CERTIFICATION OF INTERIM FILINGS

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

I, **JEAN CLAUDE GANDUR**, Chief Executive Officer of **ADDAX PETROLEUM CORPORATION**, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of Addax Petroleum Corporation, (the issuer) for the interim period ending September 30, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures for the issuer, and we have:
 - a. designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared.

DATED: November 13, 2006

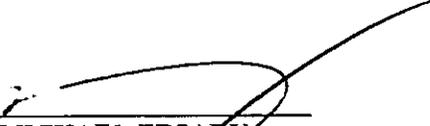

JEAN CLAUDE GANDUR
CHIEF EXECUTIVE OFFICER

Form 52-109F2
CERTIFICATION OF INTERIM FILINGS

I, **MICHAEL EBSARY**, Chief Financial Officer of **ADDAX PETROLEUM CORPORATION**, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of Addax Petroleum Corporation, (the issuer) for the interim period ending September 30, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures for the issuer, and we have:
 - a. designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
September 30, 2006 and 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

1. GENERAL

Addax Petroleum Corporation ("Addax Petroleum") was incorporated under the Canada Business Corporations Act on September 6, 2005 as a wholly owned subsidiary of The Addax and Oryx Group Ltd. ("AOG") for the purpose of acquiring all of the issued and outstanding common shares of Addax Petroleum N.V., another wholly owned subsidiary of AOG, in connection with the initial public offering of the common shares of Addax Petroleum (the "IPO").

On February 16, 2006, Addax Petroleum completed its IPO of 21.0 million common shares and on February 24, 2006 it completed the issuance of an additional 2.1 million common shares upon the exercise of an over-allotment option granted to the underwriters by Addax Petroleum in connection with the IPO. Total net proceeds from the issuances were approximately \$371,050,000.

In conjunction with the completion of the IPO, Addax Petroleum acquired all of the issued and outstanding common shares of Addax Petroleum N.V. for cash consideration of \$48,188,000 and the issuance of 117,000,000 common shares. The cash consideration has been accounted for as a distribution of earnings. As AOG controls both Addax Petroleum and Addax Petroleum N.V., the acquisition occurred between entities under common control and was accounted for in the books of Addax Petroleum as a continuity of interests. Under this form of purchase accounting, Addax Petroleum is deemed to have acquired Addax Petroleum N.V. at book value. Subsequent to the acquisition, Addax Petroleum financial statements presented for comparative purposes reflect the financial position, results of operations and cash flows as if Addax Petroleum and Addax Petroleum N.V. had been combined since the inception of Addax Petroleum N.V.

Addax Petroleum completed a public offering of 14.75 million subscription receipts on August 16, 2006. This included 1.75 million subscription receipts from the exercise of the over-allotment option by the underwriters. These subscription receipts were exchanged for common shares on September 6, 2006. Total net proceeds from the issuances were CDN\$ 401,938,000, the proceeds of which were used to fund part of the acquisition of PanAfrican Energy Corporation (Mauritius) Ltd. ("PanAfrican") in Gabon (note 3).

Addax Petroleum completed the acquisition of PanAfrican and Pan Ocean Energy UK Ltd. on September 7, 2006 for CDN\$1.605 billion in cash (\$1.441 billion) including the assumption of net debt totaling CDN\$6.8 million (\$6.1 million). Addax Petroleum funded this acquisition by the second public offering to the market, new debt financing (see note 4) and internally generated cash. Subsequent to the acquisition, Pan Ocean Energy UK Ltd. has been renamed to Addax Petroleum UK Ltd. ("Addax UK").

The operating and financial results for the three month and nine month periods ended September 30, 2006 include PanAfrican's and Addax UK's operations from September 7, 2006. The comparative figures are for Addax Petroleum only.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

2. ACCOUNTING POLICIES

The interim consolidated financial statements of Addax Petroleum include Addax Petroleum, its wholly-owned subsidiaries and its interests in joint ventures, and have been prepared following the same accounting policies as the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2005. The interim financial statements contain disclosures that are supplemental to Addax Petroleum annual audited consolidated financial statements. Certain disclosures that are normally required to be included in the notes to the annual audited consolidated financial statements have been condensed. These financial statements should be read in conjunction with Addax Petroleum N.V.'s audited consolidated financial statements and notes thereto for the year ended December 31, 2005.

Goodwill

Goodwill represents the excess purchase price over the fair value of identifiable assets and liabilities acquired in business combinations. Goodwill is not amortized but is assessed for impairment annually, or more frequently as events occur that may indicate impairment. Impairment is assessed by comparing the fair value of each reporting unit to the book value of the reporting unit. If the fair value of the reporting unit is less than the book value then impairment of goodwill is measured by deducting the fair value of the reporting unit's individual assets and liabilities from the fair value of the reporting unit to determine the implied fair value of goodwill. This is compared to the amount of the book value of the reporting unit's goodwill. Any excess of the book value of goodwill over the implied fair value of goodwill is the impairment amount. Addax Petroleum's reporting units are consistent with the cost centres.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

3. ACQUISITION

On September 7, 2006, Addax Petroleum acquired the shares of PanAfrican and Addax UK for a cash consideration of \$1.52 billion and the results of these operations have been included in the consolidated financial statements from that date. Approximately \$1.5 million of costs relating to employee redundancy and office closure costs were expensed.

The acquisition was accounted for by the purchase method of accounting and the estimated allocation of fair value to the assets acquired and liabilities assumed as at September 7, 2006 was:

Property, plant and equipment	969,980
Goodwill	767,598
Current assets	97,066
Total assets acquired	<u>1,834,644</u>
Current liabilities	23,725
Future income taxes	274,547
Asset retirement obligation	19,532
Total liabilities assumed	<u>317,804</u>
Net assets acquired	<u>1,516,840</u>

Current assets include cash of \$69 million.

Although the estimated allocation of fair value to the assets acquired and liabilities assumed is subject to changes as additional information becomes available, the final allocation is not expected to differ materially from the estimated allocation.

The goodwill was assigned to the Gabon cost centre.

4. BANK DEBT

Addax Petroleum put in place a new debt facility (The "Facility") of \$1 billion to finance, in part, the acquisition of PanAfrican (note 3). As at September 30, 2006, \$850 million had been drawn on the facility. This facility is due for repayment on August 30, 2007.

Addax Petroleum is currently in the process of replacing the Facility with a similar but long term facility, and does not expect to repay the Facility out of current cash funds.

Amounts drawn under the Facility bear interest at the Lenders' LIBOR plus an applicable margin of 1.75% for the first 6 months and then 2.25% for the 6 remaining months. The effective interest rate on the credit facility for the period ended September 30, 2006 was 7.07%.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

5. PROPERTY, PLANT AND EQUIPMENT

	September 30, 2006	December 31, 2005
Oil and natural gas properties	2,420,382	890,914
Accumulated depletion	(616,206)	(407,644)
	1,804,176	483,270
Corporate assets	18,764	7,289
Accumulated depreciation	(4,236)	(3,536)
	14,528	3,753
Balance	1,818,704	487,023

Included in property, plant and equipment are capitalized interest of \$17.0 million (2005: \$8.3 million)

Property, plant and equipment, net of accumulated depletion and depreciation, by cost centre is as follows:

Cost Centre	September 30, 2006	December 31, 2005
Nigeria	656,025	468,289
Cameroon	12,417	5,401
Gabon	995,614	9,580
Iraq	31,186	-
Joint Development Zone	108,934	-
Corporate assets	14,528	3,753
Balance, end of period	1,818,704	487,023

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
September 30, 2006 and 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Included in property, plant and equipment are certain costs not subject to depletion and depreciation as follows:

	September 30, 2006	December 31, 2005
Unproved properties		
Cameroon	12,417	5,401
Gabon	10,398	9,580
Iraq ⁽¹⁾	31,186	-
Joint Development Zone ⁽²⁾	108,934	-
Nigeria ⁽³⁾	93,460	-
	256,395	14,981

(1) Iraq

Beginning in the second quarter of 2006, costs relating to the Taq Taq field in northern Iraq were capitalized. Exploration and development activities in Iraq may be subject to economic and political considerations such as the risks of war, actions by terrorist or insurgent groups, community disturbances, expropriation, nationalization, renegotiation, forced change or nullification of existing contracts or royalty rates, unenforceability of contractual rights, adverse changes to laws (whether of general application or otherwise) or the interpretation thereof, and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction.

(2) Joint Development Zone

In March 2006, Addax Petroleum entered into three production sharing contracts ("PSCs") with the Joint Development Authority which administers the Joint Development Zone ("JDZ") between Nigeria and São Tomé e Príncipe.

(3) Nigeria

On October 16, 2006 Addax Petroleum entered into a PSC with the Nigerian National Petroleum Corporation ("NNPC") for OPL 291, a deepwater block offshore Nigeria. Prior to this, Addax entered into a farm-out agreement with Starcrest Nigeria Energy Limited ("Starcrest") to obtain a participating interest of 72.5% in, and become the operator of, OPL 291.

Pursuant to the farm-out agreement, Addax Petroleum is obligated to pay:

- To NNPC, 100% of the OPL 291 PSC signature bonus of \$55 million
- To Starcrest, a farm-in fee of \$35 million; and
- Starcrest's share of OPL 291 exploration and development costs which will be reimbursed to Addax Petroleum from Starcrest's share of production revenues from OPL 291.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

The signature bonus and farm-in fee have been paid in installments in September and October 2006. These costs are capitalized when paid.

6. SHARE CAPITAL

Addax Petroleum is authorized to issue an unlimited number of common shares and an unlimited number of preferred shares, issuable in series. There are no preferred shares outstanding.

Issued and Outstanding

	Nine month period ended	
	September 30, 2006	
	Common Shares	Amount
Balance, beginning of period	117,000,100	20,010
Issue pursuant to initial public offering	23,100,000	371,050
Issue pursuant to second public offering	14,750,000	342,419
Shares issued for Director services (note 11)	12,425	321
Issued under employee share award program	199,699	4,821
Balance, end of period	155,062,224	738,621

On September 14, 2006, the Company paid a dividend in the amount of CDN \$0.05 per common share. In addition to holders of common shares, holders of subscription receipts (note 1) on the record date of August 24, 2006 received the dividend for each subscription receipt held.

Share-Based Compensation

Share-based compensation relates to share awards to employees and directors of Addax Petroleum some of which are vested immediately and some over a three year period. AOG awarded 1,000,000 common shares of Addax Petroleum to current employees and directors during the second quarter of the year. The grant dates of the shares were May 16, 2006 and June 30, 2006. The shares vest as follows: 203,050 shares immediately on May 16; 265,650 shares on June 30; 265,650 shares on January 31, 2007; and 265,650 shares on January 31, 2008. The fair value of the common shares granted was \$26,853,000, based on the trading price of the common shares on the date of grant, and this compensation is being amortized over the vesting period.

On August 31, 2006, Addax Petroleum awarded 599,097 common shares to current employees and directors as part of a new management compensation plan. These shares vest as follows: one third on the grant date, one third one year after the grant date and one third two years after the grant date. The fair value of the common shares granted was \$14,631,000, based on the trading price of the common shares on the date of grant, and this compensation is being amortized over the vesting period.

Other	(734)	(1,293)	(761)	(1,920)

The sales to Addax B.V., a marketer of Addax Petroleum crude oil, were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG Advisory Services Ltd., include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for Addax Petroleum FPSO's and other marine support vessels.

Other includes charges from Addax Limited for the refund of services paid on behalf of Addax Petroleum and directors' compensation of \$720,000 of which \$155,000 has been paid in cash and \$321,390 has been paid in shares of Addax Petroleum, the remaining balance remains unpaid.

13. PARTNER LOAN RECEIVABLE

Pursuant to the joint venture agreement, Addax Petroleum has advanced \$21 million to a joint venture partner. The advance is repayable on demand to Addax Petroleum. It is not expected that the repayment will be requested in the next twelve months.

14. PRE-ACQUISITION EXPENSES

Included in pre-acquisition expenses are costs related to Addax Petroleum New Venture activity. Related expenditures are charged to the income statement pending finalization of Addax Petroleum's rights to a license. These costs can include seismic purchases, studies (in-house and external) and consulting.

(1) All amounts presented are in United States dollars unless otherwise indicated.

- ❖ Petroleum sales in Q3 2006 amounted to \$583.9 million, an increase of 51% over petroleum sales of \$385.7 million in Q3 2005.
- ❖ Funds flow from operations was \$244.5 million in Q3, an increase of 50% over the comparable quarter in 2005 of \$163.2 million.
- ❖ Funds flow from operations per share in Q3 increased 18% to \$1.65 as compared \$1.40 in Q3 2005.
- ❖ Average realized crude oil sales price in Nigeria in Q3 increased 13% to \$67.90/bbl as compared to \$59.88/bbl realized in Q3 2005.
- ❖ Average realized crude oil sales price in Gabon in Q3 were \$60.48/bbl.
- ❖ Capital expenditures during the quarter were \$214.1 million as compared to \$117.0 million in Q3 2005. The capital expenditures for Q3 include development of \$118.9 million, license acquisition of \$23.0 million and exploration and appraisal of \$61.3 million.
- ❖ A dividend of \$0.05 per share was declared on August 1, 2006 and paid on September 14, 2006.
- ❖ PanAfrican was acquired on September 7. PanAfrican has 8 licences covering 716 hectares of which 4 licenses are in production. Development work continues to increase the pipeline capacity onshore and 2 drilling rigs were in operation on the Addax Petroleum Gabon acreage.
- ❖ Development work in the Okwori and Nda fields in OML126 (previously reported as OPL90) in Nigeria continued.
- ❖ Development of OML123 in Nigeria continued including the installation of the new FPSO, which commenced operation subsequent to the quarter end, resulting in only 5 days of shutdown.
- ❖ Appraisal work of the Taq Taq field in the Kurdistan Region of Iraq continued with commencement of drilling operations.
- ❖ Exploration work in all blocks of the JDZ continued
- ❖ Appraisal of the Okwok property in Nigeria continued with the commencement of drilling operations.

Third Quarter Financial Update

INITIAL PUBLIC OFFERING

Addax Petroleum completed its initial public offering of 21 million common shares on February 16, 2006. On February 24, 2006 the issuance of an additional 2.1 million common shares was completed after the exercise of the over-allotment option. Gross proceeds of these issuances was CDN\$ 450,450,000.

SECOND PUBLIC OFFERING

Addax Petroleum completed a second public offering of 14.75 million common shares on September 6, 2006. This included 1.75 million shares from the exercise of the over-allotment option by the underwriters. These shares were exchanged for subscription receipts issued to the market in August 2006. Gross proceeds of these issuances were CDN\$ 401,937,500; the proceeds from this offering were used to finance the acquisition of PanAfrican in Gabon.

DEBT FINANCING

Addax Petroleum arranged a new debt facility to finance, in part, the acquisition of PanAfrican. This involves a senior secured acquisition bridge facility underwritten by BNP Paribas, Standard Chartered Bank and Natexis Bank Populaires totalling \$1 billion. As at September 30, 2006 \$850 million had been drawn down. This facility is due for renewal on August 30, 2007, however Addax Petroleum is arranging a long term facility to replace it.

Third Quarter Operational Update

HIGHLIGHTS

During the third quarter Addax Petroleum expanded its production operations beyond Nigeria by integrating the PanAfrican operations in Gabon acquired on September 7th. Production operations highlights include:

- Attributable average oil production during the quarter of 91,500bbls/d. Production for the prior quarter was 79,900bbls/d.
- By quarter end was operating a total of seven drilling rigs comprising four land rigs (one each in Nigeria and Kurdistan and two in Gabon), two jack-up rigs (OML123 and Okwok) and one semi-submersible (OML126).
- A production milestone of exceeding 100,000bbls/d when the first Nda field development well was brought on stream.
- Safe and successful change-out of the Knock Taggart FPSO for the larger Knock Adoon FPSO on OML123, offshore Nigeria in September.
- Added 3 production wells offshore Nigeria.
- Started the multi-well exploration and appraisal program on the Okwok field close to OML123 offshore Nigeria and completed in October
- Finished drilling and coring operations on Taq Taq 4 well and prepared to run completion equipment in preparation for flow testing

ACQUISITION

Addax Petroleum completed the acquisition of PanAfrican Energy Corporation (Mauritius) Ltd. ("PanAfrican") and Pan-Ocean Energy UK Ltd on September 7, 2006 for CDN\$1.605 billion in cash (\$1.441 billion) and assumption of net debt totalling CDN\$6.8 million (\$6.1 million), after the approval from the Royal Court of Jersey and certain Pan-Ocean shareholders. Addax Petroleum funded this acquisition by the second public offering to the market, new debt financing and internally generated cash. Subsequent to the acquisition, Pan-Ocean Energy UK Ltd has been renamed Addax Petroleum UK Ltd ("Addax UK").

PanAfrican has developed a balanced portfolio of producing properties, development opportunities and exploration potential in eight licenses in Gabon. Four of PanAfrican's licences are onshore and four are offshore, of which seven are pursuant to Production Sharing Contracts and one, Ibekebia, is pursuant to a technical evaluation agreement. Four of the licences (Maghena, Panthere NZE, Etame and Remboué) are producing.

At the acquisition date PanAfrican was producing approximately 10.1 mmbbls/day (average of July and August production 2006) of medium to light gravity crude oil (29° to 36° API) in Gabon, West Africa. Based on the report of their external reserve engineers, as of December 31, 2005, PanAfrican had proved plus probable reserves of 67.5 mmbbls and proved plus probable plus possible reserves of 121.3 mmbbls. PanAfrican also has several exploration opportunities on its 716,487 net acres of land, 55% of this acreage is offshore.

The operating and financial results for the quarter include PanAfrican's results from September 7, 2006. The comparative figures are for Addax Petroleum only, unless stated otherwise.

PRODUCTION AND DEVELOPMENT OPERATIONS

Addax Petroleum's production operations occur on its Nigerian offshore properties OML123 and OML126 (previously OPL90) and onshore property OML124 and the acquired Gabon onshore and offshore properties.

Nigeria

In Nigeria, where Addax Petroleum holds 100% interest in its producing properties, production averaged 89,100 bbls/d of which 95% was produced offshore from OML123 and OML126. A significant corporate milestone was achieved during the quarter where, for the first time in Addax Petroleum's history it produced over 100,000 bbls in a single day, all in Nigeria.

OML123 (Offshore)

Production from OML123 during the quarter averaged 48,400 bbls/day compared to 51,838 bbls/day in the previous quarter. All OML123 production was shut-in from September 24th through to September 29th while the Knock Taggart FPSO was safely and successfully changed-out for the larger Knock Adoon FPSO. Over the following three days production was steadily restored to pre shut-in levels. The Knock Adoon is designed to store up to 1,700,000 barrels of crude oil compared to storage capacity of 1,000,000 barrels on the replaced Knock Taggart. The Knock Adoon FPSO also offers a processing capacity of 60m bbls/day of crude oil and a total liquids (oil and water) processing capacity of 140m bbls/day. Incorporated in this facilities upgrade and expansion is an off-loading buoy terminal to allow more efficient crude oil offloading and to accommodate larger tankers. The replacement of the OML123 FPSO was a major marine project that required greater than 2 million man-hours. The complexity of the change-out operation itself required up to 16 marine support vessels and 3 onshore support bases coordinating the simultaneous shutdown of all associated production facilities on OML123.

Other major projects ongoing during the quarter include the Oron field development and redevelopment of the Adanga processing facility.

Drilling continued on OML123 during the quarter and was not disrupted during the FPSO change-out. Two additional production wells were brought on stream within the quarter, but rig activities concentrated on drilling and preparing wells for completion during the fourth quarter.

OML126 (Offshore)

Production from OML126 during the quarter averaged 36,700 bbls/day compared to 24,300 bbls/day in the previous quarter.

Development activity has been confined to the drilling and subsea tie-back of development wells on the Okwori and Nda fields using the Scarabeo-3 semi-submersible drilling rig. During the quarter, three new wells were brought on stream.

OML124 (Onshore)

Production from OML124 during the quarter averaged 4,000 bbls/day compared to 3,763 bbls/day in the previous quarter.

Gabon

Addax Petroleum completed the acquisition of PanOcean Energy's Gabon operations on September 7th; this operational report references the entire quarter. Addax Petroleum's production operations in Gabon centre around the onshore, operated Maghena and Panthere NZE producing oil fields and the Shell-operated Koula field presently in development planning and the offshore, Vaalco-operated producing Etame oil field, the Avouma oil field under development and the Ebouri oil field presently in development planning. Cumulative production attributable to Addax Petroleum since September 7th was 0.2mmbbls equating to a daily production rate for the period of 2,400 bbls/day.

Onshore Operations

Production from the Maghena and Panthere NZE oil fields continued to utilize the Total-operated Avocette terminal for oil export which restricted the fields' actual productive capacity. Maghena continued to produce through a 5,000 bbls/day Early Production Facility during the quarter while work continued on the construction of new 30,000 bbls/day Central Production Facility oil processing facilities at the Maghena field, a new 33 kilometer, 10-inch export pipeline from Maghena to Coucal and additional pumping capacity at the Total-operated Coucal facility. These facilities are substantially complete and the new production and export system is expected to be operational during the fourth quarter of 2006 thereby removing hitherto processing and export constraints. Addax Petroleum's export pipeline capacity through the end of the year will be 30,000 bbls/day with further capacity expansion under discussion.

The third quarter saw a continuation of the successful 2006 Maghena onshore drilling programme, with the completion of two further horizontal development wells and the spudding of a third well. In the first three quarters of 2006, a total of seven horizontal development wells have been successfully drilled and completed in the Maghena field.

At the end of the second quarter, the drilling rig the Simpler 101 was mobilized to the Panthere NZE field and drilled and completed the development well with a 700 metre horizontal drain in the Dentale reservoir. The rig was then moved to the eastern flank of the field to drill the Panthere NZE East appraisal well with better than expected results as it encountered the reservoir at a shallowest level yet in the field. Drilling of a horizontal development well followed. The results of the appraisal well and subsequent horizontal development well suggest material easterly extension of the Panthere NZE not previously recognized.

On the Shell-operated Awoun permit, the Koula West appraisal well was spudded in September and concluded in October but did not confirm a westerly extension of the field.

Offshore Operations

Offshore production and development operations were focused on the producing Etame field and the satellite Avouma field currently under development. Government approval has been received to proceed to develop a further satellite, the Ebouri field.

The Etame gross average field production was 17,719 bbls/day for the quarter. The field co-venturers are looking to further optimize the field to maintain these levels of production. Only a minor shut-down of the FPSO is now anticipated to enable the tie-in of the Avouma field and to complete some de-bottlenecking modifications to the process equipment.

Avouma development continues to be on schedule and on budget. During the third quarter of 2006, the Avouma production platform was installed and pre-commissioning activities are ongoing. The export pipeline to the Etame field FPSO is in place and the flex riser is due to be installed in November. The drilling rig has now arrived at location to begin drilling the two development wells.

EXPLORATION & APPRAISAL OPERATIONS

During the quarter Addax Petroleum has been progressing exploration and appraisal activities on the Okwok field in OML67 close to OML123 offshore Nigeria and on the Taq Taq field in the Kurdistan Region of Iraq. On its other exploration properties, namely the JDZ blocks, OPL225 offshore Nigeria and Ngosso offshore Cameroon, Addax Petroleum continues to process and interpret 3D seismic data recently acquired to plan 2007/2008 exploration drilling.

Nigeria (OML67, Okwok)

Following acquisition of a 40% participating interest in the Okwok field in late June Addax Petroleum, in its capacity as Technical Adviser on the field, commenced a multi-well exploration and appraisal program using the GlobalSanteFe High Island IX jack-up. The 2006 Okwok campaign was completed in October and the High Island IX, which remains under contract to Addax Petroleum, has now moved to OML123 close by to undertake development and exploration drilling.

The objectives of the 2006 Okwok campaign were met and demonstrated the presence of medium to light oils and non-optimized well flow capability in excess of 1,200 bbls/day. Well results are being incorporated into revised subsurface models to guide 2007 appraisal and potential early production development schemes.

Kurdistan Region of Iraq (Taq Taq)

The drilling and coring of Addax Petroleum's first well, on the Taq Taq field in the Kurdistan region of Iraq was concluded during the quarter. Since the end of the quarter the well has been in the process of been completed and flow tested. Wireline pressure data and core data confirm the presence of an oil column in excess of 500 meters and, at least in the region of the well, an extensive and productive fracture system. Operations at Taq Taq have proceeded slower than might otherwise have been anticipated but progress has been consistent with a new operation in, a logistically difficult location.

Management's Discussion & Analysis

The following Management's Discussion and Analysis of Addax Petroleum Corporation ("Addax Petroleum") is dated November X, 2006 and should be read in conjunction with Addax Petroleum's interim consolidated financial statements as at September 30, 2006 and for the three and nine month periods ended September 30, 2006 and 2005 together with the notes thereto and the consolidated financial statements of Addax Petroleum N.V. as at and for the year ended December 31, 2005 together with the notes thereto and related Management's Discussion and Analysis. The consolidated financial statements presented herein are those of Addax Petroleum and its subsidiaries. Except as otherwise indicated, certain defined words and terms used herein have the meaning set forth in Addax Petroleum's Annual Information Form dated March 28, 2006 and which is available at www.sedar.com. All amounts presented are in United States dollars unless otherwise indicated.

LEGAL NOTICE – FORWARD LOOKING STATEMENTS

Certain statements in this report constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results, results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires Addax Petroleum to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to: imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of Addax Petroleum. More specifically, production may be affected by such factors as exploration success, start-up timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by Addax Petroleum with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this quarterly report is made as of the date of this report and, except as required by applicable law, Addax Petroleum does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this report is expressly qualified by this cautionary statement.

NON-GAAP MEASURES

Addax Petroleum defines "Funds Flow From Operations" or "FFFO" as net cash from operating activities before changes in non-cash working capital. Management believes that in addition to net income, FFFO is a useful measure as it demonstrates Addax Petroleum's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Addax Petroleum also assesses its performance utilizing Operating Netbacks which it defines as the per barrel profit margin associated with the production and sale of crude oil and is calculated as the funds flow from operations per barrel sold, prior to corporate charges. FFFO and Operating Netback are not recognized measures under Canadian GAAP. Readers are cautioned that these measures should not be construed as an alternative to net income or cash flow from operations determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

Management's Discussion & Analysis

PRODUCTION

Extensive continuing capital investment in 2006 has resulted in record levels of production in the first nine months of 2006, representing an increase of 49% over the same period in 2005. Production also increased in Q3 over the previous quarter by 23% driven by increased production at OML126 and the acquisition of PanAfrican properties in Gabon. Over 90% of Addax Petroleum's production in Q3 was from offshore Nigeria. Addax Petroleum's average working interest production for each license area was as follows:

Average working interest oil production (mbbls/day)	Three Months ended 30 September			Nine Months ended 30 September		
	2006	2005	Change	2006	2005	Change
Before Royalties:						
Nigeria						
OML123	48.4	47.9	1%	50.2	45.9	9%
OML126	36.7	22.7	61%	29.2	12.6	132%
Subtotal – Offshore	85.1	70.6	21%	79.4	58.5	36%
OML124	4.0	3.6	12%	3.7	3.5	5%

Total	91.5	74.2	23%	84.0	62.0	49%

Nigeria Properties

OML123

In OML123, daily production has continued to increase in the first nine months of 2006 and for the third quarter of 2006 as compared to the same periods in 2005. Five new production wells have been added to this block in the first nine months of 2006 (2 wells added in Q3 2006) bringing the total producing wells for the license to 51. From September 26 the production of OML123 was shut in to facilitate the change over of the FPSO Knock Taggart to a larger FPSO Knock Adoon. Production recommenced on October 1. The shut down period was 5 days, compared to a budgeted shut down period of 10 Days. The changeout resulted in the deferral of 340 mbbls in the third quarter.

OML126

In the quarter OPL90 was successfully converted to OML126 by the Nigerian authorities. All references to OML126 in the current report were previously reported as OPL90. The OPL 225 license name has not changed.

OML126 commenced production in the first quarter of 2005, and output has continued to increase. During 2006 drilling and facilities work has continued to increase production. 5 new production wells have been added to this block in the first nine months of 2006 (3 wells added in Q3 2006) bringing the total producing wells for the license to 11.

OML124

In OML124, daily production has again slightly increased in both the quarter and year to date periods as compared to 2005. This has been achieved due to a well work over campaign. There are 15 producing wells in OML124.

Gabon Properties

Addax Petroleum acquired the Gabon properties from Pan-Ocean Energy on September 7, 2006. The Gabon properties produced an average of 9.4 mbbls/day for the 24 days from acquisition to the end of the period. To give an indication of the operational history for these properties the following table shows the average working interest production for the Gabon properties for the corresponding periods when they were operated by Pan-Ocean:

Average working interest oil production (mbbls/day)	Three Months ended 30 September			Nine Months ended 30 September		
	2006	2005	Change	2006	2005	Change
Before Royalties:						
Gabon						
Panthere NZE	1.6	1.0	56%	1.6	1.7	-6%
Maghena	1.9	2.0	-2%	1.8	0.7	182%
Remboue	0.8	0.9	-15%	0.8	1.0	-16%
Subtotal - Onshore	4.3	3.9	10%	4.2	3.4	24%
Etame	5.6	6.3	-12%	5.6	6.0	-7%
Total - Gabon	9.9	10.2	-3%	9.8	9.4	4%

Maghena & Panthere NZE

Maghena & Panthere NZE are located onshore Gabon and at the end of the period had 10 completed wells. Export capacity relating to both Maghena and Panthere NZE is currently limited to approximately 5.0 mbbls/day gross. Accordingly, only three of the ten recently drilled and completed development wells are producing, the remainder being capacity constrained. Addax Petroleum plans to increase production upon completion of the Maghena to Coucal export pipeline.

Addax Petroleum has a 92.5% working interest in the Maghena license and a 92.5% working interest in the Panthere NZE license. Average production for the 24 days to the end of September was 1.4 mbbls/day at Maghena and 1.8 mbbls/day at Panthere NZE.

Remboué

Remboué is located onshore Gabon and at the end of the period has 7 producing wells. Addax Petroleum has a 92% working interest and average production for the 24 days to the end of September was 0.8 mbbls/day.

Etame

Etame is located offshore Gabon and at the end of the period has 4 producing wells. Addax Petroleum has a 31.36% working interest and average production for the 24 days to the end of September was 5.4 mbbls/day.

CRUDE OIL MARKETING AND PRICES

Addax Petroleum currently produces and sells crude oil from 3 streams in Nigeria: Antan (OML123), Brass (OML124) and Okwori (OML126), as well as 4 streams in Gabon: Panthere NZE, Remboué, Maghena and Etame. The selling price for each area is based on the Dated Brent Benchmark Price plus a premium or a discount depending on the quality of the crude oil. Summarized below are the average prices and premiums or discounts for each producing region and for significant individual streams.

(\$/bbl)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Average Dated Brent Benchmark Price	69.49	69.62	61.53	66.96	53.54
Nigeria - Total					
Average Premium (Discount) ⁽¹⁾	(1.96)	(1.94)	(2.14)	(2.04)	(2.80)
Average Realized Sales Price	67.90	67.85	59.88	65.41	52.21
OML123					
Average Premium (Discount) ⁽¹⁾	(4.00)	(3.16)	(2.90)	(3.98)	(3.68)
Average Realized Sales Price	66.36	66.09	58.64	63.52	50.01
OML126					
Average Premium (Discount) ⁽¹⁾	0.37	0.87	(0.82)	0.82	0.28
Average Realized Sales Price	69.60	70.16	62.62	68.10	60.50
Gabon - Total					
Average Premium (Discount) ⁽¹⁾	(1.23)	--	--	(1.23)	--
Average Realized Sales Price	60.48	--	--	60.48	--
Total Average Realized Sales Price	67.60	67.85	59.88	65.34	52.21

(1) Average Premium (Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Average Dated Brent Benchmark Prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported Average Realized Prices and Average Dated Brent Benchmark Prices may not correspond to the Average Premium (Discount) to Brent Crude.

Tension in the Middle East, the loss of Alaskan supplies due to pipeline failure, and speculative buying all helped to push oil markets to record highs in early August 2006, but thereafter a major downward correction set in. The cessation of hostilities in Lebanon, the easing of the confrontation over Iran's nuclear ambitions and a significantly below-average US Hurricane Season were all negative factors. IEA forecasts for 2006 global demand were revised downwards in July and again in September, while inventories of crude oil and refined products remained at or above year-earlier levels in the main consuming regions.

International benchmark crude oil prices such as Dated Brent fell steadily through the remainder of the third quarter, with the decline gathering pace towards the end of September after the close of the US Summer driving season. Despite a drop of more than 20% in absolute price from the July high of \$78.00/bbl, average prices for the third quarter were similar to those of the second quarter.

For the nine months to end-September 2006 Dated Brent averaged almost \$67.00/bbl – around 25% above the average for the corresponding nine months of 2005. The average realized price for Nigerian liftings for the current nine month period also rose by 25% compared to the same period in 2005.

Addax Petroleum average realized prices for Nigerian crude were 13% higher in Q3 2006 than in Q3 a year earlier, in line with the 13% increase in the benchmark between the two periods.

OML123 continues to be sold both spot and term at discounts to Dated Brent of the order of \$3.00 to \$4.00/bbl. This discount remains relatively stable, as would be expected from a mature producing stream with little changes in the quality of the oil, and with established patterns of trade.

OML126 has been sold spot and term at steadily improving premiums to Brent, as the grade has become more established in the market place. Going forward it is anticipated that the premium to Dated Brent will probably stabilize slightly above \$1.00/bbl for individual cargoes, although this may not be fully reflected in comparisons with the quarterly average benchmark.

Gabon's net realized average oil price on export since acquisition was \$60.48/bbl, a \$1.23/bbl discount to the \$61.76 Brent average oil prices for the month of September.

PETROLEUM SALES AND SALES VOLUMES

Petroleum sales are reported on the basis of oil volumes sold gross of royalties and exclude any volumes held as inventory at the end of the period. Inventory held at the beginning of period is included in sales during the period together with the related costs and any overlifts are accounted for as deferred income on the balance sheet. Inventory held as at September 30, 2006 was 973 mbbbls compared to 1,101 mbbbls as at June 30, 2006. As part of the PanAfrican acquisition 156 mbbbls of inventory was acquired. The petroleum sales volumes and mixes are as set out in the table below:

Petroleum Sales Volumes (Mmbbls)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Nigeria					
OML123	4.5	4.8	4.4	13.6	12.6
OML126	3.4	2.6	1.7	8.1	2.7
OML124	0.4	0.3	0.3	0.9	0.9
Subtotal – Nigeria	8.3	7.7	6.4	22.6	16.2
Gabon					
All licences	0.4	--	--	0.4	--
Total	8.7	7.7	6.4	23.0	16.2

The changing mix of petroleum sales between the Addax Petroleum properties is set out in the table below:

Petroleum Sales Mix (%)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Nigeria					
OML123	51%	62%	69%	59%	78%
OML126	39%	34%	27%	35%	17%
OML124	5%	4%	4%	4%	5%
Subtotal – Nigeria	95%	100%	100%	98%	100%
Gabon					
All licences	5%	--	--	2%	--
Total	100%	100%	100%	100%	100%

The petroleum sales dollar amounts are as set out in the table below:

Petroleum Sales (\$ millions)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Nigeria					
OML123	303.4	319.9	262.0	865.4	632.4
OML126	232.5	178.3	106.3	551.2	160.0
OML124	27.1	24.2	17.4	63.0	48.2
Subtotal – Nigeria	563.0	522.4	385.7	1,479.6	840.6
Gabon					
All licences	20.9	--	--	20.9	--
Total Petroleum Sales	583.9	522.4	385.7	1,500.5	840.6

Total petroleum sales have increased by 79% for the first nine months of 2006 and 51% for the third quarter of 2006 as compared to the same periods in 2005. Total petroleum sales also increased by 12% in Q3 2006 over Q2. These increases are primarily as a result of increased sales volumes and higher realized prices, the movements in which have been discussed previously.

ROYALTIES

In Nigeria, royalties are comprised of Royalty Oil, Niger Delta Development Corporation (NDDC) levy, Education Tax, Nigeria National Petroleum Corporation's (NNPC) share of Profit Oil and the Cost Penalty Arrangement. For the Okwori field, in the OML126 block, a profit share royalty is paid to TOTAL, one of the previous license holders of OML126 as part of the acquisition agreement when Addax Petroleum acquired the block.

In Gabon, royalties includes Government royalties plus any Profit Oil payments in excess of the taxes payable at the Gabonese statutory rate. Royalties are determined in accordance with the applicable Production Sharing Contract.

Royalties (\$ millions)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Nigeria – OML123/124					
Royalty Oil	22.7	24.2	21.8	64.6	53.4
NDDC levy	2.3	2.9	0.5	8.7	3.9
Education Tax	4.8	4.9	3.1	12.8	8.7
NNPC's share of Profit Oil	31.2	33.8	24.8	89.9	58.4
Cost Penalty Arrangement	2.0	2.6	4.3	8.4	4.3
Royalties – Nigeria OML123/124	63.0	68.4	54.5	184.4	128.7
Nigeria – OML126					
Royalty Oil	14.6	7.9	3.7	28.7	5.4
NDDC levy	1.9	2.9	2.8	7.9	4.8
Education Tax	3.4	2.0	0.9	7.0	0.9
NNPC's share of Profit Oil	22.0	8.8	--	40.2	--
Cost Penalty Arrangement	--	--	--	--	--
Okwori Net Profit Interest	6.2	--	--	6.2	--
Royalties – Nigeria OML126	48.1	21.6	7.4	90.0	11.1
Gabon					
Royalty Oil	2.3	--	--	2.3	--
Government's share of Profit Oil	1.6	--	--	1.6	--
Royalties – Gabon	3.9	--	--	3.9	--
Total Royalties	115.0	90.0	61.9	278.3	139.8

Royalties as a percentage of related sales (%)

Nigeria	20%	17%	16%	19%	17%
OML123/124	19%	20%	19%	20%	19%
OML126	21%	12%	7%	16%	7%
Gabon	19%	--	--	19%	--

In Nigeria, royalties for OML123/124 have increased by 43% in the first nine months of 2006 and by 16% in the third quarter of 2006 as compared to the same periods in 2005. The total royalties for OML 123/124 remain steady as a percentage of sales but increase in value due to the increase in production and prices.

In OML126, the absolute value of royalties and the percentage of sales are both increasing. The percentage of royalties related to sales has increased as the assets' capital allowances have been used. The absolute value of royalties has increased due to the use of capital allowances, the increase in production and the increase in crude oil prices.

Royalty Oil is levied on petroleum sales, with the percentage of Royalty Oil increasing with sales volumes. Profit Oil is the profit remaining after deducting royalties, production costs and taxes and is shared between NNPC and Addax Petroleum on a sliding scale based on monthly production. The increase in royalties is driven by increased Royalty Oil and Profit Oil due for OML123/124 and OML126 resulting from a combination of increased production and higher benchmark crude oil prices. Increased production and increased oil prices are the main drivers of the year on year change. Production from OML126 only commenced in May 2005.

TOTAL is entitled to 8% net profit interest in the Okwori field (of OML126), once total revenues exceed total costs including all royalties and taxes. Total revenues exceeded total costs for the first time in Q3 2006.

Nigerian royalties as a percentage of sales has changed as the sales mix of the revenue streams has changed with an increased proportion from OML126.

In Gabon, royalties include government royalties, which are levied as a percentage on petroleum sales, increasing with sales volumes, plus any Profit Oil payments in excess of the taxes payable at the statutory Gabonese rate. Government royalties were levied during the current quarter at rates of 3% for Panthere NZE and Remboué, 4.5% for Maghena and at a rate of 15% for Etame.

OPERATING EXPENSES

The operating expenses presented below include costs relating to production, transportation and selling for both Nigerian and Gabon operations.

Operating Expenses (\$ millions and per barrel sold)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Nigeria					
OML123/124	35.0	36.9	30.0	107.6	86.2
OML126	16.0	17.0	9.2	44.6	17.8
Total - Nigeria	51.0	53.9	39.2	152.2	104.0
Gabon	5.3	--	--	5.3	--
Total Operating Expenses	56.3	53.9	39.2	157.5	104.0

PER BARREL SOLD (\$/bbl):

Nigeria					
OML123/124	7.21	7.18	6.37	7.40	6.36
OML126	4.71	6.42	5.44	5.48	6.49
Total - Nigeria	6.11	6.99	6.10	6.71	6.42
Gabon	15.25	--	--	15.25	--
Total Operating Expenses	6.47	6.99	6.10	6.81	6.42

There is an upward pressure on operating costs world-wide due to high demand for oil services. Addax Petroleum continues to mitigate this upward pressure through a number of methods such as using competitive bidding procedures and awarding long term contracts, but with crude oil prices remaining high, upward cost pressure is expected.

Operating expenses in Nigeria increased by 46% for the first nine months of 2006 and by 30% for the third quarter of 2006 as compared to the same periods in 2005. The increases are principally due to the coming on stream of OML126, to bonus payments made to employees for OML123/124 and to higher service costs resulting from the increase in industry wide activity in reaction to higher crude oil prices. For OML123/124, the increase in operating expenses for the first nine months of 2006 compared to the same period in 2005 is due to increased personnel costs of \$9.9 million mainly relating to a special bonus and allowances paid to the Nigerian staff following union negotiations and an increase in vessel costs of \$10.7 million including a settlement of a contract relating to the period from April 2004 to March 2006 (increase of \$3.6 million). For OML126, the increase in operating expenses mainly relates to the FPSO (\$6.7 million) and vessel costs (\$3.4 million). The decrease in operating expenses in Nigeria for Q3 2006 compared to Q2 2006 of 5% was due to high bonus payments made to employees in Q2.

Operating costs in Gabon are impacted by restrictions in production onshore which results in high per barrel costs. The pipeline used for the Maghena and Panthere NZE fields is capacity constrained and therefore the production is constrained, which means the production is currently not as cost efficient as it could be. As mentioned previously Addax Petroleum has future plans to increase the production capacity at these fields. At Remboué, field barges are used to transport production resulting in a higher cost than in other transportation due to the relatively small amounts that are transported.

OPERATING NETBACKS

Operating netbacks is a non-GAAP measure and represents the per-barrel profit margin associated with the production and sale of crude oil and is calculated as the funds generated from operations per barrel sold, prior to corporate charges. The components of operating netbacks are shown below:

Operating Netbacks (\$ per barrel sold)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005

Operating expense	(15.25)	--	--	(15.25)	--
Operating Netback, before tax – Gabon	33.99	--	--	33.99	--
Total Operating Netback, before tax	47.90	49.17	44.14	46.49	37.15

In Nigeria, operating netbacks per barrel sold for OML123/124 increased by 27% for the first nine months of 2006 and by 14% for the third quarter of 2006 as compared to the same periods in 2005. The operating netback for OML123/124 increased by 1% in Q3 2006 as compared to Q2. These increases were primarily driven by higher production and higher average realized sales prices partially offset by a corresponding increase in royalties and an increase in operating expenses.

Operating netbacks per barrel sold for OML126 increased by 3% for the first nine months of 2006 and decreased by 4% for the third quarter of 2006 as compared to the same periods in 2005. The overall increase was primarily driven by the factors described above for OML123/124.

For Nigeria overall, the changing mix of sales between OML123/124 and OML126 influences the operating netback. As sales from OML126 increase, a higher royalty percentage rate is seen leaving a lower operating netback.

In Gabon, operating netbacks are lower than the Nigerian figures due to the high operating expense as discussed previously. This is exacerbated due to the low production as capacity is constrained giving a high operating expense/bbl figure.

DEPLETION, DEPRECIATION AND ACCRETION (DD&A)

The costs of oil and natural gas properties are depleted on a unit-of-production basis by cost pool, based on Addax Petroleum's share of gross estimated proved reserves for that pool. Addax Petroleum currently has two producing cost pools – Nigeria and Gabon.

The proved reserves utilized to compute DD&A for the quarter for the Nigerian cost pool were based on the independent reserve engineer's estimate of proved reserves at December 31, 2005 and adjusted for any additions or deletions based on internal estimates. Addax Petroleum used a proved reserve estimate of 120.5 million barrels as at September 30, 2006. The proved reserve figure used in calculating DD&A includes upward adjustments of 36.7 million barrels compared to the reserve base as at December 31, 2005 due to increases in proved reserves during 2006.

The proved reserves utilized to compute the depletion for the Gabonese cost pool were based on the external reserves report as a January 1, 2006. The proved reserves figure used for Gabon was 35.9 million barrels.

DD&A (\$ millions, \$ per barrel sold)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Depletion of oil assets					
Nigeria	75.6	64.0	49.5	196.3	105.8
Gabon	10.6	--	--	10.6	--
Total Depletion	86.2	64.0	49.5	206.9	105.8
PER BARREL SOLD (\$/bb):					
Nigeria	9.05	8.31	7.72	8.65	6.54
Gabon	30.52	--	--	30.52	--
Total Depletion	9.91	8.31	7.72	8.94	6.54
Accretion of Asset Retirement Obligation					
Nigeria	0.6	0.6	0.5	1.7	1.8
Gabon	0.1	--	--	0.1	--
Total Accretion	0.7	0.6	0.5	1.8	1.8
Depreciation					
Corporate and Other	0.2	0.2	0.3	0.6	0.7
Total Depreciation	0.2	0.2	0.3	0.6	0.7
Total DD&A	87.1	64.8	50.3	209.3	108.1

In Nigeria, the depletion increased by 85% for the first nine months of 2006 and by 53% for the third quarter of 2006 as compared to the same periods in 2005. The depletion increased by 18% in Q3 2006 as compared to Q2. These increases are mainly due to the inclusion of approximately \$68.1 million of depletion on OML126 for the first nine months of 2006 (\$27.8 for the same period of 2005) and the increase in OML123 sales (8% increase on the year to date figures, as noted previously). The increase in Q3 2006 compared to Q2 is primarily due to increased production.

Depreciation on the Gabon assets is included for the first time. It is anticipated that exploration, appraisal and development drilling will result in increased reserves and reduce the per barrel rate over time.

The depletion on a per barrel sold basis has increased due to the continued investment by Addax Petroleum in its oil properties. See the discussion of the capital expenditure during the period.

CORPORATE EXPENSES

Corporate expenses include items that do not relate to the operation of individual production streams. Shown below are general and administrative expenses mainly incurred by the corporate services, pre-acquisition costs which are recognized in the income statement until licenses are in place, the cost of employee share based compensation and other income and expenses.

Corporate Expenses (\$ millions, \$ per barrel sold)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
General and Administrative Expenses	5.6	5.5	2.8	14.4	6.8

Other (Income) Expenses					
Interest Charges	5.0	0.6	1.8	6.8	2.0
Other Finance Charges	0.3	0.2	0.3	0.6	0.4
Foreign Exchange (Gain) Loss	(0.5)	(1.3)	(0.7)	(2.2)	0.8
Other Income	(5.2)	(2.3)	(0.4)	(8.7)	(1.3)
Total Other (Income) Expenses	(0.4)	(2.8)	1.0	(3.5)	1.9
Total Corporate Expenses	17.9	19.7	5.8	52.6	13.2

General and administrative expenses increased by 118% for the first nine months of 2006 and by 115% for the third quarter of 2006 as compared to the same periods in 2005. General and administrative expenses increased by 2% in Q3 2006 as compared to Q2. The reason for the year to date increase is the additional employees resulting from expansion activities within the commercial and finance departments in the Geneva office working specifically on corporate activities as a result of Addax Petroleum being a publicly quoted company.

Pre-acquisition expenses include costs related to Addax Petroleum's New Venture activity. Related expenditures are charged to the income statement pending finalization of Addax Petroleum's rights to a license. These costs include seismic purchases, studies (in house and external) and consulting. Pre-acquisition expenses continue to increase for the nine months in 2006 compared to the same period in 2005 but pre-acquisition expenses for Q3 2006 decreased by 3% as compared to Q2. The reason for the overall increases is due to Addax Petroleum aggressively seeking new business opportunities in its core areas. Included in pre-acquisition expenses are costs incurred for the operation of the Taq Taq property in the Kurdistan Region of Iraq and costs incurred relating to the blocks in the Joint Development Zone of Nigeria. The Taq Taq expenses are mainly comprised of the field set up and support costs, together with final 2D seismic expenditures. Commencing in Q2 2006, Addax Petroleum began capitalizing capital costs incurred for the operation of Taq Taq which were previously expensed.

Share-based compensation relates to share awards to employees and directors of Addax Petroleum some of which are vested immediately and some over a three year period. AOG awarded 1,000,000 common shares of Addax Petroleum to current employees and directors during the second quarter of the year. The grant dates of the shares were May 18, 2006 and June 30, 2006. The shares vest as follows: 203,050 shares immediately on May 18; 265,650 shares immediately on June 30; 265,650 shares on January 31, 2007; and 265,650 shares on January 31, 2008. The fair value of the common shares granted was \$26.9 million based on their value on grant date.

Addax Petroleum awarded 599,097 common shares to current employees as part of a new management compensation scheme. These share vest as follows: a third on the grant date, a third one year after the grant date and a third two years after the grant date. The fair value of the common shares granted was \$14.6 million based on the trading price of the common shares on grant date.

As required by GAAP, Addax Petroleum has recorded the award based on the fair value of the shares at grant date and will amortize the remaining share awards over the two year vesting period.

Interest and debt commitment fees directly attributable to development activities are capitalized to the respective cost pools and amortized on a unit of production basis with the cost pool to which it relates or otherwise expensed. Other (income) expenses have reduced during the nine months of 2006 due low average loan balance during the period.

INCOME TAXES

Income taxes paid in Nigeria and Gabon are pursuant to the production sharing contracts which govern Addax Petroleum's operations at each of its properties and vary materially based primarily upon prevailing world oil prices, actual operating costs and the amount and timing of capital expenditures. The applicable rate for Addax Petroleum's Nigerian production sharing contract is 60% of taxable profit which is calculated as revenues less royalties, non-capital costs, capital depreciation and an investment tax allowance. The corporate tax rate in Gabon is 35%. Income tax obligations in Gabon are satisfied out of a portion of the Government of Gabon's share of profit oil.

Income Taxes (\$ millions and per barrel produced)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Current Income Taxes					
Nigeria					
OML123/124	130.0	131.2	100.7	337.8	249.6
OML126	30.5	44.6	6.6	82.5	6.6
Total – Nigeria	160.5	175.8	107.3	420.3	256.2
Gabon	3.2	--	--	3.2	--
Other	(0.9)	0.1	0.1	(0.7)	0.7
Total Current Income Taxes	162.8	175.9	107.4	422.8	256.9
Future Income Taxes					
Nigeria					
OML123/124	0.4	10.5	9.3	23.7	24.4
OML126	71.3	49.7	26.2	168.9	26.2
Total – Nigeria	71.7	60.2	35.5	192.6	50.6
Gabon	(2.3)	--	--	(2.3)	--
Total Future Income Taxes	69.4	60.2	35.5	190.3	50.6

In Nigeria, current income taxes increased by 64% for the first nine months of 2006 and by 50% for the third quarter of 2006 as compared to the same periods in 2005. The overall increase in current income taxes for OML123/124 is in proportion to sales revenue. The increase in current income taxes for OML126 is not driven by the sales increase but by the restrictions on accessing capital allowances in accordance with the regulations of the Nigerian fiscal code and the removal of the availability of significant tax deductions claimed in 2005.

In Q2 2006, OML126 could not access all the available allowances, but in Q3 due to the high oil price and lower facility costs all allowances were available, hence the reduction in current income taxes in Q3 compared to Q2. Going forward it is anticipated OML126 will be able to access all its allowances, assuming production and oil prices remain at current levels.

In Gabon the corporate tax rate is 35%.

Future income taxes for Nigeria increased significantly for the first nine months of 2006 and for the third quarter of 2006 as compared to the same periods in 2005, future income taxes also increased in Q3 2006 as compared to Q2. The significant increase in future income taxes relates to OML126 and is directly a result of the usage of tax allowances compared to the corresponding period in 2005.

The Gabon future income tax is driven by the depletion of the fair value adjustment made to the PanAfrican assets on consolidation.

CAPITAL EXPENDITURES

For management's review purposes the capital expenditure is reviewed by production stream or region and by the type of expenditure. Exploration costs are exploration drilling and seismic work.

Capital Expenditures by area and type (\$ millions)	Three Months ended			Nine Months ended

Total Capital Expenditures	214.1	229.2	117.0	688.8	276.1

(1) Carried interest participation represents the working interest of the state and/or third parties which is recovered in the net amount of the excess of revenue recoveries over the operational cost recoveries in accordance with the terms of the various PSCs in Gabon.

The capital expenditure above does not include the acquisition of the PanAfrican and Addax UK by Addax Petroleum.

Total capital expenditures increased by 149% for the first nine months of 2006 and by 83% for the third quarter of 2006 as compared to the same periods in 2005. Total capital expenditures decreased by 7% in Q3 2006 as compared to Q2. The increase in capital expenditures over 2005 is mainly due to new assets in Nigeria (Okwok), Kurdistan (Taq Taq), three JDZ Blocks, new interest in OPL291 in addition to continuing development in OML126, the FPSO replacement in OML123 and an increase of the number of drilling rigs operating for Addax Petroleum from two in 2005 to seven at September 30, 2006.

There is upward pressure on capital expenditures due to high demand for oil services especially for drilling rigs. Addax Petroleum continues to mitigate this upward pressure such as using competitive bidding procedures bidding on long term contracts, but with crude oil at high levels, upward cost pressure is expected.

In Nigeria, capital expenditures totalled \$154.1 million for the third quarter of 2006, consisting primarily of exploration expenditures of \$2.4 million, development drilling expenditures of \$103.2 million, facilities expenditures of \$18.3 million and other expenditures of \$30.2 million. There were minor exploration expenditures in the third quarter in OML126. Third quarter development drilling expenditures in Nigeria included the drilling of 2 development wells in OML126, with 2 development wells in OML123, and 3 OML67 appraisal wells. Other capital expenditures in Nigeria consisted primarily of \$23 million for the initial 25% OPL291 farm-in fee and signature bonus. Addax Petroleum farmed-in to 72.5% of OPL291 in August 2006 and is to carry all the capital expenditures for the field to production. The farm-in was completed in October with a further final \$67 million for signature bonus and farm-in fee.

In Gabon, following the acquisition of PanAfrican Energy Corporation on September 7th, capital expenditures totalled \$25.2 million for the remainder of September. The main activity was onshore development drilling on the Maghena field and construction of the Central Production Facility (CPF). Commissioning of the CPF is planned for mid November 2006. There was also drilling of an onshore well on the Panthere NZE field. In the non-operated field of Avouma a new production platform began commissioning.

Capital expenditures in other regions and properties for the third quarter of 2006 related primarily to \$20.1 million for appraisal drilling and related support expenditures at Taq Taq in the Kurdistan Region of Northern Iraq. Addax Petroleum has a Farm-in Agreement with Genel Enerji of Turkey for 30% interest in the Taq Taq field. During the second quarter of 2006, Addax Petroleum commenced capitalizing expenditures relating to the Taq Taq field as the risks and rewards of ownership had been confirmed.

Major Capital Projects

In OML123, the major capital project is the replacement of the FPSO. The total capital expenditures to the end of September 2006 are \$86.3 million and the capital expenditures to complete the project are forecast to be \$13.0 million. These expenditures are for subsea pipelines and risers, FPSO moorings and topsides water injection package. The FPSO change out was completed successfully in September 2006.

In OML126, there are two major capital projects: 1) the Okwori field development, and 2) the Nda field development. For the Okwori field development, the drilling is completed and the wells tied in. A further additional well is planned for Q1 2007. The total capital expenditures for Okwori to the end of September 2006 are \$355.9 million and the capital expenditures to complete the project are forecast to be \$74.0 million. The total capital expenditures for Nda development capital costs to the end of September 2006 are \$196.4 million and the capital costs to complete the project are forecast to be \$23.0 million. It is planned to drill further appraisal wells in the greater Nda area following the Nda field development project.

In Gabon, the major capital projects are the further development of the Maghena field onshore, and the construction of the Central Production Facility ("CPF"). Commissioning of the CPF is planned for Q4 2006.

Cameroon, Okwok, Taq Taq, OPL291 and the three JDZ deep water blocks are in the appraisal and exploration stages.

FUNDS FLOW FROM OPERATIONS ("FFFO")

The components of FFFO are set out as follows:

Funds Flow From Operations (\$ millions)	Three Months ended		Nine Months ended		
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Net Income	75.2	57.9	85.6	189.7	168.0
Adjustments for non-cash items:					
DD&A	87.1	64.8	50.3	209.3	108.1
Stock-based compensation	7.3	12.6	0.0	19.8	0.0
Future income taxes	69.4	60.2	35.5	190.3	50.6
Other	5.5	0.2	(8.2)	5.3	(4.5)
Funds Flow From Operations	244.5	195.7	163.2	614.4	322.2
Changes in non-cash working capital	59.1	114.6	45.3	151.5	(37.9)
Cash Flow From Operations	303.6	310.3	208.5	765.9	284.3
Weighted Average Shares Outstanding (millions)	148.0	140.1	117.0	138.8	117.0
FFFO per share (\$/share)	1.65	1.40	1.40	4.43	2.75

FFFO increased by 91% for the first nine months of 2006 and by 50% for the third quarter of 2006 as compared to the same periods in 2005. FFFO also increased by 25% in Q3 2006 as compared to Q2. The major reasons for the increases in FFFO for the nine month period of 2006 compared to the same period in 2005 were the significant increases in the average oil price and the increased production (up 34%) during the period. The 26% increase in Q3 is mainly due to the increased in production from OMLs 123 and 126 in the quarter compared to Q2 2006.

LIQUIDITY AND CAPITAL RESOURCES

Addax Petroleum's principal source of liquidity has been fund flows generated from operations which has been supplemented as necessary by credit facilities and equity funds generated from public offerings to meet increased capital expenditures, primarily for the development of the Okwon property in OML126 and expenditure relating to the JDZ blocks and the Taq Taq field. Provided applicable solvency and corporate requirements are satisfied, there are no legal or practical restrictions in Nigeria or Gabon on the ability of Addax Petroleum's Nigerian and Gabonese subsidiaries to transfer funds to Addax Petroleum in the form of cash dividends, loans or advances. In addition, there are no contractual restrictions on such transfers of funds to Addax Petroleum by its Nigerian and Gabonese subsidiaries. Addax Petroleum has not experienced seasonal variations in its cash flows.

Changes in Working Capital and Capital Structure

The following table shows the capital structure of Addax Petroleum at the quarter ends.

Capital Structure (\$millions)	30 Sep 2006	30 Jun 2006	31 Mar 2006	Dec 2005
Accounts receivable	194.2	209.9	120.7	131.6
Partner advance	21.0	3.3	2.4	2.4
Inventories	111.2	95.8	89.5	62.8
Prepaid expenses	31.1	16.7	35.3	15.5
Accounts payable and accrued liabilities	(303.7)	(284.0)	(293.2)	(160.1)
Income taxes and royalties payable	(475.8)	(424.1)	(215.6)	(203.6)
Non-cash working capital	(422.0)	(382.6)	(260.9)	(151.4)
Cash and cash equivalents	143.2	333.9	249.2	6.7
Total net working capital	(278.8)	(48.7)	(11.7)	(144.7)
Short term debt	850.0	--	--	--
Long term debt	--	--	--	80.0
Shareholders Equity	1,116.3	698.3	627.7	298.4

The major component of Addax Petroleum's capital resources at September is the bank facility. This still has undrawn lines of credit totalling \$150 million at the quarter end. This facility is discussed in more detail below.

Addax Petroleum had a working capital deficit at the end of the quarter resulting from the income tax and royalty due. Addax Petroleum expects a reduction in this deficit, however with the bank facilities open to them, and future increases in working capital from oil sales, Addax Petroleum can continue to fund the aggressive expansion of exploration and development activities.

Short term debt

Addax Petroleum has entered into a 364 day \$1 billion Senior Secured Acquisition Bridge Facility with BNP Paribas, Standard Chartered Bank and Natexis Bank Populaires as Joint Mandated Lead Arrangers which was signed on August 31, 2006 replacing the previous syndicated \$300 million senior secured revolving credit facility. The new credit facility bears interest at floating rates linked to LIBOR plus a margin of 1.75% during the first 6 months and 2.25% thereafter. The facility is secured by a pledge over the shares of APNV, Addax Petroleum Overseas Ltd and PanAfrican, as well as a pledge over the bank accounts.

As at September 30, 2006, the amount outstanding under the facility was \$850 million (as at June 30, 2006, all amounts drawn on the previous credit facility were reimbursed) and is due to be reimbursed on August 30, 2007.

Addax Petroleum is currently in the process of replacing it with a similar longer term facility. Management does not anticipate any problems with the facility renewal or replacement and therefore does not expect a requirement to repay the facility out of current cash funds.

Public Offerings

In February 2006, Addax Petroleum was listed on the Toronto Stock Exchange by way of an Initial Public Offering ("IPO"). Pursuant to the IPO, Addax Petroleum issued 23.1 million shares for gross proceeds of \$390.6 million (CDN \$450.5 million) of which:

- \$19.5 million (CDN \$22.5 million) was used to pay expenses related to the IPO; and
- \$48.2 million (CDN \$55.6 million) and 117.0 million common shares of APC were paid to acquire all of the issued and outstanding common shares of Addax Petroleum N.V., previously held by AOG.

Total net proceeds from the IPO, the over-allotment option and the share purchase amounted to \$322.9 million (CDN \$372.4 million). A portion of the net proceeds were used to pay down Addax Petroleum's long-term debt and the balance of the proceeds were used to fund Addax Petroleum's ongoing capital expenditure program.

In September 2006, Addax Petroleum completed an offering to the market. The net proceeds from this and the over-allotment option amounted to \$357.4 million (CDN \$401.9 million). The net proceeds were used as part of the funding of the acquisition of the PanAfrican companies.

Acquisition financing

On September 7, 2006 Addax Petroleum completed the acquisition of the PanAfrican subsidiaries of PanOcean. This was for a total of CDN \$1.605 billion in cash (\$1.441 billion). This cash was raised, as noted above, in part from the debt financing \$850.0 million, in part from the second public offering \$357.4 million and in part from Addax Petroleum's internally generated cash reserves \$234.1 million.

Consolidated Changes in Cash Flow

The following table summarizes the principal components of Addax Petroleum's consolidated cash flows for the periods indicated:

Cash flow (\$ millions)	Three Months ended			Nine Months ended	
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Funds flow from operations	244.5	195.7	163.2	614.4	322.2
Net cash flow from (used in) investing activities	(1,679.7)	(225.7)	(117.1)	(2,007.8)	(276.2)
Net cash flow from (used in) financing activities	1,185.5	--	(125.0)	1,378.4	(3.5)
Net increase (decrease) in cash and cash equivalents before changes in working capital	(249.7)	(30.0)	(78.9)	(15.0)	42.5
(Increase) decrease in non-cash working capital	59.1	114.6	45.3	151.5	(37.9)
Net increase (decrease) in cash and cash equivalents	(190.6)	84.6	(33.6)	136.5	4.6

Funds flow from operations was \$614.4 million for the nine month period ended September 30, 2006 compared to \$322.2 million for the same period of 2005, representing an increase of \$292.2 million. The increase resulted from the increase in income before income taxes of \$327.4 million, due to higher oil prices and higher production from OML126 and OML123 compared to 2005 (up 36% in the period). For the quarter ended September 30, 2006, funds flow from operations has increased mainly due to the increased production of OML123 and OML126 compared to the same quarter in 2005.

Net cash used in investing activities consists principally of the purchase of PanAfrican, the purchase of property, plant and equipment and intangible capital expenditures. Net cash used in investing activities was \$1,931.0 million for the nine months ended September 30, 2006 compared to \$276.2 million for same period in 2005, representing an increase of \$1,654.8 million. The majority of this increase is due to the \$1,447.9 million acquisition of PanAfrican. The remaining expenditure increase of \$559.9 million relates to additional \$106.9 million in capital expenditures on JDZ Blocks 2, 3 and 4, an increase of \$71.0 in capital expenditures on Okwok, post acquisition expenditures on the Gabonese properties of \$25.2 million and the \$23.0 million initial payment for the farm-in and signature bonus for OPL291. The remaining increase is due to higher capital expenditures on the Nigerian properties of OML123/4 and OML126.

Net cash from financing activities was \$1,378.4 million for the nine month period ended September 30, 2006 compared to a cash outflow of \$3.5 million in the same period 2005. Addax Petroleum received \$371.0 million from the IPO. This cash inflow was partially offset by the following outflows: repayment of long term debt (\$80 million), payment of dividend (\$50 million) and fees related to the purchase of Addax Petroleum N.V. by Addax Petroleum. A further \$342.4 million was received from the second public offering in Q3 2006 and this with the \$850 million drawn down from the new credit facility was used to offset part of the PanAfrican acquisition. The net cash outflow for Q3 2006 was mainly due to the balance of the funds required for the PanAfrican acquisition being met out from the cash of Addax Petroleum.

ECONOMIC SENSITIVITIES

The following table shows the estimated after-tax effect that changes to crude oil prices, crude oil production and operating costs would have had on Addax Petroleum's net income for the nine months ended September 30, 2006, had these changes occurred on January 1, 2006. These calculations are based on business conditions, production and sales volumes existing for Q3 2006. The 1,000bbls/d increase has been allocated equally between OML123/OML124, OML126, Etame, Maghena, Panthere NZE and Remboué.

Economic Sensitivities			
Factor	Change (+)	Net Income Impact (\$ million)	Net Income Impact (\$ per share)
Average Realized Price	\$1.00/bbl	6.0	0.04
Crude oil production	1,000 bbls/d	4.2	0.03
Increase in operating expenses	10%	(4.1)	(0.03)
Interest rate	1%	(0.7)	(0.01)

The impact of the above changes may be compounded or offset by changes to other business conditions. In addition, the table does not consider the relationships between the above factors.

Changes in the exchange rate between CDN\$ and US\$ has not been considered here as changes would not be significant to the results given the low number of transactions denominated in CDN\$.

OUTLOOK FOR THE REMAINDER OF 2006 AND 2007

Addax Petroleum expects average daily production for 2006 to be approximately 89,000 barrels per day, with a production rate by year end of 115,000 barrels per day. Production is expected to increase throughout the remainder of the year as Addax Petroleum brings on-stream development wells in OML126 and OML123.

Total capital expenditures for the first nine months of 2006 were \$688.8 million, and for the fourth quarter are forecast to be \$350.0 million.

The 2007 budget anticipates an average production rate throughout the year of 130,000 barrels per day. Production is expected to increase as Addax Petroleum brings on stream development wells in Oron, Ebughu and Adanga in Nigeria and Maghena, Panthere NZE and Etame in Gabon; and the increase in production of onshore Gabon due to an increase in pipeline capacity.

Capital expenditure in 2007 is expected to be \$1,200 million, with \$125 million forecast for exploration, \$933 million forecast for development drilling and related facilities and \$142 forecast for gas studies and other costs. \$873 million is forecast to be spent on the Nigerian assets, \$248 million forecast to be spent in Gabon and \$79 million on other assets primarily for the JDZ, Cameroon and Taq Taq.

CONTRACTUAL OBLIGATIONS AND COMMITMENTS

Addax Petroleum has assumed various contractual obligations and commitments in the normal course of operations and financing activities. These obligations and commitments have been described in the December 31, 2005 MD&A and have not significantly changed during the nine month period ended September 30, 2006 except as noted below. Also as part of the acquisition of the PanAfrican companies Addax Petroleum has assumed new commitments and obligations as summarized below.

Exploration commitments in JDZ blocks

These are exploration commitments as defined in the PSCs and for the 3 blocks, the minimum four year financial commitments total \$43.3 million at quarter end.

Exploration commitment for OPL291

OPL291 PSC was signed after quarter end. The exploration commitment is defined in the PSC and the minimum five year financial commitment is \$75 million.

Exploration & Development commitments in Gabon

These are costs committed to by contracts for continued exploration and development in Gabon. They include a charter of an FPSO, drilling of an exploration well at Etame and the construction of the Coucal pipeline extension and processing facility. The total cost is \$23.8 million.

Contingent commitments after the PanAfrican acquisition

Following PanAfrican's acquisition of the Iris and Thermis permits in Gabon contingent commitments arose to pay \$0.75 million in the event of a commercial discovery during the second, third or any subsequent exploration period and \$0.75 million following the granting of an exploitation license by the Republic of Gabon.

Addax Petroleum expects to fund its obligations and committed capital investments from a combination of cash flow and drawings from the new senior bank facility.

RISK MANAGEMENT

Addax Petroleum is exposed to several operational risks inherent in exploring, developing, producing and marketing crude oil and natural gas. These inherent risks include: economic risk of finding and producing reserves at a reasonable cost; cost of capital risk associated with securing the needed capital to carry out Addax Petroleum's operations; risk of fluctuating foreign exchange rates; risk of carrying out operations with minimal environment impact; risk of governmental policies, social instability or other political, economic or diplomatic developments in its international operations; and non-performance by counterparties to contracts.

Addax Petroleum has published its assessment of its business risks in the Risk factors section of its 2006 Annual Information filing. The principal risk of Addax Petroleum remains the fluctuation of oil prices which are affected by world politics, demand and future reserves available. Since then there have been no significant changes to these identified risks other than those noted below:

- The company has acquired the PanAfrican companies which have production and exploration operations in Gabon. As this is a different location to Addax Petroleum's core operations there may be risks specific to the operations that management are not yet able to assess.

Addax Petroleum is aware it has an increased leverage and reviews its use of available facilities considering future capital expenditure, expected returns in production and oil price trends, to ensure that the required repayments can be made.

Addax Petroleum utilizes various financial instruments to manage its commodity prices, foreign currency and interest rate exposures. These financial instruments are not used for trading or speculative purposes. Currently Addax Petroleum holds a foreign exchange forward contract to manage its exposure to foreign currency risk with respect to the Swiss franc against the US dollar. There are no liquidity risks associated with this instrument. Gains or losses on foreign exchange forward contracts are included in other interest and finance charges. Addax Petroleum has no immediate plans to put in place other hedges or financial instruments. Addax Petroleum's current position with respect to its financial instruments is detailed in note 8 to the consolidated financial statements. The arrangements and policies concerning Addax Petroleum's financial instruments are under constant review and may change depending upon prevailing market conditions.

Addax Petroleum has direct responsibility for Health, Safety and Environment (HSE) in its Nigerian and Cameroonian properties. Addax Petroleum has implemented HSE policies in respect of its operations. These HSE policies are an important part of the responsibilities of Addax Petroleum's managers and significantly influence the operations of Addax Petroleum. Addax Petroleum requires all employees and contractors to comply with HSE policies. The HSE policies are codified in Addax Petroleum's HSE manual, which define individual HSE responsibilities and suggests ways to promote and support a safe and healthy environment. Addax Petroleum circulates the manual to employees in all locations and managers regularly discuss the policies with staff at periodic safety meetings. In Nigeria, Addax Petroleum has a dedicated HSE department that focuses on accident prevention, monitors operational compliance with the HSE policies and advises management on statutory and industry requirements. The manager of this HSE department reports directly to the Managing Director of Nigerian Operations of Addax Petroleum and is a member of the management committee, which meets weekly to discuss and direct Addax Petroleum's activities. The HSE policy of Addax Petroleum emphasizes leadership, commitment and training, risk management, health and safety operations, environmental protection and incident response plan.

OFF-BALANCE SHEET ARRANGEMENTS

As at September 30, 2006 Addax Petroleum had no off-balance sheet arrangements other than those mentioned in notes to the 2005 annual financial statements.

SUBSEQUENT EVENTS

On October 17, 2006 Addax Petroleum entered into a Production Sharing Contract ("PSC") with NNPC having previously entered into a farm-out agreement with Starcrest Nigeria Energy Limited ("Starcrest") for OPL291, a deepwater area offshore Nigeria. Addax Petroleum has a participating interest of 72.5% and is the operator.

Pursuant to the farm-out agreement, Addax petroleum is obligated:

- To pay to the Nigerian government, 100% of the OPL291 PSC signature bonus of \$55 million
- To pay to Starcrest a farm-in fee of \$35 million; and
- To pay Starcrest's share of OPL291 exploration and development costs which will be reimbursed to Addax petroleum from Starcrest's share of production revenues from OPL291.

The signature bonus and farm-in fee have been paid in instalments in September and October 2006 and have been capitalised.

On November 10, 2006, the Board of Directors approved a dividend to shareholders of record on November 30, 2006 in the amount of CDN \$0.05 per common share to be paid on December 14, 2006.

SHAREHOLDERS EQUITY AND OUTSTANDING SHARE DATA

Outstanding Share Data (millions)	Three Months ended		30 Sep 2005	Nine Months ended	
	30 Sep 2006	30 Jun 2006		30 Sep 2006	30 Sep 2005
Common Shares Outstanding					
Beginning of period	140.1	140.1	117.0	117.0	117.0
Issued	15.0	--	--	38.1	--
End of period	155.1	140.1	117.0	155.1	117.0
Weighted Average Common Shares Outstanding	148.0	140.1	117.0	138.8	117.0

As at September 30, 2006 Addax Petroleum had no stock options or any other security convertible into common shares.

On September 6, 2006 Addax Petroleum completed a second public offering. This offering and the over-allotment option which was exercised resulted in 14,750,000 common shares being issued. This issuance was preceded by the distribution of subscription receipts in August 2006. Holders of subscription receipts exchanged these for common shares on the completion date.

This transaction was used to part fund the acquisition of the PanAfrican companies and has been discussed in more detail in the Liquidity and Capital Resource section of this report.

On August 1, 2006, the Board of Directors approved a dividend to shareholders on record on August 24, 2006 of the amount of CDN \$0.05 per common share to be paid on September 14, 2006. Holders of subscription receipts on the record date and the over allotment holders were entitled to receive the dividend for each subscription receipt held.

On August 1, 2006, 12,425 common shares were issued to directors for fees for services in lieu of cash. The fair value of the common shares issued was \$321,390, based on the trading price of the common shares on the date of issue. This cost has been included in directors' fees in the income statement.

On August 31, 2006, Addax Petroleum awarded 599,097 common shares to current employees and directors as part of a new management compensation plan. These share vest as follows: one third on the grant date, one third one year after the grant date and one third two years after the grant date. The fair value of the common shares granted was \$14,630,937, based on the trading price of the common shares on the date of grant, and is amortized over the vesting period.

The public offerings during 2006 have diluted the holding of AOG and as at September 30, 2006, it's interest in Addax Petroleum stood at 41.56%. Although AOG no longer have majority control over Addax Petroleum, they remain the largest shareholder.

CRITICAL ACCOUNTING ESTIMATES

In the preparation of Addax Petroleum's financial statements, management is required to use judgements, assumptions and estimates in the application of generally accepted accounting policies which has an impact on the financial results of Addax Petroleum. These estimates and assumptions are based on the best available information at the time, but may change due to new events and additional information giving rise to changes in the estimates over time. Note 1 of Addax Petroleum's consolidated financial statements for the year ended December 31, 2005 explains the significant financial accounting policies used by Addax Petroleum.

The financial and operating results of Addax Petroleum utilise certain estimates including:

- Estimated oil reserves are used in calculations for the depletion of oil assets and the future life of Addax Petroleum's properties
- Estimated future cash flows to assess if Addax Petroleum's investments and properties require impairment
- Asset retirement obligations are assessed using estimated of future costs of site restoration

Addax Petroleum ensures that these estimates are made by people with the necessary skills and that they have access to all available information including operation and financial data and industry best practice standards. In addition past estimates are compared to actual results in order to made more informed decision on future estimates.

Since the December 31, 2005 annual report Addax Petroleum has adopted accounting policies that require additional accounting estimates. Please refer to Note 2 our interim financial statements.

TRANSACTIONS WITH RELATED PARTIES

Addax Petroleum has entered into no new transactions with related parties during this quarter. The ongoing transactions with AOG remain as noted below:

- Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement (collectively defined as the "Crude Oil Supply Agreements");
- Management Services Agreement;
- Bunkering Agreement;
- Agreement for Services of Jean Claude Gandur, effective January 1, 2006 between APS and AOG;
- Trademark Agreement;
- Non-Competition Agreement; and
- Share Transfer Agreement between a subsidiary of AOG and Addax Petroleum.

The following transactions took place between Addax Petroleum and AOG and its other subsidiary companies (as discussed further in Note 11 to the September 30, 2006 financial statements):

Significant Related Party Transactions (\$millions)	Three Months ended		Nine Months		
	30 Sep 2006	30 Jun 2006	30 Sep 2005	30 Sep 2006	30 Sep 2005
Sales to Addax B.V.	370.1	352.7	278.4	899.8	514.6

An amount of \$720,000 is included in the income statement for the period for directors' compensation of which \$155,000 has been paid in cash, and \$321,390 has been paid in common shares of Addax Petroleum, the remaining balance has not yet been paid.

All transactions with related parties are as set out in the individual agreements that are regularly reviewed by Addax Petroleum's management.

Crude Oil Supply Agreements

Addax B.V. ("ABV"), which is a subsidiary of AOG, is the sole marketer of Addax Petroleum's crude oil production under the Crude Oil Supply Agreements. All crude oil produced from OML123/124 and OML126 is sold to ABV on the same terms and conditions as with ABV's non-related customers. Some crude oil from Remboué field (acquired as part of the PanAfrican acquisition) is also sold to ABV. This is a continuation of trading prior to the PanAfrican acquisition and is on a non-related customer basis.

SUMMARY OF QUARTERLY RESULTS

The following is a summary of quarterly results for Addax Petroleum for the eight most recently completed quarters.

Summary of Quarterly Results (\$ million unless otherwise stated)	2006				2005		2004	
	Q3	Q2	Q1	Q4	Q3	Q2	Q1	Q4
Petroleum Sales before Royalties	583.9	522.4	394.2	378.5	385.7	257.8	197.1	156.4
Funds Flow From Operations	244.5	195.7	174.3	146.0	163.2	89.1	69.9	52.6
FFFO per share (\$/share)	1.65	1.40	1.24	1.25	1.40	0.76	0.60	0.45
Net Income	75.2	57.9	56.5	38.1	85.6	53.5	28.9	21.3
Earnings per share (\$/share)	0.51	0.41	0.44	0.33	0.73	0.46	0.25	0.18
Weighted average common shares outstanding (millions)	148.0	140.1	140.1	117.0	117.0	117.0	117.0	117.0
Capital Expenditures, net of dispositions	214.1	229.2	245.5	105.4	117.0	69.4	89.7	125.1
Average working interest gross oil production (mmbbls/day):								
Nigeria	89.1	79.9	80.4	74.8	74.2	62.3	49.3	42.8
Gabon	2.4	--	--	--	--	--	--	--
Total	91.5	79.9	80.4	74.8	74.2	62.3	49.3	42.8

The general upward trend over the eight quarters of increasing petroleum sales has resulted from a combination of increased production from OML123, increasing production from the commencement of sales from OML126 in Q2, 2005 and increasing crude oil prices throughout the period.

The general upward trend of increasing net income over the eight quarters is due to increasing petroleum sales, partially offset by increasing operating costs, DD&A and taxes. In Q2 and Q3 2005, Addax Petroleum benefited from tax incentives in OML126. From Q4 2006 onwards, Addax Petroleum no longer benefits from the tax incentives. Offsetting the increase in sales which in turn increased the net income, were increases in expenses for operating costs due to rate increases by oil service companies, DD&A increases due to additional production, increases in taxes and royalties due to increase income, and increases in G&A and share based compensation due to Addax Petroleum becoming a publicly quoted company in Q1 2006.

FORM 52-109F2
CERTIFICATION OF INTERIM FILINGS

I, **JEAN CLAUDE GANDUR**, Chief Executive Officer of **ADDAX PETROLEUM CORPORATION**, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of Addax Petroleum Corporation (the issuer) for the interim period ending June 30, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared.

Addax Petroleum Corporation

Management's Discussion and Analysis

For the three and six months ended June 30, 2006

MANAGEMENT'S DISCUSSION AND ANALYSIS
(amounts presented are in United States dollars unless otherwise indicated)

Addax Petroleum Corporation was incorporated under the Canada Business Corporations Act on September 6, 2005 as a wholly owned subsidiary of The Addax and Oryx Group Ltd. ("AOG") for the purpose of acquiring all of the issued and outstanding common shares of Addax Petroleum N.V., another wholly owned subsidiary of AOG, in connection with the initial public offering of the common shares of Addax Petroleum Corporation (the "IPO").

On February 16, 2006 Addax Petroleum Corporation completed its initial public offering of 21 million common shares and on February 24, 2006 it completed the issuance of an additional 2.1 million common shares upon the exercise of an over-allotment option granted to the underwriters by Addax Petroleum Corporation in connection with the IPO.

The aggregate gross proceeds from the issuance of common shares pursuant to the IPO and exercise of the over-allotment option was CDN\$ 450,450,000. Prior to the completion of the IPO, Addax Petroleum Corporation acquired all of the issued and outstanding common shares of Addax Petroleum N.V. from Addax Mining Holdings BV for cash consideration of CDN\$ 55,575,000 and 117,000,000 common shares of Addax Petroleum Corporation. As AOG controls both Addax Petroleum Corporation and Addax Petroleum N.V., the transaction occurred between entities under common control and was accounted in the books of Addax Petroleum Corporation as a continuity of interests. Under this form of purchase accounting, Addax Petroleum Corporation is deemed to have acquired Addax Petroleum N.V. at book value. Subsequent to the acquisition, Addax Petroleum Corporation's financial statements, presented for comparative purposes, reflect the financial position, results of operations and cash flows as if Addax Petroleum Corporation and Addax Petroleum N.V. had been combined since the inception of Addax Petroleum N.V.

Additional information relating to Addax Petroleum Corporation can be found on SEDAR at www.sedar.com.

The following Management's Discussion and Analysis of Addax Petroleum Corporation (the "Corporation") should be read in conjunction with the Corporation's interim consolidated financial statements as at June 30, 2006 and for the three and six month periods ended June 30, 2006 and 2005 together with the notes thereto and the consolidated financial statements of Addax Petroleum N.V. as at and for the year ended December 31, 2005 together with the notes thereto and related Management's Discussion and Analysis. The consolidated financial statements presented herein are those of Addax Petroleum Corporation and its subsidiaries.

Certain statements in this report constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results, results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires the Corporation to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and

uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to: imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of the Corporation. More specifically, production may be affected by such factors as exploration success, startup timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by the Corporation with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this quarterly report is made as of the date of this report and, except as required by applicable law, the Corporation does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this report is expressly qualified by this cautionary statement.

The Corporation defines "Cash Flow From Operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Readers are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

For the purpose of the following discussion and analysis, figures expressed on a per barrel basis are derived using sales volumes rather than production.

117,000,000 shares of APC were given to AOG for APC to acquire Addax Petroleum N.V. Therefore for calculating earnings per share, it is assumed that, prior to the Initial Public Offering on February 2006, there were 117,000,000 shares of APC held by AOG.

There are no diluted shares and there are no off balance sheet transactions.

Except as otherwise indicated, certain defined words and terms used herein have the meaning set forth in the Corporation's Annual Information Form dated March 28, 2006.

This MD&A is dated August 1, 2006.

SUMMARY

The Corporation's sales figures are reported gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Inventory held at the beginning of period is included in sales during the period together with the related costs.

The Corporation currently produces and sells crude oil from 3 streams in Nigeria; Antan (OML123), Brass (OML124) and Okwori (OPL90). The document will refer to OML123, OML124 and OPL90.

During the quarter ended June 30, 2006, the Corporation brought 3 new wells on-stream (4 wells in the first quarter of 2006). These wells were in both OML123 and OPL90. Total average daily production for the six months ended June 30, 2006 amounted to 80,132 bbls/d in comparison to 55,860 bbls/d during the same period in 2005.

The Corporation's total crude oil production for the six month period ended June 30, 2006 was 9.3 mmbbls from OML123, 0.6 mmbbls from OML124, and 4.6 mmbbls from OPL90, as compared with 8.1 mmbbls from OML123, 0.6 mmbbls from OML124 and 1.4 mmbbls from OPL90 for the same period in 2005.

In March 2006, APC entered into three Production Sharing Contracts ("PSC's") with the Joint Development Authority (JDA). The JDA administers the Joint Development Zone (JDZ) between Nigeria and Sao Tome Principe. The three blocks awarded were JDZ 4 (APC as operator with a share of 33.3%), JDZ 3 (APC non-operated share of 15%) and JDZ 2 (APC non-operated share of 14.33%). During the second quarter, the Corporation purchased a further 5% of JDZ 4 to increase its share in this block to 38.3%.

In June 2006, the Nigerian government approved a 40% assignment of the Okwok property to the Corporation. Okwok lies directly to the south of OML123.

Net income increased to \$114.4 million for the six month period ended June 30, 2006 from \$82.4 million for the same period in 2005.

Net income in the second quarter of 2006 includes a stock based compensation award of \$12.6 million for 1,000,000 shares which have been awarded by AOG to current employees and directors of the Corporation for past and future service. Once accepted by the employees, the shares will vest over a three year period. Some of the shares vest immediately. As required by GAAP, the Corporation has recorded the award based on the fair value of the vested shares at grant date and will amortize the remaining share awards over the two year vesting period.

Per common share (\$)	1.40	1.36	0.76	2.76	1.36
Capex, net of dispositions (million)	229.2	245.5	69.4	474.7	159.1
<i>Net Income / Revenue</i>	11.1%	14.3%	20.7%	12.5%	18.1%

Note:

- 2006 per share amounts for quarters 1 and 2 of 2006 are calculated on a basis of 127,850,100 and 140,100,100 Common Shares, respectively, and for the six months ended June 30, 2006, per share amounts are calculated on the basis of 134,008,940 common shares of Addax Petroleum Corporation.

- 2005 per share amounts are calculated on the basis of 117,000,000 Common Shares of Addax Petroleum N.V.

For the six months ended June 30, 2006, the Corporation recorded a net income of \$114.4 million compared to a net income of \$82.4 million for the same period in 2005. For the second quarter of 2006, the Corporation reported net income of \$57.9 million compared to net income of \$53.5 million in the second quarter of 2005.

Cash Flow From Operations for the six months ended June 30, 2006 increased by 133% to \$370.0 million from \$159.0 million for the comparable period in 2005. Cash flow from operations for the second quarter of 2006 increased to \$195.7 million, up 120% from \$89.1 million for the second quarter of 2005 and up 12% from \$174.3 million in the first quarter of 2006.

The major reasons for the increase in revenue and cash flow from operations for the period ended June 30, 2006 were the increased oil prices, and increased production from OPL90 and OML123. These increases were partly offset by increases in taxes, royalties, operating expenses, general and administrative expenses, depletion and other expenses.

SELECTED OPERATING INFORMATION OPERATING HIGHLIGHTS

(\$/bbl) except daily production and sales in number of barrels	<u>Three Months Ended</u>			<u>Six Months Ended</u>

(1) Including any overlift adjustment

(2) Total petroleum sales (overlift included) divided by the number of barrels sold (overlift included)

The volume of daily sales has increased significantly in the six month period ended June 30, 2006 compared to the same period for 2005. The 2006 daily sales volumes for the period ended June 30, 2006 amounted to 79,190 bbls/d compared to 54,006 bbls/day for the same period in 2005. Daily sales volumes for the quarter ended June 30, 2006 were 84,607 bbls/day compared to 73,713 bbls/d for the first quarter of 2006 and 58,736 bbls/d for the second quarter of 2005. This increase is mainly due to the production from OPL90 for which the first lifting occurred in June 2005, and from OML123 due to additional development wells being brought into production.

The average sales price increased 37% to average \$63.95 per bbl for the six months ended June 30, 2006 up from \$46.53 per bbl for the same period in 2005, and increased 41% to average \$67.85 per bbl in the second quarter of 2006, up from \$48.23 per bbl for the same period of 2005. The increase between the six month periods is due to the increase in the Dated Brent Benchmark Price which increased by 33%.

Royalties per barrel have increased by 43% for the six months ended June 30, 2006 compared to the same period for 2005 and have increased 58% in the second quarter of 2006 compared to the same period for 2005. The increase is due to higher revenues.

Operating expenses per barrel have increased by 7% for the six months ended June 30, 2006 compared to the same period for 2005. This is primarily due to upward cost pressure from high demand for oil services.

As a result, the netback has increased by 43% from \$31.94 per barrel for the six months ended June 30, 2005 to \$45.51 per barrel for the same period in 2006.

Daily Royalties (bbl)	(3'533)	(3'574)	(724)	(3'687)	(364)
Daily Production Net of Royalties (bbl)	20'757	23'085	13'296	21'781	7'104

The daily production has increased by 43% to 80,131 bbls/d for the six months ended June 30, 2006 from 55,859 bbls/d for the comparable period in 2005. The increase in production is mainly due to the Corporation's extensive capital investment in 2006 which has resulted in record levels of production.

In OML123, the daily production has increased by 14% from 44,930 bbls/d for the six months ended June 30, 2005 to 51,136 bbls/d for the six months ended June 30, 2006. 2006 second quarter production increased by 7,019 bbls/d or 15% compared to the second quarter of 2005. Five new production wells have been added to this block in the six month period ended June 30, 2006 (2 wells added in Q2 2006).

In OML124, the daily production has increased by 2% from 3,461 bbls/d for the six months ended June 30, 2005 to 3,527 bbls/d for the same period in 2006. Q2 2006 daily production increased 8% or 288 bbls/d compared to Q2 2005 production.

OPL90 commenced production in the first quarter of 2005, and has an average production for the six months ended June 30, 2006 of 25,468 bbls/d compared to 7,468 bbls/d for the same period of 2005. Q2 2006 production totalled 24,290 bbls/d compared to 14,020 bbls/d for the same period in 2005. As at June 30, 2006, 8 wells were producing (June 30 2005: 4 wells). One new production well has been added to this block at the end of Q2 2006. The reduction of 2,369 bbl/d to 24,290 bbls/d in the second quarter of 2006 from 26,659 bbls/d in the first quarter of 2006 was due to a shut-in on the FPSO in the second quarter when four mini-manifolds were lifted and installed onto the FPSO.

The production split has changed with the continuing increase in production in OPL90. For the six month period ended June 30, 2005, the number of barrels produced in OML123

accounted for 81% of the total barrels produced, the other 19% being from OML124 (7%) and OPL90 (12%). For the six month period ended June 30, 2006, barrels of production progressed as follows: OML123 accounted for 64%; OML124 accounted for 5%; and OPL90 accounted for 31% of the total production.

CRUDE OIL PRICES

The selling price for each area is based on the Dated Brent Benchmark Price plus a premium or a discount which depends on the quality of the crude oil.

(\$/barrel)	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Average Dated Brent Benchmark Price	69.62	61.75	51.59	65.69	49.55
OML123					
Average Discount	(3.16)	(4.90)	(3.97)	(3.97)	(4.29)
Average Price	66.09	57.14	47.52	62.10	45.14
% of total lifting	62.49%	64.03%	76.21%	63.20%	83.94%
OML124					
Average Premium	1.32	0.90	0.18	1.18	0.16
Average Price	71.33	62.81	51.51	68.56	50.33
% of total lifting	4.42%	2.80%	6.16%	3.67%	6.41%
OPL90					
Average Premium	0.87	1.91	2.47	1.14	2.47
Average Price	70.16	63.56	56.88	67.02	56.88
% of total lifting	33.09%	33.17%	17.63%	33.13%	9.65%

Note:

Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.

Geopolitical issues, continued demand and refinery constraints have seen oil prices continue to rise in 2006. The average dated Brent Benchmark Price has increased to an average price of \$65.69 per barrel for the six months ended June 30, 2006 from an average price of \$49.55 per barrel in the comparable period in 2005 up \$16.14/bbl or 33% on the same period a year ago.

The crude oil lifted from OML123 was sold with an average discount of \$3.97 per barrel for the six months ended June 30, 2006 (\$4.29 per barrel in the six months ended June 30, 2005) against the weighted average dated Brent benchmark price. This accounts for an average discount of 6% in comparison to Brent. Q2 2006 sales averaged a discount of \$3.16 or 5% compared to \$3.97 or 8% for the same period in 2005.

The average premium applied on the crude oil lifted from OML124 is \$1.18 per barrel in the six months ended June 30, 2006 in comparison to \$0.16 per barrel in the six months ended June 30, 2005. For the second quarter of 2006, there was an average premium on crude oil lifted from OML124 of \$1.32 compared to \$0.18 premium for the same period in 2005.

The average premium per barrel applied on the crude oil lifted from OPL90 for the six months ended June 30, 2006 is \$1.14 (\$2.47 in 2005). The average price is \$67.02 (\$56.88 in 2005). 33% of the barrels lifted in six months ended June 2006 were from OPL90 compared to 10% for the same period in 2005. The average premium applied on crude lifted from OPL90 for the second quarter of 2006 is \$0.87 (\$2.47 in 2005) whilst the average price is \$70.16 (\$56.88 in 2005).

PETROLEUM SALES

Petroleum sales are reported on the basis of production volumes sold gross of Royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Any overlifts are accounted for as deferred income in the balance sheet.

The table below summarises the Petroleum Sales.

Petroleum sales in \$ million	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
OML123	319.9	242.7	187.6	562.6	370.4
OML124	24.2	11.6	16.5	35.8	30.8
OPL90	178.3	139.9	53.7	318.2	53.7
TOTAL SALES	522.4	394.2	257.8	916.6	454.9

The petroleum sales have increased by 101% for the six month period ended June 30, 2006 in comparison to the same period in 2005. Petroleum sales in the second quarter of 2006 rose 103% compared to the second quarter of 2005. Petroleum sales include liftings from OML123, OML124 and OPL90 (OPL90 liftings began in the second quarter of 2005).

Petroleum sales from OML123 for the six month period ended June 30, 2006 account for 61% of the total (81% for the same period in 2005). Petroleum sales from OML124 account for 4% of the total (7% in 2005). Petroleum sales from OPL90 account for 35% (12 % in 2005) of total of revenue. Q2 2006 sales for OML123 account for 61% of total petroleum sales (73% in 2005); for OML124 5% of total petroleum sales (6% in 2005); and for OPL90 34% of total petroleum sales (21% in 2005).

The increase in petroleum sales in OML123 (52% between the six months ended June 30, 2006 and same period for 2005) from \$370.4 million to \$562.5 million is due mostly to the increase in market prices. The impact of the increase in price is \$153.6 million whereas the impact of the increase in production is \$38.5 million.

In OML124, the increase in petroleum sales by 16% from \$30.8 million to \$35.8 million is due to the increase in the sales price. The impact of the increase in price is \$9.6 million whereas the impact of the decrease in production is \$4.6 million.

In OPL90, the first liftings occurred in June 2005. The revenue of \$318.2 million is mostly generated by this new production.

ECONOMIC SENSITIVITIES

The following table shows the estimated after-tax effect that changes to crude oil prices, crude oil production and operating costs would have had on the Corporation's net income for the six months ended June 30, 2006, had these changes occurred on January 1, 2006. These calculations are based on business conditions, production and sales volumes existing for Q2 2006. The 1,000 bbls/d increase has been allocated equally between OML123/OML124 and OPL90.

<u>Factor</u>	<u>Change (+)</u>	<u>Net Income Impact</u> (\$million)	<u>Net Income Impact</u> (\$/share)
Price received for crude oil	\$1.00/bbl	2.8	0.02
Crude oil production	1,000 bbls/d	2.9	0.02
Increase in operating costs	10%	(2.4)	(0.02)

The impact of the above changes may be compounded or offset by changes to other business conditions. In addition, the table does not consider the relationships between the above factors.

ROYALTIES

Royalties are comprised of NNPC Profit Oil, Education Tax, Royalty Oil, Niger Delta Development Corporation (NDDC) levy and the Cost Penalty Arrangement (CPA). Royalties are determined in accordance with the applicable PSC.

Cost Penalty Arrangement	0.34	0.57	0.00	0.45	0.00
Total Royalties	11.69	11.05	7.40	11.41	7.97

Royalties for crude oil lifted from OML 123 and OML 124 for the three and six months ended June 30, 2006 increased from comparable periods in 2005 primarily due to higher benchmark prices and a significant increase in production.

Royalties for crude oil lifted from OML123 and OML124 have increased by 64% from \$74.2 million (\$7.59 per barrel) to \$121.4 million (\$8.47 per barrel). The Royalties for crude oil

lifted from OPL90 are \$41.9 million (\$2.94 per barrel) compared to \$3.7 million in the quarter ended June 30, 2005.

Royalty Oil from OML123 and OML124 increased by 33% from \$31.6 million (\$3.23 per barrel) in the quarter ended June 30, 2005 to \$41.9 million (\$2.92 per barrel) in the quarter ended June 30, 2006. Royalty Oil is levied on petroleum sales, with the percentage of Royalty Oil increasing with production. Royalty Oil has increased due to a combination of increased production and higher benchmark crude oil prices in Q2 2006 compared to Q2 2005. OPL90 Royalty Oil for the six months ended June 30, 2006 is \$14.1 million (\$0.98 per barrel) compared to \$1.7 million in the six months ended June 30, 2005.

Profit Oil in OML123/124 is up 75% from \$33.6 million in the second quarter of 2005 (\$3.44 per barrel) to \$58.7 million (\$4.06 per barrel) in the same period of 2006. The increase is due to the increase of 69% in revenues in OML123 and OML124. Profit Oil in OPL90 for the six months ended June 30, 2006 amounted to \$18.2 million compared to nil the same period in 2005. In the second quarter of 2005, OPL90 enjoyed significant tax deductions, resulting in nil profit oil.

OPERATING EXPENSES

The operating expenses presented below include costs relating to OML123/124 and to OPL90.

Operating Expenses in \$ million	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
OML123/124	36.9	35.7	31.1	72.6	56.2
OPL90	17.0	11.6	8.6	28.6	8.6
Total Producing Assets	53.9	47.3	39.7	101.2	64.8
\$/bbl lifted	6.99	7.13	7.33	7.05	6.57
\$/bbl lifted in OML 123-124	7.17	8.05	7.07	7.58	6.36
\$/bbl lifted in OPL90	6.64	5.26	8.56	6.00	8.56

There is a continuing upward pressure on operating costs due to high demand for oil services. The Corporation continues to mitigate this upward pressure through a number of methods such as using competitive bidding procedures and awarding long term contracts, but with crude oil continuing at its historic highs, continual upward cost pressure is expected.

Operating costs for the three and six months ended June 30, 2006 increased from the comparable periods in 2005. The increase is principally due to the coming on stream of OPL90, to one off employee payments made for OML123/124 and to higher service costs resulting from the increase in industry wide activity in reaction to higher crude oil prices.

The operating costs in OML123/124 have increased by 29% (\$16.4 million) from \$56.2 million to \$72.6 million and from \$6.57 per barrel in the six months ended June 30, 2005 to \$7.05 per barrel in the same period of 2006.

For OML123/124, the increase in operating costs for the six months to June 30, 2006 compared to the same period in 2005 is mainly due to a \$4.5 million increase relating to a special bonus and allowances paid to the Nigerian staff following union negotiations, an increase in vessel costs of \$7.1 million including a settlement of a contract relating to the period from April 2004 to March 2006 (increase of \$3.6 million), and an increase in FPSO costs of \$2.5 million.

For OPL90, total operating costs for the six months ended June 30, 2006 were \$28.6 million which mainly relates to costs related to the floating production storage and offloading vessel ("FPSO") (\$18.4 million). The increase in operating costs for Q2 2006 compared to Q1 2006 were due to an increase in FPSO costs of \$3.4 million including \$2.0 million of agreed variation orders relating to the modification of the FPSO, and a \$0.4 million increase in chartered ships and helicopters.

GENERAL AND ADMINISTRATIVE EXPENSES

General and administrative charges relate to corporate costs.

\$million except per bbl amounts	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Corporate costs (million)	5.5	3.3	2.5	8.8	4.0
Corporate costs (per barrel)	0.76	0.50	0.44	0.61	0.40

Corporate costs have increased by 120% to \$8.8 million in the quarter ended June 30, 2006 compared from \$4.0 million in the quarter ended June 30, 2005. The main reason for the increase is additional employees resulting from expansion activities within the commercial and finance departments in the Geneva office working specifically on corporate activities.

PRE-ACQUISITION EXPENSES

Included in pre-acquisition expenses are costs related to the Corporation's New Venture activity. Related expenditures are charged to the income statement pending finalization of the Corporation's rights to a license. These costs can include seismic purchases, studies (in house and external) and consulting.

\$million except per bbl amounts	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Taq Taq Operating Costs	0.6	7.7	0.0	8.3	0.0
New Venture Costs - Nigeria	1.7	2.6	0.0	4.3	0.0
New Venture Costs - Other	2.1	1.6	1.3	3.7	2.5
Total Pre-acquisition costs	4.4	11.9	1.3	16.3	2.5

The reason for the increase from June 30, 2005 to June 30, 2006 is due to the Corporation aggressively seeking new opportunities in its core areas.

Total Taq Taq costs incurred in the six months period ended June 30, 2006 totalled \$8.3 million. This mainly comprises the field set up and support costs, together with final 2D seismic expenditure. From the second quarter of 2006, the capital costs relating to Taq Taq have been capitalized. Prior to this they have been expensed. There are a small amount of operating expenses which have been charged to pre-acquisition expenses as no revenue is generated from Taq Taq.

The New Venture costs have increased by \$1.2 million from \$2.5 million in the six months ended June 30, 2005 to \$3.7 million in the six months ended June 30, 2006. The Corporation is continuing to increase its new venture activity in 2006, including the establishment of a New Ventures – Nigeria department.

Nigeria New Venture costs decreased from \$2.6 million in Q1 to \$1.7 million in Q2 2006 due to a successful acquisition in Q2 of Okwok. Costs relating to this project in Q2 have thus been capitalized whereas in Q1 \$0.8 million in relation to it was expensed.

SHARE-BASED COMPENSATION

Share-based compensation relates to share awards to employees and directors of the Corporation. These awards can be granted immediately or over a three year period.

Smillion except per bbl amounts	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Share based compensation (million)	12.6	0.0	0.0	12.6	0.0
Share (earnings per share)	0.09	0.0	0.0	0.09	0.0

AOG has awarded 1,000,000 common shares of the Corporation to current employees and directors during the second quarter of the year. The grant date of the shares was June 30, 2006. The shares vest as follows: 468,700 shares immediately; 265,650 shares on January 31, 2007; and 265,650 shares on January 31, 2008. The fair value of the common shares granted of \$26,852,702 is expensed over the vesting period. The earnings per share of this award is \$0.09 per share.

OTHER

Interest and debt commitment fees directly attributable to development activities are capitalized to the respective cost pools and amortized on a unit of production basis with the cost pool to which it relates.

(\$ million)	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Long term debt	0.0	0.0	83.8	0.0	183.8
Interest	0.6	1.2	0.2	1.8	0.2
Other finance charge	0.2	0.1	0.0	0.3	0.1
Foreign Exchange (Gain)/Loss	(1.3)	(0.4)	1.5	(1.7)	1.5
Other Income	(2.3)	(1.2)	(0.3)	(3.5)	(0.9)
Total	(2.8)	(0.3)	1.4	(3.1)	1.0

Other income has increased from \$0.9 million in the six months ended June 30, 2005 to \$3.5 million for the same period in 2006. The increase is mainly related to an increase in interest income, which totalled \$1.8 million for the six months ended June 30, 2006 mostly generated from cash received from the Initial Public Offering completed in February 2006.

The Corporation utilizes various financial instruments to manage its commodity prices, foreign currency and interest rate exposures. These financial instruments are not used for trading or speculative purposes. Currently the Corporation holds a foreign exchange forward contract to manage its exposure to foreign currency risk with respect to the Swiss franc against the US dollar. There are no liquidity risks associated with this instrument. Gains or losses on foreign exchange forward contracts are included in other interest and finance charges. The Corporation has no immediate plans to put in place other hedges or financial instruments.

DEPLETION, DEPRECIATION AND ACCRETION (DD&A)

(\$ million)	Three Months Ended			Six Months Ended	
	Jun.30 2006	Mar.31 2006	Jun.30 2005	Jun.30 2006	Jun.30 2005
Nigeria	64.0	56.6	35.7	120.7	56.3
Corporate	0.2	0.2	0.3	0.4	0.5
	64.2	56.8	36.0	121.1	56.8
Unwinding	0.6	0.6	0.8	1.1	1.0
Total depletion	64.8	57.4	36.8	122.2	57.8

The costs of oil and natural gas properties are depleted on a unit-of-production basis, based on the Corporation's share of gross estimated proved reserves. The proved reserves utilized to compute DD&A for the quarter were based on the internal estimate of proved reserves at December 2005 and adjusted for any additions or deletions. The Corporation used a proved reserve estimate of 121.3 million barrels as at June 30, 2006. The proved reserve figure used in calculating DD&A includes upward adjustments of 22.9mmbbls compared to the reserve base as at December 31, 2005 due to increases in proved reserves in Okwori, Nda, Adanga North, Adanga South and North Oron during the first 2 quarters of 2006.

The increase in DD&A from \$56.8 million in the six month period ended June 30, 2005 to \$121.1 million for the same period of 2006 is mainly due to the inclusion of approximately \$37.9 million of OPL90 DD&A for the six month period ended June 30, 2006 (\$19.7 for the same period of 2006), and the increase in OML123 production.

CURRENT INCOME TAXES

(\$ million)	<u>Three Months Ended</u>			<u>Six Months Ended</u>	
	Jun.30	Mar.31	Jun.30	Jun.30	Jun.30
	2006	2006	2005	2006	2005
OML123/124	131.2	76.7	74.5	207.8	148.9
OPL90	44.6	7.3	0.0	52.0	0.0
Other	0.1	0.1	0.4	0.2	0.6
Current Income Taxes	175.9	84.1	74.9	260.0	149.5

Current income taxes have increased by \$110.5 million (74%) from \$149.5 million in the six months ended June 30, 2005 to \$260.0 million in the six months ended June 30, 2006.

The overall increase in taxes in OML 123/124 is a result of the increase in revenues during the period.

Taxes for OPL 90 have increased due to restrictions on accessing capital allowances. This is due to the regulations of the Nigerian fiscal code.

In the second quarter of 2005 OPL90 enjoyed significant tax deductions, resulting in zero current tax.

The "other taxes" represent local income tax due by the Geneva Branch of Addax Petroleum Services, a subsidiary of the Corporation.

FUTURE INCOME TAXES

(\$ million)	<u>Three Months Ended</u>			<u>Six Months Ended</u>	
	Jun.30	Mar.31	Jun.30	Jun.30	Jun.30
	2006	2006	2005	2006	2005
OML123/124	10.5	12.8	8.1	23.3	15.1
OPL90	49.7	47.9	0.0	97.6	0.0
Other	0.0	0.0	0.0	0.0	0.0
Future Income Taxes	60.2	60.7	8.1	120.9	15.1

Future income taxes for OML123/124 increased by \$8.2 million (54%) to \$23.3 million in six months ended June 30, 2006 from \$15.1 million in the quarter ended June 30, 2005.

Future income taxes for OPL90 were \$97.6 million in the six months ended June 30, 2006 compared to nil in the same period of 2005. The significant increase in future income taxes for OPL90 is directly a result of the usage of tax allowances compared to the corresponding period in 2005.

Total	229.2	245.5	69.4	474.7	159.1

There is a continuing upward pressure on capital expenditures due to high demand for oil services especially for drilling rigs. The Corporation continues to mitigate this upward pressure such as using competitive bidding procedures bidding on long term contracts, but with crude oil continuing at its historic highs, continual upward cost pressure is expected.

Total capital expenditures have increased by 198 % from \$159.1million for the six months in 2005 to \$474.7 million for the six months in 2006 with quarter two increased by 230% from \$69.4 million in quarter two 2005 to \$229.2million in quarter two 2006. This is mainly due to new assets in three JDZ Blocks, Okwok and Taq Taq, Nda development, the OML123 FPSO replacement and the increase of the number of drilling rigs operating for the Corporation from two in 2005 to four at June 30, 2006.

For the first six months of 2006, total capital expenditures on OML123 and OML124 were \$135.9 million compared to \$47.3 million for the six months of 2005. Drilling costs were \$63.4 million which comprised \$7.5million of OML124 and \$47.6 million of OML123 appraisal and development wells. OML124 commenced drilling in quarter two 2006. There was an exploration well which was completed in quarter one 2006 for \$8.3million which was a non-commercial discovery. Facilities costs totalled \$65.6 million on OML123 and OML124, comprising \$55.5 million for the OML123 FPSO replacement, the project commencing during quarter three 2005, and \$4.7 million for Adanga North extended well test which commenced in

quarter four 2005. OML124 oil facilities expenditure was \$2.1million. Other capital expenditures on OML123 and OML124 were \$6.9 million including capitalized studies of \$3.9 million, capitalized seismic costs of \$0.4 million and \$2.6 million of office capital expenditure.

For the first six months of 2006, total capital expenditures on OPL90 and OPL225 were \$168.1 million compared to \$107.9 million for six months of 2005. Capital expenditures on OPL90 included \$82.1million for the appraisal and initial development of the Nda field, which commenced development in the third quarter 2005, and \$70.8 million for development, facilities and drilling costs on the Okwori property. The other costs of \$15.2 million are primarily capitalized seismic acquisition costs of \$8.9 million on OPL225 which commenced in the fourth quarter of 2005 and an Okporo exploration well in second quarter 2006.

Capital expenditures of \$6.6 million in Cameroon for first six months 2006 are primarily related to the acquisition of 3D seismic data which began in the fourth quarter of 2005.

Capital expenditures of \$101.5 million in the Joint Development Zone Blocks for first six months 2006 are mainly related to signature bonus payments and farm in fees for the JDZ Block 2 (\$18.8 million), Block 3 (\$12.9 million) and Block 4 (\$69.8 million).

Okwok incurred costs in the third quarter of \$39.4 million including \$35 million Farm-in fees. The Corporation farmed-in to 40% of the Okwok property, OML67 in Nigeria June 2006 but is carrying all the Capex to production. Okwok costs commenced being capitalized for the first time in the second quarter of 2006.

In Northern Iraq the Taq Taq field began appraisal drilling which, including support costs, totalled \$11.1 million in in the second quarter of 2006. Addax has a Farm-in Agreement with Genel Enerji of Turkey for 30% interest in the Taq Taq field.

During the second quarter of 2006, costs relating to the Taq Taq field in northern Iraq were capitalized as the risks and rewards of ownership had been confirmed. Exploration and development activities in Iraq may be subject to economic and political considerations such as the risks of war, actions by terrorist or insurgent groups, community disturbances, expropriation, nationalization, renegotiation, forced change or nullification of existing contracts or royalty rates, unenforceability of contractual rights, adverse changes to laws (whether of general application or otherwise) or the interpretation thereof, and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction.

Other capital expenditures mainly relate to the acquisition of a rig for the Taq Taq field in Northern Iraq for \$8.8 million in the first quarter of 2006.

Major Capital Projects

There are two major capital projects on OPL90, the Okwori field development, and the Nda field development.

For the Okwori field development, the final two wells will be completed and tied in during June and July 2006. The capital costs inception to date are \$351.2 million, and the capital costs to

complete the project are forecast at \$60 million, including the gas export line for \$35 million for flares down compliance.

The Nda field development has currently 1 test well producing. In the first quarter the Nigerian authorities gave approval for the full development of the Nda project. An appraisal well was drilled Q4 2005 and three further development wells will be drilled in 2006 and brought on stream in the third and fourth quarters of 2006.

The Nda development capital costs inception to date are \$158.4 million, and the capital costs to complete the project are forecast to be \$42 million. It is planned to drill further appraisal wells in the greater Nda area following the Nda field development project.

On OML123, the replacement FPSO work is ongoing. It is anticipated that the replacement will be completed in the third quarter of 2006. Costs from inception to the end of June 2006 are \$77.3 million, and the capital costs to complete the project are forecast at \$23 million. These costs are for subsea pipelines and risers, FPSO moorings and topsides water injection package.

Okwok, Taq Taq and the three JDZ deep water blocks are still in the appraisal and exploration stages.

Outlook

The capital expenditure forecast for 2006 is 6% less than the MD&A as of December 2005. The capital expenditure forecast for JDZ 4 is \$77.3 million, JDZ 3 is \$15.9 million, and for JDZ 2 is \$21.4 million. The costs include signature bonuses, farm-in fees and technical studies. Okwok 2006 work programme is forecast at \$68.3 million, including 2 appraisal wells, in addition to the Farm-in fee. The capital expenditure on Taq Taq is expected to be \$30 million in the second half of 2006 for a further 2 appraisal wells and production facilities.

Total capital expenditures for the first six months were \$474.7 million, and for the following two quarters are forecasted to be: for the third quarter \$240 million; and for the fourth quarter \$230 million.

Average production for 2006 is forecasted to be 85,000 barrels per day, with a production rate by year end of 100,000 barrels per day.

Proposed Transactions

On July 20, 2006, the Corporation announced that it had agreed with the board of Directors of Pan-Ocean Energy Corporation Limited ("Pan-Ocean Energy") to acquire two of its wholly-owned subsidiaries, PanAfrican Energy Corporation (Mauritius) Ltd. ("PanAfrican") and Pan-Ocean Energy UK Ltd. (Pan-Ocean UK"), for CDN \$1.605 billion in cash. PanAfrican owns and operates an exploration, production and marketing business in Gabon, West Africa with management and operational services being provided by Pan-Ocean UK. Funding will be provided by a combination of internal cash resources and firm financing commitments from a syndicate of lenders.

The closing of the transaction, expected on or about September 7, 2006, is subject to three quarters majority vote of both the Class A and B shares of Pan-Ocean Energy to be held at the special meeting of shareholders of Pan-Ocean Energy on August 30, 2006 and approval of the Royal Court of Jersey.

On August 1, 2006, the Corporation filed a preliminary short form base PREP prospectus with the securities regulatory authorities in Canada relating to the distribution of up to 15,000,000 subscription receipts, each subscription receipt representing the right to receive one common share of the Corporation, without payment of additional consideration. The Corporation has also granted to the underwriters an over-allotment option in respect of up to 10% of the subscription receipts purchased exercisable at any time not later than 30 days after closing of the offering. The net proceeds of the offering will be used to fund a portion of the acquisition of PanAfrican and Pan-Ocean UK described above.

On August 1, 2006, the Board of Directors approved a dividend to shareholders of record on August 24, 2006 in the amount of CDN \$0.05 per common share to be paid on September 14, 2006. Holders of subscription receipts on the record date are entitled to receive the dividend for each subscription receipt held.

The Corporation is planning to buy a production unit which is currently leased to OML123. The technical review is ongoing. Assuming a positive result from the technical and commercial review, the unit will be bought in the third quarter of 2006 for approximately \$30 million including facilities and upgrade.

LIQUIDITY AND CAPITAL RESOURCES

Overview

The Corporation's principal source of liquidity has been cash generated from operating activities which has been supplemented as necessary by credit facilities and equity funds generated from the IPO to meet increased capital expenditures, primarily for the development of the Okwori property in OPL90 and expenditure relating to the JDZ blocks and the Taq Taq field. The Corporation has not experienced seasonal variations in its cash flows. Currently, the Corporation generates all of its cash from operating activities from its Nigerian subsidiaries. Provided applicable solvency and corporate requirements are satisfied, there are no legal or practical restrictions in Nigeria on the ability of the Corporation's Nigerian subsidiaries to transfer funds to the Corporation in the form of cash dividends, loans or advances. In addition, there are no contractual restrictions on such transfers of funds to the Corporation by its Nigerian subsidiaries.

The Corporation held total cash and cash equivalents of \$333.9 million as at June 30, 2006.

On February 16, 2006, the Corporation was listed on the Toronto Stock Exchange by way of an Initial Public Offering ("IPO"). Pursuant to the IPO, the Corporation raised \$355.1 million (CDN \$409.5 million) of which:

- \$17.6 million (CDN \$20.5 million) was used to pay expenses related to the IPO;

- \$48.2 million (CDN \$55.6 million) and 117,000,000 common shares of APC were paid to acquire all of the issued and outstanding common shares of Addax Petroleum N.V., previously held by AOG.

On February 24, 2006, an over-allotment option held by the underwriters was exercised yielding net proceeds of \$33.7 million (CDN \$38.9 million) (gross proceeds totalled \$35.5 million (CDN \$41.0 million)).

Total net proceeds from the IPO, the over-allotment option and the share purchase amounted to \$322.9 million (CDN \$372.4 million). Part of the proceeds were used to pay down the Corporation's debt. The balance of the proceeds will be used to fund the Corporation's ongoing capital expenditures.

The Corporation has a senior secured revolving credit facility with BNP Paribas as Mandated Lead Arranger and Standard Bank as Lead Arranger with a borrowing base of \$300.0 million. This facility expires on December 31, 2008. The borrowing base was initially set at \$100.0 million, and is re-determined semi-annually based on NSAI's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. As at June 30, 2006, all amounts drawn on the credit facility were reimbursed. The credit facility bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization on the first day of the interest period.

The following table summarizes the principal components of the corporation's consolidated cash flows for the periods indicated:

	<u>Three Months Ended</u>			<u>Six Months Ended</u>	
	Jun.30	Mar.31	Jun.30	Jun.30	Jun.30
<u>Net Cash Inflows (outflows) before movements in working capital (\$million)</u>	2006	2006	2005	2006	2005
Cash Flow from operations	195.7	174.3	89.1	370.0	159.0
Net cash flow used in investing activities	(225.7)	(102.4)	(69.3)	(328.1)	(159.1)
Net cash flow (used in) financing activities	0.0	192.9	88.2	192.9	121.5
Net increase in cash and cash equivalents	(30.0)	264.8	108.0	234.8	121.4
(Increase) decrease in working capital	114.6	(22.2)	(82.6)	92.4	(83.2)
Increase (decrease) in cash and cash equivalents	84.6	242.6	25.3	327.2	38.2
Cash and cash equivalents at end of period	333.9	249.2	42.1	333.9	42.1

Cash Flow From Operations

Cash flow from operations was \$370.0 million for the six month period ended June 30, 2006 compared to \$159.0 million for the same period of 2005, representing an increase of \$211.0 million. The increase resulted from the increase in income before income taxes of \$248.4 million, due to higher prices and higher production from OPL90 and OML123 compared to 2005. For the quarter ended June 30, 2006, cash flow from operations has been reduced due to the increase in current income taxes in OPL90 to \$44.6 million from \$7.3 million in the quarter ended March 31, 2006.

Net Cash Flow Used in Investing Activities

Net cash used in investing activities consists principally of the purchase of property, plant and equipment, and intangible capital expenditures. Net cash used in investing activities

was \$328.1 million for the six months ended June 30, 2006 compared to \$159.1 million for same period in 2005, representing an increase of \$169.0 million. This increase is mainly due to an increase by \$101.5 million in capital expenditures on JDZ Blocks 2, 3 and 4, and an increase of \$39.4 in capital expenditures on Okwok. The remaining increase relates to increases in capital expenditures in OML123 and OPL 90.

Net Cash From (Used in) Financing Activities

Net cash from financing activities was \$192.9 million for the six month period ended June 30, 2006 compared to a cash inflow of \$121.5 million in the same period 2005. The Corporation received \$371 million from the IPO. This cash inflow was partially offset by the following outflows: repayment of long term debt (\$80 million in Q1 2006 in comparison to \$15.0 million in Q1 2005), payment of dividend (\$50 million in Q1 2006 in comparison to nil in Q1 2005) and fees related to the purchase of Addax Petroleum N.V. by the Corporation. The cash inflow for the half year to June 2005 consisted of loan drawdowns used to fund the OPL90 development program.

COMMITMENTS

On July 20, 2006 the Corporation announced that it had agreed to acquire two wholly-owned subsidiaries of Pan-Ocean Energy Corporation Limited offering CDN \$1.605 billion in cash. Funding will be provided by a combination of internal cash resources and firm financing commitments from a syndicate of lenders. For more information, please refer to the 'proposed transactions' section above.

The Corporation has assumed various contractual obligations and commitments in the normal course of its operations and financing activities. These obligations and commitments have been described in the December 31, 2005 MD&A and have not significantly changed during the six month period ended June 30, 2006.

RISKS AND UNCERTAINTIES

The Corporation is exposed to several operational risks inherent in exploring, developing, producing and marketing crude oil and natural gas. These inherent risks include: economic risk of finding and producing reserves at a reasonable cost; cost of capital risk associated with securing the needed capital to carry out the Corporation's operations; risk of fluctuating foreign exchange rates; risk of carrying out operations with minimal environment impact; risk of governmental policies, social instability or other political, economic or diplomatic developments in its international operations; and non-performance by counterparties to contracts.

The Corporation uses a variety of means to help minimize these risks. The Corporation maintains a comprehensive insurance program to reduce risk to an acceptable level and to protect it against significant losses. Operational control is enhanced by focusing efforts on large core regions with high working interests and by assuming operatorship of all key facilities. Sales of crude oil are aimed at various markets to ensure that undue exposure to any one market does not exist. Financial instruments are utilised to help ensure targets are met to manage commodity prices, foreign currency rates and interest rate exposure. The Corporation

minimizes credit risks by entering into sales contracts and financial derivatives with only high rated entities and financial institutions. In addition, the Corporation reviews its exposure to individual companies on a regular basis, and where appropriate ensures that parental guarantees or letters of credit are in place to minimise the impact in the event of default.

