconbridge or any of its subsidiaries is a party or to which any of them or any of their assets are subject that might make it inadvisable for the Offeror to proceed with the Xstrata Offer or with taking-up and paying for Falconbridge Shares deposited under the Xstrata Offer (including, without limitation, any default that may ensue as a result of the Offeror taking up or paying for Falconbridge Shares under the Xstrata Offer); and (iii) there shall not have occurred, developed or come into effect or existence any event, action, state, condition or financial occurrence of national or international consequence or any law, regulation, action, enquiry or other occurrence of any nature

whatsoever which materially adversely affects, or may materially adversely affect, the financial, banking or capital markets generally;

(i) the Offeror shall not have become aware of any adverse claim, impairment, right, interest, limitation or other restriction of any kind whatsoever not specifically and publicly disclosed by Falconbridge prior to 16 May 2006, being the date immediately preceding the date of the public announcement of the Offeror's intention to make the Offer, in respect of any of the properties or assets, including any mineral rights or concessions, of Falconbridge or its affiliates or subsidiaries;

(j) the Offeror shall have determined, in its sole judgement, that there shall not exist or have occurred (or, if there does exist or shall have previously occurred, there shall not have been disclosed, generally by way of press release and material change report or to the Offeror in writing) any change (or any condition, event or development involving a prospective change) in the business, operations (including results of operations), assets, capitalisation, properties, condition (financial or otherwise), prospects, licences, permits, rights, privileges or liabilities, whether contractual or otherwise, of Falconbridge or any of its subsidiaries which, in the sole judgement of the Offeror, when considered either individually or in the aggregate, is expected to have a Material Adverse Effect on Falconbridge, or which, if the transactions contemplated by the Xstrata Offer were consummated, would be expected to have a Material Adverse Effect on the Offeror or Xstrata;

(k) the Offeror shall not have become aware of any untrue statement of a material fact in any form, report, schedule, statement, material change report or other document required to be filed by or on behalf of Falconbridge with the Securities Authorities (being the securities commissions and similar regulatory authorities in each of the provinces and territories in Canada and the SEC) and all applicable stock exchanges and self-regulatory authorities (the "Public Documents"), or an omission to state a material fact that is required to be stated or that is necessary to make a statement not misleading in light of the circumstances in which it was made in the Public Documents which the Offeror shall have determined in its sole judgment constitutes a Material Adverse Effect on Falconbridge or which, if the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction were consummated, would be reasonably expected to constitute a Material Adverse Effect on the Offeror or Xstrata; and

(l) Xstrata Shareholders shall have approved the acquisition of Falconbridge Shares pursuant to the Xstrata Offer in accordance with the Listing Rules, and an increase in the authorised but unissued share capital of the Company and the renewal of the authorisation of Xstrata's directors to allot relevant securities of the Company for the purposes of section 80 of the Companies Act. The Xstrata Offer is not conditional on the passing of any other resolution or any special resolution that may be proposed at any extraordinary general meeting of Shareholders.

The foregoing conditions are for the sole benefit of the Offeror and may be asserted by the Offeror at any time, regardless of the circumstances giving rise to any such assertion or may be waived by the Offeror in whole or in part at any time and from time to time in its sole discretion, without prejudice to any other right which the Offeror may have. The failure by the Offeror at any time to exercise any of the foregoing rights shall not be deemed to be a waiver of any such right, the waiver of any such right with respect to particular facts and circumstances will not be deemed a waiver with respect to any other facts and circumstances, and each such right shall be deemed to be an ongoing right which may be asserted at any time and from time to time. Any determination by the Offeror concerning the events described in the foregoing conditions shall be final and binding on all parties.

Any waiver of a condition or the withdrawal of the Xstrata Offer will be effective upon written notice or other communication confirmed in writing by the Offeror to that effect to the depositary of the Xstrata Offer at its principal office in the City of Toronto. Forthwith after giving any such notice, the Offeror will make a public announcement of such waiver or withdrawal, will cause the depositary of the Xstrata Offer as soon as practicable thereafter to notify the Shareholders in the manner set forth in the Offer Document and will provide a copy of the aforementioned notice to the TSX and the NYSE. If the Xstrata Offer is withdrawn, the Offeror will not be obligated to take up or pay for any Falconbridge Shares deposited under the Xstrata Offer.

Payment

Upon the terms and subject to the conditions of the Xstrata Offer, the Offeror will take up and pay for Falconbridge Shares validly deposited under the Xstrata Offer and not properly withdrawn not later than 10 calendar days after the Expiry Time.

Any Falconbridge Shares taken up will be paid for as soon as possible, and in any event not later than three business days after they are taken up. Any Falconbridge Shares deposited under the Xstrata Offer after the first date upon which Falconbridge Shares have been taken up and paid for by the Offeror will be taken up and paid for not later than 10 days after such deposit.

All payments under the Xstrata Offer will be made in Canadian dollars, except where Falconbridge Shareholders deposit Falconbridge Shares with the depositary and elect to receive payment in US dollars. The amount payable in US dollars will be determined based upon the Bank of Canada noon rate of exchange for Canadian dollars to US dollars on the business day immediately preceding the date of delivery of such payment by the depositary.

Withdrawal of deposited Falconbridge Shares
Falconbridge Shares deposited under the Xstrata Offer may be withdrawn by or on behalf of the depositing Falconbridge Shareholder at any time before the Falconbridge Shares have been taken up by the Offeror pursuant to the Xstrata Offer and in certain other circumstances set out in the Offer Document.

Market purchases
The Offeror does not currently intend, but has reserved the right, to acquire, or cause an affiliate to acquire, additional beneficial ownership of Falconbridge Shares or securities convertible into Falconbridge Shares by making purchases through the facilities of the TSX, subject to applicable laws, at any time prior to the Expiry Time. The Offeror has committed in the Offer Document not to make any such purchases of Falconbridge Shares until the third business day following the date of the Xstrata Offer. The aggregate number of Falconbridge Shares acquired by the Offeror through the facilities of the TSX during the course of the Xstrata Offer shall not exceed 5% of the outstanding Falconbridge Shares as of the date of the Xstrata Offer, and the Offeror will issue and file a news release forthwith after the close of business of the TSX on each day on which such Falconbridge Shares or securities convertible into Falconbridge Shares have been purchased. If the Offeror purchases Falconbridge Shares through the facilities of the TSX while the Xstrata Offer is outstanding, the Falconbridge Shares so purchased shall be counted in any determination as to whether the Minimum Tender Condition has been fulfilled.

Although the Offeror has no present intention to sell Falconbridge Shares taken up under the Xstrata Offer, subject to applicable laws, it has reserved the right to make or enter into arrangements, commitments or understandings at or prior to the Expiry Time to sell any of such Falconbridge Shares after the Expiry Time.

Other terms of the Xstrata Offer
The Xstrata Offer and all contracts resulting from acceptance thereof shall be governed by and construed in accordance with the laws of the Province of Ontario and the laws of Canada applicable therein. Each party to any agreement resulting from the acceptance of the Xstrata Offer unconditionally and irrevocably attorns to the exclusive jurisdiction of the courts of the Province of Ontario.

The Offeror has reserved the right to transfer to one or more affiliates of the Offeror the right to purchase all or any portion of the Falconbridge Shares deposited pursuant to the Xstrata Offer, but any such transfer will not relieve the Offeror of its obligation under the Xstrata Offer and will in no way prejudice the rights of persons depositing Falconbridge Shares to receive payment for Falconbridge Shares validly deposited and accepted for payment pursuant to the Xstrata Offer.

In any jurisdiction in which the Xstrata Offer is required to be made by a licensed broker or investment dealer, the Xstrata Offer shall be made on behalf of the Offeror by brokers or investment dealers licensed under the laws of such jurisdiction.

Under the Offer Document, the Offeror, in its sole discretion, shall be entitled to make a final and binding determination of all questions relating to the interpretation of the Xstrata Offer (including, without limitation, the satisfaction of the conditions of the Xstrata Offer), the Offer Document and related documents, the validity of any acceptance of the Xstrata Offer and the validity of any withdrawals of Falconbridge Shares.

The Xstrata Offer is not being made to, nor will deposits be accepted from or on behalf of, Falconbridge Shareholders residing in any jurisdiction in which the making of the Xstrata Offer or the acceptance thereof would not be in compliance with the laws of such jurisdiction. The Offeror may, in its sole discretion, take such action as it may deem necessary to

make the Xstrata Offer in any jurisdiction and extend the Xstrata Offer to Falconbridge Shareholders in any such jurisdiction.

Purpose of the Xstrata Offer and plans for Falconbridge

The purpose of the Xstrata Offer is to enable the Offeror to acquire beneficial ownership of all the Falconbridge Shares not already owned by the Xstrata Group. If the Offeror takes up and pays for a sufficient number of Falconbridge Shares validly deposited under the Xstrata Offer, the Offeror intends to complete a Compulsory Acquisition or to complete a Subsequent Acquisition Transaction, if available, to acquire all the outstanding Falconbridge Shares not deposited under the Xstrata Offer. If permitted by applicable laws, subsequent to the completion of the Xstrata Offer and, if necessary, any Compulsory Acquisition or any Subsequent Acquisition Transaction, the Offeror intends to delist the Falconbridge Shares from the TSX and the NYSE. For so long as Falconbridge has public debt outstanding, there may be limitations on its ability to cease to be a reporting issuer and to cease to have public reporting obligations.

If the Offeror proposes a Compulsory Acquisition or a Subsequent Acquisition Transaction but cannot obtain any required approvals promptly, the Offeror will evaluate its other alternatives. Such alternatives could include, to the extent permitted by applicable laws, purchasing additional Falconbridge Shares in the open market, in privately negotiated transactions, in another take over bid or otherwise, or selling or otherwise disposing of any or all of the Falconbridge Shares acquired pursuant to the Xstrata Offer.

Upon completion of the Xstrata Offer, the Offeror intends to conduct a detailed review of Falconbridge and its subsidiaries, including an evaluation of their respective business plans, assets, operations and organisational and capital structure. Promptly upon the initial take up and payment by the Offeror of such number of Falconbridge Shares representing at least a majority of the outstanding Falconbridge Shares, the Offeror will be entitled to requisition a meeting of the Falconbridge Shareholders at which the Offeror may remove the current members of the Falconbridge board of directors and elect directors nominated by the Offeror.

If the Xstrata Offer and a Compulsory Acquisition or a Subsequent Acquisition Transaction are successful:

(a) the Offeror will own all of the equity interests in Falconbridge and the Offeror will be entitled to all the benefits and risks of loss associated with such ownership;

(b) current holders of Falconbridge Shares (other than the Offeror) will no longer have any interest in Falconbridge or Falconbridge's assets, book value or future earnings or growth and the Offeror will hold a 100% interest in such assets, book value, future earnings and growth;

(c) the Offeror will have the right to elect all directors to the board of directors of Falconbridge;

(d) subject to any obligations with respect to Falconbridge's outstanding public debt, preferred shares, junior preference shares and options which remain outstanding, Falconbridge will no longer be a public company and Falconbridge will no longer file periodic reports (including financial information) with any securities regulatory authorities; and

(e) the Falconbridge Shares will no longer trade on the TSX or NYSE.

Part VI

Additional Information

[This page is intentionally left blank]

1. Responsibility

The Directors, whose names are set out in paragraph 2.1 below, accept responsibility for the information contained in this document. To the best of the knowledge and belief of the Directors (who have taken all reasonable care to ensure that such is the case), the information contained in this document is in accordance with the facts and does not omit anything likely to affect the import of such information.

The Directors confirm that the information relating to the Falconbridge Group and key individuals important to the Falconbridge Group's business, which has been sourced from information included in public documents filed by the Falconbridge Group, has been accurately reproduced from those sources and, as far as the Company is aware and is able to ascertain from information included in public documents filed by the Falconbridge Group, no facts have been omitted which would render the reproduced information inaccurate or misleading.

2. Directors', Senior Executives' and others' interests

2.1 The Directors and Secretary

Name	Age	Position
Directors:		
Willy Strothotte†	62	Chairman
Mick Davis	48	Chief Executive
Trevor Reid	45	Chief Financial Officer
Santiago Zaldumbide	63	Executive Director, Chief Executive of Xstrata Zinc and Executive Chairman of Asturiana de Zinc
Ivan Glasenberg†	49	Non-executive Director
Paul Hazen	64	Non-executive Director
Robert MacDonnell	68	Non-executive Director
Sir Steve Robson CB	62	Non-executive Director
David Rough	55	Non-executive Director
Dr. Frederik Roux	58	Non-executive Director
Ian Strachan	63	Non-executive Director
Secretary:		
Richard Elliston		

† Glencore International Nominee

As announced by the Company on 11 May 2006, Mr. David Issroff resigned as a director of the Company with effect from 10 May 2006 following his decision to relocate to the USA for personal reasons. Mr. Issroff was previously a non-executive director of the Company and a Glencore International Nominee.

2.2 The Senior Executives

In addition to the Executive Directors, Messrs. Davis, Reid and Zaldumbide, the Company's senior management consists of the following executive officers who are responsible for the business and administrative departments indicated below.

Name	Age	Position
Peter Coates	60	Chief Executive, Xstrata Coal
Peet Nienaber	55	Chief Executive, Xstrata Alloys
Charlie Sartain	45	Chief Executive, Xstrata Copper
Marc Gonsalves	44	Executive General Manager, Corporate Affairs

2.3 Directors' and Senior Executives' interests

The interests of the Directors and Senior Executives in the share capital of the Company (all of which are beneficial unless otherwise stated), including the interests of persons connected with the Directors and/or Senior Executives for the purposes of section 346 of the Companies Act, as notified to the Company pursuant to sections 324 or 328 of the Companies Act and entered in the register maintained pursuant to section 325 of the Companies Act, at the date of this document are as follows:

[1] Mr. Davis has a conditional right to acquire a further 206,897 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for such Ordinary Shares is 5 March 2007. Mr. Davis has a right to acquire 169,811 Ordinary Shares at no cost in respect of the 2005 bonus awards which by virtue of the terms of the 2005 bonus plan will vest on 25 February 2007. Mr. Davis has a further right to acquire 96,801 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 55,315 Ordinary Shares on 23 February 2007 and 41,486 Ordinary Shares on 23 February 2008.

[2] Mr. Reid has a conditional right to acquire a further 179,380 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 87,931 of such Ordinary Shares is 5 March 2007, for 57,639 Ordinary Shares is 11 March 2008 and for 33,810 Ordinary Shares is 10 March 2009. Mr Reid has a right to acquire 58,726 Ordinary Shares at no cost in respect of the 2005 bonus awards which will vest on 25 February 2006, by virtue of the terms of the bonus plan. Mr. Reid has a further right to acquire 32,372 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 25,856 Ordinary Shares on 23 February 2007 and 6,516 Ordinary Shares on 23 February 2008.

[3] Mr. Zaldumbide has a conditional right to acquire a further 182,658 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 80,690 Ordinary Shares is 5 March 2007, for 66,357 Ordinary Shares is 11 March 2008 and for 35,611 Ordinary Shares is 10 March 2009. Mr Zaldumbide has a right to acquire 43,450 Ordinary Shares at no cost in respect of the 2005 bonus awards which will vest on 25 February 2006, by virtue of the terms of the bonus plan. Mr. Zaldumbide has a further right to acquire 38,775 Ordinary Shares at no

cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 31,020 Ordinary Shares on 23 February 2007 and 7,755 Ordinary Shares on 23 February 2008.

(4) Mr Coates has a conditional right to acquire a further 125,004 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 52,545 Ordinary Shares is 5 March 2007, and for 44,704 Ordinary Shares is 11 March 2008 and for 27,755 Ordinary Shares is 10 March 2009. Mr. Coates has a further right to acquire 28,965 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 23,172 Ordinary Shares on 23 February 2007 and 5,793 Ordinary Shares on 23 February 2008.

(5) Mr Gonsalves has a conditional right to acquire a further 97,119 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 39,828 Ordinary Shares is 5 March 2007, for 32,468 Ordinary Shares is 11 March 2008 and for 24,823 Ordinary Shares is 10 March 2009. Mr. Gonsalves has a further right to acquire 20,744 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 16,595 Ordinary Shares on 23 February 2007 and 4,149 Ordinary Shares on 23 February 2008.

(6) Mr Nienaber has a conditional right to acquire a further 79,820 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 34,153 Ordinary Shares is 5 March 2007, for 29,002 Ordinary Shares is 11 March 2008 and for 16,820 Ordinary Shares is 10 March 2009. Mr. Nienaber has a further right to acquire 15,250 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest on 23 February 2007.

(7) Mr Sartain has a conditional right to acquire a further 97,207 Ordinary Shares at no cost pursuant to the Xstrata Long Term Incentive Plan. The end of the period for the qualifying conditions to be fulfilled for 34,153 Ordinary Shares is 5 March 2007, for 37,511 Ordinary Shares is 11 March 2008 and for 25,543 Ordinary Shares is 10 March 2009. Mr. Sartain has a further right to acquire 25,335 Ordinary Shares at no cost in respect of the 2006 bonus awards which by virtue of the 2006 bonus plan will vest as to 18,767 Ordinary Shares on 23 February 2007 and 6,568 Ordinary Shares on 23 February 2008.

Mr. Strothotte and Mr. Glasenberg are Directors nominated by Glencore International. Therefore, potential conflicts of interest may arise between the duties owed by such Directors to the Company and their duties to Glencore. The Relationship Agreement between the Company and Glencore regulates the ongoing relationship between the Company and Glencore. In particular, under the Relationship Agreement directors of Xstrata nominated by Glencore International are not permitted, unless the independent directors agree otherwise, to vote on any resolutions of the Company's board of directors to approve any aspect of Xstrata's involvement in or enforcement of any arrangements, agreements or transactions with any member of Glencore.

To the best of the knowledge of the Company, there are no other potential conflicts of interests between any duties to the Company of the Company's directors and senior management and their private interests and/or other duties.

2.4 Interests of major shareholders

Interests for the purposes of the Companies Act

Insofar as is known to Xstrata, the name of each person who, directly or indirectly, has an interest in Xstrata's ordinary share capital which is notifiable under Part VI of the Companies Act, and the amount of such person's interest, as at 26 May 2006 (being the latest practicable date prior to the publication of this document) are as follows:

	Ordinary Shares	
Name	**No.**	**%**
Credit Suisse Securities (Europe) Limited[1]	151,931,204	21.56
Glencore International AG[1]	101,040,400	14.34
AXA Investment Managers UK Limited[2]	2,188,783	0.31

(1) As a result of their participation in a capital management programme entered into by Glencore International, CSFB Equities and CSSEL in connection with the Xstrata Group's acquisition of MIM Holdings Limited (now known as Xstrata Queensland Limited) and the associated rights issue (the "Arrangement"), Glencore International, CSFB Equities and CSSEL are jointly interested in 253,026,843 Ordinary Shares, representing approximately 35.90% of the current issued ordinary share capital of the Company. In addition to the interests of CSFB Equities and CSSEL, Xstrata has been informed by Credit Suisse that: (i) an additional 23,048 Ordinary Shares, representing approximately 0.003% of the current issued ordinary share capital of the Company, were in the course of settlement at the relevant time in the notification and the registered holder of such Ordinary Shares was not known; and (ii) the Credit Suisse group has interests in a further 347,244 Ordinary Shares, representing approximately 0.05% of the current issued ordinary share capital of the Company.

(2) AXA Investment Managers UK Limited ("AXA") notified the Company on 23 May 2006 that AXA holds a beneficial interest in 2,188,783 Ordinary Shares or approximately 0.31% of the current issued ordinary share capital of the Company and a non-beneficial interest in 71,587,335 Ordinary Shares or approximately 10.16% of the current issued ordinary share capital of the Company. In total, AXA is therefore deemed to have an interest in 73,776,118 Ordinary Shares, representing approximately 10.47% of the current issued ordinary share capital of the Company.

The Company is not directly or indirectly owned or controlled by another corporation, any foreign government, or any other natural or legal person, severally or jointly.

None of the major shareholders referred to above has different voting rights from other Shareholders.

Interests for the purposes of the Code

Following the implementation of the European Directive on Takeover Bids (Directive 2004/25/EC) in the UK on 20 May 2006, the Takeover Code (the "Code") now applies to Xstrata. As a result of this and the implementation of the changes to the Code contained in Response Statement 2005/3 ("Dealings in derivatives and options: control issues") issued by the Code Committee of the Takeover Panel, Glencore International sought and received a ruling from the Executive of the Takeover Panel that Glencore International is interested (for the purposes of the Code) in an aggregate of 252,601,000 Ordinary Shares being the 101,040,400 Ordinary Shares owned by it and the 151,560,600 Ordinary Shares which it is interested in

(for the purposes of the Code) pursuant to the Arrangement and that upon termination of the Arrangement Glencore International will be permitted to acquire the 151,560,600 Ordinary Shares currently held by CSSEL pursuant to the Arrangement without breaching Rule 5.1 of the Code or incurring an obligation under Rule 9.1 to make a mandatory cash offer for the shares not held by it in Xstrata.

3. Directors' service agreements and letters of appointment

3.1 Mr. Davis and Mr. Reid have employment agreements with Xstrata Services (UK) Limited ("Xstrata SL") but their services as Chief Executive and Chief Financial Officer respectively are provided to the Company under a secondment agreement entered into between the Company and Xstrata SL on 19 March 2002. Each of Mr. Davis and Mr. Reid are seconded to the Company for a fixed term of two years thereafter renewable by the Company for further periods of two years. The secondment agreements of Mr. Davis and Mr. Reid were renewed from 19 March 2004 until 19 March 2006 and from 19 March 2006 to 19 March 2008.

Under their employment agreements, Mr. Davis' salary is currently £950,000 per annum and Mr. Reid's salary is £444,050 per annum. In addition, each of Mr. Davis and Mr. Reid receives permanent health, life and private medical insurance, a housing allowance of US$184,168 per annum and US$142,789 per annum respectively (to enable each to maintain a residence in Switzerland so as to qualify under Swiss law for a work permit) and participates in money purchase retirement plans to which neither is required to make any contribution. In addition, Mr Reid is eligible to participate in the Xstrata LTIP and each of Mr. Davis and Mr. Reid is eligible to participate in the annual bonus scheme operated by the Company.

The employment of Mr. Davis and Mr. Reid may be terminated by not less than 12 months' notice by Xstrata SL or the Director concerned. On a termination of the employment agreement by Xstrata SL in breach, or if Mr. Davis or Mr. Reid resigns in circumstances where he cannot in good faith be expected to continue in employment, he is entitled to be paid a sum equal to 150% of his annual salary, an amount equal to his previous year's bonus and to have all entitlements under any retirement benefit arrangements in which he participates paid up to the date of termination of employment in accordance with the relevant plan rules.

3.2 Mr. Zaldumbide has a professional services agreement with Asturiana de Zinc, S.A. dated 29 January 1998 as renewed on 29 January 2001 and 4 February 2004 to act as Chairman of Asturiana. The agreement is in force until 28 February 2007 (previously 29 January 2007) and continues thereafter indefinitely unless terminated by Asturiana giving six months' notice to that effect provided that such notice may not be given to result in his employment termination before 28 February 2007. Up until 31 December 2002, Mr. Zaldumbide was entitled to a total fee for the term of his agreement of €3,005,060 payable at the rate of €601,012 per annum less any fees from external directorships. This contract predates the acquisition of Asturiana. With effect from 1 June 2003, the Remuneration Committee concluded an agreement with Mr. Zaldumbide that his annual fee should be reviewed in line with the other executive directors. His fee for the year ended 31 December 2005 is €782,500. Mr. Zaldumbide receives no pension benefits under the terms of his fixed cost remuneration arrangement. On termination of the agreement, other than on his voluntary termination or termination for gross negligence, Mr. Zaldumbide is entitled to receive a sum from the redemption of an insurance policy (acquired by Asturiana for a premium of €3,005,060), including any with profits bonus payable under the policy less the compensation received by him during the term of the agreement. This part of the agreement is not affected by the review.

On termination of the agreement by expiry of the fixed term, Mr. Zaldumbide is entitled to receive the capital redemption value of the policy, including the with profit bonus element, minus the aforementioned amount of €3,005,060 which he will already have received. Mr. Zaldumbide's entitlements under the insurance policy are in lieu of his receiving pension benefits. In addition, Mr. Zaldumbide is entitled to participate in the Xstrata LTIP and annual bonus scheme operated by the Company. Mr. Zaldumbide is engaged as a Director on the terms of a letter of appointment dated 11 March 2002. The appointment, subject to re-election when appropriate by the Company in General Meeting, is on an indefinite basis subject to the existence of the agreement between Mr. Zaldumbide and Asturiana. Mr. Zaldumbide receives no additional remuneration for his position as Director.

3.3 Mr. Strothotte is engaged by the Company as a Non-executive Director and Chairman on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months commencing on 25 February 2002 and is terminable thereafter by six months notice by Mr. Strothotte. The Company may terminate Mr. Strothotte's appointment at any time and on such termination Mr. Strothotte will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. Strothotte receives an annual fee of £180,000 as Chairman of the Company and for his

membership and chairmanship of the Company's Remuneration Committee. His appointment is subject to confidentiality undertakings.

3.4 Mr. Rough is engaged by the Company as a Non-executive Director and Deputy Chairman on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 1 April 2002 and is terminable by six months' notice by Mr. Rough. The Company may terminate Mr. Rough's appointment at any time and on such termination Mr. Rough will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. Rough was also appointed Senior Independent Director by the Board. He receives an annual fee of £125,000 as deputy chairman and for his membership of the Company's Remuneration Committee, Audit Committee and HSEC Committee, and for his membership and chairmanship of the Nominations Committee. His appointment is subject to confidentiality undertakings.

3.5 Until his resignation as a director of the Company with effect from 10 May 2006, Mr. David Issroff was engaged by the Company as a non-executive director on the terms of a letter of appointment. The appointment was for an initial fixed term of 36 months which commenced on 25 February 2002 and was terminable by six months' notice by Mr. Issroff. The Company was entitled to terminate Mr. Issroff's appointment at any time and on such termination Mr. Issroff would not have been entitled to any compensation for loss of office. The term was renewable by the Board. Mr. Issroff received an annual fee of £55,000 and is subject to confidentiality undertakings. Mr. Issroff has confirmed to the Company that he has no outstanding claims against the Company or any of its subsidiaries in respect of remuneration, fees, costs, expenses or otherwise.

3.6 Mr. Glasenberg is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Mr. Glasenberg. The Company may terminate Mr. Glasenberg's appointment at any time and on such termination Mr. Glasenberg will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. Glasenberg receives an annual fee of £55,000 and is subject to confidentiality undertakings. Mr. Glasenberg receives an additional annual fee of £10,000 for his membership of the Company's Nominations Committee.

3.7 Mr. Hazen is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months' commencing on 25 February 2002 and is terminable thereafter by six months' notice by Mr. Hazen. The Company may terminate Mr. Hazen's appointment at any time and on such termination Mr. Hazen will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. Hazen receives an annual fee of £55,000 and is subject to confidentiality undertakings. Mr. Hazen receives an additional annual fee of £10,000 for his membership of the Company's Remuneration Committee.

3.8 Mr. MacDonnell is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Mr. MacDonnell. The Company may terminate Mr. MacDonnell's appointment at any time and on such termination Mr. MacDonnell will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. MacDonnell receives an annual fee of £55,000 and is subject to confidentiality undertakings. Mr. MacDonnell receives an additional annual fee of £10,000 for his membership of the Company's Nominations Committee.

3.9 Dr. Roux is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Dr. Roux. The Company may terminate Dr. Roux's appointment at any time and on such termination Dr. Roux will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Dr. Roux receives an annual fee of £55,000 and is subject to confidentiality undertakings. Dr. Roux receives additional annual fees of £10,000 each for his membership of the Company's Audit Committee and HSEC Committee.

3.10 Sir Steve Robson is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 25 February 2002 and is terminable thereafter by six months' notice by Sir Steve. The Company may terminate Sir Steve Robson's appointment at any time and on such termination he will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Sir Steve receives an annual fee of £80,000 as a Non-executive Director and for his membership and chairmanship of the Company's Audit Committee. His appointment is subject to confidentiality undertakings.

3.11 Mr. Strachan is engaged by the Company as a Non-executive Director on the terms of a letter of appointment. The appointment is for an initial fixed term of 36 months which commenced on 8 May 2003 and is terminable thereafter by six months' notice by Mr. Strachan. The Company may terminate Mr. Strachan's appointment at any time and on such termination Mr. Strachan will not be entitled to any compensation for loss of office. The term may be renewed by the Board. Mr. Strachan receives an annual fee of £55,000 and is subject to confidentiality undertakings. Mr. Strachan receives additional annual fees of £10,000 each for his membership of the Company's Audit Committee and HSEC Committee and a further £5,000 fee as chairman of the HSEC Committee.

4. Details of key individuals important to Falconbridge's business

The following information has been derived solely from information included in public documents filed by the Falconbridge Group and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors. Nothing in the previous sentence is intended to qualify the statements in paragraph 1 of this Part VI. So far as Xstrata is aware, the following persons are key individuals important to Falconbridge:

Aaron W. Regent – President

Aaron W. Regent was appointed President and Chief Executive Officer of Former Falconbridge in June 2002. After the completion of the amalgamation of Noranda and Former Falconbridge, he became President of Falconbridge.

Prior to this, he was Executive Vice-President and Chief Financial Officer of Noranda (2000 – 2002), President and Chief Executive Officer of Trilon Securities Corporation (1996 – 2000) and Senior Vice-President and Chief Financial Officer of Brookfield Asset Management Corporation (1992 – 1996).

Mr. Regent has been a member of the Institute of Chartered Accountants of Ontario since 1991 and holds a Bachelor of Arts degree from the University of Western Ontario.

Mr. Regent is the Chairman of the Nickel Development Institute and a member of the Board of Directors of Compañía Minera Doña Inés de Collahuasi S.C.M. (Chile), the C.D. Howe Institute, the National Ballet of Canada and The Hospital for Sick Children Foundation.

Derek G. Pannell – Chief Executive Officer

Derek G. Pannell was appointed Chief Executive Officer of Falconbridge on 30 June 2005. He had previously been the President and Chief Executive Officer of Noranda since 1 June 2002. Mr. Pannell also served as the President and Chief Operating Officer for Noranda between September 2001 and June 2002.

Mr. Pannell is a metallurgical engineer with over 35 years of experience in the mining and metals industry. He holds a Bachelor of Science degree from Imperial College in London, England. As Vice-President, Operations, of Compañía Minera Antamina in Perú, Mr. Pannell participated in the completion of the copper-zinc mine, a 2.3 billion copper mining development in Perú which started commercial production in October 2001.

Mr. Pannell first joined Noranda in 1969 and, over the years, became responsible for the operations of Noranda's principal copper and zinc businesses. His senior level management experience includes Senior Vice-President, Copper Group, and President of Noranda Copper Smelting and Refining, as well as President of Brunswick Mining and Smelting.

Mr. Pannell is a Director of the Mining Association of Canada and the Chair of the Association's Towards Sustainable Mining initiative and a Board member of the International Council on Mining and Metals. He also acted as Co-Chair of the Mining Industry Training and Adjustment Council from 1996 to 1998, was a member of the Premier of New Brunswick's roundtable on the environment from 1995 to 1997, and was President of the Rouyn-Noranda CEGEP during 1991 and 1992. Mr. Pannell is also an Honorary Professor of the Universidad Nacional de Ingenéria, Lima, Peru.

Steven J. Douglas – Executive Vice-President and Chief Financial Officer

Steven J. Douglas was appointed Executive Vice-President and Chief Financial Officer of Former Falconbridge in November 2003. Prior to joining Former Falconbridge, he was Executive Vice-President and Chief Financial Officer of real estate company Brookfield Properties Corporation, a position that he held for more than six years. He also held various

senior management positions at Brookfield for three years prior to being appointed Chief Financial Officer. Prior to joining Brookfield, Mr. Douglas was affiliated with Ernst & Young in Toronto.

Mr. Douglas is a chartered accountant and holds a Bachelor of Commerce degree from Laurentian University in Sudbury, Ontario.

Ian Pearce – Chief Operating Officer
Falconbridge announced on 12 May 2006 that Ian Pearce had been appointed Chief Operating Officer, effective immediately.

Mr. Pearce joined Falconbridge in August 2003 as Senior Vice-President, Projects & Engineering and holds a bachelor degree in Science from University of Witwatersrand in South Africa. He also attended the Management Advancement Program at the same institution.

Mr. Pearce has over 26 years of professional experience in metallurgy and mining. Prior to joining Falconbridge, Mr. Pearce acquired project management experience in the United States, Indonesia, Chile and South Africa. Among numerous assignments, he worked as the Executive Project Director of Muskeg River Oil Sands Project in Alberta (Fluor Daniel Canada Inc.).

The previous Chief Operating Officer of Falconbridge, Peter Kukielski, has resigned his position of Chief Operating Officer and will be leaving Falconbridge on 1 July 2006, having accepted the position of Chief Operating Officer at Teck Cominco. Mr. Kukielski joined Noranda in September 2001 as Senior Vice-President, Projects and Engineering and was subsequently appointed Executive Vice-President, Projects and Aluminum in August 2003. Mr. Kukielski became Chief Operating Officer of Falconbridge in July 2005.

Employee retention agreements
Based on publicly available information disclosed by Falconbridge, on 14 September 2005, Falconbridge entered into employee retention agreements with a number of employees including the following executives: Derek Pannell, Aaron Regent, Steve Douglas, Martin Schady, Peter Kukielski, William Brooks, Claude Ferron, Joseph Laezza, Fernando Emilio Porcile, Robert Sippel, Brian Barr, Ian Pearce, Katherine Rethy, Paul Severin, Jeffery Snow, Michael Agnew, Michael Boone, Denis Couture, Dominique Dionne, John Doyle, Michael Frilegh, André Joron, Edward Laks, Robert Telewiak and Stephen Young.

The agreements with each of Messrs. Pannell, Regent, Douglas, Schady and Kukielski provide that in the event that the executive is terminated without just cause (which term includes the failure by Falconbridge to obtain the assumption of the agreement by a purchaser upon a change of control) or in the event such executive resigns as a result of being constructively dismissed, a payment will be made equal to three times the aggregate of such executive's annual base salary and 100% of such executive's individual target bonus (60% of such executive's annual base salary for the year in which termination of employment actually occurs) and payment of a pro-rated bonus for the year in which the termination occurs. As well, the agreements require Falconbridge to continue benefits, to the extent it may do so legally and in compliance with the benefits plans in existence at the time, at a level substantially equivalent to those provided while the executive was employed for a period of 36 months. Where this is not possible, Falconbridge will reimburse the senior officer for all reasonable expenses incurred to replace such benefits, as well as reimburse him, to a maximum of C$20,000, for legal, financial, outplacement or other professional services incurred in connection with the cessation of his employment. The agreements also provide that in the event of a change of control any unvested entitlements to Falconbridge Shares under the Falconbridge Limited Share Purchase Plan and credit in the Falconbridge Management Deferred Share Unit Plan held by those executives will vest immediately and any unvested stock options vest immediately and remain exercisable for 36 months. In addition, the above-named executives are entitled to retention bonuses in the aggregate amount of approximately C$4 million payable on 15 August 2006, except that such bonuses become payable immediately in the event of a change of control.

The agreements with the balance of the executives provide for various guaranteed severance arrangements, retention bonuses, accelerated option vesting and/or enhanced contributions to employee share savings plans that are payable upon a change of control.

Except as described above, to the knowledge of Xstrata, there are no direct or indirect benefits of accepting or refusing to accept the Xstrata Offer that will accrue to any director or senior officer of Falconbridge, to any associate of a director or senior officer of Falconbridge, to any person or company holding more than 10% of any class of equity securities of Falconbridge or to any person or company acting jointly or in concert with the Offeror, other than those that will accrue to Falconbridge Shareholders generally.

5. Related party transactions

The following are descriptions of the material provisions of agreements and other arrangements between Xstrata and various individuals and entities that may be deemed to be related parties:

(a) the Cerrejón Acquisition Agreement, a description of which is set out in Part III of the Cerrejón Circular – "Principal Terms of the Proposed Acquisition", which has been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation";

(b) the transactions and arrangements described in Part IV of the Cerrejón Circular – "The Xstrata Group's Relationship with Glencore", which has been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation"; and

(c) the related party transactions and arrangements described in the following parts of the following documents, which have been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation":

(i) pages 45 and 46 inclusive and pages 49 to 53 inclusive (excluding paragraph 4 on page 53) of the Cerrejón Circular;

(ii) pages 104 to 108 inclusive of the Financial Statements to the Annual Report and Accounts for the financial year ended 31 December 2005;

(iii) pages 145 to 148 (inclusive) of the Annual Report and Accounts for the financial year ended 31 December 2004; and

(iv) pages 149 to 151 (inclusive) of the Annual Report and Accounts for the financial year ended 31 December 2003.

6. Litigation

6.1 Xstrata Group

Except as set out below, no member of the Xstrata Group is engaged in or, so far as Xstrata is aware, has pending or threatened, any governmental, legal or arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on the Company and/or the Xstrata Group's financial position or profitability.

Total Coal arbitration and court proceedings

There are arbitration proceedings between Tavistock Collieries (Proprietary) Limited ("Tavistock"), a member of the Xstrata Group, and Total Coal South Africa (Proprietary) Limited ("Total Coal"). The aforesaid arbitration proceedings relate to a joint venture agreement between Tavistock and Total Coal. The joint venture agreement has been cancelled. The arbitration proceedings are concerned with, amongst other things:

(a) the dissolution of the joint venture and the manner in which the joint venture assets are to be distributed;

(b) a determination as to which party breached the joint venture agreement;

(c) a claim for damages by Tavistock from Total Coal of an amount of ZAR835,963,019.19 (approximately US$128.6 million);

(d) a claim for damages by Total Coal from Tavistock of an amount of ZAR1,734,082,000.00 (approximately US$266.7 million).

The aforesaid claims for damages are amounts referred to in the pleadings exchanged between the parties and remain subject to determination in terms of the arbitration proceedings. The Company is of the view that it is entitled to dissolve the joint venture as a result of a breach by Total Coal.

On 2 May 2006, summonses were served on Tavistock, Xstrata South Africa Proprietary Limited ("Xstrata South Africa"), Duiker Mining (Pty) Ltd ("Duiker"), Phoenix Collieries (Pty) Ltd ("Phoenix") and other parties outside of the Xstrata Group in respect of a South African High Court action instituted by Total Coal. The relief claimed by Total Coal in the action is concerned with following:

(a) various declaratory orders relating to, amongst other things, Total Coal's alleged undivided interest in the ATCOM mining area and the alleged obligations of Tavistock, Xstrata South Africa and Duiker in terms of a letter agreement dated 15 August 2002 concerning the mining authorisation and subsequent mining right in respect of the ATC and ATCOM mining areas;

(b) alternatively, an order that Tavistock, Xstrata South Africa and Duiker pay damages to Total Coal amounting to ZAR1,494,854,000.00 (approximately US$229.9 million); and

(c) that the arbitration agreement between Tavistock and Total Coal be ordered in terms of section 3(2) of the South African Arbitration Act 42 of 1965 to cease to have effect in relation to all issues arising from this action.

On 22 May 2006 arbitration proceedings commenced (and are currently underway) to deal with and resolve the dissolution issues.

The arbitration is at this stage scheduled to endure until 15 June 2006. Total Coal has, in May 2006, issued a summons out of the High Court of South Africa. Simultaneously with the issue of the High Court summons, Total Coal has sought to transfer the relief claimed by it in the arbitration proceedings so as to transfer some of the issues pertaining to dissolution from the arbitration proceedings to the High Court.

Whilst it is anticipated that at least some finality in regard to the dissolution issues will be obtained by 15 June 2006, there is no guarantee in view of the High Court proceedings which have been instituted. It is in the circumstances not possible to determine with any precision when the dissolution issues will be resolved.

Prior to Total Coal amending the relief sought by it in the arbitration, Total Coal sought, amongst other things, an order that Tavistock take all reasonable steps to ensure that the mining authorisation was reflected as vesting in Tavistock and Total Coal jointly in the relevant permits and/or records and/or registry of the relevant authorities.

Total Coal also sought a declaration that in the event that either of the parties subsequently seeks partition of the property rights co-owned by the parties to the joint venture, that such partition is to be effected by dividing the joint operating assets equally between them.

Total Coal relied upon, amongst other things, the provisions of the letter agreement referred to above, which provides that Tavistock, Duiker and Xstrata undertake to deal with the mining authorisation as if Total Coal is the registered co-holder thereof.

After the amendment effected by Total Coal to its relief sought in the arbitration, it now seeks substantially the same relief in the High Court proceedings.

It is not possible to state with any certainty when all of the disputes between Tavistock and Total Coal will be finalised.

Based on legal advice obtained, the Company is of the view that the Xstrata Group's prospects of success in the arbitration and in the High Court proceedings are good.

Hualfin proceedings

The Argentinean Municipality of Hualfin and its directors commenced proceedings in December 2005 against Minera Alumbrera Limited ("MAA"), in which the Xstrata Group has a 50% interest. The claim of ARS343 million (approximately

US$111.4 million) (relating to principal and interest) is in respect of alleged unpaid tax and royalties for the period from 1999 to 2004. MAA's position is that the claim is unjustified and/or unconstitutional and the existing Fiscal Stability Regime and Argentinean Constitution provide MAA with the requisite protection. Based on legal advice obtained, the Company is of the view that the prospects of MAA incurring liability in respect of the claim are low.

6.2 Falconbridge Group

The following information has been derived solely from information included in public documents filed by the Falconbridge Group and third parties and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors. Nothing in the previous sentence is intended to qualify the statements in paragraph 1 of this Part VI. So far as Xstrata is aware, except as set out below, no member of the Falconbridge Group is engaged in or has pending or threatened, any governmental, legal or arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on Falconbridge and/or the Falconbridge Group's financial position or profitability.

Department of Justice proceedings

The United States Department of Justice convened a grand jury in 1999 to investigate possible criminal antitrust violations by Falconbridge and other sulphuric acid producers in the United States. According to the latest publicly available information contained in Falconbridge's Annual Information Form dated 22 March 2006, while still technically open, Falconbridge is unaware of any ongoing activity and believes the investigation can be properly considered dormant. According to Falconbridge's Annual Information Form dated 22 March 2006, in connection with this matter, class action lawsuits filed in various jurisdictions in the United States have been consolidated into the District Court in Chicago and, in addition, class actions filed in state court in California have been consolidated in the San Francisco state court. Falconbridge stated in its Annual Information Form that it is vigorously defending these actions and that it has asserted that they are without merit.

Stark Claimants proceedings

Based on information filed publicly by Stark Trading and Shepherd Investments International Ltd. (the "Stark Claimants"), Brookfield and Falconbridge, Xstrata understands that Falconbridge is a defendant, along with Brookfield, in a claim initiated in November 2005 in Wisconsin, USA by the Stark Claimants. The Stark Claimants allege violations of US federal law, including market manipulation and misrepresentation, by Noranda and Brookfield as Noranda's controlling shareholder in connection with Noranda's issuer bid in March 2005, the Noranda takeover bid for Former Falconbridge in March 2005 and the amalgamation of Noranda and Former Falconbridge in June 2005. The Stark Claimants demand a jury trial and seek compensatory damages of US$74.1 million, punitive damages and costs. On 17 January 2006, Brookfield submitted to the Wisconsin court a memorandum of law in support of its motion to dismiss with prejudice the claim filed by the Stark Claimants and on 23 January 2006, Falconbridge submitted to the Wisconsin court a revised memorandum of law in support of its motion to dismiss with prejudice the claim filed by the Stark Claimants. The Stark Claimants submitted briefs in opposition to the motions to dismiss on 17 March 2006. Brookfield and Falconbridge submitted their reply briefs to the Stark Claimants' opposition on 18 April 2006. The court has not yet ruled on the motions.

It is not possible for Xstrata to make an assessment of the merits of the above claims against Falconbridge at this time as a result of the Xstrata Group's lack of due diligence access to Falconbridge. See the section of this document headed "Presentation of Information – Presentation of information on the Falconbridge Group".

7. Significant changes

7.1 Xstrata Group

Partnership with Kagiso Trust Investments

In February 2006, the Xstrata Group announced its agreement to form a black economic empowerment partnership with Kagiso Trust Investments (Proprietary) Limited ("Kagiso") in respect of the Xstrata Group's 50% interest in the Mototolo Joint Venture.

The Mototolo Joint Venture was established by the Xstrata Group and Anglo Platinum in 2005 to develop a platinum group metals ("PGM") mine and concentrator on the Eastern Limb of the Bushveld Complex in Mpumalanga, South Africa.

As of 11 May 2006, Kagiso, through a special purpose vehicle, Kagiso Platinum Venture (Pty) Limited ("KPV"), acquired 26% of Xstrata's 50% interest in the joint venture, resulting in KPV owning a fully participative 13% interest in the

earnings from the Mototolo Joint Venture, in return for funding its proportionate share of the total capital expenditure required for the project. The Xstrata Group retains an effective 37% interest. KPV's participation is effective retrospectively from the inception of the Mototolo Joint Venture.

In order to facilitate Kagiso's fundraising, Xstrata South Africa provided a ZAR100 million (approximately US$15.4 million) completion guarantee to Kagiso's financiers, Investec Bank Limited.

The total capital expenditure for the project is estimated at ZAR1,350 million (approximately US$207.6 million) to commissioning, of which the Xstrata Group's share is 37%. The Xstrata Group's investment is expected to be made over the next two years and funded from the Xstrata Group's free cash flow.

Agreement to establish ARM Coal

Also in February 2006, the Xstrata Group announced the agreement of the Xstrata Group and African Rainbow Minerals Limited ("ARM") to establish a new black controlled coal mining company to be called ARM Coal (Proprietary) Limited ("Arm Coal"), which will have operating assets and growth projects in South Africa and participate in the export and domestic thermal coal markets.

Under the agreement, on completion ARM will pay ZAR400 million (approximately US$61.5 million) to subscribe for 51% and the Xstrata Group will pay ZAR384 million (approximately US$59.0 million) to subscribe for 49% of the issued share capital of ARM Coal, which will hold a 20% interest in the existing coal operations of Xstrata Coal South Africa, and a direct 51% interest in the Goedgevonden project. ARM Coal will therefore acquire an immediate effective interest of more than 26% in the Xstrata Group's South African coal operations. Xstrata has agreed to provide vendor financing to ARM Coal and, to advance ARM's participation in the South African coal industry, has also agreed to grant ARM an option to increase its participation by up to a further 10%. This would result in historically disadvantaged South Africans controlling 36% of Xstrata's South African coal business.

Under this transaction, which is valued in aggregate at approximately ZAR2.4 billion (approximately US$369.1 million), ARM Coal will subscribe for participating preference shares ("Preference Shares") in the capital of Xstrata South Africa for a cash consideration of ZAR784 million (approximately US$120.6 million), by applying the subscription proceeds received from the Xstrata Group and ARM for its ordinary shares. The Preference Shares will entitle ARM Coal to participate in 20% of the free cash flow of Xstrata South Africa's existing coal operations. Dividends received from the Preference Shares will flow directly to ARM Coal's shareholders.

For the purposes of this transaction, ZAR4 billion (approximately US$615.1 million) of debt has been attributed to Xstrata South Africa's existing coal operations. This debt will bear interest at the prime overdraft rate of interest quoted publicly by the Standard Bank of South Africa (the "prime rate") and will be repaid over a ten-year period following a five-year vendor facilitation period during which no interest will accrue and no principal will be required to be repaid. Xstrata South Africa will provide debt funding of ZAR765 million (approximately US$117.6 million) to ARM Coal in order to fund its acquisition of the 51% interest in the Goedgevonden project. This debt will bear interest at the prime rate and the repayment period will be linked to the underlying cash flows of ARM Coal.

Furthermore, Xstrata South Africa will provide the project funding required to bring the Goedgevonden project into commission. The project funding is expected to peak at approximately ZAR2.3 billion (approximately US$353.7 million) and will be repayable over ten years following an eight-year vendor facilitation period. During this eight-year period, no interest will accrue and no principal will be required to be repaid in respect of Xstrata South Africa's portion of the project funding and ARM Coal will be entitled to share in this benefit. The project funding will bear interest at the prime rate.

In order for ARM to gain immediate access to cash flows, a cash upstream principle will be applied for the first five years following completion of the transaction, whereby 20% of Goedgevonden's operating cash flow will be distributed to the joint venture parties according to their respective interests. The remaining 80% of the operating cash flow will be utilised towards the servicing of the project funding debt. Furthermore, 80% of the operating cash flow received from the Goedgevonden project by ARM Coal will be used to service ARM Coal's debt of ZAR765 million and the remaining 20% will be distributed to the shareholders of ARM Coal.

The transaction, which is expected to complete in mid-2006, is subject to certain conditions precedent, including, amongst other things, obtaining the necessary regulatory approvals under the South African Exchange Control Regulations and the South African Competition Act.

Agreement to acquire one third of Cerrejón
In March 2006, the Xstrata Group announced the proposed acquisition of 33⅓% of the Cerrejón thermal coal operation in Colombia, from the Cerrejón Vendors, for a total consideration of US$1,712 million, which included an agreed amount of US$12 million in respect of the value of the excess net assets of the Cerrejón Business as at 1 January 2006 over the Cerrejón Purchasers' target net asset value of the Cerrejón Business. The consideration was satisfied in cash on completion of the Cerrejón Acquisition on 12 May 2006 and was financed through the Cerrejón Bridge Facility Agreement described in paragraph 8.1(g) of this Part VI.

Agreement to acquire Tintaya
On 16 May 2006, the Xstrata Group announced the proposed acquisition of the Tintaya mine and associated satellite deposits in Peru, South America, from BHP Billiton for US$750 million.

The acquisition price comprises an initial cash consideration of US$634 million and the assumption of US$116 million of debt. An agreed price participation arrangement may result in further deferred cash payments to BHP Billiton and will be based on prevailing copper prices upon completion of the transaction. The price participation component is capped – at current prices these payments would total approximately US$60 million.

Two further conditional deferred payments of US$25 million each in cash may also be payable to BHP Billiton. The first such amount will be payable in July 2009 if the LME copper price exceeds certain levels from July 2008 to June 2009. The second amount will be payable if either of the Antapaccay or Coroccohuayco satellite deposits are developed prior to 2020.

The Tintaya Acquisition is conditional upon, amongst other things, the receipt of certain regulatory certificates and it is expected that the Tintaya Acquisition will be completed by around the middle of June 2006.

The consideration for the Tintaya Acquisition is expected to be funded from existing debt facilities.

Xstrata Offer and related financing arrangements
On 17 May 2006, Xstrata announced the Xstrata Offer and the related financing arrangements which are described respectively in Part V – "Principal Terms of the Proposed Acquisition" and paragraphs 8.1(c) to 8.1(e) of this Part VI.

Placing
Also on 17 May 2006, Xstrata announced the placing to institutional investors of 61,994,320 Ordinary Shares at a price of 2100 pence per Ordinary Share to raise gross proceeds of approximately £1,302 million. The Placing comprised 32,543,344 new Ordinary Shares issued by the Company and 29,450,976 Ordinary Shares held at the time of the Placing by Batiss pursuant to the ECMP.

The Placing was carried out to raise proceeds for the Xstrata Group to pay back a portion of the debt incurred in relation to the acquisitions of the initial stake of approximately 19.8% in Falconbridge and the Cerrejón Acquisition.

Other than as outlined in this paragraph 7.1 above, there has been no significant change in the financial or trading position of the Xstrata Group since 31 December 2005, the date to which the latest published audited financial information of the Xstrata Group was prepared.

7.2 Falconbridge Group
The following information has been derived solely from information included in public documents published by Falconbridge and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors. Nothing in the previous sentence is intended to qualify the statements in paragraph 1 of Part VI – "Additional Information – Responsibility".

Takeover bid for Novicourt
In March 2006, Falconbridge announced that it intended to make an offer by way of a takeover bid for all of the outstanding common shares of Novicourt Inc. ("Novicourt") that it did not already own at a cash offer price of C$2.30 per

Novicourt share, or an aggregate of approximately C$17.5 million. Falconbridge stated that at the time of the announcement it held approximately 62.1% of the outstanding common shares of Novicourt.

Falconbridge stated that the proposed offer would be subject to not less than 50% of the shares of Novicourt not already owned by Falconbridge being tendered and that it had communicated its intention to make this offer to the board of directors of Novicourt. Falconbridge understood that the Novicourt board of directors had formed a special committee of independent directors to review the offer and to supervise a formal valuation of Novicourt in accordance with applicable securities laws. Falconbridge expected to issue and mail its offer to the shareholders of Novicourt as soon as practicable following the completion of the formal valuation.

Falconbridge stated that the cash offer price represented an 11.6% premium to the average closing share price of Novicourt shares over the 90 days prior to Falconbridge's announcement and an approximate 21.1% premium to the then estimated net asset value of Novicourt.

According to Falconbridge's announcement, on successful completion of the bid Falconbridge, if necessary, intended to initiate a second step acquisition transaction for the remaining shares of Novicourt in order that Novicourt continue as a wholly-owned private company subsidiary of Falconbridge.

Redemption of junior preference shares

Also in March 2006, Falconbridge announced that it intended to redeem a total of 20,000,000, or US$500 million, of its outstanding junior preference shares. Falconbridge stated that the junior preference shares will be redeemed on 26 April 2006 from holders of record on 22 March 2006 and that Falconbridge intended to utilise its internal cash resources to fund the redemption.

Falconbridge also stated that, in accordance with the terms of the junior preference shares, it will redeem shares of each series of the junior preference shares on a pro rata basis as follows: 8,000,000 junior preference shares, series 1 (approximately 67% of shares outstanding), 8,000,000 junior preference shares, series 2 (approximately 67% of shares outstanding), and 4,000,000 junior preference shares, series 3 (approximately 67% of shares outstanding). Falconbridge further stated that the number of shares to be redeemed from each holder within each series of junior preference shares will also be determined on a pro rata basis and that each junior preference share will be redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from and including 31 March 2006 to and including 25 April 2006.

Falconbridge stated that, after giving effect to the redemption of the 20,000,000 junior preference shares, it will have outstanding 3,999,899 junior preference shares, series 1, 3,999,899 junior preference shares, series 2 and 1,999,903 junior preference shares, series 3.

Increased Inco Offer and break fee payable by Falconbridge

On 13 May 2006, Inco and Falconbridge announced a revised offer by Inco for a per share consideration of C$51.17 in cash or 0.6927 of an Inco share and C$0.05 in cash, subject to a maximum cash consideration available under the Inco Offer of C$4,786,678,875 and subject to a maximum of 200,657,578 Inco common shares issuable under the Inco Offer, such that if all Falconbridge Shareholders tendered for cash, under the Inco Offer each Falconbridge Shareholder would be entitled to receive on a pro rata basis C$12.50 in cash and 0.524 of an Inco common share for each Falconbridge Share tendered. The Falconbridge board approved the revised Inco Offer and Falconbridge and Inco amended the terms of the Inco Support Agreement, such that, amongst other things, the amount of the break fee payable by Falconbridge to Inco in certain circumstances under that agreement was increased from US$320 million to US$450 million. For further details in relation to this break fee, see paragraph 8.2(b) of this Part VI.

Redemption of remaining balance of junior preference shares

On 18 May 2006, Falconbridge announced its intention to redeem the remaining balance of its 9,999,701 outstanding junior preference shares for a total of approximately C$253 million. Falconbridge stated that the junior preference shares will be redeemed on 28 June 2006 under a notice of redemption to be sent to shareholders of record on 25 May 2006. Falconbridge stated that it intended to utilise its internal cash resources to fund the redemption and that it will have no junior preference shares outstanding upon redemption.

Falconbridge stated that, in accordance with the terms of the junior preference shares, it will redeem the remaining balance of shares of each series of the junior preference shares as follows: 3,999,899 Junior Preference Shares, Series

1,3,999,899 Junior Preference Shares, Series 2, and 1,999,903 Junior Preference Shares, Series 3. Falconbridge announced that each junior preference share will be redeemed at a price of US$25.25 plus accrued and unpaid dividends for the period from and including 31 March 2006 to and including 27 June 2006.

As far as Xstrata is aware, having regard to published information, other than as outlined in this paragraph 7.2 above, there has been no significant change in the financial or trading position of the Falconbridge Group since 31 December 2005, the date to which the latest published audited financial information of the Falconbridge Group was prepared.

8. Material contracts

8.1 Xstrata Group

The following contracts are the only contracts (not being contracts entered into in the ordinary course of business) that have been entered into by Xstrata or any member of the Xstrata Group within the two years immediately preceding the date of this document which are or may be material to the Xstrata Group or which have been entered into by Xstrata or any member of the Xstrata Group at any other time and which contain provisions under which Xstrata or any member of the Xstrata Group has an obligation or entitlement that is material to the Xstrata Group as at the date of this document:

(a) A placing agreement dated 17 May 2006 (the "Placing Agreement") between Xstrata, Batiss, Xstrata Capital (Xstrata Capital and Batiss together, the "Sellers"), Deutsche Bank, JPMorgan Cazenove and JPMSL relating to a placing of 61,994,320 Ordinary Shares.

Under the Placing Agreement, each of Deutsche Bank and JPMorgan Cazenove (each in its capacity as a "Manager") severally agreed, conditionally on, amongst other things, the 32,543,344 new Ordinary Shares to be issued pursuant to the Placing Agreement (the "New Placing Shares") being admitted to the Official List, admission to trading on the London Stock Exchange becoming effective and the commencement of dealings in the New Placing Shares on the SWX ("Admission"), and in reliance on the representations, warranties and undertakings set out in the Placing Agreement, as agent of Xstrata to use their respective reasonable endeavours to procure placees to take up the New Placing Shares at the placing price (as set out in Xstrata's and the Sellers' respective terms of sale) upon and subject to the terms and conditions of the placing announcement giving details of the placing, and, subject to their having procured placees to take up the New Placing Shares, as agent of the Sellers to use their respective reasonable endeavours to procure placees to take up the 29,450,976 Ordinary Shares owned by Batiss to be sold pursuant to the Placing Agreement at the direction of Xstrata Capital (the "Batiss Placing Shares").

Under the Placing Agreement, Xstrata agreed to pay to Deutsche Bank and JPMorgan Cazenove, in aggregate, 2.00% of the proceeds of the placing of the New Placing Shares in underwriting commissions, and up to 0.75% of the proceeds of the placing of the New Placing Shares in fees.

Under the Placing Agreement, Batiss also agreed to pay to Deutsche Bank and JPMorgan Cazenove, in aggregate, 2.00% of the proceeds of the placing of the Batiss Placing Shares in underwriting commissions, and up to 0.75% of the proceeds of the placing of the Batiss Placing Shares in fees.

In accordance with an agreement dated 24 February 2003 between Batiss and Xstrata Capital in connection with the ECMP, Xstrata Capital exercised its rights to require Batiss to transfer the Batiss Placing Shares in connection with the Placing, with Xstrata Capital retaining the net proceeds from such transfer in return for the redemption of one redeemable preference share in Batiss held by Xstrata Capital for each Batiss Placing Share transferred.

Xstrata also agreed under the Placing Agreement to bear its own costs and expenses, and to pay the costs and expenses of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them), of, or in connection with, or incidental to, the bookbuilding process (the "Bookbuild") to be conducted by Deutsche Bank and JPMorgan Cazenove to arrange participation by placees in the Placing to be effected by Deutsche Bank and JPMorgan Cazenove pursuant to the Placing Agreement to the extent that the Bookbuild related to the New Placing Shares, the placing of the New Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the New Placing Shares. The agreement included (without limitation) the costs and expenses of, and incidental to, the applications to the FSA, to the London Stock Exchange and the SWX for Admission, the fees payable to the FSA, the London Stock Exchange and the registrars, all accountancy, legal, professional and other expenses of Xstrata and of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them) incurred in connection with the placing of the New Placing Shares and

Admission (including, where applicable, any irrecoverable amount in respect of VAT), and the costs of printing, advertising and circulating the documents in connection with the Bookbuild to the extent that it related to the New Placing Shares, the placing of the New Placing Shares, the allotment and issue of the New Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the New Placing Shares.

Xstrata Capital agreed under the Placing Agreement to bear its own costs and expenses and those of Batiss, and to pay the costs and expenses of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them), of, or in connection with, or incidental to, the Bookbuild to the extent that the Bookbuild related to the Batiss Placing Shares, the placing of the Batiss Placing Shares, and any other matter or arrangement contemplated by, or incidental to, the placing of the Batiss Placing Shares. The agreement included (without limitation) the fees payable to the registrars, all accountancy, legal, professional and other expenses of the Sellers and of Deutsche Bank, JPMorgan Cazenove and JPMSL (or any of them) incurred in connection with the placing of the Batiss Placing Shares, and the costs of printing, advertising and circulating the documents in connection with the Bookbuild to the extent that it related to the Batiss Placing Shares, the placing of the Batiss Placing Shares and any other matter or arrangement contemplated by, or incidental to, the placing of the Batiss Placing Shares.

The Placing Agreement contains certain customary representations, warranties, undertakings, covenants and indemnities given by Xstrata in favour of Deutsche Bank, JPMorgan Cazenove and JPMSL.

(b) The Xstrata Offer pursuant to the Offer Document, details of which are provided in Part V – "Principal Terms of the Proposed Acquisition".

(c) An underwriting letter dated 17 May 2006 (the "Debt Underwriting Letter"), between, amongst others, Xstrata (Schweiz) AG, Barclays, Deutsche Bank, JPMorgan Chase and RBS (Barclays, Deutsche Bank, JPMorgan Chase and RBS together the "Debt Underwriters") pursuant to which each of the Debt Underwriters has underwritten severally 25% of each of the following facilities (each as more particularly described below):

(i) the Acquisition Facilities Agreement; and

(ii) the Debt Bridge Facility Agreement.

Each Debt Underwriter may terminate its underwriting commitment if (amongst other things) the Acquisition Facilities Agreement and the Debt Bridge Facility Agreement are not executed on or before the date falling three months after the date of the Debt Underwriting Letter.

The agreed form of each of the Acquisition Facilities Agreement and the Debt Bridge Facility Agreement is attached to the Debt Underwriting Letter.

The Acquisition Facilities Agreement and the Debt Bridge Facility Agreement may be entered into prior to the date falling three months after the date of the Debt Underwriting Letter (unless all parties agree to extend such date) and together will provide, amongst other things, the Xstrata Group with the funds to satisfy the consideration payable pursuant to the Proposed Acquisition.

The Acquisition Facilities Agreement and the Debt Bridge Facility Agreement will be on substantially the same terms and will be utilised by the Xstrata Group: (i) to satisfy the consideration payable pursuant to the Proposed Acquisition; and (ii) to refinance certain existing indebtedness of the Xstrata Group and the Falconbridge Group following the Proposed Acquisition.

Upon execution, the Acquisition Facilities Agreement will provide Xstrata (Schweiz) AG with facilities (the "Acquisition Facilities") which consist of: (i) a 36 month term loan facility for US$3,000,000,000 ("Facility A"); (ii) a 60 month and one day term loan facility for US$1,000,000,000 ("Facility B"); (iii) a 60 month revolving loan facility for US$3,000,000,000 ("Facility C"); and (iv) a 364 day term loan facility for US$1,500,000,000 with the ability to extend (at Xstrata's option) by 364 days ("Facility D").

The Acquisition Facilities will be available (together with the Debt Bridge Facility (of which particulars are set out below)) for the purposes of satisfying the consideration payable by the Offeror for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer and for financing or refinancing the consideration payable to holders of options to acquire shares in Falconbridge. The Acquisition Facilities will also be available for the purpose of paying all costs, fees and expenses (and taxes on them) and all stamp duty, registration and other similar taxes incurred by or on behalf of Xstrata in connection with the Xstrata Offer, the Acquisition Facilities and the Debt Bridge Facility. Additionally, the Acquisition Facilities will be available for: (i) the refinancing of certain existing financial indebtedness of the Falconbridge Group; and (ii) the refinancing of the First Existing Facility, the Second Existing Facility and the Cerrejón Bridge Facility (details of which are given below). Pursuant to the Acquisition Facilities Agreement Xstrata has agreed not to waive, amend, extend, revise, withdraw, agree or treat as satisfied or decide not to enforce, in whole or in part, certain conditions of the *Xstrata Offer*.

Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which in respect of Facility A will initially be 0.60% per annum, in respect of Facility B will initially be 0.70% per annum, in respect of Facility C will initially be 0.70% per annum and in respect of Facility D will initially be 0.50% per annum. Following the date falling 6 months after the date on which the Acquisition Facilities Agreement is signed, the margin in respect of each facility will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of Xstrata.

Commitment fees are also payable from (and including) the date of the Acquisition Facilities Agreement to (and including): (i) in the case of Facility A, Facility B and Facility D, the date which is 6 months after the date of the Acquisition Facilities Agreement; and (ii) in the case of Facility C, the date which is 59 months after the date of the Acquisition Facilities Agreement. They are a percentage rate per annum on the day to day basis equal to: (i) 35% of the applicable margin on the undrawn amount of each of Facility A, Facility B, and Facility C; and (ii) 30% of the applicable margin on the undrawn amount of Facility D.

The Acquisition Facilities Agreement contains certain mandatory prepayment events, including: (i) illegality; and (ii) a change of control of Xstrata.

The Acquisition Facilities Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from Xstrata and certain other members of the Xstrata Group in favour of the lenders of the Acquisition Facilities, which are typical for this type of credit agreement. It also contains: (i) customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Acquisition Facilities; and (ii) customary conditions precedent which are usually agreed in relation to this type of facility.

Upon execution the Debt Bridge Facility Agreement will provide Xstrata (Schweiz) AG with a facility (the "Debt Bridge Facility") which consists of a six month term loan facility for US$3,500,000,000 with the ability to extend (at Xstrata's option) by 364 days.

The Debt Bridge Facility will be available for the purposes of satisfying the consideration payable by the Offeror for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer and the financing or refinancing of the consideration payable to holders of options to acquire shares in Falconbridge. The Debt Bridge Facility will be available for the purpose of paying all costs, fees and expenses (and taxes on them) and all stamp duty, registration and other similar taxes incurred by or on behalf of Xstrata in connection with the Xstrata Offer, the Acquisition Facilities and the Debt Bridge Facility. Additionally, the Debt Bridge Facility will be available for the refinancing of existing financial indebtedness of the *Falconbridge* Group. Pursuant to the Debt Bridge Facility Agreement Xstrata has agreed not to waive, amend, extend, revise, withdraw, agree or treat as satisfies *or decide* not to enforce, in whole or in part, certain conditions of the Xstrata Offer.

Interest is payable on the loans at the rate which is aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which will initially be 0.40% per annum. Following the date falling six months after the date on which the Debt Bridge Facility Agreement is signed, the margin will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of Xstrata.

A commitment fee is also payable at a percentage rate per annum on the day-to-day basis equal to 30% of the margin on the undrawn amount of the Debt Bridge Facility from the date of the Debt Bridge Facility Agreement until the date which is six months after the date of first drawn down.

The Debt Bridge Facility Agreement contains certain mandatory prepayment events, including: (i) illegality; and (ii) a change of control of Xstrata.

The Debt Bridge Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from Xstrata and certain other members of the Xstrata Group in favour of the lenders of the Debt Bridge Facility, which are typical for this type of credit agreement. It also contains: (i) customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Debt Bridge Facility; and (ii) customary conditions precedent which are usually agreed in relation to this type of facility.

The Debt Bridge Facility will be repaid or refinanced at the end of its term by means of fundraising.

(d) The Equity Bridge Facility Agreement dated 17 May 2006 between, amongst others, Xstrata (Schweiz) AG, Deutsche Bank and JPMorgan Chase (Deutsche Bank and JPMorgan Chase together the "Equity Bridge Facility Lenders").

The Equity Bridge Facility Agreement will provide Xstrata (Schweiz) AG with a term loan facility for US$7.0 billion due on the earlier of: (i) six months after initial utilisation; and (ii) 15 May 2007 (the "Equity Bridge Facility").

The Equity Bridge Facility will be available for the purposes of satisfying the consideration payable by the Offeror for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer and for financing or refinancing the consideration payable to holders of options to acquire shares in Falconbridge. The Equity Bridge Facility will also be available for the purpose of paying all costs, fees and expenses (and taxes on them) and all stamp duty, registration and other similar taxes incurred by or on behalf of Xstrata in connection with the Xstrata Offer. Pursuant to the Equity Bridge Facility Agreement Xstrata has agreed not to waive, amend, extend, revise, withdraw, agree or treat as satisfied or decide not to enforce, in whole or in part, certain conditions of the Xstrata Offer.

Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which will initially be 0.40% per annum. Following the date falling six months after the date on which the Equity Bridge Facility Agreement was signed, the margin will be adjusted from time to time in accordance with a ratchet grid based on the credit rating of Xstrata.

A commitment fee is also payable at a percentage rate per annum on the day-to-day basis equal to 30% per annum on the undrawn amount of the Equity Bridge Facility.

The Equity Bridge Facility Agreement contains certain mandatory prepayment events, including: (i) illegality; (ii) fundraising; and (iii) a change of control of Xstrata.

The Equity Bridge Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from Xstrata and certain other members of the Xstrata Group in favour of the lenders of the Equity Bridge Facility, which are typical for this type of credit agreement. It also contains customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Equity Bridge Facility.

The Equity Bridge Facility is fully subordinated to the Acquisition Facilities and the Debt Bridge Facility such that the Equity Bridge Facility Lenders cannot enforce their rights to repayment or prepayment while either of the Acquisition Facilities or the Debt Bridge Facility remain outstanding. The only circumstance in which the Equity Bridge Facility may be repaid ahead of the Acquisition Facilities and the Debt Bridge Facility is where Xstrata uses the Equity Refinancing Amount.

(e) Pursuant to an agreement entered into between Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL on 17 May 2006 (the "Standby Equity Underwriting Letter"), Deutsche Bank and JPMSL have irrevocably undertaken, severally, and not jointly or jointly and severally, to underwrite, each as to 50%, one or more equity offerings by Xstrata (and/or,

subject to the approval of Deutsche Bank and JPMorgan Cazenove, such approval not to be unreasonably withheld or delayed, by one or more directly or indirectly owned subsidiaries of Xstrata) to raise, in aggregate, such amount as is required to pay or repay any amounts then outstanding under the Equity Bridge Facility Agreement, together with costs and expenses (the "Equity Refinancing Amount"). The net proceeds raised by way of such equity offering(s) will be used first to pay or repay amounts outstanding under the Equity Bridge Facility Agreement.

Under the Standby Equity Underwriting Letter, Xstrata undertakes to effect one or more equity offerings, by itself or by one or more directly or indirectly owned subsidiaries as aforesaid, to pay or repay the Equity Refinancing Amount by the termination date of the Equity Bridge Facility Agreement (being the earlier of: (i) six months after initial utilisation of the Equity Bridge Facility; and (ii) 15 May 2007) (the "Termination Date") at such price as is determined by Xstrata, Deutsche Bank and JPMorgan Cazenove as described in paragraph (ii) below. Xstrata has agreed to undertake a rights issue underwritten by Deutsche Bank and JPMSL of such number of Ordinary Shares as is necessary to pay or repay the Equity Refinancing Amount by the Termination Date to the extent that the Equity Refinancing Amount has not already been paid or repaid.

The Standby Equity Underwriting Letter also contains, amongst others, the following provisions:

(i) unless Xstrata, with the prior approval of Deutsche Bank and JPMorgan Cazenove (such approval not to be unreasonably withheld or delayed), determines otherwise, the Equity Refinancing Amount will be raised by way of an underwritten rights issue of Ordinary Shares to existing Shareholders. Xstrata may, however, with the prior approval of Deutsche Bank and JPMorgan Cazenove (such approval not to be unresonably withheld or delayed), elect to raise the Equity Refinancing Amount through any one or more of the following:

   (A) an underwritten rights issue of Ordinary Shares or convertible unsecured loan stock ("Stock Units") or other securities to existing Shareholders ("Rights Issue");

   (B) an underwritten non-pre-emptive cash placing of Ordinary Shares ("Cash Placing");

   (C) an underwritten non-pre-emptive cash placing of Ordinary Shares owned by Batiss ("Batiss Placing"); and/or

   (D) such other method as Xstrata, Deutsche Bank and JPMorgan Cazenove may agree;

(ii) Deutsche Bank, JPMorgan Cazenove, JPMSL and Xstrata have agreed that the issue price of any Ordinary Shares, Stock Units or other securities, as the case may be, proposed to be issued in connection with any Rights Issue, Cash Placing and/or Batiss Placing will be determined by Xstrata, Deutsche Bank and JPMorgan Cazenove at the time the relevant equity offering is launched acting reasonably and in good faith in the light of the then prevailing market conditions, any relevant Listing Rules requirements and/or Investor Protection Committee Guidelines, the market price of an Ordinary Share immediately prior to launch and, in the case of a Rights Issue, customary discounts to market price, but in any event the issue price will not be: (A) less than the pounds sterling equivalent of US$0.50 per new Ordinary Share; or (B) in the case of Stock Units, a price which would, upon conversion of any Stock Units, result in Ordinary Shares being issued at a discount to their nominal value;

(iii) Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL have undertaken to negotiate reasonably and in good faith the terms and conditions of any underwriting agreement to be entered into in connection with any equity offering by Xstrata (and/or by one or more directly or indirectly owned subsidiaries of Xstrata) to raise some or all of the Equity Refinancing Amount (each an "Underwriting Agreement"). In addition, Xstrata, Deutsche Bank, JPMorgan Cazenove and JPMSL have agreed that the terms and conditions of any Underwriting Agreement will be customary for the type of equity offering it relates to, including, for example, the inclusion of an obligation for Xstrata to prepare a prospectus (if necessary), the provision of standard warranties by Xstrata and comfort letters in respect of any prospectus, customary indemnities in favour of Deutsche Bank, JPMorgan Cazenove and JPMSL, the obtaining of irrevocable undertakings (if any), customary conditions and termination provisions and customary *force majeure* provisions, if any;

(iv) Xstrata has undertaken that until any amounts drawn down under the Equity Bridge Facility Agreement are repaid neither Xstrata nor any subsidiary of Xstrata will undertake any rights issue, placing or other form of capital

agreement. It also contains customary events of default upon occurrence of which the lenders may terminate and demand repayment of the Cerrejón Bridge Facility.

(h) The Cerrejón Acquisition Agreement, a description of which is set out in Part III of the Cerrejón Circular – "Principal Terms of the Proposed Acquisition", which has been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation".

(i) The following agreements, each dated 27 February 2006, in connection with the agreement of the Xstrata Group and African Rainbow Minerals Limited ("ARM") to establish a new black controlled coal mining company to be called ARM Coal, which will have operating assets and growth projects in South Africa and participate in the export and domestic thermal coal markets, as described in paragraph 7.1 of this Part VI:

(i) an ordinary share subscription and shareholders' agreement (the "Ordinary Share Subscription and Shareholders' Agreement") between ARM, Xstrata (Schweiz) AG and Lexshell 676 Investments (Proprietary) Limited (the latter to be renamed ARM Coal (Proprietary) Limited) ("ARM Coal"), under which ARM and Xstrata (Schweiz) AG agreed to subscribe for ordinary shares in ARM Coal;

(ii) a preference share subscription and shareholders' agreement between ARM, Xstrata (Schweiz) AG, Xstrata South Africa and ARM Coal, under which ARM Coal agreed to subscribe for preference shares in Xstrata South Africa using the proceeds received from ARM and Xstrata (Schweiz) AG for ordinary shares in ARM Coal under the Ordinary Share Subscription and Shareholders' Agreement;

(iii) an option agreement between Xstrata South Africa, ARM, ARM Coal and Xstrata (Schweiz) AG under which Xstrata South Africa agreed to grant ARM an option to subscribe for further preference shares in Xstrata South Africa to increase its participation by up to a further 10%. The exercise in full of this option would result in ARM controlling 36% of Xstrata's South African coal business;

(iv) a notarial joint venture agreement between Xstrata South Africa and ARM Coal in relation to the establishment of an unincorporated mining joint venture at Goedgevonden between Xstrata South Africa and ARM Coal (the "Goedgevonden Project"); and

(v) a facility agreement between Xstrata South Africa and ARM Coal under which Xstrata South Africa agreed to provide debt funding to ARM Coal of ZAR765,000,000 (approximately US$117.6 million) in order for ARM Coal to acquire a 51% interest in the Goedgevonden Project and up to ZAR1,200,000,000 (approximately US$184.5 million) in order for ARM Coal to make its contributions to the Goedgevonden Project during the feasibility phase and development phase of the Goedgevonden Project.

(j) A notarial sale and partnership agreement dated 22 February 2006 (the "Sale and Partnership Agreement") between Xstrata South Africa, Kagiso Platinum Venture (Proprietary) Limited ("KPV"), Rustenburg Platinum Mines Limited ("RPM") and Kagiso Trust Investments (Proprietary) Limited ("Kagiso"), in relation to the formation of a black economic empowerment partnership with Kagiso, through the special purpose vehicle KPV, (the "XK Platinum Partnership") in respect of the Xstrata Group's former 50% interest in the Mototolo Joint Venture as described in paragraphs 7.1 and 8.1(p) of this Part VI.

Pursuant to the terms of the Sale and Partnership Agreement:

(i) the parties to the Sale and Partnership Agreement together with Mototolo Holdings (Proprietary) Limited ("MH") entered into a third addendum dated 22 February 2006 to the Mototolo Joint Venture Agreement dated 12 July 2005 between RPM, Xstrata South Africa and MH (as previously amended by a first addendum dated 30 August 2005 and a second addendum dated 22 September 2005) (the "Mototolo Joint Venture Agreement") in terms of which the XK Platinum Partnership has become a party to the Mototolo Joint Venture Agreement and assumed most of the rights and obligations of Xstrata South Africa; and

(ii) Xstrata South Africa, KPV, RPM and MH entered into an addendum dated 22 February 2006 to the shareholders' agreement dated 12 July 2005 between Xstrata South Africa and RPM as co-shareholders in MH, recognising the admission of KPV as a shareholder in MH.

In order to facilitate Kagiso's fundraising in relation to the Mototolo Joint Venture, Xstrata South Africa and Investec Bank Limited ("Investec") entered into a guarantee agreement dated 23 March 2006 (the "Guarantee Agreement"). Under the Guarantee Agreement, as security for certain of the obligations and responsibilities of KPV towards Investec in terms of a project loan facility agreement between KPV and Investec (the "PLF Agreement"), Xstrata South Africa has provided an on demand guarantee of the performance by KPV of the obligations of KPV to Investec under the PLF Agreement, limited to an amount of ZAR100 million (approximately US$15.4 million), until the technical completion date of the Mototolo Joint Venture project.

Xstrata South Africa, Investec and KPV also entered into a subordination agreement dated 23 March 2006, pursuant to which Xstrata South Africa agreed to subordinate certain of its claims against KPV in connection with Mototolo Joint Venture agreements in favour of and for the benefit of Investec's claims against KPV under the PLF Agreement.

Xstrata South Africa, RPM, MH, Investec, KPV and Kagiso also entered into a lender-sponsor agreement dated 29 March 2006 primarily to regulate the manner in which Investec will realise security, including ahead of any claims of Xstrata South Africa subject to the terms of the agreement, upon a default of the terms of the PLF Agreement and where KPV is in breach of certain of the provisions of the Sale and Partnership Agreement.

(k) A memorandum of agreement dated 7 October 2005, between Xstrata South Africa, Richards Bay Coal Terminal Company Limited, Ingwe Collieries Limited, Anglo Operations Limited, Total Coal South Africa (Proprietary) Limited, Sasol Mining (Proprietary) Limited, Kangra Coal (Proprietary) Limited, Eyesizwe Coal (Proprietary) Limited and South Dunes Coal Company (Proprietary) Limited in relation to Phase V of the Richards Bay Coal Terminal in South Africa, which replaces a previous memorandum of agreement entered into in respect of Phase V, pursuant to which the parties agreed the terms of investment to increase the terminal capacity to 92 Mtpa and grant access to common users.

(l) On 6 September 2005, Xstrata Capital issued a US$375,000,000 guaranteed convertible debenture due 14 August 2017 (the "2017 Convertible Debenture") to Brascade Corporation ("Brascade") which is convertible, at any time after 14 August 2006, into 4.00% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2017 Convertible Debenture is guaranteed by Xstrata and was issued at par, with a coupon of 4.00% per annum. Interest on the 2017 Convertible Debenture is payable semi-annually in arrear in equal instalments on 6 March and 6 September each year. The exchange price is £17.1315. Unless previously redeemed or converted and in each case cancelled, the 2017 Convertible Debenture will be redeemed on 14 August 2017 at its principal amount plus unpaid accrued interest (if any). At any time after 14 August 2010, Xstrata Capital may, on giving notice, redeem the 2017 Convertible Debenture at its principal amount plus unpaid accrued interest (if any).

(m) A share purchase agreement entered into on 1 September 2005 made as of 26 August 2005 (the "Share Purchase Agreement") between Lansdowne UK Equity Fund Limited, a company incorporated under the laws of the Cayman Islands, B.W.I. ("Lansdowne"), Xstrata Alberta and Xstrata, pursuant to which Xstrata Alberta purchased and Lansdowne sold 367,415 Falconbridge Shares owned by Lansdowne for C$10,287,620 in cash. Xstrata Alberta completed the purchase of an additional 2,585 Falconbridge Shares under the Share Purchase Agreement for an aggregate purchase price of C$72,380 in cash on 8 September 2005.

Pursuant to a share purchase agreement made as of 2 September 2005 (the "Second Share Purchase Agreement") between Lansdowne, Xstrata and Xstrata Alberta, Xstrata Alberta agreed to purchase and Lansdowne agreed to sell 180,240 Falconbridge Shares owned by Lansdowne for an aggregate purchase price of C$5,046,720 in cash. The completion of the purchase of the 180,240 Falconbridge Shares pursuant to the Second Purchase Agreement, which was subject to regulatory approval under the Competition Act (Canada), was completed on 19 September 2005.

Each of the Share Purchase Agreement and the Second Share Purchase Agreement provided that, in the circumstances described in paragraph 8.1(o) of this Part VI below, Xstrata Alberta would pay to Lansdowne in cash the product of the

Excess Amount (as defined in paragraph 8.1(o) of this Part VI below) and the number of Falconbridge Shares acquired pursuant to the respective agreement.

The acquisitions of the additional Falconbridge Shares by Xstrata Alberta were made to try to ensure that Xstrata and Xstrata Alberta's ownership of Falconbridge Shares was sufficient to allow them to equity account for their investment in Falconbridge. This was unsuccessful due to subsequent share issues by Falconbridge which diluted Xstrata Alberta's holding to below 20%.

(n) A facility agreement dated 18 August 2005 (the "Second Existing Facility Agreement") pursuant to which Deutsche Bank and JPMorgan Chase provided a 364-day term facility for US$600,000,000 (the "Second Existing Facility") which was made available to, and was utilised by, Xstrata (Schweiz) AG to fund the purchase of Falconbridge Shares by Xstrata Alberta pursuant to the Brookfield Purchase Agreement referred to in paragraph 8.1(o) of this Part VI below.

Interest is payable on loans pursuant to the Second Existing Facility Agreement at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to the borrowers); and (iii) the margin, which is 0.40% per annum.

The Second Existing Facility Agreement includes certain mandatory prepayment events, including: (i) illegality; (ii) a change of control of Xstrata; (iii) disposal of assets (subject to certain thresholds); and (iv) incurring indebtedness for borrowed money and equity issues.

The Second Existing Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from Xstrata and certain other members of the Xstrata Group in favour of the lenders of the Second Existing Facility which are typical for this type of credit agreement. It also contains customary events of default upon the occurrence of which the lenders may terminate and demand repayment of the Second Existing Facility.

Xstrata expects to refinance the Second Existing Facility on or about the date of completion of the Proposed Acquisition using funds made available to it pursuant to the Acquisition Facilities Agreement.