The Corporation's current position with respect to its financial instruments is detailed in note 6 to the consolidated financial statements. The arrangements and policies concerning the Corporation's financial instruments are under constant review and may change depending upon prevailing market conditions.

The corporation has direct responsibility for Health, Safety and Environment (HSE) in its Nigerian and Cameroonian properties. The Corporation has implemented HSE policies in respect of its operations. These HSE policies are an important part of the responsibilities of the Corporation's managers and significantly influence the operations of the Corporation.

The Corporation requires all employees and contractors to comply with HSE policies. The HSE policies are codified in the Corporation's HSE manual, which define individual HSE responsibilities and suggests ways to promote and support a safe and healthy environment. The Corporation circulates the manual to employees in all locations and managers regularly discuss the policies with staff at periodic safety meetings. In Nigeria, the Corporation has a dedicated HSE department that focuses on accident prevention, monitors operational compliance with the HSE policies and advises management on statutory and industry requirements. The manager of this HSE department reports directly to the Managing Director of Nigerian Operations of the Corporation and is a member of the management committee, which meets weekly to discuss and direct the Corporation's activities.

The HSE policy of the Corporation emphasizes leadership, commitment and training, risk management, health and safety operations, environmental protection and incident response plan.

ENVIRONMENT

(\$ million)	Jun.30 2006	As at	
		Jun.30 2005	Mar.31 2006
Asset retirement obligations	26.6	24.2	25.9
OML123-124	14.0	12.8	13.7
OPL90	12.6	11.4	12.2

The asset retirement obligation relates to both OML123/124 and OPL90 in Nigeria. The Production Sharing Contracts (PSC) for OML123/124 specifies that the Corporation's share of the total asset retirement obligation shall equal the percentage derived from the relationship of the anticipated remaining production to the production prior to the corporation assuming the operatorship. Costs relating to property, plant and equipment constructed after the Corporation assumed operatorship is allocated 100% to the corporation.

The increase in the asset retirement obligation for both OML123/124 and OPL90 between the six months periods ended June 30, 2005 and 2006 relates to the accretion of the liability over this period.

CRITICAL ACCOUNTING ESTIMATES

In the preparation of the Corporation's financial statements, management is required to use judgements, assumptions and estimates in the application of generally accepted accounting policies which has an impact on the financial results of the Corporation. These estimates and assumptions are based on the best available information at the time, but may change due to new events and additional information giving rise to changes in the estimates over time. Note 1 of the Corporation's consolidated financial statements for the year ended December 31, 2005 explains the significant financial accounting policies used by the Corporation. The following is a discussion of the critical accounting policies which use significant assumptions and estimates in determining the financial results of the Corporation.

Estimated Oil Reserves

Reserve estimates have a significant impact on earnings due to its impact on depreciation and depletion rates and asset impairment. The Corporation's reservoir engineers perform an internal evaluation on a bi-annual basis of all of its crude oil reserves. The estimation of reserves are based on engineering data, projected future prices, expected future rates of production and the timing of future capital expenditures, all of which are subject to numerous uncertainties and interpretations. The Corporation expects over time that its reserves will change, upwards or downwards, as a result of the results of future drilling, testing, production levels, changes in future price estimates, and economics of recovery based on cash flow forecasts. A change in the reserves estimate may result in a higher or lower depletion charge to the income statement and affect the future tax charge. A lower reserve estimate could result in a write-down of an oil property under the ceiling test.

Independent petroleum engineering consultants evaluate 100 per cent of the oil properties on a semi-annual basis, and reconciliation is performed between the Corporation's reserves estimates and that of the independent consultants.

Asset Impairments

Annually, an impairment test is performed to ensure that unamortized capitalized costs do not exceed their fair value. An impairment loss will be recognized in the income statement when the carrying value of a cost centre exceeds the estimated undiscounted future cash flows. The future cash flows used in the impairment test include assumptions on oil prices, production, and operating costs. Changes to any of these assumptions such as a decrease to future oil prices, a decrease in reserves, or an increase in operating costs could result in the impairment of an asset's carrying value.

Full Cost Accounting

The Corporation follows the full cost method for accounting for oil and gas properties as described by the Canadian Institute of Chartered Accountants. Accordingly, costs incurred in

the exploration and development of oil and gas properties are capitalized on a country by country cost pool basis. Capitalized costs include land acquisition, geological and geophysical activities, exploration and development wells, both successful and unsuccessful, related plant and equipment, directly attributable interest costs, overhead charges directly related to exploration and development and the estimated discounted cost of the asset retirement obligations.

The capitalized costs are depreciated, depleted and amortized on a unit of production method based on proved reserves for each producing cost pool. Costs relating to unproved properties and certain development projects are not subject to depreciation, depletion and amortization until production commences. The costs relating to unproved properties are reviewed periodically and any impairment is transferred to the costs being depleted, or if it is ascertained there are no reserves relating to the unproved properties, the impairment is charged directly to the income statement.

Asset Retirement Obligation

The Corporation currently records the asset retirement obligations of fixed assets at fair value when they are incurred, discounted to the Corporation's credit-adjusted risk free interest rate. Retirement costs equal to the fair value are capitalized as part of the related capital assets and are amortized to the income statement over the estimated life of the asset. Estimates of the fair value of the retirement obligations can change over time due to legislation, current costs, technology, interest rates and field life, which can affect the rate of amortization. Differences between the estimated and actual costs to settle the retirement obligation could result in gains or losses in the settlement of the obligation.

Income Taxes

The Corporation follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

RELATED PARTY TRANSACTIONS

The Corporation has entered into the following transactions with AOG:

- the Share Transfer Agreement between a subsidiary of AOG and Addax Petroleum Corporation;

- the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement (collectively defined as the "Crude Oil Supply Agreements");
- the Management Services Agreement;
- Bunkering Agreement;
- the Agreement for Services of Jean Claude Gandur, effective January 1, 2006 between APS and AOG;
- the Trademark Agreement; and
- the Non-Competition Agreement.

Share Transfer Agreement

Addax Petroleum Corporation and a subsidiary of AOG have entered into the Share Transfer Agreement under which Addax Petroleum Corporation has acquired a full and legal ownership of all of the outstanding shares of Addax Petroleum N.V. at the time of the IPO. In consideration for the transfer of ownership of Addax Petroleum N.V. to Addax Petroleum Corporation, the AOG subsidiary received the equivalent of 120,000,000 Common Shares.

The Crude Oil Supply Agreements

The existing Crude Oil Supply Agreements were executed at the same time as the Credit Facility arranged by BNP Paribas, of which assignment of the Crude Oil Supply Agreements and the proceeds from oil sales constitute a significant element of the loan security package. The Crude Oil Supply Agreements shall terminate on the later of the Maturity Date and the Final Discharge Date (as defined in the Credit Facility and anticipated to be December 31, 2008 at the latest).

The price of crude oil is determined for (i) Antan crude liftings, FOB Antan Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties, (ii) Brass River Blend crude liftings, FOB Brass River Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus the differential as quoted in the Official Selling Price for Brass River Blend Crude notified by NNPC to the Corporation for that month, and (iii) Okwori crude liftings, FOB Okwori Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties. In each instance payment terms are in US dollars, paid offshore and 30 days from bill of lading date. Under the agreements amending the Crude Oil Supply Agreements each dated November 2005, ABV will receive a marketing fee of \$0.08 per barrel. The Corporation has the right of audit of ABV's resale of Antan crude, Brass River Blend crude and Okwori crude. The payment obligations of ABV under the Crude Oil Supply Agreements are guaranteed by AOG.

The Crude Oil Supply Agreements offer a reliable and competitive means for the sale of crude oil produced from its operations. The Board intends to have a semi-annual review of the terms and conditions of this arrangement.

Management Services Agreement

AOG provides management services to the various subsidiaries of AOG. The services include support in relation to financial control and reporting, legal, tax, risk and insurance, human resources, information technology, training and local expertise in-country.

Unless terminated for a breach of terms, the initial duration of the Management Services Agreement will expire on December 31, 2009 and will thereafter continue for further periods of one year unless and until terminated by six months prior notice given at any time by either party. The fee to be paid under the contract is \$2.5 million per year for the term.

Bunkering

A subsidiary of AOG provides fuel bunkering for the Corporation's FPSOs in Nigeria.

Agreement for Services of Jean Claude Gandur

Addax Petroleum Services Ltd has entered into a services agreement with AOG for the procurement of services to be rendered by Mr. Jean Claude Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. At present, it is anticipated that approximately 90 per cent of Mr. Gandur's time will be dedicated to Addax Petroleum. The total fee to be paid by the Corporation for such services is \$1.1 million per annum.

Unless terminated for a breach of terms, this agreement shall continue in force unless and until terminated by nine months prior notice given at any time by either party.

Trademark Agreement

The Corporation identifies itself using names and logos that indicate a relationship with AOG. The Corporation believes that association with the AOG trademark has been and will continue to be beneficial. The Corporation's regional strategic focus is the African continent, particularly West Africa where AOG has established itself in the petroleum trading, oil storage and retail petroleum products industries. The Trademark Agreement provides the Corporation with the right to use under a sub-license agreement all registered and unregistered AOG trademarks in any territory in which the Corporation has business activities.

Unless terminated for a breach of terms, the initial duration of the amended and restated Trademark Agreement will expire on December 31, 2009 and will thereafter continue for further periods of one year unless and until terminated by six months prior notice given at any time by either party. The Corporation will pay AOG a fixed annual fee of \$500,000 under this agreement.

Non-Competition Agreement

AOG has agreed with Addax Petroleum that, provided AOG and Jean Claude Gandur together own not less than 25 per cent of the issued and outstanding Common Shares, neither AOG nor any of its subsidiaries will:

- acquire any petroleum properties or facilities or participate in the exploration for or development and production of petroleum or participate in any upstream petroleum business opportunities, unless AOG has first offered such business opportunities to Addax Petroleum and Addax Petroleum has declined to acquire such business opportunities. Such offer must remain open for acceptance for a minimum of 30 business days. For purposes of certainty, petroleum trading, downstream activities or non-petroleum resource activities of AOG shall not be considered directly competing interests; or
- participate in any person, other than acquiring not more than five per cent of the equity of a publicly listed corporation, which engages in the above prescribed activities.

QUARTERLY FINANCIAL INFORMATION

	2006		2005				2004		
	Q2	Q1	Q4	Q3	Q2	Q1	Q4	Q3	Q2
Petroleum Sales (million)	522.4	394.2	378.5	385.7	257.8	197.1	156.4	146.6	117.1
Net income (million)	57.9	56.5	38.1	85.6	53.5	28.9	21.3	15.8	13.7
Net income per share (\$)	0.41	0.44	0.33	0.73	0.46	0.25	0.18	0.14	0.12
Cash Flow from operations (million)	195.7	174.3	146.0	163.2	89.1	69.9	52.6	48.0	33.0
Per common share (\$)	1.40	1.36	1.25	1.39	0.76	0.60	0.45	0.41	0.28

Notes:

(1) Per share amounts for quarters 1 and 2 of 2006 are calculated on a basis of 127,850,100 and 140,100,100 Common Shares, respectively, and for the six months ended June 30, 2006, per share amounts are calculated on the basis of 134,008,940 common shares of Addax Petroleum Corporation.

(2) 2004 and 2005 per share amounts are calculated on a basis of 117,000,100 common shares of Addax Petroleum N.V.

(3) In the prospectus relating to the IPO of February 2006, the revenues did not take into account overlift adjustments for quarters 1, 2 and 3 of 2005. In quarter 1, 2005 there was an overlift adjustment of \$2.6 million which increased the petroleum sales from \$194.5 million contained in the prospectus, to \$197.1 million in the March 2005 income statement. In quarter 2, 2005 there was an overlift adjustment of \$2.1 million increasing the petroleum sales to \$257.8 million. In quarter 3, 2005 there was an overlift adjustment of \$2.1 million reducing the petroleum sales to \$365.7 million.

Petroleum Sales

The petroleum sales have increased by 33% between Q1 2006 and Q2 2006 from \$394.2 million to \$522.4 million. This increase is due to both an increase in prices and an increase in liftings during the quarters. The average selling price has increased by 16% from \$57.14 to \$66.09 whilst the liftings increased by 17% from 6.6mmbbls to 7.7mmbbls. The increase is due to the delay of a March 2006 lifting of 650,000 barrels in OPL90 due to the unavailability of tugs and a lifting delay in OML124 of 120,000. Both liftings occurred in April.

The general upward trend over the eight quarters of increasing petroleum sales has resulted from a combination of increased production from OML123, commencement of sales from OPL90 in Q2, 2005 and increasing crude oil prices throughout the period.

Net Income

Net income increased in Q2 2006 by 2% to \$57.9 million from \$56.5 million in Q 1. The major reasons for the increase were a \$128.2 million increase in petroleum sales which have been offset by an increase in expenses of 13.3% or \$19.8 million and an increase in taxes of \$91.8 million.

Expenses increased due to an increase in DD&A of \$7.4 million in Q2 2006 compared to Q1 2006 due to the increase in liftings discussed in the Petroleum Sales section above, an increase in operating costs of \$6.6 million from Q1 2006 to Q2 2006 primarily due to the increase in FPSO costs of \$3.4 million and vessel and helicopter costs of \$0.4 million in OPL90, and a charge of \$12.6 million relating to share based compensation partially offset by a reduction in pre-acquisition costs of \$7.5 million due to the capitalization of Okwok and Taq Taq in the second quarter of 2006.

The increase in taxes from \$84.1 million in Q 1 2006 to \$175.9 million in quarter 2, 2006 is primarily due to the increase in taxes in OPL90 as discussed in the Current Income Taxes section above and the increase in petroleum sales of \$128.2 million, discussed in the Petroleum Sales section above.

The general upward trend of increasing net income over the eight quarters is due to increasing petroleum sales, partially offset by increasing operating costs, DD&A and taxes. In quarters two and three 2005, the Corporation benefited from tax incentives in OPL90. In quarter two 2006, the Corporation no longer benefits from these tax incentives.

Cash Flow from Operations

Cash flow from operations increased by 12% to \$195.7 million in the second quarter of 2006 compared to \$174.3 million in the first quarter. The major increases in the second quarter compared to the first quarter of 2006 were an increase of \$1.4 million in net income, as discussed above, and an increase in items not affecting cash of \$19.9 million. This increase was due to an increase in DD&A of \$7.3 million and share based compensation of \$12.6 million. Cash flow from operations in Q2 2006 was adversely impacted due to the increase in current taxes in OPL90 of \$37.3 million.

The general upward trend in cash flow from operations in the eight quarters is due to increasing petroleum sales, partially offset by increasing operating costs and current taxes.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
June 30, 2006 and 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

1. GENERAL

Addax Petroleum Corporation (the "Corporation") was incorporated under the Canada Business Corporations Act on September 6, 2005 as a wholly owned subsidiary of The Addax and Oryx Group Ltd. ("AOG") for the purpose of acquiring all of the issued and outstanding common shares of Addax Petroleum N.V., another wholly owned subsidiary of AOG, in connection with the initial public offering of the common shares of the Corporation (the "IPO").

On February 16, 2006, the Corporation completed its IPO of 21.0 million common shares and on February 24, 2006 it completed the issuance of an additional 2.1 million common shares upon the exercise of an over-allotment option granted to the underwriters by Addax Petroleum Corporation in connection with the IPO. Total net proceeds from the issuances were approximately \$371,050,000.

In conjunction with the completion of the IPO, the Corporation acquired all of the issued and outstanding common shares of Addax Petroleum N.V. for cash consideration of \$48,188,360 and the issuance of 117,000,000 common shares. The cash consideration has been accounted for as a distribution of earnings. As AOG controls both the Corporation and Addax Petroleum N.V., the acquisition occurred between entities under common control and was accounted for in the books of the Corporation as a continuity of interests. Under this form of purchase accounting, Addax Petroleum Corporation is deemed to have acquired Addax Petroleum N.V. at book value. Subsequent to the acquisition, the Corporation's financial statements presented for comparative purposes reflect the financial position, results of operations and cash flows as if the Corporation and Addax Petroleum N.V. had been combined since the inception of Addax Petroleum N.V.

2. ACCOUNTING POLICIES

The interim consolidated financial statements of the Corporation include the Corporation, its wholly-owned subsidiaries and its interests in joint ventures, and have been prepared following the same accounting policies as the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2005. The interim financial statements contain disclosures that are supplemental to the Corporation's annual audited consolidated financial statements. Certain disclosures that are normally required to be included in the notes to the annual audited consolidated financial statements have been condensed. These financial statements should be read in conjunction with Addax Petroleum N.V.'s audited consolidated financial statements and notes thereto for the year ended December 31, 2005.

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

3. PROPERTY, PLANT AND EQUIPMENT

	June 30, 2006	December 31, 2005
Oil and natural gas properties	1,257,664	890,914
Accumulated depletion	(529,268)	(407,644)
	728,396	483,270
Corporate assets	17,097	7,289
Accumulated depreciation	(4,076)	(3,536)
	13,021	3,753
Balance	741,417	487,023

Property, plant and equipment by cost centre is as follows:

Cost Centre	June 30, 2006	December 31, 2005
Nigeria	581,690	468,289
Cameroon	11,994	5,401
Gabon	10,354	9,580
Iraq	11,070	-
Joint Development Zone	113,288	-
Other corporate assets	13,021	3,753
Balance, end of period	741,417	487,023

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Included in property, plant and equipment are certain costs not subject to depletion and depreciation as follows:

	<u>June 30,</u> <u>2006</u>	<u>December 31,</u> <u>2005</u>
Unproved properties		
Cameroon	11,994	5,401
Gabon	10,354	9,580
Iraq	11,070	-
Joint Development Zone	113,288	-
	146,706	14,981

In March 2006, the Corporation entered into three production sharing contracts ("PSCs") with the Joint Development Authority which administers the Joint Development Zone (JDZ) between Nigeria and São Tomé e Príncipe.

In June 2006, the Nigerian government approved the assignment of a 40% interest in the Okwok property to the Corporation.

During the second quarter of 2006, costs relating to the Taq Taq field in northern Iraq were capitalized as the risks and rewards of ownership had been confirmed. Exploration and development activities in Iraq may be subject to economic and political considerations such as the risks of war, actions by terrorist or insurgent groups, community disturbances, expropriation, nationalization, renegotiation, forced change or nullification of existing contracts or royalty rates, unenforceability of contractual rights, adverse changes to laws (whether of general application or otherwise) or the interpretation thereof, and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction.

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

4. SHARE CAPITAL

The Corporation is authorized to issue an unlimited number of common shares and an unlimited number of preferred shares, issuable in series.

Issued and Outstanding

	Six-month period ended	
	June 30, 2006	
	Common Shares	Amount
Balance, beginning of period	117,000,100	20,010
Issued pursuant to IPO	23,100,000	371,050
Balance, end of period	140,100,100	391,060

Share-Based Compensation

AOG has awarded 1,000,000 common shares of the Corporation to current employees and directors during the second quarter of the year. The grant date of the shares was June 30, 2006. The shares vest as follows: 468,700 shares immediately; 265,650 shares on January 31, 2007; and 265,650 shares on January 31, 2008. The fair value of the common shares granted of \$26,852,702 is expensed over the vesting period.

5. INVENTORIES

	June 30, 2006	December 31, 2005
Oil products	39,416	19,269
Materials and supplies	56,146	43,484
Balance	95,562	62,753

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

9. RELATED PARTY TRANSACTIONS

The following transactions took place between the Corporation and AOG and its other subsidiary companies:

	Three-month periods ended June 30,		Six-month periods ended June 30,	
	2006	2005	2006	2005
Sales to Addax B.V.	356,289	136,032	529,650	236,223
Charges:				
Addax Bunkering Services	(8,786)	-	(9,919)	-
AOG Advisory Services Ltd	(625)	(497)	(1,250)	(1,122)
Addax BV	(3,265)	(2098)	(3,602)	(2,670)
Other entities	(13)	(379)	(27)	(627)

The sales to Addax B.V., the sole marketer of the Corporation's crude oil, were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG Advisory Services Ltd., include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for the Corporation's bunkering operations. Other items include charges from Addax Limited for the refund of services paid on behalf of the Corporation. Addax B.V. and Addax Limited are subsidiaries of AOG.

Amounts due from (to) related parties as included in accounts receivable and accounts payable, respectively, in the consolidated balance sheet are as follows:

	June 30, 2006	December 31, 2005
Addax B.V.	73,425	109,694
AOG Advisory Services Ltd	3	281
Addax Limited	(33)	(2,943)

10. PRE-ACQUISITION EXPENSES

Included in pre-acquisition expenses are costs related to the Corporation's new venture activity. Related expenditures are charged to the income statement pending finalization of the Corporation's rights to a license. These costs can include seismic purchases, studies (in-house and external) and consulting. Beginning in the second quarter of 2006, capital costs related to the Corporation's interest in the Taq Taq field in northern Iraq have been capitalized.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

11. EVENTS SUBSEQUENT TO JUNE 30, 2006

On July 20, 2006, the Corporation announced that it had agreed with the board of Directors of Pan-Ocean Energy Corporation Limited ("Pan-Ocean Energy") to acquire two of its wholly-owned subsidiaries, PanAfrican Energy Corporation (Mauritius) Ltd. ("PanAfrican") and Pan-Ocean Energy UK Ltd. (Pan -Ocean UK"), for CDN \$1.605 billion in cash. PanAfrican owns and operates an exploration, production and marketing business in Gabon, West Africa with management and operational services being provided by Pan-Ocean UK. Funding will be provided by a combination of internal cash resources and firm financing commitments from a syndicate of lenders.

The closing of the transaction, expected on or about September 7, 2006, is subject to three quarters majority vote of both the Class A and B shares of Pan-Ocean Energy to be held at the special meeting of shareholders of Pan-Ocean Energy on August 30, 2006 and approval of the Royal Court of Jersey.

On August 1, 2006, the Corporation filed a preliminary short form base PREP prospectus with the securities regulatory authorities in Canada relating to the distribution of up to 15,000,000 subscription receipts, each subscription receipt representing the right to receive one common share of the Corporation, without payment of additional consideration. The Corporation has also granted to the underwriters an over-allotment option in respect of up to 10% of the subscription receipts purchased exercisable at any time not later than 30 days after closing of the offering. The net proceeds of the offering will be used to fund a portion of the acquisition of PanAfrican and Pan-Ocean UK described above.

On August 1, 2006, the Board of Directors approved a dividend to shareholders of record on August 24, 2006 in the amount of CDN \$0.05 per common share to be paid on September 14, 2006. Holders of subscription receipts on the record date are entitled to receive the dividend for each subscription receipt held.

FORM 52-109F2
CERTIFICATION OF INTERIM FILINGS

I, **JEAN CLAUDE GANDUR**, Chief Executive Officer of **ADDAX PETROLEUM CORPORATION**, certify that:

1. I have reviewed the interim filings (as this term is defined in Multilateral Instrument 52-109 *Certification of Disclosure in Issuers' Annual and Interim Filings*) of Addax Petroleum Corporation (the issuer) for the interim period ending March 31, 2006;
2. Based on my knowledge, the interim filings do not contain any untrue statement of a material fact or omit to state a material fact required to be stated or that is necessary to make a statement not misleading in light of the circumstances under which it was made, with respect to the period covered by the interim filings;
3. Based on my knowledge, the interim financial statements together with the other financial information included in the interim filings fairly present in all material respects the financial condition, results of operations and cash flows of the issuer, as of the date and for the periods presented in the interim filings;
4. The issuer's other certifying officers and I are responsible for establishing and maintaining disclosure controls and procedures for the issuer, and we have:
 - (a) designed such disclosure controls and procedures, or caused them to be designed under our supervision, to provide reasonable assurance that material information relating to the issuer, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which the interim filings are being prepared.

Addax Petroleum Corporation

Management's Discussion and Analysis

For the three months ended March 31, 2006

MANAGEMENT'S DISCUSSION AND ANALYSIS
(amounts presented are in United States dollars unless otherwise indicated)

Addax Petroleum Corporation was incorporated under the Canada Business Corporations Act on September 6, 2005 as a wholly owned subsidiary of The Addax and Oryx Group Ltd. ("AOG") for the purpose of acquiring all of the issued and outstanding common shares of Addax Petroleum N.V., another wholly owned subsidiary of AOG, in connection with the initial public offering of the common shares of Addax Petroleum Corporation (the "IPO").

On February 16, 2006 Addax Petroleum Corporation completed its initial public offering of 21 million common shares and on February 24, 2006 it completed the issuance of an additional 2.1 million common shares upon the exercise of an over-allotment option granted to the underwriters by Addax Petroleum Corporation in connection with the IPO.

The aggregate gross proceeds from the issuance of common shares pursuant to the IPO and exercise of the over-allotment option was CDN\$ 450,450,000. Prior to the completion of the IPO, Addax Petroleum Corporation acquired all of the issued and outstanding common shares of Addax Petroleum N.V. from Addax Mining Holdings BV for cash consideration of CDN\$ 55,575,000 and 117,000,000 common shares of Addax Petroleum Corporation. As AOG controls both Addax Petroleum Corporation and Addax Petroleum N.V., the transaction occurred between entities under common control and was accounted in the books of Addax Petroleum Corporation as a continuity of interests. Under this form of purchase accounting, Addax Petroleum Corporation is deemed to have acquired Addax Petroleum N.V. at book value. Subsequent to the acquisition, Addax Petroleum Corporation's financial statements, presented for comparative purposes, reflect the financial position, results of operations and cash flows as if Addax Petroleum Corporation and Addax Petroleum N.V. had been combined since the inception of Addax Petroleum N.V.

Additional information relating to Addax Petroleum Corporation can be found on SEDAR at www.sedar.com.

The following Management's Discussion and Analysis of Addax Petroleum Corporation (the "Corporation") should be read in conjunction with the Corporation's interim consolidated financial statements as at March 31, 2006 and for the three months periods ended March 31, 2006 and 2005 together with the notes thereto and the consolidated financial statements of Addax Petroleum N.V. as at and for the year ended December 31, 2005 together with the notes thereto and related Management's Discussion and Analysis. The consolidated financial statements presented herein are those of Addax Petroleum Corporation and its subsidiaries.

Certain statements in this report constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results, results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires the Corporation to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and

uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to: imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of the Corporation. More specifically, production may be affected by such factors as exploration success, startup timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by the Corporation with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this quarterly report is made as of the date of this report and, except as required by applicable law, the Corporation does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this report is expressly qualified by this cautionary statement.

The Corporation defines "Cash Flow From Operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Readers are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

For the purpose of the following discussion and analysis, figures expressed on a per barrel basis are derived using sales volumes rather than production.

117,000,000 shares of APC were given to Addax and Oryx Group (AOG) for APC to acquire Addax Petroleum N.V. Therefore for calculating earnings per share, it is assumed that, prior to the Initial Public Offering on February 2006, there were 117,000,000 shares of APC held by AOG.

There are no diluted shares and there are no off balance sheet transactions.

Except as otherwise indicated, certain defined words and terms used herein have the meaning set forth in the Corporation's Annual Information Form dated March 28, 2006.

This MD&A is dated May 5, 2006.

SUMMARY

The Corporation's sales figures are reported gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Inventory held at the beginning of period is included in sales during the period together with the related sales and costs.

The Corporation currently produces and sells crude oil from 3 streams in Nigeria; Antan (OML123), Brass (OML124) and Okwori (OPL90). The document will refer to OML123, OML124 and OPL90.

During the quarter ended March 31, 2006, the Corporation brought 4 new wells on-stream. These wells were in OML123 and in OPL90. Average daily production for the quarter ended March 31, 2006 for OPL90 was 26,659 bbls/d in comparison to 843 bbls/d during the same period in 2005.

The Corporation's total crude oil production by property for the quarter ended March 31, 2006 was 4.5 mmbbls from OML123, 0.3 mmbbls from OML124, and 2.4 mmbbls from OPL90, as compared with 4.0 mmbbls from OML123, 0.3 mmbbls from OML124 and 0.1 mmbbls from OPL90 for the quarter ended March 31, 2005.

In March 2006, APC entered into three Production Sharing Contracts ("PSC's") with the Joint Development Authority (JDA). The JDA administers the Joint Development Zone (JDZ) between Nigeria and Sao Tome e Principe. The three blocks awarded were JDZ 4 (APC as operator with a share of 33.3%), JDZ 3 (APC non-operated share of 15%) and JDZ 2 (APC non-operated share of 14.33%). Following the quarter end, the Corporation purchased a further 5% of JDZ 4.

Net income increased to \$56.5 million for the quarter ended March 31, 2006 from \$28.9 million for the same period in 2005. The following table summarizes the Corporation's results of operations for the quarter ended March 31, 2006 as compared to the same period in 2005.

Note:

2006 per share amounts are calculated on the basis of 127,850,100 Common Shares of Addax Petroleum Corporation

2005 per share amounts are calculated on the basis of 117,000,000 Common Shares of Addax Petroleum N.V.

The gross revenue increased by 100% from March 31, 2005 to March 31, 2006 from \$197.1 million to \$394.2 million. Net income increased by 96% from March 31, 2005 to March 31, 2006 from \$28.9 million to \$56.5 million. Cash Flow From Operations has increased by 149% from March 31, 2005 to March 31, 2006 from \$69.9 million to \$174.3 million.

The major reasons for the revenue increase as of March 31, 2006 were the increased oil prices, oil production from OPL90 and increased production from OML123. These increases were partly offset by increases in taxes, royalties, operating expenses, general and administrative expenses, depletion and other expenses.

Cash flow from operations has increased by \$104.4 million mainly due to increased income, partly offset by an increase in current taxes, operating expenses and general and administrative expenses.

SELECTED OPERATING INFORMATION

(\$/bbl) except daily production and sales in number of barrels	March 31, 2006	March 31, 2005
Daily production	80'374	49'341
Daily sales (1)	73'713	49'223
Sales price (2)	59.41	44.49
Royalties	(11.04)	(8.65)
Operating expenses	(7.13)	(5.66)
Netback	41.24	30.18

(1) Including any overlift adjustment

(2) Total petroleum sales (overlift included) divided by the number of barrels sold (overlift included)

The volume of daily sales has increased significantly over the year (increase of 50% between March 31, 2005 and March 31, 2006). The 2006 daily sales volumes as of March 31 amounted to 73,713 bbls/d compared to 49,223 bbls/d in March 2005.

This increase is mainly due to the production from OPL90 (which commenced production in March 2005). The first lifting from OPL90 occurred in June 2005.

The average sales price has also increased by 34% from \$44.48 in the quarter ending March 31, 2005 to \$59.41 in the quarter ending March 31, 2006. This is mainly due to the increase in the Dated Brent Benchmark Price by 30%.

The Royalties per barrel has increased by 28% in the quarter ending March 31, 2006 compared to the quarter ending March 31, 2005 due to higher revenues.

Operating expenses per barrel have increased by 26% in March 31, 2006 compared to March 31, 2005. The increase is detailed in the section Operating Expenses.

As a result, the netback has increased by 37% from \$30.18 per barrel to \$41.24 per barrel.

PRODUCTION

	2006 Q1		2005 Q1	
	OML123-124	OPL90	OML123-124	OPL90
Production (mbbl)	4'834	2'399	4'365	76
Daily Production (bbl)	53'715	26'659	48'498	843
Royalties (mbbl)	(920)	(322)	(825)	-
Daily Royalties (bbl)	(10'224)	(3'574)	(9'163)	-
Daily Production Net of Royalties (bbl)	43'491	23'085	39'335	843

The daily production before royalties has increased by 63% from 49,341 bbls/d to 80,374 bbls/d.

In OML123, the daily production before royalties has increased by 12% from 45,044 bbls/d to 50,427 bbls/d. In this block, 3 new production wells were added.

In OML124, the daily production before royalties has decreased by 5% from 3,454 bbls/d to 3,288 bbls/d, consistent with natural decline.

OPL90 commenced production in March 31, 2005, and has an average production for the quarter ended March 2006 of 26,659 bbls/d. At March 2006, 7 wells were producing (March 31, 2005: 2 wells).

The split of the production has changed with the start of the production in OPL90. In the quarter ended March 31, 2005, the number of barrels produced in OML123 accounted for 91% of the total barrels produced, the other 9% being from OML124 (7%) and OPL90 (2%). In the quarter ended March 31, 2006, the volume of barrels produced in OML123 accounts for 63%, the volume of barrels produced by OML124 accounts for 4% and the volume of barrels produced in OPL90 accounts for 33% of the total production for the quarter ended March 31, 2006.

The daily production net of royalties has increased by 69% from 39,335 barrels to 66,596 barrels.

The increase of the daily production net of royalties is mainly related to the gross production in OPL90 (26,659 bbls/d in the quarter ended March 31, 2006 in comparison to 843 bbls/d in the quarter ended March 31, 2005).

CRUDE OIL PRICES

The Corporation currently produces and sells crude oil from 3 areas in Nigeria: Antan (OML123), Brass (OML124) and Okwori (OPL90). The selling price for each area is based on the Dated Brent Benchmark Price plus a premium or a discount which depends on the quality of the crude oil.

(\$/barrel)		Quarter ended March 31, 2006	Quarter ended March 31, 2005
Average Dated Brent Benchmark Price		61.75	47.50
Antan	Average Discount	(4.90)	(3.10)
	Average Price	57.14	44.30
Brass	Average Premium	0.90	0.34
	Average Price	62.81	48.91
Okwori	Average Premium	1.91	-
	Average Price	63.56	-

Note:

Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.

There has been an increase in Brent crude prices over the last years. This increase reflects, among other things, an increase in world-wide demand, particularly in the United States and Asia, heightened geopolitical uncertainty in many areas of the world and supply concerns in the Middle East and other key producing regions.

The average dated Brent Benchmark Price has increased from an average price of \$47.50 per barrel in the quarter ended March 31, 2005 to an average price of \$61.75 per barrel in the quarter ended March 31, 2006.

The crude oil lifted from OML123 was sold with an average discount of \$4.90 (\$3.10 in the quarter ended March 31, 2005). This accounts for an average discount of 8% in comparison to Brent. As the price of the Brent crude increases the OML123 discount tends to increase; 64% of the barrels lifted in the quarter ended March 31, 2006 were from OML123 (93% in March 2005).

The average premium applied on the crude oil lifted from OML124 is \$0.90 in the quarter ended March 31, 2006 in comparison to \$0.34 in the quarter ended March 31, 2005. 3% of the barrels lifted in March 2006 were from OML124 (7% in March 2005).

The average premium per barrel applied on the crude oil lifted from OPL90 is \$1.91. The average price is \$63.56. 33% of the barrels lifted in the quarter ended March 2006 were from OPL90 compared to nil in the quarter ended March 2005. OPL90 commenced trading at a discount to Brent, as it was a new crude stream. This has now been reversed, and OPL90 currently trades at a premium to Brent.

PETROLEUM SALES

Petroleum sales are reported on the basis of production volumes sold gross of Royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Any overlifts are accounted for as deferred income in the balance sheet.

The table below summarises the Petroleum Sales.

Smillion	OML123		OML124		OPL90		TOTAL	
	2006 Q1	2005 Q1						
Petroleum Sales	242.7	182.8	11.6	14.3	139.9	-	394.2	197.1

The petroleum sales have increased by 100% between the quarter ended March 2005 and the quarter ended March 2006. The petroleum sales include the liftings from OML123, OML124 and OPL90 (since quarter 2, 2005).

The petroleum sales from OML123 accounts for 62% of the total (93% as of the quarter ended March 2005). The petroleum sales from OML124 accounts for 3% of the total (7% as of the quarter ended March 2005). The petroleum sales from OPL90 accounts for 35% (nil as of the quarter ended March 2005) of the total of revenue.

The increase of petroleum sales in OML123 (33% between the quarter ended March 2005 and the quarter ended March 2006) from \$182.8 million to \$242.7 million is due mostly to the increase in prices. The impact of the increase in price is \$54.5 million or 91% whereas the impact of the increase in production is \$5.4 million or 9%.

In OML124, the decrease in petroleum sales by 23% from \$14.3 million to \$11.6 million is due to fewer barrels being lifted in Q1 2006 compared to Q1 2005. A late March 2006 OML124 lifting of 120,000 barrels was delayed to early April 2006.

In OPL90, the first liftings occurred in June 2005. The revenue of \$139.9 million is fully generated by this new production. A late March 2006 lifting of 650,000 bbls was delayed until April 2006, due to unavailability of tugs.

Other income has increased from \$0.6 million in the quarter ended March 31, 2005 to \$1.2 million in the quarter ended March 31, 2006. The increase is mainly related to an increase in interest income. The cash received from the Initial Public Offering completed in February 2006 has generated interest income of \$0.4 million.

ECONOMIC SENSITIVITIES

The following table shows the estimated after-tax effect that changes to crude oil prices, crude oil production and operating costs would have had on the Corporation's net income for the quarter ended March, 2006, had these changes occurred on January 1, 2006. These calculations are based on business conditions, production and sales volumes existing for Q1 2006. The 1,000 bbls/d increase has been allocated equally between OML123/OML124 and OPL90.

<u>Factor</u>	<u>Change (+)</u>	<u>Net Income Impact</u> (\$million)	<u>Net Income Impact</u> (\$/share)
Price received for crude oil	\$1.00/bbl	1.3	0.01
Crude oil production	1,000 bbls/d	1.0	0.01
Increase in operating costs	10%	(1.9)	(0.01)

The impact of the above changes may be compounded or offset by changes to other business conditions. In addition, the table does not consider the relationships between the above factors.

ROYALTIES

Royalties are comprised of NNPC Profit Oil, Education Tax, Royalty Oil, Niger Delta Development Corporation (NDDC) levy and the Cost Penalty Arrangement (CPA). Royalties are determined in accordance with the applicable PSC.

	2006 Q1		2005 Q1		Change Antan- Brass (%)	2006 Q1		2005 Q1	
	Antan- Brass (\$million)	Okwori (\$million)	Antan- Brass (\$million)	Okwori (\$million)		Antan- Brass (\$/bbl)	Okwori (\$/bbl)	Antan- Brass (\$/bbl)	Okwori (\$/bbl)
Royalty Oil	17.7	8.2	16.8	-	5%	4.00	2.83	3.78	-
NDDC Levy	3.5	3.1	1.7	-	100%	0.79	1.39	0.38	-
Education Tax	3.1	1.8	2.8	-	11%	0.71	0.74	0.63	-
NNPC's share of profit oil	24.9	8.4	17.0	-	48%	5.81	4.28	3.85	-
Cost Penalty Arrangement	3.8	-	-	-	100%	0.85	-	-	-
Total Royalties	53.0	20.3	38.3	-	38%	11.96	9.24	8.65	-

Royalties for crude oil lifted from OML123 and OML124 have increased by 38% from \$38.3 million (\$8.64 per barrel) to \$53.0 million (\$11.96 per barrel). The Royalties for crude oil lifted from OPL90 are \$20.3 million (\$9.24 per barrel) compared to nil in the quarter ended March 31, 2005.

Royalty Oil from OML123 and OML124 slightly increased by 5% from \$16.8 million (\$3.78 per barrel) in the quarter ended March 31, 2005 to \$17.7 million (\$4.00 per barrel) in the quarter ended March 31, 2006. Royalty Oil is levied on petroleum sales, with the percentage of Royalty Oil increasing with production. Royalty Oil has increased due to increased production and revenue in Q1 2006 compared to Q1 2005. OPL90 Royalty Oil for the quarter ended 31, March 2006 is \$6.2 million (\$2.83 per barrel) compared to nil in the period ended 31, March 2005.

Profit Oil in OML123/124 has increased by 46% from \$17.0 million in the quarter ended March 31, 2005 (\$3.85 per barrel) to \$24.9 million (\$5.61 per barrel) in the quarter ended March 31, 2006. The increase is due to the increase of 25% in revenues in OML123 and OML124. Profit Oil in OPL90 accounts for \$9.4 million (\$4.28 per barrel).

OPERATING EXPENSES

The operating expenses as presented below include costs relating to OML123/124 and to OPL90 (which commenced production in 2005).

	2006 Q1	2005 Q1
Operating Expenses (million)		
OML123/124	35.7	25.1
OPL90	11.6	-
Total Producing Assets	47.3	25.1
 \$/bbl lifted	 7.13	 5.66
\$/bbl lifted in OML123-124	8.05	5.66
\$/bbl lifted in OPL90	5.26	-

There is a continuing upward pressure on operating costs due to high demand for oil services. The Corporation continues to mitigate this upward pressure through a number of methods such as using competitive bidding procedures and awarding long term contracts, but with crude oil continuing at its historic highs, continual upward cost pressure is expected.

Operating costs have increased by 88%, from \$25.1 million in the quarter ended March 31, 2005 to \$47.3 million in the quarter ended March 31, 2006.

The operating costs in OML123/124 have increased by 42% (\$10.6 million) from \$25.1 million to \$35.7 million and from \$5.66 per barrel in the quarter ended March 31, 2005 to \$8.05 per barrel in the quarter ended March 31, 2006.

For OML123/124, the increase in operating costs is mainly due to an increase by \$4.5 million relating to a special bonus and allowances paid to the Nigerian staff following union negotiations, and a settlement of a contract relating to the period from April 2004 to March 2006 (increase of \$3.6 million).

For OPL90, total operating costs were \$11.6 million and the main operating cost is the cost related to the floating production storage and offloading vessel ("FPSO") (\$7.5 million). There were no operating costs for OPL90 in Q1 2005.

GENERAL AND ADMINISTRATIVE EXPENSES

General and administrative charges relate to corporate costs.

\$million except per bbl amounts	2006 Q1	2005 Q1
Corporate costs (million)	3.3	1.5
Corporate costs (per barrel)	0.50	0.34

Corporate costs have increased by 136% to \$3.3 million in the quarter ended March 31, 2006 compared from \$1.5 million in the quarter ended March 31, 2005. The main reason for the increase is additional employees within the commercial and finance departments in the Geneva office working specifically on corporate activities.

PRE-ACQUISITION EXPENSES

Included in pre-acquisition expenses are costs related to the Corporation's New Venture activity. Related expenditures are charged to the income statement pending finalization of the Corporation's rights to a license. These costs can include seismic purchases, studies (in house and external) and consulting.

\$million except per bbl amounts	2006 Q1	2005 Q1
Taq Taq Costs	7.7	-
New Venture Costs - Nigeria	2.6	-
New Venture Costs - Other	1.6	1.2
Total Pre-acquisition costs	11.9	1.2
Pre-acquisition costs per barrel	1.79	0.27

The reason for the increase from March 31, 2005 to March 31, 2006 is due to the Corporation aggressively seeking new opportunities in its core areas.

Total Taq Taq costs incurred in the quarter ended March 31, 2006 totaled \$7.7 million compared to nil in the quarter ended March 31, 2005, which include \$2.2 million for seismic data acquisition. The capital expenditure and operating costs relating to Taq Taq are currently charged pending finalization of the Corporation's rights to the license.

The New Venture costs have increased by \$3 million from \$1.2 million in the quarter ended March 31, 2005 to \$4.2 million in the quarter ended March, 31 2006. This increase is mainly due to the increase by \$2.6 million in New Ventures costs in Nigeria. The Corporation has significantly increased its new venture activity in 2006, including formation of a new venture team in Nigeria.

OTHER

Interest and debt commitment fees directly attributable to development activities are capitalized to the respective cost pools and amortized on a unit of production basis with the cost pool to which it relates.

(\$ million)	2006 Q1	2005 Q1
Long term debt	-	100
Interest	1.2	-
Other finance charge	0.1	-
Foreign Exchange Gain/Loss	(0.4)	0.1
Total expenses	0.9	0.1

The increase in interest is related to the increase in hedging costs. Hedging costs were \$0.6 million in the quarter ended March 31, 2006 in comparison to nil in the quarter ended March 31, 2005.

The Corporation utilizes various financial instruments to manage its commodity prices, foreign currency and interest rate exposures. These financial instruments are not used for trading or speculative purposes. The Board of Directors provides principles for overall risk management as well as policies covering specific areas related to each category of financial instrument. Currently the Corporation has a currency hedge only. There are no liquidity risks associated with this instrument. The Corporation has no immediate plans to put in place other hedges.

The Corporation has previously entered into commodity price contracts to cover pricing exposure in order to safeguard a minimum cash income. Gains or losses on these contracts are included in other interest and finance charges.

The Corporation has previously entered into interest rate swap agreements to manage its fixed and floating interest mix on its long term debt obligations in which the Corporation agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. Gains or losses on interest rate swap contracts are included in other interest and finance charges.

The Corporation enters into foreign exchange forward contracts to manage its exposure to foreign currency risk with respect to the Swiss franc against the US dollar. These contracts require the periodic exchange of payments with the exchange at maturity of notional principal amounts on which the payments are based. Gains or losses on foreign exchange forward contracts are included in other interest and finance charges.

DEPLETION, DEPRECIATION AND ACCRETION (DD&A)

The costs of oil and natural gas properties are depleted on a unit-of-production basis, based on the Corporation's share of gross estimated proved reserves. The proved reserves utilized to compute DD&A for the quarter were based on the internal estimate of proved reserves at

December 2005 and adjusted for any additions or deletions. The Corporation used a proved reserve estimate of 104.2 million barrels for the quarter ended March 31, 2006. The proved reserve figure in the current quarter used in calculating DD&A was increased by 13.2mmbbls due to increases in proved reserves in Nda, Adanga North and North Oron.

The increase in DD&A from \$21.0 million for the quarter ended March 2005 to \$57.4 million for the quarter ended March 2006 was mainly due to OPL90 DD&A included in the quarter ended March 2006 of approximately \$20.3 million (nil in quarter 1 2005), and the increase in production at OML123.

CURRENT INCOME TAXES

	2006 Q1 (million)	2005 Q1 (million)	2006 Q1 \$/bbl	2005 Q1 \$/bbl
OML123/124	76.7	74.6	17.29	16.84
OPL90	7.3	-	3.34	-
Other	0.1	-	-	-
Current Income Taxes	84.1	74.6	-	-

Current income taxes have increased by \$9.5 million (13%) from \$74.6 million in the quarter ended March 31, 2005 to \$84.1 million in the quarter ended March 31, 2006.

The increase is mainly related to the income tax for OPL90. The amount of current income tax for OPL90 for the first quarter of 2006 was \$7.3 million (nil in Q1 2005).

The "other taxes" represent local income tax due by the Geneva Branch of Addax Petroleum Services, a subsidiary of the Corporation.

FUTURE INCOME TAXES

	2006 Q1 (million)	2005 Q1 (million)	2006 Q1 \$/bbl	2005 Q1 \$/bbl
OML123/124	12.8	7.0	2.89	1.57
OPL90	47.9	-	21.79	-
Future Income Taxes	60.7	7.0	-	-

Future income taxes for OML123/124 increased by 83% to \$12.8 million in the quarter ended March 31, 2006 from \$7 million in the quarter ended March 31, 2005.

Future income taxes for OPL90 were \$47.9 million in the quarter ended March 31, 2006 compared to nil in the quarter ended March 31, 2005. OPL90 has large capital allowance balances which are currently being used to offset against Petroleum Profits Tax (current tax). The reductions earned from the capital allowances reduce current taxes and increase future

income taxes. The benefit from these capital allowances is then realized over the producing life of the asset to which the allowances relate.

CAPITAL EXPENDITURES

(\$ million)	2006 Q1	2005 Q1
OML123/124		
Drilling	29.2	18.8
Facilities	41.8	5.3
Other	2.7	3.7
Sub Total	73.7	27.8
OPL90/225		
Okwori development	48.4	49.5
Nda development	32.5	0.7
Nda extended well test	-	8.1
Other	7.9	0.2

Cameroon	6.5	0.4
Gabon	0.3	0.4
JDZ Block 2	15.1	-
JDZ Block 3	9.5	-
JDZ Block 4	41.4	-
Other (1)	10.2	2.7
Total	245.5	89.8

Notes:

(1) capital expenditures for the corporate companies.

There is a continuing upward pressure on capital expenditures due to high demand for oil services especially for drilling rigs. The Corporation continues to mitigate this upward pressure such as using competitive bidding procedures bidding on long term contracts, but with crude oil continuing at its historic highs, continual upward cost pressure is expected.

Total capital expenditures have increased by 173% from \$89.8 million in Q1 2005 to \$245.5 million in Q1 2006.

For Q1 2006, total capital expenditures on OML123 and OML124 were \$73.7 million compared to \$27.8 million in Q1 2005. Drilling costs were \$29.2 million comprising \$8.2 million for an exploration well and \$19.6 million for appraisal and development wells on OML123. Facilities costs on OML123 and OML124 were \$41.8 million comprising \$36.6 million for the OML123 FPSO replacement and \$2.8 million for Adanga North extended well test. OML124 oil facilities expenditure was \$0.9 million. Other capital expenditures on OML123 and OML124 were \$2.7 million including capitalized studies of \$1.4 million, capitalized seismic costs of \$0.6 million and \$0.7 million of office capital expenditure.

For Q1 2006, total capital expenditures on OPL90 and OPL225 were \$88.8 million. Capital expenditures on OPL90 included \$32.5 million for the appraisal and initial development of the Nda field and \$48.4 million for development, facilities and drilling costs on the Okwori property. The other costs of \$7.9 million are primarily capitalized seismic acquisition costs on OPL225.

Capital expenditures of \$6.5 million in Cameroon for Q1 2006 primarily related to the acquisition of 3D seismic data.

Capital expenditures of \$66.0 million in the Joint Development Zone Blocks are mainly related to signature bonus payments and farm in fees for the JDZ Block 2 (\$15.1 million), Block 3 (\$9.5 million) and Block 4 (\$41.4 million).

Other capital expenditures mainly relate to the acquisition of a rig for Taq Taq (\$8.3 million).

Major Capital Projects

There are two major capital projects on OPL90, the Okwori field development, and the Nda field development.

For the Okwori field development, the final two wells will be completed and tied in during the second quarter of 2006. The capital costs to date are \$328.9 million, and the capital costs to complete the project are budgeted at \$58.0 million.

The Nda field development has currently 1 test well producing. In the first quarter the Nigerian authorities have given approval for full development of the Nda project. Four further development wells will be drilled in 2006 and brought on stream in the second and third quarters of 2006.

The Nda development capital costs to date are \$108.8 million, and the capital costs to complete the project are \$127.4 million. It is planned to drill further appraisal wells in the greater Nda area following the Nda field development project.

On OML123, the replacement FPSO work is ongoing. It is anticipated that the replacement will be completed in the third quarter of 2006. Costs to the end of March 2006 were \$58.4 million, and the capital costs to complete the project are budgeted at \$35.8 million.

Taq Taq and the three JDZ blocks are still in the appraisal and exploration stages.

Outlook

The capital expenditure forecast for 2006 is as per the MD&A as of December 2005, except for capital expenditure of \$103.5 million for Joint Development Zones 2, 3 and 4, which were not included in the December 2005 forecast. The capital expenditure forecast for JDZ 4 is \$68.9 million, JDZ 3 is \$14.5 million, and for JDZ 2 is \$20.1 million. The costs include signature bonuses, farm-in fees and technical studies.

Capital expenditures for the first quarter were \$245.5 million, and for the following three quarters are forecasted to be: for the second quarter of \$328.9 million; for the third quarter \$292.2 million; and for the fourth quarter \$223.4 million.

Average production for 2006 is forecasted to be 85,000 barrels per day, with a production rate of by year end of 100,000 barrels per day.

Due to the anticipated increase in OPL90 production and based on a forward projection of \$50/bbl, it is anticipated that current tax for OPL90 should be approximately \$100 million for 2006. This assumes a current tax rate of 60%. Due to the Nigerian tax regulations, it is anticipated that there will be a restriction on OPL90's ability to access all allowances, and there will be unused current period allowances on approximately \$70 million. Assuming OPL90 generates sufficient tax income, these unused allowances in 2006 can be used in future periods.

Proposed Transactions

The Corporation proposes to farm-in to 40% of the Okwok property, OML67 in Nigeria. Agreement has been reached with the holder of the licence, but the Corporation and the holder of the licence are awaiting government approval. This approval is anticipated to be received in the second quarter of 2006.

A \$35 million farm-in fee is payable on completion, and the 2006 work programme is forecast at \$45 million, including 2 appraisal wells.

The Corporation is planning to buy a production unit which is currently leased to OML123. The technical review is ongoing. Assuming a positive result from the technical review, the unit will be bought in the second or third quarter of 2006 for approximately \$30 million.

LIQUIDITY AND CAPITAL RESOURCES

Overview

The Corporation's principal source of liquidity has been cash generated from operating activities which has been supplemented as necessary by credit facilities to meet increased capital expenditures, primarily for the development of the Okwori property in OPL90 and the JDZ blocks. The Corporation has not experienced seasonal variations in its cash flows. Currently, the Corporation generates all of its cash from operating activities from its Nigerian subsidiaries. Provided applicable solvency and corporate requirements are satisfied, there are no legal or practical restrictions in Nigeria on the ability of the Corporation's Nigerian subsidiaries to transfer funds to the Corporation in the form of cash dividends, loans or advances. In addition, there are no contractual restrictions on such transfers of funds to the Corporation by its Nigerian subsidiaries.

The Corporation held total cash and cash equivalents of \$249.2 million as at March 31, 2006.

On February 16, 2006, the Corporation was listed on the Toronto Stock Exchange by way of an Initial Public Offering ("IPO"). Pursuant to the IPO, the Corporation raised \$355.1 million (CDN \$409.5 million) of which:

- \$17.6 million (CDN \$20.5 million) was used to pay expenses related to the IPO;
- \$48.2 million (CDN \$55.6 million) and 117,000,000 common shares of APC were paid to acquire all of the issued and outstanding common shares of Addax Petroleum N.V., previously held by AOG.

On February 24, 2006, an over-allotment option held by the underwriters was exercised yielding net proceeds of \$33.7 million (CDN \$38.9 million) (gross proceeds totalled \$35.5 million (CDN \$41.0 million)).

Total net proceeds from the IPO, the over-allotment option and the share purchase amounted to \$322.9 million (CDN \$372.4 million). Part of the proceeds were used to pay down the Corporation's debt. The balance of the proceeds will be used to fund the Corporation's ongoing capital expenditures.

The Corporation has a senior secured revolving credit facility with BNP Paribas as Mandated Lead Arranger and Standard Bank as Lead Arranger with a borrowing base of \$300.0 million. This facility expires on December 31, 2008. The borrowing base was initially set at \$100.0 million, and is re-determined semi-annually based on NSAI's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. As at March 31, 2006, all amounts drawn on the credit facility were reimbursed. The credit facility bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization on the first day of the interest period.

The following table summarizes the principal components of Addax Petroleum's consolidated cash flows for the periods indicated:

(\$million)

Net Cash inflows (outflows) before movements in working capital	<u>Q1 2006</u>	<u>Q1 2005</u>
Cash Flow From Operations	174.3	69.9
Net cash flow used in investing activities	(102.4)	(89.8)
Net cash flow (used in) financing activities	192.8	33.3
Increase (decrease) in cash and cash equivalents	264.7	13.4
(Increase) decrease in working capital	(22.2)	(0.5)
Net increase in cash and cash equivalents	242.5	12.9
Cash and cash equivalents at end of period	249.2	16.8

Cash Flow From Operations

Cash flow from operations was \$174.3 million in Q1 2006, compared to \$69.9 million in Q1 2005, representing an increase of \$104.4 million. The increase resulted from the increase in income before income taxes of \$90.9 million, due to the Okwori property in OPL90 coming on-stream, and higher production from OML123/124 compared to 2005.

Net Cash Flow Used in Investing Activities

Net cash used in investing activities consists principally of the purchase of property, plant and equipment, and intangible capital expenditures. Net cash used in investing activities was \$102.4 million for Q1 2006 compared to \$89.8 million for Q1 2005, representing an increase of \$12.6 million. This increase is due to an increase by \$66.0 million in capital expenditures on JDZ Blocks 2, 3 and 4, to an increase by \$36.6 million related to the OML123 FPSO replacement and to an increase in capital expenditures of \$30.3 million on OPL90.

Net Cash From (Used in) Financing Activities

Net cash from financing activities was \$192.8 million for Q1 2006 compared to a cash inflow of \$33.3 million in Q1 2005. The Corporation received \$371 million from the IPO. This cash inflow was partially offset by the following outflows: repayment of long term debt (\$80 million in Q1 2006 in comparison to \$15 million in Q1 2005), payment of dividend (\$50 million in Q1 2006 in comparison to nil in Q1 2005) and fees related to the purchase of Addax Petroleum N.V. by the Corporation.

COMMITMENTS

The Corporation has assumed various contractual obligations and commitments in the normal course of its operations and financing activities. These obligations and commitments have been described in the December 31, 2005 MD&A and have not significantly changed during the first quarter of 2006.

RISKS AND UNCERTAINTIES

The Corporation is exposed to several operational risks inherent in exploring, developing, producing and marketing crude oil and natural gas. These inherent risks include: economic risk of finding and producing reserves at a reasonable cost; cost of capital risk associated with securing the needed capital to carry out the Corporation's operations; risk of fluctuating foreign exchange rates; risk of carrying out operations with minimal environment impact; risk of governmental policies, social instability or other political, economic or diplomatic developments in its international operations; and non-performance by counterparties to contracts.

The Corporation uses a variety of means to help minimize these risks. The Corporation maintains a comprehensive insurance program to reduce risk to an acceptable level and to protect it against significant losses. Operational control is enhanced by focusing efforts on large core regions with high working interests and by assuming operatorship of all key facilities. Sales of crude oil are aimed at various markets to ensure that undue exposure to any one market does not exist. Financial instruments are utilised to help ensure targets are met to manage commodity prices, foreign currency rates and interest rate exposure. The Corporation minimizes credit risks by entering into sales contracts and financial derivatives with only high rated entities and financial institutions. In addition, the Corporation reviews its exposure to individual companies on a regular basis, and where appropriate ensures that parental guarantees or letters of credit are in place to minimise the impact in the event of default.

The Corporation's current position with respect to its financial instruments is detailed in note 6 to the consolidated financial statements. The arrangements and policies concerning the Corporation's financial instruments are under constant review and may change depending upon prevailing market conditions.

The Corporation's capital structure mix is also monitored on a continual basis to ensure that it optimizes flexibility, minimizes cost and offers the greatest opportunity for growth. This includes the determination of a reasonable level of debt and any interest rate exposure risk that may exist.

Addax Petroleum has direct responsibility for Health, Safety and Environment (HSE) in its Nigerian and Cameroonian properties. The Corporation has implemented HSE policies in respect of its operations. These HSE policies are an important part of the responsibilities of the Corporation's managers and significantly influence the operations of the Corporation.

The Corporation requires all employees and contractors to comply with HSE policies. The HSE policies are codified in the Corporation's HSE manual, which define individual HSE responsibilities and suggests ways to promote and support a safe and healthy environment.

The Corporation circulates the manual to employees in all locations and managers regularly discuss the policies with staff at periodic safety meetings. In Nigeria, the Corporation has a dedicated HSE department that focuses on accident prevention, monitors operational compliance with the HSE policies and advises management on statutory and industry requirements. The manager of this HSE department reports directly to the Managing Director of Nigerian Operations of the Corporation and is a member of the management committee, which meets weekly to discuss and direct the Corporation's activities.

The HSE policy of the Corporation emphasizes leadership, commitment and training, risk management, health and safety operations, environmental protection and incident response plan.

ENVIRONMENT

	2006 Q1 (million)	2005 Q1 (million)
Asset retirement obligations	25.8	12.5
OML123-124	13.7	12.5
OPL90	12.1	-

The asset retirement obligation relates to both OML123/124 and OPL90 in Nigeria. The Production Sharing Contracts (PSC) for OML123/124 specifies that APDNL's share of the total asset retirement obligation shall equal the percentage derived from the relationship of the anticipated remaining production to the production prior to Addax Petroleum assuming the operatorship. Costs relating to property, plant and equipment constructed after APDNL assumed operatorship is allocated 100% to Addax.

The increase in the asset retirement obligation for OML123/124 by \$1.2 million from \$12.5 million at March 31, 2005 to \$13.7 million at March 31, 2006 relates to accretion over this period.

The asset retirement obligation was booked for the first time for OPL90 during the second quarter of 2005.

CRITICAL ACCOUNTING ESTIMATES

In the preparation of the Corporation's financial statements, management is required to use judgements, assumptions and estimates in the application of generally accepted accounting policies which has an impact on the financial results of the Corporation. These estimates and assumptions are based on the best available information at the time, but may change due to new events and additional information giving rise to changes in the estimates over time. Note 1 of the Corporation's consolidated financial statements for the year ended December 31, 2005 explains the significant financial accounting policies used by the Corporation. The following is

a discussion of the critical accounting policies which use significant assumptions and estimates in determining the financial results of the Corporation.

Estimated Oil Reserves

Reserve estimates have a significant impact on earnings due to its impact on depreciation and depletion rates and asset impairment. The Corporation's reservoir engineers perform an internal evaluation on a bi-annual basis of all of its crude oil reserves. The estimation of reserves are based on engineering data, projected future prices, expected future rates of production and the timing of future capital expenditures, all of which are subject to numerous uncertainties and interpretations. The Corporation expects over time that its reserves will change, upwards or downwards, as a result of the results of future drilling, testing, production levels, changes in future price estimates, and economics of recovery based on cash flow forecasts. A change in the reserves estimate may result in a higher or lower depletion charge to the income statement and affect the future tax charge. A lower reserve estimate could result in a write-down of an oil property under the ceiling test.

Independent petroleum engineering consultants evaluate 100 per cent of the oil properties on a semi-annual basis, and reconciliation is performed between the Corporation's reserves estimates and that of the independent consultants.

Asset Impairments

Annually, an impairment test is performed to ensure that unamortized capitalized costs do not exceed their fair value. An impairment loss will be recognized in the income statement when the carrying value of a cost centre exceeds the estimated undiscounted future cash flows. The future cash flows used in the impairment test include assumptions on oil prices, production, and operating costs. Changes to any of these assumptions such as a decrease to future oil prices, a decrease in reserves, or an increase in operating costs could result in the impairment of an asset's carrying value.

Full Cost Accounting

The Corporation follows the full cost method for accounting for oil and gas properties as described by the Canadian Institute of Chartered Accountants. Accordingly, costs incurred in the exploration and development of oil and gas properties are capitalized on a country by country cost pool basis. Capitalized costs include land acquisition, geological and geophysical activities, exploration and development wells, both successful and unsuccessful, related plant and equipment, directly attributable interest costs, overhead charges directly related to exploration and development and the estimated discounted cost of the asset retirement obligations.

The capitalized costs are depreciated, depleted and amortized on a unit of production method based on proved reserves for each producing cost pool. Costs relating to unproved properties and certain development projects are not subject to depreciation, depletion and amortization until production commences. The costs relating to unproved properties are reviewed periodically and any impairment is transferred to the costs being depleted, or if it is ascertained there are no reserves relating to the unproved properties, the impairment is charged directly to the income statement.

Asset Retirement Obligation

The Corporation currently records the asset retirement obligations of fixed assets at fair value when they are incurred, discounted to the Corporation's credit-adjusted risk free interest rate. Retirement costs equal to the fair value are capitalized as part of the related capital assets and are amortized to the income statement over the estimated life of the asset. Estimates of the fair value of the retirement obligations can change over time due to legislation, current costs, technology, interest rates and field life, which can affect the rate of amortization. Differences between the estimated and actual costs to settle the retirement obligation could result in gains or losses in the settlement of the obligation.

Income Taxes

The Corporation follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

RELATED PARTY TRANSACTIONS

The Corporation has entered into the following transactions with AOG:

- the Share Transfer Agreement between a subsidiary of AOG and Addax Petroleum Corporation;
- the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement (collectively defined as the "Crude Oil Supply Agreements");
- the Management Services Agreement;
- Bunkering Agreement;
- the Agreement for Services of Jean Claude Gandur, effective January 1, 2006 between APS and AOG;
- the Trademark Agreement; and
- the Non-Competition Agreement.

Share Transfer Agreement

Addax Petroleum Corporation and a subsidiary of AOG have entered into the Share Transfer Agreement under which Addax Petroleum Corporation has acquired a full and legal ownership of all of the outstanding shares of Addax Petroleum N.V. at the time of the IPO. In consideration for the transfer of ownership of Addax Petroleum N.V. to Addax Petroleum Corporation, the AOG subsidiary received the equivalent of 120,000,000 Common Shares.

The Crude Oil Supply Agreements

The existing Crude Oil Supply Agreements were executed at the same time as the Credit Facility arranged by BNP Paribas, of which assignment of the Crude Oil Supply Agreements and the proceeds from oil sales constitute a significant element of the loan security package. The Crude Oil Supply Agreements shall terminate on the later of the Maturity Date and the Final Discharge Date (as defined in the Credit Facility and anticipated to be December 31, 2008 at the latest).

The price of crude oil is determined for (i) Antan crude liftings, FOB Antan Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties, (ii) Brass River Blend crude liftings, FOB Brass River Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus the differential as quoted in the Official Selling Price for Brass River Blend Crude notified by NNPC to the Corporation for that month, and (iii) Okwori crude liftings, FOB Okwori Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties. In each instance payment terms are in US dollars, paid offshore and 30 days from bill of lading date. Under the agreements amending the Crude Oil Supply Agreements each dated November 2005, ABV will receive a marketing fee of \$0.08 per barrel. The Corporation has the right of audit of ABV's resale of Antan crude, Brass River Blend crude and Okwori crude. The payment obligations of ABV under the Crude Oil Supply Agreements are guaranteed by AOG.

The Crude Oil Supply Agreements offer a reliable and competitive means for the sale of crude oil produced from its operations. The Board intends to have a semi-annual review of the terms and conditions of this arrangement.

Management Services Agreement

AOG provides management services to the various subsidiaries of AOG. The services include support in relation to financial control and reporting, legal, tax, risk and insurance, human resources, information technology, training and local expertise in-country.

Unless terminated for a breach of terms, the initial duration of the Management Services Agreement will expire on December 31, 2009 and will thereafter continue for further periods of one year unless and until terminated by six months prior notice given at any time by either party. The fee to be paid under the contract is \$2.5 million per year for the term.

Bunkering

A subsidiary of AOG provides fuel bunkering for the Corporation's FPSOs in Nigeria.

Agreement for Services of Jean Claude Gandur

Addax Petroleum Services Ltd has entered into a services agreement with AOG for the procurement of services to be rendered by Mr. Jean Claude Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. At present, it is anticipated that approximately 90 per cent of Mr. Gandur's time will be dedicated to Addax Petroleum. The total fee to be paid by the Corporation for such services is \$1.1 million per annum.

Unless terminated for a breach of terms, this agreement shall continue in force unless and until terminated by nine months prior notice given at any time by either party.

Trademark Agreement

The Corporation identifies itself using names and logos that indicate a relationship with AOG. The Corporation believes that association with the AOG trademark has been and will continue to be beneficial. The Corporation's regional strategic focus is the African continent, particularly West Africa where AOG has established itself in the petroleum trading, oil storage and retail petroleum products industries. The Trademark Agreement provides the Corporation with the right to use under a sub-license agreement all registered and unregistered AOG trademarks in any territory in which the Corporation has business activities.

Unless terminated for a breach of terms, the initial duration of the amended and restated Trademark Agreement will expire on December 31, 2009 and will thereafter continue for further periods of one year unless and until terminated by six months prior notice given at any time by either party. The Corporation will pay AOG a fixed annual fee of \$500,000 under this agreement.

Non-Competition Agreement

AOG has agreed with Addax Petroleum that, provided AOG and Jean Claude Gandur together own not less than 25 per cent of the issued and outstanding Common Shares, neither AOG nor any of its subsidiaries will:

- acquire any petroleum properties or facilities or participate in the exploration for or development and production of petroleum or participate in any upstream petroleum business opportunities, unless AOG has first offered such business opportunities to Addax Petroleum and Addax Petroleum has declined to acquire such business opportunities. Such offer must remain open for acceptance for a minimum of 30 business days. For purposes of certainty, petroleum trading, downstream activities or non-petroleum resource activities of AOG shall not be considered directly competing interests; or
- participate in any person, other than acquiring not more than five per cent of the equity of a publicly listed corporation, which engages in the above prescribed activities.

QUARTERLY FINANCIAL INFORMATION

	2006		2005				2004	
	Q1	Q4	Q3	Q2	Q1	Q4	Q3	Q2
Petroleum Sales (million)	394.2	378.5	385.7	257.8	197.1	156.4	146.6	117.1
Net income (million)	56.5	38.1	85.6	53.5	28.9	21.3	15.8	13.7
Net income per share (\$)	0.44	0.33	0.73	0.46	0.25	0.18	0.14	0.12
Cash Flow from operations (million)	174.3	146.0	163.2	89.1	69.9	52.6	48.0	33.0
Per common share (\$)	1.36	1.25	1.39	0.76	0.60	0.45	0.41	0.28

Notes:

(1) 2006 per share amounts are calculated on a basis of 127,850,100 common shares of Addax Petroleum Corporation

(2) 2004 and 2005 per share amounts are calculated on a basis of 117,000,100 common shares of Addax Petroleum N.V.

(3) In the prospectus relating to the IPO of February 2006, the revenues did not take into account overlift adjustments for quarters 1, 2 and 3 of 2005. In quarter 1, 2005 there was an overlift adjustment of \$2.6 million which increased the petroleum sales from \$194.5 million contained in the prospectus, to \$197.1 million in the March 2006 income statement. In quarter 2, 2005 there was an overlift adjustment of \$2.1 million increasing the petroleum sales to \$260.3 million. In quarter 3, 2005 there was an overlift adjustment of \$2.1 million reducing the petroleum sales to \$385.7 million.

Petroleum Sales

The petroleum sales have slightly increased by 4% between Q4 2005 and Q1 2006 from \$378.5 million to \$394.2 million. This increase is due to an increase in prices. The average selling price has increased by 8% from \$54.94 to \$59.42. The increase is partially offset by a 4% reduction in liftings from 6.9mmbbls to 6.6mmbbls. The decrease is due to a lifting slippage on OML124 and OPL90 of 0.8mmbbls.

The general upward trend over the eight quarters of increasing petroleum sales has resulted from a combination of increased production from OML123, commencement of sales from OPL90 in quarter 2, 2005 and increasing crude oil prices throughout the period.

Net Income

Net income increased in Quarter 1 2006 by 48% to \$56.5 million from \$38.1 million in Quarter 4, 2005. The major reasons for the increase were a \$15.6 million increase in petroleum sales, a reduction in expenses of 12% or \$16.7 million, partially offset by an increase in taxes of \$9.3 million.

Expenses reduced due to a reduction in (1) general and administrative expenses in quarter one 2006 compared to quarter 4 2005 of \$14.0 million due to a reduction in Nigeria New Ventures from \$8.4 million in quarter 4 2005 to \$2.6 million in quarter 1 2006, to the cost relating to the IPO reducing from \$3.9 million in quarter 4 2005 to nil million in quarter 1 2006 and to the write off of \$3 million relating to an option to farm-in to a block. The option was not exercised; (2) a reduction in other costs from \$5.1 million in quarter 4 2005 to \$0.9 million in quarter 1 2006 due to the write off of assets in Gabon in quarter 4 2005 (\$3.2 million); (3) a reduction in DD&A of \$4.8 million in quarter 1, 2006 compared to quarter 4 2005 due to the decrease in liftings discussed in the Petroleum Sales section above; and (4) an increase in operating costs of \$6.3 million from quarter 4, 2005 to quarter 1, 2006 primarily due to the increase in Taq Taq costs of \$4.3 million.

The increase in taxes from \$135.5 million in quarter 4 2005 to \$144.8 million in quarter 1, 2006 is primarily due to the increase in petroleum sales \$15.6 million, discussed in the Petroleum Sales section above.

The general upward trend of increasing net income over the eight quarters is due to increasing petroleum sales, partially offset by increasing operating costs, DD&A and taxes. In quarters two and three 2005, the Corporation benefited from tax incentives in OPL90.

Cash Flow from Operations

Cash flow from operations increased by 19% to \$174.3 million in the first quarter of 2006 compared to \$146.0 million in the last quarter of 2005. The major increases in the first quarter 2006 compared to the last quarter 2005 were an increase of \$18.4 million in net income, as discussed above, and an increase in items not affecting cash of \$22.6 million. The increase in items not affecting cash was primarily an increase in future income taxes of \$17.4 million due to the accelerated usage of tax allowances in OPL 90.

The general upward trend in cash flow from operations in the eight quarters is due to increasing petroleum sales, partially offset by increasing operating costs and current taxes.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

1. GENERAL

Addax Petroleum Corporation (the "Corporation") was incorporated under the Canada Business Corporations Act on September 6, 2005 as a wholly owned subsidiary of The Addax and Oryx Group Ltd. ("AOG") for the purpose of acquiring all of the issued and outstanding common shares of Addax Petroleum N.V., another wholly owned subsidiary of AOG, in connection with the initial public offering of the common shares of the Corporation (the "IPO").

On February 16, 2006, the Corporation completed its IPO of 21 million common shares and on February 24, 2006 it completed the issuance of an additional 2.1 million common shares upon the exercise of an over-allotment option granted to the underwriters by Addax Petroleum Corporation in connection with the IPO. Total net proceeds from the issuances were approximately \$371,050,000.

In conjunction with the completion of the IPO, the Corporation acquired all of the issued and outstanding common shares of Addax Petroleum N.V. for cash consideration of \$48,188,360 and the issuance of 117,000,000 common shares. The cash consideration has been accounted for as a distribution of earnings. As AOG controls both the Corporation and Addax Petroleum N.V., the acquisition occurred between entities under common control and was accounted for in the books of the Corporation as a continuity of interests. Under this form of purchase accounting, Addax Petroleum Corporation is deemed to have acquired Addax Petroleum N.V. at book value. Subsequent to the acquisition, the Corporation's financial statements presented for comparative purposes reflect the financial position, results of operations and cash flows as if the Corporation and Addax Petroleum N.V. had been combined since the inception of Addax Petroleum N.V.

2. ACCOUNTING POLICIES

The interim consolidated financial statements of the Corporation include the Corporation, its wholly-owned subsidiaries and its interests in joint ventures, and have been prepared following the same accounting policies as the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2005. The interim financial statements contain disclosures that are supplemental to the Corporation's annual audited consolidated financial statements. Certain disclosures that are normally required to be included in the notes to the annual audited consolidated financial statements have been condensed. These financial statements should be read in conjunction with Addax Petroleum N.V.'s audited consolidated financial statements and notes thereto for the year ended December 31, 2005.

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

3. PROPERTY, PLANT AND EQUIPMENT

	March 31, 2006	December 31, 2005
Oil and natural gas properties	1,064,877	890,914
Accumulated depletion	(464,889)	(407,644)
	599,988	483,270
Corporate assets	16,050	7,289
Accumulated depreciation	(3,738)	(3,536)
	12,312	3,753
Balance	612,300	487,023

Property, plant and equipment by cost centre is as follows:

Cost Centre	March 31, 2006	December 31, 2005
Nigeria	511,859	468,289
Cameroon	11,858	5,401
Gabon	9,879	9,580
Joint Development Zone	66,392	-
Other corporate assets	12,312	3,753
Balance, end of period	612,300	487,023

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Included in property, plant and equipment are certain costs not subject to depletion and depreciation as follows:

	March 31, 2006	December 31, 2005
Unproved properties		
Cameroon	11,858	5,401
Gabon	9,879	9,580
Joint Development Zone	66,392	-
	88,129	14,981

In March 2006, the Corporation entered into three production sharing contracts ("PSCs") with the Joint Development Authority which administers the Joint Development Zone (JDZ) between Nigeria and São Tomé e Príncipe.

4. SHARE CAPITAL

The Corporation is authorized to issue an unlimited number of common shares and an unlimited number of preferred shares, issuable in series.

Issued and Outstanding

	Three month period ended March 31, 2006	
	Common Shares	Amount
Balance, beginning of period	117,000,100	20,010
Issued pursuant to IPO	23,100,000	371,050
Balance, end of period	140,100,100	391,060

AOG plans to award up to 987,000 common shares of the Corporation it currently holds to current employees and directors of the Corporation during the second quarter of the year. Once awarded, the individuals will have 30 days to either accept or reject the award. Rejected shares will be kept by AOG. The shares will vest as follows: one third at the IPO date (February 2006); one third on the first anniversary of the IPO date; and one third on the second anniversary of the IPO date. The fair value at the date of grant of the common shares awarded to and accepted by employees and directors of the Corporation will be expensed over the vesting period.

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

(b) Changes in non-cash working capital

	March 31, 2006	March 31, 2005
Accounts receivable	10,926	24,365
Prepaid expenses	(19,839)	(76)
Inventories	(14,004)	(6,399)
Accounts payable and accrued liabilities	(10,003)	44,231
Tax and royalties payable	11,997	(60,101)
Deferred revenue	(1,280)	(2,530)
Changes in non-cash working capital	(22,203)	(510)

(c) Other cash flow information

	Period ended March 31,	
	2006	2005
Interest paid	1,183	3,283
Income taxes paid	-	-

The Corporation pays the Petroleum Profits Tax and Royalties in Nigeria through government liftings taken-in-kind. During the period, such government liftings totalled \$139,566,000.

8. INVESTMENT IN JOINT VENTURES

Included in the consolidated financial statements are the following items that represent the Corporation's interests in the jointly controlled assets, liabilities, revenues and expenses of the joint ventures.

	March 31, 2006	December 31, 2005
Non-current assets	87,720	14,982
Current assets	42,098	6,749
Non-current liabilities	-	-
Current liabilities	(162,444)	(40,683)
Net liabilities	32,626	18,952
Income	-	-
Expenses	8,118	10,915

9. RELATED PARTY TRANSACTIONS

ADDAX PETROLEUM CORPORATION
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (unaudited)
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

The following transactions took place between the Corporation and AOG and its other subsidiary companies:

	March 31, 2006	March 31, 2005
Sales to Addax B.V.	173,361	100,201
Charges:		
Addax Bunkering Services	(1,133)	-
AOG Advisory Services Ltd.	(625)	(625)
Addax B.V.	(337)	(572)
Addax Limited	(14)	(248)

The sales to Addax B.V., the sole marketer of the Corporation's crude oil, were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG Advisory Services Ltd., include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for the Corporation's bunkering operations. Other items include charges from Addax Limited for the refund of services paid on behalf of the Corporation. Addax B.V. and Addax Limited are subsidiaries of AOG.

Amounts due from (to) related parties as included in accounts receivable and accounts payable in the consolidated balance sheet are as follows:

	March 31, 2006	December 31, 2005
Addax B.V.	57,040	109,694
AOG Advisory Services Ltd.	435	281
Addax Limited	(2,328)	(2,943)

10. PRE-ACQUISITION

Included in pre-acquisition expenses are costs related to the Corporation's New Venture activity. Related expenditures are charged to the income statement pending finalization of the Corporation's rights to a license. These costs can include seismic purchases, studies (in-house and external) and consulting.

**Report in Respect of Voting Results Pursuant to Section 11.3 of
National Instrument 51-102 – Continuous Disclosure Obligations.**

2007 JAN 18 A 10:38

In respect of the Annual and Special Meeting of shareholders of Addax Petroleum Corporation (the "Corporation") held June 28, 2006 (the "Meeting"), the following sets forth a brief description of each matter which was voted upon at the Meeting and the outcome of the vote:

OFFICE OF INTERNATIONAL FINANCE

	Description of Matter	Outcome of Vote
1.	Ordinary resolution to approve the appointment of Deloitte & Touche LLP, Chartered Accountants, to serve as auditor of the Corporation until the next annual meeting of shareholders, at such remuneration as may be approved by the Audit Committee of the Corporation.	Resolution approved
2.	Ordinary resolution to approve the eight nominees for election as directors of the Corporation, each director elected will hold office until the close of the next annual meeting of shareholders, or until his successor is duly elected or appointed, as described in the Management Proxy Circular of the Corporation dated May 24, 2006 (the "Proxy Circular").	Resolution approved
3.	Ordinary resolution to authorize, approve and adopt the long term incentive plan of the Corporation, all or more particularly set forth and described in the Proxy Circular.	Resolution approved

ADDAX PETROLEUM CORPORATION

FORM OF PROXY

THIS PROXY IS SOLICITED ON BEHALF OF THE MANAGEMENT OF ADDAX PETROLEUM CORPORATION (the "Corporation") for use at the Annual and Special Meeting (the "Meeting") of the shareholders of the Corporation (the "Shareholders") and at any adjournment thereof. The Meeting will be held in the Sky Room at the Carlu, 7th Floor, 444 Yonge Street, Toronto, Ontario on Wednesday, June 28, 2006 at 10:00 a.m. (Eastern Standard Time) for the purposes set out in the Notice of Annual and Special Meeting accompanying this Form of Proxy. At the Meeting, holders of common shares ("Common Shares") of the Corporation are entitled to vote on all matters to come before the Meeting by virtue of the rights attached to such shares. Holders of Common Shares are entitled to one vote for every Common Share held. The solicitation of proxies is intended to be made primarily by mail but may also be undertaken by way of telephone, facsimile transmission or other electronic means of communication or in person by the directors and officers of the Corporation. The cost of the solicitation of proxies will be borne by the Corporation.

The undersigned hereby appoints JEAN CLAUDE GANDUR, Chief Executive Officer of the Corporation, or failing him, MICHAEL EBSARY, Chief Financial Officer of the Corporation, or instead of either of them _____, as Proxyholder of the undersigned, with power of substitution, to attend, act and vote for and on behalf of the undersigned at the Meeting, and at any and all adjournments thereof, in the same manner, to the same extent and with the same power as if the undersigned were present at the Meeting or an adjournment thereof.

In addition to revocation in any manner permitted by law, a Shareholder may revoke the proxy with an instrument in writing signed and delivered to Computershare Trust Company of Canada, 100 University Avenue, 9th Floor, Toronto, Ontario, M5J 2Y1, at any time up to and including the last business day preceding the day of the Meeting or any adjournment thereof or deposited with the chairman of the Meeting on the date of the Meeting or any adjournment thereof prior to the commencement of the Meeting. The document used to revoke a proxy must be in writing and completed and signed by the Shareholder or his or her attorney authorized in writing or, if the Shareholder is a corporation, under its corporate seal or by an officer or duly authorized attorney thereof. As well, a Shareholder who has given a proxy may attend the Meeting in person (or where the Shareholder is a corporation, its authorized representative may attend), revoke the proxy (by indicating such intention to the chairman of the Meeting before the proxy is exercised) and vote in person (or abstain from voting).

Without limiting the general powers hereby confirmed, the Proxyholder is hereby directed to vote on any poll as follows:

1. To receive the audited financial statements of the Corporation together with the Report of the Auditor thereon for the year ended December 31, 2005. IN FAVOUR AGAINST
2. To appoint auditors of the Corporation for the ensuing year at such remuneration as may be approved by the Audit Committee of the Corporation. IN FAVOUR WITHHOLD
3. To elect the directors of Addax Petroleum Corporation to hold office until the next annual meeting of Shareholders or until their successors are elected or appointed. IN FAVOUR WITHHOLD
4. To consider and, if deemed advisable, to pass an ordinary resolution approving the Long Term Incentive Plan of the Corporation, as more particularly described in the Management Proxy Circular of the Corporation dated May 24, 2006. IN FAVOUR AGAINST

The Notes to Proxy on the reverse are incorporated into and form part of this Form of Proxy. If this Form of Proxy is not dated in the space provided below, it shall be deemed to bear the date on which it is mailed by the person making the solicitation, being the Management of the Corporation.

The undersigned hereby revokes any instrument proxy previously given with respect to the Meeting or any adjournment thereof.

DATED this _____ day of _____, 2006.

SIGNATURE OF SHAREHOLDER _____

Name: _____

Address: _____

No. of Common Shares: _____

Your address shown will be registered as your present address. Please notify the Corporation of any change in your address.

NOTES TO PROXY

1. The Common Shares represented by this Proxy will be voted or withheld from voting on any motion, by ballot or otherwise, in accordance with the indicated instructions. **If the Shareholder has specified a choice with respect to any of the items above by marking an "X" in the space provided for that purpose, the Common Shares will be voted in accordance with that choice. IN THE ABSENCE OF SUCH DIRECTION, SUCH COMMON SHARES WILL BE VOTED IN FAVOUR OF ALL MATTERS IDENTIFIED IN THE NOTICE ACCOMPANYING THE MANAGEMENT PROXY CIRCULAR.** If any amendment or variation to the matters identified in the Notice of Meeting and Management Proxy Circular is proposed at the Meeting or any adjournment thereof, or if any other matters properly come before the Meeting or any adjournment thereof, this Proxy confers discretionary authority on the proxy nominee to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder.
2. This Proxy must be completed, dated and signed by the Shareholder or the Shareholder's attorney authorized in writing or, if the Shareholder is a corporation, under its corporate seal or by an officer or attorney thereof duly authorized. Persons signing as officers, attorneys, executors, administrators, trustees, etc., should so indicate and provide satisfactory evidence of such authority. A copy of such authorization should accompany this Proxy.
3. **THE PERSONS NAMED IN THIS PROXY ARE DIRECTORS AND/OR OFFICERS OF THE CORPORATION. A SHAREHOLDER WISHING TO APPOINT SOME OTHER PERSON AS HIS OR HER REPRESENTATIVE AT THE MEETING MAY DO SO BY EITHER: (I) CROSSING OUT THE NAMES OF THE MANAGEMENT NOMINEES AND LEGIBLY PRINTING THE OTHER PERSON'S NAME (WHO NEED NOT BE A SHAREHOLDER) IN THE BLANK SPACE PROVIDED IN THIS PROXY, OR (II) COMPLETING ANOTHER VALID PROXY.** In any case, this Proxy should be dated and signed by the Shareholder or the Shareholder's attorney authorized in writing, or if the Shareholder is a corporation, under its corporate seal, or by an officer or attorney thereof duly authorized.
4. **This Proxy must be delivered to the Corporation's transfer agent, Computershare Trust Company of Canada ("Computershare"), 100 University Avenue, 9th Floor, Toronto, Ontario, MSJ 2Y1, Attention: Proxy Department. In order to be valid, proxies must be received by Computershare no later than 10:00 a.m. (Eastern Standard Time) on June 26, 2006 or, if the Meeting is adjourned, by 10:00 a.m. (Eastern Standard Time) on the second business day prior to the date on which the Meeting is reconvened.**

NOTICE OF MEETING

AND

MANAGEMENT PROXY CIRCULAR

May 24, 2006

NOTICE OF ANNUAL AND SPECIAL MEETING

NOTICE IS HEREBY GIVEN that an annual and special meeting (the "Meeting") of the holders ("Shareholders") of common shares ("Common Shares") of Addax Petroleum Corporation (the "Corporation") will be held in the Sky Room at the Carlu, 7th Floor, 444 Yonge Street, Toronto, Ontario on Wednesday, June 28, 2006 at 10:00 a.m. (Eastern Standard Time) for the following purposes, which are described in more detail in the Management Proxy Circular of the Corporation (the "Circular") accompanying this Notice, namely:

1. to receive the audited financial statements of the Corporation together with the Report of the Auditor thereon for the year ended December 31, 2005;
2. to appoint auditors of the Corporation for the ensuing year at such remuneration as may be approved by the Audit Committee of the Corporation;
3. to elect the directors of Addax Petroleum Corporation to hold office until the next annual meeting of Shareholders or until their successors are elected or appointed;
4. to consider and, if deemed advisable, to pass an ordinary resolution approving the Long Term Incentive Plan of the Corporation, as more particularly described in the Circular of the Corporation dated May 24, 2006; and
5. to transact such other business as may properly come before the Meeting or any adjournment thereof.

Only Shareholders of record at the close of business on May 24, 2006 will be entitled to notice of and to vote at the Meeting or any adjournment thereof.

If you are unable to attend the Meeting in person, please complete, sign and deliver a proper form of proxy to the Corporation's transfer agent, Computershare Trust Company of Canada ("Computershare"), 100 University Avenue, 9th Floor, Toronto, Ontario M5J 2Y1 Attention: Proxy Department. In order to be valid, proxies must be received by Computershare no later than 10:00 a.m. (Eastern Standard Time) on June 26, 2006 or, if the Meeting is adjourned, by 10:00 a.m. (Eastern Standard Time) on the second business day prior to the date on which the Meeting is reconvened.

MANAGEMENT PROXY CIRCULAR

DATED MAY 24, 2006

SOLICITATION OF PROXIES

THIS MANAGEMENT PROXY CIRCULAR (THE "CIRCULAR") IS FURNISHED IN CONNECTION WITH THE SOLICITATION OF PROXIES BY THE MANAGEMENT OF ADDAX PETROLEUM CORPORATION (the "Corporation") for use at the Annual and Special Meeting (the "Meeting") of the shareholders of the Corporation (the "Shareholders") and at any adjournment thereof. The Meeting will be held in the Sky Room at the Carlu, 7th Floor, 444 Yonge Street, Toronto, Ontario on Wednesday, June 28, 2006 at 10:00 a.m. (Eastern Standard Time) for the purposes set out in the Notice of Annual and Special Meeting (the "Notice") accompanying this Circular.

The solicitation of proxies is intended to be made primarily by mail but may also be undertaken by way of telephone, facsimile transmission or other electronic means of communication or in person by the directors and officers of the Corporation. The cost of the solicitation of proxies will be borne by the Corporation. Except where otherwise stated, the information contained herein is given as of May 24, 2006.

PROXY INSTRUCTIONS

APPOINTMENT OF PROXIES

Those Shareholders who wish to be represented at the Meeting by proxy must complete, sign and deliver a proper form of proxy to the Corporation's transfer agent, Computershare Trust Company of Canada ("Computershare"), 100 University Avenue, 9th Floor, Toronto, Ontario, M5J 2Y1, Attention: Proxy Department. In order to be valid, proxies must be received by Computershare no later than 10:00 a.m. (Eastern Standard Time) on June 26, 2006 or, if the Meeting is adjourned, by 10:00 a.m. (Eastern Standard Time) on the second business day prior to the date on which the Meeting is reconvened.

The document appointing a proxy must be in writing and completed and signed by the Shareholder or the Shareholder's attorney authorized in writing or, if the Shareholder is a corporation, under its corporate seal or by an officer or attorney thereof duly authorized. Persons signing as officers,

attorneys, executors, administrator, trustees, etc., should so indicate and provide satisfactory evidence of such authority.

THE PERSONS NAMED IN THE ENCLOSED FORM OF PROXY ARE DIRECTORS AND/OR OFFICERS OF THE CORPORATION. A SHAREHOLDER WISHING TO APPOINT SOME OTHER PERSON AS HIS OR HER REPRESENTATIVE AT THE MEETING MAY DO SO BY EITHER: (I) CROSSING OUT THE NAMES OF THE MANAGEMENT NOMINEES AND LEGIBLY PRINTING THE OTHER PERSON'S NAME (WHO NEED NOT BE A SHAREHOLDER) IN THE BLANK SPACE PROVIDED IN THE ENCLOSED FORM OF PROXY, OR (II) COMPLETING ANOTHER VALID FORM OF PROXY. In any case, the form of proxy should be dated and signed by the Shareholder or the Shareholder's attorney authorized in writing, or if the Shareholder is a corporation, under its corporate seal, or by an officer or attorney thereof duly authorized.

REVOCATION OF PROXIES

A Shareholder who has submitted a proxy has the power to revoke it before the proxy is exercised. In addition to revocation in any manner permitted by law, a Shareholder may revoke the proxy with an instrument in writing signed and delivered to Computershare at any time up to and including the last business day preceding the day of the Meeting or any adjournment thereof or deposited with the chairman of the Meeting on the date of the Meeting or any adjournment thereof prior to the commencement of the Meeting. The document used to revoke a proxy must be in writing and completed and signed by the Shareholder or his or her attorney authorized in writing or, if the Shareholder is a corporation, under its corporate seal or by an officer or duly authorized attorney thereof. As well, a Shareholder who has given a proxy may attend the Meeting in person (or where the Shareholder is a corporation, its authorized representative may attend), revoke the proxy (by indicating such intention to the chairman of the Meeting before the proxy is exercised) and vote in person (or abstain from voting).

EXERCISE OF DISCRETION WITH RESPECT TO PROXIES

The Common Shares represented by the enclosed proxy will be voted or withheld from voting on any motion, by ballot or otherwise, in accordance with any indicated instructions. **IN THE ABSENCE OF SUCH DIRECTION, SUCH COMMON SHARES WILL BE VOTED IN FAVOUR OF ALL MATTERS IDENTIFIED IN THE NOTICE ACCOMPANYING THIS CIRCULAR.** If any amendment or variation to the matters identified in the Notice is proposed at the Meeting or any adjournment thereof, or if any other matters properly come before the Meeting or any adjournment thereof, the enclosed proxy confers discretionary authority on the proxy nominee to vote on such amendments or variations or such other matters according to the best judgment of the appointed proxyholder. As at the date of this Circular, neither the directors nor management of the Corporation are aware of any amendments or variations or other matters to come before the Meeting.

INFORMATION FOR BENEFICIAL HOLDERS OF COMMON SHARES

The information set forth in this section is of significant importance to Shareholders who do not hold Common Shares in their own name. Almost all of the Shareholders of the Corporation do not hold Common Shares in their own name.

Shareholders who do not hold their Common Shares in their own name (referred to in this Circular as "Beneficial Shareholders") should note that only proxies deposited by Shareholders whose names appear on the records of the Corporation as the registered holders of Common Shares can be recognized and acted upon at the Meeting.

If Common Shares are listed in an account statement provided to a shareholder by a broker, then in almost all cases those Common Shares will not be registered in the shareholder's name on the records of the Corporation. Such Common Shares will more likely be registered under the name of the shareholder's broker or an agent of that broker. In Canada, the vast majority of such shares are registered under the name of CDS & Co. (the registration name for The Canadian Depository for Securities Limited, which acts as nominee for many Canadian brokerage firms). Common Shares held by brokers or their agents or nominees can only be voted (for or against resolutions) or withheld from voting upon the instructions of the Beneficial Shareholder. Without specific instructions, brokers and their agents and nominees are prohibited from voting Common Shares on behalf of their clients.

Therefore, Beneficial Shareholders should ensure that instructions respecting the voting of their Common Shares are communicated to the appropriate person.

Applicable regulatory policy requires intermediaries/brokers to seek voting instructions from Beneficial Shareholders in advance of shareholders' meetings. Every intermediary/broker has its own mailing procedures and provides its own return instructions to clients, which should be carefully followed by Beneficial Shareholders in order to ensure that their Common Shares are voted at the Meeting. The form of proxy supplied to a Beneficial Shareholder by its broker (or the agent of that broker) is similar to the form of proxy provided to registered shareholders of the Corporation. However, its purpose is limited to instructing the registered shareholder (the broker or agent of the broker) how to vote on behalf of the Beneficial Shareholder. The majority of brokers now delegate responsibility for obtaining instructions from clients to ADP Investor Communications Corporation ("ADP"). ADP typically asks Beneficial Shareholders to return proxy forms to ADP. ADP then tabulates the results of all instructions received and provides instructions respecting voting of shares represented at the Meeting. **A Beneficial Shareholder receiving an ADP proxy cannot use that proxy to vote Common Shares directly at the Meeting; the ADP proxy must be returned to ADP well in advance of the Meeting in order to have the Common Shares voted.**

Although a Beneficial Shareholder may not be recognized directly at the Meeting for the purposes of voting Common Shares registered in the name of a broker (or agent of the broker), a Beneficial Shareholder may attend the Meeting as proxyholder for the registered shareholder and vote the Common Shares in that capacity. Beneficial Shareholders who wish to attend at the Meeting and indirectly vote their Common Shares as proxyholder for the registered shareholder should enter their own names in the blank space on the instrument of proxy provided to them and return same to their broker (or the broker's agent) in accordance with the instructions provided by such broker (or agent), well in advance of the Meeting.

Unless otherwise indicated, all references in this Circular to dollar amounts are to U.S. dollars.

ADDAX PETROLEUM CORPORATION

The Corporation is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria, and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day for 2006. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies.

The Corporation was incorporated pursuant to the *Canada Business Corporations Act* (the "CBCA") on September 6, 2005. Pursuant to a share transfer agreement among the Corporation, The Addax and Oryx

Group Ltd. ("AOG") and Addax Mining Holdings B.V. dated February 10, 2006, the Corporation acquired all of the issued and outstanding shares of Addax Petroleum N.V. ("APNV"), a corporation incorporated under the laws of the Netherlands Antilles. The Corporation now carries on the business previously carried on by APNV, of evaluating and pursuing oil and gas exploration and production in Africa and the Middle East.

As of the close of business on May 24, 2006, the Corporation had 140,100,100 Common Shares outstanding.

BUSINESS OF THE MEETING

Regular Business

RECEIPT OF THE FINANCIAL STATEMENTS AND AUDITOR'S REPORT

Shareholders will receive and consider the audited financial statements of the Corporation for the year ended December 31, 2005 and the Report of the Auditor thereof will be placed before the Meeting.

APPOINTMENT OF AUDITOR

Management of the Corporation proposes to nominate Deloitte & Touche LLP, Chartered Accountants, to serve as auditor of the Corporation until the next annual meeting of Shareholders, at such remuneration as may be approved by the Audit Committee of the Corporation. Deloitte & Touche LLP were first appointed auditors of the Corporation on November 23, 2005.

ELECTION OF DIRECTORS

The Corporation's articles of incorporation provide for the board of directors to consist of a minimum of 1 and a maximum of 11 directors.

The following table includes information about each of the nominees for election as a director of the Corporation, including the number of Common Shares beneficially owned, directly or indirectly, or over which control or direction is exercised as at May 24, 2006. Each director elected will hold office until the close of the next annual meeting of shareholders, or until his successor is duly elected or appointed. **The persons named below will be presented for election at the Meeting as management's nominees.** Management does not contemplate that any of these nominees will be unable to serve as a director but, if that should occur for any reason prior to the Meeting, the persons designated in the enclosed form of proxy reserve the right to vote for other nominees at their direction.

<u>Name and Municipality of Residence</u>	<u>Year of Birth</u>	<u>Position with the Corporation</u>	<u>Director Since</u>	<u>Number of Common Shares Beneficially Owned Directly or Indirectly or Controlled, or Directed</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>

Notes:

- (1) Mr. Gandur has been an officer of APNV since 2002 and became a director and officer of the Corporation in 2005.
- (2) Member of the Audit Committee.
- (3) Member of the Technical and Reserves Committee.
- (4) Member of the Corporate Governance, Nominating and Compensation Committee.
- (5) Hydromet Financial Corp., which is beneficially owned by Mr. Gandur, is a significant shareholder in The Addax and Oryx Group Ltd. which itself beneficially owns, directly or indirectly, all the outstanding shares of Addax Mining Holdings B.V. a principal holder of Common Shares.

No proposed director of the Corporation:

- (a) is, as at the date of the Circular, or has been, within the 10 years before the date of the Circular, a director or executive officer of any company (including the Corporation), that while that person was acting in that capacity,
 - (i) was the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days;
 - (ii) was subject to an event that resulted, after the director or executive officer ceased to be a director or executive officer, in the company being the subject of a cease trade or similar order or an order that denied the relevant company access to any exemption under securities legislation, for a period of more than 30 consecutive days; or
 - (iii) or within a year of that person ceasing to act in that capacity, became bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency or was subject to or instituted any proceedings, arrangement or compromise with creditors or had a receiver, receiver manager or trustee appointed to hold its assets; or
- (b) has, within the 10 years before the date of the Circular, become bankrupt, made a proposal under any legislation relating to bankruptcy or insolvency, or become subject to or instituted any proceedings, arrangement or compromise with creditors, or had a receiver, receiver manager or trustee appointed to hold the assets of the proposed director.

Special Business

LONG TERM INCENTIVE PLAN

At the Meeting, Shareholders will be asked to consider and, if deemed advisable, to pass a resolution adopting a long term incentive plan (the "Long Term Incentive Plan" or "LTIP") subject to regulatory approval. The Long Term Incentive Plan is not currently effective and will not become effective until Shareholder approval is obtained. The text of the resolution is as follows:

"BE IT RESOLVED as an ordinary resolution of the Corporation that:

1. the Long Term Incentive Plan, all or more particularly set forth and described in the Management Proxy Circular for the Annual and Special Meeting of the Corporation dated May 24, 2006, be and is hereby approved and adopted;
2. any director or officer of the Corporation be, and is hereby authorized and directed, for and on behalf of and in the name of the Corporation, to do all such acts and things and to execute and deliver all such documents and instruments as may be considered necessary or desirable to give effect to the foregoing."

Shareholder Approval

To become effective, the resolution adopting the Long Term Incentive Plan must be approved by a simple majority of the votes cast by the Shareholders voting in person or by proxy at the Meeting.

The persons named as proxyholders in the enclosed form of proxy intend to cast the votes represented by proxy in favour of the resolution adopting the Long Term Incentive Plan unless the holder of Common Shares who has given such proxy has directed that the votes be otherwise cast.

Recommendation of Directors

The directors have determined that the Long Term Incentive Plan is in the best interests of the Corporation and its Shareholders and unanimously recommends that Shareholders vote in favour of adoption of the Long Term Incentive Plan.

Background to the Long Term Incentive Plan

The Corporation intends to adopt the Long Term Incentive Plan, the purpose of which is to motivate, reward and retain key employees. The Long Term Incentive Plan is to be an integral part of the overall compensation package for key management and professional staff.

Summary of the Long Term Incentive Plan

The maximum number of Common Shares which may be issued under the Long Term Incentive Plan will not exceed 7,500,005 Common Shares, representing five per cent of the outstanding share capital of the Corporation as at May 24, 2006. Under the Long Term Incentive Plan, Common Shares may be issued to directors, officers, employees of, and other service providers to the Corporation in such numbers and with vesting provisions as the Board may determine.

Details of the Long Term Incentive Plan

Annual amounts will be based on four factors (i) the Corporation's performance relative to the Corporation's Peer Group, (ii) the Corporation's performance related directly to the Corporation's Key Performance Indicators ("KPIs"), (iii) individual performance from annual performance evaluations, and (iv) Salary Grade ("SG") applied to a notional Share Grant amount.

- (a) **Peer Group.** The Corporation's Peer Group will be reviewed and agreed to by the Corporate Governance, Nominating and Compensation. At the end of the first quarter of each year the Corporation will evaluate the performance of the Corporation versus the peer group in terms of Total Shareholder Return (average stock price increase plus dividends), production and reserves additions for the previous year. On the basis of this evaluation a ranking of the peer group (including the Corporation) will be prepared. The ranking will place all companies into one of three groups: top tier, middle tier and bottom tier. This ranking will be presented to the Corporate Governance, Nominating and Compensation Committee prior to the second quarter Board meeting.
- (b) **KPIs.** The KPIs for the Corporation include: Production, Reserves Replacement Ratio, Unit OPEX, and LTI frequency. The overall KPI performance is based on how the Corporation performed in the previous year relative to the Targets for the four key factors. The Corporate Governance, Nominating and Compensation Committee shall endeavour to establish the KPIs at the meeting prior to the second quarter Board Meeting in each year for application to the subsequent years awards.
- (c) **Individual Performance.** An individual performance factor ("IPF") is set based on the performance of the individual during the year based on defined deliverables for the individual's job. The IPF factor shall be between 0.8 and 1.2.
- (d) **Salary Grade.** The annual notional Share Grants amounts are set per salary grade.

Award Recommendation

For the CEO, the Corporate Governance, Nominating and Compensation Committee shall determine the notional Share Grant amount (the "X Factor") (taking into account the Corporation's ranking against its Peer Group and the Corporation's overall performance ranking against its KPIs), and the CEO's IPF shall be applied to this amount in order to determine the number of shares to be awarded to the CEO. The CEO shall take the Corporate Governance, Nominating and Compensation Committee's determination of corporate performance implicit in the X factor and apply it to his assessment of the IPF of each of the other Corporate Officers and determine for each of them the number of shares to be awarded to them as part of the LTIP program. The CEO shall consult with the Corporate Governance, Nominating and Compensation Committee in respect thereof prior to award. It is the intention of the LTIP program for the Corporation's senior executives that they will receive conditional awards worth up to 150% of salary this percentage could be greater in exceptional circumstances, as determined by the Corporate Governance, Nominating and Compensation Committee.

The SG Grant amount per SG for other employees would be set by Executive Management annually within the constraints of the LTIP program set out below and the total shares to be awarded pursuant thereto shall be endorsed by the Corporate Governance, Nominating and Compensation Committee prior to award.

Other Key Features of the Program

- (i) Grants would be made effective 1 July each year commencing July 1, 2006.
- (ii) Shares would be issued from Treasury unless the Board decided otherwise.
- (iii) Upon "Change of Control" for the Corporation, all grant amounts would vest immediately.

A change of control shall be deemed to have occurred if any person other than The Addax and Oryx Group Ltd. or any related party (or a group of persons acting in concert):

- (A) obtains control of the Corporation as a result of making a general offer to acquire shares in the Corporation; or
- (B) having obtained control of the Corporation makes such an offer and such offer becomes unconditional in all respects; or
- (C) obtains control of the Corporation as a result of any other recognized arrangements; or
- (D) the Corporation passes a resolution for a voluntary winding up of the Corporation or an order is made for the compulsory winding up of the Corporation.

Control means in relation to the Corporation, the ability of a person, or persons acting in concert, to cast more than 50 per cent of the votes which the holders of Shares may cast at a general meeting of the members of the Corporation.

- (iv) The principal participants in the program are defined below by the Corporation's Salary Grades:

Salary Grade 12	CEO
Salary Grade 11	COO/CFO
Salary Grade 10	CLO / Managing Director
Salary Grade 9	Senior Advisor / General Manager
Salary Grade 8	Advisor / Asset Manager / Senior Team Leader
Salary Grade 7	Senior Specialist / Team Leader

Lower Salary Grades would be included only by exception.

- (v) The total number of outstanding Common Shares is 140,100,100, representing the Corporation's current outstanding share capital. No securities have been issued under the LTIP to date and none will be issued prior to approval of the Shareholders at the Meeting. The maximum number of Common Shares which may be issued under the LTIP will not exceed 7,500,005 Common Shares, representing five per cent of the outstanding share capital of the Corporation as at May 24, 2006.

- (vi) The maximum number of shares which may be issued under the LTIP and any other share compensation plans of the Corporation to insiders will not exceed 5,250,003 Shares (representing approximately 70 per cent of the 7,500,005 shares which may be issued under this Plan in aggregate).
- (vii) The maximum number of securities or shares any one person would be entitled to receive under the proposed arrangement would be 2,311,652. This would represent approximately 1.65 percent of the current outstanding capital.
- (viii) Grants to employees under the proposed arrangement would be on a yearly basis. Grants would vest in the following manner: 1/3rd immediately; 1/3rd one year after the Grant Date; and 1/3rd two years after the Grant Date. If an employee were to leave the Corporation for any reason within the year following the Grant Date, the employee's entitlement to the 2/3rd non vested Grant would be at the discretion of the Corporate Governance, Nominating and Compensation Committee. Grants would also vest fully on a change of control (see (iii) above) and on the death of the employee.
- (ix) Fully vested arrangements benefits can be assigned at the discretion of the employee. Otherwise employees' rights under this plan would be unassignable.
- (x) The Corporate Governance, Nominating and Compensation Committee may resolve to amend and/or terminate the LTIP at any time provided no amendments to the provisions relating to:
 - (A) the selection of participants;
 - (B) levels of participation;
 - (C) the transfer or assignment of unvested awards;
 - (D) the effects of a "Capital Reorganization" (as defined under the LTIP);
 - (E) the effects of termination of employment and a "Change of Control" (as defined under the LTIP) of the Corporation;
 - (F) Shares in Section 7 of the LTIP; and
 - (G) the provisions of Section 8.5 of the LTIPmay be made without the prior authority of the holders of shares in general meeting, save that amendments the purpose of which is to comply with any applicable exchange control regulations or rules of the Toronto Stock Exchange, or to obtain or maintain favourable tax treatment for the Corporation or participants may be made without such authority. Any amendment to the LTIP shall apply only to awards made after the date of the amendment.
- (xi) No financial assistance is planned at this time to facilitate the purchase of securities under the arrangement.

PARTICULARS OF OTHER MATTERS TO BE ACTED UPON

The directors know of no other matters to come before the Meeting other than those referred to in the Notice accompanying this Circular. However, if any other matters properly come before the Meeting, it is the intention of the persons named in the form of proxy accompanying this Circular to vote the same in accordance with their best judgment of such matters.

INTEREST OF CERTAIN PERSONS OR COMPANIES IN MATTERS TO BE ACTED UPON

Management of the Corporation is not aware of any material interest, direct or indirect, by way of beneficial ownership of securities or otherwise, of (a) any director or executive officer of the Corporation; (b) any proposed nominee for election as a director of the Corporation; and (c) any associates or affiliates of any of the persons or companies listed in (a) and (b), in any matter to be acted on at the Meeting, other than the directors and officers of the Corporation being entitled to participate in the Long Term Incentive Plan, which is being presented to Shareholders for consideration and approval at the Meeting.

INTEREST OF INFORMED PERSONS IN MATERIAL TRANSACTIONS

Except as disclosed in the Corporation's Management's Discussion and Analysis for the three months ended March 31, 2006 (available on SEDAR at www.sedar.com) and other than as discussed elsewhere in this Circular, the Corporation is not aware of any material interests, direct or indirect, of any "informed person" of the Corporation, any proposed director of the Corporation, or any associate or affiliate of any informed person or proposed director, in any transaction since January 1, 2005 or in any proposed transaction which has materially affected or would materially affect the Corporation or any of its subsidiaries.

For the purposes of the determination above, "informed person" means: (a) a director or executive officer of the Corporation; (b) a director or executive officer of a company that is itself an informed person or subsidiary of the Corporation; (c) any person or company who beneficially owns, directly or indirectly, voting securities of the Corporation or who exercises control or direction over voting securities of the Corporation or a combination of both carrying more than 10 percent of the voting rights attached to all outstanding voting securities of the Corporation other than voting securities held by the person or company as underwriter in the course of a distribution; and (d) the Corporation after it has purchased, redeemed or otherwise acquired any of its securities, for so long as it holds any of its securities.

Afolabi Oladele has a consulting agreement with Addax Petroleum Development (Nigeria) Limited for which Mr. Oladele is paid a fee of \$9,000 per month.

There are potential conflicts of interest to which the directors and officers of Addax Petroleum Corporation will be subject in connection with the operations of the Corporation. In particular, certain of the directors of the Corporation are involved in managerial and/or director positions with other oil and gas companies whose operations may, from time to time, be in direct competition with those of the Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of the Corporation. The CBCA provides that in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such

contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise provided by the CBCA.

VOTING SECURITIES AND PRINCIPAL HOLDERS OF VOTING SECURITIES

Voting of Common Shares

Each Common Share entitles the holder thereof to one vote on all matters to come before the Meeting. Only holders of record of Common Shares as of the close of business on May 24, 2006 (the "Record Date") are entitled to receive notice of and to vote at the Meeting or any adjournment thereof. As of the Record Date, there were 140,100,100 Common Shares outstanding. A Shareholder of record on the Record Date will be entitled to vote the Common Shares shown opposite the Shareholder's name on the Corporation's register of Shareholders at the Meeting or any adjournment thereof, even though the Shareholder disposes of the Common Shares after that time. **No person becoming a Shareholder after the Record Date will be entitled to vote at the Meeting or any adjournment thereof.**

Principal Holder of Common Shares

To the knowledge of the directors and management of the Corporation, the only person who, or corporation which, beneficially owns, directly or indirectly, or exercises control or direction over, securities carrying more than 10% of the voting rights attached to all outstanding Common Shares is:

Shareholder Name	Number of Common Shares	Percentage of Issued Common Shares
Addax Mining Holdings B.V.	110,830,650	79.1%

As at May 24, 2006 CDS & Co. held in aggregate 140,100,100 Common Shares, including those beneficially owned by the shareholder named above.

CORPORATE GOVERNANCE

Committees of the Board of Directors

The Corporation recognizes the importance of adhering to excellent corporate governance standards. The Corporation has developed comprehensive corporate governance policies and procedures, which will be assessed on a continuous basis, and has adopted a "best practices" approach to corporate governance. The Board of Directors has adopted all of the recommendations set out in National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, having an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and a Technical and Reserves Committee, comprised of a majority of independent board members, adopting board mandates and a code of business ethics and conduct as well as approving regular board performance assessments. The Board of Directors may, from time to time, establish additional committees.

The mandates of each of the three committees are set forth below.

Audit Committee*

The purpose of the Audit Committee is to assist the Board of Directors in fulfilling their responsibilities of oversight and supervision of, among other things:

- (a) the audit of the consolidated financial statements of the Corporation, managing the relationship with the Corporation's auditors and meeting with the auditors as required in connection with the audit services provided by the Corporation's auditors;
- (b) the Corporation's preparation and reporting of its annual and quarterly consolidated financial statements and management's discussion and analysis;
- (c) the accounting and financial reporting practices and procedures of the Corporation and its subsidiaries;
- (d) the adequacy of internal controls and accounting procedures of the Corporation and its subsidiaries; and
- (e) the quality and integrity of consolidated financial statements of the Corporation.

*Additional information relating to the Audit Committee is provided in the Corporation's Annual Information Form dated March 28, 2006 in the section entitled "Audit Committee" and in Schedule "C" attached thereto.

Corporate Governance, Nominating and Compensation Committee

The purpose of the Corporate Governance, Nominating and Compensation Committee is to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- (a) the monitoring and oversight of the quality and effectiveness of the corporate governance practices and policies of the Corporation and its subsidiaries;
- (b) considering nominees for the independent directors; and
- (c) determining the adequacy and appropriateness of the compensation of officers and employees of the Corporation as well as the directors.

Technical and Reserves Committee

The purpose of the Technical and Reserves Committee is to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- (a) the independent engineering evaluation of the petroleum reserves of the Corporation and its subsidiaries, managing the relationship with the independent engineer and meeting with the independent engineer as required;
- (b) the public disclosure and filings relating to the Corporation's petroleum reserves and operations;
- (c) the appointment of the independent engineer and, together with management, defining the scope and supervising the methodology of the independent engineer's evaluation; and
- (d) the monitoring of the operational performance of the Corporation.

STATEMENT OF GOVERNANCE PRACTICES

Attached as Schedule "A" to this Circular is a report on Form 58-101F1 with respect to the Corporation's corporate governance policies.

EXECUTIVE COMPENSATION

Set out below are particulars of compensation paid to the Corporation's Chief Executive Officer, Chief Financial Officer and each of the Corporation's three most highly compensated executive officers who were serving as executive officers at the end of the most recently completed financial year and whose total salary and bonus exceeds CDN\$150,000 per year; and any additional individuals for whom disclosure would have been provided but for the fact that the individual was not serving as an executive officer of the Corporation at the end of the most recently completed financial year.

2005 Summary Compensation Table

Name and Position of Principal	Year	Annual Compensation			Long Term Compensation			All Other Compensation
		Salary (CHF ⁽⁹⁾)	Bonus (CHF ⁽⁹⁾)	Other Annual Compensation (CHF ⁽⁹⁾)	Awards		Payouts	
					Securities Under Options Granted	Common Shares subject to resale restrictions	LTIP Payouts	
Jean Claude Gandur ⁽²⁾⁽³⁾ Chief Executive Officer	2005	148,752	150,000	22,313	Nil	Nil	Nil	Nil
Michael Ebsary ⁽²⁾⁽³⁾ Chief Financial Officer	2005	436,000	585,000	65,400	Nil	Nil	Nil	Nil
Evert Jan Mulder ⁽²⁾⁽³⁾⁽⁵⁾⁽⁶⁾ Chief Operating Officer	2005	470,005	805,000	94,500	Nil	Nil	Nil	Nil
James Pearce ⁽²⁾⁽³⁾⁽⁴⁾⁽⁷⁾ Managing Director, Nigeria	2005	220,000	200,000	284,475	Nil	Nil	Nil	Nil
Leslie Blair ⁽²⁾⁽³⁾⁽⁸⁾ Business Development Manager, Nigeria	2005	256,200	118,400	179,340	Nil	Nil	Nil	Nil

Notes:

- (1) Based on the noon buying rate in New York City for cable transfers in Swiss francs as certified for customs purposes by the Federal Reserve Bank of New York, the average exchange rate for one Swiss franc, expressed in United States dollars was \$1.245945 in 2005.
- (2) Bonus amounts include compensation for performance in 2005 payable in 2006.
- (3) Messrs. Gandur, Ebsary, Mulder, Pearce and Blair participated in the Corporation's non-contributory pension plan and the Corporation's Accident Insurance Plan which is included in "Other Annual Compensation".
- (4) Mr. Pearce was paid a hardship allowance and a sign-in bonus which are included in "Other Annual Compensation".
- (5) Mr. Mulder received an accommodation allowance which is included in other annual compensation.
- (6) Mr. Mulder's employment with the Corporation ended effective December 31, 2005.
- (7) Mr. Pearce's employment with the Corporation began May 1, 2005 (eight months in 2005).
- (8) Mr. Leslie Blair was paid a hardship allowance which is included in "Other Annual Compensation".
- (9) CHF means Swiss Francs.

Long-Term Incentive Plans - Awards in Most Recently Completed Financial Year

A long-term incentive plan ("LTIP") is a plan providing compensation intended to motivate performance over a period greater than one financial year. A LTIP does not include option or stock

appreciation right ("SAR") plans or plans for compensation through shares or units that are subject to restriction on resale.

The Corporation has no LTIP in place and therefore there were no LTIP awards made during the Corporation's most recently completed financial year ended December 31, 2005.

Option/SAR Grants During the Most Recently Completed Financial Year

No incentive options or SARs were granted for the financial year ended December 31, 2005 as the Corporation had no option plan or SARs plan.

Aggregated Option/SAR Exercises During the Most Recently Completed Financial Year and Financial Year End Option/SAR Values

Not applicable.

Option and SAR Repricing

Not applicable.

Defined Benefit or Actuarial Plan Disclosure

Not applicable.

Termination of Employment, Change in Responsibilities and Employment Contracts

Employment Agreements

The Corporation has entered into employment agreements with each of Mr. Ebsary, the Chief Financial Officer, Mr. Pearce, the Chief Operating Officer and Mr. Codd, the Corporate Secretary and Chief Legal Officer. The employment agreements are for an indefinite period subject to termination by either party on nine months' notice. The employment agreements also provide for non-contributory participation in the Corporation's pension plan and accident insurance, as well as providing for annual bonuses that may be assessed individually at the sole discretion of the Corporation.

The annual base salaries under the employment agreements as of May 24, 2006 were: CHF 500,000 for Mr. Ebsary; CHF 527,000 for Mr. Pearce plus an accommodation allowance of CHF 52,800; and CHF 425,000 for Mr. Codd.

The Corporation has also entered into a services agreement with AOG, effective January 1, 2006, and terminable on nine months' notice by either party, for the procurement of services to be rendered by Mr. Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. The total fees paid by the Corporation to AOG for such services is \$1.1 million per annum (net of any amounts paid directly by the Corporation), subject to adjustment in certain circumstances. This amount does not include any annual bonus awarded by the Board on the recommendation of the Corporate Governance, Nominating and Compensation Committee or any Common Shares awarded under the LTIP.

Composition of the Compensation Committee

The Corporate Governance, Nominating and Compensation Committee is comprised of Peter Dey, James Davie, Stephen Paul de Heinrich and Gerry Macey. None of these Directors are officers of the Corporation and all are independent. The Committee assists the Board in determining the adequacy

and appropriateness of the compensation of officers and employees of the Corporation as well as Directors.

Executive Compensation

During the fiscal year ended December 31, 2005, the Corporation made no payments to officers, directors or employees.

Compensation Programme Design

At the meeting of the Board of Directors on May 8, 2006 a further report was received from the Corporate Governance, Nominating and Compensation Committee, which set out the Corporation's compensation philosophy. This report was adopted by the Board and it provides that total compensation for all senior staff including the CEO and other Corporate Officers shall consist of three elements, base salary, annual bonus and the LTIP.

1. Base Salary

- (a) Base salaries will be reviewed annually having regard to personal performance, the Corporation's performance, changes in responsibility and competitive market data from the Corporation's Peer Group and key competitors, to be reviewed and agreed by the Corporate Governance, Nominating and Compensation Committee ("APC's Peer Group").
- (b) The CEO's base salary will be reviewed annually with effect from the beginning of each calendar year by the Corporate Governance, Nominating and Compensation Committee. The other Corporate Officers will have their base salary reviewed annually by the CEO with effect from the beginning of each calendar year and the Corporate Governance, Nominating and Compensation Committee will be consulted with respect to the outcome of such review prior to its implementation. For all other staff, the base salary will be determined and reviewed annually by Executive Management.
- (c) For all staff a midpoint salary is set for each Salary Grade based on competitive data. For each individual in a given Salary Grade the salaries may range from 80% to 120% of the midpoint. For each individual his/her % midpoint is the annual salary divided by the midpoint salary. It is the midpoint salaries that may be adjusted annually to reflect market conditions. Each individual is to have an end salary objective ("ESO"), which is to be the % midpoint an individual should attain after sustained performance in a Salary Grade i.e. the ESO will depend upon performance

Ranking	ESO % Range
A	115-120
B	105-115
C	95-105
D	85-95
E	80-85

2. Annual Bonus

- (a) Executive Management will determine which employees are entitled to participate in the annual bonus plan.

- (b) For the Corporate Officers the bonuses payable are based on three factors, namely (i) the Corporation's performance related directly to the Corporation's key performance indicators ("KPIs") (to be reviewed annually by the Corporate Governance, Nominating and Compensation Committee), (ii) individual performance from annual performance evaluations, and (iii) Salary Grade. It is the Corporation's policy that for Corporate Officers a maximum annual bonus of 100% of salary would apply (except in exceptional circumstances).
- (c) The CEO's annual bonus will be determined by the Corporate Governance, Nominating and Compensation Committee annually in December (payable January) of each year. The other Corporate Officers will have their annual bonus determined annually by the CEO in December (payable January) of each year and the Corporate Governance, Nominating and Compensation Committee will be consulted in respect of such determination prior to its implementation.
- (d) For all other participants in the annual bonus plan both the principles to be applied and the annual bonus will be determined by Executive Management.

3. LTIP

The LTIP would be as described above, subject to shareholder approval. The LTIP has been developed in conjunction with MM&K Limited, U.K. based compensation consultants experienced in the upstream oil and gas sector.

Compensation of the Directors of the Corporation

During the fiscal year ended December 31, 2005, the Corporation did not pay any directors fees. However, during the fiscal year ended December 31, 2005, management committee fees were paid by APNV to certain of the individuals who were appointed directors of the Corporation on December 4, 2005 as follows: \$30,000 to each of Mr. Anderson and Mr. Macey; \$37,500 to Mr. Twiss; \$52,000 to Mr. Gandur; \$60,000 to Mr. Dey; \$70,000 to Mr. de Heinrich; \$45,000 to Mr. Davie; and \$70,000 to Mr. Oladele.

Directors of the Corporation are eligible to receive Common Share allocations. During 2005, no options to purchase Common Shares or Common Share allocations were granted. Directors of the Corporation are also reimbursed for their reasonable out-of-pocket disbursements incurred for the business of the Corporation.

Based on the recommendations of the Corporate Governance, Nominating and Compensation Committee of the Board, the Board of Directors has implemented remuneration and reimbursement arrangements for its directors that reflect current market practices and align the interests of directors with those of Shareholders. The Board of Directors has approved remuneration for each director (other than Mr. Gandur) in the amount of \$100,000 per annum, with a further \$20,000 per annum for committee chairs and \$10,000 per annum for committee participation, plus reimbursement of expenses and compensation of \$200,000 per annum to the Chairman of the Board. At least \$40,000 of each director's annual base compensation will be paid in Common Shares and each director may elect to receive additional Common Shares in lieu of cash compensation. The additional fees paid to committee chairs or for participation on committees will be paid in cash, unless the director otherwise elects to receive Common Shares.

The Corporation has adopted share ownership guidelines for directors requiring each director, within five years after becoming a director of the Corporation, to hold a minimum number of Common Shares equivalent to at least three times his annual base compensation.

With effect from February 16, 2006, the Corporation has put in place Directors and Officers Liability ("D&O") and Public Offering of Securities Insurance ("POSI") policies on a world-wide cover basis for all Directors and Officers of the Corporation with limits of \$50,000,000 each Policy and per claim, subject to an annual aggregate limit of \$50,000,000 each Policy. Deductible levels under the D&O vary from \$250,000,000 for claims in the USA and \$75,000 outside the USA. Deductibles under the POSI are max \$500,000 per claim. The total 2006 premium payable is \$374,500 for the D&O twelve month cover and \$505,000 for the POSI 72 month cover both subject to five per cent Swiss Stamp Duty. Neither Directors nor Officers will pay any portion of the premium.

INDEBTEDNESS OF DIRECTORS AND EXECUTIVE OFFICERS

There are no directors, executive officers, employees nor former directors, executive officers and employees indebted to the Corporation or any of its subsidiaries.

ADDITIONAL INFORMATION

Additional information relating to the Corporation is available at www.sedar.com and on the Corporation's website at www.addaxpetroleum.com. Shareholders may contact the Corporation to request copies of the Corporation's financial statements, MD&A and any documents incorporated by reference herein without charge by emailing investor.relations@addaxpetroleum.com.

Financial information regarding the Corporation is provided in the Corporation's audited financial statements for the year ended December 31, 2005 and the related management's discussion and analysis.

SCHEDULE "A"

**FORM 58-101F1
CORPORATE GOVERNANCE DISCLOSURE**

GOVERNANCE DISCLOSURE REQUIREMENT	COMPLIANCE	COMMENTS
1. (a) Disclose the identity of directors who are independent.	<input checked="" type="checkbox"/>	Peter Dey, Brian Anderson, James Davie, Stephen Paul de Heinrich, Gerry Macey, and Wesley Twiss are all independent. None have a direct or indirect material relationship with the Corporation.
(b) Disclose the identity of directors who are not independent, and describe the basis for that determination.	<input checked="" type="checkbox"/>	Jean Claude Gandur and Afolabi Oladele are not independent. Jean Claude Gandur is the CEO of the Corporation whose services are provided pursuant to a services agreement with The Addax and Oryx Group Ltd under which it receives fees for management services. Afolabi Oladele has a consulting agreement with Addax Petroleum Development (Nigeria) Limited for which Mr. Oladele is paid a fee of \$9,000 per month.
(c) Disclose whether or not a majority of directors are independent. If a majority of directors are not independent, describe what the board of directors (the board) does to facilitate its exercise of independent judgment in carrying out its responsibilities.	<input checked="" type="checkbox"/>	Only two directors, Jean Claude Gandur and Afolabi Oladele, are not independent. The remaining six directors are independent.
(d) If a director is presently a director of any other issuer that is a reporting issuer (or the equivalent) in a jurisdiction or a foreign jurisdiction, identify both the director and the other issuer.	<input checked="" type="checkbox"/>	<p>The following directors of the Corporation are presently directors of the following reporting issuers:</p> <p>Peter Dey: Workbrain Corporation</p> <p>James Davie: Taylor Gas Management Ltd., Navigo Energy Inc., Brompton Group of Funds.</p> <p>Jean Claude Gandur: Axmin Inc.</p> <p>Gerry Macey: Verenex Energy, Pan Orient Energy</p> <p>Wesley Twiss: Canadian Oil Sands Limited, Hydrogenics Corporation, Keyspan Energy Management Ltd., (Manager of Keyera Facilities Income Fund), Enbridge Commercial Trust (Enbridge Income Fund), Epcor Utilities Inc.</p>
(e) Disclose whether or not the independent directors hold regularly scheduled meetings at which non-independent directors and members of management are not in attendance. If the independent directors hold such meetings, disclose the number of meetings held since the beginning of the issuer's most recently completed financial year. If the independent directors do not hold such meetings, describe what the board does to facilitate open and candid discussion among its independent directors.	<input checked="" type="checkbox"/>	<p>Since the beginning of the Corporation's most recently completed financial year, the independent members of the Board have met on three occasions without the non-independent members of the Board and without Management being present. It is the intention of the Board to meet without Management being present on a regular basis.</p> <p>In addition, the Charter of the Corporate Governance, Nominating and Compensation Committee states that it will ensure the Board has appropriate structures in place so that the Board can function independently of Management.</p>

GOVERNANCE DISCLOSURE REQUIREMENT	COMPLIANCE	COMMENTS
(f) Disclose whether or not the chair of the board is an independent director. If the board has a chair or lead director who is an independent director, disclose the identity of the independent chair or lead director, and describe his or her role and responsibilities. If the board has neither a chair that is independent nor a lead director that is independent, describe what the board does to provide leadership for its independent directors.	<input checked="" type="checkbox"/>	Peter Dey is the Chair of the Board and is an independent director. Mr Dey's background and experience enable him to provide effective independent leadership of the Board and ensures that the Corporation adheres to the highest standards of corporate governance. His formal responsibilities are set out in the Chair Position Description set out in Schedule "B".
(g) Disclose the attendance record of each director for all board meetings held since the beginning of the issuer's most recently completed financial year.	<input checked="" type="checkbox"/>	December 5, 2005: all members in attendance February 7, 2006: all members in attendance February 8, 2006: all members in attendance with the exception of Afolabi Oladele February 14, 2006: all members in attendance with the exception of Stephen Paul de Heinrich, Afolabi Oladele and Wesley Twiss February 17, 2006: all members in attendance with the exception of James Davie March 2, 2006: all members in attendance March 21, 2006: all members in attendance May 8, 2006: all members in attendance
2. Disclose the text of the board's written mandate. If the board does not have a written mandate, describe how the board delineates its role and responsibilities.	<input checked="" type="checkbox"/>	The terms of the Board Charter are set out in Schedule "B".
3. (a) Disclose whether or not the board has developed written position descriptions for the chair and the chair of each board committee. If the board has not developed written position descriptions for the chair and/or the chair of each board committee, briefly describe how the board delineates the role and responsibilities of each such position.	<input checked="" type="checkbox"/>	The Board has adopted a written position description for the Chair and the Chair of Each Board Committee and these are available at the Corporation's website www.addaxpetroleum.com .
(b) Disclose whether or not the board and CEO have developed a written position description for the CEO. If the board and CEO have not developed such a position description, briefly describe how the board delineates the role and responsibilities of the CEO.	<input checked="" type="checkbox"/>	The Board has developed a written position description for the CEO.

GOVERNANCE DISCLOSURE REQUIREMENT	COMPLIANCE	COMMENTS
<p>4. (a) Briefly describe what measures the board takes to orient new directors regarding:</p> <p>(i) the role of the board, its committees and its directors, and</p> <p>(ii) the nature and operation of the issuer's business.</p>	<input checked="" type="checkbox"/>	<p>The initial Directors of the Corporation are business executives with extensive experience and directorship responsibilities on boards or as part of management of other public and private entities. Orientation for these individuals is provided through meetings with the CEO, CFO, other Directors and members of Management. All Directors are also provided with materials (financial and narrative) regarding the business of the Corporation.</p> <p>Presentations are also made to the Directors at each regular Board meeting with regard to the Corporation's operations, financial performance and key risk areas.</p> <p>The Corporation is at an advanced stage in organizing an orientation and information visit to the Corporation's Nigerian operations and will arrange further visits with regard to other operating sites as they develop.</p>
<p>(b) Briefly describe what measures, if any, the board takes to provide continuing education for its directors. If the board does not provide continuing education, describe how the board ensures that its directors maintain the skill and knowledge necessary to meet their obligations as directors.</p>	<input checked="" type="checkbox"/>	<p>The Corporate Governance, Nominating and Compensation Committee is responsible for overseeing the development and implementation of a program of orientation for Directors as part of its Charter.</p> <p>The Corporation encourages its Directors to attend formal continuing education programmes and to date has contributed to the attendance by Mr. Wesley Twiss at the Director's Education Program, Corporate Governance College of the Institute of Corporate Directors.</p>
<p>5. (a) Disclose whether or not the board has adopted a written code for the directors, officers and employees. If the board has adopted a written code:</p> <p>(i) disclose how a person or company may obtain a copy of the code;</p> <p>(ii) describe how the board monitors compliance with its code, or if the board does not monitor compliance, explain whether and how the board satisfies itself regarding compliance with its code; and</p> <p>(iii) provide a cross-reference to any material change report filed since the beginning of the issuer's most recently completed financial year that pertains to any conduct of a director or executive officer that constitutes a departure from the code.</p>	<input checked="" type="checkbox"/>	<p>The Board has adopted a Code of Business Conduct</p> <p>(i) The Code is available at the Corporation's website www.addaxpetroleum.com and on SEDAR at www.sedar.com.</p> <p>(ii) The Board and the Corporation's internal systems monitor compliance with the Code. All individuals subject to the Code are obligated to report any illegal or unethical behaviour or violations of the Code in a timely manner.</p> <p>(iii) Not applicable</p>
<p>(b) Describe any steps the board takes to ensure directors exercise independent judgment in considering transactions and agreements in respect of which a director or executive officer has a material interest.</p>	<input checked="" type="checkbox"/>	<p>The Board insists that the provisions of the <i>Canada Business Corporations Act</i> be followed with respect to actual or potential conflicts of interest that may exist in considering transactions and agreements. As noted previously, the independent members of the Board meet separately from non-independent members and Management. The Board ensures that any Director having a conflict or material interest in any transaction does not vote in respect of such transaction.</p>

GOVERNANCE DISCLOSURE REQUIREMENT	COMPLIANCE	COMMENTS
(c) Describe any other steps the board takes to encourage and promote a culture of ethical business conduct.	<input checked="" type="checkbox"/>	<p>In addition to the Code of Business Conduct, the Board has also adopted a Disclosure Policy which is available at the Corporation's website www.addaxpetroleum.com. The Policy applies to all employees, consultants, and the Board, as well as the Corporation's subsidiaries. The objective of the Policy is to ensure that communications to the investing public are timely, factual and accurate and broadly disseminated.</p> <p>The Corporation provides its Directors, officers and employees with on-line interactive ethics and compliance training through "Integrity Interactive" a leading provider of web based interactive compliance training. So far two courses have been rolled out. The first to senior employees in respect of OECD anti-bribery rules, and the second to all staff in respect of the Corporation's Code of Business Conduct.</p>
6. (a) Describe the process by which the board identifies new candidates for board nomination.	<input checked="" type="checkbox"/>	The Corporate Governance, Nominating and Compensation Committee is responsible for identifying new candidates for appointment to the Board. It will annually review the size, composition and operation of the Board. It will also annually review and recommend to the Board for consideration new candidates for nomination to be elected at the annual general meeting of shareholders.
(b) Disclose whether or not the board has a nominating committee composed entirely of independent directors. If the board does not have a nominating committee composed entirely of independent directors, describe what steps the board takes to encourage an objective nomination process.	<input checked="" type="checkbox"/>	The Chair of the Corporate Governance, Nominating and Compensation Committee is Peter Dey. The members as at May 8, 2006 are James Davie, Stephen Paul de Heinrich and Gerry Macey. The Chair and each member are independent.
(c) If the board has a nominating committee, describe the responsibilities, powers and operation of the nominating committee.	<input checked="" type="checkbox"/>	The Corporate Governance, Nominating and Compensation Committee has the responsibility of identifying qualified candidates for appointment to the Board as well as other nomination responsibilities set out in 6. (a).
7. (a) Describe the process by which the board determines the compensation for the issuer's directors and officers.	<input checked="" type="checkbox"/>	The Corporate Governance, Nominating and Compensation Committee consults with senior management to establish the Corporation's general compensation philosophy. The Committee also reviews and approves the compensation programs of senior management and is responsible for keeping abreast of current developments in executive compensation in corporations engaged in similar industries. The Committee also conducts an annual review of senior management performance. CEO compensation is reviewed by the Corporate Governance, Nominating and Compensation Committee and recommended to the independent directors for approval. The compensation of the other corporate officers is reviewed and determined by the CEO in consultation with the Corporate Governance, Nominating and Compensation Committee.

GOVERNANCE DISCLOSURE REQUIREMENT	COMPLIANCE	COMMENTS
(b) Disclose whether or not the board has a compensation committee composed entirely of independent directors. If the board does not have a compensation committee composed entirely of independent directors, describe what steps the board takes to ensure an objective process for determining such compensation.	<input checked="" type="checkbox"/>	The Chair of the Corporate Governance, Nominating and Compensation Committee is Peter Dey. The members as at May 8, 2006 are James Davie, Stephen Paul de Heinrich and Gerry Macey. The Chair and each member are independent.
(c) If the board has a compensation committee, describe the responsibilities, powers and operation of the compensation committee.	<input checked="" type="checkbox"/>	The Charter of the Corporate Governance, Nominating and Compensation Committee is available at the Corporation's website www.addaxpetroleum.com .
(d) If a compensation consultant or advisor has, at any time since the beginning of the issuer's most recently completed financial year, been retained to assist in determining compensation for any of the issuer's directors and officers, disclose the identity of the consultant or advisor and briefly summarize the mandate for which they have been retained. If the consultant or advisor has been retained to perform any other work for the issuer, state that fact and briefly describe the nature of the work.	<input checked="" type="checkbox"/>	The Corporation is consulting with U.K. based compensation consultants experienced in the upstream oil and gas sector, MM&K Limited, who prepared the Corporation's Long Term Incentive Plan in conjunction with the Corporation.
8. If the board has standing committees other than the audit, compensation and nominating committees, identify the committees and describe their function.	<input checked="" type="checkbox"/>	The Board has a Technical and Reserves Committee. The Technical and Reserves Committee assists the Board in fulfilling obligations under National Instrument 51-101 and oversees the operational performance of the Corporation. The Charter of the Technical and Reserves Committee is available at the Corporation's website www.addaxpetroleum.com .
9. Disclose whether or not the board, its committees and individual directors are regularly assessed with respect to their effectiveness and contribution. If assessments are regularly conducted, describe the process used for the assessments. If assessments are not regularly conducted, describe how the board satisfies itself that the board, its committees, and its individual directors are performing effectively.	<input checked="" type="checkbox"/>	As part of its responsibilities under its Charter, the Corporate Governance, Nominating and Compensation Committee is responsible for establishing and implementing procedures to evaluate the performance and effectiveness of the Board, the Board Committees, all individual Directors and the Corporation's senior management. The primary component of the Board and Committee assessments will be based on answers received in the Annual Directors' Evaluation Questionnaire, which will cover topics such as: (i) the performance and effectiveness of the Board, Board Committees and individual Directors; (ii) individual Director independence; (iii) individual Director and overall Board Skills; (iv) individual Director financial acumen; and (v) individual Director peer evaluations.

SCHEDULE "B"

CORPORATE GOVERNANCE DOCUMENTS

BOARD OF DIRECTORS CHAIR POSITION DESCRIPTION

The Chair ("**Chair**") of the Board of Directors ("**the Board**") of Addax Petroleum Corporation (the "**Company**") has the responsibility and specific duties described below.

Appointment

The Chair is appointed by the Board and shall be re-appointed at the first meeting of the Board following the Annual General Meeting of shareholders of the Company. The Chair will be independent under applicable law and will have the competencies and skills determined by the Board.

Responsibility

The Chair provides independent, effective leadership to the Board and leads the Board in fulfilling the duties set out in its Charter.

Specific Duties

The Chair will:

Leadership

1. Provide overall leadership to enhance the effectiveness of the Board.
2. Take all reasonable steps to ensure that the responsibility and duties of the Board, as outlined in its Charter, are well understood by the Board members and executed as effectively as possible.

Ethics

3. Foster ethical and responsible decision-making by the Board and its individual members.

Board Governance

4. Provide effective Board leadership, overseeing all aspects of the Board's direction and administration in fulfilling the terms of its Charter.
5. With the Board, oversee the structure, composition, membership and activities delegated to the Board.

Board Meetings

6. Ensure that the Board meets at least four times annually and as many additional times as necessary to carry out its duties effectively.
7. With the President and CEO and the Corporate Secretary establish the dates, location and agenda for each Board meeting.

8. Chair all meetings of the Board, including closed sessions and in camera sessions. If the Board Chair is not present, the Board members present will choose a Board member to chair the meeting.
9. Ensure sufficient time during Board meetings to fully discuss agenda items.
10. Encourage Board members to ask questions and express viewpoints during meetings.
11. Deal effectively with dissent and work constructively towards arriving at decisions and achieving consensus.
12. Ensure that the Board meets in separate, regularly scheduled, non-management, in camera sessions.

Board Reporting

13. Ensure that Board materials are available to any Director on request.
14. Ensure that all business that is required to be brought before a meeting of shareholders is brought before a meeting of shareholders.

Board Management Relationships

15. Take all reasonable steps to ensure that Board members receive all necessary training and support to enable them to fulfill the Board Charter.
16. Facilitate effective communication between Board members and the CEO, both inside and outside of Board meetings.
17. Have an effective working relationship with the CEO.

Evaluations

18. Ensure that a performance evaluation of the Board and the Board Chair is conducted, soliciting input from all Board members and appropriate members of Management.

Advisors/Resources

19. Ensure that resources and expertise are available to the Board so that it may conduct its work effectively and efficiently.
20. Coordinate with the Board to retain, oversee, compensate and terminate independent advisors to assist the Board in its activities.

Other

21. Carry out any other appropriate duties and responsibilities assigned by the Board or delegated by the Board.
22. To honour the spirit and intent of applicable law as it evolves.

CHARTER OF THE BOARD OF DIRECTORS OF ADDAX PETROLEUM CORPORATION

Mission Statement

The Board of Directors (the “**Board**”) of Addax Petroleum Corporation (the “**Company**”) has adopted this Charter to assist the Board in fulfilling its obligations to all stakeholders.

Composition

The Board shall consist of as many Directors as the Board shall determine from time to time but in any event, not fewer than six and not more than eleven, a majority of which shall be independent as defined by applicable law

Chair

The Board following each Annual General Meeting of the Company shall designate the Chair of the Board. The initial Chair of the Board shall be Peter Dey. If the Chair is not present at a meeting of the Board, the members of the Board may designate an interim Chair for the meeting by majority vote of the members present.

Meetings

The Chair of the Board, in consultation with the Board members, shall determine the schedule and frequency of the Board meetings provided that the Board will meet at least four times in each fiscal year and at least once in every fiscal quarter. The Board shall convene additional meetings, as circumstances require. The Corporate Secretary of the Company shall be the Secretary of the meetings.

Where possible, agendas for meetings of the Board shall be developed by the Chair of the Board in consultation with management and the Secretary, and shall be circulated to Board members as far in advance of each Board meeting as is reasonable.

The Board shall meet separately at each meeting without management including any member of management who is a Director.

Decisions or recommendations of the Board shall be evidenced by resolutions passed at meetings of the Board and recorded in the minutes of such meetings or by an instrument in writing signed by all members of the Board entitled to vote on that resolution. A copy of the draft minutes of each meeting of the Board and any written resolutions evidencing decisions or recommendations of the Board shall be transmitted promptly by the Secretary to each member for adoption at the next meeting

Resources and Authority

Each Director shall have the authority, subject to the prior approval of the Corporate Governance, Nominating and Compensation Committee (“**CGNCC**”), to engage outside consultants, independent legal counsel and other advisors and experts as he or she determines necessary to carry out his or her duties. The Company shall reimburse the Director such amounts as may be agreed by the CGNCC.

Responsibilities

The principal responsibility of the Board is to assume a stewardship role in respect of the business and affairs of the Company. In this capacity it is the responsibility of the Board to oversee the Officers of the Corporation who are responsible for the management of the Company.

In discharging its stewardship responsibilities, the Board shall in particular:

- (i) oversee the preparation and implementation of the Company's strategic plan, its annual work programme and budget and all major capital investment proposals;
- (ii) monitor the effectiveness of managements' Health, Safety and Environmental processes and procedures and ensure that the Company is fully compliant in respect of its obligations in these areas;
- (iii) have a full understanding of the principal business risks associated with the Company's operations and ensure that management adopts appropriate risk management systems and internal financial controls;
- (iv) appoint the CEO and other officers of the Company and monitor their performance to ensure the Company's objectives are met;
- (v) monitor the key personnel succession plans;
- (vi) ensure that the Company has an effective shareholder communications programme which communicates with shareholders and can enable feedback from shareholders;
- (vii) appoint such Committees as are required by law or deemed advisable by the Board in order to assist the Board in carrying out its responsibilities. Where necessary or desirable such committees shall be comprised of independent directors or a majority of them;
- (viii) comply with the Company's By-Laws and all legal requirements, whether statutory or otherwise, which apply to Directors of publicly quoted companies.

Limitation on the Oversight Role of the Board

Each member of the Board shall be entitled, to the fullest extent permitted by law, to rely on the integrity of those persons and organizations within and outside the Company from whom he or she receives financial and other information, and the accuracy of the information provided to the Company by such persons or organizations.

Attention Business Editors:

Addax Petroleum commissions new onshore production and export system in Gabon

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE
UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Nov. 28 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX:AXC) announces today that it has completed the commissioning of a new production and export system from its Maghena property onshore Gabon. This commissioning of the new system provides the capacity to alleviate the constraints which had been restricting the export capacity from the Corporation's Tsiengué and Obangue fields to just over 5,000 barrels per day. The new system was commissioned on Sunday, November 26 and is currently flowing at a rate of approximately 8,000 barrels per day.

Commenting today, Addax Petroleum's President and Chief Executive Officer, Jean Claude Gandur, said: "The commissioning of the new onshore production and export system in Gabon is an important step in the development of our onshore properties in the country. With the removal of current export constraints via the new system, we expect to reach our targeted 2006 exit rate of 18,000 barrels per day of production from our onshore and offshore properties in Gabon. The new production and export system will also assist us in continuing the rapid growth of Addax Petroleum's total production to a targeted average of approximately 130,000 barrels per day from all of the Corporation's properties in 2007."

The new production and export system is comprised of a 30,000 barrel per day central production facility at the Tsiengué field, a 30-kilometre, 10-inch pipeline from Maghena to the Total Gabon operated Coucal facility and additional heating and pumping capacity at Coucal. The system then ties into the main northern export trunk line and the export terminal at Cap Lopez in Port Gentil, Gabon. The new production and export system has a current export capacity of 20,000 barrels per day and the Corporation expects to increase the capacity to 30,000 barrels per day in the first half of 2007 with the installation of additional heating and pumping facilities at Coucal.

Legal Notice - Forward-Looking Statements

Certain statements in this press release constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results, results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires Addax Petroleum to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to:

Imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of Addax Petroleum. More specifically, production may be affected by such factors as exploration success, start-up timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by Addax Petroleum with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this press release is made as of the date of this press release and, except as required by applicable law, Addax Petroleum does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this press release is expressly qualified by this cautionary statement.

Attention Business Editors:

Genel Enerji and Addax Petroleum Announce the Execution of a Revised Production Sharing Agreement in Respect of the Taq Taq field

Addax Petroleum acquires additional equity in Taq Taq

VANCOUVER, Nov. 21 /CNW/ - Genel Enerji A.S. ("Genel") - which is part of Cukurova Group - and Addax Petroleum Corporation ("Addax Petroleum") (TSX:AXC) today announced the execution of a Revised Production Sharing Agreement with the Kurdistan Regional Government ("KRG") in respect of the Taq Taq Field. Genel and Addax Petroleum also announced that at the same time Addax Petroleum's wholly owned subsidiary had acquired an additional 15% Participating Interest from Genel.

Commenting, Mehmet Sepil, Chief Executive Officer of Genel Enerji said: "This opportunity for Genel to expand its activities and investment portfolio in further exploration fields will widen the perspective and objectives of Genel. Within this new concept, Genel, owned by Cukurova Group is growing to be a worldwide exploration and production company performing also in high risk projects. Genel is also planning to invest the consideration in the mid stream activities in addition to the exploration and production for the benefit of the Kurdistan Region and the people of Iraq."

Commenting, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said: "The execution of the Revised Production Sharing Agreement with Addax increasing its equity participation in Taq Taq represents a major step in confirming the legal basis for our development of the Taq Taq Field. Together with the undertaking of additional exploration in this area to the mutual benefit of the Kurdistan Regional Government, the people of Iraq, Genel and Addax Petroleum, our increased investment underscores Addax Petroleum's commitment to the Taq Taq project."

The original Taq Taq Production Sharing Agreement was entered into between Genel and the KRG on 20th January 2004. In July 2005 Addax Petroleum's wholly owned subsidiary, Addax Petroleum International Limited ("Addax International") agreed to farm in to the original PSA and agreed to acquire a 30% Participating Interest. The Revised Production Sharing Agreement extends the geographic scope of the original PSA to include further exploration acreage which includes the Kewa Chirmila prospect and gives the KRG the right to require that at a future date a government nominated entity is assigned, in the case of Taq Taq, a 20% Participating Interest, and, in the case of other developments within the Revised Production Sharing Agreement area, a 25% Participating Interest.

The Revised Production Sharing Agreement reflects i) Genel and Addax Petroleum as parties to the PSA; ii) the acquisition by Addax Petroleum from Genel of an additional 15% participating interest; iii) government back-in rights and revised fiscal terms to maintain the risk/reward balance for Addax Petroleum and Genel; and iv) expansion of the PSA acreage to include the Kewa Chirmila prospect. The revised Participating Interests prior to the exercise of any Government back in rights are,

<<

- Genel 55%,
- Addax International 45%.

>>

Addax Petroleum will meet the cost of the acquisition within its existing financing arrangements.

About Genel and Addax Petroleum

Genel Enerji A.S. is a Turkish registered company and owned by the Turkish Cukurova Group. The Cukurova Group is among Turkey's largest industrial and commercial conglomerates with numerous investments ranging from automotive, telecommunications, media, textile, energy, transportation and information technology services. Many of Cukurova Holding and associated holding companies are leaders in their respective business lines. The amount of total assets of the Cukurova Holding Group in the year of 2005 was approximately 11 billion US dollars. Within the group, Turkcell is the leading GSM operator of Turkey (with 31 million subscribers) and has been listed on the New York Stock Exchange (NYSE) and on the Istanbul Stock Exchange (IMKB). Turkcell was the first Turkish company to be listed on NYSE. BMC is the largest fully integrated vehicle manufacturer. The Geden Lines is a leading shipping company with a modern fleet in the maritime industry. Digiturk, the only digital broadcasting company in Turkey, is giving television, radio and interactive channel broadcasting services. The Cukurova Group currently has 139 companies and of these, 19 are foreign investments and 13 are joint ventures based in Turkey. A total of 26,500 people are employed in Cukurova companies in Turkey and abroad. Further information about Genel Enerji is available at www.genel-enerji.com or at www.cukurovaholding.com.tr

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is one of the largest independent oil producers in West Africa and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 91,500 barrels per day for the third quarter of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com

Legal Notice - Forward-Looking Statements

Certain statements in this press release constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results, results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires Addax Petroleum to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to: imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign

currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of Addax Petroleum. More specifically, production may be affected by such factors as exploration success, start-up timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by Addax Petroleum with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this press release is made as of the date of this press release and, except as required by applicable law, Addax Petroleum does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this press release is expressly qualified by this cautionary statement.

Genel Enerji and Addax Petroleum announce Taq Taq test results

First new Taq Taq well flows at an aggregate rate of 29,790 barrels per day

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Nov. 20 /CNW/ - Genel Enerji A.S. ("Genel"), part of the Cukurova Group, and Addax Petroleum Corporation ("Addax Petroleum") (TSX:AXC) today announced flow test results for the recently drilled TT-04 well, the first well on the Taq Taq field drilled by Taq Taq Operating Company ("TTOPCO"), the joint venture company formed by Genel and Addax Petroleum to carry out the petroleum operations in the Taq Taq license area.

Three reservoir intervals were tested separately and flowed at an aggregate rate of 29,790 bbls/d of light, 47 degrees API oil with low gas oil ratio. The intervals tested were a 106 meter perforated interval in the Shiranish formation which flowed at a rate of 3,940 bbls/d, a 55 meter perforated interval in the Kometan formation which flowed at a rate of 12,930 bbls/d, and a 86 meter bare foot interval in the Qamchuga formation which flowed at a rate of 12,920 bbls/d. Oil flow rates from the three intervals are in a 64/64" choke size. In each instance, the flow rates were constrained by the limited capacity of the surface test facilities. Evaluation of these flow test results is ongoing.

Commenting on the results, Dr. Ashti Hawrami, the Minister of Natural Resources of the Kurdistan Regional Government of Iraq, said; "This is a great achievement and we look forward to establishing our initial export of oil from the Taq Taq field in 2007. Additionally, we will be utilizing some of the oil resources to satisfy the local requirement for the refined products and power needs. We will continue our exploration campaign to achieve our export oil target of one million barrels per day of new oil from the Kurdistan Region over the next few years. This will make a significant contribution to the oil revenues of Iraq to be shared by all peoples of Iraq."

Commenting, Mehmet Sepil, Chief Executive Officer of Genel Enerji said: "We are very pleased with the test results of the TT-04 well. For the first time, a privately-owned Turkish Oil Company is developing a major oil field. We believe that this project will make Genel Enerji a world class exploration and production company in the international petroleum industry. This project will also generate wealth for the people of the Kurdistan Region and of Iraq while also helping to meet the urgent energy requirements of the region."

Commenting, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said: "This is a significant milestone for Addax Petroleum. The Taq Taq field has the potential to be a major source of reserves and production growth for the company. As demonstrated by these test results, the production potential of Taq Taq is truly significant and highlights the under-developed potential of the region. We believe that the Taq Taq field can deliver excellent value to the people of the Kurdistan Region and of Iraq and for our shareholders."

The TT-04 well is the first well drilled on the Taq Taq field, drilled using the TTOPCO-owned drilling rig and located some 500 meters from the TT-01 well, the Taq Taq field discovery well drilled in 1978. TT-04 was spudded in mid May and reached a total depth of 2,286 meters in early September.

Interpretation of data acquired, including wireline static reservoir

pressure data, indicate the presence of a significant and extensive fracture system and a single oil column in the Taq Taq field through the Shiranish, Kometan and Qamchuga formations in excess of 500 meters. The TT-04 well was the first of a three well drilling program by Genel and Addax Petroleum. The drilling of the second appraisal and development well, TT-05, is now in progress.

The Taq Taq field is located in the Kurdistan Region of Iraq some 60 kilometers northeast of Kirkuk, 85 kilometres northeast of Erbil and 120 northwest of Sulaimaniyah.

About Genel and Addax Petroleum

Genel Enerji A.S. is a Turkish registered company and owned by the Turkish Cukurova Group. The Cukurova Group is among Turkey's largest industrial and commercial conglomerates with numerous investments ranging from automotive, telecommunications, media, textiles, energy and information technology services. Further information about Genel Enerji is available at www.genel-enerji.com or at www.cukurovaholding.com.tr.

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is one of the largest independent oil producers in West Africa and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 91,500 barrels per day for the third quarter of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com

ADDAX PETROLEUM ANNOUNCES THIRD QUARTER 2006 RESULTS
First Nine Months' Funds Flow From Operations increases 91 per cent

Calgary, November 13, 2006 - /CNW/ - Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX:AXC), an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East, today announced its results for the quarter ended September 30, 2006. The financial results are prepared in accordance with Canadian GAAP and the reporting currency is US dollars.

This announcement coincides with the filing of Addax Petroleum's Third Quarter Financial Statements and Management's Discussion and Analysis which can be accessed through the Corporation's website at www.addaxpetroleum.com and through www.sedar.com.

CEO's Comment

Commenting today, Addax Petroleum's President and Chief Executive Officer, Jean Claude Gandur, said: "Our Nigeria operations continued to deliver excellent performance including the successful change-out of the OML123 FPSO and surpassing, for the first time in Addax Petroleum's history, the production milestone of 100,000 barrels in one day. In addition, during the third quarter, Addax Petroleum significantly expanded its reserves base, development opportunities and exploration acreage through the acquisition of PanOcean Energy's business. As the acquisition closed in September, there has been minimal operating and financial contribution to our third quarter results, however, we anticipate an ever growing contribution from the Gabon operations. I believe that our efforts and results during the third quarter will result in an excellent 2006, our first year as a public company, for Addax Petroleum and for its shareholders."

Selected Financial Highlights

- Petroleum sales before royalties in the third quarter of 2006 amounted to \$583.9 million, an increase of 51 per cent over petroleum sales before royalties of \$385.7 million in the same quarter in 2005. Petroleum sales before royalties contribution from the acquired PanOcean Energy business was \$20.9 million, representing just under 4 per cent of the quarter's sales.
- The average crude oil sales price increased 13 per cent to \$67.60 per barrel (/bbl) as compared to the average crude oil sales price of \$59.88/bbl recorded in the comparable quarter in 2005.

- Net income in the third quarter of 2006 was \$75.2 million (\$0.51 per share), a decrease of 12 per cent over net income of \$85.6 million (\$0.73 per share) in the corresponding quarter of the previous fiscal year. The decrease is attributable mainly to tax losses available in 2005 and fully utilized prior to the third quarter of 2006. Net income in the first nine months of 2006 was \$189.7 million (\$1.37 per share), an increase of 13 per cent over net income of \$168.0 million (\$1.44 per share) in the corresponding period of the previous year.
- Funds Flow From Operations in the third quarter was \$244.5 million, an increase of 50 per cent over third quarter 2005 cash flow from operations of \$163.2 million. Funds Flow From Operations for the first nine months of 2006 increased 91 per cent to \$614.4 million compared to \$322.2 million in the first nine months of 2005.
- Acquisition of the business of PanOcean Energy Corporation Limited ("PanOcean Energy") which is focused solely in Gabon for a cash consideration of \$1,441 million on September 7th.
- PanOcean Energy acquisition funded by a combination of (a) internal funds, (b) drawings under a new \$1.0 billion acquisition loan facility of which \$850.0 million was drawn at September 30th, 2006 and (c) the public offering of 14.75 million common shares upon conversion of subscription receipts which realized net proceeds of \$342.7 million for the Corporation.

The following table summarizes the selected financial highlights.

Selected financial highlights <i>\$ million unless otherwise stated</i>	Quarter ended 30 September			Nine Months ended 30 September		
	2006	2005	Change	2006	2005	Change
Petroleum sales before royalties	583.9	385.7	51%	1,500.5	840.6	79%
Average crude oil sales price, \$/bbl	67.60	59.88	13%	65.34	52.21	25%
Net income	75.2	85.6	(12%)	189.7	168.0	13%
Funds Flow From Operations	244.5	163.2	50%	614.4	322.2	91%
Earnings per share, \$/share	0.51	0.73	(30%)	1.37	1.44	(5%)
Shares outstanding, million	148.0	117.0	26%	138.8	117.0	19%

Operational Highlights

- Average working interest gross oil production in the third quarter of 2006 was 91.5 thousands of barrels per day (mbbls/day) an increase of 23 per cent over third quarter 2005 average production of 74.2 mbbls/day. Production contribution from the acquired PanOcean Energy business was 2.4 mbbls/day, or under 3 per cent, averaged over the quarter.
- Capital expenditures, excluding the acquisition consideration for the PanOcean Energy business, increased by 83% from \$117.0 million in the third quarter of 2005 to \$214.1 million in the same period in 2006. Development capital expenditures totaled \$118.9 million, including development capital expenditures of \$25.2 million in PanOcean Energy since acquisition. License acquisition and exploration and appraisal expenditures amounted to \$95.2 million, including \$10.9 million of capitalized fees associated with the PanOcean Energy acquisition, \$23.0 million towards license acquisition of OPL291 offshore Nigeria (see "Recent Developments") and exploration and appraisal expenditure of \$55.1 million on the Okwok and Taq Taq fields, offshore Nigeria and in the Kurdistan

Region of Iraq respectively, where some wells drilled have been or will be suspended as potential future producers.

- Development project highlights during the third quarter include:

Nigeria

- conversion of Oil Prospecting License OPL90 to Oil Mining License OML126 obviating the need for partial relinquishment of undeveloped license acreage;
- the start-up of the first development well on the Nda field on OML126 within six months of approval by the Nigerian authorities of its Field Development Plan;
- safe and successful change-out of the OML123 FPSO whereby the Knock Taggart FPSO was replaced by the larger Knock Adoon FPSO;
- bringing on-stream of five additional development wells, two in OML123 and three in OML126; and
- ongoing surface facilities development at the Oron and Adanga fields on OML123.

Gabon

- construction of the Addax Petroleum-operated Tsiengui Central Production Facility and export pipeline, scheduled to be operational during the fourth quarter of 2006;
- drilling and completion of two horizontal development wells on each of the onshore Tsiengui and Obangue fields including, on each field, step-out wells which suggest larger most-likely oil in place estimates; and
- ongoing installation and commissioning work offshore on the Vaalco-operated Avouma field, scheduled to be operational during the first quarter of 2007.

- Exploration and appraisal highlights in the third quarter include:

- *Nigeria*: start of the Okwok field 2006 exploration and appraisal campaign within one week of completion of the acquisition of a 40 per cent participating interest in the property. The exploration and appraisal campaign was completed in October having met its objectives and two of the wells drilled were suspended as a potential future oil producers;
- *Kurdistan Region of Iraq*: conclusion of drilling and coring operations on the first new well on the Taq Taq field, TT-04, indicating a gross oil column in excess of 500 meters. Well completion and testing operations are ongoing at TT-04 and a second well, TT-05, has been spudded; and
- *Other areas*: analysis and technical studies, including rig-sourcing enquiries, are ongoing on the Corporation's other properties including OPL225 offshore Nigeria, Ngosso offshore Cameroon and deepwater JDZ Blocks 2, 3 and 4.

- Operating netbacks were up 9% to \$47.90/bbl as compared to \$44.14/bbl in the third quarter of 2005. Unit operating expenses increased to \$6.47/bbl, an increase of 6 per cent over the third quarter 2005 level of \$6.10/bbl.

The following table summarizes selected operational information.

Selected operational results	Quarter ended 30 September			Nine Months ended 30 September		
	2006	2005	Change	2006	2005	Change
<i>Period average working interest gross oil production (mbbls/day):</i>						
Nigeria (offshore)	85.1	70.6	21%	79.4	58.5	36%
Nigeria (onshore)	4.0	3.6	11%	3.7	3.5	5%
Gabon (offshore & onshore)	2.4	--	--	0.9	--	--
Total	91.5	74.2	23%	84.0	62.0	49%
<i>Prices, expenses and netbacks (\$/bbl):</i>						
Average realized price	67.60	59.88	13%	65.34	52.21	25%
Operating expense	6.47	6.10	6%	6.81	6.42	6%
Operating netback	47.90	44.14	9%	46.49	37.15	25%

Dividend

The Board of Directors of the Corporation has declared a dividend of CDN\$0.05 per share for the third quarter of 2006. The dividend is payable on December 14th, 2006 to shareholders of record on November 30th, 2006.

Recent Developments

In October, the Corporation acquired a 72.5 per cent participating interest in OPL291, a deepwater block offshore Nigeria close to the world-class Agbami field and on trend with several other large oil fields in the deepwater offshore Nigeria. In consideration the Corporation has paid a signature bonus to the government of Nigeria of \$55 million and \$35 million as a farm-in fee to the licence holder, Starcrest Nigeria Energy Limited ("Starcrest"), an indigenous Nigerian oil company. In addition, the Corporation has agreed to carry Starcrest's 27.5 per cent share of exploration and field development costs.

Outlook

The Corporation's outlook for 2006 is in line with guidance provided to date. Addax Petroleum expects annual average working interest gross oil production to approximate 88 to 90 mbbls/day from its Nigeria and Gabon operations.

The Corporation will host a management presentation to financial analysts on November 21, 2006 and intends to provide further guidance for 2006 and future years at that time.

Legal Notice – Forward-Looking Statements

Certain statements in this press release constitute forward-looking statements under applicable securities legislation. Such statements are generally identifiable by the terminology used, such as "anticipate", "believe", "intend", "expect", "plan", "estimate", "budget", "outlook" or other similar wording. Forward-looking information includes, but is not limited to, reference to business strategy and goals, future capital and other expenditures, reserves and resources estimates, drilling plans, construction and repair activities, the submission of development plans, seismic activity, production levels and the sources of growth thereof, project development schedules and results,

results of exploration activities and dates by which certain areas may be developed or may come on-stream, royalties payable, financing and capital activities, contingent liabilities, and environmental matters. By its very nature, such forward-looking information requires Addax Petroleum to make assumptions that may not materialize or that may not be accurate. This forward-looking information is subject to known and unknown risks and uncertainties and other factors, which may cause actual results, levels of activity and achievements to differ materially from those expressed or implied by such information. Such factors include, but are not limited to: imprecision of reserves and resources estimates, ultimate recovery of reserves, prices of oil and natural gas, general economic, market and business conditions; industry capacity; competitive action by other companies; fluctuations in oil prices; refining and marketing margins; the ability to produce and transport crude oil and natural gas to markets; the effects of weather and climate conditions; the results of exploration and development drilling and related activities; fluctuation in interest rates and foreign currency exchange rates; the ability of suppliers to meet commitments; actions by governmental authorities, including increases in taxes; decisions or approvals of administrative tribunals; changes in environmental and other regulations; risks attendant with oil and gas operations, both domestic and international; international political events; expected rates of return; and other factors, many of which are beyond the control of Addax Petroleum. More specifically, production may be affected by such factors as exploration success, start-up timing and success, facility reliability, reservoir performance and natural decline rates, water handling, and drilling progress. Capital expenditures may be affected by cost pressures associated with new capital projects, including labour and material supply, project management, drilling rig rates and availability, and seismic costs. These factors are discussed in greater detail in filings made by Addax Petroleum with the Canadian provincial securities commissions.

Readers are cautioned that the foregoing list of important factors affecting forward-looking information is not exhaustive. Furthermore, the forward-looking information contained in this press release is made as of the date of this press release and, except as required by applicable law, Addax Petroleum does not undertake any obligation to update publicly or to revise any of the included forward-looking information, whether as a result of new information, future events or otherwise. The forward-looking information contained in this press release is expressly qualified by this cautionary statement.

Non-GAAP Measures

Addax Petroleum defines "Funds Flow From Operations" or "FFFO" as net cash from operating activities before changes in non-cash working capital. Management believes that in addition to net income, FFFO is a useful measure as it demonstrates Addax Petroleum's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Addax Petroleum also assesses its performance utilizing Operating Netbacks which it defines as the per barrel profit margin associated with the production and sale of crude oil and is calculated as the funds flow from operations per barrel sold, prior to corporate charges. FFFO and Operating Netback are not recognized measures under Canadian GAAP. Readers are cautioned that these measures should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

Analyst Conference Call

Financial analysts are invited to participate in a conference call today at 11:00 a.m. Eastern Time with Mr. Jean Claude Gandur, President and Chief Executive Officer, Mr. Michael Ebsary, Chief Financial Officer and Mr. James Pearce, Chief Operating Officer. The media and shareholders may participate on a listen only basis. To participate in the conference call, please dial one of the following:

Toronto: (416) 644 3423

Addax Petroleum Third Quarter Conference Call

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Nov. 1 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum" or the "Corporation") will announce its financial results for the quarter ended September 30, 2006 on Monday, November 13, 2006, and will discuss its financial results in a conference call on Monday, November 13, 2006 at 11:00 a.m. Eastern Time. Mr. Jean Claude Gandur, President and Chief Executive Officer, and Mr. Michael Ebsary, Chief Financial Officer, will discuss the Corporation's most recent financial and operating results and the expectations for the future.

<<

Conference call details:

Date: Monday, November 13, 2006

Time: 11:00 a.m. Eastern Time

To participate in the conference call, please call one of the following:

Toronto:	(416) 644-3423
Toll-free (Canada and the U.S.):	(866) 250-4910
Toll-free UK:	00 800 0000 2288
All others:	1-416-644-3423

>>

A replay of the call will be available at (416) 640-1917 or (877) 289-8525, passcode 21207919 followed by the number sign until Thursday, November 30, 2006.

The Corporation will also host a management presentation to research analysts on Tuesday, November 21, 2006, in Toronto, Canada.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is one of the largest independent oil producers in West Africa and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 83,000 barrels per day for the first eight months of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

CONFERENCE CALL ADVISORY: FORWARD-LOOKING STATEMENTS

The conference call may contain forward-looking statements. When used in the call, words such as "anticipate", "expect", "project", and similar expressions are intended to identify such forward-looking statements. Although the Corporation believes that these statements are based on information and assumptions which are current, reasonable and complete, these statements are necessarily subject to a variety of risks and uncertainties pertaining to operating performance, regulatory parameters, economic conditions and commodity prices. While Addax Petroleum makes these forward looking statements

in good faith, should one or more of these risks or uncertainties materialize, should underlying assumptions prove incorrect, actual results may vary significantly from those expected.

READER ADVISORY: FORWARD-LOOKING STATEMENTS

This press release includes certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements prospective investors in Addax Petroleum's securities should not place undue reliance on forward-looking statements.

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

CALGARY, Oct. 30 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum" or the "Corporation") today announced that it has completed its 2006 exploration and appraisal campaign on the Okwok field discovery in OML67 with encouraging results. The Corporation acquired a 40 per cent participating interest in the Okwok field in June of this year from Oriental Energy Resources Limited ("Oriental"), a leading indigenous Nigerian oil company, and commenced the exploration and appraisal program immediately thereafter. Addax Petroleum is the technical adviser and Oriental is the operator for the Okwok field joint venture.

Commenting on the 2006 Okwok exploration and appraisal campaign, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said; "I am delighted that our joint venture with Oriental under Nigeria's Marginal Field program has proceeded so well. Our 2006 objectives for the Okwok field were to explore and appraise the two main fault blocks on the structure, to confirm the nature of the oil present and to flow test the wells. I am pleased that these objectives have been achieved; the Okwok field contains medium to light crude oil and the reservoir is of high quality. Following these encouraging results, we are now updating our geological models to evaluate our future appraisal strategy and potential fast-track development plans."

The Okwok field is located south of and adjacent to OML123, Addax Petroleum's largest producing property, in a water depth of approximately 50 meters and comprises three major fault block compartments, named Blocks 1, 2 and 3. Block 1 was drilled by well Okwok-1 in 1967 and Block 2 by well Okwok-2 in 1968, both by a previous operator, whereas Block 3 had not been drilled prior to the recent campaign. Both earlier wells had discovered hydrocarbons but had not been flow tested.

The Okwok 2006 exploration and appraisal campaign by Addax Petroleum and Oriental commenced when the GlobalSantaFe High Island IX jack-up drilling rig arrived on location in early July and concluded in late October. The campaign comprised the drilling of wells Okwok-4A and Okwok-4AST1 in Block 2 and Okwok-7A and Okwok-8A in Block 3. The objectives of the campaign were to appraise Block 2, explore Block 3 and to conduct flow tests to establish the oil properties and reservoir conditions in both blocks. The primary reservoir objective in the Okwok field is the stacked "Lower D" sandstone sequence of Upper Pliocene/Lower Pleistocene age which, at Okwok, occurs at depths between 3,000 and 4,000 feet subsea.

For Block 2, Okwok-4A was drilled approximately 1.3 kilometres west of Okwok-2 to appraise the areal extent of the fault block's oil accumulations. Okwok-4A encountered 14 feet of net oil pay in its primary target in the Lower D sequence which was thinner than anticipated but which also encouraged the drilling of a sidetrack down-dip. Okwok-4AST1 was drilled as the sidetrack to Okwok-4A targeting a more sand-prone area and encountered 95 feet of net oil pay in two intervals within the Lower D sequence. A drill stem test was attempted but was curtailed due to a rupture of the sand exclusion screen which caused excessive sand production into the well. The test produced at a rate of approximately 400 barrels per day of light 32 degree API gravity oil. The true flow potential of the well was not reached because of sand control problems during the test, however, the Corporation was pleased with the high

quality of the oil tested and will use the knowledge gained regarding the reservoir conditions in future appraisal efforts.

Following the appraisal of Block 2, the High Island IX was moved to explore Block 3 and spudded Okwok-7A. However, Okwok-7A was abandoned prematurely because of mechanical difficulties after encountering hydrocarbons and abnormally high pressures while drilling in the Lower D sequence. The Okwok-8A well was spudded immediately thereafter, was drilled successfully and encountered 97 feet of net oil pay in two sandstone intervals in the Lower D sequence. As a precaution against the excessive sand production experienced in Okwok-4AST1, Okwok-8A was gravel packed prior to testing. The well was flow tested at a maximum rate of 1,220 barrels per day of medium 26 degree API gravity oil on a 32/64" choke. Both the Okwok-4AST1 and Okwok-8 wells are currently suspended for potential tie-back to production facilities.

Addax Petroleum and Oriental are now in the process of incorporating the well data, oil properties and flow test data from this exploration and appraisal campaign into existing geological and engineering models. The new information will be used to evaluate the 2007 Okwok work programme which the Corporation anticipates will include further appraisal drilling and potentially fast-track development planning. Should additional appraisal efforts prove successful, the Okwok field is likely to be developed through the OML123 FPSO 12 kilometres to the north and first commercial oil production could commence as early as 2008.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is one of the largest independent oil producers in West Africa and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 83,000 barrels per day for the first eight months of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

READER ADVISORY: FORWARD-LOOKING STATEMENTS

This press release includes certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements prospective investors in Addax Petroleum's securities should not place undue reliance on forward-looking statements.

Addax Petroleum presents at the Merrill Lynch Global Energy Conference

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Oct. 27 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum" or the "Corporation") announces that James Pearce, Chief Operating Officer, will be presenting at the Merrill Lynch Global Energy Conference on Wednesday, November 1, 2006 at approximately 10:05 a.m. Eastern Time. The presentation will include information detailing the company's performance, strategy and outlook.

Investors are invited to listen to the live, audio-only webcast via the following link:
http://www.corporate-ir.net/ireye/conflobby.zhtml?ticker=AXC.TO&item_id=1404378

The presentation slides will be available prior to the presentation on Addax Petroleum's website at www.addaxpetroleum.com.

Addax Petroleum provides update on the integration of its Gabon operations

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Oct. 27 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum" or the "Corporation") is pleased to provide an operational update regarding its portfolio of oil exploration and production properties in Gabon which it acquired from Pan-Ocean Energy Corporation Limited in September of this year.

Mr. Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum commented, "We are delighted with the success Addax Petroleum has had in integrating our newly acquired operations in Gabon. The Corporation retained the majority of the former Pan-Ocean personnel and continues to build on the excellent relationship that Pan-Ocean had developed with the government of Gabon. In addition, recent appraisal and development drilling onshore and offshore continue to develop the portfolio's reserve base into productive capacity, while also providing encouraging indications which may allow Addax Petroleum to expand its reserve base in the country."

The exploration and development portfolio in Gabon is comprised primarily of the operated, onshore Maghena and Panthere NZE properties which contain respectively the Tsiengui and Obangue oil fields, the non-operated, onshore Awoun property which contains the Koula and Damier oil fields, and the non-operated, offshore Etame Marin property which contains the Etame oil field, the South Tchibala/Avouma oil field and the nearby Ebouri oil field.

The Corporation's onshore activities in Gabon have continued successfully with appraisal drilling at Tsiengui and Obangue and additional development drilling of the Tsiengui field. Since January 2006 a total of seven horizontal development wells have been successfully drilled and completed on the Tsiengui field and two on the Obangue field which were also completed as production wells. The most recent well at Tsiengui confirmed the thickening high quality Gamba sandstone towards the west of the field and the overall consistency of the Corporation's reservoir model. Based on the current reservoir model, it is anticipated that an additional 30 wells will be required to further develop the Tsiengui field. The latest Obangue well was a successful step-out to the east, beyond the limit of current 3D seismic data coverage, and found the reservoir structurally shallower than anticipated suggesting an easterly extension to the Obangue field not previously recognised with a thicker than expected Gamba sandstone in the oil column. The Corporation continues to analyse the Obangue drilling results, however, initial indications are that the results may lead to a substantial increase in the level of oil reserves currently booked for the Obangue field. In addition, a deviated appraisal well was spudded in September 2006 on the onshore Shell-operated Awoun property which will test the extent of the Koula field towards the west.

Production from the Tsiengui and Obangue fields continues to be limited awaiting commissioning of new processing and export capacity. The 33 kilometre 10-inch export pipeline from Tsiengui to the Coucal export facility (Total-operated) has been laid, hydro-tested and buried. The Corporation expects that the export pumping and metering station immediately downstream of the Coucal facility will be completed in the coming weeks such that the new production and export system is expected to be fully operational by mid-November with an export capacity of 30,000 bbls/d.

The 2006 appraisal and development drilling programme onshore Gabon has

been conducted by the Corporation using the Addax Petroleum-contracted Deutag T-48 drilling rig as well as the occasional use of the Simpler 101 drilling rig. Addax Petroleum is currently arranging for an additional land drilling rig to carry out development and appraisal drilling on the Panthere NZE property, predominantly on the Obangue field.

In the offshore Etame Marin property, two horizontal development wells are planned for the remainder of the year to develop the South Tchibala/Avouma field in addition to an exploration 3D seismic campaign over a prospect to the south-west of the Etame field. The South Tchibala/Avouma development is on track for commissioning by year end; the platform is in place and commissioning in progress, the 16 kilometre pipeline to the Etame field FPSO has been laid, tie-in to the FPSO is in progress and the drilling rig has arrived on location. The South Tchibala/Avouma field is expected to produce between 8,000 and 10,000 bbls/d (2,510 to 3,140 attributable to Addax Petroleum) from the two horizontal wells with production expected to start in the first quarter of 2007. Approval for the development of the nearby Ebouri field was received from the Gabonese authorities in September 2006. Installation of a jacket and a pipeline from the Ebouri field to the Etame FPSO are being planned for the second half of 2007 with the development drilling starting thereafter.

Addax Petroleum expects to achieve its anticipated 2006 exit production rate totalling approximately 18,000 bbls/d from the Corporation's participating interests in its onshore and offshore properties in Gabon.

**ADDAX PETROLEUM ACQUIRES MAJOR INTEREST IN HIGHLY
PROSPECTIVE DEEPWATER EXPLORATION BLOCK OFFSHORE NIGERIA**

CALGARY, Oct 20, 2006 /CNW/ – Addax Petroleum Corporation (TSX: AXC) (“Addax Petroleum” or the “Corporation”) today announced that its wholly owned subsidiary has entered into a farm-out agreement with Starcrest Nigeria Energy Limited (“Starcrest”), an indigenous Nigerian oil company pursuant to which Addax Petroleum and Starcrest have signed a Production Sharing Contract (“PSC”) with Nigeria National Petroleum Corporation (“NNPC”) in respect of Oil Prospecting License (“OPL”) 291 deepwater offshore Nigeria. Addax Petroleum has a participating interest of 72.5 per cent and is the operator.

Commenting on signing the PSC Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, *“The addition of OPL291 to our deepwater exploration portfolio is truly exciting. The highly prospective nature of the property is underlined by its proximity to the nearby world-class Agbami oil field which is currently under development. We believe that OPL291 offers significant potential to our company and its shareholders.”*

OPL291 represents the mandatory relinquishment area of OPL216 following conversion of OPL216 to Oil Mining Lease (“OML”) 127 preceding the development of the Agbami field in OML127 by Chevron. OPL291 was tendered by the Nigerian government under the 2006 mini bid round and was recently awarded to Starcrest.

Pursuant to the PSC, Addax Petroleum and Starcrest (i) shall pay a PSC signature bonus to NNPC of US\$55 million, (ii) shall undertake an initial investment of US\$75 million covering an initial work commitment which comprises the acquisition of 3D seismic and drilling one well and (iii) have entered into a Memorandum of Understanding with NNPC to undertake an investment in an Independent Power Project (“IPP”) which would be developed with gas from a commercial development in OPL291 and agreement with NNPC on the technical and commercial arrangements should the IPP proceed.

Pursuant to the farm-out agreement, Addax Petroleum is obligated:

- to pay to the Nigerian government, 100 per cent of the OPL291 PSC signature bonus of US\$55 million;
- to pay to Starcrest, a farm-in fee of US\$35 million; and
- to pay Starcrest's share of OPL291 exploration and development costs which will be reimbursed to Addax Petroleum from Starcrest's share of production revenues from OPL291.

OPL291 is located approximately 130 kilometres off the Nigerian coast, where the water depth ranges from approximately 1,000 to 2,300 meters and covers a gross area of 1,287 square kilometers (318,000 acres). OPL291 is immediately adjacent to OML127 (to the east) which contains the Agbami and Ikija fields, operated by Chevron and OPL242 (to the west) operated by Devon Energy.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is one of the largest independent oil producers in West Africa and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 83,000 barrels per day for the first eight months of 2006. Attention Business Editors:

Addax Petroleum completes FPSO replacement ahead of schedule

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Oct. 3 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum" or the "Corporation") today announced that it has successfully replaced the floating production storage and offloading vessel ("FPSO") on the OML123 property offshore Nigeria, with an upgraded FPSO contracted from Fred Olsen Production AS ("Fred Olsen") and that production on OML123 has returned substantially to pre-replacement levels.

Commenting on the replacement of the OML123 FPSO, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, "I am delighted that the OML123 FPSO replacement was accomplished safely and well ahead of the scheduled change-out time. The success of this major marine project is due in no small part to the world class efforts of all concerned and to the excellent cooperation between Addax Petroleum, Fred Olsen and the Nigerian government agencies. We remain on track to achieve our 2006 production targets."

The replacement of the OML123 FPSO involved the shutdown of all production from OML123, the removal of the Knock Taggart FPSO, the installation of the Knock Adoon FPSO and the restart of OML123 production. Production shutdown during the FPSO change-out was scheduled to last 10 days but production was restarted after 5 days and a further 3 days later OML123 was producing at substantially pre-shutdown levels:

<<

- OML123 production was shutdown and disconnection of the Knock Taggart started at 17:00hrs local time on September 24
- production resumed at 17:15hrs local time on September 29 following installation of the Knock Adoon
- since resumption OML123 production has been steadily ramped up and returned, on October 2, to substantially pre-shutdown levels.

>>

The replacement of the OML123 FPSO was a major marine project that required, as planned and budgeted for by the Corporation, greater than 2 million man-hours. The complexity of the change-out operation itself required up to 16 marine support vessels and 3 onshore support bases coordinating the simultaneous shutdown of all associated production facilities on OML123. The change-out was achieved without any disruption to the Corporation's drilling activities in the area.

The Corporation maintains its 2006 production guidance that its Nigeria properties will produce an annual average of 85 mbbls/day and exit the year at approximately 100 mbbls/day. Addax Petroleum's 2006 oil production to the end of August by license area is summarized below.

<<

Production (mbbls/d)	Year to end			
	August	August	July	H1 2006
OML123, offshore	51.2	51.7	51.2	51.2
OPL90, offshore	28.1	38.7	33.2	25.4

OML124, onshore	3.6	3.9	3.9	3.5

Total	83.0	94.3	88.3	80.1

>>

About the OML123 FPSO:

OML123 is the Corporation's largest producing property and utilises an FPSO to process, store and offload crude oil to ocean-going tankers. The replaced Knock Taggart FPSO was contracted from Fred Olsen and had been stationed on OML123 since 1998. The replacement Knock Adoon FPSO is also contracted from Fred Olsen for up to the next 16 years. The Knock Adoon is a new tanker conversion which was undertaken earlier this year at the Dubai Drydocks Shipyard. The Knock Adoon is designed to store a minimum of 1,700,000 barrels of crude oil compared to storage capacity of 1,000,000 barrels on the replaced Knock Taggart. The Knock Adoon FPSO also offers a processing capacity of 60 mbbbls/day of crude oil and a total liquids (oil and water) processing capacity of 140 mbbbls/day. Incorporated in this facilities upgrade and expansion is an off-loading buoy terminal to allow more efficient crude oil offloading and to accommodate larger tankers.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 80,000 barrels per day for the first half of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

READER ADVISORY: FORWARD-LOOKING STATEMENTS

This press release includes certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements prospective investors in Addax Petroleum's securities should not place undue reliance on forward-looking statements.

Addax Petroleum completes the acquisition of the business of Pan-Ocean Energy

**/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE
UNITED STATES, AUSTRALIA OR JAPAN/**

CALGARY, Sept. 7 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") announced today the completion of the previously announced acquisition of substantially all of the assets and operations of Pan-Ocean Energy Corporation Limited ("Pan-Ocean") for cash consideration of CDN \$1.605 billion (the "Acquisition").

Mr Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said: "I am pleased at how quickly and efficiently this Acquisition process was completed and look forward to building on Pan-Ocean's dynamic business in Gabon for the benefit of all our stakeholders. We are delighted to welcome the Pan-Ocean teams into our Addax Petroleum family and are excited at the additional value growth potential that the Acquisition provides for our shareholders. We expect the Acquisition to have an immediate positive impact as it will raise our anticipated 2006 exit production rate to close to 120,000 barrels per day and give us an average production rate of over 130,000 barrels per day in 2007. Moreover the Acquisition improves our reserve life index. We have made the quick and smooth integration of the acquired Pan-Ocean business with our current Addax Petroleum businesses a priority, which will lay the foundations for a new generation independent exploration and production company."

With the successful closing of the Acquisition, holders of Addax Petroleum's 14,750,000 subscription receipts (the "Subscription Receipts") will receive one common share in the share capital of Addax Petroleum ("Common Shares") per Subscription Receipt, without payment of any additional consideration effective today, September 7, 2006. As the Subscription Receipts trade in the 'book-entry' system and no individual certificates are issued, holders of Subscription Receipts are not required to take any action in order to receive the Common Shares to which they are entitled. Holders of Subscription Receipts that convert into Common Shares are entitled to receive a special payment equivalent to the amount of the initial quarterly dividend previously announced by Addax Petroleum of CDN\$0.05 per share payable on September 14, 2006.

The proceeds from the offering of Subscription Receipts have been released to Addax Petroleum from escrow and were used along with other funds to pay the purchase price for the Acquisition. With the closing of the Acquisition, trading in the Subscription Receipts will be halted and the Subscription Receipts will remain halted until the close of business today, September 7, 2006, at which time they will be de-listed from the Toronto Stock Exchange.

About Addax Petroleum

Addax Petroleum is an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800

barrels per day for 1998 to an average of approximately 80,000 barrels per day for the first half of 2006.

Addax Petroleum closes over-allotment option offering

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Aug. 30 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today closed the previously announced exercise of the over-allotment option by its underwriting syndicate to purchase 1,750,000 subscription receipts at the price of \$27.25 per subscription receipt resulting in additional gross proceeds of CDN \$47,687,500. Each subscription receipt represents the right to receive one common share in the share capital of Addax Petroleum, without payment of any additional consideration.

The over-allotment option was granted in connection with the recent offering of 13,000,000 subscription receipts. After the exercise of the over-allotment option, Addax Petroleum will have issued 14,750,000 subscription receipts pursuant to the offering for gross proceeds of CDN \$401,937,500. The aggregate subscription proceeds, together with interest thereon, will be held in escrow by Computershare Trust Company of Canada and invested in short-term obligations of, or guaranteed by, the Government of Canada (and other approved instruments) pending completion of the acquisition of certain subsidiaries and other assets of Pan-Ocean Energy Corporation Limited (the "Acquisition"), which was announced on July 20, 2006 and is expected to close on or about September 7, 2006. In connection with the completion of the Acquisition, the escrowed funds will be released to Addax Petroleum and the outstanding subscription receipts will be converted into Addax Petroleum common shares.

The common shares of Addax Petroleum trade on the Toronto Stock Exchange under the symbol "AXC". The subscription receipts of Addax Petroleum trade on the Toronto Stock Exchange under the symbol "AXC.R"

The offering was underwritten by a syndicate led by RBC Capital Markets, Merrill Lynch Canada Inc. and Scotia Capital Inc., and included CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., UBS Securities Canada Inc., BNP Paribas (Canada) Securities Inc., FirstEnergy Capital Corp., Canaccord Capital Corporation and Peters & Co. Limited.

Addax Petroleum closes CDN\$354,250,000 public offering

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Aug. 16 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today closed the previously announced offering of 13,000,000 subscription receipts of Addax Petroleum at a price of CDN\$27.25 per subscription receipt for aggregate gross proceeds of CDN\$354,250,000. Each subscription receipt represents the right to receive one Addax Petroleum common share, without payment of additional consideration upon completion of the acquisition of certain subsidiaries of Pan-Ocean Energy Corporation Limited (the "Acquisition") which was announced on July 20, 2006 and is expected to close on or about September 7, 2006. Addax Petroleum has also granted to the underwriters an over-allotment option in respect of an additional 1,950,000 subscription receipts exercisable at any time not later than 30 days after closing of the offering.

The subscription receipts trade on the Toronto Stock Exchange ("TSX") under the symbol "AXC.R".

The net proceeds of the offering will be used to fund a portion of the Acquisition.

The aggregate subscription proceeds, together with any interest earned thereon, will be held in escrow by Computershare Trust Company of Canada and invested in short-term obligations of, or guaranteed by, the Government of Canada (and other approved instruments) pending completion of the Acquisition. In connection with the completion of the Acquisition, the escrowed funds will be released to Addax Petroleum and the outstanding subscription receipts will be converted into Addax Petroleum common shares.

Addax Petroleum announces CDN \$354,250,000 public offering

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Aug. 10 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today announced that it has entered into an underwriting agreement and filed and obtained a receipt for a final short form prospectus relating to the distribution of 13,000,000 subscription receipts at a price of CDN \$27.25 per subscription receipt for aggregate gross proceeds of CDN \$354,250,000. Each subscription receipt represents the right to receive one Addax Petroleum common share, without payment of additional consideration. Addax Petroleum has also granted to the underwriters an over-allotment option in respect of an additional 1,950,000 subscription receipts exercisable at any time not later than 30 days after closing of the offering. The closing of the offering is expected to take place on or about August 16, 2006.

The subscription receipts will trade on the Toronto Stock Exchange under the symbol "AXC.R" on a "when issued" basis commencing on August 11, 2006. Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum commented, "We would like to thank our existing and new shareholders for their support through this offering which is another important step in the evolution of Addax Petroleum as a public, high growth exploration and production company. The success of this offering is a resounding endorsement of our strategic vision."

The net proceeds of the offering will be used to fund a portion of the acquisition of certain subsidiaries of Pan-Ocean Energy Corporation Limited (the "Acquisition") which was announced on July 20, 2006 and is expected to close on or about September 7, 2006.

The aggregate subscription proceeds, together with interest thereon, will be held in escrow by Computershare Trust Company of Canada and invested in short-term obligations of, or guaranteed by, the Government of Canada (and other approved instruments) pending completion of the Acquisition. In connection with the completion of the Acquisition, the escrowed funds will be released to Addax Petroleum and the outstanding subscription receipts will be converted into Addax Petroleum common shares.

This offering is being underwritten by a syndicate led by RBC Capital Markets, Merrill Lynch Canada Inc. and Scotia Capital Inc., and includes CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., UBS Securities Canada Inc., BNP Paribas (Canada) Securities Inc., FirstEnergy Capital Corp., Canaccord Capital Corporation and Peters & Co. Limited.

This announcement is not an offer to sell or a solicitation of any offer to buy the securities of Addax Petroleum, and such securities, (the "Securities") in the United States.

The Securities have not been and will not be registered under the US Securities Act of 1933, as amended (the "Securities Act"), and may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. ADDAX PETROLEUM FILES PRELIMINARY SHORT FORM PROSPECTUS

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN

CALGARY, August 1, 2006 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today announced that it has filed and obtained a receipt for a preliminary short form prospectus relating to the distribution of up to 15,000,000 subscription receipts, each subscription receipt representing the right to receive one Addax Petroleum common share, without payment of additional consideration. Addax Petroleum has also granted to the underwriters an over-allotment option in respect of up to 10% of the subscription receipts purchased exercisable at any time not later than 30 days after closing of this offering.

The net proceeds of the offering will be used to fund a portion of the acquisition of two subsidiaries of Pan-Ocean Energy Corporation Limited (the "Acquisition") which was announced on July 20, 2006 and is expected to close on or about September 7, 2006. The aggregate subscription proceeds, together with interest thereon, will be held in escrow by Computershare Trust Company of Canada and invested in short-term obligations of, or guaranteed by, the Government of Canada (and other approved instruments) pending completion of the Acquisition. In connection with the completion of the Acquisition, the escrowed funds will be released to Addax Petroleum and the outstanding subscription receipts will be converted into Addax Petroleum common shares.

This offering is being underwritten by a syndicate led by RBC Capital Markets, Merrill Lynch Canada Inc. and Scotia Capital Inc.

This announcement is not an offer to sell or a solicitation of any offer to buy the securities of Addax Petroleum, and such securities, (the "Securities") in the United States.

The Securities have not been and will not be registered under the US Securities Act of 1933, as amended (the "Securities Act"), and may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of Securities of the Company is being made in the United States.

ADDAX PETROLEUM ANNOUNCES SECOND QUARTER 2006 RESULTS

Cash flow from operations increases 120 per cent

Calgary, August 1, 2006 - /CNW/ - Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX: AXC), an international oil and gas exploration and production company with a strategic focus on Africa and the Middle East, today announced its results for the quarter ended June 30, 2006. The financial results are prepared in accordance with Canadian GAAP and the reporting currency is US dollars.

This announcement coincides with the filing of Addax Petroleum's Second Quarter Financial Statements and Management's Discussion and Analysis which can be accessed through the Corporation's website at www.addaxpetroleum.com and through www.sedar.com.

CEO's Comment

Commenting today, Addax Petroleum's Chief Executive Officer, Jean Claude Gandur, said: "Addax Petroleum has had an excellent second quarter. Our production continues to increase on the back of successful development drilling and our portfolio of growth and exploration opportunities continues to expand with the acquisition of the Okwok block in Nigeria. This year we have increased the number of drilling rigs operating for Addax Petroleum to five giving the Corporation the necessary operational leverage to maximize our business performance".

Selected Financial Highlights

- Petroleum sales before royalties in the second quarter of 2006 amounted to \$522.4 million, an increase of 103 per cent over petroleum sales before royalties of \$257.8 million in the same quarter in 2005.
- The average crude oil sales price increased 41 per cent to \$67.85 per barrel (/bbl) as compared to the average crude oil sales price of \$48.23/bbl recorded in the comparable quarter in 2005.
- Net income in the second quarter of 2006 was \$57.9 million, an increase of 8 per cent over net income of \$53.5 million in the corresponding quarter for the previous fiscal year.
- Earnings Per Share in the second quarter of 2006 was \$0.41 per share based on 140.0 million shares, compared to \$0.46 per share based on 117.0 million shares for the corresponding period in 2005.
- Cash Flow From Operations was \$195.7 million for the second quarter of 2006, an increase of 120 per cent over the comparable quarter in 2005 of \$89.1 million.

The following table summarizes the selected financial highlights.

Selected financial highlights	Quarter ended 30		
	June		
\$ million unless otherwise stated	2006	2005	Change
Petroleum sales before royalties	522.4	257.8	103%

Operational Highlights

- Average working interest gross oil production in the second quarter of 2006 was 79.9 thousands of barrels per day (mbbls/day) an increase of 28 per cent over second quarter 2005 average working interest production of 62.3 mbbls/day.
- Capital expenditures increased by 230% from \$69.4 million in the second quarter of 2005 to \$229.2 million in the same period in 2006. The capital expenditures comprised development expenditure of \$134.5 million, license acquisition expenditures of \$65.1 million and exploration expenditures of \$29.6 million.
- Development project highlights in the second quarter include the following in Nigeria:
 - Development work in the Okwori and Nda fields in OPL90 continued in the quarter; one additional well was brought on stream at the end of the second quarter;
 - development work on OML123 continued including ongoing work to replace the current FPSO and fields' development, notably on the North Oron and Oron West fields; two additional production wells were brought on stream in OML123 in the second quarter;
 - extended well test on Adanga North field is ongoing; and
 - drilling commenced on OML124.
- License acquisition and exploration and appraisal highlights in the second quarter include:
 - acquisition of an additional 5% in Block 4 of the JDZ to increase the Corporation's participating interest to 38.33%;
 - license acquisition of 40% of the Okwok property in Nigeria and rig mobilization to commence drilling operations at Okwok; and
 - commencement of appraisal drilling on the Taq Taq field in the Kurdistan Region of Iraq.

- Operating netbacks were up 47% to \$49.17/bbl for the second quarter of 2006, as compared to \$33.43/bbl in the second quarter of 2005. Unit operating expenses reduced to \$6.99/bbl, a decrease of 6 per cent over the second quarter 2005 level of \$7.40/bbl.

The following table summarizes selected operational highlights.

Selected operational highlights	Quarter ended 30		
	June

Dividend

The Board of Directors of the Corporation has declared an initial quarterly dividend of CDN\$0.05 per share. The dividend is payable on September 14, 2006, to shareholders of record on August 24, 2006.

Recent Developments

On July 20, 2006 the Corporation announced it had entered into an arrangement agreement with Pan-Ocean Energy Corporation Limited ("Pan-Ocean Energy") for the acquisition (the "Acquisition") of all the issued and outstanding shares of two of Pan-Ocean Energy's subsidiaries and certain other assets for cash consideration of

CDN\$1.605 billion plus the assumption of net debt estimated to be CDN\$30 million. These two subsidiaries represent substantially all of Pan-Ocean Energy's operations. The Acquisition is expected to close on or about September 7, 2006.

The Corporation announced earlier today that it has filed and obtained a receipt for a preliminary short form prospectus relating to the distribution of up to 15,000,000 subscription receipts, each subscription receipt representing the right to receive one Addax Petroleum common share, without payment of additional consideration. Addax Petroleum has also granted to the underwriters an over-allotment option in respect of up to 10% of the subscription receipts purchased exercisable at any time not later than 30 days after closing of the offering. The net proceeds of the offering will be used to fund a portion of the Acquisition and will be held in escrow pending completion of the Acquisition.

This announcement is not an offer to sell or a solicitation of any offer to buy the securities of Addax Petroleum Corporation (the "Corporation", and such securities, the "Securities") in the United States or in any other jurisdiction. The Securities have not been and will not be registered under the US Securities Act of 1933, as amended (the "Securities Act") and may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of Securities of the Corporation is being made in the United States.

This press release may include certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited, to, risks associated with the oil and gas industries (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), synergies and financial impact of the proposed Acquisition, the competitive position of the combined company, the benefits of the proposed Acquisition, the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from expectations include, but are not limited to, those factors discussed in the sections dealing with risk factors or risks and uncertainties, as the case may be, in Addax Petroleum's and Pan-Ocean Energy's respective Annual Information Forms and sections dealing with risks and uncertainties in Addax Petroleum's and Pan-Ocean Energy's respective Management's Discussion and Analysis as filed with securities regulatory authorities in Canada. Although Addax Petroleum has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such

statements. Accordingly, readers should not place undue reliance on forward-looking statements. Addax Petroleum does not undertake to update any forward-looking statements that are included herein, except in accordance with applicable securities laws.

The Corporation defines "Cash Flow From Operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Readers are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

First Nda development well commences production and Addax Petroleum's daily oil production exceeds 100,000 bbls/day for the first time

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Aug. 1 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today announced that first production from the approved Nda Field development programme started on July 30. The addition of this Nda Field production has raised Addax Petroleum's gross daily oil production to 102,200 bbls/day, the first time that Addax Petroleum's production has exceeded the 100,000 bbls/day milestone.

Commenting on the development Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, "We are delighted and proud of these two concurrent achievements which underline our commitment to growth through the development of our resources. In the growth cycle of any E&P company, exceeding 100,000 bbls/day marks a coming of age."

The Nda Field lies in OPL90, was discovered by Addax Petroleum in July 2004 and is adjacent to the Okwori field. The field is being developed as a subsea tie-back to the Okwori FPSO on OPL90 following an extended well test. The Corporation received approval for the Nda Field Development Plan in February of this year.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day in the first quarter of 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

Reader Advisory: Forward-Looking Statements

This press release includes certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Addax Petroleum does not undertake to update any forward-looking statements that are included herein, except in accordance with applicable securities laws.

This announcement is not an offer to sell or a solicitation of any offer to buy the securities of Addax Petroleum Corporation (the "Company", and such securities, the "Securities") in the United States or in any other jurisdiction.

Attention Business Editors:

Addax Petroleum to acquire the business of Pan-Ocean Energy

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, July 20 /CNW/ - Addax Petroleum Corporation (TSX: AXC) ("Addax Petroleum") today announced that it has agreed to acquire two subsidiaries of Pan-Ocean Energy Corporation Limited (TSX: POC.A; POC.B) ("Pan-Ocean Energy") for C\$1.605 billion in cash and will assume net debt estimated to be C\$30 million. The subsidiaries are: PanAfrican Energy Corporation (Mauritius) Limited ("PanAfrican") which owns and operates Pan-Ocean Energy's oil exploration, production and marketing business in Gabon, West Africa and Pan-Ocean Energy UK Ltd. which provides management and operational services to Pan-Ocean Energy and together represent substantially all of the operations of Pan-Ocean Energy.

Commenting on the acquisition, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, "This is an excellent opportunity to acquire an attractive production and reserves portfolio in Gabon which is a perfect complement to Addax Petroleum's existing suite of assets and provides an obvious geographic extension to our strategically focused operations in West Africa."

"These properties offer high quality development opportunities with significant upside potential. Our extensive analysis has revealed the likelihood of substantial near term reserve development which will lead to material production and reserves increases in the near future," said Jim Sarce, Chief Operating Officer of Addax Petroleum.

These Gabonese assets are currently producing in excess of 10,000 bbls/d of medium to light crude oil and Addax Petroleum expects production to reach approximately 18,000 bbls/d by year end upon completion of a transportation pipeline in the second half of 2006. McDaniel & Associates Consultants independently evaluated oil reserves as of December 31, 2005 at 67.5 million proved plus probable barrels and 121.3 million proved plus probable plus possible barrels. The portfolio also includes significant onshore and offshore exploration potential comprising over 716 thousand net acres (approximately 55% offshore).

TRANSACTION HIGHLIGHTS

The acquisition of PanAfrican offers exciting growth opportunities for Addax Petroleum and represents an excellent fit for Addax Petroleum's growth strategy:

Expansion and Diversification in West Africa - Combining these operations will create one of the largest independent E&P companies in West Africa. With the addition of PanAfrican's operations in Gabon, on a consolidated basis Addax Petroleum will have over 100,000 bbls/d of production, 264 million proved plus probable reserves and 400 million proved plus probable plus possible barrels of oil in West Africa. Addax Petroleum's 2P reserve life index will increase and Addax Petroleum will have almost 2 million net acres of land in four jurisdictions in West Africa. The establishment of a new and immediate production hub in Gabon complements Addax Petroleum's existing production base in Nigeria. Gabon is a very stable country with a history and tradition in oil exploration and production.

Enhanced Production Growth Profile - The near and longer term production growth from PanAfrican's assets enhance Addax Petroleum's existing growth profile and on closing will add over 10,000 bbls/d of medium to light oil production (29 degrees to 36 degrees API) to Addax Petroleum. Upon the completion of a transportation pipeline in Gabon anticipated in the second half of 2006, production constraints will be removed and production is expected to increase to approximately 18,000 bbls/d by year-end. With the current drilling programs, Addax Petroleum expects 2007 production to be in excess of 30,000 bbls/d and significant further production growth in 2008 through the development of existing discoveries.

Substantial Reserves Base with Development and Exploration Upside - Addax Petroleum believes that PanAfrican has significant development and exploration potential within the properties which could lead to meaningful future reserve additions. Significant proved plus probable reserve growth is expected as PanAfrican's 54 million barrels of possible reserves are developed in the near term. Additionally, Addax Petroleum has identified exciting exploration potential on these properties which currently have relatively sparse seismic coverage but an excellent historical success rate.

Complementary Technical and Operational Expertise - Addax Petroleum expects to retain key Pan-Ocean Energy and PanAfrican personnel whose substantial technical and operational expertise in Gabon will be supplemented with Addax Petroleum's demonstrated West Africa capabilities. Additionally, given the similarities between Addax Petroleum's Nigeria assets and PanAfrican's Gabon assets, Addax Petroleum and PanAfrican should be able to quickly assess and develop further potential in Gabon.

Attractive Financial and Operational Accretion for Addax Petroleum's Shareholders - Addax Petroleum estimates that this acquisition will generate approximately US\$350 million in cash flow for 2007 (assuming a Brent crude oil price of US\$60/bbl). The all-cash acquisition is expected to provide cash flow accretion of 30% per share, production per share accretion of 31% and reserves per share accretion of 44% to Addax Petroleum shareholders.

PANAFRICAN OVERVIEW

Wholly owned subsidiaries of PanAfrican own interests in eight licences in Gabon, four onshore and four offshore, of which seven are pursuant to Production Sharing Contracts ("PSCs") and one, Ibelekia, is pursuant to a Technical Evaluation Agreement. Four of the PSCs are in production (Maghena, Panthere NZE, Etame and Remboue) while the fifth PSC (Awoun) is expected to commence production in early 2007. The following table summarises these interests:

<<					
Licence	Operator	Net Acres(1)	Interest (1)	Producing Fields	Discoveries
Maghena	PanAfrican	151,324	92.50%	Tsiengui	-
Panthere NZE	PanAfrican	27,671	92.50%	Obangue	Autour, Mokabou, Pomarin
Etame Marin(2)	Vaalco	240,006	31.36%	Etame	Avouma, Ebouri, Tchibala

Remboue	PanAfrican	30,411	92.00%	Remboue	-
Awoun	Shell	110,770	40.00%	-	Koula, Damier
Iris(2)	Sterling Energy	35,887	23.78%	-	-
Themis(2)	Sterling Energy	53,424	23.78%	-	-
Ibekelia(2)	Sterling Energy	66,994	40.00%	-	-

Total		716,487			

>>

- (1) After giving effect to the Government of Gabon's back-in rights
 (2) Offshore licences

SUMMARY OF THE TRANSACTION

The transaction will be effected as a Scheme of Arrangement under Jersey Law as Pan-Ocean Energy is a Jersey incorporated company. The arrangement is subject to approval by a three quarters majority of holders of Pan-Ocean Energy Class A and Class B Shares, each class voting separately and approval of the Royal Court of Jersey and majority of the minority approval of each class. The officers and directors of Pan-Ocean Energy have entered into a lock-up agreement with Addax Petroleum which provides that, subject to terms and conditions, they will vote all of their Class A and Class B Shares in favour of the transaction. The officers and directors of Pan-Ocean Energy own approximately 99.6% of the outstanding Class A Shares and 1.8% of the outstanding Class B Shares.

An independent committee of the Board of Directors of Pan-Ocean Energy and the Boards of Directors of Pan-Ocean Energy and Addax Petroleum have unanimously approved the transaction, completion of which is conditional on the approval of Pan-Ocean Energy shareholders, requisite regulatory and court approvals as well as satisfaction of other customary conditions.

The meeting of Pan-Ocean Energy shareholders to approve the transaction is expected to take place as soon as possible in accordance with the court approved timetable. The transaction prohibits any discussion regarding any other business combination or sale of material assets, contains provisions to enable Addax Petroleum to match any competing, unsolicited proposal and, subject to certain conditions, provides for expense reimbursement and a termination fee.

Addax Petroleum will fund the acquisition through a combination of internal cash resources and firm financing commitments from a syndicate of lenders. Subsequent to the acquisition, Addax Petroleum expects its ratio of pro forma debt to 2007 estimated cash flow from operations to be less than 1 times.

Scotia Waterous is acting as exclusive financial advisor and Fasken Martineau DuMoulin LLP is acting as legal advisor to Addax Petroleum.

CONFERENCE CALL

A conference call to discuss the proposed transaction will be held on July 20th, 2006 at 11:00 a.m. Eastern Daylight Time (9:00 a.m. Mountain Daylight Time). To participate, please call:

- 1 (416) 695-9753 (Global Access)
 1 (877) 461-2815 (North America access only)

The conference call will also be recorded and available for review until

August 20th, 2006 by calling:

- 1 (416) 695-5275 (Global Access); passcode: 628079
- 1 (888) 509-0081 (North America access only); passcode: 628079

ABOUT ADDAX PETROLEUM

Addax Petroleum is a Canadian incorporated international oil and gas exploration company with a strategic Africa and Middle East focus. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day in the first quarter of 2006.

ADDAX PETROLEUM COMPLETES ACQUISITION OF OKWOK INTEREST

CALGARY, *June 28, 2006 /CNW/* – Addax Petroleum Corporation (“Addax Petroleum” or the “Corporation”) (TSX:AXC) announces that it has acquired from Oriental Energy Resources Limited (“Oriental”) a 40 per cent participating interest in the Okwok field in licence area OML67 following receipt of all necessary Nigerian government approvals.. Under a Joint Venture Agreement between Oriental and the Corporation, Oriental retains a 60 per cent interest. Addax Petroleum will be Technical Adviser for the Okwok Field joint venture.

Commenting on the acquisition Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, “We are delighted to conclude our participation in Okwok and value the opportunity to partner with Oriental. We believe that we are the natural partner for Oriental given the proximity of this opportunity to our infrastructure in OML123. This opportunity fits very well with our strategy of business growth in Nigeria and maximising our infrastructure assets.”

In return for obtaining a 40 per cent participating interest in the Okwok field, Addax Petroleum is obligated to pay a farm-in fee and to carry Oriental’s appraisal and development costs on the Okwok field until first oil and thereafter be repaid from part of Oriental’s entitlement of oil production.

The Okwok field is located south of the OML123 in a water depth of approximately 50 meters. The field was discovered in 1967 and was appraised soon thereafter by a further two wells but was not production tested. In 2001, Mobil contributed the Okwok field to Nigeria’s Marginal Field Program which was established by the Nigerian government to encourage more Nigerian company participation in the oil and gas sector. Pursuant to this program, Oriental recently completed a farm-in agreement for the Okwok field with Mobil and the Nigerian National Petroleum Corporation.. Addax Petroleum and Oriental plan to drill up to three appraisal wells in the Okwok Field with the GSF High Island IX drilling rig, commencing in early July, 2006 to confirm the commercial potential of the field. A successful appraisal program by Oriental and Addax Petroleum will be followed by field development operations. First commercial oil production from Okwok could

commence as early as 2008.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day in the first quarter of 2006. Addax Petroleum Launches New Website

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, May 18 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX: AXC), today announced the launch of its new website at, <http://www.addaxpetroleum.com>. The new site is designed to reflect Addax Petroleum's identity as a dynamic, entrepreneurial, growth-oriented international company and to demonstrate the Corporation's commitment to be accountable and transparent to its shareholders and other stakeholders.

The new site features information of special interest to investors and potential investors in the Corporation including detailed descriptions on the Corporation's assets, financial reports and management presentations. Visitors to the site will also find answers to frequently asked questions about the Corporation and its business, the latest news from the Corporation and detailed information on the Corporation's policies, management and governance.

Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum, said on the launch of the new website: "This is another important step in Addax Petroleum's development as a public company. We will use the new website to expand the distribution of information and to provide timely access to current and accurate information about the Corporation and its business. I encourage all our stakeholders to visit the site as it is for Addax Petroleum an additional way to engage in dialogue."

The May 16, 2006 management presentation to analysts is included on the web site.

About Addax Petroleum:

Addax Petroleum is an international oil and gas company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,000 barrels per day in 1998 to an average to date of 80,000 barrels per day in 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This press release contains forward-looking statements. These statements are based on current expectation that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g. operational risks in development, exploration and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainty of reserve estimates; the uncertainty of estimates and projections in relation to production, costs and expenses and health, safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risk associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in the Corporation's securities should not place undue reliance on these forward-looking statements.

Genel and Addax Petroleum Spud Well in Taq Taq Licence

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, May 15 /CNW/ - Genel Enerji A.S. ("Genel") and Addax Petroleum Corporation ("Addax Petroleum" TSX : AXC) are proud to announce the commencement of drilling activities in their first jointly operated well in the Taq Taq License Area in the Kurdistan Region of Northern Iraq.

Genel has entered into a Production Sharing Agreement (PSA) with the Kurdistan Regional Government on 20th January 2004. This PSA superseded an earlier document dated 17th July 2002 pertaining to the exploration and exploitation of the Taq Taq License Area. Since the handover on 25th February 2003, Genel has assumed operations in the licensed area.

To supplement and support the technical and operational capacity of Genel, a Technical Services Agreement and a farm in agreement were signed by Genel and Addax Petroleum in July 2005. Since then, Genel and Addax Petroleum have conducted a 2-D seismic data acquisition campaign between December 2005 and April 2006 to define the extent of the Taq Taq structure. The well now being spudded is scheduled to reach a targeted depth of approximately 2,250 m. in the oil bearing Cretaceous Shiranish, Kometan and Qamchuga formations.

Genel and Addax Petroleum have jointly established the Taq Taq Operating Company (TTOPCO) as a special purpose entity to carry out the petroleum operations in the license area. TTOPCO conducts its operations through Ankara Operation Office and Taq Taq Field Office with the support of parent companies, Genel and Addax Petroleum

This well is the first of a three well drilling program which Genel and Addax have commenced in response to the urgent local energy requirements of the Kurdish region in Northern Iraq, and in fulfillment of a request from the regional authorities to expeditiously satisfy these needs.

Commenting on this event, Mehmet Sepil, Chief Executive Officer of Genel Enerji said: "This is a very important step and achievement for Genel Enerji being a young independent international oil and gas company. We have spent a lot of efforts together with the local authorities for the realization of this project since the beginning. The first objective of the Taq Taq project is to satisfy energy needs of the region and meet its expectations in an efficient and timely manner. We are confident that this project would be a world class and Genel together with Addax will expeditiously develop the field in accordance with the PSA and international standards by putting suitable work and development programs in place".

Commenting on this event, Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said: "This is a significant development milestone for Addax Petroleum. The Taq Taq field has the potential to be a major source of reserve and production growth. The joint drilling programme launched together with Genel will allow our two companies to move forward with the development in a world class oil province."

Genel Enerji A.S. is a Turkish registered company and owned by the Turkish Cukurova Holdings Group. Further information about Genel Enerji is available at www.genel-enerji.com

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. As a Canadian

registered company, Addax Petroleum trades on the Toronto stock exchange under the trading symbol ("AXC"). Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com

This press release contains forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ materially from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g. operational risks in development, exploration and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainty of reserve estimates; the uncertainty of estimates and projections in relation to production, costs and expenses and health, safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risk associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in the Addax Petroleum Corporation's securities should not place undue reliance on these forward-looking statements.

Addax Petroleum announces first quarter 2006 results

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

Net income increases 96 per cent

CALGARY, May 11 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX:AXC), an international oil and gas exploration and production company focused on Africa and the Middle East, today announced its results for the quarter ended March 31, 2006. The financial results are prepared in accordance with Canadian GAAP and the reporting currency is US dollars. Results per share are based on the weighted average number of Addax Petroleum shares outstanding, being 117,000,000 shares in the first quarter of 2005 and 127,850,100 for 2006.

This announcement coincides with the filing of Addax Petroleum's First Quarter Financial Statements and Management's Discussion and Analysis which can be accessed through www.sedar.com.

CEO's Comment

Commenting today, Addax Petroleum's Chief Executive Officer, Jean Claude Gandur, said: "Addax Petroleum's first quarter as a public company has been particularly successful. Our production levels continued to increase on the back of successful development drilling and our portfolio of growth and exploration opportunities was significantly enhanced through the acquisition of prominent positions in three highly prospective blocks in the Nigeria-Sao Tome and Principe Joint Development Zone ("JDZ")."

Selected Financial Highlights

- Petroleum sales before royalties in the first quarter of 2006 amounted to \$394.2 million, an increase of 100 per cent over petroleum sales before royalties of \$197.1 million in the same quarter in 2005.
- The average crude oil sales price increased 34 per cent to \$59.41 per barrel (bbl) as compared to the average crude oil sales price of \$44.49/bbl recorded in the comparable quarter in 2005.
- Net income in the first quarter of 2006 was \$56.5 million, an increase of 96 per cent over net income of \$28.9 million in the corresponding quarter the previous fiscal year.
- Earnings Per Share in the first quarter of 2006 was \$0.44 per share.
- Cash Flow From Operations was \$174.3 million, an increase of 149 per cent over first quarter 2005 cash flow from operations of \$69.9 million.
- During the first quarter of 2006, the Corporation successfully completed its Initial Public Offering ("IPO") and listing on the Toronto Stock Exchange. The Corporation realized net proceeds of \$323 million from the IPO.

The following table summarizes the selected financial highlights.

<<

Selected financial highlights \$ million unless otherwise stated	Quarter ended 31 March		
	2006	2005	Change
Petroleum sales before royalties	394.2	197.1	100%
Average crude oil sales price, \$/bbl	59.41	44.49	34%
Net income	56.5	28.9	96%
Earnings per share, \$/share	0.44	0.25	76%
Cash Flow From Operations	174.3	69.9	149%
Number of shares outstanding, million	127.9	117.0	9%

Operational Highlights

- Average working interest gross oil production in the first quarter of 2006 was 80.4 thousands of barrels per day (mbbls/day) an increase of 63 per cent over first quarter 2005 average production of 49.3 mbbls/day.
- Capital expenditures increased by 173% from \$89.8 million in the first quarter of 2005 to \$245.5 million in the same period in 2006. The capital expenditures comprised development expenditure of \$148.3 million, licence acquisition expenditures of \$66.0 million and exploration expenditures of \$31.2 million.
- Development project highlights include:
 - Nigerian Government approval to develop the Nda field. Development work in the Okwori and Nda fields in OPL90 continued in the quarter;
 - development work on OML123 continued including ongoing work to replace the current FPSO and fields development, notably on the Oron fields; three additional production wells were brought on stream in OML123 in the first quarter;
 - extended well test on Adanga North field started and is ongoing; and
 - drilling rig arrived on OML124 and rigged up in readiness to commence onshore work program.
- Licence acquisition and exploration highlights in the first quarter include:
 - acquisition of significant acreage position in Blocks 2, 3 and 4 of the JDZ including operatorship of Block 4;
 - completion of seismic acquisition surveys on OPL225 (offshore, Nigeria), Ngosso (offshore, Cameroon) and TaqTaq (onshore, Kurdistan region of Iraq);
 - drilling of the Adanga North Horst West exploration well on OML123 in Nigeria, which discovered gas but was unsuccessful as an oil exploration well; and
 - mobilization of a drilling rig to appraise the TaqTaq field.
- Operating netbacks were up 37% to \$41.24/bbl as compared to \$30.16/bbl

in the first quarter of 2005. (Unit operating expenses rose to \$7.13/bbl, an increase of 26 per cent over the first quarter 2005 level of \$5.66/bbl.

The following table summarizes selected operations information:

Operations results	Quarter ended 31		Change
	2006	2005	
Annual average working interest gross oil production (mmbbls/day):			
OML123 (offshore)	50.4	45.0	12%
OML124 (onshore)	3.3	3.5	(5%)
OPL90 (offshore)	26.7	0.8	-
Total	80.4	49.3	63%
Prices, expenses and netbacks (\$/bbl):			
Average realized price	59.41	44.49	34%
Operating expense	7.13	5.66	26%
Operating netback	41.24	30.16	37%

About Addax Petroleum

Addax Petroleum is an international oil and gas company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,000 barrels per day in 1998 to an average to date of 80,000 barrels per day in 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This press release contains forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ materially from those anticipated. These risks include, but are not limited to; risks associated with the oil and gas industry (e.g. operational risks in development, exploration and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainty of reserve estimates; the uncertainty of estimates and projections in relation to production, costs and expenses and health, safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risk associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in the Corporation's securities should not place undue reliance on these forward-looking statements.

The Corporation defines "Cash Flow From Operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Readers are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax

Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

Analyst Conference Call

Financial analysts are invited to participate in a conference call with management on Friday May 12, 2006 at 9:00 a.m. Eastern time. (Mr. Patrick Spollen moderator). The media and shareholders may participate on a listen only basis. Please dial 1-800-366-7640 to participate in the call. A replay of the call will be available at 416-640-1917 or 1-877-289-8525, passcode 21189255 followed by the number sign until Friday, May 26, 2006.

The company will host a management presentation to financial analysts on May 16, 2006.

Attention Business Editors:

Addax Petroleum celebrates sail away of Knock Adoon FPSO

RECEIVED

2007 JAN 18 A 10:23

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

CALGARY, April 25 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") (TSX:AXC) announces that its subsidiary Addax Petroleum Development (Nigeria) Limited held a Sail Away Ceremony for the Knock Adoon FPSO (Floating Production, Storage and Offloading vessel) at the Dubai Drydocks Shipyard.

The Knock Adoon FPSO will replace the current Knock Taggart FPSO as Addax Petroleum's new key crude oil production, storage and export facility in its fields in OML123, offshore Nigeria. Designed to store a minimum of 1,700,000 barrels of crude oil, the Knock Adoon FPSO also offers a processing capacity of 60 mbbls/d (sixty thousand barrels per day) of crude oil and a total liquids (oil and water) processing capacity of 140 mbbls/d. Incorporated in this facilities upgrade and expansion is an off-loading buoy terminal to more efficient crude offloading and to accommodate larger tankers.

The contract for the provision of the FPSO was awarded to Fred Olsen Production AS. Upgrade works were carried out in the Dubai Drydocks Shipyard in preparation for vessel mobilisation to Nigeria. The vessel is expected to depart from Dubai in May. Addax Petroleum has the vessel under contract for an initial eight year period with options to extend.

Mrs Mabel Daukoru, wife of the Minister of State of Petroleum, Dr Edmund Daukoru, played the role as Godmother of the vessel.

Commenting on this event Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said: "This is a fabulous example of how to work together, with the cross-border work performed by the Fred Olsen, Drydocks Shipyard, DPR, NNPC, NAPIMS and Addax Petroleum teams. I sincerely thank them, and in particular Dr Edmund Daukoru for his personal unflinching encouragement and guidance, and salute all the efforts which have led to this wonderful accomplishment." Mr. Gandur added, "The Knock Adoon FPSO is a valuable asset for the company and its shareholders that will help us sustain production in our biggest producing field."

The Knock Adoon FPSO is the third FPSO contracted by Addax Petroleum in Nigeria after the Knock Taggart FPSO, chartered from Fred Olsen Production, in OML123 and the Sendje Berge FPSO, chartered in 2005 from Sendje Berge Ltd in OPL90.

About OML123

OML123 is the Corporation's largest property as measured by reserves and production. It is located offshore approximately 70 km south of the town of Calabar, Nigeria and covers an area of 90,700 acres (367 km²) in water depths ranging from 3 to 40 m on the eastern edge of the Niger Delta. In March 2006,

oil production from OML123 was in excess of 50 mbbls/d.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day in 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This announcement does not constitute an offer of, or the solicitation of an offer to buy or subscribe for, common shares of Addax Petroleum to any person in any jurisdiction to whom or in which such offer or solicitation is unlawful and, in particular, is not for release, publication or distribution in or into the United States, Australia or Japan.

The offer and sale of the common shares has not been and will not be registered under the US Securities Act of 1933, as amended, (the "Securities Act") and such shares may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of common shares of Addax Petroleum is being made in the United States.

Certain statements in this announcement are forward-looking statements. Such statements are based on current expectations and are subject to a number of risks and that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements.

Addax Petroleum increases interest in JDZ exploration Block

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, April 13 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") (TSX: AXC) announces that it has increased its participating interest in Block 4 of the Nigeria/Sao Tome and Principe Joint Development Zone ("JDZ") from 33.3 per cent to 38.3 per cent by acquiring the 5 per cent participating interest held by Overt Ventures Ltd ("Overt"). The assignment of Overt's interest to Addax Petroleum has been approved by the Nigeria/Sao Tome and Principe Joint Development Authority ("JDA"). Addax Petroleum is the operator of Block 4.

Commenting on the acquisition Jean Claude Gandur, President and Chief Executive Officer of Addax Petroleum said, "We believe that the JDZ offers world-class exploration potential. This acquisition follows our strategy of investing in the JDZ as a core exploration area for Addax Petroleum."

In return for obtaining Overt's 5 per cent participating interest in Block 4, Addax Petroleum is obligated to pay:

- US\$10 million to Overt as consideration for the interest, and
- US\$5 million to the JDA comprised of a US\$4.5 million signature bonus associated with the acquisition of the 5 per cent participating interest in Block 4 and an assignment administration fee of US\$0.5 million.

Block 4 covers a gross area of 857 square kilometers (211,773 acres) and the water depth ranges from approximately 1,800 to 2,200 meters. Seismic data acquired over Block 4 is presently being analyzed to delineate potential drilling locations.

Nigeria-Sao Tome & Principe JDZ

The JDZ is located approximately 200 kilometres offshore Nigeria and is adjacent to areas where several large petroleum discoveries have been made. The JDZ was established in 2001 following the ratification of a formal bilateral treaty between Nigeria and the island nation of Sao Tome and Principe. The JDZ is administered by the JDA.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 80,000 barrels per day in 2006. OFFICE OF INTERNATIONAL
CORPORATE RELATIONS

Attention Business/Financial Editors:

Results for the year ended 31 December 2005

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 29 /CNW/ - Addax Petroleum announces record levels of production, revenue, operating profitability, cash flow and net income

Addax Petroleum Corporation ("Addax Petroleum" or the "Corporation") (TSX:AXC), an international oil and gas exploration and production company focused on Africa and the Middle East, today announced results for the year ended 31 December, 2005 for Addax Petroleum N.V. ("APNV"). APNV was acquired by the Corporation to become a wholly owned subsidiary at the time of closing of the Corporation's initial public offering ("IPO") and its listing of the Corporation on the Toronto Stock Exchange on February 16, 2006. The financial results are prepared in accordance with Canadian GAAP and the reporting currency is US dollars. Pro forma results per share are based on the current number of Addax Petroleum shares outstanding, being 140,100,100 shares.

This announcement coincides with the filing of Addax Petroleum's Annual Financial Statements and Auditor's Report, Annual Information Form and Management's Discussion and Analysis which can be accessed through www.sedar.com. The Corporation's Annual Information Form includes disclosure and reports relating to reserves data and other oil and gas information pursuant to National Instrument 51-101.

CEO's Comment

Commenting today, Jean-Claude Gandur, CEO, Addax Petroleum Corporation, said: "At Addax Petroleum, 2005 was a year of transformation both operationally and strategically. On the operations front, we not only continued but accelerated our production growth and demonstrated our operational expertise with the successful start-up of the Okwori field, an accomplishment recognized by our industry peers through the World Petroleum Congress technical excellence award. Strategically Addax Petroleum positioned itself to add value for shareholders by adding world class opportunities to its portfolio."

Financial Highlights

Addax Petroleum achieved strong financial results in 2005 through sustained high oil prices and strong operational performance.

- Petroleum sales before royalties up 133% to \$1,219.1 million (2004: \$524.1 million)
- Average crude oil sales price up 45% to \$52.81/bbl (2004: \$36.30/bbl)
- Net income up 229% to \$206.1 million (2004: \$62.6 million)
- Pro forma Earnings Per Share of \$1.47 per share
- Cash Flow From Operations up 174% to \$468.2 million (2004: \$171.0 million)
- Pro forma Cash Flow From Operations of \$3.34 per share

The following table summarizes selected financial information.

<<

\$ millions	Year ended/ as at 31 December		Change
	2005	2004	

Consolidated results			
Petroleum sales before royalties	1,219.1	524.1	133%
Net income	206.1	62.6	229%
Cash Flow From Operations	468.2	171.0	174%
Capital expenditure	381.5	314.2	21%
Property, plant & equipment	487.0	497.7	(2%)
Total assets	866.7	616.9	40%
Long-term debt	80.0	65.0	23%
Shareholders' equity	298.4	177.3	68%

- Since year end, Addax Petroleum successfully completed its IPO and listing on the Toronto Stock Exchange in February, which realized net proceeds to the Corporation of \$323 million
- In addition to the cash resources sourced from the IPO, the Corporation's current financial strength is enhanced through access to a \$300 million long-term syndicated loan facility which, at year-end was \$80 million drawn and currently is undrawn

Operational Highlights

During 2005, Addax Petroleum has shown strong growth from continuing operations reflected in production growth, project milestone achievements, and balanced development and exploration investment whilst maintaining operating cost discipline.

- Improved safety record reflected in lost time incident frequency of 0.84 lost time incidents per million man-hours worked (2004: 1.24)
- Annual average working interest gross oil production up 64% to 65.3 mbbbls/day (2004: 39.9 mbbbls/day)
- Major development project highlights during 2005 include:
 - first oil in March from the Okwori field in OPL90, offshore Nigeria
 - World Petroleum Council technical excellence award for Okwori project
 - six new development wells brought on stream in OML123, offshore Nigeria
 - seven new development wells brought on stream in OPL90, offshore Nigeria
 - development capital expenditures up 31% to \$360 million (2004: \$274 million)
- Exploration activity offshore Nigeria, Cameroon and Gabon during 2005 includes:
 - one exploration well offshore Nigeria resulting in the Kita North discovery in OML123
 - Seismic data acquisition commenced on OPL225, offshore Nigeria; the survey was completed in January, 2006.

- Seismic data acquisition commenced on the Ngoosso permit, offshore Cameroon; the survey was completed in March, 2006
- KME-1 well on the Kiarsseny permit, operated by Tullow Oil plc, offshore Gabon spudded. The well was completed in 2006 and was unsuccessful
- exploration expenditures down 45% to \$22 million (2004: \$40 million)
- Operating netbacks up 61% to \$37.06/bbl (2004: \$23.08/bbl) whereas unit operating expenses up to 9% to \$6.61/bbl (2004: \$6.06/bbl)
- Year end working interest gross reserves, as estimated by Netherland, Sewell & Associates ("NSAI") in accordance with NI 51-101 were 108.6 mmbbls of proved reserves, 196.7 mmbbls of proved plus probable reserves and 278.7 mmbbls of proved plus probable plus possible reserves
- Since year end, Addax Petroleum has successfully appraised the Nda field and received Nigerian government approval for the Nda Field Development Plan

The following table summarizes selected operations information.

Operations results	Year ended/ as at 31 December		Change (1)
	2005	2004	
Annual average working interest gross oil production (mmbbls/day):			
OML123	47.1	36.1	31%
OML124	3.5	3.8	(8%)
OPL90	14.7	n/a	n/a
Total	65.3	39.9	64%
Prices, expenses and netbacks (\$/bbl):			
Average realized price	52.81	36.30	45%
Operating expense	6.61	6.06	9%
Operating netback	37.06	23.08	61%
Working interest gross oil reserves (mmbbls):			
Proved	108.8	n/a	n/a
Proved + Probable	196.9	n/a	n/a
Proved + Probable + Possible	278.9	n/a	n/a

1. As at 31 December, 2004 the Corporation was not required to report its reserves in accordance with National Instrument 51-101.

New Ventures

Addax Petroleum has an active and aggressive New Ventures program to add high quality acreage and reserves. During 2005, significant progress was made to advance several New Venture opportunities, a number of which have subsequently been formally awarded to the Corporation.

- During 2005, in the Nigeria-Sao Tome & Principe Joint Development Zone ("JDZ"), Addax Petroleum entered into a participation agreement with

ERHC Energy, Inc. ("ERHC") to acquire an interest in Block 4 of the JDZ. Since year end, Addax Petroleum has been awarded interests in JDZ Blocks 2, 3 and 4 and operatorship of Block 4. A summary of the Corporation's holdings in this highly prospective region as of 28 March, 2006 is as follows:

Block	Net Acres	Addax Petroleum's Participating Interest	Payments by Addax Petroleum		ERHC interest carried by Addax Petroleum	Minimum Work Program to be funded by Addax Petroleum(1)
			as Signature Bonuses to JDZ \$ million	as acquisition payments to ERHC \$ million		
2	24,504	14.33%	8.3	6.8	7.33%	6.1
3	24,686	15.00%	2.0	7.5	10.00%	7.5
4	70,519	33.30%	23.4	18.0	17.70%	27.0
Total	119,709		33.7	32.3		40.6

1. Includes the carry of ERHC's interest

- During 2005, Addax Petroleum entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which it agreed to acquire a 40% interest in the Okwok property, located 12km southwest of OML123. Addax Petroleum's position in this opportunity remains subject to the completion of a farm-in agreement and government approval, anticipated during 2006.
- Also during 2005 Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for an interest of 30% in a production sharing contract to govern the Taq Taq field in the Kurdistan Region of Iraq. Addax Petroleum's formal position in the opportunity is subject to approval by the relevant authorities. In the meantime, Addax Petroleum has completed 2D seismic acquisition and is preparing an appraisal drilling work program in anticipation of the relevant approvals.
- In addition to the opportunities highlighted above, the Corporation has additional potential opportunities at various stages of investigation in its core areas of Africa and the Middle East.

Corporate Social Responsibility

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum believes that it has an excellent operational reputation and strong relationships which help facilitate timely approval for its projects and avoid unplanned disruptions in production. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90% of Addax Petroleum's employees in Nigeria

Nigerian citizens. In addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

2006 Outlook

Looking forward, 2006 is anticipated to be a strong year for Addax Petroleum in terms of production, development and exploration activity and capital investment. From continuing operations, the Corporation anticipates 2006 working interest gross oil production to average 85.0 mbbbls/day, an increase of approximately 30% over 2005 production. The majority of the increase in oil production is expected from OPL90 where the Nda field development is taking place. This production increase is expected from currently planned projects on the Nigerian properties where 2006 development and infrastructure investment is forecast to be approximately \$700 million, an increase of some 95% over 2005.

In addition, Addax Petroleum forecasts to invest approximately \$300 million in exploration and appraisal activity including the announced acquisition of additional acreage. This investment includes:

- exploration expenditure on all existing Nigeria, Cameroon and Gabon blocks
- acquisition payment and appraisal drilling at Okwok, close to OML123
- signature bonuses, acquisition fees and exploration work on the JDZ blocks
- appraisal activity on the Taq Taq field in the Kurdistan region of Iraq

Addax Petroleum's 2006 growth program is well resourced financially and operationally. In Nigeria, the Corporation currently has three drilling rigs on location, one in each of OML123, OML124 and OPL90 properties with a second drilling rig due on site in OML123 during the second half of 2006. In addition, drilling is scheduled to start at Taq Taq during the second quarter using an acquired land rig dedicated for this purpose.

This press release contains forward-looking statements. These statements are based on current expectation that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g. operational risks in development, exploration and production; delays or changes in plans with respect to exploration or development projects or capital expenditures; the uncertainty of reserve estimates; the uncertainty of estimates and projections in relation to production, costs and expenses and health, safety and environmental risks), the risk of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risk associated with international activity. Due to the risks, uncertainties and assumptions inherent in forward-looking statements, prospective investors in the Corporation's securities should not place undue reliance on these forward-looking statements.

Attention Business Editors:

Addax Petroleum achieves record daily production of over 85,000bbls

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 16 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces that it has today achieved a company record daily production of 85,416 bbls from its Nigerian producing assets. This is the first time daily production has exceeded 85,000bbls.

In commenting on this achievement Jean Claude Gandur, Chief Executive Officer of Addax Petroleum said, "We are delighted that Addax Petroleum has achieved another production milestone. Reaching this level of production is a testament to the operational skill, professionalism and commitment of the Addax Petroleum organisation."

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude production from an average of 8,800 barrels per day for 1998. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This announcement does not constitute an offer of, or the solicitation of an offer to buy or subscribe for, common shares of Addax Petroleum to any person in any jurisdiction to whom or in which such offer or solicitation is unlawful and, in particular, is not for release, publication or distribution in or into the United States, Australia or Japan.

The offer and sale of the common shares has not been and will not be registered under the US Securities Act of 1933, as amended, (the "Securities Act") and such shares may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of common shares of Addax Petroleum is being made in the United States.

Certain statements in this announcement are forward-looking statements. Such statements are based on current expectations and are subject to a number of risks and that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements.

Addax Petroleum acquires equity position in highly prospective exploration Block

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 16 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces that it has together with its co-venturers signed a Production Sharing Contract ("PSC") with the Nigeria/Sao Tome Joint Development Authority ("JDA") relating to Block 2 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") and that it is now entitled to a 14.33 per cent participation interest in Block 2 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") pursuant to a participation agreement with ERHC Energy Incorporated ("ERHC") entered into on 2nd March 2006. Addax Petroleum also signed a joint operating agreement among the Block 2 co-venturers where Sinopec is the designated Operator.

Block 2 - Addax Petroleum: 14.33 per cent

Addax Petroleum's Block 2 entitlement is pursuant to:

- Block 2 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$8.28 million and its share of a minimum committed work program of one (1) exploration well or a minimum expenditure of US\$28 million, and
- a Participation Agreement with ERHC entered into on 2nd March 2005 under which Addax Petroleum became entitled to a 14.33 per cent participating interest for an obligation to pay US\$6.8 million and a commitment to carry the costs associated with an ERHC interest of 7.33 per cent in Block 2.

The JDZ is located approximately 180 kilometres offshore Nigeria and is adjacent to areas where several large petroleum discoveries have been made. The JDZ was established in 2001 following the ratification of a formal bilateral treaty between Nigeria and the island nation of Sao Tome and Principe. The JDZ is administered by the JDA.

Block 2 covers a gross area of 692 square kilometres (170,993 acres). The water depth in Block 2 ranges from approximately 1,300 to 1,900 meters. Seismic data acquired over Block 2 is presently being analyzed to delineate potential drilling locations.

In commenting on the signing of the PSC Jean Claude Gandur, Chief Executive Officer of Addax Petroleum said, "With the completion of the acquisition of a equity position in a third JDZ Block, Addax Petroleum has achieved its goal of establishing a significant position in this highly prospective exploration area. We believe these acquisitions offer exciting opportunities to the Company and its shareholders".

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 78,000 barrels per day in 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This announcement does not constitute an offer of, or the solicitation of an offer to buy or subscribe for, common shares of Addax Petroleum to any person in any jurisdiction to whom or in which such offer or solicitation is unlawful and, in particular, is not for release, publication or distribution in or into the United States, Australia or Japan.

The offer and sale of the common shares has not been and will not be registered under the US Securities Act of 1933, as amended, (the "Securities Act") and such shares may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of common shares of Addax Petroleum is being made in the United States.

Certain statements in this announcement are forward looking statements. Such statements are based on current expectations and are subject to a number of risks and that could cause actual results or events to differ materially from those expressed or implied by the forward looking statements.

For further information: please contact: Mr. Patrick Spollen, Investor Relations, Tel.: +41 (0) 22 702 95 47, patrick.spollen@addaxpetroleum.com; Mr. Mac Penney, Press Relations, Tel.: (416) 934-8011, mac.penney@cossette.com; Ms. Marie-Gabrielle Cajoly, Press Relations, Tel.: +41(0) 22 702 94 44, marie-gabrielle.cajoly@addaxpetroleum.com

Attention Business Editors:

Addax Petroleum acquires interests in highly prospective JDZ exploration Blocks

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 15 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces that it has together with its co-venturers signed a Production Sharing Contract ("PSC") with the Nigeria/Sao Tome Joint Development Authority ("JDA") relating to Block 4 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") and is now entitled to a 33.3 per cent participating interest pursuant to a Participation Agreement with ERHC Energy Incorporated ("ERHC") relating to Block 4. Addax Petroleum will be the operator of this Block. Addax Petroleum has also signed today a further PSC with the JDA relating to Block 3 of the JDZ and is now entitled to a 15% participating interest under the Joint Operating Agreement ("JOA") relating to this Block where a subsidiary of Anadarko Petroleum Corporation is the operator.

In commenting on the signing of the PSCs Jean Claude Gandur, Chief Executive Officer of Addax Petroleum said, "I am delighted that Addax Petroleum has achieved prominent equity positions and operatorship in this highly prospective exploration area. We are excited about the potential these assets offer our company and its shareholders."

Block 4 - Addax Petroleum: 33.3 per cent and Operator

Addax Petroleum's Block 4 entitlement is pursuant to:

- Block 4 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$23.4 million and its share of a minimum committed work program of three exploration wells or a minimum expenditure of US\$53 million, and
- a Participation Agreement with ERHC entered into in November 2005 under which Addax Petroleum became entitled to a 33.3 per cent participating interest for an obligation to pay US\$18 million and a commitment to carry the costs associated with an ERHC interest of 17.7 per cent in Block 4.

Block 4 covers a gross area of 857 square kilometers (211,773 acres) and the water depth ranges from approximately 1,800 to 2,200 meters. Seismic data acquired over Block 4 is presently being analyzed to delineate potential drilling locations.

Block 3 - Addax Petroleum: 15 per cent

Addax Petroleum's Block 3 entitlement is pursuant to:

- Block 3 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$2 million and its share of a minimum committed work program of one exploration well or a minimum expenditure of US\$30 million, and
- a Participation Agreement with ERHC entered into in February 2006 under which Addax Petroleum acquired the 15 per cent participating interest for an obligation to pay US\$7.5 million and a commitment to carry the costs associated with an ERHC interest of 10 per cent in Block 3.

Block 3 covers a gross area of 666 square kilometers (164,569 acres) and the water depth ranges from approximately 1,700 to 2,100 meters. Seismic data acquired over Block 3 is presently being analyzed to delineate potential drilling locations.

Nigeria-Sao Tome & Principe JDZ

The JDZ is located approximately 200 kilometres offshore Nigeria and is adjacent to areas where several large petroleum discoveries have been made. The JDZ was established in 2001 following the ratification of a formal bilateral treaty between Nigeria and the island nation of Sao Tome and Principe. The JDZ is administered by the JDA.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 78,000 barrels per day in 2006. Addax Petroleum Announces Exercise of Over-Allotment Option

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, Feb. 23 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces today that it has received notice from its underwriting syndicate that they have elected to exercise the over-allotment option to purchase 2,100,000 common shares at a price of \$19.50 per common share resulting in additional gross proceeds of \$40,950,000. Closing of the over-allotment option is scheduled to occur on February 24, 2006. The over-allotment option was granted in connection with the recent offering of 21,000,000 common shares. After the exercise of the over-allotment option, Addax Petroleum will have issued 23,100,000 common shares pursuant to the offering for gross proceeds of \$450,450,000. The common shares trade on the Toronto Stock Exchange under the symbol "AXC".

The underwriting syndicate for the offering was led by RBC Capital Markets and Merrill Lynch Canada Inc. as joint bookrunners, was co-led by Scotia Capital Inc., and included CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This announcement does not constitute an offer of, or the solicitation of an offer to buy or subscribe for, common shares of Addax Petroleum to any person in any jurisdiction to whom or in which such offer or solicitation is unlawful and, in particular, is not for release, publication or distribution in or into the United States, Australia or Japan.