(o) A sale and purchase agreement (the "Brookfield Purchase Agreement") dated 14 August 2005 between Xstrata, Xstrata Alberta, Brookfield (which was then known as Brascan Corporation), Brascade and 6287042 Canada Limited (the "Vendor"), pursuant to which the Xstrata Group acquired 73,115,756 Falconbridge Shares (the "Purchased Shares") for C$28.00 per share, for an aggregate purchase price of C$2,047,241,168 (the "Purchase Price").

The Purchase Price was paid by means of the delivery to the Vendor of two promissory notes made by Xstrata Alberta. One note, for US$1,327,345,890, was due and paid in cash on 22 August 2005. The second note, for US$375,000,000, was paid on 6 September 2005 through the issue to Brascade of a guaranteed US$375,000,000 principal amount convertible debenture (the 2017 Convertible Debenture) issued by Xstrata Capital, a wholly-owned subsidiary of Xstrata. The two promissory notes were secured with a pledge given by Xstrata Alberta in favour of the Vendor of the Purchased Shares on a basis proportionate to the principal amounts of the two promissory notes, which pledge has since been released. The 2017 Convertible Debenture was issued at par, had a 12-year term and bears interest at 4% per annum. Subject to its terms, it is convertible at any time at the option of the holder into approximately 12.1 million new Ordinary Shares based on a conversion price of £17.1315 per new Ordinary Share, representing a 35% premium to the closing price of the Ordinary Shares on 11 August 2005. The 2017 Convertible Debenture is callable by Xstrata at par plus accrued interest at any time after 14 August 2010.

Xstrata and Xstrata Alberta agreed in the Brookfield Purchase Agreement that if on or prior to 14 May 2006, Xstrata, directly or through an affiliate, or any person acting jointly or in concert with Xstrata, publicly announced an intention to merge with Falconbridge whereby Xstrata, or any person acting jointly or in concert with Xstrata, would acquire a majority portion of Falconbridge's business, or announced an intention to make an offer to the shareholders of Falconbridge to acquire sufficient Falconbridge Shares to own a majority of the outstanding Falconbridge Shares, in either case for a price per Falconbridge Share in excess (the "Excess Amount") of C$28.00, then within five days of the completion of either such transaction, Xstrata and Xstrata Alberta would pay to the Vendor in cash the product of the Excess Amount and the number of Falconbridge Shares acquired pursuant to the Brookfield Purchase Agreement.

The Brookfield Purchase Agreement also provided that until such time as a nominee of Xstrata is elected or appointed to the board of directors of Falconbridge, Brookfield, Brascade and the Vendor would: (i) exercise the voting rights appertaining to any junior preference shares of Falconbridge beneficially owned by them from time to time to nominate and vote for one individual whom Xstrata has, acting reasonably, approved as a nominee to serve as a director of Falconbridge; and (ii) if requested to do so by Xstrata, would cause one of their two nominees serving as a director of Falconbridge and representing the holders of the junior preference shares of Falconbridge to resign as a director, unless prior to such request one of these nominees had already resigned, upon prior notice to Xstrata and without being requested by Xstrata to do so. The holders of the junior preference shares are entitled to vote as a class to elect two directors to the board of directors of Falconbridge, but otherwise do not generally have the right to vote at meetings of the shareholders of Falconbridge. On 20 October 2005, Xstrata waived its right to require the exercise of the rights appertaining to the junior preference shares in Falconbridge to nominate and vote for a Xstrata nominee to the board of Falconbridge.

Each of Brookfield, Brascade and the Vendor agreed in the Brookfield Purchase Agreement not to sell any junior preference shares of Falconbridge until 13 October 2005, other than to affiliates of Brookfield. After 13 October 2005, if any of Brookfield, Brascade or the Vendor (the "Brookfield Offeror") desires to sell any of the Falconbridge junior preference shares beneficially owned by it (the "Offered Shares"), the Brookfield Offeror must provide Xstrata Alberta with the right of first offer in respect of those shares, by providing Xstrata Alberta with a notice that indicates the number of Offered Shares and the price at which the Brookfield Offeror wishes to sell the Offered Shares. In order to purchase the Offered Shares, Xstrata Alberta must, within 48 hours of receipt of the notice, provide a written response indicating that it will purchase all of the Offered Shares at the offer price. If Xstrata Alberta fails to provide a response within 48 hours of receipt of the notice, then Xstrata Alberta will be deemed to have waived its rights to purchase any of the Offered Shares. If the response does not provide for the purchase of all of the Offered Shares at the offer price, then the Brookfield Offeror may, within 60 days following the expiration of the notice period, enter into an agreement for the sale to any other person(s) of all the Offered Shares at a price not less than the offer price (and otherwise on the same terms as provided in the notice).

(p) The Mototolo Joint Venture Agreement, being a notarial pooling and sharing agreement between Xstrata South Africa, RPM (a member of the Anglo Platinum group) and MH, dated 12 July 2005 (as amended by a first addendum dated 30 August 2005, a second addendum dated 22 September 2005 and a third addendum dated 22 February 2006), pursuant to which Xstrata South Africa and RPM entered into an unincorporated joint venture (the "Mototolo Joint Venture") in respect of platinum group metal ("PGM") resources in Mpumalanga Province in South Africa. Xstrata South Africa and RPM initially had an equal 50% participation interest in the Mototolo Joint Venture, although Xstrata South Africa's participation reduced to 37% as of 11 May 2006 in connection with the arrangements described in paragraph 8.1(j) of this Part VI.

Under the Mototolo Joint Venture Agreement, Xstrata South Africa agreed to develop and operate the underground mine, contributing its expertise in mechanised room and pillar mining, while RPM agreed to construct and manage a 200,000 tonnes per month PGM concentrator.

In terms of a concentrate sale agreement between RPM and Xstrata South Africa, dated 12 July 2005, RPM also agreed to purchase Xstrata South Africa's share of PGM concentrate for further smelting refining and marketing of finished product and Xstrata South Africa agreed to construct a beneficiation plant at its own cost to process the UG2 chrome tailings arising from the PGM concentrator and to purchase RPM's share of chrome concentrate.

(q) An agreement between Xstrata Queensland Limited ("Xstrata Queensland") and Universal Resources Limited ("Universal") dated 11 March 2005, providing Xstrata Queensland with the right to explore and options to acquire 51% of the Roseby copper deposits in the Mount Isa area in north west Queensland, Australia. Under the agreement, Xstrata Queensland agreed to invest A$6.6 million (approximately US$5 million) in Universal, a listed Australian exploration company, by way of a placement of 30 million shares of Universal at an issue price of A$0.22 per share. This represented 13.2% of Universal's issued capital.

Of Xstrata Queensland's investment in Universal, A$4.4 million was agreed to be used to part-fund the planned Roseby Feasibility Project. Xstrata Queensland was also granted an option to acquire a direct 51% interest in this project at its then market value.

The remaining A$2.2 million was agreed to be used to fund an exploration project undertaken by Xstrata Queensland for additional copper sulphide mineralisation within the Roseby tenement area during 2005 and 2006. Known as the Sulphide Extension Exploration Project (SEEP), principal exploration targets were expected to be beneath and adjacent to the native copper deposits within the Roseby Feasibility Project. Xstrata Queensland will be granted an option to earn 51% equity in SEEP either by expending a minimum of A$10 million plus delivering a bankable feasibility study or by A$15 million expenditure on exploration.

In addition, Xstrata Queensland secured the option to purchase future copper concentrate production from Roseby that is not subject to prior off-take agreements.

(r) A US$4,000,000,000 acquisition facilities and subscription agreement and a US$2,600,000,000 bridge facility and subscription agreement, both dated 1 March 2005, pursuant to which Barclays Capital, JPMorgan Chase and RBS provided facilities (the "WMC Facilities") to Xstrata (Schweiz) AG and certain other members of the Xstrata Group in accordance with an underwriting letter dated 19 November 2004.

No member of the Xstrata Group utilised funds made available to it pursuant to the WMC Facilities due to the failure of the proposed acquisition of WMC Resources Limited. Members of the Xstrata Group no longer have any right to borrow, nor the lenders any obligation to lend, funds pursuant to the WMC Facilities.

(s) An option contract dated 1 October 2004 between Empresa Minera del Centro del Peru S.A. ("Centromin") and Xstrata Peru S.A. ("Xstrata Peru") relating to the grant of an option for a term of four years, with the potential to extend for a further two years.

The agreement was entered into following the Xstrata Group winning the right, in August 2004, to explore and the option to develop the Las Bambas copper-gold-molybdenum project in Southern Peru following an international bid process conducted by ProInversion (Peru's Private Investment Promotion Agency).

The consideration for the initial option was US$45.5 million plus US$500,000 and US$750,000 for each six months in year 5 and 6 of the option respectively. On the exercise of the option, Centromin has agreed to execute a transfer agreement relating to the transfer of mining tenements covering approximately 35,000 hectares and including the Chalcobamba, Ferrobamba, Sulfobamba and Charcas deposits and other assets to Xstrata.

The Las Bambas copper project is within the Southern Peru copper belt, which hosts a series of major copper operations including Toquepala and Cuajone (SPCC), the Tintaya operation and Cerro Verde (Phelps Dodge). It is located in the district of Apurimac, 260 kilometres from Cuzco. Exploration work to date has indicated a resource in excess of 500 million tonnes and copper grades of over 1%.

Xstrata Peru continues to progress work and liaise with ProInversion, Centromin and the Government of Peru to complete exploration and feasibility work in accordance with the option contract. During or at the end of this period, Xstrata Peru has the right to exercise its option to develop the copper operation.

(t) A US$1,400,000,000 multi-currency revolving facilities and subscription agreement dated 28 May 2004 ("the First Existing Facility Agreement") pursuant to which Barclays Capital, Deutsche Bank, JPMorgan Chase, RBS and other lenders provide general purpose working capital facilities (the "First Existing Facilities") to Xstrata (Schweiz) AG and certain other members of the Xstrata Group. The First Existing Facility Agreement was entered into in the ordinary course of business and is on customary terms.

The First Existing Facilities consist of: (i) a 60-month term loan facility for US$1,000,000,000 ("Facility A"); and (ii) a 364-day revolving loan facility with an extension option for US$400,000,000 ("Facility B").

Interest is payable on loans pursuant to the First Existing Facilities at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to the borrowers); and (iii) the margin, which in respect of Facility A is 0.50% per annum and in respect of Facility B is 0.40% per annum.

The First Existing Facilities include certain mandatory prepayment events, including: (i) illegality; (ii) a change of control of Xstrata; (iii) disposal of assets (subject to certain thresholds); and (iv) incurring indebtedness for borrowed money and equity issues.

The First Existing Facility Agreement contains representations, warranties and undertakings (including financial condition covenants and undertakings) and contains a guarantee from Xstrata and certain other members of the Xstrata Group in favour of the lenders of the First Existing Facilities, which are typical for this type of credit agreement. The First Existing Facility Agreement also contains customary events of default upon the occurrence of which the lenders may terminate and demand repayment of the First Existing Facilities.

Xstrata expects to refinance the First Existing Facilities on or before the date of the Proposed Acquisition using funds made available to it pursuant to the Acquisition Facilities Agreement.

(u) A notarial pooling and sharing agreement between Xstrata South Africa and Merafe Resources Limited ("Merafe") dated 23 February 2004 (the "Pooling and Sharing Agreement") establishing the Xstrata Merafe Chrome Venture, pursuant to which the parties pool their respective South African chrome and ferrochrome assets in the Pooling and Sharing Venture ("PSV") and share in the earnings from such assets.

The Xstrata Group's Chrome Business assets consist of five operating chromite mines and 18 ferrochrome furnaces, all of which are managed through the PSV. Two of the ferrochrome furnaces were until 16 November 2005 owned in a 50/50 production joint venture, known as the Gemini Joint Venture, with Samancor Limited ("Samancor"), a major South African ferrochrome producer. Merafe concluded a transaction with Samancor which resulted in Merafe replacing Samancor in the Gemini Joint Venture and all associated mining activities with effect from 16 November 2005. The assets and business of the Gemini Joint Venture and certain strategic chrome reserves which were also acquired as part of the transaction have been incorporated within the PSV. The assets are now managed along with all of the other PSV assets and fall under the control and management of the Joint Board of the PSV.

Xstrata South Africa's attributable interest in the PSV is staggered over time, with its current participation of 83% scheduled to decrease to 79.5% from 1 July 2006. Immediately following the formation of the PSV on 1 July 2004, Merafe's participation was 11%. Under the terms of the pooling arrangements, Merafe's interest increased to 14% on 1 July 2005, to 17% on 16 November 2005 following the contribution of its share of the Gemini Joint Venture assets, and is scheduled to increase to 20.5% from 1 July 2006.

The following addenda and adjustment agreements have been entered into in relation to the above arrangements:

(i) an addendum dated 8 April 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to extend the date of fulfilment of a suspensive condition in the Pooling and Sharing Agreement;

(ii) a second addendum dated 30 April 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to extend the date of fulfilment of a suspensive condition in the Pooling and Sharing Agreement;

(iii) a third addendum dated 25 June 2004 between Xstrata South Africa and Merafe, pursuant to which the parties agreed to reinstate the Pooling and Sharing Agreement with effect from 31 May 2004, extend the date of fulfilment of the suspensive conditions contained in the Pooling and Sharing Agreement and amend the provisions of the Pooling and Sharing Agreement relating to EBITDA and CAPEX;

(iv) a fourth addendum dated 8 December 2004 between Xstrata South Africa and Merafe, pursuant to which the parties amended various provisions in the Pooling and Sharing Agreement pertaining to EBITDA, net working capital, environmental obligations, maintenance capital, the inclusion by Xstrata South Africa of a further asset in the PSV and various other miscellaneous issues;

(v) an agreement dated 3 May 2005 between Xstrata South Africa, Merafe and Merafe Ferrochrome and Mining (Proprietary) Limited ("Merafe Ferrochrome") in relation to the adjustment of the parties' respective participation interests in the PSV, pursuant to which the parties agreed to amend the Pooling and Sharing Agreement so that Merafe's share in the PSV would increase to 17%; and

(vi) a fifth addendum dated 15 November 2005 between Xstrata South Africa, Merafe and Merafe Ferrochrome, pursuant to which the parties conditionally agreed to amend the Pooling and Sharing Agreement to make provision for the inclusion of the Project Lion ferrochrome expansion project as part of the PSV and the consequent adjustment of Merafe's share in the PSV so that, with effect from 1 July 2006, Merafe's share in the PSV would increase to 20.5%.

(v) On 15 August 2003, Xstrata Capital issued US$600,000,000 of guaranteed convertible bonds due 15 August 2010 (the "2010 Convertible Bonds") which are convertible at the option of the holder, at any time after 26 September 2003, into 3.95% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2010 Convertible Bonds are guaranteed by Xstrata and were issued at par and bear a coupon of 3.95% per annum. Interest on the 2010 Convertible Bonds is payable semi-annually in arrear in equal instalments on 15 February and 15 August each year. The exchange price is £6.10. Unless previously redeemed or converted or purchased and in each case cancelled, the 2010 Convertible Bonds will be redeemed on 15 August 2010 (the "2010 Convertible Bonds Final Maturity Date") at their principal amount plus unpaid accrued interest (if any). Prior to the 2010 Convertible Bonds Final Maturity Date, Xstrata Capital may, in certain circumstances, on giving notice, redeem all but not some only of the 2010 Convertible Bonds then outstanding at their principal amount plus unpaid accrued interest (if any).

(w) The Relationship Agreement dated 20 March 2002 between the Company and Glencore International regulating the continuing relationship between the parties and ensuring the Company is capable of carrying on its business independently of Glencore and of Glencore International as controlling shareholder, a description of which is set out in paragraph 3 of Part IV of the Cerrejón Circular – "The Xstrata Group's Relationship with Glencore – Relationship with controlling shareholder", which has been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation".

8.2 Falconbridge Group

The following information has been derived solely from information included in public documents published by Falconbridge and has not, for the purposes of this document, been commented on or verified by Falconbridge or the Falconbridge Directors or verified by Xstrata or the Xstrata Directors. Nothing in the previous sentence is intended to qualify the statements in paragraph 1 of this Part VI. So far as Xstrata is aware, the following contracts, not being contracts entered into in the ordinary course of business, have been entered into by a member of the Falconbridge Group within the two years immediately preceding the date of this document or are expected to be entered into prior to the date of this document and are, or may be, material or have been entered into at any time by a member of the Falconbridge Group and contain any provisions under which a member of the Falconbridge Group has an obligation or entitlement which is, or may be, material to the Falconbridge Group as at the date of this document:

(a) A shareholder rights plan agreement dated as of 21 March 2006 between Falconbridge and CIBC Mellon Trust Company providing for the adoption by Falconbridge of a shareholder rights plan (the "Shareholder Rights Plan").

Under the Shareholder Rights Plan, Falconbridge issued one SRP Right for each Falconbridge Share then outstanding and authorised the issue of SRP Rights in respect of any Falconbridge Shares issued thereafter. The SRP Rights are attached to the Falconbridge Shares and are not exercisable until the time (the "Separation Time"), which is defined in the Shareholder Rights Plan to mean the close of business on the tenth business day after the earlier of: (i) the first public announcement of facts indicating that a person has acquired Beneficial Ownership (as defined in the Shareholder Rights Plan) of 20% or more of the Falconbridge Shares; (ii) the date of commencement of, or first public announcement of the intent of any person to commence, a take-over bid to acquire 20% or more of the Falconbridge Shares, other than as a result of a Permitted Bid (as defined in the Shareholder Rights Plan and as described below); and (iii) the date upon which a Permitted Bid (as defined therein and described below) ceases to be such. The Falconbridge Directors have the discretion to delay the Separation Time in the case of (ii) and (iii) above and Falconbridge's Notice of Change to its Directors' Circular dated 26 May 2006 relating to the announced revised Inco Offer stated that on 23 May 2006 they had done so with respect to the Xstrata Offer.

The Shareholder Rights Plan does not apply to certain types of transactions, including "Permitted Bids". A "Permitted Bid" is a bid that, amongst other things, is a take-over bid made to all Falconbridge Shareholders for all the Falconbridge Shares that provides that no Falconbridge Shares may be taken up unless more than 50% of the Falconbridge Shares held by Independent Shareholders (as defined in the Shareholder Rights Plan) have been deposited and not withdrawn.

From and after the Separation Time, each SRP Right entitles a holder thereof to purchase one Falconbridge Share for a price (the "Exercise Price") equal to four times the market price (as defined in the Shareholder Rights Plan) per Falconbridge Share (subject to adjustment in certain circumstances). Pursuant to the Shareholder Rights Plan, if any person (an "Acquiring Person") acquires Beneficial Ownership of 20% or more of the Falconbridge Shares other than as a result of certain exempt transactions (including acquisitions pursuant to a Permitted Bid) (a "Flip-in Event"), then after the close of business on the tenth business day after the first date of public announcement by Falconbridge or an Acquiring Person that an Acquiring Person has become such, each SRP Right thereafter constitutes, effective from and after the Separation Time, the right to purchase from Falconbridge, upon payment of the Exercise Price, that number of Falconbridge Shares having an aggregate market price (as defined in the Shareholder Rights Plan) equal to twice the Exercise Price (thereby effectively giving Falconbridge Shareholders the right to purchase Falconbridge Shares at a 50% discount). However, SRP Rights beneficially owned by an Acquiring Person and persons acting jointly or in concert with an Acquiring Person are void. The result would be to significantly dilute the shareholdings of any such acquiror.

Until the Separation Time (or the earlier termination or expiration of the SRP Rights), the SRP Rights will be evidenced by the certificates representing the associated Falconbridge Shares and will be transferable only together with the associated Falconbridge Shares. After the Separation Time, separate certificates evidencing the SRP Rights ("Rights Certificates"), together with a disclosure statement describing the SRP Rights, are required to be mailed to holders of record of Falconbridge Shares (other than an Acquiring Person) as of the Separation Time. The SRP Rights will trade separately from the Falconbridge Shares after the Separation Time.

Under the Shareholder Rights Plan, Falconbridge's board of directors has the discretion prior to the occurrence of a Flip-in Event that would occur by reason of a take-over bid, made by means of a take-over bid circular sent to all holders of Falconbridge Shares, to waive the application of the plan to such Flip-in Event, provided that such waiver shall automatically constitute a waiver of the application of the plan to any other Flip-in Event made by means of a take-over bid circular to all holders of Falconbridge Shares prior to the expiry of any take-over bid for which the plan was waived or deemed to have been waived. Falconbridge's board of directors also has the right, without the prior consent of the holders of Falconbridge Shares (or the holders of SRP Rights if the Separation Time has occurred), at any time prior to the occurrence of a Flip-in Event, to redeem all (but not less than all) of the SRP Rights at a redemption price of C$0.00001 per SRP Right, subject to certain adjustments. If a person acquires Falconbridge Shares pursuant to a Permitted Bid or pursuant to a transaction for which Falconbridge's board of directors has waived the application of the Shareholder Rights Plan, then Falconbridge's board of directors shall immediately upon the consummation of such acquisition be deemed to have elected to redeem the SRP Rights at the redemption price.

Falconbridge has agreed in the Inco Support Agreement that, unless required by the terms of the Shareholder Rights Plan or a final and non-appealable order of a court having jurisdiction or an order of the OSC, Falconbridge shall not redeem the SRP Rights or otherwise waive, amend, suspend the operation of or terminate the Shareholder Rights Plan without the prior written consent of Inco.

Xstrata believes that the Inco Offer is a Permitted Bid.

It is a condition of the Xstrata Offer that the Offeror shall have determined in its sole judgment that, on terms satisfactory to the Offeror: (i) the Shareholder Rights Plan does not provide rights to the Falconbridge Shareholders to purchase any securities of Falconbridge as a result of the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction, and does not and will not adversely affect the Xstrata Offer, the Offeror or Xstrata, either before or on consummation of the Xstrata Offer, or the acquisition by the Offeror of any Falconbridge Shares under the Xstrata Offer or any Compulsory Acquisition or Subsequent Acquisition Transaction; (ii) the board of directors of Falconbridge shall have redeemed all outstanding SRP Rights or waived the application of the Shareholders Rights Plan to the purchase of Falconbridge Shares by the Offeror under the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; (iii) a cease trade order or an injunction shall have been issued that has the effect of prohibiting or preventing the exercise of SRP Rights or the issue of Falconbridge Shares upon the exercise of the SRP Rights; (iv) a court of competent jurisdiction shall have ordered that the SRP Rights are illegal, of no force or effect or may not be exercised in relation to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction; or (v) the SRP Rights and the Shareholders Rights Plan shall otherwise have become or been held unexercisable or unenforceable in relation to the Falconbridge Shares with respect to the Xstrata Offer and any Compulsory Acquisition or Subsequent Acquisition Transaction.

(b) A support agreement (the "Inco Support Agreement") dated 10 October 2005 (as amended by amendment agreements dated 12 January 2006, 20 February 2006, 21 March 2006 and 13 May 2006) between Inco and Falconbridge with respect to the proposed acquisition of all Falconbridge Shares by Inco on the basis of C$51.17 in cash per Falconbridge Share or 0.6927 of an Inco Share per Falconbridge Share and C$0.05 in cash, in each case at the election of the Falconbridge Shareholders, subject to a maximum cash consideration available under the Inco Offer of C$4,786,678,875 and subject to a maximum of 200,657,578 Inco Shares issuable under the Inco Offer, such that if all Falconbridge Shareholders tendered for cash, under the Inco Offer each Falconbridge Shareholder would be entitled to receive C$12.50 in cash and 0.524 of an Inco Share.

Falconbridge has agreed in the Inco Support Agreement that, promptly upon the purchase by Inco of such number of Falconbridge Shares which represents at least a majority of the outstanding Falconbridge Shares, Inco will be entitled to designate such number of members of the Falconbridge board of directors, and any committees thereof, as is proportionate to the percentage of the outstanding Falconbridge Shares owned by Inco (the time of such election or appointment of such directors being the "Effective Time").

The Inco Support Agreement contains a number of customary representations and warranties of Inco and Falconbridge, and each of Falconbridge and Inco has also agreed in the Inco Support Agreement to a number of mutual covenants.

Falconbridge has agreed in the Inco Support Agreement that, prior to the earlier of the time of the appointment or election to its board of directors of persons designated by Inco who represent a majority of the directors of Falconbridge and the termination of the Inco Support Agreement, Falconbridge will, and will cause each of its subsidiaries to, conduct its business in the ordinary course consistent with past practice and not undertake certain types of restricted activities unless Inco otherwise agrees in writing.

Falconbridge has agreed that if the Inco Offer is not, or ceases to qualify as, a Permitted Bid, Falconbridge will immediately defer the separation time of the SRP Rights in respect of the Inco Offer and to continue to defer separation of the SRP Rights with respect to the Inco Offer. Falconbridge has further agreed that, immediately prior to the expiry time of the Inco Offer (the "Inco Expiry Time"), it shall waive or suspend the operation of or otherwise render the Shareholder Rights Plan inoperative against the Inco Offer, any Compulsory Acquisition and any Subsequent Acquisition Transaction.

If Inco acquires not less than 50.01% of the outstanding Falconbridge Shares (on a fully-diluted basis) no later than 10 days after the Inco Expiry Time, Falconbridge has agreed that it will, at the request of Inco, promptly take all necessary steps to redeem all of its outstanding junior preference shares (Series 1, 2 and 3) and any other class of preference shares, or any outstanding convertible debentures.

The Inco Support Agreement contains certain "non-solicitation" provisions pursuant to which Falconbridge has agreed that it will not, directly or indirectly: (i) take any action of any kind which might, directly or indirectly, interfere with the successful acquisition of Falconbridge Shares pursuant to the Inco Offer; (ii) engage in any discussions or negotiations regarding, or provide any confidential information with respect to, any acquisition proposal, provided that Falconbridge may advise any person making an unsolicited acquisition proposal that such acquisition proposal does not constitute a superior proposal when Falconbridge's board of directors has so determined; (iii) withdraw, modify or qualify, or propose publicly to withdraw, modify or qualify, in any manner adverse to Inco, the approval or recommendation of Falconbridge's board of directors or any committee thereof of the Inco Support Agreement or the Inco Offer; (iv) approve or recommend, or remain neutral with respect to, or propose publicly to approve or recommend, or remain neutral with respect to, any acquisition proposal; or (v) accept or enter into, or publicly propose to accept or enter into, any letter of intent, agreement in principal, agreement, arrangement or undertaking related to any acquisition proposal.

The Inco Support Agreement provides that, notwithstanding the foregoing restrictions, the board of directors of Falconbridge is permitted, subject to certain requirements, to: (i) withdraw, modify or qualify (or propose to withdraw, modify or qualify) in any manner adverse to Inco the approval or recommendation of the Inco Offer; or (ii) engage in discussions or negotiations with, or provide information pursuant to the Inco Support Agreement to, any person in response to an acquisition proposal by any such person, only if it has received an unsolicited bona fide written acquisition proposal from such person and such acquisition proposal constitutes a superior proposal.

The Inco Support Agreement defines a "superior proposal" as an unsolicited bona fide acquisition proposal made by a third party to Falconbridge in writing after 10 October 2005: (i) to purchase or otherwise acquire, directly or indirectly, by means of a merger, take-over bid, amalgamation, plan of arrangement, business combination, consolidation, recapitalisation, liquidation, winding-up or similar transaction, all of the Falconbridge Shares and offering or making available the same consideration in form and amount per Falconbridge Share to be purchased or otherwise acquired; (ii) that is reasonably capable of being completed without undue delay, taking into account all legal, financial, regulatory (including competition/antitrust approvals in the United States and Canada and Investment Canada Act approval) and other aspects of such proposal and the party making such proposal; (iii) in respect of which any required financing to complete such acquisition proposal has been demonstrated to the satisfaction of the board of directors of Falconbridge, acting in good faith (after receipt of advice from its financial advisors and outside legal counsel), will be obtained; (iv) which is not subject to a due diligence and/or access condition which would allow access to the books, records, personnel or properties of Falconbridge or any subsidiary or their respective representatives beyond 5:00 p.m. (Eastern Standard Time) on the third day after which access is afforded to the third party making the acquisition proposal (provided, however, that the foregoing shall not restrict the ability of such third party to continue to review information provided to it by Falconbridge during such three day period); (v) which is offered or made available to all Falconbridge Shareholders in Canada and the United States; (vi) in respect of which the board of directors of Falconbridge determines in good faith (after receipt of advice from its financial advisors with respect to (y) below and outside legal counsel with respect to (x) below) that (x) failure to recommend such acquisition proposal to Falconbridge Shareholders would be inconsistent with its fiduciary duties and (y) the acquisition proposal would, taking into account all of the terms and conditions of such acquisition proposal, if consummated in accordance with its terms (but not assuming away any risk of non-completion), result in a transaction more favourable to Falconbridge Shareholders from a financial point of view than the Inco Offer (including any adjustment to the terms and conditions of the Inco Offer pursuant to the Inco Support Agreement, and taking into account the long-term value and anticipated synergies anticipated to be realised as a result of the combination of Inco and Falconbridge); and (vii) that, subject to compliance with the requirements of Inco Support Agreement, the board of directors of Falconbridge has determined to recommend to Falconbridge Shareholders.

From and after the date of the Inco Support Agreement, Falconbridge must notify Inco of any proposal, inquiry, offer (or any amendment thereto) or request relating to or constituting an acquisition proposal, any request for discussions or negotiations, any request for representation on the board of directors of Falconbridge or any request for non-public information relating to Falconbridge or any subsidiary or material joint venture or material mineral property of which Falconbridge's directors, officers, representative or agents are or become aware, or any amendments to the foregoing.

Falconbridge is not permitted to accept, approve or recommend, nor enter into any agreement relating to, an acquisition proposal (other than a confidentiality agreement contemplated by the Inco Support Agreement) unless: (i) the acquisition proposal constitutes a superior proposal; (ii) Falconbridge has complied with the non-solicitation restrictions in the Inco Support Agreement; (iii) Falconbridge has provided Inco with notice in writing that there is a superior proposal together with all documentation related to and detailing the superior proposal at least seven business days prior to the date on which the board of directors of Falconbridge proposes to accept, approve, recommend or to enter into any agreement relating to such superior proposal; (iv) ten business days shall have elapsed from the later of the date Inco received notice of Falconbridge's proposed determination to accept, approve, recommend or to enter into any agreement relating to such superior proposal, and the date Inco received a copy of the written proposal in respect of the acquisition proposal and, if Inco has proposed to amend the terms of the Inco Offer in accordance with the Inco Support Agreement, the board of directors of Falconbridge (after receiving advice from its financial advisors and outside legal counsel) shall have determined in good faith that the acquisition proposal is a superior proposal compared to the proposed amendment to the terms of the Inco Offer by Inco; (v) Falconbridge concurrently terminates the Inco Support Agreement in accordance with its terms; and (vi) Falconbridge has previously, or concurrently will have, paid to Inco the Falconbridge termination payment as described below.

Pursuant to the Inco Support Agreement, Falconbridge has agreed that, during the ten day business period referred to above or such longer period as Falconbridge may approve for such purpose, Inco shall have the opportunity, but not the obligation, to propose to amend the terms of the Inco Offer. The board of directors of Falconbridge must review any proposal by Inco to amend the terms of the Inco Offer in order to determine, in good faith in the exercise of its fiduciary duties, whether Inco's proposal to amend the Inco Offer would result in the acquisition proposal not being a superior proposal compared to the proposed amendment to the terms of the Inco Offer.

Pursuant to the Noranda Debt Underwriting Agreement the obligations of the several Noranda Debt Underwriters to purchase the Noranda Notes referred to above were subject to certain conditions precedent and the Noranda Debt Underwriters agreed to purchase all of the Noranda Notes if any of the Noranda Notes were purchased.

Noranda agreed to indemnify the Noranda Debt Underwriters against some specified types of liabilities, including liabilities under the Securities Act and Canadian securities legislation, and to contribute to payments the Noranda Debt Underwriters may be required to make in respect of any of these liabilities.

The Noranda Notes were a new issue of securities with no established trading market. The Noranda Notes were not listed on any securities exchange or on any automated dealer quotation system. The Noranda Debt Underwriters were permitted to make a market in the Noranda Notes after completion of the offering, but were not obligated to do so and could discontinue any market-making activities at any time without notice.

In connection with the offering of the Noranda Notes, the Noranda Debt Underwriters were permitted to purchase and sell the Noranda Notes in the open market. These transactions could have included short sales, purchases to cover positions created by short sales and stabilising transactions.

The Noranda Debt Underwriters were permitted to close out any short position by purchasing notes in the open market.

Under the Noranda Debt Underwriting Agreement, the Noranda Debt Underwriters could impose a penalty bid, i.e. where a particular Noranda Debt Underwriter would repay to the other Noranda Debt Underwriters a portion of the underwriting commission received by it because the representative of the Noranda Debt Underwriters had repurchased Noranda Notes sold by or for the account of that Noranda Debt Underwriter in stabilising or short covering transactions.

(f) A support agreement (the "Falconbridge Support Agreement") dated 8 March 2005 between Noranda and Former Falconbridge pursuant to which Noranda agreed to make an offer to purchase all of the outstanding common shares of Former Falconbridge not already owned by Noranda or its affiliates (the "Noranda Offer") and, subject to the satisfaction of certain conditions, pursuant to which Noranda agreed to take up such shares.

Noranda had also agreed to proceed with a share exchange issuer bid (the "Noranda Issuer Bid") pursuant to which Noranda would offer to purchase up to approximately 63.4 million of its common shares in exchange for three series of junior preferred shares of Noranda with an aggregate stated value of US$1.25 billion. Pursuant to the Falconbridge Support Agreement, Noranda agreed to coordinate the Noranda Offer and the Noranda Issuer Bid such that the Noranda Offer would expire at least five days after Noranda took up common shares of Noranda under the Noranda Issuer Bid. Noranda committed to extend the expiry date of the Noranda Offer for a minimum of 30 days in the event that Noranda waived: (i) the condition in the Noranda Issuer Bid that Brookfield would have deposited and not withdrawn 63,377,140 common shares of Noranda to the Noranda Issuer Bid; or (ii) the condition in the Noranda Offer that Noranda had not taken up any Noranda Shares under the Noranda Issuer Bid. Noranda also agreed it may not waive without the consent of Former Falconbridge the minimum tender condition of the Noranda Offer that at the expiry time of the Noranda Offer, the number of common shares of Former Falconbridge tendered (or deemed tendered) and not withdrawn under the Noranda Offer would not be sufficient to enable Noranda to complete a second stage business combination in accordance with applicable securities and corporate laws.

Pursuant to the Falconbridge Support Agreement, each of Former Falconbridge and Noranda made certain representations and warranties to the other. Former Falconbridge agreed that until the common shares of Former Falconbridge were taken up by Noranda, Former Falconbridge would conduct its business in the ordinary and regular course. Each of Noranda and Former Falconbridge agreed to use its reasonable best efforts to take or cause to be taken all appropriate action or to do or cause to be done all things necessary to consummate and make effective the transactions contemplated in the Falconbridge Support Agreement.

Noranda covenanted in the Falconbridge Support Agreement that, assuming completion of the Noranda Offer, it would take such action to ensure that the Noranda Board of Directors was comprised of Alex Balogh, André Bérard, Jack L. Cockwell, Maureen Kempston Darkes, J. Bruce Flatt, A.L. (Al) Flood, Norman Gish, Robert J. Harding, David W. Kerr,

Edmund King, Neville Kirchmann, James McCutcheon, Mary Mogford, George Myhal, Derek G. Pannell, David Race and James Wallace.

The Falconbridge Support Agreement was capable of being terminated by either Noranda or Former Falconbridge if a court of competent jurisdiction or other governmental body issued an order or had taken similar action restraining the Noranda Offer in certain circumstances.

Former Falconbridge could also terminate the Support Agreement if, amongst other things: (i) the Noranda Offer was not made within the time period provided in the Falconbridge Support Agreement; (ii) the Noranda Offer did not conform in all material respects with the description of the offer in the Falconbridge Support Agreement; (iii) Noranda had not become legally obligated to accept and take up the common shares of Former Falconbridge on or prior to 31 May 2005 subject to any extension contemplated in the Falconbridge Support Agreement; (iv) the Noranda Offer was terminated, withdrawn or expired; (v) there was a material breach of the representations and warranties on the part of Noranda in the Falconbridge Support Agreement; or (vi) there was a material breach by Noranda of its covenants contained in the Falconbridge Support Agreement and Noranda failed to remedy the breach within five business days of notice of the breach.

Noranda could also terminate the Falconbridge Support Agreement if, amongst other things: (i) Noranda determined, acting reasonably, prior to 31 May 2005 that any condition to the Noranda Offer would not be satisfied or waived prior to such date; (ii) any condition to the Noranda Offer had not been satisfied or waived on expiry of the Noranda Offer; (iii) there had been a material breach of the representations and warranties on the part of Former Falconbridge in the Falconbridge Support Agreement; (iv) there had been a material breach by Former Falconbridge of its covenants contained in the Falconbridge Support Agreement and Former Falconbridge had failed to remedy the breach within five business days of notice of the breach; or (v) the board of directors of Former Falconbridge had withdrawn or modified (in a manner determined by Noranda to be adverse to Noranda) its approval or recommendation of the Noranda Offer, the Falconbridge Support Agreement or the transactions contemplated in the Falconbridge Support Agreement.

(g) A lock-up agreement dated 8 March 2005 between Brookfield, Brascade and Noranda, pursuant to which Brookfield and Brascade agreed to deposit, subject to certain conditions, common shares in the capital of Noranda ("Noranda Shares") owned by them or any of their wholly-owned subsidiaries to the offer by Noranda to exchange up to 63,377,140 Noranda Shares for 50,000,000 junior preference shares of Noranda. Under the Lock-up Agreement, Brookfield and Brascade also agreed to vote their Noranda Shares in favour of any resolution required to create such junior preference shares. Xstrata believes that this agreement will not have any impact on its ability to complete the Proposed Acquisition.

9. Working capital

Xstrata is not currently able to undertake appropriate procedures to support a statement in respect of the sufficiency of working capital of the Xstrata Group which, in these circumstances, should ordinarily cover the Xstrata Group including the Falconbridge Group following completion of the Proposed Acquisition. This is because Xstrata does not currently have access to any material non-public financial or other information in respect of Falconbridge or the Falconbridge Group which would allow those procedures to be undertaken.

Xstrata is of the opinion that, taking into account the bank and other facilities available to the Xstrata Group, the Xstrata Group has sufficient working capital for its present requirements, that is for at least 12 months from the date of publication of this document.

Xstrata's opinion on the sufficiency of working capital of the Xstrata Group including the Falconbridge Group following completion of the Proposed Acquisition is intended to be available and to be published as soon as Xstrata is granted access sufficient for the purpose to the information referred to above and in any event within 28 days of the date of satisfaction or waiver of all of the conditions of the Xstrata Offer and the announcement by the Offeror that the Offeror has taken up Falconbridge Shares under the Xstrata Offer.

Xstrata EBITDA is presented as the aggregated results of Xstrata, Xstrata's attributable share of Cerrejón, which is assumed to be all thermal coal, and Tintaya, which is assumed to be all copper. The accounting basis of Xstrata's attributable share of Cerrejón and Tintaya estimated aggregated EBITDA may differ following consolidation with the Xstrata Group. Xstrata has not assessed the potential impact of adjusting the accounting policies of Cerrejón, Tintaya or Falconbridge to those of the Xstrata Group.

Xstrata EBITDA includes the results of associates, and is before unallocated costs and non-trade items and the results of discontinued operations. Cerrejón and Tintaya EBITDA is calculated as earnings before net interest, taxation, depreciation and amortisation. Falconbridge EBITDA is derived as income generated on operating assets adding back depreciation, amortisation and accretion charges and is before the deduction of unallocated expenses.

Xstrata revenue is presented as the aggregated results of Xstrata, Xstrata's attributable share of Cerrejón, which is assumed to be all South America, and Tintaya, which is assumed to be all South America. The accounting basis of Xstrata's attributable share of Cerrejón and Tintaya estimated aggregated revenue may differ following consolidation with the Xstrata Group. Xstrata has not assessed the potential impact of adjusting the accounting policies of Cerrejón, Tintaya or Falconbridge to those of the Xstrata Group. Falconbridge revenue split is calculated before "other" regions revenue as there is insufficient publicly available information to split other revenue by component geography.

The source of the information used is as follows:

(a) Xstrata: 2005 IFRS audited financial information from the 2005 Annual Report and Accounts;

(b) Falconbridge: Canadian GAAP audited financial information extracted from Falconbridge's 2005 annual report and accounts;

(c) Cerrejón: extracted from BHP Billiton's annual report (year ended 30 June 2005, supplementary information) and half yearly report (6 months ended 31 December 2005, supplementary information); and

(d) Tintaya: EBITDA and revenue for the year to 30 June 2005 as extracted from Xstrata's announcement in respect of the Tintaya Acquisition, dated 16 May 2006.

13. Documents available for inspection

Copies of the following documents are available for inspection during usual business hours on any weekday (Saturdays, Sundays and public holidays excepted), from the date of this document up to and including the date of conclusion of the Extraordinary General Meeting at the offices of Freshfields Bruckhaus Deringer, 65 Fleet Street, London EC4Y 1HS, UK:

(a) the memorandum and articles of association of Xstrata;

(b) the Annual Reports and Accounts of Xstrata, including the audited consolidated accounts and the independent auditors' reports for each of the years ended 31 December 2003, 31 December 2004 and 31 December 2005;

(c) the consent letters referred to in paragraph 11 of this Part VI;

(d) a copy of the Offer Document;

(e) a copy of this document; and

(f) the documents incorporated by reference into this document as described in the section of this document headed "Relevant Documentation".

The above documents will also be available at Congress Center Metalli, Parkhotel Zug, 6300 Zug, Switzerland and Deutsche Bank Auditorium, Winchester House, 1 Great Winchester Street, London EC2N 2DB, UK from at least 15 minutes prior to the Extraordinary General Meeting until the conclusion of that meeting.

Dated: 30 May 2006

Definitions

Note that certain terms used in Falconbridge information included in Part III – "Information on the Falconbridge Group" are defined within the relevant section(s) of such Falconbridge information.

"2010 Convertible Bonds"	the 3.95% Guaranteed Convertible Bonds due 2010 issued by Xstrata Capital
"2017 Convertible Debenture"	the 4.00% Guaranteed Convertible Debenture due 2017 issued by Xstrata Capital
"ARC"	Advance Ruling Certificate under Section 102 of the Competition Act (Canada) in respect of the purchase of Falconbridge Shares by the Offeror
"Acquisition Facilities"	the acquisition facilities to be provided under the Acquisition Facilities Agreement
"Acquisition Facilities Agreement"	the acquisition facilities agreement, details of which are provided in paragraph 8.1(c) of Part VI – "Additional Information – Material contracts"
"Annual Reports and Accounts"	the annual reports and accounts prepared by Xstrata for the financial years ended 31 December 2003, 31 December 2004 and 31 December 2005
"Argentine pesos" or "ARS"	the lawful currency of Argentina
"Articles"	the articles of association of the Company
"Arrangement"	the capital management programme entered into by Glencore International, CSFB Equities and CSSEL in connection with the Xstrata Group's acquisition of MIM Holdings Limited (now known as Xstrata Queensland Limited) and the associated rights issue
"associated undertaking"	has the meaning given in paragraph 20(1) of Schedule 4A to the Companies Act
"Asturiana"	Asturiana de Zinc, S.A., a company incorporated in Spain with limited liability
"Australia"	the Commonwealth of Australia
"Australian dollars" or "A$"	the lawful currency of Australia
"Barclays"	Barclays Bank PLC
"Batiss"	Batiss Investments Limited
"BHP Billiton"	BHP Billiton plc and/or BHP Billiton Limited as the context may require
"Bloomberg"	Bloomberg Financial Markets
"Brascade"	Brascade Corporation
"Brookfield"	Brookfield Asset Management Inc., a company formerly known as Brascan Corporation
"Canada"	Canada, its territories and its possessions.

representing not less than one-tenth of the total voting rights of all the members having the right to vote at the EGM) may demand a poll. On a poll, each member present in person or by proxy has one vote for each fully paid Ordinary Share of which he is a ho'der.

Note 10

As permitted by the Company's Articles of Association, a proxy appointment will (a) include the right: (i) to demand, or join in demanding, a poll; (ii) to speak at a meeting; and (iii) to vote on any amendment of a Resolution as the proxy thinks fit; and (b) (unless it provides to the contrary) be valid for any adjournment of a meeting.

Note 11

As permitted by the Company's Articles of Association, members present in person or by proxy at the satellite meeting will be counted in the quorum for the meeting and entitled to vote.

Note 12

A proxy appointment which is not delivered or received in accordance with these notes and the Company's Articles of Association shall be invalid. When two or more valid proxy appointments are delivered or received in respect of the same share for use at the EGM, the one which was executed last shall be treated as replacing and revoking the others as regards that share; if the Company is unable to determine which was executed last, none of them shall be treated as valid in respect of that share.

Note 13

CREST members who wish to appoint a proxy or proxies through the CREST electronic proxy appointment service may do so for the EGM to be held on Friday, 30 June 2006 and any adjournment(s) thereof by using the procedures described in the CREST Manual. CREST personal members or other CREST sponsored members, and those CREST members who have appointed a voting service provider(s), should refer to their CREST sponsor or voting service provider(s), who will be able to take the appropriate action on their behalf.

In order for a proxy appointment or instruction made using the CREST service to be valid, the appropriate message (a "CREST Proxy Instruction") must be properly authenticated in accordance with CRESTCo's specifications and must contain the information required for such instructions, as described in the CREST Manual. The message, regardless of whether it constitutes the appointment of a proxy or an amendment to the instruction given to a previously appointed proxy must, in order to be valid, be transmitted so as to be received by Computershare Investor Services PLC (ID 3RA50) by (i) 10.30 a.m. (British Summer Time) on Wednesday, 28 June 2006; or (ii) not less than 48 hours before the time of any adjourned meeting; or (iii) where a poll is taken more than 48 hours after it is demanded, after the poll has been demanded and not less than 24 hours before the time appointed for the taking of the poll. For this purpose, the time of receipt will be taken to be the time (as determined by the timestamp applied to the message by the CREST Applications Host) from which Computershare Investor Services PLC is able to retrieve the message by enquiry to CREST in the manner prescribed by CREST. After such time any change of instructions to proxies appointed through CREST should be communicated to the appointee through other means.

CREST members and, where applicable, their CREST sponsors or voting service providers should note that CRESTCo does not make available special procedures in CREST for any particular messages. Normal system timings and limitations will therefore apply in relation to the input of CREST Proxy Instructions. It is the responsibility of the CREST member concerned to take (or, if the CREST member is a CREST personal member or sponsored member or has appointed a voting service provider(s), to procure that his CREST sponsor or voting service provider(s) take(s)) such action as shall be necessary to ensure that a message is transmitted by means of the CREST system by any particular time. In this connection, CREST members and, where applicable, their CREST sponsors or voting service providers are referred, in particular, to those sections of the CREST Manual concerning practical limitations of the CREST system and timings.

The Company may treat as invalid a CREST Proxy Instruction in accordance with the provisions of the Uncertificated Securities Regulations 2001.

Note 14

Unless the context otherwise requires, terms used in this EGM Notice have the meanings ascribed to them in the section headed "Definitions and Glossary of Technical Terms" of the Circular issued by the Company on 30 May 2006.

Rights Issue

October 2006

SEC RECEIVED PROCESSING
JAN 16 2007
WASH, D.C. 186 SECTION

PROSPECTUS DATED 3 OCTOBER 2006

THIS DOCUMENT IS IMPORTANT AND REQUIRES YOUR IMMEDIATE ATTENTION. If you are in any doubt as to what action you should take, you are recommended to seek your own personal financial advice immediately from your stockbroker, bank manager, solicitor, accountant, fund manager or other appropriate independent financial adviser, who is authorised under the Financial Services and Markets Act 2000 if you are in the United Kingdom, or from another appropriately authorised independent financial adviser if you are in a territory outside the United Kingdom.

If you sell or transfer or have sold or otherwise transferred all of your Existing Shares (other than ex-rights) held in certificated form before Thursday, 5 October 2006 (the "ex-rights date"), please forward this document (and, if you are a *Qualifying non-CREST Shareholder, the Provisional Allotment Letter which, subject to certain exceptions, you are being* sent) to the purchaser or transferee or the stockbroker, bank or other agent through whom the sale or transfer is/was effected for onward transmission to the purchaser or transferee. This document and/or the Provisional Allotment Letter (which, subject to certain exceptions, you are being sent if you are a Qualifying non-CREST Shareholder) should not, however, be distributed, forwarded to or transmitted in, or into, any jurisdiction where to do so might constitute a violation of local securities laws or regulations, including but not limited to and subject to certain exceptions, the United States, Australia, Canada, Japan and South Africa. Please refer to paragraph 7 of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue" of this document if you propose to send this document and/or the Provisional Allotment Letter outside the United Kingdom. If you sell or have sold or otherwise transferred your Existing Shares (other than ex-rights) held in uncertificated form before the ex-rights date, a claim transaction will automatically be generated by CRESTCo which, on settlement, will transfer the appropriate number of Nil Paid Rights to the purchaser or transferee. If you sell or have sold only part of your holding of Existing Shares (other than ex-rights) in certificated form, please contact your stockbroker, bank or other agent through whom the sale or transfer was effected immediately. Instructions regarding split applications are set out in the Provisional Allotment Letter.

***The distribution of this document and/or the Provisional Allotment Letter and/or the transfer of Nil Paid* Rights, Fully Paid Rights and/or New Shares into jurisdictions other than the United Kingdom may be restricted by law and therefore persons into whose possession this document and/or the Provisional Allotment Letter come should inform themselves about and observe any such restrictions. Any failure to comply with any such restrictions may constitute a violation of the securities laws or regulations of such jurisdictions. In particular, subject to certain exceptions, this document, the Provisional Allotment Letter and any other such documents should not be distributed, forwarded to or transmitted in or into the United States, Australia, Canada, Japan or South Africa.**

Capitalised terms have the meanings ascribed to them in Part XI – "Definitions and Glossary of Technical Terms". References to times in this document are to London Time unless otherwise stated.

You should read this document in its entirety and in particular the section of this document headed "Risk Factors" at pages 14 to 29 when considering whether to take up your rights under the Rights Issue.

Xstrata plc

(incorporated in England and Wales under the Companies Act 1985, with registered number 4345939)

1 for 3 Rights Issue of up to 235,787,596 New Shares at 1,265 pence per New Share

---

The latest time for acceptance and payment in full of entitlements under the Rights Issue is 11.00 a.m. (London Time) on Friday, 27 October 2006. The procedure for acceptance and payment is set out in Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue" and, for Qualifying non-CREST Shareholders only, is also set out in the Provisional Allotment Letter. Qualifying CREST Shareholders should refer to paragraph 4 of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue".

The Existing Shares have been admitted to the Official List, to trading on the London Stock Exchange's main market for listed securities and to listing on the SWX. Application has been made to the Financial Services Authority for the New Shares (nil and fully paid) to be issued in connection with the Rights Issue to which this Prospectus relates to be admitted to the Official List and to the London Stock Exchange for the New Shares (nil and fully paid) to be admitted to trading on the London Stock Exchange's main market for listed securities. Application has also been made to the Admission Board of the SWX for the New Shares (nil and fully paid) to be admitted to listing on the SWX. It is expected that Admission to the Official List will become effective and that dealings in the New Shares will commence on the *London Stock Exchange and on the SWX, nil paid, at 8.00 a.m. (London Time) on Thursday, 5 October 2006.*

Certain information in relation to the Former Xstrata Group has been incorporated by reference into this document. You should refer to the section of this document headed "Relevant Documentation and Incorporation by Reference".

This document comprises a prospectus relating to the Company, the offer of New Shares under the Rights Issue and Admission which has been prepared in accordance with the Listing Rules made under section 73A of the Financial Services and Markets Act 2000 (as amended) ("FSMA") and the prospectus rules made under Part VI of FSMA (the "Prospectus Rules"). This Prospectus will be made available to the public in accordance with the Prospectus Rules.

Qualifying Shareholders holding Ordinary Shares through the SIS System should contact the Swiss Bank through which they hold Ordinary Shares for details of how to participate in the Rights Issue.

Deutsche Bank AG is authorised under German Banking Law (Competent authority: BaFin – Federal Financial Supervising Authority) and with respect to UK commodity derivatives business by the Financial Services Authority; regulated by the Financial Services Authority for the conduct of UK business. Deutsche Bank AG is acting for the Company and no one else in connection with the Rights Issue and will not be responsible to anyone other than the Company for providing the protections afforded to clients of Deutsche Bank nor for providing advice in connection with the Rights Issue.

JPMorgan Cazenove, which is authorised and regulated by the Financial Services Authority and is regulated by the Financial Services Authority for the conduct of UK business, is acting exclusively for the Company and no one else in connection with the Rights Issue, and will not be responsible to anyone other than the Company for providing the protections afforded to the clients of JPMorgan Cazenove nor for providing advice in connection with the Rights Issue.

Deutsche Bank, JPMorgan Cazenove and J.P. Morgan Securities Ltd. (the "Banks") or their affiliates provide various investment banking, commercial banking and financial advisory services from time to time to the Enlarged Xstrata Group. In addition, affiliates of the Banks are lenders under certain of the Enlarged Xstrata Group's debt facilities. In particular, Deutsche Bank and JPMorgan Chase are lenders under the Debt Bridge Facility Agreement, the Acquisition Facilities Agreement and the Equity Bridge Facility Agreement. See paragraph 21 of Part VIII – "Additional Information – Summary of the terms of the Underwriting Agreement" for details of the Underwriting Agreement, paragraph 22.9 of Part VIII – "Additional Information – Material contracts" for details of the Debt Bridge Facility Agreement, the Acquisition Facilities Agreement and the Equity Bridge Facility Agreement and paragraph 22.11 of Part VIII – "Additional Information – Material contracts" for details of the Standby Equity Underwriting Letter.

Qualifying non-CREST Shareholders, other than (subject to certain exceptions) those with registered addresses in the United States, Australia, Canada, Japan or South Africa, are being sent a Provisional Allotment Letter. Qualifying CREST Shareholders (none of whom are being sent a Provisional Allotment Letter), other than (subject to certain exceptions) those with registered addresses in the United States, Australia, Canada, Japan or South Africa, are expected to receive a credit to their appropriate stock accounts in CREST in respect of the Nil Paid Rights to which they are entitled on Thursday, 5 October 2006. The Nil Paid Rights so credited are expected to be enabled for settlement by CRESTCo as soon as practicable after Admission. Qualifying CREST Shareholders who are CREST sponsored members should refer to their CREST sponsors regarding the action to be taken in connection with this document and the Rights Issue.

Holdings of Ordinary Shares in certificated and uncertificated form will be treated as separate holdings for the purpose of calculating entitlements under the Rights Issue.

This document does not constitute or form part of any offer or invitation to sell or issue, or any solicitation of any offer to purchase or subscribe for, New Shares, Nil Paid Rights and/or Fully Paid Rights to be issued in connection with the Rights Issue and/or to take up entitlements to Nil Paid Rights, in any jurisdiction in which such an offer or solicitation is unlawful. The New Shares, the Nil Paid Rights and the Fully Paid Rights have not been and will not be registered under the Securities Act or under any relevant securities laws of any state or other jurisdiction of the United States and, accordingly, may not be offered, sold, taken up, exercised, resold, renounced, transferred or delivered, directly or indirectly, within the United States absent registration or an applicable exemption from the registration requirements of the Securities Act and in compliance with state securities laws. The New Shares, the Nil Paid Rights and the Fully Paid Rights have not been approved or disapproved by the US Securities and Exchange Commission, any state securities commission in the United States or any US regulatory authority, nor have any of the foregoing authorities passed upon or endorsed the merits of the offering of the New Shares, the Nil Paid Rights or the Fully Paid Rights or the accuracy or adequacy of this document. Any representation to the contrary is a criminal offence in the United States. Except as otherwise provided for herein, neither this document nor any Provisional Allotment Letter constitutes an offer of New Shares, Nil Paid Rights or Fully Paid Rights to any Shareholder with a registered address in, or who is resident in, the United States, Australia, Canada, Japan or South Africa. The Banks may arrange for the offer of New Shares not taken up in the Rights Issue in the United States only to persons reasonably believed to be QIBs in reliance on the exemption from the registration requirements of the Securities Act provided by Rule 144A or another exemption from, or in a transaction not subject to, the registration requirements of the Securities Act. The New Shares, the Nil Paid Rights and the Fully Paid Rights offered outside the United States are being offered in reliance on Regulation S. Subject to certain exceptions, the Provisional Allotment Letters are not being, and will not be, posted to any person in the United States, Australia, Canada, Japan or South Africa. The attention of Overseas Shareholders and other recipients of this document who are residents or citizens of any country other than the United Kingdom or who have a contractual or other obligation to forward this document and/or the Provisional Allotment Letter to a jurisdiction outside the United Kingdom is drawn to paragraphs 7 and 8 of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue" of this document.

No person has been authorised to give any information or to make any representations other than those contained in this document and, if given or made, such information or representations must not be relied on as having been authorised by Xstrata or any of the Banks. Subject to the Listing Rules, the Prospectus Rules and the Disclosure Rules, neither the delivery of this document, nor any subscription or acquisition made under it shall, in any circumstances, create any implication that there has been no change in the affairs of the Enlarged Xstrata Group since the date of this document or that the information in it is correct as of any subsequent date.

The contents of this document should not be construed as legal, business or tax advice. Each prospective investor should consult his, her or its own legal adviser, financial adviser or tax adviser for advice.

Any reproduction or distribution of this document in whole or in part, and any disclosure of its contents or use of any information herein for any purpose other than considering an investment in the New Shares, the Nil Paid Rights or the Fully

Paid Rights is prohibited. Each offeree of the New Shares, the Nil Paid Rights or the Fully Paid Rights by accepting delivery of this document agrees to the foregoing.

For the Rights Issue, the Company is relying upon exemptions from registration under the US securities laws for an offer that does not involve a public offering in the United States. None of the New Shares, the Nil Paid Rights or the Fully Paid Rights have been recommended by any US federal or state securities commission or any other US regulatory authority and they have not determined that this document is accurate or complete. Any representation to the contrary is a criminal offence.

The New Shares, the Nil Paid Rights and the Fully Paid Rights have not been and will not be registered under the Securities Act or under any relevant securities laws of any state or other jurisdiction of the United States and, accordingly, may not be offered, sold, taken up, exercised, resold, renounced, transferred or delivered, directly or indirectly, within the United States absent registration or an applicable exemption from the registration requirements of the Securities Act and in compliance with state securities laws.

Subject to certain exceptions, this document does not constitute or form part of any offer or invitation to sell or issue, or any solicitation of any offer to purchase or subscribe for, New Shares, Nil Paid Rights and/or Fully Paid Rights to any Shareholder with a registered address in, or who is resident in, the United States. If you are in the United States, you may not exercise your Nil Paid Rights or Fully Paid Rights and/or acquire any New Shares offered hereby unless you are a "qualified institutional buyer" within the meaning of Rule 144A under the Securities Act (a "QIB"). In addition, in order to exercise your Nil Paid Rights or Fully Paid Rights and/or acquire any New Shares offered hereby you must sign and deliver an investor letter, substantially in the form described under paragraph 7(d) of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue".

If you sign such an investor letter, you will be, amongst other things:

- representing that you and any account for which you are acquiring the New Shares, the Nil Paid Rights or the Fully Paid Rights are a QIB;
- agreeing not to reoffer, sell, pledge or otherwise transfer the New Shares, the Nil Paid Rights or the Fully Paid Rights, except:
  - in an offshore transaction in accordance with Rule 903 or 904 of Regulation S under the Securities Act;
  - to another QIB in accordance with Rule 144A under the Securities Act (if available); or
  - with respect to the New Shares only, pursuant to Rule 144 under the Securities Act (if available),

  and, in each case, in compliance with any applicable securities laws of any state or other jurisdiction of the United States; and
- agreeing not to deposit any New Shares, Nil Paid Rights or Fully Paid Rights into any unrestricted depositary facility established or maintained by a depositary bank, unless they have been registered pursuant to an effective registration statement under the Securities Act.

No representation has been, or will be, made by the Company or the Banks as to the availability of Rule 144 under the Securities Act or any other exemption under the Securities Act or any state securities laws for the reoffer, pledge or transfer of the New Shares.

Any envelope containing a Provisional Allotment Letter and post-marked from the United States will not be accepted unless it contains a duly executed investor letter in the appropriate form as described in paragraph 7(d) of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue". Similarly, any Provisional Allotment Letter in which the exercising holder requests New Shares to be issued in registered form and gives an address in the United States will not be accepted unless it contains a duly executed investor letter.

The payment paid in respect of Provisional Allotment Letters that do not meet the foregoing criteria will be returned without interest.

Any person in the United States who obtains a copy of this document and who is not a QIB is required to disregard it.

NOTICE TO NEW HAMPSHIRE RESIDENTS

NEITHER THE FACT THAT A REGISTRATION STATEMENT OR AN APPLICATION FOR A LICENSE HAS BEEN FILED UNDER RSA 421-B WITH THE STATE OF NEW HAMPSHIRE NOR THE FACT THAT A SECURITY IS EFFECTIVELY REGISTERED OR A PERSON IS LICENSED IN THE STATE OF NEW HAMPSHIRE CONSTITUTES A FINDING BY THE SECRETARY OF STATE THAT ANY DOCUMENT FILED UNDER RSA 421-B IS TRUE, COMPLETE OR NOT MISLEADING. Current trading and prospects

Since 30 June 2006, Xstrata has continued to trade well, with demand for commodities remaining robust. In the wider market, this demand, together with market supply constraints and long lead times to add new market capacity, has supported prices for the Enlarged Xstrata Group's commodities significantly above long-term averages.

Base metals prices rose strongly in the first half of 2006, with copper, zinc and lead prices peaking in May before falling back in June. Nickel and aluminium prices also rose strongly in the first half of 2006. In the three months ended 30 September 2006, copper prices consolidated in a range between US$7,000 per tonne and US$8,000 per tonne, while prices for the other three metals showed a strong upward trend. For copper, the market was supported by supply disruption issues in the face of strong market demand. Strong global zinc demand growth coupled with low world zinc stocks and a supply deficit have combined to boost the zinc price in the second half of 2006. The nickel price increased further after 30 June 2006, reaching new highs in August 2006. By comparison the aluminium price has remained flat to date in the second half of 2006, albeit at a relatively high level by historical standards. With the exception of nickel, where the London Metal Exchange (LME) price has continued to show upward momentum, base metals prices fell back from their recent highs in mid-September 2006 due to concerns over potential softer Chinese demand and the performance of the US economy. However, base metal prices remain significantly above their long-term averages and the assumptions that underpinned the Falconbridge Acquisition.

For thermal and coking coal, more than 90% of Xstrata's export sales from Australia and South Africa have been priced for the remainder of 2006. Thermal and coking coal prices have remained above historical averages in 2006, although average realised prices are expected to be lower than in 2005. A key driver of earnings for the Coal Business in 2007 will be the settlement of contract prices in Australian thermal and coking coals for the new contract year from 1 April 2007 as well as coal's competitive position in the European energy market. Term thermal coal prices relating to this period for contracts settled to date reflect the continued strong demand. Coking coal price negotiations for the new contract year will not typically commence until later in 2006. Stronger demand from stainless steel producers in 2006 has supported an increase of 4.75 cents per pound in the ferrochrome price in the third quarter of 2006. Vanadium prices have declined from the peaks seen in 2005, but remain strong and are anticipated to remain significantly above historical levels during 2006.

Significant changes

Falconbridge break fees

Following the expiry of the Inco Offer for Falconbridge on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement.

Falconbridge Special Dividend
Falconbridge paid a special cash dividend of C$0.75 per Falconbridge Share on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006, being cash payments of approximately C$278.1 million (approximately US$249.2 million) and approximately US$3.6 million in aggregate, of which approximately C$55.2 million (approximately US$49.5 million) was received by the Former Xstrata Group in respect of its Falconbridge Shares held on the record date.

Falconbridge Acquisition
On 28 July 2006, Xstrata Alberta purchased for cash 18,556,430 Falconbridge Shares through the TSX, representing approximately 5% of the then outstanding Falconbridge Shares, at an average price of C$62.25 per Falconbridge Share, or approximately C$1,155.1 million (approximately US$1,035.2 million) in aggregate.

On 15 August 2006, Xstrata Canada acquired for cash 257,700,100 Falconbridge Shares under the Xstrata Offer, representing approximately 67.8% of the then outstanding Falconbridge Shares, at the Xstrata Offer price of C$62.50 per Falconbridge Share, or approximately C$16,106.3 million (approximately US$14,434.8 million) in aggregate.

On 25 August 2006, Xstrata Canada acquired for cash 18,637,431 Falconbridge Shares under the Xstrata Offer, representing approximately 4.9% of the then outstanding Falconbridge Shares, at the Xstrata Offer price, or approximately C$1,164.8 million (approximately US$1,043.9 million) in aggregate.

As a result of these transactions and acquisitions in August and September 2005 by Xstrata Alberta of approximately 19.9% of the then outstanding Falconbridge Shares, Xstrata now beneficially owns approximately 97.1% of the outstanding Falconbridge Shares on a fully-diluted basis. Since the Xstrata Offer was accepted by holders of more than 90% of Falconbridge Shares, Xstrata has begun a compulsory acquisition process to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006.

The market purchases of Falconbridge Shares and the Xstrata Offer were, and the compulsory acquisition procedure will be, financed by the Former Xstrata Group's existing cash resources and its debt facilities, which are to be refinanced in part using the net proceeds of the Rights Issue.

ARM Coal
On 24 August 2006, the transaction announced by the Company in February 2006 between the Former Xstrata Group and African Rainbow Minerals, to establish a new black controlled South African coal mining company called ARM Coal, completed. The transaction was valued in aggregate at approximately ZAR2.4 billion (approximately US$310.3 million). The Former Xstrata Group paid ZAR384 million (approximately US$49.6 million) to subscribe for 49% of the issued share capital of ARM Coal, which holds a 20% interest in the coal operations of Xstrata South Africa excluding the Goedgevonden project, and a direct 51% interest in the Goedgevonden project. In August 2006, ARM exercised an option to increase its direct interests in the coal operations of Xstrata South Africa (excluding the Goedgevonden project) for a cash investment of ZAR400 million (approximately US$51.7 million). As a result, historically disadvantaged South Africans will now control approximately 36% of the Enlarged Xstrata Group's South African coal business. The Former Xstrata Group also provided debt funding of ZAR765 million (approximately US$98.9 million) to ARM Coal to acquire the 51% interest in the Goedgevonden project.

Redemption of Falconbridge preference shares
Falconbridge announced on 15 September 2006 its intention to redeem its outstanding Cumulative Redeemable Preferred Shares, Series F and Series G, and Cumulative Preferred Shares, Series 1 on 1 November 2006. The Enlarged Xstrata Group intends to utilise its internal cash resources to fund the aggregate redemption price of approximately C$306 million (approximately US$274.2 million).

Rights Issue
On Tuesday, 3 October 2006, the Company announced the Rights Issue.

Other than as outlined above, there has been no significant change in the financial or trading position of the Enlarged Xstrata Group since 30 June 2006, the date to which the latest unaudited interim published financial information of the Former Xstrata Group was prepared.

Capitalisation and indebtedness

As at 31 August 2006, the gross capitalisation of the Enlarged Xstrata Group calculated in accordance with IFRS was US$32,068.5 million. Of this amount, total shareholders' equity was US$9,070.8 million and total gross indebtedness was US$22,997.7 million. US$791.5 million of the gross indebtedness balance was non-current and guaranteed but unsecured. US$14.1 million of the gross indebtedness balance was current and guaranteed but unsecured. The current secured debt was US$146.3 million and the non-current secured debt was US$96.7 million. The current unsecured and unguaranteed debt was US$12,076.2 million and the non-current unsecured and unguaranteed debt was US$9,872.9 million.

The Enlarged Xstrata Group's net indebtedness position as at 31 August 2006 was US$20,358.9 million being the Enlarged Xstrata Group's gross indebtedness of US$22,997.7 million (US$12,236.6 million current debt and US$10,761.1 million non-current debt) offset by cash or cash equivalents of US$2,638.8 million. The Enlarged Xstrata Group's net financial indebtedness position as at 31 August 2006 was US$20,358.9 million being the Enlarged Xstrata Group's net indebtedness of US$20,358.9 million offset by current financial receivables of US$nil.

As at 30 June 2006, the total shareholders' equity of the Former Xstrata Group in accordance with IFRS was US$8,760.0 million (excluding the profit and loss reserve).

The above capitalisation and indebtedness information is unaudited and sourced, in the case of the total shareholders' equity at 30 June 2006, from the 2006 Xstrata Interim Report and, otherwise, from the Enlarged Xstrata Group's management accounts.

Working capital

Xstrata is of the opinion that, taking into account the net proceeds of the Rights Issue and the bank and other facilities available to the Enlarged Xstrata Group, the Enlarged Xstrata Group has sufficient working capital for its present requirements, that is for at least 12 months from the date of publication of this document.

Additional information

The Enlarged Xstrata Group has entered into transactions in the ordinary course of business with Glencore and joint venture entities that may be deemed to be related parties. The Enlarged Xstrata Group also acquired a one-third interest in Cerrejón from Glencore on 12 May 2006.

Details of the Company's directors, senior management, advisers and auditors are set out in the section of this document headed "Directors, Secretary, Registered Office, Head Office and Advisers" and Part VI – "Directors and Senior Management of Xstrata" and details of the Enlarged Xstrata Group's employees and contractors are set out in paragraph 15 of Part VIII – "Additional Information – Employees and contractors".

Copies of this Prospectus, the Provisional Allotment Letter, the Company's memorandum and articles of association and certain other documents referred to herein will be on display during normal business hours for a period of 12 months following the date of publication of this document at Xstrata's registered office and at the offices of Freshfields Bruckhaus Deringer in London.

The Rights Issue and investment in the Company are subject to a number of risks. Accordingly, investors and prospective investors should consider carefully all of the information set out in this document and all of the information incorporated by reference into this document, including, in particular, the risks described below, prior to making any decisions on whether or not to make an investment in the Company. Additional risks and uncertainties not presently known to the Company or the Directors, or that the Company or the Directors currently consider to be immaterial, may also have an adverse effect on the Enlarged Xstrata Group.

The Enlarged Xstrata Group's business, financial condition or results of operations could be materially and adversely affected by any of the risks described below. In such case, the market price of the Ordinary Shares, Nil Paid Rights and/or Fully Paid Rights may decline and investors may lose all or part of their investment. ***Investors and prospective investors should consider carefully whether an investment in the Company is suitable for them, in the light of the information set out in this document and the information incorporated by reference into this document and the financial resources available to them.***

Industry risks relating to the Enlarged Xstrata Group

Commodity price volatility and cost efficiency

The Enlarged Xstrata Group's turnover and earnings are dependent upon prevailing prices for the commodities it produces. Historically, such prices have been volatile and are subject to wide fluctuations in response to relatively minor changes in the supply of, and demand for, such commodities, market uncertainty, the overall performance of world or regional economies and the related cyclicality in industries directly served by the Enlarged Xstrata Group and a variety of other factors beyond its control. In particular, demand for commodities has recently been, and is expected to be in the future, influenced by demand from specific regions, such as the Asia-Pacific region and specific countries, such as China and India, and there can be no assurance that factors beyond the Enlarged Xstrata Group's control, such as political, regulatory and economic factors, will not adversely affect such demand. Prices may also be affected by governmental actions intended to reduce greenhouse gas emission. See Part II –"Information on the Enlarged Xstrata Group – Regulatory and environmental matters" and "Risks related to climate change legislation" in this section headed "Risk Factors" below. In addition, speculative trades in certain commodities on the world markets may cause short-term price fluctuations for such commodities, including commodities produced by the Enlarged Xstrata Group. These external factors and the volatile nature of the commodity markets make it difficult to estimate future prices. Any substantial or extended decline in commodity prices would adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

As the Enlarged Xstrata Group, in common with its competitors, is unable to influence commodity prices directly, its competitiveness and long-term profitability are, to a significant degree, dependent upon its ability to reduce costs and maintain low-cost, efficient operations. Important cost inputs in the Enlarged Xstrata Group's operations generally include the extraction and processing costs of raw materials and consumables such as reductants, power, fuels, labour, transport and equipment, many of which have been, and continue to be, particularly susceptible to inflationary and supply and demand pressures. The Enlarged Xstrata Group's production costs are also significantly affected by production volumes and, therefore, the Enlarged Xstrata Group's ability to maintain production levels and maximise capacity utilisation will be a key factor in determining its overall cost competitiveness. The Enlarged Xstrata Group's ability to maintain earnings and undertake capital expenditure would be adversely affected in the event of a sustained material fall in world commodity prices, an appreciable rise in its production costs or a decline in its production volumes. There can be no assurance that the Enlarged Xstrata Group will be able to maintain or reduce production costs or maintain or increase its production volumes in the future.

Any increase in the price of a commodity may encourage other producers to increase their production of that commodity. Any over-production in a particular commodity, which is in excess of demand, could reduce the price of that commodity and adversely affect the Enlarged Xstrata Group's results of operations or financial condition.

Environmental, health and safety

Various environmental, health and safety permits are required for many of the operations of the Enlarged Xstrata Group and these permits are subject, in certain situations or on the occurrence of certain events, to modification, renewal or revocation by issuing authorities. Governmental authorities and the courts have the power to enforce compliance with these permits and applicable environmental, health and safety laws and regulations and violations may result in civil or criminal penalties, the curtailment or cessation of operations, orders to pay compensation, orders to remedy the effects of violations and/or orders to take preventative steps against possible future violations.

In some jurisdictions, members of the public can initiate private proceedings to enforce compliance with permits and applicable environmental, health and safety laws and regulations. Proceedings commenced by members of the public have not to date had a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group, although actions of this type have occurred in relation to other corporations. No assurance can be given that these types of private actions will not occur in the future and have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group.

Compliance with these laws, regulations and permits has not to date had a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group although such permits, laws and regulations are subject to change (including the imposition of more onerous requirements and obligations) and the Company is unable to predict the ultimate cost of compliance with such amended environmental, health and safety permits, laws and regulations. The cost of maintaining compliance could be substantial. There can be no assurance that the cost of complying with present or future laws or regulations will not adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

The operations of the Enlarged Xstrata Group are extensively regulated. National, state and local authorities in the countries in which the Enlarged Xstrata Group has operations regulate the industries in which the Enlarged Xstrata Group operates with respect to matters including, but not limited to, employee health and safety, royalties, permitting and licensing requirements, planning and development and environmental compliance (including, for example, compliance with waste and waste water treatment and disposal, emissions and discharge requirements, plant and wildlife protection, reclamation and restoration of mining properties before, during and after mining is complete, surface subsidence from underground mining and the effects that mining has on surface and/or groundwater quality and availability). Numerous governmental permissions, approvals and leases are required for each of the Enlarged Xstrata Group's operations. The Enlarged Xstrata Group is required to prepare and present to national, state or local authorities data pertaining to the anticipated effect or impact that any proposed exploration, mining or production activities may have upon the environment. The costs, liabilities and other obligations associated with complying with such requirements or arising from the manner in which the obligations are met or, as may be necessary, the cost of rehabilitation of sites used for operations which have been closed down, may be substantial and time-consuming and may delay the commencement or continuation of exploration, mining or production activities. There can be no assurance that compliance costs, including the costs of rehabilitation of site operations which have been closed down, and dealing with environmental, health and safety issues associated with legacy closed sites will not adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

The Enlarged Xstrata Group's copper and lead smelters at Mount Isa in Australia are exempted, through special state legislation, from compliance with state environmental laws regulating air emissions. The Mount Isa operations in Queensland are subject to specific legislation of the Queensland State Parliament, the Mount Isa Mines Limited Agreement Act 1985. The Mount Isa Mines Limited Agreement Act 1985 exempts the Mount Isa operations from strict compliance with the otherwise applicable Environmental Protection Act 1994 with respect to air emissions. The state environmental regulator has informed Xstrata of its desire to assume responsibility for the regulation of special state legislation, including the Mount Isa Mines Limited Agreement Act 1985. In the event that happens and a subsequent amendment is sought and made to bring air emissions permitted under the Mount Isa Mines Limited Agreement Act 1985 into line with the Environmental Protection Act 1994, or alternatively that the Mount Isa Mines Limited Agreement Act 1985 is repealed, then significant cost consequences, relating to investing in new environmental technologies and practices, could be required to maintain current production levels, which would have an adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group. See Part II – "Information on the Enlarged Xstrata Group – Regulatory and environmental matters".

In addition, a violation of environmental, health and safety laws relating to a mine or production facility or a failure to comply with the instructions of the relevant environmental or health and safety authorities could lead to, amongst other things, a temporary shutdown of all or a portion of the mine or production facility, a loss of the right to mine or to continue with production or the imposition of costly compliance procedures, fines and penalties, liability for clean-up costs or damages. If environmental and/or health and safety authorities require the Enlarged Xstrata Group to shut down all or a portion of a mine or production facility or to implement costly compliance measures, or impose fines and penalties, liability for clean-up costs or damages on the Enlarged Xstrata Group, whether pursuant to existing or new environmental or health and safety laws and regulations, such measures could have a material adverse effect on the Enlarged Xstrata Group's results of operations and financial condition.

The possibility exists that new environmental and/or health and/or safety legislation or regulations may come into force and/or new information may emerge on existing environmental and/or health and/or safety conditions and/or other events (including legal proceedings brought based upon such conditions or an inability to obtain necessary permits), that may materially adversely affect the Enlarged Xstrata Group's operations, its cost structure, its customers' ability to use the commodities produced by the Enlarged Xstrata Group, demand for its products, the quality of its products and/or its methods of production and distribution. The Enlarged Xstrata Group expects that further environmental laws and/or regulations will likely be implemented to protect the environment and quality of life, given issues of sustainable development and other similar requirements which governmental and supragovernmental organisations and other bodies have been pursuing. Some of the issues which are relevant to the Enlarged Xstrata Group that are currently under review by environmental regulatory agencies include reducing or stabilising various emissions, including sulphur dioxide and greenhouse gas emissions, geochemical and geotechnical stability of mine works, mine reclamation and restoration, and water, air and soil quality and absolute liability for spills and exceeding prescribed limits. Such matters may, amongst other things, require the Enlarged Xstrata Group, or its customers, to change operations significantly or incur increased costs (including compliance expenditures) or could require the Enlarged Xstrata Group to increase financial reserves, which could have an adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group.

In view of the uncertainties concerning future removal, stabilisation, reclamation and site restoration costs on certain of the Enlarged Xstrata Group's properties, the ultimate costs for future removal, stabilisation, reclamation and site restoration to the Enlarged Xstrata Group could differ from the amounts estimated. Estimates for such future costs are subject to change based on amendments to applicable laws and regulation, the nature of ongoing operations and technological innovations. Future changes, if any, due to their nature and unpredictability, could have a significant impact and, in such case, would be reflected prospectively as a change in an accounting estimate. In addition, regulatory authorities in various jurisdictions around the world may require the Enlarged Xstrata Group to provide financial security to secure, in whole or in part, future removal, stabilisation, reclamation and site restoration obligations in such jurisdictions. In some instances, the Enlarged Xstrata Group has already provided such security. In other instances, such security may be required to be provided upon the occurrence of certain events, including in certain cases if the Company or the relevant member of the Enlarged Xstrata Group ceases to maintain a minimum investment grade credit rating, if the regulatory authority ceases to accept alternative forms of comfort to secure the obligation, if the regulatory authority claims the security is based upon a miscalculation of costs or as the relevant property nears the end of its operation. Although the provision of such security does not increase the future removal, reclamation and site restoration costs (other than costs associated with the provision of such security), a portion of the Enlarged Xstrata Group's financial resources may be required to support these commitments, which could adversely affect the financial resources available to the Enlarged Xstrata Group.

Risks related to climate change legislation

In December 1997, in Kyoto, Japan, the signatories to the United Nations Convention on Climate Change established individual, legally binding targets to limit or reduce greenhouse gas emissions by developed nations. This international agreement, known as the Kyoto Protocol, came into force on 16 February 2005. As of 30 August 2006, 164 states and regional economic integration organisations (such as the EU) had deposited instruments of ratifications, accessions, approvals or acceptances in respect of the Kyoto Protocol.

The Enlarged Xstrata Group has operations in various jurisdictions that may be subject to national, regional or local laws, regulations and policies aimed at limiting or reducing greenhouse gas emissions. While the impact of the Kyoto Protocol and related legislation and regulation cannot be quantified at this time, the likely effect will be to increase costs for fossil fuels, electricity and transportation, restrict industrial emission levels, impose added costs for emissions in excess of permitted levels and increase costs for monitoring, reporting and financial accounting. As the operation of the Enlarged Xstrata Group's business involves incurring certain of these costs, increases in such costs could have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group. Further, the Enlarged Xstrata Group may be required to change operations, reduce production capacity or make additional investments to adapt to new or amended environmental laws and regulations, which could have a material adverse affect on the results of operations or financial condition of the Enlarged Xstrata Group.

The coal industry, governments and other organisations are actively investing in research projects to reduce greenhouse gas emissions from the use of coal in power generation. Demand for coal is expected to be supported by forecast increases in global demand for energy. Nonetheless, there can be no assurance that the introduction of laws, regulations and practices to limit greenhouse gas emissions will not in the future adversely affect the price of, and demand for, coal. A significant

decrease in the demand for coal, with current users turning increasingly to alternative forms of energy, may adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

A significant part of the Enlarged Xstrata Group's export thermal coal sales are to Japanese customers. The Japanese government's current policy on greenhouse gas emissions is that it intends to meet its Kyoto obligations by 2012. In February 2003, the Japanese cabinet approved a tax on coal imports of 700 yen per tonne (approximately US$5.90 per tonne) to be phased in in three stages. The first stage commenced on 1 October 2003 with a 230 yen per tonne levy (approximately US$1.94 per tonne) and the second phase became effective on 1 April 2005 at 460 yen per tonne (approximately US$3.90 per tonne). The third phase is scheduled to be implemented on 1 April 2007. The tax applies to all thermal coal imports, including thermal coal produced by the Enlarged Xstrata Group. There can be no assurance that these taxes or other taxes which may be introduced in the future in Japan and/or other countries will not adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

Given the uncertainty surrounding the impact of climate change, the manner of implementation of the Kyoto Protocol in those jurisdictions where it has yet to be implemented, the various mechanisms available for countries to achieve their emission reduction targets (whether under the Kyoto Protocol or otherwise) and difficulties in identifying and assessing the financial impacts of such measures, it is not possible to determine with certainty at this time what the ultimate effects of climate change and the Kyoto Protocol or other similar initiatives to limit or control greenhouse gas emissions may be for the Enlarged Xstrata Group.

See Part II – "Information on the Enlarged Xstrata Group – Regulatory and environmental matters".

Australian native title and South African and Canadian land claims

In Australia, the Native Title Act 1993 (Cth) (the "Native Title Act") recognises native title and establishes processes relating to mining and exploration rights. Native title represents the traditional rights and interests that the Aboriginal people have in relation to land. If native title has not been extinguished, the Native Title Act provides procedural rights for registered native title claimants, including the right to negotiate with respect to the grant of mining rights, which include exploration titles and the compulsory acquisition of land. For further information, see Part IV – "Information on the Former Xstrata Group's Business – Native title and land claims". Native title claims have been made over some areas where the Enlarged Xstrata Group has mining operations and there can be no assurance that such claims or any future claims will not have a material adverse effect on the Enlarged Xstrata Group's results of operations or financial condition or that additional claims will not be lodged in the future.