The offer and sale of the common shares has not been and will not be registered under the US Securities Act of 1933, as amended, (the "Securities Act") and such shares may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of common shares of Addax Petroleum is being made in the United States.

Certain statements in this announcement are forward-looking statements. Such statements are based on current expectations and are subject to a number of risks and that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements.

Addax Petroleum Announces Filing of Final Prospectus for C\$409.5 million Initial Public Offering

Calgary, Alberta, February 8, 2006 – Addax Petroleum Corporation (“Addax Petroleum”) announces today that it has filed a final prospectus with the securities regulatory authorities in all provinces of Canada with respect to the sale of its common shares.

The C\$409.5 million initial public offering by Addax Petroleum is comprised of 21,000,000 common shares priced at \$19.50 per share. The common shares will trade on the Toronto Stock Exchange under the symbol “AXC” on a “when issued” basis on February 9, 2006. Regular trading of common shares will begin after the closing of the offering, which is expected to occur on or about February 15, 2006. The final prospectus will be available for viewing on SEDAR at www.sedar.com. Printed copies of the final prospectus will be available from the underwriters of the offering.

Addax Petroleum has granted to the underwriters an option to purchase up to an additional 2,100,000 common shares at the offering price for a period expiring 30 days following the closing to cover over-allotments, if any, and for market stabilization purposes.

The underwriting syndicate for the offering is led by RBC Capital Markets and Merrill Lynch Canada Inc. as joint bookrunners, is co-led by Scotia Capital Inc., and includes CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005.

Addax Petroleum acquires equity position in highly prospective exploration Block

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 16 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces that it has together with its co-venturers signed a Production Sharing Contract ("PSC") with the Nigeria/Sao Tome Joint Development Authority ("JDA") relating to Block 2 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") and that it is now entitled to a 14.33 per cent participation interest in Block 2 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") pursuant to a participation agreement with ERHC Energy Incorporated ("ERHC") entered into on 2nd March 2006. Addax Petroleum also signed a joint operating agreement among the Block 2 co-venturers where Sinopec is the designated Operator.

Block 2 - Addax Petroleum: 14.33 per cent

Addax Petroleum's Block 2 entitlement is pursuant to:

- Block 2 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$8.28 million and its share of a minimum committed work program of one (1) exploration well or a minimum expenditure of US\$28 million, and
- a Participation Agreement with ERHC entered into on 2nd March 2005 under which Addax Petroleum became entitled to a 14.33 per cent participating interest for an obligation to pay US\$6.8 million and a commitment to carry the costs associated with an ERHC interest of 7.33 per cent in Block 2.

The JDZ is located approximately 180 kilometres offshore Nigeria and is adjacent to areas where several large petroleum discoveries have been made. The JDZ was established in 2001 following the ratification of a formal bilateral treaty between Nigeria and the island nation of Sao Tome and Principe. The JDZ is administered by the JDA.

Block 2 covers a gross area of 692 square kilometres (170,993 acres). The water depth in Block 2 ranges from approximately 1,300 to 1,900 meters. Seismic data acquired over Block 2 is presently being analyzed to delineate potential drilling locations.

In commenting on the signing of the PSC Jean Claude Gandur, Chief Executive Officer of Addax Petroleum said, "With the completion of the acquisition of a equity position in a third JDZ Block, Addax Petroleum has achieved its goal of establishing a significant position in this highly prospective exploration area. We believe these acquisitions offer exciting opportunities to the Company and its shareholders".

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is

March 15, 2006.

ITEM 3 News Release:

The attached news release was issued by the Corporation on March 15, 2006 through the services of Canada NewsWire (the "News Release").

ITEM 4 Summary of Material Change:

The Corporation announced that it has together with its co-venturers signed a production sharing contract ("PSC") with the Nigeria/Sao Tome Joint Development Authority ("JDA") relating to Block 4 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") and is now entitled to a 33.3 per cent participating interest pursuant to a participation agreement with ERHC Energy Incorporated relating to Block 4. Addax Petroleum will be the operator of this Block.

Addax Petroleum also signed a further PSC with the JDA relating to Block 3 of the JDZ and is now entitled to a 15% participating interest under a joint operating agreement relating to this Block where a subsidiary of Anadarko Petroleum Corporation is the operator.

ITEM 5 Full Description of Material Change:

Please see the attached News Release for a full description of the material change.

ITEM 6 Reliance on subsection 7.1(2) or (3) of National Instrument 51-102:

Not applicable.

ITEM 7 Omitted Information:

None.

ITEM 8 Executive Officer:

The name and business number of the executive officer of the Corporation who is knowledgeable about the material change and this report is:

Mr. Michael Ebsary – Chief Financial Officer of the Corporation
Telephone: (+41 22) 702 9400

ITEM 9 Date of Report:

Attention Business Editors:

Addax Petroleum acquires interests in highly prospective JDZ exploration Blocks

/NOT FOR RELEASE, PUBLICATION OR DISTRIBUTION IN OR INTO THE UNITED STATES, AUSTRALIA OR JAPAN/

CALGARY, March 15 /CNW/ - Addax Petroleum Corporation ("Addax Petroleum") announces that it has together with its co-venturers signed a Production Sharing Contract ("PSC") with the Nigeria/Sao Tome Joint Development Authority ("JDA") relating to Block 4 of the Nigeria/Sao Tome Joint Development Zone ("JDZ") and is now entitled to a 33.3 per cent participating interest pursuant to a Participation Agreement with ERHC Energy Incorporated ("ERHC") relating to Block 4. Addax Petroleum will be the operator of this Block. Addax Petroleum has also signed today a further PSC with the JDA relating to Block 3 of the JDZ and is now entitled to a 15% participating interest under the Joint Operating Agreement ("JOA") relating to this Block where a subsidiary of Anadarko Petroleum Corporation is the operator.

In commenting on the signing of the PSCs Jean Claude Gandur, Chief Executive Officer of Addax Petroleum said, "I am delighted that Addax Petroleum has achieved prominent equity positions and operatorship in this highly prospective exploration area. We are excited about the potential these assets offer our company and its shareholders."

Block 4 - Addax Petroleum: 33.3 per cent and Operator

Addax Petroleum's Block 4 entitlement is pursuant to:

- Block 4 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$23.4 million and its share of a minimum committed work program of three exploration wells or a minimum expenditure of US\$53 million, and
- a Participation Agreement with ERHC entered into in November 2005 under which Addax Petroleum became entitled to a 33.3 per cent participating interest for an obligation to pay US\$18 million and a commitment to carry the costs associated with an ERHC interest of 17.7 per cent in Block 4.

Block 4 covers a gross area of 857 square kilometers (211,773 acres) and the water depth ranges from approximately 1,800 to 2,200 meters. Seismic data acquired over Block 4 is presently being analyzed to delineate potential drilling locations.

Block 3 - Addax Petroleum: 15 per cent

Addax Petroleum's Block 3 entitlement is pursuant to:

- Block 3 PSC signed today with the JDA under which Addax Petroleum is obligated to pay a signature bonus of US\$2 million and its share of a minimum committed work program of one exploration well or a minimum expenditure of US\$30 million, and
- a Participation Agreement with ERHC entered into in February 2006

under which Addax Petroleum acquired the 15 per cent participating interest for an obligation to pay US\$7.5 million and a commitment to carry the costs associated with an ERHC interest of 10 per cent in Block 3.

Block 3 covers a gross area of 666 square kilometers (164,569 acres) and the water depth ranges from approximately 1,700 to 2,100 meters. Seismic data acquired over Block 3 is presently being analyzed to delineate potential drilling locations.

Nigeria-Sao Tome & Principe JDZ

The JDZ is located approximately 200 kilometres offshore Nigeria and is adjacent to areas where several large petroleum discoveries have been made. The JDZ was established in 2001 following the ratification of a formal bilateral treaty between Nigeria and the island nation of Sao Tome and Principe. The JDZ is administered by the JDA.

About Addax Petroleum:

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. Addax Petroleum is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average to date of approximately 78,000 barrels per day in 2006. Further information about Addax Petroleum is available at www.addaxpetroleum.com or at www.sedar.com.

This announcement does not constitute an offer of, or the solicitation of an offer to buy or subscribe for, common shares of Addax Petroleum to any person in any jurisdiction to whom or in which such offer or solicitation is unlawful and, in particular, is not for release, publication or distribution in or into the United States, Australia or Japan.

The offer and sale of the common shares has not been and will not be registered under the US Securities Act of 1933, as amended, (the "Securities Act") and such shares may not be offered or sold in the United States unless registered under the Securities Act or an exemption from such registration is available. No public offering of common shares of Addax Petroleum is being made in the United States.

Certain statements in this announcement are forward-looking statements. Such statements are based on current expectations and are subject to a number of risks and that could cause actual results or events to differ materially from those expressed or implied by the forward-looking statements.

ADDAX PETROLEUM CORPORATION

**FORM 51-102F3
MATERIAL CHANGE REPORT**

RECEIVED

2007 JAN 18 A 10:40

OFFICE OF INTERNATIONAL
CORPORATE FINANCE

ITEM 1 Name and Address of Reporting Issuer:

Addax Petroleum Corporation ("Addax" or the "Corporation")
16, avenue Eugène-Pittard
1206, Geneva, Switzerland

Registered Office Address:
3400, 350 – 7th Avenue S.W.
Calgary, Alberta T2P 3N9

ITEM 2 Date of Material Change:

July 20, 2006

ITEM 3 News Release:

A news release was issued by the Corporation on July 20, 2006 through CNW Group. The news release was also filed on SEDAR.

ITEM 4 Summary of Material Change:

Addax has agreed to acquire, either directly or through a subsidiary, two subsidiaries of Pan-Ocean Energy Corporation Limited ("Pan-Ocean") for CDN\$1.605 billion in cash and will assume net debt estimated to be approximately CDN\$30 million. The subsidiaries are: PanAfrican Energy Corporation (Mauritius) Limited ("PanAfrican"), which owns and operates Pan-Ocean's oil exploration, production and marketing business in Gabon, West Africa and Pan-Ocean Energy U.K. Ltd., ("PanOcean UK") which provides management and operational services to Pan-Ocean. PanAfrican and PanOcean UK represent substantially all of the operations of Pan-Ocean.

ITEM 5 Full Description of Material Change:

Pursuant to an arrangement agreement between Pan-Ocean and Addax dated July 20, 2006 (the "Arrangement Agreement"), Pan-Ocean will sell, directly or indirectly, all of the shares of its wholly owned subsidiaries, PanAfrican and PanOcean UK, which, together, own all of the consolidated operating assets of and account for all of the consolidated operating revenues of Pan-Ocean, as well as certain ancillary assets of Pan-Ocean, to Addax for CDN\$1.605 billion in cash and the assumption by Addax of net debt estimated to be approximately CDN\$30 million. Net proceeds, after payment of transaction related costs and a reserve for contingencies, will be used by Pan-Ocean for the purchase and cancellation of all class B subordinate voting shares

of Pan-Ocean ("Class B Shares") at a price anticipated to be not less than CDN\$58.50 per share and all Class A multiple voting shares of Pan-Ocean ("Class A Shares") at a price anticipated to be not less than CDN\$65.80 per share.

The transaction will be effected as a Scheme of Arrangement under Jersey Law as Pan-Ocean is a Jersey incorporated company. The arrangement is subject to approval by a three quarters majority of holders of Pan-Ocean Class A and Class B Shares, each class voting separately, approval of the Royal Court of Jersey and majority of the minority approval of each class.

The officers and directors of Pan-Ocean agreed to enter into lock-up agreements with Addax that provide, subject to certain terms and conditions, that they will vote all of their Class A Shares and Class B Shares in favour of the transaction. The officers and directors of Pan-Ocean own approximately 99.6% of the outstanding Class A Shares and 1.7% of the outstanding Class B Shares.

The Arrangement Agreement provides that Pan-Ocean will pay Addax a non-completion fee of CDN\$45 million in certain circumstances. The Arrangement Agreement also includes customary non-solicitation covenants, allows Pan-Ocean to respond to superior proposals and provides Addax with the right to match superior proposals. Pan-Ocean has agreed to reimburse up to CDN\$5 million of Addax's expenses in certain circumstances.

Addax will, after completion of the Scheme of Arrangement, own all of the consolidated operating assets which generate all of the consolidated operating revenues of Pan-Ocean through its ownership of PanAfrican and PanOcean UK.

Addax will fund the acquisition through a combination of internal cash resources and firm financing commitments from a syndicate of lenders.

The intended closing date is expected to be on or about September 7, 2006 with an outside date of October 31, 2006 (or such later date as may be agreed by Addax and Pan-Ocean).

ITEM 6 Reliance on subsection 7.1(2) or (3) of National Instrument 51-102:

Not applicable.

ITEM 7 Omitted Information:

Not applicable.

ITEM 8 Executive Officer:

Mr. David Codd
Chief Legal Officer and Corporate Secretary
(+41 22) 702 9525

ITEM 9 Date of Report:

July 28, 2006.

Reader Advisory: Forward-Looking Statements

This material change report includes certain forward-looking statements. These statements are based on current expectations that involve a number of risks and uncertainties, which could cause actual results to differ from those anticipated. These risks include, but are not limited to, risks associated with the oil and gas industry (e.g., operational risks in development; exploration and production; delays or changes in plans with respect to exploration and development projects or capital expenditures; uncertainties of reserve estimates; the uncertainty of estimates and projections in relation to production; costs and expenses and health, safety and environmental risks), synergies and financial impact of the proposed transaction, the benefits of the proposed transaction, the risks of commodity price and foreign exchange rate fluctuations, the uncertainty associated with negotiating with foreign governments and risks associated with international activity. There can be no assurance that such statements will prove to be accurate and actual results and future events could differ materially from those anticipated in such statements. Important factors that could cause actual results to differ materially from expectations include, but are not limited to, those factors discussed in the sections dealing with risk factors or risks and uncertainties, as the case may be, in Addax's and Pan-Ocean's respective Annual Information Forms and sections dealing with risks and uncertainties in Addax Petroleum's and Pan-Ocean's respective Management's Discussion and Analysis as filed with securities regulatory authorities in Canada. Although Addax has attempted to identify important factors that could cause actual results to differ materially, there may be other factors that cause results not to be as anticipated, estimated or intended. There can be no assurance that such statements will prove to be accurate as actual results and future events could differ materially from those anticipated in such statements. Accordingly, readers should not place undue reliance on forward-looking statements. Addax does not undertake to update any forward-looking statements that are included herein, except in accordance with applicable securities laws.

1.2 Executive Officer

For further information about the Acquisition (as defined below) and this Report, please contact the following officer of Addax:

Mr. David Codd, Chief Legal Officer and Corporate Secretary
+41 (0) 22 702 94 00

Item 2 - Details of Acquisition

2.1 Nature of Business Acquired

On September 7, 2006, the Corporation completed the acquisition of all of the issued and outstanding shares of two subsidiaries of Pan-Ocean Energy Corporation Limited ("Pan-Ocean Energy") and certain other assets of Pan-Ocean Energy, which together represent substantially all of the assets and operations of Pan-Ocean Energy (the "Acquisition").

The Pan-Ocean Energy subsidiaries acquired by the Corporation are PanAfrican Energy Corporation (Mauritius) Limited ("PanAfrican") and Pan-Ocean U.K. Ltd. ("Pan-Ocean UK"). PanAfrican is an energy company focused on the exploration, development, production and marketing of conventional medium to light gravity crude oil production in Gabon, West Africa. Pan-Ocean UK provides management services to PanAfrican.

2.2 Date of Acquisition

September 7, 2006.

2.3 Consideration

The cash consideration for the Acquisition was CDN\$1.605 billion. Specific information concerning the financing of the Acquisition is set forth in the section of the Corporation's Supplemented Short Form PREP Prospectus dated August 10, 2006 entitled "Financing of the Acquisition", which is incorporated herein by reference.

2.4 Effect on Financial Position

Not applicable.

2.5 Prior Valuations

None.

2.6 Parties to Transaction

Not applicable.

2.7 Date of Report

November 21, 2006.

Item 3 - Financial Statements

The requisite financial statements are attached hereto.

KPMG LLP have not given their consent for the inclusion in this Report of their report dated August 8, 2006 on the consolidated financial statements of PanAfrican Energy Corporation (Mauritius) Limited as at and for the years ended December 31, 2005 and 2004.

APPENDIX "A"
PRO FORMA FINANCIAL STATEMENTS

Compilation Report

To the Directors of Addax Petroleum Corporation:

We have read the accompanying unaudited pro forma consolidated statements of operations of Addax Petroleum Corporation (the "Corporation") for the nine months ended September 30, 2006 and the year ended December 31, 2005 and have performed the following procedures:

1. Compared the figures in the column captioned "APC" to the unaudited consolidated financial statements of the Corporation and for the nine months ended September 30, 2006, and the audited consolidated financial statements of the Corporation for the year ended December 31, 2005, respectively, and found them to be in agreement.
2. Compared the figures in the column captioned "PanAfrican" to the unaudited consolidated financial statements and accounting records of PanAfrican Energy Corporation (Mauritius) Limited ("PanAfrican") for the period from January 1, 2006 to September 6, 2006, and the audited consolidated financial statements of PanAfrican for the year ended December 31, 2005, respectively, and found them to be in agreement.
3. Made enquiries of certain officials of the Corporation who have responsibility for financial and accounting matters about:
 - (a) the basis for determination of the pro forma adjustments; and
 - (b) whether the unaudited pro forma financial statements comply as to form in all material respects with the regulatory requirements of the securities regulatory authorities in Canada.

The officials:

- (a) described to us the basis for determination of the pro forma adjustments; and
 - (b) stated that the unaudited pro forma financial statements comply as to form in all material respects with the regulatory requirements of the securities regulatory authorities in Canada.
5. Read the notes to the unaudited pro forma consolidated financial statements, and found them to be consistent with the basis described to us for determination of the pro forma adjustments.
6. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "APC" and "PanAfrican" for the nine months ended September 30, 2006, and for the year ended December 31, 2005, and found the amounts in the column captioned "Pro forma" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no assurance. The foregoing procedures would not necessarily reveal matters of significance to the unaudited pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

ADDAX PETROLEUM CORPORATION
NOTES TO PRO FORMA CONSOLIDATED STATEMENTS OF OPERATIONS
December 31, 2005 and September 30, 2006
(unaudited)

1. Basis of presentation

The unaudited pro forma consolidated statements of operations for the period ended September 30, 2006 and the year ended December 31, 2005 (collectively, the “**pro forma financial statements**”) of Addax Petroleum Corporation (“**Addax Petroleum**” or “**APC**”) have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in a business acquisition report relating to the acquisition of PanAfrican Energy Corporation (Mauritius) Limited (“**PanAfrican**”) by Addax Petroleum on September 7, 2006.

The pro forma financial statements have been prepared from and should be read in conjunction with the:

- Audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2005 and 2004 and for each of the years in the three year period ended December 31, 2005;
- Unaudited consolidated financial statements of Addax Petroleum as at and for the nine months ended September 30, 2006; and
- Audited consolidated financial statements of PanAfrican Energy Corporation (Mauritius) Limited (“**PanAfrican**”) as at December 31, 2005 and 2004 and for the years ended December 31, 2005 and 2004.

Accounting policies used in the preparation of the pro forma financial statements are in accordance with those used in the preparation of Addax Petroleum N.V.’s audited consolidated financial statements as at and for the year ended December 31, 2005. As a result of the acquisition of Addax Petroleum N.V. by Addax Petroleum on February 16, 2006, the historical financial statements of Addax Petroleum are those of Addax Petroleum N.V.

Other information which was available at the time of preparation of the pro forma financial statements has also been considered. In the opinion of management, these pro forma financial statements include all material adjustments necessary for fair presentation.

The underlying assumptions for the pro forma adjustments provide a reasonable basis for presenting the significant financial effects directly attributable to the transactions discussed herein, however, the pro forma financial statements are not necessarily indicative of the results of operations expected in future periods.

2. Pro forma adjustments

The pro forma financial statements give effect to the following transactions as if they had occurred on January 1, 2005:

- 2.1 Issuance of 14,750,000 common shares of the Corporation on conversion of 14,750,000 subscription receipts for net proceeds of \$357.4 million.
- 2.2 Assumption of increase in debt to \$850,000,000.
- 2.3 Acquisition of all the outstanding shares of PanAfrican for \$1.44 billion plus transaction costs financed from the proceeds discussed in 2.1 and 2.2 above as well as available cash in Addax Petroleum.
- 2.4 Depletion and future income taxes are adjusted for the fair value increase of property, plant and equipment in PanAfrican as a result of the acquisition described in 2.3 above.

The purchase price allocation is as follows (\$000's):

Current assets	\$ 97,066
Goodwill	767,598
Property plant and equipment	969,980
Current liabilities	(23,725)
Asset retirement obligation	(19,532)
Future income taxes	<u>(274,547)</u>
	<u>\$1,516,840</u>

- 2.5 Interest expense is adjusted for the increase in debt described in 2.2 above.

3. Earnings per share

Pro forma earnings per share for the nine months ended September 30, 2006 and year ended December 31, 2005 have been calculated using 154,850,100 common shares outstanding.

APPENDIX "B"
AUDITED ANNUAL FINANCIAL STATEMENTS
OF
PANAFRICAN ENERGY CORPORATION (MAURITIUS) LIMITED

AUDITORS' REPORT TO THE DIRECTORS

We have audited the consolidated balance sheets of PanAfrican Energy Corporation (Mauritius) Limited as at December 31, 2005 and 2004 and the consolidated income statements, changes in shareholder's equity and cash flows for the years then ended. These consolidated financial statements are the responsibility of the company's management. Our responsibility is to express an opinion on these consolidated financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the consolidated financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the consolidated financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the company as at December 31, 2005 and 2004 and the results of its operations and cash flows for the years then ended in accordance with Canadian generally accepted accounting principles.

Notes to the Consolidated Financial Statements

(tabular amounts in US\$000, except where noted)

PanAfrican Energy Corporation (Mauritius) Limited ("PAEM" or the "Company") is an international energy company engaged in the exploration, production and marketing of oil and natural gas. The Company is incorporated and registered in Mauritius. On behalf of the Board, the Consolidated Financial Statements were approved on 28th July 2006.

On the 6th August 2004, the Company issued shares in exchange for the Gabonese operations of PanOcean Energy Corporation Limited. The financial statements present the historical financial position, results of operations and cash flows on a carve-out basis from PanOcean Energy Corporation Limited as if the Company had operated as a stand-alone entity subject to PanOcean Energy Corporation Limited control prior to August 6th, 2004.

1. BASIS OF PREPARATION

The Consolidated Financial Statements of the Company and its subsidiaries are measured and presented in US dollars on the basis that this reflects the currency in which the main operating cash flows arise. Management is required to make estimates and assumptions that affect the reported amounts of assets and liabilities, the disclosure of contingent assets and liabilities at the date of the financial statements, and the reported amounts of revenue and expenses during the period. Actual results could differ from these estimates.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

The preparation of financial statements in conformity with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from these estimates.

a) Basis of consolidation

(i) The consolidated financial statements have been prepared by management in accordance with accounting principles generally accepted in Canada. The Consolidated Financial Statements are prepared on the historical cost basis and include the accounts of the Company and the following wholly owned subsidiaries:

Subsidiary	Registered in:
PANAFRICAN NZE Inc. S.A.	Gabon
PANAFRICAN REMBOUE Inc. S.A	Gabon
PANAFRICAN MAGHENA Inc. S.A.R.L	Gabon
PANAFRICAN ETAME INC.	British Virgin Islands
PANAFRICAN AWOUN INC.	British Virgin Islands
PANAFRICAN IRIS INC.	British Virgin Islands
PANAFRICAN THEMIS INC.	British Virgin Islands

(ii) Transactions eliminated upon consolidation

Inter-company balances and transactions, and any unrealised gains arising from inter-company transactions, are eliminated in preparing the Consolidated Financial Statements.

b) Foreign currency

Foreign currency transactions are recorded at the rate of exchange prevailing at the date of the transaction. Monetary assets and liabilities in foreign currencies are translated at year-end rates. Non-monetary items are translated at historic rates, unless such items are carried at market value, in which case they are translated using the exchange rates that existed when the values were determined. Any resulting exchange rate differences are taken to the income statement.

c) Petroleum and natural gas properties

The Company follows the full cost method of accounting for petroleum and natural gas properties whereby all costs relating to the acquisition, exploration and development of petroleum and natural gas reserves are capitalized. Such costs are accumulated in the Company's one cost centre, Gabon Africa.

These capitalized costs together with production and related equipment are depleted and depreciated using the unit-of-production method based on estimated gross proved petroleum and gas reserves as determined by independent reservoir engineers. Petroleum and natural gas reserves and production are converted into equivalent units based upon relative energy content.

Costs of acquiring and evaluating unproved properties are initially excluded from depletion calculations. These unevaluated properties are assessed periodically to ascertain whether impairment has occurred. When proved reserves are assigned or the property is considered to be impaired, the cost of the property or the amount of the impairment is added to costs subject to depletion calculations.

In applying the full cost method, the Company calculates a ceiling test whereby the carrying value of petroleum and natural gas properties is compared quarterly to the sum of undiscounted future cash flows expected to result from proved reserves and the lower of cost and market of unproved properties. Cash flows are based on third party quoted forward prices, adjusted for transportation and quality differentials. Should the ceiling test result in an excess of carrying value, the Company would then measure the amount of impairment by comparing the carrying amounts of petroleum and natural gas properties to an amount equal to the estimated net present value of future cash flows from proved plus probable reserves and the lower of cost and market of unproved properties. A risk free interest rate is used to arrive at the net present value of future cash flows. The carrying value of petroleum and natural gas properties in excess of the future cash flows is recorded as a permanent impairment.

Proceeds from the sale of petroleum and natural gas properties are applied against capitalized costs, with no gain or loss recognized, unless such a sale would alter the rate of depletion and depreciation by more than 20 per cent.

Substantially all exploration and production activities are conducted jointly with others. Accordingly, the accounts reflect only the Company's proportionate interest in such activities.

d) Depreciation

Depreciation in respect of non-petroleum assets is charged to the income statement on a straight-line basis over the estimated useful economic lives of each class of asset. Land is not depreciated. The estimated useful lives are as follows:

Leasehold improvements	Over Remaining life of the lease
Plant and equipment	3 years
Computer equipment	3 years
Motor Vehicles	3 years
Office fixture and fittings	4 years

e) Inventories

The Company recognises oil inventory held in storage tanks at the fields, together with any oil in transit to the terminal or point of sale. They are valued at the lower of cost and net realisable value. The cost of inventory relates to the direct cost of production on an actual basis, together with the associated level of depletion and amortisation on a cost per barrel basis.

f) Trade and other receivables

Trade and other receivables are stated at cost less impairment losses.

g) Cash and cash equivalents

Cash and cash equivalents include cash on deposit and highly liquid investments with original maturities of three months or less.

h) Pension

The Company does not operate a pension plan, although it does make defined contributions to employee's personal plans. Obligations for contributions to defined contribution pension plans are recognised as an expense in the income statement as incurred.

i) Provision for abandonment

The Company uses the fair value method to provide for asset retirement obligations. The fair value of an asset retirement obligation is recognized in the period in which it is incurred when a reasonable estimate of fair value can be made. The fair value is based on estimated reserve life, inflation and discount rates. The provision is recorded as a long-term liability, with a corresponding increase in the carrying value of the associated asset. The capitalized amount is depleted on a unit-of-production basis. The liability amount is increased each reporting period due to the passage of time with this accretion charged to earnings in the period. Revisions to the estimated timing of cash flows or to the original estimated undiscounted cost would also result in an increase or decrease to the asset retirement obligation. Actual asset retirement expenditures are charged against the liability to the extent of the liability recorded. Any difference between the actual costs incurred and the amount of the liability recorded is recognized as a gain or loss in earnings in the period the costs are incurred.

j) Revenue, royalties and production sharing contracts

The Company recognises revenue from crude oil and natural gas sales with a transfer of title effected upon delivery of its working interest volumes to the buyer. In the case of revenue derived from a pilot project, the revenue received is offset against the project's non-depreciable asset base.

Substantially all the Company's revenue is shared under the terms of the various Production Sharing Contracts ("PSC") with the Republic of Gabon as represented by the Ministry of Mines, Energy and Petroleum. Under the PSCs, the Company and its other non-governmental partners, if any, pay all operating and capital costs. Each PSC establishes specific terms for the Company to recover these costs in accordance with a formula based on monthly production volumes ("Cost Recovery Oil") and to receive a share of production in excess of the Cost Recovery Oil ("Profit Oil"). The government's share of operating costs are recorded in operating expense when incurred and capital costs are recorded in Property, Plant & Equipment and are depleted using the unit-of-production method. Profit Oil attributable to the government includes an amount in respect of all deemed income taxes payable by the Company under the laws of Gabon. All other government interests, other than income taxes, are considered to be government royalties and burdens.

k) Taxation

Deferred taxation is provided using the balance sheet liability method, providing for temporary differences between the carrying amounts of assets and liabilities for financial reporting purposes and the amounts used for taxation purposes. The amount of deferred tax provided is based on the expected manner of realisation or settlement of the carrying amount of asset and liabilities, using tax rates enacted or substantially enacted at the balance sheet date. A deferred tax asset is recognised only to the extent that it is probable that future taxable profits will be available against which the asset can be utilised. Deferred tax assets are reduced to the extent that it is no longer probable that the related tax benefit will be realised.

m) Joint interest operations

It is standard industry practice to conduct petroleum and natural gas operations jointly with other exploration and production companies and, accordingly, the Company only reflects its proportionate interest in such activities.

n) Measurement uncertainty

The amounts recorded for depletion and depreciation of petroleum and natural gas properties, the provision for asset retirement obligations and the cost recovery ceiling test are based on estimates. These estimates include proved and probable reserves, production rates, petroleum and natural gas prices, future costs and other relevant assumptions. By their nature, these estimates are subject to measurement uncertainty and the effect of changes in such estimates on the financial statements of future periods could be significant.

3. ACQUISITION

On the 6th August 2004, the Company issued shares in exchange for the Gabonese operations of PanOcean Energy Corporation Limited. The financial statements present the historical financial position, results of operations and cash flows on a carve-out basis from PanOcean Energy Corporation Limited as if the Company had operated as a stand-alone entity subject to PanOcean Energy Corporation Limited control prior to August 6th, 2004.

	Book value at acquisition
Petroleum and natural gas properties	86,921
Inventories	2,263
Trade and other receivables	35,304
Cash	7,338
Current liabilities	(18,688)
Provision for abandonment	(4,988)
Deferred tax provision	(3,531)
Interest bearing loan	(1,663)
Equity in net assets acquired	<u>102,956</u>

4. SEGMENTAL REPORTING

The Company has only one operating segment, being the exploration, production and marketing of oil and natural gas in Gabon. All revenue is earned from this operating segment. Substantially all capital assets are located in Gabon.

Major customers

Substantially all of the Company's gross revenues are comprised of sales to two major crude oil buyers which accounted for 91% (2004: 86%) of crude oil sales. At December 31, 2005, \$11 million (2004: \$19.9 million) of the Company's trade receivables are receivable from these two companies.

5. TAXATION

All of the Company's tax relates to its operations in Gabon, where the corporate tax rate is 35%. The Company settles its obligations in Gabon through its PSC arrangements in that country.

	2005	2004
Profit before taxation	79,761	41,864
Provision for income taxes calculated at the statutory rate	27,916	14,652
Add (deduct) the tax effect of:		
Non-deductible royalties and revenue burdens	4,623	1,121
Other operating income	(73)	(34)
General and administrative	1,913	1,886
Foreign exchange	(134)	141
Recognition of previously unrecorded deferred tax assets	-	(782)
Tax provision	34,245	16,984

The deferred income tax liability includes the following temporary differences:

	2005	2004
Differences between tax bases and carrying value of petroleum properties	(10,128)	(5,034)

6. INVENTORIES

The inventory relates to physical oil inventories and consists of 248,000 barrels of oil at 31 December 2005 (2004: 232,000 barrels) being the Company's share of oil inventories held at the Obangue storage facility, on the Etame floating production storage offloading vessel and on the Remboué tanker.

7. PETROLEUM AND NATURAL GAS PROPERTIES

As at 31 December 2005 petroleum and natural gas property costs included an amount of \$28.0 million (2004: \$23.4 million), which has been excluded from the depletion calculations. The 2005 costs relate to the Iris/Themis and Awoun concessions, while the 2004 costs related to the Maghena and Awoun concessions. The ability of the Company to recover costs incurred on its pre-production stage activities on these properties is dependent on the future commercial production from these projects. General and administrative costs of \$0.9 million (2004: \$0.5 million) have been capitalised during the year.

It is estimated by the Company's independent petroleum engineers that in order to bring the total proved reserves to production, a total of \$182 million of future development costs will be incurred.

The table below shows the Company's petroleum and natural gas properties and related equipment.

	GABON	NON PETROLEUM ASSETS	TOTAL
COSTS			
As at 1 January 2005	169,547	435	169,982
Additions	91,748	599	92,347
Increase in abandonment	13,120	-	13,120
As at 31 December 2005	274,415	1,034	275,449
DEPRECIATION			
As at 1 January 2005	66,493	87	66,580
Charge in period - depletion	22,198	-	22,198

As at 31 December 2005	88,691	376	89,067
NET BOOK VALUE			
As at 1 January 2005	103,054	348	103,402
As at 31 December 2005	185,724	658	186,382

	LEASEHOLD LAND AND BUILDINGS	FIXTURES AND FITTINGS	MOTOR VEHICLES	PLANT AND EQUIPMENT	COMPUTER EQUIPMENT	TOTAL
COSTS						
As at 1 January 2005	13	18	262	46	96	435
Additions	99	8	406	2	84	599
As at 31 December 2005	112	26	668	48	180	1,034
DEPRECIATION						
As at 1 January 2005	-	4	41	15	27	87
Charge in the period	-	10	183	33	63	289
As at 31 December 2005	-	14	224	48	90	376
NET BOOK VALUE						
As at 1 January 2005	13	14	221	31	69	348
As at 31 December 2005	112	12	444	-	90	658

8. PROVISION FOR ABANDONMENT

	2005	2004
Balance at beginning of year	5,146	4,766
Increase during the year	13,120	-
Accretion	418	380
Balance as at end of year	18,684	5,146

A provision of \$18.7 million has been recognised for future decommissioning costs. Increases in abandonment costs of \$13.1 million have been recognised for future decommissioning costs relating to Tsiengui, Obangue, Etarne and Awoun. The costs are expected to be incurred in 2008 to 2019. The provision has been based on internal engineering estimates and regulations in effect at the period end, using current prices inflated at 3% per annum and discounted using a rate of 8%. The Company estimates the total undiscounted amount of cash flows required to settle its asset retirement obligations at 31 December 2005 is \$27.1 million (2004: \$14.1 million).

9. FINANCIAL INSTRUMENTS

The Company is exposed to market risks resulting from fluctuations in commodity prices, foreign exchange rates and interest rates in the normal course of operations. The Company monitors these risks and periodically may enter into financial instruments to manage its exposure to these risks.

As at 31 December 2005 and as at the date hereof, the Company held no derivative instruments, long-term sales contracts or other contracts for delivery and accordingly the carrying amounts and estimated fair values were nil.

Credit risk

Substantially all the accounts receivable are due from customers in the oil and gas industry and are subject to normal credit risks.

Foreign currency risk

The Company's exposure to foreign currency risk is limited to exchange rate fluctuations on foreign currency cash and outstanding payable balances.

Fair values

Financial instruments of the Company carried on the balance sheet consist mainly of current assets, current liabilities. There were no significant differences between the carrying value of these financial instruments and their estimated fair value due to their short term to maturity.

10. CAPITAL STOCK

	2005			2004		
	Authorised	Issued	Valuation at par value	Authorised	Issued	Valuation at par value
Number of shares						
Common Shares						
As at 1 January and 31 December	2	2	2	2	2	2

All of the common shares are owned by Pan-Ocean Energy Corporation Limited, the ultimate Parent Company. The common shares have been recorded at their par value of \$1. There were no changes in the capital stock of the Company in 2005.

11. COMMITMENTS.

The following is a summary of the Company's commitments detailing payments due for each of the next five years and thereafter.

	Total	Less than one year	1-3 years	4-5 years	after 5 years
Commitments	22,901	18,784	4,117	-	-

The Company has the following commitments:

- > 31.36% share of the Etame charter payments, which are \$6.2 million per annum (\$4.1 million in years 1-3).
- > 25.71% share of the Themis offshore exploration well, to be drilled in November 2006, of \$2.9 million.
- > Rig hire contract, to date of first extension at 31 October 2006, of \$7.4 million.
- > Contract for the construction of the Tsiengui to Coucal pipeline of \$2.3 million.

12. CONTINGENT LIABILITIES

Under the acquisition of the interest of the Iris and Themis permits from Surnburnt Downs Co. Pty Ltd in April 2005, there are further purchase considerations due in relation to each block of up to \$2 million Australian dollars respectively:

- (i) \$1 million Australian dollars in the event of a commercial discovery during the second or third exploration period or any subsequent exploration period; and
- (ii) \$1 million Australian dollars following the granting of an exploitation licence by the Republic of Gabon.

13. ULTIMATE PARENT UNDERTAKING

The ultimate parent undertaking of the Company is Pan-Ocean Energy Corporation Limited, a company registered in Jersey, Channel Islands. As at December 31, 2005 a total of \$10.4 million was due to Pan-Ocean Energy Corporation Limited (2004 : \$19.9 million was due from Pan-Ocean Energy Corporation Limited) The balance due to Pan-Ocean Energy Corporation Limited is non interest bearing and has no specific terms for repayment.

During 2005 PanOcean repaid the \$19.9 million. The \$10.4 million relates to charges for services from the Pan-Ocean entities of \$3.9 million (2004: \$3.2 million), together with the direct funding to Gabon of \$1.6 million (2004: \$nil), direct payment of the Energy package insurance premium of \$1.3 million (2004: \$nil) and the acquisition of the Iris and Themis permits for \$3.6 million (2004: \$nil). The balance of the 2004 \$19.9 million related to the prior periods funding of Pan-Ocean's operations by the Company. These transactions have been recorded at the exchange amounts which is the amount agreed to between the related parties.

14. SUBSEQUENT EVENT

On July 20, 2006 Pan-Ocean Energy Corporation Limited entered into an agreement with Addax Petroleum Corporation ("Addax Petroleum") whereby Addax Petroleum will acquire 100% of the shares of the PanAfrican Energy Corporation (Mauritius) Limited, for cash consideration of Cdn. \$1.605 billion.

PanAfrican Energy Corporation (Mauritius) Limited

Notes to the Consolidated Financial Statements

(tabular amounts in US\$000, except where noted)

Basis of preparation

PanAfrican Energy Corporation (Mauritius) Limited is a wholly owned subsidiary of Pan-Ocean Energy Corporation Limited. These consolidated financial statements of PanAfrican Energy Corporation (Mauritius) Limited (the "Company") have been prepared by management in accordance with accounting principles generally accepted in Canada. The preparation of financial statements in conformity with generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and disclosure of contingent assets and liabilities at the date of the financial statements and the reported amounts of revenues and expenses during the reported period. Actual results could differ from these estimates.

These interim consolidated financial statements have been prepared by management following the same accounting policies and methods that were used and disclosed in the audited financial statements for the year ended December 31, 2005 and should be read in conjunction with the audited financial statements. These consolidated interim financial statements include all adjustments necessary to present fairly the results for the interim period ended June 30, 2006. Certain information and footnote disclosure normally included in the financial statements has been condensed or omitted.

The consolidated financial statements include the accounts of the Company and its wholly-owned subsidiaries;

Subsidiary	Registered in:
PANAFRICAN NZE Inc. S.A.	Gabon
PANAFRICAN REMBOUE Inc. S.A	Gabon
PANAFRICAN MAGHENA Inc. S.A.R.L	Gabon
PANAFRICAN ETAME INC.	British Virgin Islands
PANAFRICAN AWOUN INC.	British Virgin Islands
PANAFRICAN IRIS INC.	British Virgin Islands
PANAFRICAN THEMIS INC.	British Virgin Islands

1. SEGMENTAL REPORTING

The Company has only one operating segment, being the exploration, production and marketing of oil and natural gas in Gabon. All revenue is earned from this operating segment. Substantially all capital assets are located in Gabon:

Major customers

Substantially all of the Company's gross revenue are comprised of sales to two major crude oil buyers which accounted for 92% (2005: 93%) of crude oil sales. At June 30, 2006, \$27.6 million (2005 : \$22.1 million) of the Company's trade receivables are receivable from these two companies.

PanAfrican Energy Corporation (Mauritius) Limited

2. TAXATION

All of the Company's tax relates to its operations in Gabon, where the corporate tax rate is 35%. The Company settles its obligations in Gabon through its PSC arrangements in that country.

	Three months ended		Six Months ended	
	30 June 2006	30 June 2005	30 June 2006	30 June 2005
Profit before taxation	30,857	18,632	57,044	34,715
Provision for income taxes calculated at the statutory rate	10,800	6,521	19,965	12,150
Add (deduct) the tax effect of:				
Non-deductible royalties and revenue burdens	1,691	2,472	3,428	4,556
Other income	(7)	(17)	(53)	(35)
General and administrative	460	482	957	842
Foreign exchange	(44)	(63)	83	(71)
Tax provision	12,900	9,395	24,381	17,442

The deferred income tax liability includes the following temporary differences:

	30 June 2006	30 June 2005
Differences between tax base and carrying value of petroleum properties	(13,357)	(6,496)

3.COMMITMENTS

Commitments have been described in the notes to the December 31, 2005 financial statements and have not materially changed during the six month period ended June 30, 2006.

PanAfrican Energy Corporation (Mauritius) Limited

4. CONTINGENT LIABILITIES

Under the acquisition of the interest of the Iris and Themis permits from Sumburnt Downs Co. Pty Ltd in April 2005, there are further purchase considerations due in relation to each block of up to \$2 million Australian dollars respectively:

- (i) \$1 million Australian dollars in the event of a commercial discovery during the second or third exploration period or any subsequent exploration period; and
- (ii) \$1 million Australian dollars following the granting of an exploitation licence by the Republic of Gabon

5. ULTIMATE PARENT UNDERTAKING

The ultimate parent undertaking of the Company is Pan-Ocean Energy Corporation Limited, a company registered in Jersey, Channel Islands. As at June 30, 2006 a total of \$19.8 million was due to Pan-Ocean Energy Corporation Limited (2005 : \$11.4 million). The \$19.8 million, relates in most part to recharges from the PanOcean entities for finance and technical services, together with direct payment of a joint venture billing statement, payment of the PanAfrican group of companies insurance premium.

6. SUBSEQUENT EVENT

On July 20, 2006 PanOcean Energy Corporation Limited entered into an agreement with Addax Petroleum Corporation ("Addax Petroleum") whereby Addax Petroleum will acquire 100% of the shares of the PanAfrican Energy Corporation (Mauritius) Limited, which conducts all of Pan-Ocean's Gabon operations, as well as a subsidiary which provides management and operational services, for cash consideration of Cdn. \$1.605 billion.

- (a) Addax Petroleum Corporation Unaudited Pro Forma Consolidated Balance Sheet as at September 30, 2005 and Unaudited Pro Forma Consolidated Statement of Operations for the year ended December 31, 2004 and for the nine months ended September 30, 2005, together with the compilation report.
- (b) Audited Annual Consolidated Financial Statements of Addax Petroleum N.V. for the years ended December 31, 2005 and 2004.

EXHIBIT A

Unaudited Pro Forma Consolidated Financial Statements of Addax Petroleum Corporation

COMPILATION REPORT

To the Directors of
Addax Petroleum Corporation:

We have read the accompanying unaudited pro forma consolidated balance sheet of Addax Petroleum Corporation (the "Corporation") as at September 30, 2005 and the unaudited pro forma consolidated statements of operations for the nine months ended September 30, 2005 and for the year ended December 31, 2004, and have performed the following procedures.

1. Compared the figures in the columns captioned "APC" to the audited balance sheet of the Corporation as at November 30, 2005 and found them to be in agreement. The Corporation has yet to commence operations and no statements of operations exist for any period.
2. Compared the figures in the columns captioned "APNV" to the unaudited consolidated financial statements of Addax Petroleum N.V. as at September 30, 2005 and for the nine months then ended, and the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2004 and for the year then ended and found them to be in agreement.
3. Made enquiries of certain officials of the Corporation who have responsibility for financial and accounting matters about:
 - (a) the basis for determination of the pro forma adjustments; and
 - (b) whether the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similar regulatory authorities in Canada.

The officials of the Corporation:

- (c) described to us the basis for determination of the pro forma adjustments; and
 - (d) stated that the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similar regulatory authorities in Canada.
4. Read the notes to the unaudited pro forma consolidated financial statements and found them to be consistent with the basis described to us for determination of the pro forma adjustments.
5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "APC" and "APNV" as at September 30, 2005, and for the nine months then ended and for the year ended December 31, 2004, and found the amounts in the column captioned "APC Pro Forma" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the unaudited pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

ADDAX PETROLEUM CORPORATION

NOTES TO UNAUDITED PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2004 and September 30, 2005
(unaudited)

1. BASIS OF PRESENTATION

The accompanying unaudited pro forma consolidated financial statements (the "Pro Forma Financial Statements") of Addax Petroleum Corporation (the "Corporation") have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in a base PREP prospectus relating to the initial public offering of common shares of the Corporation.

The Pro Forma Financial Statements have been prepared from and should be read in conjunction with:

- The audited balance sheet of the Corporation as at November 30, 2005; and
- The audited consolidated financial statements of Addax Petroleum N.V. ("APNV") as at December 31, 2004 and 2003 and for each of the years in the three year period ended December 31, 2004 and the unaudited consolidated financial statements of APNV as at and for the nine month period ended September 30, 2005.

Accounting policies used in the preparation of the Pro Forma Financial Statements are in accordance with those used in the preparation of APNV's audited consolidated financial statements as at and for the year ended December 31, 2004.

Other information which was available at the time of preparation of the Pro Forma Financial Statements has also been considered. In the opinion of management, these Pro Forma Financial Statements include all material adjustments necessary for fair presentation.

The underlying assumptions for the pro forma adjustments provide a reasonable basis for presenting the significant financial effects directly attributable to the transactions discussed herein, however, the Pro Forma Financial Statements are not necessarily indicative of the results of operations expected in future years.

2. PRO FORMA ADJUSTMENTS

The unaudited pro forma consolidated balance sheet gives effect to the following transactions as if they had occurred on September 30, 2005 while the unaudited pro forma consolidated statements of operations for the nine month period ended September 30, 2005 and for the year ended December 31, 2004 give effect to the following transactions as if they had occurred on January 1, 2004.

- 2.1 The initial public offering of 21,000,000 common shares of the Corporation for net proceeds of \$291,457,000.
- 2.2 Concurrently with the closing of the initial public offering, the acquisition of all of the issued and outstanding common shares of APNV by the Corporation in exchange for 117,000,000 common shares and cash consideration of \$41,637,000.

3. EARNINGS PER SHARE

Pro forma earnings per share for the nine months ended September 30, 2005 and the year ended December 31, 2004 have been calculated using 138,000,100 outstanding common shares.

EXHIBIT B

Audited Annual Consolidated Financial Statements of Addax Petroleum N.V.

AUDITORS' REPORT

To the Shareholder of
Addax Petroleum N.V.

We have audited the consolidated balance sheets of Addax Petroleum N.V. as at December 31, 2005 and 2004 and the consolidated statements of operations, retained earnings and cash flows for each of the years in the three year period ended December 31, 2005. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2005 and 2004 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2005, in accordance with Canadian generally accepted accounting principles.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

1. GENERAL

Addax Petroleum N.V. ("Addax") was incorporated on August 27, 1999 and is a registered Netherlands Antilles corporation. Addax is a wholly-owned subsidiary of The Addax and Oryx Group Ltd. ("AOG"). Addax and its subsidiaries (collectively, the "Company") are involved in the exploration, appraisal, development and production of crude oil and natural gas.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of presentation

The consolidated financial statements include the accounts of Addax and all of its subsidiaries and are prepared in accordance with Canadian generally accepted accounting principles. Subsidiaries are consolidated from the date on which control is transferred to the Company and ceases on the date on which control is transferred out of the Company.

Inter-company balances and transactions, including inter-company profits and unrealized profits and losses are eliminated.

Measurement uncertainty

The preparation of financial statements in accordance with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingencies at the date of the consolidated financial statements and the reported amounts of revenue and expenses arising during the reporting period. Actual results could differ from these estimates and the differences could be material.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized prospectively.

The amount recorded for depletion and depreciation of property, plant and equipment, the provision for asset retirement obligations and the test for impairment of property, plant and equipment are based on estimates of oil and natural gas reserves, production rates, commodity prices, future costs and other relevant assumptions. By their nature, these estimates are subject to measurement uncertainty and the effect on the consolidated financial statements of changes in such estimates in future years could be significant.

Property, plant and equipment

The Company follows the full cost method of accounting for oil and natural gas exploration and development activities whereby all costs associated with exploring for and developing oil and natural gas reserves are initially capitalized on a country by country cost centre basis.

Capitalized costs include expenditures on acquiring exploration and development licences, land acquisition, geological and geophysical activities, drilling and testing both productive and non-productive wells, acquiring and developing oil and natural gas reserves in place, and financing and

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

administrative costs directly attributable to specific new exploration and development projects until the necessary facilities are completed and ready for use.

Gains or losses are not recognized upon the disposition of oil and natural gas properties unless such a disposition would result in a change in the depletion rate by 20 percent or more.

The costs related to each cost centre are depleted on a unit-of-production basis based on the Company's share of gross estimated proven reserves, before royalties, as estimated by Company and compared to the results of the independent reservoir engineers. Costs of acquiring and evaluating unproved properties and certain costs associated with major development projects are not subject to depletion until proved reserves are assigned and production commences or the costs are impaired.

Property, plant and equipment other than oil and natural gas properties is stated at cost less accumulated depreciation. Depreciation is calculated on a straight-line basis over the estimated life of the assets, which ranges from 3 to 10 years.

The Company assesses the carrying amount of its oil and natural properties for impairment annually or as circumstances dictate. An impairment is deemed to exist when the carrying amount exceeds the estimated undiscounted future net cash flows associated with the Company's proved oil and natural gas reserves. In such situations, the impairment is measured as the excess of the carrying amount over the estimated discounted future net cash flows associated with the Company's proved and probable oil and natural gas reserves. The discount rate used is the Company's risk free interest rate. Any impairment loss is charged to earnings in the period in which the impairment occurs.

The carrying values of unproved properties and major development projects are limited to their net realizable value and are reviewed at least annually for impairment. Any impairment is charged to earnings in the period in which the impairment occurs.

Cost centres in the pre-production stage are assessed at each reporting date to determine whether it is likely that net costs, in the aggregate, may be recovered in the future. Costs considered unlikely to be recovered are expensed during the period.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred with a corresponding increase in the carrying value of the related asset. The fair value is determined on the basis of independent engineering and environmental studies for each well or facility. The liability is subsequently adjusted for the passage of time, which is recognized as accretion expense and included in depletion, depreciation and

accretion in the consolidated statement of operations. The fair value of the liability and the carrying value of the related asset are also adjusted due to revisions in either the timing or the amount of the original estimated cash flows associated with the liability. Obligations settled during the period are charged against the liability recorded. Gains or losses on settlement are recognized in the period of settlement.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Interests in joint ventures

The consolidated financial statements include only the Company's proportionate share of assets, liabilities, revenues and expenses from its corporate and unincorporated joint ventures.

Cash and cash equivalents

Cash includes cash on hand and cash with banks. Cash equivalents are short term, highly liquid investments that are readily convertible to known amounts of cash with original maturities of three months or less.

Inventories and underlift

Inventories, including parts and consumables and crude oil inventories, and crude oil underlifts are recorded at the lower of cost and net realizable value. Cost is determined on a first-in, first-out basis.

Foreign currency transactions

The Company's reporting currency is the United States ("US") dollar as the majority of its transactions are denominated in this currency.

Transactions in foreign currencies are recorded at rates prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated to US dollars at the foreign exchange rate in effect at the balance sheet date.

Income taxes

The Company follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Company earns Capital Investment Allowances ("CIAs") on capital expenditures in Nigeria. The future income tax benefits arising from CIAs are recorded when the CIAs are earned and reduce the carrying amount of property, plant and equipment. CIAs are charged to future income tax in the statement of operations as the tax benefits are realized.

Revenue recognition

Oil and natural gas sales are recognized in the consolidated statement of operations when the significant risks and rewards of ownership have been transferred to the buyer, which typically occurs at the lifting date. Revenue from services rendered is recognized in the consolidated statement of operations in proportion to the stage of completion of the transaction at the balance sheet date. Overlifts are accounted for as deferred income.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Substantially all of the Company's operations are conducted under production sharing contracts ("PSCs") with foreign governments. Under the PSCs, the Company and its other non-governmental partners, if any, pay all operating and capital costs. Each PSC establishes specific terms for the Company to recover these costs in accordance with a formula based on monthly production volumes ("Cost Recovery Oil") and to receive a share of production in excess of the Cost Recovery Oil ("Profit Oil"). Profit Oil attributable to the government includes an amount in respect of all deemed income taxes payable by the Company under the laws of the respective country. All other government interests, other than income taxes, are considered to be royalty interests.

Derivative financial instruments and commodity contracts

The Company may use derivative financial instruments (forward exchange contracts, interest rate swaps and options) to manage its exposure to market risks resulting from fluctuations in foreign exchange rates, interest rates, and commodity prices. These derivative financial instruments are not used for trading or speculative purposes.

Gains and losses on derivative instruments that are designated as and determined to be effective hedges are deferred and recognized in the period of settlement as a component of the related transaction. If a derivative instrument ceases to be effective as a hedge or is terminated, hedge accounting is discontinued and future gains and losses are recognized in the consolidated statement of operations in the current period.

Derivative instruments that are not designated as hedges for accounting purposes are recorded in the consolidated balance sheet at fair value with any resulting gain or loss recognized in the consolidated statement of operations in the current period.

Comparative figures

Certain figures provided for prior years have been reclassified to confirm to the presentation adopted in 2005.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

3. PROPERTY, PLANT AND EQUIPMENT

	December 31,	
	2005	2004
Item 5 - Oil and natural gas properties	890,914	730,691
Accumulated depletion	(407,644)	(234,702)
	483,270	495,989
Corporate assets	7,289	4,648
Accumulated depreciation	(3,536)	(2,955)
	3,753	1,693
Balance	487,023	497,682

Included in property, plant and equipment are capitalized loan costs of \$8.3 million (2004: \$0.6 million)

Property, plant and equipment by cost centre is as follows:

Cost Centre	December 31,	
	2005	2004
Nigeria	468,289	485,802
Cameroon	5,401	3,321
Gabon	9,580	6,866
Other corporate assets	3,753	1,693
Balance, end of period	487,023	497,682

Included in property, plant and equipment are certain costs not subject to depletion and depreciation as follows:

	December 31,	
	2005	2004
Unproved properties		
Cameroon	5,401	3,321
Gabon	9,580	6,866
Major development projects		
Nigeria	-	184,686
	14,981	194,873

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

4. ASSET RETIREMENT OBLIGATIONS

The asset retirement obligation movements are as follows:

	<u>December 31,</u>	
	<u>2005</u>	<u>2004</u>
Balance, beginning of period	12,268	11,953
Asset retirement obligations incurred	10,912	-
Revisions of previous estimates	-	(698)
Accretion expense	2,086	1,013
Balance, end of period	<u>25,266</u>	<u>12,268</u>

5. LONG-TERM DEBT

Debt financing is provided through a syndicated \$300 million senior secured reducing revolving credit facility (the "Facility"). The Facility expires on December 31, 2008. The borrowing base is re-determined semi-annually based on an independent engineer's evaluation of the Company's oil and natural gas reserves, subject to the approval of the syndicate.

The amounts drawn under the Facility bear interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization of the Facility on the first day of the interest period. The Facility is secured by debentures given by the Company, assignment of the Company's principal contracts, a pledge over the bank accounts and share pledges of the Company's principal subsidiaries.

At December 31, 2005, the amount outstanding under the Facility was \$80 million (December 31, 2004 - \$65 million).

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

6. SHARE CAPITAL

	<u>December 31,</u>	
	<u>2005</u>	<u>2004</u>
Authorized: unlimited number of common shares		
Issued and outstanding		
60,030,000 common shares	20,010	20,010

In 2004, the issued and outstanding common shares were converted on a three-for-one basis.

7. EARNINGS PER SHARE

Per share information is calculated on the basis of the weighted average number of common shares outstanding during the fiscal period, being 60,030,000 for all periods presented. There are no potentially dilutive shares for all periods presented.

8. PENSION PLANS

The Company has two pension plans.

The employees of Addax Petroleum Development (Nigeria) Ltd. ("APDNL"), a wholly-owned subsidiary of Addax, have a defined benefit plan (the "Nigerian Plan") in which the assets are held in a separate trustee administered fund. The employees of the Geneva branch of Addax Petroleum Services Ltd., a wholly owned subsidiary of the Company, have a defined benefit plan (the "Swiss Plan") complying with the legal requirements of Switzerland in which the assets are held and administered in a separate insurance company. These pension plans are funded by payments by each relevant company, taking into account the respective legal requirements.

The pension costs are accounted for using the projected benefits method whereby the costs are amortized over the service life of the employees in accordance with the advice of qualified actuaries.

For Nigerian staff, there is also a gratuity plan funded by APDNL. The plan provides employees who retire at age 60 and who have at least 10 years continuous service with a lump sum payment of 5% of pensionable pay for each year worked to a maximum of 24 months of monthly base salary. The projected benefits method has been used to calculate the liability. Information relating to the Company's defined benefit pension plans is shown in the following tables:

9. INCOME TAXES

The majority of the Company's taxable operations are located in Nigeria under PSCs with the Nigerian government. The deemed income tax rate in the Nigerian PSCs is 60%. The provision for income taxes varies from the amounts that would be computed by applying the combined income tax rates set out in the PSCs to net income before provision for income taxes for the following reasons:

	Year ended December 31,		
	2005	2004	2003
Income before provision for income taxes	649,039	233,107	153,068
Tax at 60%	389,423	139,864	91,841
Adjustments to income taxes:			
Non deductible costs	71,105	47,115	33,020
Non taxable revenues	(486)	(2,518)	(1,905)
Enhanced tax allowances	(29,507)	2,193	-
Adjustments in respect of prior years	-	4,643	4,067
Tax allowances not recoverable	9,600	(22,064)	-
Deduction for countries with lower tax rates	2,834	1,250	344
Provision for income taxes	442,969	170,483	127,367

Components of future income taxes

	December 31,	
	2005	2004
The net future tax liability is as follows:		
Differences between tax base and reported amounts of depreciable and depletable assets	107,135	107,414
Other	(14,042)	(18,865)
Future income tax liabilities	93,093	88,549

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

(i)	December 31,	
	2005	2004

Other	22,288	-
Future income tax assets	155,884	15,990

10. INVENTORIES

	December 31,	
	2005	2004
Oil products	19,269	1,709
Materials and supplies	43,484	15,088
	62,753	16,797

11. FINANCIAL INSTRUMENTS

Market risk

The Company's activities expose it to a variety of market risks, including the effects of changes in commodity prices, foreign currency exchange rates and interest rates. The Company uses derivative financial instruments such as options on commodities, foreign exchange contracts and interest rate swaps to manage certain exposures.

The Board of Directors provides principles for overall risk management, as well as policies covering specific areas, such as commodity price risk, foreign exchange risk, interest rate risk and credit risk. These principles include guidelines on the use of derivative financial instruments.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

a) **Commodity price risk**

It is the intention of the Company to cover commodity-pricing exposure in order to safeguard a minimum cash income. The option contracts run for 12 months or less. At December 31, 2005, the Company had the following crude oil derivative contract outstanding:

	Put option
Maturity	March 31, 2006
Volume	27.4 mbbls/d
Average price	\$21.00 per barrel

The estimated fair value is disclosed in section (e) below.

b) **Foreign exchange risk**

The Company operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to the Swiss francs (or "CHF") and the Nigerian naira against the US dollar. The Company uses both local currency borrowing facilities and forward contracts to hedge their exposure to foreign currency risk. The forward currency contract must be in the same currency as the hedged item.

In December 2005, the Company entered into foreign exchange forward contracts to purchase CHF 18,000,000 for \$14,311,988 for the year ending December 31, 2006. These forward contracts fix the exchange rate used to convert a portion of the Company's Swiss franc denominated general and administrative expenses to US dollars. These contracts have not been designated as hedges for accounting purposes. Estimated fair values on these contracts at period end are disclosed in section (e) below.

c) **Interest rate risk**

The Company's exposure to market risk for changes in interest rates relates primarily to the Company's long-term debt obligations.

To manage this risk in a cost efficient manner, the Company enters into interest rate swaps, in which the Company agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. These swaps are designated to hedge cash outflows related to interest obligations.

These contracts have not been designated as hedges for accounting purposes and expired in August 2005.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

d) Credit risk

Concentrations of credit risk with respect to accounts receivable are limited due to the high portion of amounts due from related parties. Of the Company's significant individual accounts receivable at December 31, 2005, approximately 82% was due from one related party customer (December 2004 – 59%). Historical experience has indicated no problem in collecting accounts receivable from related companies. Therefore, management believes there is no significant credit risk inherent in the Company's accounts receivable, beyond amounts provided for in doubtful accounts.

e) Liquidity risk

The following table sets out the estimated fair values of purchased derivative financial instruments recognized in the consolidated balance sheet in accounts receivable and accounts payable with resulting gains and losses being recognized in other interest and finance charges in the statement of operations. These contracts have not been designated as hedges for accounting purposes.

	<u>December 31,</u> <u>2005</u>
Currency forwards	571
Oil options	-
Interest rate swaps	-

The fair values of other financial instruments including cash and cash equivalents, accounts receivable, accounts payable and other long-term liabilities approximate their carrying values due to the short term to maturity of these items. The fair value of long-term debt approximates its carrying value as it is subject to a floating market rate of interest.

	December 31,	
	2005	2004
Pension liabilities	937	3,778
Other liabilities	3,972	3,094
	4,909	6,872

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

15. COMMITMENTS

Future total commitments relating to Floating Production, Storage and Offloading vessel ("FPSO") leases and exploration and development activities, after December 31, 2005 are as follows:

2006	352,865
2007	78,929
2008	92,098
2009	45,858
2010	34,556
Thereafter	117,017
Total	721,323

Included in the above table are commitments for the hire of three FPSO vessels ranging from one to eight years.

In addition to the above, the Company has the following work commitments:

Under the Cameroon concession contract there is a first phase work commitment of \$22 million over a three year period, commencing on April 19, 2004, being the date of issuance of the Exploration Authorization by the Cameroon government. The Company has the right to extend the exploration period by an additional two phases of two years each. These additional phases have additional work commitments.

16. CONTINGENCIES

Given the nature of the business, the Company is exposed to the possibility of environmental damage arising from its exploration, development and production activities. The Company is responsible for any liabilities arising from such events and has developed a series of strict operating procedures to protect the environment.

Various legal actions arising in the normal course of business have been commenced in Nigeria against the Company. It is the view of management that most of these actions are without any foundation and the Company has provided \$300,000 as its best estimate of losses under these actions.

The Company is liable to pay early termination penalties on its FPSO lease contracts. As at December 31, 2005, the maximum contingent liability arising from early termination of these contracts amounted to \$188.6 million.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

The Company's income tax filings are subject to audits by taxation authorities. There are audits in progress and items under review, some that may increase the tax liability. In addition, notices have been filed objecting certain issues. While the results of these items cannot be ascertained at this time, it is believed that there is an adequate accrual for income taxes based on available information.

17. RELATED PARTY TRANSACTIONS

The following transactions took place between the Company and AOG and its other subsidiary companies:

	December 31,		
	2005	2004	2003
Sales to Addax B.V	693,856	371,444	386,613
Charges:			
Addax Bunkering Services	(7,625)	(10,406)	-

Other items	(275)	(1,141)	(1,894)
Interest and related charges	-	-	(47)

The sales to Addax B.V., the sole marketer of the Company's crude oil (net of NNPC liftings), were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for the Company's bunkering operations. Other items include charges from Addax Limited for the refund of services paid on behalf of the Company. Addax BV and Addax Limited are subsidiaries of AOG.

Addax Petroleum N.V.

Notes to the Consolidated Financial Statements

December 31, 2005 and 2004

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts due from (to) related parties as included in accounts receivable and accounts payable in the consolidated balance sheet are as follows:

	December 31,	
	2005	2004
Addax BV	109,694	38,936
AOG	281	100
Other	(2,943)	9,736

18. EVENTS SUBSEQUENT TO DECEMBER 31, 2005

Addax Petroleum Corporation ("APC"), a Canadian corporation, was established in 2005. In the first quarter of 2006, APC became the direct parent company of the Company.

On February 16, 2006, APC was listed on the Toronto Stock Exchange by way of an Initial Public Offering ("IPO"). Pursuant to the IPO, APC raised \$355.1 million (CDN\$409.5 million) of which:

- \$17.6 million (CDN\$20.5 million) was used to pay expenses related to the IPO; and
- \$48.2 million (CDN\$55.6 million) and 117,000,000 common shares of APC were given to acquire all of the issued and outstanding common shares of Addax Petroleum NV previously held by AOG.

On February 24, 2006, an over-allotment option held by the underwriters was exercised yielding net proceeds of \$33.7 million (CDN\$38.9 million) (gross proceeds totaled \$35.5 million (CDN\$41.0 million)).

Total net proceeds from the IPO, the over-allotment option and the share purchase amounted to \$322.9 million (CDN\$372.4 million).

In March of 2006, APC has entered into three PSC's with the Joint Development Authority (JDA). The JDA administers the Joint Development Zone (JDZ) between Nigeria and Sao Tome e Principe. The three blocks awarded were JDZ 4 (APC as operator with a share of 33%), JDZ 3 (APC non-operated share of 15%) and JDZ 2 (APC non-operated share of 14.33%). The initial commitments are for JDZ 4: \$23.4 million signature bonus, and a minimum work commitment including carry costs of \$45.0 million, for JDZ 3 a \$2.0 million signature bonus and a minimum work commitment including carry costs of \$15 million and for JDZ 2 a \$8.3 million signature bonus and a minimum work commitment including carry costs of \$12.9 million.

**AMENDMENT NO. 1 DATED JANUARY 5, 2006 TO THE
AMENDED AND RESTATED PRELIMINARY BASE PREP PROSPECTUS
DATED DECEMBER 15, 2005**

A copy of the amended and restated preliminary base PREP prospectus and this amendment (collectively the "Amended Preliminary Prospectus") has been filed with the securities regulatory authorities in each of the provinces of Canada but has not yet become final for the purpose of the sale of securities. Information contained in the Amended Preliminary Prospectus may not be complete and may have to be amended. The securities may not be sold until a receipt for the prospectus is obtained from the securities regulatory authorities.

The prospectus has been filed under procedures in each of the provinces of Canada that permit certain information about these securities to be determined after the prospectus has become final and that permit the omission of that information from this prospectus. The procedures require the delivery to purchasers of a supplemented PREP prospectus containing the omitted information within a specified period of time after agreeing to purchase any of these securities.

All disclosure contained in the supplemented PREP prospectus that is not contained in the base PREP prospectus will be incorporated by reference into the base PREP prospectus as of the date of the supplemented PREP prospectus.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. The base PREP prospectus constitutes a public offering of securities only in those jurisdictions where such securities may be lawfully offered for sale and therein only by persons permitted to sell such securities. These securities have not been and will not be registered under the United States Securities Act of 1933, as amended, and, subject to certain exceptions, may not be offered or sold in the United States. This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of these securities within the United States. See "Plan of Distribution".

• , 2006

CDN\$ •

• Common Shares

Price: CDN\$ • per Common Share

The Amended and Restated Preliminary Base PREP Prospectus dated December 15, 2005 relating to the distribution of Common Shares of Addax Petroleum Corporation (the "Preliminary Prospectus") is amended by the information set out below (the "Amendment"). This Amendment is part of the Preliminary Prospectus and must be read together with the Preliminary Prospectus. Any information in the Preliminary Prospectus that conflicts with the information provided in this Amendment is deemed to be amended by this Amendment. Unless otherwise defined in this Amendment, terms defined in the Preliminary Prospectus have the same meaning when used in this Amendment.

Recent Drilling Results

The Nda field is located in OPL 90 and is currently producing by means of an extended well test on the first Nda well ("Nda-1") which averaged 3,280 bbls/d in December 2005. The Nda-1 well encountered three oil bearing reservoirs, having gross oil intervals of 19, 31 and 8 m respectively bounded in each instance by individual oil-water contacts. Based on the Nda-1 well results, NSAI estimated gross proved reserves for the Nda field to be 7.2 mmbbls, gross proved plus probable reserves to be 10.2 mmbbls and gross proved plus probable plus possible reserves to be 19.6 mmbbls, as at September 30, 2005.

In December 2005, Addax Petroleum drilled the second well in the Nda field ("Nda-2"), approximately 650 m from Nda-1 with the purpose of further delineating the Nda field reserves and finalizing the Nda field development plan. Nda-2 was drilled up-dip of Nda-1 and encountered oil in the same three stacked reservoirs. The drilling results from the Nda-2 well now demonstrate gross oil column heights in these reservoirs of 62, 73 and 61 m respectively which are in excess of management's expectations prior to drilling the well. Addax Petroleum expects that the December 2005 drilling results for Nda-2 will result in the recategorization of proved, probable and possible reserves for the Nda field and in the addition of reserves in all three categories. The recent drilling results for Nda-2 were not available for review by NSAI in connection with the preparation of the Reserve Report.

CERTIFICATE OF THE CORPORATION

DATED: January 5, 2006

The Amended and Restated Preliminary Base PREP Prospectus dated December 15, 2005 together with the documents and information incorporated therein by reference, as amended by this Amendment No. 1 dated January 5, 2006, will, as of the date of the supplemental prospectus providing the information permitted to be omitted from the Base PREP Prospectus, constitute full, true and plain disclosure of all material facts relating to the securities offered by this prospectus as required under securities legislation of each of the provinces of Canada. For the purpose of the Province of Quebec, this prospectus will, as of the date of the supplemented prospectus, contain no misrepresentation likely to affect the value or the market price of the securities to be distributed.

AMENDED AND RESTATED PRELIMINARY BASE PREP PROSPECTUS DATED DECEMBER 15, 2005

A copy of this preliminary prospectus has been filed with the securities regulatory authorities in each of the provinces of Canada but has not yet become final for the purpose of the sale of securities. Information contained in this preliminary prospectus may not be complete and may have to be amended. The securities may not be sold until a receipt for the prospectus is obtained from the securities regulatory authorities.

This prospectus has been filed under procedures in each of the provinces of Canada that permit certain information about these securities to be determined after the prospectus has become final and that permit the omission of that information from this prospectus. The procedures require the delivery to purchasers of a supplemented PREP prospectus containing the omitted information within a specified period of time after agreeing to purchase any of these securities.

All disclosure contained in the supplemented PREP prospectus that is not contained in this base PREP prospectus will be incorporated by reference into this base PREP prospectus as of the date of the supplemented PREP prospectus.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. This prospectus constitutes a public offering of securities only in those jurisdictions where such securities may be lawfully offered for sale and therein only by persons permitted to sell such securities. These securities have not been and will not be registered under the United States Securities Act of 1933, as amended, and, subject to certain exceptions, may not be offered or sold in the United States. See "Plan of Distribution".

Initial Public Offering

• , 200•

Price: CDN\$ • per Common Share

This prospectus qualifies the distribution of an aggregate of • common shares (the "Offered Shares") of Addax Petroleum Corporation at a price of CDN\$ • per share. See "Plan of Distribution".

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships in Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

The terms of this offering were established by negotiation among RBC Dominion Securities Inc., Merrill Lynch Canada Inc., Scotia Capital Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited (collectively, the "Underwriters"). Addax Petroleum and The Addax and Oryx Group Ltd. ("AOG"). Presently, there is no market through which the common shares of the Corporation (the "Common Shares") may be sold and purchasers may not be able to resell the Offered Shares purchased under this prospectus. The Corporation has applied to have the Common Shares listed on the Toronto Stock Exchange (the "TSX"). Listing will be subject to the Corporation fulfilling all requirements of the TSX. See "Risk Factors" for certain considerations relevant to an investment in the Offered Shares.

	Price to the Public (CDN\$)	Underwriters' Fees (CDN\$)	Net Proceeds to the Corporation ⁽¹⁾ (CDN\$)
Per Common Share	•	•	•
Total Offering ⁽²⁾	•	•	•

Notes:

- Before deducting the expenses of the offering payable by the Corporation, estimated to be CDN\$ • , which will be paid by the Corporation out of the proceeds of the offering, CDN\$ • of the net proceeds of this offering will be used to fund the Pre-IPO Transactions. See "Use of Proceeds".
- Addax Petroleum Corporation has granted to the Underwriters an over-allotment option (the "Over-Allotment Option"), exercisable, in whole or in part, at any time until 30 days after closing of this offering, to purchase from the Corporation up to an additional • Common Shares, at the same price as set forth above, to cover over-allotments, if any, and for market stabilization purposes. If the Over-Allotment Option is exercised in full, the total "Price to the Public", "Underwriters' Fees" and "Net Proceeds to the Corporation" (before deducting expenses of the offering) will be CDN\$ • , CDN\$ • and CDN\$ • , respectively. This prospectus also qualifies the distribution of the Over-Allotment Option and the Common Shares issuable upon exercise of the Over-Allotment Option. See "Plan of Distribution".

The Underwriters, as principals, conditionally offer the Offered Shares, subject to prior sale, if, as and when issued and sold by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution" and subject to the approval of certain legal matters on behalf of the Corporation by Fasken Martineau DuMoulin LLP and on behalf of the Underwriters by Fraser Milner Casgrain LLP.

RBC Dominion Securities Inc. is an indirect wholly owned subsidiary of a Canadian chartered bank that is a lender to Addax Petroleum under a revolving credit facility. Consequently, Addax Petroleum may be considered to be a connected issuer of RBC Dominion Securities Inc. under applicable securities legislation. See "Relationship Between the Corporation and RBC Dominion Securities Inc."

In the opinion of counsel, based on legislation in effect on the date of this prospectus, the Offered Shares are eligible investments as set forth under the heading "Eligibility for Investment".

Subscriptions will be received subject to rejection or allotment, in whole or in part, and the right is reserved to close the subscription books at any time without notice. On closing, a book entry certificate representing the Offered Shares will be issued in registered form to The Canadian Depository for Securities Limited ("CDS") or its nominee and will be deposited with CDS. Shareholders will not receive physical share certificates representing their ownership. A purchaser of the Offered Shares will receive only a customer confirmation from the registered dealer which is a CDS participant and from or through which the Offered Shares are purchased. See "Plan of Distribution". Closing of this offering is expected to occur on or about • , 2006, or such later date as the Corporation and the Underwriters may agree, but in any event not later than • , 2006.

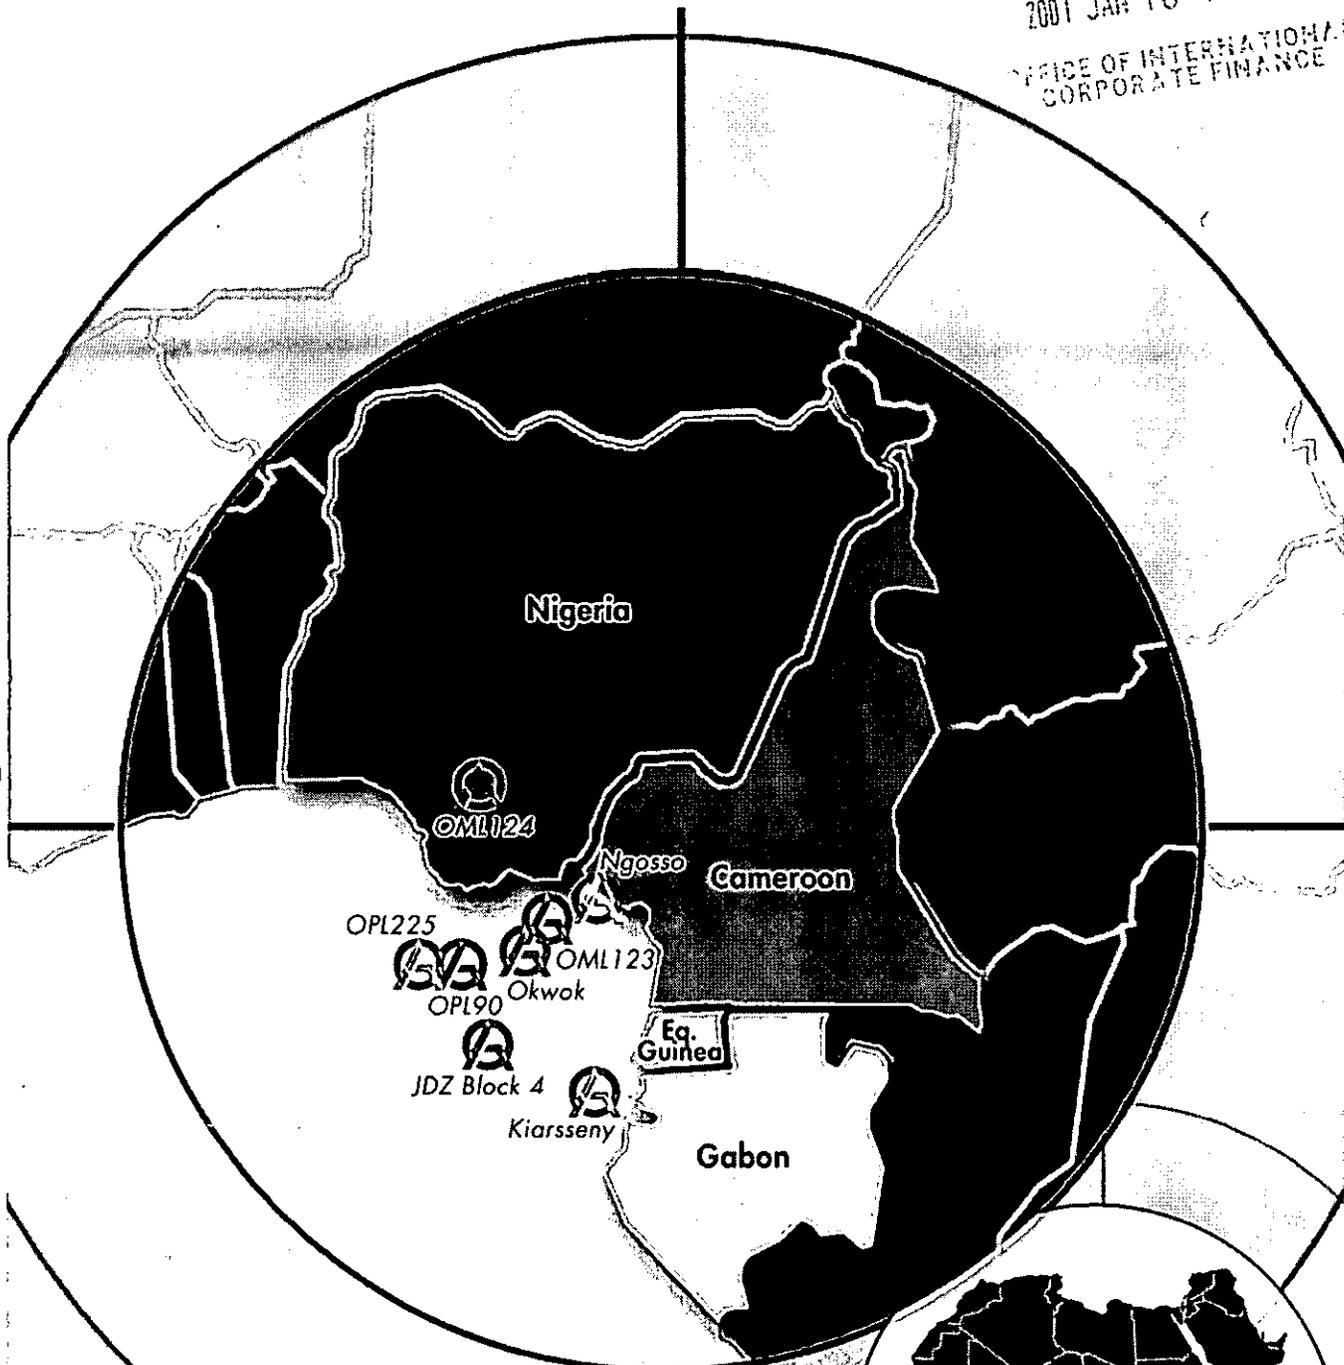

Except as otherwise indicated in this prospectus, references to "\$" and to "dollar" refer to currency of the United States of America and references to oil reserves and production refer to reserves and production calculated on a gross basis.

SUMMARY

The following is a summary of the principal features of this offering and is qualified by, and should be read together with, the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the "Glossary", "Abbreviations" and "Conversions" for the meaning of certain terms used in this prospectus.

Addax Petroleum

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

Addax Petroleum's Average Oil Production 1998 - October 2005

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of Cash Flow From Operations. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of Cash Flow From Operations. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by Netherland, Sewell & Associates, Inc. ("NSAI"), independent oil and natural gas reservoir engineers.

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);

- OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
- OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		1,133,900			74,450	62,090	109.3	201.3	284.1

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. Pursuant to the participation agreement the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

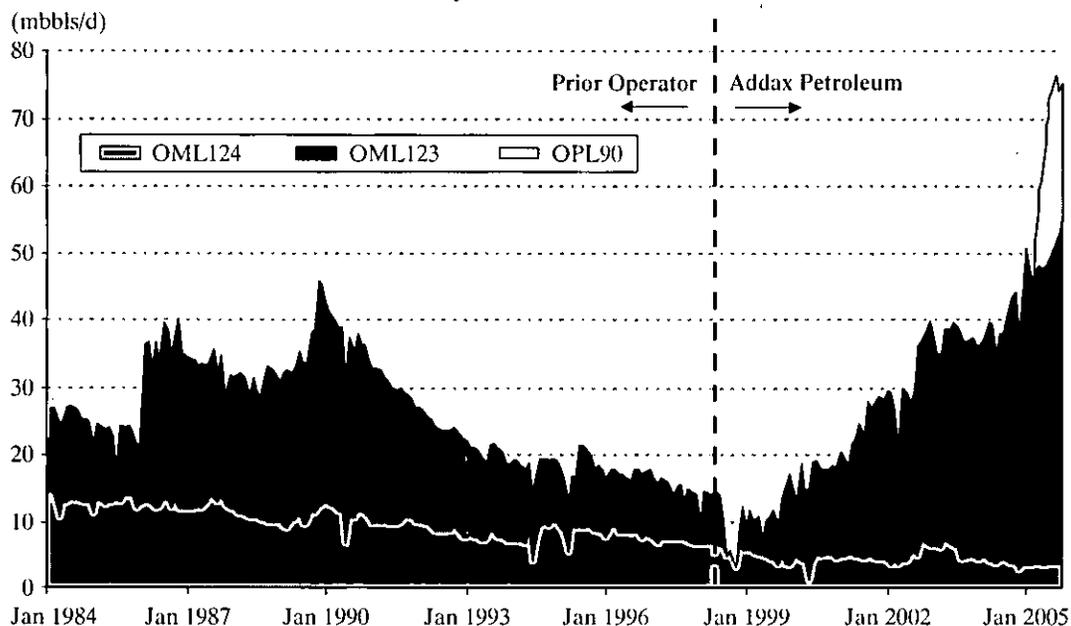

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mbbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

*Average Monthly Oil Production
January 1984 - October 2005*

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mmbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mmbbls/d in 2005 to 85 mmbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI reports Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum's excellent reputation and strong relationships help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In addition, the Corporation's community relations policy promotes infrastructure development projects and

education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to 9.6 million Common Shares (representing up to eight per cent of AOG's current shareholdings) be issued to current and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, as well as a Technical and Reserves Committee, comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30, 2005		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	Total	2004 Total	2003 Total
		(\$million)								
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

(1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 will fund significant infrastructure investment to sustain future production as well as a two-rig drilling program that includes development, infill, extension, appraisal and exploration drilling. These budgeted capital expenditures are expected to increase production from approximately 46 mbbbls/d in 2005 to approximately 48 mbbbls/d in 2006. Capital expenditures for OPL90 and OPL225 are expected to increase production from approximately 16 mbbbls/d in 2005 to approximately 33 mbbbls/d in 2006. These budgeted capital expenditures will fund seismic data acquisition as well as a one-rig drilling program that includes development and exploration drilling.

Capital expenditures for the Corporation's other properties and major new venture opportunities will be incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

Petroleum Reserves

The tables below summarize the petroleum reserves and the present value of future net revenue associated with Addax Petroleum's reserves evaluated in the Reserve Report prepared by NSAI, independent oil and natural gas reservoir engineers, based on forecast and constant price and cost assumptions presented in accordance with NI 51-101. The tables summarize the data contained in the Reserve Report and, as a result, may contain slightly different numbers than the Reserve Report due to rounding. Future net revenue values, whether calculated without discount or using a discount rate, are estimated values and do not represent fair market value. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserves estimates of Addax Petroleum's petroleum reserves provided herein are estimates only and there is no assurance that the estimated reserves will be recovered. Actual petroleum reserves may be greater than or less than the estimates provided herein. The estimates of reserves and future net revenue for individual properties included in this prospectus may not reflect the same confidence level as estimates of revenue for all properties, due to the effects of aggregation. See "Petroleum Reserves and Operational Matters".

Total Proved plus Probable plus Possible	285.3	241.4	11,190	9,259	7,826	6,735	3,748	3,135	2,674	2,320

The estimate of gross reserves means Addax Petroleum's total working interest prior to the deduction of NNPC's share of Profit Oil. The estimate of net reserves includes deductions under the Nigerian Production Sharing Contracts for Royalty Oil and NNPC's share of Profit Oil. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

The "after taxes" figures are the future net revenue estimates after all deductions under the Nigerian Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, Niger Delta Development Commission levy, education tax and tax inversion penalty. The "before taxes" figures only include deductions for Royalty Oil and NNPC's share of Profit Oil. NSAI is of the opinion that the "after taxes" case is representative of the fiscal regime under the Nigerian Production Sharing Contracts.

Selected Financial Information

The following table presents a summary of historical consolidated financial data for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended. The summary of historical consolidated financial data set forth below may not contain all of the information that is important to a prospective investor and should be read along with "Presentation of Financial Information", "Selected Financial Information", "Management's Discussion and Analysis of Financial Condition and Results of Operations", and the consolidated financial statements and related notes of the Corporation for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 included in this prospectus. The results for the nine months ended September 30, 2005 are not necessarily indicative of results for the full year. All financial information with respect to the Corporation has been presented in United States dollars in accordance with Canadian GAAP.

Notes:

- (1) All per share amounts are calculated on the basis of 120 million outstanding Common Shares of Addax Petroleum Corporation, giving pro forma effect to the completion of the Pre-IPO Transactions.
- (2) The Corporation does not have any outstanding securities that are convertible into, or exchangeable for, Common Shares.

The Offering

Offering Price	CDN\$ • per Common Share.
Offered Shares	• Common Shares.
Over-Allotment Option	Addax Petroleum Corporation has granted the Over-Allotment Option to the Underwriters, exercisable in whole or in part, at any time until 30 days after closing, to purchase up to • additional Common Shares on the same terms as set forth in this prospectus to cover over-allotments, if any, and for market stabilization purposes.
Use of Proceeds	The net proceeds to the Corporation from the sale of the Offered Shares are estimated to be CDN\$ • million (CDN\$ • million if the Over-Allotment Option is exercised in full) after deducting the fees payable to the Underwriters and the estimated expenses of this offering. Of the net proceeds, CDN\$ • will be used to fund the Corporation's 2006 capital expenditure programs and for general corporate purposes and CDN\$ • will be used to fund the purchase of the issued and outstanding shares of APNV. Pending application of funds for capital expenditures and general corporate purposes, a portion of such net proceeds will be used to temporarily repay amounts outstanding under the Credit Facility. See "Addax Petroleum — Pre-IPO Transactions" and "Addax Petroleum — Capital Expenditure Program".
Dividend Policy	Addax Petroleum Corporation intends to declare quarterly cash dividends. The payment and the amount of dividends declared in any fiscal quarter will depend on Addax Petroleum Corporation's earnings, financial requirements and other conditions existing which the Board of Directors may consider relevant at such time including applicable restrictions arising under the Credit Facility on the ability of APNV to pay dividends or other distributions to the Corporation. Subject to the factors described above, Addax Petroleum Corporation intends to pay its first quarterly dividend for the quarter ending June 30, 2006. See "Dividends".
Incorporation	Addax Petroleum Corporation was incorporated under the <i>Canada Business Corporations Act</i> on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. The registered office of Addax Petroleum Corporation is located at 3400, 350 - 7th Avenue S.W., Calgary, Alberta, Canada, T2P 3N9.
Pre-IPO Transactions	<p>Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for • Common Shares and \$ • million.</p> <p>Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.</p>

Shareholdings Post-Closing

After giving effect to the Pre-IPO Transactions and the closing of this offering, the Corporation will have ● Common Shares outstanding, of which ● per cent of the Common Shares will be held by investors under this offering, ● per cent of the Common Shares will be held by AOG and ● per cent of the Common Shares will be held by current and former directors, officers and employees of the Corporation (● per cent, ● per cent and ● per cent if the Over-Allotment Option is exercised in full).

Closing

The closing of this offering is anticipated to occur on or about ● , 2006 and in any event not later than ● , 2006.

Eligibility for Investment

Subject to certain assumptions, limitations and restrictions, in the opinion of Fasken Martineau DuMoulin LLP, counsel to the Corporation, and Fraser Milner Casgrain LLP, counsel to the Underwriters, the Offered Shares, if as and when listed on a prescribed stock exchange (including the TSX), will be qualified investments for a trust governed by a registered retirement savings plan, a registered retirement income fund, a registered education savings plan or a deferred profit sharing plan under the *Income Tax Act* (Canada) and the regulations thereunder.

Risk Factors

The securities offered hereby should be considered highly speculative due to the nature of the Corporation's business. A prospective investor should consider carefully the risks and uncertainties set out below, in addition to the other information contained in this prospectus, before making an investment decision. Additional risks and uncertainties not presently known to the Corporation or that it currently deems to be immaterial may also impair its business and affect the price of its Common Shares. If any of the events described in this prospectus as a risk or uncertainty actually occurs, the Corporation's business, results of operations or financial condition could be materially adversely affected. See "Risk Factors".

Risks relating to the business of the Corporation

- The Corporation's failure to replace its current reserves would have a material adverse effect on its business and financial condition.
- Exploration and development activities are inherently risky and are subject to change.
- Failure to obtain governmental approvals and fulfill contractual commitments may adversely affect the Corporation's business.
- The loss of any of the Corporation's executive officers and key employees could have an adverse impact on its business.
- The Corporation's operations are subject to potential losses that may not be covered by insurance.
- The Corporation is dependent on an affiliated company for the marketing of the oil the Corporation produces.
- The Corporation shares a trademark and a tradename with a group of companies and any adverse development affecting the trademark or tradename of any of those companies could adversely affect the business, goodwill or reputation of the Corporation.
- The Corporation may not be able to secure financing for its future exploration, development, production and acquisition plans.
- The Corporation could be subject to labour or other unplanned production disruptions.
- Future litigation could adversely affect the Corporation's business, results of operations or financial condition.
- The Corporation is subject to certain risks related to the nature of the Corporation's business and its present stage and speed of development.
- There are risks inherent in the Corporation's strategy of geographic diversification and acquisition of new exploration and development properties.
- The Corporation is exposed to the risks associated with commodity hedging activities.
- Joint ventures entered into by the Corporation could lead to additional costs.

Risks relating to the petroleum industry

- Volatility of petroleum prices could have a material adverse effect on the Corporation's business, results of operations or financial condition.
- The Corporation could face significant liabilities under environmental laws.
- The oil reserve and oil and gas resource data in this prospectus are only estimates, and the Corporation's actual production, revenue and expenditure with respect to its reserves may be materially different from such estimates.

- The Corporation's exploration and development activities depend on its ability to procure appropriate drilling equipment.
- The Corporation operates in a highly competitive industry.
- The Corporation faces foreign exchange, interest rate and inflation risks.

Risks relating to the countries in which the Corporation currently operates and may operate in the future

- There are political, economic and other risks relating to the countries in which the Corporation currently operates or may operate in the future.
- Relinquishment obligations under applicable legislation and the terms of Production Sharing Contracts may adversely affect the total amount of the Corporation's prospective resources.
- Interpretation and application of the laws and regulations of the countries in which the Corporation operates can be uncertain and could adversely affect the Corporation.
- The Corporation must comply with the regulatory regimes of the countries in which it operates, and such compliance may result in increased expenditure.
- The Corporation's production may be constrained by production or export quotas.
- Crime and governmental or business corruption could disrupt the Corporation's ability to conduct its business.
- US holders of Common Shares and the Corporation may be subject to sanctions imposed by the US government if the Corporation decides to pursue operations in countries subject to US economic sanctions.

Risks relating to the Common Shares

- Uncertainties exist as to the market price and liquidity of the Common Shares as there has been no prior public market for such shares.
- The controlling shareholder(s) of the Corporation will exercise significant control over the affairs of the Corporation.
- Sales of Common Shares by controlling shareholder(s) could have an adverse effect on the price of the Common Shares.
- Investors may face risks related to the Corporation's holding company structure.

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below.

“**ABV**” means Addax B.V. Geneva Branch, a wholly owned subsidiary of AOG which specializes in crude oil and product trading in West Africa;

“**Adanga Platform**” means the production platform located in the Adanga field on OML123;

“**Addax Petroleum Corporation**” means Addax Petroleum Corporation, a corporation incorporated under the CBCA;

“**Addax Petroleum N.V.**” or “**APNV**” means Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles;

“**Agip**” means ENI S.p.A together with all of its subsidiaries in its Agip division;

“**Antan Blend**” means the crude oil produced from OML123, together with the crude oil produced by the OML114 Parties, which is lifted from the Antan Terminal;

“**Antan Crude Oil Supply Agreement**” means the Antan Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“**Antan Terminal**” means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OML123 where oil from OML123 is loaded onto ocean-going tankers;

“**AOG**” means The Addax and Oryx Group Ltd., together with all of its subsidiaries other than Addax Petroleum;

“**API**” means the American Petroleum Institute;

“**APS**” means Addax Petroleum Services Ltd., a directly or indirectly wholly owned subsidiary of Addax Petroleum;

“**Ashland**” means Ashland Inc. together with all of its subsidiaries;

“**best estimate**” means, in relation to prospective and contingent resources, the best estimate of the quantity that will actually be recovered from the accumulation. If probabilistic methods are used, this term is a measure of central tendency of the uncertainty distribution (most likely/mode, P_{50} /median, or arithmetic average/mean);

“**Block 4**” or “**Block 4 Property**” means the property located in the north end of the Joint Development Zone;

“**Board**” or “**Board of Directors**” means the board of directors of Addax Petroleum Corporation;

“**Bogi Platform**” means the Bogi production platform located in the Disputed Area;

“**BP**” means BP p.l.c. together with all of its subsidiaries;

“**Brass River Blend**” means the crude oil produced from OML124 and commingled with crude oil produced by other parties, which is transported to the Brass River Terminal;

“**Brass River Blend Crude Oil Supply Agreement**” means the Brass River Blend Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“**Brass River Terminal**” means the oil production export terminal located on the Nigerian coast where oil from OML124 is loaded onto ocean-going tankers;

“**Brent Crude**” means crude oil produced from the Brent system in the North Sea, a price setting benchmark in the world energy market;

“**Canadian GAAP**” means the generally accepted accounting principles and practices in Canada, including without limiting the foregoing, the principles set forth in the Canadian Institute of Chartered Accountants (“**CICA**”)

Handbook published by CICA or any successor institute and which are applicable on the effective date as at which a calculation is required to be made in accordance therewith;

“CBCA” means the *Canada Business Corporations Act*, as amended;

“CDS” means The Canadian Depository for Securities Limited;

“CFFO” or “Cash Flow From Operations” means cash from operating activities before changes in non-cash working capital. CFFO is not a standard measure under Canadian GAAP. Cash Flow From Operations measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See “Presentation of Financial Information”;

“Chevron” means Chevron Corp. together with all of its subsidiaries;

“CIP Policy” has the meaning given to it under the heading “Petroleum Reserves and Operational Matters — Insurance”;

“COGE Handbook” means the Canadian Oil and Gas Evaluators Handbook prepared jointly by The Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy and Petroleum (Petroleum Society), as amended from time to time;

“Common Share” means a common share in the share capital of Addax Petroleum Corporation;

“Common Share Incentive Plan” means the incentive share ownership plan that Addax Petroleum Corporation plans to adopt, the purpose of which is to develop the interests of the directors, officers, employees and other persons who provide on-going services to Addax Petroleum Corporation in the growth and development of Addax Petroleum Corporation by providing such individuals with the opportunity to acquire an increased proprietary interest in Addax Petroleum Corporation and to aid in attracting as well as retaining and encouraging the continued involvement of such persons with Addax Petroleum Corporation;

“ConocoPhillips” means ConocoPhillips Company together with all of its subsidiaries;

“contingent resources” means the best estimate quantities of oil or gas estimated at a given date to be potentially recoverable from known accumulations but that are not currently economic;

“Corporation” or “Addax Petroleum” means (i) before the closing of this offering, APNV, together with all of its subsidiaries and (ii) after the closing of this offering, Addax Petroleum Corporation, together with all of its subsidiaries;

“Cost Oil” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“Credit Facility” means the Amended and Restated Senior Secured Reducing Revolving Credit Facility Agreement dated June 14, 2005 between Addax Petroleum, Addax Petroleum Overseas Limited, Addax Petroleum Development (Nigeria) Limited, Addax Petroleum Exploration (Nigeria) Ltd. and Addax Petroleum Services Limited, BNP Paribas S.A. and other original lenders;

“Crude Oil Supply Agreements” means the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement, each dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“developed non-producing reserves” means those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown;

“developed producing reserves” means those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty;

“developed reserves” means those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (e.g. when compared to the cost of drilling a well) to put the reserves in production. The developed category may be subdivided into producing and non-producing;

“Devon Energy” means Devon Energy Corporation together with all of its subsidiaries;

“Disputed Area” means the area of OML123 awarded to Cameroon pursuant to the October 10, 2002 ruling of the International Court of Justice;

“EBITDA” is defined as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest. EBITDA is not a standard measure under Canadian GAAP. EBITDA measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See **“Presentation of Financial Information”**;

“Ebughu Platform” means the production platform located in the Ebughu field in OML123;

“ENI” means ENI S.p.A.;

“ERHC Energy” means ERHC Energy, Inc. together with all of its subsidiaries;

“ExxonMobil” means ExxonMobil Corporation together with all of its subsidiaries;

“FOB” means free on board;

“FPSO” means floating production storage and offloading vessel;

“GDP” means gross domestic product;

“gross” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest prior to the deduction of royalties and NNPC’s share of Profit Oil (which reserves are reported as **“working interest”** in the Reserve Report) and (ii) in respect of acreage, wells and seismic data, 100 per cent of same;

“GTL” means gas to liquids;

“HSE” means health, safety and environment;

“Izombe Flow Station” means the Izombe production and flow station located in OML124;

“Joint Border Commission” means the Nigeria Cameroon Mixed Commission established following the October 10, 2002 decision of the International Court of Justice to peacefully apply the decision;

“Joint Development Zone” or **“JDZ”** means the zone for joint development of petroleum and other resources established by treaty between Nigeria and the Democratic Republic of Sao Tome and Principe in the overlapping area of their respective maritime boundary claims;

“Kiarsseny Agreement” means the Corporation’s farm-in agreement with Tullow Oil for a 42.5 per cent interest in the Kiarsseny Production Sharing Contract;

“Kiarsseny Production Sharing Contract” means the Production Sharing Contract between the Government of Gabon and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from Kiarsseny;

“Kiarsseny Property” means the Kiarsseny license area, which is located offshore Gabon, where the Corporation is engaged in development and exploration activities to extract crude oil and natural gas liquids pursuant to the Kiarsseny Production Sharing Contract;

“Knock Adoon” means the floating production storage and offloading vessel described under the heading **“Properties and New Ventures — Nigeria Properties — OML123 — Production Facilities”**;

“Knock Taggart” means the floating production, storage and offloading vessel described under the heading **“Properties and New Venture — Nigeria Properties — OML123 — Production Facilities”**;

“LNG” means liquefied natural gas;

“LPG” means liquid petroleum gas;

“**Management Services Agreement**” means the Management Services Agreement, to be entered into prior to the closing of this offering and made effective January 1, 2006 between APS and AOG;

“**NDDC**” means the Niger Delta Development Commission;

“**net**” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest after deduction of Royalty Oil and NNPC’s share of Profit Oil and (ii) in respect of acreage, wells and seismic data, that share attributable to Addax Petroleum’s working interest;

“**Net Offering Price**” means the price per share at which the Offered Shares are sold in this offering less the Underwriters’ fees per Offered Share;

“**net profit interest**” means an interest in an oil and gas property consisting of a share of profits after the recovery of the costs of development and production;

“**Ngosso Concession**” means the concession contract between the Government of Cameroon, the Corporation and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from the Ngosso Property;

“**Ngosso Property**” means the Ngosso license area offshore Cameroon where the Corporation is engaged in development and exploration activities to extract crude oil, natural gas liquids and natural gas pursuant to the Ngosso Concession;

“**NI 51-101**” means National Instrument 51-101 *Standards of Disclosure for Oil and Gas Activities* of the Canadian Securities Administrators;

“**Nigerian Marginal Fields**” has the meaning given to it under the heading “Fiscal Terms — Nigeria — Nigerian Marginal Fields”;

“**NNPC**” means Nigerian National Petroleum Corporation together with all of its subsidiaries;

“**Non-Competition Agreement**” means the non-competition agreement between Addax Petroleum Corporation and AOG, to be entered into prior to the closing of this offering;

“**NSAI**” means Netherland, Sewell & Associates, Inc., independent oil and natural gas reservoir engineers;

“**Occidental**” means Occidental Petroleum Corporation together with all of its subsidiaries;

“**OECD**” means Organization for Economic Co-operation and Development;

“**Offered Shares**” means the securities offered by Addax Petroleum Corporation to the public hereunder, including any shares issued upon the exercise of the Over-Allotment Option unless the context otherwise requires, at a price of CDNS ● per share;

“**Official Selling Price**” means the sales price published by NNPC for the sale of Nigerian government and NNPC crude oil entitlement to trade buyers for export. The Official Selling Price is issued by NNPC for each type of crude oil to be lifted by traders and published by the middle of each month prior to the month of lifting;

“**Oil Mining Lease**” or “**OML**” means a lease issued by the Nigerian government upon conversion of an Oil Prospecting License giving the lessee the exclusive right to produce petroleum from the geographical area covered by the Oil Mining Lease;

“**Oil Prospecting License**” or “**OPL**” means a license issued by the Nigerian government to one or more oil companies (including NNPC) giving the licensee the exclusive right to explore for petroleum in the geographical area covered by the Oil Prospecting License;

“**Okwok Property**” means the Okwok license area, located in OML67 offshore Nigeria;

“**Okwori Blend**” means the crude oil produced from OPL90;

“**Okwori Crude Oil Supply Agreement**” means the Okwori Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“**Okwori Terminal**” means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OPL90 where oil from OPL90 is loaded into ocean going tankers;

“**OML114 Parties**” means Moni Pulo Limited and Brass Exploration Unlimited;

“**OML123**” means the property subject to Oil Mining Lease 123 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OML124**” means the property subject to Oil Mining Lease 124 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OPEC**” means the Organization of the Petroleum Exporting Countries;

“**OPL90**” means the property subject to Oil Prospecting License 90 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant a Production Sharing Contract;

“**OPL225**” means the property subject to Oil Prospecting License 225 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant to a Production Sharing Contract;

“**Oriental Energy**” means Oriental Energy Resources Limited together with all of its subsidiaries;

“**Oriental Joint Venture Agreement**” means the joint venture agreement effective September 14, 2005 between Addax Petroleum and Oriental Energy;

“**Over-Allotment Option**” means the over-allotment option granted by Addax Petroleum Corporation to the Underwriters which is exercisable, in whole or in part, at any time until 30 days after closing to purchase from the Corporation up to an additional • Common Shares, at the same price as the Common Shares offered hereunder, to cover over-allotments, if any, and for market stabilization purposes;

“**Paris Club**” means the informal group of official creditors whose role is to find co-ordinated and sustainable solutions to the payment difficulties experienced by debtor nations;

“**Petrobras**” means Petróleo Brasileiro S.A. together with all of its subsidiaries;

“**Petroleum Act**” means the *Petroleum Act* (Nigeria) of 1969, as amended;

“**possible reserves**” means those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves;

“**PPT**” means Petroleum Profits Tax;

“**PPT Act**” means the *Petroleum Profits Tax Act* (Nigeria) as amended;

“**Pre-IPO Transactions**” means the declaration and payment of dividends by APNV and the acquisition of all of the issued and outstanding shares of APNV by Addax Petroleum Corporation as described under the heading “Addax Petroleum — Pre-IPO Transactions”;

“**probable reserves**” means those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves;

“**Production Sharing Contract**” or “**PSC**” means a contract whereby a government or government corporation contracts with a petroleum company to explore for, develop and extract petroleum substances in an area that is subject to a license held by the government corporation, at the risk and expense of the petroleum company, in exchange for a share of production;

“**Profit Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“**prospective resources**” means the best estimate quantities of oil and gas estimated on a given date to be potentially recovered from undiscovered accumulations. They are technically viable and economic to recover;

“**proved reserves**” means those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves;

“**Realizable Price**” means “Realizable Price” as defined under the heading “Fiscal Terms — Nigeria”;

“**Reserve Report**” means the engineering report dated December 5, 2005 prepared by NSAI evaluating the crude oil reserves attributable to Addax Petroleum’s properties and certain resources effective as of September 30, 2005, in accordance with the standards contained in the COGE Handbook and the reserves and resources definitions set out by the Canadian Securities Administrators in NI 51-101 and the COGE Handbook;

“**reserves**” means those quantities of oil and gas anticipated to be economically recoverable from discovered resources;

“**Royalty Oil**” means “Royalty Oil” as defined under the heading “Fiscal Terms — Nigeria”;

“**Share Transfer Agreement**” means the share transfer agreement between a subsidiary of AOG and Addax Petroleum Corporation effective • , 2006;

“**Shell**” means Royal Dutch Shell p.l.c. together with all of its subsidiaries;

“**Statoil**” means Statoil ASA together with all of its subsidiaries;

“**Tax Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“**Temporary Production Unit**” or “**TPU**” means a temporary production unit which is used to produce petroleum on a temporary basis;

“**Total**” means TOTAL S.A. together with all of its subsidiaries;

“**Trademark Agreement**” means the Trademark Agreement, to be entered into prior to the closing of this offering and made effective January 1, 2006, between Addax Petroleum Corporation and AOG;

“**TSX**” means the Toronto Stock Exchange;

“**Tullow Oil**” means Tullow Oil p.l.c. together with all of its subsidiaries;

“**Underwriters**” means, collectively, RBC Dominion Securities Inc., Merrill Lynch Canada Inc., Scotia Capital Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited;

“**Underwriting Agreement**” means the underwriting agreement dated • , 2006 among the Corporation, AOG, and the Underwriters with respect to this offering; and

“**undeveloped reserves**” means those reserves expected to be recovered from known accumulations where a significant expenditure (e.g. when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

CURRENCY AND EXCHANGE RATE INFORMATION

Except as otherwise indicated, references to "\$" and to "dollar" in this prospectus refer to the currency of the United States of America.

The following tables set forth, for each period indicated, the high and low exchange rates for one United States dollar, expressed in Canadian dollars, the average for such exchange rates for each period and the exchange rate at the end of such period, in each case based on the noon buying rate in Canadian dollars as quoted by the Bank of Canada (the "Noon Buying Rate").

	<u>Previous Three Months (2005)</u>			<u>Year Ended December 31,</u>		
	<u>November</u>	<u>October</u>	<u>September</u>	<u>2004</u>	<u>2003</u>	<u>2002</u>
Rate at end of period	\$1.1674	\$1.1752	\$1.1588	\$1.1970	\$1.292	\$1.580
Average rate during period	\$1.1811	\$1.1770	\$1.1774	\$1.3013	\$1.401	\$1.570
High	\$1.1961	\$1.1882	\$1.1888	\$1.3957	\$1.575	\$1.613
Low	\$1.1657	\$1.1627	\$1.1627	\$1.1759	\$1.292	\$1.511

On December 14, 2005 the Noon Buying Rate for \$1.00 United States was \$1.1531 Canadian.

FORWARD LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward looking statements under applicable securities legislation. In this prospectus, the words "may", "would", "could", "should", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect" and similar expressions, as they relate to the Corporation, are often, but not always, used to identify forward looking statements. Such statements reflect the Corporation's current views with respect to future events and are subject to certain risks, uncertainties and assumptions; including, without limitation, those described in this prospectus. Many factors could cause the Corporation's actual results, performance or achievements to vary from those described in this prospectus. If one or more of these risks or uncertainties materialize, or if the assumptions underlying forward looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected.

In particular, this prospectus contains forward looking statements pertaining to the following:

- oil and gas reserve and resource quantities and the discounted present value of future net cash flows from these reserves;
- the ultimate recoverability of reserves;
- future production levels;
- the amount, nature, timing and effects of capital expenditures;
- plans for drilling wells;
- expectations regarding the negotiation of contractual rights;
- prices for oil and natural gas;
- timing and amount of future production, forecasts of capital expenditures and the sources of financing thereof;
- operating and other costs;
- business strategies and plans of management;
- anticipated benefits and enhanced shareholder value resulting from prospect development and acquisitions; and
- treatment under the fiscal terms of Production Sharing Contracts and governmental regulatory regimes.

The Corporation's actual results could differ materially from those anticipated in these forward looking statements if the assumptions underlying them prove incorrect, or if one or more of the uncertainties or risks described elsewhere in this prospectus materializes. See "Risk Factors". Therefore prospective investors are cautioned not to rely unduly on these forward looking statements. The Corporation does not intend, and does not assume any obligation, to update any forward looking statements.

PRESENTATION OF FINANCIAL INFORMATION

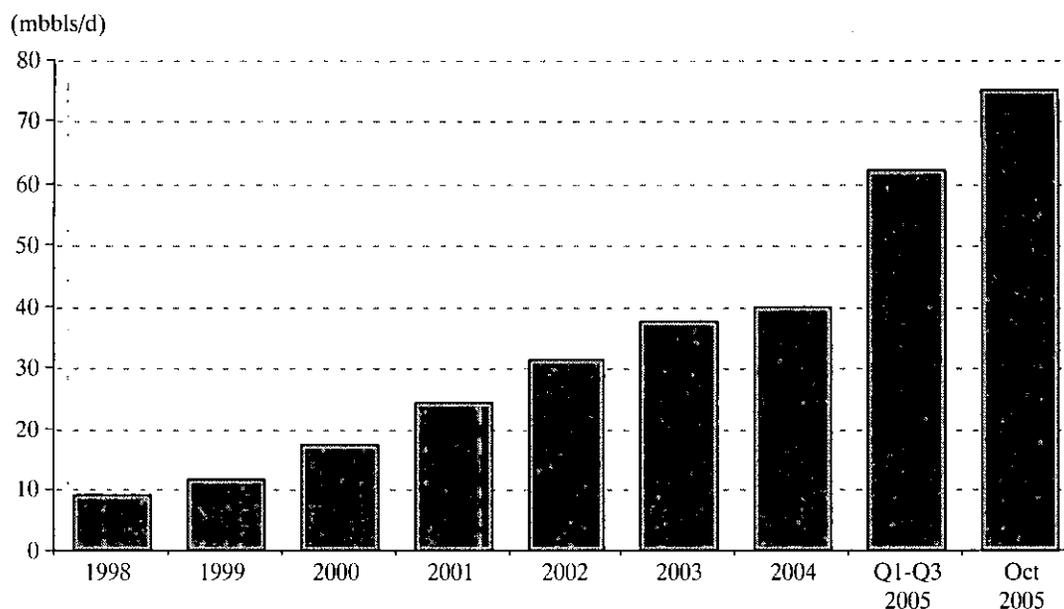

EBITDA, CFFO, average realized price per barrel sold, and operating cost per barrel sold are not recognized measures under Canadian GAAP. Management believes that in addition to net income, EBITDA, CFFO, average realized price per barrel sold, and operating cost per barrel sold are useful supplemental measures as they demonstrate the Corporation's ability to generate the cash necessary to fund future growth through capital investment or repay debt. Investors are cautioned, however, that these measures should not be construed as an alternative to net income determined in accordance with Canadian GAAP as an indication of the Corporation's performance. Addax Petroleum's method of calculating these measures may differ from other companies and accordingly, they may not be comparable to measures used by other companies. For these purposes, Addax Petroleum defines (i) EBITDA as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest; (ii) CFFO as cash from operating activities before changes in non-cash working capital; (iii) average realized price per barrel sold as revenue from petroleum sales for the period divided by the quantity of oil sold in that period; and (iv) operating cost per barrel sold as the operating costs for the period divided by the quantity of oil sold in that period.

ADDAX PETROLEUM

Overview

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria, and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

*Addax Petroleum's Average Oil Production
1998 - October 2005*

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of CFFO. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of CFFO. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by NSAI.

Corporate History

Addax Petroleum was founded in 1994 by AOG to evaluate and pursue oil and gas exploration and production opportunities in West Africa. Through its other subsidiaries, AOG carries on several different businesses worldwide with particular emphasis on Africa, including petroleum and refined products trading, oil storage, retail petroleum products and mining businesses. AOG was incorporated in 1987 and has established itself as one of the largest independent oil trading companies in Africa and the largest marine fuel supply company in West Africa.

Addax Petroleum is the only subsidiary of AOG involved in the exploration for, and production of, petroleum. AOG's strategy is to conduct its upstream petroleum business entirely through Addax Petroleum

and, therefore, pursuant to the Non-Competition Agreement, it will agree not to compete with Addax Petroleum in such business, provided that AOG and Jean Claude Gandur together own not less than 25 per cent of the Common Shares. Subject to the same proviso, AOG will also agree that any upstream petroleum business opportunities made available to it will first be offered to Addax Petroleum; if Addax Petroleum declines the opportunity, AOG may then pursue it.

In 1994, AOG decided to use its experience in Africa and in the oil industry to diversify its business to include oil and gas exploration and production. After the formation of Addax Petroleum in 1994, management began evaluating opportunities in West Africa. In 1995, Addax Petroleum acquired a 90 per cent interest in a Production Sharing Contract with the Government of Côte d'Ivoire relating to an offshore field known as the Espoir field. In 1997, Addax Petroleum sold 24 per cent interests in the Espoir field Production Sharing Contract to each of Ranger Oil Limited (now Canadian Natural Resources Limited) and Tullow Oil. Addax Petroleum sold a further 15 per cent interest in the Espoir field Production Sharing Contract to Canadian Natural Resources Limited in 2000 and the remainder of its interest in 2001.

In May 1998, the Corporation entered into Production Sharing Contracts with the Nigerian government for OML123, OML124, OPL90 and OPL225. Prior to this, Ashland had held their own Production Sharing Contracts relating to these properties, which were terminated by the Nigerian government when Ashland attempted to sell its interests under the Production Sharing Contracts without prior government approval. The Corporation acquired Ashland's remaining assets and rights relating to these properties pursuant to an acquisition agreement dated April 8, 1998 between Addax Petroleum and Ashland. See "Properties and New Ventures — Nigeria Properties".

In December 2002, Addax Petroleum expanded its operations in West Africa by acquiring a 60 per cent interest in the Ngosso Concession, offshore Cameroon. The Ngosso Property is operated by Addax Petroleum. See "Properties and New Ventures — Cameroon".

In January 2004, Addax Petroleum further expanded by acquiring a 42.5 per cent farm-in interest in the Kiarsseny Production Sharing Contract, offshore Gabon. The Kiarsseny Property is operated by Tullow Oil. See "Properties and New Ventures — Gabon".

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. See "Properties and New Ventures — Middle East New Ventures".

In September 2005, Addax Petroleum entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which it agreed to acquire a 40 per cent interest in the Okwok Property, located in OML67 offshore Nigeria, subject to the completion of a farm-in agreement and government approval. The Corporation expects to conduct operations for the property in its capacity as technical advisor. See "Properties and New Ventures — Nigeria Properties".

In November 2005, Addax Petroleum made its first strategic move into deep-water exploration when it signed a participation agreement with ERHC Energy pursuant to which the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property. See "Properties and New Ventures — Joint Development Zone".

Pre-IPO Transactions

Addax Petroleum Corporation was incorporated under the *Canada Business Corporations Act* on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. On December 5, 2005 the articles of Addax Petroleum Corporation were amended to authorize the issue of an unlimited number of Preferred Shares, issuable in series.

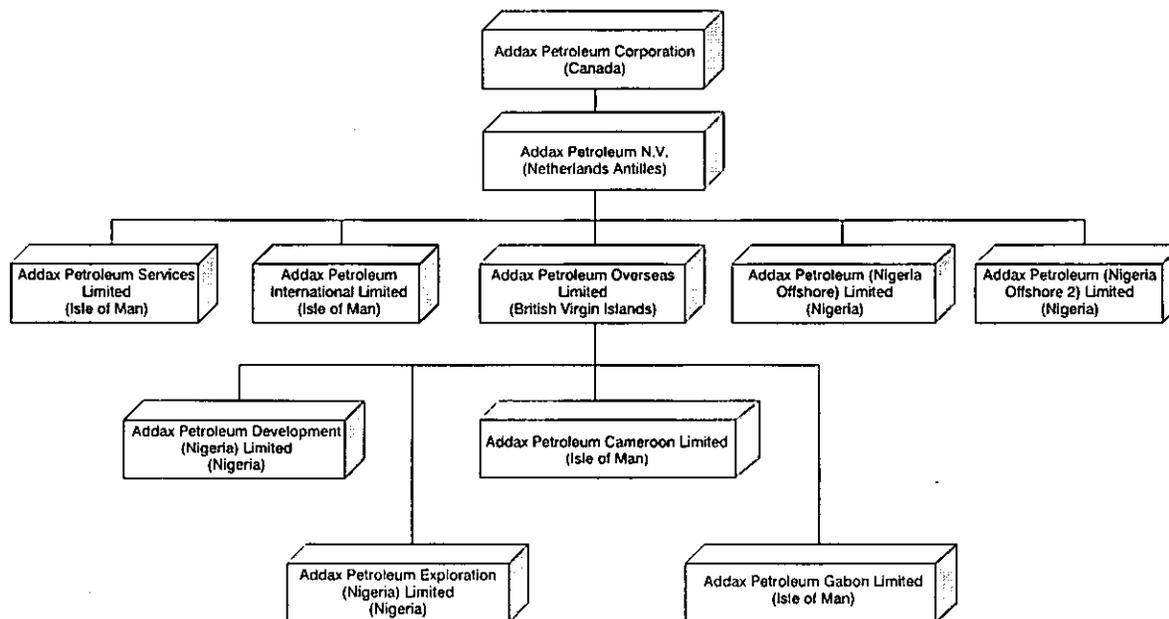

Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's

CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.

Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for • Common Shares and \$ • million.

Corporate Structure

At the closing of this offering, the Corporation will beneficially and wholly own, directly or indirectly, 10 material subsidiaries. The chart below shows the intercorporate relationships among the Corporation and its material subsidiaries at the closing of this offering.

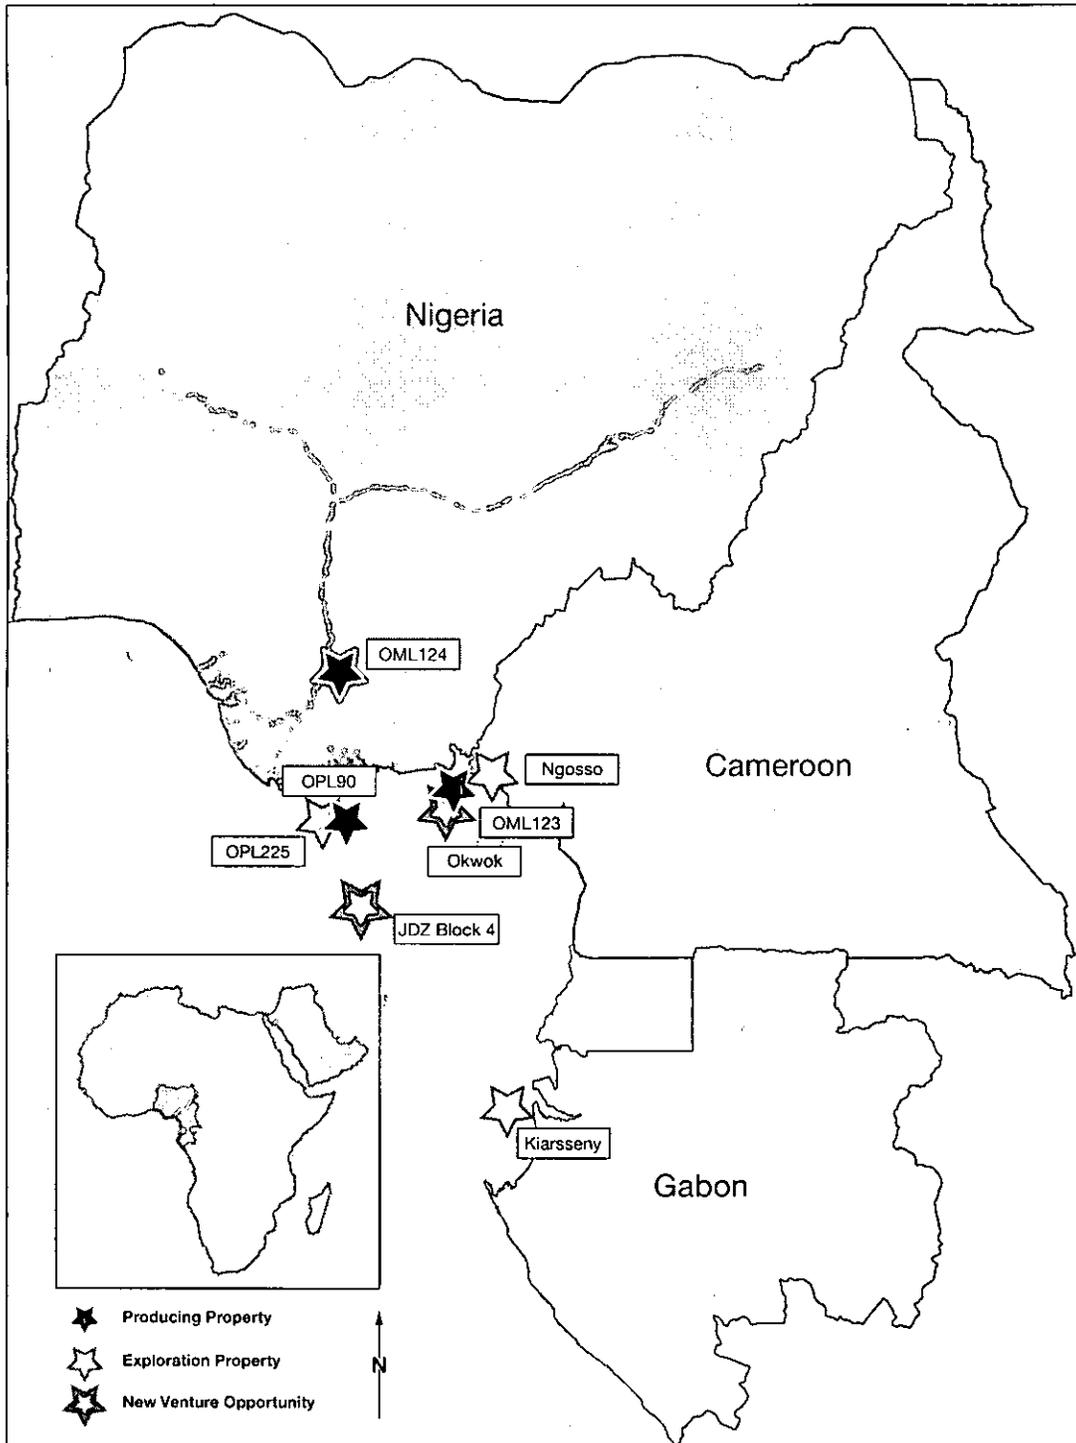

Properties Summary

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);
 - OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
 - OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

*Addax Petroleum
Properties and New Venture Opportunities*

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		1,133,900			74,450	62,090	109.3	201.3	284.1

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Major New Venture Opportunities Summary

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be

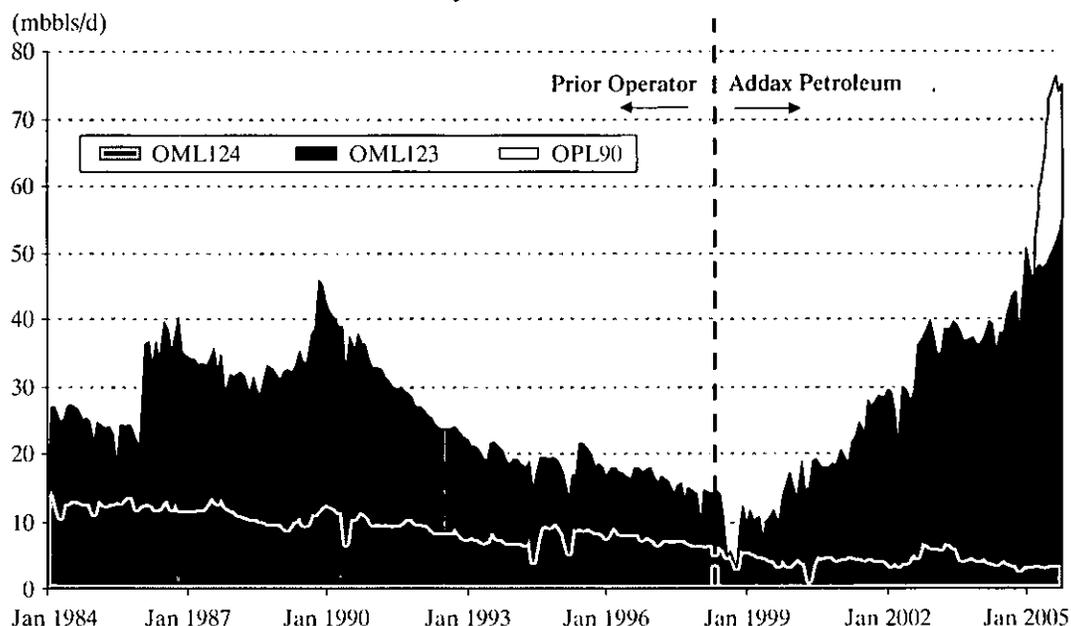

35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mbbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

*Average Monthly Oil Production
January 1984 - October 2005*

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mbbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mbbls/d in 2005 to 85 mbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI estimates Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum's excellent reputation and strong relationships help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to 9.6 million Common Shares (representing up to eight per cent of AOG's current shareholdings) be issued to current and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and Technical and Reserves Committees comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30,		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	2005 Total	2004 Total	2003 Total
		(\$million)								
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

(1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production including the replacement of the Knock Taggart FPSO (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007) as well as a two-rig drilling program in OML123 that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

Capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006. These capital expenditures are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. The budgeted capital expenditures will fund a one-rig drilling program in OPL90 and OPL225 that includes:

- the completion of development drilling in the Okwori field;
- development drilling in the Nda field and tie back to the OPL90 FPSO; and
- seismic data acquisition and drilling of three exploration wells.

Capital expenditures for the Corporation's other properties and major new venture opportunities are budgeted to be \$6 million in the fourth quarter of 2005 and \$115 million in 2006. These expenditures will be incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

PROPERTIES AND NEW VENTURES

Addax Petroleum's principal oil and gas properties are in the West African countries of Nigeria, Cameroon and Gabon.

Nigeria Country Discussion

Overview

Nigeria is Africa's most populous country and largest oil producer. The following table highlights some important statistics regarding Nigeria, its people and its economy.

Total Area	923,768 km ² (approximately 1.5 times the area of Alberta, Canada)
Population	128.8 million
Major Cities	Lagos, Kano, Ibadan, Kaduna, Port Harcourt, Abuja (capital)
Language	English (official), Hausa, Yoruba, Igbo (Ibo), Fulani
Literacy	68 per cent of population over 15 years of age can read and write
Government	Federal Republic
Legal System	Based on English common law (Islamic law in the north)
GDP	\$125.7 billion (2004 estimate)
GDP per capita	\$1,000 (2004 estimate)
Oil Production	2.5 mmbbls/d (2004 estimate)
Net Oil Exports	2.2 mmbbls/d (2004 estimate)
Currency	Naira
Inflation	16.5% in 2004

Sources: The U.S. Central Intelligence Agency — The Worldfact Book 2005, the Energy Information Administration and U.S. Department of Energy.

Recent History

Nigeria gained independence from the United Kingdom on October 1, 1960 and has subsequently experienced periods of military and democratic rule. The death of General Sani Abacha in 1998 marked the most recent transition to democratic government, which saw the election of President Olusegun Obasanjo in 1999.

The development of the oil industry in the Niger Delta in the south of the country has been a key factor shaping modern Nigeria. Oil was first discovered in the 1950s and exploration and production increased rapidly in the 1960s. The country's oil industry now accounts for approximately 20 per cent of GDP, 96 per cent of export earnings and 65 per cent of budgetary revenues.

Government and Legal System

In 1999, Nigeria adopted a new constitution and held democratic elections. The Nigerian government has a three-tier structure: the federal government, 36 state governments and many local government administrations. The structure of the federal government is similar to that of the United States. Under the Nigerian constitution, the President can serve a maximum of two terms of four years each. The Parliament comprises two houses: the House of Representatives, with 346 elected members, and the Senate, with 107 elected members. The most recent elections were held in April 2003 and saw the re-election of President Obasanjo of the People's Democratic Party for a second term.

Nigeria's legal system is based on English common law and much of the legislation covering the country's oil industry was originally based upon equivalent legislation in England. Islamic law is also used in some states in the north.

Economic Environment

Nigeria has significant agricultural, mineral, marine and forest resources, but the economy of Nigeria is strongly dependent upon the international oil price. The Obasanjo government is seeking to broaden the country's economy and has initiated structural reforms with new competition policies and a privatization program. The Bureau for Public Enterprise has the mandate to privatize state-owned enterprises in all sectors of the economy, including hotels, insurance, paper mills, fertilizer plants, oil refineries, ports and the electrical, telephone, rail and water utilities. To date, the Nigerian government has privatized its hotel, insurance and cement enterprises. Included in the enterprises scheduled to be privatized are four oil refineries owned by NNPC.

In recent years, Nigeria has attracted significant international support, both from individual governments and international agencies. The World Bank currently has a total commitment to Nigeria of approximately \$444 million in the areas of privatization, power transmission, healthcare, community development, education, water and economic capacity building. Further, representatives of the Paris Club creditor countries met in October 2005 and agreed with the representatives of the Nigerian government on a comprehensive treatment of its debt. In total, this agreement allows Nigeria to cancel approximately \$18 billion of debt (including moratorium interest) representing an overall cancellation of about 60 per cent of its debt to the Paris Club.

International Relations

Nigeria is a member of the United Nations, the Organization of African Unity, the Commonwealth of Nations and the Economic Community of West African States. Nigeria became a member of OPEC in 1971.

On October 10, 2002, the International Court of Justice ruled on the long disputed Cameroon-Nigeria land and maritime boundary and awarded the Bakassi Peninsula and adjacent offshore acreage, including part of the Corporation's acreage in OML123 (the "Disputed Area"), to Cameroon. Nigeria initially rejected the ruling but formed a Joint Border Commission to peaceably resolve the dispute. The dispute relating to the land boundary involving the Bakassi Peninsula is in the course of being resolved peacefully and the Joint Border Commission has initiated steps to resolve the maritime boundary dispute. The issue regarding the maritime boundary continues to have implications for Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Petroleum Industry

Oil

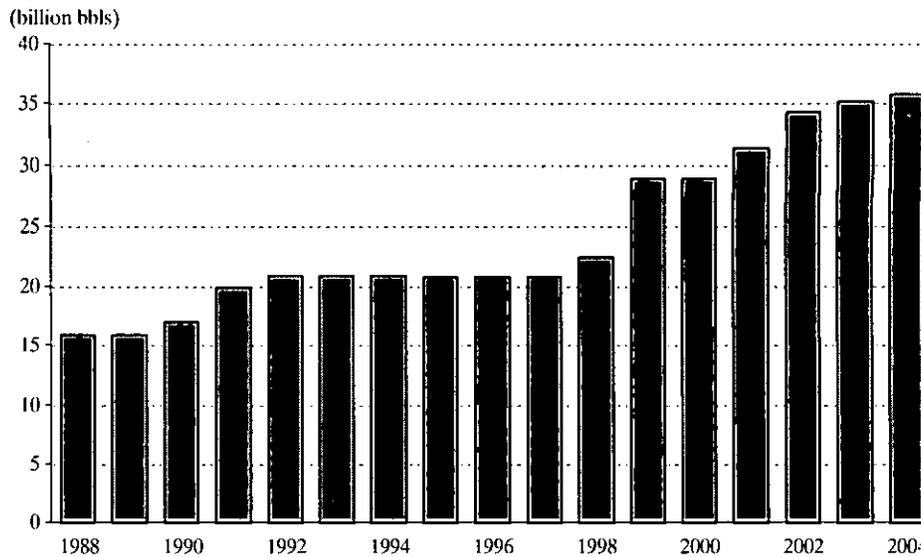

The crude oil supply market is truly global with approximately 31 per cent of 2004 production originating from the Middle East, 23 per cent from Europe and Eurasia, 14 per cent from Latin America, 12 per cent from Africa, 10 per cent from North America and 10 per cent from Asia Pacific.

The oil industry in Nigeria has a long history. Shell D'Arcy (a Shell/BP joint venture) started exploring for oil in the country in 1938. Other foreign oil companies entered Nigeria in the 1950s and 1960s, including Mobil (now ExxonMobil), Texaco (now Chevron), Gulf (now Chevron), Safrap (later Elf and now Total) and Agip. Apart from BP, all of these international oil and gas companies still maintain a significant presence in Nigeria.

Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. The Nigerian government has expressed its desire to increase the country's proved oil reserves to 40 billion barrels by 2010 and is encouraging the continued development and exploration of the country's oil resources to do so.

The following chart shows the increase in Nigeria's proved crude oil reserves over the past 17 years, with the majority of the increase occurring in the last six years.

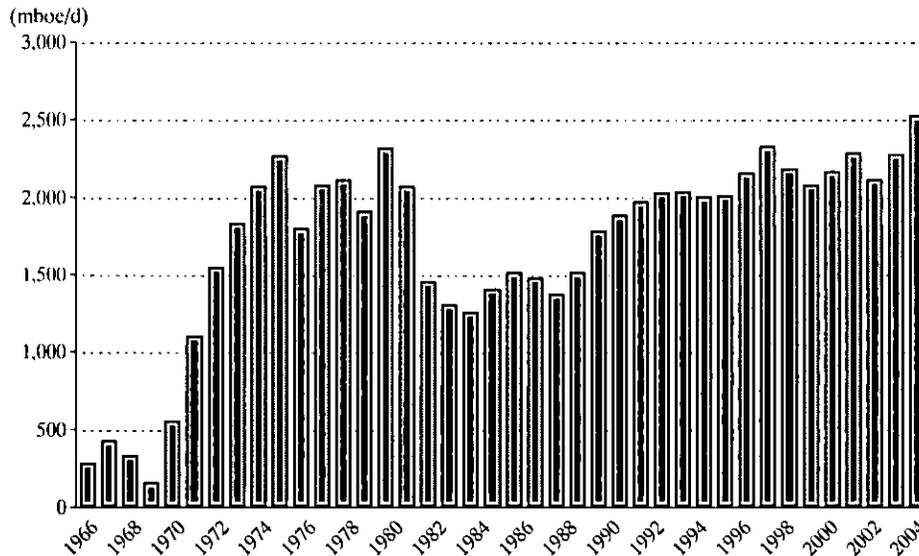

Nigerian Proved Crude Oil Reserves

Source: OPEC Annual Statistical Bulletin, 2004.

The first commercial oil discovery in Nigeria was made in 1956 by Shell D'Arcy and subsequent discoveries and development activity saw production steadily climb to reach in excess of two mmbbls/d in the mid-1970s. During the 1980s, oil production in Nigeria declined in part due to an unfavourable investment environment. However, development activity and production increased after the Nigerian government revised the fiscal terms governing oil production. The history of oil production in Nigeria is shown in the following chart.

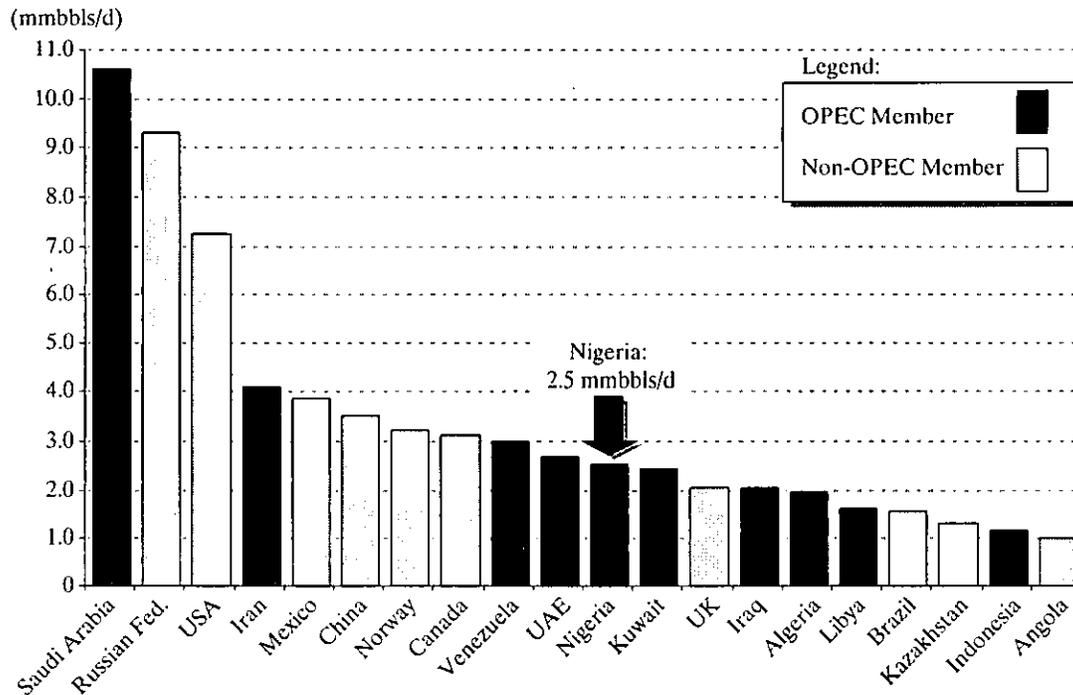

Nigerian Crude Oil Production

Source: BP Statistical Review of World Energy, June 2005.

Nigeria ranks as one of the world's major oil producers and the largest producer of oil in Africa. The country's 2004 oil production is estimated to have been approximately 2.5 mmbbls/d, representing 27 per cent of the continent's total oil production and 3.2 per cent of the world's production (compared to Canada at 3.8 per cent). The following chart, showing 2004 oil production for selected major oil producing countries, demonstrates Nigeria's importance as a global oil producer.

Oil Production by Selected Country, 2004

Source: BP Statistical Review of World Energy. June 2005.

The majority of oil in Nigeria is produced by joint ventures between NNPC and international oil and gas companies, which are the operators of the joint venture properties. There are joint ventures between NNPC and Shell (the largest joint venture), ExxonMobil, Chevron, Agip and Total. NNPC has a 55 per cent interest in the Shell joint venture and 60 per cent interest in each of the other joint ventures. In addition, ConocoPhillips, Devon Energy, Nexen Inc., Petrobras, Statoil and other foreign companies hold interests in Nigeria.

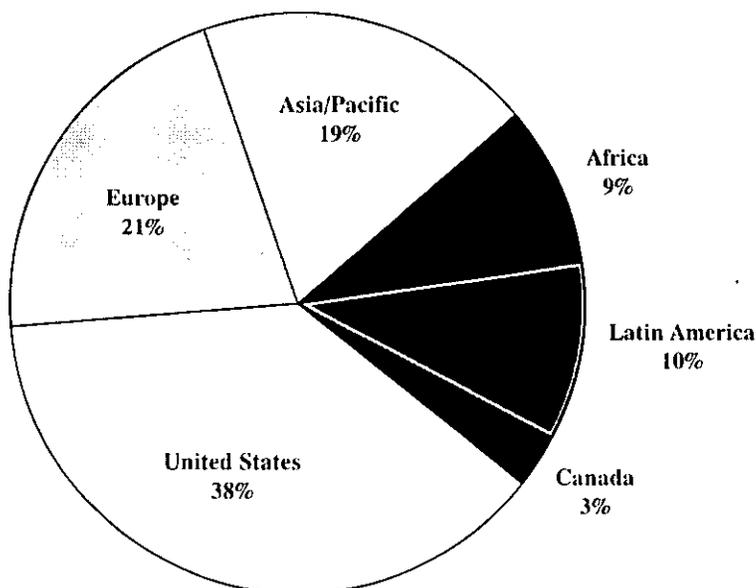

The following table shows the estimated 2004 daily production by principal operators in Nigeria.

	2004 Production (estimated) (mmbbls/d)
Shell	907
ExxonMobil	590
Chevron	352
Agip	185
Total	158
Addax Petroleum	40

Source: Estimates derived from Wood Mackenzie, except for Addax Petroleum.

In 2004, Nigeria exported approximately 2.2 mmbbls/d or 88 per cent of the country's total oil production, with the United States being the largest single export market. Nigeria is the fifth largest supplier of crude oil to the United States, behind Canada, Mexico, Saudi Arabia and Venezuela, supplying approximately 8.5 per cent of total United States crude oil imports. The following chart shows the principal export markets for Nigerian oil in 2004.

*Country/Market for Nigerian Oil
2004 Exports*

Source: OPEC Annual Statistical Bulletin 2004.

The Nigerian government has announced a production target of 4 mmbbls/d by 2010. Future oil production in Nigeria is expected to increase with the continued development of many significant deep-water discoveries. Some of the significant discoveries and development projects announced by international oil and gas companies are described below.

Shell — Shell recently developed the deep-water Bonga field with estimated reserves of 700 mmbbls and expected plateau production of 225 mmbbls/d. Shell has also announced plans to develop the Bonga South West field which has estimated reserves of 600 mmbbls and the EA field which has estimated reserves of 350 mmbbls and expected plateau production of 170 mmbbls/d.

ExxonMobil — ExxonMobil is currently developing the deep-water Erha field which has estimated reserves of 500 mmbbls and expected plateau production of 150 mmbbls/d. ExxonMobil is also developing the Yoho field with estimated reserves of 400 mmbbls and expected plateau production of 150 mmbbls/d.

Chevron — Chevron is currently developing the deep-water Agbami field which has estimated reserves of 1,000 mmbbls and expected plateau production of 250 mmbbls/d.

Total — Total developed the Amenam Kpono field that came on-stream in July 2003 and has expected plateau production of 125 mmbbls/d in its first phase. Total has discovered two further fields, Usan and Akpo, with estimated reserves exceeding 500 mmbbls each.

Agip — Agip developed the first deep-water field in Nigeria, the Abo field, that began production in early 2003. Reserves are estimated to be 700 mmbbls and the plateau production is expected to be 300 mmbbls/d.

OPEC and Oil Production Quotas in Nigeria

Nigeria has been a member of OPEC since 1971. OPEC has eleven members who collectively supply approximately 40 per cent of the world's oil consumption and account for approximately two-thirds of the world's proved oil reserves. OPEC's member countries are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates and Venezuela. OPEC's stated objective is "to co-ordinate and unify petroleum policies among member countries, in order to secure fair and stable prices for petroleum producers; an efficient, economic and regular supply of petroleum to consuming nations; and a fair return on capital to those investing in the industry". At its March 2000 meeting, OPEC established a price band mechanism to respond to changes in world oil market conditions. Since its inception, the informal price band mechanism has been activated only once.

At its most recent meeting, OPEC established new production ceilings and quotas for individual members effective March 16, 2005. Nigeria's quota was set at approximately 2.3 mmbbls/d. NNPC allocates production quotas among oil producers in Nigeria. The allocations are based on the aggregate of the technical production limits per well for a producer as negotiated between the producer and the Nigerian government to reflect good oil field production practices. If the aggregate of all the producers' technical production limits exceeds Nigeria's OPEC quota, the production allocations among producers are reduced pro rata.

The Corporation applies for, on a monthly basis, and regularly receives an additional quota for the difference between its production quota and its expected production. At September 30, 2005, Addax Petroleum had a production quota of 65 mbbls/d and an additional production quota of 10 mbbls/d compared to its production of 73 mbbls/d for the same period. The Corporation anticipates increasing its production over the next two years to in excess of 80 mbbls/d. Given the current and anticipated growth of production in Nigeria, there is a risk that quota allocations may force Addax Petroleum to curtail its production in the future. However, except in one instance which was immaterial, the Corporation has not had to reduce its production due to the application of a monthly quota and has succeeded in obtaining an additional quota for the difference between its exportable production and its fixed monthly quota. In the current high oil price environment, Addax Petroleum does not expect that it will be required to reduce its production due to a quota constraint. See "Risk Factors."

Natural Gas

Nigeria's natural gas reserves were estimated by NNPC to be 181 tcf in 2004, making Nigeria the country with the eighth largest natural gas reserves in the world. To date, exploration and development activities in Nigeria have not focused on natural gas because of the lack of readily accessible markets. Approximately half of the Nigerian natural gas reserves represent associated gas, a co-product of oil production, and the other half non-associated gas. Currently, natural gas development legislation in Nigeria relates mainly to the development of associated gas. In late 2005 or 2006, the Nigerian government plans to pass new gas legislation that will address the development of non-associated gas.

Nigerian natural gas production is inferred from various industry sources to have been approximately five bcf/d in 2004, of which an aggregate of approximately 40 per cent was sold as LNG and natural gas liquids into international markets and as natural gas for use in power generation in Nigeria. Of the remaining gas production, the majority was flared and the rest was used in oil field operations.

The Nigerian government has announced its objective to increase natural gas revenue sales to match oil revenues by 2010. To achieve this objective, the government has announced its intention to facilitate gas export-oriented projects and increase domestic gas consumption. The Nigerian government has also announced what is commonly referred to as the "Flares Down by 2008" policy which is intended to encourage oil companies to develop natural gas projects in order to eliminate the flaring of associated natural gas by 2008. Although NNPC does not yet have a legislative mandate to eliminate natural gas flaring by 2008, it is strongly indicating to operators that this will be a requirement. The oil producers in Nigeria are making concerted efforts to eliminate flaring although full compliance may not be practically possible by 2008. By 2010, gas production is forecast to increase to 10 bcf/d of which 8 bcf/d (currently 1.3 bcf/d) will be exported as LNG and 2 bcf/d will be used to meet domestic demand, predominantly for power generation (currently 1 bcf/d).

The most significant natural gas project to date in Nigeria has been the construction of a liquefaction plant in 1999 at Bonny Island by Nigeria LNG Ltd. This company is owned by NNPC (49 per cent), Shell (25.6 per cent), Total (15 per cent) and Agip (10.4 per cent). Presently the plant has three LNG trains with capacity to export 8.7 million tonnes of liquefied natural gas per year consuming 1.3 bcf/d. Two additional trains are planned to be added to the plant to increase its capacity to 16.7 million tonnes per year by 2006 consuming 2.5 bcf/d and further LNG trains may be added thereafter. LNG from the plant is exported to customers in France, Italy, Portugal, Spain, Turkey and the United States.

To meet the projected increase in gas exports, a number of gas export projects are planned including GTL projects, other LNG projects and export pipelines. A GTL project proposed by Chevron is expected to produce 35 mbbbls/d of petroleum products and consume 0.35 bcf/d of gas. Other LNG projects have been proposed including conventional LNG projects at Brass River, led by ConocoPhillips and Agip, and at Escravos, led by Chevron, and two floating LNG facilities located on deep-water discoveries operated by ExxonMobil and Statoil. Export pipeline projects include the West Africa Gas Pipeline project with a consortium of international oil and gas companies (including Shell) led by Chevron, to export natural gas from Escravos to Ghana, Togo and Benin for power generation. Initially, this project will consume 0.14 bcf/d but consumption is expected to increase to 0.45 bcf/d. This project will also increase the capacity of the existing Escravos to Lagos pipeline from 0.3 bcf/d to 1.0 bcf/d. Of the planned projects, the Chevron GTL project at Escravos in western Nigeria is progressing and the other LNG projects are expected to be announced.

A major program is underway in Nigeria to expand gas-fired power generation capacity to meet the projected increase in domestic gas consumption. Major oil companies are anticipated to play an important role in constructing joint venture independent power plants. In connection with the expansion of the country's electrical power generation capacity, the Nigerian government has announced that it is restructuring the electricity sector in anticipation of privatizing the industry later in the decade. The Corporation is presently in discussions with NNPC to provide gas for power generation from OML123.

In addition to promoting gas consumption and domestic power generation, the Nigerian government is promoting the production and consumption of LPG. Compared to its West African neighbours, Nigeria consumes little LPG, most of which is imported. The Nigerian government is stimulating demand by removing import duties and has also begun a program to reactivate under-utilized LPG depots throughout the country to improve the distribution of LPG. The Corporation is presently considering investing in an LPG plant at its OML124 onshore property.

Legal Regime for the Petroleum Industry

The petroleum industry in Nigeria is governed by the *Petroleum Act*. Under the *Petroleum Act*, the ownership and control of oil and gas in Nigeria (including under its territorial waters and continental shelf) is vested in the Nigerian government. The Department of Petroleum Resources, in collaboration with other government agencies such as NNPC and the Ministry of the Environment, has the responsibility for enforcing the *Petroleum Act* and the related legislation and regulations governing the petroleum industry in Nigeria.

The Department of Petroleum Resources has wide regulatory powers which include issuing Oil Prospecting Licenses and Oil Mining Leases under the *Petroleum Act*, the approval of field development plans, the setting of production levels, the monitoring of industry work programs, the administration of fiscal incentives and the monitoring of oil production and exports. NNPC is the state owned petroleum company that holds the Nigerian government's equity shares in joint ventures and enters into Production Sharing Contracts with foreign oil companies on behalf of the Nigerian government.

An Oil Prospecting License gives the licensee the exclusive right to explore for petroleum in a specified area. An Oil Mining Lease gives the lessee the exclusive right to produce petroleum from a specified area. Under the *Petroleum Act*, an Oil Prospecting License may be converted into an Oil Mining Lease when the Nigerian government is satisfied that the license is capable of producing at least 10 mbbbls/d of crude oil. In practice, however, the Nigerian government generally allows production from areas covered by an Oil Prospecting License pending conversion to an Oil Mining Lease. The *Petroleum Act* provides for the relinquishment of certain areas within Oil Prospecting Licenses on their conversion to Oil Mining Leases, and within Oil Mining Leases ten years after the granting of such leases. Under the *Petroleum Act*, relinquishment is

subject to ministerial approval and may be subject to additional conditions as set forth in the applicable Production Sharing Contract. The Production Sharing Contract for OPL90 and OPL225 also requires Addax Petroleum to relinquish part of the license area to be agreed between Addax Petroleum and NNPC.

Oil Prospecting License licensees are required to conduct hazard and operability studies prior to implementing facilities design and construction or major modification projects. The licensee is also required to conduct an environmental impact assessment prior to commencing operations, in addition to the environmental impact assessment required for such specific activities as seismic survey, drilling campaign and installation of facilities and pipelines.

Contractual Framework

Most oil exploration and production activities in Nigeria are carried out under joint ventures or Production Sharing Contracts. All of Addax Petroleum's current production is under Production Sharing Contracts.

Under a joint venture, one or more oil companies enter into a joint operating agreement with NNPC whereby the oil companies and NNPC agree to jointly explore for, develop and produce petroleum pursuant to the terms of an Oil Prospecting License or Oil Mining Lease jointly held by them. Each partner in the joint venture contributes to the costs of exploration, development and production and shares the benefits or losses of the operations in accordance with its proportionate equity interest in the joint venture. Joint ventures currently account for the majority of Nigeria's total crude oil production.

The Nigerian government has more recently moved toward Production Sharing Contract arrangements, particularly with respect to oil exploration, development and production in Nigeria's deep offshore acreage. NNPC is the holder of the Oil Prospecting License or the Oil Mining Lease and one or more oil companies enter into a Production Sharing Contract with NNPC under which they agree to carry out oil exploration, development and production activities as a contractor on NNPC's behalf at the oil company's risk and expense in return for a share of production.

In 2003, the Nigerian government considered alternatives to increase the participation of indigenous or locally owned companies in oil exploration and production. The Marginal Field Development Program is a significant part of this initiative. Marginal fields are defined by guidelines issued by the Nigerian government in July 2001 as being any field that has reserves booked and reported annually to the Nigerian government and has remained unproduced for more than ten years. Marginal fields are subject to compulsory farmouts to indigenous companies under a competitive bid process. There have been a series of acreage awards under this program, the most recent being in April 2003, when 31 indigenous oil companies were awarded acreage covering marginal fields that the international oil and gas companies had chosen not to develop. These indigenous oil companies have been encouraged to enter into agreements with international oil and gas companies for assistance with financing and technical support; however, non-Nigerian companies are not permitted to hold more than a 40 per cent equity interest.

Geological Description

The Niger Delta Basin is Africa's largest and most prolific oil producing basin. It is also one of the world's largest delta systems of Tertiary age and covers an area greater than 75,000 km². Geologically, it is similar to the Mississippi Delta complex of the United States Gulf Coast, in that it has been fed by major river systems that have deposited a thick layer of sediment in a prograding delta system.

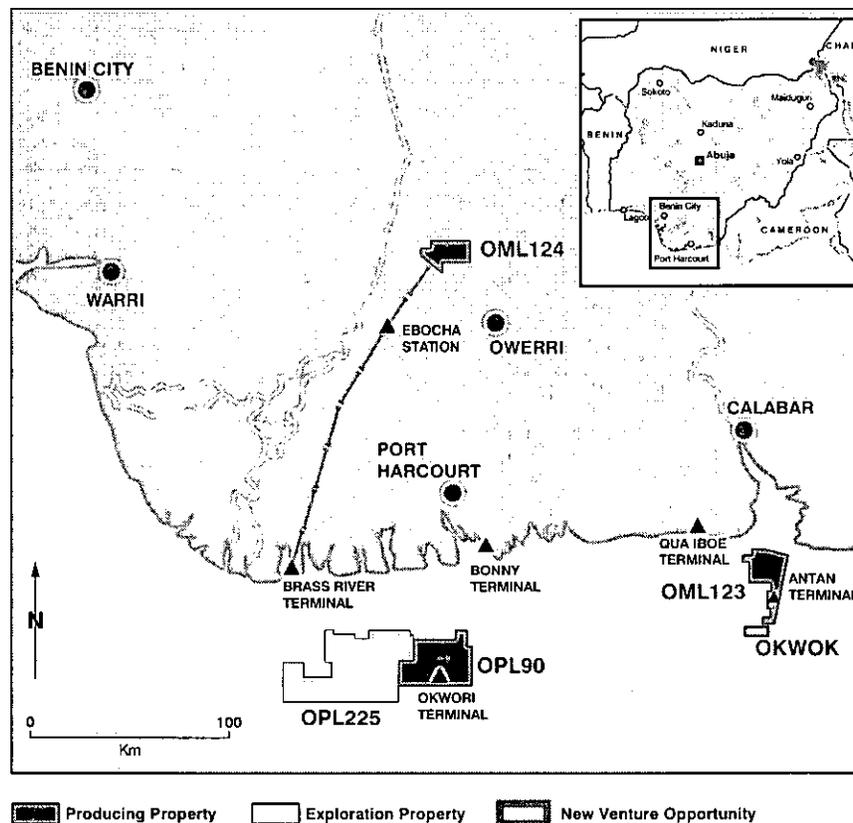

Three main lithologic formations are recognized in the basin: Benin, Agbada and Akata. These formations are usually further divided by each operator for each field. The reservoir sands in the Agbada formation are of good quality, often with Darcy permeabilities. The accumulations consist of primarily sweet, mainly light to medium oil (31° to 41° API) as oil rims with associated gas caps, and secondly, of heavy (less than 25° API) oil rims and unassociated gas. Producing oil rims are relatively thin (10 to 20 m, occasionally extending to 30 m). Most reservoirs are normally pressured with generally strong aquifer support.

Nigeria Properties

Within Nigeria, Addax Petroleum has a 100 per cent interest in a Production Sharing Contract covering OML123 and OML124, a 100 per cent interest in a Production Sharing Contract covering OPL90 and OPL225 and is pursuing a 40 per cent interest in the Okwok Property in OML67 (immediately adjacent to OML123) through the Oriental Joint Venture Agreement entered into in September 2005. OML123, OML124 and OPL90 are operated by the Corporation and contain producing oil fields as well as a number of development and exploration opportunities. OPL225 is operated by the Corporation and contains a discovery and a number of exploration opportunities. The Okwok Property contains the Okwok discovery where Addax Petroleum expects to conduct operations in its capacity as technical advisor. The Corporation has budgeted capital expenditures in Nigeria of \$161 million in the fourth quarter of 2005 and \$772 million in 2006, including budgeted capital expenditures on the Okwok Property but excluding expenditures in the JDZ.

The development of the natural gas industry, including the cessation of associated natural gas flaring by 2008, is a high priority for the Nigerian government. Currently the Corporation's Production Sharing Contracts covering OML123, OML124, OPL90 and OPL225 relate solely to commercial oil development but include the right to negotiate commercial terms with NNPC for gas development in the properties. As at September 30, 2005, NSAI reports gross contingent gas resources on Addax Petroleum's Nigeria properties to be 1.25 tcf. Addax Petroleum's natural gas strategy is intended to ensure that the Corporation complies with the requirement to cease associated natural gas flaring and also to position the Corporation to assist with, and participate in, the monetization of existing and future associated and non-associated natural gas reserves. The Corporation is currently in discussions to supply natural gas from all of its producing properties in Nigeria. See "Properties and New Ventures — Nigeria Country Discussion — Petroleum Industry — Natural Gas".

Nigeria Properties⁽¹⁾

Note:

(1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

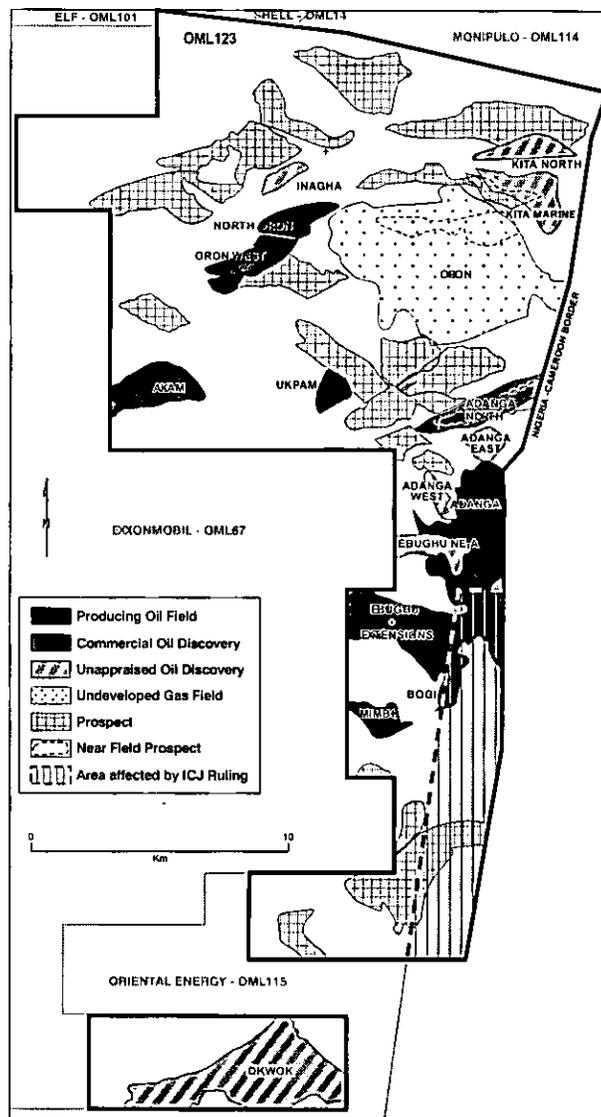

OML123

Overview

OML123 is the Corporation's largest property as measured by reserves and production. In the first nine months of 2005, OML123 produced an average of 46.0 mbbbls/d of oil from 52 wells with an average water cut of 35 per cent. Oil gravity ranges between 19° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OML123 to be 71.4 mmbbls and gross proved plus probable reserves to be 144.9 mmbbls. The Corporation expects production from OML123 to be approximately 48 mbbbls/d in 2006.

OML123 is located offshore approximately 70 km south of the town of Calabar and covers an area of 90,700 acres (367 km²) in water depths ranging from 3 to 40 m on the eastern edge of the Niger Delta. OML123 contains eight producing oil fields (Adanga, Ebughu and extensions, Oron West, North Oron, Akam, Bogi, Mimbo and Ukpam) and one undeveloped oil field (Adanga North). There are also six unappraised oil discoveries (Kita Marine, Inagha, Adanga East, Adanga West, Ebughu NE-A and Kita North), one large 8,600 acre (35 km²) undeveloped gas discovery (Oron) and several exploration prospects. Total capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006.

OML123

Production and Reserves

The following table summarizes the production and reserves in OML123.

Field	Number of Wells ⁽¹⁾	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
		9 months ended September 30, 2005 (bbls/d)	2004 (bbls/d)	Proved (mmbbls)	Probable (mmbbls)	Proved Plus Probable (mmbbls)
Adanga	19	22,720	18,730	23.2	26.6	49.8
Ebughu (and extensions)	22	15,960	12,210	13.6	4.7	18.3
Oron West and North Oron	8	5,420	3,390	25.2	25.4	50.6
Akam	9	960	700	1.4	1.0	2.4
Bogi	2	440	610	0.3	—	0.3
Mimbo	2	360	360	0.7	0.3	1.0
Ukpam	2	110	120	0.2	2.2	2.4
Adanga North	—	—	—	—	11.0	11.0
Kita North	—	—	—	6.9	2.3	9.2
Total	64	45,970	36,120	71.4	73.5	144.9

Notes:

- (1) Number of wells includes shut-in wells.
- (2) Proved and probable reserves as at September 30, 2005, as reported in the Reserve Report under "Forecast Prices and Costs Case".
- (3) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

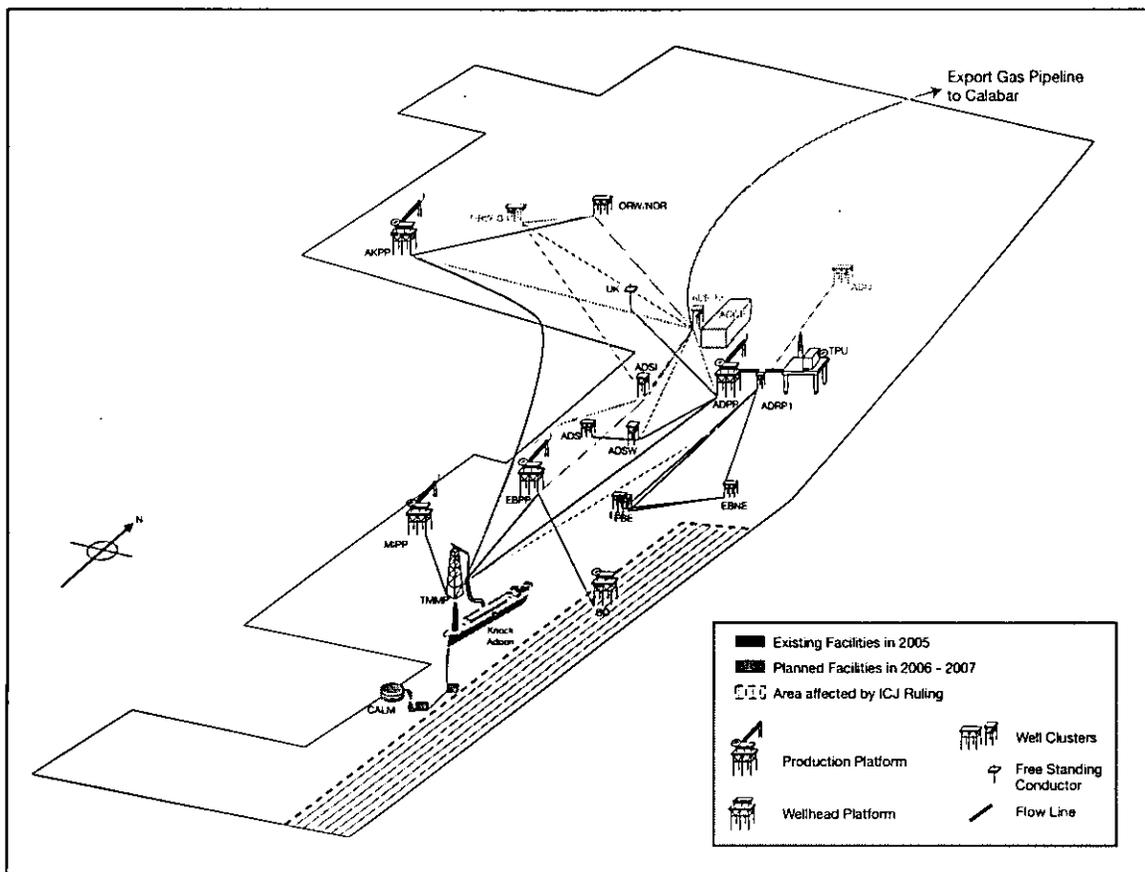

Production Facilities

The producing fields in OML123 are operated as a common development area. The key production facility is a FPSO which gathers produced crude oil from production or wellhead platforms on each field. At the OML123 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The current OML123 FPSO is the Knock Taggart which was commissioned in early 1998 and has a nameplate processing capacity of up to 60 mbbls/d of crude oil, a total liquids (oil and water) processing capacity of 100 mbbls/d and a storage capacity of approximately one mmbbls of crude oil. In order to maximize production capacity and improve cost efficiency, the Corporation intends to replace the Knock Taggart with the Knock Adoon FPSO in 2006. The Knock Adoon will have a processing capacity of 60 mbbls/d of crude oil, a total liquids (oil and water) processing capacity of 140 mbbls/d and a storage capacity of 1.7 mmbbls of crude oil and will incorporate an off-loading buoy terminal to better facilitate offloading during periods with strong currents. The Knock Adoon will be under a time charter with a subsidiary of Fred Olsen Production AS, the term of which expires in June 2014 with extension periods of up to a further eight years at the Corporation's option.

In order to maximize the use of the OML123 production facilities, Addax Petroleum has entered into an agreement with the OML114 Parties who operate the adjacent OML114, to store and export all of the crude oil produced from their license area. In return, the OML114 Parties pay the Corporation for their share of the expenses for the operation of the OML123 FPSO. For the first nine months of 2005, crude oil liftings totaled 12.6 mmbbls for Addax Petroleum and NNPC and 4.3 mmbbls for the OML114 Parties.

OML123 Production Facilities

Associated gas produced on OML123 is currently used for gas lift and fuel gas to aid oil production while the excess is flared by Addax Petroleum. NNPC, the owner of all natural gas in Nigeria, has informed the Corporation that it has targeted to use OML123 to supply 140 mmcf/d of natural gas to a new power generation plant at Calabar, starting in 2007. This project will aid the Corporation in achieving its objective of complying with the "Flares Down by 2008" policy announced by the Nigerian government. The Corporation believes its participation in this gas supply project will position it to participate in the supply of non-associated gas under separate supply arrangements in the future.

The initial gas supply project from OML123 contemplates the construction of gas gathering pipelines to bring both associated gas from existing oil facilities as well as non-associated gas to a central gas processing unit comprised of gas processing and compression facilities and a gas delivery pipeline to the town of Calabar. The central gas processing unit should be located adjacent to existing oil production facilities in the Adanga field. The capital expenditures for the gas supply project are expected to be funded by Addax Petroleum and NNPC. See "Properties and New Ventures — Nigeria Properties — OML123 — Budgeted Capital Expenditures".

Fields

Adanga

The Adanga field, discovered in 1980 and producing since 1986, is Addax Petroleum's principal producing field in OML123. For the first nine months of 2005, Adanga produced an average of 22.7 mmbbls/d of oil from 15 wells with an average watercut of 15 per cent. Oil gravity averaged 33° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Adanga field to be 23.2 mmbbls and gross proved plus probable reserves to be 49.8 mmbbls.

The Adanga field is located in water depths ranging from 10 to 20 m and covers an area of approximately 2,800 acres (11.3 km²) in the central part of OML123. The Corporation is producing from seven stacked "P" sand reservoirs of Miocene age at depths between 5,000 and 7,600 ftss, but most of the production comes from two reservoirs between 5,900 and 6,200 ftss which contain 90 per cent of the reserves in Adanga.

First production started in 1986 from the Adanga main block through one vertical and eight deviated wells drilled from the Adanga Platform. Following a detailed 3D seismic interpretation, Addax Petroleum modelled the field in 1999-2000 and undertook an extensive appraisal and development drilling program in the southern blocks, beginning in 2001. Since then, the Corporation has drilled a total of 29 wells resulting in 15 horizontal production wells, 12 appraisal wells and two water injection wells. The Corporation continues to evaluate infill and step-out drilling locations at Adanga and, in 2006, plans to drill five appraisal wells followed by up to five horizontal production wells and one water injection well and to work-over and recomplate two water injection wells. Water injection pumping facilities will be provided on the Knock Adoon. Most of the field's well completions are equipped with gas lift capability. The Corporation expects that 2005 production levels from the Adanga field will be maintained in 2006.

Wells from the Adanga field produce through the Adanga Platform, installed in 1986, and three satellite wellhead platforms, installed in 2003. In the second quarter of 2004, a new riser platform tied-in to a leased TPU was commissioned at Adanga, at which time all production was handled by the TPU. The TPU now handles all initial processing in the Adanga area prior to being pumped to the FPSO. In addition, the TPU allows production from the wells in the nearby Ebughu field extensions which could not otherwise be accommodated on the Adanga Platform or on the Ebughu Platform. In the fourth quarter of 2005 and 2006, the Corporation plans to purchase the TPU and refurbish both the TPU and the Adanga platform. The refurbishment project is planned to be substantially complete by the end of 2006.

Ebughu (and extensions)

The Ebughu field, discovered in 1980 and producing since 1988, along with the extensions is Addax Petroleum's second largest producing field in OML123. For the first nine months of 2005, Ebughu produced an average of 16.0 mmbbls/d of oil from 21 horizontal wells with an average watercut of 46 per cent. Oil gravity ranges between 20° API in the Ebughu field and 28° API in its northeast extension. As at September 30, 2005, NSAI estimates gross proved reserves for the Ebughu field and extensions to be 13.6 mmbbls and gross proved plus probable reserves to be 18.3 mmbbls.

The Ebughu field is located in water depth of approximately 30 m and covers an area of approximately 2,600 acres (10.6 km²) in the southern part of OML123. Production is from an 18 m thick oil rim in the "AA" horizon of Upper Miocene age at an average depth of 4,500 ftss. Most of the Ebughu field's oil completions are on gas lift.

Following a successful three-well appraisal program in 1984, Ashland installed the Ebughu Platform in 1988 and completed two wells which began producing in 1988. In 1996, a pilot horizontal production well was drilled between the existing two wells. Since 1999, Addax Petroleum has embarked on an extensive appraisal and development drilling program resulting in the discovery of five field extensions. In the second half of 2006, Addax Petroleum plans to drill three horizontal production wells on the eastern and north-eastern extensions subject to the availability of a second drilling rig for OML123 and authorization being granted to locate wells in the Disputed Area. As the drilling program is budgeted to take place in the second half of the year, the Corporation does not anticipate a material production impact from these new wells in 2006.

In 2004, the Corporation constructed and installed two wellhead platforms and two export pipelines to, and one gas lift pipeline from, the TPU in the Adanga field. No further production facilities are planned to be added at Ebughu.

Oron West and North Oron

Oron West was discovered by Addax Petroleum in 2002 and North Oron was successfully appraised in the same year. Oil production from Oron West and North Oron commenced in 2004. For the first nine months of 2005, Oron West and North Oron produced an average of 5.4 mmbbls/d from eight wells in both fields with an

average watercut of 2 per cent. Oil gravity averages 38° API in Oron West and 27° API in North Oron. As at September 30, 2005, NSAI estimates gross proved reserves for the Oron West and North Oron fields to be 15.8 and 9.4 mmbbls, respectively, and gross proved plus probable reserves to be 29.7 and 20.8 mmbbls, respectively.

The fields are located in water depth of approximately 8 m and cover an area of approximately 1,200 acres (4.9 km²) in the northwest sector of OML123. Production is from two "I" sands of Miocene age at depths between approximately 6,300 ftss in Oron West and at 5,100 ftss in North Oron. In 2005, Addax Petroleum drilled nine appraisal wells on Oron West and five appraisal wells on North Oron in the first development phase of both fields.

In 2005, the Corporation designed and constructed a wellhead platform from which six horizontal production wells have been drilled. Currently production is constrained as it flows to the Akam platform where it is degassed prior to being pumped to the Knock Taggart. In 2006, a second wellhead platform is planned to be installed near the existing platform from which a further four wells are planned in 2006 comprising two horizontal production wells in North Oron and one appraisal and one horizontal production well in Oron West. In addition, an isolated appraisal well is planned in Oron West. A third wellhead is planned to be installed in the second half of 2006 on the southern extension of Oron West from which two water injection wells will be drilled followed by three horizontal production wells in 2007. In order to overcome the production constraint at Akam, a new pipeline from Oron to the Adanga Platform, bypassing Akam, is also planned for 2006. The Corporation anticipates production from the Oron West and North Oron fields to increase to approximately 17 mbbbls/d during 2006.

Akam

The Akam field was discovered in 1980 and has been producing since 1984. In the first nine months of 2005, Akam produced an average of 1.0 mbbbls/d of oil from three deviated wells and one horizontal well with an average watercut of 87 per cent. Oil gravity is 36° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Akam field to be 1.4 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Akam field is located in 15 to 20 m water depth and covers an area of approximately 1,100 acres (4.6 km²) in the central part of OML123. Production is from four stacked "P" sand reservoirs of Miocene age at depths between 4,300 ftss and 6,200 ftss although most of the current production in the Akam field comes from two reservoirs between 4,800 ftss and 5,500 ftss. Some of the Akam accumulations may extend marginally into the adjacent license to the west held by the ExxonMobil/NNPC joint venture.

The Corporation plans to drill one appraisal and one horizontal development well at Akam in mid 2007. Further drilling plans will be contingent on the outcome of this well.

Bogi

The Bogi field was discovered in 1983 and has been producing since 1988. In the first nine months of 2005, Bogi produced an average of 0.4 mbbbls/d of oil from one horizontal well with an average watercut of 42 per cent. Oil gravity is 20° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Bogi field to be 0.3 mmbbls.

The Bogi field is located in water depth of approximately 40 m and covers an area of approximately 150 acres (0.6 km²) in the southern part of OML123. Production is from a 20 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,950 ftss. The eastern flank of the field straddles the international boundary with Cameroon as defined by the International Court of Justice in October 2002. See "Properties and New Ventures — Nigeria Country Discussion — International Relations". As a result, the Bogi Platform is now located in the Disputed Area. No further drilling activity or significant capital expenditures are planned for this field.

Mimbo

The Mimbo field was discovered in 1984 and has been producing since 1989. In the first nine months of 2005, Mimbo produced an average of 0.4 mbbbls/d of oil from one horizontal wells with an average watercut of

32 per cent. Oil gravity is 30° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Mimbo field to be 0.7 mmbbls and gross proved plus probable reserves to be 1.0 mmbbls.

The Mimbo field is located in water depth of approximately 40 m and covers an area of approximately 420 acres (1.7 km²) in the southern part of OML123. Addax Petroleum is producing from a 30 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,910 ftss. No further drilling activity or other capital expenditures are planned for this field.

Ukpam

The Ukpam field was discovered in 1986 and has been producing since 1989. In the first nine months of 2005, Ukpam produced an average of 0.1 mbbbls/d of oil from two wells with an average watercut of 89 per cent. Oil gravity ranges between 38° and 45° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ukpam field to be 0.2 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Ukpam field is located in 10 m water depth and covers an area of approximately 420 acres (1.7 km²) in the central part of OML123. Addax Petroleum is producing from three stacked reservoirs in the "AC-1", "P-4" and "I" sands of Miocene age at depths between 5,000 ftss and 7,800 ftss. No further drilling activity or other capital expenditures are planned for this field.

Adanga North

The Adanga North field was discovered in 1986 and appraised in 1996, and further appraisal and development plans are in progress. Oil gravity is 19° API. As at September 30, 2005, NSAI estimates gross proved plus probable reserves to be 11.0 mmbbls.

The Adanga North field is located in 10 m water depth and covers an area of approximately 1,100 acres (4.5 km²) in the central part of OML123. Two stacked reservoirs each contain a 18 m thick oil rim with an associated gas cap in good quality sands of Upper Miocene age at depths between 3,300 ftss and 3,650 ftss.

In 2006, the Corporation plans to carry out an extended production test to establish the optimal development plan for the Adanga North field. As part of this process, Addax Petroleum built and installed a wellhead structure from which one appraisal well was drilled in the fourth quarter of 2005 and confirmed the eastern extension of the field. A horizontal well for an extended well test is currently being drilled. If the production test is successful, the field would be developed as a satellite to the Adanga Platform with production expected to start in 2007 at an estimated rate of approximately 12 mbbbls/d. The development plans for the field would include the construction of a four km long pipeline to the Adanga Platform.

Unappraised Discoveries and Exploration

In addition to the existing fields, there are seven unappraised discoveries in OML123 which are the Oron gas discovery drilled in 1975, the Inagha, Adanga West and Ebughu NE-A oil discoveries drilled in 2002 and the Adanga East and Kita North oil discoveries drilled in 2005. Kita North may be a significant discovery as it encountered a total of 100 ft of oil in a reservoir at a depth of 4,750 ftss which tested at 1.0 mbbbls/d of 28° API gravity oil. As at September 30, 2005, NSAI estimates gross proved reserves for Kita North to be 6.9 mmbbls and gross proved plus probable reserves to be 9.2 mmbbls.

The Corporation has concluded an in-depth study of the remaining exploration potential of OML123 based upon full 3D seismic survey and existing well data. The study classed the remaining exploration potential into near field potential clusters, which can be drilled from or which are readily accessible to existing production facilities, and prospect clusters which may require additional platforms and pipelines to connect to existing facilities. Each cluster contains multiple prospects. Four near field potential clusters and five prospect clusters were identified.

Presently, two of the exploration clusters (Inagha and Kita North) have been drilled, both of which discovered oil. The most recent discovery, Kita North, was the most productive. In addition, one of the near field potential clusters has been successfully drilled (Adanga East) and the results are being evaluated. Following on from the recent exploration success on Kita North, the Corporation plans to expand its exploration and appraisal

drilling activity, subject to rig availability, including the Kita North area appraisal of the Oron gas discovery in 2006 and exploration of the Adanga North Graben and Antan prospect clusters in 2006 and 2007.

NSAI reports Addax Petroleum's gross prospective oil resources in OML123 as of September 30, 2005 to be 220 mmbbls (116 mmbbls risked).

Budgeted Capital Expenditures

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005, comprised of \$28 million for drilling and \$56 million for facilities, and \$383 million in 2006, as discussed below. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production, including the replacement of the Knock Taggart (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007), as well as a two-rig drilling program that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

<u>Field / Category</u>	<u>2006 Budgeted Capital Expenditures</u>			<u>Number of wells</u>
	<u>Drilling & Seismic</u> (\$million)	<u>Facilities & Other</u> (\$million)	<u>Total</u> (\$million)	
Infrastructure				
FPSO replacement	-	80	80	-
Gas lift and gas gathering	-	55	55	-
TPU purchase and Adanga Platform and TPU refurbishment	-	17	17	-
General maintenance	-	31	31	-
Subtotal	-	183	183	-
Field Development				
Oron West and North Oron	52	53	105	6
Adanga	55	-	55	5
Ebughu (and extensions)	25	-	25	3
Subtotal	132	53	185	14
Exploration and appraisal	15	-	15	2
Total	147	236	383	16

The Corporation estimates the total cost through 2007 of the proposed project to supply natural gas to the power plant at Calabar to be \$427 million. Of the total estimated capital expenditure for the proposed project, the Corporation estimates that \$81 million relates to the provision of gas gathering and gas lift infrastructure for associated gas. This \$81 million is included in budgeted capital expenditures and will be the direct responsibility of the Corporation to fund but will be recoverable under the terms of the OML123/124 PSC. Approximately \$55 million of this amount is budgeted to be spent in 2006, with the remainder to be spent in 2007. The balance of the total initial investment of \$346 million is related to non-associated gas production facilities, gas processing and compression facilities and the delivery pipeline to Calabar and is the responsibility of NNPC. Approximately \$264 million of this amount is expected to be spent in the fourth quarter of 2005 and in 2006, with the remainder to be spent in 2007. The Corporation is in discussions with NNPC to clarify the apportionment of the funding responsibility, including a provision whereby the Corporation would carry NNPC's capital investment in exchange for modifications to the OML123/124 PSC, including a temporary increased share of Profit Oil.

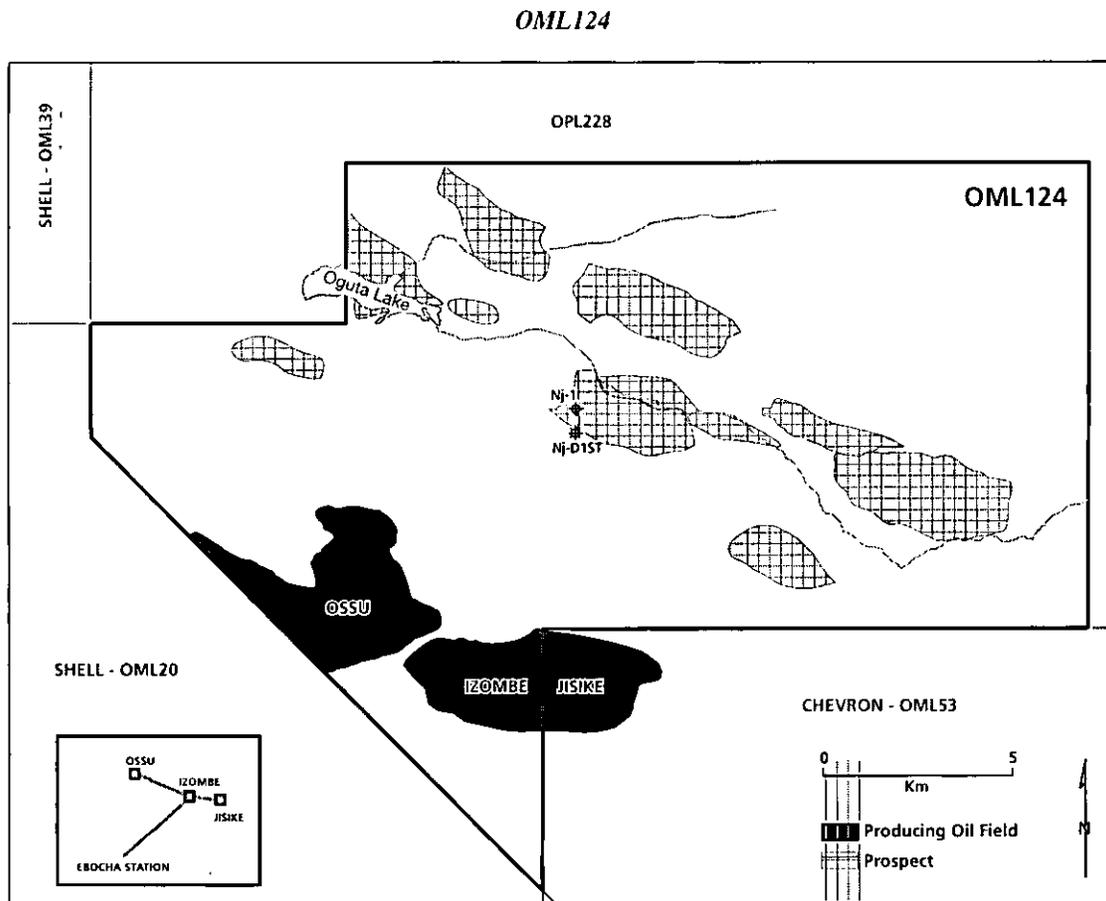

Addax Petroleum believes the 220 mmbbls (116 mmbbls risked) of gross prospective oil resources in OML123, as reported by NSAI, provide the Corporation with the opportunity to sustain a sizeable capital expenditure program in OML123 for the near and medium term.

OML124

Overview

OML124 is the Corporation's smallest producing property as measured by reserves and production. For the first nine months of 2005, OML124 produced an average of 3.5 mmbbls/d of oil from ten wells with an average watercut of 84 per cent. Oil gravity ranges between 29° API and 48° API. With the exception of a one week long stoppage to production during September 1999, there has been no unplanned disruption to production from OML124. As at September 30, 2005, NSAI estimates gross proved reserves for OML124 to be 10.0 mmbbls and gross proved plus probable reserves to be 12.6 mmbbls. The Corporation expects production from OML124 to be approximately 4 mmbbls/d in 2006.

OML124 is located onshore in Imo State, approximately 100 km north of Port Harcourt, and covers an area of 74,100 acres (300 km²) on the northeast edge of the Niger Delta. OML124 contains two producing fields, Ossu and Izombe, the latter extending as the Jisike field to the southeast into the adjacent OML53 held by the Chevron/NNPC joint venture. OML124 also contains ten exploration prospects the most attractive of which is Okaka prospect in the southeast part of the property. Total capital expenditures for OML124 are budgeted to be \$9 million in the fourth quarter of 2005 and \$27 million in 2006.

Production and Reserves

The following table summarizes the production and reserves in OML124.

<u>Field</u>	<u>Number of Wells⁽¹⁾</u>	<u>Average Oil Production</u>		<u>Gross Oil Reserves⁽²⁾</u>		
		<u>9 Months Ended September 30, 2005</u> (bbls/d)	<u>2004</u> (bbls/d)	<u>Proved</u> (mmbbls)	<u>Probable</u> (mmbbls)	<u>Proved Plus Probable</u> (mmbbls)
Izombe	7	1,810	2,160	5.6	2.0	7.6
Ossu	6	1,700	1,650	4.4	0.6	5.0
Total	13	3,510	3,810	10.0	2.6	12.6

Notes:

(1) Number of wells includes shut-in wells.

(2) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Production Facilities

The Ossu and Izombe fields are operated as a common production area. Production facilities include the Izombe Flow Station, gas compressors, water injection pumps and three flow lines from Ossu to the Izombe Flow Station. The Corporation has an agreement with a Chevron/NNPC joint venture whereby crude oil produced from the Chevron/NNPC Jisike field is processed at the Izombe Flow Station in return for the payment of a tariff to Addax Petroleum. The Ossu, Izombe and Jisike crudes are all processed at the Izombe Flow Station and transported via an export pipeline to Ebocha. From Ebocha, the oil is transported through the Agip/NNPC joint venture's pipeline to their Brass River Terminal.

At the present time some of the associated gas being produced with the oil from OML124 is re-injected to aid oil production and the remainder is flared. The Corporation together with a consortium of private Nigerian investors, is contemplating the construction of an LPG facility. The Corporation has completed conceptual design studies relating to the supply of gas to and construction of this LPG facility which would be located adjacent to the existing Izombe Flow Station. This project requires a supply of a total of 40 mmcf/d of associated and non-associated gas from the Ossu and Izombe fields. The LPG plant is expected to produce approximately 75 t/d of propane, approximately 75 t/d of butane and approximately 1 mbbbls/d of natural gasoline and approximately 35 mmcf/d of residue lean gas. The Corporation expects that the natural gasoline would be blended with oil at the Izombe Flow Station for export. Butane and some blended propane would be marketed locally. Subject to access to appropriate export facilities, butane and propane may be exported and the residue lean gas would be used for local power generation, as LNG feed stock or re-injected into the Izombe and Ossu fields. See "Properties and New Ventures — Nigeria Properties — OML124 — Budgeted Capital Expenditures".

Fields

Izombe

The Izombe field, discovered in 1974 and producing since 1975, is Addax Petroleum's principal producing field in OML124. In the first nine months of 2005, Izombe produced an average of 1.8 mbbbls/d from six wells with an average watercut of 83 per cent. Oil gravity ranges between 35° and 40° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Izombe field to be 5.6 mmbbls and gross proved plus probable reserves to be 7.6 mmbbls.

The Izombe field is located in a relatively densely populated dry land area covered by farmlands, shrubs and secondary rain forest, at an elevation of 45 to 60 m above mean sea level, and covers an area of approximately 1,600 acres (6.4 km²) in the southern part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 5,300 and 7,400 ftss, but most of the production comes from one reservoir located at approximately 5,400 ftss. Most accumulations extend to the east into the Jisike field operated by Chevron.

In 2006, the Corporation plans to drill an oil production well, a water injection well and to work over an existing oil production well in the Izombe field.

Ossu

The Ossu field was discovered in 1973 and has been producing since 1976. In the first nine months of 2005, Ossu produced an average of 1.7 mbbbls/d from four wells with an average watercut of 85 per cent. Oil gravity ranges between 29° and 48° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ossu field to be 4.4 mmbbls and gross proved plus probable reserves to be 5.0 mmbbls.

The Ossu field is located approximately 4 km to the west of the Izombe field at an elevation of 25 m above mean sea level in a drowned river valley affected by seasonal flooding which limits the access to the field during the rainy season. The field covers an area of approximately 2,300 acres (9.3 km²) in the south western part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 4,500 and 8,500 ftss, but most of the production comes from three reservoirs at depths between 4,500 ftss and 6,850 ftss. Some accumulations extend to the west into the adjacent OML20, which is operated by the Shell/NNPC joint venture.

In late 2005, the Corporation plans to start a drilling and well work over program, including drilling one appraisal and two oil production wells, and working over two existing oil production wells in 2006 in the Ossu field.

Unappraised Discoveries and Exploration

In 2002, the Corporation concluded a comprehensive acreage and prospect evaluation study based on 3D and 2D seismic surveys and existing well data. Several prospects with possible commercial potential were identified in the north eastern sector of OML124. The Corporation intends to drill the Okaka exploration prospect in 2006, which will be the first exploration well to be drilled by the Corporation in OML124.

NSAI reports Addax Petroleum's gross prospective oil resources in OML124 as of September 30, 2005 to be 32 mmbbls (14 mmbbls risked).

Budgeted Capital Expenditures

Total capital expenditure budgeted for OML124 is \$9 million for the fourth quarter of 2005 and \$27 million for 2006.

In addition to its budgeted capital expenditures for 2006, the Corporation estimates the total investment to complete the contemplated LPG project would be \$94 million of which \$60 million would be incurred by Addax Petroleum to supply feed gas and \$34 million would be incurred by Addax Petroleum and by other private sector investors to fund the construction of the LPG plant. It is expected that private sector investors would hold a 60 per cent interest in the LPG plant and the Corporation would hold the remaining 40 per cent interest. All of the facilities would be constructed and initially operated by Addax Petroleum. The Corporation intends to make a final investment decision regarding the LPG project by the end of the first quarter of 2006. If the Corporation decides to proceed, it expects the plant to be operational in 2007. The Corporation estimates its total share of the capital investment would be approximately \$74 million of which \$58 million is forecasted to be spent by the Corporation in 2006 with the balance of \$16 million to be spent in 2007 after the plant is operational. Of the Corporation's capital expenditure, the \$60 million incurred to supply feed gas would be recoverable over a five year period under the terms of OML123/124 PSC.

OPL90 and OPL225

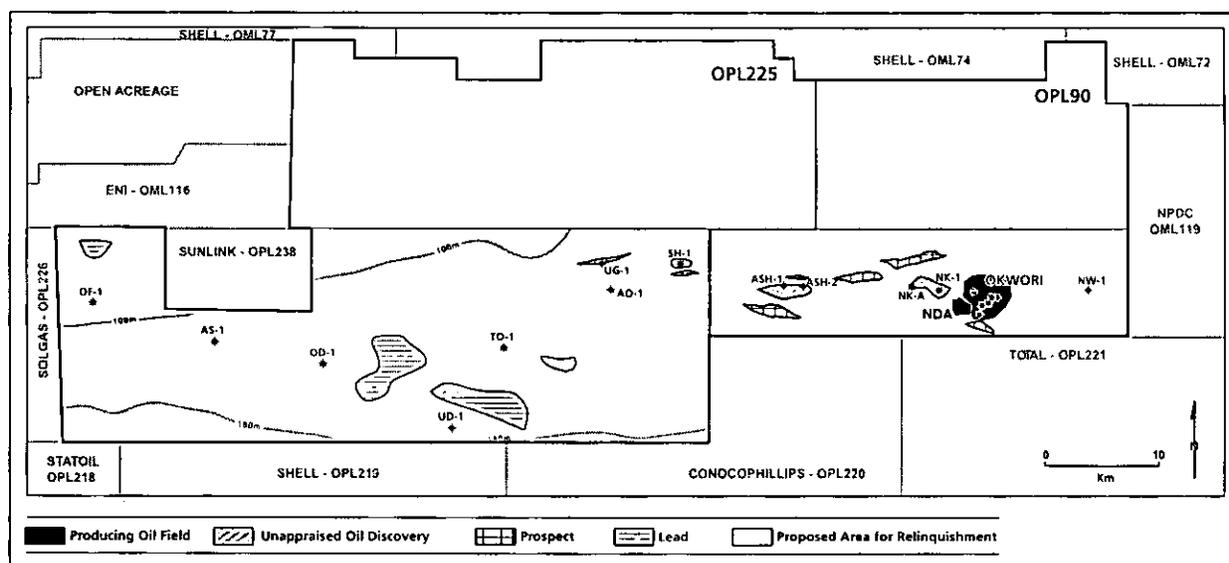

Overview

OPL90 and OPL225 are two contiguous blocks which represent Addax Petroleum's largest Nigerian properties as measured by area and also account for the majority of the Corporation's recent production growth. Production from OPL90 commenced in March 2005 and averaged 20 mbbbls/d for the month of October 2005. In the first nine months of 2005, OPL90 produced an average of 12.6 mbbbls/d of oil from six wells with no watercut. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OPL90 to be 27.9 mmbbls and gross proved plus probable reserves to be 43.7 mmbbls. As at September 30, 2005,

OPL225 had no reserves or production. The Corporation expects production from OPL90 and OPL225 to be approximately 33 mbbls/d in 2006.

OPL90 and OPL225 are located 90 km offshore south of Port Harcourt, close to the edge of the continental shelf, in water depths ranging between 50 and 210 m and cover a combined area of 327,200 acres (1,324 km²). The southern half of OPL90 has been completely surveyed by 3D seismic and contains one producing oil field (Okwori), four undeveloped oil discoveries, one of which (Nda) is currently producing from an extended well test and will be developed in 2006, and four exploration prospects. OPL225 has been surveyed principally by 2D seismic and it contains one undeveloped oil discovery, several non-commercial gas discoveries and a number of shallow and deep leads. Addax Petroleum plans to acquire a 800 km² 3D seismic survey across this southern area of OPL225 at the end of 2005. Total capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006.

OPL90 and OPL225 Properties

Production and Reserves

The following table summarizes the reserves and production in OPL90 and OPL225. Production from the Okwori field in OPL90 started in March 2005. Production from the Nda field in OPL90 is from an extended well test following which a full field development is planned to take place.

Field	Number of Wells	Average Oil Production		Gross Oil Reserves ⁽¹⁾		
		October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Probable (mmbbls)	Proved Plus Probable (mmbbls)
Okwori	5	16,360	10,080	20.7	12.8	33.5
Nda	1	3,590	2,530	7.2	3.0	10.2
Total	6	19,950	12,610	27.9	15.8	43.7

Note:

(1) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

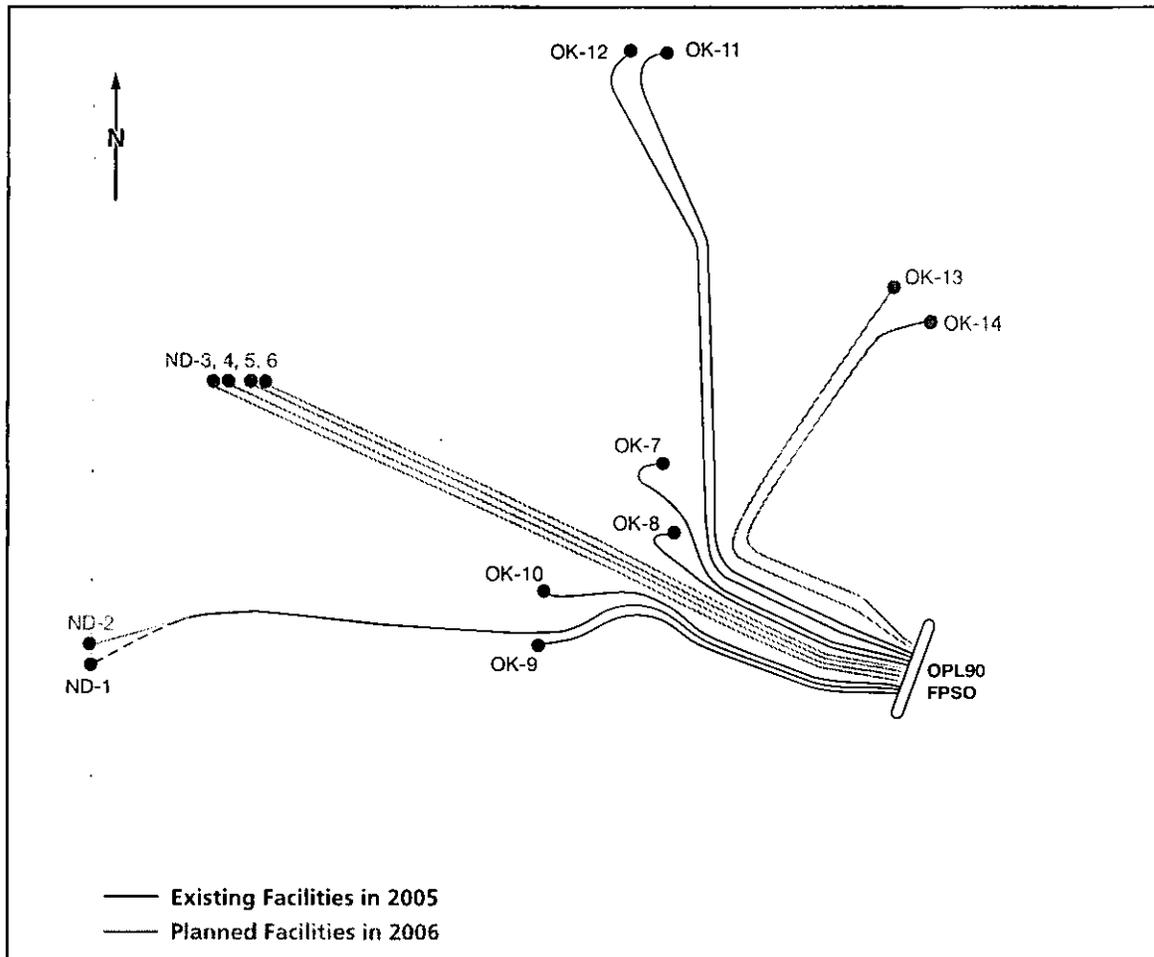

Production Facilities

The Okwori and Nda fields in OPL90 are operated as a common development area. Individual wells in each field are connected to the FPSO Sendje Berge by individual sub-sea flow lines. At the OPL90 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The OPL90 FPSO has a nameplate processing capacity of 38 mbbls/d of crude oil, a total liquids (oil and water) processing capacity of 60 mbbls/d and a storage capacity of approximately two mmbbls of crude oil. The OPL90 FPSO is under a time charter from Sendje Berge Ltd., a company within the Norwegian shipping group Bergesen now owned by Worldwide Shipping of Hong Kong. The term of the charter expires in February 2009, with extension periods of up to an additional four years at the Corporation's option.

The production facilities at OPL90 have been designed to accommodate additional production from future satellite developments, should planned exploration drilling result in commercial oil discoveries. One such discovery, the Nda field, has been producing to the OPL90 production facilities under an extended well test since March 2005 and is awaiting full field development. The Corporation anticipates that throughout 2006 and into 2007 there will be continuous drilling and well hook-up activity on the property.

OPL90 Production Facilities

The Corporation believes that the known associated gas resource on OPL90 is insufficient to justify commercial development. To cease flaring on OPL90, Addax Petroleum has proposed to NNPC to construct a gas gathering pipeline from the OPL90 FPSO to a new gas trunk line to be built by an adjacent operator. Construction of the gas gathering pipeline is expected to take place in 2006 or 2007. The capital expenditures for the gas gathering pipeline will be funded by Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — OPL90 and OPL225 — Budgeted Capital Expenditures".

Fields

Okwori

The Okwori field, discovered in 1972 and appraised in 1973 by Occidental, was further appraised in the mid-1990s by Ashland and declared commercial in 1996. Field development planning was commenced by Ashland at that time, but was suspended when Ashland's Production Sharing Contracts were terminated by a settlement agreement with the Nigerian government in 1998. See "Addax Petroleum — Corporate History".

Addax Petroleum began development of the Okwori field in July 2004 and commenced production from the Okwori field in March 2005. For the month of October 2005, the Okwori field produced an average of 16.4 mbbbls/d of oil from five wells with an average watercut of 3 per cent. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Okwori field to be 20.7 mmbbls and gross proved plus probable reserves to be 33.5 mmbbls.

The Okwori field is located in 110 to 150 m water depth and covers approximately 2,700 acres (11 km²) in the southern part of OPL90. The field development plan envisages production from seven stacked reservoirs in the sands of Plio-Miocene age at depths between 5,100 and 9,300 ftss, but the majority of the production is expected to come from two reservoirs (7,000 to 9,300 ftss). The stacked reservoir configuration of the field requires that production wells be selectively completed, choosing the optimum oil zones to be produced.

As of the end of October 2005, six production wells have been successfully drilled on the Okwori field of which five have been placed on production and the sixth is awaiting tie-in to the OPL90 FPSO. All wells have been fitted with downhole expandable sand screens designed to exclude the production of sand dislodged from reservoir rock that may occur. At the end of October 2005, the sand screen in one well had failed and is anticipated to fail shortly in a second well. Remedial treatment of these wells is planned in late 2005 and/or early 2006. The Corporation plans to drill two more development wells to complete the field development plan and is reviewing the methodology for control of sand production. The Corporation plans to complete the Okwori field development drilling program in 2006 and production is expected to average approximately 25 mbbbls/d in 2006.

When the OPL90/225 PSC was awarded to Addax Petroleum in 1998, Total, which held a 50 per cent farm-in interest in Ashland's Production Sharing Contract, was given an option to retain a 50 per cent interest in the area. This option was replaced by a reimbursement agreement between Total and Addax Petroleum dated October 24, 2000, whereby Total is entitled to an eight per cent net profit interest in only the Okwori field.

Nda

The Nda field was discovered by Addax Petroleum in July 2004. Oil in commercial quantities was encountered in three stacked reservoirs. The discovery well was re-entered in February 2005 and completed on two of the three main reservoirs in order to carry out an extended well test. The well is tied back to the OPL90 FPSO and has produced a total of 0.7 mmbbls at September 30, 2005. For the month of October 2005, the Nda field produced an average of 3.6 mbbbls/d from one well with no water cut. As at September 30, 2005, NSAI estimates gross proved reserves for the Nda field to be 7.2 mmbbls and gross proved plus probable reserves to be 10.2 mmbbls.

The Nda field is located adjacent to the Okwori field in a similar water depth and covers approximately 250 acres (1 km²) in the southern part of OPL90. The field will be producing from three stacked reservoirs in the sands of Plio-Miocene age at depths between 6,700 and 8,150 ftss.

The Corporation has finalized a development plan for the Nda field, which has been submitted to the Nigerian government, and intends to drill an up-dip appraisal well, necessary for field development approval, in early 2006. The field development plan comprises drilling four horizontal wells during 2006, individually tied back to and controlled from the OPL90 FPSO. The Nda field is presently producing from one well under an extended well test before additional development wells are expected to commence production in the second half of 2006 and is expected to average approximately 20 mbbbls/d for the last six months of the year.

Unappraised Discoveries and Exploration

In addition to the Okwori and Nda fields, there have been three further uneconomic oil discoveries by previous operators, of which the most significant well was drilled in 1972 in OPL225 and tested at 6.1 mbbbls/d of oil. Natural gas was also encountered in two of the oil discoveries. Addax Petroleum commenced its exploration

on OPL90 and OPL225 in 2004 by drilling one exploration commitment well in each lease. The exploration well drilled by the Corporation in OPL225 found two small accumulations of non-associated gas. The exploration well drilled by the Corporation in OPL90 discovered the Nda field as discussed above.

In late 2005 and during 2006, Addax Petroleum intends to undertake a concerted exploration and appraisal campaign. On OPL90 three exploration and appraisal wells are budgeted in 2006 on the Okporo, Nda West and Nkelu Deep structures, all of which offer tie-back development opportunities to the OPL90 FPSO. On OPL225, the Corporation intends to acquire a 800 km² 3D seismic survey at the end of 2005 which will be processed during 2006 to identify further exploration drilling opportunities.

NSAI reports Addax Petroleum's gross prospective oil resources in OPL90 and OPL225 as of September 30, 2005, to be 7 mmbbls (5 mmbbls risked).

Budgeted Capital Expenditures

Capital expenditures on OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 comprised of \$29 million for facilities and \$39 million for drilling and \$290 million in 2006, as discussed below. These expenditures are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. The budgeted capital expenditures will fund a one-rig drilling program in OPL90 and OPL225 that includes:

- completion of development drilling in the Okwori field;
- development drilling in the Nda field and tie back to the OPL90 FPSO; and
- seismic data acquisition and drilling of three exploration wells.

<u>Field/Category</u>	<u>2006 Budgeted Capital Expenditures</u>			<u>Number of Wells</u>
	<u>Drilling & Seismic</u> <u>(\$million)</u>	<u>Facilities & Other</u> <u>(\$million)</u>	<u>Total</u> <u>(\$million)</u>	
Nda	106	55	161	4
Okwori	32	19	51	2
Gas gathering pipeline	-	16	16	-
Subtotal	138	90	228	6
Exploration and appraisal	59	3	62	3
Total	197	93	290	9

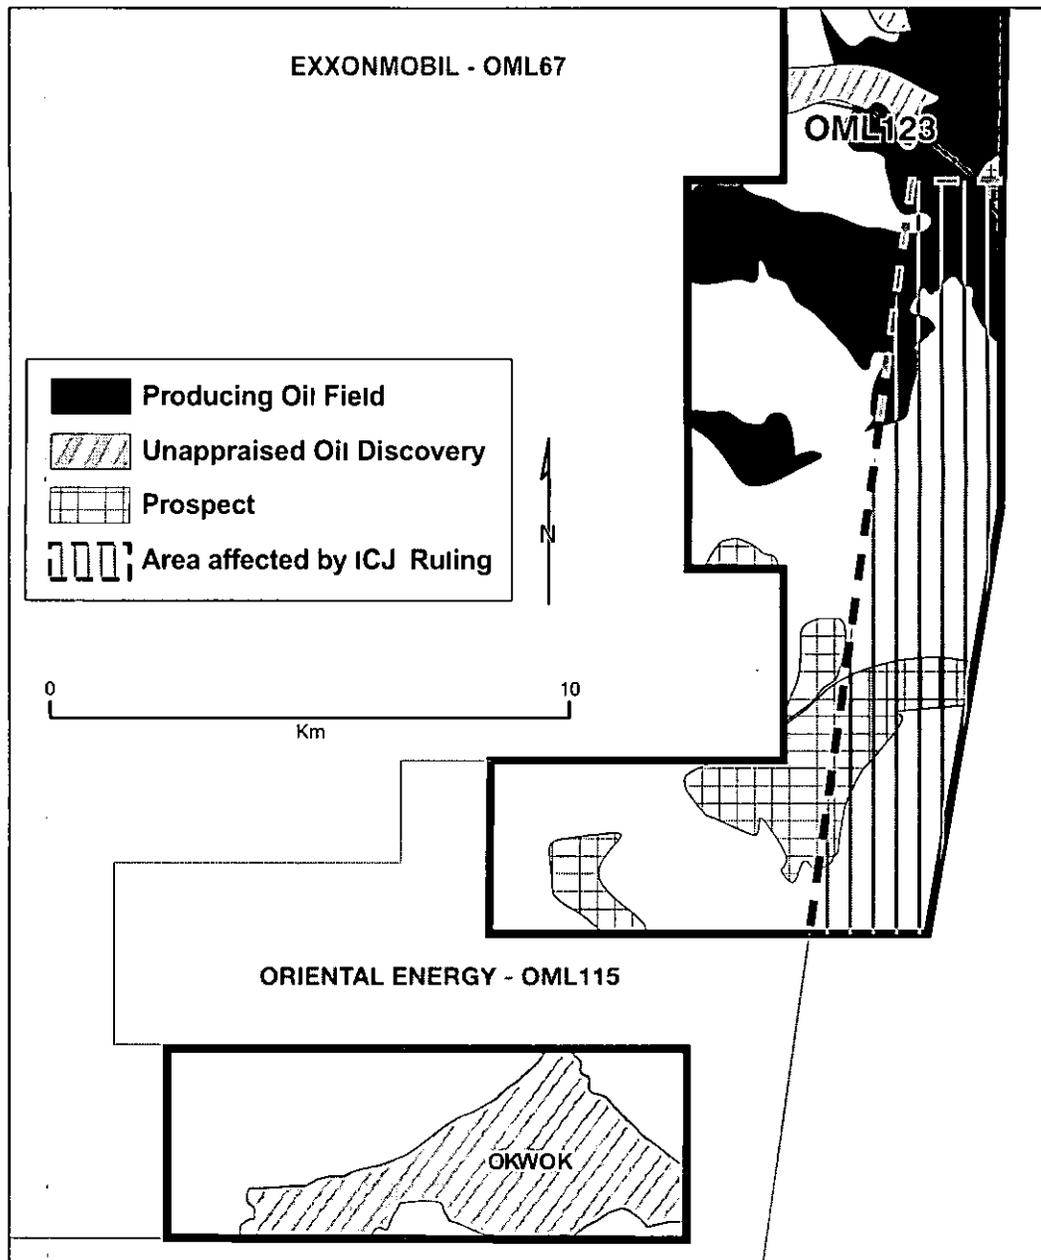

The Corporation estimates that the total cost to construct the proposed gas gathering pipeline will be \$35 million to be spent before the end of 2007. The budgeted capital expenditures for 2006 includes \$16 million and the balance of \$19 million is expected to be spent in 2007, all of which is expected to be recoverable under the OPL90/225 PSC.

Okwok Property

Overview

The Okwok Property is located approximately 45 km off the Nigeria coast in 35 to 50 m water depth due south of the town of Calabar. The Okwok Property is within ExxonMobil's licence area OML67, immediately to the south of OML123.

Okwok Property

In late 2000, the governments of Nigeria and Equatorial Guinea concluded a maritime boundary treaty that removed 62 km² from an Oil Mining Lease held by Oriental Energy that became part of Equatorial Guinea's Block B, the main beneficiary of which was ExxonMobil. Oriental Energy successfully petitioned the Nigerian government for compensation and in October 2001 the Nigerian government approved a compensation area for Oriental Energy in ExxonMobil's OML67 that included the Okwok Property. The farm-in agreement between Oriental Energy and ExxonMobil is yet to be concluded.

In September 2005, Addax Petroleum entered into the Oriental Joint Venture Agreement pursuant to which the Corporation has agreed to acquire a 40 per cent interest in the Okwok Property. The Oriental Joint Venture Agreement will become effective once the farm-in agreement between Oriental Energy and ExxonMobil is signed by the two parties and government approval is received. Pursuant to the Oriental Joint

Venture Agreement, Addax Petroleum will make a cash payment of \$35 million to Oriental Energy and will initially fund all capital and operating costs. During the cost recovery period, the Corporation will be entitled to 80 per cent of production from the Okwok Property until all capital costs have been recovered by the Corporation after which Addax Petroleum and Oriental Energy will be entitled to their pro rata share of production. As broker of the Oriental Joint Venture Agreement, Sovereign Oil & Gas Company II LLC will receive an overriding royalty interest of one per cent of all production from the Okwok Property.

Production and Reserves

There has been no production to date from the Okwok Property. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.

Production Facilities

Addax Petroleum believes that there will be significant synergies for the Okwok Property and OML123 as the Okwok Property will be developed using production, storage and offloading facilities on the OML123 FPSO vessel approximately 12 km to the north. Facility sharing in this manner will allow the Corporation to develop the Okwok Property in a cost effective manner while also benefiting unit operating costs at OML123.

Field Description

The Okwok Property was discovered in 1967 by Mobil, with the first well encountering a gross oil bearing interval of approximately 70 ft in two main zones. The second well was drilled in 1968 to appraise a fault block to the east of the discovery well and encountered a gross oil bearing interval of approximately 150 ft. Two further wells have been drilled in the immediate area, the most recent of which was drilled by Oriental Energy and ConocoPhillips in 1993. Both of these wells were drilled on the edge of the main Okwok Property structure and while they only encountered minimal hydrocarbons they are useful in assisting to delineate the structure. None of the wells have been production tested. The Okwok Property has been surveyed by two 3D seismic surveys, the most recent of which was in 2004.

The two main reservoirs are interpreted to be part of the Agbada formation and are of Pliocene age. Reservoir depths vary between 2,750 and 4,000 ftss. Due to the shallow nature of the reservoir, the oil is assumed to have a density of around 20° API. This is supported by a sample taken from an offset well, drilled 10 km to the east of the Okwok Property, which recovered 23° API oil from an interval which correlates with one of the two main zones in the Okwok Property.

Budgeted Capital Expenditures

The development of the Okwok Property is expected to commence in 2006 and the Corporation's capital expenditures are budgeted to be \$72 million in 2006, including the farm-in fee of \$35 million payable by Addax Petroleum to Oriental Energy contingent on the Oriental Joint Venture Agreement becoming effective. The remainder of the budgeted capital expenditures will fund the drilling of three appraisal wells and development planning studies. Subject to appraisal drilling results, the Corporation anticipates the Okwok Property to be developed using a central production processing platform and two satellite wellhead platforms connected by pipelines to the OML123 FPSO. The Corporation's development plan anticipates first oil from the Okwok Property in early 2008.

Oil Sales Arrangements

ABV purchases the Corporation's entitlement of crude oil from OML123, OML124 and OPL90 pursuant to the Crude Oil Supply Agreements. See "Interest of AOG in Material Transactions".

Crude oil produced from OML123 is exported from the Antan Terminal and sold as Antan Blend. The Antan Blend includes oil delivered by the OML114 Parties. The Antan Blend may, in the future, include oil production from the Okwok Property in the event that it is developed by Addax Petroleum.

Crude oil produced from OML124 is transported by pipeline to the Brass River Terminal and commingled with crude oil from several third party oil fields. The resulting blend, known as Brass River Blend, is exported and sold at international prices.

Crude oil produced from OPL90 is exported from the Okwori Terminal and sold as Okwori Blend. The first sale of Okwori Blend took place in June 2005 and to date there have been five liftings in total. Marketing knowledge of the Okwori Blend is at an early stage. Going forward the Corporation anticipates that the Okwori Blend will sell at a premium relative to the Brent Crude price.

Addax Petroleum Crude Oil Premium/(Discount) to Brent Crude (Volume Weighted)⁽¹⁾

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
Sales and Marketing Volumes (mmbbls)				
Antan Blend ⁽²⁾	12.6	13.3	11.8	10.0
Brass River Blend	0.8	1.3	2.2	1.8
Okwori Blend	2.6	-	-	-
Dated Brent Crude Price (\$/bbl)				
	53.54	38.22	28.84	24.98
Addax Petroleum Average Realized Prices (\$/bbl)				
Antan Blend ⁽²⁾	50.17	36.56	27.49	24.04
Brass River Blend	54.42	39.37	29.10	25.51
Okwori Blend	60.60	-	-	-
Premium/(Discount) to Brent Crude (\$/bbl)⁽¹⁾				
Antan Blend ⁽²⁾	(3.51)	(1.88)	(1.27)	(1.36)
Brass River Blend	0.79	0.49	0.39	0.19
Okwori Blend	0.38	-	-	-

Notes:

- (1) Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.
- (2) The API gravity of the Antan Blend is dependent on the proportional mix of crudes at any time. Where future individual oil field developments have lower API gravities than the current API gravity of the Antan Blend, then the API gravity of the Antan Blend may be reduced at that time.

Property Boundaries

Under the International Court of Justice ruling of October 2002, the Disputed Area includes a small part of OML123 (8,400 acres, 33.9 km²), including the Bogi Platform. The Joint Border Commission which was set up by the governments of Nigeria and Cameroon to study the implications of the ruling has not yet reached a decision about how the Corporation's operations will be treated. The Disputed Area has been excluded from the acreage and property descriptions in this prospectus. Reserves presented in this prospectus exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

In 2003, in accordance with the terms of the OPL90/225 PSC, Addax Petroleum was required to relinquish 50 per cent of the area of OPL90 and OPL225, excluding areas in which petroleum had been discovered in commercial quantities. The Corporation held discussions in 2003 and 2004 with NNPC regarding the acreage to be relinquished but no formal agreement has been concluded. The area proposed for relinquishment for OPL90 and OPL225 has been excluded from the acreage, property descriptions and reserve and resource estimates in this prospectus except as otherwise stated.

Discussions were also held with NNPC in the same period with regard to the same provisions in the OML123/124 PSC. In 2004, the existing OPL98 and OPL118 were converted into OML123 and OML124. The Corporation has received advice from Nigerian counsel that the formal grant of OML123 and OML124 supercedes these discussions but that further relinquishment will be required on the tenth anniversary of their July 2002 effective date.

Nigeria New Ventures

Overview

Addax Petroleum established a dedicated new ventures team in Nigeria in 2004. This team has made a number of bids and approaches for assets in Nigeria and has recently been successful in organizing and negotiating the Okwok Property transaction and is leading the discussions on the JDZ Block 4 opportunity. The Corporation targets Nigeria new ventures opportunities from three principal sources: (i) new bid rounds, (ii) farm-ins with indigenous Nigerian oil companies and (iii) farm-ins with major international oil and gas companies.

New Bid Rounds

Addax Petroleum participated in the most recent Nigerian bid round that was held in mid 2005 and intends to participate in future bid rounds when they occur. In this most recent bid round, Addax Petroleum finished second in the bidding for two assets and third for another. If the winning bidders do not provide evidence of their financial capability to pay for the signing bonus, Addax Petroleum will likely be invited to take the original position for which it bid but finished second. These assets are OPL135 and OPL280, both of which are onshore blocks close to OML124.

Farm-in to Properties held by Indigenous Nigerian Oil Companies

Indigenous oil companies have gained rights to a number of blocks under the Nigerian government's Marginal Field Development Program, with the 2003 bid round providing rights to a number of new indigenous oil companies. Often such companies seek partners to provide capital and technology needed to develop the properties. Addax Petroleum's Nigeria new ventures team has discussed and continues to discuss a number of these farm-in opportunities with such indigenous oil companies. It is likely that additional blocks will be made available to indigenous oil companies through relinquishment by existing operators and this could provide additional opportunities for the Corporation in Nigeria.

Farm-in or Acquire Properties held by Major International Oil and Gas Companies

The major international oil and gas companies that operate in Nigeria such as Shell, ExxonMobil, Chevron, Total and Agip, through joint ventures with NNPC, hold rights to significant acreage in the country, much of which is unexplored or not fully developed. Opportunities to farm-in or acquire properties in onshore or in shallow water regions are becoming increasingly available as major international oil and gas companies shift their focus to deep-water areas. Addax Petroleum's Nigeria new ventures team has had discussions with most of these major international oil and gas companies and has expressed an interest in taking over their acreage if acceptable terms can be negotiated.

Joint Development Zone

Overview

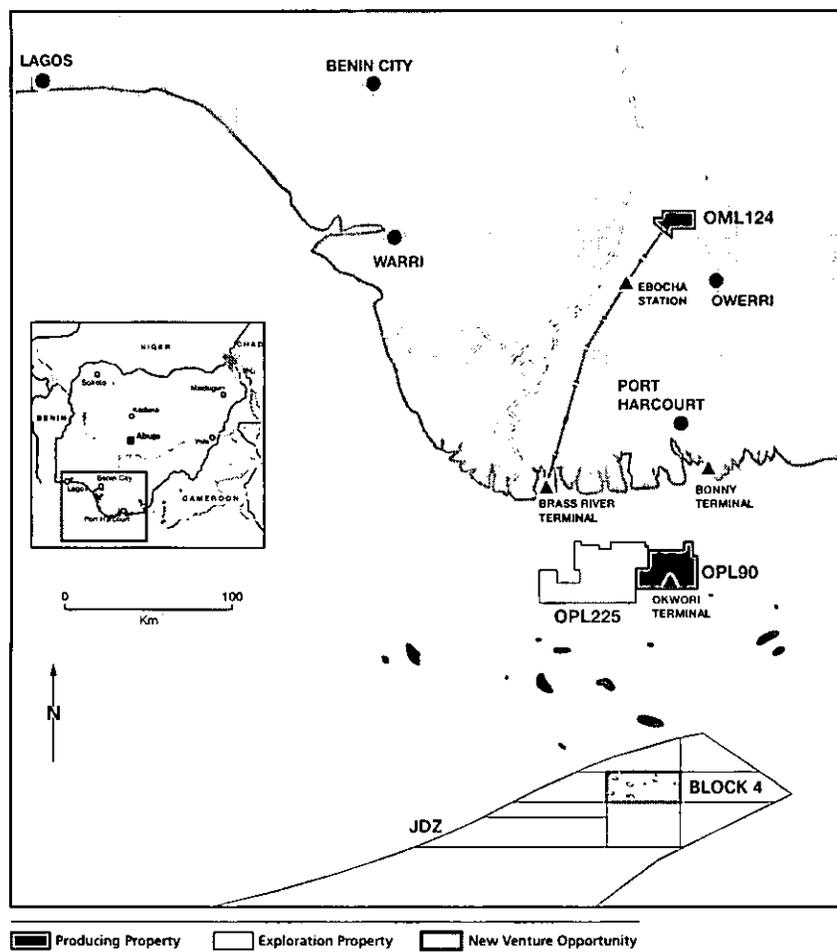

In 2001, Nigeria and the Democratic Republic of Sao Tome and Principe signed a formal treaty for the joint development of petroleum and other resources in the overlapping area of their respective maritime boundary claims. The treaty established the Joint Development Zone and an administrative body, the Joint Development Authority, to oversee the implementation of the treaty and underlying development plan.

The JDZ covers an area of 34,548 km² with water depths ranging from approximately 1,500 m in the northern part of the JDZ to over 3,500 m at its south western sector.

The first licensing round for the JDZ was announced in April 2003 from which the first Production Sharing Contract was signed in February 2005 for Block 1. The successful consortium to develop Block 1, which paid a signature bonus of \$123 million, included Chevron (51 per cent and operator), ExxonMobil (40 per cent) and Dangote-Energy Equity Resources (nine per cent). A second licensing round for the JDZ was announced in November 2004 which made an additional 5 blocks available to potential investors. The results of the second licensing round were announced in May 2005, with the successful bidders including such companies as Anadarko

Petroleum (awarded 51 per cent of Block 3), Noble Energy Inc. and ERHC Energy (jointly awarded 60 per cent of Block 4) and Devon Energy and Pioneer Natural Resources (jointly awarded 65 per cent of Block 2). In addition to the Block 4 Property, the Corporation is in preliminary discussions with some of the successful bidders on other blocks with a view to farming-in to one or more of these blocks.

Joint Development Zone

Note:

- (1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Geological Description

The JDZ lies in the Gulf of Guinea which is one of the most prolific hydrocarbon regions in the world. Intensive exploration efforts over the last 35 years in and around the Niger Delta, in particular, have led to a succession of large discoveries, notably the Bonga, Agbami/Ekoli and Akpo discoveries in Nigeria and Zafiro and Alba in Equatorial Guinea.

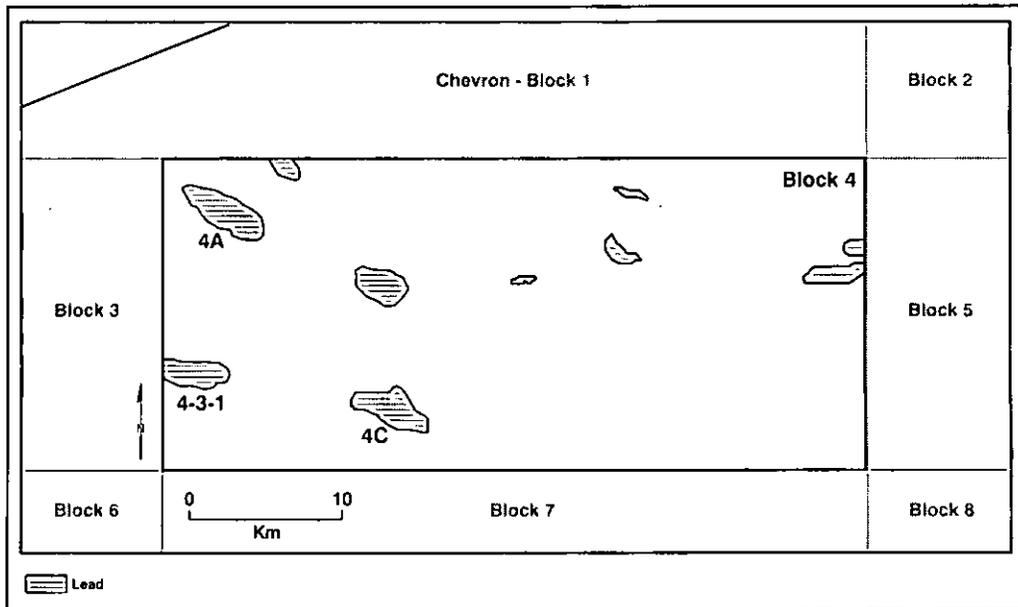

Modern seismic data and improved models of sand distribution indicate that in places prospective acreage can extend up to 300 km from the coastline of Nigeria. Extensive regional 2D and 3D seismic data shot by a number of seismic contractors provide a high quality regional dataset that has provided insight into the region's geological character.

Block 4 Property

Overview

The Block 4 Property is located in the northern end of the JDZ, approximately 170 km south of the Nigerian coastline and approximately 300 km north of the city of Sao Tome. Block 4 covers an area of 211,700 acres (857 km²) in water depths ranging from approximately 1,800 m to 2,200 m.

Block 4 Property

JDZ Agreements

In June 2005, the Joint Development Authority announced that Block 4 would be awarded to ERHC Energy/Noble Energy JDZ (60 per cent), Conoil p.l.c. (20 per cent), Hercules Oil Ltd./Centurion Energy (10 per cent), Godsonic Oil Co. (5 per cent) and Overt Ventures Ltd. (5 per cent). The winning bid provided for a signing bonus of \$90 million and a minimum work program of three exploration wells or a minimum expenditure of \$53 million. In late October 2005, Noble Energy announced that they were withdrawing from the ERHC Energy/Noble Energy JDZ consortium. ERHC Energy entered into a memorandum of understanding with Addax Petroleum in October 2005 pursuant to which Addax Petroleum replaced Noble Energy JDZ as operator for the consortium. In November 2005, Addax Petroleum entered into a participation agreement with ERHC Energy under which it anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property in return for a payment of up to \$18 million and a full carry in respect of ERHC Energy's retained interest. Addax Petroleum would also be required to pay a signature bonus of up to \$23.4 million to the Joint Development Authority. A joint operating agreement and Production Sharing Contract would also have to be negotiated with the other participating parties and, in the case of the Production Sharing Contract, the Joint Development Authority before Block 4 is awarded.

Cameroon

Overview

Cameroon covers a total area of 475,440 km² and is approximately half the size of its western neighbour Nigeria.

Government

Cameroon was formed from a French administered UN trusteeship. In 1961, part of British Cameroon merged with the recently formed independent Cameroon. Cameroon is a republic with a multiparty presidential regime. Opposition parties were legalized in 1990. The current President, Paul Biya, has been in office since 1982 and was last elected with 71 per cent of the vote during the elections held in October 2004. The President is elected by popular vote for a seven-year term. The next elections are due in October 2011. Cameroon has a National Assembly with 180 seats, whose members are elected by direct popular vote to serve five-year terms, though the President can either lengthen or shorten the term of the legislature. The most recent National Assembly elections were held in June 2002.

International Relations

Cameroon is a member of the United Nations, Organization of African Unity, the Commonwealth of Nations and the Monetary and Economic Community of Central Africa. In 2002, the International Court of Justice ruled in favour of Cameroon on the long disputed Cameroon — Nigeria land and maritime boundary. See “Properties and New Ventures — Nigeria Country Discussion — International Relations”.

Petroleum Industry

Petroleum exploration activity in Cameroon began in the 1950s and concentrated on the Douala Basin in the south of the country where several oil and gas discoveries were made. In the 1970s, activity switched to the Rio del Rey Basin in the west of the country which now accounts for most of Cameroon’s current oil production. The Rio del Rey Basin is the eastern extension of the Niger Delta and all of its oil is produced from the Agbada formation.

Oil production in Cameroon began in 1977 and increased to approximately 170 mbbbls/d in 1986 before slowly declining to approximately 62 mbbbls/d in 2004. In comparison with its neighbours, oil exploration in Cameroon has been modest and is limited by its lack of access to deep-water offshore acreage given its geographical location. However, there has been renewed activity in recent years with the development of new fields. The major oil producers in Cameroon are Shell and Total.

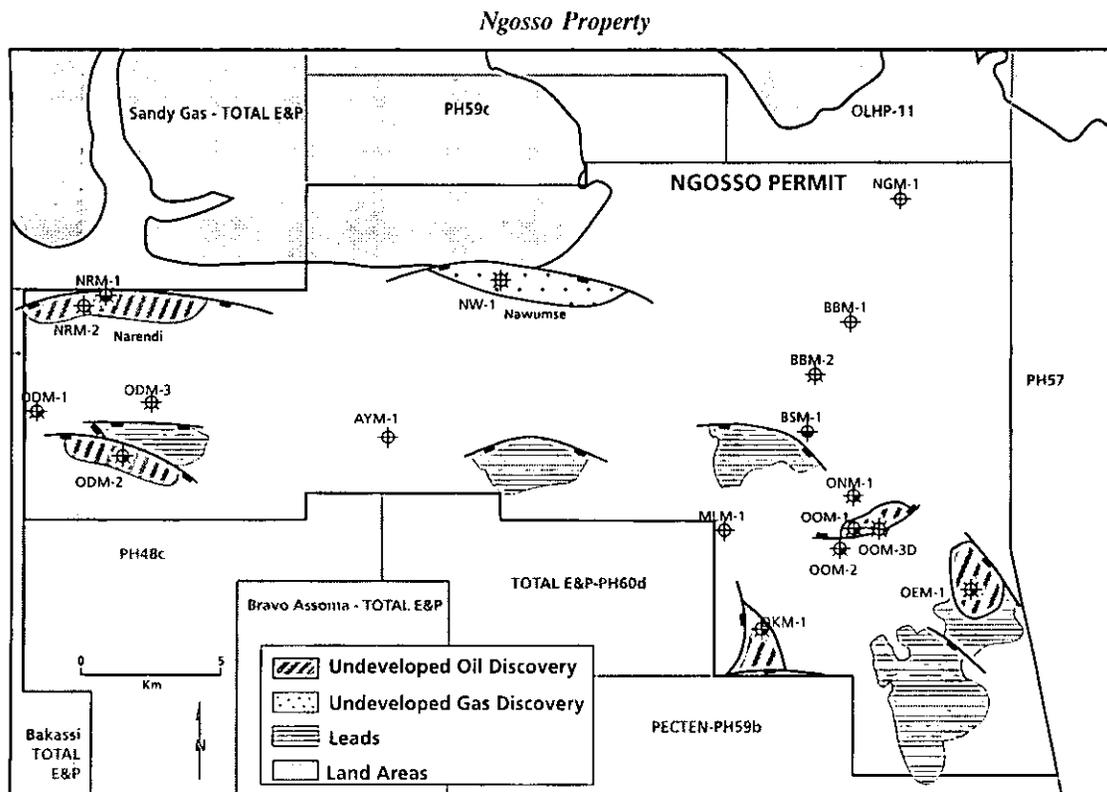

Ngosso Property

In December 2002, Addax Petroleum, together with Tullow Oil, signed the Ngosso Concession with the Government of Cameroon for the Ngosso Property. Addax Petroleum is the operator of the Ngosso Property, with a 60 per cent working interest. The Ngosso Concession has an initial term of three years with a minimum work commitment of 200 km² of 3D seismic and the drilling of two exploration wells. The Ngosso Concession can be renewed twice for an additional two years per renewal.

The Ngosso Concession’s initial three year exploration period officially started in April 2004 but the Cameroonian government has indicated that it is prepared to extend the initial permit by one year in compensation for the delays incurred and official confirmation is awaited. The Cameroonian government has confirmed that the cost of work incurred prior to the Ngosso Concession’s effective date will be recognized for tax and other purposes under the Cameroon Concession.

To date, Addax Petroleum has not been able to access part of the Ngosso Property, including the western prospective zone, due to the Nigeria — Cameroon border dispute. See “Properties and New Ventures — Nigeria Country Discussion — International Relations”. The Ngosso Property itself is not part of the disputed territory, but operations require access to the southern part of the Bakassi Peninsula. The Joint Border Commission between Cameroon and Nigeria had set April 2004 as the period for the transfer of power to a new Cameroonian civil administration for the Bakassi Peninsula, and this should have allowed the Corporation to commence operations in the western part of the Ngosso Property. As the power transfer process is not complete, the Corporation intends to limit its seismic acquisition activities to the offshore with a minor impact on the coverage. The Corporation plans to acquire two 3D seismic surveys in the western and in the south eastern sectors of the Ngosso Property between December 2005 and April 2006.

The Ngosso Property is located in the hydrocarbon prone Rio del Rey Basin, western offshore Cameroon and covers 117,100 gross acres (474 km²). To the east, north and west, the Ngosso Property has a common border with two concessions operated by Total and with four open acreage areas. To the south, the Ngosso Property is bordered by two concessions operated by Total and by Shell and by open acreage.

The Ngosso Property lies adjacent to the shore in water depths of up to eight m. It has similar operational and subsurface geological conditions to the Corporation's OML123, located approximately 20 km to the west. The Ngosso Property contains several hydrocarbon discoveries but has not seen any exploration activity for more than 20 years. The Corporation intends to evaluate discovered and potential oil and gas accumulations and, if commercial, develop them using proven technology including 3D seismic and horizontal drilling.

The Corporation has carried out a detailed prospectivity evaluation of the acreage based on existing 2D seismic and well data. Two petroleum plays have been penetrated by wells indicating the presence of good quality sand reservoirs. Both plays are characterized by gas and oil discoveries (oil API gravities ranging between 20° to 24° in the shallow play and 40° to 45° in the deep play) and contain a number of remaining leads.

NSAI reports Addax Petroleum's gross prospective oil resources in the Ngosso Property, as at September 30, 2005, to be 28 mmbbls (19 mmbbls risked).

The Corporation's capital expenditures for Ngosso are budgeted to be \$2 million for the fourth quarter of 2005 for seismic surveys of 170 km² and \$16 million in 2006 which includes \$10 million for seismic surveys of 120 km² and \$6 million for drilling two exploration wells.

Gabon

Overview

Gabon is one of sub-Saharan Africa's wealthier countries due to a relatively small population and substantial oil and mineral reserves.

Government

Gabon is a republic which gained independence from France in 1960. A multiparty political system and a new constitution were introduced in the early 1990s, though President Omar Bongo has been in power since 1967. The President is elected by popular vote for a seven-year term. The Parliament is comprised of the Senate and the National Assembly. The next elections for the National Assembly are scheduled for 2006. The most recent presidential election was held in November 2005 and Senate elections were held in early 2004.

International Relations

Gabon is a member of the United Nations, the Organization of African Unity and many other international organizations. As a proponent of regional economic integration, Gabon and five other countries agreed to form the Monetary and Economic Community of Central Africa to converge their macroeconomic policies, stabilize their common currency, create a common market and harmonize their sectoral policies.

Petroleum Industry

Oil was first discovered in Gabon in the 1950s and since then there has been significant development and exploration activity both onshore and offshore. Gabon's two biggest fields are located onshore. The Gamba field was discovered in 1963 with estimated reserves of 250 mmbbls and the Rabi field was discovered in 1985 with estimated reserves of 1,000 mmbbls.

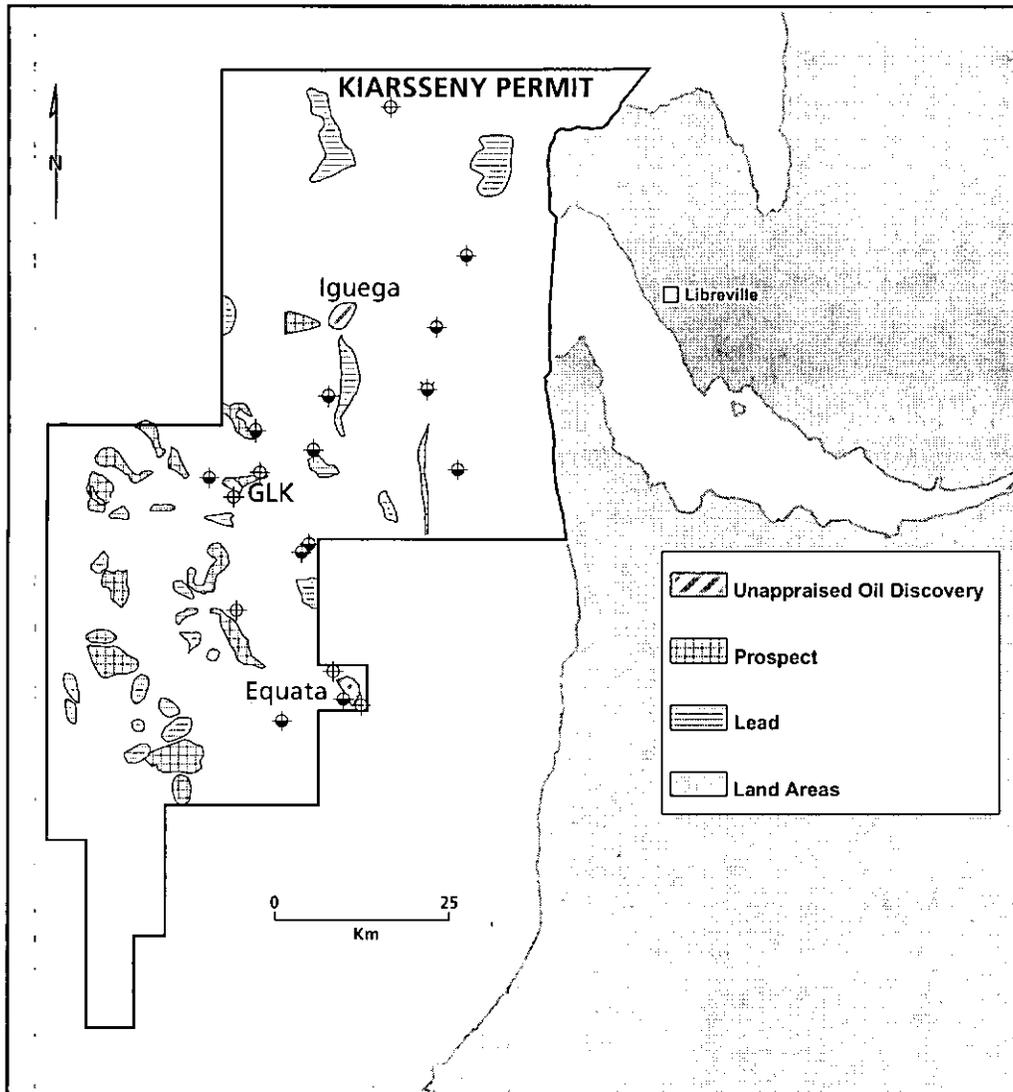

Gabonese oil production first peaked in 1975 at approximately 220 mbbls/d and then reached a new high of approximately 360 mbbls/d in 1996 after a period of decline. Current oil production is approximately 235 mbbls/d, the majority of which is produced by Shell and Total.

Kiarsseny Property

On January 27, 2004, Addax Petroleum signed the Kiarsseny Agreement with Tullow Oil for the acquisition of 42.5 per cent of the Kiarsseny Production Sharing Contract for the Kiarsseny Property. Tullow Oil originally entered into the Kiarsseny Production Sharing Contract with the Government of Gabon in March 2003. In March 2004, Tullow announced that it had reduced its interest to 47.5 per cent through the farm-out of 10 per cent to Sonangol E.P.

The Kiarsseny Property covers an area of 1,345,000 gross acres (5,443 km²) and is located adjacent to shore in the Port Gentil Basin in water depths up to 800 m. It contains three oil discoveries and additional exploration potential. There are 2,643 km² of 3D seismic data, 18,750 km of 2D seismic data and 25 wells in the Kiarsseny Property.

Kiarsseny Property

The Port Gentil Basin contains a prolific hydrocarbon system. The majority of the producing reservoirs are sandstones with good porosities and permeabilities. Oil gravities from major oil fields vary from 20° to 47° API. NSAI reports Addax Petroleum's gross prospective oil resources in the Kiarsseny Property as at September 30, 2005, to be 11.0 mmbbls (10.0 mmbbls risked).