In South Africa, the government's Restitution of Land Rights Act 1994 provides remedies for persons who have been dispossessed of rights in land as a result of past racially discriminatory laws or practices. The Land Claims Court is empowered to make orders concerning the restoration of a right in land or any portion of land, compelling the payment of compensation, compelling the South African government to include a claimant as a beneficiary in a state support programme for housing or granting the claimant an appropriate right in alternatively designated state land or with any alternative and appropriate relief. For further information, see Part IV – "Information on the Former Xstrata Group's Business – Native title and land claims". The Company is aware that a number of land claims have been lodged in relation to the surface rights of the Enlarged Xstrata Group's various South African properties, but has limited information about these claims, and due to the lengthy administrative process under the Restitution of Land Rights Act 1994, there is uncertainty as to their status and prospects of success.

In Canada, the Enlarged Xstrata Group's properties may, in the future, be the subject of Native Americans' land claims which are generally addressed by the courts in Canada. The legal basis of such a land claim is a matter of considerable legal complexity and the impact of the assertion of a land claim, or the possible effect of a settlement of such claim upon the property interest in question, cannot be predicted with any degree of certainty at this time. In addition, no assurance can be given that any recognition of Native American rights whether by way of a negotiated settlement or by judicial pronouncement (or through the grant of an injunction prohibiting mining activity pending resolution of any such claim) would not delay or even prevent the Enlarged Xstrata Group's resource development or mining activities in Canada.

Accordingly, the Company can give no assurance that these land claims, or any other land claims of which it is not aware, will not have an adverse effect on the Enlarged Xstrata Group's rights to the properties that are subject to the land claims.

Nothing in this paragraph headed "Australian native title and South African and Canadian land claims" is intended to qualify the statement in paragraph 27 of Part VIII – "Additional Information – Litigation" that, except as set out in that paragraph, no member of the Enlarged Xstrata Group is engaged in or, so far as Xstrata is aware, has pending or threatened, any governmental, legal or arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on the Company and/or the Enlarged Xstrata Group's financial position or profitability.

South African MPRDA and Empowerment Charter

On 3 October 2002, the President of South Africa assented to and signed into law the Mineral and Petroleum Resources Development Act 28 of 2002 (the "MPRDA"), which came into operation on 1 May 2004. On 13 August 2004, the Empowerment Charter was promulgated, together with the "scorecard" for measuring black empowerment in the mining industry, which is intended to monitor and assess compliance with the Empowerment Charter. In addition to this the government of South Africa, in conjunction with the industry, is developing further legislation and guidelines including the Royalty Bill pertaining to royalties (which is discussed further in Part II – "Information on the Enlarged Xstrata Group – Regulatory and environmental matters"). Regulations pertaining to the MPRDA were promulgated on 23 April 2004 and on 29 October 2004.

A key outcome is that the government of South Africa becomes the custodian of all the rights to minerals and that prospecting and mining will require prospecting and mining rights respectively which can only be granted once certain criteria are met, including empowerment criteria for historically disadvantaged South Africans ("HDSAs"). Existing prospecting and mining rights, termed "old order rights", need to be converted to new order rights and, to do so, the above criteria need to be satisfied or undertakings given.

A key objective of the above legislation is to ensure that 26% of the South African mining industry is controlled by HDSAs within ten years from 1 May 2004. In addition, mining companies need to achieve certain goals aimed at the upliftment of HDSAs both in the workplace and the communities in which they operate. The MPRDA and Empowerment Charter are more fully explained in Part II – "Information on the Enlarged Xstrata Group – Regulatory and environmental matters".

The Company can give no assurance that these legislative developments in South Africa will not have a material adverse effect on the Enlarged Xstrata Group's mining rights in South Africa and/or the results of operations or financial condition of the Enlarged Xstrata Group.

With respect to its obligations under this legislation, the Enlarged Xstrata Group has entered into partnerships with ARM, Merafe and Kagiso relating to certain of its South African operations as described in Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Acquisitions, disposals and discontinued operations", Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and paragraphs 22.15, 22.16 and 22.33 of Part VIII – "Additional Information – Material contracts". See also Part IV – "Information on the Former Xstrata Group's Business – Coal Business summary – South African operations – Mineral right applications and conversions", Part IV – "Information on the Former Xstrata Group's Business – Alloys Business summary – Chrome operations – Mineral right applications and conversions" and Part IV – "Information on the Former Xstrata Group's Business – Alloys Business summary – Vanadium operations – Mineral right applications and conversions".

Risks relating to the business of the Enlarged Xstrata Group

Operational considerations

The success of the Enlarged Xstrata Group's business is affected by a number of factors which are, to a large extent, outside its control. Such factors include the availability of raw materials, water and power. In addition, the Enlarged Xstrata Group's business is subject to numerous other operating risks which include: unusual or unexpected geological features, ground conditions or seismic activity; climatic conditions such as flooding or drought; interruptions to power supplies; congestion at commodities transport terminals; industrial action or disputes; environmental hazards; and technical failures, fires, explosions and other accidents at a mine, processing plant, cargo terminal or related facilities. These and other risks and hazards could result in damage to, or destruction of, properties or production facilities, may reduce or cause production to cease at those properties or production facilities, may result in personal injury or death, environmental damage, business interruption, monetary losses and possible legal liability and may result in actual production differing

from estimates of production, including those contained whether expressly or by implication in this document or the information incorporated by reference into this document. While the Enlarged Xstrata Group has insurance covering various types of business interruptions in respect of its operations, such insurance may not fully cover the consequences of such business interruptions and, in particular, may not cover interruptions arising from all types of equipment failure, labour disputes or "*force majeure*" events. No assurance can be given that such insurance will continue to be available, or that it will be available at economically feasible premiums. Equally, there can be no assurance that operating risks and the costs associated with them will not adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

Metal processing plants are especially vulnerable to interruptions, particularly where events cause a stoppage which necessitates a shutdown in operations. Stoppages in smelting, even if lasting only a few hours, can cause the contents of furnaces to solidify, resulting in a plant closure for a significant period and necessitating expensive repairs, any of which could adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

The Enlarged Xstrata Group depends upon seaborne freight, rail, trucking, overland conveyor and other systems to deliver its commodities to market. Disruption of these transportation services because of weather-related problems, key equipment or infrastructure failures, strikes, lock-outs or other events could temporarily impair the Enlarged Xstrata Group's ability to supply its commodities to its customers and thus could adversely affect the Enlarged Xstrata Group's results of operations or financial condition. Consistent with practice in the industry, members of the Enlarged Xstrata Group may enter into long term contracts related to, for example, infrastructure and supply of services. Any early termination of such contracts may require the payment of amounts which might have a material adverse effect on the Enlarged Xstrata Group's results of operations. In addition, the Enlarged Xstrata Group's ability to increase its export sales may be restricted by available rail infrastructure and port capacity which may adversely affect the Enlarged Xstrata Group's ability to increase turnover.

Although the Enlarged Xstrata Group maintains liability insurance, the insurance does not cover every potential risk associated with its operations and meaningful coverage at reasonable rates is not obtainable for certain types of environmental hazards. The occurrence of a significant adverse event, the risks of which are not fully covered by insurance, could have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group. See Part II – "Information on the Enlarged Xstrata Group – Operational hazards and insurance".

Energy supply and prices

Certain of the Enlarged Xstrata Group's operations and facilities are intensive users of natural gas, electricity, oil and other fuels. The procurement dynamics of these energy types are becoming increasingly connected as supply and demand conditions become more inter-dependent on a global basis. Factors beyond the control of the Enlarged Xstrata Group, such as strong demand from the Asia-Pacific region, political, regulatory and economic uncertainties and the costs associated with emissions from fossil fuels, as well as problems related to local production and delivery conditions, continue to put upward pressure on prices. Certain of the Enlarged Xstrata Group's supply contracts are governed by standard energy risk management principles, which are designed to ensure that supply, price and credit risks are managed effectively.

The Enlarged Xstrata Group has entered into fixed-term diesel supply agreements with Glencore as described in Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship – Copper Business". On termination of those agreements, the Enlarged Xstrata Group will need to source its diesel requirements from Glencore or third parties. There can be no assurance that the Enlarged Xstrata Group will be able to renew its diesel supply agreements with Glencore or to source its diesel requirements on better or equivalent terms compared with its current agreements, which may have an adverse affect on the results of operations or financial condition of the Enlarged Xstrata Group.

The security of energy supply is of primary importance to the Enlarged Xstrata Group. The Enlarged Xstrata Group's business operations could be adversely affected, including loss of production and damage to its plants and equipment, if, even temporarily, the supply of energy to one or more of its facilities were interrupted. Additionally, prolonged loss of supply could materially adversely affect its results of operations or financial condition. There is an increased focus within the Enlarged Xstrata Group's operations on the management of energy use and the impact of rises in energy costs on financial performance. As a significant portion of the Enlarged Xstrata Group's costs relate to energy consumption, the Enlarged Xstrata Group's earnings are directly related to fluctuations in the cost of natural gas, electricity, oil and other fuels.

Taxation

Although the Company is incorporated in England and Wales, the Company is regarded as resident in Switzerland, and not in the United Kingdom, for Swiss and UK tax purposes and for the purposes of the United Kingdom-Switzerland double tax treaty. This means, broadly, that the Company's profits, income and gains are subject to the Swiss tax regime and not, save in the case of UK source income, to the UK tax regime. Dividends paid by the Company are regarded as Swiss dividends rather than UK dividends. For further information see paragraph 18 of Part VIII – "Additional Information – UK taxation", paragraph 19 of Part VIII – "Additional Information – Swiss taxation" and Paragraph 20 of Part VIII – "Additional Information – US taxation".

It is possible that in the future, whether as a result of a change of law or the practice of any relevant tax authority or the renegotiation of the United Kingdom-Switzerland double tax treaty, or as a result of any change in the management or the conduct of the Company's affairs, the Company could become, or be regarded as having been, resident in the United Kingdom, therefore becoming subject to the UK tax regime, which could adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

Under the UK Finance Act 2006 (the "UK Finance Act"), it is possible that any future acquisitions by the Enlarged Xstrata Group could bring it within the UK controlled foreign company rules in certain circumstances, with the consequence that the Company may become subject to UK tax on the income profits of certain non-UK resident subsidiaries. Future acquisitions could therefore adversely affect the results of operations or financial condition of the Enlarged Xstrata Group. However, HM Revenue & Customs ("HMRC") have provided a non-statutory letter of comfort to the Company that the legislation is not intended to apply to a company such as Xstrata and that HMRC will not regard the legislation as applying, provided that the Company continues to act as the parent company of its existing group, where the Company acts in the ordinary course of its business in making acquisitions of other groups or companies in the same general business sector as its existing group or carrying out significant post-acquisition refinancing or restructuring (including disposals). This legislation should not, therefore, apply in practice to the Falconbridge Acquisition, as more fully explained in the risk factor "Risks connected with the Falconbridge Acquisition – Taxation" below. In addition, none of the Cerrejón Acquisition, any post-acquisition restructuring of the Cerrejón Business, the Tintaya Acquisition or any post-acquisition restructuring of Tintaya will bring the Enlarged Xstrata Group within the UK controlled foreign company rules, because neither the Cerrejón Acquisition nor the Tintaya Acquisition involved the acquisition of any UK resident company (which is a requirement for the new legislation to apply).

A number of arrangements entered into by companies in the Enlarged Xstrata Group have been structured in a tax efficient manner. Although it is anticipated that these arrangements are likely to achieve their desired effect, if any of them is successfully challenged by the relevant tax authorities, Enlarged Xstrata Group companies may incur additional tax liabilities which could adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

Reserves

The Enlarged Xstrata Group's recoverable reserves decline as the commodities are extracted. Further, the Enlarged Xstrata Group may not be able to mine all of its reserves as profitably as it does at its current operations. The Enlarged Xstrata Group's future success depends upon conducting successful exploration and development activities or acquiring properties containing economically recoverable reserves. The Enlarged Xstrata Group's current strategy includes increasing its reserve base through acquisitions of commodity-producing properties and continuing to develop the Enlarged Xstrata Group's existing properties.

The Enlarged Xstrata Group's planned development and exploration projects and acquisition activities may not result in significant additional reserves and it may not be successful in developing additional mines. In addition, in order to develop its reserves, it must receive various governmental permits. The Enlarged Xstrata Group cannot predict whether it will continue to receive the permits necessary for it to operate profitably in the future. The Enlarged Xstrata Group may not be able to negotiate economically viable mining contracts for properties containing additional reserves.

The Enlarged Xstrata Group bases its reserve information on engineering, economic and geological data assembled and analysed by its staff, which includes various engineers and geologists, and which in certain cases is periodically reviewed by third parties. The reserves estimates as to both quantity and quality are periodically updated to reflect production of commodities from the reserves and new drilling or other data received. There are numerous uncertainties inherent in estimating quantities and qualities of and costs to mine reserves, including many factors beyond the Enlarged Xstrata

Group's control. Estimates of reserves necessarily depend upon a number of variable factors and assumptions, all of which may vary considerably from actual results such as:

- geological and mining conditions which may not be fully identified by available exploration data or which may differ from experience in current operations;
- historical production from the area compared with production from other similar producing areas; and
- the assumed effects of regulation and taxes by governmental agencies and assumptions concerning commodity prices, operating costs, mining technology improvements, severance and excise tax, development costs and reclamation costs.

The Enlarged Xstrata Group's reported mineral reserves are estimated quantities of proven and probable ore and other minerals that under present and anticipated conditions can be legally and economically mined and processed, including where relevant by the extraction of their mineral content.

Whilst Falconbridge has determined and will, whilst it is listed on the TSX, continue to determine, the amount of the Falconbridge Group's mineral reserves in accordance with the requirements of the applicable Canadian securities regulatory authorities and established mining standards (which are materially similar to the standards used by the Former Xstrata Group with only minor variations), the Falconbridge Group has not to date used outside sources to verify its reserves.

The volume and grade of reserves actually recovered and rates of production from the Enlarged Xstrata Group's present mineral reserves may be less than geological measurements of the reserves. Market price fluctuations in commodities and exchange rates, and changes in operating and capital costs, may in the future render certain mineral reserves uneconomic to mine. In addition, short-term operating factors relating to the mineral reserves, such as the need for orderly development of ore bodies and other mineral resources or the processing of new or different ore grades, may cause mineral reserves to be modified or the Enlarged Xstrata Group's operations to be unprofitable in any particular fiscal period.

No assurance can be given that the indicated amount of ore or other minerals will be recovered or that it will be recovered at the prices assumed in determining reserves. Mineral reserve estimates are based on limited sampling and, consequently, are uncertain because the samples may not be representative of the entire orebody or mineral resource. As more knowledge and understanding of the orebody and mineral resource are obtained, the reserve estimates may change significantly, either positively or negatively.

For these reasons, estimates and classifications of reserves prepared by different engineers or by the same engineers at different times may vary substantially. Actual commodity tonnage recovered from identified reserves and turnover and expenditures with respect to the Enlarged Xstrata Group's reserves may vary materially from estimates. Accordingly, these reserve estimates may not accurately reflect the Enlarged Xstrata Group's actual reserves. Any inaccuracy in the estimates related to the Enlarged Xstrata Group's reserves could result in lower than expected revenue, higher than expected costs and/or decreased profitability.

Currency fluctuations

The Enlarged Xstrata Group produces and sells commodities that are typically priced in US dollars, while a large portion of the operating costs of the Enlarged Xstrata Group's business are incurred in local currencies, including the Canadian dollar, the Chilean peso, the Norwegian Kroner, the Australian dollar, the Euro, the South African Rand, the Argentine peso, the Colombian peso and the Peruvian Sol. Accordingly, the strengthening of those currencies and other local currencies in which the Enlarged Xstrata Group incurs expenditure against the US dollar has a detrimental effect on the Enlarged Xstrata Group's results of operations and financial condition. See Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group".

The Enlarged Xstrata Group's operations are conducted in many countries and the results of operations and the financial condition of individual Enlarged Xstrata Group companies are reported in the relevant functional currency which, in some cases, is not the US dollar. The results for Enlarged Xstrata Group companies whose functional currency is not the US dollar have been translated into US dollars at the applicable foreign currency exchange rates for inclusion in the Former Xstrata Group's historical consolidated financial statements and the Falconbridge Group's historical consolidated financial

statements and will be translated into US dollars at the applicable foreign currency exchange rates for inclusion in the Enlarged Xstrata Group's future consolidated financial statements. The exchange rates between relevant currencies other than the US dollar and the US dollar have historically fluctuated (including over the last five years), and the translation effect of such fluctuations may have a material adverse effect on the Enlarged Xstrata Group's consolidated results of operations or financial condition.

The Enlarged Xstrata Group may, from time to time, hedge a portion of its currency exposures and requirements to try to limit any adverse effect of exchange rate fluctuations on the Enlarged Xstrata Group's results of operations and financial condition, but there can be no assurance that such hedges will eliminate the potential material adverse effect of such fluctuations.

Borrowings

The Enlarged Xstrata Group has a significant amount of indebtedness, which may impair the operating and financial flexibility of the Enlarged Xstrata Group and could adversely affect the business and financial position of the Enlarged Xstrata Group and the Company's ability to pay dividends.

The Enlarged Xstrata Group has a substantial amount of debt and significant debt service obligations. As at 31 August 2006 the Enlarged Xstrata Group had unaudited gross outstanding indebtedness of US$22,997.7 million, including US$18,875.6 million of indebtedness incurred in connection with the Falconbridge Acquisition. For details of the Enlarged Xstrata Group's unaudited capitalisation and indebtedness at 31 August 2006, see paragraph 4 of Part VIII – "Additional Information – Capitalisation and indebtedness" and for details of the Enlarged Xstrata Group's existing debt financing arrangements see paragraph 22.9 of Part VIII – "Additional Information – Material contracts".

Whilst the proceeds of the Rights Issue will be used to reduce the Enlarged Xstrata Group's existing indebtedness and the Company is committed to maintaining an investment grade credit rating, the Company anticipates that the Enlarged Xstrata Group's substantial leverage will continue for the foreseeable future.

The Enlarged Xstrata Group's substantial indebtedness has important consequences for Shareholders. For example, it could potentially:

- cause the Enlarged Xstrata Group to dedicate a substantial portion of cash flow from operations to payments to service debt, depending on the level of borrowings, prevailing interest rates and, to a lesser extent, exchange rate fluctuations, which reduces the funds available for working capital, capital expenditure, acquisitions and other general corporate purposes;
- curtail the Company's ability to pay dividends;
- limit the Enlarged Xstrata Group's ability to borrow additional funds for working capital, capital expenditure, acquisitions and other general corporate purposes;
- limit the Enlarged Xstrata Group's flexibility in planning for, or reacting to, changes in technology, customer demand, competitive pressures and the industries in which it operates;
- place the Enlarged Xstrata Group at a competitive disadvantage compared to its competitors that are less leveraged than it is; and
- increase the Enlarged Xstrata Group's vulnerability to both general and industry-specific adverse economic conditions.

In addition, any lowering of the Company's credit rating may have important consequences for Shareholders. For example, it could potentially:

- increase the margin payable under certain of the Enlarged Xstrata Group's debt financing facilities;
- result in the acceleration of the repayment of a substantial portion of the Enlarged Xstrata Group's debt; and

- make it harder for the Enlarged Xstrata Group to raise funds through the capital markets.

Xstrata's existing debt facilities contain a number of financial, operating and other obligations that limit the Enlarged Xstrata Group's operating and financial flexibility. The Enlarged Xstrata Group's ability to comply with these obligations depends on the future performance of its business.

Nothing in this paragraph headed "Borrowings" is intended to qualify the statements in the section of this document headed "Summary – Working capital" and paragraph 24 of Part VIII – "Additional Information – Working capital".

Interest rate and counterparty risk

The Enlarged Xstrata Group's exposure to changes in interest rates results from investing and borrowing activities undertaken to manage its liquidity and capital requirements. The Enlarged Xstrata Group has entered into interest rate swap agreements to manage the interest rate risk associated with a portion of its fixed-rate debt. The interest rate swap changes the Enlarged Xstrata Group's exposure to interest risk by effectively converting a portion of the Enlarged Xstrata Group's fixed-rate debt to a floating rate. The Enlarged Xstrata Group may elect in the future to enter into interest rate swaps to effectively convert floating-rate debt to fixed-rate debt or to enter into additional fixed-rate to floating-rate swaps. There can be no assurance that the Enlarged Xstrata Group will not be materially adversely affected by interest rate changes in the future, notwithstanding the Enlarged Xstrata Group's use of interest rate swaps.

In addition, the Enlarged Xstrata Group's interest rate swaps, metals hedging and foreign currency and energy risk management activities expose the Enlarged Xstrata Group to the risk of default by the counterparties to such arrangements. Any such default could have a material adverse effect on the Enlarged Xstrata Group's business, financial condition and results of operations.

Integration of acquisitions

A substantial portion of the Enlarged Xstrata Group's growth in turnover and earnings has historically been generated from and, for the Enlarged Xstrata Group, will be generated from, acquisitions and investments and subsequent improvements in the performance of the businesses acquired or invested in, including, in the case of the Former Xstrata Group, MIM, the Cerrejón Business, Tintaya and Falconbridge. Xstrata expects to continue a strategy of identifying, acquiring and investing in businesses with a view to expanding its operating businesses or diversifying into other natural resources. Xstrata believes that acquisitions and investments in joint ventures will continue to be an important part of its business strategy.

There can be no assurance that Xstrata will continue to identify suitable acquisition opportunities, obtain the financing necessary to complete and support such acquisitions or its investment in such joint ventures or acquire businesses on satisfactory terms, or that any business acquired will prove to be profitable. In addition, acquisitions and investments in joint ventures involve a number of risks, including possible adverse effects on the Enlarged Xstrata Group's operating results, diversion of management's attention, failure to retain key personnel, risks associated with unanticipated events or liabilities, difficulties in the assimilation of the operations, technologies, systems, services and products of the acquired companies or investments and risks arising from change of control provisions in contracts of any acquired company. Further, the Enlarged Xstrata Group's integration strategy may also be influenced by local factors in the markets in which it has made and makes acquisitions, such as black empowerment in South Africa. Any failure to achieve successful integration of such acquisitions or joint ventures could have a material adverse effect upon the results of operations or financial condition of the Enlarged Xstrata Group.

Labour

The majority of the workforce of the Enlarged Xstrata Group is unionised. Xstrata believes that all of the Enlarged Xstrata Group's operations have, in general, good relations with their employees and unions, but the Enlarged Xstrata Group's operations in South Africa, Australia, Canada and Chile have from time to time experienced limited work stoppages and other forms of industrial action in recent years. See Part II – "Information on the Enlarged Xstrata Group – Labour and employee relations". There can be no assurance that the Enlarged Xstrata Group's operations will not be affected by such problems in the future. In addition, the Enlarged Xstrata Group has been subject to union demands for pay rises and increased benefits. Furthermore, the Enlarged Xstrata Group contains operations in South America where recent strike action associated with demands for pay rises and increased benefits at operations of other industry participants has received widespread media attention. Strike action at other industry participants' operations in South America may encourage work stoppages in connection with any labour-related demands of employees or unions at the Enlarged Xstrata

Group's operations in South America and/or elsewhere. There can be no assurance that work stoppages or other labour-related developments (including the introduction of new labour regulations in countries where the Enlarged Xstrata Group operates) will not adversely affect the results of operations or financial condition of the Enlarged Xstrata Group.

The majority of the workforce of the Enlarged Xstrata Group is engaged pursuant to collective employment agreements. These collective agreements are negotiated with unions and other employee representative organisations from time to time. The collective agreements establish and set the terms and conditions of employment of the employees covered by the collective agreements. The Enlarged Xstrata Group's collective agreements have differing terms of operation and expiry dates. Prior to the expiry of a collective agreement, negotiation of conditions for renewal occurs between the relevant employing entities within the Enlarged Xstrata Group and the relevant unions or other employee representative organisations. There can be no assurance that collective agreements when due to be renewed will be so renewed without work stoppages or other forms of industrial action or without additional or unforeseen costs being incurred by the Enlarged Xstrata Group.

There is a serious problem with HIV/AIDS infection of the Enlarged Xstrata Group's South African workforce, as there is in South Africa generally. The HIV/AIDS infection rate of the Enlarged Xstrata Group's South African workforce is expected to continue to increase significantly during this decade. The costs and lost workers' time associated with HIV/AIDS may continue to adversely affect the Enlarged Xstrata Group's South African results of operations and financial condition. See Part IV – "Information on the Former *Xstrata Group*'s Business – Health and safety".

Key employees

The management of the each of the Enlarged Xstrata Group's operations depends on a relatively small number of key employees. The loss of the services of certain key employees, particularly to competitors, could have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group. In addition, as the Enlarged Xstrata Group's business develops and expands, Xstrata believes that the Enlarged Xstrata Group's future success will depend on its ability to attract and retain highly skilled and qualified personnel, which is not guaranteed.

Joint ventures

Members of the Enlarged Xstrata Group hold, and expect to hold in the future, undivided interests in joint ventures.

Special risks associated with joint ventures include the possibility that the joint venture partners, which in certain cases include competitors of the Company, may: (i) have economic or business interests or goals that are inconsistent with those of the Enlarged Xstrata Group; (ii) take action contrary to the Enlarged Xstrata Group's policies or objectives with respect to its investments, for instance by vetoing proposals in respect of the joint venture operations; (iii) be unable or unwilling to fulfil their obligations under the joint venture or other agreements; or (iv) experience financial or other difficulties. Any of the foregoing may have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group. In addition, the termination of certain of these joint venture agreements, if not replaced on similar terms, could have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group.

Holding company structure; restrictions on dividends and dependence on subsidiaries

The Company's results of operations and financial condition are entirely dependent on the trading performance of members of the Enlarged Xstrata Group. The Company's ability to pay dividends will depend upon the level of distributions, if any, received from the Company's operating subsidiaries and interests, any amounts received on capital raisings (including the Rights Issue) and asset disposals and the level of cash balances. Certain of the Company's operating subsidiaries and interests may, from time to time, be subject to restrictions on their ability to make distributions to the Company including as a result of restrictive covenants contained in loan agreements, foreign exchange limitations and other regulatory restrictions and agreements with the other shareholders of such subsidiaries or associated companies. There can be no assurance that such restrictions will not have a material adverse effect on the Enlarged Xstrata Group's results of operations or financial condition.

Political risk

Certain of the Enlarged Xstrata Group's activities and related assets are located in countries which may be considered to be, or may become, politically or economically unstable. Exploration or development activities in such countries may require protracted negotiations with host governments, international organisations and other third parties, including non-governmental organisations, and are frequently subject to economic and political considerations, such as taxation,

nationalisation, inflation, currency fluctuations and governmental regulation and approval requirements, which could adversely affect the economics of projects. These projects and investments could be adversely affected by war, civil disturbances and activities of governments which limit or disrupt markets, restrict the movement of funds or supplies or result in the restriction of contractual rights or the taking of property without fair compensation.

The Enlarged Xstrata Group performs a thorough risk assessment on a country-by-country basis when considering its activities and attempts to conduct its business and financial affairs so as to protect against political, legal, regulatory and economic risks applicable to operations in the various countries where the Enlarged Xstrata Group operates, but there can be no assurance that the Enlarged Xstrata Group will be successful in so protecting itself. These projects and investments could also be adversely affected by changes in laws and regulations relating to foreign trade, investment and taxation.

The Enlarged Xstrata Group has significant operations in South Africa. As a result, there are important political, economic and other risks relating to South Africa which could affect an investment in the Company. Large parts of the population do not have access to adequate education, healthcare, housing and other services, including water and electricity. South Africa has also experienced high levels of crime and unemployment in comparison with more developed countries. These problems have been among the factors that have impeded inward investment into South Africa, prompted the emigration of skilled workers and affected South Africa's growth rate negatively. While the South African government committed itself to creating a stable free market economy, it is difficult to predict the future political, social and economic direction of South Africa or how the government will try to address South Africa's challenges. It is also difficult to predict the effect on the Enlarged Xstrata Group's business of these problems or of the government's efforts to solve them.

Further, there has been political and economic instability in South Africa's neighbouring countries. If this instability were to extend into or cause similar instability in South Africa, it could have a negative impact on the Enlarged Xstrata Group's ability to manage and operate its South African operations and therefore on its results of operations or financial condition.

There are political and economic risks relating to the Enlarged Xstrata Group's operations at Alumbrera, Argentina. Argentina suffered a period of deep social and economic deterioration and political and economic instability during 2001 and a devaluation of its currency in 2002. The Enlarged Xstrata Group's operations in Argentina may be adversely affected by changes in the nature of the Argentinean government, its policies, including taxation, or the political, economic or social dynamics affecting Argentina, any or all of which may not be within the control of the Enlarged Xstrata Group.

Cerrejón operates in Colombia. As a result, there are political and other risks relating to Colombia which could affect an investment in the Enlarged Xstrata Group. Colombia has experienced several periods of criminal violence over the past four decades, primarily due to the activities of guerrilla groups and drug cartels. In response, the Colombian government has implemented various security measures and has strengthened its military and police forces by creating specialised units. Despite these efforts, drug-related crime and guerrilla activity continue to exist in Colombia. If this violence affected the operations of the Cerrejón Business, it could have an adverse affect on the Enlarged Xstrata Group's results of operations. Historically, Colombia has also experienced other political and economic instability. The Cerrejón Business may be adversely affected by any deterioration in the political, economic or security situation in Colombia, including where such factors have a direct impact on the operations of Cerrejón's mines and Cerrejón's rights to carry on its operations. There can be no assurance that such deterioration will not have a material adverse effect on the results of operations or financial condition of either or both of the Cerrejón Business and the Enlarged Xstrata Group.

The Enlarged Xstrata Group has operations in Peru and Chile. These operations may be adversely affected by changes in government policies, including taxation, changes in the ruling government or the political, economic or social matrix of factors affecting Peru and/or Chile, any or all of which may not be within the control of the Enlarged Xstrata Group.

Exchange controls

South African exchange control regulations provide for a common monetary area consisting of South Africa, Lesotho, Namibia and Swaziland (the "CMA"). Transactions between CMA residents and non-CMA residents are subject to South African exchange control regulations. The present exchange control system in South Africa is used principally to control capital movements. South African residents, including companies, are generally not permitted (other than subject to certain monetary limits and within certain parameters), without the approval of the exchange control authorities, to export capital from South Africa or to hold foreign currency or foreign investments, as restrictions are imposed on foreign investments by South African residents. It is impossible to predict whether any further modifications may be made by the

South African government. There can be no assurance that the expansion of existing, or imposition of new, exchange controls would not adversely affect the Enlarged Xstrata Group's results of operations or financial condition.

In 2002, Argentina imposed exchange control restrictions which required revenues from exports to be repatriated to Argentina and exchanged for Argentine pesos. However, pursuant to a decree issued on 27 February 2003, all mining companies which enjoyed "exchange control stability" between March 1991 and December 2001, which includes Minera Alumbrera Limited, a member of the Enlarged Xstrata Group, are exempt from compliance with the exchange control restrictions. There can be no assurance that Argentinean government policy in relation to this issue will not change again in the future and any change could have a material adverse effect on the Enlarged Xstrata Group's results of operations or financial condition.

Market access

Global and regional demand for metals is influenced by regulatory and voluntary initiatives to restrict or eliminate the use of certain metals in particular products or applications. Impacts of such measures can be global, creating non-tariff barriers to international trade and affecting product design and specifications on a global basis. Such measures could affect the balance between supply and demand and depress metal prices and treatment/refining charges. Metals with a limited number of major applications are most susceptible to changes in demand and price in response to such measures. Such changes in demand and price could have a material adverse effect on the Enlarged Xstrata Group's results of operations or financial condition.

Production technology

Xstrata believes that the technology it uses to produce and process metals is significantly advanced and, in part, due to high investment costs, subject only to slow technological change. However, there can be no assurance that more economical production or processing technology will not be developed or that the economic conditions in which current technology is applied will not change.

Sulphuric acid

Sulphur dioxide is a by-product from the smelting of copper, zinc and lead sulphide concentrates. The Enlarged Xstrata Group captures sulphur dioxide to limit acid rain omissions and produces sulphuric acid as a marketable by-product. Due to increasingly strict environmental standards worldwide for sulphur dioxide emissions, involuntary production of sulphuric acid by smelters is growing. The balance of world acid production is largely based on elemental sulphur, the supply of which is now a by-product of oil and gas production, and growing more rapidly than demand. Long term, these factors may make it more difficult for the Enlarged Xstrata Group to obtain satisfactory prices for its sulphuric acid. However, the Enlarged Xstrata Group's production of sulphuric acid cannot be reduced in response to low prices, or dropping sales volumes, without a corresponding reduction in the Enlarged Xstrata Group's production of metals. Reductions in the price of sulphuric acid could have an adverse effect on the Enlarged Xstrata Group's results of operations or financial condition.

Raw material procurement risks

Procurement of raw materials involves the risks typically connected with commercial transactions, which can include trade barriers, political instability and problems due to local production conditions. In addition, the Enlarged Xstrata Group's supply contracts provide that suppliers of concentrate may be released from their delivery obligations to the Enlarged Xstrata Group if certain "*force majeure*" events occur. The Enlarged Xstrata Group's business operations could be adversely affected, at least temporarily, if supplies of raw materials are interrupted as a result of the imposition of trade barriers or other events and if the Enlarged Xstrata Group is unable, on short notice, to shift to alternative sources of supply.

Legal proceedings

The nature of the Enlarged Xstrata Group's business subjects the Enlarged Xstrata Group to numerous regulatory investigations, claims, lawsuits and other proceedings in the ordinary course of its business. The results of these legal proceedings cannot be predicted with certainty. There can be no assurance that these matters will not have a material adverse effect on the Enlarged Xstrata Group's results of operations in any future period, and a substantial judgement could have a material adverse impact on the Enlarged Xstrata Group's business, financial condition, liquidity and results of operations.

Nothing in this paragraph headed "Legal proceedings" is intended to qualify the statement in paragraph 27 of Part VIII – "Additional Information – Litigation" that, except as set out in that paragraph, no member of the Enlarged Xstrata Group is

engaged in or, so far as Xstrata is aware, has pending or threatened, any governmental, legal or arbitration proceedings which may have, or have had in the recent past (covering the 12 months preceding the date of this document), a significant effect on the Company and/or the Enlarged Xstrata Group's financial position or profitability.

Risks connected with the Falconbridge Acquisition

Integration of the Falconbridge Group

The integration of the Falconbridge Group's business in the Enlarged Xstrata Group involves a number of risks, including:

- the attention of the Enlarged Xstrata Group's management may be diverted away from other business concerns;
- the Enlarged Xstrata Group's management may be unable to integrate the Falconbridge Group's business in a cost-effective manner, including as a result of its commitments given in connection with securing approval for the Falconbridge Acquisition under the Investment Canada Act, as described in Part II – "Information on the Enlarged Xstrata Group – The Falconbridge Acquisition", which could result in duplication of management information and financial control systems, customer service teams and product offerings;
- there may be outstanding or unforeseen legal, regulatory, contractual, labour or other issues arising from the acquisition of the Falconbridge Group;
- the Enlarged Xstrata Group may find it difficult to effectively assimilate the business and management cultures of the Former Xstrata Group and the Falconbridge Group; and
- the Enlarged Xstrata Group may not be able to achieve the post-tax cash cost savings and other potential synergies identified prior to the Falconbridge Acquisition.

If the Company fails to integrate the Falconbridge Group on a timely and cost-effective basis, the higher than expected costs and other difficulties could have a material adverse effect upon the results of operations or financial condition of the Enlarged Xstrata Group.

The Enlarged Xstrata Group may face risk associated with labour relations

Xstrata is undertaking a detailed review of Falconbridge's activities to evaluate long term performance, profitability and potential synergies for the Enlarged Xstrata Group. Xstrata expects that benefits will accrue to the Enlarged Xstrata Group from access to pooled managerial and technical expertise, with increased opportunities for employees across the Enlarged Xstrata Group. There can be no assurance, however, that relationships with former Falconbridge Group employees at the Enlarged Xstrata Group's operations in Canada and/or elsewhere will be positive or that new collective agreements will be entered into without work interruptions. The Enlarged Xstrata Group could also be adversely affected by labour disruptions involving third parties who may provide the Enlarged Xstrata Group with goods or services at its operations in Canada and elsewhere. Strikes and other labour disruptions at any of the Enlarged Xstrata Group's operations, or lengthy work interruptions at its existing and future development projects, could materially adversely affect the timing, completion and cost of any such project, as well as the Enlarged Xstrata Group's results of operations or financial condition.

Falconbridge may not perform in line with expectations

If the results and cash flows generated by the Falconbridge Group are not in line with the Former Xstrata Group's expectations, a write-down may be required against the carrying value of its investment in the Falconbridge Group. Such a write-down may affect the Enlarged Xstrata Group's business and may also reduce the Company's ability to generate distributable reserves by the extent of the write-down, and consequently affect the Company's ability to pay dividends.

Exchange rate fluctuations may increase the financing costs for the Falconbridge Acquisition and increase the consideration paid for Falconbridge as reported in Xstrata's consolidated accounts

Exchange rate fluctuations may increase the Enlarged Xstrata Group's financing costs and increase the total consideration paid by Xstrata Canada as reported in the Enlarged Xstrata Group's accounts.

Taxation

Under the UK Finance Act, it is possible that the Falconbridge Acquisition or any post-acquisition restructuring of the Falconbridge Group's business could bring the Enlarged Xstrata Group within the UK controlled foreign company rules in

certain circumstances. This could cause the Company to become subject to UK tax on the income profits of certain non-UK resident subsidiaries, which could adversely affect the results of operations or financial condition of the Enlarged Xstrata Group. However, HMRC have provided a non-statutory letter of comfort that the UK Finance Act would not apply specifically to either the Falconbridge Acquisition or post-acquisition restructuring on the basis of the information provided. HMRC have also provided a more general non-statutory letter of comfort to the Company on the application of the UK Finance Act, as more fully explained in the risk factor "Risks relating to the business of the Enlarged Xstrata Group – Taxation" *above*.

Market considerations

Trading market for Nil Paid Rights and Fully Paid Rights

Application has been made to admit the New Shares (nil and fully paid) for trading on the London Stock Exchange's main market for listed securities and for the New Shares (nil and fully paid) to be admitted to listing on the SWX. It is expected that dealings in rights to subscribe for the New Shares, nil paid, on the London Stock Exchange's main market for listed securities and on the SWX (for normal settlement) will commence on Thursday, 5 October 2006. There can be no assurance, however, that an active trading market in Nil Paid Rights or Fully Paid Rights will develop upon or following Admission or Swiss Admission.

Exchange rate risk

The Nil Paid Rights, Fully Paid Rights and New Shares are priced in pounds sterling. Accordingly, any investor outside the United Kingdom is subject to adverse movements in their local currency against pounds sterling.

Dilution of ownership of Ordinary Shares upon issue of New Shares

If you do not respond to the Rights Issue by 11.00 a.m. (London Time) on Friday, 27 October 2006, the expected latest time and date for acceptance and payment in full for your provisional allotment of New Shares, your Nil Paid Rights to subscribe for New Shares will lapse and the Company has made arrangements under which the Banks, within the two-Business-Day period following the expiration of the latest time and date for acceptance and payment, will endeavour (as agents of the Company) to find subscribers for New Shares not taken up by Shareholders. If, however, the Banks are unable to find subscribers for such New Shares or are unable to achieve a specified premium over the Issue Price and the related expenses of procuring such subscribers, Shareholders will not receive any consideration for the Nil Paid Rights they have not taken up. Furthermore, to the extent that Shareholders do not exercise their Nil Paid Rights to subscribe for New Shares, their proportionate ownership and voting interest in the Ordinary Shares of the Company (upon the issue of New Shares) will, accordingly, be reduced, and the percentage that their Existing Shares represent of the Company's increased share capital after the issue of New Shares will accordingly be reduced.

Possible volatility of the price of the Nil Paid Rights, Fully Paid Rights and/or Ordinary Shares

The market price of the Nil Paid Rights, the Fully Paid Rights and/or Ordinary Shares could be subject to significant fluctuations due to a change in sentiment in the market regarding the Nil Paid Rights, the Fully Paid Rights and/or Ordinary Shares (or securities similar to them), including, in particular, in response to various facts and events, including any regulatory changes affecting the Enlarged Xstrata Group's operations, variations in the Enlarged Xstrata Group's operating results and/or business developments of the Enlarged Xstrata Group and/or its competitors. Stock markets have from time to time experienced significant price and volume fluctuations that have affected the market prices for securities and which may be unrelated to the Enlarged Xstrata Group's operating performance or prospects. Furthermore, the Enlarged Xstrata Group's operating results and prospects from time to time may be below the expectations of market analysts and investors. Any of these events could result in a decline in the market price of the Nil Paid Rights, the Fully Paid Rights and/or Ordinary Shares.

Major Shareholders

As at the date of this document as far as the Company is aware, CSSEL and Glencore International hold approximately 21.7% and 14.3%, respectively, of the issued ordinary share capital of Xstrata. Xstrata has received an irrevocable undertaking from Glencore International to take up its full entitlement under the Rights Issue. In addition, CSSEL has agreed to transfer to Glencore International its entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue and Glencore International has irrevocably undertaken to take up in full such entitlements. As a result of these undertakings, assuming the Rights Issue completes, assuming that Glencore International takes up in full all of the entitlements that are the subject of its irrevocable undertakings, assuming that the CSSEL takes up in full those of its entitlements under the Rights Issue that are not transferred to Glencore International and hence subject to Glencore

International's undertaking and assuming that no exchange rights under the Glencore Exchangeable Bonds are exercised or conversion rights under the 2010 Convertible Bonds, 2017 Convertible Debenture or 2017 Convertible Bonds are exercised, between Monday, 2 October 2006 (being the latest practicable date prior to the publication of this document) and completion of the Rights Issue, immediately following the New Shares Issue, Glencore International and CSSEL companies are expected to hold approximately 19.6% and 16.4%, respectively, of the enlarged issued ordinary share capital of Xstrata. Each of Glencore International and Credit Suisse companies are currently able to, and following the New Shares Issue will continue to be able to, exercise a significant degree of influence over matters requiring Shareholder approval, including the approval of significant corporate transactions, and this may have the effect of delaying, preventing or deterring a change in control of the Enlarged Xstrata Group, could deprive Shareholders of an opportunity to receive a premium for their Ordinary Shares as part of a sale of the Enlarged Xstrata Group and might affect the market price of the Ordinary Shares and/or other securities of the Enlarged Xstrata Group. In addition, any decision by any of Glencore International or the Credit Suisse companies to sell all or a portion of the Ordinary Shares held by it could adversely affect the market price of the Ordinary Shares and/or other securities of the Enlarged Xstrata Group.

Possible unavailability of pre-emptive rights for US and other non-UK holders of Ordinary Shares

In the case of an increase of the share capital of the Company for cash, the existing Shareholders are generally entitled to pre-emption rights pursuant to the Companies Act unless such rights are waived by a special resolution of the Shareholders at a general meeting or in certain circumstances stated in the Articles. To the extent that pre-emptive rights are granted, US and certain other non-UK holders of the Ordinary Shares may not be able to exercise pre-emptive rights for their Ordinary Shares unless the Company decides to comply with applicable local laws and regulations and, in the case of US holders, unless a registration statement under the Securities Act is effective with respect to those rights, or an exemption from the registration requirements thereunder is available. The Company intends to evaluate at the time of any future rights offering the costs and potential liabilities, direct and indirect, associated with any such compliance or registration statement. At such time, the Company also intends to evaluate the indirect benefits to it of enabling the exercise by US and other non-UK holders of the Ordinary Shares of pre-emptive rights and any other factors the Company considers appropriate at the time. On the basis of this evaluation, the Company will then need to make a decision as to how to proceed and whether to file such a registration statement or otherwise or any other steps necessary to enable Shareholders in such other non-UK jurisdictions to exercise their pre-emptive rights. No assurance can be given that any steps will be taken in any jurisdiction or that any registration statement will be filed to enable the exercise of such holders' pre-emptive rights.

It may not be possible to effect service of process upon the Company or the Directors or enforce court judgements against the Company or the Directors

Xstrata is a company incorporated in England and Wales and regarded as resident in Switzerland, and not in the United Kingdom, for Swiss and UK tax purposes and for the purposes of the United Kingdom–Switzerland double tax treaty. The Enlarged Xstrata Group's assets are located in various jurisdictions and the majority of the Enlarged Xstrata Group's assets are located in jurisdictions outside the United States. The Directors are citizens of various countries and most of the Directors are not citizens of the United States. It may not be possible for investors in the Company's securities to effect service of process outside England, Wales or Switzerland against the Company or the Directors or to enforce the judgement of a court outside England, Wales or Switzerland against the Company or the Directors. It may be difficult for investors in the Company's securities to enforce, in original actions or in actions for enforcement brought in jurisdictions located outside the US, judgements of US courts or civil liabilities predicated upon US federal securities laws. Further, it may be difficult for investors in the Company's securities to enforce judgements of this nature in many of the other jurisdictions in which the Enlarged Xstrata Group operates and in which its assets are situated and in the countries of which most of the Directors are citizens.

Market and industry information

Market data and certain industry forecasts used in this document were obtained from internal surveys, reports and studies, where appropriate, as well as market research, publicly available information and industry publications. Industry publications generally state that the information they contain has been obtained from sources believed to be reliable but that the accuracy or completeness of such information is not guaranteed. Similarly, internal surveys, reports and studies and market research, while believed by the Company to be reliable and accurately extracted by the Company for the purposes of this document, have not been independently verified and the Company makes no representation as to the accuracy of such information. The industry forecasts are forward-looking statements. See "Cautionary note regarding forward-looking statements" below.

Analysis of the coking coal markets in this document does not include coals known as pulverised coal injection ("PCI") coals, which are used for injection directly into blast furnaces, and refers only to coal used for coke-making.

Competitive statements

The table set out below describes the basis of the competitive statements in respect of the Enlarged Xstrata Group included in this document. The market data supporting the competitive statements was obtained from internal surveys, reports and studies, where appropriate, as well as market research, publicly available information and industry publications. The Company has not relied on single sources but has instead sought to ensure that each competitive statement is balanced and reasonable, based on various available sources and the Company's knowledge of the markets in which the Enlarged Xstrata Group operates. See above in this section headed "Market and industry information".

Statement	Basis
Enlarged Xstrata Group	
The Enlarged Xstrata Group is the fifth largest diversified mining group in the world	Enterprise value calculated as market capitalisation (sourced from Bloomberg and Datastream) plus interest bearing net debt plus minorities sourced from the latest publicly available financial information, in each case as at 30 September 2006
The Enlarged Xstrata Group's top five industry positions in copper, thermal and coking coal, zinc and nickel	Production for the year ended 31 December 2005
Copper Business	
The Enlarged Xstrata Group is the world's fourth largest producer of mined copper	Production for the year ended 31 December 2005
Coal Business	
On a managed basis, the Enlarged Xstrata Group is one of the world's largest producers of export thermal coal, one of the largest producers of export semi-soft/PCI coal and the fifth largest producer of export coking coal	Production for the year ended 31 December 2005
The Enlarged Xstrata Group is South Africa's third largest exporter of thermal coal	South African thermal coal export sales in the year ended 31 December 2005
Nickel Business	
The Enlarged Xstrata Group is the fourth largest producer of refined nickel in the world	Production for the year ended 31 December 2005
The Enlarged Xstrata Group is one of the largest recyclers and processers of nickel and cobalt-bearing materials	Production for the year ended 31 December 2005
Zinc Business	
The Enlarged Xstrata Group is one of the world's largest producers of zinc	Production for the year ended 31 December 2005
The Enlarged Xstrata Group is one of the world's largest lead producers	Production for the year ended 31 December 2005

Statement	Basis
The Enlarged Xstrata Group is one of the largest zinc producers in the western world in terms of capacity	Production capacity for the three months ended 31 March 2006
The Former Xstrata Group Zinc Business ranks among the world's leading producers of lead by volume of production	Production for the year ended 31 December 2005
The Former Xstrata Group Zinc Business, together with the Falconbridge Group, is one of the five largest producers of silver by volume of production	Production for the year ended 31 December 2005
The Former Xstrata Group Zinc Business is one of the five largest producers of zinc, by volume of production	Production for the year ended 31 December 2005
Alloys Business	
The Enlarged Xstrata Group's top five industry position in ferrochrome	Market share of sales for the year ended 31 December 2005
The Enlarged Xstrata Group is the world's largest producer of ferrochrome	Market share of attributable production for the year ended 31 December 2005
The Enlarged Xstrata Group is the world's largest, in terms of both attributable production and attributable sales, producer of ferrochrome	Market share of attributable production and attributable sales for the year ended 31 December 2005
The Enlarged Xstrata Group's top five industry position in vanadium	Forecast compound annual growth rate for the year ended 31 December 2005 to the year ending 31 December 2010
The Enlarged Xstrata Group is one of the world's leading producers of primary vanadium	Forecast compound annual growth rate for the year ended 31 December 2005 to the year ending 31 December 2010

Cautionary note regarding forward-looking statements

This document and the information incorporated by reference into this document include statements that are, or may be deemed to be, "forward-looking statements". These forward-looking statements can be identified by the use of forward-looking terminology, including the terms "believes", "estimates", "anticipates", "expects", "intends", "plans", "goal", "target", "aim", "may", "will", "would", "could" or "should" or, in each case, their negative or other variations or comparable terminology. These forward-looking statements include all matters that are not historical facts. They appear in a number of places throughout this document and the information incorporated by reference into this document and include statements regarding the intentions, beliefs or current expectations of the Directors, Xstrata or the Enlarged Xstrata Group concerning, amongst other things, the results of operations, financial condition, liquidity, prospects, growth, strategies and dividend policy of the Enlarged Xstrata Group and the industries in which it operates.

This document and the information incorporated by reference into this document also contain forward-looking statements regarding the Falconbridge Acquisition, including statements regarding and relating to potential and/or expected synergies and cost savings available to the Enlarged Xstrata Group in connection with the Falconbridge Acquisition.

By their nature, forward-looking statements involve risks and uncertainties because they relate to events and depend on circumstances that may or may not occur in the future and may be beyond Xstrata's ability to control or predict. Forward-looking statements are not guarantees of future performance. The Enlarged Xstrata Group's actual results of operations, financial condition, liquidity, dividend policy and the development of the industries in which it operates may differ materially from the impression created by the forward-looking statements contained in this document and/or the information incorporated by reference into this document. Further, actual developments in relation to the Acquisitions may differ materially from those contemplated by forward-looking statements depending on certain factors which include, but are not limited to, the risks that the Enlarged Xstrata Group may not realise the anticipated benefits, operational and other synergies and/or cost savings from the Falconbridge Acquisition and/or the Cerrejón Acquisition and/or the Tintaya Acquisition and the Enlarged Xstrata Group may incur and/or experience unanticipated costs and/or delays and/or difficulties relating to integration of the Falconbridge Group and/or the Cerrejón Business and/or Tintaya. In addition, even if the results of operations, financial condition, liquidity and dividend policy of the Enlarged Xstrata Group, and the

development of the industries in which it operates, are consistent with the forward-looking statements contained in this document and/or the information incorporated by reference into this document, those results or developments may not be indicative of results or developments in subsequent periods. Important factors that could cause these differences include, but are not limited to, general economic and business conditions, commodity price volatility, industry trends, competition, changes in government and other regulation, including in relation to the environment, health and safety and taxation, labour relations and work stoppages, changes in political and economic stability, currency fluctuations (including the €/US$, £/US$, A$/US$, C$/US$, ZAR/US$, ARS/US$, CHF/US$, CLP/US$, the Colombian peso/US$, the Peruvian Sol/US$ and the Kroner/US$ exchange rates), the Enlarged Xstrata Group's ability to integrate new businesses (including the Falconbridge Group, the Cerrejón Business and Tintaya) and recover its reserves or develop new reserves and changes in business strategy or development plans and other risks, including those described in the section of this document headed "Risk Factors".

You are advised to read this document and the information incorporated by reference into this document in their entirety, and, in particular, the sections of this document headed "Summary" and "Risk Factors" and Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group", Part II – "Information on the Enlarged Xstrata Group", Part III "Unaudited Pro Forma Financial Information", Part IV – "Information on the Former Xstrata Group's Business", Part V – "Information on the Falconbridge Group's Business" and Part X – "Financial Information Relating to the Falconbridge Group", for a further discussion of the factors that could affect the Enlarged Xstrata Group's future performance and the industries in which it operates. In light of these risks, uncertainties and assumptions, the events described in the forward-looking statements in this document and/or the information incorporated by reference into this document may not occur.

Other than in accordance with their legal or regulatory obligations (including under the Listing Rules, the Disclosure Rules and the Prospectus Rules), neither Xstrata nor the Banks undertake any obligation to update or revise publicly any forward-looking statement, whether as a result of new information, future events or otherwise.

Presentation of financial information

Historical financial information

Capitalisation and indebtedness information for the Enlarged Xstrata Group in this document is derived from management accounts of the Enlarged Xstrata Group, unaudited, presented in US dollars and has been prepared in accordance with IFRS as at 31 August 2006.

Unless otherwise indicated, financial information for the Former Xstrata Group in this document and the information incorporated by reference into this document is presented in US dollars and has been prepared in accordance with UK GAAP for the financial years up to and including the financial year ended 31 December 2004 and in accordance with IFRS for the financial year ended 31 December 2005 and, for comparative purposes, the year ended 31 December 2004, and for the six-month period ended 30 June 2006 and, for comparative purposes, the six-month period ended 30 June 2005.

Unless otherwise indicated, financial information for the Falconbridge Group in this document is presented in US dollars and has been prepared in accordance with Canadian GAAP.

Unless otherwise indicated, financial information for Cerrejón in this document is presented in US dollars and has been prepared in accordance with IFRS.

Unless otherwise indicated, financial information for Tintaya in this document is presented in US dollars and has been prepared in accordance with Peruvian GAAP.

UK GAAP (in accordance with which Xstrata previously prepared its financial information) and IFRS differ in certain significant respects from US GAAP and Canadian GAAP. See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP".

EBITDA and EBIT are not defined under IFRS, UK GAAP, Canadian GAAP or Peruvian GAAP

Although none of IFRS, UK GAAP, Canadian GAAP or Peruvian GAAP defines the measures EBITDA and EBIT, they are measures which are widely used in the natural resources sector to evaluate a company's operating performance. Nevertheless, EBITDA and EBIT should not be considered in isolation or as a substitute for operating profit, cash flows from

operating activities or any other measure for determining Xstrata's operating performance or liquidity that is calculated in accordance with IFRS or UK GAAP, the Falconbridge Group's operating performance or liquidity that is calculated in accordance with Canadian GAAP, Cerrejón's operating performance or liquidity that is calculated in accordance with IFRS or Tintaya's operating performance or liquidity that is calculated in accordance with Peruvian GAAP. As EBITDA and EBIT are not measures of performance defined by IFRS, UK GAAP, Canadian GAAP or Peruvian GAAP, these measures may not be comparable to similarly titled measures employed by other companies.

Within Part III – "Unaudited Pro Forma Financial Information", EBITDA represents profit before interest, taxation, depreciation and amortisation and EBIT represents profit before interest and taxation.

EBITDA and EBIT in relation to the Enlarged Xstrata Group and the Former Xstrata Group
Unless otherwise indicated, EBITDA represents, when used in this document and the information incorporated by reference into this document in relation to the Enlarged Xstrata Group and the Former Xstrata Group, net profit or loss from continuing operations before interest, taxation, depreciation and amortisation. Unless otherwise indicated, EBIT represents earnings before interest and taxation.

"EBITDA (before exceptional items)" and "EBIT (before exceptional items)" presented under UK GAAP are EBITDA or EBIT, respectively, before material items which derive from events or transactions that fall within the ordinary activities of the Former Xstrata Group and which individually or, if of a similar type, in aggregate, need to be disclosed by virtue of their size or incidence if Xstrata's financial statements are to give a true and fair view.

"EBITDA (before non-trading items)" and "EBIT (before non-trading items)" presented under IFRS are EBITDA or EBIT, respectively, before material items of income and expense, presented separately due to their nature or expected infrequency of the events giving rise to them.

Set out below are unaudited reconciliations, based on information extracted without material adjustment from Xstrata's published financial statements, between net profit, EBIT and EBITDA:

- per Xstrata's UK GAAP audited consolidated financial statements for the years ended 31 December 2003 and 31 December 2004;
- per Xstrata's IFRS audited consolidated financial statements for the year ended 31 December 2005 (and, for comparative purposes, the year ended 31 December 2004); and
- per Xstrata's IFRS unaudited consolidated financial statements for the six-month periods ended 30 June 2005 and 30 June 2006.

	Audited UK GAAP Year ended 31 December		Unaudited IFRS Year ended 31 December	Audited IFRS Year ended 31 December	Unaudited IFRS Six months ended 30 June	
	2003	2004	2004	2005	2005	2006

EBITDA	**811.9**	**2,070.7**	**2,066.6**	**3,092.8**	**1,347.7**	**2,263.4**

Note.

[1] Net profit is profit after taxation for the UK GAAP audited consolidated financial statements for the years ended 31 December 2003 and 31 December 2004, profit for the year for the IFRS audited consolidated financial statements for the year ended 31 December 2005 and comparative consolidated financial statements for the year ended 31 December 2004, and profit for the period for the IFRS unaudited consolidated financial statements for the six-month periods ended 30 June 2005 and 30 June 2006.

EBITDA and EBIT in relation to the Falconbridge Group

Unless otherwise indicated, EBITDA represents, when used in this document in relation to the Falconbridge Group, net income from continuing operations before interest, taxation, depreciation, amortisation, and accretion, net restructuring costs and minority interest earnings of subsidiaries. Unless otherwise indicated, EBIT represents earnings before interest and taxation.

"Income generated from operating assets" represents, when used in this document in relation to the Falconbridge Group, net income before interest expense, net; corporate and general administration; research, development and exploration; minority interest in earnings of subsidiaries; gain, net of restructuring costs and other; and tax expense. Since this measure captures the Falconbridge Group's key revenues and operating expenses of assets currently in operation, income generated from operating assets is a key performance measurement that management uses to evaluate the performance of both individual assets and business units of the Falconbridge Group.

Set out below are unaudited reconciliations, based on information extracted without material adjustments from the Falconbridge Group's published financial statements, between net income, EBIT and EBITDA:

- per Noranda's Canadian GAAP audited consolidated financial statements for the years ended 31 December 2003 (restated) and 31 December 2004 (as reported and as restated);
- per Falconbridge's Canadian GAAP audited consolidated financial statements for the year ended 31 December 2005; and
- per Falconbridge's Canadian GAAP unaudited consolidated financial statements for the six-month periods ended 30 June 2005 and 30 June 2006.

	Audited Canadian GAAP Financial year ended 31 December				Unaudited Canadian GAAP Six months ended 30 June

Notes

(1) Effective from 1 January 2004, the Falconbridge Group adopted a new standard for the accounting treatment of asset retirement obligations, leading to a restatement of its 2003 financial statements. The restated financial information presented for the year ended 31 December 2003 above is extracted from Noranda's financial statements for the year ended 31 December 2004.

(2) Effective from 1 January 2005, the Falconbridge Group adopted new standards for the accounting treatment of convertible debentures, Preferred Shares Series H and variable interest entities, leading to a restatement of its 2004 financial statements. The restated financial information presented for the year ended 31 December 2004 above is extracted from Falconbridge's financial statements for the year ended 31 December 2005.

Unaudited financial information

The following financial information in this document and the information incorporated by reference into this document is unaudited:

- pro forma financial information on the Enlarged Xstrata Group for the twelve months ended 31 December 2005 and the six-month period ended 30 June 2006, which is included in the section of this document headed "Summary – Selected unaudited IFRS pro forma financial information on the Enlarged Xstrata Group" and Part III – "Unaudited Pro Forma Financial Information";

- capitalisation information for the Former Xstrata Group as at 30 June 2006 sourced from the 2006 Xstrata Interim Report and gross capitalisation and indebtedness information for the Enlarged Xstrata Group as at 31 August 2006 sourced from management accounts of the Enlarged Xstrata Group, which is included in the section of this document headed "Summary – Capitalisation and indebtedness" and paragraph 4 of Part VIII – "Additional Information – Capitalisation and indebtedness";

- the reconciliations, based on information extracted without material adjustment from Xstrata's published financial statements, between net profit, EBIT and EBITDA, which is included in the section headed "EBITDA and EBIT in relation to the Enlarged Xstrata Group and the Former Xstrata Group" in this section headed "Presentation of Financial Information" above;

- the reconciliations, based on information extracted without material adjustment from the Falconbridge Group's published financial statements, between net income, EBIT and EBITDA, which is included in the section headed "EBITDA and EBIT in relation to the Falconbridge Group" in this section headed "Presentation of Financial Information" above;

- financial information on Xstrata relating to the six-month period ended 30 June 2006 and the comparative information relating to the six-month period ended 30 June 2005, which has been incorporated by reference into this document as set out in the section of this document headed "Relevant Documentation and Incorporation by Reference";

- financial information on Falconbridge relating to the six-month period ended 30 June 2006 and the comparative information relating to the six-month period ended 30 June 2005, which is included in Part X – "Financial Information Relating to the Falconbridge Group";

- the IFRS reconciliation statements converting financial information published by Falconbridge at, and for the six-month period ended, 30 June 2006 and for the year ended 31 December 2005 from Canadian GAAP to IFRS, as applied by Xstrata, which are included in Part III – "Unaudited Pro Forma Financial Information – Notes to the unaudited pro forma financial information – IFRS reconciliation statements"; and

- the other financial information in this document and the information incorporated by reference into this document which is specifically identified as being unaudited.

Currencies

In this document and the information incorporated by reference into this document, references to "Argentine pesos" or "ARS" are to the lawful currency of Argentina, references to "Australian dollars", "AUD" or "A$" are to the lawful currency of Australia, references to "Canadian dollars","C$", or "Cdn$" are to the lawful currency of Canada, references to "Chilean peso" or "CLP" are to the lawful currency of Chile, references to "Colombian pesos" are to the lawful currency of Colombia, references to "Euro", "EUR" or "€" are to the currency introduced at the start of the third stage of European economic and monetary union pursuant to the Treaty establishing the European Community, as amended, references to "yen" or "JPY" are to the lawful currency of Japan, references to "Kroner" are to the lawful currency of Norway, references to "Peruvian Sol" are to the lawful currency of Peru, references to "CHF" are to the lawful currency of Switzerland, references to "Rand" or "ZAR" are to the lawful currency of South Africa, references to "£", "Sterling" or "GBP" are to the lawful currency of the United Kingdom and references to "US dollars", "US$", "$US", "US¢" or "cents" are to the lawful currency of the United States.

Unless otherwise indicated in this document and/or the information incorporated by reference into this document, the financial information contained in this document and the information incorporated by reference into this document has been presented in US dollars. In addition, solely for convenience, this document and the information incorporated by reference into this document contain translations of relevant currencies to US dollars. These translations should not be construed as representations that the relevant currency could be converted into US dollars at the rate used or at any other rate, and translations into US dollar amounts that have been calculated at 2 October 2006, being the latest practicable date prior to the publication of this document, may not correspond to the US dollar amounts shown in the historic or future financial statements of the Company in respect of which different exchange rates may have been, or may be, used.

Exchange rate data

The Falconbridge Group historically published its consolidated financial statements in Canadian dollars. Effective 1 July 2003, the Falconbridge Group began reporting its financial results in US dollars.

The following table sets forth, for each period indicated, information concerning the exchange rates between US dollars and Canadian dollars based on the noon buying rate in the City of New York for cable transfers as certified for customs purposes by the Federal Reserve Bank of New York (the "noon buying rate"). The table illustrates how many Canadian dollars it would take to buy one United States dollar.

	Year ended 31 December			Six months ended 30 June	
	2003	2004	2005	2005	2006
			C$		
Low	1.2923	1.1775	1.1507	1.1982	1.0989
High	1.5750	1.3970	1.2703	1.2703	1.726
Average[1]	1.3916	1.2984	1.2083	1.2354	1.1311
Period end	1.2923	1.2034	1.1656	1.2256	1.1150

Note.

(1) The average of the daily noon buying rates on the last business day of each month during the applicable period.

Ore reserve and mineral resource reporting – basis of preparation

Former Xstrata Group

Unless otherwise indicated in this document and/or the information incorporated by reference into this document, ore reserves and mineral resources information reported in this document and the information incorporated by reference into this document in respect of the Former Xstrata Group has been compiled in accordance with the Australasian Code for Reporting of Exploration Results, Mineral Resources and Ore Reserves (the "JORC Code"), December 2004 edition. South African mineral reserves and mineral resources information reported in this document and/or the information incorporated by reference into this document in respect of the Former Xstrata Group has been compiled in accordance with the South African Code for Reporting of Mineral Resources and Mineral Reserves (the "SAMREC Code"), this being materially similar to the JORC Code with only minor variations. The terms "ore reserves" and "mineral reserves" are equivalent and, where relevant, the terms "ore reserves" and "mineral reserves" can be read as including coal reserves and the term "mineral resources" can be read as including coal resources.

The relevant definitions from the December 2004 edition of the JORC Code and certain other definitions can be found in Part XI – "Definitions and Glossary of Technical Terms".

The JORC Code recognises a fundamental distinction between mineral resources and ore reserves. Mineral resources are based on mineral occurrences quantified on the basis of geological data and an assumed cut-off grade, and are divided into "measured", "indicated" and "inferred" categories reflecting decreasing confidence in geological and grade continuity. Generally, explicit allowances for dilution or for losses during mining are not included in the estimates, but the reporting of mineral resources carries the implication that there are reasonable prospects for eventual economic extraction. Mineral resources may therefore be viewed as the estimation stage prior to the application of more stringent economic criteria for ore reserve definition, such as a rigorously defined cut-off grade and mine design outlines, along with allowances for dilution and losses during mining. Under this system of reporting, it is common practice for companies to include in the mineral resource category material with a reasonable expectation of conversion to ore reserves, but for which the required detailed engineering, economic and other studies have not yet been undertaken.

Ore reserves as defined by the JORC Code are designated as "proved" and "probable" and are derived from the corresponding measured and indicated resource estimates by including allowances for dilution and losses during mining. It is an explicitly stated further requirement that other modifying economic, mining, metallurgical, marketing, legal, environmental, social and governmental factors also be taken into account. Reporting conventions that may be adopted are to report mineral resource estimates inclusively, including those measured and indicated resources modified to produce the ore reserves, or to report as additional mineral resources only those portions which have not contributed to conversion to ore reserves.

Unless otherwise indicated in this document, measured and indicated resource estimates reported in this document in respect of the Former Xstrata Group are reported inclusively, including those mineral resources modified to produce the ore reserves.

Unless otherwise indicated in this document, ore reserve and mineral resources information reported in this document in respect of the Former Xstrata Group has been extracted without material adjustment from, or, in the case of attributable resource and reserve information, is based upon, the Former Xstrata Group Ore Reserves and Mineral Resources Report published by Xstrata on 1 March 2006 and included in paragraph 1 of Part IX – "Ore Reserves and Mineral Resources Information – Former Xstrata Group Ore Reserves and Mineral Resources Report" and such information is reported as at 30 June 2005.

Ore reserves and mineral resources information reported in this document in respect of the Bajo de la Alumbrera operation in Argentina (in which the Enlarged Xstrata Group has a 50% interest) has been compiled in accordance with the JORC Code, October 2001 edition and is reported as at 30 June 2006. This information is not sourced from the Former Xstrata Group Ore Reserves and Mineral Resources Report but has been extracted without material adjustment from, or, in the case of attributable resource and reserve information, is based upon, the Alumbrera Ore Reserves and Mineral Resources Report published by Xstrata on 30 June 2006 and included in paragraph 2 of Part IX – "Ore Reserves and Mineral Resources Information – Alumbrera Ore Reserves and Mineral Resources Report".

Ore reserves and mineral resources information reported in this document in respect of Cerrejón and Tintaya has been compiled in accordance with the JORC Code, December 2004 edition and is reported as at 30 June 2005. This information is not sourced from the Former Xstrata Group Ore Reserves and Mineral Resources Report but is sourced instead from reserves and resources summaries approved by Competent Persons (as defined in the JORC Code).

In this document, ore reserve and mineral resource information in relation to the Former Xstrata Group is based on information compiled by Competent Persons (as defined in and required by both the JORC Code and the SAMREC Code). This ore reserve and mineral resource information is included in the reserve and resource estimates in Part IV – "Information on the Former Xstrata Group's Business".

Falconbridge Group

Unless otherwise indicated in this document, all estimates of mineral reserves and mineral resources information reproduced in this document in respect of the Falconbridge Group:

- have been estimated by or on behalf of the Falconbridge Group in accordance with the CIM Definition Standards on Mineral Resources and Reserves, adopted by the CIM Council on 14 November 2004, and the CIM Estimation of Mineral Resources and Mineral Reserves Best Practice Guidelines, adopted by the CIM Council on 23 November 2003 using geostatistical or classical methods, plus economic and mining parameters appropriate to each operation. The Canadian resources and reserves reporting regime is materially similar to the JORC Code with only minor variations;

- were compiled, indirectly supervised and verified on behalf of the Falconbridge Group by Chester Moore, Falconbridge's Director, Mineral Reserve Estimation and Reporting at the relevant time, a member of the Professional Geoscientists of Ontario with over 30 years of experience as a geologist and a qualified person as defined in NI 43-101;

- are shown on a 100% basis; and

- used the following long-term metal prices for estimates: nickel US$3.25/lb, copper US$0.90/lb, zinc US$0.50/lb with a nickel premium added at Sudbury operations. (Exchange rate of C$1.50 to US$1.00).

Unless otherwise indicated, in this document mineral reserves and mineral resources information in relation to the Falconbridge Group is reported as at 31 December 2005.

Inferred resources
The reserves and resources information in this document includes references to "inferred resources". An inferred resource is that part of a mineral resource for which tonnage, grade and mineral content can be estimated with a low level of confidence. This categorisation is inferred from geological evidence and assumed but not verified geological and/or grade continuity. It is based on information gathered through appropriate techniques from locations such as outcrops, trenches, pits, workings and drill holes which may be limited or of uncertain quality and reliability.

Resources and reserves, production and sales
In this document, certain references to resources and reserves are to attributable resources and attributable reserves. Attributable resources means that part of the resources from a mine in which the Enlarged Xstrata Group has an economic interest. Attributable reserves means that part of the reserves from a mine in which the Enlarged Xstrata Group has an economic interest. Attributable resources and attributable reserves therefore exclude resources and reserves attributable to minority interests in controlled subsidiaries and the interests of joint venture partners. Unless otherwise indicated, in this document, reserves are a subset of resources and are included in resource estimates.

In this document, production has been measured in two ways:

- **Mine production** or **total production** or **total mine production**. Mine production or total production or total mine production is equal to the total production from a particular mine or operation for the whole year regardless of ownership of that mine or that operation.

- **Attributable production**. Attributable production is that part of mine, total or total mine production in which the Enlarged Xstrata Group had an economic interest at the relevant time. It therefore excludes production attributable to minority interests in controlled subsidiaries and the interests of joint venture partners.

In this document, sales by volume have been measured in two ways:

- **Total sales** or **total mine sales**. Total sales or total mine sales is equal to the total sales from a particular mine or operation for the whole year regardless of ownership of that mine or that operation.

- **Attributable sales**. Attributable sales is that part of sales from a particular mine or operation in which the Enlarged Xstrata Group had an economic interest at the relevant time. It therefore excludes sales attributable to minority interests in controlled subsidiaries and the interests of joint venture partners.

Cost curves
This document contains references to "cost curves". A cost curve is a graphic representation in which the total production volume of a given commodity across the relevant industry is arranged on the basis of average unit costs of production from lowest to highest to permit comparisons of the relative cost positions of particular production sites, individual producers or groups of producers across the world or within a given country or region. Generally, a producer's position on a cost curve is described in terms of the particular percentile or quartile in which the production of a given plant or producer or group of producers appears.

The cost curves referred to in this document have been obtained by Xstrata from independent industry analysts with recognised experience in constructing cost curves for the relevant commodities, namely Brook Hunt, CRU and Barlow Jonker. To construct cost curves, industry analysts compile information from a variety of sources, including reports made available by producers, site visits, personal contacts and trade publications. Although producers may participate to some extent in the process through which cost curves are constructed, they are typically unwilling to validate cost analyses directly because of commercial sensitivities. Inevitably, assumptions must be made by the analyst with respect to data that such analyst is unable to obtain and judgement must be brought to bear in the case of virtually all data, however obtained.

In addition, the time required to produce cost curves means that even the most recent available examples will be unable to take account of recent developments. Costs data for specific producers may be based on costs incurred by the producers over their respective accounting years; while the independent analysts may attempt to adjust cost data to apply to calendar years, discrepancies may result from such adjustments and, to the extent accounting years differ from calendar years, the direct comparability of costs data may be limited. The cost curves referred to in this document reflect direct cash costs of production only, and exclude non-cash or indirect costs such as depreciation, interest and unrelated overhead expenses and costs relating specifically to marketing and export. The ferrochrome cost curve excludes indirect costs but includes delivery costs. Delivery costs reflect estimates for each producer to accepted selling points based on actual sales. They include estimates for all costs involved in delivery, including freight, insurance, warehousing and financing costs as well as sales commissions. Moreover, all cost curves embody a number of significant assumptions with respect to exchange rates and other variables. In summary, the manner in which cost curves are constructed means that they have a number of significant inherent limitations.

In certain cases, cost curves produced by more than one reputable industry analyst may exist with regard to a specific commodity. The methodologies employed and conclusions reached by such analysts may differ. Moreover, the reliability of any given cost curve may be difficult to assess, as the accuracy of the data, and the reasonableness of the assumptions on which it has been based, usually cannot be tested directly. Particular producers are, however, in a position to validate the accuracy of the presentation with respect to their own costs, which can provide a useful indication of the reliability of a cost curve overall and, notwithstanding their shortcomings, independently produced cost curves are widely used in the industries in which the Enlarged Xstrata Group operates.

The specific cost curves to which this document refers are the most recent cost curves which have been obtained by Xstrata from the independent industry analysts named above. All such cost curves are based on 2005 data. Whilst the Directors have satisfied themselves that the Enlarged Xstrata Group's own production costs are reasonably represented, the Enlarged Xstrata Group is not in a position to verify directly the cost data for other producers from which these cost curves were constructed or to update such data.

Metric/Imperial conversion table

The imperial equivalents of the metric units of measurement used in this document are as follows:

Wherever referred to in this document:	Metric unit	Metric symbol	Imperial equivalent
"kg" means kilogramme	Tonne	mt	1.102311 tons
"lb" means pound	Kilogramme	kg	2.20462 pounds
"oz" means troy ounces	Gramme	g	0.032151 troy ounces
"tonne" or "mt" means 1,000 kilogrammes	Metre	m	3.2808 feet
	Cubic metre	m^3	35.315 cubic feet
	Kilometre	km	0.6214 miles
	Hectare	ha	2.4711 acres

Rounding

Certain figures included in this document have been subject to rounding adjustments. Accordingly, discrepancies in tables between the totals and the sums of the relevant amounts are due to rounding.

No profit forecast

No statement in this document is intended as a profit forecast and no statement in this document should be interpreted to mean that earnings per Ordinary Share for the current or future financial years would necessarily match or exceed the historical published earnings per Ordinary Share.

Expected date of commencement of dealings in New Shares, fully paid, on the London Stock Exchange and on the SWX and New Shares credited to CREST stock accounts (uncertificated holders only[1])	**8.00 a.m. London Time (9.00 a.m. Central European Time) on Monday, 30 October 2006**
Expected date of dispatch of definitive share certificates for New Shares (to Qualifying non-CREST Shareholders only[1])	by Friday, 3 November 2006

[1] Subject to certain restrictions relating to Overseas Shareholders. See paragraphs 7 and 8 of Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue".

Expected Timetable of Principal Events

The dates set out in the expected timetable of principal events above and mentioned throughout this document and in the Provisional Allotment Letter may be adjusted by Xstrata in which event details of the new dates will be notified to the Financial Services Authority, the London Stock Exchange and the SWX and, where appropriate, to Shareholders. In particular, pursuant to the Underwriting Agreement, the Company and the Banks have agreed that if a supplementary prospectus is issued by the Company two or fewer Business Days prior to the date specified in the expected timetable of principal events above as the expected latest time and date for acceptance and payment in full (or such later date as may be agreed by the Company and the Banks), such date shall be deemed to be the date which is three Business Days after the date of issue of the supplementary prospectus (and the dates and times of principal events due to take place following such date will be adjusted accordingly).

References to times in this document are to London Time unless otherwise stated.

If you have any queries on the procedure for acceptance and payment, you should contact Computershare Investor Services PLC, PO Box 859, The Pavilions, Bridgwater Road, Bristol BS99 1XZ, UK, telephone 0870 707 1417 (UK only) or +44 870 707 1417 (international calls). The helpline is available between the hours of 8.30 a.m. and 5.30 p.m. (London Time) (9.30 a.m. and 6.30 p.m. Central European Time) on Monday to Friday excluding public holidays in the UK.

Relevant Documentation and Incorporation by Reference

The following documentation, which was sent to Shareholders at the relevant time and/or is available as described below, contains information which is relevant to the Rights Issue:

1. Xstrata Annual Reports and Accounts for the three financial years ended 31 December 2003, 31 December 2004 and 31 December 2005

   These contain the audited consolidated financial statements of Xstrata for the financial years ended 31 December 2003 and 2004 prepared in accordance with UK GAAP and the audited consolidated financial statements of Xstrata for the financial year ended 31 December 2005 prepared in accordance with IFRS, together with audit reports in respect of each such year.

   The audited consolidated financial statements of Xstrata for the financial year ended 31 December 2005 also contain information in relation to Xstrata's first time adoption of IFRS, Xstrata's change in accounting policies from UK GAAP to IFRS and an IFRS reconciliation of consolidated financial information of Xstrata to UK GAAP, as more fully described in Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – A. Financial information on the Former Xstrata Group".

2. 2006 Xstrata Interim Report for the six months ended 30 June 2006

   This contains the unaudited financial statements of Xstrata for the six-month periods ended 30 June 2005 and 30 June 2006 prepared in accordance with IFRS.

The table below sets out the various sections of the documents referred to above which are incorporated by reference into this Prospectus, so as to provide the information required pursuant to paragraphs 9.1, 9.2, 19, 20.1, 20.3, 20.4, and 20.6 of Annex I to the Prospectus Rules and paragraph 10.2 of Annex III to the Prospectus Rules and to ensure that Shareholders and others are aware of all information which, according to the particular nature of the Company and of the New Shares, is necessary to enable Shareholders and others to make an informed assessment of the assets and liabilities, financial position, profit and losses and prospects of the Company and of the rights attaching to the New Shares:

Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group

[This page is intentionally left blank]

Financial information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group

A. Financial information on the Former Xstrata Group

The information presented herein is extracted without material amendment from the consolidated financial statements contained in the 2006 Xstrata Interim Report and the Xstrata Annual Reports and Accounts. Each of the unaudited consolidated financial statements contained in the 2006 Xstrata Interim Report (together with the independent review report in the 2006 Xstrata Interim Report) and the audited consolidated financial statements contained in the Xstrata Annual Reports and Accounts (together with the auditors' reports in the Xstrata Annual Reports and Accounts) are incorporated by reference in this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference". You should read the information below in conjunction with the unaudited consolidated financial statements and independent review report contained in the 2006 Xstrata Interim Report and the audited consolidated financial statements and the auditors' reports contained in the Xstrata Annual Reports and Accounts and also the detailed information included in this document and the other information incorporated by reference into this document and you should not rely solely on key and summarised information. Ernst & Young LLP of 1 More London Place, London SE1 2AF, have issued unqualified audit opinions in respect of the financial statements for Xstrata for each of the financial years ended 31 December 2003, 31 December 2004 and 31 December 2005.

The information in respect of the Former Xstrata Group in paragraphs A and B of this Part I is presented in US dollars and in accordance with IFRS for the six-month periods ended 30 June 2006 and 30 June 2005 and for the years ended 31 December 2005 and 31 December 2004 and in accordance with UK GAAP for the financial years ended 31 December 2004 and 31 December 2003.

UK GAAP differ in certain significant respects from US GAAP and IFRS. See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP".

The following information is included in Notes 5 (First time adoption of IFRS and changes in accounting policies) and 7 (IFRS Reconciliation to UK GAAP) to Xstrata's audited consolidated financial statements for the year ended 31 December 2005 included in the Xstrata Annual Report and Accounts 2005, which have been incorporated by reference into this document as set out in the section of this document headed "Relevant Documentation and Incorporation by Reference":

- a discussion of Xstrata's first time adoption of IFRS from 1 January 2005 and Xstrata's consequent change in accounting policies;
- a summary of certain significant differences between IFRS and UK GAAP as they apply and applied to Xstrata;
- a reconciliation between Xstrata's UK GAAP and IFRS consolidated balance sheet at 1 January 2004 (the date of Xstrata's transition to IFRS);
- a reconciliation between Xstrata's UK GAAP and IFRS consolidated balance sheet and equity at 31 December 2004;
- notes to the consolidated balance sheet and equity reconciliation at 1 January 2004 and 31 December 2004;
- a reconciliation between Xstrata's UK GAAP and IFRS profit for the year ended 31 December 2004; and
- notes to the reconciliation of consolidated profit for the financial year ended 31 December 2004.

Selected financial information on the Former Xstrata Group

The following tables set out selected audited financial information under UK GAAP regarding the Former Xstrata Group for the two financial years ended 31 December 2003 and 31 December 2004, selected audited financial information under IFRS for the financial year ended 31 December 2005 and comparative consolidated financial statements for the year ended 31 December 2004, and selected unaudited financial information under IFRS for the six-month periods ended 30 June 2005 and 30 June 2006.

You should read the information below in conjunction with the rest of this Part I and the other detailed information included elsewhere in this document and incorporated by reference into this document and should not rely solely on selected and summarised information.

A. Financial information on the Former Xstrata Group (continued)

	Audited UK GAAP Year ended 31 December

(6) Earnings after interest but before tax and minority interests.
(7) Attributable profit before non-trading items but after minority interests.
(8) Profit from operating activities after minority equity interests.
(9) Attributable profit before non-trading items divided by the weighted average number of Ordinary Shares in issue during the period.
(10) Attributable profit divided by the weighted average number of Ordinary Shares in issue during the period.
(11) Dividends declared and paid during the period per Ordinary Share.
(12) Dividends proposed, but unpaid, during the period per Ordinary Share.
(13) The level of external indebtedness of the Former Xstrata Group including loans, the liability component of the convertible borrowings and finance leases net of cash (including 100% of Minera Alumbrera Limited cash), cash equivalents and arrangement fees.
(14) Total assets less total liabilities.
(15) Net debt as a percentage of equity (including minority interests).
(16) Non-trading items relate to acquisition costs.
(17) Non-trading items, with regard to the years ended 31 December 2004 and 31 December 2005, include profit on the sale of discontinued operations, income tax benefit on non-trading items, finance income and costs, acquisition costs, profit on sale of investments and re-structuring and closure costs.
(18) Non-trading items, with regard to the six-month periods ended 30 June 2005 and 30 June 2006, include acquisition costs, recycled foreign currency gains/losses from the translation reserve, loan issue costs written off on facility refinancing, income tax benefits on non-trading items and profit on the sale of discontinued operations.

A. Financial information on the Former Xstrata Group (continued)

Six-month periods ended 30 June 2006 and 30 June 2005 and years ended 31 December 2005 and 31 December 2004 – IFRS

The following tables set out financial information (which has been prepared in accordance with IFRS) relating to the Former Xstrata Group at, and for each of the six-month periods ended, 30 June 2006 and 30 June 2005 and at, and for the years ended, 31 December 2005 and 31 December 2004.

To comply with European Union legislation, the Former Xstrata Group adopted IFRS from 1 January 2005. The date of transition was 1 January 2004 and as a result the 2004 comparative information has been adjusted to conform with IFRS.