The Kiarsseny Production Sharing Contract is currently in its first exploration phase of four years, ending March 2007, and has a two well commitment. The first commitment well was drilled by Tullow Oil and Addax Petroleum in February 2004 to appraise the Topaze South structure and subsequently a side-track was drilled into the central Topaze compartment. The well failed to prove up sufficient reservoir development in both instances and was therefore abandoned.

The second commitment well is planned to commence drilling in late 2005 or early 2006 and will appraise the eastern flank of the Equata discovery. The main objective is to prove commerciality of this accumulation with an option to suspend the well as a future producing well if at least two reservoirs are oil-bearing and one can be successfully tested. Under the terms of the Kiarsseny Agreement, Addax Petroleum may be obligated to pay 100 per cent of a third well (up to \$5 million) if this second commitment well is successful. In the event that the second well is not successful, the well costs incurred in relation to a possible third well shall be borne by the parties in proportion to their participating interests.

An inventory of the remaining exploration potential of the block is currently being prepared following which an exploration target may be selected by the partners for a discretionary well to be drilled in 2006. The Corporation's capital expenditures for Kiarsseny are budgeted to be \$4 million for the fourth quarter of 2005 and \$6 million in 2006 for drilling one exploration well.

Other West Africa New Ventures

Along with the Corporation's properties in Cameroon and Gabon, Addax Petroleum is looking to expand further its activities in the West African Gulf of Guinea region. Additional countries in this target zone include Angola, Equatorial Guinea, Congo and Côte d'Ivoire. Addax Petroleum has made and is continuing to make efforts to gain a position in these countries for the following principal reasons:

- the Gulf of Guinea is a prolific basin with significant opportunities ranging from the onshore, through shallow offshore to deeper water;
- many geological plays are similar to those that the Corporation successfully operates and produces in Nigeria using horizontal drilling and other techniques that can be employed in these other regions; and
- AOG has been involved in trading activities throughout the region and has developed good contacts and a good reputation for its activities.

Addax Petroleum has made efforts to enter into properties in this region in the past primarily through direct negotiations with international companies who hold properties and, to a lesser extent, through direct negotiations with governments. While there are no transactions currently at an advanced stage of negotiations in the region, the Corporation intends to increase its staffing in order to redouble its effort in this regard.

North Africa New Ventures

Addax Petroleum is pursuing opportunities in North Africa, including the countries of Algeria, Libya and Egypt, as a core investment area for the following reasons:

- the presence of proven prolific hydrocarbon basins ranging from Tertiary/Mesozoic (Gulf of Suez, Western Desert, Sirte) to Palaeozoic (Ghadames, Murzuk and a number of basins in Algeria);
- the region's unique strategic position in respect to oil and gas export to major North American and European markets; and
- the relative stability of the political systems in these countries.

Consequently, Addax Petroleum has made, and continues to make, considerable efforts to gain a position in these North African countries. Addax Petroleum has passed the stringent pre-qualification processes and is recognized as a potential operator in Libya and Algeria. The Corporation is currently evaluating several farm-in opportunities and has participated in various bid rounds in several countries. Addax Petroleum has not yet been successful in any of the bid rounds in which it has participated.

Middle East New Ventures

Kurdistan Region of Iraq

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. The Taq Taq field is located 60 kilometres northeast of the giant Kirkuk oil field and the adjacent city of Kirkuk and 80 kilometres northwest of the city of Sulaimaniyah. The field area of Taq Taq is approximately 680 km².

Under the farm-in agreement with Genel Enerji A.S., Addax Petroleum is committed to expenditures in respect of the Taq Taq field initially of \$30 million and, conditionally, another \$50 million should it acquire any interest in any Production Sharing Contract in respect of the Taq Taq field.

Central and Southern Iraq

Apart from its activities in the Kurdistan Region, Addax Petroleum is currently positioning itself to obtain oil rights in the central and southern parts of Iraq, once the legal framework has been established and the security situation allows the Corporation to work efficiently and safely in the area. To this end, Addax Petroleum intends to enter into a collaboration agreement with the Ministry of Oil of the central Iraqi government to conduct field studies and train Iraqi oil and gas professionals.

Addax Petroleum believes that the future of the Iraqi oil industry will benefit from building-up a strong local, privately owned, industry and is therefore providing financial support to Nawras Oil Services Ltd., a company owned by Iraqi businessmen and former Iraqi Oil ministry executives. Nawras Oil Services Ltd. maintains relationships with the Ministry of Oil and is currently representing Addax Petroleum in Baghdad.

Iran

Addax Petroleum intends to enter into a study agreement with the National Iranian Oil Company. Under this agreement, Addax Petroleum, together with representatives of the National Iranian Oil Company, will study two undeveloped fields located offshore Iran. The study is expected to be completed within the next 12 months. Neither the activities under the study agreement nor any future activities based in Iran will be financed with the proceeds of this offering. All such Iranian activities will be financed with funds from other sources.

FISCAL TERMS

Nigeria

Addax Petroleum's interests in OML123 and OML124 and OPL90 and OPL225 are governed by Production Sharing Contracts with NNPC. The Corporation's proposed interest in the Okwok Property is governed by a Production Sharing Contract and will be subject to the terms of the Oriental Joint Venture Agreement and, once implemented, the Nigerian Marginal Field Terms. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Production Sharing Contracts

In May 1998, the Corporation and NNPC entered into a Production Sharing Contract covering OML123 and OML124 and a Production Sharing Contract covering OPL90 and OPL225. These contracts are supplemented by the provisions of the *Petroleum Act*, and the regulations thereunder, and the *PPT Act*. The fiscal terms of the Production Sharing Contracts were modified by the terms of the letter entitled "Fiscal Regimes for Onshore and Shallow Offshore PSC", issued on November 21, 2001 by the Office of the Presidential Adviser on Petroleum and Energy with retroactive effect to January 1, 2000. Both of the Corporation's Nigerian Production Sharing Contracts have a term of 20 years expiring in May 2018.

Under each of its Nigerian Production Sharing Contracts, Addax Petroleum bears the development and exploration risk for the properties concerned and funds all of the necessary capital expenditures. In return, the Corporation is entitled to sell sufficient oil to recover its capital expenditures and operating costs and to have a designated share of oil production remaining after the payment of royalties and taxes. Each of the Corporation's Nigerian Production Sharing Contracts impose minimum work obligations and Addax Petroleum has fulfilled the minimum work obligations. Taxation of each Production Sharing Contract is calculated independently of Addax Petroleum's other Production Sharing Contract and as a result, capital expenditure recovery is available to the extent of the profitability of the particular Production Sharing Contract on which the capital expenditures were incurred.

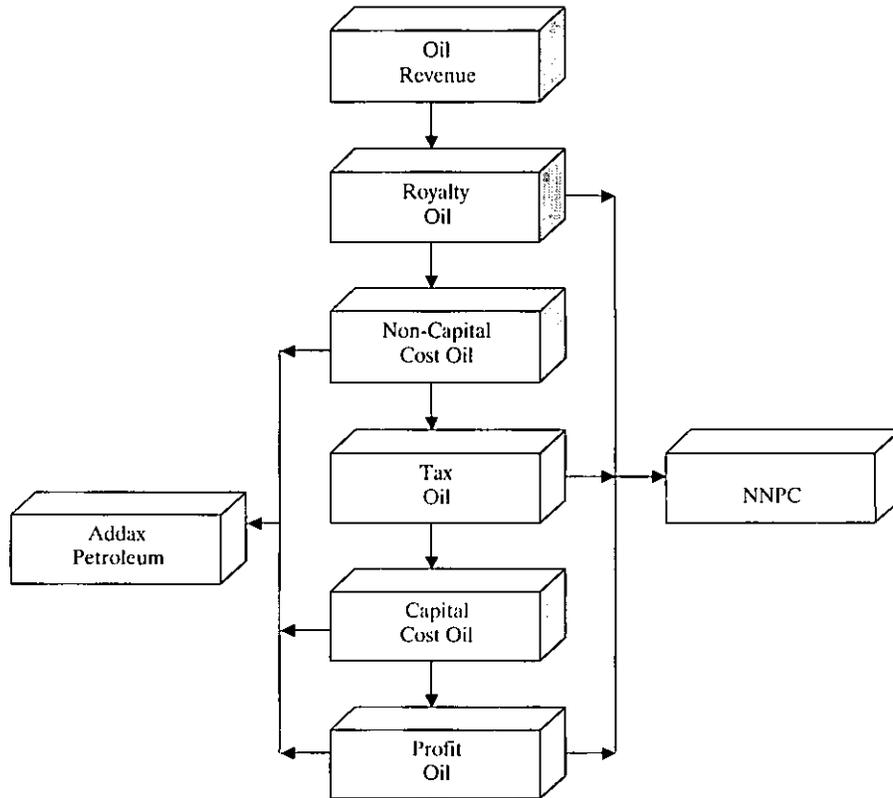

Oil produced under the Nigerian Production Sharing Contracts is notionally allocated to one of four categories in the following order.

1. Royalty Oil
2. Cost Oil

3. Tax Oil
4. Profit Oil

Royalty Oil and Tax Oil are allocated to NNPC while Cost Oil is allocated to Addax Petroleum. Profit Oil is shared between NNPC and Addax Petroleum. The Production Sharing Contracts provide for each party to lift and sell its oil entitlement, though NNPC can request that Addax Petroleum lift and sell on its behalf.

Allocation of Oil Production under the PSCs

The proportion of production that is designated for each of Royalty Oil, Cost Oil, Tax Oil and Profit Oil in a particular time period is influenced by oil prices, production levels, operating costs, capital expenditures and costs and allowances carried forward from previous periods in accordance with the terms of the Production Sharing Contracts. The fiscal terms have the effect of reducing the percentage of revenues paid as Tax Oil during periods of lower oil prices and increasing such percentage during periods of higher oil prices. For purposes of illustration, the tables below show the proportions of production designated as Royalty Oil, Cost Oil, Tax Oil and Profit Oil under the Production Sharing Contracts for OML123 and OML124 and OPL90 and OPL225 for the nine months ended September 30, 2005.

**OML123/124 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	50.80	—	—	100
Royalty Oil and other levies ⁽²⁾	4.94	4.94	—	10
Cost Oil	14.33	—	14.33	28
Tax Oil	18.38	18.38	—	36
Profit Oil	13.15	4.23	8.92	26

**OPL90/225 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005⁽³⁾**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	60.60	—	—	100
Royalty Oil and other levies ⁽²⁾	4.80	4.80	—	8
Cost Oil	53.31	—	53.31	88
Tax Oil	2.49	2.49	—	4
Profit Oil	—	—	—	—

Notes:

- (1) The tax accounts and the financial accounts use different revenue recognition methods.
- (2) Other levies include the NDDC levy and education tax.
- (3) Production from OPL90 began in March 2005. There was no production from OPL225 in 2005.

The calculation of the different categories of oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

<u>Water Depth</u>	<u>Royalty Oil Rates Field Range of Production (bbls/d)</u>					
	<u><2,000</u> (%)	<u>2,000-5,000</u> (%)	<u>5,000-10,000</u> (%)	<u>10,000-15,000</u> (%)	<u>15,000-25,000</u> (%)	<u>>25,000</u> (%)
Onshore	5.0	7.5	15.0	20.0	20.0	20.0
<100	2.5	2.5	7.5	12.5	18.5	18.5
100-200	1.5	1.5	3.0	5.0	10.0	16.7

Royalty Oil is accounted for on a monthly basis.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below). These levies are paid in cash to the relevant Nigerian authority.

Cost Oil is allocated to Addax Petroleum in such an amount as to enable the recovery of all recoverable costs. The accounting procedure attached to the Production Sharing Contracts divides costs into two categories: non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Historically, under the Production Sharing Contracts, Addax Petroleum has recovered approximately 80 per cent of all drilling and seismic expenditures in the fiscal period in which they are incurred. Capital costs are depreciated over a five year period at 20 per cent straight-line starting in the year of first production, except for the fifth year which is depreciated at 19 per cent. All costs prior to the first lifting on a Production Sharing Contract are capitalized.

Maximum Cost Oil available is calculated as total production less Royalty Oil. Cost Oil is calculated on a monthly basis and any excess costs are carried forward to subsequent months or years. As at September 30, 2005, the Cost Oil balances, including capital depreciation carried forward to future years, were as set out in the following table.

	Cost Oil Balances					
	2005	2006	2007	2008	2009	2010
	(\$million)					
OML123/124 PSC	40.5	37.8	29.0	16.4	5.2	-
OPL90/225 PSC ⁽¹⁾	67.4	67.4	67.4	67.4	64.0	-

Note:

(1) Includes \$10.2 million of expenditure by previous contractor.

Tax Oil is calculated after deducting Royalty Oil and Cost Oil. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Corporation's Nigerian Production Sharing Contracts is 60 per cent. In the event that after the deduction of capital allowances and capital investment allowances the tax to be paid is zero, a 15 per cent tax charge is made on the taxable amount before the deduction of certain capital allowances and capital investment allowances. This currently applies to the OPL90/225 PSC. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 40 per cent of offshore capital expenditures and 25 per cent of onshore capital expenditures.

Due to the capital expenditure on the OPL90/225 PSC, there are unutilized capital investment allowances of \$120.6 million as of September 30, 2005. There are no unutilized capital investment allowances for the OML123/124 PSC.

The Corporation's Nigerian Production Sharing Contracts also contain a tax inversion penalty which is designed to encourage oil companies to contain operating costs. The tax inversion penalty for production rates less than 50 mbbls/d is calculated at 35 per cent of operating costs in excess of \$7.50/bbl. For production rates more than 50 mbbls/d, the tax inversion penalty is calculated at 35 per cent of operating costs above \$5.00/bbl. Addax Petroleum is not currently subject to this penalty as the Corporation's operating costs are below the designated threshold, assuming production from the OML123/124 PSC remains below 50 mbbls/d average for the year 2005. If the production average exceeds 50 mbbls/d for 2005, the maximum exposure to tax inversion penalty is estimated to be \$4.5 million.

Profit Oil is the oil remaining after deducting Royalty Oil, Cost Oil and Tax Oil. Profit Oil is shared between NNPC and Addax Petroleum on a sliding scale based on monthly production from the respective Nigerian Production Sharing Contracts. The varying allocations between NNPC and Addax Petroleum are applied on an incremental sliding scale basis.

Profit Oil Sliding Scale for the OML123/124 PSC

Monthly Average Production from OML123 and OML124 (mbbls/d)	NNPC Share	Addax Petroleum Share
	(%)	(%)
<40	30	70
≥40 and <75	45	55
≥75 and <100	55	45
≥100	60	40

Profit Oil Sliding Scale for the OPL90/225 PSC

Monthly Average Production from OPL90 and OPL225 (mbbls/d)	NNPC Share	Addax Petroleum Share
	(%)	(%)
<40	20	80
≥40 and <75	35	65
≥75 and <100	45	55
≥100	50	50

The following example illustrates how oil is allocated between the four categories under the Corporation's Nigerian Production Sharing Contracts. The example compares two scenarios each with annual revenues of \$200, annual operating costs of \$20 and no loss or allowances carried forward. For the purposes of the illustration, Royalty Oil is assumed to be levied at five per cent, NDDC levy at three per cent, education tax at two per cent, Tax Oil at 60 per cent and NNPC's share of Profit Oil at 30 per cent. The impact of capital expenditures of \$100 in Year 1 has an after tax and Profit Oil cash flow effect of only \$70 reduction in Year 1 and an increase of almost \$15 in the following four years such that the aggregate incremental cash flow reduction over the five year period is approximately \$10, assuming no revenue benefit arising from the investment. The following table has been included as an example only and actual results may vary materially.

		Without Capital Expenditure		With Capital Expenditure	
		Year 1	Years 2 to 5	Year 1	Years 2 to 5
Tax Oil Computation:					
	Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i>	non-capital costs	20.0	20.0	20.0	20.0
<i>less</i>	Royalty Oil	10.0	10.0	10.0	10.0
<i>less</i>	NDDC levy	0.6	0.6	3.6	0.6
<i>yields</i>	Assessable Profit	169.4	169.4	166.4	169.4
<i>less</i>	education tax	3.4	3.4	3.3	3.4
<i>yields</i>	Adjusted Assessable Profit / (Loss)	166.0	166.0	163.1	166.0
<i>less</i>	capital allowances	0.0	0.0	20.0	20.0
<i>less</i>	investment tax allowance	0.0	0.0	40.0	0.0
<i>times</i>	Tax Oil rate	60%	60%	60%	60%
<i>yields</i>	Tax Oil	99.6	99.6	61.8	87.6
Contractor Cash Flow Computation:					
	Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i>	Royalty Oil	10.0	10.0	10.0	10.0
<i>less</i>	operating expenditure	20.0	20.0	20.0	20.0
<i>less</i>	NDDC	0.6	0.6	3.6	0.6
<i>less</i>	education tax	3.4	3.4	3.3	3.4
<i>less</i>	Tax Oil	99.6	99.6	61.8	87.6
<i>less</i>	NNPC's share of Profit Oil	19.9	19.9	24.4	17.5
<i>yields</i>	Post Tax Cash Flow	46.5	46.5	76.9	60.9
<i>less</i>	capital expenditure	0.0	0.0	100.0	0.0
<i>yields</i>	Contractor Cash Flow	46.5	46.5	(23.1)	60.9
Oil Allocation of Total PSC Revenue:					
	Cost Oil	20.0	20.0	40.0	40.0
	Profit Oil — Contractor Share	46.5	46.5	56.9	40.9
	Contractor Total	66.5	66.5	96.9	80.9
	Royalty Oil	10.0	10.0	10.0	10.0
	Tax Oil	99.6	99.6	61.8	87.6
	Profit Oil — NNPC's share	19.9	19.9	24.4	17.5
	NDDC levy and education tax	4.0	4.0	6.9	4.0
	Government Total	133.5	133.5	103.1	119.1

Between the commencement of its activities under the Nigerian Production Sharing Contracts until the end of 2003, Addax Petroleum lifted and sold all of NNPC's oil on their behalf but since the beginning of 2004, NNPC has lifted its entitlement. Under the Corporation's Nigerian Production Sharing Contracts, oil is valued

based upon the appropriate "Realizable Price". The "Realizable Price" is equivalent to the Official Selling Price which is a price issued on a monthly basis by NNPC and is calculated by NNPC to equate to the prevailing international price in arms length transactions, taking into account the properties of each crude blend. The Okwori Blend is being jointly marketed by Addax Petroleum and NNPC for the first six months or 10 liftings, whichever is longer, commencing June 2005. After this joint marketing period, NNPC will calculate and issue an Official Selling Price on a monthly basis for the Okwori Blend "Realizable Price".

Nigerian Marginal Fields

The Okwok Property is subject to the provisions of the *Petroleum Act* and the regulations thereunder, and the *PPT Act*. The fiscal terms of Nigerian Marginal Fields are the subject of legislative proposals to encourage development. The Nigerian Marginal Fields comprise a number of ring-fenced fields located on concessions already awarded to joint ventures between international oil companies and NNPC and which have reserves booked to the Nigerian Department of Petroleum Resources and have remained un-produced for a period of over 10 years. The Nigerian Marginal Fields are assigned to indigenous Nigerian oil companies who conclude farm-in agreements with the joint ventures and can, in turn, farm-out to other operators.

The Nigerian Marginal Fields are subject to Royalty Oil and Tax Oil payable to government agencies.

The calculation of Royalty Oil and Tax Oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

Anticipated Royalty Oil Rates for the Okwok Property Field Range of Production (mbbls/d)						
<2	2-5	5-10	10-15	15-25	25	
(%)	(%)	(%)	(%)	(%)	(%)	(%)
2.5	2.5	7.5	12.5	18.5	18.5	18.5

Royalty Oil is accounted for on a monthly basis and paid within 60 days of the end of the chargeable period.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below).

Tax Oil is calculated after deducting Royalty Oil and non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Capital costs are depreciated over a five year period at 20 per cent on straight-line basis starting in the first year of production. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Nigerian Marginal Fields is anticipated to be 55 per cent. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 10 per cent of capital expenditures for offshore fields where the water depth is less than 100 m.

In addition to the fiscal terms described above, Addax Petroleum's interest in the Okwok Property is subject to the terms and conditions of the Oriental Joint Venture Agreement. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Cameroon

Addax Petroleum has a 60 per cent interest in, and operates, the Ngosso Concession. Tullow Oil holds the remaining 40 per cent interest. The Government of Cameroon has the right to participate as a joint venturer in any development in the Ngosso Property with a participating interest of up to 25 per cent. Should the Government of Cameroon choose to participate in development of the Ngosso Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil or gas fields within the contract area, production will be subject to royalties and taxes. Royalties vary with annual average production and are calculated on an incremental sliding scale basis as follows.

<u>Annual Production Per Contract Area</u> (mboe/d)	<u>Rate</u> (%)
≤5	2.5
>5 and ≤10	5.0
>10 and ≤20	10.0
>20	12.5

A corporate income tax rate of 40 per cent applies to profits in excess of operating costs and capital expenditures.

There is an additional petroleum duty of 12.5 per cent payable in case the "R" Factor (ratio of cumulative net revenues/cumulative investments) reaches more than 1.5. The additional petroleum duty will be increased to 20 per cent in case "R" is greater than 2.5.

The Ngosso Concession also contains provisions for signature and production bonuses and training fees for Cameroonian nationals.

Gabon

Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Production Sharing Contract. Tullow Oil holds a 47.5 per cent interest and Sonangol E.P. holds the remaining 10 per cent interest. The Government of Gabon has the right to participate as a partner in any development under the Kiarsseny Production Sharing Contract with a participating interest of five per cent. Should the Government of Gabon choose to participate in development of the Kiarsseny Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil fields, the Kiarsseny Production Sharing Contract divides production into Royalty Oil, Cost Oil and Profit Oil. Addax Petroleum and the other Kiarsseny Production Sharing Contract parties will be entitled to lift the Cost Oil and a share of Profit Oil.

Royalty Oil will be calculated on a monthly basis per production area. The rates vary with water depth and production levels on an incremental sliding scale basis as follows.

Royalty Oil Rates

<u>Water Depth</u> (m)	<u>Monthly Average Production</u> (mboe/d)	<u>Rate</u> (%)
<100	≤10	2.0
	>10 and ≤15	3.0
	>15 and ≤20	5.0
	>20 and ≤30	7.5
	>30	10.0
≥100	≤15	2.0
	>15 and ≤25	3.0
	>25 and ≤35	5.0
	>35 and ≤55	7.5
	>55	10.0

After the deduction of Royalty Oil, up to 75 per cent of remaining production will be used to recover all costs for exploration, development and production activities under the Kiarsseny Production Sharing Contract.

Oil remaining after the deduction of Royalty Oil and Cost Oil is Profit Oil. Profit Oil will be shared between the Government of Gabon and the Kiarsseny Production Sharing Contract parties based upon monthly production and water depth according to an incremental sliding scale as follows.

Profit Oil Sharing

<u>Water Depth</u> (m)	<u>Monthly Average Production</u> (mboc/d)	<u>State Share</u> (%)	<u>Contractor Share</u> (%)
<100	≤15	50	50
	>15 and ≤30	52	48
	>30 and ≤40	54	46
	>40 and ≤50	56	44
	>50 and ≤75	60	40
	>75 and ≤100	65	35
	>100	70	30
≥100	≤25	50	50
	>25 and ≤40	52	48
	>40 and ≤55	54	46
	>55 and ≤70	56	44
	>70 and ≤85	58	42
	>85 and ≤100	60	40
	>100	70	30

The Kiarsseny Production Sharing Contract also contains provisions for signature and production bonuses and training fees for Gabonese nationals. There is also a domestic supply obligation.

PETROLEUM RESERVES AND OPERATIONAL MATTERS

Reserves

The tables below summarize the petroleum reserves and the present value of future net revenue associated with Addax Petroleum's reserves evaluated in the Reserve Report prepared by NSAI, independent oil and natural gas reservoir engineers, based on constant and forecast prices and costs assumptions presented in accordance with National Instrument 51-101 — *Standards of Disclosure for Oil and Gas Activities*. The tables summarize the data contained in the Reserve Report and, as a result, may contain slightly different numbers than the Reserve Report due to rounding. Future net revenue values, whether calculated without discount or using a discount rate, are estimated values and do not represent fair market value. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserves estimates of Addax Petroleum's petroleum reserves provided herein are estimates only and there is no assurance that the estimated reserves will be recovered. Actual petroleum reserves may be greater than or less than the estimates provided herein. The estimates of reserves and future net revenue for individual properties included in this prospectus may not reflect the same confidence level as estimates of revenue for all properties, due to the effects of aggregation.

The petroleum reserves of the Corporation are limited to crude oil reserves in Nigeria. The Corporation's Nigerian Production Sharing Contracts do not include the right to produce and sell natural gas and therefore the Corporation's reserve evaluations do not include any natural gas reserves. However, the Production Sharing Contracts in Nigeria contain natural gas utilization clauses which permit the Corporation to participate in commercial natural gas development if and when it occurs. The Ngosso Concession and the Kiarsseny Production Sharing Contract treat commercial natural gas in effectively the same manner as crude oil, except that lower royalty rates apply to gas production under the Ngosso Concession. However, Addax Petroleum did not have any booked proved, probable or possible reserves in Cameroon or Gabon as at September 30, 2005.

Notes:

- (1) Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.
- (2) Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.
- (3) Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.
- (4) Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (e.g., when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

- (5) Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.
- (6) Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.
- (7) "Gross" means Addax Petroleum's total working interest before deduction of NNPC's share of Profit Oil and "Net" means Addax Petroleum's total working interest after deducting the amounts attributable to Royalty Oil and NNPC's share of Profit Oil. See "Fiscal Terms — Nigeria".
- (8) Columns may not add up due to rounding.
- (9) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (10) The forecast prices and costs assumptions assume the continuance of current laws and regulations and increases in terminal selling prices, and take into account inflation with respect to future operating and capital costs. In the Reserve Report, operating costs are assumed to escalate at 1.8 per cent per annum. Crude oil prices as forecast by NSAI effective September 30, 2005, are as follows.

NSAI Crude Oil Forecast Prices

<u>Year</u>	<u>Brent Crude</u> (\$/bbl)	<u>Antan Blend</u> (\$/bbl)	<u>Brass River Blend</u> (\$/bbl)	<u>Okwori Blend</u> (\$/bbl)
2005	62.87	59.55	63.75	63.26
2006	61.47	58.22	62.33	61.86
2007	55.19	52.28	55.96	55.54
2008	46.61	44.15	47.26	46.90
2009	43.45	41.16	44.06	43.72
2010	42.86	40.60	43.46	43.13
2011	42.85	40.58	43.45	43.12
2012	43.36	41.07	43.97	43.64
2013	44.22	41.89	44.84	44.50
2014	45.00	42.62	45.63	45.28
2015	45.89	43.47	46.53	46.18
2016	46.70	44.23	47.35	46.99
2017	47.58	45.07	48.25	47.88

- (11) The constant price and costs assumptions assume the continuance of current laws, regulations and operating costs in effect on the date of the Reserve Report. Crude oil prices were not forecast beyond September 30, 2005. In addition, operating and capital costs have not been increased on an inflationary basis. The prices were as follows.

	<u>September 30, 2005</u> (\$/bbl)
Brent Crude	62.56
Antan Blend	59.26
Brass River Blend	63.44
Okwori Blend	62.95

- (12) Included in the Reserve Report is a capital investment of \$126.4 million to be expended prior 2008 to eliminate gas flaring by constructing infrastructure to supply all produced gas for sale or re-injection.
- (13) Abandonment costs have been estimated for the end of the economic producing life of each property.
- (14) The estimated Net Present Values of Future Net Revenues After Taxes include the effect of all deductions under the Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, NNDC levy, Education Tax and Tax Inversion Penalty. The estimated Net Present Values of Future Net Revenues Before Taxes only include the effect of deducting Royalty Oil and NNPC's share of Profit Oil.
- (15) Estimated Net Present Values of Future Net Revenue include the revenue effects of exploration expenditures of \$103.7 million under the Nigerian PSCs but the costs of exploration activities are not deducted from future net revenue because they do not relate to the reserves being evaluated.

The following two tables set forth the undiscounted elements of future net revenue based on forecast prices and costs and constant prices and costs used by NSAI to determine total future net revenue.

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Forecast Prices and Costs**

	Revenue	Royalties	Operating Costs	Development Costs	Abandonment Costs	Future Net Revenue Before Taxes	Taxes	Future Net Revenue After Taxes
	(\$million)							
Proved Reserves	5,552	629	1,012	697	35	3,163	1,807	1,372
Proved Plus Probable	9,718	1,266	1,716	1,017	45	5,635	3,567	2,107
Proved Plus Probable Plus Possible	13,365	2,004	2,136	1,238	51	7,881	5,190	2,746

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Constant Prices and Costs**

	Revenue	Royalties	Operating Costs	Development Costs	Abandonment Costs	Future Net Revenue Before Taxes	Taxes	Future Net Revenue After Taxes
	(\$million)							
Proved Reserves	6,863	803	1,075	687	32	4,244	2,549	1,718
Proved Plus Probable	12,206	1,677	1,647	1,000	38	7,790	5,056	2,788
Proved Plus Probable Plus Possible	17,322	2,763	2,041	1,209	42	11,190	7,519	3,748

The following table sets forth development costs deducted by NSAI in the estimation of the future net revenue for the Corporation's properties and assets attributable to the reserve categories noted below.

**Future Development Costs (Undiscounted)
as at September 30, 2005**

Year	Forecast Prices and Costs			Constant Prices and Costs

Oil Wells

The following table sets forth the number and status of wells as at September 30, 2005 which are producing or shut-in and which the Corporation considers to be capable of production.

Property	Producing		Shut-in	
	Gross	Net	Gross	Net
OML123				
Adanga	15	15	4	4
Ebughu (and extensions)	21	21	1	1
Oron West and North Oron	8	8	-	-
Akam	4	4	5	5
Bogi	1	1	1	1
Mimbo	1	1	1	1
Ukpam	2	2	-	-
OML124				
Izombe	6	6	1	1
Ossu	4	4	2	2
OPL90				
Okwori	5	5	-	-
Nda	1	1	-	-
Total	68	68	15	15

All of the Corporation's producing or shut-in wells are located in Nigeria, and with the exception of OML124, are offshore.

Drilling History

The total number of exploratory, appraisal and development wells (excluding placement wells and unplanned sidetracks) within the properties which the Corporation drilled in the periods indicated, are listed below.

	9 Months Ended		Year Ended December 31,

Reconciliation of Reserves

The Corporation has not previously reported its reserves in accordance with NI 51-101 and consequently a reconciliation has not been included.

Alternative Price Forecast Evaluation

The forecast prices used by NSAI in the Reserve Report as at September 30, 2005 differ from those currently in the public domain with respect to a number of the Corporation's industry peers. As a result, at the request of the Corporation, NSAI conducted a price sensitivity analysis of the reserves of the Corporation and the net present value of future net revenue associated with such reserves as at September 30, 2005 using an alternative price forecast supplied by the Corporation. The alternative price forecast correlates with the price forecast used in appraisals of some of the Corporation's industry peers in the public domain and, by comparison to the information set forth in the Reserve Report, provides some measure of guidance in respect of the sensitivity of the evaluation to price forecast changes, particularly having regard to the period over which reserves are, pursuant to the evaluation, estimated to be recovered. NSAI otherwise used the same assumptions and definitions as in the Reserve Report. The tables below summarize the alternative price forecast and the results of such analysis. The information set forth below is supplemental to the disclosure required by NI 51-101 and is not a substitute therefor.

Oil Reserves and Future Net Revenues

Notes:

- (1) Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.
- (2) Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.
- (3) Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.
- (4) Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (e.g., when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.
- (5) Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.
- (6) Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.
- (7) "Gross" means Addax Petroleum's total working interest before deduction of NNPC's share of Profit Oil and "Net" means Addax Petroleum's total working interest after deducting the amounts attributable to Royalty Oil and NNPC's share of Profit Oil. See "Fiscal Terms — Nigeria".
- (8) Columns may not add up due to rounding.
- (9) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (10) The alternative prices and costs assumptions assume the continuance of current laws and regulations and increases in terminal selling prices, and take into account inflation with respect to future operating and capital costs. In the Reserve Report, operating costs are assumed to escalate at 1.5 per cent per annum. Crude oil prices used by NSAI for the Alternative Forecast Prices and Cost effective September 30, 2005, are as follows.

Alternative Crude Oil Forecast Prices

<u>Year</u>	<u>Brent Crude</u> (\$/bbl)	<u>Antan Blend</u> (\$/bbl)	<u>Brass River Blend</u> (\$/bbl)	<u>Okwori Blend</u> (\$/bbl)
2005	56.67	53.68	57.46	57.02
2006	57.44	54.41	58.25	57.81
2007	57.25	54.23	58.05	57.61
2008	55.59	52.65	56.37	55.94
2009	54.06	51.21	54.82	54.40
2010	52.99	50.19	53.73	53.32
Thereafter, escalated at 1.5%	52.30	49.54	53.03	52.63

- (11) Included in the Reserve Report is a capital investment of \$126.4 million to be expended prior 2008 to eliminate gas flaring by constructing infrastructure to supply all produced gas for sale or re-injection.
- (12) Abandonment costs have been estimated for the end of the economic producing life of each property.
- (13) The estimated Net Present Values of Future Net Revenues Income Taxes include the effect of all deductions under the Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, NNDC levy, Education Tax and Tax Inversion Penalty. The estimated Net Present Values of Future Net Revenues Before Taxes only include the effect of deducting Royalty Oil and NNPC's share of Profit Oil.
- (14) Estimated Net Present Values of Future Net Revenue include the revenue effects of exploration expenditures of \$103.7 million under the Nigerian PSCs but the costs of exploration activities are not deducted from future net revenue because they do not relate to the reserves being evaluated.

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Alternative Forecast Prices and Costs**

	<u>Revenue</u>	<u>Royalties</u>	<u>Operating Costs</u>	<u>Development Costs</u>	<u>Abandonment Costs</u>	<u>Future Net Revenue Before Taxes</u>	<u>Taxes</u>	<u>Future Net Revenue After Taxes</u>
	(\$million)							
Proved Reserves	6,031	679	1,070	695	35	3,536	2,059	1,494
Proved Plus Probable	10,790	1,431	1,723	1,014	44	6,533	4,193	2,385
Proved Plus Probable Plus Possible	15,191	2,350	2,131	1,233	49	9,364	6,241	3,187

Significant Factors or Uncertainties

Other than various risks and uncertainties that participants in the oil and gas industry are exposed to generally, the Corporation is unable to indentify any important economic factors or significant uncertainties that will affect any particular components of the reserves data disclosed herein. See "Risk Factors".

Sales and Marketing

Historically, the Corporation has utilized the crude marketing services of its affiliate, ABV, to sell all of its crude oil. See "Interest of AOG in Material Transactions". The Corporation currently sells three blends of crude oil. For these three blends of crude, the table below sets forth the sales and marketing volumes, average realized prices and realized differential to Brent Crude for each of the preceding three years ended December 31, 2004 and for the nine months ended September 30, 2005.

Addax Petroleum Crude Oil Differential Premium/(Discount) to Brent Crude (Volume Weighted)⁽¹⁾

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
Sales and Marketing Volumes (mmbbls)				
Antan Blend ⁽²⁾	12.6	13.3	11.8	10.0
Brass River Blend	0.8	1.3	2.2	1.8
Okwori Blend	2.6	-	-	-
Dated Brent Crude Price (\$/bbl)	53.54	38.22	28.84	24.98
Addax Petroleum Average Realized Prices (\$/bbl)				
Antan Blend ⁽²⁾	50.17	36.56	27.49	24.04
Brass River Blend	54.42	39.37	29.10	25.51
Okwori Blend	60.60	-	-	-
Premium/(Discount) to Brent Crude (\$/bbl)⁽¹⁾				
Antan Blend ⁽²⁾	(3.51)	(1.88)	(1.27)	(1.36)
Brass River Blend	0.79	0.49	0.39	0.19
Okwori Blend	0.38	-	-	-

Notes:

- (1) Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.
- (2) The API gravity of the Antan Blend is dependent on the proportional mix of crudes at any time. Where future individual oil field developments have lower API gravities than the current API gravity of the Antan Blend, then the API gravity of the Antan Blend may be reduced at that time.

Future Commitments

The Corporation uses non-physical oil price hedging arrangements to protect its cash flow against near-term low prices while retaining the opportunity to benefit from high oil prices. Typically, the Corporation achieves this objective by hedging a portion of its crude oil production through the purchase of put options.

Additional Information Concerning Abandonment and Reclamation Costs

The Corporation does not expect to incur any abandonment or reclamation costs within the next three years.

Employees

As at September 30, 2005, Addax Petroleum had 291 employees. Of these, 215 were located in Nigeria, 75 were located in Geneva, Switzerland and one was located in Cameroon. All the Nigerian employees, other than management employees, are unionized.

Environmental and Safety Matters

Addax Petroleum has direct responsibility for HSE in its Nigerian and Cameroonian properties. The Corporation has implemented HSE policies in respect of its operations. These HSE policies are an important part of the responsibilities of the Corporation's managers and significantly influence the operations of the Corporation.

The Corporation requires all employees and contractors to comply with HSE policies. The HSE policies are codified in the Corporation's HSE manual, which define individual HSE responsibilities and suggests ways to promote and support a safe and healthy environment. The Corporation circulates the manual to employees in all locations and managers regularly discuss the policies with staff at periodic safety meetings. In Nigeria, the Corporation has a dedicated HSE department that focuses on accident prevention, monitors operational

compliance with the HSE policies and advises management on statutory and industry requirements. The manager of this HSE department reports directly to the Managing Director of Nigerian Operations of the Corporation and is a member of the management committee, which meets weekly to discuss and direct the Corporation's activities.

The HSE policy of the Corporation emphasizes the following:

Leadership, Commitment and Training: Addax Petroleum requires its managers and supervisors to demonstrate a commitment to the HSE policies of the Corporation. This commitment includes not just responsibility for daily operation but also responsibility for reviewing the training requirements of the Corporation in order to ensure new employees and contractors receive appropriate introduction to the HSE policies. The Corporation then eliminates any identified gaps, to enable all employees and contractors to perform their duties responsibly and with due regard to the health and safety of others and the environment.

Risk Management: The Corporation manages risk by ensuring that all new projects or modifications to existing facilities undergo a hazardous operations and risk assessment. The Corporation also routinely assesses the risks of its activities and develops action plans to eliminate or minimize impact on personnel, the environment and facilities.

Health and Safety Operations: The Corporation believes that injury and incident-free operation is achievable and works to promote this mindset throughout the organization. Addax Petroleum conducts periodic in-house inspections and sponsors third-party health and safety audits to evaluate the Corporation's performance and compliance with applicable regulations, guidelines and best practices. Measures recommended through these exercises are diligently implemented to eliminate or mitigate exposure of employees, contractors and the public. The provision of the services of trained medical doctors and equipped facilities at all our field locations enhance the administration of first aid services to the Corporation's and contractors' employees.

Addax Petroleum encourages employees and contractors to report, and the Corporation will investigate, all incidents occurring in the course of operations. Knowledge gained from such investigation is communicated to all operational sites of the Corporation to prevent recurrence of similar incidents within the organization. To this end, Addax Petroleum publishes its HSE statistics and circulates them, with practice updates, throughout the organization.

Environmental Protection: Addax Petroleum conducts studies to assess the impact of planned projects or activities on the environment. Such environmental evaluation studies are conducted periodically to evaluate the impact of the Corporation's activities and opportunities for improvement. Addax Petroleum's waste management plan emphasizes waste minimization and waste reuse in compliance with the regulatory standards and guidelines set by the Nigerian Federal Ministry of Environment and the Department of Petroleum Resources.

Incident Response Plan: The Corporation has developed an integrated incident response plan to address foreseeable emergencies. This plan provides the framework on which a single or multiple emergency situation can be simultaneously managed, while maintaining a disciplined command and control of events. Emergencies such as fire, well control, medical evacuation, oil spill and civil disturbances have developed response annexes. Regular exercises are conducted at all locations to assess the awareness and preparedness of responders and to test the adequacy and state of readiness of emergency response equipment.

Insurance

The Corporation's producing oil and gas properties are all located in Nigeria. Pursuant to the terms of the Corporation's Nigerian Production Sharing Contracts, NNPC is the license holder while Addax Petroleum, as contractor, operates the fields. Addax Petroleum bears all of the risk and costs of exploration, development and operation. However, under the terms of the Nigerian Production Sharing Contracts the field equipment in Nigeria is owned by NNPC and is therefore insured by NNPC under a global policy (the "CIP Policy") which covers all of NNPC's assets and provides property damage and comprehensive general liability insurance coverage. The Corporation is co-insured under NNPC's CIP Policy as a contractor to NNPC. Addax Petroleum

believes that the coverage under the CIP Policy meets international oil industry practice and standards and the limits and deductibles are adequate for the operations in Nigeria.

Addax Petroleum has procured construction all risks insurance coverage in respect of its operations in OPL90. Coverage is for works executed anywhere in the world in performance of contracts relating to OPL90 including loss of, or damage to, the pipelines, risers, umbilicals, christmas trees and completions to be installed. Addax Petroleum has also recently procured construction all risks insurance coverage in respect of its operations in OML123 relating to the subsea works associated with the replacement of the FPSO.

Addax Petroleum's policy is to arrange such other insurance from time to time in respect of its other operations as required and in accordance with industry practice.

SELECTED FINANCIAL INFORMATION

The following table presents a summary of historical consolidated financial data for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended. The summary of historical consolidated financial data set forth below may not contain all of the information that is important to a prospective investor and should be read along with "Presentation of Financial Information", "Selected Financial Information", "Management's Discussion and Analysis of Financial Condition and Results of Operations", and the consolidated financial statements and related notes of the Corporation for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 included in this prospectus. The results for the nine months ended September 30, 2005 are not necessarily indicative of results for the full year. All financial information with respect to the Corporation has been presented in United States dollars in accordance with Canadian GAAP.

Notes:

- (1) All per share amounts are calculated on the basis of 120 million outstanding Common Shares of Addax Petroleum Corporation, giving pro forma effect to the completion of the Pre-IPO Transactions.
- (2) The Corporation does not have any outstanding securities that are convertible into, or exchangeable for, Common Shares.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis of the Corporation's financial condition and results of operations should be read in conjunction with the rest of the prospectus, including the Corporation's consolidated financial statements and related notes thereto beginning on page F-7 of this prospectus and the "Selected Financial Information". The consolidated financial statements presented herein are those of Addax Petroleum N.V. and its subsidiaries. After giving effect to the Pre-IPO Transactions, the Corporation will own legally and beneficially 100 per cent of the common shares of Addax Petroleum N.V. See "Addax Petroleum — Pre-IPO Transactions".

This discussion and analysis contains forward-looking statements that are subject to known and unknown risks and uncertainties. The Corporation's actual results and the timing of events could differ materially from those expressed or implied by such forward-looking statements as a result of various factors, including those discussed below and elsewhere in this Prospectus, particularly under the headings "Forward Looking Statements" and "Risk Factors".

Addax Petroleum defines "cash flow from operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Investors are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

For the purpose of the following discussion and analysis, figures expressed on a per barrel basis are derived using sales volumes rather than production.

Overview

The Corporation is an international oil and gas exploration and production company focused on Africa and the Middle East. It has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. The Corporation currently has 11 producing fields, and has increased its crude oil production from an average of 8,800 bbls/d for 1998 to an average of approximately 74,450 bbls/d for October 2005. As at September 30, 2005, the Corporation had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls.

The Corporation is the largest independent oil producer in Nigeria and operates all four of its 100 per cent owned Nigerian properties, which account for all of its oil production. OML123 is located in shallow water and produces the majority of the Corporation's crude oil, a medium to light quality crude called the Antan Blend. OML124 is located onshore and produces light quality crude oil called the Brass River Blend. OPL90 is located offshore in medium depth water and produces light quality crude oil called the Okwori Blend, and OPL225 is an offshore exploration property located in medium depth water adjacent to OPL90.

The Corporation performs its oil activities in Nigeria through two Production Sharing Contracts with NNPC. Under each Nigerian Production Sharing Contract, the Corporation bears the development and exploration risk for the properties and funds all operating expenses and capital expenditures. In return, the Corporation is entitled to recover these costs and expenditures based on a production sharing formula after commercial discoveries are made and production begins and after the payment of royalties and production taxes. The Corporation shares with NNPC the oil remaining after the payment of royalties, costs and expenditures and production taxes on a sliding scale based on monthly production under each Nigerian Production Sharing Contract. All of the crude oil produced from the Corporation's operations is sold on an arm's length basis to ABV, a wholly-owned subsidiary of AOG, under the terms of the Crude Oil Supply Agreements.

In addition to Nigeria, the Corporation is active in Cameroon, where it has a 60.0 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation, and Gabon, where it has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The Corporation is also pursuing a number of new venture opportunities in the Middle East and Africa, primarily relating to the Taq Taq Property, the Okwok Property and the Block 4 Property in the Joint Development Zone.

Material Factors Affecting the Corporation's Results of Operations and Financial Condition

Management believes that the following factors have had, and will continue to have, a material effect on the Corporation's results of operations and financial condition.

Oil Prices

The Corporation's results of operations are influenced significantly by crude oil prices. Crude oil prices have been volatile in the past and are likely to continue to be volatile in the future. Prices for oil are based on world supply and demand and a number of other factors, including government regulation, social and political conditions and the weather.

The prices for oil produced by the Corporation are related to the price of Brent crude oil in the world markets. Brent crude prices have increased from an average price of \$28.84 per barrel in 2003 to an average price of \$38.22 per barrel in 2004 and to an average price of \$53.54 per barrel for the first nine months of 2005. This increase reflects, among other things, an increase in world-wide demand, particularly in the United States and Asia, heightened geopolitical uncertainty in many areas of the world and supply concerns in the Middle East and other key producing regions. For the month of October, 2005, the average price per barrel rose to \$58.61, as supply concerns arose following hurricanes Katrina and Rita and their adverse effect on crude oil production in the US Gulf Coast region. For the nine months ended September 30, 2005, approximately 74 per cent of the Corporation's crude oil production was Antan Blend, which sold at an average discount to Brent crude of approximately seven per cent in the nine months ended September 30, 2005 and approximately six per cent in 2004. Prices for Antan Blend have increased to an average of \$50.02 per barrel for the nine months ended September 30, 2005 from \$36.08 per barrel for the same period in 2004.

The increase in oil prices has had a significant positive impact on the Corporation's net revenue, CFFO and net income, particularly in 2004 and the nine months ended September 30, 2005.

Production and Reserves

The Corporation's revenues and net income also depend on its production levels and its ability to replace its reserves. The Corporation has historically increased production by employing advanced and proven technologies to increase production in mature fields, drilling additional wells on its existing properties and acquiring and developing additional properties. The Corporation had 201.3 mmbbls of proved and probable reserves as at September 30, 2005. The Corporation increased production by 55 per cent to an average of 62.1 mbbls/d in the nine months ended September 30, 2005 from an average of 40.0 mbbls/d during the same period in 2004. The increased production was due mainly to the Okwori Property and the Nda field test well in OPL90 coming on-stream in March 2005 and 11 new wells coming on-stream in OML123.

Operating Expenses and Capital Costs

Operating expenses are the costs of producing oil and consist of items such as labour, FPSO leasing obligations, supplies, maintenance, repairs and utilities. The Corporation maintained an average operating expense of \$6.46 per barrel for the nine months ended September 30, 2005 from \$6.07 per barrel for the same period in 2004. Operating expenses increased in large part because of the costs associated with development at the Okwori Property. Operating expenses relating to the Okwori Property have averaged \$6.88 per barrel during its start up phase in 2005. Production from the Okwori Property is still increasing and operating costs are expected to decline on a per barrel basis as the field reaches full production.

Capital costs are capitalized and expensed to the income statement and include engineering studies, seismic acquisition, drilling of exploration, appraisal and development wells, the acquisition of leases and facilities costs. Facilities costs include the construction and installation of platforms and the purchase and installation of

pipelines. All costs prior to the first lifting are capitalized. The costs of drilling rig and supply boat day rates increased significantly during 2005.

Taxes

Taxes paid in Nigeria pursuant to the Production Sharing Contracts vary materially based upon, among other factors, world oil prices and capital expenditures of the Corporation. The percentage of revenues that the Corporation pays as Tax Oil decreases during periods of lower oil prices and increases during periods of higher oil prices. Tax Oil thus serves as a partial hedge against changes in the price of oil.

The Nigerian Production Sharing Contracts are also designed to stimulate capital investment in the Nigerian oil industry. Certain capital expenditures are recoverable as capital allowances prior to the calculation of Tax Oil and therefore, have the effect of reducing taxes otherwise payable under the Nigerian Production Sharing Contracts at a rate of 60 per cent. However, in the event that deductions for capital allowances and capital investment allowances reduce the taxes otherwise payable to zero, a 15 per cent tax charge is applied to the taxable amount prior to deduction of certain capital allowances and capital investment allowances.

In the nine months ended September 30, 2005, the Corporation was taxed at the 15 per cent tax rate in relation to the OPL90/225 PSC. As at September 30, 2005, the Corporation had \$120.6 million of unutilized capital investment allowance relating to OPL90 and OPL225. In addition, \$55.2 million of costs incurred by a prior operator were available for recovery as Cost Oil. \$44.2 million of these costs have been allocated to operating expenses and utilized, while the balance of \$11.0 million has been allocated to capital costs. The Corporation expects to become subject to the standard tax rate of 60 per cent under the OPL90/225 PSC, if and when it utilizes its capital allowances and capital investment allowances. The Corporation's 2006 budget assumes that the 60 per cent rate would apply to OPL90/225.

Economic Sensitivities

The following table shows the estimated after-tax effect that changes to crude oil prices, crude oil production, operating costs and taxes for the OPL90/225 PSC would have had on Addax Petroleum's net income for the nine months ended September 30, 2005, had these changes occurred on January 1, 2005. These calculations are based on business conditions, production and sales volumes existing in the nine months ended September 30, 2005. The 1,000 bbls/d increase has been allocated evenly to OML123, OML124 and OPL90 once initial production from OPL90 commenced in March 2005. Prior to March 2005, production is assumed to come entirely from OML123 and OML124.

<u>Factor</u>	<u>Change (+)</u>	<u>Net Income Impact</u> ((\$million)	<u>Net Income Impact</u> (\$/share)
Price received for crude oil	\$1.00/bbl	5.4	0.05
Crude oil production	1,000 bbls/d	4.3	0.04
Increase in operating costs	10%	(4.2)	(0.04)
Tax rate for OPL90/225 PSC	45% (15% to 60%)	(20.0)	(0.17)

The impact of the above changes may be compounded or offset by changes to other business conditions. In addition, the table does not consider the relationships between the above factors.

Nine months Ended September 30, 2005 Compared with Nine Months Ended September 30, 2004

Summary

The Corporation's production figures are reported gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period.

During the nine months ended September 30, 2005, the Corporation brought 11 new wells on-stream. The majority of these wells were in the Adanga, Oron West and North Oron fields in OML123. The Okwori Property and the Nda field test well in OPL90 came on-stream in March 2005. The addition of the new wells increased the Corporation's crude oil production by 58 per cent to 16.9 mmbbls for the nine months ended September 30, 2005

from 10.7 mmbbls in the same period in 2004. Average daily production for the nine months ended September 30, 2005 was 62.1 mbbbls/d, representing an increase from the average daily production of 39.1 mbbbls/d during the same period in 2004.

The Corporation's total crude oil production by property for the nine months ended September 30, 2005 was 12.5 mmbbls from OML123, 1.0 mmbbls from OML124, and 3.4 mmbbls from OPL90 (which commenced production in March 2005), as compared with 9.6 mmbbls from OML123 and 1.1 mmbbls from OML124 for the same period in 2004.

Net income increased to \$168.0 million for the nine months ended September 30, 2005 from \$41.3 million for the same period in 2004. The following table summarizes the Corporation's results of operations for the nine months ended September 30, 2005 as compared to the same period in 2004.

	9 Months Ended September 30, 2005	9 Months Ended September 30, 2004	Change	9 Months Ended September 30, 2005	9 Months Ended September 30, 2004
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)

Future taxes	(50.6)	(26.4)	92	(3.14)	(2.54)
Net Income	168.0	41.3	307	10.43	3.97

Notes:

- (1) Includes interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
- (2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales are reported on the basis of production volumes sold gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Any overlifts are accounted for as deferred income on the balance sheet.

Due to favourable market conditions, the average realized price for the Corporation's crude oil increased by 48 per cent to \$52.21 per barrel for the nine months ended September 30, 2005 from \$35.37 per barrel for the same period in 2004.

Petroleum sales increased by 129 per cent to \$840.6 million for the nine months ended September 30, 2005 from \$367.8 million for the same period in 2004. The increase reflects both a 48 per cent increase in the average sales price and a 58 per cent increase in average daily production. Petroleum sales volumes for the nine months ended September 30, 2005 were 16.1 mmbbls compared with 10.4 mmbbls for the same period in 2004.

Royalties

The following table summarizes the component parts of Royalties for the nine month periods ended September 30, 2005 and 2004:

	9 Months Ended September 30,		Change	9 Months Ended September 30,	
	2005	2004		2005	2004
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Royalty Oil	(58.7)	(24.0)	144	(3.65)	(2.31)
NNPC Profit Oil	(58.4)	(25.5)	129	(3.63)	(2.45)
NDDC	(8.7)	(9.3)	(7)	(0.54)	(0.90)
Education Tax	(9.6)	(4.3)	122	(0.60)	(0.42)
Tax Inversion Penalty	(4.4)	(3.9)	13	(0.28)	(0.36)
Total Royalties	(139.8)	(67.0)	109	(8.68)	(6.44)

Royalties include Nigerian Royalty Oil, NNPC's share of Profit Oil, Niger Delta Development Commission ("NDDC") levy, education tax and tax inversion penalty.

- Royalty Oil is calculated in accordance with the Corporation's Nigerian Production Sharing Contracts on a field by field basis.
- Profit Oil is calculated in accordance with the Nigerian Production Sharing Contracts and is equal to the realized price for crude oil less Royalty Oil, Cost Oil and Tax Oil. Profit Oil is shared between NNPC and the Corporation depending on the licence and the monthly volumes produced.
- NDDC levy is calculated as 3 per cent of budgeted expenditures. For OPL90, this amount was calculated once first lifting occurred in June 2005. Before first lifting, there was no liability for the levy.
- Education tax is calculated as a 2 per cent charge on taxable profit before capital allowances are deducted.
- The tax inversion penalty is designed to encourage oil companies to contain operating costs. The tax inversion penalty for production rates of less than 50 mbbbls/d is calculated at 25 per cent of operating costs in excess of \$7.50/bbl. For production rates of more than 50 mbbbls/d, the tax inversion penalty is calculated at 25 per cent of operating costs above \$5.00/bbl. Addax Petroleum would be subject to this penalty if the Corporation's average production from the OML123/124 PSC is above 50 mbbbls/d in 2005. If, as management expects, the production average exceeds 50 mbbbls/d for 2005, the Corporation's maximum exposure to the tax inversion penalty is estimated to be approximately \$4.5 million.

Royalties increased by 109 per cent to \$139.8 million for the nine months ended September 30, 2005 from \$67.0 million for the same period in 2004. This increase was due to the rise in petroleum sales which in turn resulted in Royalty Oil increasing by 144 per cent to \$58.7 million from \$24.0 million and includes \$5.3 million of Royalty Oil resulting from OPL90 crude oil production (2004 — nil), and NNPC's share of Profit Oil increasing 129 per cent to \$58.4 million from \$25.5 million, due to increased profitability from OML123 and OML124, primarily as a result of higher sales volumes and prices.

The NDDC levy decreased by \$0.6 million to \$8.7 million for the nine months ended September 30, 2005 from \$9.3 million for the same period in 2004. Education tax increased by 122 per cent to \$9.6 million for the nine months ended September 30, 2005 from \$4.3 million for the same period in 2004. The increase in education tax was a result of higher taxable income before allowances in OML123 and OML124 and the inclusion of OPL90 income for the first time. The tax inversion penalty increased by 13 per cent to \$4.4 million for the nine months ended September 30, 2005 from \$3.9 million for the same period in 2004 due primarily to management's expectation that OML123 and OML124 will produce in excess of 50.0 mbbbls/d for 2005.

Operating Expenses

Operating expenses increased by 65 per cent to \$104.0 million for the nine months ended September 30, 2005 from \$63.1 million during the same period in 2004. The increase was primarily due to (i) an increase in employee costs and benefits of \$4.5 million following the recruitment of 20 additional professionals in Nigeria to support ongoing operations and development in the Okwori field; (ii) an increase of \$5.0 million in Lagos office costs; (iii) an increase of \$4.3 million for production and maintenance work on OPL90; and (iv) an increase of \$7.5 million in FPSO charter costs following the lease of a TPU (temporary production unit) which was used to continue production from the Adanga platform while upgrades were being made. In addition, operating expenses for OPL90 for the nine months ended September 30, 2005 were \$23.2 million, as compared with no operating expenses for OPL90 in 2004.

Per barrel operating expenses increased to \$6.46 in the nine months ended September 30, 2005 from an average of \$6.07 for the same period in 2004.

General and Administrative Expenses

General and administrative charges relate to corporate costs and new venture activities. These costs are not tax deductible for Nigerian tax purposes.

General and administrative expenses decreased by 16 per cent to \$11.3 million for the nine months ended September 30, 2005 from \$13.5 million for the same period in 2004. This decrease was due primarily to the Corporation incurring \$2.2 million in legal and special audit costs in 2004 in preparation for its initial public offering.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 131 per cent to \$108.1 million for the nine months ended September 30, 2005 from \$46.8 million for the same period in 2004. The 2005 figure includes \$30.2 million in depreciation on OPL90 assets which were not depreciated in 2004 as production from OPL90 did not commence until March 2005. Depreciation for OML123 and OML124 assets increased by \$28.6 million for the nine months ended September 30, 2005 compared to the same period in 2004, due primarily to increased production which led to an increase in the unit of production rate used to calculate depreciation. This higher unit of production rate was due primarily to the addition of the Okwori Property costs to the depletion, depreciation and accretion pool. The average development cost per barrel for projects in OML123/124 is approximately \$4.00 to \$6.00 per barrel compared with significantly higher development costs of approximately \$10.00 per barrel for the Okwori Property.

Current Income Taxes

The fiscal terms of the Corporation's main operations in Nigeria are set out in the Production Sharing Contracts as modified by the Nigerian government on November 21, 2001. Taxation is calculated at the statutory rate on income which is taxable in Nigeria as a result of activities under the Production Sharing Contract.

Current Income Taxes increased by 135 per cent to \$256.9 million for the nine months ended September 30, 2005 from \$109.1 million for the same period in 2004. This increase was due primarily to an increase in petroleum sales, which generated a higher taxable basis for the nine months ended September 30, 2005. There were \$6.6 million of current income taxes for OPL90 for the nine months ended September 30, 2005 and no income tax for the same period in 2004. Income from OPL90 for the nine months ended September 30, 2005 was taxed at 15 per cent.

Future Income Taxes

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

Future income taxes increased by 92 per cent to \$50.6 million for the nine months ended September 30, 2005 from \$26.4 million for the same period in 2004. This increase is primarily due to a future tax liability of \$20.1 million for the OPL 90/225 PSC for the nine months ended September 30, 2005 (corresponding period in 2004 — nil).

Year Ended December 31, 2004 Compared with Year Ended December 31, 2003

Summary

During 2004, 15 new wells came on-stream, including two extended well tests. The Corporation also implemented initiatives to optimize production from existing wells. This resulted in an increase in production by 6 per cent to 14.6 mmbbls in 2004 from 13.8 mmbbls in 2003 and an increase in the average daily crude oil production rate to 40.0 mbbls/d in 2004 from 37.7 mbbls/d in 2003.

Total oil production for 2004 was 14.6 mmbbls, 91 per cent of which was from OML123 (13.2 mmbbls) with the remainder from OML124 (1.4 mmbbls).

In 2004, net income increased by 169 per cent to \$62.6 million from \$23.3 million in 2003. The following table summarizes the Corporation's results of operations for 2004 as compared to 2003.

	<u>2004</u>	<u>2003</u>	<u>Change</u>	<u>2004</u>	<u>2003</u>

Current taxes	(140.4)	(101.7)	38	(9.82)	(7.32)
Future taxes	(30.1)	(25.7)	17	(2.10)	(1.85)
Non-controlling interest	—	(2.4)	n/a	—	(0.16)
Net Income	<u>62.6</u>	<u>23.3</u>	<u>169</u>	<u>4.38</u>	<u>1.68</u>

Notes:

- (1) Including interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
- (2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales increased by 37 per cent to \$524.1 million in 2004 from \$381.8 million in 2003. The increase reflects both a 33 per cent increase in the average realized sales price and a 6 per cent increase in average daily production. The average realized price per barrel increased by 33 per cent to \$36.65 in 2004 from \$27.47 in 2003.

Royalties

The following table summarizes the component parts of royalties for the years ended December 31, 2004 and 2003.

	Year Ended December 31,		Change (%)	Year Ended December 31,	
	2004 (\$million)	2003 (\$million)		2004 (\$/bbl)	2003 (\$/bbl)
Royalty Oil	(36.0)	(28.2)	27	(2.51)	(2.03)
NNPC Profit Oil	(45.5)	(28.7)	59	(3.18)	(2.06)
NDDC	(11.8)	(6.4)	84	(0.82)	(0.46)
Education Tax	(6.3)	(3.8)	64	(0.44)	(0.27)
Tax Inversion Penalty	(3.8)	-	-	(0.27)	-
Total Royalties	(103.4)	(67.1)	54	(7.22)	(4.82)

Royalties increased by 54 per cent to \$103.4 million in 2004 from \$67.1 million in 2003. This increase was due to the increase in petroleum sales outlined above which resulted in Royalty Oil increasing by 27 per cent to \$36.0 million in 2004 from \$28.2 million in 2003, and NNPC's share of Profit Oil increasing by 59 per cent to \$45.5 million in 2004 from \$28.7 million in 2003, due to increased profitability from OML123 and OML124, primarily due to higher sales volumes and prices.

The NDDC levy increased by 84 per cent to \$11.8 million in 2004 from \$6.5 million in 2003, due primarily to a \$5.0 million accrual relating to a change in the basis on which the NDDC levy was calculated. The NDDC levy was calculated based on actual expenditures in 2002 and 2003 and budgeted expenditures in 2004. The Corporation had been lobbying to change the basis of the NNDC levy calculation and it became apparent in 2004 that the method which the Nigerian authorities wished to use was budgeted expenditure. This calculation method is still being disputed by the Corporation. The additional increase is mainly due to higher expenditures in 2004 compared to 2003. Education tax increased by 64 per cent to \$6.3 million in 2004 from \$3.9 million in 2003, due to higher taxable income before allowances.

The tax inversion penalty in 2004 relates to a tax audit of the Corporation's 1998 to 2001 financials where NNPC and the Corporation agreed on final tax accounts. The method of calculating operating costs for the costs penalty arrangement is still to be agreed. However, following the audit, and applying the Corporation's method of calculating operating costs per barrel, the cost per barrel for 2000 was greater than \$7.50 per barrel. Thus, the tax inversion penalty was accrued in 2004.

Operating Expenses

Operating expenses increased by 14 per cent to \$87.5 million in 2004 from \$76.8 million in 2003. This increase was primarily due to an increase in employee costs and benefits of \$5.2 million following the recruitment of additional professionals in Nigeria to support ongoing operations and development on the Okwori Property and an increase of \$5.8 million in FPSO charter costs following the lease of a temporary production unit which was used to process crude oil while the Adanga Platform was closed for upgrades. This increase was partially offset by a decrease of \$0.8 million in onshore maintenance costs (pipeline and facilities) and \$0.8 million in custom duties on the importation of well material. The per barrel operating cost increased to \$6.12 in 2004 from \$5.53 in 2003.

General and Administrative Expenses

General and administrative expenses increased by 21 per cent to \$18.2 million in 2004 from \$15.0 million in 2003. This increase was due primarily to the Corporation incurring \$4.0 million in legal and special audit costs in 2004 in preparation for its initial public offering.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 26 per cent to \$77.2 million in 2004, from \$61.3 million in 2003, largely as a result of increased production and a larger depreciable base. On a per barrel basis, depletion, depreciation and accretion expenses increased by \$0.99 per barrel to \$5.40 per barrel in 2004 from \$4.41 per barrel in 2003.

In 2004, the Corporation wrote off \$3.8 million, which represented its portion of the costs associated with the drilling of an unsuccessful exploratory well in Gabon in early 2004.

In 2003, production from two cost pools, OPL90 and OPL225 and the Ngosso Property, had not yet commenced. Accordingly, no depreciation charge for these costs was calculated and all costs were capitalized. The Corporation planned to acquire 3D seismic data in the Ngosso Property in 2003, but the project was postponed due to the Cameroon-Nigeria border dispute. In 2003, the Corporation wrote off capitalized intangible costs of \$4.3 million which were incurred for mobilization and demobilization of a seismic data acquisition team in the Ngosso Property.

Current Income Taxes

Current income taxes increased by \$38.7 million to \$140.4 million in 2004 from \$101.7 million in 2003. This increase is due primarily to a 35.0 per cent increase in petroleum sales which generated a higher taxable basis in 2004 compared to 2003, and an increase in PPT charges of \$9.6 million relating to whether certain capital costs regarding the acquisition of the Nigerian properties should be charged to Cost Oil.

Future Income Taxes

Future income tax expense increased by 17 per cent to \$30.1 million in 2004 from \$25.7 million in 2003. The increase is due primarily to additional capital expenditure of which intangible drilling costs are expensed in the tax accounts and capitalized in the financial statements, offset by greater depletion, depreciation and accretion compared to capital allowances.

Year Ended December 31, 2003 Compared with Year Ended December 31, 2002

Summary

In OML123, five new wells came on-stream in 2003 and initiatives were implemented to optimize production from existing wells. In OML124, the Corporation implemented a drilling program that resulted in two new producing wells being brought on-stream. Principally as a result, crude oil production increased by 20 per cent to 13.8 mmbbls in 2003 from 11.5 mmbbls in 2002. The average daily rate of production increased to 37.7 mbbbls/d in 2003 from 31.5 mbbbls/d in 2002.

Total crude oil production for 2003 was 13.8 mmbbls, 85.5 per cent of which was produced from OML123 (11.8 mmbbls), with the remainder produced from OML124 (2.0 mmbbls).

In 2003, net income decreased by 66 per cent to \$23.3 million as compared to \$68.2 million in 2002. The following table summarizes the Corporation's results of operations for 2003 as compared to 2002.

	2003	2002	Change	2003	2002
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Petroleum sales	381.8	284.1	34	27.47	24.28

Notes:

- (1) Including interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
(2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales increased by 34 per cent to \$381.8 million in 2003 from \$284.1 million in 2002. The increase reflects both a 13 per cent increase in the average realized price of the Corporation's crude oil (\$27.47 in 2003 compared to \$24.28 in 2002) and a 20 per cent increase in sales. The number of barrels lifted increased to 13.8 mmbbls in 2003 from 11.5 mmbbls in 2002.

Royalties

The following table summarizes the component parts of royalties for the years ended December 31, 2003 and 2002.

	Year Ended December 31,		Change	Year Ended December 31,	
	2003	2002		2003	2002
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Royalty Oil	(28.2)	35.2	n/a	(2.03)	3.01
NNPC Profit Oil	(28.7)	(6.4)	344	(2.06)	(0.55)
NDDC	(6.4)	(8.1)	(21)	(0.46)	(0.69)
Education Tax	(3.8)	(1.6)	143	(0.28)	(0.14)
Total Royalties	(67.1)	19.1	n/a	(4.83)	1.63

Royalties increased to \$67.1 million in 2003 from a credit of \$19.1 million in 2002. Royalty Oil increased to \$28.2 million in 2003 from a credit of \$35.2 million in 2002. Royalty Oil in 2002 included a credit of \$53.7 million due to the implementation of new royalty terms during 2002, but made effective retroactively as of January 1, 2000. In addition, the increase in production between 2003 and 2002 resulted in higher royalties. NNPC's share of Profit Oil increased to \$28.7 million in 2003 from \$6.4 million in 2002, due to increased profitability from OML123 and OML124, primarily due to higher sales volumes and prices. Following an audit by NNPC in 2003, the Corporation agreed with NNPC that capital investment allowance was not deductible in calculating NNPC Profit Oil. This increased NNPC Profit Oil in 2003 by \$10.3 million. In 2002, NNPC Profit Oil had carried forward losses from prior years, which reduced the 2002 change.

NDDC levies decreased by 21 per cent to \$6.5 million in 2003 from \$8.1 million in 2002. The decrease in NDDC levies was due primarily to lower capital expenditures in 2003. Education tax increased by 143 per cent to \$3.9 million in 2003 from \$1.6 million in 2002. The increase was due to higher taxable income before allowances in 2003. In 2003 and 2002, the NDDC levy was calculated based on actual expenditures (as opposed to budgeted expenditures) incurred on OML123 and OML124. As no crude oil was produced and sold from OPL90 and OPL225 in 2003 or 2002, no petroleum levies were calculated for these properties.

Operating Expenses

Operating expenses increased by 19 per cent to \$76.8 million in 2003 from \$64.8 million in 2002. This increase was due primarily to a \$4.4 million increase in the OML123 FPSO costs following the leasing of a second production processing train for the FPSO, a \$2.2 million increase in employee costs, a \$2 million provision for Nigerian withholding tax in 2003, a \$1.2 million increase in supply vessel costs of the Corporation's offshore operations, a \$1 million restructuring charge incurred in 2003 and a \$0.6 million increase in third party maintenance staff costs. Per barrel operating costs decreased by \$0.01 to \$5.53 in 2003 from \$5.54 in 2002.

General and Administrative Expenses

General and administrative expenses increased by \$3.9 million to \$15.0 million in 2003 from \$11.1 million in 2002. This increase was primarily due to an increase in new ventures activities and office expansion activities in Geneva.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 53 per cent to \$61.3 million in 2003 from \$40.1 million in 2002. This increase was primarily due to the increase of the unit of production rate used to calculate total depreciation. On a per barrel basis, depletion, depreciation and accretion expenses increased by \$0.98 to \$4.37.

Current Income Taxes

Current Income Taxes increased by 193 per cent to \$101.7 million in 2003 from \$34.7 million in 2002. This increase was due primarily to a 27.2 per cent increase in petroleum sales which generated a higher taxable basis in 2003. Tax loss and allowance carry forwards were used before 2003, which significantly reduced the 2002 tax charge. A tax accrual of \$8.0 million was taken in 2003 relating to a reserve addition bonus for reserve additions in 1999, which the Nigerian authorities disallowed in 2003 and which the Corporation successfully contested. Another tax accrual, also for \$8.0 million, was taken relating to studies which were capitalized by the Corporation.

Future Income Taxes

Future income taxes decreased by 64 per cent to \$25.7 million in 2003 from \$72.3 million in 2002. The decrease was a result of a \$16 million tax deferral for the Okwori Property, which was offset by an increase in the timing differences in OML123 and OML124 and the accumulation of capital investment allowance carry forwards in 2003.

Consolidated Results of Operations by Quarter

The following table sets forth a summary of the Corporation's results of operations for the periods indicated.

	2005			2004				2003			
	Q3	Q2	Q1	Q4	Q3	Q2	Q1	Q4	Q3	Q2	Q1
	(\$thousand)										
Petroleum sales	387.8	258.2	194.5	156.4	146.6	117.1	104.0	96.2	98.4	89.4	97.8
Net income	85.6	53.5	28.9	21.3	15.8	13.7	11.8	(8.1)	13.8	1.4	16.2
Net income per share — basic and diluted	0.71	0.45	0.24	0.18	0.13	0.11	0.10	(0.07)	0.12	0.01	0.14

Petroleum Sales

The volume of crude oil sold by the Corporation per fiscal quarter for the first three fiscal quarters of 2005 was 4.4 mmbbls, 5.4 mmbbls and 6.4 mmbbls, respectively. Petroleum sales for the first three quarters of 2005 increased as production from OML123 and OML124 increased and as production from OPL90 was brought on-stream in March 2005. Petroleum sales from OPL90 and OPL225 per fiscal quarter for the first three quarters of 2005 were nil mmbbls, 0.9 mmbbls and 1.7 mmbbls, respectively. The average sales price per quarter for the first three fiscal quarters of 2005 was \$43.13 per barrel, \$49.67 per barrel and \$59.89 per barrel, respectively. The increasing volumes and prices throughout the quarters, including first sales from OPL90 and OPL225, accounted for the increasing petroleum sales per quarter.

In 2004, the volumes of crude oil sold by the Corporation per fiscal quarter were 3.3 mmbbls, 3.4 mmbbls, 3.7 mmbbls and 4.0 mmbbls, respectively. Petroleum sales in 2004 were affected by increasing production during the year. The average sales price per fiscal quarter generally increased throughout 2004 as follows: \$30.53 per barrel, \$33.52 per barrel, \$40.22 per barrel and \$40.14 per barrel. The increasing volumes and prices throughout the year accounted for the rising total petroleum sales per quarter.

For the four fiscal quarters in 2003, the volumes sold were 3.3 mmbbls, 3.6 mmbbls, 3.7 mmbbls and 3.3 mmbbls, respectively. The average sales price in the first quarter was \$30.46 per barrel, dropping to \$25.01 per barrel in the second quarter and then rising to \$27.51 and \$28.30 per barrel in the third and fourth quarters, respectively.

Net Income

Net income by fiscal quarter for the first three quarters of 2005 were \$28.9 million, \$53.5 million and \$85.6 million, respectively. The increase in net income in the second quarter compared to the first quarter of \$24.6 million was due primarily to an increase in petroleum sales from \$194.5 million in the first quarter to \$258.2 million in the second quarter. Second quarter petroleum sales included initial sales from the Okwori Property of \$53.6 million. The increase in petroleum sales in the second quarter was offset by costs from Okwori production of \$30.1 million. Taxes were flat in the second quarter due to production from the Okwori Property having a low tax rate and large tax allowances obtained from a previous operator of OPL90. Net income increased in the third quarter compared to the second quarter by \$32.1 million primarily due to an increase in petroleum sales from \$258.2 million in the second quarter to \$387.8 in third quarter. Third quarter petroleum sales from the Okwori Property were \$106.3 million as compared to \$53.6 million in the second quarter. The increase in petroleum sales in the third quarter was offset by costs from Okwori production of \$59.3 million. Taxes increased in the third quarter compared to the second quarter by \$60.6 million due to the Okwori Property having utilised its tax allowances. Costs in OML123 and OML124 increased by \$31.2 million in the third quarter compared to the second quarter due to increasing royalties and depletion, depreciation and accretion.

Net income by quarter for 2004 was \$11.8 million, \$13.7 million, \$15.8 million and \$21.3 million, respectively. The increase in net income in the second quarter compared to the first quarter of \$1.9 million was due primarily to an increase in petroleum sales from \$104.0 million in the first quarter to \$117.1 million in the second quarter. Increasing petroleum sales were offset by a corresponding increase in taxes of \$6.1 million and increased administration costs, which were not tax deductible. Net income increased in the third quarter

compared to the second quarter by \$2.1 million due primarily to an increase in petroleum sales from \$117.1 million in the second quarter to \$146.6 million in the third quarter. Increasing petroleum sales were offset by a corresponding increase in taxes of \$17.2 million. Net income increased in the fourth quarter compared to the third quarter by \$5.5 million due primarily to an increase in revenues from \$146.6 million in the third quarter to \$156.4 million in the fourth quarter, a decrease in taxes of \$10.0 million due mainly to a partial reversal of the reserve addition bonus tax accrual and a \$13.5 million increase in depletion costs.

Net income/(loss) by quarter for 2003 was \$16.2 million, \$1.4 million, \$13.8 million and \$(8.1) million. The decrease in net income in the second quarter compared to the first quarter of \$14.9 million was due largely to an increase in administration costs from \$5.1 million in the first quarter to \$16.7 in the second quarter. Administration costs are not tax deductible as they are not incurred for Nigerian activities. Net income in the third quarter returned to levels comparable to first quarter net income. \$16 million of tax accruals and a \$10.3 million additional charge to NNPC Profit Oil were taken in the fourth quarter. These tax accruals were comprised of \$8.0 million for the possible loss of a tax offset for a reserve addition bonus earned in 1999 and \$8.0 million for reclassification of studies from capital cost to operating expense in the tax accounts. This reclassification produced a loss of capital investment allowances, thereby increasing the tax charge.

Liquidity and Capital Resources

Overview

The Corporation's principal source of liquidity has been cash generated from operating activities which has been supplemented as necessary by credit facilities to meet increased capital expenditures, primarily for the development of the Okwori Property in OPL90. The Corporation has not experienced seasonal impact on its cash flows. Currently, the Corporation generates all of its cash from operating activities of its Nigerian subsidiaries. Provided applicable solvency and corporate requirements are satisfied, there are no legal or practical restrictions in Nigeria on the ability of the Corporation's Nigerian subsidiaries to transfer funds to the Corporation in the form of cash dividends, loans or advances. In addition, there are no contractual restrictions on such transfers of funds to the Corporation by its Nigerian subsidiaries. After the closing of this offering, APNV will be a wholly owned subsidiary of the Corporation and transfers of funds by APNV to the Corporation in the form of cash dividends, loans or advances will be restricted by the provisions of the credit facility described below. See "Dividends".

The Corporation held total cash and cash equivalents of \$8.5 million as at September 30, 2005.

The Corporation has a senior secured revolving credit facility with BNP Paribas as Mandated Lead Arranger and Standard Bank as Lead Arranger with a borrowing base of \$300.0 million. This facility expires on December 31, 2008. The borrowing base was initially set at \$100.0 million, and is re-determined semi-annually based on NSAI's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. As at November 30, 2005, \$80.0 million was drawn down on the credit facility.

The credit facility bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilisation on the first day of the interest period. The credit facility is secured by debentures given by APNV and Addax Petroleum Overseas Ltd., assignment by way of security of the principal contracts including the Crude Oil Supply Agreements, a pledge over the bank accounts and share pledges of APNV's principal subsidiaries. The credit facility is for funding Nigerian capital expenditures. This facility restricts dividends to a maximum of one-third of the Corporation's after tax profit.

Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million prior to the closing of the offering.

Management believes that the Corporation's cash flow generated from operating activities, its cash and cash equivalents, the existing credit facilities and the net proceeds it receives from the offering will be sufficient to fund its foreseeable working capital requirements.

The following table summarizes the principal components of Addax Petroleum's consolidated cash flows for the periods indicated:

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
		(\$million)		
Net Cash Inflows (outflows) before movements in working capital				
Cash flow from operations	322.2	171.0	118.6	184.2
Net cash flow used in investing activities	(276.2)	(314.2)	(175.2)	(170.4)
Net cash from (used in) financing activities	(3.5)	35.3	(31.0)	8.0
Net increase in cash and cash equivalents	42.5	(107.9)	(87.6)	21.8
(Increase) decrease in working capital	(37.9)	55.8	100.8	(2.6)
Increase (decrease) in cash and cash equivalents	4.6	(52.1)	13.2	19.2
Cash and cash equivalents at end of year	8.5	3.9	56.0	42.8

Cash Flow from Operations

Cash flow from operations was \$322.2 million for the nine months ended September 30, 2005, compared to \$118.4 million for the same period in 2004, representing an increase of \$203.8 million. The increase was due primarily to the increase in income before income taxes of \$298.7 million, the Okwori Property coming on-stream in 2005, and higher production from OML123/124 in 2005. Additionally, there were increases in non-cash items with the operating activities, specifically an increase of \$86.0 million relating to depreciation and future taxes. This was offset by an increase in current taxes of \$147.8 million.

Cash flow from operations was \$171.0 million in 2004 compared to \$118.6 million in 2003, an increase of \$52.4 million. The increase was primarily due to the increase in income before income taxes and non-controlling interests of \$80.0 million, with a revenue increase of \$106.1 million offset by costs of \$26.1 million. Additionally, there were increases in non-cash items with the operating activities in 2004, specifically an increase of \$19.5 million in depreciation and write-offs. These increases to operating activities were mostly offset by an increase in income tax paid and liftings of Nigerian government entitlement to income tax of \$43.1 million.

Cash flow from operations was \$118.6 million in 2003 compared to \$184.2 million in 2002, a decrease of \$65.6 million. The decrease was due primarily to the increase in current income tax payable to the Nigerian government of \$65.0 million.

Net Cash Flow Used in Investing Activities

Net cash used in investing activities consists principally of the purchase of property, plant and equipment, and intangible assets. Net cash used in investing activities was \$276.2 million for the nine months ended September 30, 2005 compared to \$183.0 million for the same period in 2004, representing an increase of \$93.9 million. This increase is due largely to capital expenditures on the development of the Okwori Property and the Nda extended well test of \$170.2 million in the nine months ended September 30, 2005 and \$95.9 million in the same period in 2004. Property, plant and equipment expenditures on OML123 and OML124 increased in 2005 by \$15.0 million to \$99.2 million in 2005 from \$84.2 million in 2004. Expenditure on intangible assets decreased slightly in 2004 to \$11.4 million from \$14.3 million in 2003.

Net cash used in investing activities was \$314.2 million in 2004, compared to \$175.2 million in 2003, an increase of \$139.0 million. This increase is due to capital expenditures on the development of the Okwori Property and the Nda extended well test of \$165.4 million in 2004. Property, plant and equipment expenditures on OML123 and OML124 decreased to \$135.1 million in 2004 from \$138.2 million in 2003. Expenditures on intangible assets decreased slightly to \$11.4 million in 2004 from \$14.3 million in 2003. Additionally, in 2003 the Corporation purchased the non-controlling interest in the Nigeria Production Sharing Contracts for \$21.0 million (2004 — nil).

Net cash used in investing activities was \$175.2 million in 2003 compared to \$170.4 million in 2002. This increase is primarily due to the Corporation's purchase of the non-controlling interest in the Nigerian Production Sharing Contracts for \$21.0 million in 2003 (2002 — nil). This increase was offset in part by a

decrease in property, plant and equipment and intangible assets of \$16.3 million. This decrease is due to lower capital expenditures on OML123 and OML124 which decreased to \$142.1 million in 2003 from \$161.1 million in 2002. Expenditures on intangible assets decreased slightly in 2004 to \$11.4 million from \$14.3 million in 2003.

Net Cash From (Used in) Financing Activities

Net cash used in financing activities was \$3.5 million for the nine months ended September 30, 2005 compared to a cash inflow of \$6.5 million for the corresponding period for 2004. Drawdowns of \$125.0 million were made in the nine months ended September 30, 2005 as compared to \$25.0 million in the same period in 2004. Dividends paid increased to \$35.0 million in the nine months ended September 30, 2005 from \$18.5 million in the same period in 2004. The Corporation repaid debt of \$90.0 million in the nine months ended September 30, 2005 (corresponding period in 2004 — nil) and paid interest expense of \$3.5 million in the nine months ended September 30, 2005 (corresponding period in 2004 — nil).

Net cash from financing activities was \$35.3 million in 2004 as compared to net cash used in financing activities of \$31.0 million in 2003. Drawdowns of \$65.0 million were made in 2004 (2003 — nil). Borrowing fees of \$2.7 million were paid in 2004 (2003 — nil). Repayment of debt of \$25.0 million was made in 2003 (2004 — nil).

Net cash used in financing activities was \$31.0 million in 2003 as compared to net cash from financing activities of \$8.0 million in 2002. Drawdowns of \$25.0 million were made in 2002 (2003 — nil). Repayment of debt of \$25.0 million was made in 2003 as compared with \$5.0 million in 2002. Dividends paid in 2003 decreased to \$6.0 million from \$12.0 million in 2002.

Off Balance Sheet Arrangements

The Corporation does not currently have any off balance sheet arrangements.

Contractual Obligations and Commercial Commitments

The table below sets forth information relating to the Corporation's contractual obligations and commercial commitments as at September 30, 2005.

<u>Contractual Obligations and Commercial Commitments</u>	<u>Within One Year</u>	<u>From 1 to 5 years</u>	<u>More than 5 years</u>	<u>Total</u>
		(\$million)		
Long Term Debt	-	100.0	-	100.0
Operating Leases ⁽¹⁾	59.8	231.6	128.6	420.0
Purchase Obligations ⁽²⁾	144.6	-	-	144.6
Other Long Term Obligations ⁽³⁾	69.1	-	-	69.1
Total	<u>273.5</u>	<u>331.6</u>	<u>128.6</u>	<u>733.7</u>

Notes:

- (1) Operating leases are the leases of FPSO's and the TPU.
- (2) Consists principally of the purchase of flowlines and pipelines and wellheads in OPL90 and OPL225, and pipelines related to the replacement FPSO in OML123 and OML124.
- (3) Consists principally of obligations related to two long term rig charters.

Capital Expenditures

The following table sets forth the Corporation's capital expenditures for the periods indicated.

Capital Expenditures	9 Months Ended September 30, 2005	Year Ended December 31		
		2004	2003	2002
		(\$million)

Budgeted Capital Expenditures

The Corporation has a substantial capital expenditure program for its current properties and new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million for 2006. These budgeted capital expenditures will fund a four rig drilling program (three of which are currently contracted), the Nda field development, replacement of the current OML123 FPSO, redevelopment of the Adanga field and TPU refurbishment, development of the Oron field, development and exploration on the Okwok Property, gas gathering and gas-lift infrastructure for associated gas and appraisal activity in Iraq, Cameroon and Gabon. Management believes its cash flow generated from operating activities, its cash and cash equivalents and the net proceeds to the Corporation from the offering will be adequate to fund the Corporation's capital expenditure requirements. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred under the production sharing formula. The estimated development cost per barrel added for selected developments is as follows: Nda field development \$9.96 per barrel, Ebughu North East infill \$6.75 per barrel, Ebughu East in fill \$5.38 per barrel. Of the 2006 budget of \$815 million, \$152 million is for sustaining activities and \$663 million is for growth activities.

Capital Expenditures for the Nine Months Ended September 30, 2005

Total capital expenditures for the nine months ended September 30, 2005 were \$276.1 million. For the nine months ended September 30, 2005, total capital expenditures on OML123 and OML124 were \$99.2 million, including drilling costs of \$71.3 million comprised of \$2.8 million for one exploration well and \$68.5 million for 20 appraisal and development wells on OML123. Facilities costs on OML123 and OML124 were \$18.9 million, which included \$10.0 million for the OML123 FPSO replacement, \$4.8 million for redevelopment of the Adanga Platform and \$2.0 million for development of the Oron Platform. OML124 oil facilities expenditure was \$1.5 million. Other capital expenditures on OML123 and OML124 included capitalized studies of \$5.0 million and \$4.0 million of office capital expenditure.

For the nine months ended September 30, 2005, total capital expenditures on OPL90 and OPL225 were \$172.6 million. Capital expenditures on OPL90 included \$8.5 million for the completion of the Nda extended well test, \$71.3 million for development drilling costs on the Okwori Property, which included \$58.0 million for the completion of two development wells and the fabrication and laying of flow lines from such wells to the OPL90 FPSO. The other costs of \$9.0 million are primarily capitalized interest.

Total capital expenditures of \$2.4 million in Gabon for the nine months ended September 30, 2005 primarily related to geological and geophysical studies and the acquisition of seismic data. Total capital expenditures of \$0.6 million in Cameroon for the nine months ended September 30, 2005 related to geological and geophysical studies.

Capital Expenditures for the Year Ended December 31, 2004

Total capital expenditures for 2004 were \$314.2 million. Total capital expenditures on OML123 and OML124 in 2004 were \$135.1 million, including drilling costs of \$77.3 million, which related to the drilling of 19 appraisal and development wells on OML123. Facilities costs on OML123 and OML124 in 2004 were \$48.0 million, which included \$7.8 million for the Ebughu East structure, topsides and oil and gas lines, \$6.9 million for the Ebughu North East structure and topsides, \$5.6 million for the Oron West extended well test platform and flow line, \$9.0 million for the Adanga riser platform, bridge and piping, \$3.5 million for the Oron wellhead facility, \$2.9 million for the temporary production platform hook-up and \$6.1 million on OML124 oil facilities. Other capital expenditures on OML123 and OML124 in 2004 included \$6.2 million for capitalized studies and \$3.6 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2004 were \$166.2 million, including \$21.6 million for two exploration wells and \$133.3 million for Okwori development costs, which included the completion of two development wells and the fabrication of flow lines from such wells to the OPL90 FPSO.

Total capital expenditures in Gabon in 2004 were \$10.7 million, most of which relate to the Topaze exploration well drilled in early 2004, at a cost of \$7.0 million. Total capital expenditures of \$0.6 million in Cameroon in 2004 related to studies.

Capital Expenditures for the Year Ended December 31, 2003

Total capital expenditures for 2003 were \$154.1 million. Total capital expenditures on OML123 and OML124 in 2003 were \$138.2 million, including drilling costs of \$76.2 million comprised of \$23.2 million for the drilling of 3 water injection wells on OML123, \$32.6 million for the drilling of 4 development wells on OML123 and \$20.4 million for the drilling of 2 development wells on OML124. Facilities costs on OML123 and OML124 were \$47.4 million, which included \$12.4 million for the Ebughu East structure, topsides and oil and gas lines, \$10.1 million for the Ebughu North East structure and topsides, \$10.0 million for the Oron West extended well test platform and flow line and \$8.0 million for OML 124 oil facilities. Other capital expenditures on OML123 and OML124 included \$12.3 million for capitalized studies and \$1.9 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2003 were \$8.1 million relating to pre-development work and studies.

Total capital expenditures for Cameroon in 2003 were \$3.5 million relating to the mobilization and demobilization of a seismic team in Cameroon and studies.

Capital Expenditures for the Year Ended December 31, 2002

Total capital expenditure in 2002 were \$170.4 million. Total capital expenditures on OML123 and OML124 in 2002 were \$161.1 million, including drilling costs of \$118.7 million comprised \$16.7 million for the drilling of 2 exploration wells on OML123, \$66.3 million for the drilling of 16 appraisal and development wells on OML123 and \$34.9 million for the drilling of 7 development wells on OML124. Facilities costs on OML123 and OML124 were \$30.4 million, which included \$12.6 million for two Adanga South flow lines and caissons, \$3.8 million for

the Ebughu to TMMP pipeline, \$3.1 million for the Ebughu to Bogi gas flow line and \$3.0 million for the installation of topsides on Adanga South West. Other capital expenditures on OML123 and OML124 included \$9.1 million for capitalized studies, \$1.0 million for the conversion of OML123 and OML124 from OPLs to OMLs and \$0.7 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2002 were \$5.4 million relating to pre-development work and studies.

Total capital expenditures for Cameroon in 2002 were \$3.2 million relating to the mobilization and demobilization of a seismic team into Cameroon and studies.

Transactions with Related Parties

For the nine months ended September 30, 2005, the Corporation sold \$512.3 million of crude oil to AOG. The Corporation also paid \$3.5 million in charges to AOG relating to management services, trademark licence and IT support and \$11.4 million for bunkering oil. See "Interest of AOG in Material Transactions".

In 2004, the Corporation sold \$371.4 million of crude oil to AOG. The Corporation also paid \$5.0 million in charges to AOG relating to management services, trademark licence and IT support and \$10.4 million for bunkering oil. See "Interest of AOG in Material Transactions".

In 2003, the Corporation sold \$386.6 million of crude oil to AOG and paid \$5.8 million in charges to AOG relating to management services, trademark licence and IT support.

In 2002, the Corporation sold \$284.1 million of crude oil to AOG, incurred \$6.2 million in charges to AOG relating to management services, trademark licence and IT support and paid \$0.4 million in interest to AOG.

New Accounting Pronouncements

In an effort to harmonize Canadian GAAP with US GAAP, the Canadian Accounting Standards Board ("AcSB") has issued sections:

- 1530, *Comprehensive Income*;
- 3855, *Financial Instruments — Recognition and Measurement*; and
- 3865, *Hedges*.

Under these new standards, all financial assets should be measured at fair value with the exception of loans, receivables and investments that are intended to be held to maturity and certain equity investments, which should be measured at cost. Similarly, all financial liabilities should be measured at fair value when they are held for trading or they are derivatives.

Gains and losses on financial instruments measured at fair value will be recognized in the income statement in the periods they arise with the exception of gains and losses arising from:

- financial assets held for sale, for which unrealized gains and losses are deferred in other comprehensive income until sold or impaired; and
- certain financial instruments that qualify for hedge accounting.

Sections 3855 and 3865 make use of "other comprehensive income". Other comprehensive income comprises revenues, expenses, gains and losses that are recognized in comprehensive income, but are excluded from net income. Unrealized gains and losses on qualifying hedging instruments, translation of self-sustaining foreign operations, and unrealized gains or losses on financial instruments held for sale will be included in other comprehensive income and reclassified to net income when realized. Comprehensive income and its components will be a required disclosure under the new standard.

These new standards are effective for fiscal years beginning on or after October 1, 2006 and early adoption is permitted. Adoption of these standards as at September 30, 2005 would not have an impact on the Corporation's Consolidated Financial Statements.

The AcSB issued Section 3831, *Non-Monetary Transactions*, which replaces Section 3830 and requires all non-monetary transactions to be measured at fair value unless:

- the transaction lacks commercial substance;
- the transaction is an exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange;
- neither the fair value of the assets or services received nor the fair value of the assets or services given up is reliably measurable; or
- the transaction is a non-monetary, non-reciprocal transfer to owners that represents a spin-off or other form of restructuring or liquidation.

The new requirements apply to non-monetary transactions initiated in periods beginning on or after January 1, 2006. Earlier adoption is permitted as of the beginning of a period beginning on or after July 1, 2005. We do not expect the adoption of this section will have any material impact on our results of operations or financial position.

Critical Accounting Estimates

In the preparation of the Corporation's financial statements, management is required to use judgements, assumptions and estimates in the application of generally accepted accounting policies which has an impact on the financial results of the Corporation. These estimates and assumptions are based on the best available information at the time, but may change due to new events and additional information giving rise to changes in the estimates over time. Note 1 of the Corporation's consolidated financial statements for the year ended December 31, 2004 explains the significant financial accounting policies used by the Corporation. The following is a discussion of the critical accounting policies which use significant assumptions and estimates in determining the financial results of the Corporation.

Estimated Oil Reserves

Reserve estimates have a significant impact on earnings due to its impact on depreciation and depletion rates and asset impairment. The Corporation's reservoir engineers perform an internal evaluation on a bi-annual basis of all of its crude oil reserves. The estimation of reserves are based on engineering data, projected future prices, expected future rates of production and the timing of future capital expenditures, all of which are subject to numerous uncertainties and interpretations. The Corporation expects over time that its reserves will change, upwards or downwards, as a result of the results of future drilling, testing, production levels, changes in future price estimates, and economics of recovery based on cash flow forecasts. A change in the reserves estimate may result in a higher or lower depletion charge to the income statement and effect the future tax charge. A lower reserve estimate could result in a write-down of an oil property under the ceiling test.

Independent petroleum engineering consultants evaluate 100 per cent of the oil properties on a semi-annual basis, and a reconciliation is performed between the Corporation's reserves estimates and that of the independent consultants.

Asset Impairments

Annually, an impairment test is performed to ensure that unamortized capitalized costs do not exceed their fair value. An impairment loss will be recognized in the income statement when the carrying value of a cost centre exceeds the estimated undiscounted future cash flows. The future cash flows used in the impairment test include assumptions on oil prices, production, and operating costs. Changes to any of these assumptions such as

a decrease to future oil prices, a decrease in reserves, or an increase in operating costs could result in the impairment of an asset's carrying value.

Full Cost Accounting

The Corporation follows the full cost method for accounting for oil and gas properties as described by the Canadian Institute of Chartered Accountants. Accordingly, costs incurred in the exploration and development of oil and gas properties are capitalized on a country by country cost pool basis. Capitalized costs include land acquisition, geological and geophysical activities, exploration and development wells, both successful and unsuccessful, related plant and equipment, directly attributable interest costs, overhead charges directly related to exploration and development and the estimated discounted cost of the asset retirement obligations.

The capitalized costs are depreciated, depleted and amortized on a unit of production method based on proved reserves for each producing cost pool. See "Petroleum Reserves and Operational Matters". Costs relating to unproved properties and certain development projects are not subject to depreciation, depletion and amortization until production commences. The costs relating to unproved properties are reviewed periodically and any impairment is transferred to the costs being depleted, or if it is ascertained there are no reserves relating to the unproved properties, the impairment is charged directly to the income statement.

Asset Retirement Obligation

The Corporation currently records the asset retirement obligations of fixed assets at fair value when they are incurred, discounted to the Corporation's credit-adjusted risk free interest rate. Retirement costs equal to the fair value are capitalized as part of the related capital assets and are amortized to the income statement over the estimated life of the asset. Estimates of the fair value of the retirement obligations can change over time due to legislation, current costs, technology, interest rates and field life, which can effect the rate of amortization. Differences between the estimated and actual costs to settle the retirement obligation could result in gains or losses in the settlement of the obligation.

Income Taxes

The Corporation follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

Financial Controls and Risk Management

The Corporation's activities expose it to a variety of market risks, including the effects of changes in commodity prices, foreign currency exchange rates and interest rates. The Corporation uses derivative financial instruments such as options on commodities, foreign exchange contracts and interest rate swaps to manage certain exposures.

The Board of Directors provides principles for overall risk management, as well as policies covering specific areas, such as commodity price risk, foreign exchange risk, interest rate risk and credit risk. These principles include guidelines on the use of derivative financial instruments.

(a) Foreign exchange risk

The Corporation operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to Swiss francs (or "CHF") and Naira (Nigerian currency) against the US dollar. The Corporation uses both local currency borrowing facilities and forward contracts to hedge their exposure to foreign currency risk. The forward currency contract must be in the same currency as the hedged item.

In December 2004 and January 2005, the Corporation entered into foreign exchange forward contracts to purchase CHF 18,000,000 for \$15,578,244 for the year ending December 31, 2005. As at September 30, 2005, the Corporation had bought CHF 13,500,000 for \$11,651,412. These forward contracts fix the exchange rate used to convert a portion of the Corporation's Swiss franc denominated general and administrative expenses to US dollars.

(b) Commodity price risk

It is the intention of the Corporation to cover commodity-pricing exposure in order to safeguard a minimum cash income. The option contracts run for 12 months or less and are consistent with the related production estimate. At September 30, 2005, the Corporation had the following crude oil derivative contract outstanding:

	<u>Put Option</u>
Maturity	March 2006
Volume	10 million barrels
Average price	\$21.00 per barrel

(c) Interest rate risk

The Corporation's exposure to market risk for changes in interest rates relates primarily to the Corporation's long-term debt obligations.

To manage this risk in a cost efficient manner, the group enters into interest rate swaps, in which the group agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. These swaps are designated to hedge the cash outflows related to interest obligations.

In 2002, in anticipation of receiving a \$50 million loan, the Corporation entered into two interest rate swap contracts to hedge against possible adverse interest rate fluctuations. These contracts resulted in interest expense at an average fixed rate of 4.4 per cent in exchange for a three-month variable LIBOR rate on two notional principal amounts of \$25 million expiring in August 2004 and August 2005, respectively. The Corporation drew down \$25 million on the \$50 million loan facility in February 2002 and repaid this amount in May 2003. One of these two swap contracts expired upon repayment of the \$25 million while the other one was determined to be a hedge from the date of the first-drawdown on the \$300 million loan facility in November 2004 until its termination date in August 2005.

(d) Credit risk

Concentrations of credit risk with respect to trade receivables are limited due to the high portion of related party debtors. Historical experience has indicated no problem in collecting accounts receivable from related party companies. Due to these factors, management believes that there is no significant credit risk inherent in the Corporation's trade receivables, beyond amounts provided for specific collection losses.

The Corporation has not experienced any material credit losses on the collection of receivables. Of the Corporation's significant individual accounts receivable at September 30, 2005, approximately 80 per cent was due from one related party customer (December 2004 — 59 per cent; December 31, 2003 — 81 per cent).

(e) **Liquidity risk**

The following table represents the estimated fair values of purchased derivative financial instruments considered as non-effective hedges recognized in the consolidated balance sheet as at December 31:

	<u>September 30,</u> 2005	<u>December 31,</u>	
		2004	2003
	(\$thousand)		
Currency forwards	519	-	-
Oil options	-	-	890
Interest rate swaps	-	(268)	(1,321)

The estimated fair values of purchased derivative financial instruments that are effective hedges as at December 31 are as follows:

	<u>September 30,</u> 2005	<u>December 31,</u>	
		2004	2003
	(\$thousand)		
Currency forwards	-	(66)	955

The fair values of other financial instruments including cash and cash equivalents, accounts receivable, accounts payable and income tax payable approximate their carrying values.

CAPITALIZATION

The following table sets forth the consolidated capitalization of Addax Petroleum Corporation as at November 30, 2005, and as at November 30, 2005 after giving effect to the Pre-IPO Transactions and after giving effect to the Pre-IPO Transactions and the Offering.

	Authorized	Outstanding as at November 30, 2005	Outstanding as at November 30, 2005, After Giving Effect to the Pre-IPO Transactions ^(b)	Outstanding as at November 30, 2005, After Giving Effect to the Pre-IPO Transactions and the Offering ^(3,4,5)
Debt⁽¹⁾				
Short term debt	-	-	\$ -	\$ -
Long term debt	-	-	<u>\$80 million</u>	<u>\$80 million</u>
Total debt	-	-	\$80 million	\$80 million
Share Capital⁽²⁾				
Common Shares	Unlimited	CDN\$100 (100 shares)	CDN\$ • (120 million shares)	CDN\$ • (• shares)
Preferred Shares	Unlimited	CDN\$ - (nil shares)	CDN\$ - (nil shares)	CDN\$ - (nil shares)

Notes:

- (1) Pursuant to an Amended and Restated Senior Secured Reducing Revolving Credit Facility Agreement dated June 14, 2005 between Addax Petroleum N.V. and a syndicate of banks lead by BNP Paribas S.A., the Corporation has a \$300 million senior secured reducing revolving credit facility available until December 31, 2008. The borrowing base is determined semi-annually based upon an independent engineer's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. The facility borrowing base was set at \$300 million in October 2005. The loan bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization on the first day of the interest period. The facility is secured by debentures given by Addax Petroleum N.V. and Addax Petroleum Overseas Ltd., assignment by way of security of the principal contracts including the offtake contracts, a pledge over the bank accounts and share pledges of the Corporation's principal subsidiaries. The loan is to be used for funding Nigerian capital expenditure.
- (2) Addax Petroleum Corporation's authorized capital consists of an unlimited number of Common Shares and an unlimited number of Preferred Shares, issuable in series. No series of Preferred Shares will be authorized at the closing of this offering.
- (3) Concurrently with the closing of the offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares in the capital of Addax Petroleum N.V. See "Addax Petroleum — Pre-IPO Transactions".
- (4) Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.
- (5) The net proceeds to the Corporation from the offering of Offered Shares are estimated to be CDN\$ • based on the issuance of • Offered Shares for aggregate gross proceeds of CDN\$ • less the Underwriters' fees of CDN\$ • and expenses of the offering estimated to be CDN\$ •.

DIVIDENDS

Addax Petroleum Corporation intends to establish a policy of declaring quarterly cash dividends on the Common Shares. The payment and the amount of dividends declared in any fiscal quarter will depend on Addax Petroleum Corporation's earnings, financial requirements and other conditions existing which Addax Petroleum Corporation's Board of Directors may consider relevant at such future time, including applicable restrictions arising under the Credit Facility on the ability of APNV to pay dividends or other distributions to the Corporation. Subject to the factors described above, Addax Petroleum Corporation intends to pay its first quarterly dividend for the quarter ending June 30, 2006.

Under the agreement governing the Credit Facility, APNV is not permitted to pay a dividend or other distribution to the Corporation unless APNV is in compliance with a stipulated net worth test and no default exists under that agreement or would result from payment of the dividend or distribution. In addition, the agreement governing the Credit Facility limits the dividends or distributions that can be paid by APNV in any fiscal year to an amount which is equal to the lesser of (i) 33 per cent of APNV's net profit (as defined in that agreement) for its preceding fiscal year plus amounts which APNV could have paid out in dividends in previous years after 2003 but which were instead added to APNV's retained earnings, and (ii) 66 per cent of APNV's net

profit for its preceding fiscal year. However, the lenders under the Credit Facility have provided waivers permitting APNV to pay up to \$120 million in dividends prior to closing of this offering (see "Addax Petroleum — Pre-IPO Transactions") and permitting APNV to pay dividends or other distributions during fiscal 2006 equal to 50 per cent of APNV's net profit for the 2005 fiscal year. See "Management's Discussion and Analysis of Financial Condition and Results of Operations".

Since January 1, 2002, APNV has made cash dividend payments totalling \$82 million. These included a payment of an aggregate amount of \$18 million in 2002, none in 2003, \$29 million in 2004 and \$35 million in the first nine months of 2005. Prior to the closing of the offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long term debt at the November 30, 2005 level of approximately \$80 million. Investors who purchase the Common Shares will not be entitled to receive any part of these dividends. APNV has not declared or paid any other dividends since January 1, 2002 and does not intend to declare any additional dividends in respect of the financial results for 2005. The amount of dividends paid historically by APNV as a private company is not indicative of the dividends that Addax Petroleum Corporation will pay in the future. Addax Petroleum Corporation can provide no assurances that it will declare and pay any dividends in the future.

USE OF PROCEEDS

The net proceeds to the Corporation from the sale of the Offered Shares are estimated to be CDN\$ • million (CDN\$ • million if the Over-Allotment Option is exercised in full) after deducting the fees payable to the Underwriters and the estimated expenses of the offering. Of the net proceeds, CDN\$ • will be used to fund the Corporation's 2006 capital expenditure programs and for general corporate purposes and CDN\$ • will be used to fund the purchase of the issued and outstanding shares of APNV. Pending application of funds for capital expenditures and general corporate purposes, a portion of such net proceeds will be used to temporarily repay amounts outstanding under the Credit Facility. See "Addax Petroleum — Pre-IPO Transactions" and "Addax Petroleum — Capital Expenditure Program".

DIRECTORS AND OFFICERS

The following table sets out the names and municipalities of residence of each of the current directors and officers of Addax Petroleum Corporation and their current positions and offices with Addax Petroleum Corporation and their principal occupations and positions held during the last five years.

Name and Municipality of Residence	Age	Position with the Corporation	Director or Officer Since	Principal Occupation and Principal Positions Held During the Last Five Years
Peter Dey ⁽³⁾⁽⁵⁾ <i>Toronto, Ontario</i>	64	Director, Chairman of the Board of Directors and Chairman of the Corporate Governance, Nominating and Compensation Committee	2005	Chairman, Paradigm Capital Inc. Former Partner, Osler, Hoskin & Harcourt LLP. Director of Workbrain Corporation and former Chairman of Morgan Stanley Canada Limited.
Jean Claude Gandur <i>London, United Kingdom</i>	56	Chief Executive Officer and Director	2002 ⁽¹⁾	Officer of APNV. Chief Executive Officer and Chairman of the Advisory Board of The Addax and Oryx Group Ltd. Non-Executive Chairman of AXMIN Inc.
Brian Anderson ⁽³⁾⁽⁴⁾ <i>Kowloon, Hong Kong</i>	62	Director and Chairman of the Technical and Reserves Committee	2005	Chairman and Managing Director of Anderson Energy (Hong Kong) Limited.

<u>Name and Municipality of Residence</u>	<u>Age</u>	<u>Position with the Corporation</u>	<u>Director or Officer Since</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>
James Davie ⁽³⁾⁽⁵⁾ <i>Toronto, Ontario</i>	62	Director	2005	Director of Brompton Funds, Profico Energy Management Inc., Range Royalty Management Ltd., Navigo Energy Inc. and Taylor Gas Management Ltd. Prior to July 2002, Managing Director of RBC Dominion Securities Inc.
Stephen Paul de Heinrich ⁽³⁾⁽⁵⁾ <i>Dully, Switzerland</i>	62	Director	2005	Independent Consultant Associate with Beldi & Cie S.A. Vice Chairman of Advisory Board of The Addax and Oryx Group, Ltd.
Gerry Macey ⁽⁴⁾⁽⁵⁾ <i>Calgary, Alberta</i>	59	Director	2005	Director of Verenex Energy Inc. and PanOrient Energy Corp. Prior thereto, from 2002 to March 2004, Executive Vice President and President, International New Ventures Exploration, Division of EnCana Corporation and from 1999 to 2002, Executive Vice President, Exploration, of PanCanadian Petroleum Corporation.
Afolabi Oladele ⁽⁴⁾ <i>Mississauga, Ontario</i>	54	Director	2005	Vice President, Oil and Gas, Capital Alliance Nigeria. Chairman of Subsurface Assets Management Co. and Formwork Ltd. Director of Freezone Fabrication International Oil & Gas Facilities Fabrication Co., Dorman Long Engineering Co., Sudelletra Nigeria Ltd. and AOG.
Wesley Twiss ⁽³⁾⁽⁴⁾ <i>Calgary, Alberta</i>	60	Director and Chairman of the Audit Committee	2005	Director and Audit Committee Chair of the Canadian Oil Sands Trust, Hydrogenics Corporation, Enbridge Income Fund, Keyera Facilities Income Fund and EPCOR.

<u>Name and Municipality of Residence</u>	<u>Age</u>	<u>Position with the Corporation</u>	<u>Director or Officer Since</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>
James Pearce <i>Lagos, Nigeria</i>	56	Chief Operating Officer, Managing Director of Nigerian Operations	2005	Officer of APNV. General Manager of Deep Water Operations for Chevron Nigeria Ltd., Managing Director of Chevron Oil Congo.
Michael Ebsary <i>Geneva, Switzerland</i>	44	Chief Financial Officer	1999	Officer of APNV. Director of AXMIN Inc. and Carpathian Gold Inc.
David Codd <i>Geneva, Switzerland</i>	52	Chief Legal Officer and Corporate Secretary	2005	Officer of APNV. Prior thereto, Chairman of Edco Oil & Gas Ltd. and Managing Director, Texaco Limited

Notes:

- (1) Mr. Gandur has been an officer of APNV since 2002 and became a director and officer of Addax Petroleum Corporation in 2005.
- (2) Mr. Ebsary has been an officer of APNV since 1999 and became an officer of Addax Petroleum Corporation in 2005.
- (3) Member of the Audit Committee.
- (4) Member of the Technical and Reserves Committee.
- (5) Member of the Corporate Governance, Nominating and Compensation Committee.

The term of office of the directors of Addax Petroleum Corporation will expire at the next annual meeting of the shareholders to be held in spring 2006.

The officers and directors of Addax Petroleum Corporation, as a group, do not beneficially own, directly or indirectly, any Common Shares. At the closing of this offering, AOG will direct that up to 9.6 million Common Shares (representing up to eight per cent of AOG's current shareholdings) be issued to current and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business.

The directors and officers of Addax Petroleum Corporation successfully combine entrepreneurial and management skills with extensive financial and international oil industry experience, particularly in the Corporation's strategic region of Africa. The following are the biographies of the directors and senior officers of Addax Petroleum Corporation.

Peter Dey, Chairman

Mr. Dey is the Chairman of Addax Petroleum Corporation. Mr. Dey is also the Chairman of Paradigm Capital Inc. and a former partner of Osler, Hoskin & Harcourt LLP, a law firm specializing in corporate and securities law. From 1994 to 2001, he was Chairman of Morgan Stanley Canada Limited where he was responsible for the overall strategic direction of Morgan Stanley in Canada. Mr. Dey previously chaired The Toronto Stock Exchange Committee on Corporate Governance in Canada which released a report entitled "Where Were the Directors?" in December 1994. From 1983 to 1985, Mr. Dey was the Chairman of the Ontario Securities Commission. Mr. Dey is the chairman of the Private Sector Advisory Group of the Global Corporate Governance Forum established by the World Bank and the OECD. Mr. Dey is the vice-chairman of the Boardroom Advisory Panel established by the OECD. Mr. Dey has a Bachelor of Science from Queen's University, a Bachelor of Laws degree from Dalhousie University and a Master of Laws degree from Harvard University. Mr. Dey is also a director of Workbrain Corporation.

Jean Claude Gandur, Chief Executive Officer and Director

Mr. Gandur is the Chief Executive Officer and a Director of Addax Petroleum Corporation. Mr. Gandur has worked with major commodity traders including Philipp Brothers from 1976 to 1983, where he was Manager of the African/Latin American division; Sigmoid Resources N.V. from 1984 to 1986, where he was the Managing Director; and Kaines SA from 1986 to 1988, where he was the Managing Director. For ten years Mr. Gandur was honorary consul for the Republic of Congo in Geneva. Mr. Gandur was also awarded a diplomatic passport by

Senegal. In addition, he has received the decorations of Grand Officer of the Lion Order of Senegal and Commander of the National Order of Benin. Mr. Gandur is one of the founders of AOG, of which he is Chief Executive Officer and Chairman of the Advisory Board. Mr. Gandur is also the Non-Executive Chairman of AXMIN Inc. Mr. Gandur is a Swiss citizen and studied law at the University of Lausanne, Switzerland.

Brian Anderson, Director

Mr. Anderson is a Director of Addax Petroleum Corporation. Before retiring in 2000, Mr Anderson had a 34-year professional career, largely in the Royal Dutch/Shell Group of Companies. Mr. Anderson was appointed Managing Director of the Shell Petroleum Development Company and Chairman of Shell Nigeria in January 1994. His last assignment before retirement was three years based in Beijing as Chairman of the Shell Companies in North East Asia, principally involved in China and Hong Kong, but he also had overall responsibility for Shell's interests in Korea and Taiwan. Mr. Anderson is currently Chairman and Managing Director of Anderson Energy (Hong Kong) Limited, a consulting company which he set up in 2000 to specialize in assisting companies mostly in Africa and China in the energy sector. Mr. Anderson was born in Nigeria and is a citizen of the United Kingdom and studied Metaliferous Mining Engineering at Cambourne in the United Kingdom followed by an MSc in Petroleum Reservoir Engineering at London University.

James Davie, Director

Mr. Davie is a Director of Addax Petroleum Corporation. Mr. Davie has over 29 years of investment banking experience with RBC Dominion Securities Inc. before retiring in 2002. Mr. Davie held a number of senior positions at RBC Dominion Securities Inc. including Managing Director of Investment Banking and Head of Equity Capital Markets from 1987 to 1999. Mr. Davie has a Bachelor of Commerce degree from the University of Toronto and a Master of Business Administration from Queen's University. Mr. Davie is also a director of Profico Energy Management Ltd., Range Royalty Management Ltd., Navigo Energy Inc., Taylor Gas Management Ltd. and the Brompton Group of Funds.

Stephen Paul de Heinrich, Director

Mr. de Heinrich is a Director of Addax Petroleum Corporation. He has more than 30 years experience in trading and investment in Africa. He has been instrumental in organizing counter trading export pre-financing and syndicated financial transactions in several African countries. Mr. de Heinrich is now an independent consultant as well as an associate in Beldi & Cie S.A., a Geneva based corporate finance house. He was a non-executive director of AOG from 1988 to 1991 and since then has been the Vice Chairman of its supervisory board. He has been chairman and a director of SAMAX Resources Limited and Carpathian Gold Limited, among other companies. Mr. de Heinrich is a citizen of both Canada and Hungary and has a degree in economics from McMaster University, Hamilton, Canada.

Gerry Macey, Director

Mr. Macey is a Director of Addax Petroleum Corporation. Mr. Macey has over 31 years of oil and gas industry experience. In particular, from 2002 to March 2004, he served as Executive Vice President and President, International New Ventures Exploration Division, of EnCana Corporation, and from 1999 to 2002, he served as Executive Vice President, Exploration, of PanCanadian Petroleum Corporation. Mr. Macey holds a Bachelor of Science degree in geotechnical science from Loyola College in Montreal and a Master of Science degree in geology from Ottawa Carleton University. Mr. Macey is also a director of Verex Energy Inc. and PanOrient Energy Corp.

Afolabi Oladele, Director

Mr. Oladele is a Director of Addax Petroleum Corporation. Mr. Oladele has over 25 years experience in the oil and gas industry. He worked from 1977 to 1988 for NNPC in the marketing department and from 1988 to 1999 for National Petroleum Investment Management Services (NAPIMS) latterly as Group Executive Director, Refining and Petrochemical. Since 1999, he has been Vice President, Oil & Gas for Capital Alliance Nigeria. Mr. Oladele is also Chairman, Subsurface Assets Management Co, Chairman, Formwork Ltd, Director, Freezone Fabrication International Oil & Gas Facilities Fabrication Co, Director, Dorman Long Engineering Co, Director, Sudelletra Nigeria Ltd, and Director, AOG. Mr. Oladele is a citizen of Nigeria and studied

Chemical Engineering at the University of Ife followed by Petroleum Economics at the French Petroleum Institute (IFP) in Paris and a post Graduate Diploma in Energy Modelling and Large Scale Planning Systems at the University of Southern California. Mr. Oladele also has a Certificate in Applied International Management IFL from Sigtuna, Sweden.

Wesley Twiss, Director

Mr. Twiss is a Director of Addax Petroleum Corporation and Audit Committee Chair. Mr. Twiss is a corporate director with 35 years of energy industry experience, including 13 years as the senior financial officer of two major Canadian companies. He was Executive Vice President and Chief Financial Officer of PanCanadian Energy Corporation from October 2000 until April 2002 and was Executive Vice President and Chief Financial Officer of Petro-Canada from 1998 through 2000. In those roles, Mr. Twiss was responsible for directing all aspects of corporate financial affairs, as well as strategic management and corporate development. He is a director of Canadian Oil Sands Trust, Keyera Facilities Income Fund, Enbridge Income Fund, Hydrogenics Corporation and EPCOR. Mr. Twiss holds a Bachelor of Applied Science in Chemical Engineering from the University of Toronto and a Master of Business Administration from the University of Western Ontario.

James Pearce, Chief Operating Officer and Managing Director of Nigerian Operations

Mr. Pearce is the Chief Operating Officer of Addax Petroleum Corporation and Managing Director for Addax Petroleum Development (Nigeria) Limited. Mr. Pearce is responsible for all of Addax Petroleum's upstream activities in Nigeria including new ventures, exploration, new fields development and operations. Mr. Pearce joined Addax Petroleum in May, 2005 after 30 years with various Chevron subsidiaries. He has held many positions with Chevron including Chief Engineer in Sumatra Indonesia, Manager, Petroleum Engineering in Lagos, Nigeria, General Manager, Asset Development in Luanda, Angola, Managing Director in the Republic of Congo, and most recently General Manager, Deepwater in Lagos, Nigeria. In his most recent assignment with Chevron he was responsible for all deep-water operations in Nigeria including the multi-billion dollar development of the giant Agbami field.

Mr. Pearce holds a PhD in Mechanical Engineering from the California Institute of Technology and has received two US Patents for innovative drilling platform concepts for arctic operations. Mr. Pearce is a Member of the Society of Petroleum Engineers and was past Chairman of the Lagos Chapter. He has published in both international and American journals and has made numerous technical presentations at major conferences.

Michael Ebsary, Chief Financial Officer

Mr. Ebsary is the Chief Financial Officer of Addax Petroleum Corporation. Mr. Ebsary worked at the Bank of Nova Scotia from 1986 to 1987 and the Bank of Montreal from 1987 to 1989, prior to joining the international upstream oil business with Occidental in London in 1989. Following the acquisition of Occidental's U.K. assets by Elf, Mr. Ebsary was appointed Treasurer of Elf Petroleum UK in 1991. In 1994, Mr. Ebsary was transferred to Elf's head office in Paris to the role of Senior Manager, Project Finance, during which time his responsibilities included major project financings in emerging markets, particularly in Nigeria, Chad and Cameroon. Mr. Ebsary joined the Corporation in 1998 and became Chief Financial Officer in 1999. Mr. Ebsary is a citizen of both Canada and the United Kingdom and studied mathematics and statistics, followed by an MBA in finance and accounting, at Queen's University at Kingston, Canada.

David Codd, Chief Legal Officer and Corporate Secretary

Mr. Codd is the Chief Legal Officer and Corporate Secretary of Addax Petroleum Corporation. Mr. Codd has over 25 years experience in the international oil industry. After qualifying with a major UK law firm, Mr Codd worked from 1980 to 1984 for Burmah Oil. In 1984 he joined Britoil Plc as Senior Legal Adviser. Following two years with ConocoPhillips in the UK, in 1990 he was appointed General Counsel to Texaco's integrated operations in the UK. From 1999 to 2001 Mr. Codd was Managing Director of Texaco in the UK, being Texaco's senior corporate representative in the UK with business responsibility for Texaco's regional upstream Business Development. Following Texaco's merger with Chevron, Mr. Codd was Chairman of a start up company engaged in project development work in the Middle East until he joined the Corporation in February 2005. Mr. Codd is a member of Council of the Energy Institute in the UK and a Trustee of the Energy, Petroleum, Mineral and Natural Resources Education Trust. Mr. Codd is a citizen of the United Kingdom and is a solicitor with an MA (Jurisprudence) and a BCL both from Oxford University.