The rules for first time adoption of IFRS are set out in IFRS 1 "First Time Adoption of International Financial Reporting Standards". IFRS 1 states that a company should use the same accounting policies in its opening IFRS balance sheet and throughout all periods presented in its first IFRS financial statements. In preparing this financial information, the Former Xstrata Group applied the mandatory exemptions and certain of the optional exemptions from full retrospective application of IFRS.

The primary exemptions that were applied by the Former Xstrata Group are described in Note 5 (First time adoption of IFRS and changes in accounting policies) of the notes to Xstrata's audited consolidated financial statements for the year ended 31 December 2005 included in the Xstrata Annual Report and Accounts 2005, which has been incorporated by reference into this document as described in the section of this document headed "Relevant Documentation and Incorporation by Reference".

The information presented herein at, and in respect of the six-month periods ended, 30 June 2005 and 30 June 2006 is unaudited and, in each case, is extracted without material amendment from the 2006 Xstrata Interim Report. The information presented herein at, and in respect of the year ended, 31 December 2005 is audited and is extracted without material amendment from the Xstrata Annual Report and Accounts 2005. The information presented herein at, and in respect of the year ended, 31 December 2004 is unaudited and is extracted without material amendment from the Xstrata Annual Report and Accounts 2005.

B. Operating and financial review relating to the Former Xstrata Group

The following discussion of the financial condition and results of operations of the Former Xstrata Group should be read in conjunction with "A. Financial information on the Former Xstrata Group" in this Part I above with "C. Financial Information on the Falconbridge Group" in this Part I below, with "D. Operating and Financial Review Relating to the Falconbridge Group" below, and with the information relating to the businesses of the Enlarged Xstrata Group, the Former Xstrata Group and the Falconbridge Group included elsewhere in this document and the financial and other information on the Former Xstrata Group incorporated by reference into this document as described in the section of this document headed "Relevant Information".

Some of the information in the review set forth below and elsewhere in this document and in the information incorporated by reference into this document includes forward-looking statements that involve risks and uncertainties. See the section of this document headed "Presentation of Information – Cautionary note regarding forward-looking statements" for a discussion of important factors that could cause actual results to differ materially from the results described in the forward-looking statements contained in this document. Factors that could cause or contribute to such differences include those discussed below and elsewhere in this document, particularly in the section of this document headed "Risk Factors".

Investors and potential investors should read the whole of this document and not just rely on summarised or key information. See also the section of this document headed "Presentation of Information – Presentation of financial information".

Overview of the Enlarged Xstrata Group's business

The Enlarged Xstrata Group is the fifth largest diversified mining group in the world with top five industry positions in copper, thermal and coking coal, ferrochrome, zinc, nickel and vanadium, a smaller but profitable aluminium business, recycling facilities, additional exposures to gold, lead, silver and platinum group metals and a suite of global technologies, many of which are leading technologies in the industry. The Enlarged Xstrata Group's operations and projects span five continents and 18 countries: Argentina, Australia, Brazil, Canada, Chile, Colombia, the Dominican Republic, Germany, Jamaica, New Caledonia, Norway, Papua New Guinea, Peru, South Africa, Spain, Tanzania, the UK and the USA.

The Enlarged Xstrata Group's business is organised in the following six principal business units:

Copper. The Enlarged Xstrata Group is the world's fourth largest producer of mined copper. The Copper Business incorporates the Former Xstrata Group Copper Business, which has interests in two operating mines, a smelter and a refinery in Australia, one mine in Argentina and one mining and processing operation in the high Andes region of southern Peru, and the Falconbridge Copper Business which has interests in the Antamina copper and zinc mine in Peru, the Altonorte copper smelter, the Collahuasi copper mine and the Lomas Bayas copper mine and solvent extraction-electrowinning (SX-EW) refinery in Chile, the Kidd copper and zinc mine in Canada as well as smelting, refining and recycling facilities in Canada and the United States.

Coal. On a managed basis, the Enlarged Xstrata Group is one of the world's largest producers of export thermal coal, one of the largest producers of export semi-soft/PCI coal and the fifth largest producer of export coking coal. It has interests in 33 operating coal mines, 19 of which are located in Australia, 13 in South Africa and one in Colombia.

Nickel. The Enlarged Xstrata Group is the fourth largest producer of refined nickel in the world, and one of the largest recyclers and processors of nickel and cobalt-bearing materials. Its operations include mines and processing facilities in Canada, Norway and the Dominican Republic.

Zinc. The Enlarged Xstrata Group is one of the world's largest producers of zinc. The Zinc Business incorporates the Former Xstrata Group Zinc Business, with zinc smelting operations in Spain and Germany, interests in three operating mines and a lead smelter in Australia and a lead refining plant in the United Kingdom, and the Falconbridge Zinc Business, with interests in the Antamina copper and zinc mine in Peru, the Brunswick zinc mine and a lead smelter and refinery in New Brunswick and a minority interest in a zinc smelter in Valleyfield, Quebec, Canada.

Aluminum. The Enlarged Xstrata Group's aluminium operations include six plants in the United States that produce alumina, primary aluminium and aluminium foil, as well as a mining operation in St. Ann, Jamaica.

Alloys. The Enlarged Xstrata Group is the world's largest producer of ferrochrome and one of the world's leading producers of primary vanadium, with integrated production facilities in South Africa. It also has a platinum group metal ("PGM") joint venture with Rustenburg Plantinum Mines and Kagiso in South Africa.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Xstrata previously had a forestry business in Chile, which was sold in January 2005, and a magnesium recycling business in North America, which was sold in April 2003. Falconbridge previously had aftermarket automotive wheel manufacturing and distribution operations, American Racing Equipment, which it sold in July 2005.

The Enlarged Xstrata Group comprises, following completion of the Falconbridge Acquisition in August 2006, the Former Xstrata Group and the Falconbridge Group. The Former Xstrata Group's principal businesses comprise the Coal Business, the Former Xstrata Group Copper Business, the Former Xstrata Group Zinc Business and the Alloys Business. The Falconbridge Group's principal businesses comprise the Nickel Business, the Falconbridge Group Copper Business, the Falconbridge Group Zinc Business and the Aluminum Business. For information in relation to the Former Xstrata Group, see Part IV – "Information on the Former Xstrata Group's Business" and, for information in relation to the Falconbridge Group, see Part V – "Information on the Falconbridge Group's Business".

Principal factors affecting the Enlarged Xstrata Group's and the Former Xstrata Group's business

Principal factors affecting the Former Xstrata Group's results of operations (and those which are expected to affect the Enlarged Xstrata Group's results of operations in the future) are discussed below:

Market conditions

Commodity prices are significantly affected by changes in global economic conditions and related industry cycles. Prices of commodity products, such as copper, coal, nickel, zinc, aluminium, lead, chrome and vanadium, the primary products of the Enlarged Xstrata Group, can vary significantly when world supply and demand fluctuate and are influenced by other related factors such as speculative activities by market participants, political and economic conditions, as well as production costs in major producing regions. The realised price for metals is also influenced by regional supply-demand factors, the availability and price of secondary or metal containing scrap materials, and other substitute commodity products. Whilst the producers are unable to influence commodities prices directly, events such as the introduction of commodity production capacity and temporary price reductions or other attempts to capture market share by individual producers may also have an effect on market prices. In addition, the prices realised by producers on sales of their products can, to some extent, be affected by contractual arrangements, production levels and hedging strategies. The Enlarged Xstrata Group generally realises prevailing market prices and generally does not hedge the price it realises on the sale of its own production. Price variations and market cycles have historically influenced the financial performance of the Former Xstrata Group and are expected to continue to influence the financial performance of the Enlarged Xstrata Group.

Commodity prices

The following table sets out indicative average market prices in US dollars for the Former Xstrata Group's principal commodities for the periods indicated:

Average commodity prices

		Average for the year ended 31 December			Average for the six months ended 30 June	
	Unit	2003	2004	2005	2005	2006
Australian FOB export coking	US$/t	43.5	65.3	111.5	100.3	117.8
Australian FOB export semi-soft coking	US$/t	30.5	47.2	70.3	63.7	73.2
Australian FOB export thermal coal	US$/t	25.2	40.9	51.2	50.2	47.0
Colombian FOB export thermal coal	US$/t	n/a	n/a	n/a	n/a	48.8
South African export thermal coal	US$/t	24.9	39.0	48.5	49.1	45.1
Copper (LME)	US$/t	1,779	2,866	3,684	3,333	6,075
Gold (LBM)	US$/oz	364	409	445	427	580
Lead (LME)	US$/t	515	886	976	983	1,171
Silver (LBM)	US$/oz	4.88	6.69	7.31	7.01	10.98
Zinc (LME)	US$/t	828	1,048	1,382	1,295	2,762
Ferrochrome (Metal Bulletin)	US¢/lb	46.0	68.0	73.0	75.5	66.6
Ferrovanadium (Metal Bulletin)	US$/kg	11.5	27.2	70.5	88.8	40.5

For a detailed discussion of recent market conditions and market outlook for each of the Enlarged Xstrata Group's principal commodities, see Part II – "Information on the Enlarged Xstrata Group – Overview of the industries in which the Enlarged Xstrata Group principally operates".

B. Operating and financial review relating to the Former Xstrata Group (continued)

Exchange rates

During the periods under review, the Former Xstrata Group's results were affected significantly by exchange rate fluctuations between the US dollar and the South African Rand, the Australian dollar and the Euro. In recent years, each of these currencies has strengthened considerably against the US dollar, although this trend was partially reversed during 2005 and the first half of 2006. The strengthening of these currencies against the US dollar has resulted in increased production costs, in US dollar terms, for the Former Xstrata Group during the period under review. The following tables reflect the historical average and closing exchange rates of the Argentine peso, the Australian dollar, the Canadian dollar, the Chilean Peso, the Euro, the British pound, the South African Rand and the Swiss Franc against the US dollar where relevant to the Former Xstrata Group for the periods and dates indicated:

Average currency rates in relation to US$

	Average for year ended 31 December			Average for six months ended 30 June	
	2003	2004	2005	2005	2006

Notes

(1) Average and closing Canadian dollar currency rates are shown in the tables above only for periods during which, and at dates which, the Former Xstrata Group had a stake in Falconbridge.

(2) Average and closing Chilean Peso currency rates are shown in the tables above only for periods during which, and at dates which, the Former Xstrata Group had its forestry business in Chile.

Currency cash flow hedging has been used historically to reduce the Former Xstrata Group's short-term exposure to fluctuations in the local currency exchange rates to the US dollar, Sterling and the Euro. The hedging gains reflected in the Company's consolidated income statement for the year ended 31 December 2005 amounted to US$45 million compared to US$218 million for the year ended 31 December 2004. The unrealised mark-to-market loss on currency hedging in place at 31 December 2005 was US$14.2 million. The currency hedging losses reflected in the Company's consolidated income statement for the six months ended 30 June 2006 amounted to US$5 million compared to gains of US$32 million for the six months ended 30 June 2005. The unrealised mark-to-market position for currency hedging at 30 June 2006 was $0.4 million. Australian dollar hedging is taken out in respect of US dollar priced sales. The majority of Australian dollar hedging relates to Australian dollar costs in respect of contracted and priced sales.

Like the Former Xstrata Group, the Enlarged Xstrata Group produces and sells commodities that are typically priced in US dollars. A large portion of the operating costs of the Enlarged Xstrata Group, however, is incurred in local currencies of the countries in which the Enlarged Xstrata Group's mining, production and other facilities are located. Accordingly, the Enlarged Xstrata Group may be significantly affected by exchange rate fluctuations between the US dollar and such currencies. From time to time, the Enlarged Xstrata Group may hedge a portion of its currency exposures and requirements

B. Operating and financial review relating to the Former Xstrata Group (continued)

to try to limit any adverse effect of exchange rate fluctuations on the Enlarged Xstrata Group's results of operations and financial condition. See the section of this document headed "Risk Factors – Currency fluctuations".

Production costs and efficiency

As in the case of the Former Xstrata Group, the Enlarged Xstrata Group, in common with its competitors, is unable to influence commodity prices directly and its competitiveness and long-term profitability are, to a significant degree, dependent upon its ability to reduce costs and maintain low-cost, efficient operations. Costs associated with mining and metal production can be broadly categorised into labour costs and other on-site expenses, including power and equipment costs, port handling costs and freight costs. Production costs are largely influenced by ore grades, mine planning, processing technology, energy and supply costs and the impact of exchange rate fluctuations on costs of operations.

During the period under review, the positive effects of rising commodity prices have been partially offset by rising costs, particularly in respect of power, fuels, labour, transport, equipment and consumables.

Unit production costs are also significantly affected by production volumes, and therefore, the Enlarged Xstrata Group's production levels are a key factor in determining its overall cost competitiveness.

In connection with the Falconbridge Acquisition, the Company has identified anticipated annualised cash cost savings of around US$120 million, comprising reductions in certain duplicated head office and administrative functions and non-Canadian exploration activity, together with a proportional share of the synergies identified by Inco and Falconbridge from the Sudbury nickel businesses. In addition, Xstrata expects to benefit from the incorporation of Falconbridge into the Enlarged Xstrata Group's financial structure and from synergies arising from the optimisation of material flows across Xstrata's enlarged copper and zinc businesses.

Acquisitions, disposals and discontinued operations

Acquisitions and disposals

Key factors affecting comparability of the results of operations of the Former Xstrata Group as a whole during the period under review include the following principal acquisitions and disposals of the Former Xstrata Group:

- On 24 June 2003, the Former Xstrata Group acquired 100% of the issued share capital of MIM Holdings Limited (now known as Xstrata Queensland Limited) for US$2.1 billion. In addition to its thermal coal and zinc lead assets, the acquisition of MIM provided the Former Xstrata Group with significant new products in copper and coking coal as well as a number of proprietary technologies, which are the main products of Xstrata Technology. The size and timing of the MIM acquisition substantially affects the comparability of the results of operations of the Former Xstrata Group for the financial years ended 31 December 2003 and subsequent periods under review.

- In November 2003, the Former Xstrata Group sold interests in the following JANEs: a 20% interest in the Newlands, Collinsville, Abbot Point Joint Venture, a 20% interest in the Oaky Creek Coal Joint Venture and a 25% interest in four Xstrata Coal Queensland projects in equal proportions to joint venture partners, Itochu Corporation and Sumitomo Corporation, for net consideration of US$388.4 million. JANEs are joint arrangements not creating an entity. They are characterised by the sharing of output (for example, the physical commodity or transport facility) rather than the sharing of profit for operations of the joint venture.

- On 1 July 2004, the Former Xstrata Group established a combined Pooling and Sharing Venture ("PSV") with Merafe Resources Limited ("Merafe"). The PSV was the first black economic empowerment transaction for the Former Xstrata Group and represented a considerable step forward in achieving compliance with the New Minerals and Petroleum Resources Development Act in South Africa.

- In August 2005, Anglo Platinum and the Former Xstrata Group formed the Mototolo Joint Venture to develop a platinum group metals ("PGM") mine and concentrator on the Eastern Limb of the Bushveld Complex in Mpumalanga, South Africa. Anglo Platinum and the Former Xstrata Group each agreed to contribute a similar amount of in-situ PGM reserves and resources. Anglo Platinum agreed to purchase the Former Xstrata Group's 50% share of PGM concentrate for further smelting, refining and marketing of finished product. The Former Xstrata Group agreed to construct a beneficiation plant at its own cost to process the UG2 chrome tailings arising from the PGM concentrator and to purchase Anglo Platinum's 50% share of chrome concentrate. In February 2006, the Former Xstrata Group announced its agreement to form a black economic empowerment partnership with Kagiso Trust Investments (Proprietary) Limited

B. Operating and financial review relating to the Former Xstrata Group (continued)

("Kagiso") in respect of the Former Xstrata Group's 50% interest in the Mototolo Joint Venture. As of 11 May 2006, Kagiso, through a special purpose vehicle, Kagiso Platinum Venture (Pty) Limited ("KPV"), acquired 26% of the Former Xstrata Group's 50% interest in the joint venture, resulting in KPV owning a fully participative 13% interest in the earnings from the Mototolo Joint Venture, in return for funding its proportionate share of the total capital expenditure required for the project. The Former Xstrata Group retains an effective 37% interest. KPV's participation is effective retrospectively from the inception of the Mototolo Joint Venture. In order to facilitate Kagiso's fundraising, Xstrata South Africa provided a ZAR100 million (approximately US$12.9 million) completion guarantee to Kagiso's financiers, Investec Bank Limited. The total capital expenditure for the project is estimated at ZAR1,350 million (approximately US$174.5 million) to commissioning, of which the Former Xstrata Group's share is 37%. The Former Xstrata Group's investment is expected to be made by the end of 2007 and funded from the Enlarged Xstrata Group's free cash flow. Initial production of PGM is anticipated in the last quarter of 2006 and full production by the end of 2007.

- In August and September 2005, Xstrata Alberta acquired 73,665,996 Falconbridge Shares in private transactions, representing approximately 19.9% of the then outstanding Falconbridge Shares, at a price of C$28 per Falconbridge Share, or approximately C$2,062.6 million (approximately US$1,848.5 million) in aggregate. These acquisitions were financed by borrowings under the Second Facility Agreement described in paragraph 22.22 of Part VIII – "Additional Information – Material contracts" and the issue of the 2017 Convertible Debenture described in paragraph 22.20 of Part VIII – "Additional Information – Material contracts".

- In March 2006, the Former Xstrata Group announced the proposed acquisition of $33^{1/3}$% of the Cerrejón thermal coal operation in Colombia, from the Cerrejón Vendors, for a total consideration of US$1,712 million, which included an agreed amount of US$12 million in respect of the value of the excess net assets of the Cerrejón Business as at 1 January 2006 over the Cerrejón Purchasers' target net asset value of the Cerrejón Business. The consideration was satisfied in cash on completion of the Cerrejón Acquisition on 12 May 2006 and was financed through the Cerrejón Bridge Facility Agreement described in paragraph 22.13 of Part VIII – "Additional Information – Material contracts".

- On 16 May 2006, the Former Xstrata Group announced the proposed acquisition of the Tintaya copper mine and associated satellite deposits in Peru, South America, from BHP Billiton for US$750 million (before working capital adjustments). The acquisition price comprised an initial cash consideration paid on completion on 21 June 2006 of US$634 million and the assumption of US$116 million of debt. An agreed price participation arrangement based on prevailing copper prices upon completion of the transaction resulted in further deferred cash payments to BHP Billiton totalling US$25 million having to be paid during the eighteen months from January 2007 to June 2008. Two further conditional deferred payments of US$25 million each in cash may also be payable to BHP Billiton. The first such amount will be payable in July 2009 if the LME copper price exceeds certain levels from July 2008 to June 2009. The second amount will be payable if either of the Antapaccay or Coroccohuayco satellite deposits are developed prior to 2020. The consideration for the Tintaya Acquisition was funded from debt facilities of the Former Xstrata Group.

Discontinued operations

The Former Xstrata Group's discontinued operations include its forestry operation in Chile, which was sold in January 2005, and its magnesium scrap recycling plant in the United States, which was sold in April 2003.

Recent significant developments

- In August 2005, Xstrata announced the Former Xstrata Group's intention to convert the McArthur River zinc-lead mine in the Northern Territory, Australia from an underground to an open cut operation to enable production to continue at the mine. The switch of mining methods entails an investment initially estimated at A$66 million (approximately US$49.4 million) which, provided the necessary regulatory approval is obtained, is expected to be made over the next two years and funded from the Enlarged Xstrata Group's free cash flow. The regulatory approval may be subject to stringent compliance requirements which, added to further delays in the approval process, will result in increased project capital and operating cost.

- On 17 May 2006, Xstrata announced the placing to institutional investors of 61,994,320 Ordinary Shares at a price of 2100 pence per Ordinary Share to raise gross proceeds of approximately £1,302 million. The Placing, which closed on 22 May 2006, comprised 32,543,344 new Ordinary Shares issued by the Company and 29,450,976 Ordinary Shares held at the time of the Placing by Batiss pursuant to the ECMP. The Placing was carried out to raise proceeds for the

B. Operating and financial review relating to the Former Xstrata Group (continued)

Former Xstrata Group to pay back a portion of the debt incurred in relation to the acquisitions of the initial stake of approximately 19.9% in Falconbridge and the Cerrejón Acquisition.

- On 20 June 2006, Xstrata announced that heads of agreement had been signed with Caledon Resources plc for the partial sale of the Enlarged Xstrata Group's Cook Colliery and the surrounding Southern Resource. The Enlarged Xstrata Group will retain the large Northern Resource. A conditional sale and purchase agreement was entered into in respect of the sale on 22 August 2006. The consideration is A$45.6 million (approximately US$34.1 million), payable in cash.

- On 28 July 2006, Xstrata Alberta purchased for cash 18,556,430 Falconbridge Shares through the TSX, representing approximately 5% of the then outstanding Falconbridge Shares, at an average price of C$62.25 per Falconbridge Share, or approximately C$1,155.1 million (approximately US$1,035.2 million) in aggregate. On 15 August 2006, Xstrata Canada acquired for cash 257,700,100 Falconbridge Shares under the Xstrata Offer, representing approximately 67.8% of the then outstanding Falconbridge Shares, at the Xstrata Offer price of C$62.50 per Falconbridge Share, or approximately C$16,106.3 million (approximately US$14,434.8 million) in aggregate. On 25 August 2006, Xstrata Canada acquired for cash 18,637,431 Falconbridge Shares under the Xstrata Offer, representing approximately 4.9% of the then outstanding Falconbridge Shares, at the Xstrata Offer price, or approximately C$1,164.8 million (approximately US$1,043.9 million) in aggregate. As a result of these transactions and the Former Xstrata Group's acquisitions of approximately 19.9% of the then outstanding Falconbridge Shares in August and September 2005, Xstrata now beneficially owns approximately 97.1% of the issued and outstanding Falconbridge Shares on a fully-diluted basis. Since the Xstrata Offer was accepted by holders of more than 90% of Falconbridge Shares, Xstrata has begun the process of exercising its right under the compulsory acquisition provisions of section 188 of the Business Corporations Act (Ontario), as amended, to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006. The aggregate cash consideration paid by the Former Xstrata Group for Falconbridge Shares since 30 June 2006 (and therefore excluding the consideration of approximately US$1.7 billion in aggregate for the stake acquired in August and September 2005 and excluding the consideration to be paid in respect of the Falconbridge Shares to be acquired under the compulsory acquisition procedure, which is estimated at approximately C$659.0 million (approximately US$590.6 million in aggregate) was approximately C$18.3 billion (approximately US$16.4 billion). The market purchases of Falconbridge Shares and the Xstrata Offer were, and the compulsory acquisition procedure will be, financed by the Former Xstrata Group's existing cash resources and debt financing under the Equity Bridge Facility, the Debt Bridge Facility and the Acquisition Facilities described in paragraph 22.9 of Part VIII – "Additional Information – Material contracts".

- Following the expiry of the Inco Offer for Falconbridge on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement.

- Falconbridge paid a special cash dividend of C$0.75 per Falconbridge Share on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006, being cash payments of approximately C$278.1 million (approximately US$249.2 million) and approximately US$3.6 million in aggregate of which approximately C$55.2 million (approximately US$49.5 million) was received by the Former Xstrata Group in respect of its Falconbridge Shares held on the record date.

- In February 2006, Xstrata announced the agreement of the Former Xstrata Group and African Rainbow Minerals Limited ("ARM") to establish a new black controlled coal mining company called ARM Coal (Proprietary) Limited ("ARM Coal"), with operating assets and growth projects in South Africa and participation in the export and domestic thermal coal markets. The transaction completed on 24 August 2006. The principal features of the transaction were as follows:

    - As of completion, ARM paid ZAR400 million (approximately US$51.7 million) to subscribe for 51% and the Former Xstrata Group paid ZAR384 million (approximately US$49.6 million) to subscribe for 49% of the issued share capital of ARM Coal, which holds a 20% interest by way of participating preference shares in the existing coal operations of Xstrata South Africa, excluding the Goedgevonden project, and a direct 51% interest in the Goedgevonden project. The Former Xstrata Group agreed to provide certain vendor financing to ARM Coal and, to advance ARM's participation in the South African coal industry, also agreed to grant ARM an option (the "ARM

B. Operating and financial review relating to the Former Xstrata Group (continued)

Option") to increase its direct participation in participating preference shares of Xstrata South Africa by up to a further 10%. ARM exercised the ARM Option in August 2006, which will result in historically disadvantaged South Africans controlling approximately 36% of Xstrata's South African coal business.

- Under this transaction, which was valued in aggregate at approximately ZAR2.4 billion (approximately US$310.3 million), ARM Coal initially subscribed for participating preference shares ("Initial Preference Shares") in the capital of Xstrata South Africa for cash consideration of ZAR784 million (approximately US$101.4 million), by applying the subscription proceeds received from the Former Xstrata Group and ARM for its ordinary shares. The Initial Preference Shares entitle ARM Coal to participate in 20% of the free cash flow of Xstrata South Africa's existing coal operations, excluding the Goedgevonden project. All dividends received from the Initial Preference Shares flow to ARM via ARM Coal.

- Under the terms of the ARM Option, ARM will subscribe for new participating preference shares ("Further Preference Shares") in the capital of Xstrata South Africa for cash consideration of ZAR400 million (approximately US$51.7 million). The Further Preference Shares carry the same rights and obligations as the Initial Preference Shares save that no vendor facilitation (relating to interest and capital standstill arrangements and the application of the cash upstream principle as more fully described below) was provided by Xstrata South Africa. Accordingly, the Further Preference Shares will entitle ARM to participate in 10% of the free cash flow of Xstrata South Africa's existing coal operations, excluding the Goedgevonden project, and dividends received from the Further Preference Shares will flow directly to ARM.

- For the purposes of this transaction, ZAR4 billion (approximately US$517.2 million) of debt was attributed to Xstrata South Africa's existing coal operations excluding the Goedgevonden project. This debt bears interest at the prime overdraft rate of interest quoted publicly by the Standard Bank of South Africa (the "prime rate") and is to be repaid over a ten-year period following a five-year vendor facilitation period during which no interest will accrue and no principal will be required to be repaid. Xstrata South Africa provided debt funding of ZAR765 million (approximately US$98.9 million) to ARM Coal in order to fund its acquisition of the 51% interest in the Goedgevonden project. This debt bears interest at the prime rate and the repayment period is linked to the underlying cash flows of ARM Coal.

- Furthermore, Xstrata South Africa is obliged to provide the project funding required to bring the Goedgevonden project into commission. The project funding is expected to peak at approximately ZAR2.9 billion (approximately US$375.0 million) and will be repayable over ten years following an eight-year vendor facilitation period. During this eight-year period, no interest will accrue and no principal will be required to be repaid in respect of Xstrata South Africa's portion of the project funding and ARM Coal will be entitled to share in this benefit. The project funding will bear interest at the prime rate.

- In order for ARM to gain immediate access to cash flows, a cash upstream principle is applicable for the first five years following completion of the transaction, whereby 20% of Goedgevonden's operating cash flow will be distributed to the joint venture parties according to their respective interests. The remaining 80% of the operating cash flow will be utilised towards the servicing of the project funding debt. Furthermore, 80% of the operating cash flow received from the Goedgevonden project by ARM Coal will be used to service ARM Coal's debt of ZAR765 million and the remaining 20% will be distributed to the shareholders of ARM Coal.

- Falconbridge announced on 15 September 2006 its intention to redeem its outstanding Cumulative Redeemable Preferred Shares, Series F and Series G, and Cumulative Preferred Shares, Series 1 on 1 November 2006. The Enlarged Xstrata Group intends to utilise its internal cash resources to fund the aggregate redemption price of approximately C$306 million (approximately US$274.2 million).

- On 3 October 2006, Xstrata announced the Rights Issue.

Current trading and prospects

Since 30 June 2006, Xstrata has continued to trade well, with demand for commodities remaining robust. In the wider market, this demand, together with market supply constraints and long lead times to add new market capacity, has supported prices for the Enlarged Xstrata Group's commodities significantly above long-term averages.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Base metals prices rose strongly in the first half of 2006, with copper, zinc and lead prices peaking in May before falling back in June. In mid-September 2006, the prices of these three metals fell back from their recent highs due to concerns over potential softer Chinese demand and the performance of the US economy. However, base metal prices remain significantly above their long-term averages and the assumptions that underpinned the Falconbridge Acquisition.

For copper, supply uncertainty and a strong physical market supported prices. The market was sensitive to supply issues such as industrial unrest in Escondida, a significant copper mine in Chile (which is owned by third parties outside the Enlarged Xstrata Group, including BHP Billiton and Rio Tinto), further boosting the copper price. This dispute has now ended, but the prevailing copper price remains supported by a tight market. In the three months ended 30 September 2006, copper prices consolidated in a range between US$7,000 per tonne and US$8,000 per tonne. Expansionary projects to increase smelter capacity at the Enlarged Xstrata Group's Australian Mount Isa operation are expected to improve refined metal output in the second half of 2006.

Strong global zinc demand growth (approaching 7% in 2006), low zinc stocks on the London Metal Exchange (LME) and a supply deficit have combined to boost the zinc price in the second half of 2006, in addition to the increase in the first half of 2006. This mitigated lower metal production in the Enlarged Xstrata Group's Australian operations in the first half of 2006, and improved concentrator capacity coming on stream in the second half 2006 is expected to improve zinc and lead volumes significantly.

Low LME stocks and surging demand from stainless steel producers have boosted nickel prices to date in 2006. Despite significant gains in the first half of 2006, prices increased further in the third quarter of 2006 and stocks currently remain low. This has facilitated a strong performance by the Nickel Business despite the impact of high fuel costs.

Following an increase of approximately 12% in the aluminium price in the first six months of 2006, the aluminium price has remained flat to date in the second half of 2006, albeit at a relatively high level by historical standards.

For thermal and coking coal, more than 90% of Xstrata's export sales from Australia and South Africa have been priced for the remainder of 2006. Thermal and coking coal prices have remained above historical averages in 2006, although average realised prices are expected to be lower than in 2005. A key driver of earnings for the Coal Business in 2007 will be the settlement of contract prices in Australian thermal and coking coals for the new contract year from 1 April 2007 as well as coal's competitive position in the European energy market. Thermal coal prices relating to this period for contracts settled to date have reflected the continued strong demand, while hard coking coal price negotiations for the new contract year typically will not commence until later in 2006. In Europe, the forward coal prices are currently higher than spot pricing, reflecting a stronger forward electricity and gas market. Production volumes are higher in 2006 due to commencement of projects such as the Rolleston thermal coal project in Queensland, Australia and a second longwall in the Oaky No 1 coking coal operation, although the Company does not expect the Enlarged Xstrata Group's South African operations to increase exports for 2006.

Stronger demand from stainless steel producers in 2006 has supported an increase of 4.75 cents per pound in the ferrochrome price in the third quarter of 2006. The Project Lion ferrochrome smelter complex started production in September 2006, on time and within budget, adding additional, lower cost capacity to the Enlarged Xstrata Group's South African ferrochrome business. Vanadium prices have declined from the peaks seen in 2005, but remain strong and are anticipated to remain significantly above historical levels during 2006.

Results of operations

For the purposes of the this discussion of the Former Xstrata Group's results of operations:

- comparisons of financial information for the six-month period ended 30 June 2006 with that of the six-month period ended 30 June 2005 and comparisons of financial information for the year ended 31 December 2005 with that of the year ended 31 December 2004 are based on historical financial information prepared in accordance with IFRS; and
- comparisons of financial information for the year ended 31 December 2004 with that of the year ended 31 December 2003 are based on historical financial information prepared in accordance with UK GAAP.

UK GAAP differ in certain significant respects from IFRS. See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP".

B. Operating and financial review relating to the Former Xstrata Group (continued)

Profit and loss account items

Revenue

Former Xstrata Group. The primary sources of revenue and the nature of associated costs for the Former Xstrata Group and its businesses are set out under Part IV – "Information on the Former Xstrata Group's Business – Coal Business summary", Part IV – "Information on the Former Xstrata Group's Business – Former Xstrata Group Copper Business summary", Part IV – "Information on the Former Xstrata Group's Business – Former Xstrata Group Zinc Business summary" and Part IV – "Information on the Former Xstrata Group's Business – Alloys Business summary". The relationship that the Former Xstrata Group has with Glencore International is important to the marketing of the Enlarged Xstrata Group's products. See Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore – Commercial relationship".

The following tables show the Former Xstrata Group's revenues, including share of joint ventures, analysed by major categories of products and services for the periods indicated:

	Audited UK GAAP Year ended 31 December	
	2003	2004
	US$m	
Coal	1,597.6	2,693.4
Copper	555.1	1,598.3
Zinc	760.3	1,165.3
Alloys	543.0	953.0
Other	25.6[1]	55.3[2]
Former Xstrata Group	3,481.6	6,465.3

[1] In 2003, "Other" consisted of the magnesium, forestry and technology businesses.
[2] In 2004, "Other" consisted of the technology and forestry businesses.

	Unaudited IFRS Year ended 31 December	Audited IFRS Year ended 31 December
	2004	2005
	US$m	
Coal	2,693.4	3,400.4

Former Xstrata Group	6,465.3	8,049.8

[1] In 2004, "Other" consisted of the technology and forestry businesses.
[2] In 2005, "Other" consisted of the technology business.

	Unaudited IFRS Six months ended 30 June	
	2005	2006
	US$m	
Coal	1,645.4	1,692.5
Copper	778.2	1,718.2
Zinc	671.8	1,283.9
Alloys	638.9	432.0
Technology	31.4	51.7
Former Xstrata Group	3,765.7	5,178.3

Coal. The Former Xstrata Group's coal revenues are generated from the sale of thermal, coking and semi-soft coal from the Former Xstrata Group's mining and production facilities in South Africa and Australia. Sales of coal may be made on the spot market, on the basis of supply contracts with negotiated volumes and prices, as well as under annually renewable long-term supply arrangements. The majority of the Former Xstrata Group's sales are to export markets in transactions denominated in US dollars. As a result, the Former Xstrata Group's turnover is impacted by changes in the international spot markets and the relative strength of the US dollar compared to other currencies.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Copper. The Former Xstrata Group's copper revenues are made up of sales of copper concentrates, copper cathode, copper-gold concentrates and gold doré from the Former Xstrata Group's mines, mineral processing plants and projects in Australia and Argentina. Approximately 90% of the concentrates are sold under smelter frame contracts and the remainder are in the spot market and are sales to export markets in transactions denominated in US dollars. Approximately 35% of cathode produced at the copper refinery in Townsville is sold domestically in Australia. The remaining 65% is sold to Glencore via an off-take agreement and exported into the Asian region (see Part II – "Information on the Enlarged Xstrata Group – Relationship with Glencore").

Zinc. The Former Xstrata Group's zinc revenues are made up of sales of zinc metal, zinc concentrates, refined lead and silver and by-products such as germanium, cadmium, sulphuric acid and sulphur dioxide from the Former Xstrata Group's operations in Spain, Germany, Australia and the United Kingdom, which include mines, smelters, plants and a refinery. Zinc metal is primarily sold in EU countries in the form of SHG ingots or alloys. Zinc concentrates are sold primarily in Australia, Japan, Korea, China and Europe.

Alloys. The Former Xstrata Group's alloys revenues are made up of sales of chrome and vanadium. The majority of the Former Xstrata Group's chrome products are exported to stainless steel manufacturers in North America, Europe and the Pacific Rim. Vanadium pentoxide is produced in South Africa by the Former Xstrata Group and it is almost exclusively upgraded to ferrovanadium. The Former Xstrata Group's ferrovanadium is exported, with Europe as the largest export market.

Other. In 2003, "Other" consisted of the Former Xstrata Group's forestry, magnesium and technology businesses. The forestry business comprised the management of a plantation of eucalyptus globulus, and the sale of pulplogs under a tolling and marketing agreement. The magnesium business comprised a facility in Anderson, Indiana, to recycle scrap to produce magnesium alloy for the US automobile industry. In April 2003, the Former Xstrata Group sold its magnesium business. In June 2003, the MIM acquisition provided the Former Xstrata Group with, amongst other things, a number of proprietary technologies, which are the main technologies of Xstrata Technology. These operations were included in "Other" for the purposes of the Former Xstrata Group's financial reporting. In January 2005, the Former Xstrata Group sold its forestry business. In August and September 2005, the Former Xstrata Group acquired approximately 19.9% of the then outstanding Falconbridge Shares. As a result, during the year ended 31 December 2005 and the six-month period ended 30 June 2006 "Other" consisted largely of the Former Xstrata Group's Technology business and the Former Xstrata Group's share of results from its interest in Falconbridge.

For the purposes of this discussion, references to revenue for the year ended 31 December 2003 shall be construed as references to turnover, as that term is defined under UK GAAP.

Profit before interest, taxation, depreciation and amortisation

Costs reflected in profit before interest, taxation, depreciation and amortisation include cost of sales of which raw material costs, mining costs and power costs are the most significant components, distribution costs of which rail transport and freight costs are the most significant components, and administrative expenses and other income and expense items. Under UK GAAP, for the years ended 31 December 2004 and 31 December 2003, the Former Xstrata Group's total operating profit is calculated after taking into account exceptional costs relating to impairment of assets and restructuring costs and the Former Xstrata Group's share of total operating profit or loss of joint ventures and associates.

For the purposes of this discussion, references to total operating profit for the years ended 31 December 2004 and 31 December 2003 shall be construed as references to total operating profit, as that term is defined under UK GAAP.

B. Operating and financial review relating to the Former Xstrata Group (continued)

The following tables show the Former Xstrata Group's operating profit, including shares of joint ventures and associates, analysed by major categories of products and services for the periods indicated:

	Audited UK GAAP Year ended 31 December	
Operating profit	**2003**	**2004**
	US$m	
Coal	127.6	662.8
Copper	137.7	644.0
Zinc	21.1	69.4
Alloys	54.3	169.4
Other	1.8[1]	14.0[2]
Corporate and unallocated	(54.8)	(78.3)
Former Xstrata Group	287.7	1,481.3

[1] In 2003, "Other" consisted of the magnesium, forestry and technology businesses.
[2] In 2004, "Other" consisted of the technology and forestry businesses.

The following tables show the Former Xstrata Group's profit before interest, taxation, depreciation and amortisation analysed by major categories of products and services for the periods indicated:

B. Operating and financial review relating to the Former Xstrata Group (continued)

Six-month period ended 30 June 2006 compared with six-month period ended 30 June 2005

Revenue

Former Xstrata Group. The Former Xstrata Group's revenue was US$5,178.3 million in the six months ended 30 June 2006, an increase of US$1,412.6 million or 37.5% from US$3,765.7 million in the six months ended 30 June 2005. Sustained stronger commodity prices particularly in exchange traded metals, was the principal reason for the increase.

Coal. Revenue of the Coal Business was US$1,692.5 million in the six months ended 30 June 2006, an increase of US$47.1 million or 2.9% from US$1,645.4 million in the six months ended 30 June 2005. This resulted primarily from increased sales volumes of Australian and Colombian coal, the latter as a result of the Former Xstrata Group's acquisition of 33⅓% of Cerrejón, and signicantly higher prices for Australian coking coal, offset in part by sales volume decreases for South African coal as well as lower average prices realised for thermal coal in the six months ended 30 June 2006 compared with the six months ended 30 June 2005.

Copper. Revenue of the Copper Business was US$1,718.2 million in the six months ended 30 June 2006, an increase of US$940.0 million or 120.8% from US$778.2 million in the six months ended 30 June 2005. The increase was due largely to increased copper prices for the six months ended 30 June 2006 resulting from strong demand growth, low exchange inventories and global supply-side disruptions. Sales were also positively impacted, although to a much lesser extent, by higher gold prices and increased sales volumes for both copper and gold.

Zinc. Revenue of the Zinc Business was US$1,283.9 million in the six months ended 30 June 2006, an increase of US$612.1 million or 91.1% from US$671.8 million in the six months ended 30 June 2005. The entire increase for the six months ended 30 June 2006 was due to increased prices for zinc, lead and silver in 2006. Increased global demand for zinc, fuelled in part by demand for steel for Chinese construction and infrastructure projects, combined with global capacity increasing at a slower rate than demand, resulted in higher average prices for zinc products in the six months ended 30 June 2006. The increase was partially offset by a shortfall in metal production in the Australian zinc-lead operations due to lower grade ore and lower recoveries.

Alloys. Revenue of the Alloys Business was US$432.0 million in the six months ended 30 June 2006, a decrease of US$206.9 million or 32.4% from US$638.9 million in the six months ended 30 June 2005. The decrease resulted from a substantial decline in the price for ferrovanadium in the six months ended 30 June 2006 compared to the six months ended 30 June 2005 as well as a decrease of lesser magnitude in the price of ferrochrome during the same period. Primary stainless steel production was lower in the six months ended 30 June 2006 and this, combined with higher ferrochrome production from China and Russia, led to an increase in ferrochrome stocks by 31 December 2005. Because of the continued appreciation of the Rand and the soft market conditions for ferrochrome, South African producers announced cutbacks in production in the second half of 2005. Although vanadium demand remained strong, increased supplies from Chinese steel and vanadium producers resulted in a price decline during the six months ended 30 June 2006 to approximately US$41 per kilogramme from the record levels experienced in the six months ended 30 June 2005 of US$88 per kilogramme. Sales volumes were also lower in the six months ended 30 June 2006, but the principal effects were reflected in the price changes.

Technology. Revenue from Xstrata Technology was US$51.7 million in the six months ended 30 June 2006, an increase of US$20.3 million or 64.6% from US$31.4 million in the six months ended 30 June 2005. This increase was due primarily to a number of new contracts entered into in the six months ended 30 June 2006, reflecting the high level of activity within the metals and mining sector.

Profit before interest, taxation, depreciation and amortisation ("EBITDA")

Former Xstrata Group. The Former Xstrata Group's EBITDA from continuing operations increased by US$915.7 million or 67.9% to US$2,263.4 million in the six months ended 30 June 2006 from US$1,347.7 million in the six months ended 30 June 2005. This was due to higher realised sales prices, stronger volumes and the positive impact of a stronger US dollar against local currencies. Consistent with the trend across the mining industry, the increase was partially offset by increased cost pressures.

Coal. The Coal Business's EBITDA decreased by US$59.7 million or 9.3% to US$581.5 million in the six months ended 30 June 2006 from US$641.2 million in the six months ended 30 June 2005. A positive result in Australian coking coal for the six months ended 30 June 2006 compared with the prior year was more than offset by decreased profitability in the

B. Operating and financial review relating to the Former Xstrata Group (continued)

Former Xstrata Group's thermal coal operations. Coking coal sales volumes increased mainly due to increased production at Oaky No. 1 following the commencement of a second longwall unit in December 2005. This led to a reduction in the proportion of higher cost production from the Oaky Creek open cut operation, benefiting unit costs. In addition, mining commenced at the lower cost Wollombi deposit at Newlands late in the six months ended 30 June 2006. These positive developments were offset in part by increased prices for mining inputs, including fuel, steel and explosives. Although production of Australian thermal coal increased in the six months ended 30 June 2006, the positive effects of increased sales volume were more than offset by the negative effect of lower prices for the product as well as higher costs. The result for South African thermal coal was negatively impacted by higher unit costs, lower export volumes and slightly lower prices in the six months ended 30 June 2006 compared with the six months ended 30 June 2005. The results of the Coal Business were positively affected in 2006 by the acquisition of the Former Xstrata Group's interest in Cerrejón, which contributed EBIT of US$28.1 million in the six months ended 30 June 2006.

Copper. The Copper Business's EBITDA increased by US$774.7 million or 189.3% to US$1,184.0 million in the six months ended 30 June 2006 from US$409.3 million in the six months ended 30 June 2005. In the Former Xstrata Group's Australian copper operations, strong copper and gold prices as well as a weaker Australian dollar and increased copper production and sales volumes had a positive effect in 2006. These benefits were marginally offset by slightly higher costs in the six months ended 30 June 2006. The South American copper operations benefited in the six months ended 30 June 2006 from higher sales prices as well as increased sales volumes compared with the six months ended 30 June 2005.

Zinc. The Zinc Business's EBITDA increased by US$304.4 million or 236.5% to US$433.1 million in the six months ended 30 June 2006 from US$128.7 million in the six months ended 30 June 2005. The results for the Former Xstrata Group's Australian zinc-lead operations were positively affected by significant price increases for zinc, lead and silver during the six months ended 30 June 2006 compared with the six months ended 30 June 2005. This positive affect was partially offset by a shortfall in metal production (and consequently lower sales volume) due to lower grade ore and lower recoveries. The increase experienced by the Former Xstrata Group's European zinc lead operations in the six months ended 30 June 2006 was primarily as a result of higher metal prices.

Alloys. The Alloys Business's EBITDA decreased by US$111.9 million or 53.1% to US$98.7 million in the six months ended 30 June 2006 from US$210.6 million in the six months ended 30 June 2005. Earnings for the Alloys Business for the six months ended 30 June 2006 were negatively impacted by lower sales prices as well as lower sales volumes compared with the six months ended 30 June 2005, driven primarily by lower global demand for ferrochrome. Although demand for vanadium remained relatively strong in the six months ended 30 June 2006, prices retreated from their historical highs in the six months ended 30 June 2005. The business also experienced increases in costs consistent with the mining sector generally.

Other. EBITDA of the Former Xstrata Group's technology business increased by US$4.5 million or 100.0% to US$9.0 million in the six months ended 30 June 2006 from US$4.5 million in the six months ended 30 June 2005. The results for the technology business were positively impacted by increased volumes of work, due to the relatively strong recent activity levels in the mining sector.

Other pre-tax items

The Former Xstrata Group's depreciation and amortisation and asset impairments increased for the six months ended 30 June 2006 compared with the six months ended 30 June 2005 to US$316.0 million in the six months ended 30 June 2006 from US$283.8 million in the six months ended 30 June 2005. The Former Xstrata Group recognised net interest expense of US$67.4 million for the six months ended 30 June 2006 after recognising US$4.4 million in net interest income for the six months ended 30 June 2005. The change was due primarily to increased borrowings to help fund acquisitions made by the Former Xstrata Group in the first half of 2006 and reduced net recycled foreign currency gains from the foreign currency translation reserve.

Income tax expense

Income tax expense increased to US$491.6 million in the six months ended 30 June 2006 from US$207.8 million in the six months ended 30 June 2005, mainly due to increased earnings.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Profit for the six months

In the six months ended 30 June 2006, the Former Xstrata Group recorded profit for the six months of US$1,388.4 million, an increase of US$524.2 million as compared to profit for the six months ended 30 June 2005 of US$864.2 million. Minority interests of US$255.6 million recorded in the six months ended 30 June 2006 related to other shareholders of entities in which the Former Xstrata Group had an interest. As a result, profit for the period attributable to equity holdings of the Former Xstrata Group increased to US$1,132.8 million for the six months ended 30 June 2006, an increase of US$335.7 million or 42.1% from US$797.1 million for the six months ended 30 June 2005. Minority interests' share of the profits for the six months ended 30 June 2006 increased to US$255.6 million, an increase of US$188.5 million or 280.9% from US$67.1 million for the six months ended 30 June 2005.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Year ended 31 December 2005 compared with year ended 31 December 2004

Revenue

Former Xstrata Group. The Former Xstrata Group's revenue was US$8,049.8 million in the year ended 31 December 2005, an increase of US$1,587.4 million or 24.6% from US$6,462.4 million in the year ended 31 December 2004. The slight difference in the sum of the revenue figures for the Former Xstrata Group's business segments for the year ended 31 December 2004 from that of the Former Xstrata Group overall is due to the recognition of US$2.9 million in revenues from the Former Xstrata Group's forestry business, a discontinued operation, in 2004.

Coal. Revenue of the Coal Business was US$3,400.4 million in the year ended 31 December 2005, an increase of US$707 million or 26.2% from US$2,693.4 million in the year ended 31 December 2004. This increase was primarily due to higher sales prices and, to a lesser extent, higher sales volumes.

Copper. Revenue of the Copper Business was US$2,007.8 million in the year ended 31 December 2005, an increase of US$409.5 million or 25.6% from US$1,598.3 million in the year ended 31 December 2004. This increase was due to significantly higher sales prices for copper and gold, which more than offset reduced sales volumes of gold due to the effects of lower grade ores recovered.

Zinc. Revenue of the Zinc Business was US$1,448.9 million in the year ended 31 December 2005, an increase of US$283.6 million or 24.3% from US$1,165.3 million in the year ended 31 December 2004. This increase was primarily due to higher sales prices and sales volumes.

Alloys. Revenue of the Alloys Business was US$1,115.5 million in the year ended 31 December 2005, an increase of US$162.5 million or 17.0% from US$953 million in the year ended 31 December 2004. An increase of US$184.3 million in vanadium revenues more than offset a decrease of US$21.8 million in revenues from the Chrome Business in 2005. The increase was primarily driven by higher prices for both chrome and vanadium due to lower chrome sales volumes as well as the agreed reduction in the Former Xstrata Group's participation interest in the Xstrata-Merafe PSV chrome venture.

Other. Revenue from Xstrata Technology was US$77.2 million in the year ended 31 December 2005, an increase of US$24.8 million or 47.3% from US$52.4 million in the year ended 31 December 2004. This increase was due to continued strong demand for Xstrata Technology products in light of the buoyant market for metals and mining products. Revenue in the year ended 31 December 2004 also included US$2.9 million in sales from the Former Xstrata Group's forestry business.

Profit before interest, taxation, depreciation and amortisation ("EBITDA")

Former Xstrata Group. The Former Xstrata Group's EBITDA from continuing operations increased by US$1,026.2 million or 49.7% to US$3,092.8 million in the year ended 31 December 2005 from US$2,066.6 million in the year ended 31 December 2004. This increase was principally attributable to higher sales prices for the Former Xstrata Group's products, which was in part offset by the increase in costs associated with the weakening of the US dollar against the Australian dollar and the South African Rand. The difference between the Former Xstrata Group's overall profit before interest, taxation, depreciation and amortisation and the sum of those of the Former Xstrata Group's business segments is due to profit arising from the Former Xstrata Group's share of results from associates, net of tax, in certain business segments and profit before interest, taxation, depreciation and amortisation generated in discontinued operations as well as unallocated costs. For details of this and other information regarding the Former Xstrata Group's results by business segment, see Note 10 of the notes to the Former Xstrata Group's consolidated financial statements in the Xstrata Annual Report and Accounts 2005.

Coal. The Coal Business's EBITDA (excluding the share of results from associates) increased by US$430.4 million or 47.1% to US$1,344.1 million in the year ended 31 December 2005 from US$913.7 million in the year ended 31 December 2004. The overall increase was attributable to higher coal prices. This was in part offset by the strengthening of local currencies against the US dollar as well as reduced currency hedging gains and increased royalties and mining input costs, which more than offset productivity improvements. In addition, severe congestion at the Dalrymple Bay Coal Terminal also had a negative effect on profitability for the Coal Business as it led to a significant increase in demurrage charges for using this port from US$1.47 per tonne in 2004 to US$3.54 per tonne in 2005, prompting Oaky Creek to ship larger quantities of coal through Gladstone at a higher transportation charge.

Copper. The Copper Business's EBITDA (excluding the share of results from associates) increased by US$274.4 million or 32.0% to US$1,131.1 million in the year ended 31 December 2005 from US$856.7 million in the year ended

B. Operating and financial review relating to the Former Xstrata Group (continued)

31 December 2004. This reflected significantly higher sales prices, offset in part by lower concentrate sales and reduced gold production from lower grade gold ores in South America.

Zinc. The Zinc Business's EBITDA (excluding the share of results from associates) increased by US$157.6 million or 108.3% to US$303.1 million in the year ended 31 December 2005 from US$145.5 million in the year ended 31 December 2004. The increase was primarily attributable to higher sales prices and sales volumes as well as an improvement in unit costs as a consequence of increased ore production in the mines, improved capacity utilisation at the concentrator plant, operational improvements and the business's continued focus on containing operating costs, which more than offset the negative effect of the strengthening of local currencies against the US dollar in 2005.

Alloys. The Alloys Business's EBITDA increased by US$147.5 million or 72.9% to US$349.9 million in the year ended 31 December 2005 from US$202.4 million (being EBITDA before non-trading items of US$203.0 million offset by a non-trading loss in the Alloys Business of US$0.6 million) in the year ended 31 December 2004. The increased revenue from increased prices was offset, in part, by decreased sales volumes overall in 2005. Although Former Xstrata Group vanadium pentoxide volumes were lower for the year ended 31 December 2005 than for the year ended 31 December 2004 as a result of the Vantech closure, the Former Xstrata Group maximised production of vanadium pentoxide at the expense of efficiency to capitalise on favourable market conditions and maximise contribution margins for the year ended 31 December 2005.

Other. EBITDA of the Former Xstrata Group's other businesses (principally the Xstrata Technology business) decreased to US$13.5 million in the year ended 31 December 2005 from US$19.2 million in the year ended 31 December 2004, mainly as a result of the timing of a number of large contracts for Xstrata Technology which were recognised in 2004. Unallocated costs (including non-trading items) decreased from US$83.4 million for the year ended 31 December 2004 to US$72.3 million for the year ended 31 December 2005.

Share of results from associates. The Former Xstrata Group's share of results from associates increased from US$2.3 million in 2004 to US$23.4 million in 2005, due primarily to the US$21.0 million recognised in 2005 in respect of it's then current investment in Falconbridge.

Other pre-tax items

The Former Xstrata Group's depreciation and amortisation and asset impairments stayed relatively constant from 2004 to 2005, increasing to US$583.6 million in the year ended 31 December 2005 from US$567.6 million in the year ended 31 December 2004, primarily due to a slight increase in depreciation and amortisation in the Former Xstrata Group's coal business segment due to higher sales volumes. The Former Xstrata Group recognised net interest expense of US$47.3 million for the year ended 31 December 2005, a decrease of 18.3% after recognising US$57.9 million in net interest expense for the year ended 31 December 2004. This difference was due largely to higher interest charges relating to the financing of the Former Xstrata Group's then current stake in Falconbridge and reduced net recycled foreign currency gains from the foreign currency translation reserve, which were more than offset by reduced loan facility write offs and higher average returns on the Former Xstrata Group's cash balances in 2005.

Income tax expense

Income tax expense increased to US$542.7 million in the year ended 31 December 2005 from US$213.7 million in the year ended 31 December 2004. This increase was primarily due to increased earnings and the recognition in the year ended 31 December 2004 of a US$49.6 million benefit from previously unrecognised tax losses and the one time benefit of a deferred tax adjustment of US$48.1 million as a result of certain entities entering into the Australian tax consolidation regime in the year ended 31 December 2004. The 2005 taxation charge was partially reduced by a 1% decrease in corporate tax rates in South Africa in 2005 of US$21.5 million as well as the recognition of research and development allowances in Australia.

Profit for the year

In the year ended 31 December 2005, the Former Xstrata Group recorded profit for the year of US$1,922.9 million, an increase of US$697.6 million or 56.9% as compared to profit for the year ended 31 December 2004 of US$1,225.3 million. Minority interests of US$216.5 million recorded in the year ended 31 December 2005 related to other shareholders of entities in which the Former Xstrata Group had an interest. As a result, profit for the period attributable to equity holdings of the Former Xstrata Group increased to US$1,706.4 million for the year ended 31 December 2005, an increase of US$639.3 million or 59.9% from US$1,067.1 million for the year ended 31 December 2004. Minority interests' share of the profits for the year ended 31 December 2005 increased by 36.9% to US$216.5 million compared with the year ended 31 December 2004.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Year ended 31 December 2004 compared with year ended 31 December 2003

Turnover

Former Xstrata Group. The Former Xstrata Group's turnover was US$6,465.3 million in the year ended 31 December 2004, an increase of US$2,983.7 million or 85.7% from US$3,481.6 million in the year ended 31 December 2003. Although turnover in each of the Former Xstrata Group's businesses increased in the year ended 31 December 2004, the most significant contribution to the increase in the Former Xstrata Group's overall turnover came from the Coal Business and the Copper Business.

The year on year comparison of turnover in the year ended 31 December 2004 and the year ended 31 December 2003 is impacted significantly by the full-year effect in the year ended 31 December 2004 for the first time of the acquisition of MIM by the Former Xstrata Group in June 2003 and higher average commodity prices.

Coal. Turnover of the Coal Business was US$2,693.4 million in the year ended 31 December 2004, an increase of US$1,095.8 million or 68.6% from US$1,597.6 million in the year ended 31 December 2003. This increase was primarily due to higher coal prices and increased sales volumes in the year ended 31 December 2004, due to the full-year effect of the MIM acquisition in 2003.

Copper. Turnover of the Copper Business was US$1,598.3 million in the year ended 31 December 2004, an increase of US$1,043.2 million or 187.9% from US$555.1 million in the year ended 31 December 2003. The increase was due primarily to increased prices for copper products in the year ended 31 December 2004 and the full year effect of the MIM acquisition in 2003.

Zinc. Turnover of the Zinc Business was US$1,165.3 million in the year ended 31 December 2004, an increase of US$405.0 million or 53.3% from US$760.3 million in the year ended 31 December 2003. As in the case of the Former Xstrata Group's Coal and Copper Businesses, this increase was primarily due to increased market prices for zinc and lead and increased sales volumes resulting from the full year effect of the MIM acquisition in 2003.

Alloys. Turnover in the Alloys Business was US$953.0 million in the year ended 31 December 2004, an increase of US$410.0 million or 75.5% from US$543.0 million in the year ended 31 December 2003. This increase was primarily due to higher sales prices for the Former Xstrata Group's products.

Other. The Other business's turnover increased by US$29.7 million to US$55.3 million in the year ended 31 December 2004 from US$25.6 million in the year ended 31 December 2003, primarily as a result of a number of highly profitable contracts of Xstrata Technology accounted for in the year ended 31 December 2004, involving proprietary technologies acquired as part of the MIM acquisition in 2003.

Total operating profit

Former Xstrata Group. The Former Xstrata Group's total operating profit increased by US$1,193.6 or 414.9% over the prior year's result to US$1,481.3 million in the year ended 31 December 2004 from US$287.7 million in the year ended 31 December 2003. The overall increase was attributable to higher prices for the Former Xstrata Group's products and the full year effect of the MIM acquisition in June 2003. This increase was partly offset by the increased cost associated with the weakening of the US dollar against local currencies and inflationary impacts on the Former Xstrata Group's cost base.

Coal. The Coal Business's total operating profit increased by US$535.2 million or 419.4% over the prior year's result to US$662.8 million in the year ended 31 December 2004 from US$127.6 million in the year ended 31 December 2003. The overall increase was attributable to higher coal prices in 2004, productivity improvements and the full year effect of the MIM acquisition in 2003. This was in part offset by the strengthening of the Australian dollar and the South African Rand against the US dollar.

Copper. The Copper Business's total operating profit increased by US$506.3 million or 367.7% over the prior year's result to US$644.0 million in the year ended 31 December 2004 from US$137.7 million in the year ended 31 December 2003. The increase was due principally to higher prices, the full year effect of the MIM acquisition in 2003 and productivity improvements in the year ended 31 December 2004.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Zinc. The Zinc Business's total operating profit increased by US$48.3 million or 228.9% over the prior year's result to US$69.4 million in the year ended 31 December 2004 from US$21.1 million in the year ended 31 December 2003. The overall increase was primarily attributable to higher prices for both lead and zinc in 2004, the full year effect of the MIM acquisition in 2003 and productivity improvements. This was in part offset by the weaker US dollar against the Euro, Australian dollar and pound sterling in 2004.

Alloys. The Alloys Business's total operating profit increased by US$115.1 million or 212.0% over the prior year's result to US$169.4 million in the year ended 31 December 2004 from US$54.3 million in the year ended 31 December 2003. The increase was due primarily to higher sales prices, offset in part by increased production costs, negative foreign exchange movements and closure costs of Windimurra and Vantech.

Other. The Other business's total operating profit increased by US$12.2 million to US$14.0 million in the year ended 31 December 2004 from US$1.8 million in the year ended 31 December 2003, primarily as a result of a number of highly profitable contracts of Xstrata Technology accounted for in the year ended 31 December 2004, involving proprietary technologies acquired as part of the MIM acquisition in 2003.

Other pre-tax items

The increase of US$48.9 million in net interest expense to US$126.6 million in the year ended 31 December 2004 from US$77.7 million in the year ended 31 December 2003 was due to higher average borrowings in the year ended 31 December 2004 as a result of the MIM acquisition in 2003.

Attributable profit

In the year ended 31 December 2004, the Former Xstrata Group recorded attributable profit for the financial year of US$1,052.9 million, compared to profit for the year ended 31 December 2003 of US$277.0 million. Minority interests' share of the profits for the financial year increased from US$30.8 million in the year ended 31 December 2003 to US$139.1 million in the year ended 31 December 2004 mainly due to the full year effect of the MIM acquisition. Tax on profit on ordinary activities increased to US$177.1 million in the year ended 31 December 2004 from US$46.5 million in the year ended 31 December 2003 due to increased earnings offset in part by increased amounts recognised for previously unrecognised tax losses and the one time benefit of certain entities entering into the Australian tax consolidation regime in 2003.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Liquidity and capital resources

The Company has launched the Rights Issue to refinance part of the debt raised to finance the cash consideration paid in respect of the Falconbridge Acquisition. The total net proceeds of the Rights Issue, after estimated aggregate costs and expenses of approximately £54 million (approximately US$102 million), are expected to be approximately £2.9 billion (approximately US$5.5 billion). The Company intends to apply the net proceeds of the Rights Issue towards repayment of the principal and interest that is currently outstanding under the fully drawn US$7.0 billion Equity Bridge Facility.

The following table sets forth the Former Xstrata Group's net cash inflow from operating activities and its cash flows for the periods indicated:

	Audited UK GAAP Year ended 31 December	
	2003	2004
	US$m	
Net cash inflow from operating activities	593.4	1,747.9
Net cash inflow/(outflow) before financing	(1,710.8)	1,050.6
Net cash inflow/(outflow) from financing activities	1,865.6	(827.6)
Net increase/(decrease) in cash and cash equivalents	154.8	223.0

	Unaudited IFRS Year ended 31 December	Audited IFRS Year ended 31 December
	2004	2005
	US$m	
Net cash flow from operating activities	1,638.2	2,324.9
Net cash flow from/(used in) investing activities	(423.8)	(2,363.2)
Net cash flow from/(used in) financing activities	(1,009.1)	122.0
Net increase/(decrease) in cash and cash equivalents	205.3	83.7

	Unaudited IFRS Six months ended 30 June	
	2005	2006
	US$m	
Net cash flow from operating activities	848.1	1,479.2
Net cash flow from/(used in) investing activities	(340.2)	(2,858.3)
Net cash flow from/(used in) financing activities	(737.0)	1,791.2
Net increase/(decrease) in cash and cash equivalents	(229.1)	412.1

Cash flow

From the six months ended 30 June 2005 to the six months ended 30 June 2006, the Former Xstrata Group's net cash inflow from operating activities increased by US$631.1 million from US$848.1 million in the six months ended 30 June 2005 to US$1,479.2 million in the six months ended 30 June 2006 due mainly to increased profitability in the six months ended 30 June 2006, offset in part by increases in working capital requirements and income tax payments. The Former Xstrata Group's net cash outflow from investing activities increased by US$2,518.1 million, from US$340.2 million for the six months ended 30 June 2005 to US$2,858.3 million for the six months ended 30 June 2006 due mainly to the acquisition of the Former Xstrata Group's interest in Cerrejón, its acquisition of Tintaya and increased sustaining and expansionary capital expenditure in the six months ended 30 June 2006. The Former Xstrata Group's net cash flow from financing activities increased by US$2,528.2 million from a net cash outflow of US$737.0 million in the six months ended 30 June 2005 to a net cash inflow of US$1,791.2 million in the six months ended 30 June 2006 due mainly to the financing arrangements for the acquisitions of the Cerrejón Business and Tintaya.

From the year ended 31 December 2004 to the year ended 31 December 2005, the Former Xstrata Group's net cash inflow from operating activities increased by US$686.7 million from US$1,638.2 million in the year ended 31 December 2004 to US$2,324.9 million in the year ended 31 December 2005 due mainly to increased profitability in the year ended 31 December 2005, offset in part by increases in working capital requirements and income tax payments. The Former Xstrata Group's net cash outflow from investing activities increased by US$1,939.4 million, from US$423.8 million for the year ended 31 December 2004 to US$2,363.2 million for the year ended 31 December 2005 due mainly to the acquisition of the Former Xstrata Group's interest in the share capital of Falconbridge, its acquisition of the African Carbon

B. Operating and financial review relating to the Former Xstrata Group (continued)

group and increased sustaining and expansionary capital expenditure in the year ended 31 December 2005. The Former Xstrata Group's net cash flow from financing activities increased by US$1,131.1 million from a net cash outflow of US$1,009.1 million in the year ended 31 December 2004 to a net cash inflow of US$122.0 million in the year ended 31 December 2005 due mainly to the financing arrangements for the acquisition of the Former Xstrata Group's interest in the share capital of Falconbridge and lower net repayments of interest bearing loans and borrowings, partially offset by increased purchases of own shares and dividend payments in the year ended 31 December 2005.

From the year ended 31 December 2003 to the year ended 31 December 2004, the Former Xstrata Group's net cash inflow from operating activities increased by US$1,154.5 million from US$593.4 million in the year ended 31 December 2003 to US$1,747.9 million in the year ended 31 December 2004 and the Former Xstrata Group's net cash inflow/(outflow) before financing increased by US$2,761.4 million from a net cash outflow of US$1,710.8 million in the year ended 31 December 2003 to a net cash inflow of US$1,050.6 million in the year ended 31 December 2004 due mainly to the full year effect of the MIM acquisition in 2003 and the Former Xstrata Group's increased profitability in the year ended 31 December 2004. The Former Xstrata Group's net cash inflow/(outflow) from financing activities decreased by US$2,693.2 million from an a net cash inflow of US$1,865.6 million in the year ended 31 December 2003 to an a net cash outflow of US$827.6 million in the year ended 31 December 2004 due mainly to the financing of the MIM acquisition in 2003 and increased net repayments of long term loans in the year ended 31 December 2004.

Liquidity reserves

Interest-bearing borrowings

The Former Xstrata Group's unaudited interest-bearing borrowings (calculated in accordance with IFRS) as of 31 December 2005 are set forth below:

	Due within one year	Due after one year	Total[1]
		US$m	
Bank loans	712.1	974.3	1,686.4
Bank overdrafts	2.7	–	2.7
Capital market notes	14.3	216.7	276.0
Other loans	0.3	1.2	1.5
Convertible borrowings	–	858.3	858.3
Equity minority interest loans	–	81.5	81.5
Total	729.4	2,177.0	2,906.4

[1] The analysis above excludes Finance Lease and Hire Purchase creditors of US$228.8 million as of 31 December 2005.

The Former Xstrata Group's unaudited interest-bearing borrowings (calculated in accordance with IFRS) as of 30 June 2006 are set forth below:

	Due within one year	Due after one year	Total[1]
		US$m	
Bank loans	1,190.1	288.9	1,479.0
Bank overdrafts	24.8	–	24.8
Capital market notes	14.0	259.3	273.3
Other loans	0.1	1.3	1.4
Convertible borrowings	–	530.5	530.5
Equity minority interest loans	–	81.3	81.3
Total	1,229.0	1,161.3	2,390.3

[1] The above analysis excludes Finance Lease and Hire Purchase creditors of US$223.7 million as of 30 June 2006.

In connection with the Falconbridge Acquisition, the Enlarged Xstrata Group's indebtedness increased significantly since 30 June 2006. For details of the unaudited consolidated indebtedness of the Enlarged Xstrata Group at 31 August 2006, see paragraph 4 of Part VIII – "Additional Information – Capitalisation and indebtedness".

B. Operating and financial review relating to the Former Xstrata Group (continued)

Bank loans

In connection with the Falconbridge Acquisition, Xstrata entered into the Acquisition Facilities Agreement, the Debt Bridge Facility Agreement and the Equity Bridge Facility Agreement for the purposes of meeting the financing requirements of the Falconbridge Offer and to act as the Enlarged Xstrata Group's principal bank facilities following the Falconbridge Acquisition.

The Acquisition Facilities Agreement provides Xstrata with facilities which consist of: (i) a 36-month term loan facility for US$3,353 million; (ii) a 60-month-and-one-day term loan facility for US$1,117 million; (iii) a 60-month revolving loan facility for US$3,353 million; and (iv) a 364-day term loan facility for US$1,677 million with the ability to extend (at Xstrata (Schweiz) AG's option) by 364 days. Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to the borrowers); and (iii) the relevant margins which are initially between 0.50% per annum and 0.70% per annum as described in paragraph 22.9.7 of Part VIII – "Additional Information – Material contracts".

The unused balance of approximately US$1,278 million at 30 September 2006 under the 60-month revolving loan facility for US$3,353 million provides the Enlarged Xstrata Group with its principal liquidity requirements, together with approximately US$150 million of working capital facilities available to operating subsidiaries of the Enlarged Xstrata Group.

The Debt Bridge Facility Agreement provides the Enlarged Xstrata Group with a facility which consists of a six-month term loan facility for US$2,500 million with the ability to extend (at Xstrata (Schweiz) AG's option) by 364 days. Interest is payable on the loans at a rate which is the aggregate of: (i) LIBOR, (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers), and (iii) the relevant margin, which is initially 0.40% per annum.

The Equity Bridge Facility Agreement provides the Enlarged Xstrata Group with a term loan facility for US$7.0 billion due on the earlier of: (i) six months after initial utilisation; and (ii) 15 May 2007. Interest is payable on the loans at the rate which is the aggregate of: (i) LIBOR; (ii) mandatory costs (being regulatory costs of the lenders which are passed on to borrowers); and (iii) the relevant margin, which is initially 0.40% per annum.

The Acquisition Facilities Agreement and the Debt Bridge Facility Agreement include financial covenants that require Xstrata to procure that certain financial ratios are maintained.

Pursuant to these covenants, which are calculated in accordance with IFRS, Xstrata must ensure that:

(a) its consolidated borrowings do not exceed 50% of its total capitalisation;

(b) the ratio of its consolidated borrowings to EBITDA does not exceed 3.00:1.00 for (i) any financial year or (ii) any 12 month period constituting the second six months of one financial year and the first six months of the next; and

(c) the ratio of its EBITDA to interest expense does not fall below 5.00:1.00 for (i) any financial year or (ii) any 12 month period constituting the second six months of one financial year and the first six months of the next.

Xstrata has complied with these covenants since the execution of the First Facilities Agreement on 28 May 2004.

As at 31 August 2006:

- US$8.5 billion in aggregate had been drawn under the Acquisition Facilities for the purposes of: (i) satisfying the consideration payable by Xstrata Canada for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer; and (ii) the refinancing of the First Facility (described in paragraph 22.32 of Part VIII – "Additional Information – Material contracts") and the Cerrejón Bridge Facility (described in paragraph 22.13 of Part VIII – "Additional Information – Material contracts"); and

- each of the US$2.5 billion Debt Bridge Facility and the US$7.0 billion Equity Bridge Facility had been fully drawn for the purposes of satisfying the consideration payable by Xstrata Canada for the entire issued share capital of Falconbridge pursuant to the Xstrata Offer.

B. Operating and financial review relating to the Former Xstrata Group (continued)

The Falconbridge Group's committed bank facilities totalled US$780 million at 30 June 2006 and were essentially undrawn. As at 26 September 2006, approximately US$204 million of these committed bank facilities were drawn. Following the change of control of Falconbridge as a result of the Falconbridge Acquisition, these facilities are due to expire on 14 November 2006. Falconbridge, however, is seeking to extend US$680 million of these facilities for 12 months.

The Company has launched the Rights Issue to refinance part of the debt raised to finance the cash consideration paid in respect of the Falconbridge Acquisition. The total net proceeds of the Rights Issue, after estimated aggregate costs and expenses of approximately £54 million (approximately US$102 million), are expected to be approximately £2.9 billion (approximately US$5.5 billion). The Company intends to apply the net proceeds of the Rights Issue towards repayment of amounts outstanding under the Equity Bridge Facility Agreement.

The Company is also considering alternatives for refinancing the outstanding debt under the Equity Bridge Facility not refinanced with the net proceeds of the Rights Issue and under the Debt Bridge Facility. It intends to refinance this outstanding debt and, depending on market conditions and other factors, it may do so in whole or in part by issuing debt securities. The Company may pursue one or more of such alternatives at any time that it judges market conditions and other factors to be favourable.

See paragraph 22.9 of Part VIII –"Additional Information – Material contracts" for further information regarding the Acquisition Facilities Agreement, the Debt Bridge Facility Agreement and the Equity Bridge Facility Agreement.

Other bank loans

Bank loans also include ZAR denominated borrowing which is subject to floating interest rates based on the Johannesburg inter-bank acceptance rate (JIBAR). US$7.4 million was used to fund capital expenditure at the Richards Bay Coal Terminal with half-yearly loan repayments commencing in January 2005 and ending in January 2010. The average floating rate of interest payable was 8.7% per annum at 31 December 2005.

Bank overdrafts

Bank overdrafts are unsecured and subject to local prime floating interest rates in which they have been drawn down, mainly in South Africa.

Capital market notes

As at 31 December 2005, the Former Xstrata Group had guaranteed unsecured private placements in the United States as follows:

(a) US$9.3 million of senior notes due in yearly instalments, with an effective interest rate of 3.22% maturing in December 2006;

(b) US$159.1 million of series A senior unsecured notes, with an effective interest rate of 5.9% maturing and due in June 2008;

(c) US$53.7 million series B unsecured notes due in yearly instalments from June 2008, with an effective interest rate of 6.75% maturing in June 2011; and

(d) US$53.9 million series B senior unsecured notes, with an effective interest rate of 7% maturing and due in June 2011.

US$64.9 million of Australian dollar denominated bonds matured in February 2005. There was a cross currency swap of this amount into US$43.0 million. Interest was based on BBSW (being the Australian Financial Markets Association's bank-bill swap reference rate) plus 1.9%, payable quarterly.

These notes and bonds have been designated as a hedge of the net investments in the South Americas by Australian subsidiaries and are being used to reduce the exposure to foreign exchange risk. Gains and losses on retranslation of these borrowings are transferred to equity to offset any gains or losses on translation of the net investment in the subsidiaries.

Other loans

As at 31 December 2005, of a loan of EUR1.3 million, which was received from the Ministry of Industry & Energy and the Cantabria Government in Spain for San Juan de Nieva zinc smelter expansion projects, EUR0.5 million is subject to a fixed interest rate of 5.0% per annum and the balance of EUR0.8 million is interest free.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Convertible borrowings

2010 Convertible Bonds

On 15 August 2003, Xstrata Capital issued US$600 million of guaranteed convertible bonds due 15 August 2010, convertible, at any time after 26 September 2005, at the option of the holder into 3.95% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2010 Convertible Bonds are guaranteed by Xstrata and were issued at par and bear a coupon of 3.95% per annum. The initial exchange price was £6.10 and an adjustment to the exchange price as a result of the Rights Issue will be announced in accordance with the terms of the 2010 Convertible Bonds. If not previously converted or redeemed, the 2010 Convertible Bonds will be redeemed at par on 15 August 2010. Prior to 15 August 2010, Xstrata Capital may, in certain circumstances, on giving notice, redeem all but not some of the 2010 Convertible Bonds then outstanding at their principal amount plus unpaid accrued interest (if any). The issue costs for the 2010 Convertible Bonds were US$7.7 million. In August 2003, the 2010 Convertible Bonds were admitted, and continue to be admitted, to the Official List and to trading on the London Stock Exchange's market for listed securities. As at 2 October 2006 (being the latest practicable date prior to the publication of this document) approximately 35.74%, or US$214,419,000 million, of the 2010 Convertible Bonds remained in issue unconverted.

2017 Convertible Debenture

On 6 September 2005, Xstrata Capital issued a US$375 million guaranteed convertible debenture, due 14 August 2017, to Brascade Corporation, convertible, at any time after 14 August 2006, at the option of the holder into 4.00% exchangeable redeemable preference shares of Xstrata Capital which are exchangeable immediately upon issuance for fully paid new Ordinary Shares. The Convertible Debenture is guaranteed by Xstrata and was issued at par, with a coupon of 4.00% per annum. The initial exchange price was £17.1315 and an adjustment to the exchange price as a result of the Rights Issue is expected to be made in accordance with the terms of the 2017 Convertible Debenture. Unless previously converted, redeemed or cancelled, the 2017 Convertible Debenture is redeemable on 14 August 2017 at its principal amount plus unpaid accrued interest (if any). At any time after 14 August 2010, Xstrata Capital is entitled, on giving notice, to redeem the 2017 Convertible Debenture at its principal amount plus unpaid accrued interest (if any). In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document the 2017 Convertible Bonds in consideration for the cancellation of the 2017 Convertible Debenture, the waiver of all rights of the holder of the 2017 Convertible Debenture (Trilon International Inc. ("Trilon"), which is a subsidiary of Brookfield Asset Management Inc., a company formerly known as Brascan Corporation ("Brookfield")), under the 2017 Convertible Debenture and the related deed poll and the release of Xstrata Capital and Xstrata from each of their respective obligations under the 2017 Convertible Debenture and the related deed poll.

2017 Convertible Bonds

In accordance with the obligations of Xstrata Capital and Xstrata under a subscription agreement entered into in relation to the issue of the 2017 Convertible Debenture, Xstrata Capital intends to issue as soon as reasonably practicable after the date of this document US$375 million of guaranteed convertible bonds, due 14 August 2017, to Trilon, convertible, at any time after their issue, at the option of the holder into 4.00% exchangeable redeemable preference shares of Xstrata Capital which are expected to be exchangeable immediately upon issuance for fully paid new Ordinary Shares. The 2017 Convertible Bonds are expected to be guaranteed by Xstrata with a coupon of 4.00% per annum. The initial exchange price is expected to be £17.1315. Such exchange price is expected to be adjusted immediately following the issue of the 2017 Convertible Bonds as a result of the Rights Issue. Unless previously redeemed or converted or purchased and in each case cancelled, it is expected that the terms of the 2017 Convertible Bonds will provide that the 2017 Convertible Bonds will be redeemed on 14 August 2017 at their principal amount together with unpaid accrued interest (if any) and that at any time after 14 August 2010, Xstrata Capital may, on giving notice, redeem the 2017 Convertible Bonds at their principal amount together with interest accrued to the date fixed for redemption. It is intended that the 2017 Convertible Bonds will be listed on the Professional Securities Market of the London Stock Exchange.

Xstrata adopted IAS 32 "Financial Instruments: Disclosure and Presentation" on 1 January 2005 which require the equity and liability components of its convertible securities to be separately measured and presented on the face of the balance sheet. The liability element has been determined by measuring the value of a similar liability that does not have a conversion option as at the issue date. The equity component at the issue date of the 2010 Convertible Bonds was US$63.4 million and US$56.0 million for the 2017 Convertible Debenture, representing the difference between the liability component and the face values. Xstrata expects to measure and present separately the equity and liability components of the 2017 Convertible Bonds on its next balance sheet following issue of the 2017 Convertible Bonds.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Equity minority interest loans

Equity minority interest loans comprise a loan of US$81.0 million advanced to Minera Alumbrera Limited to fund operations, which is subject to a fixed interest rate of 7.2% per annum.

Seasonality

The Directors do not believe there is any significant seasonality in the Enlarged Xstrata Group's borrowing requirements.

Capital expenditure

The following table sets forth the Former Xstrata Group's capital expenditure for the periods indicated:

	Audited UK GAAP Year ended 31 December	
	2003	2004
	US$m	
Total Former Xstrata Group	316.4	630.2
Of which sustaining capital expenditure	178.8	301.2
Of which expansionary capital expenditure	137.6	329.0

	Unaudited IFRS Six months ended 30 June	
	2005	2006
	US$m	
Total Former Xstrata Group	350.6	459.1
Of which sustaining capital expenditure	153.0	182.5
Of which expansionary capital expenditure	197.6	276.6

	Unaudited IFRS Year ended 31 December	Audited IFRS Year ended 31 December
	2004	2005
	US$m	
Total Former Xstrata Group	641.8	947.1
Of which sustaining capital expenditure	307.5	429.9
Of which expansionary capital expenditure	334.3	517.2

The Former Xstrata Group's total capital expenditure for the six-month period ended 30 June 2006 was US$459.1 million, an increase of US$108.5 million or 30.9% from total capital expenditure of US$350.6 million for the six-month period ended 30 June 2005. Sustaining capital expenditure in the six-month period ended 30 June 2006 increased by 19.3% or US$29.5 million from sustaining capital expenditure in the six-month period ended 30 June 2005 of US$153.0 million. Expansionary capital expenditure increased by 40.0% in the six months ended 30 June 2006 or US$79.0 million from expansionary capital expenditure of US$197.6 million in the six months ended 30 June 2005. Major items of expansionary capital expenditure included the Project Lion ferrochrome smelter in South Africa as it prepared for commissioning (despite escalating input costs, in particular steel, production started on budget and on schedule in September 2006) in the second half of 2006, continued development of the Mototolo PGM project, ongoing expansions to the copper smelter at Mount Isa, a new coal wash plant at the Collinsville coal mine and the acquisition of a further dragline at the Rolleston operation in Queensland.

The Former Xstrata Group's total capital expenditure for the year ended 31 December 2005 was US$947.1 million, an increase of US$305.3 million or 47.6% from total capital expenditure of US$641.8 million for the year ended 31 December 2004. The Former Xstrata Group's expansionary capital expenditure in the year ended 31 December 2005, which increased by US$182.9 million or 54.7% from US$334.3 million for the year ended 31 December 2004 to US$517.2 million in the year ended 31 December 2005, featured a number of major discrete projects accelerated to take advantage of the currently favourable commodity prices. The most significant of these were Project Lion, and the development of the open cut Rolleston coal mine, which together incurred the bulk of the Former Xstrata Group's expansionary capital expenditure in 2005. At Project Lion, US$132 million was incurred in the period as construction accelerated. At Rolleston, US$135.3 million was spent in the period, and the operation commenced production in 2005, on time and within budget. Other major items of the Former Xstrata Group's expansionary capital expenditure in the year ended 31 December 2005 included the following:

B. Operating and financial review relating to the Former Xstrata Group (continued)

- the Coal Business spent US$24 million to upgrade the coal flotation plant at Newlands to coincide with operations commencing at the Northern underground mine in the first quarter of 2006;

- the commencement of construction of the UG2 mine and concentrator for the Mototolo joint venture with Anglo Platinum, with the Former Xstrata Group's share of the joint venture capital expenditure (excluding commitments) being approximately ZAR56 million (approximately US$8.8 million) for the second half of 2005;

- the initiation of the drilling programme at the Copper Business's Las Bambas project at a cost of US$10 million; and

- US$12 million incurred for the continued development of the Black Star zinc lead-mine.

In the year ended 31 December 2005, the Former Xstrata Group's sustaining capital expenditure increased by *US$122.4 million or 39.8% to US$429.9 million from sustaining capital expenditure* of US$307.5 million in the year ended 31 December 2004. Major items of sustaining capital expenditure in the year ended 31 December 2005 included:

- US$188 million by the Coal Business, including US$52 million in respect of the longwall system and US$12 million in respect of the underground drift conveyor system, both of which are expected to be operational at the Ulan underground mine in 2006; and

- US$115 million by the Copper Business, including US$21 million in respect of continued mobile equipment replacements to assist with mining at greater depth at Ernest Henry and a total of US$50 million for mine development, infrastructure maintenance and ore handling projects at Mount Isa which resulted in increased concentrate output during 2005.

The Directors expect total capital expenditure for the Former Xstrata Group in 2006 to be approximately US$950 million, around US$50 million higher than the guidance provided at the announcement of Xstrata's full year results for the year ended 31 December 2005 in March 2006. The additional capital expenditure is principally due to the approval during the first half of 2006 of an accelerated revamp of the zinc-lead concentrator at Mount Isa, at a total capital cost of US$120 million. This project has been brought forward to take advantage of continuing strong zinc prices and it is intended to increase throughput by 1.5 million tonnes of ore per annum once completed.