MANAGEMENT

The following are the biographies of the senior management of Addax Petroleum:

Ian Leslie Blair

Mr. Blair is the Managing Director, Nigeria New Ventures at Addax Petroleum. Mr. Blair has 30 years experience in finance and has worked for such companies as Enterprise Oil and British Gas E&P in Vietnam and, immediately prior to joining Addax Petroleum in 1998, Hardy E&P in India. In 1974, Mr. Blair obtained an M.A. in accountancy and economics from Aberdeen University in Scotland and is a Fellow of the UK Association of Chartered Certified Accountants.

Jacobus Blommerde

Mr. Blommerde joined Addax Petroleum as a Senior Production Technologist in February 2000. In January 2001, Mr. Blommerde was promoted to Manager of Production Technologists. Mr. Blommerde has over 32 years of experience in the oil and gas industry, primarily with Shell. In 1972, Mr. Blommerde obtained an M.Sc. in petroleum engineering from Delft University of Technology in the Netherlands.

Robert Bulstra

Mr. Bulstra has worked with Addax Petroleum since April 2004 as the Manager, Corporate Gas. Mr. Bulstra has over 27 years of experience in exploration and production, of which 19 years was overseas. During that time, he has worked primarily for Shell. Mr. Bulstra holds an M.Sc. in petroleum engineering from Delft University of Technology in the Netherlands.

Joop Cornelissen

Mr. Cornelissen joined Addax Petroleum in October 2005. Mr. Cornelissen has over 30 years experience in the petroleum industry and has worked overseas for companies such as Shell, Wintershall Libya, Al Furat Petroleum Company and ABB – Lummus Global. Mr. Cornelissen obtained an M.Sc. in chemical engineering from the University of Amsterdam in the Netherlands.

Douglas Cowieson

Mr. Cowieson joined Addax Petroleum as Finance Manager in October 1999. Mr. Cowieson has over 23 years of finance experience in the oil and gas industry and has worked for such companies as BHP Petroleum, Sun Exploration & Production Company and Total Oil Marine. In 1975, Mr. Cowieson obtained a B.A. in accounting from Middlesex Polytechnic University in London, United Kingdom.

Pradeep Kabra

Mr. Kabra joined Addax Petroleum in May 2002 as a New Ventures Project Manager. Mr. Kabra has over 17 years of experience in the oil and gas industry, with companies such as Lundin Oil AB, IPC Ltd. and Dublin International Petroleum Limited. Mr. Kabra obtained a Bachelor of Law's degree from Delhi University in Delhi, India. He also has qualified as a chartered accountant with the Institute of Chartered Accountants of India.

Yannis Korakakis

Mr. Korakakis joined Addax Petroleum and is General Manager Assets of Nigerian Operations based in Lagos. Mr. Korakakis has over 17 years of experience in the petroleum industry, including 3 years of academic experience. Mr. Korakakis has worked in Nigeria, the United Kingdom and the Netherlands, primarily with Shell. Mr. Korakakis holds an M.Sc. in petroleum engineering from The Mining University Leoben in Austria.

Giel Krijger

Mr. Krijger is Corporate Head of Reservoir Engineering and joined Addax Petroleum in October 1999. Mr. Krijger has over 29 years experience in exploration and production, including 21 years of experience overseas primarily with Shell. Mr. Krijger holds an M.Sc. in aeronautical engineering from Delft University of Technology in the Netherlands.

George Maxwell

Mr. Maxwell joined Addax Petroleum in January 2005 as General Manager Banners Services for the Nigerian Operations. Mr. Maxwell has over 20 years of experience in the petroleum industry having held senior positions in Europe, the United States and the Far East with Texaco and ABB Veteo Gray. Mr. Maxwell is qualified in business studies and accounting.

Philippe Probst

Mr. Probst joined Addax Petroleum in 2000 as Manager, New Ventures. Mr. Probst has over 25 years of experience in the management, planning and economics of petroleum industry projects, primarily with Shell. Mr. Probst holds a Ph.D in geology from the Geologic Institute of the University of Bern in Switzerland.

Patrick Spollen

Mr. Spollen joined Addax Petroleum in November 2004 and is commercial manager. Mr. Spollen has 24 years of experience in the petroleum and finance industries and has worked for various organizations including ERC Energy Resource Consultants, CIBC World Markets and the Deutsche Bank in London. Mr. Spollen holds an M.Sc. in petroleum engineering from Imperial College London and an MBA from the London Business School.

Paul Van Maren

Mr. Van Maren is a senior production geologist with Addax Petroleum and was recently promoted to the position of Corporate Head of Geology and Geophysics. Mr. Van Maren has 24 years experience in the oil and gas industry, which includes 18 years experience with Shell. Mr. Van Maren obtained an M.Sc. in geology from the Rijksuniversiteit Leiden in the Netherlands.

EXECUTIVE COMPENSATION

Compensation of Executive Officers

The following table presents, for the most recently completed financial year of the Corporation, the remuneration of the executive officers in place during 2004.

2004 Summary Compensation Table

Name and Principal Position	Annual Compensation ⁽¹⁾		
	Salary (CHF)	Bonus (CHF)	Other Annual Compensation (CHF)
Jean Claude Gandur ⁽²⁾⁽³⁾ <i>Chief Executive Officer</i>	144,000	70,000	21,600
Michael Ebsary ⁽²⁾⁽³⁾ <i>Chief Financial Officer</i>	366,400	200,000	54,960
Evert Jan Mulder ⁽²⁾⁽³⁾⁽⁵⁾⁽⁶⁾ <i>Chief Operating Officer</i>	342,000	250,000	81,200
Daniel Mancini ⁽²⁾⁽³⁾⁽⁴⁾⁽⁷⁾ <i>Managing Director, Nigeria</i>	309,100	130,000	200,915
Leslie Blair ⁽²⁾⁽³⁾⁽⁴⁾ <i>Business Development Manager, Nigeria</i>	239,400	90,000	155,610

Notes:

- (1) Based on the noon buying rate in New York City for cable transfers in Swiss francs as certified for customs purposes by the Federal Reserve Bank of New York, the average exchange rate for one Swiss franc, expressed in United States dollars was \$0.8046 in 2004.
- (2) Bonus amounts include compensation for performance in 2004 which were paid in 2005.
- (3) Messrs. Gandur, Ebsary, Mulder, Mancini and Blair participated in the Corporation's non-contributory pension plan and the Corporation's Accident Insurance Plan which is included in "Other Annual Compensation".
- (4) Messrs. Mancini and Blair were paid a hardship allowance which is included in "Other Annual Compensation".
- (5) Mr. Mulder received an accommodation allowance which is included in other annual compensation.
- (6) Mr. Mulder's employment with the Corporation will be ending effective as of December 31, 2005.
- (7) Mr. Mancini resigned from the Corporation on December 31, 2004.

Stock Options

The Corporation has not granted any options or Common Share allocations during the fiscal year ended December 31, 2004 or any time prior to that date and does not intend to grant any options in the future.

Employment Agreements

The Corporation has entered into employment agreements with each of Messrs. Pearce, Ebsary and Codd. The employment agreements are for an indefinite period subject to termination by either party on nine months notice. The employment agreements also provide for non-contributory participation in the Corporation's pension plan and accident insurance, as well as providing for annual bonuses that may be assessed individually at the sole discretion of the Corporation.

The annual base salaries under the employment agreements as of September 30, 2005 were: CHF 148,800 for Mr. Gandur; CHF 500,000 for Mr. Ebsary; CHF 330,000 for Mr. Pearce; CHF 255,000 for Mr. Codd; plus an accommodation allowance of CHF 18,000/year; and Mr. Pearce receives an expatriate allowance of CHF 115,000 plus free housing and cars in Nigeria and three home leave flights for himself and his family.

The Corporation will also enter into a services agreement with AOG, effective January 1, 2006, and terminable on nine months notice by either party, for the procurement of services to be rendered by Mr. Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. The total fees paid by the Corporation to AOG for such services is \$1 million per annum less the salary paid to Mr. Gandur by the Corporation.

Compensation of Directors

During the fiscal year ended December 31, 2004, the Corporation did not pay any directors fees. However, the Corporation did pay \$36,593 to ABN Amro Trust Company Curaçao Ltd. with respect to the services as directors provided to the Corporation by Gerben Wardenier, Francisca Pinedo Sluis and Susanna Panneflekk.

Directors of the Corporation are eligible to receive Common Share allocations. During 2004, no options to purchase Common Shares or Common Share allocations were granted. Directors of the Corporation are also reimbursed for their reasonable out-of-pocket disbursements incurred for the business of the Corporation.

Based on the recommendations of the Corporate Governance, Nominating and Compensation Committee, of the Board, the Board of Directors has implemented remuneration and reimbursement arrangements for its directors that reflect current market practices and align the interests of directors with those of shareholders. The Board of Directors has approved remuneration for each director in the amount of \$100,000 per annum, with a further \$20,000 per annum for committee chairs and \$10,000 per annum for committee participation, plus reimbursement of expenses and compensation of \$200,000 per annum to the Chairman of the Board. At least \$40,000 of each director's annual base compensation will be paid in Common Shares and each director may elect to receive additional Common Shares in lieu of cash compensation. The additional fees paid to committee chairs or for participation on committees will be paid in cash, unless the director otherwise elects to receive Common Shares.

Addax Petroleum Corporation intends to adopt share ownership guidelines for directors requiring each director, within a certain period after becoming a director of Addax Petroleum Corporation, to hold a minimum number of Common Shares.

The Corporation plans to obtain directors' and officers' liability insurance to a maximum of \$50,000,000 per claim, subject to an aggregate annual limit of \$50,000,000 for all directors and officers. This policy will cover all directors and officers and various senior managers of the Corporation and its subsidiaries. The deductible applicable to the policy will be determined through negotiations with the proposed insurance provider. The premium payable by the Corporation is currently also under discussion by management with the proposed insurance provider. Neither directors nor officers nor managers will pay any portion of the premium.

COMMON SHARE INCENTIVE PLAN

Currently, all Common Shares of Addax Petroleum Corporation are owned by AOG. Addax Petroleum Corporation intends to adopt an incentive share ownership plan, the purpose of which is to develop the interests of the directors, officers, employees and other persons who provide on-going services to Addax Petroleum Corporation in the growth and development of Addax Petroleum Corporation by providing such individuals with the opportunity to acquire an increased proprietary interest in Addax Petroleum Corporation and to aid in attracting as well as retaining and encouraging the continued involvement of such persons with Addax Petroleum Corporation. The total number of Common Shares issuable pursuant to the Common Share Incentive Plan is

- Common Shares, representing • per cent of the outstanding Common Shares after giving effect to this offering (• per cent if the Over-Allotment Option is exercised in full). The number of Common Shares issuable pursuant to this Common Share Incentive Plan will not exceed 10 per cent of the total number of outstanding Common Shares.

Under the Common Share Incentive Plan, Common Shares may be issued to directors, officers, employees of, and other service providers to, the Corporation in such numbers and with vesting provisions as the Board may determine.

The Common Share Incentive Plan will provide that if a recipient ceases to be a director, officer, or employee of, or service provider to, the Corporation or any of its subsidiaries any Common Shares that have not vested will revert to the Corporation except in certain limited circumstances.

CORPORATE GOVERNANCE

Committees of the Board of Directors

Addax Petroleum Corporation recognizes the importance of adhering to excellent corporate governance standards. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, which will be assessed on a continuous basis, and has adopted a "best practices" approach to corporate governance. The Board of Directors has adopted all of the recommendations set out in National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and a Technical and Reserves Committee, comprised of a majority of independent board members, adopting board mandates and a code of business ethics and conduct as well as approving regular board performance assessments. The Board of Directors may, from time to time, establish additional committees.

The mandates of each of the three committees are set forth below.

Audit Committee

The purpose of the audit committee will be to assist the Board of Directors in fulfilling their responsibilities of oversight and supervision of, among other things:

- the audit of the consolidated financial statements of the Corporation, managing the relationship with the Corporation's auditors and meeting with the auditors as required in connection with the audit services provided by the Corporation's auditors;
- the Corporation's preparation and reporting of its annual and quarterly consolidated financial statements and management's discussion and analysis;
- the accounting and financial reporting practices and procedures of the Corporation and its subsidiaries;
- the adequacy of internal controls and accounting procedures of the Corporation and its subsidiaries; and
- the quality and integrity of consolidated financial statements of the Corporation.

Corporate Governance, Nominating and Compensation Committee

The purpose of the corporate governance committee will be to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- the monitoring and oversight of the quality and effectiveness of the corporate governance practices and policies of the Corporation and its subsidiaries;
- considering nominees for the independent directors; and
- determining the adequacy and appropriateness of the compensation of officers and employees of the Corporation as well as the directors.

Technical and Reserves Committee

The purpose of the reserves committee will be to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- the independent engineering evaluation of the petroleum reserves of the Corporation and its subsidiaries, managing the relationship with the independent engineer and meeting with the independent engineer as required;
- the public disclosure and filings relating to the Corporation's petroleum reserves and operations;
- the appointment of the independent engineer and, together with management, defining the scope and supervising the methodology of the independent engineer's evaluation; and
- the monitoring of the operational performance of the Corporation.

THE ADDAX AND ORYX GROUP LTD.

AOG carries on several different businesses worldwide with particular emphasis on Africa, including petroleum and refined products trading, oil storage, retail petroleum products and mining businesses. AOG was incorporated in 1987 and has established itself as one of the largest independent oil trading companies in Africa and the largest marine fuel supply company in West Africa.

To the best of the knowledge of the directors and officers of Addax Petroleum Corporation, as of the date of this prospectus, AOG beneficially owns, directly or indirectly, and exercises control or direction over 60,030,000 common shares of APNV, representing all of its issued and outstanding common shares and 100 Common Shares of Addax Petroleum Corporation, representing all of its issued and outstanding common shares. After giving effect to this offering and the Pre-IPO Transactions, AOG will beneficially own, directly or indirectly, and exercise control or direction over

- Common Shares of Addax Petroleum Corporation representing
- per cent of the issued and outstanding Common Shares before giving effect to the exercise of the Over-Allotment Option (or
- per cent if the Over-Allotment Option is exercised in full).

After the closing of this offering, AOG will hold a majority of the shares in the Corporation. It is the intention of AOG, post-closing of this offering, to hold an extraordinary meeting of its shareholders and to propose a reorganization of AOG that will give shareholders the ability to exchange their AOG shares for Common Shares held by AOG and other consideration. Following this transaction (if the exchange right is exercised by some AOG shareholders), the shareholding percentage of AOG in the Corporation will be reduced. AOG expects to continue to hold, at a minimum, a large minority stake in the Corporation after this reorganization, if it occurs. See "Plan of Distribution".

AOG has three shareholders who each beneficially own, directly or indirectly, or exercise control or direction over, 10 per cent or more of AOG's outstanding shares. These shareholders are Hydromel Financial Corp., Leblesmouti Trust and Southwind Trust. The beneficial owner of Hydromel Financial Corp. is Jean Claude Gandur, the Chief Executive Officer and a director of Addax Petroleum Corporation. The named beneficiary of the Leblesmouti Trust, which is discretionary and irrevocable, is Frederique Lorenceau and her two children. The Southwind Trust is a discretionary trust whose beneficiaries are the family of Stephen de Heinrich, a director of the Corporation. None of Hydromel Financial Corp., Leblesmouti Trust or Southwind Trust individually holds 50 per cent or more of AOG's outstanding shares.

Addax France SARL ("AFSARL") was an approved lifter under the United Nations Oil-for-Food Programme. AFSARL is an affiliate of the Corporation, as they are both controlled by AOG, though the companies are otherwise separate and distinct. AFSARL had entered into several contracts with the Iraqi Government to lift oil throughout various stages of the Oil-for-Food Programme, lifting an aggregate of 11.8 mmbbls from 1997 to 2000. Under a contract numbered M/08/57, AFSARL had the right to lift 1.5 million barrels, 1.2 million barrels of which were lifted up to September 2000. When approximately 300,000 barrels of oil remained to be lifted under contract M/08/57, the Iraqi authorities informed AFSARL that it would be required to pay a surcharge of approximately \$60,000 (equivalent to a surcharge of \$0.20 per barrel) that was not permitted under the Programme. AFSARL refused to pay the surcharge and no further liftings were made by AFSARL under that contract or any other contract under the United Nations Oil-for-Food Programme. In the Report on the Manipulation of the Oil-for-Food Programme, AFSARL is listed as a contracting company on a contract for which a surcharge payment of \$60,262 was made. The payment was purportedly made under contract M/08/57 in October 2001 (more than one year after AFSARL had lifted any oil from Iraq) by a company named Petroline Fzc. AOG believes that, upon AFSARL's refusal to make an illicit payment, Iraqi officials assigned the benefit of the contract to Petroline Fzc., without removing AFSARL's name as contracting party. No company within the AOG group has ever had any relationship with Petroline Fzc. and this company and its directors and officers are unknown to the AOG group. No AOG group company has ever participated in any payments that would contravene the rules of the United Nations Oil-for-Food Programme.

INTEREST OF AOG IN MATERIAL TRANSACTIONS

AOG owns, directly or indirectly, all of the outstanding common shares of APNV prior to the closing of this offering and the Pre-IPO Transactions.

Addax Petroleum has entered into or will enter into, prior to the closing of this offering the following transactions with AOG:

- the Share Transfer Agreement between a subsidiary of AOG and Addax Petroleum Corporation;
- the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement (collectively defined as the “Crude Oil Supply Agreements”);
- the Management Services Agreement;
- the Agreement for Services of Jean Claude Gandur, effective January 1, 2006 between APS and AOG;
- the Trademark Agreement; and
- the Non-Competition Agreement.

Share Transfer Agreement

Prior to the closing of this offering, Addax Petroleum Corporation and a subsidiary of AOG will enter into the Share Transfer Agreement. Under the agreement, Addax Petroleum Corporation will acquire all of the outstanding shares of Addax Petroleum N.V. for consideration equivalent to 120 million multiplied by the Net Offering Price and comprised of • Common Shares and \$ • million. The closing of the transactions contemplated by the Share Transfer Agreement will occur concurrently with the closing of this offering. “See “Addax Petroleum — Pre-IPO Transactions”.

The Crude Oil Supply Agreements

Historically, the Corporation has employed the crude oil marketing services of ABV and sold to ABV, on an arm's length basis, all of the crude oil produced from its operations including the entitlement of NNPC and, in the case of Antan Blend, from time to time the entitlement of the OML114 Parties. The Corporation will continue the relationship as it makes available to the Corporation the specialized expertise of ABV in marketing West African crude oils.

The existing Crude Oil Supply Agreements were executed at the same time as the Credit Facility arranged by BNP Paribas, of which assignment of the Crude Oil Supply Agreements and the proceeds from oil sales constitute a significant element of the loan security package. The Crude Oil Supply Agreements shall terminate on the later of the Maturity Date and the Final Discharge Date (as defined in the Credit Facility and anticipated to be December 31, 2008 at the latest).

The price of crude oil is determined for (i) Antan crude liftings, FOB Antan Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties, (ii) Brass River Blend crude liftings, FOB Brass River Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus the differential as quoted in the Official Selling Price for Brass River Blend Crude notified by NNPC to the Corporation for that month, and (iii) Okwori crude liftings, FOB Okwori Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties. In each instance payment terms are in US dollars, paid offshore and 30 days from bill of lading date. By an amendment to be entered into prior to the closing of this offering, ABV will receive a marketing fee of \$0.08 per barrel. The Corporation has the right of audit of ABV's resale of Antan crude, Brass River Blend crude and Okwori crude. The payment obligations of ABV under the Crude Oil Supply Agreements are guaranteed by AOG.

The Crude Oil Supply Agreements offer a reliable and competitive means for the sale of crude oil produced from its operations. The Board intends to have a semi-annual review of the terms and conditions of this arrangement.

Management Services Agreement

AOG provides management services to the various subsidiaries of AOG, including the Corporation. The services include support in relation to financial control and reporting, legal, tax, risk and insurance, human resources, information technology, training and local expertise in-country.

Unless terminated for a breach of terms, the Management Services Agreement will expire in 2009 with the option for both parties to extend its duration for a further period of one year unless notice is given six months prior to the initial expiry date. The fee to be paid under the contract is \$2.5 million per year for the term.

Agreement for Services of Jean Claude Gandur

The Corporation will enter into a services agreement with AOG for the procurement of services to be rendered by Mr. Jean Claude Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. At present, it is anticipated that approximately 90 per cent of Mr. Gandur's time will be dedicated to Addax Petroleum. The total fee to be paid by the Corporation for such services is \$1 million per annum less the salary paid to Mr. Gandur by the Corporation.

Trademark Agreement

The Corporation identifies itself using names and logos that indicate a relationship with AOG. The Corporation believes that association with the AOG trademark has been and will continue to be beneficial. The Corporation's regional strategic focus is the African continent, particularly West Africa where AOG has established itself in the petroleum trading, oil storage and retail petroleum products industries. The Trademark Agreement will provide the Corporation with the right to use under a sub-license agreement all registered and unregistered AOG trademarks in any territory in which the Corporation has business activities.

The initial duration of the amended and restated Trademark Agreement will expire on December 31, 2009 with the option for both parties to extend its duration for a further period of one year unless notice is given six months prior to the expiry of the initial period. The Corporation will pay AOG a fixed annual fee of \$500,000 under this agreement.

Non-Competition Agreement

AOG will agree with Addax Petroleum that, provided AOG and Jean Claude Gandur together own not less than 25 per cent of the issued and outstanding Common Shares, neither AOG nor any of its subsidiaries will:

- acquire any petroleum properties or facilities or participate in the exploration for or development and production of petroleum or participate in any upstream petroleum business opportunities, unless AOG has first offered such business opportunities to Addax Petroleum and Addax Petroleum has declined to acquire such business opportunities. Such offer must remain open for acceptance for a minimum of 30 business days. For purposes of certainty, petroleum trading, downstream activities or non-petroleum resource activities of AOG shall not be considered directly competing interests; or
- participate in any person, other than acquiring not more than five per cent of the equity of a publicly listed company, which engages in the above prescribed activities.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed elsewhere in this prospectus, none of the directors, officers or principal shareholders of Addax Petroleum Corporation or APNV, and no associate or affiliate of Addax Petroleum Corporation or APNV, respectively, has or has had any material interest in any transaction which materially affects Addax Petroleum Corporation or APNV.

Afolabi Oladele has a consulting agreement with Addax Petroleum Development (Nigeria) Limited and Mr. Oladele is paid a fee of \$9,000 per month.

There are potential conflicts of interest to which the directors and officers of Addax Petroleum Corporation will be subject in connection with the operations of Addax Petroleum Corporation. In particular, certain of the directors of Addax Petroleum Corporation are involved in managerial and/or director positions with other oil and gas companies whose operations may, from time to time, be in direct competition with those of Addax Petroleum Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of Addax Petroleum Corporation. See "Directors and Officers". The CBCA provides that in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise provided by the CBCA.

PLAN OF DISTRIBUTION

Subject to the terms and conditions of the Underwriting Agreement, Addax Petroleum Corporation has agreed to issue and sell • Offered Shares at a price of CDN\$ • per Offered Share to the Underwriters for a total consideration of CDN\$ • , and the Underwriters have severally agreed to purchase such Offered Shares, as principals, on • , 2006 or such other date as may be agreed upon by the parties to the Underwriting Agreement, but not later than • , 2006. In consideration of the services provided in connection with this offering, Addax Petroleum Corporation will pay the Underwriters a fee of CDN\$ • per Offered Share.

Addax Petroleum Corporation has granted to the Underwriters the Over-Allotment Option, exercisable for a period ending 30 days after closing, to purchase up to an additional • Common Shares at a price of CDN\$ • per Common Share to cover over-allotments, if any, and for market stabilization purposes. If the Underwriters exercise the Over-Allotment Option in full, Addax Petroleum Corporation will be obligated to sell such Common Shares and will receive additional net proceeds of CDN\$ • after deducting fees to the Underwriters of CDN\$ • . This prospectus also qualifies for distribution any Common Shares that are issued pursuant to the exercise of the Over-Allotment Option.

There is currently no market for the Common Shares. Accordingly, the terms of the offering were established by negotiation among the Underwriters, Addax Petroleum Corporation and AOG.

The obligations of the Underwriters under the Underwriting Agreement are conditional and may be terminated at their discretion on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events. The Underwriters are, however, severally obligated to take up and pay for all Offered Shares agreed to be purchased under the Underwriting Agreement if any Offered Shares are purchased under the Underwriting Agreement. Addax Petroleum Corporation and AOG have agreed to indemnify the Underwriters, their directors, officers, employees and agents against certain liabilities including civil liabilities under applicable securities legislation or will contribute to payments the Underwriters may be required to make in respect thereof.

Subscriptions for Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice.

Pursuant to policy statements of the Ontario Securities Commission and the Autorité des marchés financiers, the Underwriters may not, throughout the period of distribution under this prospectus, bid for or purchase Common Shares. The foregoing restriction is subject to exceptions, including a bid or purchase permitted under the Universal Market Integrity Rules of Market Regulation Services Inc. relating to market stabilization and passive market making activities and a bid or purchase made for and on behalf of a customer

where the order was not solicited during the period of distribution, provided that the bid or purchase is not engaged in for the purpose of creating actual or apparent active trading in, or raising the price of, the Common Shares. In connection with this offering, and subject to the foregoing, the Underwriters may effect transactions which stabilize or maintain the market price for the Common Shares at levels other than those which might otherwise prevail in the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares have not been and will not be registered under the United States Securities Act of 1933, as amended (the "1933 Act") or any state securities laws. Accordingly, except to the extent permitted by the Underwriting Agreement, the Offered Shares may not be offered or sold within the United States. Each Underwriter has agreed that it will not offer or sell the Offered Shares within the United States except in accordance with Rule 144A or an exemption from, or in a transaction not subject to, the 1933 Act and in compliance with applicable state securities laws. This prospectus does not constitute an offer to sell or a solicitation of an offer to buy any of the Offered Shares in the United States. Moreover, the Underwriting Agreement provides that the Underwriters will offer and sell the Offered Shares outside the United States only in accordance with Regulation S under the 1933 Act. In addition, until 40 days after the commencement of the offering, an offer or sale of additional Common Shares within the United States by any dealer (whether or not participating in the Offering) may violate the registration requirements of the 1933 Act if such offer or sale is made otherwise than in accordance with Rule 144A.

Addax Petroleum Corporation and AOG have agreed that they will not, without the prior consent of RBC Dominion Securities Inc. and Merrill Lynch Canada Inc., which consent may not be unreasonably withheld, offer, sell or issue for sale or resale any Common Shares (or any securities giving the right to acquire Common Shares) other than the sale of the Common Shares pursuant to the exercise of the Over-Allotment Option or agree to or announce the intention to do so at any time prior to the date which is 180 days following closing of this offering. However, RBC Dominion Securities Inc. and Merrill Lynch Canada Inc. have consented to (i) the transfer of up to 9.6 million of the Common Shares owned by AOG after the Pre-IPO Transactions to current and former directors, officers and employees of the Corporation and (ii) the distribution of Common Shares by AOG pursuant to the potential reorganization of AOG described under "The Addax and Oryx Group Ltd.", provided that the recipients of such Common Shares enter into an agreement satisfactory to the Underwriters to be bound by equivalent restrictions as set forth above on the disposition of the Common Shares they have received.

The Corporation has applied to have the Common Shares listed on the TSX. Listing will be subject to the Corporation fulfilling all requirements of the TSX, including distribution of Common Shares to a minimum number of public security holders.

RELATIONSHIP BETWEEN THE CORPORATION AND RBC DOMINION SECURITIES INC.

RBC Dominion Securities Inc. is an indirect wholly owned subsidiary of a Canadian chartered bank that is a lender to APNV under the Credit Facility. Accordingly, the Corporation may be considered to be a connected issuer of RBC Dominion Securities Inc. under applicable securities legislation.

As at November 30, 2005, \$80 million was owed to the lenders under the Credit Facility. The Corporation is in material compliance with all material terms of the agreements governing the Credit Facility and none of the lenders has waived any material breach by the Corporation of those agreements since the Credit Facility was established. Neither the financial position of Addax Petroleum nor the value of the security under Credit Facility has changed substantially and adversely since the indebtedness under the Credit Facility was incurred.

The decision to distribute the Offered Shares and the determination of the terms of the distribution were made solely through negotiations among the Corporation, AOG, RBC Dominion Securities Inc. and Merrill Lynch Canada Inc. The lenders under the Credit Facility did not have any involvement in such decision or determination, but have been advised of the issuance and the terms thereof. As a consequence of the issuance, RBC Dominion Securities Inc. will receive its share of the Underwriters' fee. See "Plan of Distribution" and "Use of Proceeds".

DESCRIPTION OF SHARE CAPITAL

Addax Petroleum Corporation is authorized to issue an unlimited number of Common Shares and an unlimited number of Preferred Shares, issuable in series.

Common Shares

The holders of Common Shares will be entitled to receive notice of, and to exercise one vote per share at, every meeting of shareholders of Addax Petroleum Corporation, to receive such dividends as the Board of Directors declares and to share equally in the assets of Addax Petroleum Corporation remaining upon the liquidation of Addax Petroleum Corporation after the creditors of Addax Petroleum Corporation have been satisfied, subject to the prior rights of the Preferred Shares.

Preferred Shares

The Preferred Shares will be issuable in series, with each series consisting of such number of shares and having such rights, privileges, restrictions and conditions as may be determined by the Board of Directors of Addax Petroleum Corporation prior to the issuance thereof. With respect to the payment of dividends and the distribution of assets in the event of liquidation, dissolution or winding-up of Addax Petroleum Corporation, whether voluntary or involuntary, the Preferred Shares are entitled to preferences over Addax Petroleum Common Shares and any other shares ranking junior to the Preferred Shares and may also be given such other preferences over the Common Shares and any other shares ranking junior to the Preferred Shares as may be determined at the time of creation of each series.

PRIOR SALES

Addax Petroleum Corporation has not issued any Common Shares in the 12 month period prior to the date of this prospectus, except 100 Common Shares issued to AOG on November 23, 2005 for cash consideration of CDNS\$100 in connection with the incorporation and organization of Addax Petroleum Corporation. APNV has not issued any Common Shares in the 12 month period prior to the date of this prospectus.

MATERIAL CONTRACTS

A copy of the Underwriting Agreement, the Share Transfer Agreement, and the Non-Competition Agreement will be filed with the Alberta Securities Commission and the Ontario Securities Commission and will be available for inspection during normal business hours at Addax Petroleum Corporation's registered office in Calgary, Alberta and at the offices of Fasken Martineau DuMoulin LLP, in Toronto, Ontario during the period of distribution.

RISK FACTORS

The securities offered hereby should be considered highly speculative due to the nature of the Corporation's business. A prospective investor should consider carefully the risks and uncertainties set out below in addition to the other information contained in this prospectus before making an investment decision. Additional risks and uncertainties not presently known to the Corporation or that it currently deems immaterial may also impair its business and affect the price of its Common Shares. If any of the events described in this prospectus as a risk or uncertainty actually occurs, the Corporation's business, results of operations or financial condition could be materially adversely affected.

Risks relating to the business of the Corporation

The Corporation's failure to replace its current reserves would have a material adverse effect on its business and financial condition.

The Corporation's oil reserves and production, and therefore its cash flows and earnings, are highly dependent upon the Corporation developing and increasing its current reserve base. Without the addition of reserves through exploration, acquisition or development activities, the Corporation's reserves and production will decline over time as reserves are depleted. The business of exploring for, developing or acquiring reserves is

capital intensive. To the extent that cash flow from operations is insufficient and external sources of capital become limited or unavailable, the Corporation's ability to make the necessary capital investments to maintain and expand its oil reserves will be impaired. There can be no assurance that the Corporation will be able to find and develop or acquire additional reserves to replace production at commercially feasible costs.

Exploration and development activities are inherently risky and are subject to change.

Future oil and natural gas exploration may involve unprofitable efforts, not only from dry wells, but from wells that are productive but do not produce sufficient net revenues to return a profit after drilling, operating and other costs. Completion of a well does not assure a profit on the investment or recovery of drilling, completion and operating costs. In addition, drilling hazards or environmental damage could greatly increase the cost of operations and various field operating conditions may adversely affect the production from successful wells.

Whether the Corporation ultimately undertakes an exploration or development project depends upon a number of factors, including availability and cost of capital, current and projected oil and gas prices, receipt of government approvals, access to the property, the costs and availability of drilling rigs and other equipment, supplies and personnel necessary to conduct these operations, success or failure of activities in similar areas and changes in the estimates to complete the projects.

The Corporation will continue to gather data about its new venture opportunities and other projects. Additional information could cause the Corporation to alter its schedule or determine that a new venture opportunity or project should not be pursued, which could adversely affect the Corporation's prospects.

Under its Production Sharing Contracts, the Corporation finances exploration, development and operations and the related facilities and equipment and will only recover its costs if there is successful production in accordance with the terms of the Production Sharing Contracts.

Failure to obtain governmental approvals and fulfill contractual commitments may adversely affect the Corporation's business.

The Corporation's current operations are, and future operations will be, subject to approvals of governmental authorities and, as a result, the Corporation has limited control over the nature and timing of development and exploration of such properties or the manner in which operations are conducted on such properties.

The Corporation's Production Sharing Contracts and other contracts with governments and government bodies to explore and develop the properties are subject to specific requirements and obligations. If the Corporation fails to satisfy such requirements and obligations and there is a material breach of such contracts, such contracts could, under certain circumstances, be terminated. The termination of any of the Corporation's contracts granting rights in respect of the properties would have a material adverse effect on the Corporation's financial condition.

The loss of any of the Corporation's executive officers and key employees could have an adverse impact on its business.

The Corporation is highly dependent upon its executive officers and key employees, and the success of the Corporation will be largely dependent upon the performance of such officers and key employees. In particular, the Corporation's Chief Executive Officer, Jean Claude Gandur, has a number of key relationships that are important to the Corporation's business. The unexpected loss of the services of Mr. Gandur or other executive officers or key personnel could have a material adverse effect on the Corporation. The Corporation does not maintain key man life insurance on any of its employees. In assessing the risk of an investment in the Common Shares, potential investors should recognize that they are relying on the ability and integrity of the management of the Corporation.

The Corporation's operations are subject to potential losses that may not be covered by insurance.

The exploration for, and the production, storage, transportation and marketing of oil involves many risks. These risks include encountering unexpected formations or pressures, premature declines of reservoirs, equipment failures and other accidents, uncontrollable flows of oil, natural gas well fluids or water, adverse weather conditions, blowouts, explosions, fire, gaseous leaks, migration of harmful substances and oil spills, any of which could cause personal injury, result in damage to, or destruction of, oil wells or formations or production facilities and other property, equipment and the environment, as well as interrupt operations. The Corporation's offshore production facilities are also subject to hazards inherent in marine operations, such as capsizing, sinking, grounding, collision and damage from severe weather or tidal conditions. These hazards can cause substantial damage to facilities and interrupt production. The impact that any of these risks may have upon the Corporation is increased because of the large contribution made to the Corporation's overall production by a few select properties.

The Corporation is insured against some, but not all, potential risks; however, there can be no assurance that such insurance will be adequate to cover any losses or exposure for liability. The occurrence of a significant unfavourable event not fully covered by insurance could have a material adverse effect on the Corporation's financial condition, results of operations or cash flows. Furthermore, the Corporation cannot predict whether insurance will continue to be available at a reasonable cost or at all.

The Corporation is dependent on an affiliated company for the marketing of the oil the Corporation produces.

In conducting its business, Addax Petroleum will continue to rely on ABV to purchase and sell all of the crude oil the Corporation produces under the Crude Oil Supply Agreements. If the Corporation's agreements with ABV terminate for any reason, the Corporation may be unable to enter into a relationship with another purchaser and seller of its crude oil on a timely basis or on acceptable terms, which could materially adversely affect the Corporation's business, results of operations or financial condition.

The Corporation shares a trademark and a tradename with a group of companies and any adverse development affecting the trademark or tradename of any of those companies could adversely affect the business, goodwill or reputation of the Corporation.

The Corporation shares a trademark and a trademark with AOG and many of AOG's subsidiaries. AOG engages in petroleum trading and distribution, and mining activities throughout Africa and in Eastern Europe, and it has subsidiaries, local branches and commercial representation bureaus throughout Africa and in Europe and Asia. Pursuant the Trademark Agreement, the Corporation intends to continue identifying itself using names and logos that indicate a relationship with AOG. Any adverse development affecting the trademark or trade name of any of those companies could have an adverse affect on the business, good will or reputation of the Corporation. See "The Addax and Oryx Group Ltd." and "Interest of AOG in Material Transactions".

The Corporation may not be able to secure financing for its future exploration, development, production and acquisition plans.

Depending on future exploration, development, production or acquisition plans, the Corporation may require additional financing. The ability of the Corporation to arrange such financing in the future will depend in part upon prevailing financing market conditions as well as the business performance of the Corporation. If Addax Petroleum's revenues or reserves decline, it may not have the capital necessary to undertake or complete future drilling programs. There can be no assurance that debt or equity financing or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to Addax Petroleum. Transactions financed partially or wholly with debt may increase the Corporation's debt levels above industry standards. The inability of Addax Petroleum to access sufficient capital for its operations could have a material adverse effect on Addax Petroleum's business and financial condition. If additional financing is raised by the issuance of shares from treasury of the Corporation, control of the Corporation may change and shareholders may suffer dilution.

The Corporation could be subject to labour or other unplanned production disruptions.

The Corporation has a significant number of staff belonging to two Nigerian trade unions, Nupeng and Pengassan, which have a record of occasional industrial action. The presence of trade unions may limit the Corporation's flexibility in dealing with its staff in Nigeria. If there is a material disagreement between the Corporation and its trade unions, the Corporation's operations in Nigeria could suffer an interruption or shutdown that could have a material adverse effect on the Corporation's business, results of operations or financial condition.

Future litigation could adversely affect the Corporation's business, results of operations or financial condition.

From time to time, the Corporation is subject to litigation arising out of its operations. Damages claimed under such litigation may be material or may be indeterminate, and the outcome of such litigation may materially impact the Corporation's business, results of operations or financial condition. While the Corporation assesses the merits of each lawsuit and defends itself accordingly, it may be required to incur significant expenses or devote significant resources to defending itself against such litigation. In addition, the adverse publicity surrounding such claims may have a material adverse effect on the Corporation's business.

The Corporation is subject to certain risks related to the nature of the Corporation's business and its present stage and speed of development.

There are numerous factors which may affect the success of the Corporation's business which are beyond the Corporation's control, including local, national and international economic, legal and political conditions. The Corporation's business involves a high degree of risk which a combination of experience, knowledge and careful evaluation may not overcome. The operations of the Corporation in developing countries expose the Corporation to, among other things, political and currency risks.

The Corporation has experienced significant growth and development in a relatively short period of time and expects to continue to grow as production increases from its oil reserves. Management of that growth requires, among other things, stringent control of financial system and operations, the continued development of management controls and the training of new personnel. Failure to successfully manage the Corporation's expected growth and development could have a material adverse effect on the Corporation's business, results of operations or financial condition.

There are risks inherent in the Corporation's strategy of geographic diversification and acquisition of new exploration and development properties.

The Corporation intends to acquire additional oil and gas properties. Although the Corporation performs a review of properties prior to acquiring them that it believes is consistent with industry practices, such reviews are inherently incomplete. It generally is not feasible to review in depth every individual property involved in each acquisition. Ordinarily, the Corporation will focus its due diligence efforts on higher valued properties and will sample the remainder. However, even an in-depth review of all properties and records may not necessarily reveal existing or potential problems, nor will it permit a buyer to become sufficiently familiar with the properties to assess fully their deficiencies and capabilities. Inspections may not be performed on every well, and structural or environmental problems, such as ground water contamination, are not necessarily observable even when an inspection is undertaken. The Corporation may be required to assume pre-closing liabilities, including environmental liabilities, and may acquire interests in properties on an "as is" basis. In addition, competition for the acquisition of prospective oil properties is intense, which may increase the cost of any potential acquisition. To date Addax Petroleum's exploration and development activities have principally been based in Nigeria and nearby areas in West Africa, and Addax Petroleum's limited presence in other regions may limit its ability to identify and complete acquisitions in other geographic areas. There can be no assurance that any acquisition by the Corporation will be successful.

The Corporation is exposed to the risks associated with commodity hedging activities.

The nature of the Corporation's operations will result in exposure to fluctuations in commodity prices. Addax Petroleum may use financial instruments and physical delivery contracts to hedge its exposure to these

risks. If Addax Petroleum engages in hedging it will be exposed to credit related losses in the event of non-performance by counterparties to the financial instruments. Additionally, if product prices increase above those levels specified in any future hedging agreements, Addax Petroleum could lose the cost of floors or ceilings or a fixed price could limit Addax Petroleum from receiving the full benefit of commodity price increases. If Addax Petroleum enters into hedging arrangements, it may suffer financial loss if it is unable to commence operations on schedule or is unable to produce sufficient quantities of oil to fulfill its obligations.

Joint ventures entered into by the Corporation could lead to additional costs.

The Corporation has, in respect of Cameroon and Gabon, and is likely, in respect of the JDZ, the Taq Taq Property and the Okwok Property, to enter into joint ventures. The Corporation may suffer additional costs or other losses if a joint venture partner does not meet its obligations. It is also possible that the interests of the Corporation and those of its joint venture partners are not aligned resulting in project delays, additional costs or disagreements, which could adversely affect the Corporation's business.

Risks relating to the petroleum industry

Volatility of petroleum prices could have a material adverse effect on the Corporation's business, results of operations or financial condition.

The Corporation's business, results of operations or financial condition and future growth are substantially dependent on the prevailing prices for its petroleum production. Historically, the markets for petroleum have been volatile and such markets are likely to continue to be volatile in the future. Prices for oil are based on world supply and demand and are subject to large fluctuations in response to relatively minor changes to the demand for oil, whether the result of uncertainty or a variety of additional factors beyond the control of the Corporation, including actions taken by OPEC and its adherence to agreed production quotas, war, terrorism, government regulation, social and political conditions in oil producing countries generally and in Nigeria specifically, economic conditions, prevailing weather patterns and the availability of alternative sources of energy. Any substantial decline in the price of petroleum could have a material adverse effect on the Corporation's revenues, operating income, cash flows and borrowing capacity and may require a reduction in the carrying value of the Corporation's properties, its planned level of spending for exploration and development and the level of its reserves. No assurance can be given that prices will be sustained at levels which will enable the Corporation to operate profitably.

A substantial decline in oil prices may also require the Corporation to write down certain of its assets. Under Canadian GAAP, the net capitalized cost of oil and gas properties may not exceed a "ceiling limit", which is based, in part, upon estimated future net cash flows from reserves. If the net capitalized costs exceed this limit, the Corporation must charge the amount of the excess against earnings. As oil prices decline, the Corporation's net capitalized cost may approach or exceed this cost ceiling, resulting in a charge against earnings. While a write down would not directly affect cash flow, the charge to earnings could be viewed unfavourably in the market or could limit the Corporation's ability to borrow funds or comply with covenants contained in current or future credit agreements or other debt instruments.

The Corporation could face significant liabilities under environmental laws.

Extensive national, state, and local environmental laws and regulations in foreign jurisdictions affect nearly all of the operations of the Corporation. These laws and regulations set various standards regulating certain aspects of health and environmental quality, provide for civil and criminal penalties and other liabilities for the violation of such standards and establish in certain circumstances obligations to remediate current and former facilities and locations where operations are or were conducted. In addition, special provisions may be appropriate or required in environmentally sensitive areas of operation. There can be no assurance that the Corporation will not incur substantial financial obligations in connection with environmental compliance.

Significant liability could be imposed on the Corporation for damages, clean-up costs or penalties in the event of certain discharges into the environment, environmental damage caused by previous owners of property purchased by the Corporation, acts of sabotage or non-compliance with environmental laws or regulations. Such liability could have a material adverse effect on the Corporation. Moreover, the Corporation cannot predict

what environmental legislation or regulations will be enacted in the future or how existing or future laws or regulations will be administered or enforced. Compliance with more stringent laws or regulations, or more vigorous enforcement policies of any regulatory authority, could in the future require material expenditures by the Corporation for the installation and operation of systems and equipment for remedial measures, any or all of which may have a material adverse effect on the Corporation.

As a party to various Production Sharing Contracts and the Ngosso Concession, the Corporation may have an obligation to restore producing fields to a condition acceptable to the authorities at the end of their commercial lives. Each party to such contracts is typically liable for its share of the cost of decommissioning infrastructure installed under that contract. In respect of the Corporation's producing properties that are located offshore, the costs to decommission offshore wells may be substantial. These costs are payable at a time when assets are no longer generating cash flow. Although the Corporation makes an accounting provision for decommissioning and site restoration costs, there are no immediate plans to establish a reserve account for these potential costs in respect of any of the Corporation's current properties or facilities. Rather, the costs of decommissioning are expected to be paid from the proceeds of production in accordance with the practice generally employed in onshore and offshore oilfield operations. There can, however, be no assurance that the proceeds from production will be sufficient to meet the costs of decommissioning at the time when required to be incurred. The use of other funds to satisfy such decommissioning costs could have a material adverse effect on the Corporation's financial position.

The oil reserve and oil and gas resource data in this prospectus are only estimates, and the Corporation's actual production, revenue and expenditure with respect to its reserves may be materially different from such estimates.

There are numerous uncertainties inherent in estimating quantities of proved, probable and possible reserves and prospective and contingent resources and cash flows to be derived therefrom, including many factors beyond the control of the Corporation. The reserves, resources and cash flow information set forth in this prospectus represent estimates only. In general, estimates of economically recoverable oil reserves and the future net cash flow therefrom are based on a number of factors and assumptions made as of the date on which the reserves estimates were determined, such as geological and engineering estimates (which have inherent uncertainties), historical production from the properties, the assumed effects of regulation by governmental agencies and estimates of future commodity prices and operating costs, all of which may vary considerably from actual results. All such estimates are, to some degree, uncertain and classifications of reserves are only attempts to define the degree of uncertainty involved. For these reasons, estimates of the economically recoverable oil reserves attributable to any particular group of properties, the classification of such reserves based on risk recovery and estimates of future net revenues expected therefrom, prepared by different engineers or by the same engineers at different times, may vary substantially. The Corporation's actual production, revenues, taxes and development and operating expenditures with respect to the Corporation's reserves will likely vary from such estimates, and such variances could be material.

Estimates with respect to reserves that may be developed and produced in the future are often based upon volumetric calculations and upon analogy to similar types of reserves, rather than upon actual production history. Estimates based on these methods generally are less reliable than those based on actual production history. Subsequent evaluation of the same reserves based upon production history will result in variation, which may be material, in the estimated reserves.

The present value of estimated future net cash flows referred to herein should not be construed as the current market value of estimated proved oil reserves attributable to the Corporation's properties. The estimated discounted future cash flow from proved reserves are based upon price and cost estimates which may vary from actual prices and costs and such variance could be material. Actual future net cash flows will also be affected by factors such as the amount and timing of actual production, supply and demand for oil, curtailments or increases in consumption by purchasers and changes in governmental regulations or taxation.

The Corporation's exploration and development activities depend on its ability to procure appropriate drilling equipment.

Oil and natural gas development and exploration activities are dependent on the availability of drilling and related equipment in the particular areas where such activities will be conducted. Demand for limited equipment such as drilling rigs or access restrictions may affect the availability of such equipment to the Corporation and may delay its development and exploration activities. In the areas in which the Corporation operates there is significant demand for drilling rigs and other equipment. Failure by the Corporation to secure necessary equipment could adversely affect the Corporation's business, results of operations or financial condition.

The Corporation operates in a highly competitive industry.

The oil and gas industry is intensely competitive and the Corporation competes with other companies which possess greater technical and financial resources. Many of these competitors not only explore for and produce oil and natural gas, but also carry on refining operations and market petroleum and other products on an international basis. The Corporation also competes with other companies to attract and retain experienced skilled management and oil professionals. If the Corporation is unsuccessful in competing against other companies, its business, results of operations or financial condition would be materially adversely affected. See "Properties and New Ventures — Nigeria Country Discussion".

The Corporation faces foreign exchange, interest rate and inflation risks.

The Corporation's revenues are in United States dollars and most of the Corporation's working capital is in United States dollars. The Corporation converts funds to foreign currencies as its payment obligations become due. Part of the Corporation's costs are incurred in other currencies, including the Nigerian Naira and the Swiss franc. The Corporation's accounts are prepared in United States dollars and dividends, if paid, will be paid in Canadian dollars. Accordingly, the Corporation is subject to inflation in the countries in which it operates and fluctuations in the rates of currency exchange between the United States dollar and these currencies, and such fluctuations may materially affect the Corporation's business, results of operations or financial condition. Consequently, construction, exploration, development, administration and other costs may be higher than the Corporation anticipates. Any increase in relevant interest rates will increase the amount the Corporation pays to service debt.

Risks relating to the countries in which the Corporation currently operates and may operate in the future

There are political, economic and other risks relating to the countries in which the Corporation currently operates or may operate in the future.

The Corporation's current oil production activities are located entirely in Nigeria. It is also currently pursuing exploration and development activities in Cameroon, Gabon and the Kurdistan Region of Iraq. Exploration and development activities in such countries may require protracted negotiations with host governments, national oil companies and third parties and may be subject to economic and political considerations such as the risks of war, actions by terrorist or insurgent groups, community disturbances, expropriation, nationalization, renegotiation, change or nullification of existing contracts or royalty rates, changing taxation policies or interpretations, foreign exchange restrictions, inflation, changing political conditions, local currency devaluation, currency controls, and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction. Any of these or similar factors could have a material adverse effect on the Corporation's business, results of operations or financial condition. If a dispute arises in connection with foreign operations, the Corporation may be subject to the exclusive jurisdiction of foreign courts or foreign arbitration tribunals or may not be successful in subjecting foreign persons, especially foreign oil ministries and national oil companies, to the jurisdiction of Canada.

Under the International Court of Justice ruling of October 2002, the border between Nigeria and Cameroon was fixed such that a part of OML123, including the Bogi Platform, is now located in Cameroon. The Joint Border Commission between the governments of Nigeria and Cameroon has not reached a decision about

how the Corporation's operations will be treated. Accordingly, the Corporation may be materially adversely affected by a decision of the Joint Border Commission.

Relinquishment obligations under applicable legislation and the terms of Production Sharing Contracts may adversely affect the total amount of the Corporation's prospective resources.

Pursuant to the Nigeria Production Sharing Contracts, Addax Petroleum is required to relinquish 50 per cent of the area of OML123 and OML124 and OPL90 and OPL225, excluding the areas of the properties in which petroleum had been discovered in commercial quantities. The Corporation has submitted a relinquishment proposal to NNPC in respect of OPL90 and OPL225, but there is no assurance that such proposal will be accepted.

In addition, the Production Sharing Contract in respect of OML123 and OML124 required that not later than five years from the effective date of the PSC (May 1998), 50 per cent of the contract area (excluding any areas in which petroleum had been discovered in commercial quantities) should be relinquished pursuant to mutual agreement between NNPC and the Corporation. Although discussions commenced between NNPC and the Corporation, no area was ever relinquished in accordance with this provision of the PSC. Subsequent to the date required for such relinquishment, the OPLs under which the Corporation held the areas were converted to OML123 and OML124. The Corporation has obtained legal advice to the effect that, as the conversion from the previous OPL's into the OML's required the consent of NNPC, the obligation under the PSC to relinquish the area is no longer effective. However, there is a risk that NNPC could in the future request such relinquishment.

In addition, in accordance with the *Petroleum Act*, 50 per cent of the area covered by an OML must be relinquished within 10 years of the date of grant of the OML. OML123 and OML124 were granted in July 2002 and contain such provisions. There can be no assurance that the area proposed by the Corporation will be accepted by the government, and there is a risk that such relinquishment may necessarily contain reserves already booked by the Corporation, leading to a restatement of its reserves.

The Ngosso Concession contains a change of control provision which provides that "if [the State], pursuant to Article 34 of the Petroleum Regulations shall have become aware of changes in the factors constituting control of the Contractor or of an entity comprising Contractor, [the State] may, within 90 days order the latter to take all necessary steps in order to terminate the operations which led to such changes". Accordingly, any change of control in the Corporation could have an adverse effect on the Corporation's operations in Cameroon.

Interpretation and application of the laws and regulations of the countries in which the Corporation operates can be uncertain and could adversely affect the Corporation.

The jurisdictions in which the Corporation operates may have less developed legal systems than more established economies which may result in risks such as (i) effective legal redress in the courts of such jurisdictions, whether in respect of a breach of law or regulation, or, in an ownership dispute, being more difficult to obtain; (ii) a higher degree of discretion on the part of governmental authorities; (iii) the lack of judicial or administrative guidance on interpreting applicable rules and regulations; (iv) inconsistencies or conflicts between and within various laws, regulations, decrees, orders and resolutions; or (v) relative inexperience of the judiciary and courts in such matters. Enforcement of laws in some of the jurisdictions in which the Corporation operates may depend on and be subject to the interpretation placed upon such laws by the relevant local authority, and such authority may adopt an interpretation of an aspect of local law which differs from the advice that has been given to the Corporation. There can be no assurance that contracts, joint ventures, licences, licence applications or other legal arrangements will not be adversely affected by the actions of government authorities and the effectiveness of and enforcement of such arrangements in these jurisdictions. In certain jurisdictions, the commitment of local businesses, government officials and agencies and the judicial system to abide by legal requirements and negotiated agreements may be more uncertain and may be susceptible to revision or cancellation, and legal redress may be uncertain or delayed.

In the countries in which the Corporation does business, currently Nigeria, Cameroon, Gabon and the Kurdistan Region of Iraq, the state generally retains ownership of the minerals and consequently retains control of (and in many cases, participates in) the exploration and production of hydrocarbon reserves. Accordingly, these operations may be materially affected by host governments through royalty payments, export taxes and

regulations, surcharges, value added taxes, production bonuses and other charges. In addition, transfers of interests typically require government approval, which may delay or otherwise impede transfers, and the government may impose obligations on the Corporation to complete minimum work within specified timeframes. In the future, the Corporation may extend its interests in operations to other countries where similar circumstances may apply.

The Corporation must comply with the regulatory regimes of the countries in which it operates, and such compliance may result in increased expenditure.

The Corporation is subject to extensive government laws and regulations governing prices, taxes, royalties, allowable production, waste disposal, pollution control and similar environmental laws, the export of oil and many other aspects of the oil business.

Although the Corporation believes it has good relations with the current governments of Nigeria, Gabon, Cameroon, Iraq and the Kurdistan Region of Iraq, there can be no assurance that the actions of present or future governments in these countries, or of governments of other countries in which the Corporation may operate in the future, will not materially adversely affect the business or financial condition of the Corporation.

While the Nigeria Production Sharing Contracts do not include the right to produce and sell natural gas, the Corporation does produce a significant amount of natural gas which is associated with the Corporation's oil production. The majority of the Corporation's produced associated natural gas is currently flared, as there is no established market in which to sell the natural gas, nor does the Corporation have the necessary facilities to capture or transport natural gas. The Nigerian government has announced what is commonly known as the "Flares Down by 2008" policy that that will require petroleum producers to reduce the amount of natural gas that is flared in petroleum production. The Nigerian government has not officially announced any details on how this policy will be implemented and has not enacted any legislation implementing the "Flares Down" policy. Consequently, no assurances can be given that the Corporation will be able to comply with such policy.

The Corporation's production may be constrained by production or export quotas.

Nigeria is a member of OPEC, and the Corporation may operate in other OPEC-member countries in the future. Production in OPEC-member countries can be constrained from time to time by OPEC production quotas. In Nigeria, NNPC allocates production quotas among oil producers in Nigeria based on the aggregate of the technical production limits per well for a producer as negotiated between the producer and the Nigerian government. If the aggregate of all the producers' technical production limits exceeds Nigeria's OPEC quota, the production allocations among the producers are reduced pro rata. The Corporation has historically exceeded its production allocation but has applied for and been granted additional quota from the Nigerian government for all of its excess oil production. There can be no assurance that if the Corporation exceeds its allocated quota in the future that it will continue to receive additional quota from the Nigerian government.

In addition to OPEC production quotas, oil producing countries can also implement export quotas. The Corporation may be constrained in exporting oil that it produces in the future due to the imposition of export quotas.

Crime and governmental or business corruption could disrupt the Corporation's ability to conduct its business.

The Corporation operates in some countries which have experienced governmental and business corruption. Although the Corporation's policy mandates strict compliance with internal policies and local laws which prohibit corrupt payments to government officials or other businesses or persons, there is no assurance that such internal policies and procedures will be adhered to by its employees. Findings against the Corporation or its employees of its involvement in corruption could result in criminal or civil penalties, including substantial monetary fines, against the Corporation and any allegations or finding of involvement in corruption could damage the Corporation's reputation and its ability to do business. Furthermore, involvement in corrupt practices by the joint venture partners of the Corporation and others with whom the Corporation conducts business could also damage the Corporation's reputation and business.

Western oil and gas companies may be perceived to be targets of criminal or terrorist activities. Criminal or terrorist action against the Corporation, its properties or facilities could have a material adverse effect on the Corporation's business, results of operations or financial position. In addition, the fear of criminal or terrorist attacks against the Corporation could have an adverse effect on the ability of the Corporation to raise capital or to adequately staff its operations or could substantively increase the costs of doing so.

US holders of Common Shares and the Corporation may be subject to sanctions imposed by the US government if the Corporation decides to pursue operations in countries subject to US economic sanctions.

US economic sanctions may be imposed on US holders of Common Shares or the Corporation in connection with future operations in countries subject to US economic sanctions, such as Iran. To date, the Corporation has only had discussions with the Iranian national oil company regarding certain projects. See "Middle East and North Africa — Middle East New Ventures — Iran". Two US sanctions programs, the Iranian Transactions-Regulations ("ITR") and the Iran and Libya Sanctions Act ("ILSA") may potentially apply to the Corporation's future activities in Iran if the Corporation decides to undertake substantive activities in that country.

The ITR, which are administered by the Office of Foreign Assets Control ("OFAC") of the US Treasury Department, apply only to US persons and thus would not apply to the Corporation. However, the ITR may apply to US holders of Common Shares. The Corporation has taken steps it feels are sufficient to mitigate the risk to US holders but there can be no assurance that such steps will be successful. If the OFAC takes a different view of these steps and pursues enforcement of the ITR, US holders may be subject to a range of civil and criminal penalties. The imposition of such penalties may have a material adverse effect on the price of the Common Shares.

The ILSA grants the US President authority to impose sanctions against persons or entities found by the President to have knowingly made investments in Iran's petroleum industry of \$20 million or more in any twelve month period. Sanctions could include restrictions on obtaining credit from US financial institutions and the US export-import bank and on the ability of the Corporation to procure goods, services and technology from the US. To date, the Corporation has not invested the requisite amount in Iran to trigger ILSA sanctions. Additionally, the Corporation understands that the US government has not yet imposed any sanctions under ILSA, despite having a number of foreign investment projects in Iran under investigation.

The Corporation may in the future invest sufficient money in activities in Iran to trigger ILSA and cannot predict future interpretation of ILSA by the US government regarding any such future activities. It is possible that the US President may determine that these future activities constitute violations of ILSA and subject the Corporation to sanctions. The imposition of sanctions could have an adverse impact on the Corporation's business, results of operations or financial condition.

Risks relating to the Common Shares

Uncertainties exist as to the market price and liquidity of the Common Shares as there has been no prior public market for such shares.

Prior to this offering, there has been no public market for the Common Shares. The Corporation has applied to have its Common Shares listed on the TSX. The Corporation cannot predict the extent to which an active market for the Common Shares will develop or be sustained after the offering, or how the development of such a market might affect the market price for the Common Shares. An illiquid market for the Common Shares may result in lower trading prices and increased volatility, which could adversely affect the value of an investment.

The initial public offering price has been determined by negotiation among the Corporation, AOG and the Underwriters based on a number of factors, including market conditions in effect at the time of the offering, that may not be indicative of future performance. The market price of the Common Shares may fall below the offer price or could fluctuate substantially due to a number of factors.

The controlling shareholder(s) of the Corporation will exercise significant control over the affairs of the Corporation.

Upon completion of this offering, AOG will own • Common Shares and control approximately • per cent (• per cent if the Over-Allotment Option is exercised in full) of the aggregate voting shares of the Corporation which will allow AOG to control substantially all the actions taken by the shareholders of the Corporation, including the election of directors. It is likely that AOG will have sufficient voting power to, among other things, amend the articles and by-laws of the Corporation, delay, deter or prevent a change in control of the Corporation that might otherwise be beneficial to its shareholders and may also discourage acquisition bids for the Corporation and limit the amount certain investors may be willing to pay for the Common Shares.

Certain directors and senior management of the Corporation hold positions with AOG and other companies, some of which operate in the petroleum industry. These other positions could create, or appear to create, potential conflicts of interest when these directors and senior management are faced with decisions that could have different implications for the Corporation and their other business interests. In the past, the Corporation has appointed committees of independent directors to evaluate opportunities where conflicts of interest exist or are perceived to exist, and the Corporation will continue to deal with conflicts in this fashion. Although the Corporation expects that such conflicts will be handled in accordance with the CBCA and its corporate governance policies, there is no assurance that all conflicts will be adequately addressed.

Although the Corporation has entered into an agreement with AOG in which AOG has agreed to conduct its upstream petroleum business entirely through the Corporation, to not compete with the Corporation in such business and to offer the Corporation any upstream petroleum business opportunities made available to AOG, in each case so long as AOG and Jean Claude Gandur together own not less than 25 per cent of the issued and outstanding Common Shares, it is nonetheless possible that other conflicts could arise that may ultimately be resolved in a manner unfavourable to the Corporation.

Sales of Common Shares by controlling shareholder(s) could have an adverse effect on the price of the Common Shares.

In connection with the offering, the Corporation and AOG have agreed to certain restrictions on the sale or other disposition of the Common Shares for a period of 180 days from the date of closing of this offering, subject to certain exceptions. See "Plan of Distribution". The Corporation cannot predict whether substantial numbers of the Common Shares will be sold in the open market following the expiry of the lock-up period. In particular, there can be no assurance that AOG will not reduce its holding of Common Shares or dividend or otherwise distribute the Common Shares it holds to the beneficial owners of AOG. Sales of a large number of the Common Shares in the public markets, or the potential for such sales, could decrease the trading price of the Common Shares and could impair the Corporation's ability to raise capital through future offerings of Common Shares.

Investors may face risks related to the Corporation's holding company structure.

Following the closing of the offering, the Corporation will hold all of its assets in its wholly owned subsidiary, APNV. In the event of insolvency, liquidation or other reorganization of APNV, the holders of the Common Shares will have no right to proceed against the assets of APNV or to cause the liquidation or bankruptcy of the company under applicable bankruptcy laws. Creditors of APNV would be entitled to payment in full from such assets before the Corporation, as a shareholder, would be entitled to receive any distribution therefrom. Claims of creditors of APNV will have priority with respect to the assets and earnings of the company over the claims of the Corporation, except to the extent that the Corporation may itself be a creditor with recognized claims against APNV ranking at least pari passu with such other creditors, in which case the claims of the Corporation would still be effectively subordinate to any mortgage or other liens on the assets of APNV and would be subordinate to any indebtedness of APNV.

ELIGIBILITY FOR INVESTMENT

Subject to certain assumptions, limitations and restrictions, in the opinion of Fasken Martineau DuMoulin LLP, counsel to Addax Petroleum Corporation and APNV, and Fraser Milner Casgrain LLP, counsel to the Underwriters, the Offered Shares, if as and when listed on a prescribed stock exchange (including the TSX), will be qualified investments for a trust governed by a registered retirement savings plan, a registered retirement income fund, a registered education savings plan or a deferred profit sharing plan under the *Income Tax Act* (Canada) and the regulations thereunder.

LEGAL PROCEEDINGS

Neither Addax Petroleum Corporation nor APNV is a party to, nor are any their respective properties subject to, any material legal proceedings nor are any such proceedings known by the Addax Petroleum Corporation to be contemplated.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby have been passed upon, on behalf of Addax Petroleum Corporation and APNV, by Fasken Martineau DuMoulin LLP and, on behalf of the Underwriters, by Fraser Milner Casgrain LLP.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of Addax Petroleum Corporation and APNV are Deloitte & Touche LLP, Chartered Accountants, 3000 Scotia Centre, 700 - 2nd Street SW, Calgary, Alberta, T2P 0S7.

Computershare Investor Services Inc. at its principal office in Calgary, Alberta is the registrar and transfer agent for the Common Shares.

INTEREST OF EXPERTS

None of Fasken Martineau DuMoulin LLP, Fraser Milner Casgrain LLP, Netherland, Sewell & Associates, Inc. or any director, officer, employee or partner thereof, has received or will receive a direct or indirect interest in the property of Addax Petroleum Corporation or APNV or any of their respective associates or affiliates. As at the date hereof, the aforementioned persons, and companies beneficially own, directly or indirectly, (both before and after giving effect to this offering assuming said persons do not subscribe for Common Shares) less than one per cent of the securities of Addax Petroleum Corporation or APNV and their respective associates and affiliates. None of the aforementioned persons or companies, nor any director, officer, partner or employee of any of the aforementioned persons or companies is or is expected to be elected, appointed or employed as a director, officer or employee of Addax Petroleum Corporation or APNV or of any of their respective associates or affiliates.

ADDITIONAL INFORMATION

Additional information relating to the Corporation is available through the Internet on the Canadian System for Electronic Document Analysis and Retrieval (SEDAR) which can be accessed at www.sedar.com.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus or any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus or any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal advisor.

REPORT ON RESERVES DATA BY INDEPENDENT QUALIFIED RESERVES EVALUATOR

FORM 51-101F2

To the Board of Directors of Addax Petroleum Corporation:

1. We have evaluated Addax Petroleum N.V.'s (the "Corporation") reserves data as at September 30, 2005. The reserves data consists of the following:
 - (a) (i) proved and proved plus probable and proved plus probable plus possible oil reserves estimated using forecast prices and costs; and
 - (ii) the related estimated future net revenue; and
 - (b) (i) proved and proved plus probable and proved plus probable plus possible oil reserves estimated using constant prices and costs; and
 - (ii) the related estimated future net revenue.
2. The reserves data are the responsibility of the Corporation's management. Our responsibility is to express an opinion on the reserves data based on our evaluation.

We carried out our evaluation in accordance with standards set out in the Canadian Oil and Gas Evaluation Handbook (the "COGE Handbook") prepared jointly by the Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy & Petroleum (Petroleum Society).

3. Those standards require that we plan and perform an evaluation to obtain reasonable assurance as to whether the reserves data are free of material misstatement. An evaluation also includes assessing whether the reserves data are in accordance with principles and definitions presented in the COGE Handbook.
4. The following table sets forth the estimated forecast net revenue (before deduction of taxes) attributed to proved plus probable reserves, estimated using forecast prices and costs and calculated using a discount rate of 10 percent, included in the reserves data of the Company evaluated by us as at September 30, 2005 and identifies the respective portions thereof that we have evaluated and reported on to the Corporation's management/Board of Directors:

Oil Reserves and Future Net Revenues Based on Forecast Prices and Costs as at September 30, 2005

	Crude Oil Reserves		Estimated Net Present Values of Future Net Revenue Before Taxes					Estimated Net Present Values of Future Net Revenue After Taxes					
	Gross (mmbbls)	Net	Discounted at					Discounted at					
			0%	5%	10%	15%	20%	0%	5%	10%	15%	20%	
		(\$million)					(\$million)

Total Proved plus Probable	201.3	176.2	5,635	4,855	4,262	3,798	3,427	2,107	1,843	1,635	1,468	1,332	
Possible	82.9	66.9	2,246	1,789	1,451	1,197	1,002	639	504	405	331	275	
Total Proved plus Probable plus Possible	284.1	243.1	7,881	6,644	5,713	4,995	4,429	2,746	2,347	2,040	1,799	1,607	

5. In our opinion, the reserves data respectively evaluated by us have, in all material respects, been determined and are in accordance with the COGE Handbook. We express no opinion on the reserves data that we reviewed but did not audit or evaluate.
6. We have no responsibility to update our reports referred to in paragraph 4 for events and circumstances occurring after their respective preparation dates.
7. Because the reserves data are based on judgments regarding future events, actual events will vary and the variations may be material.

Executed as to our report referred to above.

REPORT OF MANAGEMENT AND DIRECTORS ON RESERVES DATA AND OTHER INFORMATION

FORM 51-101F3

Management of Addax Petroleum Corporation (the "Corporation") are responsible for the preparation and disclosure of information with respect to the Corporation's oil and gas activities in accordance with securities regulatory requirements. This information includes reserves data, which consist of the following:

- (a) (i) proved, proved plus probable and proved plus probable plus possible oil and gas reserves estimated as at September 30, 2005 using forecast prices and costs; and
- (ii) the related estimated future net revenue; and
- (b) (i) proved, proved plus probable and proved plus probable plus possible oil and gas reserves estimated as at September 30, 2005 using constant prices and costs; and
- (ii) the related estimated future net revenue.

An independent qualified reserves evaluator has evaluated the Corporation's reserves data. The report of the independent qualified reserves evaluator is being filed with securities regulatory authorities concurrently with this report.

The Board of Directors of the Corporation has:

- (a) reviewed the Corporation's procedures for providing information to the independent qualified reserves evaluator;
- (b) met with the independent qualified reserves evaluator to determine whether any restrictions affected the ability of the independent qualified reserves evaluator to report without reservation; and
- (c) reviewed the reserves data with management and the independent qualified reserves evaluator.

The Board of Directors has reviewed the Corporation's procedures for assembling and reporting other information associated with oil and gas activities and has reviewed that information with management. The Board of Directors has approved:

- (a) the content and filing with securities regulatory authorities of the reserves data and other oil and gas information;
- (b) the filing of the report of the independent qualified reserves evaluator on the reserves data; and
- (c) the content and filing of this report.

Because the reserves data are based on judgments regarding future events, actual results will vary and the variations may be material.

AUDITORS' CONSENT

We have read the base PREP prospectus of Addax Petroleum Corporation (the "Corporation") dated ●, 2006 relating to the sale and issue of ● common shares of the Corporation (the "Prospectus"). We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the Prospectus of our report to the directors of the Corporation on the balance sheet of the Corporation as at November 30, 2005. Our report is dated December 2, 2005 (except as to note 2 which is as of ●, 2006).

We also consent to the use in the Prospectus of our report to the directors of the Corporation and of Addax Petroleum N.V. on the consolidated balance sheets of Addax Petroleum N.V. as at December 31, 2004 and 2003 and the consolidated statements of operations, retained earnings and cash flows for each of the years in the three year period ended December 31, 2004. Our report is dated December 2, 2005 (except as to note 18 which is as of ●, 2006).

INDEX TO FINANCIAL STATEMENTS

PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS OF ADDAX PETROLEUM CORPORATION	F-2
AUDITED CONSOLIDATED FINANCIAL STATEMENTS OF ADDAX PETROLEUM N.V.	F-7
AUDITED FINANCIAL STATEMENTS OF ADDAX PETROLEUM CORPORATION	F-27

COMPILATION REPORT

To the Directors of
Addax Petroleum Corporation:

We have read the accompanying unaudited pro forma consolidated balance sheet of Addax Petroleum Corporation, (the "Corporation") as at September 30, 2005 and the unaudited pro forma consolidated statements of operations for the nine months ended September 30, 2005 and for the year ended December 31, 2004, and have performed the following procedures.

1. Compared the figures in the columns captioned "APC" to the audited balance sheet of the Corporation as at November 30, 2005 and found them to be in agreement. The Corporation has yet to commence operations and no statements of operations exist for any period.
2. Compared the figures in the columns captioned "APNV" to the unaudited consolidated financial statements of Addax Petroleum N.V. as at September 30, 2005 and for the nine months then ended, and the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2004 and for the year then ended and found them to be in agreement.
3. Made enquiries of certain officials of the Corporation who have responsibility for financial and accounting matters about:
 - (a) the basis for determination of the pro forma adjustments; and
 - (b) whether the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similiar regulatory authorities in Canada.

The officials of the Corporation:

- (a) described to us the basis for determination of the pro forma adjustments; and
 - (b) stated that the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similiar regulatory authorities in Canada.
4. Read the notes to the unaudited pro forma consolidated financial statements and found them to be consistent with the basis described to us for determination of the pro forma adjustments.
 5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "APC" and "APNV" as at September 30, 2005, and for the nine months then ended and for the year ended December 31, 2004, and found the amounts in the column captioned "APC Pro Forma" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the unaudited pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

ADDAX PETROLEUM CORPORATION

NOTES TO UNAUDITED PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2004 and September 30, 2005
(unaudited)

1. BASIS OF PRESENTATION

The accompanying unaudited pro forma consolidated financial statements (the "Pro Forma Financial Statements") of Addax Petroleum Corporation (the "Corporation") have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in a base PREP prospectus relating to the initial public offering of common shares of the Corporation.

The Pro Forma Financial Statements have been prepared from and should be read in conjunction with:

- The audited balance sheet of the Corporation as at November 30, 2005; and
- The audited consolidated financial statements of Addax Petroleum N.V. ("APNV") as at December 31, 2004 and 2003 and for each of the years in the three year period ended December 31, 2004 and the unaudited consolidated financial statements of APNV as at and for the nine month period ended September 30, 2005.

Accounting policies used in the preparation of the Pro Forma Financial Statements are in accordance with those used in the preparation of APNV's audited consolidated financial statements as at and for the year ended December 31, 2004.

Other information which was available at the time of preparation of the Pro Forma Financial Statements has also been considered. In the opinion of management, these Pro Forma Financial Statements include all material adjustments necessary for fair presentation.

The underlying assumptions for the pro forma adjustments provide a reasonable basis for presenting the significant financial effects directly attributable to the transactions discussed herein, however, the Pro Forma Financial Statements are not necessarily indicative of the results of operations expected in future years.

2. PRO FORMA ADJUSTMENTS

The unaudited pro forma consolidated balance sheet gives effect to the following transactions as if they had occurred on September 30, 2005 while the unaudited pro forma consolidated statements of operations for the nine month period ended September 30, 2005 and for the year ended December 31, 2004 give effect to the following transactions as if they had occurred on January 1, 2004.

- 2.1 The initial public offering of • common shares of the Corporation for net proceeds of \$ • .
- 2.2 Concurrently with the closing of the initial public offering, the acquisition of all of the issued and outstanding common shares of APNV by the Corporation in exchange for • common shares and \$ • .

3. EARNINGS PER SHARE

Pro forma earnings per share for the nine months ended September 30, 2005 and the year ended December 31, 2004 have been calculated using • outstanding common shares.

AUDITORS' REPORT

To the directors of
Addax Petroleum Corporation and Addax Petroleum N.V.:

We have audited the consolidated balance sheets of Addax Petroleum N.V. as at December 31, 2004 and 2003 and the consolidated statements of operations, retained earnings and cash flows for each of the years in the three year period ended December 31, 2004. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2004 and 2003 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2004, in accordance with Canadian generally accepted accounting principles.

Calgary, Canada
December 2, 2005
(except as to Note 16
which is as of • , 2006)

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

December 31, 2004 and 2003 and September 30, 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

1. GENERAL

Addax Petroleum N.V. ("Addax") was incorporated on August 27, 1999 and is a registered Netherlands Antilles corporation. Addax is a wholly-owned subsidiary of The Addax and Oryx Group Ltd. ("AOG"). Addax and its subsidiaries (collectively, the "Company") are involved in the exploration, appraisal, development and production of crude oil and natural gas.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of presentation

The consolidated financial statements include the accounts of Addax and all of its subsidiaries and are prepared in accordance with Canadian generally accepted accounting principles. Subsidiaries are consolidated from the date on which control is transferred to the Company and ceases on the date on which control is transferred out of the Company.

Inter-company balances and transactions, including inter-company profits and unrealized profits and losses are eliminated.

Measurement uncertainty

The preparation of financial statements in accordance with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingencies at the date of the consolidated financial statements and the reported amounts of revenue and expenses arising during the reporting period. Actual results could differ from these estimates and the differences could be material.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized prospectively.

The amount recorded for depletion and depreciation of property, plant and equipment, the provision for asset retirement obligations and the test for impairment of property, plant and equipment are based on estimates of oil and natural gas reserves, production rates, commodity prices, future costs and other relevant assumptions. By their nature, these estimates are subject to measurement uncertainty and the effect on the consolidated financial statements of changes in such estimates in future years could be significant.

Property, plant and equipment

The Company follows the full cost method of accounting for oil and natural gas exploration and development activities whereby all costs associated with exploring for and developing oil and natural gas reserves are initially capitalized on a country by country cost centre basis. Capitalized costs include expenditures on acquiring exploration and development licences, land acquisition, geological and geophysical activities, drilling and testing both productive and non-productive wells, acquiring and developing oil and natural gas reserves in place, and financing and administrative costs directly attributable to specific new exploration and development projects until the necessary facilities are completed and ready for use.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

**Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited**

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Gains or losses are not recognized upon the disposition of oil and natural gas properties unless such a disposition would result in a change in the depletion rate by 20 per cent or more.

The costs related to each cost centre are depleted on a unit-of-production basis based on the Company's share of gross estimated proved reserves, before royalties, as estimated by independent reservoir engineers. Reserves and production are converted to equivalent units on the basis of six thousand cubic metres of natural gas to one barrel of oil, reflecting the approximate relative energy content. Costs of acquiring and evaluating unproved properties and certain costs associated with major development projects are not subject to depletion until proved reserves are assigned and production commences or the costs are impaired.

Property, plant and equipment other than oil and natural gas properties is stated at cost less accumulated depreciation. Depreciation is calculated on a straight-line basis over the estimated life of the assets, which ranges from 3 to 10 years.

The Company assesses the carrying amount of its oil and natural properties for impairment annually or as circumstances dictate. An impairment is deemed to exist when the carrying amount exceeds the estimated undiscounted future net cash flows associated with the Company's proved oil and natural gas reserves. In such situations, the impairment is measured as the excess of the carrying amount over the estimated discounted future net cash flows associated with the Company's proved and probable oil and natural gas reserves. The discount rate used is the Company's risk free interest rate. Any impairment loss is charged to earnings in the period in which the impairment occurs.

The carrying values of unproved properties and major development projects are limited to their net realizable value and are reviewed at least annually for impairment. Any impairment is included in costs subject to depletion in the period of the impairment.

Cost centres in the pre-production stage are assessed at each reporting date to determine whether it is likely that net costs, in the aggregate, may be recovered in the future. Costs considered unlikely to be recovered are expensed during the period.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred with a corresponding increase in the carrying value of the related asset. The fair value is determined on the basis of independent engineering and environmental studies for each well or facility. The liability is subsequently adjusted for the passage of time, which is recognized as accretion expense and included in depletion, depreciation and accretion in the consolidated statement of operations. The fair value of the liability and the carrying value of the related asset are also adjusted due to revisions in either the timing or the amount of the original estimated cash flows associated with the liability. Obligations settled during the period are charged against the liability recorded. Gains or losses on settlement are recognized in the period of settlement.

Interests in joint ventures

The consolidated financial statements include only the Company's proportionate share of assets, liabilities, revenues and expenses from its corporate and unincorporated joint ventures.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended

September 30, 2005 and 2004 are unaudited

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Cash and cash equivalents

Cash includes cash on hand and cash with banks. Cash equivalents are short term, highly liquid investments that are readily convertible to known amounts of cash with original maturities of three months or less.

Inventories and underlift

Inventories, including parts and consumables and crude oil inventories, and crude oil underlifts are recorded at the lower of cost and net realizable value. Cost is determined on a first-in, first-out basis.

Foreign currency transactions

The Company's reporting currency is the United States ("US") dollar as the majority of its transactions are denominated in this currency.

Transactions in foreign currencies are recorded at rates prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated to US dollars at the foreign exchange rate in effect at the balance sheet date.

Income taxes

The Company follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Company earns capital investment allowances ("CIAs") on capital expenditures in Nigeria. The future income tax benefits arising from CIAs are recorded when the CIAs are earned and reduce the carrying amount of property, plant and equipment. CIAs are charged to future income tax in the statement of operations as the tax benefits are realized.

Revenue recognition

Oil and natural gas sales are recognized in the consolidated statement of operations when the significant risks and rewards of ownership have been transferred to the buyer, which typically occurs at the lifting date. Revenue from services rendered is recognized in the consolidated statement of operations in proportion to the stage of completion of the transaction at the balance sheet date. Overlifts are accounted for as deferred income.

Substantially all of the Company's operations are conducted under production sharing contracts ("PSCs") with foreign governments. Under the PSCs, the Company and its other non-governmental partners, if any, pay all operating and capital costs. Each PSC establishes specific terms for the Company to recover these costs in accordance with a formula based on monthly production volumes ("Cost Recovery Oil") and to receive a share of production in excess of the Cost Recovery Oil ("Profit Oil"). Profit Oil attributable to the government includes an amount in respect of all deemed income taxes payable by the Company under the

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

laws of the respective country. All other government interests, other than income taxes, are considered to be royalty interests.

Derivative financial instruments and commodity contracts

The Company may use derivative financial instruments (forward exchange contracts, interest rate swaps and options) to manage its exposure to market risks resulting from fluctuations in foreign exchange rates, interest rates, and commodity prices. These derivative financial instruments are not used for trading or speculative purposes.

Gains and losses on derivative instruments that are designated as and determined to be effective hedges are deferred and recognized in the period of settlement as a component of the related transaction. If a derivative instrument ceases to be effective as a hedge or is terminated, hedge accounting is discontinued and future gains and losses are recognized in the consolidated statement of operations in the current period.

Derivative instruments that are not designated as hedges for accounting purposes are recorded in the consolidated balance sheet at fair value with any resulting gain or loss recognized in the consolidated statement of operations in the current period.

	<u>13,236</u>	<u>194,873</u>	<u>32,687</u>

In March 2003, the Company acquired the non-controlling interest in one of its subsidiaries for \$21 million. The excess of the recorded value of the non-controlling interest over the consideration paid has been recognized as a reduction in property, plant and equipment of the Nigerian cost centre.

4. ASSET RETIREMENT OBLIGATIONS

The asset retirement obligation movements are as follows:

	<u>September 30,</u>	<u>December 31,</u>	
	<u>2005</u>	<u>2004</u>	<u>2003</u>
	(unaudited)		
Balance, beginning of period	12,268	11,953	5,835
Asset retirement obligations incurred	10,912	-	5,593
Revisions of previous estimates	-	(698)	-
Accretion expense	1,565	1,013	525
Balance, end of period	<u>24,745</u>	<u>12,268</u>	<u>11,953</u>

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

5. LONG-TERM DEBT

Debt financing is provided through a syndicated \$300 million senior secured reducing revolving credit facility (the "Facility"). The Facility expires on December 31, 2008. The borrowing base is re-determined semi-annually based on an independent engineer's evaluation of the Company's oil and natural gas reserves, subject to the approval of the syndicate.

The amounts drawn under the Facility bear interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization of the Facility on the first day of the interest period. The Facility is secured by debentures given by the Company, an assignment of the Company's principal contracts, a pledge over the bank accounts and share pledges of the Company's principal subsidiaries.

At September 30, 2005, the amount outstanding under the Facility was \$100 million (December 31, 2004 — \$65 million; December 31, 2003 — \$nil). The average interest for the period ended September 30, 2005 was 4.6 per cent (December 31, 2004 — 6.4 per cent; December 31, 2003 — 7.1 per cent).

6. SHARE CAPITAL

	<u>September 30,</u> <u>2005</u>	<u>December 31,</u> <u>2004</u>	<u>2003</u>
	(unaudited)		
Authorized: unlimited number of common shares			
Issued and outstanding			
60,030,000 common shares	20,010	20,010	20,010

During 2004, the issued and outstanding common shares were split on a three-for-one basis. Prior periods reflect this split.

7. EARNINGS PER SHARE

Per share information is calculated on the basis of the weighted average number of common shares outstanding during the fiscal period, being 60,030,000 for all periods presented. There are no potentially dilutive shares for all periods presented.

8. PENSION PLANS

The Company has two pension plans.

The employees of Addax Petroleum Development (Nigeria) Ltd. ("APDNL"), a wholly-owned subsidiary of Addax, have a defined benefit plan (the "Nigerian Plan") in which the assets are held in a separate trustee administered fund. The employees of the Geneva branch of Addax Petroleum Services Ltd., a wholly owned subsidiary of the Company, have a defined benefit plan (the "Swiss Plan") complying with the legal requirements of Switzerland in which the assets are held and administered in a separate insurance company. These pension plans are funded by payments by each relevant company, taking into account the respective legal requirements.

The pension costs are accounted for using the projected benefits method whereby the costs are amortized over the service life of the employees in accordance with the advice of qualified actuaries.

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended

September 30, 2005 and 2004 are unaudited

8. PENSION PLANS (Continued)

For Nigerian staff, there is also a gratuity plan funded by APDNL. The plan provides employees who retire at age 60 and who have at least 10 years continuous service a lump sum payment of five per cent of pensionable pay for each year worked to a maximum of 24 months of monthly base salary. The projected benefits method has been used to calculate the liability.

Information relating to the Company's defined benefit pension plans is shown in the following tables:

9. INCOME TAXES

At the current time, the majority of the Company's taxable operations are located in Nigeria under PSCs with the Nigerian government. The deemed income tax rate in the Nigerian PSCs is 60 per cent. The provision for income taxes varies from the amounts that would be computed by applying the combined income tax rates set out in the PSCs to net income before provision for income taxes for the following reasons:

	Period ended September 30,		Year ended December 31,		
	2005 (unaudited)	2004 (unaudited)	2004	2003	2002
Income before provision for income taxes	475,486	176,797	233,107	153,068	184,908
Tax at 60%	285,292	106,078	139,864	91,841	110,945
Adjustments to income taxes:					
Non-deductible costs	47,397	24,465	47,115	33,020	21,086
Non-taxable revenues	(1,783)	4,504	(2,518)	(1,905)	2,185
Enhanced tax allowances	(19,844)	-	2,193	-	-
Adjustments in respect of prior years	-	-	4,643	4,067	2,846
Tax allowances not recoverable	(4,320)	-	(22,064)	-	(5,000)
Deduction for countries with lower tax rates	744	426	1,250	344	344
Change in tax terms	-	-	-	-	(25,400)
Provision for income taxes	307,486	135,473	170,483	127,367	107,006

Components of future income taxes

	September 30,	December 31,	
	2005 (unaudited)	2004	2003
The net future tax liability is as follows:			
Differences between tax bases and reported amounts of depreciable and depletable assets	115,459	107,414	102,969
Other	(28,234)	(18,865)	(11,409)
Future income tax liabilities	87,225	88,549	91,560

In 2002, the Company was notified by the Nigerian authorities that the fiscal terms (royalties, CIAs and income tax rates) under which it operated had been amended. These amendments were to be applied retroactively to January 1, 2000. The royalty rate on oil production was reduced from 20 per cent onshore and 18.5 per cent offshore to variable rates depending on production which averaged 6.5 per cent in 2002 and the income tax rate was reduced from 85 per cent to 60 per cent. As a result of the new fiscal terms, 2002 petroleum sales were reduced by \$5,500,000 for the impact of the changes on Cost Recovery Oil, royalties were reduced by \$53,700,000 and income taxes were increased by \$25,400,000 for amounts related to 2000 and 2001. The overpaid royalty amounts were recorded as prepaid expenses and applied to reduce

11. FINANCIAL INSTRUMENTS

Market risk

The Company's activities expose it to a variety of market risks, including the effects of changes in commodity prices, foreign currency exchange rates and interest rates. The Company uses derivative financial instruments such as options on commodities, foreign exchange contracts and interest rate swaps to manage certain exposures.

The Board of Directors provides principles for overall risk management, as well as policies covering specific areas, such as commodity price risk, foreign exchange risk, interest rate risk and credit risk. These principles include guidelines on the use of derivative financial instruments.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

11. FINANCIAL INSTRUMENTS (Continued)

(a) Commodity price risk

It is the intention of the Company to cover commodity-pricing exposure in order to safeguard a minimum cash income. The option contracts run for 12 months or less. At September 30, 2005, the Company had the following crude oil derivative contract outstanding:

	<u>Put option</u>
Maturity	March 31, 2006
Volume	27,400 barrels per day
Average price	\$21.00 per barrel

The estimated fair value is disclosed in section (e) below.

(b) Foreign exchange risk

The Company operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to Swiss francs (or "CHF") and the Nigerian Naira against the US dollar. The Company uses both local currency borrowing facilities and forward contracts to hedge their exposure to foreign currency risk. The forward currency contract must be in the same currency as the hedged item.

In December 2004 and January 2005, the Company entered into foreign exchange forward contracts to purchase CHF 18,000,000 for \$15,578,244 for the year ending December 31, 2005. As at September 30, 2005, the Company had purchased forward contracts for the purchase of CHF 13,500,000 for \$11,651,412. These forward contracts fix the exchange rate used to convert a portion of the Company's Swiss franc denominated general and administrative expenses to US dollars. These contracts have not been designated as hedges for accounting purposes. Estimated fair values on these contracts at period end are disclosed in section (e) below.

(c) Interest rate risk

The Company's exposure to market risk for changes in interest rates relates primarily to the Company's long-term debt obligations.

To manage this risk in a cost efficient manner, the Company enters into interest rate swaps, in which the Company agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. These swaps are designated to hedge cash outflows related to interest obligations.

In 2002, in anticipation of receiving a \$50 million loan, the Company entered into two interest rate swap contracts to hedge against possible adverse interest rate fluctuations. These contracts resulted in interest expense at an average fixed rate of 4.4 per cent in exchange for a three-month variable LIBOR rate on two notional principal amounts of \$25 million expiring in August 2004 and August 2005, respectively. The Company drew down \$25 million on the \$50 million loan facility in February 2002 and repaid this amount in May 2003. One of these two swap contracts expired upon repayment of the \$25 million while the other one was determined to be a hedge from the date of the first drawdown on the \$300 million loan facility in November 2004 until its termination date in August 2005.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended

September 30, 2005 and 2004 are unaudited

11. FINANCIAL INSTRUMENTS (Continued)

These contracts have not been designated as hedges for accounting purposes. Estimated fair values at period end are disclosed in section (e) below.

(d) Credit risk

Concentrations of credit risk with respect to accounts receivable are limited due to the high portion of amounts due from related parties. Of the Company's significant individual accounts receivable at September 30, 2005, approximately 80 per cent was due from one related party customer (December 2004 — 59 per cent; December 31, 2003 — 81 per cent). Historical experience has indicated no problem in collecting accounts receivable from related companies. Therefore, management believes there is no significant credit risk inherent in the Company's accounts receivable, beyond amount provided for doubtful accounts.

(e) Liquidity risk

The following table sets out the estimated fair values of purchased derivative financial instruments recognized in the consolidated balance sheet in accounts receivable and accounts payable with resulting gains and losses being recognized in other interest and finance charges in the statement of operations. These contracts have not been designated as hedges for accounting purposes.

	<u>September 30,</u> <u>2005</u>
Currency forwards	519
Crude oil put options	-
Interest rate swaps	-

The fair values of other financial instruments including cash and cash equivalents, accounts receivable and accounts payable approximate their carrying values due to the short term to maturity of these items. Other long-term liabilities approximate their carrying value due to minimal risk of change in value to maturity. The fair value of long-term debt approximates its carrying value as it is subject to a floating market rate of interest.

12. CASH FLOWS

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

14. OTHER LONG-TERM LIABILITIES

	September 30, 2005 <u>(unaudited)</u>	December 31, 2004	2003
Disputed tax payable	6,920	-	-
Royalties	8,134	-	-
Pension	2,095	3,778	1,562
Operational	5,533	-	-
Other	2,973	3,094	137
	<u>25,655</u>	<u>6,872</u>	<u>1,699</u>

The tax payable to the Nigerian government relates to the disputed deductibility of the original purchase price of certain Nigerian assets. This dispute was raised by NNPC in 2003 and is still unresolved.

Royalties due to the Nigerian government relate to tax inversion penalties for 2000 and 2005 where the operating cost per barrel exceeded the allowable threshold. There is a 25 per cent penalty charged on the excess. The method of calculating the operational cost per barrel has yet to be agreed between the Corporation and NNPC. Management believes these two matters will not be settled within a year.

Operational liabilities relate to the following:

- i) a dispute relating to the construction and installation of certain platforms and pipelines in 2003 and 2004, amounting to \$2,533,000. All other claims for this contract have been settled. The outstanding amount has been claimed against Addax's insurance. The insurer has offered a 10 per cent settlement. If the contractor does not receive settlement, the contractor is expected to claim against Addax; and
- ii) a dispute relating to the costs of conversion of an FPSO. The dispute has gone to arbitration, but the formal claim documentation has yet to be received from the contractor.

Management believes these two matters will not be settled within a year.

15. COMMITMENTS

Future total commitments relating to Floating Production, Storage and Offloading vessel ("FPSO") leases and exploration and development activities, after September 30, 2005 are as follows:

2005	77,090
2006	213,849
2007	70,194
2008	70,838
2009	46,667
2010	35,365
Thereafter	<u>119,757</u>
Total	<u>633,760</u>

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

**Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited**

15. COMMITMENTS (Continued)

Included in the above table are commitments for the hire of three FPSO vessels ranging from one to eight years.

In addition to the above, the Company has the following work commitments:

Under the Cameroon concession contract there is a first phase work commitment of \$22 million over a three year period, commencing on April 19, 2004, being the date of issuance of the Exploration Authorization by the Cameroon government. The Company has the right to extend the exploration period by an additional two phases of two years each. These additional phases have additional work commitments.

Under the Exploration and Production Sharing Contract offshore Gabon, there is an initial exploration period of four years including a two well commitment that commenced in March 2003. The contract can be renewed twice for an additional three year period per renewal. These additional phases have additional work commitments. The first commitment well was drilled in early 2004, proved to be dry and was subsequently written off, the second remains to be drilled.

16. CONTINGENCIES

The Company is exposed to the possibility of environmental damage arising from its exploration, development and production activities. The Company is responsible for any liabilities arising from such events and has developed a series of strict operating procedures to protect the environment.

Various legal actions arising in the normal course of business have been commenced in Nigeria against the Company. It is the view of management that most of these actions are without any foundation and the Company has provided \$300,000 as its best estimate of losses under these actions.

The Company is liable to pay early termination penalties on its FPSO lease contracts. As at September 30, 2005, the maximum contingent liability arising from early termination of these contracts amounted to \$216.9 million. Management's intent is to carry the contracts to maturity.

The Company's income tax filings are subject to audit by taxation authorities. There are audits in progress and items under review, some that may increase our tax liability. In addition, we have filed notices of objection with respect to certain issues. While the results of these items cannot be ascertained at this time, we believe we have an adequate provision for income taxes based on available information.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

17. RELATED PARTY TRANSACTIONS

The following transactions took place between the Company and AOG and its other subsidiary companies.

	Period ended September 30,		Year ended December 31,		
	2005 (unaudited)	2004 (unaudited)	2004	2003	2002
Sales to Addax B.V.	512,254	291,447	371,444	386,613	284,062
Charges:					
Addax Bunkering Services	(11,437)	(6,698)	(10,406)	-	
AOG	(375)	(375)	(2,809)	(3,860)	(5,219)
Addax B.V.	(1,236)	(499)	(1,067)	-	
Other items	(1,920)	(1,905)	(1,141)	(1,894)	(935)
Interest and related charges	-	-	-	(47)	(390)

The sales to Addax B.V., the sole marketer of the Company's crude oil (net of NNPC liftings), were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for the Company's bunkering operations. Other items include charges from Addax Limited for the refund of services paid on behalf of the Company. Addax BV and Addax Limited are subsidiaries of AOG. Outstanding balances with related companies are as follows:

Amounts due from (to) related parties as included in accounts receivable and accounts payable in the consolidated balance sheet are as follows:

	September 30,	December 31,	
	2005 (unaudited)	2004	2003
Addax BV	101,080	38,936	31,715
AOG	3,293	100	1,795
Other	2,376	9,736	141

A director of the Company has a consulting contract with a subsidiary pursuant to which the director is paid \$9,000 per month.

18. EVENTS SUBSEQUENT TO SEPTEMBER 30, 2005

AUDITORS' REPORT

To the Directors of
Addax Petroleum Corporation

We have audited the balance sheet of Addax Petroleum Corporation (the "Corporation") as at November 30, 2005. This financial statement is the responsibility of the Corporation's management. Our responsibility is to express an opinion on this financial statement based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the balance sheet is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statement. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, the balance sheet presents fairly, in all material respects, the financial position of the Corporation as at November 30, 2005, in accordance with Canadian generally accepted accounting principles.

PRELIMINARY BASE PREP PROSPECTUS DATED DECEMBER 6, 2005

A copy of this preliminary prospectus has been filed with the securities regulatory authorities in each of the provinces of Canada but has not yet become final for the purpose of the sale of securities. Information contained in this preliminary prospectus may not be complete and may have to be amended. The securities may not be sold until a receipt for the prospectus is obtained from the securities regulatory authorities.

This prospectus has been filed under procedures in each of the provinces of Canada that permit certain information about these securities to be determined after the prospectus has become final and that permit the omission of that information from this prospectus. The procedures require the delivery to purchasers of a supplemented PREP prospectus containing the omitted information within a specified period of time after agreeing to purchase any of these securities.

All disclosure contained in the supplemented PREP prospectus that is not contained in this base PREP prospectus will be incorporated by reference into this base PREP prospectus as of the date of the supplemented PREP prospectus.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. This prospectus constitutes a public offering of securities only in those jurisdictions where such securities may be lawfully offered for sale and therein only by persons permitted to sell such securities. These securities have not been and will not be registered under the United States Securities Act of 1933, as amended, and, subject to certain exceptions, may not be offered or sold in the United States. See "Plan of Distribution".

Initial Public Offering

RECEIVED
2006 JAN 18 A 10:12
OFFICE OF INTERPROVINCIAL
CORPORATE FINANCE

• **Common Shares**

Price: CDN\$ • per Common Share

This prospectus qualifies the distribution of an aggregate of • common shares (the "Offered Shares") of Addax Petroleum Corporation at a price of CDN\$ • per share. See "Plan of Distribution".

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships in Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

The terms of this offering were established by negotiation among RBC Dominion Securities Inc. and Merrill Lynch Canada Inc. (collectively, the "Underwriters"), Addax Petroleum and The Addax and Oryx Group Ltd. ("AOG"). Presently, there is no market through which the common shares of the Corporation (the "Common Shares") may be sold and purchasers may not be able to resell the Offered Shares purchased under this prospectus. The Corporation has applied to have the Common Shares listed on the Toronto Stock Exchange (the "TSX"). Listing will be subject to the Corporation fulfilling all requirements of the TSX. See "Risk Factors" for certain considerations relevant to an investment in the Offered Shares.

	Price to the Public (CDN\$)	Underwriters' Fees (CDN\$)	Net Proceeds to the Corporation ⁽¹⁾ (CDN\$)
Per Common Share	•	•	•
Total Offering ⁽²⁾	•	•	•

Notes:

- (1) Before deducting the expenses of the offering payable by the Corporation, estimated to be CDN\$ •, which will be paid by the Corporation out of the proceeds of the offering. CDN\$ • of the net proceeds of this offering will be used to fund the Pre-IPO Transactions. See "Use of Proceeds".
- (2) Addax Petroleum Corporation has granted to the Underwriters an over-allotment option (the "Over-Allotment Option"), exercisable, in whole or in part, at any time until 30 days after closing of this offering, to purchase from the Corporation up to an additional • Common Shares, at the same price as set forth above, to cover over-allotments, if any, and for market stabilization purposes. If the Over-Allotment Option is exercised in full, the total "Price to the Public", "Underwriters' Fees" and "Net Proceeds to the Corporation" (before deducting expenses of the offering) will be CDN\$ •, CDN\$ • and CDN\$ •, respectively. This prospectus also qualifies the distribution of the Over-Allotment Option and the Common Shares issuable upon exercise of the Over-Allotment Option. See "Plan of Distribution".

The Underwriters, as principals, conditionally offer the Offered Shares, subject to prior sale, if, as and when issued and sold by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution" and subject to the approval of certain legal matters on behalf of the Corporation by Fasken Martineau DuMoulin LLP and on behalf of the Underwriters by Fraser Milner Casgrain LLP.

RBC Dominion Securities Inc. is an indirect wholly owned subsidiary of a Canadian chartered bank that is a lender to Addax Petroleum under a revolving credit facility. Consequently, Addax Petroleum may be considered to be a connected issuer of RBC Dominion Securities Inc. under applicable securities legislation. See "Relationship Between the Corporation and RBC Dominion Securities Inc."

In the opinion of counsel, based on legislation in effect on the date of this prospectus, the Offered Shares are eligible investments as set forth under the heading "Eligibility for Investment".

Subscriptions will be received subject to rejection or allotment, in whole or in part, and the right is reserved to close the subscription books at any time without notice. On closing, a book entry certificate representing the Offered Shares will be issued in registered form to The Canadian Depository for Securities Limited ("CDS") or its nominee and will be deposited with CDS. Shareholders will not receive physical share certificates representing their ownership. A purchaser of the Offered Shares will receive only a customer confirmation from the registered dealer which is a CDS participant and from or through which the Offered Shares are purchased. See "Plan of Distribution". Closing of this offering is expected to occur on or about •, 2006, or such later date as the Corporation and the Underwriters may agree, but in any event not later than •, 2006.

Except as otherwise indicated in this prospectus, references to "\$" and to "dollar" refer to currency of the United States of America and references to oil reserves and production refer to reserves and production calculated on a gross basis.

SUMMARY

The following is a summary of the principal features of this offering and is qualified by, and should be read together with, the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the "Glossary", "Abbreviations" and "Conversions" for the meaning of certain terms used in this prospectus.

Addax Petroleum

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

Addax Petroleum's Average Oil Production 1998 - October 2005

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of Cash Flow From Operations. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of Cash Flow From Operations. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by Netherland, Sewell & Associates, Inc. ("NSAI"), independent oil and natural gas reservoir engineers.

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);

- OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
- OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		<u>1,133,900</u>			<u>74,450</u>	<u>62,090</u>	<u>109.3</u>	<u>201.3</u>	<u>284.1</u>

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. Pursuant to the participation agreement the Corporation may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

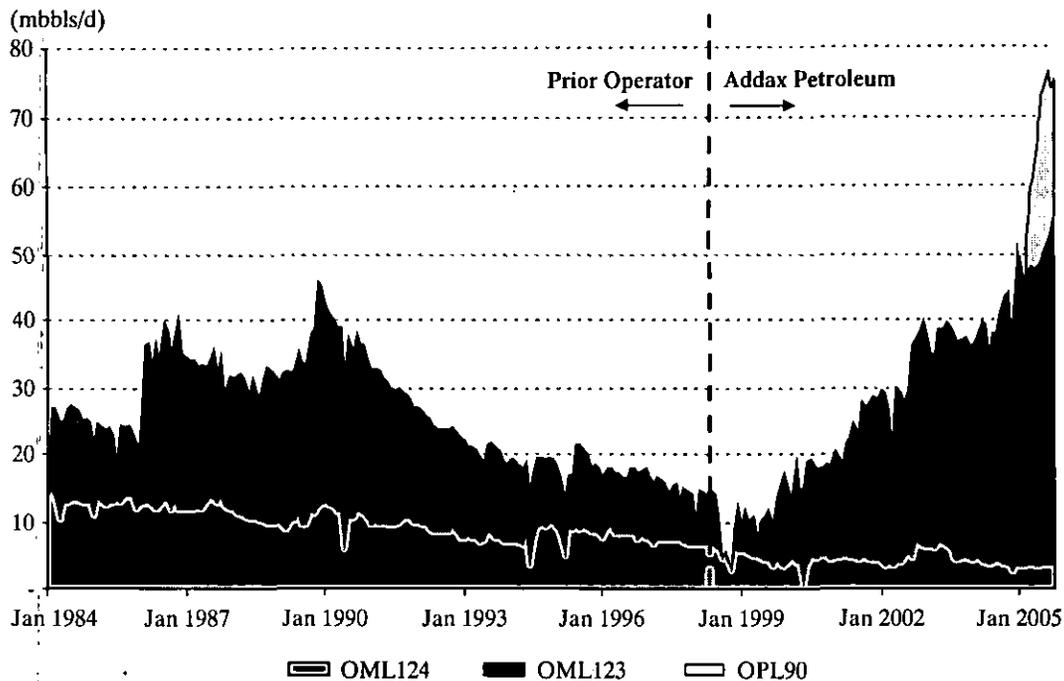

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

*Average Monthly Oil Production
January 1984 - October 2005*

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mbbls/d in 2005 to 85 mbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI reports Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum's excellent reputation and strong relationships help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to eight per cent of the Common Shares (or Common Shares) that it is to receive in connection with the Pre-IPO Transactions be issued to existing and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, as well as a Technical and Reserves Committee, comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30, 2005		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	Total	2004 Total	2003 Total
		(\$million)						(\$million)		
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

(1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 will fund significant infrastructure investment to sustain future production as well as a two-rig drilling program that includes development, infill, extension, appraisal and exploration drilling. These budgeted capital expenditures are expected to increase production from approximately 46 mbb/d in 2005 to approximately 48 mbb/d in 2006. Capital expenditures for OPL90 and OPL225 are expected to increase production from approximately 16 mbb/d in 2005 to approximately 33 mbb/d in 2006. These budgeted capital expenditures will fund seismic data acquisition as well as a one-rig drilling program that includes development and exploration drilling.

Capital expenditures for the Corporation's other properties and major new venture opportunities will be incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

Petroleum Reserves

The tables below summarize the petroleum reserves and the present value of future net revenue associated with Addax Petroleum's reserves evaluated in the Reserve Report prepared by NSAI, independent oil and natural gas reservoir engineers, based on forecast and constant price and cost assumptions presented in accordance with NI 51-101. The tables summarize the data contained in the Reserve Report and, as a result, may contain slightly different numbers than the Reserve Report due to rounding. Future net revenue values, whether calculated without discount or using a discount rate, are estimated values and do not represent fair market value. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserves estimates of Addax Petroleum's petroleum reserves provided herein are estimates only and there is no assurance that the estimated reserves will be recovered. Actual petroleum reserves may be greater than or less than the estimates provided herein. The estimates of reserves and future net revenue for individual properties included in this prospectus may not reflect the same confidence level as estimates of revenue for all properties, due to the effects of aggregation. See "Petroleum Reserves and Operational Matters".

The estimate of gross reserves means Addax Petroleum's total working interest prior to the deduction of NNPC's share of Profit Oil. The estimate of net reserves includes deductions under the Nigerian Production Sharing Contracts for Royalty Oil and NNPC's share of Profit Oil. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

The "after taxes" figures are the future net revenue estimates after all deductions under the Nigerian Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, Niger Delta Development Commission levy, education tax and tax inversion penalty. The "before taxes" figures only include deductions for Royalty Oil and NNPC's share of Profit Oil. NSAI is of the opinion that the "after taxes" case is representative of the fiscal regime under the Nigerian Production Sharing Contracts.

Selected Financial Information

The following table presents a summary of historical consolidated financial data for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended. The summary of historical consolidated financial data set forth below may not contain all of the information that is important to a prospective investor and should be read along with "Presentation of Financial Information", "Selected Financial Information", "Management's Discussion and Analysis of Financial Condition and Results of Operations", and the consolidated financial statements and related notes of the Corporation for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 included in this prospectus. The results for the nine months ended September 30, 2005 are not necessarily indicative of results for the full year. All financial information with respect to the Corporation has been presented in United States dollars in accordance with Canadian GAAP.

Notes:

- (1) All per share amounts are calculated on the basis of 120 million outstanding Common Shares of Addax Petroleum Corporation, giving pro forma effect to the completion of the Pre-IPO Transactions.
- (2) The Corporation does not have any outstanding securities that are convertible into, or exchangeable for, Common Shares.

The Offering

Offering Price	CDN\$ ● per Common Share.
Offered Shares	● Common Shares.
Over-Allotment Option	Addax Petroleum Corporation has granted the Over-Allotment Option to the Underwriters, exercisable in whole or in part, at any time until 30 days after closing, to purchase up to ● additional Common Shares on the same terms as set forth in this prospectus to cover over-allotments, if any, and for market stabilization purposes.
Use of Proceeds	The net proceeds to the Corporation from the sale of the Offered Shares are estimated to be CDN\$ ● million (CDN\$ ● million if the Over-Allotment Option is exercised in full) after deducting the fees payable to the Underwriters and the estimated expenses of this offering. Of the net proceeds, CDN\$ ● will be used to fund the Corporation's 2006 capital expenditure programs and for general corporate purposes and CDN\$ ● will be used to fund the purchase of the issued and outstanding shares of APNV. Pending application of funds for capital expenditures and general corporate purposes, a portion of such net proceeds will be used to temporarily repay amounts outstanding under the Credit Facility. See "Addax Petroleum — Pre-IPO Transactions" and "Addax Petroleum — Capital Expenditure Program".
Dividend Policy	Addax Petroleum Corporation intends to declare quarterly cash dividends. The payment and the amount of dividends declared in any fiscal quarter will depend on Addax Petroleum Corporation's earnings, financial requirements and other conditions existing which the Board of Directors may consider relevant at such time including applicable restrictions arising under the Credit Facility on the ability of APNV to pay dividends or other distributions to the Corporation. Subject to the factors described above, Addax Petroleum Corporation intends to pay its first quarterly dividend for the quarter ending June 30, 2006. See "Dividends".
Incorporation	Addax Petroleum Corporation was incorporated under the <i>Canada Business Corporations Act</i> on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. The registered office of Addax Petroleum Corporation is located at 3400, 350 - 7th Avenue S.W., Calgary, Alberta, Canada, T2P 3N9.
Pre-IPO Transactions	<p>Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for ● Common Shares and \$ ● million.</p> <p>Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.</p>

Shareholdings Post-Closing

After giving effect to the Pre-IPO Transactions and the closing of this offering, the Corporation will have ● Common Shares outstanding, of which ● per cent of the Common Shares will be held by investors under this offering, ● per cent of the Common Shares will be held by AOG and ● per cent of the Common Shares will be held by existing and former directors, officers and employees of the Corporation (● per cent, ● per cent and ● per cent if the Over-Allotment Option is exercised in full).

Closing

The closing of this offering is anticipated to occur on or about ● , 2006 and in any event not later than ● , 2006.

Eligibility for Investment

Subject to certain assumptions, limitations and restrictions, in the opinion of Fasken Martineau DuMoulin LLP, counsel to the Corporation, and Fraser Milner Casgrain LLP, counsel to the Underwriters, the Offered Shares, if as and when listed on a prescribed stock exchange (including the TSX), will be qualified investments for a trust governed by a registered retirement savings plan, a registered retirement income fund, a registered education savings plan or a deferred profit sharing plan under the *Income Tax Act* (Canada) and the regulations thereunder.

Risk Factors

The securities offered hereby should be considered highly speculative due to the nature of the Corporation's business. A prospective investor should consider carefully the risks and uncertainties set out below, in addition to the other information contained in this prospectus, before making an investment decision. Additional risks and uncertainties not presently known to the Corporation or that it currently deems to be immaterial may also impair its business and affect the price of its Common Shares. If any of the events described in this prospectus as a risk or uncertainty actually occurs, the Corporation's business, results of operations or financial condition could be materially adversely affected. See "Risk Factors".

Risks relating to the business of the Corporation

- The Corporation's failure to replace its current reserves would have a material adverse effect on its business and financial condition.
- Exploration and development activities are inherently risky and are subject to change.
- Failure to obtain governmental approvals and fulfill contractual commitments may adversely affect the Corporation's business.
- The loss of any of the Corporation's executive officers and key employees could have an adverse impact on its business.
- The Corporation's operations are subject to potential losses that may not be covered by insurance.
- The Corporation is dependent on an affiliated company for the marketing of the oil the Corporation produces.
- The Corporation shares a trademark and a tradename with a group of companies and any adverse development affecting the trademark or tradename of any of those companies could adversely affect the business, goodwill or reputation of the Corporation.
- The Corporation may not be able to secure financing for its future exploration, development, production and acquisition plans.
- The Corporation could be subject to labour or other unplanned production disruptions.
- Future litigation could adversely affect the Corporation's business, results of operations or financial condition.
- The Corporation is subject to certain risks related to the nature of the Corporation's business and its present stage and speed of development.
- There are risks inherent in the Corporation's strategy of geographic diversification and acquisition of new exploration and development properties.
- The Corporation is exposed to the risks associated with commodity hedging activities.
- Joint ventures entered into by the Corporation could lead to additional costs.

Risks relating to the petroleum industry

- Volatility of petroleum prices could have a material adverse effect on the Corporation's business, results of operations or financial condition.
- The Corporation could face significant liabilities under environmental laws.
- The oil reserve and oil and gas resource data in this prospectus are only estimates, and the Corporation's actual production, revenue and expenditure with respect to its reserves may be materially different from such estimates.

- The Corporation's exploration and development activities depend on its ability to procure appropriate drilling equipment.
- The Corporation operates in a highly competitive industry.
- The Corporation faces foreign exchange, interest rate and inflation risks.

Risks relating to the countries in which the Corporation currently operates and may operate in the future

- There are political, economic and other risks relating to the countries in which the Corporation currently operates or may operate in the future.
- Relinquishment obligations under applicable legislation and the terms of Production Sharing Contracts may adversely affect the total amount of the Corporation's prospective resources.
- Interpretation and application of the laws and regulations of the countries in which the Corporation operates can be uncertain and could adversely affect the Corporation.
- The Corporation must comply with the regulatory regimes of the countries in which it operates, and such compliance may result in increased expenditure.
- The Corporation's production may be constrained by production or export quotas.
- Crime and governmental or business corruption could disrupt the Corporation's ability to conduct its business.
- US holders of Common Shares and the Corporation may be subject to sanctions imposed by the US government if the Corporation decides to pursue operations in countries subject to US economic sanctions.

Risks relating to the Common Shares

- Uncertainties exist as to the market price and liquidity of the Common Shares as there has been no prior public market for such shares.
- The controlling shareholder(s) of the Corporation will exercise significant control over the affairs of the Corporation.
- Sales of Common Shares by controlling shareholder(s) could have an adverse effect on the price of the Common Shares.
- Investors may face risks related to the Corporation's holding company structure.

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below.

"ABV" means Addax B.V. Geneva Branch, a wholly owned subsidiary of AOG which specializes in crude oil and product trading in West Africa;

"Adanga Platform" means the production platform located in the Adanga field on OML123;

"Addax Petroleum Corporation" means Addax Petroleum Corporation, a corporation incorporated under the CBCA;

"Addax Petroleum N.V." or **"APNV"** means Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles;

"Agip" means ENI S.p.A together with all of its subsidiaries in its Agip division;

"Antan Blend" means the crude oil produced from OML123, together with the crude oil produced by the OML114 Parties, which is lifted from the Antan Terminal;

"Antan Crude Oil Supply Agreement" means the Antan Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

"Antan Terminal" means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OML123 where oil from OML123 is loaded onto ocean-going tankers;

"AOG" means The Addax and Oryx Group Ltd., together with all of its subsidiaries other than Addax Petroleum;

"API" means the American Petroleum Institute;

"APS" means Addax Petroleum Services Ltd., a directly or indirectly wholly owned subsidiary of Addax Petroleum;

"Ashland" means Ashland Inc. together with all of its subsidiaries;

"best estimate" means, in relation to prospective and contingent resources, the best estimate of the quantity that will actually be recovered from the accumulation. If probabilistic methods are used, this term is a measure of central tendency of the uncertainty distribution (most likely/mode, P₅₀/median, or arithmetic average/mean);

"Block 4" or **"Block 4 Property"** means the property located in the north end of the Joint Development Zone;

"Board" or **"Board of Directors"** means the board of directors of Addax Petroleum Corporation;

"Bogi Platform" means the Bogi production platform located in the Disputed Area;

"BP" means BP p.l.c. together with all of its subsidiaries;

"Brass River Blend" means the crude oil produced from OML124 and commingled with crude oil produced by other parties, which is transported to the Brass River Terminal;

"Brass River Blend Crude Oil Supply Agreement" means the Brass River Blend Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

"Brass River Terminal" means the oil production export terminal located on the Nigerian coast where oil from OML124 is loaded onto ocean-going tankers;

"Brent Crude" means crude oil produced from the Brent system in the North Sea, a price setting benchmark in the world energy market;

"Canadian GAAP" means the generally accepted accounting principles and practices in Canada, including without limiting the foregoing, the principles set forth in the Canadian Institute of Chartered Accountants ("**CICA**")

Handbook published by CICA or any successor institute and which are applicable on the effective date as at which a calculation is required to be made in accordance therewith;

“CBCA” means the *Canada Business Corporations Act*, as amended;

“CDS” means The Canadian Depository for Securities Limited;

“CFFO” or “Cash Flow From Operations” means cash from operating activities before changes in non-cash working capital. CFFO is not a standard measure under Canadian GAAP. Cash Flow From Operations measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See “Presentation of Financial Information”;

“Chevron” means Chevron Corp. together with all of its subsidiaries;

“CIP Policy” has the meaning given to it under the heading “Petroleum Reserves and Operational Matters — Insurance”;

“COGE Handbook” means the Canadian Oil and Gas Evaluators Handbook prepared jointly by The Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy and Petroleum (Petroleum Society), as amended from time to time;

“Common Share” means a common share in the share capital of Addax Petroleum Corporation;

“Common Share Incentive Plan” means the incentive share ownership plan that Addax Petroleum Corporation plans to adopt, the purpose of which is to develop the interests of the directors, officers, employees and other persons who provide on-going services to Addax Petroleum Corporation in the growth and development of Addax Petroleum Corporation by providing such individuals with the opportunity to acquire an increased proprietary interest in Addax Petroleum Corporation and to aid in attracting as well as retaining and encouraging the continued involvement of such persons with Addax Petroleum Corporation;

“ConocoPhillips” means ConocoPhillips Company together with all of its subsidiaries;

“contingent resources” means the best estimate quantities of oil or gas estimated at a given date to be potentially recoverable from known accumulations but that are not currently economic;

“Corporation” or “Addax Petroleum” means (i) before the closing of this offering, APNV, together with all of its subsidiaries and (ii) after the closing of this offering, Addax Petroleum Corporation, together with all of its subsidiaries;

“Cost Oil” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“Credit Facility” means the Amended and Restated Senior Secured Reducing Revolving Credit Facility Agreement dated June 14, 2005 between Addax Petroleum, Addax Petroleum Overseas Limited, Addax Petroleum Development (Nigeria) Limited, Addax Petroleum Exploration (Nigeria) Ltd. and Addax Petroleum Services Limited, BNP Paribas S.A. and other original lenders;

“Crude Oil Supply Agreements” means the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement, each dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“developed non-producing reserves” means those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown;

“developed producing reserves” means those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty;

“developed reserves” means those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (e.g. when compared to the cost of drilling a well) to put the reserves in production. The developed category may be subdivided into producing and non-producing;

“**Devon Energy**” means Devon Energy Corporation together with all of its subsidiaries;

“**Disputed Area**” means the area of OML123 awarded to Cameroon pursuant to the October 10, 2002 ruling of the International Court of Justice;

“**EBITDA**” is defined as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest. EBITDA is not a standard measure under Canadian GAAP. EBITDA measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See “Presentation of Financial Information”;

“**Ebughu Platform**” means the production platform located in the Ebughu field in OML123;

“**ENI**” means ENI S.p.A;

“**ERHC Energy**” means ERHC Energy, Inc. together with all of its subsidiaries;

“**ExxonMobil**” means ExxonMobil Corporation together with all of its subsidiaries;

“**FOB**” means free on board;

“**FPSO**” means floating production storage and offloading vessel;

“**GDP**” means gross domestic product;

“**gross**” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest prior to the deduction of royalties and NNPC’s share of Profit Oil (which reserves are reported as “working interest” in the Reserve Report) and (ii) in respect of acreage, wells and seismic data, 100 per cent of same;

“**GTL**” means gas to liquids;

“**HSE**” means health, safety and environment;

“**Izombe Flow Station**” means the Izombe production and flow station located in OML124;

“**Joint Border Commission**” means the Nigeria Cameroon Mixed Commission established following the October 10, 2002 decision of the International Court of Justice to peacefully apply the decision;

“**Joint Development Zone**” or “**JDZ**” means the zone for joint development of petroleum and other resources established by treaty between Nigeria and the Democratic Republic of Sao Tome and Principe in the overlapping area of their respective maritime boundary claims;

“**Kiarsseny Agreement**” means the Corporation’s farm-in agreement with Tullow Oil for a 42.5 per cent interest in the Kiarsseny Production Sharing Contract;

“**Kiarsseny Production Sharing Contract**” means the Production Sharing Contract between the Government of Gabon and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from Kiarsseny;

“**Kiarsseny Property**” means the Kiarsseny license area, which is located offshore Gabon, where the Corporation is engaged in development and exploration activities to extract crude oil and natural gas liquids pursuant to the Kiarsseny Production Sharing Contract;

“**Knock Adoon**” means the floating production storage and offloading vessel described under the heading “Properties and New Ventures — Nigeria Properties — OML123 — Production Facilities”;

“**Knock Taggart**” means the floating production, storage and offloading vessel described under the heading “Properties and New Venture — Nigeria Properties — OML123 — Production Facilities”;

“**LNG**” means liquefied natural gas;

“**LPG**” means liquid petroleum gas;

“**Management Services Agreement**” means the Management Services Agreement, to be entered into prior to the closing of this offering and made effective January 1, 2006 between APS and AOG;

“**NDDC**” means the Niger Delta Development Commission;

“**net**” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest after deduction of Royalty Oil and NNPC’s share of Profit Oil and (ii) in respect of acreage, wells and seismic data, that share attributable to Addax Petroleum’s working interest;

“**Net Offering Price**” means the price per share at which the Offered Shares are sold in this offering less the Underwriters’ fees per Offered Share;

“**net profit interest**” means an interest in an oil and gas property consisting of a share of profits after the recovery of the costs of development and production;

“**Ngosso Concession**” means the concession contract between the Government of Cameroon, the Corporation and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from the Ngosso Property;

“**Ngosso Property**” means the Ngosso license area offshore Cameroon where the Corporation is engaged in development and exploration activities to extract crude oil, natural gas liquids and natural gas pursuant to the Ngosso Concession;

“**NI 51-101**” means National Instrument 51-101 *Standards of Disclosure for Oil and Gas Activities* of the Canadian Securities Administrators;

“**Nigerian Marginal Fields**” has the meaning given to it under the heading “Fiscal Terms — Nigeria — Nigerian Marginal Fields”;

“**NNPC**” means Nigerian National Petroleum Corporation together with all of its subsidiaries;

“**Non-Competition Agreement**” means the non-competition agreement between Addax Petroleum Corporation and AOG, to be entered into prior to the closing of this offering;

“**NSAI**” means Netherland, Sewell & Associates, Inc., independent oil and natural gas reservoir engineers;

“**Occidental**” means Occidental Petroleum Corporation together with all of its subsidiaries;

“**OECD**” means Organization for Economic Co-operation and Development;

“**Offered Shares**” means the securities offered by Addax Petroleum Corporation to the public hereunder, including any shares issued upon the exercise of the Over-Allotment Option unless the context otherwise requires, at a price of CDN\$ • per share;

“**Official Selling Price**” means the sales price published by NNPC for the sale of Nigerian government and NNPC crude oil entitlement to trade buyers for export. The Official Selling Price is issued by NNPC for each type of crude oil to be lifted by traders and published by the middle of each month prior to the month of lifting;

“**Oil Mining Lease**” or “**OML**” means a lease issued by the Nigerian government upon conversion of an Oil Prospecting License giving the lessee the exclusive right to produce petroleum from the geographical area covered by the Oil Mining Lease;

“**Oil Prospecting License**” or “**OPL**” means a license issued by the Nigerian government to one or more oil companies (including NNPC) giving the licensee the exclusive right to explore for petroleum in the geographical area covered by the Oil Prospecting License;

“**Okwok Property**” means the Okwok license area, located in OML67 offshore Nigeria;

“**Okwori Blend**” means the crude oil produced from OPL90;

“**Okwori Crude Oil Supply Agreement**” means the Okwori Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum and ABV, to be amended prior to the closing of this offering;

“**Okwori Terminal**” means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OPL90 where oil from OPL90 is loaded into ocean going tankers;

“**OML114 Parties**” means Moni Pulo Limited and Brass Exploration Unlimited;

“**OML123**” means the property subject to Oil Mining Lease 123 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OML124**” means the property subject to Oil Mining Lease 124 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OPEC**” means the Organization of the Petroleum Exporting Countries;

“**OPL90**” means the property subject to Oil Prospecting License 90 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant a Production Sharing Contract;

“**OPL225**” means the property subject to Oil Prospecting License 225 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant to a Production Sharing Contract;

“**Oriental Energy**” means Oriental Energy Resources Limited together with all of its subsidiaries;

“**Oriental Joint Venture Agreement**” means the joint venture agreement effective September 14, 2005 between Addax Petroleum and Oriental Energy;

“**Over-Allotment Option**” means the over-allotment option granted by Addax Petroleum Corporation to the Underwriters which is exercisable, in whole or in part, at any time until 30 days after closing to purchase from the Corporation up to an additional • Common Shares, at the same price as the Common Shares offered hereunder, to cover over-allotments, if any, and for market stabilization purposes;

“**Paris Club**” means the informal group of official creditors whose role is to find co-ordinated and sustainable solutions to the payment difficulties experienced by debtor nations;

“**Petrobras**” means Petr leo Brasileiro S.A. together with all of its subsidiaries;

“**Petroleum Act**” means the *Petroleum Act* (Nigeria) of 1969, as amended;

“**possible reserves**” means those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves;

“**PPT**” means Petroleum Profits Tax;

“**PPT Act**” means the *Petroleum Profits Tax Act* (Nigeria) as amended;

“**Pre-IPO Transactions**” means the declaration and payment of dividends by APNV and the acquisition of all of the issued and outstanding shares of APNV by Addax Petroleum Corporation as described under the heading “Addax Petroleum — Pre-IPO Transactions”;

“**probable reserves**” means those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves;

“**Production Sharing Contract**” or “**PSC**” means a contract whereby a government or government corporation contracts with a petroleum company to explore for, develop and extract petroleum substances in an area that is subject to a license held by the government corporation, at the risk and expense of the petroleum company, in exchange for a share of production;

“**Profit Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“prospective resources” means the best estimate quantities of oil and gas estimated on a given date to be potentially recovered from undiscovered accumulations. They are technically viable and economic to recover;

“proved reserves” means those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves;

“Realizable Price” means “Realizable Price” as defined under the heading “Fiscal Terms — Nigeria”;

“Reserve Report” means the engineering report dated December 5, 2005 prepared by NSAI evaluating the crude oil reserves attributable to Addax Petroleum’s properties and certain resources effective as of September 30, 2005, in accordance with the standards contained in the COGE Handbook and the reserves and resources definitions set out by the Canadian Securities Administrators in NI 51-101 and the COGE Handbook;

“reserves” means those quantities of oil and gas anticipated to be economically recoverable from discovered resources;

“Royalty Oil” means “Royalty Oil” as defined under the heading “Fiscal Terms — Nigeria”;

“Share Transfer Agreement” means the share transfer agreement between a subsidiary of AOG and Addax Petroleum Corporation effective • , 2006;

“Shell” means Royal Dutch Shell p.l.c. together with all of its subsidiaries;

“Statoil” means Statoil ASA together with all of its subsidiaries;

“Tax Oil” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“Temporary Production Unit” or **“TPU”** means a temporary production unit which is used to produce petroleum on a temporary basis;

“Total” means TOTAL S.A. together with all of its subsidiaries;

“Trademark Agreement” means the Trademark Agreement, to be entered into prior to the closing of this offering and made effective January 1, 2006, between Addax Petroleum Corporation and AOG;

“TSX” means the Toronto Stock Exchange;

“Tullow Oil” means Tullow Oil p.l.c. together with all of its subsidiaries;

“Underwriters” means, collectively, RBC Dominion Securities Inc. and Merrill Lynch Canada Inc.;

“Underwriting Agreement” means the underwriting agreement dated • , 2006 among the Corporation, AOG, and the Underwriters with respect to this offering; and

“undeveloped reserves” means those reserves expected to be recovered from known accumulations where a significant expenditure (e.g. when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

CURRENCY AND EXCHANGE RATE INFORMATION

Except as otherwise indicated, references to "\$" and to "dollar" in this prospectus refer to the currency of the United States of America.