For the year ending 31 December 2006, the Falconbridge Group's projected capital investments as at 30 June 2006 were approximately US$315 million for sustaining capital expenditures and other smaller projects and approximately US$445 million in new copper and nickel investments. See section D of this Part I - "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group - D. Operating and Financial Review Relating to the Falconbridge Group – Capital investments".

The Enlarged Xstrata Group has made and may in the future make acquisitions of mines, plants or materials and metals businesses that complement or enhance its existing production.

Contractual obligations

Finance lease and hire purchase commitments

Members of the Former Xstrata Group have entered into finance leases and hire purchase contracts for various items of plant and machinery. The majority of these leases include guaranteed residual value clauses. Future minimum lease payments under finance leases and hire purchase contracts together with the present value of future finance charges were as follows as at the dates indicated:

B. Operating and financial review relating to the Former Xstrata Group (continued)

	At 31 December 2004		At 31 December 2005	
	Minimum payments	Present value of payments	Minimum payments	Present value of payments
		US$m		
Within one year	14.1	9.3	31.0	14.7
After one year but not more than five years	152.9	137.9	187.6	171.9
More than five years	42.7	37.8	48.1	42.2
Total minimum lease payments	209.7	185.0	266.7	228.8
Less amounts representing finance lease charges	(24.7)	–	(37.9)	–
Present value of minimum lease payments	185.0	185.0	228.8	228.8

Operating lease commitments – Former Xstrata Group member as lessee

Members of the Former Xstrata Group have entered into leases for buildings, motor vehicles and sundry plant and equipment. These leases have an average life of 12.5 years with renewal terms at the option of the lessee. Future minimum rentals under non-cancellable operating leases were as follows as at the dates indicated:

	At 31 December	
	2004	2005
	US$m	
Within one year	23.6	17.4
After one year but not more than five years	42.2	22.9
More than five years	11.3	10.8
Total	77.1	51.1

For further details regarding the Former Xstrata Group's contractual liabilities, see Notes 17, 30, 31, 32, 36, 37, 38 and 39 in the notes to Xstrata's consolidated financial statements for the year ended 31 December 2005 in the Xstrata Annual Report and Accounts 2005.

Contingent liabilities

As at 31 December 2005, the Former Xstrata Group, had the following guarantees outstanding (amounts having been translated from local currencies at the rates used in Xstrata's financial statements at the relevant dates):

- The Former Xstrata Group's Australian coal business has issued performance guarantees to customers under contracts for supply of coal for US$20.5 million (31 December 2004: US$21.6 million) and guarantees to the New South Wales and Queensland Department for Mineral Resources in respect of various mining leases and the performance thereof US$59.2 million (31 December 2004: US$62.4 million).

- The Newlands and Collinsville joint ventures are responsible for costs incurred with workforce termination and equipment demobilisation at the conclusion of the open cut mining contracts. Indemnities have been provided by the joint ventures to government agencies which have given guarantees relating to mining tenemants of US$5.3 million (31 December 2004: U$16.5 million) and customs, civil contract work and transport of US$0.2 million (31 December 2004: US$1.0 million).

- The Rolleston joint venture has signed an agreement with Ergon Energy for electricity supply. Bank guarantees of US$nil (31 December 2004: US$14.7 million) have been provided by the Former Xstrata Group and based on the work completed to date there is an estimated contigent liability of US$ nil (31 December 2004: US$11.7 million). Owing to a change in circumstances, the bank guarantees in respect of the Rolleston joint venture that were reported for the year ended 31 December 2004 were recognised by the Former Xstrata Group as a liability as at 31 December 2005.

- The Former Xstrata Group's South African coal business has issued guarantees to Eskom for power usage and early termination of power usage of US$3.2 million (31 December 2004: US$2.8 million) in aggregate and to the Department of Minerals and Energy to obtain certain prospecting permits of US$0.1 million (31 December 2004: US$0.1 million).

- The Alloys Business has issued a guarantee to Eskom for power usage and early termination of power usage of US$16.5 million (31 December 2004: US$18.3 million), to the Department of Minerals and Energy, municipalities and

B. Operating and financial review relating to the Former Xstrata Group (continued)

governmental boards in respect of various mining leases and the performance thereof for US$5.9 million (31 December 2004: US$4.2 million) and to customers of US$0.7 million (31 December 2004: US$0.1 million).

- The Alloys Business has issued a guarantee in respect of the obligations of Merafe under a US$47.4 million (31 December 2004: US$ nil) facility in connection with the acquisition of certain assets and resources relating to the Former Xstrata Group's and Merafe's chrome and ferrochrome pooling and sharing venture (the "PSV") and the Project Lion ferrochrome expansion project undertaken by the PSV. Payment under the guarantee by the Former Xstrata Group is secured by recourse to Merafe and the security Merafe has provided to the lender.

- The Former Xstrata Group's Copper, Zinc-Lead and Australian Technology businesses have issued performance guarantees to customers for US$22.4 million (31 December 2004: US$35.8 million), guarantees to the Queensland Department for Mineral Resources in respect of various mining leases and the performance thereof, environmental bonds and self insurance licences of US$114.2 million (31 December 2004: US$97.8 million) and office leases of US$0.8 million (31 December 2004: US$0.9 million).

- The Former Xstrata Group's Zinc Business has issued performance guarantees to the Northern Territory government for an electricity supply and pipeline agreements of US$32.0 million (31 December 2004: US$34.0 million).

- In connection with the expansion at the San Juan De Nieva plant, the Former Xstrata Group has issued bank guarantees for the amount of US$31.4 million (31 December 2004: US$40.8 million). The bank guarantees have primarily been issued in respect of grants received from regional and federal authorities. The guarantees will be released once the authorities are satisfied that the Former Xstrata Group has met all its obligations in connection with the receipt of the grants. Other bank guarantees issued amount to US$76.3 million (31 December 2004: US$30.0 million).

- Northfleet has issued bank guarantees to HM Revenue & Customs in respect of VAT and duty on imports of lead and other raw materials for US$13.8 million (31 December 2004: US$7.7 million), to the UK Environmental Agency in respect to the recycling of batteries and disposal of metal residues of US$0.2 million (31 December 2004: US$0.8 million) and US$1.2 million (31 December 2004: US$1.4 million) to the European Commission in respect of a fine.

- The Former Xstrata Group had a issued bank guarantee to Banco Santander in Chile for US$12.0 million in 2004. This bank guarantee was released upon the sale of the forestry operations in January 2005.

As at 31 December 2005, the Former Xstrata Group had the following contingent liabilities (other than guarantees):

- The Former Xstrata Group's South African coal business operations have legal obligations to rehabilitate and treat mine water which will decant from the mines into the river systems some time after cessation of mining occurs. Detailed studies are currently being undertaken to determine the likely quantum and timing of decanting, the most appropriate treatment options and the impact of water flows from adjoining mines. Once this study is complete and the exposure is quantifiable, a rehabilitation asset and liability will be recognised and will thereafter amortise the asset and unwind the discounted liability.

- The purchase agreement of the Las Bambas copper project in Peru includes contingent amounts payable to a community trust fund of US$21 million (31 December 2004: US$38.1 million) following a decision to develop the project. This will be payable over the development and construction phases of the project.

- Included in the above is US$95.3 million (2004: US$94.4 million) representing the Former Xstrata Group's share of guarantees incurred jointly with other ventures.

Transfer of funds by members of the Enlarged Xstrata Group to the Company

Except to the extent described in the section of this document headed "Risk Factors – Exchange controls", there are no material legal or economic restrictions (including taxation consequences of transfers) on the ability of members of the Enlarged Xstrata Group to transfer funds to the Company in the form of cash dividends, loans or advances that have had or are expected to have a material adverse effect on the ability of the Company to meet its cash obligations.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Treasury policies

The Enlarged Xstrata Group's Treasury Department has responsibility for strategic planning of the Enlarged Xstrata Group's treasury activities. Its responsibilities include: management of the Enlarged Xstrata Group's cash resources and debt funding programmes; funding acquisitions and investments; management of interest rate and foreign exchange exposures; and co-ordinating relationships with banks, rating agencies and other financial institutions.

The Enlarged Xstrata Group is exposed to US dollars through its revenue stream. The Enlarged Xstrata Group will seek to source debt capital in US dollars directly or by borrowing in other currencies and swapping them into US dollars, thus matching the negative exposure of its debt service obligations against the positive exposure of its revenue.

The Enlarged Xstrata Group's primary financial instruments, other than derivatives, comprise bank loans and overdrafts, convertible borrowings, capital market notes, finance leases and hire purchase contracts, and cash and short-term deposits. The main purpose of these financial instruments is to raise finance for the Enlarged Xstrata Group's acquisitions and operations. The Enlarged Xstrata Group has various other financial assets and liabilities such as trade receivables and trade payables, which arise directly from its operations.

The Enlarged Xstrata Group is exposed to changes in currency exchange rates, commodity prices and interest rates in the normal course of business. Derivative transactions are entered into solely to hedge these risks. Market fluctuations in derivative financial instruments designated as hedges are used to offset the fluctuations in the underlying exposure. No derivatives are held for trading purposes.

The main risks arising from the Enlarged Xstrata Group's financial instruments are credit risk, interest rate risk, liquidity risk, foreign currency risk and commodity price risk. A treasury committee establishes the policies for managing each of these risks and the Company's board of directors reviews and agrees these policies.

Quantitative and qualitative disclosures about market risk

The Enlarged Xstrata Group is exposed to changes in currency exchange rates, commodity prices and interest rates in the normal course of business. Derivative transactions are entered into solely to hedge these risks. Market fluctuations in derivative financial instruments designated as hedges are used to offset the fluctuations in the underlying exposure.

Currency hedging

Currency cash flow hedging may be used to reduce the Enlarged Xstrata Group's short-term exposure to fluctuations in local currency exchange rates to the US dollar, Sterling and the Euro. The currency hedging losses gains reflected in the income statement for the six months ended 30 June 2006 amounted to US$5 million compared to gains of US$32 million for the six months ended 30 June 2005.

The unrealised available mark-to-market position on foreign currency hedging in place at 30 June 2006 was US$0.4 million, detailed as follows:

Foreign currency forward contracts	Forward sale at 30 June 2006 US$m	Weighted average exchange rate	Fair value at 30 June 2006 US$m
Maturing 2006			
US$ to AUD	124.1	0.7403	0.2
AUD to GBP	5.5	0.3902	(0.2)
US$ to JPY	1.8	109.13	(0.1)

Maturing 2008			
US$ to AUD	11.1	0.7397	(0.1)
Total			0.4

B. Operating and financial review relating to the Former Xstrata Group (continued)

Commodity hedging

The Enlarged Xstrata Group is exposed to fluctuations in commodity prices, with the commodity mix spread relatively evenly between those which are priced by reference to prevailing market prices on terminal markets and those that are set on a contract basis with customers, generally on an annual basis. Commodity hedging of the Former Xstrata Group is in the form of forward and option contracts covering a portion of planned attributable gold, copper, zinc, silver, lead and coal production.

Hedges relating to sales are classified as cash flow hedges and shown in the table below. The fair value of these hedges is deferred within equity on the balance sheet until the sale is recorded.

Due to the volatile nature of commodity prices and the historical relationship between prices and the currencies of most of the countries where the Former Xstrata Group operates, hedging may be entered into only in limited circumstances and subject to strict limits laid down by the Board.

No new hedging contracts were entered into by the Former Xstrata Group for base metals, gold or silver during the six months ended 30 June 2006. Copper hedges outstanding at 31 December 2005 and falling due over the course of 2006 were substantially allocated against the income statement during the six months ended 30 June 2006, to leave forward contracts representing 10,600 tonnes of copper due to impact Enlarged Xstrata Group earnings in the second half of 2006.

The unrealised mark-to-market loss on commodity hedging maturing in the second half of 2006 and as at 30 June 2006 was approximately US$74 million, based on the forward curve at that time.

Cash flow hedging relating to sales in the six-month period ending 31 December 2006 – Commodity forward and option contracts	Commodity	Volume	Average price US$[1]	Fair value at 30 June 2006 US$m

Total				**(119.0)**

[1] The average price is stated in US dollars and where necessary has been translated from foreign currencies at period end exchange rates.

B. Operating and financial review relating to the Former Xstrata Group (continued)

The unrealised mark-to-market loss on commodity option contracts in place at 31 December 2005 was US$9.1 million detailed as follows:

Commodity option contracts	Commodity	Volume	Average price US$	Fair value at 31 December 2005 US$m
Maturing in 2006				
Gold (ounces)	Gold	51,000	500.0 – 590.5	0.2
Maturing in 2007				
Gold (ounces)	Gold	102,000	500.0 – 576.3	(1.4)
Maturing in 2008 and 2009				
Gold (ounces)	Gold	276,000	475.0 – 639.7	(7.9)
Total				**(9.1)**

Other commodity derivatives also includes zinc and lead forward contracts that were closed out from offsetting sales positions with settlement deferred into 2006 until the maturity dates of the sales forward contracts, with a loss of US$14.5 million.

The Former Xstrata Group undertook a number of short dated commodity hedging programmes during 2005. Gold and silver are principally produced as by-products from the Former Xstrata Group's major operating assets; hedging these commodities effectively locks in a portion of the operating costs associated with these assets. The Coal Business has an ongoing hedging programme for thermal coal, principally from South Africa, and hedges a portion of forecast production when pricing opportunities exist in the forward market.

The Ernest Henry copper gold operation is scheduled in 2006 to enter a period of abnormally low ore grades for several months. As a consequence, unit costs are expected to increase temporarily. A decision was made during the first half of 2005 to attempt to lock in the profitability of the operation through the forward sale of copper for this period. As a result of the more favourable outlook for copper prices into 2006, hedges relating to 27,800 tonnes of copper have been reclassified as fair value hedges, with the full earnings impact of US$35 million taken against 2005 copper sales and recognised in the profit and loss statement at the balance date. Zinc hedges maturing in 2006 relate to a specific shipment of zinc which was delayed from the final quarter of 2005 into 2006.

Copper and zinc are often sold under terms whereby sales are priced according to future quotational periods. In certain circumstances, hedging is undertaken to lock in the price at the time of the sale. Hedges that relate to 2005 sales are shown in the table below and have been recognised in the profit and loss account at the balance date. As a result, these fair value hedges will have no further earnings impact.

Other hedging – Commodity forward contracts	Commodity	Volume	Average price US$[1]	Fair value at 31 December 2005 US$m
Maturing in 2006				
Gold (ounces)	AUDGold	28,252	479.48	(1.5)
Gold (ounces)	US$Gold	36,332	378.08	(5.1)
Copper (tonnes)	US$Copper	56,050	3,056.54	(75.9)

Total				**1.6**

Carrying values and fair values of financial instruments

Set out below is a comparison by category of carrying values and fair values of the Former Xstrata Group's financial instruments that are not carried at fair value in the financial statements at 31 December 2005:

	At 31 December 2005	
Financial liabilities[1]:	Carrying value US$	Fair value
Capital market notes	(276.0)	(271.2)
Equity minority interest loans	(81.0)	(80.4)
Convertible borrowings	(874.6)	(872.5)

Note:
(1) Market rates at 31 December 2005 have been used to determine the fair value of fixed interest loans. The fair value of the liability portion of the convertible borrowings is estimated using an equivalent market interest rate of a similar liability that does not have a conversion option as at the origination of the bond.

Credit risk

The Enlarged Xstrata Group is exposed to credit risk in respect of trade receivables. Given the geographical and industry spread of the Enlarged Xstrata Group's customers, however, credit risk is believed to be limited. The Enlarged Xstrata Group has established credit limits so that dealings are with a wide range of reputable banks and financial institutions on a competitive basis. Where concentrations of credit risk exist, management closely monitors the receivable and focuses on putting appropriate controls in place to ensure recovery. Credit risk is minimal and not concentrated for other financial assets. Credit risk is limited to the carrying amount of financial assets at balance sheet date.

Interest rate risk of financial assets and liabilities

It is the Enlarged Xstrata Group's preference to borrow and invest at floating rates of interest, notwithstanding that some borrowings are at fixed rates of interest and it therefore typically swaps fixed rate exposure into floating interest rates. A limited amount of fixed rate hedging can be undertaken during periods where the Enlarged Xstrata Group's exposure to movements in short term interest rates is more significant. In keeping with the Enlarged Xstrata Group's preference to borrow at a floating rate of interest, the 2010 Convertible Bonds, which bear a fixed rate of interest at 3.95%, were swapped to a floating rate of interest based on LIBOR. The first two years of floating rate payments were subsequently swapped back for commercial reasons to a fixed interest rate of 2.2% per annum which matured on 15 August 2005. The unrealised mark-to-market loss on interest rate hedging in place at 30 June 2006 was approximately US$26 million detailed as follows:

	Principal US$m	Average rate %	Fair value at 30 June 2006 US$m
Maturing 2010			
Interest rate swapped from US$ fixed rates	600	4.5	(25.6)

Ratios

The Former Xstrata Group's net debt to equity ratio at 30 June 2006, as calculated in accordance with IFRS, was 12.7% (where net debt is the level of external indebtedness of the Former Xstrata Group including loans, convertible borrowings, the liability component of the convertible borrowings and finance leases net of cash (including 100% of Minera Alumbrera Limited cash), cash equivalents and arrangement fees and equity includes minority interests).

B. Operating and financial review relating to the Former Xstrata Group (continued)

The former Xstrata Group's EBITDA to interest expense ratio for the six-month period ended 30 June 2006, as calculated in accordance with IFRS, was 21 to 1.

In connection with the Falconbridge Acquisition, the Enlarged Xstrata Group's indebtedness increased significantly since 30 June 2006. Details of the unaudited consolidated indebtedness of the Enlarged Xstrata Group at 31 August 2006, see paragraph 4 of Part VIII – "Additional Information – Capitalisation and indebtedness". Unaudited pro forma financial information on the Enlarged Xstrata Group is set out in Part III – "Unaudited Pro Forma Financial Information".

B. Operating and financial review relating to the Former Xstrata Group (continued)

Critical accounting policies

Xstrata historically prepared its financial statements under UK GAAP, and its audited financial statements for the years ended 31 December 2003 and 31 December 2004 prepared in accordance with UK GAAP have been incorporated by reference herein from the Xstrata Annual Reports and Accounts as described in the section of this document headed "Relevant Documentation and Incorporation by Reference". Since the 2005 Xstrata Interim Report, the Company has prepared and will continue to prepare its financial statements under IFRS. The Company's audited financial statements for the year ended 31 December 2005, which include comparable figures for the year ended 31 December 2004, each prepared in accordance with IFRS, have been incorporated by reference herein as described in the section of this document headed "Relevant Documentation and Incorporation by Reference". The Company's unaudited financial statements for the six-month period ended 30 June 2006, which include comparable figures for the six-month period ended 30 June 2005, each prepared in accordance with IFRS, have been incorporated by reference herein from the 2006 Xstrata Interim Report as described in the section of this document headed "Relevant Documentation and Incorporation by Reference".

As part of the Former Xstrata Group's audited financial statements, the directors of the Company were required to disclose the accounting policies adopted in respect of items that were judged material in determining the results and financial position of the Former Xstrata Group used in preparing the financial statements. In addition, the preparation of financial statements requires management to make estimates and judgements that affect the reported amount of certain assets, liabilities, revenues and expenses, as well as the disclosure of certain contingent assets and liabilities. The application of these accounting policies involves the exercise of judgement and use of assumptions as to future uncertainties and, as a result, actual results could differ from these estimates.

Set forth below are the accounting policies that the Directors considered to be critical in relation to the historical financial statements of the Former Xstrata Group referred to above (under IFRS and UK GAAP, respectively) and which, under IFRS, the Directors consider will be critical to the financial statements of the Enlarged Xstrata Group:

IFRS

Intangible assets

Purchased intangible assets are recorded at the cost of acquisition including expenses incidental to the acquisition, less accumulated amortisation and any impairment in value.

Intangible assets acquired as part of an acquisition of a business are capitalised separately from goodwill if the asset is separable or arises from contractual or legal rights, and the fair value can be measured reliably on initial recognition.

Internally generated goodwill is not recognised.

Amortisation of intangible assets

Intangible assets are amortised using a straight-line method based on estimated useful lives, except goodwill and those intangible assets which the Company's directors regard as having indefinite useful lives, which are not amortised but are reviewed for impairment at least annually, and whenever events or circumstances indicate that the carrying amount may not be recoverable. Intangible assets are regarded as having an indefinite life when, based on an analysis of all the relevant factors, there is no foreseeable limit to the period over which the asset is expected to generate net cash flows. Such analyses are performed annually. Estimated useful lives are determined as the period over which the Former Xstrata Group expects to use the asset or the number of production (or similar) units expected to be obtained from the asset by the Former Xstrata Group and for which the Former Xstrata Group retains control of access to those benefits.

For intangible assets with a finite useful life, the amortisation method and period are reviewed annually, and impairment testing is undertaken when circumstances indicate the carrying amount may not be recoverable.

Where an intangible asset is disposed of, it is derecognised and the difference between its carrying value and the net sales proceeds is reported as a profit or loss on disposal in the income statement.

Coal export rights

Coal export rights are carried at cost and are considered to have an indefinite useful life. As a result they are not amortised but are subject to an annual asset impairment review, at least annually and more regularly if indicators of impairment exist.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Software and technology patents
Software and Technology patents are carried at cost and amortised over a period of 3 years and 20 years respectively.

Investments in associates
Entities in which the Former Xstrata Group has significant influence and which are neither subsidiaries nor joint ventures, are associates, and are accounted for under the equity method of accounting.

Under the equity method of accounting, the investment in the associate is recognised in the balance sheet on the date of acquisition at the fair value of the purchase consideration and therefore includes any goodwill on acquisition which is not amortised. The carrying amount is adjusted by the Former Xstrata Group's share of the post acquisition profit or loss; depreciation, amortisation or impairment arising from fair value adjustments made at date of acquisition and certain inter-entity transactions together with a reduction for any dividends received or receivable from the associate. Where there has been a change recognised directly in the equity of the associate, the Former Xstrata Group recognises its share of such changes in equity.

Where there has been a change recognised directly in the equity of the associate, the Former Xstrata Group recognises its share of such changes in equity.

The financial statements of the associates are prepared for the same reporting period as the Company, using consistent accounting policies. Adjustments are made to bring into line any dissimilar accounting policies that may exist. Adjustments are made in the consolidated financial statements to eliminate the Former Xstrata Group's share of unrealised gains and losses on transactions between the Former Xstrata Group and its associates.

The Former Xstrata Group discontinues its use of the equity method from the date at which it ceases to have significant influence, and shall from that date, account for the investment in accordance with IAS 39 (with its initial cost, being the carrying amount of the associate at that date), provided the investment does not then qualify as a subsidiary or joint venture.

The Former Xstrata Group's income statement reflects the share of associates results after tax and the Former Xstrata Group's statement of recognised income and expense includes any amounts recognised by associates outside of profit and loss.

Business combinations
Business combinations after 1 January 2004 are accounted for in accordance with the policy described below. Business combinations that occurred prior to this date have not been adjusted.

On the acquisition of a subsidiary, the purchase method of accounting is used whereby the purchase consideration is allocated to the identifable assets, liabilities and contingent liabilities (identifiable net assets) on the basis of fair value at the date of acquisition. Those mineral reserves and resources that are able to be reliably valued are recognised in the assessment of fair values on acquisition. Other potential reserves, resources and mineral rights, for which, in the opinion of the directors of the Company, values cannot be reliably determined, are not recognised.

When the cost of acquisition exceeds the fair values attributable to the Former Xstrata Group's share of the identifiable net assets the difference is treated as purchased goodwill, which is not amortised but is reviewed for impairment annually and where there is an indication of impairment. If the fair value attributable to the Former Xstrata Group's share of the identifiable net assets exceeds the cost of acquisition the difference is immediately recognised in the income statement.

Minority interests represent the portion of profit or loss and net assets in subsidiaries that is not held by the Former Xstrata Group and is presented in equity in the consolidated balance sheet, separately from the parent shareholders equity.

Similar procedures are applied in accounting for the purchases of interests in associates or jointly controlled entities. Any goodwill arising on such purchases is included within the carrying amount of the investment in associates or jointly controlled entity, but not thereafter amortised. Any excess of the Former Xstrata Group's share of the net fair value of the associate's or jointly controlled entity's identifiable assets, liabilities and contingent liabilities over the cost of the investment is included in income in the period of the purchase.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Available-for-sale financial assets

Available-for-sale financial assets are those non-derivative financial assets that are designated as available-for-sale or are not classified in any of the "Financial assets at fair value through profit or loss", "Held-to-maturity investments" or "Financial assets at fair value through profit or loss" categories. After initial recognition available-for sale financial assets are measured at fair value with gains or losses being recognised as a separate component of equity until the investment is derecognised or until the investment is determined to be impaired at which time the cumulative gain or loss previously reported in equity is included in the income statement.

Listed share investments are carried at fair value based on stock exchange quoted prices at the close of business at balance sheet date. Unlisted shares are carried at fair value where market values can be reliably obtained, otherwise they are stated at cost less any impairment.

Share based compensation plans

The Former Xstrata Group makes share based awards including free shares and options, to certain employees.

Equity-settled awards

For equity-settled awards, the fair value is charged to the income statement and credited to retained earnings, on a straight line basis over the vesting period, after adjusting for the estimated number of awards that are expected to vest (taking into account the achievement of non-market based performance conditions). The fair value of the equity settled awards is determined at the date of the grant. In calculating fair value, no account is taken of any vesting conditions, other than conditions linked to the price of the shares of the company (market conditions). The fair value is determined by external experts using models. At each balance sheet date prior to vesting, the cumulative expense representing the extent to which the vesting period has expired and management's best estimate of the awards that are ultimately expected to vest is computed (after adjusting for non-market performance conditions). The movement in cumulative expense is recognised in the income statement with a corresponding entry within equity.

No expense is recognised for awards that do not ultimately vest, except for awards where vesting is conditional upon a market condition, which are treated as vesting irrespective of whether or not the market condition is satisfied, provided that all other performance conditions are satisfied.

Where the terms of an equity-settled award are modified, as a minimum an expense is recognised as if the terms had not been modified over the original vesting period. In addition, an expense is recognised for any modification, which increases the total fair value of the share-based payment arrangement, or is otherwise beneficial to the employee as measured at the date of modification, over the remainder of the new vesting period.

Where an equity-settled award is cancelled, it is treated as if it had vested on the date of cancellation, and any expense not yet recognised for the award is recognised immediately. Any compensation paid up to the fair value of the awards at the cancellation or settlement date is deducted from equity, with any excess over fair value being treated as an expense in the income statement. However, if a new award is substituted for the cancelled award, and designated as a replacement award on the date that it is granted, the cancelled and new awards are treated as if they are a modification of the original award, as described in the previous paragraph.

Cash settled-awards

For cash-settled awards, the fair value is re-calculated at each balance date until the awards are settled based on the estimated number of awards that are expected to vest adjusting for market and non-market based performance conditions. During the vesting period, a liability is recognised representing the portion of the vesting period which has expired at the balance sheet date times the fair value that of the awards at that date. After vesting the full fair value of the unsettled awards at each balance date is recognised as a liability. Movements in the fair value are recognised in the income statement. The fair value is recalculated using an option pricing model.

The Former Xstrata Group has taken advantage of the transitional provisions of IFRS 2 in relation to equity-settled awards and has applied this accounting standard only to awards granted on or after 7 November 2002 that had not vested prior to 1 January 2005.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Convertible borrowings

The Former Xstrata Group has not retrospectively applied the requirements of IAS 32 and 39. Convertible borrowings are accounted for in accordance with UK GAAP prior to 1 January 2005.

On issue of the convertible borrowing, the fair value of the liability component is determined by discounting the contractual future cash flows using a market rate for a non-convertible instrument with similar terms. This value is carried as a liability on the amortised cost basis until extinguished on conversion or redemption. The remainder of the proceeds is allocated to a separate component of equity, net of issue costs, which remains constant in subsequent periods. Issue costs are apportioned between the liability and equity components based on their respective carrying amounts when the instrument was issued.

On conversion, the liability is reclassified to equity and no gain or loss is recognised in the profit or loss. Where the convertible borrowing is redeemed early or repurchased in a way that does not alter the original conversion privileges, the consideration paid is allocated to the liability and equity components. The consideration relating to the equity component is recognised in equity and the amount of gain or loss relating the liability element in profit and loss.

Own shares

The cost of purchases of own shares held by the Employee Share Ownership Plan (ESOP) trust are deducted from equity. Where they are issued to employees or sold, no gain or loss is recognised in the income statement. Any proceeds received on disposal of the shares or transfer to employees are also recognised in equity.

Own shares purchased under the Equity Capital Management Programme (ECMP) are deducted from equity. No gain or loss is recognised in the income statement on the purchase, sale, issue or cancellation of such shares. Such gains and losses are recognised directly in equity.

Foreign currencies

Financial statements of subsidiaries, joint ventures and associates, are maintained in their functional currencies and translated to US dollars for consolidation of the Former Xstrata Group results. The functional currency of each entity is determined after consideration of the primary economic environment of the entity. Transactions in foreign currencies are translated at the exchange rates ruling at the date of transaction. Monetary assets and liabilities denominated in foreign currencies are retranslated at year end exchange rates. Non-monetary assets measured in terms of historical cost in a foreign currency are translated using the exchange rates at the date of the initial transactions. Where non-monetary assets are measured at fair value in a foreign currency, they are translated at the exchange rates when the fair value was determined. All differences that arise are recorded in the income statement except when hedge accounting is applied and for differences on loans that form part of the net investment in a foreign operation. Where the exchange differences relates to an item which has been recorded in equity, the related exchange difference is also recorded in equity.

On consolidation of foreign operations into US dollars, income statement items are translated at weighted average rates of exchange where this is a reasonable approximation to the exchange rate at the dates of the transactions. Balance sheet items are translated at closing exchange rates. Exchange differences on the re-translation of the investments in overseas subsidiaries, joint ventures and associates at closing rates, together with differences between income statements translated at average and at closing rates, are recorded in a separate component of equity. Exchange differences relating to loan balances with the foreign operations which form part of the net investment in the foreign operation are also recognised in this component of equity. On disposal or partial disposal of a foreign entity or on repayment of loans forming part of the net investment in the foreign entity, the deferred cumulative amount recognised in equity relating to that particular foreign operation is recognised in the income statement.

Exchange differences on foreign currency borrowings to finance net investments and tax charges/credits attributable to those exchange differences are also recorded in a separate component of equity to the extent that the hedge is effective. Upon full or partial disposal or repayment of the net investment in the foreign operation, (including loans that form part of the net investment), the cumulative amount of the exchange differences is recognised in the income statement when the gain or loss on disposal or on loan repayment is recognised.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Property, plant and equipment

Land and buildings, plant and equipment

On initial acquisition, land, property, plant and equipment are valued at cost, being the purchase price and the directly attributable costs of acquisition or construction required to bring the asset to the location and condition necessary for the asset to be capable of operating in the manner intended by management.

In subsequent periods, property, plant and equipment is stated at cost less accumulated depreciation and any impairment in value, whilst land is stated at cost less any impairment in value and is not depreciated.

Depreciation is provided so as to write off the cost, less estimated residual values of property, plant and equipment (based on prices prevailing at the balance date) on the following bases:

Mine production assets are depreciated using a unit of production method based on estimated economically recoverable reserves, which results in a depreciation charge proportional to the depletion of reserves. Buildings, plant and equipment unrelated to production are depreciated using the straight-line method based on estimated useful lives.

Where significant parts of an asset have differing useful lives, depreciation is calculated on each separate part. Each item or part's estimated useful life has due regard to both its own physical life limitations and the present assessment of economically recoverable reserves of the mine property at which the item is located, and to possible future variations in those assessments. Estimates of remaining useful lives and residual values are reviewed annually. Changes in estimates which affect unit of production calculations are accounted for prospectively.

The expected useful lives are as follows:

Buildings	15 – 40 years
Plant and Equipment	4 – 30 years
Furniture and Fixtures	5 – 15 years
Other	3 – 5 years

The net carrying amounts of mine buildings, machinery and equipment at each mine property are reviewed for impairment either individually or at the cash-generating unit when events and changes in circumstances indicate that the carrying amount may not be recoverable to the extent to which these values exceed their recoverable amounts, that excess is fully provided against in the financial year in which this is determined.

Expenditure on major maintenance or repairs includes the cost of replacement of parts of assets and overhaul costs. Where an asset or part of an asset is replaced and it is probable that future economic benefits associated with the item will flow to the Former Xstrata Group, the expenditure is capitalised and the carrying amount of the item replaced derecognised. Similarly, overhaul costs associated with major maintenance are capitalised where it is probable that future economic benefits will be available and any remaining carrying amounts of the cost of previous overhauls are derecognised. All other costs are expensed as incurred.

Where an item of property, plant and equipment is disposed of, it is derecognised and the difference between its carrying value and net sales proceeds is disclosed as a profit or loss on disposal in the income statement.

Any items of property, plant or equipment that cease to have future economic benefits expected to arise from the continued use or disposal of the assets are derecognised with any gain or loss included in the income statement in the financial year in which the item is derecognised.

Exploration and evaluation expenditure

Exploration and evaluation expenditure for each area of interest, other than that acquired from the purchase of another mining company, is carried forward as an asset provided that one of the following conditions is met:

- such costs are expected to be recouped in full through successful development and exploration of the area of interest or alternatively, by its sale; or

- exploration and evaluation activities in the area of interest have not yet reached a stage which permits a reasonable assessment of the existence or otherwise of economically recoverable reserves, and active and significant operations in relation to the area are continuing, or planned for the future.

Purchased exploration and evaluation assets are recognised as assets at their cost of acquisition or at fair value if purchased as part of a business combination.

An impairment review is performed, either individually or at the cash generating unit level, when there are indicators that the carrying amount of the assets may exceed their recoverable amounts. To the extent that this occurs, the excess is fully provided against, in the financial period in which this is determined. Exploration assets are reassessed on a regular basis and these costs are carried forward provided that at least one of the conditions outlined above is met.

Mineral properties and mine development expenditure
The cost of acquiring mineral reserves and mineral resources are capitalised on the balance sheet as incurred. Capitalised costs (development expenditure) include interest and financing costs relating to the construction of plant and equipment and costs associated with a start up period where the asset is available for use but incapable of operating at normal levels without a commissioning period.

Mineral reserves and capitalised mine development expenditure are, upon commencement of production, amortised using a unit of production method based on the estimated economically recoverable reserves to which they relate or are written-off if the property is abandoned. The net carrying amounts of mineral reserves and resources and capitalised mine development expenditure at each mine property are reviewed for impairment either individually or at the cash-generating unit when events and changes in circumstances indicate that the carrying amount may not be recoverable. To the extent to which these values exceed their recoverable amounts, that excess is fully provided against in the financial year in which this is determined.

Capital work in progress
Assets in the course of construction are capitalised in the capital work in progress account. On completion, the cost of construction is transferred to the appropriate category of property, plant and equipment.

The cost of property, plant and equipment comprises its purchase price and any costs directly attributable to bringing it into working condition for its intended use.

Costs associated with a start up period are capitalised where the asset is available for use but incapable of operating at normal levels without a commissioning period.

Capital work in progress is not depreciated.

Deferred overburden removal expenditure
In open pit mining operations, it is necessary to remove overburden and other waste in order to access the ore body. During the pre-production phase, these costs are capitalised as part of the cost of the mine property.

The costs of removal of the waste material during a mine's production phase is deferred, where appropriate. The deferral of these costs, and subsequent charges to the income statement are determined with reference to the mine's strip ratio. This ratio represents the ratio of the estimated total volume of waste, to the estimated total quantity of economically recoverable ore, over the life of the mine. Deferral of these costs is made where the actual stripping ratios vary from the mine's strip ratio. The costs charged to the income statement are based on application of the mine strip ratio to the quantity of ore mined in the period. Where the ore is expected to be evenly distributed, waste removal is expensed as incurred.

Derivative financial instruments and hedging
The Former Xstrata Group uses derivative financial instruments such as interest rate swaps, forward currency and commodity contracts to hedge its risks associated with interest rate, foreign currency and price fluctuations. Such derivative financial instruments are initially recognised at fair value on the date on which a derivative contract is entered into and are

subsequently re-measured at fair value. Derivatives are carried as assets when the fair value is positive and as liabilities when the fair value is negative.

Any gains or losses arising from changes in fair value on derivatives that do not qualify for hedge accounting are taken directly to profit or loss for the year.

The fair value of forward currency and commodity contracts are calculated by reference to current forward exchange rates and prices for contracts with similar maturity profiles. The fair value of interest rate swap contracts is determined by reference to market values for similar instruments.

For the purpose of hedge accounting, hedges are classified as:

- fair value hedges;
- cash flow hedges; or
- hedges of a net investment in a foreign operation.

At the inception of a hedge relationship, the Former Xstrata Group formally designates and documents the hedge relationship to which the Former Xstrata Group wishes to apply hedge accounting and the risk management objective and strategy for undertaking the hedge. The documentation includes identification of the hedging instrument, the hedged item or transaction, the nature of the risk being hedged and how the entity will assess the hedging instrument's effectiveness in offsetting the exposure to changes in the hedged item's fair value or cash flows attributable to the hedged risk. Such hedges are expected to be highly effective in achieving offsetting changes in fair value or cash flows and are assessed on an ongoing basis to determine that they actually have been highly effective throughout the financial reporting periods for which they were designated.

Hedges which meet the strict criteria for hedge accounting are accounted for as follows:

Fair value hedges
Fair value hedges are hedges of the Former Xstrata Group's exposure to changes in the fair value of a recognised asset or liability that could affect profit or loss. The carrying amount of the hedged item is adjusted for gains and losses attributable to the risk being hedged, the derivative is re-measured at fair value and gains and losses from both are taken to profit or loss.

For fair value hedges relating to items carried at amortised cost, the adjustment to carrying value is amortised through profit or loss over the remaining term to maturity. Any adjustment to the carrying amount of a hedged financial instrument for which the effective interest method is used is amortised to profit or loss.

Amortisation begins when the hedged item ceases to be adjusted for changes in its fair value attributable to the risk being hedged.

The Former Xstrata Group discontinues fair value hedge accounting if the hedging instrument expires or is sold, terminated or exercised, the hedge no longer meets the criteria for hedge accounting or the Former Xstrata Group revokes the designation.

Cash flow hedges
Cash flow hedges are a hedge of the exposure to variability in cash flows that is attributable to a particular risk associated with a recognised asset or liability or a highly probable forecast transaction and could affect profit or loss. The effective portion of the gain or loss on the hedging instrument is recognised directly in equity, while the ineffective portion is recognised in profit or loss.

Amounts taken to equity are transferred to the income statement when the hedged transaction affects profit or loss. Where the hedged item is the cost of a non-financial asset or liability, the amounts taken to equity are transferred to the initial carrying amount of the non-financial asset or liability.

B. Operating and financial review relating to the Former Xstrata Group (continued)

If the forecast transaction is no longer expected to occur, amounts previously recognised in equity are transferred to profit or loss. If the hedging instrument expires or is sold, terminated or exercised without replacement or rollover, or if its designation as a hedge is revoked, amounts previously recognised in equity remain in equity until the forecast transaction occurs. If the related transaction is not expected to occur, the amount is taken to profit or loss.

Hedges of a net investment

Hedges of a net investment in a foreign operation, including a hedge of a monetary item that is accounted for as part of the net investment, are accounted for in a way similar to cash flow hedges. Gains or losses on the hedging instrument relating to the effective portion of the hedge are recognised directly in equity while any gains or losses relating to the ineffective portion are recognised in profit or loss. On disposal of the foreign operation, the cumulative value of any such gains or losses recognised directly in equity is transferred to profit or loss.

Environmental protection, rehabilitation and closure costs

Provision is made for close down, restoration and environmental rehabilitation costs (which include the dismantling and demolition of infrastructure, removal of residual materials and remediation of disturbed areas) in the accounting period when the related environmental disturbance occurs. This provision is based on the estimated future costs, using information available at the balance sheet date. The provision is discounted using a current market-based pre-tax discount rate and the unwinding of the discount is included in interest expense. At the time of establishing the provision, a corresponding asset is capitalised, where it gives rise to a future benefit, and depreciated over future production from the mine to which it relates.

The provision is reviewed on an annual basis for changes to obligations or legislation or discount rates that effect change in cost estimates or life of operations. The cost of the related asset is adjusted for changes in the provision resulting from changes in the estimated cash flows or discount rate, and the adjusted cost of the asset is depreciated prospectively. Periodic unwinding of the discount is recognised as a finance cost in the income statement.

Rehabilitation trust funds holding monies committed for use in satisfying environmental obligations are included within Other financial assets on the balance sheet.

Taxation

Current tax

Current tax for each taxable entity in the Former Xstrata Group is based on the local taxable income at the local statutory tax rate enacted or substantively enacted at the balance sheet date and includes adjustments to tax payable or recoverable in respect of previous periods.

Deferred tax

Deferred tax is recognised using the balance sheet method in respect of all temporary differences between the tax bases of assets and liabilities, and their carrying amounts for financial reporting purposes, except as indicated below:

Deferred income tax liabilities are recognised for all taxable temporary differences, except:

- where the deferred income tax liability arises from the initial recognition of goodwill, or the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and

- in respect of taxable temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, where the timing of the reversal of the temporary differences can be controlled and it is probable that the temporary differences will not reverse in the foreseeable future.

Deferred income tax assets are recognised for all deductible temporary differences, carry-forward of unused tax assets and unused tax losses, to the extent that it is probable that taxable profit will be available against which the deductible temporary differences, and the carry-forward of unused tax assets and unused tax losses can be utilised, except:

B. Operating and financial review relating to the Former Xstrata Group (continued)

- where the deferred income tax asset relating to the deductible temporary difference arises from the initial recognition of an asset or liability in a transaction that is not a business combination and, at the time of the transaction, affects neither the accounting profit nor taxable profit or loss; and

- in respect of deductible temporary differences associated with investments in subsidiaries, associates and interests in joint ventures, deferred tax assets are recognised only to the extent that it is probable that the temporary differences will reverse in the foreseeable future and taxable profit will be available against which the temporary differences can be utilised.

The carrying amount of deferred income tax assets is reviewed at each balance sheet date and reduced to the extent that it is no longer probable that sufficient taxable profit will be available to allow all or part of the deferred income tax asset to be utilised. To the extent that an asset not previously recognised fulfils the criteria for recognition, a deferred income tax asset is recorded.

Deferred tax is measured on an undiscounted basis at the tax rates that are expected to apply in the periods in which the asset is realised or the liability is settled, based on tax rates and tax laws enacted or substantively enacted at the balance sheet date.

Current and deferred tax relating to items recognised directly in equity are recognised in equity and not in the income statement.

UK GAAP

Acquisition accounting – fair value

On the acquisition of a subsidiary, or of an interest in a joint venture, associate, or joint arrangement, the purchase consideration is allocated to the assets and liabilities of the Former Xstrata Group on the basis of their fair value at the date of acquisition. Mineral reserves and resources that can be reliably valued are recognised in the assessment of fair value on acquisition. Other potential reserves, resources and mineral rights, for which, in the directors' opinion, values cannot be reliably determined, are not recognised. If the cost of acquisition exceeds the fair value attributable to the Former Xstrata Group's share of the identifiable net assets acquired the difference is treated as purchased goodwill. Goodwill is amortised on a straight-line basis over its useful economic life up to a presumed maximum of 20 years. As further evidence becomes available subsequent to an acquisition, the estimated fair values of identifiable assets or liabilities acquired are reviewed and may be adjusted, as appropriate, prior to the end of the first full financial year following the year of acquisition.

Exploration and evaluation expenditure

Exploration and evaluation expenditure for each area of interest, other than that acquired from the purchase of another mining company, is carried forward as an asset provided that one of the following conditions is met:

- such costs are expected to be recouped through successful development and exploration of the area of interest or alternatively, by the sale of such interest; or
- exploration and evaluation activities in the area of interest have not yet reached a stage which permits a reasonable assessment of the existence or otherwise of economically recoverable reserves, and active and significant operations in relation to the area are continuing.

Exploration expenditure which fails to meet at least one of the conditions outlined above is written-off. Identifiable exploration and evaluation assets acquired are recognised as assets at their cost of acquisition. Exploration assets are reassessed on a regular basis and these costs are carried forward provided that at least one of the conditions outlined above is met.

Mineral properties and mine development expenditure

Costs of acquiring mineral properties are capitalised on the balance sheet in the year in which they are incurred. Capitalised costs (development expenditure) include interest and financing costs relating to the construction of plant and equipment and costs associated with a start-up period where the asset is available for use but incapable of operating at normal levels without a commissioning period.

Mineral properties and capitalised costs are, upon commencement of production, amortised using a unit of production method based on the estimated economically recoverable reserves to which they relate or are written-off if the property is abandoned or where there is an impairment in value.

Fixed assets – valuation
Fixed assets are generally included in the financial statements at historical cost less any accumulated depreciation or amortisation. The carrying amounts of fixed assets are reviewed for impairment if events or changes in circumstances indicate the carrying value may not be recoverable. If there are indications of impairment, a review is undertaken to determine whether the carrying values are in excess of their estimated recoverable amount. Such review is undertaken on income generating units.

If the carrying amount of a fixed asset exceeds the recoverable amount, a provision is recorded to reflect the asset at the lower recoverable amount. In assessing recoverable amount for fixed assets, the relevant future cash flows expected to arise from the continuing use of such assets and from their disposal have been discounted to their present value using a market-determined discount rate. Cash flows are estimated based on commodity price assumptions (considering current and historical prices, price trends and related factors), production and sales plans, recoverable reserves, operating costs and rehabilitation costs. These estimates are subject to risk and uncertainty, hence there is a possibility that changes in circumstances will alter these projections, which may impact the recoverability of these assets.

Environmental protection, rehabilitation and closure costs
The Former Xstrata Group makes provision for close down, restoration and for environmental rehabilitation costs (which include the dismantling and demolition of infrastructure, removal of residual materials and remediation of disturbed areas) in the accounting period when the related environmental disturbance occurs, which provision is based on the estimated future costs and in turn on the Former Xstrata Group's interpretation of environmental and regulatory requirements and its own environmental policies. The provision is discounted where material and the unwinding of the discount is included in interest payable. At the time of establishing the provision, a corresponding asset is capitalised (where it gives rise to a future benefit) and depreciated over future production from the mine to which it relates. The provision does not include allowances for unforeseeable events.

The provision is reviewed on an annual basis for changes in cost estimates or life of operations.

Deferred taxation
Deferred tax is recognised in respect of all timing differences that have originated but not reversed at the balance sheet date that will result in an obligation to pay more, or a right to pay less, tax in the future. In particular:

- provision is made for tax on gains arising from the disposal of fixed assets, but only to the extent that, at the balance sheet date, there is a binding agreement to dispose of the assets concerned. However, no provision is made where, on the basis of all available evidence at the balance sheet date, it is more likely than not that the taxable gain will be rolled over into replacement assets and charged to tax only when the replacement assets are sold;
- provision is made for deferred tax that would arise on remittance of the retained earnings of overseas entities only to the extent that, at the balance sheet date, dividends have been accrued as receivable; and
- deferred tax assets are recognised only where it is more likely than not that there will be suitable taxable profits from which the future reversal of the underlying timing differences can be deducted.

Deferred tax is measured on an undiscounted basis at the tax rates that are expected to apply in the periods in which timing differences reverse, based on tax rates and laws enacted or substantively enacted at the balance sheet date.

Foreign currencies
Transactions in foreign currencies are translated at the exchange rates ruling at the date of transaction or, where forward cover contracts have been arranged, at the rate specified in the forward contract. Monetary assets and liabilities denominated in foreign currencies are retranslated at year end exchange rates, or where there are related forward contracts, at the rate specified in the forward contract.

On consolidation, profit and loss account items are translated at average rates of exchange. Balance sheet items are translated at year end exchange rates.

B. Operating and financial review relating to the Former Xstrata Group (continued)

Exchange differences on the retranslation of the investments in overseas subsidiaries, joint arrangements, joint ventures and associates at closing rates, together with differences between profit and loss accounts translated at average and at closing rates, are dealt with in reserves. Exchange differences on foreign currency borrowings financing those net investments, are also dealt with in reserves. All other exchange differences are charged or credited to the profit and loss account in the year in which they arise.

Derivative instruments

The Former Xstrata Group is exposed to foreign exchange, interest rate and commodity price risks. The Former Xstrata Group may use forward, swap, option and collar contracts to reduce its exposure to foreign exchange, interest rate and commodity price risks movements. Hedge accounting is applied whereby gains and losses on these contracts are recognised in the period to which the gains and losses of the underlying transactions relate. Where the underlying transaction can no longer be identified, gains or losses on the hedge contract are recognised in the profit and loss account. Where the hedge contracts are terminated early and the underlying transaction can no longer be identified, the gain or loss on the terminated hedge contract is recognised in the profit and loss account. Where the hedged transaction is still expected to occur, the gain or loss on the terminated hedge transaction is deferred until the underlying transaction occurs.

Deferred overburden removal expenditure

In open pit mining operations, it is necessary to remove overburden and other waste in order to access the ore body. During the pre-production phase, these costs are capitalised as part of the cost of the mine property.

The cost of removal of the waste material during a mine's production phase is deferred, where appropriate. The deferral of these costs, and subsequent charges in the profit and loss account are determined with reference to the mine's strip ratio. This ratio represents the ratio of the estimated total volume of waste, to the estimated total quantity of economically recoverable ore, over the life of the mine. Deferral of these costs is made where the actual stripping ratios vary from the mine's strip ratio. The costs charged in the profit and loss account are based on application of the mine strip ratio to the quantity of ore mined in the period. Where the ore is expected to be evenly distributed, waste removal is expensed as incurred.

C. Financial information on the Falconbridge Group

The information presented herein is extracted without material amendment from the consolidated financial statements contained in Part X – "Financial Information Relating to the Falconbridge Group". You should read the information below in conjunction with the financial information contained in Part X – "Financial Information Relating to the Falconbridge Group" and also the detailed information included in this document and the information incorporated by reference into this document and you should not rely solely on key and summarised information.

Ernst & Young LLP (Canada) of Ernst & Young Tower, 222 Bay Street Toronto, Ontario M5K 1J7, Canada has issued audit reports on the financial statements of Falconbridge at, and for the year ended, 31 December 2005 and of Noranda for the two years ended 31 December 2004 and 31 December 2003. Each such audit report was unqualified.

The information in respect of the Falconbridge Group in paragraphs C and D of this Part I is presented in US dollars unless otherwise indicated and in accordance with Canadian GAAP.

Canadian GAAP differ in certain significant respects from UK GAAP, IFRS and US GAAP. See paragraph 17 of Part VIII – "Additional Information – Differences between US GAAP, IFRS, UK GAAP and Canadian GAAP".

On 30 June 2005 Noranda and Former Falconbridge completed their merger transaction, whereby Noranda increased its majority interest in Former Falconbridge. Following the transaction, Noranda operates under the name Falconbridge. The financial information presented relates to:

- Falconbridge at, and for the six-month periods ended, 30 June 2006 and 30 June 2005 and for the year ended 31 December 2005; and

- Noranda at, and for the two years ended, 31 December 2004 and 31 December 2003 on the basis that Noranda consolidated Former Falconbridge within its accounts for the two years ended 31 December 2004 and 31 December 2003.

C. Financial information on the Falconbridge Group (continued)

Selected Canadian GAAP financial information on the Falconbridge Group[1]

The financial information set out below has been extracted without material amendment from Noranda's audited consolidated financial information for the years ended 31 December 2003 and 31 December 2004 (in the latter case as reported and as restated on the basis set out in note (2) below) and for the six-month period ended 30 June 2005 and from Falconbridge's audited consolidated financial information for the year ended 31 December 2005 and for the six-month period ended 30 June 2006, in each case prepared in accordance with Canadian GAAP.

You should read the information below in conjunction with the rest of this Part I and the other detailed information included elsewhere in this document and incorporated by reference into this document and should not rely solely on selected and summarised information.

	Audited Canadian GAAP Year ended 31 December				Unaudited Canadian GAAP Six months ended 30 June

D. Operating and financial review relating to the Falconbridge Group

The following discussion of the financial condition and results of operations of the Falconbridge Group should be read in conjunction with "A. Financial information on the Former Xstrata Group" in this Part I above, with "B. Operating and financial review relating to the Former Xstrata Group" in this Part I above, with "C. Financial information on the Falconbridge Group" in this Part I below, with Part X – "Financial Information Relating to the Falconbridge Group" and with the information relating to the businesses of the Enlarged Xstrata Group, the Former Xstrata Group and the Falconbridge Group included elsewhere in this document and the financial and other information on the Former Xstrata Group incorporated by reference into this document as described in the section of this document headed "Relevant Information".

The information and analysis contained in this section D has been primarily sourced from the Falconbridge Group's published Management's Discussion and Analysis at, and for each of the years ended, 31 December 2003, 31 December 2004 and 31 December 2005 and at, and for each of the three-month periods ended, 31 March 2006 and 30 June 2006.

Effective from 1 January 2005, the Falconbridge Group adopted new standards for the accounting treatment of convertible debentures, Preferred Shares Series H and variable interest entities, leading to a restatement of its 2004 financial statements. Accordingly, the discussion in the section headed "Year ended 31 December 2005 compared with year ended 31 December 2004 (restated)" in this section D below compares the reported results for the year ended 31 December 2005 with the restated results for the year ended 31 December 2004.

Effective from 1 January 2004, the Falconbridge Group adopted a new standard for the accounting treatment of asset retirement obligations, leading to a restatement of its 2003 financial statements. Accordingly, the discussion in the section headed "Year ended 31 December 2004 (as reported) compared with year ended 31 December 2003 (restated)" in this section D below compares the reported results for the year ended 31 December 2004 with the restated results for the year ended 31 December 2003.

Some of the information in the review set forth below and elsewhere in this document and in the information incorporated by reference into this document includes forward-looking statements that involve risks and uncertainties. See the section of this document headed "Presentation of Information – Cautionary note regarding forward-looking statements" for a discussion of important factors that could cause actual results to differ materially from the results described in the forward-looking statements contained in this document. Factors that could cause or contribute to such differences include those discussed below and elsewhere in this document, particularly in the section of this document headed "Risk Factors".

See also the section of this document headed "Presentation of Information – Presentation of financial information".

Investors and potential investors should read the whole of this document and not just rely on summarised or key information.

Overview of the Falconbridge Group's business

The Falconbridge Group's principal products are nickel, copper, zinc and aluminium, with the balance of the Falconbridge Group's products coming from by-products and co-products that include silver, gold, platinum group metals, lead, selenium, tellurium, cadmium, indium, cobalt, nickel sulphate and sulphuric acid.

The principal markets for the Falconbridge Group's products include the steel, refinery and foundry, construction, telecommunications, automotive, agricultural and chemical industries. The United States was the principal market for the Falconbridge Group's products in 2005, accounting for 36% of consolidated sales (2004 – 36%), with Canada accounting for 16% of consolidated sales (2004 – 17%), Europe 23% of consolidated sales (2004 – 26%) and other countries 25% of consolidated sales (2004 – 21%).

Principal factors affecting the Falconbridge Group's business

The Falconbridge Group's business is international in scope and, in essence, is the production and marketing of base metal commodities and the by-products of those production processes and the treatment of custom feed materials. As a result, profitability and cash flows from operations are determined primarily by the price of the metals sold and the Falconbridge Group's ability to produce at a low cost.

D. Operating and financial review relating to the Falconbridge Group (continued)

Prices and markets

Historically, the Falconbridge Group has experienced and expects to continue to be subject to volatile commodity prices, which are influenced primarily by the world supply-demand balance for those commodity products and related processing services, and other related factors such as speculative activities by market participants, production activities by competitors, political and economic conditions, as well as production costs in major producing regions. The realised price for metals is also influenced by regional supply-demand factors, the availability and price of secondary or metal containing scrap materials, and other substitute commodity products. The Falconbridge Group generally realises prevailing market prices and does not hedge the price it realises on the sale of its own production. For an overview of the industries in which the Falconbridge Group operates, see Part II – "Information on the Enlarged Xstrata Group – Overview of the industries in which the Enlarged Xstrata Group operates".

Production costs

The other primary determinant of profitability and cash flow from the Falconbridge Group's operations is the Falconbridge Group's ability to produce at a low cost. Production costs are largely influenced by ore grades, mine planning, processing technology, energy and supply costs and the impact of exchange rate fluctuations on costs of operations.

Capital

The Falconbridge Group's business is capital intensive with significant costs involved in exploration activities, and the development and maintenance of mining and metallurgical facilities. As such, securing low-cost capital is instrumental in profitability.

Historically, the Falconbridge Group has sourced capital from common and preferred equity markets, public debt markets and bank debt. A more detailed description of the Falconbridge Group's use of interest rate and foreign currency management instruments is provided in this Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group – Six-month period ended 30 June 2006 compared with six-month period ended 30 June 2005 – Financial instruments and other instruments", in this Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group - Year ended 31 December 2005 compared with year ended 31 December 2004 (restated) - Financial instruments and other instruments" and in this Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group – Year ended 31 December 2004 (as reported) compared with year ended 31 December 2003 (restated) – Financial instruments and other instruments".

Significant developments during the period under review

Six-month period ended 30 June 2006

Major developments in relation to the Falconbridge Group in the six-month period ended 30 June 2006 included:

- Inco Offer for Falconbridge:

  On 11 October 2005, Inco Limited announced the Inco Offer to acquire all outstanding Falconbridge Shares. On 13 May 2006, Inco announced an improved offer that when subject to pro-ration would have provided Falconbridge Shareholders with C$12.50 in cash and 0.524 of an Inco share.

  Following the Phelps Dodge offer to acquire Inco that was announced on 26 June 2006 (see details below), Inco subsequently revised its offer on 26 June 2006 to C$17.50 and 0.55676 Inco shares on the pro-rated basis and again on 16 July 2006 to C$18.50 and 0.55676 Inco shares on the pro-rated basis.

  The Inco Offer expired on 28 July 2006 without Inco taking up any Falconbridge Shares.

  In connection with the Inco Offer, Falconbridge and Inco reached regulatory clearance agreements with the US Department of Justice and the European Commission which determined that the proposed remedy was acceptable to allow the proposed Inco and Falconbridge transaction to proceed. The remedy consisted of the conditional sale of the Nikkelverk refinery in Norway and the Falconbridge marketing and custom feed organisations that procure third-party feed materials and market and sell the refined products to LionOre. The sale would have included an agreement to

D. Operating and financial review relating to the Falconbridge Group (continued)

supply up to 60,000 tonnes of nickel in matte annually, approximately equivalent to the current volume of feed provided by Falconbridge's operations to this refinery, for up to ten years. The sale of the Nikkelverk refinery and the Falconbridge marketing and custom feed organisations was conditional upon the completion of the Inco Offer. As a result of the termination of the Inco Offer, the asset sales under the Falconbridge LionOre Agreement did not proceed. See paragraph 22.6 of Part VIII – "Additional Information – Material contracts".

Following the expiry of the Inco Offer for Falconbridge on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement described in paragraph 22.17 of part VIII – "Additional Information – Material contracts".

- Phelps Dodge Inco Combination:

  On 26 June 2006, Phelps Dodge announced in conjunction with Inco and Falconbridge that the three companies had agreed to combine. Phelps Dodge offered to acquire all of the outstanding common shares of Inco for a combination of cash and shares. Each Inco shareholder would receive 0.672 Phelps Dodge shares and C$17.50 in cash for each Inco common share on a pro-rated basis. Phelps Dodge subsequently revised its offer on 16 July 2006 to C$20.25 and 0.672 Phelps Dodge shares on a prorated basis. The Phelps Dodge offer to Inco shareholders would also have been available to all Falconbridge Shareholders, upon the successful take up of Falconbridge Shares by Inco under the terms of the Inco Offer, for any Inco common shares received pursuant to the offer. Falconbridge's role in the Phelps Dodge Inco Combination ended on the expiry on 28 July 2006 of the Inco Offer without Inco taking up any Falconbridge Shares. On 5 September 2006, Inco announced that it had agreed with Phelps Dodge to terminate the Phelps Dodge Inco Combination Agreement and Phelps Dodge's offer for Inco terminated without Phelps Dodge taking up any Inco shares.

- Xstrata Offer:

  On 18 May 2006, Xstrata made its offer to purchase for cash all of the outstanding Falconbridge Shares at an offered price of C$52.50 per share. On 11 July 2006, Xstrata announced its intention to increase its all cash offer price to C$59.00 per share. On 21 July 2006, Xstrata increased its offer for Falconbridge to C$62.50 per common share in cash and waived the minimum tender condition under the Xstrata Offer. The Xstrata Offer completed on 25 August 2006 and the Enlarged Xstrata Group now owns approximately 97.1% of the Falconbridge Shares and Xstrata has begun a compulsory acquisition process to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006, after which Falconbridge will be a wholly-owned indirect subsidiary of Xstrata.

- Declaration of Falconbridge Special Dividend

  On 16 July 2006, Falconbridge declared the Falconbridge Special Dividend of C$0.75 per Falconbridge Share that was paid on 10 August 2006 to Falconbridge Shareholders on record at the close of business on 26 July 2006.

- Redemption of Junior Preference Shares

  On 26 April 2006, Falconbridge redeemed a total of 20 million shares, or US$500 million, of its outstanding Junior Preference Shares, based upon shareholders of record on 22 March 2006. Falconbridge utilised then existing cash balances to fund the redemption. On 28 June 2006, Falconbridge redeemed the remaining balance of its 9,999,701 outstanding Junior Preference Shares for a total of approximately US$250 million utilising internal cash resources. Upon redemption, Falconbridge had no Junior Preference Shares outstanding.

- Falconbridge offer to acquire outstanding Novicourt shares

  On 22 June 2006, Falconbridge announced that it would offer to acquire by way of a takeover bid all of the outstanding common shares of its subsidiary, Novicourt Inc., that it did not already own (being approximately 37.9% of the common shares of Novicourt). Falconbridge offered an aggregate of approximately C$17.5 million (approximately

D. Operating and financial review relating to the Falconbridge Group (continued)

US$15.7 million) in cash under the offer. The offer, as extended, expired on 22 August 2006, resulting in Falconbridge now holding approximately 93.6% of the common shares of Novicourt. The balance of the Novicourt shares will be acquired by Falconbridge under a second step business compulsory acquisition transaction, expected to be completed in October 2006, after which Novicourt will be a wholly-owned subsidiary of Falconbridge.

- The adoption of the Second Falconbridge Shareholder Rights Plan pursuant to an agreement dated as of 21 March 2006 between Falconbridge and CIBC Mellon Trust Company, as rights agent, that was cease traded on 28 July 2006, as described in paragraph 22.7 of Part VIII – "Additional Information – Material contracts".

Year ended 31 December 2005

Major developments in relation to the Falconbridge Group in the year ended 31 December 2005 included:

- the continued progress on the Raglan Optimisation Programme;
- the construction at the molybdenum recovery plant, which started-up in the fourth quarter of 2006, at Compañía Minera Doña Inés de Collahuasi S.C.M. ("Collahuasi");
- the continuation of the feasibility study on the second expansion of the copper concentrator at Collahuasi;
- the development of the new leaching pad for run-of-mine ore at Lomas Bayas;
- the Kidd Mine D shaft progress with the ramp and lateral development being at 97% of plan;
- the finalisation of a joint-venture agreement between Falconbridge and Barrick Gold Corporation regarding the Kabanga nickel deposit in Tanzania and related concessions;
- the earn-in of a 70% joint venture interest in the El Morro (Chile) copper/gold property from Metallica Resources Inc.;
- the completion on 5 May 2005, of Noranda's issuer bid to exchange Noranda common shares for new Junior Preference Shares. A total of 63,377,140 Noranda common shares were repurchased as a result of this offer and a total of 50,000,000 new junior preference shares were issued as consideration;
- the completion of Noranda's takeover bid of the Former Falconbridge whereby it offered to exchange 1.77 Noranda common shares for each outstanding Former Falconbridge common share that it did not own. 58,476,589 Former Falconbridge common shares were validly deposited under the offer, increasing Noranda's ownership to 164,235,689 or 91% of the outstanding Former Falconbridge common shares;
- the issue and sale of US$250 million of 12-year 5.5% and US$250 million of 30-year 6.2% unsecured notes of Noranda;
- the redemption of US$500 million (20,000,000 shares) of Falconbridge's outstanding Junior Preference Shares;
- the sale of the assets and liabilities of the Falconbridge Group's Lockerby Mine in Sudbury, including all closure obligations, to First Nickel Inc.;
- the approval on 30 June 2005 by Noranda and Former Falconbridge shareholders of the amalgamation of the two companies. The amalgamated company chose to continue under the operating name Falconbridge Limited and effective 6 July 2005 began trading under new stock symbols (TSX: FAL.LV and NYSE: FAL);
- the depletion of ore reserves at the Louvicourt mine and final production on 12 July 2005. The Louvicourt mine was a major supplier of copper and zinc concentrates to the Falconbridge Group's Horne smelter;
- the commencement of molybdenum production at the Falconbridge Group's Altonorte smelter following the completion of the roaster transformation;

D. Operating and financial review relating to the Falconbridge Group (continued)

- the sale by Falconbridge's subsidiary Noranda Aluminum Inc. of its aftermarket automobile wheel manufacturing and distribution operations, American Racing Equipment ("ARE"), to Platinum Equity, a global mergers and acquisition firm based in Los Angeles, California, for US$40.5 million. The transaction resulted in a gain for Falconbridge of approximately US$1 million. Under the transaction, an affiliate of Platinum Equity acquired all outstanding shares of ARE;

- the acquisition by Xstrata of 73.1 million Falconbridge Shares, or approximately 19.9% of the then outstanding Falconbridge Shares, from Brookfield at a price of C$28 per share, making Xstrata the largest single Falconbridge Shareholder;

- the announcement that the board of directors of Falconbridge had adopted the First Falconbridge Shareholder Rights Plan. This First Falconbridge Shareholder Rights Plan expired on 21 March 2006. See paragraph 22.19 of Part VIII – "Additional Information – Material contracts";

- the realisation of a pre-tax gain of US$13 million on the sale of the Falconbridge Group's stake in Canico Resources Inc. following its acquisition by another metals and mining company;

- the settlement of the Kidd Metallurgical Division's new three-year collective agreement with Canadian Auto Workers – Local 599 which represents the facility's production and maintenance employees;

- the announcement on 11 October 2005 of a takeover bid by Inco Limited for all of the outstanding shares of Falconbridge and endorsement of the acquisition offer by the boards of directors of Falconbridge and Inco and the recommendation by the Falconbridge board that Falconbridge Shareholders tender their shares to the Inco Offer. The Inco Offer expired on 28 July 2006 without Inco taking up any Falconbridge Shares;

- the announcement on 23 December 2005 that Falconbridge reached an agreement on the financing of the Koniambo nickel project with Societé Minière du Sud Pacifique S.A. ("SMSP"), its joint venture partner in the Koniambo nickel project in New Caledonia; and

- the satisfaction of the two conditions precedents under the Bercy Accord prior to 31 December 2005, allowing for the eventual transfer of the Koniambo property to Koniambo Nickel, a company owned 49% by the Falconbridge Group and 51% by its partner SMSP.

Year ended 31 December 2004

Major developments in relation to the Falconbridge Group in the year ended 31 December 2004 included:

- the achievement of increased profitability in all four Falconbridge Group business units, including zinc and aluminium;

- the advancement of new production capacity at the Collahuasi mine;

- the commencement of an underground definition programme at the Nickel Rim South project with production targeted for 2009;

- the successful ramp-up at Lomas Bayas following completion of the crusher expansion project ahead of schedule and under budget;

- the achievement of planned nickel production following the three week strike at the Sudbury mines;

- the advancement of Phase One of the Raglan Optimisation Programme;

- the procurement of additional long-term zinc concentrate supply for the Kidd Creek refinery;

- the execution of an agreement to acquire a 50% interest in the Lennard Shelf zinc mine in Australia;

D. Operating and financial review *relating to the Falconbridge Group* (continued)

- the acquisition of a 50% interest in Kaiser Aluminum Gramercy alumina plant in Gramercy, Louisiana, and related bauxite mining assets in Jamaica;
- the completion of the removal of residual lake sediment at the Antamina copper/zinc mine enabling access to higher-grade ores;
- the advancement and near completion of the Kidd Mine D expansion project;
- the commencement of scoping studies for further expansions at Falcondo, Lomas Bayas and Collahuasi;
- the completion of the bankable feasibility study for the Koniambo project in New Caledonia;
- the renewal of collective labour agreements at the Collahuasi mine, CCR refinery, CEZ refinery, Matagami mine, Noranda Recycling – Roseville, Nikkelverk, Altonorte and American Racing;
- the completion of the Montcalm mine development, ahead of time, and under budget, with the milling of ore commencing in October;
- the continued advancement of exploration programmes at Raglan and Sudbury, Canada and West Wall and El Morro, Chile; and
- the announcement by Noranda that it had entered into exclusive negotiations with China Minmetals Corporation regarding the acquisition of Noranda, and the subsequent announcement by Noranda in November 2004 that the period for such exclusive negotiations would not be extended.

Year ended 31 December 2003

Major developments in relation to the Falconbridge Group in the year ended 31 December 2003 included:

- the announcement of the Falconbridge Group's plans to rationalise its magnesium business and the temporary shutdown of its Magnola magnesium plant in Danville, Quebec, as a result of adverse market conditions. The plant was closed in April 2003. A US$33 million pre-tax charge related to costs incurred to shut down the plant was recorded in 2003;
- the advancement of important development programmes at Collahuasi and Kidd Creek to maintain copper production levels;
- the shut down of the zinc refining operations located at the Kidd Metallurgical site in Timmins, Ontario for 13 weeks during the summer for market and supply-related reasons;
- the completion by the Altonorte smelter, in Chile, of a major modernisation and US$170 million Phase 3 expansion project;
- the public offering by Noranda of 6,000,000 Cumulative Redeemable Series H Shares with a quarterly cumulative dividend at a rate of 6.25% per annum (the "Series H Shares") for gross proceeds of C$150 million;
- Noranda's private placement of 6,000,000 Cumulative Preferred Shares, Series I with a quarterly cumulative dividend at a rate of 8% per annum (the "Series I Shares") for gross proceeds of C$150 million. All of the Series I Shares were purchased by Brascan pursuant to the exercise by Noranda of a put option previously granted by Brascan. The Series I Shares were redeemed by Noranda in August 2003 in accordance with their terms;
- purchase of a 3.3% net proceeds interest relating to the Antamina copper and zinc mine in Peru from Inmet Mining Corporation for US$22.5 million. The purchase was completed under a put-call agreement entered into between the companies in February 2002;

D. Operating and financial review relating to the Falconbridge Group (continued)

- advancement on the work at the Koniambo Project in New Caledonia including the mobilisation of the project team to begin the bankable feasibility study and financing discussions progression with the French government;

- the completion of the following transactions, among others, as part of the Company's recapitalisation plan to improve Noranda's balance sheet by reducing debt:

  (a) the reduction of Noranda's quarterly dividend from C$0.20 per share to C$0.12 per share;

  (b) the release of guarantees of Noranda in the amount of US$442 million on 1 July 2003 with respect to the Antamina project loan by converting these facilities to a non-recourse basis;

  (c) the secondary offering of Noranda's remaining 11,984,900 Priority Units of the Noranda Income Fund in July 2003 for gross proceeds of approximately US$84 million. Subsequent to the offering, Noranda retained a 25% interest in the Noranda Income Fund through its holding of Ordinary Units of Noranda Income Limited Partnership, exchangeable on a one for one basis for Priority Units of Noranda Income Fund upon the occurrence of certain events;

  (d) the issue and sale in August 2003 of 28.52 million common shares of Noranda to a syndicate of underwriters and of 20 million common shares to Brascan, for total net proceeds of approximately C$601 million. The outstanding Series I Shares were redeemed as part of this transaction; and

  (e) the issue and sale in September 2003, of 12-year 6% unsecured notes of Noranda in an aggregate principal amount of US$350 million;

- Noranda's announcement that the ore reserves at the Bell Allard zinc mine in Matagami, Quebec would be depleted in 2004 and that operations at the Bell Allard mine would cease in the fourth quarter of 2004;

- the retirement of Lars-Eric Johansson from his position as Executive Vice-President and Chief Financial Officer of Noranda and the appointment of Steven Douglas, previously the Executive Vice-President and Chief Financial Officer of real estate company Brookfield Properties Corporation, as his successor; and

- the signing of new collective agreements in respect of the Falconbridge Group's operations at Brunswick Mine, Brunswick Smelter, Brunswick Smelter Bulk Handling, General Smelting, Horne, Lomas Bayas, Antamina, Norandal Salisbury, Noranda Recycling – Roseville and Altonorte.

D. Operating and financial review relating to the Falconbridge Group (continued)

Financial impact of the amalgamation of Noranda and Former Falconbridge

For information on the financial impact of the Falconbridge Amalgamation which became effective on 30 June 2005, see note 2 of the unaudited consolidated financial statements of Falconbridge for the six-month period ended 30 June 2006, as set out in Part X – "Financial Information Relating to the Falconbridge Group".

The preliminary fair value of the 41.5% of the assets and liabilities acquired from Former Falconbridge exceeded the book value of those assets by approximately US$1.4 billion, which was allocated to the assets and liabilities of the acquired assets at their respective preliminary fair values. The preliminary allocation of these values was as follows:

	Unaudited Canadian GAAP US$m
Preliminary fair value increment of assets acquired by Falconbridge	
Accounts receivable	9
Metals and other inventories	42
Operating capital assets	1,966
Development projects	255
Investments and other assets	(41)
Preliminary fair value increment of liabilities assumed by Falconbridge	
Long-term debt	8
Future income taxes	(708)
Asset retirement obligation, pension and other provisions	(114)
Net assets acquired	1,417
Book value of minority interest and other	1,117
Acquisition value	2,534

Purchase accounting rules required an allocation of the purchase costs to assets and liabilities acquired under the transaction. During the second quarter of 2006, the allocation to the assets and liabilities was finalised. The impact of the finalisation of the purchase price allocation on 30 June 2006 from the preliminary purchase price allocation was to decrease operating capital assets by US$789 million, decrease development projects by US$266 million, increase investment and other assets by US$116 million, increase goodwill by US$529 million and decrease future income taxes by US$410 million.

Integrated operations

As an integrated producer of metals, Falconbridge's operations include mines and metallurgical facilities which provide the Falconbridge Group with maximum flexibility in both minimising costs and maximising operating performance by processing its own minerals. This integration also reduces the Falconbridge Group's exposure to treatment-charge fluctuations and shipping-rate volatility.

When milling, smelting or refining capacity exceeds the Falconbridge Group's own mine production, Falconbridge acquires third-party concentrates and secondary feeds to utilise this capacity and realise incremental treatment revenues. These treatment revenues provide incremental income to Falconbridge Group and absorb fixed costs at metallurgical sites, with custom milling, smelting and refining operations being conducted throughout Falconbridge Group as capacity allows. Operations conducting custom feed processing of copper and nickel feeds are located in North and South America, and Norway. The flexibility of the processing facilities enables Falconbridge Group to treat complex ores, concentrates and secondary feeds.

The Falconbridge Group also captures the sulphur content of the concentrates that it treats at its metallurgical sites and produces sulphuric acid as a marketable by-product. This by-product can provide incremental revenues that help reduce cash operating costs.

The price paid to suppliers of custom feeds varies with the prevailing price of the metals being treated and as such, Falconbridge's exposure to increasing metals prices is primarily based upon its own mine production. Falconbridge's continued focus on the identification and development of long-life, high-quality copper and nickel mining assets will continue to increase its leverage to copper and nickel while current metallurgical site infrastructure will minimise the investment required to bring new deposits into commercial production.

D. Operating and financial review relating to the Falconbridge Group (continued)

Six-month period ended 30 June 2006 compared with six-month period ended 30 June 2005

Financial overview

For the six-month period ended 30 June 2006, Falconbridge's consolidated net income totalled US$1,190 million, with basic earnings per share of US$3.17 and diluted earnings per share of US$3.12. This compared with net income of US$378 million, with basic earnings per share of US$1.20 and diluted earnings per share of US$1.19 for the six-month period ended 30 June 2005.

Revenues

Revenues for the six-month period ended 30 June 2006 were US$6.81 billion, 72% higher than revenues of US$3.95 billion in the six-month period ended 30 June 2005. The increase was mainly due to higher realised metal prices, increased copper, nickel and aluminium sales volumes and increased revenue contribution from by-product molybdenum credits. Falconbridge Group business unit revenues for the six-month period ended 30 June 2006 were 111% higher for copper, 15% higher for nickel, 132% higher for zinc and 24% higher for aluminium as compared with those for the six-month period ended 30 June 2005.

Average realised prices

Average realised prices for the Falconbridge Group's main products during the six-month period ended 30 June 2006 and the six-month period ended 30 June 2005 were as follows:

	Six months ended 30 June	
	2005	2006
	US$ per pound	
Copper	1.55	2.82
Nickel	7.34	7.89
Zinc	0.63	1.32
Aluminium	0.91	1.20
Lead	0.50	0.61

Operating expenses

Operating expenses totalled US$4.83 billion in the six-month period ended 30 June 2006, compared to US$3.02 billion in the six-month period ended 30 June 2005, primarily due to the higher value of raw material feeds. Mining, processing and refining costs increased to US$1.57 billion in the six-month period ended 30 June 2006 from US$1.24 billion in the six-month period ended 30 June 2005 due to increased mined and refined copper production, higher refined zinc production, increased primary and rolled aluminium production, higher energy and supplies/consumables costs and the impact of a weaker US dollar on operating costs at all Canadian and South American operations. The average value of the Canadian dollar increased 9% to US$0.88 in the six-month period ended 30 June 2006 from US$0.81 during the six-month period ended 30 June 2005.

The value of raw material feed purchases was US$2.93 billion in the six-month period ended 30 June 2006, or almost double the US$1.52 billion recorded in the six-month period ended 30 June 2005 due to higher metal prices and increased custom feed processing at the Horne smelter and CCR refinery. Higher purchased raw materials values are recovered at the time of sale of the metals contained in the materials treated and are hedged at the time of purchase.

Depreciation, amortisation and accretion expense increased to US$328 million in the six-month period ended 30 June 2006 from US$265 million in the six-month period ended 30 June 2005, with the increase being primarily attributable to the amortisation of the fair value increment related to the purchase of Former Falconbridge minority shareholders' interest. Net interest expense increased to US$77 million in the six-month period ended 30 June 2006 from US$65 million in the six-month period ended 30 June 2005 due to the early redemption premium of US$8 million paid to holders at the time of the redemption of US$750 million of junior preference shares in the second quarter of 2006. Minority interest in earnings of subsidiaries decreased to US$5 million in the six-month period ended 30 June 2006 from US$149 million in the six-month period ended 30 June 2005 largely as a result of the elimination of Former Falconbridge's minority share ownership. Tax expenses recorded increased to US$628 million in the six-month period ended 30 June 2006 from US$257 million during the six-month period ended 30 June 2005, due to the overall increase in profitability.

D. Operating and financial review relating to the Falconbridge Group (continued)

Income generated by operating assets

Income generated by operating assets for the six-month period ended 30 June 2006 was US$1.98 billion, 115% higher than US$922 million in the six-month period ended 30 June 2005. Income generated by operating assets increased 211% to US$1,346 million in the Falconbridge Copper Business, decreased 3% to US$383 million in the Nickel Business, increased from US$31 million to US$215 million in the Falconbridge Zinc Business and increased 71% to US$120 million in the Aluminum Business, in each case comparing the six-month period ended 30 June 2006 with the six-month period ended 30 June 2005.

Net income totalled US$1.190 billion in the six-month period ended 30 June 2006, with basic earnings per share of US$3.17 and diluted earnings per share of US$3.12 for the six-month period ended 30 June 2006, 215% higher than net income of US$378 million, with basic earnings per share of US$1.20 and diluted earnings per share of US$1.19 in the six-month period ended 30 June 2005. Higher net income reflected higher realised metal and by-product prices and higher treatment and refining charges received at copper smelters and refineries.

Consolidated assets

Consolidated assets totalled US$13.2 billion as at 30 June 2006, compared with US$12.4 billion as at 31 December 2005. The increase was primarily due to the investment of additional capital in advancing brownfield and greenfield expansion development projects and higher working capital levels due to increased metals prices.

Minority interest increased from US$54 million at 31 December 2005 to US$243 million as at 30 June 2006. The increase was attributable to consolidating the Koniambo Nickel joint venture that was formed during the second quarter of 2006. The Falconbridge Group owns 49% of the net assets of the joint venture and the minority interest represents the 51% of the net assets that are owned by the Falconbridge Group's partner, SMSP.

Falconbridge Copper Business

The table below provides selected summary information in relation to the Falconbridge Copper Business for the six-month period ended 30 June 2005, the six-month period ended 30 June 2006, the three-month periods ended 30 June 2005 and 30 June 2006 and the three month periods ended 31 March 2005 and 31 March 2006:

	Unaudited Canadian GAAP					
	Three months ended 31 March		Six months ended 30 June		Three months ended 30 June	
	2005	2006	2005	2006	2005	2006
Production: (tonnes)						
Mined copper	106,000	104,800	208,600	212,400	101,700	107,500
Refined copper	121,600	143,100	246,300	287,500	124,700	144,500
Mined zinc	47,600	37,600	102,700	79,900	55,100	42,300
Refined zinc	38,000	37,300	73,500	77,400	35,600	40,000
Sales (tonnes)						
Contained copper	210,800	280,800	416,700	527,800	205,900	247,000
Contained zinc	56,100	41,500	99,100	86,900	43,000	45,500
Revenues (US$m)	968	1,768	2,012	4,247	1,044	2,479
Realised copper price (US$/lb)	1.54	2.29	1.55	2.82	1.57	3.39
Mining, processing and refining costs (US$m)	242	320	506	630	264	310
Cash costs (US$/lb of copper)	0.35	0.30	0.29	0.16	0.21	0.03
Income from operating assets (US$m)	231	489	433	1,346	202	857

Revenues. For the three-month period ended 30 June 2006, Falconbridge Copper Business revenues increased by 137% to US$2.48 billion from US$1.04 billion in the three-month period ended 30 June 2005, reflecting higher realised copper and zinc prices and higher copper sales volumes. Copper sales volumes totalled 247,000 tonnes in the three-month period ended 30 June 2006, up 20% from 205,900 tonnes reported in the three-month period ended 30 June 2005. In the three-month period ended 30 June 2006, mine concentrate sales were 23% higher at 53,300 tonnes, anode sales were 15% higher at 47,900 and cathode sales were 27% higher at 145,800 tonnes, in each case compared with the three-month period ended 30 June 2005. Sales of by-product zinc volumes totalled 45,500 tonnes in the three-month period ended 30 June 2006 versus 43,000 tonnes during the three-month period ended 30 June 2005. Higher zinc sales

D. Operating and financial review relating to the Falconbridge Group (continued)

from the Kidd Creek refinery accounted for the increase. Antamina concentrate stocks at the end of the three-month period ended 30 June 2006 were significantly higher than normal due to vessel shipping delays that deferred some June shipments into July.

During the three-month period ended 30 June 2006, copper revenues were higher as the realised copper price of US$3.39/lb increased 116% compared to US$1.57/lb realised in the three-month period ended 30 June 2005. Also contributing to Falconbridge Copper Business revenues were significantly higher zinc prices, as well as increased sales of by-product molybdenum concentrate from the Antamina and Collahuasi mines. Combined molybdenum concentrate sales were 77% higher at 1,000 tonnes in three-month period ended 30 June 2006 compared with the three-month period ended 30 June 2005.

For the three-month period ended 31 March 2006, Falconbridge Copper Business revenues increased 83% to US$1,768 million from US$968 million in the three-month period ended 31 March 2005, reflecting higher realised copper and zinc prices and higher copper sales volumes. Copper sales volumes totalled 280,800 tonnes in the three-month period ended 31 March 2006, up 30% from the three-month period ended 31 March 2005, as output from all copper smelters and refineries increased during the three-month period ended 31 March 2006.

Sales of by-product zinc volumes totalled 41,500 tonnes in the three-month period ended 31 March 2006 versus 56,100 tonnes during the three-month period ended 31 March 2005. The majority of the zinc sales decrease was attributable to lower production at Antamina that resulted from lower zinc grades that were mined.

During the three-month period ended 31 March 2006, copper revenues were higher as the realised copper price of US$2.29/lb increased 49% compared to US$1.54/lb realised in the three-month period ended 31 March 2005. Also contributing to Falconbridge Copper Business revenues were significantly higher zinc prices, as well as increased sales of by-product molybdenum concentrate from the Antamina and Collahuasi mines.

Costs. Total operating expenses for the Falconbridge Copper Business increased to US$1,622 million in the three-month period ended 30 June 2006 from US$842 million in the three-month period ended 30 June 2005. Mining, processing and refining costs increased to US$310 million in the three-month period ended 30 June 2006 from US$264 million in the three-month period ended 30 June 2005 as a result of the impact of a weaker US dollar, higher energy and supply costs and increased smelter and refinery output. The value of purchased raw material feeds increased to US$1,247 million in the three-month period ended 30 June 2006 from US$510 million in the three-month period ended 30 June 2005 due to the significant rise in copper prices and the increased custom materials throughput at the Horne smelter and CCR refinery. Depreciation decreased to US$65 million in the three-month period ended 30 June 2006 from US$68 million in the three-month period ended 30 June 2005. The operating cash cost of producing a pound of copper in the three-month period ended 30 June 2006 decreased to US$0.03/lb from US$0.21/lb in the three-month period ended 30 June 2005 due to higher credits from by-product sales and improved smelting and refining charge revenues.

Total operating expenses for the Falconbridge Copper Business increased to US$1,279 million in the three-month period ended 31 March 2006, from US$737 million in the three-month period ended 31 March 2005. Mining, processing and refining costs increased to US$320 million in the three-month period ended 31 March 2006 from US$242 million in the three-month period ended 31 March 2005 as a result of the impact of a weaker US dollar, higher energy and supply costs and increased smelter and refinery output. The value of purchased raw material feeds increased to US$871 million in the from US$440 million in the three-month period ended 31 March 2005 due to the significant rise in copper prices and the increased production and sales from the copper smelters and refineries. Depreciation increased to US$88 million from US$55 million due to the amortisation of the fair value increment related to the acquisition of Former Falconbridge and due to increased copper sales volumes from Kidd Creek. The operating cash cost of producing a pound of copper in the three-month period ended 31 March 2006 decreased to US$0.30/lb from $0.35/lb in the three-month period ended 31 March 2005 due to higher credits from by-product sales and improved smelting and refining charge revenues.

Income generated from operating assets. Operating income for the copper business in the three-month period ended 30 June 2006 more than quadrupled to US$857 million from US$202 million in the three-month period ended 30 June 2005 as a result of significantly higher revenues that were partially offset by higher costs. Operating income benefited from higher sales volumes and metals prices, higher treatment and refining charges and increased throughput at the Horne

D. Operating and financial review relating to the Falconbridge Group (continued)

smelter and CCR refinery. Partially offsetting the stronger revenues were increased costs resulting from the impact of a weaker US dollar on operating costs and higher energy and supply costs.

Operating income for the Falconbridge Copper Business in the three-month period ended 31 March 2006 increased 112% to US$489 million from US$231 million in the three-month period ended 31 March 2005 as a result of significantly higher revenues that were somewhat offset by higher costs. Operating income also benefited from higher treatment and refining charges and increased throughput at all three copper smelters and both copper refineries. Partially offsetting the stronger revenues were increased costs resulting from the impact of a weaker US dollar on operating costs and higher energy and supply costs.

Production. During the three-month period ended 30 June 2006, copper mine production from Canadian and South American operations totalled 107,500 tonnes, an increase of 6% compared to 101,700 tonnes in the three-month period ended 30 June 2005. While Antamina mined copper output was 800 tonnes lower, Collahuasi, Lomas Bayas and Kidd Creek mined copper production were all higher than the three-month period ended 30 June 2005. Collahuasi copper was 14% higher at 11,300 tonnes in the three-month period ended 30 June 2006 compared with the three-month period ended 30 June 2005.

By-product zinc-in-concentrate production was 23% lower at 42,300 tonnes in the three-month period ended 30 June 2006 versus 55,100 tonnes in the three-month period ended 30 June 2005. Lower by-product zinc mine production was recorded at both Antamina and Kidd Creek due to lower zinc grades.

Offsetting 56% higher anode production at the Horne smelter was lower production at the Altonorte smelter and Kidd Creek smelters. Altonorte anode production was 14,000 tonnes lower than the three-month period ended 30 June 2005 due mostly to lower concentrate grades. Total anode production was 146,300 tonnes in the three-month period ended 30 June 2006 versus 149,000 tonnes in the three-month period ended 30 June 2005.

Refined copper production was 144,500 tonnes in the three-month period ended 30 June 2006 versus 124,700 tonnes in the three-month period ended 30 June 2005 due primarily to increased production at the CCR refinery. The CCR refinery cathode production increased to 94,100 tonnes during the three-month period ended 30 June 2006 from 67,200 tonnes in the three-month period ended 30 June 2005, as a result of higher anode production at the Horne smelter and increased processing of Inco sourced copper anodes at CCR. Kidd Creek refined cathode production was 21% lower in the three-month period ended 30 June 2006 compared with the three-month period ended 30 June 2005 due to a scheduled six-week maintenance outage that occurred during the three-month period ended 30 June 2006.

During the three-month period ended 31 March 2006, copper mine production from Canadian and South American operations totalled 104,800 tonnes, compared to 106,900 tonnes in the three-month period ended 31 March 2005. Lower copper production at Collahuasi was partially offset by higher production from Antamina and Kidd Creek. By-product zinc-in-concentrate production was 21% lower at 37,600 tonnes in the three-month period ended 31 March 2006 versus 47,600 tonnes in the three-month period ended 31 March 2005. Lower by-product zinc mine production recorded at Antamina was partially offset by higher zinc concentrate production at Kidd Creek.

At Antamina, copper-in-concentrate production was 34,200 tonnes in the three-month period ended 31 March 2006, an increase of 10% from the three-month period ended 31 March 2005 due to richer copper grades (1.47% compared with 1.41%) resulting from a change in the ore type mix. Partially offsetting higher copper output at Antamina were lower zinc grades and production due to the intrinsic variability for such complex skarn deposits.

Copper production at the Lomas Bayas mine was 15,600 tonnes in the three-month period ended 31 March 2006, down 4% from the three-month period ended 31 March 2005, mainly due to adverse weather conditions.

Kidd Creek mined copper production was 23% higher in the three-month period ended 31 March 2006 at 13,800 tonnes compared with the three-month period ended 31 March 2005, due to higher copper head grades and mill throughput.

At the Collahuasi mine, the Falconbridge Group's share of production totalled 41,200 tonnes in the three-month period ended 31 March 2006, compared with 48,400 tonnes in the three-month period ended 31 March 2005. Production was lower primarily due to lower head grades (1.09% compared with 1.25%) and lower mill throughput associated mostly with

D. Operating and financial review relating to the Falconbridge Group (continued)

material handling problems at the primary crusher and conveyor system and due to an electrical failure of the motor in one of the SAG mills. The 10-day outage of the affected mill occurred in late March 2006.

At the Altonorte smelter, copper anode production of 66,000 tonnes was 14% higher in the three-month period ended 31 March 2006 compared with the three-month period ended 31 March 2005, due to improved operations. In addition, in the three-month period ended 31 March 2005 the Altonorte smelter had a scheduled shutdown which reduced production.

Refined copper production was 143,100 tonnes in the three-month period ended 31 March 2006 versus 121,600 tonnes in the three-month period ended 31 March 2005. Kidd Creek refinery production was up 7% to 33,700 tonnes in the three-month period ended 31 March 2006 compared with the three-month period ended 31 March 2005, due to higher mine production and increased custom feed processing. The CCR refinery cathode production increased to 87,200 tonnes during the three-month period ended 31 March 2006 from 67,000 tonnes in the three-month period ended 31 March 2005, as a result of higher anode production at the Horne smelter and increased processing of Inco sourced copper anodes.

Nickel Business

The table below provides selected summary information in relation to the Nickel Business for the six-month period ended 30 June 2005, the six-month period ended 30 June 2006, the three-month periods ended 30 June 2005 and 30 June 2006 and the three-month periods ended 31 March 2005 and 31 March 2006:

	Unaudited Canadian GAAP					
	Three months ended 31 March		Six months ended 30 June		Three months ended 30 June	
	2005	2006	2005	2006	2005	2006
Production: (tonnes)						
Mined nickel	20,500	19,500	41,200	40,000	20,700	20,500
Refined nickel	27,900	28,400	56,800	55,500	28,900	27,100
Mined copper	8,600	8,900	18,100	17,000	9,500	8,100
Sales (tonnes)						
Contained nickel	27,800	29,600	56,500	57,500	28,700	27,900
Refined copper	15,500	13,200	18,800	21,000	10,000	10,300
Revenues (US$m)	535	581	1,145	1,314	610	733
Realised nickel price (US$/lb)	7.03	6.84	7.34	7.89	7.64	9.00
Realised ferronickel price (US$/lb)	6.70	6.63	7.13	7.39	7.55	8.19
Mining, processing and refining costs (US$m)	170	214	391	460	221	246
Cash costs (US$/lb of nickel) – INO	2.51	2.60	2.83	2.71	3.07	2.83
Cash costs (US$/lb of nickel) – Falcondo	3.88	4.82	4.05	5.07	4.19	5.30
Cash costs (US$/lb of nickel) – NBU	2.94	3.38	3.25	3.56	3.49	3.73
Income from operating assets (US$m)	194	148	394	383	200	235

Revenues. For the three-month period ended 30 June 2006, Nickel Business revenues of US$733 million increased from US$610 million in the three-month period ended 30 June 2005. Nickel sales volumes decreased 3% to 27,900 tonnes in the three-month period ended 30 June 2006 from 28,700 tonnes in the three-month period ended 30 June 2005. Total Nikkelverk refined copper sales were 3% higher from the three-month period ended 30 June 2005.

INO refined nickel sales of 20,100 tonnes in the three-month period ended 30 June 2006 decreased by 9% from 22,000 tonnes in three-month period ended 30 June 2005 due to decreased production at the Nikkelverk refinery. At Falcondo, ferronickel sales volumes increased by 18% to 7,900 tonnes in the three-month period ended 30 June 2006 from 6,700 tonnes in the three-month period ended 30 June 2005, which reflected a depletion of the inventory build-up that resulted from stainless steel market destocking which occurred in the second half of 2005. Cobalt sales of 931 tonnes in the three-month period ended 30 June 2006 decreased 20% from the three-month period ended 30 June 2005. Precious metals revenues increased by US$9 million in the three-month period ended 30 June 2006 compared to the three-month period ended 30 June 2005.

D. Operating and financial review relating to the Falconbridge Group (continued)

Realised nickel prices of US$9.00/lb increased by 18% in the three-month period ended 30 June 2006 compared with US$7.64/lb in the three-month period ended 30 June 2005. Realised ferronickel prices of US$8.19/lb increased by 8% from US$7.55/lb in the three-month period ended 30 June 2005. Realised cobalt prices of US$14.21/lb decreased by 8% in the three-month period ended 30 June 2006, compared with US$15.48/lb in the three-month period ended 30 June 2005.

For the three-month period ended 31 March 2006, Nickel Business revenues of US$581 million increased from US$535 million in the three-month period ended 31 March 2005. Nickel sales volumes increased 6% to 29,600 tonnes in the three-month period ended 31 March 2006 from 27,800 tonnes in the three-month period ended 31 March 2005. By-product copper sales volumes of 13,200 tonnes in the three-month period ended 31 March 2006 decreased 15% from 15,500 tonnes in the three-month period ended 31 March 2005.

Integrated Nickel Operations (INO) sales volumes of refined nickel in the three-month period ended 31 March 2006 were essentially unchanged from the three-month period ended 31 March 2005, at 21,400 tonnes. At Falcondo, ferronickel sales volumes increased by 26% to 8,200 tonnes in the three-month period ended 31 March 2006 from 6,500 tonnes in the three-month period ended 31 March 2005, which reflected the depletion of the inventory build-up that resulted from stainless steel market destocking in the second half of 2005. Cobalt sales of 1,100 tonnes in the three-month period ended 31 March 2006 increased 22% from the three-month period ended 31 March 2005. Precious metals revenues increased by US$14 million in the three-month period ended 31 March 2006 compared to the three-month period ended 31 March 2005.

Realised nickel prices of US$6.84/lb decreased by 3% in the three-month period ended 31 March 2006 compared with US$7.03/lb in the three-month period ended 31 March 2005. Realised ferronickel prices of US$6.63/lb in the three-month period ended 31 March 2006 decreased by 1% from US$6.70/lb in the three-month period ended 31 March 2005. Realised cobalt prices of US$12.41/lb in the three-month period ended 31 March 2006 decreased by 29% compared with US$17.44/lb in the three-month period ended 31 March 2005.

Costs. Total operating expenses increased to US$498 million in the three-month period ended 30 June 2006 from US$410 million in the three-month period ended 30 June 2005. Mining, processing and refining costs increased to US$246 million in the three-month period ended 30 June 2006 from US$221 million in the three-month period ended 30 June 2005 year largely due to the exchange rate impact on operating costs at Canadian operations and increases in energy prices. The value of purchased raw material feeds increased to US$209 million in the three-month period ended 30 June 2006 from US$145 million in the three-month period ended 30 June 2005 due to increased purchased material volumes and higher payable nickel and copper prices.

The operating cash cost per pound of mined nickel for all of Falconbridge (including INO and Falcondo) was US$3.73 in the three-month period ended 30 June 2006 compared with US$3.49 for the three-month period ended 30 June 2005. The operating cash cost of producing a pound of nickel from INO mines during the three-month period ended 30 June 2006 was US$2.83, a decrease of US$0.24 or 8% from the three-month period ended 30 June 2005. The decrease in unit costs was the result of higher by-product credits due to increases in by-product metal prices which offset the impact of the stronger Canadian dollar on operating costs at Canadian operations, higher energy costs and lower ore grades. At Falcondo, the operating cash cost per pound of ferronickel during the three-month period ended 30 June 2006 was US$5.30 compared with US$4.19 in the three-month period ended 30 June 2005. The increase in Falcondo costs was largely due to the increase in the oil price, as average oil costs rose from US$46.98 per barrel in the three-month period ended 30 June 2005 to US$60.62 per barrel during the three-month period ended 30 June 2006. Oil is the source of fuel for the electricity plant operated on site at Falcondo and represented 74% of total operating costs during the three-month period ended 30 June 2006.

Total operating expenses increased to US$433 million in the three-month period ended 31 March 2006 from US$341 million in the three-month period ended 31 March 2005. Mining, processing and refining costs increased to US$214 million in the three-month period ended 31 March 2006 from US$170 million in the three-month period ended 31 March 2005, largely due to the exchange rate impact on operating costs at Canadian operations, increases in energy prices and increased sales volumes. The value of purchased raw material feeds increased to US$166 million in the three-month period ended 31 March 2006 from US$142 million in the three-month period ended 31 March 2005, due to increased purchased material volumes and higher payable copper prices. The operating cash cost per pound of mined nickel for all of the Falconbridge Group (including INO and Falcondo) was US$3.38 in the three-month period ended 31 March 2006 compared with US$2.94 for the three-month period ended 31 March 2005. The operating cash cost of producing a pound of nickel

D. Operating and financial review relating to the Falconbridge Group (continued)

from INO mines, was US$2.60 in the three-month period ended 31 March 2006. The US$0.09/lb, or 4%, increase in costs from the three-month period ended 31 March 2005 was the result of the stronger Canadian dollar on operating costs at Canadian operations, higher energy costs, and lower ore grades. These higher costs offset the impact of increased by-product credits that resulted from higher by-product metal prices.

At Falcondo, operating cash cost per pound of ferronickel was US$4.82 in the three-month period ended 31 March 2006, compared with US$3.88 in the three-month period ended 31 March 2005. The increase in costs was largely due to the increase in the oil price, as average oil costs rose from US$38.83 per barrel in the three-month period ended 31 March 2005 to US$52.15 per barrel in the three-month period ended 31 March 2006. Oil is the source of fuel for the electricity plant operated on site and represented 71% of total operating costs at Falcondo during the three-month period ended 31 March 2006.

Income generated by operating assets. Operating income for the Nickel Business totalled US$235 million in the three-month period ended 30 June 2006, compared to US$200 million in the three-month period ended 30 June 2005. The US$35 million increase was mainly due to the impact of higher metal prices which offset increases in the costs of operations, including higher energy costs, the higher value of purchased raw materials and the impact of lower nickel and cobalt sales volumes. Depreciation charges decreased 2% to US$43 million from the three-month period ended 30 June 2006.

Operating income for the Nickel Business in the three-month period ended 31 March 2006 totalled US$148 million, compared to US$194 million in the three-month period ended 31 March 2005. The US$46 million decrease was mainly due to the impact of higher costs of operations, including higher energy costs and the higher value of purchased raw materials. Depreciation charges increased due to the amortisation of the fair value increment associated with the amalgamation of Former Falconbridge and Noranda. Higher costs offset the beneficial impact of slightly higher sales volumes during the three-month period ended 31 March 2006 versus the three-month period ended 31 March 2005.

Production. Total refined nickel production decreased 6% to 27,100 tonnes during the three-month period ended 30 June 2006 versus 28,900 tonnes during the three-month period ended 30 June 2005. Total mined nickel production was 1% lower at 20,500 tonnes in the three-month period ended 30 June 2006 compared with the three-month period ended 30 June 2005.

Sudbury mines production was 4,300 tonnes of nickel and 5,200 tonnes of copper during the three-month period ended 30 June 2006, compared with 5,600 tonnes of nickel and 7,000 tonnes of copper in the three-month period ended 30 June 2005. Sudbury mined nickel production was lower due to challenging ground conditions at the Thayer Lindsley mine and lower ore grades. At Raglan, nickel in concentrate production in the three-month period ended 30 June 2006 was 6,100 tonnes and copper-in-concentrate production was 1,500 tonnes, compared with 5,200 tonnes of nickel and 1,400 tonnes of copper in the three-month period ended 30 June 2005. The increase in Raglan production was due to higher mill throughput, which was partially offset by the impact of lower ore grades. The Montcalm mine produced 2,600 tonnes of nickel in concentrate and 1,300 tonnes of copper in concentrate in the three-month period ended 30 June 2006, compared to 2,200 tonnes and 1,100 tonnes of nickel and copper respectively in the three-month period ended 30 June 2005. The increases in production at Montcalm were due to increases in tonnes mined and improved ore grades.

At the Sudbury smelter, nickel-in-matte production in the three-month period ended 30 June 2006 decreased to 13,600 tonnes from 15,500 tonnes in the three-month period ended 30 June 2005, as a result of the treatment of lower mine concentrate tonnages and lower feed grades. The Sudbury smelter completed a three-week vacation shutdown in the first part of July 2006.

At the Nikkelverk refinery, refined nickel production was 19,600 tonnes in the three-month period ended 30 June 2006, compared with 21,200 tonnes in the three-month period ended 30 June 2005. Refined copper production at Nikkelverk totalled 10,300 tonnes in the three-month period ended 30 June 2006 compared to 9,700 tonnes in the three-month period ended 30 June 2005. The Falcondo ferronickel refinery produced 7,500 tonnes of nickel in ferronickel in the three-month period ended 30 June 2006, compared with 7,700 tonnes in the three-month period ended 30 June 2005.

Total refined nickel production increased by 2% to 28,400 tonnes during the three-month period ended 31 March 2006 versus 27,900 tonnes during the three-month period ended 31 March 2005. Total mined nickel production was 1,000

D. Operating and financial review relating to the Falconbridge Group (continued)

tonnes lower at 19,500 tonnes in the three-month period ended 31 March 2006 compared with the three-month period ended 31 March 2005.

Sudbury mines production was 4,500 tonnes of nickel and 6,200 tonnes of copper during the three-month period ended 31 March 2006, compared with 6,100 tonnes of nickel and 6,000 tonnes of copper in the three-month period ended 31 March 2005. Sudbury mined nickel production was lower due to challenging ground conditions at the Thayer Lindsley mine and lower nickel ore grades. At Raglan, nickel-in-concentrate production in the three-month period ended 31 March 2006 was 5,300 tonnes and copper production was 1,300 tonnes, compared with 6,000 tonnes of nickel and 1,500 tonnes of copper in the three-month period ended 31 March 2005. The decrease in Raglan production was due to the impact of lower ore grades. The Montcalm mine produced 2,800 tonnes of nickel and 1,400 tonnes of copper in the three-month period ended 31 March 2006, compared to 2,000 tonnes and 1,100 tonnes of nickel and copper respectively in the three-month period ended 31 March 2005. The increases in production at Montcalm were due to increases in tonnes mined and improved ore grades.

At the Sudbury smelter, nickel-in-matte production in the three-month period ended 31 March 2006 decreased to 15,800 tonnes from 17,400 tonnes in the three-month period ended 31 March 2005, as a result of the treatment of lower concentrate tonnages (due to reduced mine feeds) with lower feed grades.

At the Nikkelverk refinery, nickel production was 21,500 tonnes in the three-month period ended 31 March 2006, essentially unchanged from the three-month period ended 31 March 2005.

The Falcondo ferronickel refinery produced 6,900 tonnes of nickel in ferronickel in the three-month period ended 31 March 2006, compared with 6,500 tonnes in the three-month period ended 31 March 2005.

Falconbridge Zinc Business

The table below provides selected summary information in relation to the Falconbridge Zinc Business for the six-month period ended 30 June 2005, the six-month period ended 30 June 2006, the three-month periods ended 30 June 2005 and 30 June 2006 and the three-month periods ended 31 March 2005 and 31 March 2006:

	Unaudited Canadian GAAP					
	Three months ended 31 March		Six months ended 30 June		Three months ended 30 June	
	2005	2006	2005	2006	2005	2006
Production: (tonnes)						
Mined zinc	67,100	64,800	139,100	133,900	72,000	69,000
Refined zinc[1]	16,700	15,400	33,900	32,700	17,200	17,300
Mined lead	18,900	19,000	39,300	38,300	20,400	19,300
Refined lead	21,600	22,400	44,500	42,400	22,900	20,000
Sales (tonnes)						
Contained zinc[2]	94,800	68,400	185,500	178,900	90,700	110,500
Contained lead	26,500	29,700	52,400	55,700	26,000	26,000
Revenues (US$m)	119	199	246	570	127	371
Realised zinc price (US$/lb)	0.63	1.07	0.63	1.32	0.63	1.55
Mining, processing and refining costs (US$m)	50	52	87	112	37	60
Cash costs (US$/lb of zinc)	0.40	0.41	0.39	0.48	0.39	0.55
Income from operating assets (US$m)	6	64	31	215	25	151

Notes:

(1) 25% of the Noranda Income Fund CEZ refinery zinc production.

(2) Brunswick mine concentrate contained zinc and third party purchased concentrate sales to Noranda Income Fund.

Revenues. Falconbridge Zinc Business revenues increased to US$371 million in the three-month period ended 30 June 2006, an increase of 192% compared to the US$127 million recorded during the three-month period ended 30 June 2005. The increased revenue was due to higher zinc concentrate sales volumes and higher prices realised for zinc and other by-products. The average realised price per pound of zinc during the three-month period ended 30 June 2006 was US$1.55/lb, an increase of 146% compared to US$0.63/lb in the three-month period ended 30 June 2005. The average

D. Operating and financial review relating to the Falconbridge Group (continued)

realised price per pound of refined lead during the three-month period ended 30 June 2006 was US$0.57/lb, versus US$0.50/lb in the three-month period ended 30 June 2005. Silver LME prices increased to US$12.29 in the three-month period ended 30 June 2006 per ounce from US$7.15 per ounce in the three-month period ended 30 June 2005.

In the three-month period ended 30 June 2006, sales volumes of zinc-in-concentrates increased 22% to 110,500 tonnes from 90,700 tonnes in the three-month period ended 30 June 2005. Higher zinc sales volumes reflect the draw-down of inventory that was built up during the three-month period ended 30 June 2006 for shipment to the Noranda Income Fund. Lead metal and concentrate sales in the three-month period ended 30 June 2006 were unchanged from the three-month period ended 30 June 2005, at 26,000 tonnes.

The Falconbridge Group Zinc Business's revenues increased to US$199 million in the three-month period ended 31 March 2006, an increase of 67% compared to the US$119 million recorded during the three-month period ended 31 March 2005. The increased revenue was due to higher prices realised for zinc and other by-products. The average realised price per pound of zinc during the three-month period ended 31 March 2006 was US$1.07/lb, an increase of 70% compared to US$0.63/lb in the three-month period ended 31 March 2005. The average realised price per pound of refined lead during the three-month period ended 31 March 2006 was US$0.63/lb, versus US$0.49/lb in the three-month period ended 31 March 2005. Silver LME prices increased to US$9.69 per ounce in the three-month period ended 31 March 2006 from US$6.97 per ounce in the three-month period ended 31 March 2005.

In the three-month period ended 31 March 2006, sales volumes of zinc-in-concentrates decreased 28% to 68,400 tonnes from 94,800 tonnes in the three-month period ended 31 March 2005. Lower zinc sales volumes reflected the build-up of inventory to be shipped to the Noranda Income Fund in the three-month period ended 31 March 2006 and the timing of vessel shipments and arrivals. Lead metal sales in the three-month period ended 31 March 2006 increased to 29,700 tonnes from 26,500 tonnes in the three-month period ended 31 March 2005.

Costs. Mining, processing and refining costs increased to US$60 million in the three-month period ended 30 June 2006 from US$37 million in the three-month period ended 30 June 2005, while the value of purchased raw materials increased to US$147 million from US$57 million in the three-month period ended 30 June 2005. The value of raw material feeds increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to US$0.55 in the three-month period ended 30 June 2006 from US$0.39 for the three-month period ended 30 June 2005 due to a stronger Canadian dollar, higher smelting charges due to higher price participation and lower production at the Brunswick Mine, partially offset by the benefits from higher by-product copper and silver prices.

Mining, processing and refining costs increased to US$52 million in the three-month period ended 31 March 2006 from US$50 million in the three-month period ended 31 March 2005, while the value of purchased raw materials increased to US$76 million from US$54 million in the three-month period ended 31 March 2005. The value of raw material feeds increased along with the rise in zinc and lead prices. The operating cash cost per pound of mined zinc increased to US$0.41 in the three-month period ended 31 March 2006 from US$0.40 for the three-month period ended 31 March 2005 due to a stronger Canadian dollar and lower production at the Brunswick Mine, partially offset by the benefits from higher by-product copper and silver prices.

Income generated by operating assets. Operating income of the Falconbridge Zinc Business in the three-month period ended 30 June 2006 was US$151 million, compared with US$25 million for the three-month period ended 30 June 2005. The US$126 million improvement resulted from the higher metal prices and increased sales of zinc concentrates.

Operating income of the Falconbridge Group Zinc Business in the three-month period ended 31 March 2006 was US$64 million, compared with US$6 million for the three-month period ended 31 March 2005. The US$58 million improvement resulted primarily from the higher metal prices.

Production. Contained zinc production was 69,000 tonnes in the three-month period ended 30 June 2006, compared to 72,000 tonnes in the three-month period ended 30 June 2005. The decrease in production was primarily attributable to lower ore head grades. By-product copper in concentrate production at the Brunswick mine increased to 2,200 tonnes in the three-month period ended 30 June 2006 from 1,600 tonnes during the three-month period ended 30 June 2005, primarily due to a higher copper grade and improved recoveries in 2006.

D. Operating and financial review relating to the Falconbridge Group (continued)

Lead metal production at the Brunswick smelter was 20,000 tonnes in the three-month period ended 30 June 2006 compared to 22,900 tonnes in the three-month period ended 30 June 2005, primarily due to lower lead grades at the Brunswick mine.

Falconbridge's share of refined zinc production at the Noranda Income Fund CEZ Refinery totalled 17,300 tonnes in the three-month period ended 30 June 2006, versus 17,200 tonnes during the three-month period ended 30 June 2005.

Contained zinc production was 64,800 tonnes in the three-month period ended 31 March 2006, compared to 67,100 tonnes in the three-month period ended 31 March 2005. The decrease in production was primarily attributable to lower ore head grades and the residual effects of a rock burst which occurred at the Brunswick Mine in November 2005. The Falconbridge Group's share of refined zinc production at the Noranda Income Fund CEZ refinery totalled 15,400 tonnes in the three-month period ended 31 March 2006, versus 16,700 tonnes during the three-month period ended 31 March 2005. By-product copper-in-concentrate production at the Brunswick mine increased to 2,200 tonnes in the three-month period ended 31 March 2006 from 1,300 tonnes during the three-month period ended 31 March 2005, primarily due to a higher copper grade and improved recoveries in 2006.

Lead metal production at the Brunswick smelter was 22,400 tonnes in the three-month period ended 31 March 2006 compared to 21,600 tonnes in the three-month period ended 31 March 2005, due to an unplanned maintenance shutdown during the three-month period ended 31 March 2005 which resulted in lower production.

Aluminum Business

The table below provides selected summary information in relation to the Aluminum Business for the six-month period ended 30 June 2005, the six-month period ended 30 June 2006, the three-month periods ended 30 June 2005 and 30 June 2006 and the three-month periods ended 31 March 2005 and 31 March 2006:

	Unaudited Canadian GAAP					
	Three months ended 31 March		Six months ended 30 June		Three months ended 30 June	
	2005	2006	2005	2006	2005	2006
Production: primary (tonnes)	61,400	62,300	123,100	125,700	61,700	63,400
Sales: primary (tonnes)	56,600	56,400	113,900	114,000	57,300	57,600
Shipments: fabricated (tonnes)	45,600	46,400	89,200	95,100	43,500	48,700
Revenues (US$m)	271	310	543	676	272	366
Realised aluminium price (US$/lb)	0.92	1.13	0.91	1.20	0.90	1.25
Mining, processing and refining costs (US$m)	139	156	276	317	137	161
Cash costs (US$/lb of aluminium)	0.59	0.67	0.61	0.67	0.61	0.66
Income from operating assets (US$m)	35	47	70	120	35	73

Revenues. Aluminum Business revenues increased to US$366 million in the three-month period ended 30 June 2006, 35% higher than the US$272 million recorded during the three-month period ended 30 June 2005. Third-party sales of primary aluminium were essentially the same at 57,600 tonnes in the three-month period ended 30 June 2006, compared to 57,300 tonnes during the three-month period ended 30 June 2005. Rolled products sales volumes increased by 12% to 48,700 tonnes in the three-month period ended 30 June 2006 compared to 43,500 tonnes the three-month period ended 30 June 2005. The realised primary aluminium price for the three-month period ended 30 June 2006 increased 39% to US$1.25/lb versus US$0.90/lb in the three-month period ended 30 June 2005.

Third-party sales of St. Ann bauxite were 3% higher at 250,200 tonnes in the three-month period ended 30 June 2006 and third-party sales of Gramercy alumina were 3% lower at 87,300 tonnes during the three-month period ended 30 June 2006, in each case compared with the three-month period ended 30 June 2005.

Aluminum Business revenues increased to US$310 million in the three-month period ended 31 March 2006, 14% higher than the US$271 million recorded during the three-month period ended 31 March 2005. Third-party sales of primary aluminium were essentially the same in the three-month period ended 31 March 2006 at 56,400 tonnes, compared to the three-month period ended 31 March 2005. Rolled products sales volumes for the three-month period ended 31 March 2006 also increased by 2% to 46,400 tonnes compared to 45,600 tonnes during the three-month period ended 31 March 2005.

D. Operating and financial review relating to the Falconbridge Group (continued)

The realised primary aluminium price increased 23% to US$1.13/lb in the three-month period ended 31 March 2006, versus US$0.92/lb in the three-month period ended 31 March 2005.

Costs. Total Aluminum Business operating expenses increased 24% to US$293 million in the three-month period ended 30 June 2006, compared to US$237 million during the three-month period ended 30 June 2005. Mining, processing and refining costs increased to US$161 million in the three-month period ended 30 June 2006 from US$137 million in the three-month period ended 30 June 2005. Operating costs were impacted by significantly higher natural gas costs at the Gramercy alumina refinery and at the rolling mills, along with increased electrical energy costs at the New Madrid smelter. The increased electrical energy costs came into effect under the new fifteen-year electricity supply contract effective 1 June 2005. These rates compared very favourably with electricity costs incurred by other US aluminium producers. The value of purchased raw materials increased to US$120 million in the three-month period ended 30 June 2006 compared to US$89 million for the three-month period ended 30 June 2005, due to increased aluminium prices.

The net operating cash cost per pound of primary aluminium metal production was US$0.66/lb in the three-month period ended 30 June 2006, an increase from US$0.61/lb for the three-month period ended 30 June 2005. Higher electrical energy and natural gas costs were the major contributors to the higher unit costs. The cost per pound at the rolled products division was 10% higher in the three-month period ended 30 June 2006, compared with the three-month period ended 30 June 2005, resulting primarily from higher natural gas and purchased aluminium metal costs.

Aluminum Business operating expenses increased 11% to US$263 million in the three-month period ended 31 March 2006, compared to US$236 million during the three-month period ended 31 March 2005. Mining, processing and refining costs increased to US$156 million in the three-month period ended 31 March 2006 from US$139 million in the three-month period ended 31 March 2005. Operating costs were impacted by significantly higher natural gas costs at the Gramercy alumina refinery and at the rolling mills, along with increased electrical energy costs at the New Madrid smelter. The increased electrical energy costs came into effect under the new fifteen-year electricity supply contract. These rates compared very favourably with electricity costs incurred by other US aluminium producers. The value of purchased raw materials increased to US$94 million in the three-month period ended 31 March 2006 compared to US$85 million for the three-month period ended 31 March 2005, due to increased aluminium prices.

The operating cash cost per pound of primary aluminium metal production was US$0.67/lb in the three-month period ended 31 March 2006, an increase from US$0.59/lb for the three-month period ended 31 March 2005. Higher electrical energy and natural gas costs were the major contributors to the higher unit costs. The cost per pound at the rolled products division was 7% higher in the three-month period ended 31 March 2006, compared with the three-month period ended 31 March 2005, resulting from higher natural gas and purchased aluminium metal costs.

Income generated by operating assets. Operating income for the Aluminum Business in the three-month period ended 30 June 2006 was US$73 million compared with US$35 million for the three-month period ended 30 June 2005. The US$38 million increase was mainly due to the higher realised aluminium price, partly offset by higher power and natural gas costs.

Operating income for the Aluminum Business for the three-month period ended 31 March 2006 was US$47 million compared with US$35 million for the three-month period ended 31 March 2005. The US$12 million increase was mainly due to the higher realised aluminium price, partly offset by higher power and natural gas costs.

Production. In the three-month period ended 30 June 2006, primary aluminium production was 3% higher at 63,400 tonnes, compared to 61,700 tonnes in the three-month period ended 30 June 2005. For the rolled products operations, shipments were 12% higher at 48,700 tonnes in the three-month period ended 30 June 2006, compared with 43,500 tonnes for the three-month period ended 30 June 2005. Falconbridge's share of St. Ann bauxite production was 628,500 tonnes during the three-month period ended 30 June 2006 versus 478,300 tonnes in the three-month period ended 30 June 2005. The Falconbridge Group's share of Gramercy alumina production was 151,900 tonnes in the three-month period ended 30 June 2006 versus 148,700 tonnes during the three-month period ended 30 June 2005.

In the three-month period ended 31 March 2006, primary aluminium production was higher at 62,300 tonnes, compared to 61,400 tonnes in the three-month period ended 31 March 2005. For the rolled products operations, shipments were

D. Operating and financial review relating to the Falconbridge Group (continued)

higher at 46,400 tonnes for the three-month period ended 31 March 2006 compared with 45,600 tonnes for the three-month period ended 31 March 2005.

Production forecast

The following table sets out Falconbridge Group production information for the year ended 31 December 2005 and forecasts for the year ending 31 December 2006:

	Year ended 31 December	
	2005 (Actual)	2006 (Forecast)
	Mt	
Copper:		
Mined	462	460
Refined	544	640
Nickel:		
Mined	80	80
Refined	114	110
Zinc:		
Mined	454	460
Refined[(1)]	182	210
Aluminium:		
Primary	246	250
Fabricated	178	195

Note:

(1) Includes 100% of Kidd Creek refinery production and 25% of the Noranda Income Fund CEZ Refinery production.

Forecast mined copper production for 2006 was revised downwards by Falconbridge in the second quarter of 2006 by 15,000 tonnes in order to take account of lost production at Collahuasi that resulted from repairs required to one of the mill motors and the primary conveyor. At the same time, the refined copper production forecast was revised upwards by Falconbridge by 5,000 tonnes as increased materials throughput at the Horne smelter and CCR refinery were exceeding expectations.

Forecast mined nickel production was revised downward by Falconbridge as a result of lower head grades at the Sudbury mines. Refined nickel production was revised downwards by Falconbridge due to the forecast lower production from the Sudbury mines as well as due to reduced custom feed throughput at the Nikkelverk refinery.

Information regarding production forecasts is subject to risks and uncertainties, see the section of this document headed "Presentation of Information – Cautionary note regarding forward-looking statements".

Liquidity and capital initiatives

Falconbridge has historically maintained long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding needs. The Falconbridge Group's future financial requirements related to debt maturities, operating costs, projects under development and other capital investments are to be funded as part of the Enlarged Xstrata Group primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financing and new long- and short-term borrowings.

The Falconbridge Group's committed bank facilities totalled US$780 million at 30 June 2006 and were essentially undrawn. As at 26 September 2006, approximately US$204 million of these committed bank facilities were drawn. Following the change of control of Falconbridge as a result of the Falconbridge Acquisition, these facilities are due to expire on 14 November 2006. Falconbridge, however, is seeking to extend US$680 million of these facilities for 12 months.

Cash generated from operations, before the net change in accounts receivables, payables and inventories, was US$1,002 million during the three month-period ended 30 June 2006. Non-cash working capital increased by US$308 million during the three month-period ended 30 June 2006 due to higher accounts receivable and inventory values resulting from higher metal prices. Total liquidity remained strong, with approximately US$1.4 billion of cash and undrawn

D. Operating and financial review relating to the Falconbridge Group (continued)

lines at 30 June 2006. Long-term debt was US$2.5 billion at 30 June 2006, excluding preferred share liabilities. Falconbridge's net-debt-to-capitalisation ratio stood at 26.7% at 30 June 2006, a reduction from 36.6% at 31 December 2005.

On 26 April 2006, Falconbridge redeemed a total of 20 million shares, or US$500 million, of its outstanding Junior Preference Shares, from shareholders of record on 22 March 2006. On 28 June 2006, Falconbridge redeemed the remaining balance of its 9,999,701 outstanding Junior Preference Shares for a total of approximately US$250 million. The Junior Preference Shares were redeemed utilising internal cash resources. Upon redemption, Falconbridge had no Junior Preference Shares outstanding.

Following the expiry of the Inco Offer for Falconbridge on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement.

Falconbridge paid a special cash dividend of C$0.75 per Falconbridge Share on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006, being cash payments of approximately C$278.1 million (approximately US$249.2 million) and approximately US$3.6 million in aggregate, of which approximately C$55.2 million (approximately US$49.0 million) was received by the Former Xstrata Group in respect of its Falconbridge Shares held on the record date.

Redemption of Falconbridge preference shares

Falconbridge announced on 15 September 2006 its intention to redeem its outstanding Cumulative Redeemable Preferred Shares, Series F and Series G, and Cumulative Preferred Shares, Series 1 (together, the "Redeemed Shares"). Falconbridge will redeem all of the outstanding Redeemed Shares on 1 November 2006 as follows: each Series F share will be redeemed for C$25.50 in cash, each Series G share will be redeemed for C$25.00 in cash and each Series 1 share will be redeemed for C$10.00 in cash, plus accrued and unpaid dividends in respect of each share up to, but excluding, 1 November 2006. The Enlarged Xstrata Group intends to utilise its internal cash resources to fund the aggregate redemption price of approximately C$306 million (approximately US$274.2 million).

Capital investments

Investments in new production capacity such as the Nickel Rim South and Koniambo nickel projects totalled US$332 million during the six-month period ended 30 June 2006. For the year ending 31 December 2006, the Falconbridge Group's projected capital investments as at 30 June 2006 were approximately US$315 million for sustaining capital expenditures and other smaller projects and approximately US$445 million in new copper and nickel investments. The major components of the capital investment programme are shown in the following table:

	Year ended 31 December	
	2005 (Actual)	2006 (Forecast)
	US$m	
Copper:		
Copper development projects (El Morro, El Pachón, Lomas Bayas)	4	60
Kidd Creek Mine extension	114	90
Nickel:		
Koniambo	96	180
Nickel Rim South	74	75
Nickel development projects (Kabanga, Raglan)	61	40
Sustaining capital and other	388	315
Total capital investments	737	760

D. Operating and financial review relating to the Falconbridge Group (continued)

Significant future obligations

Significant future obligations of Falconbridge at 30 June 2006 and its partially-owned subsidiaries, excluding employee future benefit obligations, are summarised as follows:

	Payments by period						
Nature of obligation	Second quarter 2006	Second half 2006	2007	2008	2009	2010	Thereafter
	US$m						
Convertible debentures and other loans	140	8	109	23	–	–	–
Senior debentures	2,351	250	–	157	–	–	1,944
Preferred share liabilities[1]	132	–	–	132	–	–	–
	2,623	258	109	312	–	–	1,944
Debt of partially-owned	360	43	85	70	59	51	52
Capital leases	16	1	5	1	1	1	7
Operating leases and purchase commitment	142	73	18	13	9	8	21
Total	3,141	375	217	396	69	60	2,024

Note

[1] May be redeemed for common shares.

Falconbridge's main defined benefit pension plans and other benefit plans are currently in deficit on the basis set out in the most recent relevant actuarial valuations for the plans. Further details of the funding position in respect of such plans is set out in Note 20 (Employee Future Benefit Plans) of Falconbridge's financial statements for the year ended 31 December 2005 included in Part X – "Financial Information Relating to the Falconbridge Group – Financial Information on the Falconbridge Group – three years ended 31 December 2005, 31 December 2004 and 31 December 2003", which shows a net deficit of plan assets over benefit obligations of US$181 million for pension benefit plans as at 31 December 2005 and a net deficit of plan assets over benefit obligations of US$412 million for other benefit plans as at 31 December 2005.

Off-balance-sheet arrangements

Falconbridge does not have any unconsolidated affiliates. Falconbridge does not enter into material off-balance-sheet arrangements with special purpose entities in the normal course of business. Its only significant off-balance-sheet arrangements at 30 June 2006 were the Canadian dollar expenditure hedges discussed in this Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group - Six-month period ended 30 June 2006 compared with six-month period ended 30 June 2005 - Financial instruments and other instruments".

Revenue recognition

Revenues from the sale of base metals, aluminium and fabricated products and from by-product materials are recorded at the time of sale, when the rights and obligations of ownership pass to the buyer.

Under the terms of concentrate sales contracts with third parties, final prices for metals in the concentrate are set based on the prevailing spot metal prices on a specified future date based on the date that the concentrate is delivered. Falconbridge records revenues under these contracts based on the forward prices at the time of the sale and the revenues are adjusted at each subsequent balance sheet date to the then current forward prices. Price changes for shipments which at year-end are awaiting final pricing could have a material effect on future revenues. As at 30 June 2006, there was US$692 million in Falconbridge revenues that was awaiting final pricing, primarily related to 87,000 tonnes of payable copper in concentrate.

D. Operating and financial review relating to the Falconbridge Group (continued)

Transactions with related parties

Falconbridge Group related-party transactions for the six-month period ended 30 June 2006 are summarised as follows:

Related party	Description	Revenue	Product revenue	Service purchases US$m	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	231	33	–	231	–
Noranda Income Fund	Trading activity	–	3	33	2	31
Antamina	Trading activity	–	–	223	–	114
Gramercy	Trading activity	–	–	67	–	23
Collahuasi	Trading activity	–	–	146	–	86

Financial instruments and other instruments

Falconbridge uses financial and other instruments in the following instances:

Foreign currency exposure

The Falconbridge Group has historically used forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures. As at 30 June, 2006, the Falconbridge Group had no significant outstanding foreign exchange contracts to hedge Canadian denominated costs.

Commodity price exposure

Generally, Falconbridge does not hedge the price it realises on the sale of its own production and accepts realisations based on market prices prevailing around the time of delivery of metals to customers. Under certain circumstances, Falconbridge enters into futures and option contracts to hedge the effect of price changes on a portion of the raw materials it purchases on a custom processing or resale basis. Gains and losses on these contracts are reported as a component of the related transactions. Designated contracts meeting the definition for hedge accounting under Canadian GAAP are not recorded. These contracts are carried at estimated fair values and gains or losses arising from the changes in the market values of these contracts are recognised in the earnings of the period in which the changes occur.

Interest rate management

Falconbridge may enter into interest-rate swap agreements, including foreign exchange cross currency swaps, to modify the interest characteristics of its outstanding debt. The differential to be paid or received, for interest rate swaps for which Falconbridge receives hedge accounting, is accrued and recognised as an adjustment to interest expense related to the debt. The following table sets out a summary of these positions as at 30 June 2006:

Interest rate swaps	Total notional principal amount US$m
Maturity 2006	325
Maturity 2008[1]	136
Maturity 2011	300
Maturity 2012	350
Maturity 2015	500
Fair value[2]	54

Notes:

(1) Includes a cross-currency interest rate swap designated as a hedge of a Canadian dollar debenture. The total fair value of this instrument at 30 June 2006 was US$51 million of which US$41 million related to the currency component of the swap and US$5 million related to the interest component.

(2) Includes the fair value of US$46 million related to the currency component of the cross currency interest rate swap discussed in note (1) above.

Counterparty risk

Foreign currency and interest rate swap contracts are maintained with counterparties with at least an "A" rating or better by a recognised national credit rating agency. As a result, Falconbridge does not anticipate that any counterparty under such swap contracts will fail to meet its obligation. If any outstanding foreign exchange or interest rate swap were terminated prior to maturity then the contract would be settled at the fair value at the time.

D. Operating and financial review relating to the Falconbridge Group (continued)

Outstanding shares

As at 12 September 2006, Falconbridge's issued and outstanding shares and securities were as follows:

Name of Falconbridge security	Trading symbol	Shares outstanding
Common Shares[1]	FAL	379,804,879
Common share options outstanding (vested and unvested)[2]		46,480
Convertible debentures[3] – converted into common shares		186,534
Cumulative Preferred Shares, Series 1[4]	N/A	89,835
Cumulative Preferred Shares, Series 2	FAL.PR.A	4,787,283
Cumulative Preferred Shares, Series 3	FAL.PR.B	3,122,882
Cumulative Redeemable Preferred Shares, Series F[4]	FAL.PR.F	3,246,057
Cumulative Redeemable Preferred Shares, Series G[4]	FAL.PR.G	8,753,943
Cumulative Redeemable Preferred Shares, Series H	FAL.PR.H	6,000,000

Notes:

(1) Falconbridge common shares trade on the Toronto Stock Exchange under the symbol FAL. Falconbridge common shares also trade in US dollars on the Toronto Stock Exchange under the symbol FAL.U. The figure above includes common shares which were converted from Falconbridge's adjustable rate convertible subordinated debentures due 30 April 2007 (the "Convertible Debentures") up to 12 September 2006. As at such date, the Xstrata beneficially owned 369,056,589 Falconbridge common shares.

(2) Falconbridge common share options are convertible into common shares of Falconbridge at the rate of one common share for each common share option outstanding. The terms of Falconbridge's stock option plans provide that Falconbridge options will cease to be exercisable on the earlier of: (i) the expiry date of the options; and (ii) the date on which the underlying option shares cease to publicly traded.

(3) As at 12 September 2006, Falconbridge had outstanding C$5,070,000 principal amount of convertible debentures, which were convertible into 186,534 Falconbridge common shares at a conversion rate of 36.7918 Falconbridge common shares per C$1,000 principal amount of convertible debentures. As at 31 August 2006, Falconbridge had outstanding C$10,674,000 principal amount of convertible debentures. On 29 August 2006, Falconbridge called for the redemption of all outstanding convertible debentures. In accordance with the notice of redemption Falconbridge mailed on 29 August 2006, holders of the convertible debentures were entitled to convert their convertible debentures into Falconbridge common shares up to 29 September 2006. Any convertible debentures not converted by such date are subject to redemption and ceased to be outstanding from and after 2 October 2006.

(4) Falconbridge announced on 15 September 2006 its intention to redeem its outstanding Cumulative Redeemable Preferred Shares, Series F and Series G, and Cumulative Preferred Shares, Series 1 on 1 November 2006. Falconbridge intends to utilise its internal cash resources to fund the aggregate redemption price of approximately C$306 million (approximately US$274.2 million).

D. Operating and financial review relating to the Falconbridge Group (continued)

Year ended 31 December 2005 compared with year ended 31 December 2004 (restated)

Financial overview

Falconbridge's consolidated assets totalled US$12.4 billion as at 31 December 2005 on a book-value basis compared with US$9.6 billion as at 31 December 2004. The increase was primarily due to the acquisition of the common shares of Former Falconbridge that Noranda did not already own. Total revenues increased to US$8.1 billion during 2005, an increase of US$1.3 billion over the US$6.8 billion in revenue generated in 2004, due to stronger metals prices and higher copper and nickel sales volumes. Falconbridge generated net income of US$872 million, or US$2.50 per share on a diluted basis, an increase of US$351 million from the net income of US$521 million, or US$1.70 per share on a diluted basis in 2004. The improved results were mostly attributable to higher base metals prices, partially offset by the impact of a weaker US dollar on operating costs at all Canadian and South American operations and increasing energy and supply costs throughout the operations.

Net income for 2005 included a loss of US$8 million, or US$0.02 per basic share and US$0.02 per diluted share from discontinued operations. This compares to a loss of US$73 million, or US$0.25 per basic share and US$0.24 per diluted share from discontinued operations in 2004. Discontinued operations reflect the operating results of Falconbridge's custom wheel manufacturing operations prior to its disposal in June 2005 and the net gain recorded from its disposal.

At 31 December 2005, Falconbridge held cash and cash equivalents of US$886 million. During 2005, Falconbridge's consolidated net-debt-to-capitalisation declined to 37% as cash generated from operations was utilised in part to reduce debt instruments issued to effect the reorganisation of Falconbridge. Cash resources, combined with undrawn credit facilities of over US$1.6 billion, provided Falconbridge with sufficient liquidity to pursue its development projects, new investment and development opportunities and repay near-term debt maturities.

Operating assets

Of the US$12.4 billion of assets, the book value of capital assets that were contributing to earnings totalled US$6.8 billion as at 31 December 2005, while projects under development which were not then contributing to earnings totalled US$1.7 billion. Combined, these assets represented 69% of Falconbridge's total asset base. Included in the US$6.8 billion of operating assets was the US$2 billion preliminary fair market value increment on the operating assets for the purchase accounting of acquisition of Former Falconbridge, as well as US$77 million being transferred from projects under development to operating capital assets for the completion of the new Montcalm nickel/copper mine near Timmins, Ontario. The operating assets were distributed in the Falconbridge Group's business segments as follows:

	At 31 December	
	2004	2005
	US$m	
Operating capital assets		
Copper	2,890	3,807
Nickel	1,078	2,114
Zinc	158	139
Aluminium	702	710
Other	42	33
Total	4,870	6,803

Revenues

For 2005, total revenues increased to US$8.1 billion from US$6.8 billion for the year ended 31 December 2004 primarily due to the significant increase in realised metals prices. Copper reached a new historical high and zinc and aluminium also finished the year at multi-year highs. Average historical realised prices for copper, nickel, zinc and aluminium were as follows:

	Year ended 31 December		
	2003	2004	2005
	US$ per pound		
Copper	0.82	1.30	1.71
Nickel	4.40	6.40	6.85
Zinc	0.43	0.52	0.70
Aluminium	0.68	0.84	0.91

D. Operating and financial review relating to the Falconbridge Group (continued)

Prices for by-product metals such as lead, molybdenum and precious metals, which are found and processed in conjunction with core metals, also experienced similar price increases during these periods.

Sales volumes of refined copper, nickel and fabricated aluminium products were all higher in 2005 than 2004 levels. Due to the closure of the Bell Allard mine in October 2004, mined zinc sales volumes were lower in 2005. Bauxite and alumina sales to third parties increased as the Falconbridge Group recorded its first full year of joint ownership of the St. Ann and Gramercy operations since their acquisition in October 2004. The Falconbridge Group also recorded significantly higher molybdenum concentrate sales from the Antamina mine and produced its first molybdenum concentrate from the Collahuasi mine in the fourth quarter of 2005.

Operating expenses

Operating expenses totalled US$6.3 billion in 2005, 18% higher than US$5.4 billion in 2004. Mining, processing and refining costs increased to US$2.5 billion, a 28% increase from 2004 levels of US$2.0 billion, largely due to the impact of a weaker US dollar on operating costs at all Canadian and South American operations and increasing energy costs throughout the operations. Mining, processing and refining costs included US$191 million of costs associated with the new operations at the new Montcalm mine and the acquired operations at St. Ann and Gramercy. The average value of the Canadian dollar increased 8% to US$0.83 versus US$0.77 during 2004. Upon completion of the acquisition of former Falconbridge minority shares, the carried value of inventory on hand was increased by US$42 million to reflect its preliminary fair value, which is charged to income as the related inventory is sold. As a result, the increased cost reduced 2005 income by US$42 million, lowering income in 2005 as a result of the acquisition.

The value of raw material purchases was US$3,235 million, 11% higher than US$2,904 million in 2004, due to higher metal prices and increased custom feed processing at the Nikkelverk nickel refinery and at all copper smelting and refining operations. Higher purchased raw material values are recovered at the time of sale of the metals contained in the materials treated.

Depreciation, amortisation and accretion expense increased to US$555 million from US$493 million in 2004, with US$21 million of the increase being attributable to the amortisation of the preliminary fair value increment related to the purchase of the Falconbridge minority shareholders' interest and the resulting increase in the book value of the mining and processing assets acquired. Depreciation, amortisation and accretion expense also increased due to the addition of amortisation expenses associated with the new operations at Montcalm and the acquired assets at St. Ann and Gramercy.

Income from operating assets and net income

Income generated by operating assets for 2005 was US$1,820 million, 31% higher than US$1,391 million in 2004. Income from operating assets increased 61% to US$1,086 million in the copper business, decreased 6% to US$597 million in the nickel business, increased to US$60 million in the zinc business and increased 19% to US$106 million in the aluminium business.

Interest expense increased to US$152 million in 2005, an increase of 27% over US$120 million in 2004, due mostly to the inclusion of dividends that were paid on the new junior preference shares that were issued in 2005, offset partially by lower average debt levels and interest rates below the levels of 2004. Interest expense included a one-time early redemption premium of US$5 million paid to the holders at the time of the partial redemption of the junior preferred shares in August 2005. Corporate and general administration costs as well as research and development costs increased from 2004 primarily due to strengthening of the Canadian dollar.

Minority interest in earnings of subsidiaries decreased to US$155 million from US$297 million, largely as a result of the elimination of the former Falconbridge minority share ownership since the completion of the merger of Noranda and Former Falconbridge on 30 June 2005.

In 2005, Falconbridge also recorded a US$17-million gain, net of restructuring costs and other, compared to US$84 million in 2004. Included in the US$84-million gain in 2004 was the US$80-million gain on the settlement of an alumina supply contract upon acquisition of the Gramercy alumina joint venture. Tax expenses recorded increased to US$511 million from US$351 million during 2005, due primarily to the increase in net income from continuing operations before taxes and minority interest to US$1,546 million from US$1,242 million.

D. Operating and financial review relating to the Falconbridge Group (continued)

Net income for the year ended 31 December 2005 was US$872 million or US$2.50 per common share on a diluted basis, compared with a net income of US$521 million or US$1.70 per common share on a diluted basis for 2004. The significant improvement in 2005 results was due to higher average realised prices for all four primary metals and strong operational performance from each business unit supported by improved by-product credits. Offsetting the impact of price increases and cost containment initiatives was the impact of rising energy costs and supply costs, combined with the further weakening of the US dollar relative to both the Canadian dollar and Chilean peso, thereby increasing operating costs in those jurisdictions.

Production

Production of refined copper and nickel increased substantially in 2005, as increased quantities of concentrates were processed, versus 2004 levels. Copper production benefited from increased anode production at the Altonorte smelter and the ramp-up of cathode production at the CCR refinery. Nickel production benefited from increased custom feed processing. Production of refined zinc was lower than 2004 levels mostly due to a month-long strike at the Kidd Creek metallurgical complex in October. Mined copper production was higher in 2005 at the Antamina, Kidd Creek, Lomas Bayas and Montcalm mines, but was offset by lower production at the Collahuasi mine and reduced production from the Louvicourt mine which closed in July 2005. Mined nickel production was stable in 2005 as the new Montcalm mine contributed its first full year of production offsetting lower production at Raglan and Sudbury mines, resulting from lower grades. Mined zinc production was lower due to the closure of the Bell Allard mine, which closed in October 2004. Primary aluminium production was slightly lower in 2005 than in 2004, due mostly to the impact of the fall hurricanes, while fabricated aluminium products sales were higher in 2005 versus the prior year.

Falconbridge Copper Business

The following table sets out estimated mine life information in respect of certain Falconbridge Group copper mines. Information regarding estimated mine life is subject to risks and uncertainties; see the section of this document headed "Presentation of Information – Cautionary note regarding forward-looking statements".

	Mine life Estimated number of years
Copper mine	
Collahuasi	40+
Antamina	15+
Lomas Bayas	20+
Kidd Creek	10+

The following table sets out a percentage break down of the Falconbridge Copper Business's copper mining, processing and refining costs incurred in the year ended 31 December 2005:

	Percentage (%)
Energy	16
Labour	24
Supplies and consumables	25
Contract and other	35
Total	100%

D. Operating and financial review relating to the Falconbridge Group (continued)

The table below provides selected summary financial information in relation to the Falconbridge Copper Business for the year ended 31 December 2004 and for the year ended 31 December 2005:

	Audited Canadian GAAP Year ended 31 December	
	2004	2005
	US$m (except as otherwise stated)	
Revenues	3,592	4,421
Mining, processing and refining costs	803	993
Purchased raw materials	1,882	2,082
Income generated by operating assets	673	1,086
Realised copper price (US$ per pound)	US$1.30	US$1.71
Operating cash cost (US$ per pound of copper)	US$0.38	US$0.31
Sales and throughput (000s tonnes)[1]		
Copper in concentrates	275	267
Copper metal	612	627
Copper concentrate processed	1,810	1,899
Zinc in concentrates	68	83
Zinc metal	120	116
Sulphuric acid	749	811

Note:

[1] 100% basis except for Collahuasi (44%) and Antamina (33.75%).

Revenues. For the year ended 31 December 2005, consolidated revenues for the Falconbridge Copper Business were US$4,421 million, an increase of 23%, over the US$3,592 million for the same period of 2004. Higher realised copper, zinc and molybdenum prices accounted for the increase in revenues. During 2005, the realised copper price averaged US$1.71/lb, compared to US$1.30/lb in 2004. Sales volumes of refined copper and copper anodes increased 2% in 2005, as a result of increased production at CCR, Altonorte, Kidd Creek and Lomas Bayas. By-product revenues from molybdenum also increased from US$19 million in 2004 to US$138 million in 2005.

Costs. Total operating expenses were US$3,335 million in 2005, versus US$2,919 million in 2004. Mining, processing and refining costs totalled US$993 million in 2005, versus US$803 million in 2004. The increase was due to higher energy costs, supply costs, contractor costs, and the impact of the weaker US dollar. Value of purchased raw materials increased to US$2,082 million from US$1,882 million, a 11% increase year over year due to higher metal prices and increased throughput at CCR and Altonorte. In 2005, the operating cash cost of producing a pound of copper was US$0.31/lb versus US$0.38/lb in 2004.

Income generated from operating assets. Falconbridge Copper Business income generated from operating assets was US$1,086 million in 2005, compared to US$673 million in the same period for 2004. The US$413 million increase was mainly attributable to higher copper, zinc and molybdenum prices which more than offset lower mine production from Collahuasi and higher operating costs resulting from the impact of a weaker US dollar and higher energy and supply costs.

Production. For 2005, mined copper production totalled 415,000 tonnes, compared to 430,000 tonnes during 2004. Higher production from Antamina, Kidd Creek and Lomas Bayas was more than offset by lower production from Collahuasi. At Antamina, higher recoveries more than offset a 3% reduction in ore milled. At Kidd Creek, higher mill throughput more than offset lower copper grades as the new Mine D expansion provided more stable feed for the mill. At Collahuasi, lower production was a result of lower head grades, material handling issues and temporary problems with one of the mill motors. Copper anode production from copper smelters increased from 534,000 tonnes in 2004 to 563,000 tonnes in 2005 due to increased production at Altonorte. During the fourth quarter, annual production at the Horne smelter was increased from the recent past operating rate of 140,000 tonnes per year to 170,000 tonnes per year.

Copper cathode production at CCR and Kidd Creek increased to 415,000 tonnes from 404,000 tonnes as increased production at CCR more than offset lower production at Kidd Creek, which was affected by a month-long strike in October. CCR refined cathode output benefited from the agreement reached with Inco earlier in the year whereby CCR began the treatment of Inco's Sudbury operations copper anode output. CCR is investing in expanding its capacity to treat

D. Operating and financial review relating to the Falconbridge Group (continued)

anodes that are higher in nickel. This is expected to allow CCR to achieve its full capacity of 370,000 tpa, compared to an average output of less than 300,000 tpa in recent years. Total copper cathode production in 2005 was 505,000 tonnes, compared to 492,000 tonnes in the previous year as higher production from CCR, Collahuasi and Lomas Bayas more than offset lower production from Kidd Creek.

During the year ended 31 December 2005, the Falconbridge Group also completed the modification of a former copper roaster at the Altonorte smelter and began the tolling of molybdenum concentrates. Construction of the US$6 million project was completed on time and on budget. Tolling operations started at the end of June 2005 and reached the design capacity run-rate of 10,000 tonnes per year shortly thereafter.

By-product mined zinc in concentrate totalled 182,000 tonnes in 2005 versus 152,000 tonnes in 2004. Zinc concentrate volumes increased due to higher mill throughput and higher zinc grades at Kidd Creek. By-product refined zinc volumes in 2005 were 114,000 tonnes versus 122,000 tonnes in 2004, due to the labour disruption at Kidd Creek metallurgical facilities. Mined molybdenum production at Antamina was 2,300 tonnes, compared to 1,200 tonnes in 2004, mainly due to the increase in recoveries.

Nickel Business

The following table sets out estimated mine life information in respect of certain Falconbridge Group nickel mines. Information regarding estimated mine life is subject to risks and uncertainties; see the section of this document headed "Presentation of Information – Cautionary note regarding forward-looking statements".

	Mine life Estimated number of years
Nickel mine	
Integrated Nickel Operations	15+
Falcondo	15+

The following table sets out a percentage break down of the Nickel Business's nickel mining, processing and refining costs incurred in the year ended 31 December 2005.

	Percentage (%)
Energy	37
Labour	33
Supplies and consumables	23
Contract and other	7
Total	100%

D. Operating and financial review relating to the Falconbridge Group (continued)

The table below provides selected summary financial information in relation to the Nickel Business for the year ended 31 December 2004 and for the year ended 31 December 2005:

	Audited Canadian GAAP Year ended 31 December	
	2004	*2005*
	US$m (except as otherwise stated)	
Revenues	1,824	2,146
Mining, processing and refining costs	604	810
Purchased raw materials	447	574
Income generated by operating assets	637	597
Realised nickel price (US$ per pound)	US$6.40	US$6.85
Realised ferronickel price (US$ per pound)	US$6.37	US$6.74
Operating cash cost (US$ per pound of nickel/ferronickel)	US$2.93	US$3.49
Operating cash cost (US$ per pound of nickel)	US$2.57	US$2.97
Operating cash cost (US$ per pound of ferronickel)	US$3.50	US$4.40
Sales (000s tonnes)		
Nickel	71	85
Ferronickel	29	26
Cobalt	4	4

Revenues. For the year ended 31 December 2005, consolidated revenues for the Nickel Business were US$2,146 million, an increase of 18%, over the US$1,824 million recorded in 2004. At the INO, sales volumes of nickel and copper increased by 20% and 16%, respectively, in 2005, as a result of increased production from the Montcalm mine, which achieved commercial production at the end of 2004 and due to increased volumes of custom feeds. Cobalt sales increased 5% from 2004 levels due to increases in production related to custom feeds. At Falcondo, sales volumes decreased 9% to 26,300 tonnes from 28,900 tonnes in 2004, reflecting destocking in the stainless steel market and the lower production level in 2005. Realised nickel prices of US$6.85/lb increased by 7%, compared with US$6.40/lb in 2004. The realised ferronickel price increased 6% in 2005, compared to 2004. Realised cobalt prices decreased by 33% versus 2004.

Costs. Total Nickel Business operating expenses were US$1,549 million in the year ended 31 December 2005 versus US$1,187 million in 2004. Mining, processing and refining costs totalled US$810 million in 2005, versus US$604 million in 2004, an increase of US$206 million reflecting a full year of operations at Sudbury (the 2004 results were impacted by a three-week labour strike), new production costs related to the Montcalm mine, increased oil purchase costs at Falcondo and the impact of the change in the value of the Canadian dollar on operating costs at the Canadian operations. The value of purchased raw materials increased from US$447 million to US$574 million due to higher metal prices and increased volumes.

The weighted average operating cash cost per pound of mined nickel for all of Falconbridge was US$3.49 in 2005, compared with US$2.93 in 2004. At INO, in 2005, the operating cash cost of producing a pound of nickel from INO mines was US$2.97 prior to the inclusion of custom feed processing credits. This cost was US$0.40/lb, or 16% higher than the 2004 cost due to the impact of the stronger Canadian dollar on operating costs at the Canadian operations, the impact of lower ore grades on mine production and higher energy costs which offset the impact of increases in by-product credits due to higher metal prices. At Falcondo, operating cash cost per pound of ferronickel was US$4.40 in 2005, compared with US$3.50 in 2004. The increase in costs was largely due to the significant increase in the oil price. Oil costs rose from US$36.63 per barrel in 2004, to US$49.09 in 2005. Purchased fuel oil costs accounted for 71% of total operating cash costs in 2005.

Income generated from operating assets. For 2005, Nickel Business income generated from operating assets was US$597 million, compared with US$637 million for 2004. The US$40-million decrease was mainly due to the amortisation of the preliminary fair value increment relating to the Noranda/Former Falconbridge merger, and higher unit costs, again caused in part by the strengthening of the Canadian dollar, which offset the impact of higher nickel and copper prices and increases in sales volumes.

D. Operating and financial review relating to the Falconbridge Group (continued)

Production. Refined nickel production totalled 113,600 tonnes in 2005, compared to 100,900 tonnes in 2004, setting a new record for production. During 2005, Sudbury mines nickel production was 19,700 tonnes, compared with 22,600 tonnes in 2004. The reduction in nickel production was attributable to a reduction in ore grade. For 2005, Raglan nickel-in-concentrate production was 22,200 tonnes, compared with 26,600 tonnes of nickel in 2004. The decrease in production from 2004 levels was due to the impact of a lower nickel ore grade. In its first full year after achieving commercial production, the Montcalm mine produced 9,000 tonnes of nickel. In Sudbury, smelter production of nickel in matte, which established a new annual production record, was 63,100 tonnes in 2005, compared with 52,600 tonnes in 2004, as a result of the treatment of higher concentrate tonnages with lower feed grades. At Nikkelverk, 2005 refined nickel production of 84,900 tonnes was higher than the 71,400 tonnes produced in 2004, establishing a new annual production record. Nikkelverk cobalt production also set a new record at 5,000 tonnes. The Falcondo ferronickel operation produced 28,700 tonnes of nickel in ferronickel, compared to 29,500 tonnes in 2004.

Falconbridge Zinc Business

The following table sets out a percentage break down of the Falconbridge Zinc Business's zinc mining, processing and refining costs incurred in the year ended 31 December 2005:

	Percentage (%)
Energy	14
Labour	44
Supplies and consumables	31
Contract and other	11
Total	100%

The table below provides selected summary financial information in relation to the Falconbridge Zinc Business for the year ended 31 December 2004 and for the year ended 31 December 2005:

	Audited Canadian GAAP Year ended 31 December	
	2004	2005
	US$m (except as otherwise stated)	
Revenues	415	504
Mining, processing and refining costs	158	168
Purchased raw materials	187	243
Income generated by operating assets	14	60
Realised zinc price (US$ per pound)	US$0.52	US$0.70
Realised lead price (US$ per pound)	US$0.43	US$0.50
Operating cash cost (US$ per pound of zinc)	US$0.32	US$0.41
Sales (000s tonnes)		
Zinc in concentrates	293	219
Lead metal	83	74

Revenues. For the year ended 31 December 2005, revenues for the Falconbridge Zinc Business increased 21%, to US$504 million from US$415 million in 2004, as higher realised prices for zinc and lead more than offset lower production and sales volumes. Sales volumes of zinc in concentrate decreased in 2005, by 25% to 219,400 tonnes, compared to 292,500 tonnes in 2004, principally due to the closure of the Bell Allard mine in Quebec in October 2004. Lead metal sales volumes decreased in 2005, by 11% to 73,700 from 83,200 tonnes in 2004. The decrease in lead metal sales is primarily due to a decrease in lead metal production in 2005, versus 2004, due to lower tonnage processed at the Brunswick lead metallurgical operation.

Costs. Falconbridge Zinc Business operating expenses totalled US$444 million in the year ended 31 December 2005, an increase from US$401 million in 2004. Mining, processing and refining costs totalled US$168 million in 2005, versus US$158 million in 2004. The value of purchased raw materials increased from US$187 million in 2004, to US$243 million in 2005 primarily due to higher metal prices. In 2005, the operating cash cost of producing a pound of zinc increased 28% to US$0.41, from US$0.32 in 2004. The increase is mainly due to a stronger Canadian dollar, higher energy costs, higher

D. Operating and financial review relating to the Falconbridge Group (continued)

consumable costs, and higher freight charges and also reflects the loss of production from the Bell Allard mine which closed in October 2004.

Income generated from operating assets. For the year ended 31 December 2005, the Falconbridge Zinc Business income generated from operating assets was US$60 million, compared to US$14 million in 2004. The US$46 million increase was mainly relating to higher metal prices, which were partially offset by lower sales volumes and the negative effect of the stronger Canadian dollar on costs.

Production. During the year ended 31 December 2005, contained zinc in mine production was 265,600 tonnes, compared to 367,000 tonnes in 2004. The decrease in mine production in 2005 was attributable to the loss of production from the Bell Allard mine. Brunswick mine production was 265,600 tonnes of zinc in concentrate in 2005, compared with 268,100 tonnes of zinc in concentrate in 2004. The decrease in zinc production was attributable to ore-pass operating issues and a rock burst during the fourth quarter of 2005. During 2005, the Brunswick smelter consumed 189,700 tonnes of feed, compared to 205,500 tonnes of feed in 2004. Refined lead production totalled 76,100 tonnes in 2005 versus 83,800 tonnes in 2004, a decrease of 9% resulting from a reduction in tonnage of material processed.

The principal zinc and lead concentrate producing asset within the Falconbridge Zinc Business is the Brunswick mine. Detailed technical and economic studies of the additional mineral resources and other mining remnants located throughout the mine are continuing. If this evaluation is successful in converting remaining resources to reserves, the mine life could be extended by an additional year of operation, subject to the risks and hazards associated with the mining business and the mine in its final stage of extraction.

Aluminum Business

The following table sets out a percentage break down of the Aluminum Business's aluminium mining, processing and refining costs incurred in the year ended 31 December 2005.

	Percentage (%)
Energy	47
Labour	24
Supplies and consumables	6
Contract and other	23
Total	100%

The table below provides selected summary financial information in relation to the Aluminum Business for the year ended 31 December 2004 and for the year ended 31 December 2005:

	Audited Canadian GAAP Year ended 31 December	
	2004	2005
	US$m (except as otherwise stated)	
Revenues	935	1,077
Mining, processing and refining costs	420	583
Purchased raw materials	388	335
Income generated by operating assets	89	106
Realised aluminium price (US$ per pound)	US$0.84	US$0.91
Average fabricating spread (US$ per pound of foil)	US$0.42	US$0.46
Operating cash cost (US$ per pound of aluminium)	US$0.58	US$0.63
Sales (000s tonnes)		
Primary aluminium	249	248
Aluminium foil	174	178

Revenues. For the year ended 31 December 2005, consolidated revenues for the Aluminum Business increased 15%, to US$1,077 million from US$935 million in 2004. Primary sales volumes were slightly lower than 2004, resulting from the fewer average number of operating pots in 2005. Realised Mid-West prices in 2005 increased by 8% to US$0.91/lb, from US$0.84/lb in 2004. For the rolled products division, sales volumes were up by 2% for the year mainly due to improved

D. Operating and financial review relating to the Falconbridge Group (continued)

production levels. Overall weighted fabrication spreads were up US$0.04/lb, or 10% from 2004 levels, due entirely to strong demand and related price increases in heavy-gauge product lines.

Costs. Total Aluminum Business operating expenses totalled US$971 million in the year ended 31 December 2005, versus US$846 million in 2004, primarily due to the inclusion of Falconbridge's share of the newly acquired St. Ann bauxite mine and Gramercy alumina refinery operating costs, which were offset by the benefits of a fully-integrated aluminium business and certainty of long-term alumina supply. Mining, processing and refining costs totaled US$583 million in 2005, versus US$420 million in 2004, an increase of US$163 million. Operating costs were negatively affected by the temporary production disruption at the Gramercy alumina refinery that resulted from the impact of hurricane Katrina and the resulting higher natural gas costs. Energy costs at the New Madrid smelter were negatively impacted by slightly higher electricity rates that came into effect under the new fifteen-year electricity supply contract, but these contract rates compare very favourably with electricity costs incurred by other US aluminium producers. The value of purchased raw materials decreased to US$335 million from US$388 million in 2004, due to the fact that alumina purchases in 2004 were from third-parties prior to the fourth quarter acquisition of Gramercy Alumina.

For the year, the net operating cash cost at the primary division was US$0.63/lb, compared with US$0.58/lb in 2004. Higher natural gas and electrical energy costs were the major contributors to the higher unit costs. For the rolled products division, conversion costs on average were down 6% from last year, due in part to a heavier-gauge product mix and improvements in manufacturing efficiencies at all plants offsetting the negative impact of higher natural gas prices.

Income generated from operating assets. For the year ended 31 December 2005, income generated from operating assets for the Aluminum Business was US$106 million, compared with US$89 million for 2004. The increase was mainly due to higher metal prices and fabrication margins, improved production levels at the rolled products divisions, and higher margins received on value-added product sales such as rod, billet and rolled aluminium products.

Production. For the year ended 31 December 2005, production of primary aluminium was 245,600 tonnes, compared to 247,500 tonnes in the year ended 31 December 2004. For the rolled products operations, shipments were 177,900 tonnes for the year, up 2% compared to 173,900 tonnes in 2004.

Average realised prices

Average realised prices for the Falconbridge Group's main products during the year ended 31 December 2005 and the year ended 31 December 2004 were as follows:

	Year ended 31 December	
	2004	2005
	US$ per pound	
Copper	1.30	1.71
Nickel	6.40	6.85
Ferronickel	6.37	6.74
Zinc	0.52	0.70
Aluminium	0.84	0.91
Lead	0.43	0.50
Cobalt	22.48	14.97
Molybdenum	16.21	31.09

D. Operating and financial review relating to the Falconbridge Group (continued)

Sensitivities

The following table shows the annualised impact on Falconbridge's net income from changes in metals prices and the US$/C$ exchange rate:

	Change in US$/lb price (US$)	Impact on net income (US$m)	Impact on income per share (US$)
Copper	0.05	37	0.10
Nickel	0.50	63	0.17
Zinc	0.05	38	0.10
Aluminium	0.05	19	0.05
Lead	0.05	6	0.02
Exchange rate C$=US$	0.01	12	0.03

Mining operations and recoveries

The following table details the results of milling operations and recoveries at the Falconbridge Group's operating mines in the year ended 31 December 2005:

		Copper		Nickel		Zinc	
	Ore treated (000s tonnes)	Grade	Recovery	Grade (%)	Recovery	Grade	Recovery
Copper mines							
Antamina	10,241	1.35	90.3	–	–	0.92	82.7
Collahuasi[1]	20,495	1.15	81.6	–	–	–	–
Kidd Creek	2,320	2.02	93.0	–	–	6.19	83.5
Lomas Bayas – heap leach	13,286	0.50	76.8	–	–	–	–
Lomas Bayas – ROM leach	22,432	0.22	24.6	–	–	–	–
Louvicourt	369	2.20	95.0	–	–	–	85.6
Nickel mines							
Falcondo	3,920	–	–	1.18	75.3[2]	–	–
Montcalm	750	0.79	85.6	1.52	82.1	–	–
Raglan	934	0.84	80.4	2.84	86.4	–	–
Sudbury	2,171	1.26	93.3	1.16	80.5	–	–
Zinc mines							
Brunswick	3,529	0.35	48.9	–	–	8.59	87.7

Notes:

[1] Collahuasi figures reflect a weighted average of sulphide and oxide ores.
[2] Falcondo upgrade circuit.

Financial position and liquidity

During the year ended 31 December 2005, the corporate initiatives undertaken to simplify the ownership structure of Falconbridge resulted in a significant repositioning of Falconbridge to enhance liquidity and reduce the cost of capital.

On 4 May 2005, Noranda completed a US$1.25 billion issuer bid and acquired for cancellation 63.4 million common shares in exchange for the issue of US$1.25 billion of junior preferred shares at a price of C$19.72 per common share. The junior preferred shares were issued in three series as follows:

	Principal amount (US$m)	Mandatory redemption date	Dividend rate (%)
Series 1	500	30 June 2008	6.0
Series 2	500	30 June 2010	6.2
Series 3	250	30 June 2013	6.5
Total	1,250		

The issuer bid represented an opportunity for Noranda to acquire 63.4 million common shares at attractive price levels, and reduced the dilution of common shareholder interest when common shares were subsequently issued to acquire the remaining common shares outstanding of Former Falconbridge.

D. Operating and financial review relating to the Falconbridge Group (continued)

The junior preferred shares were issued at a time of relative uncertainty regarding Noranda's ability to complete the acquisition of Former Falconbridge and therefore have unrestricted access to the cash flow of the combined entity. As such, the junior preferred shares were issued with Falconbridge retaining the right to redeem these shares at any time for 101% of fair value; were issued with an average term to maturity of seven years to provide an opportunity to refinance these instruments without placing undue strain on the liquidity of Falconbridge; and Falconbridge retained the right to repay the junior preferred shares at their maturity in common shares of Falconbridge at the then prevailing common share price.

These provisions provided Falconbridge with maximum flexibility. As a result of the share attributes, the junior preferred shares were classified as debt instruments on the balance sheet and dividend payments on these instruments were classified as interest expense.

On 30 June 2005, Noranda completed the acquisition of the minority interest in Former Falconbridge through the two-step transaction and the issuance of 132,840,641 common shares, representing a total acquisition price of US$2.5 billion. The consolidation of the ownership and simplification of the capital structure of the combined entity created a financially stronger entity with opportunities to further reduce the weighted average cost of capital of the combined entity.

Following the successful completion of the merger of Noranda and Former Falconbridge, Falconbridge received affirmation of its ratings from its respective rating agencies in recognition of the combined entities continued strong cash flow, liquidity and the sustained strength of metal prices.

The completion of the merger also altered the credit risk profile of the combined entity, and the enhancement of the availability of other long-term sources of capital as a result of the investment grade ratings caused Falconbridge to redeem US$500 million of junior preferred shares for cash in August 2005, from available cash resources.

Working capital (defined as current assets, less current liabilities on consolidated balance sheets for the purposes of this paragraph D of this Part I), excluding cash and cash equivalents, and debt due within a year, decreased to US$1,024 million at 31 December 2005 from US$1,119 million at 31 December 2004. During the year ended 31 December 2005, Falconbridge continued to improve its balance sheet and operating capacity to support its strategic objective of maintaining an investment grade credit rating.

Cash and cash equivalents at 31 December 2005 totalled US$886 million, compared to US$884 million at 31 December 2004. In addition to its cash balances, Falconbridge's liquidity and financial flexibility was augmented by revolving credit facilities. Committed lines of credit at 31 December 2005 totalled US$780 million, none of which had been drawn upon.

Long-term debt, excluding the amount due in less than one year and junior preferred shares liabilities, amounted to US$2,598 million at 31 December 2005, compared to US$2,736 million at 31 December 2004. In June 2005, Noranda issued US$250 million aggregate principal amount of 12-year notes and US$250 million aggregate principal amount of 30-year notes. The 12-year notes, which are unsecured, bear interest at the rate of 5.5% per annum and mature on 15 June 2017. The 30-year notes, which are also unsecured, bear interest at the rate of 6.2% per annum and mature on 15 June 2035. Both series of notes are redeemable in whole, or in part, at any time, at a redemption price equal to 100% of their principal amount plus a make-whole premium. At 31 December 2005, Falconbridge's consolidated net-debt-to-total-capitalisation ratio was 36.9%, compared to 43.2% at 31 December 2004, following the repayment of in excess of US$1 billion in debt during 2005.

Shareholders' equity at 31 December 2005 was US$5 billion, an increase of US$2.2 billion compared with shareholders' equity at 31 December 2004, due to the issue of common shares to acquire the minority interest of Former Falconbridge, retained earnings in excess of dividends paid, offset by the reduction in common equity as a result of the substantial issuer bid completed in May 2005.

D. Operating and financial review relating to the Falconbridge Group (continued)

Falconbridge's long-term public debt ratings at 31 December 2004 and 31 December 2005 are noted below:

	As at 31 December	
	2004	2005
Standard & Poor's	BBB–	BBB–
Moody's	Baa3	Baa3
Dominion Bond Rating Services	BBB	BBB

Note:

A security rating is not a recommendation to buy, sell or hold securities, and may be subject to revision or withdrawal at any time by a rating organisation.

Cash flows

Operating activities

Cash generated from operations, before net changes in non-cash working capital, totalled US$1,650 million in the year ended 31 December 2005, up from US$1,461 million in the year ended 31 December 2004. The increase was primarily the result of the higher sales volumes and higher metal prices despite the adverse impact of increasing energy and supply costs and foreign exchange movements on the mining, processing and refining costs. Higher accounts receivable and inventories resulting from higher metal prices were mostly offset by higher accounts and taxes payable as non-cash working capital increased by US$15 million during the year ended 31 December 2005.

Investment activities

Capital investments totalled US$737 million in the year ended 31 December 2005, compared to US$666 million in the year ended 31 December 2004. Major capital expenditures during the year ended 31 December 2005 included the expansion and transfer of the mining operations at the Collahuasi copper mine, the Kidd Creek Mine D underground extension, the Montcalm nickel mine, the Nickel Rim South underground exploration project (initiated in early 2005) and US$100 million for equipment and services relating to the Koniambo project. During the year ended 31 December 2005 proceeds from dispositions totalled US$93 million mostly from the sale of the Falconbridge Group's wholly-owned wheel manufacturer and from the sale of cost-accounted investments.

Financing activities

In the year ended 31 December 2005, Falconbridge used US$843 million to reduce its net debt outstanding (repaying US$1,394 million of debt while issuing US$551 million). This does not include the junior preferred share transaction as this did not involve the receipt of any cash by Falconbridge. During the year ended 31 December 2005, Falconbridge's common and preferred share dividend payments were US$150 million, compared to US$123 million in the year ended 31 December 2004. Total dividend obligations increased due to the increase in the total common shares outstanding that resulted from the acquisition of the minority interest in Former Falconbridge that Noranda did not already own.

The annual common share dividend was C$0.48 per share in the year ended 31 December 2005, which remained unchanged from the year ended 31 December 2004. Significant future obligations of Falconbridge and its partially-owned subsidiaries, excluding the employee future benefit obligations, at 31 December 2005, are summarised as follows:

	Payments by year						
Nature of obligation	2006	2007	2008	2009	2010	Thereafter	Total
	US$m						
Convertible debentures and other loans	15	120	23	–	5	–	163
Senior debentures	250	–	150	–	–	1,943	2,343
Preferred share liabilities[1]	–	–	126	–	300	450	876
	265	120	299	–	305	2,393	3,382
Debt of joint ventures	87	87	87	87	40	42	430
Capital leases	1	5	1	1	1	7	16
Operating leases and purchase commitment	172	18	13	9	8	21	241
Total	525	230	400	97	354	2,463	4,069

D. Operating and financial review relating to the Falconbridge Group (continued)

Capital expenditures, capacity enhancements and projects under development

In the year ended 31 December 2005, Falconbridge increased its copper and nickel ore reserves, enhanced its copper and nickel processing capacity, added new zinc projects, expanded its primary and fabricated production capacity and acquired bauxite mining and alumina refining assets to fully integrate its aluminium operations. These investments substantially increased Falconbridge's baseline earnings and its leverage to metal prices. The following is a summary of these initiatives and their impact on Falconbridge.

Investments in development projects at the end of the year ended 31 December 2005 totalled US$1,707 million, an increase of US$541 million since 31 December 2004. As shown in the following table, Falconbridge had expansion projects in both of these commodities that were under development at December 2005.

Projects under development – capital spending in the year ended 31 December 2005

		Unaudited book value at 31 December	
	Falconbridge's interest (%)	2004 US$m	2005
Copper			
El Morro pre-feasibility	70.0	12	16
Kidd Creek mine extension	100.0	404	518
Nickel			
Koniambo	49.0	180	276
Nickel Rim South	100.0	101	173
Kabanga	50.0	–	34
Other		469	690
Total		1,166	1,707

Risk assessment and reduction in the evaluation, selection and implementation of projects

Falconbridge's preference for lower-risk brownfield expansion projects provides inherent risk reduction due to the Falconbridge Group's knowledge of the environment in which the expansion project is to be undertaken and its ability to tap into existing human and physical resources. When the Falconbridge Group chooses to invest and grow via the development of greenfield projects, away from existing infrastructure, risk assessment and reduction is the top priority.

The Falconbridge Group has taken several steps to ensure the success of its current and future capital projects including the following:

- the formation of highly experienced projects group with project leaders dedicated to securing the investment performance of major capital projects;
- the implementation of a "Six Sigma-based Stage Gate" process for project evaluation. This process is a disciplined system which addresses and quantifies key sources of project impact and risk in support of management decision making;
- the addition of parameters in the Stage Gate process that measure social, business and strategic elements;
- the recognition of investment returns as the primary measure of project success; and
- the assignment of accountability.

Six Sigma

Since significant deployment in 1999 and Falconbridge Group-wide adoption in 2002, application of Six Sigma has contributed to improving performance at the Falconbridge Group. Six Sigma is a process-centered, step-by-step analytical approach to reviewing operational performance and driving continuous improvement. During 2005, 154 Six Sigma projects were completed for total annualised benefit of US$60 million at an average savings value of US$390,000 per project.

D. Operating and financial review relating to the Falconbridge Group (continued)

Exploration

The objectives of the Falconbridge Group's exploration team are aligned with those of the Falconbridge Copper Business, the Nickel Business and the Falconbridge Zinc Business. Joint-venture arrangements are pursued with both junior and senior mining companies to increase the level of focused exploration activity thereby sharing cost and risk, and improving the likelihood of success. The Falconbridge Group's exploration team is supported by an experienced mergers and acquisitions team and a strong project engineering team with a track record of building mines around the world.

As a Founding Patron of the Association of Professional Geoscientists of Ontario and a Founding Partner of the Prospector and Developers Association of Canada's Environmental Excellence in Exploration initiative, the team of geoscientists is committed to being fully compliant with NI 43-101 requirements and in consistently conducting safe and environmentally responsible global exploration.

As at 31 December 2005, the exploration team consisted of 119 employees, including 92 geologists and geophysicists. Exploration activity is primarily focused on Canada, Chile, Brazil, Mexico, Norway, Australia, Africa, Papua New Guinea, China and Mongolia.

Transactions with related parties

Related-party transactions for the year ended 31 December 2005 were as follows:

Related party	Description	Revenue	Product revenue	Service purchases US$m	Receivables	Payables
Noranda Income Fund	Processing & administration agreement	210	65	–	44	–
Noranda Income Fund	Trading activity	–	3	35	–	11
Antamina	Trading activity	–	–	260	–	65
Gramercy	Trading activity	–	–	136	–	6
Collahuasi	Trading activity	–	–	109	–	25

Critical accounting policies

Falconbridge has historically prepared its financial statements under Canadian GAAP.

Set forth below are the accounting policies considered by the Falconbridge directors at the time to be critical in relation to the historical financial statements of the Falconbridge Group for year ended 31 December 2005 set out in Part X – "Financial Information Relating to the Falconbridge Group".

Falconbridge management is required to make estimates in preparing its financial statements in conformity with Canadian GAAP. These estimates affect the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Changes to these estimates would result in material changes to these line items.

The critical accounting estimates made by Falconbridge relate to the Falconbridge Group's accounting for the following items:

- property, plant and equipment:
  - the determination of mineral reserves;
  - impairment assessments of long-lived assets; and
  - amortisation of property, plant and equipment;
- employee future benefits;
- asset retirement obligations; and

D. Operating and financial review relating to the Falconbridge Group (continued)

- the determination of taxes.

Property, plant and equipment

Included in operating capital assets of US$6.8 billion at 31 December 2005 was primarily property, plant and equipment. As such, the estimates used in accounting for property, plant and equipment and the related depreciation and amortisation charges are critical and have a material impact on Falconbridge's financial condition and earnings. Property, plant and equipment and related capitalised interest and development and pre-production expenditures are recorded at cost and are subject to impairment testing as discussed below.

Determination of mineral reserves

One of the most significant estimates which impacts the accounting for property, plant and equipment and the related depreciation and amortisation, is the estimate of proven and probable mineral reserves. The process of estimating reserves is complex, requiring significant assumptions, estimates and decisions regarding economic (i.e. metal prices, production costs and exchange rates), engineering, geophysical and geological data. A material revision to existing reserve estimates could occur because of changes to any of these inputs. Changes in reserves could result in impairment of the carrying amount of property, plant and equipment and a change in amortisation expense.

Impairment assessments of long-lived assets

Falconbridge reviews and evaluates its long-lived assets for impairment when events or changes in circumstances indicate that the carrying amount may not be recoverable. Asset impairment is considered to exist if the total estimated future cash flows on an undiscounted basis are less than the carrying amount of the asset. An impairment loss is measured and recorded based on recoverable minerals, expected commodity prices (considering current and historical prices, price trends and related factors), production levels, capital and reclamation costs, and are all based on detailed life-of-mine plans. The term "recoverable minerals" refers to the estimated amount of metal that will be obtained from proven and probable ore/mineral reserves, after taking into account losses during ore processing and treatment. Significant management judgement is involved in estimating these factors, which include inherent risks and uncertainties. The assumptions Falconbridge uses are consistent with its internal planning. Management periodically evaluates and updates the estimates based on the conditions that influence these factors. The variability of these factors depends on a number of conditions, including uncertainty about future events, and thus accounting estimates may change from period to period. If other assumptions and estimates had been used in the current period, the asset balances could have been materially impacted. If management uses different assumptions or if different conditions occur in future periods, future operating results could be materially impacted.

In estimating future cash flows, assets are grouped at the lowest levels for which there are identifiable cash flows that are largely independent of future cash flows from other asset groups, taking into consideration movements of intermediate products to ensure the utilisation of available capacity across Falconbridge's operations. All assets at a particular operation are considered together for purposes of estimating future cash flows.

Amortisation of property, plant and equipment

Depreciation of property, plant and equipment is based on the estimated service lives of the assets (4-40 years), calculated primarily on a straight-line basis for metallurgical operations and on a units-of-production method for mining operations. Resource properties are depleted and preproduction and mine development expenditures are amortised on a units-of-production method. Units-of-production method is defined as tonnes milled during the period over proven and probable ore reserves at the start of the period. Construction in progress will be depreciated once the project is substantially completed.

The most critical estimates which impact the above accounting policy are the estimated quantities of proven and probable mineral reserves which are the underlying bases for the calculation for the units-of-production method. Changes in the quantity of reserves would result in changes in amortisation expense in the periods subsequent to the revision.

Employee future benefits

Assets are valued at current market value. The expected return on plan assets, currently 7%, is based on current bond yields and expected long-term rate of return on equities. The long-term rate of return on assets assumption is reviewed on an annual basis.

D. Operating and financial review relating to the Falconbridge Group (continued)

Liabilities are determined as a present value of future anticipated cash flows using a discount rate based on corporate AA bond yields at the valuation date and an inflation expectation consistent with the corporate AA bond yield curve. Differences between the estimated future results and actual future results are amortised (to the extent that the cumulative experience gain or loss is in excess of the permitted 10% corridor under Canadian GAAP) over the expected average remaining service life of the active members (EARSL). This 10% corridor represents 10% of the greater of the postretirement benefits obligations and the fair value of plan assets. The return on assets assumption and the discount rate, salary and inflation assumptions used to value the liabilities are reviewed annually and are determined based on a consistent framework from year to year. The most significant risk is that the assumption will prove to be either too high or too low in the long term. It is reasonable to assume that there will be a significant variation between the assumptions (which are set within the framework of a long-term commitment) and actual experience in any one year, but are expected to produce an appropriate reflection of costs over the long term.

For post-employment benefits other than pensions, the discount rate is the same as for pensions. The inflation rate assumed for medical costs is based on Falconbridge's history of healthcare spending. The assumption for the ultimate health care trend rates relates to the overall economic trends.

Falconbridge estimated that a 0.5% increase or decrease in the return on assets assumption would result in a corresponding US$10-million increase or decrease in annual pension expense. Changes to the return on asset assumption would have no significant effect on funding requirements, as Falconbridge's contributions are primarily determined based on the applicable Canadian regulatory solvency funding requirements. Under this valuation methodology, liabilities for solvency valuation are based on market bond yields, and the excess of liabilities over assets must be amortised over a five-year period. Falconbridge estimated that a 0.5% increase or decrease in the discount rate assumption would result in a corresponding US$10-million increase or decrease in the pension expense.

Asset retirement obligations

As a result of Falconbridge's mining activities, Falconbridge incurs legal obligations associated with the retirement of tangible long-lived assets, from the acquisition, construction, development or normal operations of those assets, which an entity is required to settle as a result of an existing or enacted law or contract. CICA 3110, which was adopted 1 January 2004, requires that, when a legal obligation is incurred, Falconbridge records the fair value of estimated asset retirement obligations and a corresponding deferred charge presented as an asset grouped with property plant and equipment. The liabilities are accreted to full value over time through a charge to earnings. The asset is depreciated over the useful life of the associated long-lived asset on a straight-line basis. The fair value of the obligation as of 31 December 2005 was US$424 million.

The fair value of these obligations are determined by discounting the projected cash flows required to settle the legal obligations at Falconbridge's credit adjusted risk-free interest rate over the time periods over which the obligations were incurred. The future cash flows required to settle the obligations were determined by detailed engineering and environmental reviews assuming the most probable outcome based on present facts, circumstances and legislation.

Critical estimates and judgement were made by Falconbridge management in the determination of the fair value of Falconbridge's obligation. Cash outflows to settle these obligations will be incurred for periods exceeding 50 years. Due to the combined effect of the uncertainty associated with such extended time periods, the estimated discount and inflation factors, and potential changes to applicable legislation, the fair value of Falconbridge's asset retirement obligations could materially change from period to period.

Income and mining taxes

The provision or relief for income taxes is calculated based on the expected tax treatment of transactions recorded in the consolidated financial statements. The objectives of accounting for income and mining taxes are to recognise the amount of taxes payable or refundable for the current year and deferred tax liabilities and assets for the future tax consequences of events that have been recognised in the consolidated financial statements or tax returns. In determining both the current and future components of income and mining taxes, Falconbridge interprets tax legislation in a variety of jurisdictions as well as make assumptions about the expected timing of the reversal of future tax assets and liabilities. If Falconbridge's interpretation differs from those of tax authorities or if the timing of reversals is not as anticipated, the provision or relief for income and mining taxes could increase or decrease in future periods. In estimating deferred income and mining tax

assets, a valuation allowance is determined to reduce the future income tax assets to the amount that is more likely than not to be realised.

Evaluation of disclosure controls and procedures

As of 31 December 2005, an evaluation of the effectiveness of Falconbridge's disclosure controls and procedures (as such term is defined under the rules adopted by the Canadian securities regulatory authorities and by the SEC) was carried out by Falconbridge management, under the supervision of, and with the participation of, Falconbridge's then Chief Executive Officer ("CEO") and Chief Financial Officer ("CFO"). Based upon that evaluation, the CEO and CFO concluded that as of such date Falconbridge's disclosure controls and procedures were effective such that information relating to Falconbridge, including its consolidated subsidiaries, required to be disclosed by Falconbridge in the reports it files or submits to such regulatory authorities (a) is recorded, processed, summarised and reported within the time periods specified under applicable securities laws and (b) is accumulated and communicated to Falconbridge management, including Falconbridge's principal executive and principal financial officers, or persons performing similar functions, as appropriate, to allow timely decisions regarding disclosure.

D. Operating and financial review relating to the Falconbridge Group (continued)

Year ended 31 December 2004 (as reported) compared with year ended 31 December 2003 (restated)

On 30 June 2005 Noranda and Former Falconbridge completed their merger transaction, whereby Noranda increased its majority interest in Former Falconbridge. Following the transaction Noranda has operated under the name Falconbridge. The financial information presented relates to Noranda for the two years ended 31 December 2004 and 31 December 2003 on the basis that Noranda consolidated Former Falconbridge within its accounts for the two years ended 31 December 2004 and 31 December 2003.

Financial overview

Noranda's consolidated assets totalled US$9.6 billion as at 31 December 2004 on a book-value basis compared with US$8.3 billion as at 31 December 2003. The increase was primarily due to the investment of additional capital in both completing and advancing brownfield expansion development projects and income generated in excess of debt repaid. Total revenues increased to US$7.0 billion during the year ended 31 December 2004, an increase of US$2.3 billion over the US$4.7 billion in revenue generated in the year ended 31 December 2003, due to stronger metal prices and higher production levels. Noranda generated net income of US$551 million in the year ended 31 December 2004, or US$1.75 per share on a diluted basis, an increase of US$528 million from the net income of US$23 million, or nil per share on a diluted basis in the year ended 31 December 2003.

The improved results were attributed to higher base metal prices, increased production levels and a lower cost structure in 2004. This was partially offset by the impact of the stronger Canadian dollar relative to the US dollar, which increased Canadian-based operating costs when translated to US dollars.

Operating assets

Of the US$9.6 billion of consolidated assets as at 31 December 2004 on a book-value basis, the book value of capital assets which were contributing to earnings at 3 February 2005 totalled US$4.9 billion, while projects under development, which were not contributing to earnings at 3 February 2005, totalled US$1.2 billion.

Combined, these assets represented 63% of the total asset base of Noranda. During 2004, Noranda completed the construction of the Collahuasi expansion. This project, which was completed ahead of schedule and below budget, resulted in US$272 million being transferred from projects under development to operating capital assets. The operating assets were distributed in the Noranda's core metals as follows:

	2003 US$m	2004
Operating capital assets		
Copper	2,757	2,890
Nickel	1,107	1,078
Zinc	234	158
Aluminium	579	702
Other	88	42
Total	4,765	4,870

D. Operating and financial review relating to the Falconbridge Group (continued)

Projects under development

Investments in development projects at 31 December 2004 totalled US$1,166 million, an increase of US$193 million since 31 December 2003, primarily due to capital invested in brownfield expansions offset by the completion of the Collahuasi mine expansion in 2004. The Collahuasi transition/expansion project increased the mine's concentrator design capacity to 110,000 tonnes per day from 70,000 tonnes per day. Total investments in the Collahuasi and Kidd projects during the year ended 31 December 2004 totalled US$65 million and US$127 million, respectively.

The following table sets forth nickel and copper expansion projects that were under development in the year ended 31 December 2004, as well as capital spending in the year ended 31 December 2004:

Projects under development – capital spending in the year ended 31 December 2004

	Noranda's beneficial interests (%)	Book Value at 31 December 2003	Expenditures US$m	Transferred to operating assets	Book Value at 31 December 2004
Copper					
Collahuasi	25.9	207	65	(272)	–
Kidd Creek Mine D, Ontario	58.8	277	127	–	404
Nickel					
Koniambo, New Caledonia	28.8	123	57	–	180
Nickel Rim South, Ontario	58.8	5	96	–	101
Other	–	361	120	–	481
Total		973	465	(272)	1,166

Results of operations

Noranda's net income for the year ended 31 December 2004 was US$551 million or US$1.75 per common share on a diluted basis, compared with a net income of US$23 million or US$0.00 per share for the year ended 31 December 2003. The significant improvement in the year ended 31 December 2004 results was due to higher average realised prices for all four primary metals as well as by-products and strong operational performance from each Falconbridge business unit. Net income in the year ended 31 December 2004 included a gain of US$80 million on the settlement of a favourable alumina purchase agreement offset by an asset impairment provision of US$50 million realised against the assets of American Racing.

In the year ended 31 December 2003, net income included a gain of US$38 million pre-tax on the sale of the remaining priority units of the Noranda Income Fund and other investments. This was offset by US$66 million pre-tax of restructuring costs related to the shut-down of unprofitable operations.

Revenues increased to US$7.0 billion in the year ended 31 December 2004, an increase of 49% over revenues for the year ended 31 December 2003 of US$4.7 billion due to additional capacity brought on stream, and higher realised prices during the year ended 31 December 2004. Income generated by operating assets increased to US$1,380 million in the year ended 31 December 2004 compared to US$397 million in the year ended 31 December 2003.

Average realised prices

Noranda's average realised prices during the year ended 31 December 2004 and the year ended 31 December 2003 were as follows:

	Year ended 31 December	
	2003 US$ per pound	2004
Copper	0.82	1.30
Nickel	4.40	6.40
Zinc	0.43	0.52
Aluminium	0.68	0.84
Lead	0.27	0.43
Cobalt	9.42	22.48
Molybdenum	4.51	14.09

D. Operating and financial review relating to the Falconbridge Group (continued)

Cost of operations increased to US$2.1 billion in the year ended 31 December 2004, a 7% increase from US$1.9 billion for the year ended 31 December 2003, largely as a result of the strength of the Canadian dollar relative to the US dollar and increasing energy costs throughout Noranda's operations.

Approximately 50% of Noranda's operating costs were incurred in Canadian dollars in the year ended 31 December 2004. Purchased raw materials, including costs incurred to purchase custom feed, increased to US$3.0 billion in the year ended 31 December 2004 from US$1.8 billion in the year ended 31 December 2003, due to higher average metal prices paid for in purchased feeds. The settlement price for purchased custom feed is based on metal content and the prevailing market prices of the metals at the time of settlement.

With the addition of new mine capacity to Noranda's operating base, Noranda's net income sensitivity to improvement in metal prices increased significantly in the year ended 31 December 2004. The following table shows the annualised impact on Noranda's net income from changes in metals prices and the US dollar/Canadian dollar exchange rate.

	Change in US$/lb price (US$)	Impact on net income (US$m)	Impact on income per share (US$)
Copper	0.05	29	0.10
Nickel	0.50	35	0.12
Zinc	0.05	32	0.11
Aluminium	0.05	19	0.06
Lead	0.05	5	0.02
Exchange rate C$=US$	0.01	5	0.02

Falconbridge Copper Business

The table below provides selected summary financial information in relation to the Falconbridge Copper Business for the year ended 31 December 2003 and for the year ended 31 December 2004:

	Audited Canadian GAAP Year ended 31 December	
	2003	2004
	US$m (except as otherwise stated)	
Revenues	2,147	3,630
Purchased raw materials	1,067	1,882
Operating cash cost[1] (US$ per pound of copper)	US$0.40	US$0.38
Income generated by operating assets	170	673
Sales and throughput (000s tonnes)[2]		
Copper in concentrates	212	275
Copper metal	604	612
Zinc metal	111	135
Zinc in concentrates	100	52
Sulphuric acid	651	749
Concentrate processed	1,793	1,810

Notes:
(1) Includes all cash production and selling costs, net of by-product credits, but excludes interest, corporate, research, exploration costs and custom feed profits. Continuing costs incurred during shutdowns or strikes are excluded.
(2) 100% basis except for Collahuasi (44%) and Antamina (33.75%).

Revenues. For the year ended 31 December 2004, consolidated revenues for the Falconbridge Copper Business were US$3.63 billion, an increase of 69% over the US$2.15 billion for the same period of the year ended 31 December 2003. Higher copper sales and metal prices and by-product revenues accounted for the increase as well as increased production levels of copper as expansions at Collahuasi and the completion of the removal of sediment from the high-grade copper zone at Antamina led the increase in production. The realised copper price averaged $1.30/lb for the year ended 31 December 2004, compared to $0.82/lb for the year ended 31 December 2003.

D. Operating and financial review relating to the Falconbridge Group (continued)

Costs. Total Falconbridge Copper Business operating expenses totalled US$2,957 million in the year ended 31 December 2004 versus US$1,977 million in the year ended 31 December 2003. Cost of operations totalled US$841 million in the year ended 31 December 2004 versus US$710 million in the year ended 31 December 2003. Cost of purchased raw materials increased to US$1,882 million from US$1,067 million, a 76% increase year-over-year due to higher metal prices. In the year ended 31 December 2004, the operating cash cost of producing a pound of copper was US$0.38/lb versus US$0.40/lb in the year ended 31 December 2003.

Income generated from operating assets. In the year ended 31 December 2004, the Falconbridge Copper Business's operating income was US$673 million compared to US$170 million in the year ended 31 December 2003. The US$503 million increase was mainly attributable to higher realised prices and production volumes. For the year ended 31 December 2004, the Falconbridge Copper Business's income generated from operating assets represented 49% of Falconbridge's total income.

Production. For the year ended 31 December 2004, mined copper production of the Falconbridge Copper Business totalled 430,391 tonnes compared to 360,602 tonnes during the year ended 31 December 2003. Production was higher due to the completion of the Collahuasi expansion and open pit transition project, the removal of lake sediment at the Antamina mine allowing access to better copper grades and due to the record production at the Lomas Bayas operation.

Mined zinc-in-concentrate of the Falconbridge Copper Business in the year ended 31 December 2004 totalled 152,004 tonnes versus 197,950 tonnes in the year ended 31 December 2003. Zinc concentrate volumes declined due to lower zinc output from the Antamina mine as high-grade copper zones were mined instead.

Refined copper cathode volumes of the Falconbridge Copper Business in the year ended 31 December 2004 were 491,624 tonnes versus 456,111 tonnes in the year ended 31 December 2003. Refined zinc volumes in the year ended 31 December 2004 were 121,557 tonnes versus 94,719 tonnes in the year ended 31 December 2003. The positive copper variance in the year ended 31 December 2004 reflects significantly higher copper cathode production from the CCR refinery due mostly to higher copper anode production at the Horne smelter.

Nickel Business

The table below provides selected summary financial information in relation to the Nickel Business for the year ended 31 December 2003 and for the year ended 31 December 2004:

	Audited Canadian GAAP Year ended 31 December	
	2003	2004
	US$m (except as otherwise stated)	
Revenues	1,298	1,835
Purchased raw materials	280	447
Operating cash cost (US$ per pound of nickel)	US$2.64	US$2.57
Operating cash cost (US$ per pound of ferronickel)	US$3.04	US$3.50
Income generated by operating assets	291	637
Sales (000s tonnes)		
Nickel	79	71
Ferronickel	27	29
Cobalt	3	4

Revenues. For the year ended 31 December 2004, consolidated revenues for the Nickel Business were US$1.84 billion, an increase of 42% over the US$1.30 billion recorded in the year ended 31 December 2003. At INO, sales volumes of nickel and copper decreased by 10% and 14%, respectively, in 2004 as a result of lower metal deliveries resulting from the strike at Sudbury Operations and reductions from custom shippers.

Cobalt sales in the year ended 31 December 2004 increased 7% from 2003 levels due to increases in production related to custom feeds. At Falcondo, sales volumes increased 7% to 28,936 tonnes in the year ended 31 December 2004 from 27,133 tonnes in the year ended 31 December 2003. The realised ferronickel price increased 52% in the year ended 31 December 2004, compared to the year ended 31 December 2003. Realised nickel prices of US$6.40/lb increased by

D. Operating and financial review relating to the Falconbridge Group (continued)

45% compared with US$4.40/lb in the year ended 31 December 2003. Realised cobalt prices increased by 139% versus the year ended 31 December 2003.

Costs. Total nickel operating expenses totalled US$1,198 million in the year ended 31 December 2004 versus US$1,007 million in the year ended 31 December 2003. Cost of nickel operations totalled US$615 million in the year ended 31 December 2004 versus US$587 million in the year ended 31 December 2003, an increase of US$28 million. Cost of purchased raw materials increased from US$280 million to US$447 million due to higher metal prices. The operating cash cost per pound of mined nickel for all of Falconbridge was US$2.93 in the year ended 31 December 2004, compared with US$2.78 in the year ended 31 December 2003. At INO, in the year ended 31 December 2004 the operating cash cost of producing a pound of nickel from INO mines was US$2.57. The US$0.07, or 3%, decrease from the year ended 31 December 2003 costs was the result of increased mine production and higher by-product credits due to the increase in metal prices which offset the impact of the stronger Canadian dollar, increased costs to access the ore at the Canadian operations and lower ore grades.

At Falcondo, operating cash cost per pound of ferronickel was US$3.50 in the year ended 31 December 2004, compared with $3.04 in 2003. The increase in costs was largely due to the increase in the oil price and costs for extra power generation during periods of power plant maintenance. Oil costs rose from US$29.42 per barrel in the year ended 31 December 2003 to US$36.63 in the year ended 31 December 2004.

Income generated from operating assets. For the year ended 31 December 2004, the operating income of the Nickel Business was US$637 million compared with US$291 million for the year ended 31 December 2003. The US$346 million increase was mainly due to higher metal prices and lower depreciation and amortisation charges, which were offset by lower sales volumes for nickel and copper, increased administrative charges and higher unit costs, again caused in part by the strengthening of the Canadian dollar. For the year ended 31 December 2004, the Falconbridge Copper Business's income generated from operating assets represented 46% of Falconbridge's total income.

Production. Refined nickel production totalled 100,887 tonnes in the year ended 31 December 2004, compared to 104,410 tonnes in the same period in the year ended 31 December 2003. During the year ended 31 December 2004, Sudbury mines nickel production was 22,602 tonnes, compared with 24,143 tonnes in the year ended 31 December 2003. The reduction in nickel production was attributable to the strike in the first quarter of 2004 and the subsequent ramp-up of production (which reduced the annual production by 3,500 tonnes). For the year ended 31 December 2004, Raglan nickel-in-concentrate production was 26,552 tonnes, compared with 25,110 tonnes of nickel in the year ended 31 December 2003. Increased ore tonnages offset the impact of lower ore grades. In Sudbury, smelter production of nickel-in-matte was 52,595 tonnes in the year ended 31 December 2004, compared with 59,831 tonnes in the year ended 31 December 2003, largely as a result of the strike at Sudbury and lower concentrate grades. At Nikkelverk, 2004 nickel production of 71,410 tonnes was lower than the 77,183 tonnes produced in the year ended 31 December 2003 due to lower shipments of material from Sudbury.

Nikkelverk cobalt production set a new record at 4,670 tonnes in the year ended 31 December 2004. The Falcondo ferronickel operation increased production by 8% to 29,477 tonnes of nickel in ferronickel in the year ended 31 December 2004, compared to 27,227 tonnes in the year ended 31 December 2003.

Falconbridge Zinc Business

The table below provides selected summary financial information in relation to the Falconbridge Zinc Business for the year ended 31 December 2003 and for the year ended 31 December 2004:

	Audited Canadian GAAP Year ended 31 December	
	2003	2004
	US$m (except as otherwise stated)	
Revenues	363	415
Purchased raw materials	155	187
Operating cash cost (US$ per pound of zinc)	US$0.32	US$0.32
Income generated by operating assets	(60)	14
Sales (000s tonnes)		
Zinc in concentrates	335	293
Lead metal	60	83

D. Operating and financial review relating to the Falconbridge Group (continued)

Revenues. For the year ended 31 December 2004, consolidated revenues for the Falconbridge Zinc Business increased 14% to US$415 million from US$363 million in the year ended 31 December 2003. Sales volumes of zinc in concentrate decreased in the year ended 31 December 2004 by 13% from 292,512 tonnes compared to 335,059 tonnes in the year ended 31 December 2003, principally due to the closure of the Bell Allard mine in October 2004. Lead metal sales volumes increased in the year ended 31 December 2004 by 38% to 83,194 from 60,452 tonnes in the year ended 31 December 2003. The increase in lead metal sales is primarily due to a shorter seasonal shutdown in the year ended 31 December 2004 versus the year ended 31 December 2003.

Costs. Total Falconbridge Zinc Business operating expenses totalled US$401 million in the year ended 31 December 2004, a decrease from US$423 million in the year ended 31 December 2003. Cost of zinc operations totalled US$158 million in the year ended 31 December 2004 versus US$204 million in the year ended 31 December 2003, a decrease of US$46 million. Cost of purchased raw materials increased from US$155 million to US$187 million due to higher metal prices. In the year ended 31 December 2004, the operating cash cost of producing a pound of zinc was US$0.32, unchanged from the year ended 31 December 2003. Costs remain unchanged from the year ended 31 December 2003 with higher by-product revenue offsetting increased transportation and smelting charges.

Income generated from operating assets. For the year ended 31 December 2004, the Falconbridge Zinc Business operating income was US$14 million compared with a loss of US$60 million for the year ended 31 December 2003. The US$74 million increase was mainly due to higher metal prices, which were offset by lower sales volumes and the negative effect of the stronger Canadian dollar on costs.

Production. During the year ended 31 December 2004, contained zinc in mine production was 366,969 tonnes in the year ended 31 December 2004, compared to 396,136 tonnes in the year ended 31 December 2003. Brunswick Mine production was 268,068 tonnes zinc in concentrate, compared with 286,457 tonnes zinc in concentrate in the year ended 31 December 2003. The decrease in zinc production was attributable to ore pass operating issues during the fourth quarter of 2004. Bell Allard mine production during the year ended 31 December 2004 was 98,901 tonnes zinc in concentrate, compared with 109,679 tonnes zinc in concentrate in the year ended 31 December 2003. The decrease in the year ended 31 December 2004 was due to the closure of Bell Allard in October 2004 as a result of the depletion of reserves and planned closure of the mine. During the year ended 31 December 2004, Brunswick Smelter consumed 205,473 tonnes of feed, compared to 153,207 tonnes of feed in 2003. Refined lead production totalled 83,829 tonnes in the year ended 31 December 2004 versus 60,776 tonnes in the year ended 31 December 2003, an increase of 38%. The increase during the year ended 31 December 2004 was due to the earlier re-start of the smelter following its seasonal shutdown.

Aluminum Business

The table below provides selected summary financial information in relation to the Aluminum Business for the year ended 31 December 2003 and for the year ended 31 December 2004:

	Audited Canadian GAAP Year ended 31 December	
	2003	2004
	US$m (except as otherwise stated)	
Revenues	686	935
Purchased raw materials	236	388
Average fabricating spread (US$ per pound of foil)	US$0.44	US$0.42
Operating cash cost (US$ per pound of aluminium)	US$0.56	US$0.58
Income generated by operating assets	20	89
Sales (000s tonnes)		
Primary aluminium	247	249
Aluminium foil	147	174

Revenues. For the year ended 31 December 2004, consolidated revenues for the Aluminum Business increased 36%, to US$935 million from US$686 million in the year ended 31 December 2003. Primary sales volumes increased slightly over the year ended 31 December 2003. Realised mid-west prices in the year ended 31 December 2004 increased by 24% to US$0.84/lb from US$0.68/lb in the year ended 31 December 2003. For the rolled products division, sales were up by 18% for the year. Overall weighted fabrication spreads were down a little over one cent, or 2% from 2003 levels, due entirely

D. Operating and financial review relating to the Falconbridge Group (continued)

to a change in product mix towards heavier-gauge products. This change in product mix also reduced conversion costs by 8% year-over-year.

Costs. Total Aluminum Business operating expenses totalled US$846 million in the year ended 31 December 2004 versus US$666 million in the year ended 31 December 2003. Cost of aluminium operations totalled US$420 million in the year ended 31 December 2004 versus US$388 million in the year ended 31 December 2003, an increase of US$32 million. Cost of purchased raw materials increased to US$388 million from US$236 million due to higher metal prices. For the year ended 31 December 2004, the net operating cash cost at the primary division was US$0.58/lb compared with US$0.56/lb in the year ended 31 December 2003. Higher power costs in the year ended 31 December 2004 more than offset the positive impact of higher volumes and improved metal premiums. Unit costs at the rolled products division declined by 8% between the year ended 31 December 2003 and the year ended 31 December 2004, due entirely to higher volumes, especially at the Huntingdon West plant.

Income generated by operating assets. For the year ended 31 December 2004, operating income for the Aluminum Business was US$89 million compared with US$20 million for the year ended 31 December 2003. The increase was mainly due to higher metal prices, higher volumes in both the primary and rolled products divisions and higher value-added margins. In the year ended 31 December 2004, the Aluminum Business's income generated by operating assets represented 6% of total income.

Production. For the year ended 31 December 2004, production of primary aluminium was 247,472 tonnes, compared to 244,044 tonnes in the year ended 31 December 2003. For the rolled products operations, shipments were 173,853 tonnes in the year ended 31 December 2004, compared with 146,716 tonnes in the year ended 31 December 2003.

Other income and expenses

Interest expense decreased to US$119 million in the year ended 31 December 2004, a decrease of 8% over US$129 million in the year ended 31 December 2003, due to lower average debt levels and interest rates below the levels of the year ended 31 December 2003.

Corporate and general administration costs as well as research and development costs remained relatively unchanged over 2003 levels.

Minority interest in earnings increased to US$297 million in the year ended 31 December 2004, up from US$88 million in the year ended 31 December 2003, due to the higher contribution to earnings of the Nickel Business unit (principally Falconbridge), which was 58.8% owned by Noranda.

Tax expense increased to US$333 million in the year ended 31 December 2004, reflecting the increased profitability of Noranda in the year ended 31 December 2004, as compared to a tax expense of US$20 million on a consolidated basis in the year ended 31 December 2003.

Pre-tax restructuring costs incurred and gains on sale of investments in the year ended 31 December 2004 and the year ended 31 December 2003 were as follows:

	Year ended 31 December	
	2003 US$m	2004
Gain on alumina contract settlement	–	(80)
American Racing Equipment impairment charge	–	50
Magnesium closure costs	33	–
Restructuring costs	33	3
Gain on sale of units in Noranda Income Fund	(35)	–
Gain on sale of investments and other	(3)	(6)
Total	28	(33)

D. Operating and financial review relating to the Falconbridge Group (continued)

The gain on contract settlement recorded in the year ended 31 December 2004 reflects the fair value at the time of termination of the alumina supply contract in Noranda's alumina operations. The amount of the gain was capitalised to the carried value of the assets received and allotted to capital assets. The contract, originally signed in June 2000 provided the full alumina requirement of the New Madrid smelter until the year 2010 at a price equal to 12.35% of the then prevailing LME price for aluminium. The counterparty to the contract agreed to transfer ownership of the alumina refinery in Gramercy, Louisiana, and a 25% interest in the St. Ann bauxite mine in Jamaica in exchange for cancellation of the contract plus US$11.5 million in cash.

Noranda recorded an impairment charge of US$50 million for the year ended 31 December 2004 against the carried value of the Company's investment in American Racing.

Financial position and liquidity

Noranda maintained long-term credit arrangements and relationships with a variety of financial institutions and investors in order to facilitate its ongoing access to domestic and international financial markets to meet its funding requirements. Noranda's future financial requirements at 31 December 2004 related to debt maturities, operating costs, the projects currently under development and other capital investments and were to be funded primarily from a combination of existing cash balances, committed bank lines, operating cash flows, project financings and new borrowings.

Working capital, excluding cash, short-term investments and short-term indebtedness, increased to US$1,119 million at 31 December 2004 from US$852 million at 31 December 2003. During the year ended 31 December 2004, Noranda continued to improve its balance sheet and operating capacity to support its strategic objective of maintaining an investment-grade credit rating to allow it to benefit more fully from improving fundamentals in the copper and nickel sectors. During the year ended 31 December 2004, Noranda:

- arranged US$295 million of three-year revolving credit facilities with six banks; and
- repaid US$300 million 8⅛% debenture maturity.

Cash and cash equivalents and short-term investments at 31 December 2004 totalled US$884 million compared to US$630 million at 31 December 2003. In addition to its cash balances, Noranda's liquidity and financial flexibility was augmented by revolving credit facilities. Committed lines of credit at 31 December 2004 totalled US$1,112 million of which US$246 million had been drawn or utilised. These lines of credit were primarily with various Canadian chartered banks and syndicates of US and international banks. These bank facilities had committed terms of up to three years and were unsecured.

Long-term debt, excluding the amount due in less than one year, amounted to US$2,638 million at 31 December 2004 compared to US$2,893 million at 31 December 2003. At 3 February 20005, Noranda and its partially-owned subsidiary had US$250 million and US$600 million, respectively, available for public debt issuance under shelf prospectuses filed in September 2003 and January 2004, respectively. At 31 December 2004, Noranda's consolidated net-debt-to-total-capitalisation ratio was 35% compared to 43% at 31 December 2003.

Noranda's long-term public debt ratings at 31 December 2003 and 31 December 2004 are noted below:

	As at 31 December	
	2003	2004
Standard & Poor's	BBB–	BBB–
Moody's	Baa3	Baa3
Dominion Bond Rating Services	BBB	BBB

Note:
A security rating is not a recommendation to buy, sell or hold securities, and may be subject to revision or withdrawal at any time by a rating organisation.

Cash flows

Cash generated from operations, before net changes in non-cash working capital, totalled US$1,468 million in the year ended 31 December 2004, up from US$577 million in the year ended 31 December 2003. The increase was primarily the

D. Operating and financial review relating to the Falconbridge Group (continued)

result of higher sales and production volumes, lower operating costs and higher metal prices, despite the adverse impact of foreign exchange rates.

Capital investments totalled US$666 million in the year ended 31 December 2004 compared to US$489 million in the year ended 31 December 2003. Major capital expenditures during the year ended 31 December 2004 included the expansion and transfer of mining operations at the Collahuasi copper mine, the Kidd Creek Mine D underground extension, the Montcalm nickel mine and the Nickel Rim South underground exploration project initiated in early 2004.

In the year ended 31 December 2004, Noranda's common and preferred share dividend obligations were US$165 million compared to US$123 million in the year ended 31 December 2003. The annual common share dividend was C$0.48 per share in the year ended 31 December 2004 versus C$0.64 per share in the year ended 31 December 2003.

Significant future obligations of Noranda and its partially-owned subsidiaries at 31 December 2004 are summarised as follows:

	Payments by year						
	2005	2006	2007	2008	2009	Thereafter	Total
Nature of obligation				US$m			
Long-term debt	568	353	328	256	83	1,603	3,191
Capital leases	2	2	3	1	1	8	17
Operating leases	29	23	18	14	9	21	114
Total	599	378	349	271	93	1,632	3,322

Off-balance sheet arrangements

In the years ended 31 December 2004 and ended 31 December 2003, Noranda had no unconsolidated affiliates and had not entered into material off-balance sheet arrangements with special purpose entities in the normal course of business. Its only significant off-balance sheet arrangements at 31 December 2004 were the Canadian dollar expenditure hedges discussed in this Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – D. Operating and financial review relating to the Falconbridge Group – Year ended 31 December 2004 (as reported) compared with year ended 31 December 2003 (restated) – Financial instruments and other instruments".

Transactions with related parties

Related-party transactions for the year ended 31 December 2004 are summarised as follows:

Related party	Description	Revenue	Product revenue	Service purchases	Receivables	Payables
				US$m		
Noranda Income Fund	Processing & administration agreement	127	56	–	27	–
Noranda Income Fund	Trading activity	5	–	29	1	8
Antamina	Trading activity	–	–	159	–	42
Other affiliates	Power supply contract	–	–	127	–	–
Other affiliates	Trading activity	–	–	3	–	–

Critical accounting policies

Noranda prepared its financial statements under Canadian GAAP.

Set forth below are the accounting policies that the Directors of Noranda considered to be critical in relation to the historical financial statements of Noranda for year ended 31 December 2004 set out in Part X – "Financial Information Relating to the Falconbridge Group".

Noranda management was required to make estimates in preparing its financial statements in conformity with Canadian GAAP. These estimates affected the reported amounts of assets and liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. Changes to these estimates would result in material changes to these line items.

D. Operating and financial review relating to the Falconbridge Group (continued)

The critical accounting estimates made by Noranda relate to the Falconbridge Group's accounting for the following items:

- property, plant and equipment:
  - the determination of mineral reserves;
  - impairment assessments of long-lived assets; and
  - amortisation of property, plant and equipment;
- employee future benefits;
- asset retirement obligations; and
- the determination of taxes.

Property, plant and equipment

Included in operating capital assets of US$4.9 billion at 31 December 2004, was a property, plant and equipment carrying value of US$4.2 billion. This represented 86% of the book value of the asset base. As such, the estimates used in accounting for property, plant and equipment and the related depreciation and amortisation charges were critical and had a material impact on Noranda's financial condition and earnings. Property, plant and equipment and related capitalised interest and development and pre-production expenditures were recorded at cost and were subject to impairment testing as discussed below.

Determination of mineral reserves

One of the most significant estimates which impacted the accounting for property, plant and equipment and the related depreciation and amortisation, was the estimate of proven and probable mineral reserves. The process of estimating reserves is complex, requiring significant assumptions, estimates and decisions regarding economic (i.e. metal prices, production costs, and exchange rates), engineering, geophysical and geological data. A material revision to existing reserve estimates could occur because of changes to any of these inputs. Changes in reserves could result in impairment of the carrying amount of property, plant and equipment and a change in amortisation expense.

Impairment assessments of long-lived assets

Noranda reviewed and evaluated its long-lived assets for impairment when events or changes in circumstances indicated that the carrying amount may not be recoverable. In the year ended 31 December 2004, an asset impairment charge of US$50 million was realised with respect to a wholly-owned subsidiary, American Racing Equipment, a wheel manufacturing subsidiary located in the United States. Asset impairment was considered to exist if the total estimated future cash flows on an undiscounted basis were less than the carrying amount of the asset. An impairment loss was measured and recorded based on recoverable minerals, expected commodity prices (considering current and historical prices, price trends and related factors), production levels, capital and reclamation costs, and were all based on detailed life-of-mine plans. The term "recoverable minerals" refers to the estimated amount of metal that will be obtained from proven and probable mineral reserves, after taking into account losses during ore processing and treatment. Significant management judgement is involved in estimating these factors, which include inherent risks and uncertainties. The assumptions Noranda used were consistent with its internal planning. Noranda management periodically evaluated and updated the estimates based on the conditions that influenced these factors. The variability of these factors depended on a number of conditions, including uncertainty about future events, and thus accounting estimates could change from period to period. If other assumptions and estimates had been used in the year ended 31 December 2004, the asset balances could have been materially impacted. If Noranda management used different assumptions or if different conditions occur in future periods, future operating results could be materially impacted.

In estimating future cash flows, assets were grouped at the lowest levels for which there were identifiable cash flows that were largely independent of future cash flows from other asset groups, taking into consideration movements of intermediate products to ensure the utilisation of available capacity across Noranda's operations. All assets at a particular operation were considered together for purposes of estimating future cash flows.

D. Operating and financial review relating to the Falconbridge Group (continued)

Amortisation of property, plant and equipment

Noranda generally depreciated plant and equipment on a straight-line basis over the lesser of their useful service lives or the lives of the producing mines to which they related. Mine facilities were depreciated over the estimated lives of the mines based on the unit of production basis. Depletion of resource properties was provided over the estimated lives of the resources recoverable from the properties on the unit of production basis. Development and pre-production expenditures, together with certain subsequent capitalised development expenditures were amortised over periods not exceeding the lives of the producing mines and properties.

The most critical estimates which impacted the above accounting policy were the estimated quantities of proven and probable mineral reserves which were the underlying bases for the calculation of the depletion of resource properties using the unit of production method. Changes in the quantity of reserves would result in changes in amortisation expense in the periods subsequent to the revision.

Employee future benefits

Assets were valued at then current market value. The expected return on plan assets, 7%, was based on then current bond yields and expected long-term rate of return on equities. The long-term rate of return on assets assumption was reviewed on an annual basis.

Liabilities were determined as a present value of future anticipated cash flows using a discount rate based on corporate AA bond yields at the valuation date and an inflation expectation consistent with the corporate AA bond yield curve. Differences between the estimated future results and actual future results were amortised (to the extent that the cumulative experience gain or loss was in excess of the permitted 10% corridor under Canadian GAAP) over the expected average remaining service life of the active members (EARSL). This 10% corridor represented 10% of the greater of the postretirement benefits obligations and the fair value of plan assets. The return on assets assumption and the discount rate, salary and inflation assumptions used to value the liabilities were reviewed annually and determined based on a consistent framework from year-to-year. The most significant risk is that the assumption will prove to be either too high or too low in the long term. It is reasonable to assume that there will be a significant variation between the assumptions (which are set within the framework of a long-term commitment) and actual experience in any one year, but are expected to produce an appropriate reflection of costs over the long term.

For post-employment benefits other than pensions, the discount rate was the same as for pensions. The inflation rate assumed for medical costs was based on Noranda's history of healthcare spending. The assumption for the ultimate healthcare trend rates related to the overall economic trends.

Noranda estimated at 3 February 2005 that a 0.5% increase or decrease in the return on assets assumption would result in a corresponding US$9 million increase or decrease in annual pension expense. Changes to the return on asset assumption would have no significant effect on funding requirements, as Noranda's contributions were primarily determined based on the applicable Canadian regulatory solvency funding requirements. Under this valuation methodology, liabilities for solvency valuation are based on market bond yields and the excess of liabilities over assets must be amortised over a five-year period. Noranda estimated at 3 February 2005 that a 0.5% increase or decrease in the discount rate assumption would result in a corresponding US$4 million increase or decrease in the pension expense.

Asset retirement obligations

As a result of Noranda's mining activities, the Falconbridge Group incurred legal obligations associated with the retirement of tangible long-lived assets, from the acquisition, construction, development or normal operations of those assets, which an entity was required to settle as a result of an existing or enacted law or contract. CICA 3110, which was adopted on 1 January 2004, required that, when a legal obligation was incurred, Noranda recorded the fair value of the Falconbridge Group's estimated asset retirement obligations and a corresponding deferred charge presented as an asset grouped with property plant and equipment. The liabilities were accreted to full value over time through a charge to earnings. The asset was depreciated over the useful life of the associated long-lived asset on a straight-line basis. The fair value of the obligation as of 31 December 2004 was US$436 million.

The fair value of these obligations was determined by discounting the projected cash flows required to settle the legal obligations at the Falconbridge Group's credit adjusted risk free interest rate over the time periods over which the

D. Operating and financial review relating to the Falconbridge Group (continued)

obligations were incurred. The future cash flows required to settle the obligations were determined by detailed engineering and environmental reviews assuming the most probable outcome based on present facts, circumstances and legislation.

Critical estimates and judgements were made by Noranda management in the determination of the fair value of the Falconbridge Group's obligations. Cash outflows to settle these obligations were due to be incurred at 3 February 2005 during periods ranging from one to 62 years. Due to the combined effect of the uncertainty associated with such extended time periods, the estimated discount and inflation factors and potential changes to applicable legislation, the fair value of the Falconbridge Group's asset retirement obligations could materially change from period to period.

Income and mining taxes

The provision or relief for income taxes was calculated based on the expected tax treatment of transactions recorded in Noranda's consolidated financial statements. The objectives of accounting for income and mining taxes were to recognise the amount of taxes payable or refundable for the year ended 31 December 2004 and deferred tax liabilities and assets for the future tax consequences of events that had been recognised in Noranda's consolidated financial statements or tax returns. In determining both the current and future components of income and mining taxes, Noranda interpreted tax legislation in a variety of jurisdictions as well as making assumptions about the expected timing of the reversal of future tax assets and liabilities. If Noranda's interpretation differs from those of tax authorities or if the timing of reversals is not as anticipated, the provision or relief for income and mining taxes could increase or decrease in subsequent or future periods. In estimating deferred income and mining tax assets, a valuation allowance was determined to reduce the future income tax assets to the amount that was more likely than not to be realised.

Changes in accounting policies including initial adoption

Asset retirement obligations

Under the standard applicable before the year ended 31 December 2004, costs related to ongoing site restoration programmes were expensed when incurred. A provision for mine closure and site closure costs was charged to earnings during the life of the operations. Under the standard applicable for the year ended 31 December 2004, a capital asset and corresponding long-term liability equal to the present value of the legal obligation for asset retirement, at the date that the obligation arose was recorded. Provisions recorded under the prior standard were reversed to retained earnings. The capital asset was depreciated and charged to earnings on a straight-line basis over the life of the related asset. Interest on the obligation was accreted and charged to earnings. This standard was applied retroactively with restatement of prior years.

As of 1 January 2003, the cumulative impact of the adoption of the standard was to decrease retained earnings by US$27 million, increase capital assets by US$70 million, increase the asset retirement obligation by US$97 million, decrease future income taxes by US$5 million and increase interest of other shareholders by US$5 million. The adoption of the new standard reduced net income by US$11 million for the year ended 31 December 2003.

Hedging relationships

As of 1 January 2004, Noranda adopted CICA guideline AcG 13, which established new standards for when hedge accounting may be applied. Under the provisions of the standard, Noranda's interest rate hedge positions and certain energy price hedges were not eligible for hedge accounting. As a result of the implementation of this standard, on 1 January 2004 Noranda recorded a deferred mark-to-market gain of US$27 million on its interest rate hedges while recording a long-term receivable and long-term payable of US$67 million and $40 million, for those contracts in a gain and loss position, respectively. During the year ended 31 December 2004, US$7 million of this deferred gain was amortised into income as an adjustment of interest expense.

Financial instruments and other instruments

Noranda used financial and other instruments in the following instances:

D. Operating and financial review relating to the Falconbridge Group (continued)

Foreign currency exposure

Noranda used forward foreign exchange and option contracts to hedge the effect of exchange rate changes on identifiable foreign currency exposures. A summary of these positions at 31 December 2004 is tabled below:

	2005		2006 and beyond		Totals as at 31 December 2004			
	Amount C$m	Rate	Amount C$m	Rate	Amount C$m	Rate	Unrealised gain US$m	Realised gain US$m
Noranda	224	1.5014	12	1.5157	236	1.5022	39	24
Former Falconbridge	274	1.3835	–	–	274	1.3835	30	53
Total	498	1.4366	12	1.5157	510	1.4385	69	77

Note:
(1) Former Falconbridge's totals include gains/(losses) on foreign exchange option contracts.

Commodity price exposure

Generally, Noranda did not hedge the price it realised on the sale of its own production and accepted realisations based on market prices prevailing around the time of delivery of metals to customers. Under certain circumstances, Noranda entered into futures and option contracts to hedge the effect of price changes on a portion of the raw materials it purchased on a custom processing or resale basis. Gains and losses on these contracts were reported as a component of the related transactions. Designated contracts meeting the definition for hedge accounting under GAAP were not recorded.

Interest-rate management

Noranda also entered into interest rate swap agreements, including foreign exchange cross-currency swaps, to modify the interest characteristics of its outstanding debt. The differential to be paid or received, for interest rate swaps for which Noranda received hedge accounting, was accrued and recognised as an adjustment to interest expense related to the debt. The following table sets out a summary of these positions at 31 December 2004:

Interest rate swaps	Total notional principal amount
Maturity 2005	400
Maturity 2006	325
Maturity 2008(1)	136
Maturity 2011	300
Maturity 2012	350
Maturity 2015	500
Fair value(2)	86

Notes:
(1) Includes a cross-currency interest rate swap (with a notional amount of US$111.3 million) designated as a hedge of a Canadian dollar debenture. The total fair value of this instrument at 31 December 2004 was US$46.3 million of which US$34.1 million related to the currency component of the swap and US$12.2 million related to the interest component.
(2) Includes the fair value of US$34.1 million related to the currency component of the cross currency interest rate swap discussed in note (1) above.

Part II

Information on the Enlarged Xstrata Group

[This page is intentionally left blank]

Overview of the Enlarged Xstrata Group's business

The Enlarged Xstrata Group is the fifth largest diversified mining group in the world with top five industry positions in copper, thermal and coking coal, ferrochrome, zinc, nickel and vanadium, a smaller but profitable aluminium business, recycling facilities, additional exposures to gold, lead, silver and platinum group metals and a suite of global technologies, many of which are leading technologies in the industry. The Enlarged Xstrata Group's operations and projects span five continents and 18 countries: Argentina, Australia, Brazil, Canada, Chile, Colombia, the Dominican Republic, Germany, Jamaica, New Caledonia, Norway, Papua New Guinea, Peru, South Africa, Spain, Tanzania, the UK and the USA.

The Enlarged Xstrata Group's business is organised in the following six principal business units:

Copper. The Enlarged Xstrata Group is the world's fourth largest producer of mined copper. The Copper Business incorporates the Former Xstrata Group Copper Business, which has interests in two operating mines, a smelter and a refinery in Australia, one mine in Argentina and one mining and processing operation in the high Andes region of southern Peru, and the Falconbridge Copper Business which has interests in the Antamina copper and zinc mine in Peru, the Altonorte copper smelter, the Collahuasi copper mine and the Lomas Bayas copper mine and solvent extraction-electrowinning (SX-EW) refinery in Chile, the Kidd copper and zinc mine in Canada as well as smelting, refining and recycling facilities in Canada and the United States.

Coal. On a managed basis, the Enlarged Xstrata Group is one of the world's largest producers of export thermal coal, one of the largest producers of export semi-soft/PCI coal and the fifth largest producer of export coking coal. It has interests in 33 operating coal mines, 19 of which are located in Australia, 13 in South Africa and one in Colombia.

Nickel. The Enlarged Xstrata Group is the fourth largest producer of refined nickel in the world, and one of the largest recyclers and processors of nickel and cobalt-bearing materials. Its operations include mines and processing facilities in Canada, Norway and the Dominican Republic.

Zinc. The Enlarged Xstrata Group is one of the world's largest producers of zinc. The Zinc Business incorporates the Former Xstrata Group Zinc Business, with zinc smelting operations in Spain and Germany, interests in three operating mines and a lead smelter in Australia and a lead refining plant in the United Kingdom, and the Falconbridge Zinc Business, with interests in the Antamina copper and zinc mine in Peru, the Brunswick zinc mine and a lead smelter and refinery in New Brunswick and a minority interest in a zinc smelter in Valleyfield, Quebec, Canada.

Aluminum. The Enlarged Xstrata Group's aluminium operations include six plants in the United States that produce alumina, primary aluminium and aluminium foil, as well as a mining operation in St. Ann, Jamaica.

Alloys. The Enlarged Xstrata Group is the world's largest producer of ferrochrome and one of the world's leading producers of primary vanadium, with integrated production facilities in South Africa. It also has a platinum group metal ("PGM") joint venture with Rustenburg Plantinum Mines and Kagiso in South Africa.

In addition to its six principal businesses, the Enlarged Xstrata Group also operates Xstrata Technology, a mining and processing technology business with operations in Australia, South Africa, Chile and Canada.

Xstrata previously had a forestry business in Chile, which was sold in January 2005, and a magnesium recycling business in North America, which was sold in April 2003. Falconbridge previously had aftermarket automotive wheel manufacturing and distribution operations, American Racing Equipment, which it sold in July 2005.

The Enlarged Xstrata Group comprises, following completion of the Falconbridge Acquisition in August 2006, the Former Xstrata Group and the Falconbridge Group. The Former Xstrata Group's principal businesses comprise the Coal Business, the Former Xstrata Group Copper Business, the Former Xstrata Group Zinc Business and the Alloys Business. The Falconbridge Group's principal businesses comprise the Nickel Business, the Falconbridge Group Copper Business, the Falconbridge Group Zinc Business and the Aluminum Business. For information in relation to the Former Xstrata Group, see Part IV – "Information on the Former Xstrata Group's Business" and, for information in relation to the Falconbridge Group, see Part V – "Information on the Falconbridge Group's Business".

Strategy

Xstrata's strategy since the Xstrata IPO in 2002 has been to grow and manage a distinct, value-focused, global diversified resources group positioned to compete for and create value, with the single aim of delivering industry-leading returns for Shareholders. Xstrata recognises that this aim can only be achieved through genuine partnerships with employees, customers, Shareholders, local communities and other stakeholders which are based on integrity, co-operation, transparency and mutual value creation.

The strategy leverages the Enlarged Xstrata Group's size and momentum and focuses on:

- commitment, capacity and headroom to grow in moves that are themselves creators of value; and
- constant improvement in the quality of Xstrata's businesses through ongoing efficiency gains, margin improvements, net present value enhancements and cost reductions.

Xstrata's strategy is based on its assessment of key success factors in global mining, being:

- scale and critical mass;
- diversification of commodity, currency and country exposure;
- a wide range of growth options, including via acquisitions and brown-field and green-field expansions; and
- operating excellence.

Certain third parties have indicated to Xstrata their interest in acquiring parts of the Falconbridge Group. Xstrata is continuing to evaluate its strategic options, which may or may not include disposals.

History and development of Xstrata

Xstrata plc is the holding company of the Enlarged Xstrata Group.

Xstrata AG, which was the predecessor of Xstrata plc, was established in Switzerland in 1926 to invest in infrastructure and power projects in Latin America. In 1990, Glencore International became a substantial shareholder of Xstrata AG, following which Xstrata AG built a portfolio of businesses operating in the natural resources sector.

On 25 March 2002, Xstrata plc merged with Xstrata AG to become the holding company of the Former Xstrata Group. At the same time, the Former Xstrata Group acquired Enex and Duiker from Glencore International and the shares of Xstrata plc were admitted to the Official List, to trading on the London Stock Exchange's market for listed securities and to listing on the SWX.

In December 2002, the Former Xstrata Group acquired the Nordenham zinc smelter from Metaleurop SA, a company in which Glencore International has a 33% shareholding.

In June 2003, Xstrata acquired, through a wholly-owned subsidiary, MIM Holdings Limited, now known as Xstrata Queensland Limited.

In August and September 2005, the Former Xstrata Group acquired approximately 19.9% of the then outstanding Falconbridge Shares. Following completion of the Falconbridge Acquisition, Xstrata now beneficially owns approximately 97.1% of the Falconbridge Shares and Xstrata has begun a compulsory acquisition process to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006. See "The Falconbridge Acquisition" in this Part II below.

In May 2006, the Former Xstrata Group acquired $33^{1/3}$% of the Cerrejón thermal coal operation in Colombia. In June 2006, the Former Xstrata Group acquired the Tintaya mine and associated satellite deposits in Peru.

For further information in relation to significant acquisitions and disposals of the Former Xstrata Group since 1 January 2003, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Principal factors affecting the Former Xstrata Group's business – Acquisitions and discontinued operations – Acquisitions and disposals". For recent developments in respect of the Former Xstrata Group, see Part I – "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Recent significant developments" and "Financial Information and Operating and Financial Review Relating to the Former Xstrata Group and the Falconbridge Group – Operating and financial review relating to the Former Xstrata Group – Current trading and prospects".

The Rights Issue

The Company has launched the Rights Issue to refinance part of the debt raised to finance the cash consideration paid in respect of the Falconbridge Acquisition. The total net proceeds of the Rights Issue, after estimated total expenses of approximately £54 million (approximately US$102 million), are expected to be approximately £2.9 billion (approximately US$5.5 billion).

The proceeds of the Rights Issue will not otherwise be used to discharge, reduce or retire indebtedness.

Save in respect of New Shares which Glencore International takes up pursuant to the irrevocable undertakings it has given to the Company and pursuant to the separate underwriting commitment Glencore International has given to the Banks

pursuant to the Glencore Underwriting Letter, the Rights Issue is fully underwritten by Deutsche Bank and, on behalf of its affiliate JPMorgan Cazenove, by JPMSL.

Glencore International has irrevocably undertaken to take up its full entitlements under the Rights Issue. In addition, CSSEL has agreed to transfer to Glencore International its entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue and Glencore International has also irrevocably undertaken to take up in full such entitlements. CSSEL (in respect of 151,560,600 Ordinary Shares) and Glencore International have agreed to lock-ups which, subject to certain exceptions, will expire six months after the latest time for acceptance and payment in full of entitlements to subscribe for the New Shares. A total of 84,200,333 New Shares are subject to Glencore International's irrevocable undertakings (approximately 35.71% of the maximum number of New Shares to be issued under the Rights Issue). The actual number of New Shares taken up by Glencore International pursuant to the Irrevocable Undertaking Agreement may be less than 84,200,333 if Glencore International disposes of any of its existing holding of Ordinary Shares prior to the ex-rights date as a result of the exercise of any exchange rights pursuant to the Glencore Exchangeable Bonds. However, Deutsche Bank and JPMorgan Cazenove have agreed, as agent for the Company, to endeavour to procure subscribers for such number of New Shares as Glencore International is unable to take up prior to the latest time and date for acceptance and payment in full under the Rights Issue as a consequence of having to dispose of Ordinary Shares in these circumstances (such New Shares being referred to herein as "Exchanged New Shares"), except if in the opinion of the Banks subscribers are unlikely to be procured for such Exchanged New Shares. Pursuant to the Glencore Underwriting Letter, Glencore International has agreed to subscribe for New Shares equivalent in number to the Exchanged New Shares for which Deutsche Bank and JPMorgan Cazenove have not procured subscribers. The Takeover Panel has granted a dispensation from any obligation on either Glencore International or CSSEL to make a mandatory offer for Xstrata pursuant to Rule 9 of the City Code, as a result of Glencore International and CSSEL's interest being diluted by exchange rights under the Glencore Exchangeable Bonds being exercised or conversion rights under the 2010 Convertible Bonds, 2017 Convertible Debenture or 2017 Convertible Bonds into Ordinary Shares being exercised, between Monday, 2 October 2006 (being the latest practicable date prior to the publication of this document) and completion of the Rights Issue and subsequently being increased again as a result of Glencore International subscribing for New Shares pursuant to the irrevocable undertakings it has given to the Company or pursuant to the Glencore Underwriting Letter. Glencore International's right to acquire shares pursuant to Note 11 on Rule 9.1 of the City Code is not affected by this dispensation nor by these arrangements generally.

Glencore International will be paid an underwriting commission by the Company of US$35.1 million in connection with its undertakings.

Further details of Glencore International's Irrevocable Undertaking Agreement and the lock-up arrangements are set out in paragraph 22.2 of Part VIII – "Additional Information – Material contracts".

Further details of the Rights Issue are set out in Part VII – "Use of Proceeds and Terms and Conditions of the Rights Issue".

The Falconbridge Acquisition

Following the amalgamation of Noranda and Former Falconbridge in June 2005 to form Falconbridge, in August and September 2005 the Former Xstrata Group purchased an approximate 19.9% stake in Falconbridge at a cost of approximately US$1.7 billion or C$28 per Falconbridge Share from Brookfield, Falconbridge's then largest shareholder, and Lansdowne.

On 11 October 2005, without any prior discussion with Xstrata, Inco and Falconbridge announced an offer by Inco to purchase all of the Falconbridge Shares for a per share consideration of C$34.00 in cash or 0.6713 of an Inco share and C$0.05 in cash. On 13 May 2006, Inco and Falconbridge announced a revised offer by Inco for a per share consideration of C$51.17 in cash or 0.6927 of an Inco share and C$0.05 in cash.

On 17 May 2006, Xstrata announced the Xstrata Offer to acquire (through Xstrata Canada Inc., an indirect wholly-owned subsidiary of Xstrata ("Xstrata Canada")) all of the issued and outstanding Falconbridge Shares not already owned by the Former Xstrata Group for C$52.50 in cash per Falconbridge Share.

On 26 June 2006, in connection with a proposed combination of Phelps Dodge Corporation and Inco, Inco announced that it would increase its offer for Falconbridge to a per share consideration of C$53.83 in cash or 0.82419 of an Inco share plus C$0.05 in cash.

On 11 July 2006, Xstrata announced that the Xstrata Offer would be increased to C$59.00 in cash per Falconbridge Share.

On 16 July 2006, Inco announced that it would increase its offer for Falconbridge to a per share consideration of C$60.20 in cash or 0.80312 of an Inco share plus C$0.05 in cash. Under the further revised Inco Offer, Inco offered C$18.50 plus 0.55676 shares of Inco for each Falconbridge Share, assuming full pro-ration of the consideration. At the same time, the board of directors of Falconbridge declared the Falconbridge Special Dividend, being a special cash dividend of C$0.75 per

Falconbridge Share which was subsequently paid on 10 August 2006 to Falconbridge Shareholders of record at the close of business on 26 July 2006. In addition, the Inco Offer was amended to provide that the consideration under the Inco Offer would not be reduced by the amount of the Falconbridge Special Dividend.

On 19 July 2006, Xstrata announced that the Xstrata Offer would be further increased to C$62.50 in cash per Falconbridge Share, or approximately C$19.2 billion in total (approximately US$16.9 billion). At the same time, Xstrata announced that Xstrata Canada would also amend the Xstrata Offer to provide that the consideration under the Xstrata Offer would not be reduced by the amount of the Falconbridge Special Dividend. The Second Increased Xstrata Offer, together with the Falconbridge Special Dividend, valued the total common share capital of Falconbridge at approximately C$24.1 billion (approximately US$21.2 billion).

The Inco Offer expired on 28 July 2006 without Inco taking up any Falconbridge Shares, as Inco's minimum tender condition was not satisfied at the expiry time of the Inco Offer.

Following a hearing on 27 June 2006 by a three-member panel of the Ontario Securities Commission relating to an application by Xstrata to terminate the Second Falconbridge Shareholder Rights Plan, the Former Xstrata Group was able from 28 July 2006 to exercise its right to acquire up to 5% of the Falconbridge Shares through normal course purchases on the Toronto Stock Exchange in accordance with applicable securities laws. On 28 July 2006, Xstrata Alberta purchased for cash 18,556,430 Falconbridge Shares through the TSX, representing approximately 5% of the then outstanding Falconbridge Shares, at an average price of C$62.25 per Falconbridge Share, or approximately C$1,155.1 million (approximately US$1,035.2 million) in aggregate.

On 15 August 2006, Xstrata Canada acquired for cash 257,700,100 Falconbridge Shares under the Xstrata Offer, representing approximately 67.8% of the then outstanding Falconbridge Shares, at the Xstrata Offer price of C$62.50 per Falconbridge Share, or approximately C$16,106.3 million (approximately US$14,434.8 million) in aggregate.

On 25 August 2006, Xstrata Canada acquired for cash 18,637,431 Falconbridge Shares under the Xstrata Offer, representing approximately 4.9% of the then outstanding Falconbridge Shares, at the Xstrata Offer price, or approximately C$1,164.8 million (approximately US$1,043.9 million) in aggregate.

As a result of the transactions referred to above, Xstrata now beneficially owns approximately 97.1% of the outstanding Falconbridge Shares on a fully-diluted basis. Since the Xstrata Offer was accepted by holders of more than 90% of Falconbridge Shares, Xstrata has begun the process of exercising its right under the compulsory acquisition provisions of section 188 of the Business Corporations Act (Ontario), as amended, to acquire all outstanding Falconbridge Shares not already owned by Xstrata at the Xstrata Offer price of C$62.50 per Falconbridge Share. Xstrata expects the compulsory acquisition process to conclude in early November 2006.

Shareholders approved the Falconbridge Acquisition at extraordinary general meetings of the Company held on 30 June 2006 and, following the Second Increased Xstrata Offer, 14 August 2006.

Following the expiry of the Inco Offer on 28 July 2006, Falconbridge paid Inco a cash break fee of US$150 million on 1 August 2006 and, following the successful completion of the Xstrata Offer for Falconbridge, Falconbridge paid Inco a further cash break fee of US$300 million on 16 August 2006, in each case in accordance with the terms of the Inco Support Agreement described in paragraph 22.17 of Part VIII – "Additional Information – Material contracts".

The acquisitions of Falconbridge Shares in August and September 2005 were financed by borrowings under the Second Facility Agreement described in paragraph 22.22 of Part VIII – "Additional Information – Material contracts" and the issue of the 2017 Convertible Debenture described in paragraph 22.20 of Part VIII – "Additional Information – Material contracts".

The market purchases of Falconbridge Shares and the Xstrata Offer were, and the compulsory acquisition procedure will be, financed by the Former Xstrata Group's existing cash resources and debt financing under the Equity Bridge Facility, the Debt Bridge Facility and the Acquisition Facilities described in paragraph 22.9 of Part VIII – "Additional Information – Material contracts".

Xstrata has committed to undertake one or more equity capital raisings to refinance the Equity Bridge Facility, under which the Former Xstrata Group drew US$7.0 billion in connection with the Falconbridge Acquisition. Deutsche Bank and JPMSL committed to underwrite, each as to 50% and subject to the terms of the Standby Equity Underwriting Letter, one or more equity offerings to raise such amount as is required to repay the amounts outstanding under the Equity Bridge Facility Agreement together with costs and expenses.

As a result the Company has launched the Rights Issue, and the Company and the Banks have entered into the Underwriting Agreement, to refinance part of the US$7.0 billion drawn under the Equity Bridge Facility in respect of the Falconbridge Acquisition.

The Directors believe that the Falconbridge Acquisition will be substantially earnings per share and cash flow per share accretive in the first full year of consolidation.

In connection with the Falconbridge Acquisition, the Company has identified anticipated annualised cash cost savings of around US$120 million, comprising reductions in certain duplicated head office and administrative functions and non-Canadian exploration activity, together with a proportional share of the synergies identified by Inco and Falconbridge from the Sudbury nickel businesses. In addition, Xstrata expects to benefit from the incorporation of Falconbridge into the Enlarged Xstrata Group's financial structure and from synergies arising from the optimisation of material flows across Xstrata's enlarged copper and zinc businesses.

In connection with securing approval for the Falconbridge Acquisition under the Investment Canada Act, Xstrata provided the Canadian Minister of Industry with several important commitments in respect of Falconbridge's operations and employees in Canada. These commitments included:

- establishing Xstrata Nickel as a new standalone global nickel business, with its head office in Toronto and with responsibility for all of the Enlarged Xstrata Group's worldwide nickel operations;
- establishing in Toronto a Canadian Division of Xstrata Technology, which is responsible not only for marketing the Falconbridge Group's existing commercial technologies worldwide but also for marketing Xstrata's existing proprietary technologies throughout the Americas. In addition, Xstrata made significant commitments with respect to increased research and development expenditures in Canada over the next three years;
- making substantial commitments with respect to improved capital expenditures in Canada over the next three years, including significant commitments in respect of increased expenditures on exploration, including greenfield exploration, in Canada over the same period;
- committing to a process to identify for consideration by the Nominations Committee an appropriate Canadian candidate to be put forward to Shareholders as a non-executive director of the Company; and
- consistent with Xstrata's established practice of setting aside 1% of its annual pre-tax profits to support communities in which it operates, committing that a set portion of the Enlarged Xstrata Group's social involvement funding will be spent on community and social initiatives in Canada, with a particular focus on supporting Native American communities.

Overview of the industries in which the Enlarged Xstrata Group principally operates

Copper industry overview

Background

Copper's principal use is in wire and cable applications, which account for an estimated 55% of total consumption. Copper and its primary alloys, brass and bronze, are also used to make a variety of other products such as tubes, for both plumbing and air-conditioning, sheet and strip, for end-uses such as roofing, coinage, electrical connectors, and rods and bars for further manufacturing into industrial parts, fixtures, taps and other goods.

By market sector, construction accounts for the major end use at approximately 37% of total copper consumption. Electrical and electronic products are the second largest consuming sector at approximately 26%, followed by demand for industrial machinery applications at approximately 15%. Transport and consumer product sectors each consume approximately 11% of total refined copper demand.

The global supply of refined copper is largely produced from primary sources. Conventional milling/flotation processes account for approximately 73% of total refined copper production while the hydrometallurgical process of solvent extraction and electrowinning (SX-EW) supplies around 17% of global output. The balance of refined copper supply is obtained from the processing of secondary copper materials such as scrap.

Approximately 46% of the copper concentrate produced by milling/flotation processes is treated at integrated facilities that are usually located at or near the mine site. The balance of copper concentrate production is typically shipped to custom and partially integrated smelters for subsequent smelting and refining. Custom smelters usually purchase concentrates on the basis of payments made for the metal content of the concentrate adjusted for a processing charge that reflects the cost of treatment and refining.

In contrast to other metals such as aluminium, the concentration of supply ownership remains fragmented despite consolidation in recent years. In 2005, the top five mined copper producers accounted for more than 36% of total mine supply while the top five refined copper producers accounted for just over a quarter of total refined production.

Supply and demand

Chile accounts for approximately 36% of world mined production. Including Peru, Argentina and Brazil, the region of Latin America produces approximately 47% of the world total. Other major producers include the US, Indonesia and Australia.

Smelting and refining capacity is spread relatively evenly between the key supply areas, such as Latin America, and the consuming markets of Western Europe, North America and Asia. The Asia region accounts for approximately 35% of global refined supply and within the region, rapid industrialisation and capital and operating cost advantages have concentrated the addition of new smelting capacity in China and India. Latin America produces approximately 24% of refined supply while North America is the third largest producing region at approximately 11% of global refined production.

China's metals intensive growth has made China the world's largest consumer of copper, accounting for more than 22% of global refined demand in 2005. Since 2000, China has been responsible for almost 90% of global growth in refined copper demand and the Asia region now consumes almost 45% of global copper supply. Western Europe and North America are responsible for approximately 21% and 15% of global demand respectively.

Between 1990 and 2005, demand for copper in the western world increased at an annual average rate of approximately 2% and total global demand increased at an annual average rate of approximately 3.0% over the same period. Western world refined copper supply has increased at an annual rate of approximately 2.2% since 1990 while global refined supply has grown at an average rate of approximately 2.9% per annum.

During 2005, Chinese consumption helped to limit the growth of exchange stocks. Although Chinese consumption has been tempered by inventory destocking over the year to date in 2006, strong growth in other markets and repeated production interruptions at some of the world's largest production facilities have combined to keep global exchange stocks at very low levels. Total world exchange stocks at the end of August 2006 were 184,821 tonnes, representing approximately four days of consumption.

Pricing and costs

Refined copper is sold to consumers or delivered into a terminal market. Metals exchanges such as the London Metal Exchange, the Shanghai Futures Exchange and the New York Mercantile Exchange COMEX division provide pricing information that is used to benchmark global pricing.

The copper concentrate market is a negotiated market with a large percentage of production sold under annual contracts at agreed treatment and refining charges (TC/RCs). The main determinant of TC/RCs is the relationship between mine production and smelter demand.

Costs at copper smelters can vary widely. Older operations have greater fossil fuel requirements than newer smelting technologies. Labour costs can contribute at least a third of costs in high-wage economies, but all smelters incur high costs of "other" items including refractory replacement, fluxes, high temperature materials and other maintenance items. The main variable costs at electrolytic refineries are labour, electric power and consumables.

In 2005, a number of supply disruptions coupled with continued strong Chinese demand and critically low exchange stocks drove copper prices to record nominal highs. The LME copper price averaged US$1.67 per pound over the year, an increase of 28% over the corresponding period in 2004.

The 2006 year-to-date average LME copper price at the end of August was US$2.94 per pound.

Treatment and refining charges (TC/RCs) have declined quickly from the record highs experienced during 2005, due to disruptions to supply and strong growth in smelter consumption. Annual benchmark TC/RCs were set at around US$95 per dry metric tonne and US$0.095 per pound for 2006 and the spot market has continued to reflect the declining market during 2006.

Market and outlook

In recent years, the refined copper market has been characterised by an excess of demand over supply. In particular, rapid commodity demand growth in China has driven very strong copper consumption growth conditions. Coincident with this, weak production growth, cut backs and supply disruptions over the past two years ensured that refined copper supply fell short of this pick-up in demand. Copper demand growth moderated over 2005, however, and new additions to refined supply have not yet re-balanced the market.

The Company believes that the outlook for global copper demand is buoyant and that China will maintain high consumption growth rates for the remainder of this decade.

Xstrata anticipates that exchange stocks are likely to remain well below historical levels and that the copper market will remain sensitive to actual and perceived supply-side disruptions.

Coal industry overview

Analysis of the coking coal markets in this document does not include coals known as pulverised coal injection ("PCI") coals, which are used for injection directly into blast furnaces, and refers only to coal used for coke-making.

Background

Coal is one of the world's most extensive, affordable and geographically diverse natural sources of energy. The black or hard coal industry is divided into two key markets: coking and thermal coal. Thermal coal is also referred to as steaming coal and is used in combustion processes by electricity producers and industrial users to produce steam for electricity and heat. Coking coal is principally used to produce coke, which is then used as a reductant in blast furnaces for the production of steel. Semi-soft coking coal exhibits some coking properties and is blended with hard and semi-hard coking coals to produce coke. Some semi-soft coking coals are also used for injection directly into the blast furnace (although analysis of the coking coal markets in this document does not include coal used for this purpose, known as PCI coal, and refers only to coal used for coke-making). Certain grades of semi-soft coking coal can be economically processed for use as thermal coals.

Coal is currently the most cost effective fossil fuel on a contained heat basis and prices (on a "per unit of energy" basis) have historically remained significantly below the price of oil or natural gas, even on an adjusted basis where carbon dioxide taxes or carbon dioxide trading is evident. Coal retains a number of other advantages, namely less volatile prices, stable supply from a wide range of politically secure geographic locations and easy and safe storage and transportation by rail or ship. The Company expects these factors will ensure long-term demand for thermal coal.

According to the latest available data, in 2005 approximately 5.0 billion tonnes of hard coal were produced globally, of which approximately 4.3 billion tonnes was thermal coal. Of this thermal coal production, approximately 86% was used for domestic consumption, primarily in China, the United States and India.

The key thermal coal exporting nations to the Pacific market (which consist primarily of Asian consumers) are Australia, China and Indonesia whilst South Africa, Russia and Colombia are the major thermal coal suppliers to the Atlantic market (which consists primarily of European countries although the United States is currently the fastest growing major market for coal exports). Although seaborne export thermal coal currently represents approximately 13% of the world's total thermal coal production, the Company believes that it is one of the most rapidly growing segments of the global coal industry, expanding by an estimated compound average rate of approximately 8.2% per annum over the five year period to 31 December 2005. During this period, the Pacific and Atlantic seaborne export thermal coal markets grew at a compound average rate of approximately 8.9% and 6.4% per annum respectively. For the year ended 31 December 2005, the Company believes that the global seaborne export thermal coal market grew by approximately 7% to reach a total market size of around 508 Mt.

Coking coal is more of a specialty product and thus the seaborne export market for coking coal is global rather than regionalised into Atlantic or Pacific markets. Seaborne exports currently represent over 25% of the global production of coking coal. In the past, coking coal has been a slower growth market than thermal coal, growing by an estimated compound average rate of approximately 2.0% per annum over the five year period to 31 December 2005. However, this market has picked up in recent times and for the year ended 31 December 2005, the Company believes that the global seaborne export coking coal market grew by approximately 3.0% to reach a total market size of around 170 Mt.

Supply and demand

Thermal coal

Growth in thermal coal demand is closely related to growth in electricity consumption, with coal currently accounting for approximately 40% of the energy used for global electricity generation. OECD electricity demand and coal-fired electricity generation increased at an average rate of approximately 2.4% per annum between 1990 and 2005 and total OECD electricity demand is projected to continue increasing until 2030, with the highest growth expected in developing nations, particularly in Asia. The Company expects that increasing electricity demand will create greater demand for seaborne thermal coal.

The Company expects demand for thermal coal to continue to increase in Asia, particularly in Korea, India, Malaysia, Taiwan and Thailand. Despite the advent of the EU Emissions Trading Scheme ("ETS"), coal imports into and within Europe have increased, particularly by Germany and the UK. Germany has committed to cut production of coal from its mines by reducing subsidies paid to producers of coal, in line with European Union rules on support to the coal industry, over the period ending 1 June 2010. The reduction of these subsidies should further increase Germany's demand for thermal coal

imports. Atlantic demand growth is primarily driven by the United States, which has more than doubled its annual imports of thermal coal in the period from 2002 to 2005, to approximately 24 Mt.

On the supply side, there has been significant consolidation in the coal industry over the last eight years. In 1998, four coal producers accounted for approximately 44% of coal exported from Australia, South Africa and Colombia. In 2005, this percentage increased to approximately 70%. In addition, these four coal producers currently account for approximately 32% of global thermal coal exports.

Historically, Australian thermal coal exports have primarily satisfied demand in the Asian market. However, over the last decade, Indonesia has increased its exports of thermal coal to the Asian market. Chinese exports of thermal coal to the Asian market peaked in 2003 but have subsequently decreased.

The Company estimates that China's domestic electricity consumption may grow at an average of approximately 5% per annum over the next 20 years. Coal currently accounts for approximately 70% of China's electricity production, which, the Company believes, suggests that China's domestic demand for coal in the future will continue to increase and reduce the amount of coal produced in China that is available for export. Surging domestic demand and strong domestic prices are major contributors to the recent decrease in Chinese coal exports.

Coking coal

Trade in seaborne coking coal (coal for coke-making, not including PCI) in 2005 is estimated at approximately 170 Mt out of a total estimated use of approximately 769 Mt worldwide. Growth in trade has been steady in the last five years with an average annual growth rate of approximately 2.0% compared to the approximate 0.5% average annual growth rate from 1990 to 2000.

Australia is the largest exporter of coking coal, accounting for an estimated 102 Mt of international supply in 2005. The BHP Billiton Mitsubishi Alliance ("BMA") produces an estimated 48% of Australia's coking coal exports.

Canada is another large coking coal exporter, with an estimated 24 Mt of international supply in 2005. Rationalisation in Canada is well progressed. Following the merger between Fording, Luscar and Teck Cominco, there is currently only one significant producer of coking coal in Canada, Elk Valley Coal Partnership, although further small entrants have commenced exports during the past 12 months.

The United States is an important swing exporter on the global market. US seaborne exports of coking coal had declined to approximately 15 Mt in 2002 (mostly to the European market) but increased to an estimated 21 Mt in 2005 as a result of an international supply shortfall and demand in the Asian market that Australia and Canada were unable to meet due to infrastructure and capacity constraints. The Company believes that US exports will likely decline in the future as Australia and Canada increase their respective capacities.

Growth in the export coking coal market is linked to expansion in steel production with, the Company believes, the greatest growth likely to occur in Asia and South America, particularly in China, India and Brazil. Chinese domestic demand is predominantly supplied by domestic coal production, supplemented with seaborne imports and imports from Mongolia. The Company anticipates that if Chinese domestic demand exceeds domestic production and Mongolian imports, seaborne imports to China will increase. The Company believes that India, however, will primarily rely on coal imports to satisfy its growing domestic demand for coal products.

Pricing and costs

There are three principal grades of coking coal sold into the market: hard coking coal, semi-hard coking coal and semi-soft coking coal. Hard coking coal is the coal that forms the highest quality coke. Semi-hard coal has slightly inferior coking properties to hard coking coal. Semi-soft coal has weak coking properties. Hard coking coal attracts the highest prices with semi-hard coal being discounted depending on its coking quality characteristics. The pricing of semi-soft coal, which not only displays some coking properties but is also lower in ash than the normal grades of thermal coal, has in the past been linked to the price of thermal coal on a heat adjusted basis, but in recent years of an undersupplied coking coal market it has obtained a significant premium based on its value as an ingredient in the coke blend.

The future price for coking coal is also a function of supply and demand balance, with demand levels strongly linked to projections for economic growth and steel consumption. The demand for coking coal is dependent upon the utilisation rates of coke in steel-making and blast furnace pig iron production, which is in turn sensitive to industrial production. The

outlook for industrial production is positive, with average growth over the next five years expected to remain strongly positive across Asian iron making regions.

The price of thermal coal is largely driven by the balance of supply and demand for coal, and market outlook, with different qualities of thermal coal attracting different prices according to their specific heat, ash, sulphur and chemical contents. In deregulated markets, the price may also be influenced by traded electricity prices and costs of, or availability of, competing energy sources such as gas or hydroelectric power. Exported thermal coal typically has a higher heat value, lower sulphur content (1% or less) and lower ash content (15% or less) than that sold into the Australian and South African domestic markets. A significant proportion of export coal needs to be washed in order to meet the higher quality requirements. The floor price for semi-soft coking coal in an oversupplied market will be provided by the thermal coal price due to the fact that semi-soft coking coal can also be used effectively as a high quality thermal coal.

Costs associated with coal mining can be broadly categorised as labour costs, other on-site costs, royalty payments, freight costs and port loading costs. Export coal is generally sold FOB at the loading port with producers paying transport costs to, and loading costs at, the port. Accordingly, producers selling into the export market with mines close to port with good transport (principally rail) systems have significant cost advantages.

The Australian coal industry remains competitive in the global export coal market due to its large, high quality reserves, and efficient operations which are generally located close to its export ports. The South African coal industry is one of the lower-cost export producers. It has relatively low labour and capital costs, low transport costs (which compensate for the relatively long distance to port), shallow mining depths and favourable geological conditions.

Market and outlook

There has been fairly consistent and reliable growth in demand for seaborne export coal in recent years, despite the vagaries of economic cycles and the depressed Asian economies of prior years. The overall seaborne coal trade grew at an average rate of approximately 7% per annum between 2000 and 2005 and the Company anticipates an average rate of growth of approximately 3% per annum between 2005 and 2010.

Thermal coal market

The Company expects there to be continuing strong demand in thermal coal in Asia, particularly in Korea, India and Taiwan. Even though Japan retains its position as the largest importer in the region and the Company expects it to experience better economic growth than in recent years, its economy is nevertheless more mature and the Company believes growth in its thermal coal imports will be modest in the medium term and subject to the fate of nuclear development and the need to meet any constraints imposed by implementation of emissions abatement strategies including the Kyoto Protocol. The Company believes the introduction of energy taxes is unlikely to have a material impact, as certain competing fuels are also taxed (although each has a different emissions profile, some with lower emissions than coal). However, coal is expected to maintain its cost advantage, even on an emission cost adjusted basis, particularly when compared with the much higher equivalent energy costs of gas and oil.

Demand growth in Europe continues to rise steadily, with growth affected by the decline in domestic European production. However, the Company believes the outlook for the Atlantic thermal coal market remains robust as a result of the continued growth in demand for imported thermal coal within the United States and the Americas, restricted supply increases out of South Africa, Russia's relatively high FOB cost of export coal, the relative competitiveness of coal fired electricity generation and, on a longer-term basis, the renewed interest in new coal-fired power capacity.

Coking coal market

The Company expects the mature economies of Europe and North America to maintain a reasonable level of growth, with Europe helped by growing demand in Eastern Europe. The Company anticipates strong industrial growth from the emerging economies of Asia and South America, and Japan to emerge from its decade-long stagnation. The Company expects crude steel output from the iron making countries to grow at an average annual rate of approximately 4% to 2010 (driven by Chinese and Indian increases), resulting in blast furnace iron production in excess of 0.9 billion tpa, an increase of around 170 Mtpa on current levels.

Nickel industry overview

Background

Nickel is a metal with the characteristics of corrosion resistance, high strength over a wide range of temperatures, and high ductility. The principal uses for nickel include stainless steel, nickel-based alloys, electroplating, low-alloy steel, foundry products and copper-based alloys. Nickel is also used in batteries and catalysts.

Supply and demand

In 2003, world production of nickel grew by 3.1%, compared with 2.5% in 2002. Supply-side fundamentals were the main driver behind nickel price increases in 2003, accentuated by the very strong demand for metals in China. Disruptions at producers reduced supply in the first half of 2003. This was followed by a three-month strike at Inco's Sudbury operations during the summer of 2003, which removed approximately 30,000 tonnes of nickel from the market. When factoring in the Inco strike, the nickel market deficit increased to 56,000 tonnes. However, the release of the 60,000-tonne collateral stocks by Norilsk more than offset the deficit.

A surge in nickel prices in 2004 was driven by constrained supply of both primary nickel and stainless steel scrap and strong demand from the stainless steel sector, particularly in China. Stainless steel production grew an estimated 8.5% in 2004. Strong market fundamentals were further supported by investment-fund interest and activity. A continued strengthening of the global economy bolstered other nickel end-use sectors as well, including the high-performance nickel alloys used in jet-engine turbines.

By the start of summer of 2004, already low LME nickel inventories fell to critical levels just below 8,000 tonnes. High prices and tight availability caused Chinese traders and consumers to begin de-stocking and also resulted in increased quantities of stainless steel scrap appearing on the market. Some stainless steel producers, particularly in Asia, shifted their production focus onto ferritic grades of stainless steel and/or grades with lower nickel content. This action alleviated the pressure on a tight primary nickel supply and caused the forecast deficit for 2004 to be reduced to 5,000 tonnes. LME inventories began to reflect this increased availability, as a steady trickle of small warehouse deposits brought the exchange stocks back up to 20,898 tonnes by the end of the year. At 31 December 2004, LME nickel inventories had declined by 3,132 tonnes from the beginning of 2004.

Strong demand conditions experienced in the first half of 2005 quickly turned around in the third quarter of 2005 as stainless steel mills initiated a period of heavy de-stocking for the balance of the year. With nickel producers operating at close to capacity in the first half of 2005, surging demand had to be met from LME inventories, which declined from 20,898 tonnes at the start of 2005 to a low of 4,926 tonnes by mid-May 2005. The fall-off in demand from the stainless steel sector in the latter part of 2005, resulted in LME stocks creeping back up to end the year at 36,042 tonnes.

While demand for nickel was strong overall in the first half of 2005, an imbalance developed in stainless steel supply/demand fundamentals by mid-2005 leading to rising stock levels, declining prices and reduced margins for the mills, precipitating numerous stainless steel production cuts. The ramp-up of significant new Chinese stainless steel capacity also reduced the need in China for stainless steel imports from Western producers. The net effect was reduced primary nickel consumption and increased stainless steel scrap availability. Consequently, global stainless steel production estimates for 2005 were at the same level as 2004. In addition, sustained nickel price volatility during 2005 drove stainless steel mills to increase production of non- or lower nickel bearing grades of stainless steel.

Other nickel consuming sectors are estimated to have grown by 9.2% in 2005, supported by strong high nickel alloy and battery demand. Robust demand was seen in 2005 from all end-use sectors across all geographical regions.

As a result of nickel producers pushing their utilisation rates, increased production irregularities and maintenance outages were experienced in 2005. World nickel production increased in 2005 by less than 1% compared with 2004. Overall, a 4,000 tonne supply/demand surplus was forecast for 2005.

Pricing and costs

The nickel price rose from a low of US$3.27/lb at the start of 2003 to US$7.55/lb by the end of 2003, with much of the increase occurring in the second half of 2003. Supply-side fundamentals were the main driver behind this increase, accentuated by the very strong demand for metals in China.

The nickel price continued to rise and peaked at US$8.01/lb in early January of 2004. For the balance of 2004, nickel prices remained volatile, oscillating within a range of US$4.78/lb to US$7.53/lb, breaking the trend of the previous decade when the nickel price managed to stay above the $4.00/lb level only briefly. The average LME cash-settlement price for 2004 was $6.26/lb, 43% above the average price of $4.37/lb for 2003.

Nickel prices averaged US$7.20/lb in the first half of 2005, but with prolonged shutdowns and cutbacks at the stainless steel mills, nickel prices entered a temporary period of decline averaging US$6.17/lb during the second half of 2005. For the whole of 2005, nickel prices averaged US$6.69/lb, a 7% increase over the 2004 average.

Market and outlook

The stainless steel market rebounded in the first quarter of 2006, in line with the accelerating momentum of the industrial production cycle. With a rebound in stainless steel production and continued healthy non-stainless steel demand, the Company estimates total nickel consumption will grow by approximately 7% for the whole of 2006, compared with a slight contraction in the year ended 31 December 2005. Xstrata also anticipates that total global refined nickel supply will increase by approximately 6.2% for the year ending 31 December 2006.

For the remainder of this decade, the Company expects that the nickel market will continue to benefit from constrained supply, strong demand driven by Chinese stainless steel plant expansions and limited major greenfield nickel projects coming on stream.

Zinc and lead industry overview

Background

Zinc

Zinc's major use, accounting for around half of total consumption, is as a coating for steel to guard against corrosion (galvanising). Other major uses include the production of brass (an alloy of zinc and copper) and as a die casting material for manufacturing toys, motor housings and locks. Zinc dust is used in paints, and zinc oxide is used in the manufacture of rubber and ceramics.

Zinc companies can be divided into three categories. Zinc mining companies produce zinc concentrate for sale to smelters and generally receive payment for 85% of the contained zinc at the LME cash price less a treatment charge. Zinc smelting companies buy concentrates and sell refined metal. Integrated companies mine zinc ore, smelt concentrates to produce metal and sell refined metal. Few producers are integrated further downstream, with the exception of those that produce zinc alloys.

The gross returns achievable by zinc smelting and refining companies are linked to the difference between the amount they pay for the zinc metal contained in concentrate (85% of contained zinc), the level of the zinc treatment charge, which is deducted from the price paid for the zinc concentrate, the amount of "free zinc" or the amount of zinc above the payment level of 85% which they are able to recover and any premiums achieved on the sale of refined zinc.

The zinc mining industry is highly fragmented, with the top five producers accounting for only approximately 27% of world mine production. The zinc smelting industry is similarly fragmented with the top five smelting companies accounting for approximately 29% of world production. Integrated producers account for approximately one-third of western world zinc production. There is some scope for further consolidation, in addition to that which has taken place in recent years.

Lead

By far the most important application for lead is the lead-acid battery, which accounts for more than two-thirds of total consumption worldwide. Lead is also used as a roofing material in certain countries, and in ammunition, cable sheathing and oxides. Approximately two-thirds of the demand for lead in batteries is from the automotive sector with industrial batteries accounting for approximately one-third.

A significant difference between lead and most other major base metals is that a significant portion of the metal is recycled. Secondary recovery plays a very important part in the production of refined lead, because batteries have a high lead content, and because recycling is the safest and most environmentally friendly way of disposing of spent batteries. Secondary production accounts for approximately half of total refined lead production, and the proportion continues to rise as the share of batteries in total lead usage increases and recycling rates improve.

Primary lead companies can be divided into mining companies, which almost always produce lead concentrates as a by-product of zinc and/or silver production, and smelting companies, which buy concentrates and convert them into refined lead. A small number of primary producers are integrated from mining through to smelting and refining.

Primary lead smelting and refining companies typically pay for 95% of the lead contained in concentrates. As such, the gross returns achievable for primary lead smelting and refining companies are linked principally to the treatment charge that they can deduct from this metal payment, which is a market based charge and reflects the supply and demand for lead concentrate, which is then adjusted to reflect the level of the lead price.

Supply and demand

Zinc

Total demand for zinc has grown at approximately 2.4% per year in the western world since 1990. Recent growth in demand in China has been much more rapid, however, and the annual growth rate for the world as a whole has been approximately 3.4% per year since 1990.

The refined zinc market was in supply deficit in 2005 by around 550,000 tonnes, as strong growth in China drove a 3.2% increase in global demand for refined zinc to approximately 10.7 million tonnes.

Zinc ore is mined in approximately 40 countries, of which China, Australia, Canada, Peru and the US together account for approximately 65% of output. Production has fallen since 2000 in North America and Europe but risen in the Commonwealth of Independent States (CIS), China, and Peru. North America, Australia and South America are all net exporters of zinc concentrates, while China, Japan, South Korea and Europe are all net importers.

Depressed prices in 2001, 2002 and 2003 discouraged investment in new mine capacity. Overall, in the next five years the Company expects new mines and expansions or reactivations only slightly to exceed closures resulting from reserve exhaustion. Based on existing mine plans, expansion projects and committed projects, the Company believes world mine production is set to grow at an average annual rate of 1.9% between 2006 and 2011. If probable projects (those that are not yet fully financed and committed) are included, however, this estimated growth rate rises to approximately 4.5% per annum, which is higher than the average mine production growth rate of approximately 3.6% over the last zinc price cycle (from 1993 to 2002).

While demand continued to grow in 2005, global zinc metal production remained relatively flat at approximately 10.1 Mt in 2005, as increases in output in China, India and Kazakhstan were largely balanced by lower production in Canada, Peru, Belgium, Norway and Russia, smelting capacity reduction in France and plant closures in Italy, Spain, and Germany.

Global zinc mine production in 2005 increased by 3% to approximately 9.9 million tonnes. Mine output increased mainly in China, India, Morocco, Sweden and Australia, while it fell in Canada and Mexico. The concentrates market remained tight during the year, resulting in a further drop in average negotiated treatment charges, which fell from US$141 per tonne in 2004 to US$126 per tonne in 2005. The Company expects this tightness in the supply of zinc concentrate to continue throughout the remainder of 2006 and possibly into early 2007.

Peru, Australia and the US are the major exporting countries for zinc concentrates. Western Europe is the largest importing region for zinc concentrates in the western world, followed by Japan and South Korea. China has also become a major importer of zinc concentrates and will continue to import as its smelter capacity rises further.

Zinc smelting is geographically more dispersed. China is now the leading producer of zinc metal, accounting for approximately 26% of global supply. The Company expects global refined zinc production to grow by approximately 3.4% between 2006 and 2011, marginally higher than the approximate 3.3% growth during the last price cycle. Africa, the CIS and Australia are surplus regions. Major importing regions are Asia, Europe and North America.

The Company expects supply to remain in deficit throughout the remainder of 2006 and potentially into early 2007 as Xstrata does not expect commissioning of new mines to have a significant effect before 2008. The Company believes refined zinc production should remain constrained by the acute tightness in the concentrate market while significant expansions in Asian galvanising production capacity should underpin strong and steady demand growth. As a result, the Company expects zinc stocks to continue to trend down during 2007, supporting strengthened prices.

Lead

Primary lead production is widely dispersed throughout the world. China is the leading producer accounting for approximately 40% of primary refined production and approximately 30% of global primary and secondary production. Other major producers include North America, Europe and Australia. Secondary lead production is more concentrated in the mature industrialised economies, where larger volumes of scrap batteries arise.

The Company anticipates that mine closures over the next five years will nearly offset the small number of expected expansions at lead mines. The Company believes any growth in lead mine production will come from projects, mainly in Latin America and Australia, that are not yet fully financed and committed. The Company believes increases in primary smelting capacity in the next five years are likely, mainly in China and that there will be limited net growth in secondary smelting capacity over the next five years.

The US, Australia and Peru are the major exporting countries for lead concentrates. China, South Korea and Japan are the main importing countries.

Global consumption of refined lead rose by over 5% to 7.6 Mt in 2005. The Company believes China remains a significant and growing influence in the global lead market, where lead usage has risen strongly in recent years, driven by surging battery production due to the country's rapidly expanding automobile sector.

Global production of refined lead increased by 8% to 7.5 Mt in 2005; around half of this amount came from secondary production, mainly from battery recycling. In China, primary lead production increased by 26% while secondary production increased by 11%.

As a result, the refined lead market was in supply deficit in 2005 with lead stocks at LME warehouses remaining at very low levels during the period. At the end of 2005, LME stocks were at 43,600 tonnes, representing less than one week of global consumption.

Pricing and costs

Zinc

Zinc metal is sold to consumers or into the terminal market provided by the LME. The zinc concentrate market is largely a negotiated market with a large proportion of concentrate sold under annual contracts at negotiated treatment charges. Global zinc smelting costs typically comprise approximately 26% labour, approximately 42% energy and approximately 32% for other costs.

Lead

Refined lead is sold to consumers or into the terminal market provided by the LME. The lead concentrate market is largely a negotiated market with a large proportion of concentrate sold under annual contracts at negotiated treatment charges. Lead smelting costs are split approximately equally between labour, energy costs and other costs.

Markets and outlook

Zinc

The Company believes that global demand for zinc increased by approximately 3.9% in 2003, approximately 7% in 2004 and approximately 3.2% in 2005, largely as a result of strong growth in China. Despite this, the global zinc market was in significant surplus in 2003 shifting to a significant deficit since 2004. The LME cash zinc price therefore averaged only US$779 per tonne in 2002, US$828 in 2003 and US$1,048 in 2004. Nevertheless, in 2005 there was a supply deficit of 556 kt and the LME cash price averaged US$1,382.

Depressed prices from 2000 led to closures of some mines and smelters, and reduced the rate of investment. Consequently stocks of concentrates are very low. World mine production has grown slowly since 2000 at a compound annual growth rate of approximately 1.8%, increasing by only approximately 0.3% in 2004, recovering to approximately 2.8% in 2005.

The supply deficit in 2005 was reflected in a drawdown of 235,000 tonnes of LME stocks and 265,000 tonnes of stocks held elsewhere during 2005. LME stocks fell by approximately 37% to 393,500 tonnes at the end of 2005, the lowest level recorded since mid-2001. Strong market fundamentals drove prices up in 2005, particularly in the second half of the year, rising by 51% to finish the year at US$1,915 per tonne. The average LME zinc price increased by 32% in 2005 to

US$1,382 per tonne, up from US$1,048 per tonne in the previous year. Zinc prices have continued to be strong in 2006, averaging US$2,766 per tonne in the first half of the year.

The Company believes world demand for zinc in the next five years is likely to be driven by growth in the galvanising market and by the economies of Asia (notably China). The Company believes that in the western world immediate economic prospects suggest there will be only a slow recovery in demand, but that over the period from 2006 to 2010 growth of approximately 2.6% per year in demand is possible.

Lead

The Company believes that western world lead consumption grew at an annual average rate of approximately 1% over the thirty years to 2004, but in the 1990s this growth rate increased to approximately 2.1%. Lead demand reduced by approximately 1% in the western world but increased by approximately 5.6% worldwide in 2005.

During 2005 the cash price for lead traded between US$824 per tonne and a high of US$1,156 per tonne to finish the year at US$1,100 per tonne. The average price in 2005 was US$976 per tonne, 10% higher than US$887 per tonne in 2004. Backwardation was again a key feature of trading throughout the year, reflecting the tight physical market.

The Company expects the lead market to be in balance during 2006 and anticipates that global lead consumption will continue to grow, but at a lower rate than in 2005. The Company expects battery demand to continue to increase while it expects non-battery uses for lead to follow the current downward trend. The Company anticipates that China will continue to be a dominant force in consumption and production. Exports of refined lead from China remained at similar levels to the year before but in the future Xstrata expects them to show a declining trend as domestic demand continues to grow. The Company expects lead stocks to continue to remain at very low levels and consequently that the market will remain fairly tight throughout 2006, supporting lead prices.

The Company believes the main drivers of demand over the next five years will be the rate of production of new vehicles, which determines new battery demand, and the size of the total automotive population, which determines the level of replacement demand.

The large proportion of refined lead supplied by secondary recycling tends to keep supply and demand close to balance, since secondary production is closely allied to the demand for replacement batteries. The world market was in surplus in 2000 to 2003 shifting to deficit in 2004 and 2005 resulting in a drawdown in LME stocks to very low levels and a stronger price, but the Company expects it to be closely balanced or tending to a slight surplus in the next five years. Xstrata anticipates treatment charges for lead concentrates will remain at competitive levels.

Aluminium industry overview

Background

Whether measured in terms of market value or quantity, industrial use of aluminium exceeds that of any other metals, except iron. It is ductile, malleable and an efficient conductor of heat and electricity. Although very reactive chemically, aluminium resists corrosion by forming a protective oxide coating and has a high strength-to-weight ratio. Flat rolled products (sheet, plate and foil) constitute around half of all aluminium usage.

Supply and demand

In 2003, Chinese aluminium production rose about 25% to exceed North American production for the first time. Driven by a 15% export rebate, net Chinese exports of primary and alloyed aluminium rose by about 80% and there was concern that this could become a destabilising factor in world markets.

Aluminium's supply and demand fundamentals, however, improved significantly in 2004 and market surpluses of the previous few years turned into a global deficit of approximately 450,000 tonnes. Most of the improvement was led by increased demand in China and the US. Other major industrial economies demonstrated somewhat lesser – but still positive – rates of demand growth. Production increases had been unable to keep pace with demand growth as both power and alumina costs rose significantly during 2004. Smelter strikes also impacted production, especially in Canada.

LME inventories began 2004 with 1.4 million tonnes in warehouse but by the end of 2004 this stockpile had decreased more than 50% to 695,000 tonnes. This decline in stocks and the continued depreciation of the US dollar added further support to aluminium prices throughout the year.

Aluminium's supply and demand fundamentals were essentially balanced in 2005. LME warehouse inventories were 695,000 tonnes at the beginning of 2005. By the end of 2005 this stockpile had decreased to 645,000 tonnes. This decline in LME stocks was offset by combined increases of 113,000 tonnes in NYMEX warehouse stocks and IAI inventories.

Pricing and costs

LME cash prices for 2003 ranged from a low of US$0.60/lb in April 2003 to a high of US$0.72/lb on 31 December 2003. Continued weakening of the US dollar coupled with speculative fund buying propelled the price to its highest level in 34 months in December 2003.

The LME aluminium price moved steadily higher throughout 2004, from US$0.73/lb in January to a near ten-year high of US$0.89/lb by December 2004. The rise in prices was fairly constant throughout the year. The LME cash-settlement aluminium price averaged US$0.78/lb in 2004, a 20% increase over the average of US$0.65/lb in 2003.

The LME cash-settlement aluminium price averaged US$0.85/lb in 2005, a 9% increase over the average of US$0.78/lb in 2004. However, the price was somewhat volatile throughout 2005. The LME aluminium cash price opened 2005 at US$0.83/lb. The low point of US$0.76/lb was reached in June 2005. By the end of 2005 the price was at a sixteen-year high of US$1.03/lb.

There has been a dramatic shift in the cost base associated with the production of primary aluminium. While virtually all raw material and energy costs have risen significantly, the cost component increases impacting aluminium smelters the most are electrical power and alumina. Together, they account for over two-thirds of total production costs. Global spot-alumina prices increased almost 50% during 2005, from US$400/tonne to almost US$600/tonne. Power is much more of a localised issue. Smelters faced with renegotiating power contracts, most notably in the US and Europe, have faced substantial cost increases or even lack of available supply. In some cases, the result is permanent closure of the smelters in question.

Market and outlook

The Company believes that the global aluminium market will move from a deficit situation in 2006 to a minor surplus in 2007. The Company also believes that modest consumption growth in the Western economies will contrast with continued double-digit growth in China.

The Chinese government has taken steps to cool domestic investment in the energy-intensive aluminium sector. The export rebate was reduced from 15% to 8% in January 2004 and was replaced by a 5% export tax in January 2005. As a consequence, the growth in net Chinese exports has slowed dramatically and the Company expects annual increases in primary aluminium production to fall to around 8% (around one third of the 2002 to 2005 level).

Operating rates at North American foil and light gauge sheet mills are estimated to have been in the region of 90%, a historically high number, since 2005 and the Company expects this to continue.

The Company expects the 2006 North American market for HVAC Fin Stock, the most important flat-rolled aluminium product of the Falconbridge Group's aluminium producer Norandal, will have grown by 5% to 10%, mainly due to increased US government mandated improvements in efficiency ratings of residential air-conditioners.

Chrome industry overview

Background

The most important property of metallic chromium is its ability to form a regenerative oxide film which protects a metal surface against oxidation. Alloys that contain chrome are therefore corrosion and wear resistant.

Chrome and nickel are the two key alloying elements used in bulk quantities for the production of stainless steel. Stainless steel contains a minimum of 10.5% chrome and an average of 18% in the principal grade, 304. Chrome may be added to the stainless steel melt in the form of chrome ore, ferrochrome or as stainless steel scrap. Ferrochrome is an alloy of

chrome and iron generally containing between 50% to 65% chrome. Approximately 80% of the world's ferrochrome production is used in the production of stainless steel. Stainless steel scrap intake by the industry varies depending on the production process used and the availability of scrap. The latter is in turn influenced in part by the price of nickel.

Supply and demand

Demand for high-carbon ferrochrome has grown in the western world at an average rate of approximately 4.3% per annum since 2001. Total global demand increased at an average annual rate of approximately 7.3% between the years 2001 and 2005.

Ferrochrome production is determined largely by the production of stainless steel. South Africa holds approximately 65% of total world chromite reserves and is the leading integrated ferrochrome producing country, accounting for approximately 45% of global production of ferrochrome in 2005. Historically, South Africa, overall, has been among the lowest-cost producers of ferrochrome, due to the ready availability of chrome ore combined with low power costs and, until recently, a favourable exchange rate. Kazakhstan is the other major ferrochrome producing country accounting for approximately 14% of global production of ferrochrome in 2005.

Approximately 60% of the total input of chrome units in the stainless steel industry is provided by ferrochrome with the remainder from stainless steel scrap and chrome ore. Stainless steel scrap intake variations depend in large part on the state of nickel prices. High nickel prices may make it more cost effective to source the nickel units (and chrome units) from stainless steel scrap.

Globally, stainless steel melt production in 2005 continued at a similar level to 2004. In Western Europe, stainless melt production declined by an estimated 5.5% to approximately 8.3 Mt in 2005. Production of stainless melt also fell in the United States, down by an estimated 4.3%, in Taiwan, down by an estimated 5.4%, and in Japan, where production declined by an estimated 5.0% year-on-year. China was the exception, experiencing significant growth of an estimated 40.2% to around 3.3 Mt.

Demand for ferrochrome continued to grow year-on-year in the first half of 2005, but declined in the second half due to the downturn in the stainless steel sector. For the whole of 2005, consumption of ferrochrome rose modestly compared with 2004, with global demand totalling approximately 5.98 Mt, up from 5.96 Mt in 2004, supported by increased production of ferritic grade stainless steel.

Pricing and costs

The ferrochrome market is largely a negotiated market, with prices agreed on a quarterly basis and generally under long-term volume off-take contracts. The strengthening of the South African Rand in late 2003 coupled with the global reductant shortage led to a significant increase in production costs for the Former Xstrata Group, which was to some extent off-set by operational initiatives and enhanced metallurgical control of the operating units. The Rand continued to strengthen during 2004 while demonstrating significant volatility. However, in May 2005 the Rand depreciated against the US Dollar and from mid-2005 onwards traded principally in the ZAR6.30 to ZAR6.80 region.

As the correction in stainless melt production translated into lower ferrochrome demand in the second half of 2005, ferrochrome prices came under pressure, with the contract price reducing by US$0.05/lb in each quarter to end the year at US$0.68/lb. The average quoted price in 2005 was US$0.73/lb, 7.3% higher than the published 2004 average of US$0.68/lb.

Markets and outlook

Ferrochrome consumption tends to track trends in stainless steel production, although growth in ferrochrome demand may vary from growth in the stainless steel market depending on nickel prices and the availability of stainless steel scrap. Recent developments in the ferrochrome market have been characterised by the decline in stainless steel melt production in 2005.

Relatively weak growth in stainless steel melt production continued into the first quarter of 2006 resulting in further downward pressure on prices; in the first quarter the contract price reduced by a further US$0.05/lb to US$0.63/lb. However, the Company anticipates a recovery in the second half of 2006 as growth in both stainless steel melt production and ferrochrome demand gain momentum. China is again expected to drive this growth, although there may be strong recoveries in other regions too.

The Company expects global stainless steel melt growth to resume average growth levels of between 5% and 6% per annum between 2006 and 2009, with these growth levels resulting in additional demand for high-carbon ferrochrome of approximately 1.15 Mtpa during this period and in total global demand of approximately 7.6 Mtpa by 2009. The Company anticipates significant growth in demand, in particular in China, where it expects stainless steel production to increase from approximately 1.8 Mt in 2003 to in excess of 8 Mt in 2009.

Vanadium industry overview

Background

The main application of vanadium is as an additive in the production of carbon steels and high-strength alloys. Under certain conditions, the presence of vanadium increases the hardness and toughness of steel. Approximately 90% of vanadium production is consumed as a carbon steel addition, and vanadium consumption is therefore linked to increases in carbon steel melt. Carbon steel production has performed strongly in recent years with average growth in steel melt of approximately 5.8% between the years 2000 and 2004. The Company expects a trend of strong carbon steel growth to continue in the near future as China rapidly increases its production and consumption of steel.

Historically, most vanadium producers have produced vanadium pentoxide for sale to third party converters who convert it to ferrovanadium to sell to the steel industry. Increasingly, however, vanadium pentoxide producers (including the Enlarged Xstrata Group) have vertically integrated to become ferrovanadium producers that sell directly to the steel industry. This is due to the cost savings that can be achieved in transporting converted ferrovanadium rather than vanadium pentoxide. Around 20% of the world's vanadium is produced as a primary product directly from vanadium bearing ores with the balance being produced as a by- or co-product of the iron, steel and oil industries and residue reclamation.

Supply and demand

Approximately one third of the world's vanadium ore reserves are located in South Africa. The high vanadium content of, and relatively easy access to, the ore, together with competitive energy costs, gives South African producers a competitive advantage. Savings in the cost of transporting vanadium pentoxide and adding value at source is likely to continue to lead to vanadium pentoxide producers moving to become ferrovanadium producers.

Carbon steel continued to show solid global growth of approximately 6% during 2005. The primary driver was China, where carbon steel production increased by approximately 25%. Vanadium supply increased in response, particularly from magnetite steel producers in China, while high prices led to some substitution of vanadium by ferroniobium in certain applications.

The Company expects vanadium consumption to continue to be driven by steel production and consumption as well as by its intensity of use in steel. In addition, the Company expects the current rapid growth in China, combined with the continued relatively high use of vanadium in the United States and Europe, to boost consumption of vanadium in these areas. A parallel increase in the intensity of vanadium use in Asian steel production also represents a growth opportunity for vanadium demand.

Pricing and costs

The vanadium market is largely a negotiated market with contracts based on volume and agreed prices which are largely linked to published prices and entered into for varying periods. Mining costs and reagents are major cost components of primary vanadium production costs.

In 2004, market prices for vanadium pentoxide and ferrovanadium were significantly higher than in previous years. In 2005 the vanadium market was significantly undersupplied, with prices for ferrovanadium peaking at US$128/kg in April 2005 compared with a peak of US$28.2/kg in April 2004 and US$13.4/kg in April 2003. Ferrovanadium prices retreated from the peaks seen in the first half of 2005 to around US$38/kg by the end of 2005, bringing the average price for 2005 to around US$70/kg.

Markets and outlook

There has been a relative recovery in the vanadium market since oversupply of vanadium pentoxide in 2000 and 2001 led to a depression in vanadium pentoxide prices. The recent strong growth in carbon steel production in China combined with the closure of certain production facilities in South Africa and Australia (including the Enlarged Xstrata Group's Vantech and Windimurra operations) has improved market sentiment towards vanadium.

Higher prices have led, in some instances, to substitution of vanadium with ferroniobium. Vanadium prices have retreated since 2005 but the Company expects them to remain above the long-term trend line in the short-term.

Relationship with Glencore

Overview

Glencore International is a private, 100% employee-owned, diversified natural resources company with worldwide activities in the smelting, refining, mining, processing, purchasing, selling and marketing of metals and minerals, energy products and agricultural products. Glencore operates on a global scale, marketing physical commodities which it produces at its own industrial assets or purchases from third parties to industrial consumers, such as those in the automotive, steel, power generation, oil and food processing industries. Glencore also provides financing, logistics and other services to producers and consumers of commodities. These activities are supported by investments in industrial assets relating to its core commodities. Glencore's headquarters are located in Baar, Switzerland and it has a network of 60 field offices in over 50 countries throughout the world.

In 1990, Glencore International became a substantial shareholder in Xstrata AG (which merged with the Company in 2002 as Xstrata plc became the ultimate holding company of the Former Xstrata Group), following which Xstrata AG built a portfolio of businesses operating in the natural resources sector.

As a result of their participation in a capital management programme entered into by Glencore International, CSFB Equities and CSSEL in connection with the Former Xstrata Group's acquisition of MIM and the MIM Rights Issue (the "Arrangement"), Glencore International, CSFB Equities and CSSEL are, so far as Xstrata is aware, jointly interested in 254,750,351 Ordinary Shares, representing approximately 36.01% of the current issued ordinary share capital of the Company. Of these 254,750,351 Ordinary Shares, 252,601,000 Ordinary Shares are subject to the Arrangement and of these 252,601,000 Ordinary Shares: (a) Glencore International is entitled to exercise the voting rights attaching to 101,040,400 of them, representing approximately 14.28% of the issued outstanding Ordinary Shares of the Company; and (b) CSSEL is entitled to exercise the voting rights attaching to 151,560,600 of them, representing approximately 21.43% of the issued outstanding Ordinary Shares of the Company. Glencore International and CSSEL are the largest shareholders of the Company. Under its terms, the Arrangement will terminate on 2 December 2006.

Glencore International has irrevocably undertaken to take up its full entitlements under the Rights Issue. In addition, CSSEL has agreed to transfer to Glencore International its entitlements in respect of 151,560,600 Ordinary Shares under the Rights Issue and Glencore International has also irrevocably undertaken to take up in full such entitlements. CSSEL (in respect of 151,560,600 Ordinary Shares) and Glencore International have agreed to lock-ups which, subject to certain exceptions, will expire six months after the latest time for acceptance and payment in full of entitlements to subscribe for the New Shares. A total of 84,200,333 New Shares are subject to Glencore International's irrevocable undertakings (approximately 35.71% of the maximum number of New Shares to be issued under the Rights Issue). The actual number of New Shares taken up by Glencore International pursuant to the Irrevocable Undertaking Agreement may be less than 84,200,333 if Glencore International disposes of any of its existing holding of Ordinary Shares prior to the ex-rights date as a result of the exercise of any exchange rights pursuant to the Glencore Exchangeable Bonds. However, Deutsche Bank and JPMorgan Cazenove have agreed, as agent for the Company, to endeavour to procure subscribers for such number of New Shares as Glencore International is unable to take up prior to the latest time and date for acceptance and payment in full under the Rights Issue as a consequence of having to dispose of Ordinary Shares in these circumstances (such New Shares being referred to herein as "Exchanged New Shares"), except if in the opinion of the Banks subscribers are unlikely to be procured for such Exchanged New Shares. Pursuant to the Glencore Underwriting Letter, Glencore International has agreed to subscribe for New Shares equivalent in number to the Exchanged New Shares for which Deutsche Bank and JPMorgan Cazenove have not procured subscribers. The Takeover Panel has granted a dispensation from any obligation on either Glencore International or CSSEL to make a mandatory offer for Xstrata pursuant to Rule 9 of the City Code, as a result of Glencore International and CSSEL's interest being diluted by exchange rights under the Glencore Exchangeable Bonds being exercised or conversion rights under the 2010 Convertible Bonds, 2017 Convertible Debenture or 2017 Convertible Bonds into Ordinary Shares being exercised, between Monday, 2 October 2006 (being the latest practicable date prior to the publication of this document) and completion of the Rights Issue and subsequently being increased again as a result of Glencore International subscribing for New Shares pursuant to the irrevocable undertakings it has given to the Company or pursuant to the Glencore Underwriting Letter. Glencore International's right to acquire shares pursuant to Note 11 on Rule 9.1 of the City Code is not affected by this dispensation nor by these arrangements generally. Glencore International will be paid an underwriting commission by the Company of US$35.1 million in connection with its undertakings. Further

details of Glencore International's Irrevocable Undertaking Agreement and the lock-up arrangements are set out in paragraph 22.2 of Part VIII – "Additional Information – Material contracts".

Commercial relationship

General

The Enlarged Xstrata Group believes that it benefits from the various arm's length advisory and marketing arrangements in place with Glencore. The Enlarged Xstrata Group further believes that Glencore benefits from these arrangements with the Enlarged Xstrata Group.

A number of the Enlarged Xstrata Group's operating subsidiaries have entered into long-term agency agreements with Glencore under which Glencore provides marketing services in exchange for agency fees. These fees are negotiated on arm's length terms and range from 3.5% to 5% of the FOB sales revenue. In a number of instances, Glencore acts as collecting agent and also assumes 60% of the non-payment risk of the Chrome Business's ferrochrome trade receivables and 100% of the non-payment risk of the Chrome Business's vanadium trade receivables.

The Former Xstrata Group also acquired a one-third interest in Cerrejón from Glencore in May 2006.

Copper Business

The Former Xstrata Group has entered into sales agreements with Glencore International in respect of the total available export allocation of copper cathode and surplus North Queensland copper concentrate not processed through its Mount Isa copper smelter for an initial 3 year period from 1 June 2004 and "evergreen" thereafter unless the agreement is terminated by either party with a minimum 12 month notice period. The sales terms for the copper cathode are the LME price plus a premium that is based on Codelco North Asian CIF Liner Terms less freight discounts by destination. The sales terms for the copper concentrate are based on market prices less agreed metal content deductions, treatment and refining charges. The treatment and refining charges for the benchmark portion (25%) are fixed annually in line with annual benchmark terms. The treatment and refining charges for the spot portion (75%) are negotiated quarterly based on the prevailing spot market terms.

Minera Alumbrera Limited has entered into a contract with Glencore in respect of 20,000 to 40,000 dmt copper concentrate per annum expiring on 31 December 2004, thereafter "evergreen" with a 12-month termination period. The sales terms for the copper concentrate are negotiated annually. Minera Alumbrera Limited also has a fixed term contract for the sale of copper concentrate to Glencore for 40,000 dmt per annum in 2004, 2006 and 2007 as well as 60,000 dmt in 2005, expiring 31 December 2007. The treatment and refining charges are fixed for the term of the contract. Minera Alumbrera Limited on occasions sells concentrate to Glencore at spot terms. Spot sales are at prevailing spot market prices.

All terms for the North Queensland operations and Minera Alumbrera Limited are set at generally accepted international terms.

Approximately 60,000 dmt of Tintaya copper concentrate and 4,000 tonnes of copper cathode has been sold on a spot basis to Glencore during the second half of 2006, at prevailing market prices. No long-term contracts have been entered into between Tintaya and Glencore.

The Falconbridge Copper Business has entered into a long-term deal for the supply of 50,000 dmt copper concentrate per annum from Glencore to the Altonorte smelter. This contract is "evergreen" in nature, with terms renewed annually. Altonorte has also entered into an annual contract with Glencore for the sale of 9,000 tonnes of copper blister.

The Falconbridge Copper Business's smelters in Canada purchased approximately 80,000 dmt of copper concentrate from Glencore in 2006, under various spot contracts. Falconbridge had also entered into a contract for the sale of 4,000 tonnes of copper cathode to Glencore in 2006, with terms reviewed quarterly. It is expected that this contract will be renewed in 2007.

The following table sets out in more detail the contracts between Glencore and the Falconbridge Copper Business during 2004, 2005 and 2006:

Copper Business Entity	Commodity	Quality	Quantity (dmt)	Spot/ Annual	Start date	Headline terms (TC/RC)
Kidd Smelter	Copper concentrate	Butte	15,000	Spot	First half 2005	US$100/10¢
	Copper concentrate	Butte	5,000	Spot	End 2005/Beginning 2006	US$150/15¢
	Copper concentrate	Gibraltar	8,200	Spot	End 2005/Beginning 2006	US$150/15¢
	Copper concentrate	Gibraltar	13,900	Spot	First quarter 2006	US$142/14.2¢
	Cathodes	Kidd	690	Spot	August 2005	Premium 5.50
Horne Smelter	Copper concentrate	Butte	6,000	Spot	First quarter 2006	US$150/15¢
	Copper concentrate	Gibraltar	9,000	Spot	First quarter 2006	US$150/15¢
	Copper concentrate	Gibraltar	3,800	Spot	First quarter 2006	US$150/15¢
	Copper concentrate	Gibraltar	1,100	Spot	First quarter 2006	US$142/14.2¢
	Copper concentrate	Peak	9,000	Spot	First quarter 2006	US$153/15.3¢
	Copper reverts	Salvador	10,000	Spot	First quarter 2006	US$165/16.5¢
CCR	Cathodes	CCR	1,895	Spot	May/June 2005	Premium 5.00
	Cathodes	CCR	4,135	Annual	January to December 2004	Noranda quarterly premium

Coal Business

Xstrata Coal Marketing AG and Xstrata (Schweiz) AG entered into a Market Advisory Agreement with Glencore International on 2 March 2002. Pursuant to this agreement, Glencore International, for a fee of US$0.50 per attributable tonne of coal exported by the Former Xstrata Group from Australia or South Africa, acts as the Enlarged Xstrata Group's market adviser with respect to its export production of coal (other than for Cumnock No.1 Colliery Pty Limited ("Cumnock") while it is not a wholly-owned subsidiary). Glencore International advises the Enlarged Xstrata Group regarding the placement of its Australian and South African export coal in the world market, the future planning for that placement and market opportunities available for the future sale of export coal. Glencore International also provides the Enlarged Xstrata Group's marketing department with real time market intelligence and access to Glencore International's network of global offices. In providing such services Glencore International has agreed not to act for the greater benefit of itself to the disadvantage of the Enlarged Xstrata Group. See "– Relationship with controlling shareholder" below.

The Market Advisory Agreement remains in full force and effect for a period of 20 years from the date of the agreement, with a review of the fee at the end of each fifth year of its term. The Market Advisory Agreement may be terminated by Xstrata Coal Marketing AG after giving 45 days' notice if any person (together with its affiliates) holds, directly or indirectly, 50% or more of the issued share capital of Glencore International. The Market Advisory Agreement may also be terminated by either party with immediate effect if:

(a) the other party commits a material breach of the agreement and fails to remedy the breach, if capable of remedy, within 30 days of receiving written notice from the other party identifying such breach; or

(b) the other party enters into liquidation or is declared insolvent.

Xstrata (Schweiz) AG has agreed to guarantee the performance by Xstrata Coal Marketing AG of its obligations under the Market Advisory Agreement.

On 5 January 1995, Cumnock entered into a sales and marketing agreement with Glencore International. Pursuant to this agreement Glencore International provides sales and marketing services to Cumnock and Cumnock appoints Glencore International as its agent to market coal. Glencore International is entitled to a commission of US$0.75 per tonne for all coal sold by Cumnock.

The Enlarged Xstrata Group enters into forward commodity price contracts with Glencore International as counter-party. During the six-month period ended 30 June 2006, 505,000 tonnes were delivered at an average FOB price of US$55.75 per tonne, compared with 945,000 tonnes at an average FOB price of US$57.80 per tonne during the year ended 31 December 2005 and 930,000 tonnes at an average FOB price of US$43.10 per tonne during the year ended

31 December 2004. At 30 June 2006, 560,000 tonnes were contracted at an average FOB price of US$56.80 per tonne for delivery in 2006, compared with 765,000 tonnes contracted at an average FOB price of US$52.63 per tonne for delivery in 2006 at 31 December 2005 and 720,000 tonnes contracted at an average FOB price of US$59.75 per tonne for delivery in 2005 at 31 December 2004.

During the six months ended 30 June 2006, 236,952 tonnes were borrowed from Glencore and 319,418 tonnes were transferred back to Glencore with 58,104 tonnes owed to Glencore at 30 June 2006 (compared with 140,570 tonnes at 31 December 2005).

In 2006 the Former Xstrata Group entered into a three-year fuel supply agreement with Glencore to supply diesel fuels to coal mines in New South Wales and Queensland. The supply agreement commenced in April 2006 and 16.1 million litres (US$15.0 million) were delivered to June 2006. The supply agreement is on arm's length terms and prices change monthly according to the world market price per barrel (USD/BBL).

The Former Xstrata Group acquired a one-third interest in Cerrejón from Glencore in May 2006. In 2005, Cerrejón entered into a four-year fuel supply agreement with Glencore to supply diesel fuels. Since Xstrata acquired its interest in Cerrejón, Xstrata's share of the fuel purchases totalled 19.3 million litres (US$10.2 million) to June 2006. The supply agreement is on arm's length terms and prices change for each shipment according to the world market price per barrel.

All other coal purchases and sales with Glencore International are on commercial terms.

Nickel Business

The Nickel Business currently has a 60 tonnes per month contract with Glencore under which Glencore markets nickel product out of the Nikkelverk refinery in Norway. There is also an additional contract with Glencore for the treatment of a "white alloy" product that Glencore sources from the Democratic Republic of Congo.

Zinc Business

Asturiana has a service agreement with Glencore (the "Asturiana Service Agreement"), under the terms of which Glencore provides advice and assistance with respect to the acquisition of mining and/or metallurgical interests and advice in connection with Asturiana's hedging policy and improvement of its position in the zinc market. The fees paid by Asturiana under the Asturiana Service Agreement are approximately US$2.0 million per annum.

Asturiana has an "evergreen" agreement with Glencore to purchase 460,000 dmt per annum of zinc concentrate. Treatment charges are negotiated annually.

Asturiana (through its San Juan de Nieva and Nordenham operations) agreed to supply Glencore with 250,000 tonnes of SHG zinc slabs or CGG ingots during 2005 based on market FOB/CPT prices plus the respective premium.

McArthur River has an agreement with Glencore to supply 204,800 wmt per annum in 2005 and 2006 of zinc concentrate. There is an additional agreement to supply Glencore with any unsold zinc concentrate, to a maximum of 94,200 wmt per annum, in 2005 and 2006. Treatment charges for 51,200 wmt per annum of zinc concentrate are fixed with the balance negotiated annually until 31 December 2006.

Mount Isa has two agreements with Glencore for the supply of zinc concentrate. The first agreement is to supply 90,000 wmt. The second agreement is to supply 80,000 wmt to 100,000 wmt for the purpose of swapping Mount Isa concentrate in exchange for the same volume to be delivered to Xstrata's European smelters at equivalent terms. Treatment charges are negotiated annually. Xstrata and Glencore have agreed to extend these agreements to the end of 2008 after which they will become "evergreen" in nature.

The Falconbridge Zinc Business has a current contract to sell to Glencore in 2006 12,000 tonnes of zinc metal (shipped at 1,000 tonnes per month) from Kidd Creek and Canadian Electrolytic Zinc ("CEZ") operations in Canada. In April 2006, the Falconbridge Zinc Business purchased 25,000 tonnes of zinc concentrate at CEZ from Glencore. In addition, Glencore purchased under contracts shipped in April and June of 2006 a total of 43,000 tonnes of zinc concentrate from Brunswick Zinc. Two 2006 annual contracts are also in place with Glencore to purchase 6,000 tonnes and 5,000 tonnes of zinc metal.

Aluminum Business

The Aluminum Business currently has two purchase agreements for the supply of primary aluminium for remelt at its Huntingdon and Salisbury rolling mills and expects to purchase approximately 130 million pounds of primary aluminium for the year ending 31 December 2006 at the market price prevailing during the month of shipment. In the year ended 31 December 2005, the Aluminum Business purchased from Glencore approximately 112 million pounds of aluminium with a total spend of approximately US$110 million and approximately 7,500 tonnes of alumina with a total spend of approximately US$3 million and it sold to Glencore approximately 15 million pounds of aluminium with a total sales value of approximately US$14 million.

Alloys Business

Chrome operations

Xstrata South Africa entered into a ferrochrome marketing agreement with Glencore International on 21 April 1995, appointing Glencore International as its exclusive world-wide marketing agent for the sale of Xstrata South Africa's entire production of ferrochrome other than ferrochrome sold into the US, Canada and certain Asian countries. The agreement continues for as long as Xstrata South Africa produces ferrochrome. Glencore International is obliged to use its best endeavours to arrange sales at prevailing market rates as agreed from time to time by Xstrata South Africa and Glencore International. Glencore International is entitled to receive an agency fee of 3.5% on FOB sales revenues and an additional fee of 0.75% on FOB sales revenues for assuming the risk of non-payment by customers on this material. Glencore International assumes 60% of the risk of non-payment by customers in relation to ferrochrome sales.

This ferrochrome marketing agreement was updated in 2005 with effect from 1 July 2004, to provide that, in addition, Glencore International is appointed and is responsible for the marketing of all ferrochrome produced by Merafe as a result of Merafe's participation in the Pooling and Sharing Venture (PSV) between Merafe and Xstrata South Africa, on terms and conditions that are no less favourable than those terms and conditions in the ferrochrome marketing agreement between Xstrata South Africa and Glencore International.

If at any time Xstrata South Africa notifies Glencore International that it is able to find purchasers for its production at prices higher than those generally obtainable by Glencore International, Xstrata South Africa may, unless Glencore International is able to obtain similar prices, sell its products in the market. Glencore International is nevertheless entitled to an agency fee of 3.5% of FOB sales revenue in respect of such sales. Glencore International is also entitled to receive a US$50,000 monthly fee in connection with market analysis and administration tasks it performs.

Ferrochrome sold into the US and Canada is distributed by Glencore Limited and Glencore Canada Inc., respectively, under two distribution agreements. These agreements continue indefinitely, with both parties having the right to terminate the agreement at 12 months' notice. The percentage of distribution fees payable by the Enlarged Xstrata Group in respect of ferrochrome sold under the distribution agreement is substantially the same as the commission paid in respect of ferrochrome sold under the marketing agreement.

Mitsui & Co. Limited ("Mitsui & Co") is the appointed marketing agent for all ferrochrome sales into China, Japan and South Korea up to a maximum of 30,000 tonnes. A change in marketing agent for sales into these countries must be done with the consent of Glencore International. Mitsui & Co. is entitled to receive 2.5% sales commission on sales revenue FOB value. The continuation of the distribution agreement with Mitsui & Co. is subject to the operating agreement between Xstrata South Africa and Mitsui Minerals Development South Africa ("MMDSA") in relation to the Xstrata Lydenburg plant. MMDSA owns a 12.5% undivided share in the fixed assets of Xstrata Lydenburg plant of which Xstrata South Africa is appointed as independent contractor. This ownership entitles MMDSA to purchase the same percentage of the rated capacity (capped at 240,000 tonnes) ferrochrome produced at an amount equal to FOB cost per tonne plus 3.5% of the FOB export price for the products taken. Upon termination of the operating agreement, the distribution agreement will also terminate and Xstrata South Africa will be obliged to purchase the 12.5% undivided share from MMDSA at the prevailing market price.

Vanadium operations

The Enlarged Xstrata Group's wholly-owned marketing agent, Xstrata Marketing Corporation A.V.V., entered into a marketing agreement with Glencore International expiring on 31 December 2017, in respect of the Enlarged Xstrata Group's entire production of vanadium other than vanadium sold into the US or Canada. In January 2005, the previous 20

year marketing agreement was superseded and replaced by a substantially similar marketing agreement consolidating the marketing arrangements between Glencore and the Former Xstrata Group's contracting entities.

Under the agreement, Glencore International is obliged to use its best endeavours to arrange sales for the Enlarged Xstrata Group of vanadium pentoxide and ferrovanadium to customers. Xstrata South Africa is obliged to pay to Glencore International an agency fee of 3.5% on FOB sales revenues and an additional fee of 1.5% on FOB sales revenues for assuming the risk of non-payment by customers in relation to vanadium sales.

If at any time Xstrata South Africa notifies Glencore International that it is able to find purchasers for its production at prices higher than those generally obtainable by Glencore International, Xstrata South Africa may, unless Glencore International is able to obtain similar prices, sell its products in the market. Glencore International is nevertheless entitled to the 3.5% agency fees described above in respect of such sales.

Vanadium pentoxide and ferrovanadium sold into the United States or Canada is distributed by Glencore Limited and Glencore Canada Inc., respectively, under two distribution agreements. The distribution agreements have the same term as the marketing agreement. The percentage of distribution fees payable by the Enlarged Xstrata Group in respect of vanadium pentoxide and ferrovanadium is substantially the same as the commission paid in respect of vanadium pentoxide and ferrovanadium sold under the marketing agreement.

Relationship with controlling shareholder

On 20 March 2002, Glencore International and Xstrata entered into an agreement (the "Relationship Agreement") which regulates the ongoing relationship between them. The principal purpose of the Relationship Agreement is to ensure that Xstrata is capable of carrying on the Enlarged Xstrata Group's business independently of Glencore and that transactions and relationships between Glencore and the Enlarged Xstrata Group are at arm's length and on normal commercial terms. The Relationship Agreement will continue for so long as the Ordinary Shares are listed on the Official List and traded on the London Stock Exchange and Glencore International is Xstrata's controlling shareholder (as such term is defined in the Relationship Agreement). Currently, a controlling shareholder is a person who holds either 30% or more of the votes exercisable at general meetings of Xstrata or has the right to control the appointment of the majority of the directors of the Company. As is noted above, as a result of entering into the Arrangement, Glencore International currently holds only approximately 14% of the votes exercisable at general meetings of Xstrata and it does not have the right to control the appointment of the majority of the directors of the Company. Notwithstanding that it is no longer a controlling shareholder of Xstrata under the terms of the Relationship Agreement, Glencore International has agreed that the Relationship Agreement will, nevertheless, continue in full force and effect.

Under the Relationship Agreement:

- Xstrata and Glencore International agree that transactions and relationships between the Enlarged Xstrata Group and Glencore will be conducted at arm's length and on a normal commercial basis;
- Xstrata and Glencore International agree to ensure that Xstrata is capable, at all times, of carrying on its business independently of any member of Glencore;
- Glencore International is only permitted to nominate a maximum of three directors of Xstrata or (if lower or higher) such number of directors of Xstrata nominated by Glencore International as is equal to one less than the number of independent directors. Glencore International previously nominated three directors to the board of directors of the Company. However, following Mr. David Issroff's resignation from the board of directors of the Company with effect from 10 May 2006, Glencore International currently only has two nominees on the board of directors of the Company, being Messrs. Strothotte and Glasenberg;
- directors of Xstrata nominated by Glencore International shall not be permitted, unless the independent directors agree otherwise, to vote on any resolutions of the Company's board of directors to approve any aspect of the Enlarged Xstrata Group's involvement in or enforcement of any arrangements, agreements or transactions with any member of Glencore; and

- Glencore International undertakes to procure that Glencore shall not exercise its voting rights to procure amendment to the constitutional documents of Xstrata which would be inconsistent with, or undermine, the Relationship Agreement.

The Enlarged Xstrata Group believes that the terms of the Relationship Agreement as described above enable the Enlarged Xstrata Group to carry on its business independently from Glencore.

Technology

Xstrata Technology is a minerals and processing technology business with operations in Australia, South Africa, Chile and Canada.

The Enlarged Xstrata Group participates in a number of focused explorations research projects designed to reduce the cost of mineral exploration and increase the likelihood of success. Projects include the areas of geophysics, geology, geochemistry and remote sensing. The Enlarged Xstrata Group is also involved in the development, acquisition and application of technologies to improve the performance of its mining and metallurgical businesses and create opportunities for business growth.

Xstrata Technology develops and sells technology to third parties through licensing agreements. The following table sets out a description of the current technologies of the Former Xstrata Group:

Technology	Description
ISASMELT	ISASMELT is a smelting process that has applications for primary and secondary copper and lead smelting, converting, copper/nickel smelting, and treatment of scraps and residues. The technology is installed at smelting facilities in Australia, the US, Belgium, Germany, the United Kingdom, India, Malaysia, China and Peru.
ISAPROCESS	ISAPROCESS is a permanent cathode technology for the copper refining industry. This technology utilises re-usable stainless steel cathode plates with precise cathode alignment, automation in electrode handling, and associated cathode stripping equipment. Benefits of the ISAPROCESS include copper cathode purity, operating intensity, increased labour productivity, improved safety and lower operating costs. The ISAPROCESS is installed at over 50 plants worldwide accounting for over 30% of global refined copper production.
IsaMill	IsaMill is a revolutionary grinding technology initially developed for ultra-fine grinding of ore bodies at Mount Isa and McArthur River. It has since been adopted for conventional coarser grinding where it can significantly increase processing efficiency. It is rapidly being adopted with over 40MW of installed capacity anticipated by the end of the first quarter of 2007 in Australia, South Africa and the US.
Jameson Cell	The Jameson Cell is a flotation cell that generates an intense flotation recovery process. Over 250 Jameson Cells have been installed at a number of copper, lead, zinc, coal and solvent extraction/electrowinning (SX-EW) facilities.
Albion Process	The Albion Process is a patented process that includes a combination of ultra-fine grinding using IsaMill technology followed by atmospheric leaching for subsequent metal recovery, for example by electrowinning or precipitation. This technology is being considered for installation at two of the Former Xstrata Group's mine sites after pilot testing on copper and zinc concentrates has been completed, and has been licenced to an operation that will recover refractory gold from tailing dams.

In the Falconbridge Acquisition, Xstrata also acquired the rights to the Kidd Process, another leading stainless steel copper refining technology, which is used to produce approximately 3.7 Mt of refined copper worldwide. Xstrata Technology now markets the Kidd Process in addition to ISAPROCESS, which has further strengthened its position as a supplier of copper refining technology.

The Enlarged Xstrata Group also has metallurgical technology facilities at the Falconbridge Technology Centre in Sudbury and the Nikkelverk refinery. Research is conducted at these facilities to provide mineral analyses, to develop new methods for treating ores and custom feeds, to improve nickel, copper and cobalt products and to develop environmentally sustainable production technologies.

The primary focus at the Technology Centre in Sudbury is on developing new technologies for the Enlarged Xstrata Group in hydrometallurgy and pyrometallurgy for nickel laterites and nickel and copper sulphides. The majority of the technical support is provided to the Nickel Business. Other Enlarged Xstrata Group businesses receive support on an as-needed basis.

Pilot plant facilities for metallurgical testing are located at Sudbury, the Nikkelverk refinery, Brisbane Hydrometallurgical laboratories, Townsville Copper Refinery, Kidd Creek Metallurgical site and at Lomas Bayas. In 2005 several industrial scale metallurgical tests were also conducted including testing at the Sudbury smelter, at Kidd Creek in Timmins and at CCR in Montreal.

Expenditures by the Falconbridge Group on research and process development for the two years ended 31 December 2004 and 2005 were US$22 million and US$29 million, respectively.

No material portion of the Enlarged Xstrata Group's business is dependent on a single or connected group of patents, licences, industrial, commercial or financial contracts or new manufacturing processes.

Operational hazards and insurance

The Enlarged Xstrata Group's operations are subject to numerous operating risks which include geological conditions such as unexpected geological features, unexpected seismic activity, climatic conditions such as flooding or drought, interruptions to power supplies, environmental hazards, technical failures, fires, explosions and other accidents at a mine, processing plant, cargo terminal or related facilities. These risks and hazards could also result in damage to, or destruction of, properties or production facilities, personal injury, environmental damage, business interruption and possible legal liability.

The Enlarged Xstrata Group maintains insurance through a number of international insurers prepared to provide cost effective insurance cover to the metals and mining industry. The insurances are arranged via international brokers who provide an assurance that the types of insurance are customary for the mining and metal industry and limits and coverages are appropriate for the Enlarged Xstrata Group. The Falconbridge Group placed part of its property and business interruption insurance directly with an international insurer.

For substantially all of the Enlarged Xstrata Group's operations, the Enlarged Xstrata Group maintains:

- property and business interruption insurance, which protects against losses relating to the Enlarged Xstrata Group's assets;
- public and products liability insurance, which protects against claims by third parties for bodily injury or damage to property; and
- freight insurance which protects against losses relating to the transport of the Enlarged Xstrata Group's equipment, product inventory and concentrates.

The Enlarged Xstrata Group's insurance does not cover every potential risk associated with its operations. In particular, meaningful coverage at reasonable rates is not obtainable by the Enlarged Xstrata Group or other companies within the industry for certain types of environmental hazards, such as gradual pollution or other hazards as a result of the disposal of waste products. The occurrence of a significant adverse event, the risks of which are not fully covered by insurance, could have a material adverse effect on the Enlarged Xstrata Group's financial condition or results of operations. Moreover, no assurance can be given that the Enlarged Xstrata Group will be able to maintain adequate insurance in the future at rates it considers reasonable.

Regulatory and environmental matters

The mining, mineral processing and other operations of the Enlarged Xstrata Group are subject to extensive government regulations relating to the protection of the environment, including those relating to air and water quality, solid and hazardous waste handling and disposal, mine reclamation and closure and occupational health and safety. In addition to mandated environmental safeguards, the Enlarged Xstrata Group has many initiatives to improve both the internal and external environment, such as health research, auditing and risk management programmes. These aspects are aligned with and support the Enlarged Xstrata Group's commitments to sustainable development, where economic prosperity, environmental quality and social equity drive business activities. The Enlarged Xstrata Group believes that sustainable

development is the implementation of practices and policies that contribute to the well-being of the environment, economy and society to address the needs of customers, suppliers, shareholders, employees, contractors, government, the general public, the communities in which it operates and other stakeholders, without compromising the ability of future generations to meet their own needs.

The Enlarged Xstrata Group has in place a comprehensive environmental management system consisting of a sustainable development policy, guidelines, standards, procedures, audit frameworks, job descriptions and procedures, roles and responsibilities, employee and contractor training, public and employee reporting, emergency prevention and response, risk management and community awareness.

In common with other diversified natural resources and mineral processing companies, the Enlarged Xstrata Group's operations generate hazardous and non-hazardous waste, effluent and emissions into the atmosphere. There are many national (including certain provisions of the South African Constitution), regional and local environmental laws, regulations and policies which apply to the Enlarged Xstrata Group's operations, the scope of which varies according to the jurisdiction concerned. Examples include those relating to waste and waste water treatment, disposal of waste, air emissions or discharges. If any of the Enlarged Xstrata Group's operations fail to comply with the relevant laws and regulations, the relevant authorities could require additional equipment to be installed at substantial cost or that the whole or part of the operation be closed down or scaled back. In addition, if a member of the Enlarged Xstrata Group is found to have committed a breach of the relevant law or regulation, it may be liable to pay a fine to the relevant authority or, in some cases, compensation to individuals affected by the breach; alternatively, directors of Enlarged Xstrata Group members may be held liable for any breach.

In some jurisdictions, members of the public can initiate private proceedings to enforce compliance with permits and applicable environmental, health and safety laws and regulations. Proceedings commenced by members of the public have not to date had a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group, although actions of this type have occurred in relation to other corporations. No assurance can be given that these types of private actions will not occur in the future and have a material adverse effect on the results of operations or financial condition of the Enlarged Xstrata Group.

The Mount Isa operations in Queensland are subject to specific legislation of the Queensland State Parliament, the Mount Isa Mines Limited Agreement Act 1985. The Mount Isa Mines Limited Agreement Act 1985 exempts the Mount Isa operations from compliance with the otherwise applicable Environmental Protection Act 1994 with respect to air emissions. The State environmental regulator has informed Xstrata of its desire to assume the regulation of special state legislation, including the Mount Isa Mines Limited Agreement Act 1985. In the event that happens and a subsequent amendment is sought and made to bring air emissions permitted under the Mount Isa Mines Limited Agreement Act 1985 into line with the Environmental Protection Act 1994, or alternatively that the Mount Isa Mines Limited Agreement Act 1985 is repealed, then significant cost consequences, relating to investing in new environmental technologies and practices, could follow to maintain current production levels.

Each of the Enlarged Xstrata Group's businesses is subject to various laws and regulations relating to their ability to carry out operations, as well as environmental and health and safety issues. The requirements of these laws vary from operation to operation, and are also dependent on the jurisdiction in which they operate. The Enlarged Xstrata Group's objective is to meet or surpass environmental standards set by relevant legislation, through the application of innovative and technically-proven economic measures in advance of prescribed deadlines. In addition, the Enlarged Xstrata Group incurs substantial waste removal and site restoration costs on an ongoing basis, which it believes will minimise future liabilities for site closure. The board of directors of the Company, as a matter of policy, requires each of the Enlarged Xstrata Group's businesses and operations, as a minimum, to comply with all relevant laws and regulations in the jurisdiction in which it operates. Compliance with relevant environmental laws is the responsibility of respective managers at the operating companies who are directly responsible to the Enlarged Xstrata Group's senior management. All Falconbridge Group operations are guided by a Sustainable Development Policy and Management System Environment, Health and Safety (EHS) Operating Manual that assists corporate, site, project managers and EHS professionals to implement the elements of the Falconbridge Limited Sustainable Development Policy. All Falconbridge operations are also guided by the Falconbridge Code of Ethics which sets a high standard of ethical behaviour throughout the Falconbridge Group. The code requires that decision-making include due consideration for human rights, the provision of a living wage to all workers worldwide, a diverse workforce that encourages upward mobility, respect for indigenous rights, environmental improvement,

transparency in the Falconbridge Group's conduct and a commitment to sustainable communities. A procedure exists for employees to confidentially report issues of non-compliance to designated individuals or through the Falconbridge Group's Ethics Hotline. Xstrata believes that each of the Enlarged Xstrata Group's businesses and operations are substantially in compliance with all material applicable environmental laws and regulations.

In most jurisdictions, businesses are required to rehabilitate site operations which have been closed down. In South Africa, for example, section 43 of the MPRDA imposes liability on the mining operator for some time after the relevant mining operations have ceased. Accordingly, the Enlarged Xstrata Group, to the extent it has not already done so, will have to make provision for the costs involved in closure and other rehabilitation of any of its site operations in the future. This may involve substantial costs. In the event that pollution of the environment surrounding or adjacent to any of the Enlarged Xstrata Group's operations occurs, or has already occurred, the Enlarged Xstrata Group may be required to remediate pollution and incur substantial costs. In particular, the Enlarged Xstrata Group's operations are generally required either to lodge security bonds or make ongoing cash contributions for the purpose of rehabilitation at the end of a mine's life. The Enlarged Xstrata Group has an established environmental audit programme at each of its mines and will continue to review its compliance with environmental requirements, including its rehabilitation requirements. The Enlarged Xstrata Group will comply with the provisions of the South African MPRDA to ensure that it will continue to be able to operate within the legislative regime introduced by the MPRDA and the Enlarged Xstrata Group complies with similar obligations in other jurisdictions in which it has operations.

In the UK, any cessation of operations requires the decommissioning of plants and rehabilitation of the environment in order to surrender various environmental permits. The standard and extent of remediation required will vary according to the approach of the regulator and it is not possible to accurately estimate such closure and rehabilitation costs in advance. As environmental regulation becomes more stringent, there can be no assurances that future costs of closure and rehabilitation will not be materially higher than currently anticipated.

The Enlarged Xstrata Group's operations are members of various forums which aim to develop, through the use of best available technologies, water management practices to ensure that the water used by the Enlarged Xstrata Group's operation will, when re-introduced into the water system, meet end user requirements and legal requirements.

The Enlarged Xstrata Group's operations require various environmental permits covering, amongst other things, water use and discharges, stream diversions and solid waste disposal. The Enlarged Xstrata Group has applied for the necessary permits and in doing so has complied with all the requisite statutory obligations required to make application for the permits. Not all permits have, however, been issued due to administrative delay. Xstrata does not anticipate that any environmental issues or liabilities in connection with environmental permits will be material to the Enlarged Xstrata Group's operations. Further information on the licensing and permits of the Enlarged Xstrata Group's businesses can be found in Part IV – "Information on the Former Xstrata Group's Business – Statutory authorisations, licences and concessions" and in Part V "Information on the Falconbridge Group's Business – Statutory authorisations, licences and concessions".

New legislation or regulations may come into force in the future that may materially adversely affect the Enlarged Xstrata Group's mining operations, its cost structure or its customers' ability to use the Enlarged Xstrata Group's products, particularly coal. New legislation or regulations, or different or more stringent interpretation or enforcement of existing laws and regulations, may also require the Enlarged Xstrata Group or its customers to change operations significantly or incur increased costs. It is possible that environmental laws and regulations in certain countries in which the Enlarged Xstrata Group operates will, in the future, become more stringent with the result that the amount and timing of future expenditure required to enable the Enlarged Xstrata Group to remain in compliance with such laws and regulations could increase substantially from their current levels. In particular, there is a clear and continuing trend in Europe for increasingly stringent environmental measures to be enacted at European Union level which require stringent environmental measures to be enacted at EU member state level and which may have a significant operating and financial impact on the Enlarged Xstrata Group.

In December 1997, in Kyoto, Japan, the signatories to the United Nations Convention on Climate Change established individual, legally binding targets to limit or reduce greenhouse gas emissions by developed nations. This international agreement, known as the Kyoto Protocol, came into force on 16 February 2005. As of 30 August 2006, 164 states and regional economic integration organisations (such as the EU) had deposited instruments of ratifications, accessions, approvals or acceptances in respect of the Protocol.

Those jurisdictions in which the Enlarged Xstrata Group has operations can be split, with regard to the laws, regulations and policies aimed at limiting or reducing greenhouse gas emissions, into four categories. The first is those jurisdictions within the EU (such as Belgium, Germany, Spain and the UK) which are subject to the EU emissions trading scheme (the "EU ETS"). The EU ETS currently focuses on carbon dioxide emissions from certain energy intensive industries (such as power generation and the production and processing of ferrous metals) until 2007 when the scheme will be expanded to cover other greenhouse gases, such as methane, and other industries, such as the chemical and aluminium production industries. The second category comprises non-EU jurisdictions that have ratified the Kyoto Protocol and that have in place, or will shortly have in place, a formalised system of greenhouse gas emission allowances trading and emission levels regulation (such as Canada and Norway). The third category consists of those jurisdictions that have not ratified the Kyoto Protocol and that presently have no jurisdiction-wide system for emission allowances trading (such as Australia). The final category is those jurisdictions that have ratified the Kyoto Protocol but have no obligations under it to reduce greenhouse gas emissions (the so called non-Annex 1 countries such as South Africa, Chile, Argentina, Peru, Colombia and the Dominican Republic).

Both Canada and Norway have ratified the Kyoto Protocol and are committed to meeting their obligations thereunder in respect of greenhouse gas emission levels. Canada, which is the jurisdiction of incorporation of Falconbridge, ratified the Kyoto Protocol in late 2002. Various levels of government in Canada are developing a number of policy measures in order to meet Canada's emission reduction obligations under the Kyoto Protocol. The federal Canadian government has undertaken extensive industry consultations with a view to structuring a domestic emissions trading system and has proposed a regulatory framework for greenhouse gas emissions regulation and trading. From 1 January 2005, an emissions trading system has been introduced in Norway for the period 2005 to 2007 (and covering in the region of 10% to 15% of Norway's greenhouse gas emissions). The Norwegian system is very similar in structure and in form to the EU ETS.

The Enlarged Xstrata Group has operations in various developing world jurisdictions, such as South Africa, Chile, Argentina, Peru, Colombia and the Dominican Republic, that are non-Annex 1 countries. Despite having no obligations under the Kyoto Protocol in respect of their levels of greenhouse gas emissions, these countries may host Clean Development Mechanism ("CDM") projects that allow Annex 1 country companies, whether operators of an emissions constrained installation or not, to procure additional emission rights.

In July 2005, Australia, China, India, Japan, South Korea and the US formed the Asia-Pacific Partnership on Clean Development and Climate. Members of the partnership intend to cooperate on the development and transfer of technology which enables the reduction of greenhouse gas emissions. It is uncertain what, if any, impact this partnership will have on the Enlarged Xstrata Group as its implementation plans are being developed.

See the section of this document headed "Risk Factors – Industry risks relating to the Enlarged Xstrata Group – Risks related to climate change legislation" for a discussion of certain potential impacts on the Enlarged Xstrata Group relating to the Kyoto Protocol.

The Enlarged Xstrata Group has a number of mining tenements, licences and concessions with various terms (including durations) under which the Enlarged Xstrata Group carries out mining and natural resources activities. Except to the extent described in respect of the Rhovan vanadium operations in Part IV – "Information on the Xstrata Group's Business – Alloys Business Summary – Vanadium operations – Description of vanadium operations – Mineral right applications and conversions", licences are in place in respect of all reserves which the Enlarged Xstrata Group is currently exploiting. Members of the Enlarged Xstrata Group may from time to time breach the terms of their mining tenements, licences and concessions. Xstrata does not however believe that any such breaches of which it is aware would have a material adverse effect on the Enlarged Xstrata Group.

South African Mineral and Petroleum Resources Development Act and Empowerment Charter and Royalty Bill

On 3 October 2002, the President of South Africa assented to and signed into law the MPRDA, which came into operation on 1 May 2004. On 13 August 2004, the Empowerment Charter was promulgated, together with the "scorecard" for measuring black empowerment in the mining industry, which is intended to monitor and assess compliance with the Empowerment Charter. In addition to this the government of South Africa, in conjunction with the industry, is developing further legislation and guidelines, including the Mineral and Petroleum Royalty Bill (the "Royalty Bill") pertaining to royalties. A draft of the Royalty Bill, dated 10 March 2003, was released for public comment on 20 March 2003. This version of the Royalty Bill has been withdrawn for revision and a new draft is expected in the near future. The Minister of Finance has

however recently indicated that mining royalties as envisaged in the draft bill will only become payable by mining companies in South Africa from 2009.

A key outcome of the MPRDA is that the South African State becomes the custodian of all the rights to minerals and that prospecting and mining require prospecting and mining rights respectively which can only be granted by the State once certain criteria are met, including black empowerment criteria for HDSAs. Existing prospecting and mining authorisations and the underlying mineral rights need to be converted to new order rights and, to do so, the above criteria need to be satisfied or undertakings given.

A key objective of the above legislation is to ensure that 26% of the mining industry is controlled by HDSAs within ten years from 1 May 2004. In addition, mining companies need to achieve certain goals aimed at the advancement of HDSAs both in the workplace and the communities in which they operate.

The transitional provisions of the MPRDA facilitate the conversion of prospecting and mining rights currently held at common law and under the Minerals Act (termed, "old order rights" in the MPRDA) to the new forms of prospecting and mining rights contemplated by the MPRDA ("new order rights").

The conversion applicants will have a maximum of two years in the case of prospecting and five years in the case of mining to lodge their rights for conversion. For successful conversion, applicants will be required to be in possession of a valid prospecting permit or mining authorisation and to have been physically prospecting or mining (as the case may be) on the area to which their application relates as at the promulgation date.

This legislation impacts the Enlarged Xstrata Group's resource holdings and consequently its development programmes.

The Enlarged Xstrata Group has developed and is implementing a strategy to address the tenure risks associated with the legislation and believes that the transformation of the business to align itself with the intent of the MPRDA and associated legislation will be done on a commercial basis in accordance with the legislation.

Native title and land claims

Land in Australia, South Africa and Canada owned or used by the Enlarged Xstrata Group may be the subject of land claims.

In Australia, the Native Title Act recognises native title and established processes relating to mining and exploration rights. Native title represents the traditional rights and interests that the Aboriginal people have in relation to land. Once extinguished it cannot be revived although compensation is payable, generally by the Commonwealth government. Claims are decided on a factual basis and determined ultimately by the Federal Court of Australia. Where existing mining leases are held, those rights are not affected if a native title claim is lodged. If native title has been extinguished, future mining leases can be granted without reference to native title. If it has not been extinguished, the Native Title Act provides procedural rights for registered native title claimants, including the 'right to negotiate' with respect to the grant of mining rights, which includes exploration titles and the compulsory acquisition of land. While the right to negotiate does not include a veto on the grant of a title, it may require financial payments to be made. Native title claims have been made over areas where the Enlarged Xstrata Group has mining operations. Xstrata believes, however, that such claims will not have a material impact on the Enlarged Xstrata Group's existing operations.

In South Africa, the government's Restitution of Land Rights Act 1994 provides remedies for persons who have been dispossessed of rights in land as a result of past racially discriminatory laws or practices. Claims under the Restitution of Land Rights Act had to be lodged by 31 December 1998. The Land Claims Court is empowered to make orders concerning the restoration of a right in land or any portion of land, compelling the payment of compensation, compelling the State to include a claimant as a beneficiary in the State support programme for housing or granting the claimant an appropriate right in alternatively designated State land or with any alternative and appropriate relief. The Enlarged Xstrata Group has received unofficial reports that approximately 350 land claims have been lodged in relation to the surface rights of the Enlarged Xstrata Group's various South African properties. Xstrata has very limited information about these land claims and can give no assurance that they, or any other land claims of which it is not aware, will not have an adverse effect on the Enlarged Xstrata Group's rights to the properties that are subject to the land claims.

The emphasis of the restitution of land rights process in South Africa is to provide an appropriate remedy to claimants in terms of a statutory process. The landowner is not required to provide the land seeker with a remedy. Existing legislation regulating the land restitution process in South Africa places this burden on the State. It is therefore unlikely that the Enlarged Xstrata Group will be the party that will be required to address the remedies sought by land seekers unless the State expropriates a landowner's land, in terms of the appropriate expropriation legislation, in order to comply with a decision by a competent authority or court to restore land to a claimant.

In Canada, the Enlarged Xstrata Group's properties may, in the future, be the subject of Native Americans' land claims which are generally addressed by the courts in Canada. The legal basis of such a land claim is a matter of considerable legal complexity and the impact of the assertion of a land claim, or the possible effect of a settlement of such claim upon the property interest in question, cannot be predicted with any degree of certainty at this time. In addition, no assurance can be given that any recognition of Native American rights whether by way of a negotiated settlement or by judicial pronouncement (or through the grant of an injunction prohibiting mining activity pending resolution of any such claim) would not delay or even prevent the Enlarged Xstrata Group's resource development or mining activities in Canada.

Health and safety

The Enlarged Xstrata Group's health and safety standards are reviewed by the Enlarged Xstrata Group on an ongoing basis. In addition, the Enlarged Xstrata Group's operations are subject to government authority inspections throughout the year, as well as health and safety audits at most operations. These inspections and audits have not resulted in any significant capital expenditures by the Enlarged Xstrata Group. However, certain of the Enlarged Xstrata Group's activities are inherently dangerous and the authorities responsible for administering health and safety standards have considerable inspection, injunction and penalty powers that, if exercised against the Enlarged Xstrata Group, could have an adverse impact on the Enlarged Xstrata Group's financial condition or results of operations.

Xstrata recognises that the health and safety of its employees, contractors and other key stakeholders and the maintenance of high environmental performance standards are significant responsibilities involved in the conduct of its operations. The Enlarged Xstrata Group's aim is to be recognised as a leader in health, safety and environmental management.

There is a serious problem with HIV/AIDS infections in South Africa generally. Certain of the Enlarged Xstrata Group's operations are addressing HIV/AIDS in the workforce at their operations in South Africa through awareness, employee wellness training and aggressive antiretroviral intervention programmes both for new employees and on an ongoing basis for all employees. The World Health Organisation estimates that approximately 20% of the South African population is living with HIV/AIDS.

The Enlarged Xstrata Group participates in a regional initiative known as the Power Belt AIDS Project, a mining community-based programme which targets AIDS awareness and safe sex practices through the provision of information to schools and clinics and the use of peer trainers in the community. The project is managed by the Council for Scientific and Industrial Research and is funded by affiliated businesses, government and international organisations.

Xstrata believes that these intervention and health programmes, the Enlarged Xstrata Group's contingency plans (which involve teaching multiple skills to the workforce and improving training and recruiting capacities) and the large number of unemployed skilled persons available in the region could mitigate the financial impact on the Enlarged Xstrata Group's South African operations of the HIV/AIDS crisis in South Africa.

Labour and employee relations

For the year ended 31 December 2005, the average monthly number of Former Xstrata Group employees and contractors of the Former Xstrata Group was approximately 24,000 in aggregate. The majority of the Former Xstrata Group's employees are unionised.

At 31 December 2005, the Falconbridge Group had approximately 14,500 employees in 18 countries. The majority of the Falconbridge Group's employees are unionised and engaged pursuant to collective employment agreements. In 2005, collective agreements were signed in respect of the following Falconbridge Group operations:

Three-year agreements:

- Norandal – Newport
- Kidd Metallurgical Division
- St. Ann Bauxite Mine (Production & Maintenance, Staff)

Five-year agreement:

- Gramercy Alumina Refinery

A three-year collective agreement at Falcondo was ratified on 22 February 2006, replacing the contract that expired in November 2005.

Collective bargaining agreements for the following Falconbridge Group operations have expired or are scheduled to expire in 2006 in the months indicated:

- General Smelting (Montreal) – 31 January
- Brunswick Mine (Bathurst) – 28 February
- Brunswick Smelter (Bathurst) – 28 February
- Horne Smelter (Rouyn) – 1 March
- Bulk Handling Operation (Bathurst) – 31 March
- Raglan Mine (Rouyn) – 30 April
- Lomas Bayas (Chile) – 30 April
- Nikkelverk (Norway) – 1 April
- Antamina (Peru) – 24 July
- Norandal – Salisbury (Salisbury) – 20 November
- Altonorte (Chile) – 12 December

Collective agreements covering the Falconbridge Group's unionised employees at Norandal-Newport, St. Ann (production and maintenance employees), and Gramercy were all renewed in 2005. At the Timmins Metallurgical site, a collective agreement was signed with the Canadian Auto Workers Union after a one-month strike in October 2005. Bargaining was completed in 2006 for the renewal of the collective agreements at Falcondo and St. Ann (staff employees only).

The Falconbridge Group reached an agreement with the Sindicato de Empresa Compañía Minera Lomas Bayas for the renewal of the collective agreement at the Lomas Bayas copper mine located in Chile. Employees voted in favour of the agreement on 6 May 2006 and it will supersede the prior agreement which expired on 30 April 2006.

On 1 March 2006 the Falconbridge Group and the CSN union reached an agreement on a new three year agreement at the Horne Smelter in Rouyn, Noranda. Details of the agreement included a US$0.50 increase in each year of the contract, pension increases to US$46/US$47/US$48 per month and a maximum of 15 55/30 early retirement packages. The Falconbridge Group gained the right to operate the plant over the Christmas period and clarified the terms of the contracting out language.

In May 2006 employees at Brunswick Mine, members of United Steelworkers of America, Local 5385, voted in favour of a new collective agreement. The new agreement will be in effect up to an including closure of the Brunswick Mine scheduled for early 2010. Highlights of the agreement include: (i) a downsizing provision at closure that defines how seniority will apply, how termination will be carried out and how pensions and severances will be provided to workers; (ii) wage increase of C$0.25 per hour for each year of the agreement; and (iii) an increase in the basic pension from C$47 per month per year of service to C$52 at closure.

On 24 May 2006 the Falconbridge Group and the United Steelworkers, Local 9449, announced that employees at Raglan Mine have voted in favour of a new collective agreement. The new collective agreement expires on 30 April 2011. Highlights include: (i) a wage increase of 2.2% each year of the collective agreement; (ii) productivity and profit sharing programme improvements; and (iii) a signing bonus of C$1,500 upon the execution of the collective agreement and an additional C$375 in each remaining year of the collective agreement.

On 21 June 2006 employees at Brunswick Smelter, members of United Steelworkers of America, Local 7085, voted in favour of a new collective agreement. The previous agreement expired on 28 February 2006. The new contract is a five-year agreement. Highlights of the agreement include: (i) a definition of how seniority will apply and how pensions and severances will be provided to workers; (ii) wage increases of US$0.25 per hour for each year of the agreement; and (iii) an increase in the basic pension from US$47 per month per year of service to US$52 in 2010.