The following tables set forth, for each period indicated, the high and low exchange rates for one United States dollar, expressed in Canadian dollars, the average for such exchange rates for each period and the exchange rate at the end of such period, in each case based on the noon buying rate in Canadian dollars as quoted by the Bank of Canada (the "Noon Buying Rate").

	<u>Previous Three Months (2005)</u>			<u>Year Ended December 31,</u>		
	<u>November</u>	<u>October</u>	<u>September</u>	<u>2004</u>	<u>2003</u>	<u>2002</u>
Rate at end of period	\$1.1674	\$1.1752	\$1.1588	\$1.1970	\$1.292	\$1.580
Average rate during period	\$1.1811	\$1.1770	\$1.1774	\$1.3013	\$1.401	\$1.570
High	\$1.1961	\$1.1882	\$1.1888	\$1.3957	\$1.575	\$1.613
Low	\$1.1657	\$1.1627	\$1.1627	\$1.1759	\$1.292	\$1.511

On December 5, 2005 the Noon Buying Rate for \$1.00 United States was \$1.1565 Canadian.

FORWARD LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward looking statements under applicable securities legislation. In this prospectus, the words “may”, “would”, “could”, “should”, “will”, “intend”, “plan”, “anticipate”, “believe”, “seek”, “propose”, “estimate”, “expect” and similar expressions, as they relate to the Corporation, are often, but not always, used to identify forward looking statements. Such statements reflect the Corporation’s current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this prospectus. Many factors could cause the Corporation’s actual results, performance or achievements to vary from those described in this prospectus. If one or more of these risks or uncertainties materialize, or if the assumptions underlying forward looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected.

In particular, this prospectus contains forward looking statements pertaining to the following:

- oil and gas reserve and resource quantities and the discounted present value of future net cash flows from these reserves;
- the ultimate recoverability of reserves;
- future production levels;
- the amount, nature, timing and effects of capital expenditures;
- plans for drilling wells;
- expectations regarding the negotiation of contractual rights;
- prices for oil and natural gas;
- timing and amount of future production, forecasts of capital expenditures and the sources of financing thereof;
- operating and other costs;
- business strategies and plans of management;
- anticipated benefits and enhanced shareholder value resulting from prospect development and acquisitions; and
- treatment under the fiscal terms of Production Sharing Contracts and governmental regulatory regimes.

The Corporation’s actual results could differ materially from those anticipated in these forward looking statements if the assumptions underlying them prove incorrect, or if one or more of the uncertainties or risks described elsewhere in this prospectus materializes. See “Risk Factors”. Therefore prospective investors are cautioned not to rely unduly on these forward looking statements. The Corporation does not intend, and does not assume any obligation, to update any forward looking statements.

PRESENTATION OF FINANCIAL INFORMATION

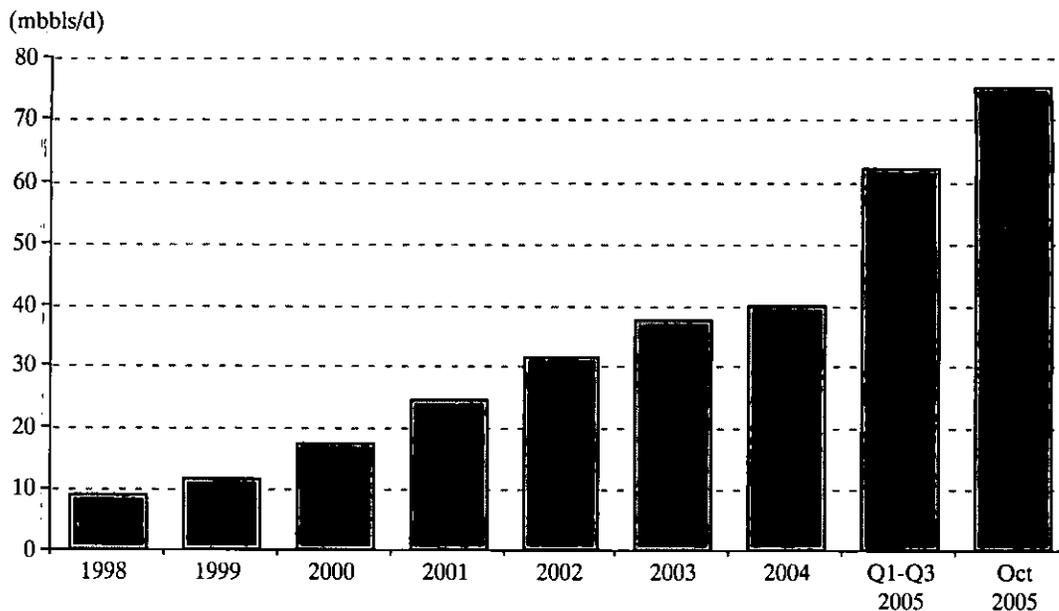

EBITDA, CFFO, average realized price per barrel sold, and operating cost per barrel sold are not recognized measures under Canadian GAAP. Management believes that in addition to net income, EBITDA, CFFO, average realized price per barrel sold, and operating cost per barrel sold are useful supplemental measures as they demonstrate the Corporation’s ability to generate the cash necessary to fund future growth through capital investment or repay debt. Investors are cautioned, however, that these measures should not be construed as an alternative to net income determined in accordance with Canadian GAAP as an indication of the Corporation’s performance. Addax Petroleum’s method of calculating these measures may differ from other companies and accordingly, they may not be comparable to measures used by other companies. For these purposes, Addax Petroleum defines (i) EBITDA as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest; (ii) CFFO as cash from operating activities before changes in non-cash working capital; (iii) average realized price per barrel sold as revenue from petroleum sales for the period divided by the quantity of oil sold in that period; and (iv) operating cost per barrel sold as the operating costs for the period divided by the quantity of oil sold in that period.

ADDAX PETROLEUM

Overview

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria, and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum's demonstrated operational and technical expertise, combined with its excellent reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

*Addax Petroleum's Average Oil Production
1998 - October 2005*

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of CFFO. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of CFFO. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by NSAI.

Corporate History

Addax Petroleum was founded in 1994 by AOG to evaluate and pursue oil and gas exploration and production opportunities in West Africa. Through its other subsidiaries, AOG carries on several different businesses worldwide with particular emphasis on Africa, including petroleum and refined products trading, oil storage, retail petroleum products and mining businesses. AOG was incorporated in 1987 and has established itself as one of the largest independent oil trading companies in Africa and the largest marine fuel supply company in West Africa.

Addax Petroleum is the only subsidiary of AOG involved in the exploration for, and production of, petroleum. AOG's strategy is to conduct its upstream petroleum business entirely through Addax Petroleum

and, therefore, pursuant to the Non-Competition Agreement, it will agree not to compete with Addax Petroleum in such business, provided that AOG and Jean Claude Gandur together own not less than 25 per cent of the Common Shares. Subject to the same proviso, AOG will also agree that any upstream petroleum business opportunities made available to it will first be offered to Addax Petroleum; if Addax Petroleum declines the opportunity, AOG may then pursue it.

In 1994, AOG decided to use its experience in Africa and in the oil industry to diversify its business to include oil and gas exploration and production. After the formation of Addax Petroleum in 1994, management began evaluating opportunities in West Africa. In 1995, Addax Petroleum acquired a 90 per cent interest in a Production Sharing Contract with the Government of Côte d'Ivoire relating to an offshore field known as the Espoir field. In 1997, Addax Petroleum sold 24 per cent interests in the Espoir field Production Sharing Contract to each of Ranger Oil Limited (now Canadian Natural Resources Limited) and Tullow Oil. Addax Petroleum sold a further 15 per cent interest in the Espoir field Production Sharing Contract to Canadian Natural Resources Limited in 2000 and the remainder of its interest in 2001.

In May 1998, the Corporation entered into Production Sharing Contracts with the Nigerian government for OML123, OML124, OPL90 and OPL225. Prior to this, Ashland had held their own Production Sharing Contracts relating to these properties, which were terminated by the Nigerian government when Ashland attempted to sell its interests under the Production Sharing Contracts without prior government approval. The Corporation acquired Ashland's remaining assets and rights relating to these properties pursuant to an acquisition agreement dated April 8, 1998 between Addax Petroleum and Ashland. See "Properties and New Ventures — Nigeria Properties".

In December 2002, Addax Petroleum expanded its operations in West Africa by acquiring a 60 per cent interest in the Ngosso Concession, offshore Cameroon. The Ngosso Property is operated by Addax Petroleum. See "Properties and New Ventures — Cameroon".

In January 2004, Addax Petroleum further expanded by acquiring a 42.5 per cent farm-in interest in the Kiarsseny Production Sharing Contract, offshore Gabon. The Kiarsseny Property is operated by Tullow Oil. See "Properties and New Ventures — Gabon".

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. See "Properties and New Ventures — Middle East New Ventures".

In September 2005, Addax Petroleum entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which it agreed to acquire a 40 per cent interest in the Okwok Property, located in OML67 offshore Nigeria, subject to the completion of a farm-in agreement and government approval. The Corporation expects to conduct operations for the property in its capacity as technical advisor. See "Properties and New Ventures — Nigeria Properties".

In November 2005, Addax Petroleum made its first strategic move into deep-water exploration when it signed a participation agreement with ERHC Energy pursuant to which the Corporation may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property. See "Properties and New Ventures — Joint Development Zone".

Pre-IPO Transactions

Addax Petroleum Corporation was incorporated under the *Canada Business Corporations Act* on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. On December 5, 2005 the articles of Addax Petroleum Corporation were amended to authorize the issue of an unlimited number of Preferred Shares, issuable in series.

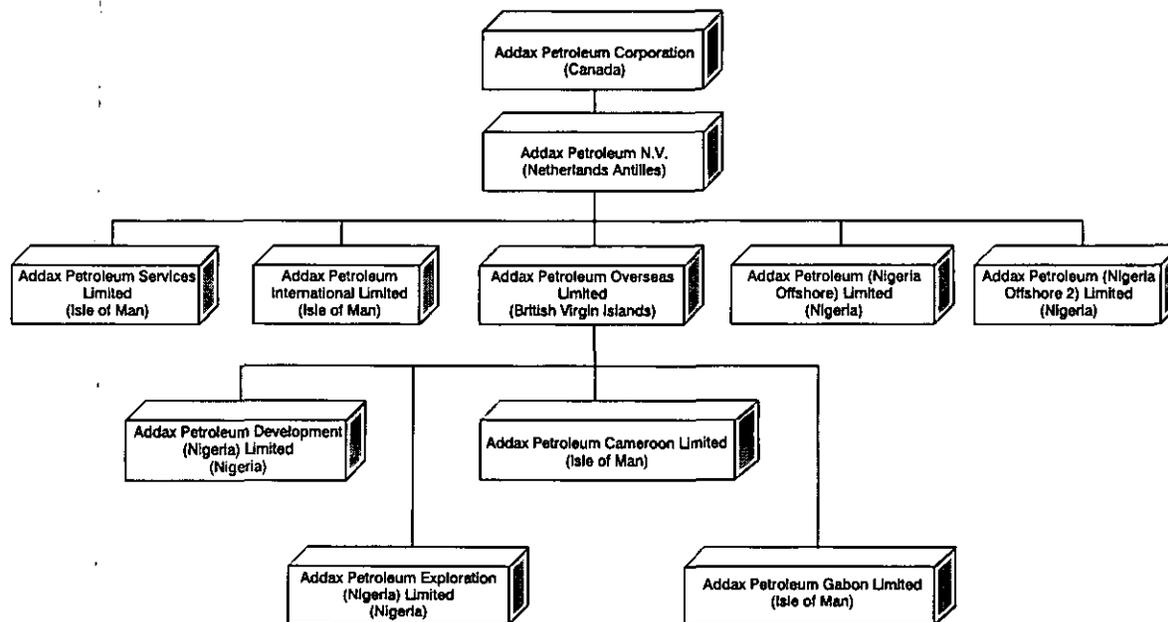

Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's

CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.

Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for • Common Shares and \$ • million.

Corporate Structure

At the closing of this offering, the Corporation will beneficially and wholly own, directly or indirectly, 10 material subsidiaries. The chart below shows the intercorporate relationships among the Corporation and its material subsidiaries at the closing of this offering.

Properties Summary

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);
 - OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
 - OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		<u>1,133,900</u>			<u>74,450</u>	<u>62,090</u>	<u>109.3</u>	<u>201.3</u>	<u>284.1</u>

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Major New Venture Opportunities Summary

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. Pursuant to the participation agreement, the Corporation may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

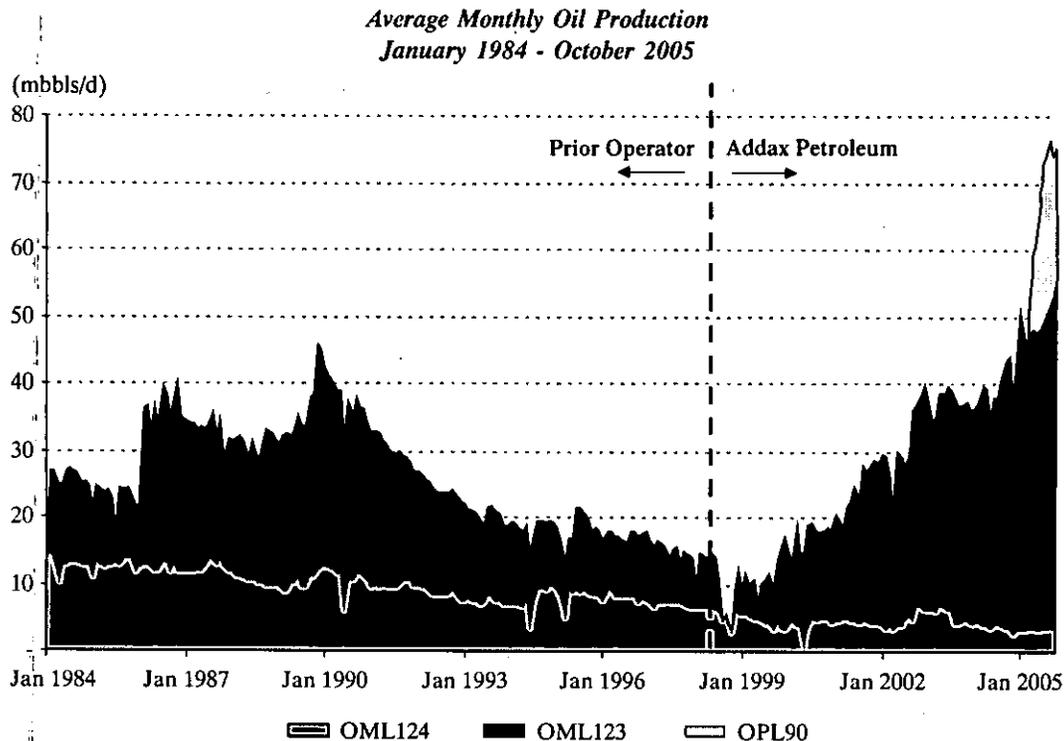

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mmbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mmbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mmbbls/d in 2005 to 85 mmbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI estimates Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum's excellent reputation and strong relationships help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In

addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to eight per cent of the Common Shares (or Common Shares) that it is to receive in connection with the Pre-IPO Transactions be issued to existing and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and Technical and Reserves Committees comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to

successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30, 2005		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	Total	2004 Total	2003 Total
		(\$million)						(\$million)		
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

(1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production including the replacement of the Knock Taggart FPSO (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007) as well as a two-rig drilling program in OML123 that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

Capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006. These capital expenditures are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. The budgeted capital expenditures will fund a one-rig drilling program in OPL90 and OPL225 that includes:

- the completion of development drilling in the Okwori field;
- development drilling in the Nda field and tie back to the OPL90 FPSO; and
- seismic data acquisition and drilling of three exploration wells.

Capital expenditures for the Corporation's other properties and major new venture opportunities are budgeted to be \$6 million in the fourth quarter of 2005 and \$115 million in 2006. These expenditures will be

incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

PROPERTIES AND NEW VENTURES

Addax Petroleum's principal oil and gas properties are in the West African countries of Nigeria, Cameroon and Gabon.

Nigeria Country Discussion

Overview

Nigeria is Africa's most populous country and largest oil producer. The following table highlights some important statistics regarding Nigeria, its people and its economy.

Total Area	923,768 km ² (approximately 1.5 times the area of Alberta, Canada)
Population	128.8 million
Major Cities	Lagos, Kano, Ibadan, Kaduna, Port Harcourt, Abuja (capital)
Language	English (official), Hausa, Yoruba, Igbo (Ibo), Fulani
Literacy	68 per cent of population over 15 years of age can read and write
Government	Federal Republic
Legal System	Based on English common law (Islamic law in the north)
GDP	\$125.7 billion (2004 estimate)
GDP per capita	\$1,000 (2004 estimate)
Oil Production	2.5 mmbbls/d (2004 estimate)
Net Oil Exports	2.2 mmbbls/d (2004 estimate)
Currency	Naira
Inflation	16.5% in 2004

Recent History

Nigeria gained independence from the United Kingdom on October 1, 1960 and has subsequently experienced periods of military and democratic rule. The death of General Sani Abacha in 1998 marked the most recent transition to democratic government, which saw the election of President Olusegun Obasanjo in 1999.

The development of the oil industry in the Niger Delta in the south of the country has been a key factor shaping modern Nigeria. Oil was first discovered in the 1950s and exploration and production increased rapidly in the 1960s. The country's oil industry now accounts for approximately 20 per cent of GDP, 96 per cent of export earnings and 65 per cent of budgetary revenues.

Government and Legal System

In 1999, Nigeria adopted a new constitution and held democratic elections. The Nigerian government has a three-tier structure: the federal government, 36 state governments and many local government administrations.

The structure of the federal government is similar to that of the United States. Under the Nigerian constitution, the President can serve a maximum of two terms of four years each. The Parliament comprises two houses: the House of Representatives, with 346 elected members, and the Senate, with 107 elected members. The most recent elections were held in April 2003 and saw the re-election of President Obasanjo of the People's Democratic Party for a second term.

Nigeria's legal system is based on English common law and much of the legislation covering the country's oil industry was originally based upon equivalent legislation in England. Islamic law is also used in some states in the north.

Economic Environment

Nigeria has significant agricultural, mineral, marine and forest resources, but the economy of Nigeria is strongly dependent upon the international oil price. The Obasanjo government is seeking to broaden the country's economy and has initiated structural reforms with new competition policies and a privatization program. The Bureau for Public Enterprise has the mandate to privatize state-owned enterprises in all sectors of the economy, including hotels, insurance, paper mills, fertilizer plants, oil refineries, ports and the electrical, telephone, rail and water utilities. To date, the Nigerian government has privatized its hotel, insurance and cement enterprises. Included in the enterprises scheduled to be privatized are four oil refineries owned by NNPC.

In recent years, Nigeria has attracted significant international support, both from individual governments and international agencies. The World Bank currently has a total commitment to Nigeria of approximately \$444 million in the areas of privatization, power transmission, healthcare, community development, education, water and economic capacity building. Further, representatives of the Paris Club creditor countries met in October 2005 and agreed with the representatives of the Nigerian government on a comprehensive treatment of its debt. In total, this agreement allows Nigeria to cancel approximately \$18 billion of debt (including moratorium interest) representing an overall cancellation of about 60 per cent of its debt to the Paris Club.

International Relations

Nigeria is a member of the United Nations, the Organization of African Unity, the Commonwealth of Nations and the Economic Community of West African States. Nigeria became a member of OPEC in 1971.

On October 10, 2002, the International Court of Justice ruled on the long disputed Cameroon-Nigeria land and maritime boundary and awarded the Bakassi Peninsula and adjacent offshore acreage, including part of the Corporation's acreage in OML123 (the "Disputed Area"), to Cameroon. Nigeria initially rejected the ruling but formed a Joint Border Commission to peaceably resolve the dispute. The dispute relating to the land boundary involving the Bakassi Peninsula is in the course of being resolved peacefully and the Joint Border Commission has initiated steps to resolve the maritime boundary dispute. The issue regarding the maritime boundary continues to have implications for Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Petroleum Industry

Oil

The crude oil supply market is truly global with approximately 31 per cent of 2004 production originating from the Middle East, 23 per cent from Europe and Eurasia, 14 per cent from Latin America, 12 per cent from Africa, 10 per cent from North America and 10 per cent from Asia Pacific.

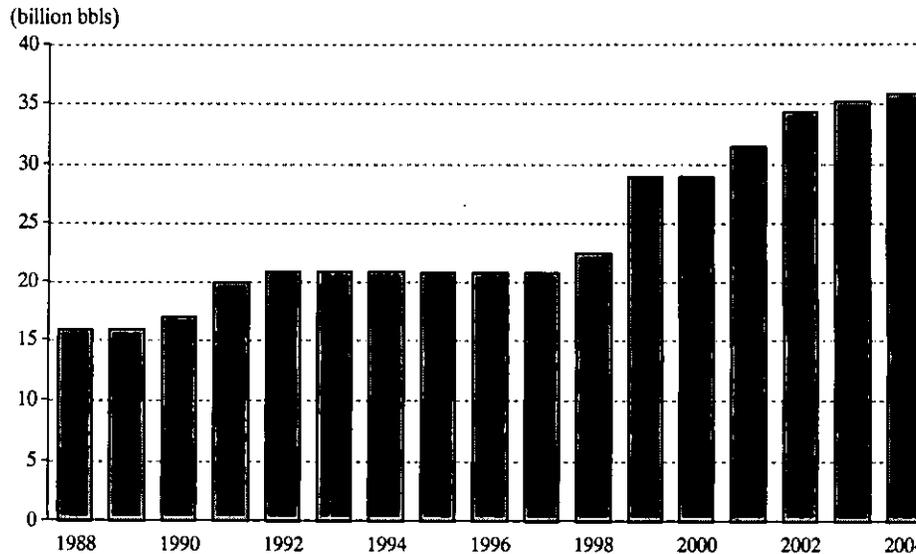

The oil industry in Nigeria has a long history. Shell D'Arcy (a Shell/BP joint venture) started exploring for oil in the country in 1938. Other foreign oil companies entered Nigeria in the 1950s and 1960s, including Mobil (now ExxonMobil), Texaco (now Chevron), Gulf (now Chevron), Safrap (later Elf and now Total) and Agip. Apart from BP, all of these international oil and gas companies still maintain a significant presence in Nigeria.

Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. The Nigerian government has expressed its desire to

increase the country's proved oil reserves to 40 billion barrels by 2010 and is encouraging the continued development and exploration of the country's oil resources to do so.

The following chart shows the increase in Nigeria's proved crude oil reserves over the past 17 years, with the majority of the increase occurring in the last six years.

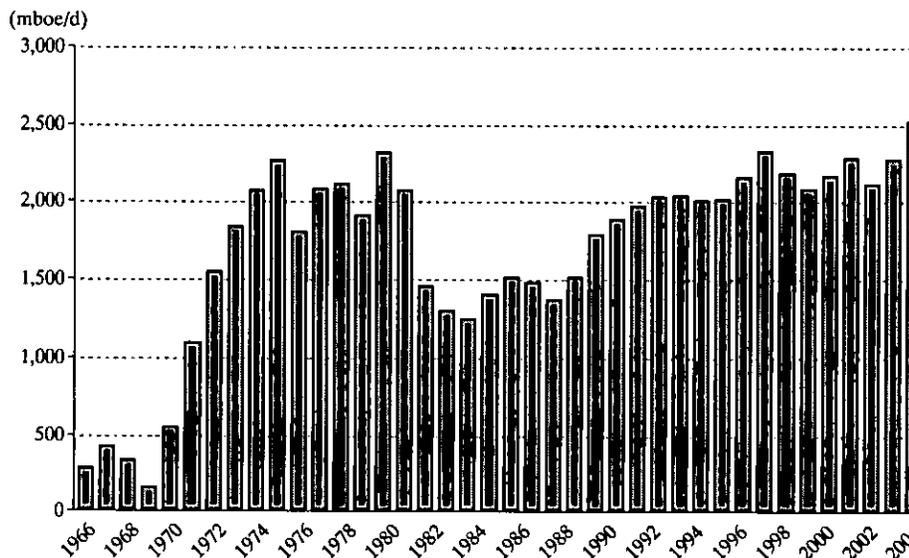

Nigerian Proved Crude Oil Reserves

Source: OPEC Annual Statistical Bulletin, 2004.

The first commercial oil discovery in Nigeria was made in 1956 by Shell D'Arcy and subsequent discoveries and development activity saw production steadily climb to reach in excess of two mmbbls/d in the mid-1970s. During the 1980s, oil production in Nigeria declined in part due to an unfavourable investment environment. However, development activity and production increased after the Nigerian government revised the fiscal terms governing oil production. The history of oil production in Nigeria is shown in the following chart.

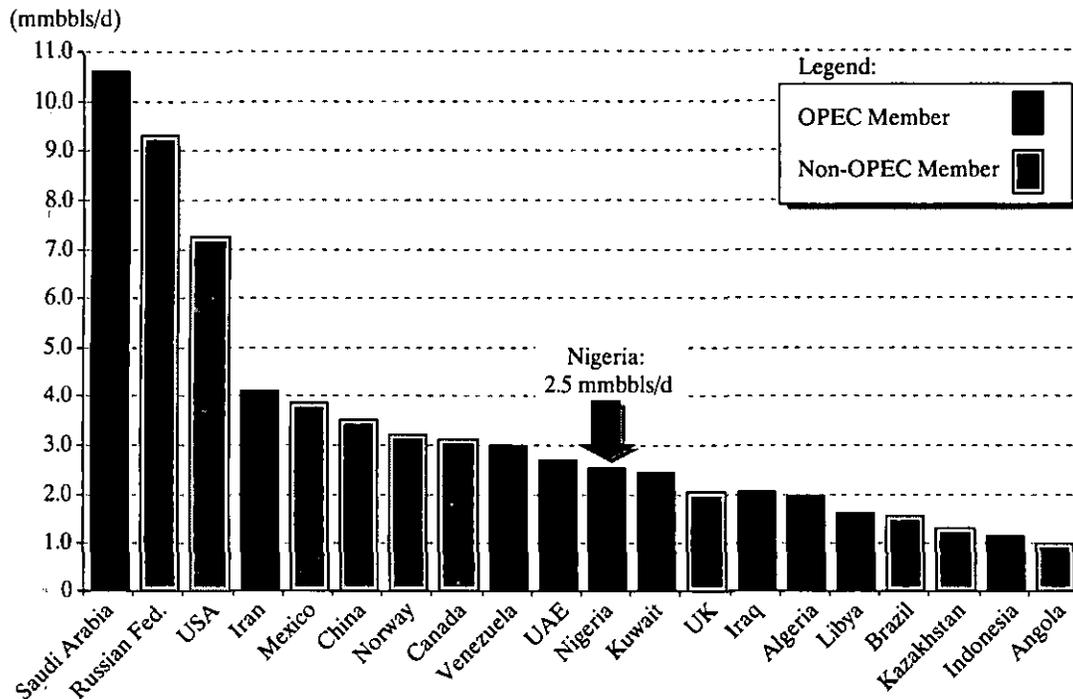

Nigerian Crude Oil Production

Source: BP Statistical Review of World Energy, June 2005.

Nigeria ranks as one of the world's major oil producers and the largest producer of oil in Africa. The country's 2004 oil production is estimated to have been approximately 2.5 mmbbls/d, representing 27 per cent of the continent's total oil production and 3.2 per cent of the world's production (compared to Canada at 3.8 per cent). The following chart, showing 2004 oil production for selected major oil producing countries, demonstrates Nigeria's importance as a global oil producer.

Oil Production by Selected Country, 2004

Source: BP Statistical Review of World Energy, June 2005.

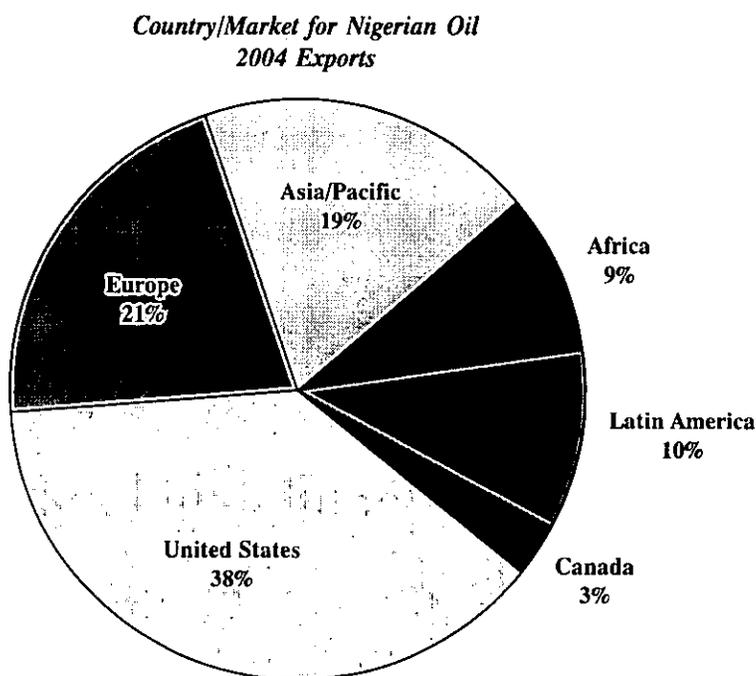

The majority of oil in Nigeria is produced by joint ventures between NNPC and international oil and gas companies, which are the operators of the joint venture properties. There are joint ventures between NNPC and Shell (the largest joint venture), ExxonMobil, Chevron, Agip and Total. NNPC has a 55 per cent interest in the Shell joint venture and 60 per cent interest in each of the other joint ventures. In addition, ConocoPhillips, Devon Energy, Nexen Inc., Petrobras, Statoil and other foreign companies hold interests in Nigeria.

The following table shows the estimated 2004 daily production by principal operators in Nigeria.

	2004 Production (estimated) (mmbbls/d)
Shell	907
ExxonMobil	590
Chevron	352
Agip	185
Total	158
Addax Petroleum	40

Source: Estimates derived from Wood Mackenzie, except for Addax Petroleum.

In 2004, Nigeria exported approximately 2.2 mmbbls/d or 88 per cent of the country's total oil production, with the United States being the largest single export market. Nigeria is the fifth largest supplier of crude oil to the United States, behind Canada, Mexico, Saudi Arabia and Venezuela, supplying approximately 8.5 per cent of total United States crude oil imports. The following chart shows the principal export markets for Nigerian oil in 2004.

Source: OPEC Annual Statistical Bulletin 2004.

The Nigerian government has announced a production target of 4 mmbbls/d by 2010. Future oil production in Nigeria is expected to increase with the continued development of many significant deep-water discoveries. Some of the significant discoveries and development projects announced by international oil and gas companies are described below.

Shell — Shell recently developed the deep-water Bonga field with estimated reserves of 700 mmbbls and expected plateau production of 225 mmbbls/d. Shell has also announced plans to develop the Bonga South West field which has estimated reserves of 600 mmbbls and the EA field which has estimated reserves of 350 mmbbls and expected plateau production of 170 mmbbls/d.

ExxonMobil — ExxonMobil is currently developing the deep-water Erha field which has estimated reserves of 500 mmbbls and expected plateau production of 150 mbbls/d. ExxonMobil is also developing the Yoho field with estimated reserves of 400 mmbbls and expected plateau production of 150 mbbls/d.

Chevron — Chevron is currently developing the deep-water Agbami field which has estimated reserves of 1,000 mmbbls and expected plateau production of 250 mbbls/d.

Total — Total developed the Amenam Kpono field that came on-stream in July 2003 and has expected plateau production of 125 mbbls/d in its first phase. Total has discovered two further fields, Usan and Akpo, with estimated reserves exceeding 500 mmbbls each.

Agip — Agip developed the first deep-water field in Nigeria, the Abo field, that began production in early 2003. Reserves are estimated to be 700 mmbbls and the plateau production is expected to be 300 mbbls/d.

OPEC and Oil Production Quotas in Nigeria

Nigeria has been a member of OPEC since 1971. OPEC has eleven members who collectively supply approximately 40 per cent of the world's oil consumption and account for approximately two-thirds of the world's proved oil reserves. OPEC's member countries are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates and Venezuela. OPEC's stated objective is "to co-ordinate and unify petroleum policies among member countries, in order to secure fair and stable prices for petroleum producers; an efficient, economic and regular supply of petroleum to consuming nations; and a fair return on capital to those investing in the industry". At its March 2000 meeting, OPEC established a price band mechanism to respond to changes in world oil market conditions. Since its inception, the informal price band mechanism has been activated only once.

At its most recent meeting, OPEC established new production ceilings and quotas for individual members effective March 16, 2005. Nigeria's quota was set at approximately 2.3 mmbbls/d. NNPC allocates production quotas among oil producers in Nigeria. The allocations are based on the aggregate of the technical production limits per well for a producer as negotiated between the producer and the Nigerian government to reflect good oil field production practices. If the aggregate of all the producers' technical production limits exceeds Nigeria's OPEC quota, the production allocations among producers are reduced pro rata.

The Corporation applies for, on a monthly basis, and regularly receives an additional quota for the difference between its production quota and its expected production. At September 30, 2005, Addax Petroleum had a production quota of 65 mbbls/d and an additional production quota of 10 mbbls/d compared to its production of 73 mbbls/d for the same period. The Corporation anticipates increasing its production over the next two years to in excess of 80 mbbls/d. Given the current and anticipated growth of production in Nigeria, there is a risk that quota allocations may force Addax Petroleum to curtail its production in the future. However, except in one instance which was immaterial, the Corporation has not had to reduce its production due to the application of a monthly quota and has succeeded in obtaining an additional quota for the difference between its exportable production and its fixed monthly quota. In the current high oil price environment, Addax Petroleum does not expect that it will be required to reduce its production due to a quota constraint. See "Risk Factors."

Natural Gas

Nigeria's natural gas reserves were estimated by NNPC to be 181 tcf in 2004, making Nigeria the country with the eighth largest natural gas reserves in the world. To date, exploration and development activities in Nigeria have not focused on natural gas because of the lack of readily accessible markets. Approximately half of the Nigerian natural gas reserves represent associated gas, a co-product of oil production, and the other half non-associated gas. Currently, natural gas development legislation in Nigeria relates mainly to the development of associated gas. In late 2005 or 2006, the Nigerian government plans to pass new gas legislation that will address the development of non-associated gas.

Nigerian natural gas production is inferred from various industry sources to have been approximately five bcf/d in 2004, of which an aggregate of approximately 40 per cent was sold as LNG and natural gas liquids into international markets and as natural gas for use in power generation in Nigeria. Of the remaining gas production, the majority was flared and the rest was used in oil field operations.

The Nigerian government has announced its objective to increase natural gas revenue sales to match oil revenues by 2010. To achieve this objective, the government has announced its intention to facilitate gas export-oriented projects and increase domestic gas consumption. The Nigerian government has also announced what is commonly referred to as the "Flares Down by 2008" policy which is intended to encourage oil companies to develop natural gas projects in order to eliminate the flaring of associated natural gas by 2008. Although NNPC does not yet have a legislative mandate to eliminate natural gas flaring by 2008, it is strongly indicating to operators that this will be a requirement. The oil producers in Nigeria are making concerted efforts to eliminate flaring although full compliance may not be practically possible by 2008. By 2010, gas production is forecast to increase to 10 bcf/d of which 8 bcf/d (currently 1.3 bcf/d) will be exported as LNG and 2 bcf/d will be used to meet domestic demand, predominantly for power generation (currently 1 bcf/d).

The most significant natural gas project to date in Nigeria has been the construction of a liquefaction plant in 1999 at Bonny Island by Nigeria LNG Ltd. This company is owned by NNPC (49 per cent), Shell (25.6 per cent), Total (15 per cent) and Agip (10.4 per cent). Presently the plant has three LNG trains with capacity to export 8.7 million tonnes of liquefied natural gas per year consuming 1.3 bcf/d. Two additional trains are planned to be added to the plant to increase its capacity to 16.7 million tonnes per year by 2006 consuming 2.5 bcf/d and further LNG trains may be added thereafter. LNG from the plant is exported to customers in France, Italy, Portugal, Spain, Turkey and the United States.

To meet the projected increase in gas exports, a number of gas export projects are planned including GTL projects, other LNG projects and export pipelines. A GTL project proposed by Chevron is expected to produce 35 mbbbl/d of petroleum products and consume 0.35 bcf/d of gas. Other LNG projects have been proposed including conventional LNG projects at Brass River, led by ConocoPhillips and Agip, and at Escravos, led by Chevron, and two floating LNG facilities located on deep-water discoveries operated by ExxonMobil and Statoil. Export pipeline projects include the West Africa Gas Pipeline project with a consortium of international oil and gas companies (including Shell) led by Chevron, to export natural gas from Escravos to Ghana, Togo and Benin for power generation. Initially, this project will consume 0.14 bcf/d but consumption is expected to increase to 0.45 bcf/d. This project will also increase the capacity of the existing Escravos to Lagos pipeline from 0.3 bcf/d to 1.0 bcf/d. Of the planned projects, the Chevron GTL project at Escravos in western Nigeria is progressing and the other LNG projects are expected to be announced.

A major program is underway in Nigeria to expand gas-fired power generation capacity to meet the projected increase in domestic gas consumption. Major oil companies are anticipated to play an important role in constructing joint venture independent power plants. In connection with the expansion of the country's electrical power generation capacity, the Nigerian government has announced that it is restructuring the electricity sector in anticipation of privatizing the industry later in the decade. The Corporation is presently in discussions with NNPC to provide gas for power generation from OML123.

In addition to promoting gas consumption and domestic power generation, the Nigerian government is promoting the production and consumption of LPG. Compared to its West African neighbours, Nigeria consumes little LPG, most of which is imported. The Nigerian government is stimulating demand by removing import duties and has also begun a program to reactivate under-utilized LPG depots throughout the country to improve the distribution of LPG. The Corporation is presently considering investing in an LPG plant at its OML124 onshore property.

Legal Regime for the Petroleum Industry

The petroleum industry in Nigeria is governed by the *Petroleum Act*. Under the *Petroleum Act*, the ownership and control of oil and gas in Nigeria (including under its territorial waters and continental shelf) is vested in the Nigerian government. The Department of Petroleum Resources, in collaboration with other government agencies such as NNPC and the Ministry of the Environment, has the responsibility for enforcing the *Petroleum Act* and the related legislation and regulations governing the petroleum industry in Nigeria.

The Department of Petroleum Resources has wide regulatory powers which include issuing Oil Prospecting Licenses and Oil Mining Leases under the *Petroleum Act*, the approval of field development plans, the setting of production levels, the monitoring of industry work programs, the administration of fiscal incentives and the monitoring of oil production and exports. NNPC is the state owned petroleum company that holds the Nigerian

government's equity shares in joint ventures and enters into Production Sharing Contracts with foreign oil companies on behalf of the Nigerian government.

An Oil Prospecting License gives the licensee the exclusive right to explore for petroleum in a specified area. An Oil Mining Lease gives the lessee the exclusive right to produce petroleum from a specified area. Under the *Petroleum Act*, an Oil Prospecting License may be converted into an Oil Mining Lease when the Nigerian government is satisfied that the license is capable of producing at least 10 mbbls/d of crude oil. In practice, however, the Nigerian government generally allows production from areas covered by an Oil Prospecting License pending conversion to an Oil Mining Lease. The *Petroleum Act* provides for the relinquishment of certain areas within Oil Prospecting Licenses on their conversion to Oil Mining Leases, and within Oil Mining Leases ten years after the granting of such leases. Under the *Petroleum Act*, relinquishment is subject to ministerial approval and may be subject to additional conditions as set forth in the applicable Production Sharing Contract. The Production Sharing Contract for OPL90 and OPL225 also requires Addax Petroleum to relinquish part of the license area to be agreed between Addax Petroleum and NNPC.

Oil Prospecting License licensees are required to conduct hazard and operability studies prior to implementing facilities design and construction or major modification projects. The licensee is also required to conduct an environmental impact assessment prior to commencing operations, in addition to the environmental impact assessment required for such specific activities as seismic survey, drilling campaign and installation of facilities and pipelines.

Contractual Framework

Most oil exploration and production activities in Nigeria are carried out under joint ventures or Production Sharing Contracts. All of Addax Petroleum's current production is under Production Sharing Contracts.

Under a joint venture, one or more oil companies enter into a joint operating agreement with NNPC whereby the oil companies and NNPC agree to jointly explore for, develop and produce petroleum pursuant to the terms of an Oil Prospecting License or Oil Mining Lease jointly held by them. Each partner in the joint venture contributes to the costs of exploration, development and production and shares the benefits or losses of the operations in accordance with its proportionate equity interest in the joint venture. Joint ventures currently account for the majority of Nigeria's total crude oil production.

The Nigerian government has more recently moved toward Production Sharing Contract arrangements, particularly with respect to oil exploration, development and production in Nigeria's deep offshore acreage. NNPC is the holder of the Oil Prospecting License or the Oil Mining Lease and one or more oil companies enter into, a Production Sharing Contract with NNPC under which they agree to carry out oil exploration, development and production activities as a contractor on NNPC's behalf at the oil company's risk and expense in return for a share of production.

In 2003, the Nigerian government considered alternatives to increase the participation of indigenous or locally owned companies in oil exploration and production. The Marginal Field Development Program is a significant part of this initiative. Marginal fields are defined by guidelines issued by the Nigerian government in July 2001 as being any field that has reserves booked and reported annually to the Nigerian government and has remained unproduced for more than ten years. Marginal fields are subject to compulsory farmouts to indigenous companies under a competitive bid process. There have been a series of acreage awards under this program, the most recent being in April 2003, when 31 indigenous oil companies were awarded acreage covering marginal fields that the international oil and gas companies had chosen not to develop. These indigenous oil companies have been encouraged to enter into agreements with international oil and gas companies for assistance with financing and technical support; however, non-Nigerian companies are not permitted to hold more than a 40 per cent equity interest.

Geological Description

The Niger Delta Basin is Africa's largest and most prolific oil producing basin. It is also one of the world's largest delta systems of Tertiary age and covers an area greater than 75,000 km². Geologically, it is similar to the

Mississippi Delta complex of the United States Gulf Coast, in that it has been fed by major river systems that have deposited a thick layer of sediment in a prograding delta system.

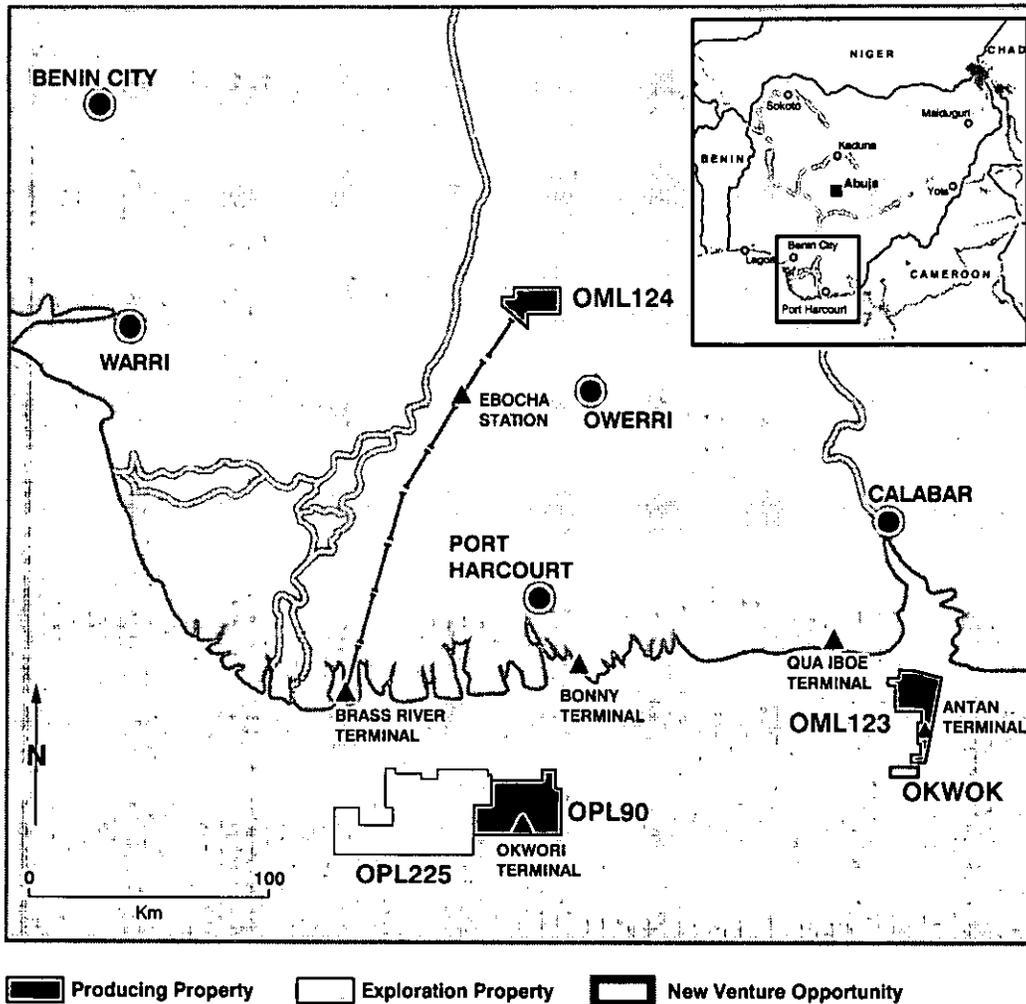

Three main lithologic formations are recognized in the basin: Benin, Agbada and Akata. These formations are usually further divided by each operator for each field. The reservoir sands in the Agbada formation are of good quality, often with Darcy permeabilities. The accumulations consist of primarily sweet, mainly light to medium oil (31° to 41° API) as oil rims with associated gas caps, and secondly, of heavy (less than 25° API) oil rims and unassociated gas. Producing oil rims are relatively thin (10 to 20 m, occasionally extending to 30 m). Most reservoirs are normally pressured with generally strong aquifer support.

Nigeria Properties

Within Nigeria, Addax Petroleum has a 100 per cent interest in a Production Sharing Contract covering OML123 and OML124, a 100 per cent interest in a Production Sharing Contract covering OPL90 and OPL225 and is pursuing a 40 per cent interest in the Okwok Property in OML67 (immediately adjacent to OML123) through the Oriental Joint Venture Agreement entered into in September 2005. OML123, OML124 and OPL90 are operated by the Corporation and contain producing oil fields as well as a number of development and exploration opportunities. OPL225 is operated by the Corporation and contains a discovery and a number of exploration opportunities. The Okwok Property contains the Okwok discovery where Addax Petroleum expects to conduct operations in its capacity as technical advisor. The Corporation has budgeted capital expenditures in Nigeria of \$161 million in the fourth quarter of 2005 and \$772 million in 2006, including budgeted capital expenditures on the Okwok Property but excluding expenditures in the JDZ.

The development of the natural gas industry, including the cessation of associated natural gas flaring by 2008, is a high priority for the Nigerian government. Currently the Corporation's Production Sharing Contracts covering OML123, OML124, OPL90 and OPL225 relate solely to commercial oil development but include the right to negotiate commercial terms with NNPC for gas development in the properties. As at September 30, 2005, NSAI reports gross contingent gas resources on Addax Petroleum's Nigeria properties to be 1.25 tcf. Addax Petroleum's natural gas strategy is intended to ensure that the Corporation complies with the requirement to cease associated natural gas flaring and also to position the Corporation to assist with, and participate in, the monetization of existing and future associated and non-associated natural gas reserves. The Corporation is currently in discussions to supply natural gas from all of its producing properties in Nigeria. See "Properties and New Ventures — Nigeria Country Discussion — Petroleum Industry — Natural Gas".

Nigeria Properties⁽¹⁾

Note:

(1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

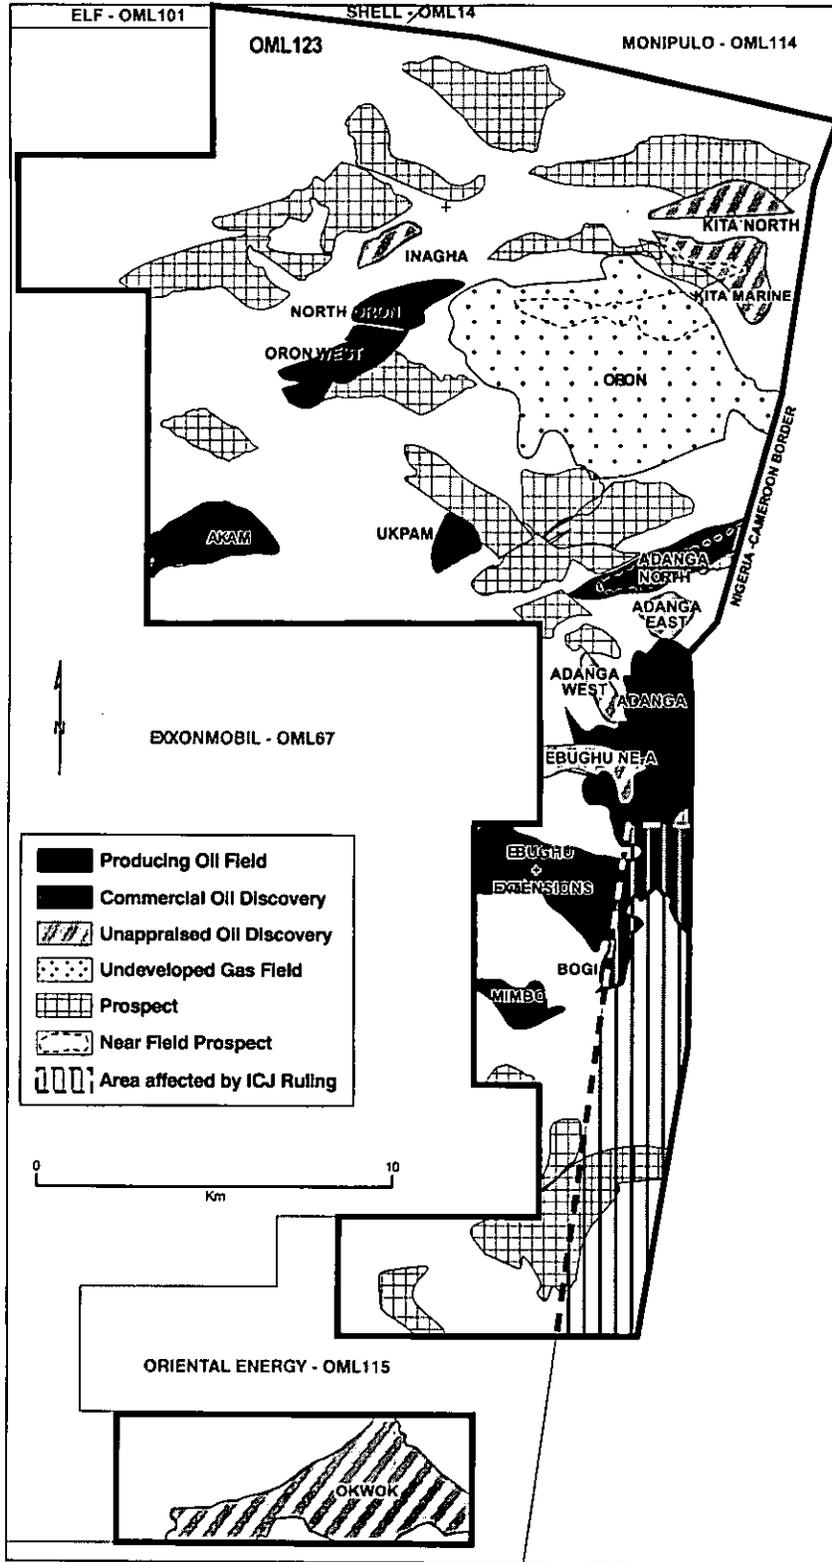

OML123

Overview

OML123 is the Corporation's largest property as measured by reserves and production. In the first nine months of 2005, OML123 produced an average of 46.0 mbbbls/d of oil from 52 wells with an average water cut of 35 per cent. Oil gravity ranges between 19° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OML123 to be 71.4 mmbbls and gross proved plus probable reserves to be 144.9 mmbbls. The Corporation expects production from OML123 to be approximately 48 mbbbls/d in 2006.

OML123 is located offshore approximately 70 km south of the town of Calabar and covers an area of 90,700 acres (367 km²) in water depths ranging from 3 to 40 m on the eastern edge of the Niger Delta. OML123 contains eight producing oil fields (Adanga, Ebughu and extensions, Oron West, North Oron, Akam, Bogi, Mimbo and Ukpam) and one undeveloped oil field (Adanga North). There are also six unappraised oil discoveries (Kita Marine, Inagha, Adanga East, Adanga West, Ebughu NE-A and Kita North), one large 8,600 acre (35 km²) undeveloped gas discovery (Oron) and several exploration prospects. Total capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006.

OML123

Production and Reserves

The following table summarizes the production and reserves in OML123.

Field	Number of Wells ⁽¹⁾	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
		9 months ended September 30, 2005	2004	Proved	Probable	Proved Plus Probable
		(bbls/d)	(bbls/d)	(mmbbls)	(mmbbls)	(mmbbls)
Adanga	19	22,720	18,730	23.2	26.6	49.8
Ebughu (and extensions)	22	15,960	12,210	13.6	4.7	18.3
Oron West and North Oron	8	5,420	3,390	25.2	25.4	50.6
Akam	9	960	700	1.4	1.0	2.4
Bogi	2	440	610	0.3	-	0.3
Mimbo	2	360	360	0.7	0.3	1.0
Ukpam	2	110	120	0.2	2.2	2.4
Adanga North	-	-	-	-	11.0	11.0
Kita North	-	-	-	6.9	2.3	9.2
Total	64	45,970	36,120	71.4	73.5	144.9

Notes:

- (1) Number of wells includes shut-in wells.
- (2) Proved and probable reserves as at September 30, 2005, as reported in the Reserve Report under "Forecast Prices and Costs Case".
- (3) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

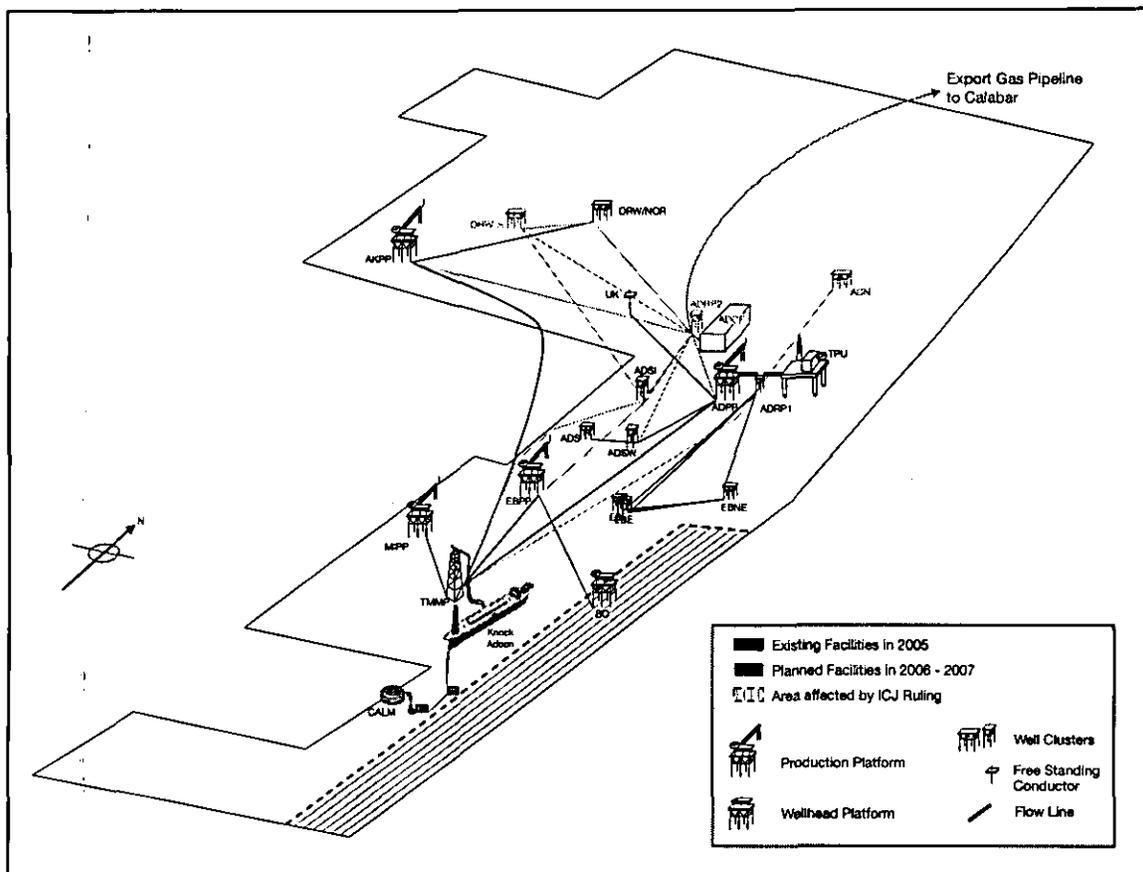

Production Facilities

The producing fields in OML123 are operated as a common development area. The key production facility is a FPSO which gathers produced crude oil from production or wellhead platforms on each field. At the OML123 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The current OML123 FPSO is the Knock Taggart which was commissioned in early 1998 and has a nameplate processing capacity of up to 60 mbbbls/d of crude oil, a total liquids (oil and water) processing capacity of 100 mbbbls/d and a storage capacity of approximately one mmbbls of crude oil. In order to maximize production capacity and improve cost efficiency, the Corporation intends to replace the Knock Taggart with the Knock Adoon FPSO in 2006. The Knock Adoon will have a processing capacity of 60 mbbbls/d of crude oil, a total liquids (oil and water) processing capacity of 140 mbbbls/d and a storage capacity of 1.7 mmbbls of crude oil and will incorporate an off-loading buoy terminal to better facilitate offloading during periods with strong currents. The Knock Adoon will be under a time charter with a subsidiary of Fred Olsen Production AS, the term of which expires in June 2014 with extension periods of up to a further eight years at the Corporation's option.

In order to maximize the use of the OML123 production facilities, Addax Petroleum has entered into an agreement with the OML114 Parties who operate the adjacent OML114, to store and export all of the crude oil produced from their license area. In return, the OML114 Parties pay the Corporation for their share of the expenses for the operation of the OML123 FPSO. For the first nine months of 2005, crude oil liftings totaled 12.6 mmbbls for Addax Petroleum and NNPC and 4.3 mmbbls for the OML114 Parties.

OML123 Production Facilities

Associated gas produced on OML123 is currently used for gas lift and fuel gas to aid oil production while the excess is flared by Addax Petroleum. NNPC, the owner of all natural gas in Nigeria, has informed the Corporation that it has targeted to use OML123 to supply 140 mmmcf/d of natural gas to a new power generation plant at Calabar, starting in 2007. This project will aid the Corporation in achieving its objective of complying with the "Flares Down by 2008" policy announced by the Nigerian government. The Corporation believes its participation in this gas supply project will position it to participate in the supply of non-associated gas under separate supply arrangements in the future.

The initial gas supply project from OML123 contemplates the construction of gas gathering pipelines to bring both associated gas from existing oil facilities as well as non-associated gas to a central gas processing unit comprised of gas processing and compression facilities and a gas delivery pipeline to the town of Calabar. The central gas processing unit should be located adjacent to existing oil production facilities in the Adanga field. The capital expenditures for the gas supply project are expected to be funded by Addax Petroleum and NNPC. See "Properties and New Ventures — Nigeria Properties — OML123 — Budgeted Capital Expenditures".

Fields

Adanga

The Adanga field, discovered in 1980 and producing since 1986, is Addax Petroleum's principal producing field in OML123. For the first nine months of 2005, Adanga produced an average of 22.7 mmbbls/d of oil from 15 wells with an average watercut of 15 per cent. Oil gravity averaged 33° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Adanga field to be 23.2 mmbbls and gross proved plus probable reserves to be 49.8 mmbbls.

The Adanga field is located in water depths ranging from 10 to 20 m and covers an area of approximately 2,800 acres (11.3 km²) in the central part of OML123. The Corporation is producing from seven stacked "P" sand reservoirs of Miocene age at depths between 5,000 and 7,600 ftss, but most of the production comes from two reservoirs between 5,900 and 6,200 ftss which contain 90 per cent of the reserves in Adanga.

First production started in 1986 from the Adanga main block through one vertical and eight deviated wells drilled from the Adanga Platform. Following a detailed 3D seismic interpretation, Addax Petroleum modelled the field in 1999-2000 and undertook an extensive appraisal and development drilling program in the southern blocks, beginning in 2001. Since then, the Corporation has drilled a total of 29 wells resulting in 15 horizontal production wells, 12 appraisal wells and two water injection wells. The Corporation continues to evaluate infill and step-out drilling locations at Adanga and, in 2006, plans to drill five appraisal wells followed by up to five horizontal production wells and one water injection well and to work-over and recompleat two water injection wells. Water injection pumping facilities will be provided on the Knock Adoon. Most of the field's well completions are equipped with gas lift capability. The Corporation expects that 2005 production levels from the Adanga field will be maintained in 2006.

Wells from the Adanga field produce through the Adanga Platform, installed in 1986, and three satellite wellhead platforms, installed in 2003. In the second quarter of 2004, a new riser platform tied-in to a leased TPU was commissioned at Adanga, at which time all production was handled by the TPU. The TPU now handles all initial processing in the Adanga area prior to being pumped to the FPSO. In addition, the TPU allows production from the wells in the nearby Ebughu field extensions which could not otherwise be accommodated on the Adanga Platform or on the Ebughu Platform. In the fourth quarter of 2005 and 2006, the Corporation plans to purchase the TPU and refurbish both the TPU and the Adanga platform. The refurbishment project is planned to be substantially complete by the end of 2006.

Ebughu (and extensions)

The Ebughu field, discovered in 1980 and producing since 1988, along with the extensions is Addax Petroleum's second largest producing field in OML123. For the first nine months of 2005, Ebughu produced an average of 16.0 mbbbls/d of oil from 21 horizontal wells with an average watercut of 46 per cent. Oil gravity ranges between 20° API in the Ebughu field and 28° API in its northeast extension. As at September 30, 2005, NSAI estimates gross proved reserves for the Ebughu field and extensions to be 13.6 mmbbls and gross proved plus probable reserves to be 18.3 mmbbls.

The Ebughu field is located in water depth of approximately 30 m and covers an area of approximately 2,600 acres (10.6 km²) in the southern part of OML123. Production is from an 18 m thick oil rim in the "AA" horizon of Upper Miocene age at an average depth of 4,500 ftss. Most of the Ebughu field's oil completions are on gas lift.

Following a successful three-well appraisal program in 1984, Ashland installed the Ebughu Platform in 1988 and completed two wells which began producing in 1988. In 1996, a pilot horizontal production well was drilled between the existing two wells. Since 1999, Addax Petroleum has embarked on an extensive appraisal and development drilling program resulting in the discovery of five field extensions. In the second half of 2006, Addax Petroleum plans to drill three horizontal production wells on the eastern and north-eastern extensions subject to the availability of a second drilling rig for OML123 and authorization being granted to locate wells in the Disputed Area. As the drilling program is budgeted to take place in the second half of the year, the Corporation does not anticipate a material production impact from these new wells in 2006.

In 2004, the Corporation constructed and installed two wellhead platforms and two export pipelines to, and one gas lift pipeline from, the TPU in the Adanga field. No further production facilities are planned to be added at Ebughu.

Oron West and North Oron

Oron West was discovered by Addax Petroleum in 2002 and North Oron was successfully appraised in the same year. Oil production from Oron West and North Oron commenced in 2004. For the first nine months of 2005, Oron West and North Oron produced an average of 5.4 mbbbls/d from eight wells in both fields with an

average watercut of 2 per cent. Oil gravity averages 38° API in Oron West and 27° API in North Oron. As at September 30, 2005, NSAI estimates gross proved reserves for the Oron West and North Oron fields to be 15.8 and 9.4 mmbbls, respectively, and gross proved plus probable reserves to be 29.7 and 20.8 mmbbls, respectively.

The fields are located in water depth of approximately 8 m and cover an area of approximately 1,200 acres (4.9 km²) in the northwest sector of OML123. Production is from two "I" sands of Miocene age at depths between approximately 6,300 ftss in Oron West and at 5,100 ftss in North Oron. In 2005, Addax Petroleum drilled nine appraisal wells on Oron West and five appraisal wells on North Oron in the first development phase of both fields.

In 2005, the Corporation designed and constructed a wellhead platform from which six horizontal production wells have been drilled. Currently production is constrained as it flows to the Akam platform where it is degassed prior to being pumped to the Knock Taggart. In 2006, a second wellhead platform is planned to be installed near the existing platform from which a further four wells are planned in 2006 comprising two horizontal production wells in North Oron and one appraisal and one horizontal production well in Oron West. In addition, an isolated appraisal well is planned in Oron West. A third wellhead is planned to be installed in the second half of 2006 on the southern extension of Oron West from which two water injection wells will be drilled followed by three horizontal production wells in 2007. In order to overcome the production constraint at Akam, a new pipeline from Oron to the Adanga Platform, bypassing Akam, is also planned for 2006. The Corporation anticipates production from the Oron West and North Oron fields to increase to approximately 17 mbbbls/d during 2006.

Akam

The Akam field was discovered in 1980 and has been producing since 1984. In the first nine months of 2005, Akam produced an average of 1.0 mbbbls/d of oil from three deviated wells and one horizontal well with an average watercut of 87 per cent. Oil gravity is 36° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Akam field to be 1.4 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Akam field is located in 15 to 20 m water depth and covers an area of approximately 1,100 acres (4.6 km²) in the central part of OML123. Production is from four stacked "P" sand reservoirs of Miocene age at depths between 4,300 ftss and 6,200 ftss although most of the current production in the Akam field comes from two reservoirs between 4,800 ftss and 5,500 ftss. Some of the Akam accumulations may extend marginally into the adjacent license to the west held by the ExxonMobil/NNPC joint venture.

The Corporation plans to drill one appraisal and one horizontal development well at Akam in mid 2007. Further drilling plans will be contingent on the outcome of this well.

Bogi

The Bogi field was discovered in 1983 and has been producing since 1988. In the first nine months of 2005, Bogi produced an average of 0.4 mbbbls/d of oil from one horizontal well with an average watercut of 42 per cent. Oil gravity is 20° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Bogi field to be 0.3 mmbbls.

The Bogi field is located in water depth of approximately 40 m and covers an area of approximately 150 acres (0.6 km²) in the southern part of OML123. Production is from a 20 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,950 ftss. The eastern flank of the field straddles the international boundary with Cameroon as defined by the International Court of Justice in October 2002. See "Properties and New Ventures — Nigeria Country Discussion — International Relations". As a result, the Bogi Platform is now located in the Disputed Area. No further drilling activity or significant capital expenditures are planned for this field.

Mimbo

The Mimbo field was discovered in 1984 and has been producing since 1989. In the first nine months of 2005, Mimbo produced an average of 0.4 mbbbls/d of oil from one horizontal wells with an average watercut of

32 per cent. Oil gravity is 30° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Mimbo field to be 0.7 mmbbls and gross proved plus probable reserves to be 1.0 mmbbls.

The Mimbo field is located in water depth of approximately 40 m and covers an area of approximately 420 acres (1.7 km²) in the southern part of OML123. Addax Petroleum is producing from a 30 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,910 ftss. No further drilling activity or other capital expenditures are planned for this field.

Ukpam

The Ukpam field was discovered in 1986 and has been producing since 1989. In the first nine months of 2005, Ukpam produced an average of 0.1 mbbbls/d of oil from two wells with an average watercut of 89 per cent. Oil gravity ranges between 38° and 45° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ukpam field to be 0.2 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Ukpam field is located in 10 m water depth and covers an area of approximately 420 acres (1.7 km²) in the central part of OML123. Addax Petroleum is producing from three stacked reservoirs in the "AC-1", "P-4" and "I" sands of Miocene age at depths between 5,000 ftss and 7,800 ftss. No further drilling activity or other capital expenditures are planned for this field.

Adanga North

The Adanga North field was discovered in 1986 and appraised in 1996, and further appraisal and development plans are in progress. Oil gravity is 19° API. As at September 30, 2005, NSAI estimates gross proved plus probable reserves to be 11.0 mmbbls.

The Adanga North field is located in 10 m water depth and covers an area of approximately 1,100 acres (4.5 km²) in the central part of OML123. Two stacked reservoirs each contain a 18 m thick oil rim with an associated gas cap in good quality sands of Upper Miocene age at depths between 3,300 ftss and 3,650 ftss.

In 2006, the Corporation plans to carry out an extended production test to establish the optimal development plan for the Adanga North field. As part of this process, Addax Petroleum built and installed a wellhead structure from which one appraisal well was drilled in the fourth quarter of 2005 and confirmed the eastern extension of the field. A horizontal well for an extended well test is currently being drilled. If the production test is successful, the field would be developed as a satellite to the Adanga Platform with production expected to start in 2007 at an estimated rate of approximately 12 mbbbls/d. The development plans for the field would include the construction of a four km long pipeline to the Adanga Platform.

Unappraised Discoveries and Exploration

In addition to the existing fields, there are seven unappraised discoveries in OML123 which are the Oron gas discovery drilled in 1975, the Inagha, Adanga West and Ebughu NE-A oil discoveries drilled in 2002 and the Adanga East and Kita North oil discoveries drilled in 2005. Kita North may be a significant discovery as it encountered a total of 100 ft of oil in a reservoir at a depth of 4,750 ftss which tested at 1.0 mbbbls/d of 28° API gravity oil. As at September 30, 2005, NSAI estimates gross proved reserves for Kita North to be 6.9 mmbbls and gross proved plus probable reserves to be 9.2 mmbbls.

The Corporation has concluded an in-depth study of the remaining exploration potential of OML123 based upon full 3D seismic survey and existing well data. The study classed the remaining exploration potential into near field potential clusters, which can be drilled from or which are readily accessible to existing production facilities, and prospect clusters which may require additional platforms and pipelines to connect to existing facilities. Each cluster contains multiple prospects. Four near field potential clusters and five prospect clusters were identified.

Presently, two of the exploration clusters (Inagha and Kita North) have been drilled, both of which discovered oil. The most recent discovery, Kita North, was the most productive. In addition, one of the near field potential clusters has been successfully drilled (Adanga East) and the results are being evaluated. Following on from the recent exploration success on Kita North, the Corporation plans to expand its exploration and appraisal

drilling activity, subject to rig availability, including the Kita North area appraisal of the Oron gas discovery in 2006 and exploration of the Adanga North Graben and Antan prospect clusters in 2006 and 2007.

NSAI reports Addax Petroleum's gross prospective oil resources in OML123 as of September 30, 2005 to be 220 mmbbls (116 mmbbls risked).

Budgeted Capital Expenditures

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005, comprised of \$28 million for drilling and \$56 million for facilities, and \$383 million in 2006, as discussed below. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production, including the replacement of the Knock Taggart (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007), as well as a two-rig drilling program that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

<u>Field / Category</u>	<u>2006 Budgeted Capital Expenditures</u>			<u>Number of wells</u>
	<u>Drilling & Seismic</u> (\$million)	<u>Facilities & Other</u> (\$million)	<u>Total</u> (\$million)	
Infrastructure				
FPSO replacement	-	80	80	-
Gas lift and gas gathering	-	55	55	-
TPU purchase and Adanga Platform and TPU refurbishment	-	17	17	-
General maintenance	-	31	31	-
Subtotal	-	183	183	-
Field Development				
Oron West and North Oron	52	53	105	6
Adanga	55	-	55	5
Ebughu (and extensions)	25	-	25	3
Subtotal	132	53	185	14
Exploration and appraisal	15	-	15	2
Total	147	236	383	16

The Corporation estimates the total cost through 2007 of the proposed project to supply natural gas to the power plant at Calabar to be \$427 million. Of the total estimated capital expenditure for the proposed project, the Corporation estimates that \$81 million relates to the provision of gas gathering and gas lift infrastructure for associated gas. This \$81 million is included in budgeted capital expenditures and will be the direct responsibility of the Corporation to fund but will be recoverable under the terms of the OML123/124 PSC. Approximately \$55 million of this amount is budgeted to be spent in 2006, with the remainder to be spent in 2007. The balance of the total initial investment of \$346 million is related to non-associated gas production facilities, gas processing and compression facilities and the delivery pipeline to Calabar and is the responsibility of NNPC. Approximately \$264 million of this amount is expected to be spent in the fourth quarter of 2005 and in 2006, with the remainder to be spent in 2007. The Corporation is in discussions with NNPC to clarify the apportionment of the funding responsibility, including a provision whereby the Corporation would carry NNPC's capital investment in exchange for modifications to the OML123/124 PSC, including a temporary increased share of Profit Oil.

Addax Petroleum believes the 220 mmbbls (116 mmbbls risked) of gross prospective oil resources in OML123, as reported by NSAI, provide the Corporation with the opportunity to sustain a sizeable capital expenditure program in OML123 for the near and medium term.

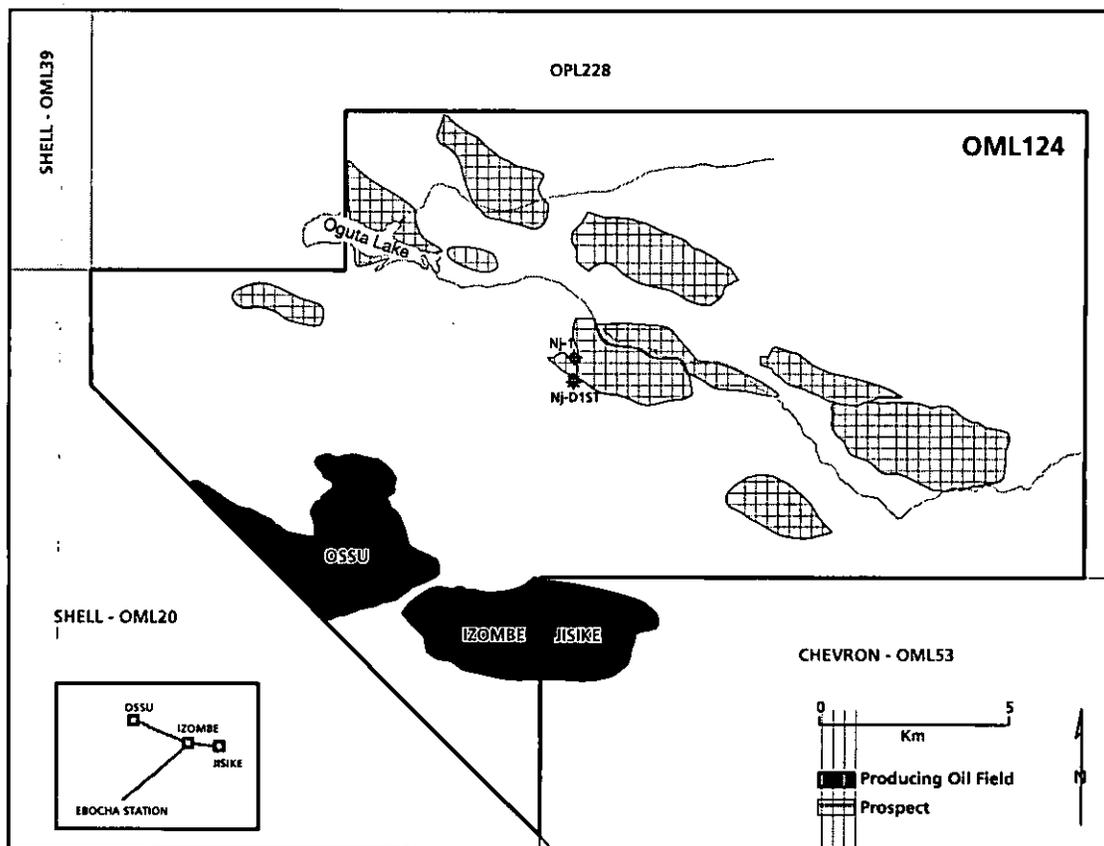

OML124

Overview

OML124 is the Corporation's smallest producing property as measured by reserves and production. For the first nine months of 2005, OML124 produced an average of 3.5 mmbbls/d of oil from ten wells with an average watercut of 84 per cent. Oil gravity ranges between 29° API and 48° API. With the exception of a one week long stoppage to production during September 1999, there has been no unplanned disruption to production from OML124. As at September 30, 2005, NSAI estimates gross proved reserves for OML124 to be 10.0 mmbbls and gross proved plus probable reserves to be 12.6 mmbbls. The Corporation expects production from OML124 to be approximately 4 mmbbls/d in 2006.

OML124 is located onshore in Imo State, approximately 100 km north of Port Harcourt, and covers an area of 74,100 acres (300 km²) on the northeast edge of the Niger Delta. OML124 contains two producing fields, Ossu and Izombe, the latter extending as the Jisike field to the southeast into the adjacent OML53 held by the Chevron/NNPC joint venture. OML124 also contains ten exploration prospects the most attractive of which is Okaka prospect in the southeast part of the property. Total capital expenditures for OML124 are budgeted to be \$9 million in the fourth quarter of 2005 and \$27 million in 2006.

OML124

Production and Reserves

The following table summarizes the production and reserves in OML124.

Field	Number of Wells ⁽¹⁾	Average Oil Production		Gross Oil Reserves ⁽²⁾		
		9 Months Ended September 30, 2005	2004	Proved	Probable	Proved Plus Probable
		(bbls/d)	(bbls/d)	(mmbbls)	(mmbbls)	(mmbbls)
Izombe	7	1,810	2,160	5.6	2.0	7.6
Ossu	6	1,700	1,650	4.4	0.6	5.0
Total	13	3,510	3,810	10.0	2.6	12.6

Notes:

(1) Number of wells includes shut-in wells.

(2) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Production Facilities

The Ossu and Izombe fields are operated as a common production area. Production facilities include the Izombe Flow Station, gas compressors, water injection pumps and three flow lines from Ossu to the Izombe Flow Station. The Corporation has an agreement with a Chevron/NNPC joint venture whereby crude oil produced from the Chevron/NNPC Jisike field is processed at the Izombe Flow Station in return for the payment of a tariff to Addax Petroleum. The Ossu, Izombe and Jisike crudes are all processed at the Izombe Flow Station and transported via an export pipeline to Ebocha. From Ebocha, the oil is transported through the Agip/NNPC joint venture's pipeline to their Brass River Terminal.

At the present time some of the associated gas being produced with the oil from OML124 is re-injected to aid oil production and the remainder is flared. The Corporation together with a consortium of private Nigerian investors, is contemplating the construction of an LPG facility. The Corporation has completed conceptual design studies relating to the supply of gas to and construction of this LPG facility which would be located adjacent to the existing Izombe Flow Station. This project requires a supply of a total of 40 mmcf/d of associated and non-associated gas from the Ossu and Izombe fields. The LPG plant is expected to produce approximately 75 t/d of propane, approximately 75 t/d of butane and approximately 1 mbbbls/d of natural gasoline and approximately 35 mmcf/d of residue lean gas. The Corporation expects that the natural gasoline would be blended with oil at the Izombe Flow Station for export. Butane and some blended propane would be marketed locally. Subject to access to appropriate export facilities, butane and propane may be exported and the residue lean gas would be used for local power generation, as LNG feed stock or re-injected into the Izombe and Ossu fields. See "Properties and New Ventures — Nigeria Properties — OML124 — Budgeted Capital Expenditures".

Fields

Izombe

The Izombe field, discovered in 1974 and producing since 1975, is Addax Petroleum's principal producing field in OML124. In the first nine months of 2005, Izombe produced an average of 1.8 mbbbls/d from six wells with an average watercut of 83 per cent. Oil gravity ranges between 35° and 40° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Izombe field to be 5.6 mmbbls and gross proved plus probable reserves to be 7.6 mmbbls.

The Izombe field is located in a relatively densely populated dry land area covered by farmlands, shrubs and secondary rain forest, at an elevation of 45 to 60 m above mean sea level, and covers an area of approximately 1,600 acres (6.4 km²) in the southern part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 5,300 and 7,400 fss, but most of the production comes from one reservoir located at approximately 5,400 fss. Most accumulations extend to the east into the Jisike field operated by Chevron.

In 2006, the Corporation plans to drill an oil production well, a water injection well and to work over an existing oil production well in the Izombe field.

Ossu

The Ossu field was discovered in 1973 and has been producing since 1976. In the first nine months of 2005, Ossu produced an average of 1.7 mmbbls/d from four wells with an average watercut of 85 per cent. Oil gravity ranges between 29° and 48° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ossu field to be 4.4 mmbbls and gross proved plus probable reserves to be 5.0 mmbbls.

The Ossu field is located approximately 4 km to the west of the Izombe field at an elevation of 25 m above mean sea level in a drowned river valley affected by seasonal flooding which limits the access to the field during the rainy season. The field covers an area of approximately 2,300 acres (9.3 km²) in the south western part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 4,500 and 8,500 ftss, but most of the production comes from three reservoirs at depths between 4,500 ftss and 6,850 ftss. Some accumulations extend to the west into the adjacent OML20, which is operated by the Shell/NNPC joint venture.

In late 2005, the Corporation plans to start a drilling and well work over program, including drilling one appraisal and two oil production wells, and working over two existing oil production wells in 2006 in the Ossu field.

Unappraised Discoveries and Exploration

In 2002, the Corporation concluded a comprehensive acreage and prospect evaluation study based on 3D and 2D seismic surveys and existing well data. Several prospects with possible commercial potential were identified in the north eastern sector of OML124. The Corporation intends to drill the Okaka exploration prospect in 2006, which will be the first exploration well to be drilled by the Corporation in OML124.

NSAI reports Addax Petroleum's gross prospective oil resources in OML124 as of September 30, 2005 to be 32 mmbbls (14 mmbbls risked).

Budgeted Capital Expenditures

Total capital expenditure budgeted for OML124 is \$9 million for the fourth quarter of 2005 and \$27 million for 2006.

In addition to its budgeted capital expenditures for 2006, the Corporation estimates the total investment to complete the contemplated LPG project would be \$94 million of which \$60 million would be incurred by Addax Petroleum to supply feed gas and \$34 million would be incurred by Addax Petroleum and by other private sector investors to fund the construction of the LPG plant. It is expected that private sector investors would hold a 60 per cent interest in the LPG plant and the Corporation would hold the remaining 40 per cent interest. All of the facilities would be constructed and initially operated by Addax Petroleum. The Corporation intends to make a final investment decision regarding the LPG project by the end of the first quarter of 2006. If the Corporation decides to proceed, it expects the plant to be operational in 2007. The Corporation estimates its total share of the capital investment would be approximately \$74 million of which \$58 million is forecasted to be spent by the Corporation in 2006 with the balance of \$16 million to be spent in 2007 after the plant is operational. Of the Corporation's capital expenditure, the \$60 million incurred to supply feed gas would be recoverable over a five year period under the terms of OML123/124 PSC.

OPL90 and OPL225

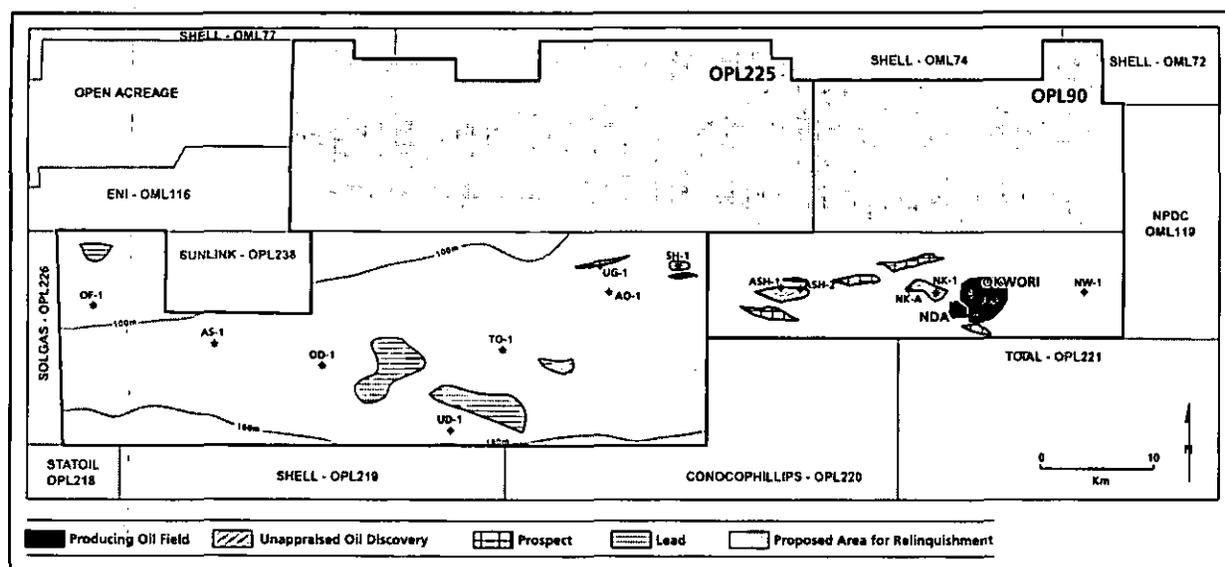

Overview

OPL90 and OPL225 are two contiguous blocks which represent Addax Petroleum's largest Nigerian properties as measured by area and also account for the majority of the Corporation's recent production growth. Production from OPL90 commenced in March 2005 and averaged 20 mmbbls/d for the month of October 2005. In the first nine months of 2005, OPL90 produced an average of 12.6 mmbbls/d of oil from six wells with no watercut. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OPL90 to be 27.9 mmbbls and gross proved plus probable reserves to be 43.7 mmbbls. As at September 30, 2005,

OPL225 had no reserves or production. The Corporation expects production from OPL90 and OPL225 to be approximately 33 mmbbls/d in 2006.

OPL90 and OPL225 are located 90 km offshore south of Port Harcourt, close to the edge of the continental shelf, in water depths ranging between 50 and 210 m and cover a combined area of 327,200 acres (1,324 km²). The southern half of OPL90 has been completely surveyed by 3D seismic and contains one producing oil field (Okwori), four undeveloped oil discoveries, one of which (Nda) is currently producing from an extended well test and will be developed in 2006, and four exploration prospects. OPL225 has been surveyed principally by 2D seismic and it contains one undeveloped oil discovery, several non-commercial gas discoveries and a number of shallow and deep leads. Addax Petroleum plans to acquire a 800 km² 3D seismic survey across this southern area of OPL225 at the end of 2005. Total capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006.

OPL90 and OPL225 Properties

Production and Reserves

The following table summarizes the reserves and production in OPL90 and OPL225. Production from the Okwori field in OPL90 started in March 2005. Production from the Nda field in OPL90 is from an extended well test following which a full field development is planned to take place.

Field	Number of Wells	Average Oil Production		Gross Oil Reserves ⁽¹⁾		
		October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Probable (mmbbls)	Proved Plus Probable (mmbbls)
Okwori	5	16,360	10,080	20.7	12.8	33.5
Nda	1	3,590	2,530	7.2	3.0	10.2
Total	6	19,950	12,610	27.9	15.8	43.7

Note:

(1) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

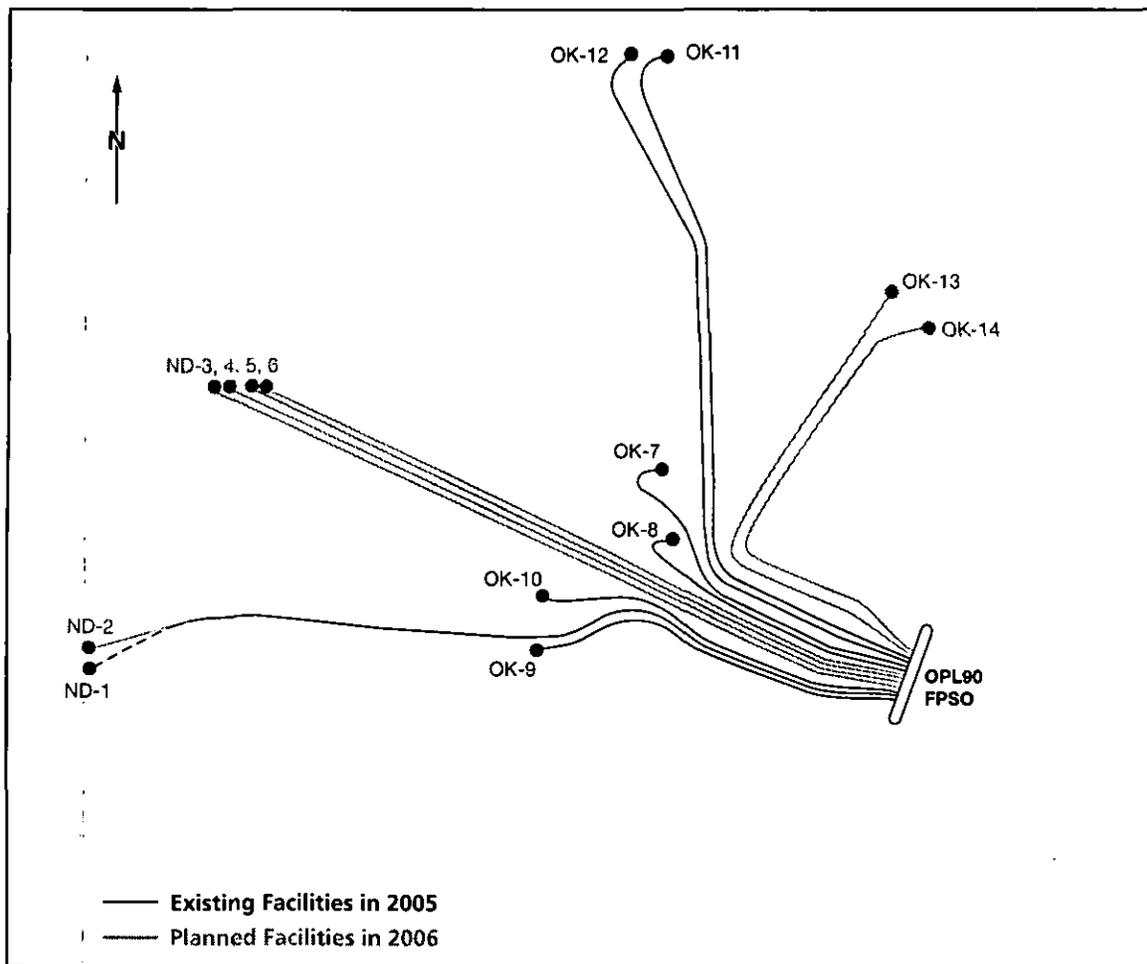

Production Facilities

The Okwori and Nda fields in OPL90 are operated as a common development area. Individual wells in each field are connected to the FPSO Sendje Berge by individual sub-sea flow lines. At the OPL90 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The OPL90 FPSO has a nameplate processing capacity of 38 mbbbls/d of crude oil, a total liquids (oil and water) processing capacity of 60 mbbbls/d and a storage capacity of approximately two mmbbls of crude oil. The OPL90 FPSO is under a time charter from Sendje Berge Ltd., a company within the Norwegian shipping group Bergesen now owned by Worldwide Shipping of Hong Kong. The term of the charter expires in February 2009, with extension periods of up to an additional four years at the Corporation's option.

The production facilities at OPL90 have been designed to accommodate additional production from future satellite developments, should planned exploration drilling result in commercial oil discoveries. One such discovery, the Nda field, has been producing to the OPL90 production facilities under an extended well test since March 2005 and is awaiting full field development. The Corporation anticipates that throughout 2006 and into 2007 there will be continuous drilling and well hook-up activity on the property.

OPL90 Production Facilities

The Corporation believes that the known associated gas resource on OPL90 is insufficient to justify commercial development. To cease flaring on OPL90, Addax Petroleum has proposed to NNPC to construct a gas gathering pipeline from the OPL90 FPSO to a new gas trunk line to be built by an adjacent operator. Construction of the gas gathering pipeline is expected to take place in 2006 or 2007. The capital expenditures for the gas gathering pipeline will be funded by Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — OPL90 and OPL225 — Budgeted Capital Expenditures".

Fields

Okwori

The Okwori field, discovered in 1972 and appraised in 1973 by Occidental, was further appraised in the mid-1990s by Ashland and declared commercial in 1996. Field development planning was commenced by Ashland at that time, but was suspended when Ashland's Production Sharing Contracts were terminated by a settlement agreement with the Nigerian government in 1998. See "Addax Petroleum — Corporate History".

Addax Petroleum began development of the Okwori field in July 2004 and commenced production from the Okwori field in March 2005. For the month of October 2005, the Okwori field produced an average of 16.4 mbbbls/d of oil from five wells with an average watercut of 3 per cent. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Okwori field to be 20.7 mmbbls and gross proved plus probable reserves to be 33.5 mmbbls.

The Okwori field is located in 110 to 150 m water depth and covers approximately 2,700 acres (11 km²) in the southern part of OPL90. The field development plan envisages production from seven stacked reservoirs in the sands of Plio-Miocene age at depths between 5,100 and 9,300 ftss, but the majority of the production is expected to come from two reservoirs (7,000 to 9,300 ftss). The stacked reservoir configuration of the field requires that production wells be selectively completed, choosing the optimum oil zones to be produced.

As of the end of October 2005, six production wells have been successfully drilled on the Okwori field of which five have been placed on production and the sixth is awaiting tie-in to the OPL90 FPSO. All wells have been fitted with downhole expandable sand screens designed to exclude the production of sand dislodged from reservoir rock that may occur. At the end of October 2005, the sand screen in one well had failed and is anticipated to fail shortly in a second well. Remedial treatment of these wells is planned in late 2005 and/or early 2006. The Corporation plans to drill two more development wells to complete the field development plan and is reviewing the methodology for control of sand production. The Corporation plans to complete the Okwori field development drilling program in 2006 and production is expected to average approximately 25 mbbbls/d in 2006.

When the OPL90/225 PSC was awarded to Addax Petroleum in 1998, Total, which held a 50 per cent farm-in interest in Ashland's Production Sharing Contract, was given an option to retain a 50 per cent interest in the area. This option was replaced by a reimbursement agreement between Total and Addax Petroleum dated October 24, 2000, whereby Total is entitled to an eight per cent net profit interest in only the Okwori field.

Nda

The Nda field was discovered by Addax Petroleum in July 2004. Oil in commercial quantities was encountered in three stacked reservoirs. The discovery well was re-entered in February 2005 and completed on two of the three main reservoirs in order to carry out an extended well test. The well is tied back to the OPL90 FPSO and has produced a total of 0.7 mmbbls at September 30, 2005. For the month of October 2005, the Nda field produced an average of 3.6 mbbbls/d from one well with no water cut. As at September 30, 2005, NSAI estimates gross proved reserves for the Nda field to be 7.2 mmbbls and gross proved plus probable reserves to be 10.2 mmbbls.

The Nda field is located adjacent to the Okwori field in a similar water depth and covers approximately 250 acres (1 km²) in the southern part of OPL90. The field will be producing from three stacked reservoirs in the sands of Plio-Miocene age at depths between 6,700 and 8,150 ftss.

The Corporation has finalized a development plan for the Nda field, which has been submitted to the Nigerian government, and intends to drill an up-dip appraisal well, necessary for field development approval, in early 2006. The field development plan comprises drilling four horizontal wells during 2006, individually tied back to and controlled from the OPL90 FPSO. The Nda field is presently producing from one well under an extended well test before additional development wells are expected to commence production in the second half of 2006 and is expected to average approximately 20 mbbbls/d for the last six months of the year.

Unappraised Discoveries and Exploration

In addition to the Okwori and Nda fields, there have been three further uneconomic oil discoveries by previous operators, of which the most significant well was drilled in 1972 in OPL225 and tested at 6.1 mbbbls/d of oil. Natural gas was also encountered in two of the oil discoveries. Addax Petroleum commenced its exploration

on OPL90 and OPL225 in 2004 by drilling one exploration commitment well in each lease. The exploration well drilled by the Corporation in OPL225 found two small accumulations of non-associated gas. The exploration well drilled by the Corporation in OPL90 discovered the Nda field as discussed above.

In late 2005 and during 2006, Addax Petroleum intends to undertake a concerted exploration and appraisal campaign. On OPL90 three exploration and appraisal wells are budgeted in 2006 on the Okporo, Nda West and Nkelu Deep structures, all of which offer tie-back development opportunities to the OPL90 FPSO. On OPL225, the Corporation intends to acquire a 800 km² 3D seismic survey at the end of 2005 which will be processed during 2006 to identify further exploration drilling opportunities.

NSAI reports Addax Petroleum's gross prospective oil resources in OPL90 and OPL225 as of September 30, 2005, to be 7 mmbbls (5 mmbbls risked).

Budgeted Capital Expenditures

Capital expenditures on OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 comprised of \$29 million for facilities and \$39 million for drilling and \$290 million in 2006, as discussed below. These expenditures are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. The budgeted capital expenditures will fund a one-rig drilling program in OPL90 and OPL225 that includes:

- completion of development drilling in the Okwori field;
- development drilling in the Nda field and tie back to the OPL90 FPSO; and
- seismic data acquisition and drilling of three exploration wells.

<u>Field/Category</u>	<u>2006 Budgeted Capital Expenditures</u>			<u>Number of Wells</u>
	<u>Drilling & Seismic</u> <u>(\$million)</u>	<u>Facilities & Other</u> <u>(\$million)</u>	<u>Total</u> <u>(\$million)</u>	
Nda	106	55	161	4
Okwori	32	19	51	2
Gas gathering pipeline	—	16	16	—
Subtotal	138	90	228	6
Exploration and appraisal	59	3	62	3
Total	197	93	290	9

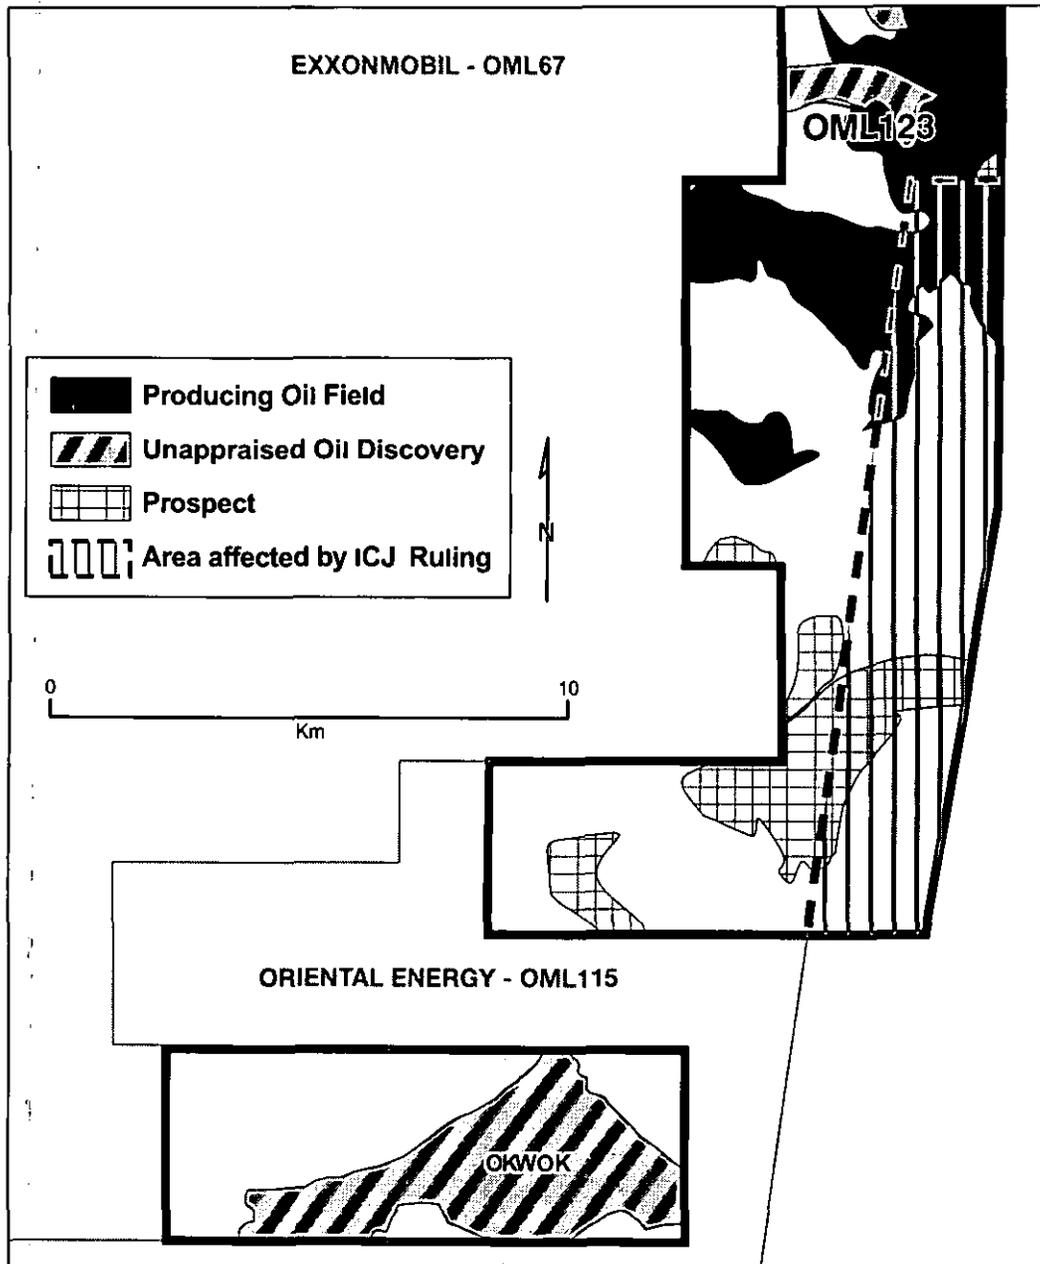

The Corporation estimates that the total cost to construct the proposed gas gathering pipeline will be \$35 million to be spent before the end of 2007. The budgeted capital expenditures for 2006 includes \$16 million and the balance of \$19 million is expected to be spent in 2007, all of which is expected to be recoverable under the OPL90/225 PSC.

Okwok Property

Overview

The Okwok Property is located approximately 45 km off the Nigeria coast in 35 to 50 m water depth due south of the town of Calabar. The Okwok Property is within ExxonMobil's licence area OML67, immediately to the south of OML123.

Okwok Property

In late 2000, the governments of Nigeria and Equatorial Guinea concluded a maritime boundary treaty that removed 62 km² from an Oil Mining Lease held by Oriental Energy that became part of Equatorial Guinea's Block B, the main beneficiary of which was ExxonMobil. Oriental Energy successfully petitioned the Nigerian government for compensation and in October 2001 the Nigerian government approved a compensation area for Oriental Energy in ExxonMobil's OML67 that included the Okwok Property. The farm-in agreement between Oriental Energy and ExxonMobil is yet to be concluded.

In September 2005, Addax Petroleum entered into the Oriental Joint Venture Agreement pursuant to which the Corporation has agreed to acquire a 40 per cent interest in the Okwok Property. The Oriental Joint Venture Agreement will become effective once the farm-in agreement between Oriental Energy and ExxonMobil is signed by the two parties and government approval is received. Pursuant to the Oriental Joint

Venture Agreement, Addax Petroleum will make a cash payment of \$35 million to Oriental Energy and will initially fund all capital and operating costs. During the cost recovery period, the Corporation will be entitled to 80 per cent of production from the Okwok Property until all capital costs have been recovered by the Corporation after which Addax Petroleum and Oriental Energy will be entitled to their pro rata share of production. As broker of the Oriental Joint Venture Agreement, Sovereign Oil & Gas Company II LLC will receive an overriding royalty interest of one per cent of all production from the Okwok Property.

Production and Reserves

There has been no production to date from the Okwok Property. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.

Production Facilities

Addax Petroleum believes that there will be significant synergies for the Okwok Property and OML123 as the Okwok Property will be developed using production, storage and offloading facilities on the OML123 FPSO vessel approximately 12 km to the north. Facility sharing in this manner will allow the Corporation to develop the Okwok Property in a cost effective manner while also benefiting unit operating costs at OML123.

Field Description

The Okwok Property was discovered in 1967 by Mobil, with the first well encountering a gross oil bearing interval of approximately 70 ft in two main zones. The second well was drilled in 1968 to appraise a fault block to the east of the discovery well and encountered a gross oil bearing interval of approximately 150 ft. Two further wells have been drilled in the immediate area, the most recent of which was drilled by Oriental Energy and ConocoPhillips in 1993. Both of these wells were drilled on the edge of the main Okwok Property structure and while they only encountered minimal hydrocarbons they are useful in assisting to delineate the structure. None of the wells have been production tested. The Okwok Property has been surveyed by two 3D seismic surveys, the most recent of which was in 2004.

The two main reservoirs are interpreted to be part of the Agbada formation and are of Pliocene age. Reservoir depths vary between 2,750 and 4,000 ftss. Due to the shallow nature of the reservoir, the oil is assumed to have a density of around 20° API. This is supported by a sample taken from an offset well, drilled 10 km to the east of the Okwok Property, which recovered 23° API oil from an interval which correlates with one of the two main zones in the Okwok Property.

Budgeted Capital Expenditures

The development of the Okwok Property is expected to commence in 2006 and the Corporation's capital expenditures are budgeted to be \$72 million in 2006, including the farm-in fee of \$35 million payable by Addax Petroleum to Oriental Energy contingent on the Oriental Joint Venture Agreement becoming effective. The remainder of the budgeted capital expenditures will fund the drilling of three appraisal wells and development planning studies. Subject to appraisal drilling results, the Corporation anticipates the Okwok Property to be developed using a central production processing platform and two satellite wellhead platforms connected by pipelines to the OML123 FPSO. The Corporation's development plan anticipates first oil from the Okwok Property in early 2008.

Oil Sales Arrangements

ABV purchases the Corporation's entitlement of crude oil from OML123, OML124 and OPL90 pursuant to the Crude Oil Supply Agreements. See "Interest of AOG in Material Transactions".

Crude oil produced from OML123 is exported from the Antan Terminal and sold as Antan Blend. The Antan Blend includes oil delivered by the OML114 Parties. The Antan Blend may, in the future, include oil production from the Okwok Property in the event that it is developed by Addax Petroleum.

Crude oil produced from OML124 is transported by pipeline to the Brass River Terminal and commingled with crude oil from several third party oil fields. The resulting blend, known as Brass River Blend, is exported and sold at international prices.

Crude oil produced from OPL90 is exported from the Okwori Terminal and sold as Okwori Blend. The first sale of Okwori Blend took place in June 2005 and to date there have been five liftings in total. Marketing knowledge of the Okwori Blend is at an early stage. Going forward the Corporation anticipates that the Okwori Blend will sell at a premium relative to the Brent Crude price.

Addax Petroleum Crude Oil Premium/(Discount) to Brent Crude (Volume Weighted)⁽¹⁾

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
Sales and Marketing Volumes (mmbbls)				
Antan Blend ⁽²⁾	12.6	13.3	11.8	10.0
Brass River Blend	0.8	1.3	2.2	1.8
Okwori Blend	2.6	-	-	-
Dated Brent Crude Price (\$/bbl)	53.54	38.22	28.84	24.98
Addax Petroleum Average Realized Prices (\$/bbl)				
Antan Blend ⁽²⁾	50.17	36.56	27.49	24.04
Brass River Blend	54.42	39.37	29.10	25.51
Okwori Blend	60.60	-	-	-
Premium/(Discount) to Brent Crude (\$/bbl)⁽¹⁾				
Antan Blend ⁽²⁾	(3.51)	(1.88)	(1.27)	(1.36)
Brass River Blend	0.79	0.49	0.39	0.19
Okwori Blend	0.38	-	-	-

Notes:

- (1) Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.
- (2) The API gravity of the Antan Blend is dependent on the proportional mix of crudes at any time. Where future individual oil field developments have lower API gravities than the current API gravity of the Antan Blend, then the API gravity of the Antan Blend may be reduced at that time.

Property Boundaries

Under the International Court of Justice ruling of October 2002, the Disputed Area includes a small part of OML123 (8,400 acres, 33.9 km²), including the Bogi Platform. The Joint Border Commission which was set up by the governments of Nigeria and Cameroon to study the implications of the ruling has not yet reached a decision about how the Corporation's operations will be treated. The Disputed Area has been excluded from the acreage and property descriptions in this prospectus. Reserves presented in this prospectus exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

In 2003, in accordance with the terms of the OPL90/225 PSC, Addax Petroleum was required to relinquish 50 per cent of the area of OPL90 and OPL225, excluding areas in which petroleum had been discovered in commercial quantities. The Corporation held discussions in 2003 and 2004 with NNPC regarding the acreage to be relinquished but no formal agreement has been concluded. The area proposed for relinquishment for OPL90 and OPL225 has been excluded from the acreage, property descriptions and reserve and resource estimates in this prospectus except as otherwise stated.

Discussions were also held with NNPC in the same period with regard to the same provisions in the OML123/124 PSC. In 2004, the existing OPL98 and OPL118 were converted into OML123 and OML124. The Corporation has received advice from Nigerian counsel that the formal grant of OML123 and OML124 supercedes these discussions but that further relinquishment will be required on the tenth anniversary of their July 2002 effective date.

Nigeria New Ventures

Overview

Addax Petroleum established a dedicated new ventures team in Nigeria in 2004. This team has made a number of bids and approaches for assets in Nigeria and has recently been successful in organizing and negotiating the Okwok Property transaction and is leading the discussions on the JDZ Block 4 opportunity. The Corporation targets Nigeria new ventures opportunities from three principal sources: (i) new bid rounds, (ii) farm-ins with indigenous Nigerian oil companies and (iii) farm-ins with major international oil and gas companies.

New Bid Rounds

Addax Petroleum participated in the most recent Nigerian bid round that was held in mid 2005 and intends to participate in future bid rounds when they occur. In this most recent bid round, Addax Petroleum finished second in the bidding for two assets and third for another. If the winning bidders do not provide evidence of their financial capability to pay for the signing bonus, Addax Petroleum will likely be invited to take the original position for which it bid but finished second. These assets are OPL135 and OPL280, both of which are onshore blocks close to OML124.

Farm-in to Properties held by Indigenous Nigerian Oil Companies

Indigenous oil companies have gained rights to a number of blocks under the Nigerian government's Marginal Field Development Program, with the 2003 bid round providing rights to a number of new indigenous oil companies. Often such companies seek partners to provide capital and technology needed to develop the properties. Addax Petroleum's Nigeria new ventures team has discussed and continues to discuss a number of these farm-in opportunities with such indigenous oil companies. It is likely that additional blocks will be made available to indigenous oil companies through relinquishment by existing operators and this could provide additional opportunities for the Corporation in Nigeria.

Farm-in or Acquire Properties held by Major International Oil and Gas Companies

The major international oil and gas companies that operate in Nigeria such as Shell, ExxonMobil, Chevron, Total and Agip, through joint ventures with NNPC, hold rights to significant acreage in the country, much of which is unexplored or not fully developed. Opportunities to farm-in or acquire properties in onshore or in shallow water regions are becoming increasingly available as major international oil and gas companies shift their focus to deep-water areas. Addax Petroleum's Nigeria new ventures team has had discussions with most of these major international oil and gas companies and has expressed an interest in taking over their acreage if acceptable terms can be negotiated.

Joint Development Zone

Overview

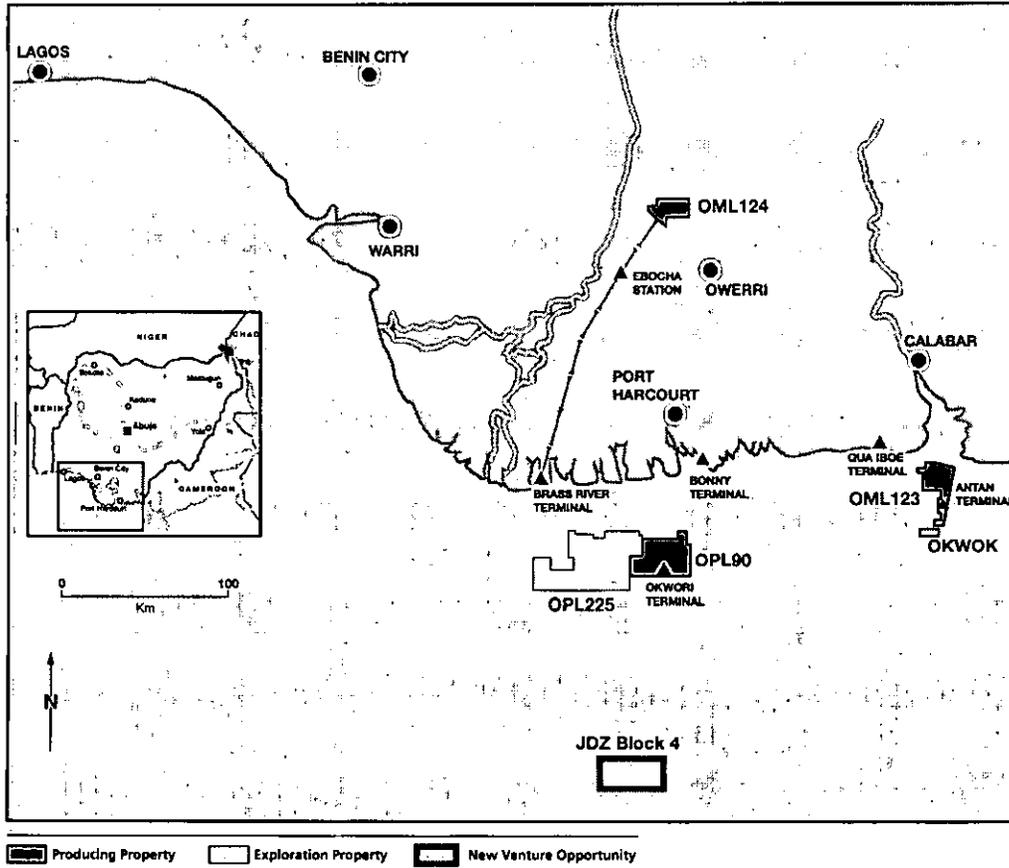

In 2001, Nigeria and the Democratic Republic of Sao Tome and Principe signed a formal treaty for the joint development of petroleum and other resources in the overlapping area of their respective maritime boundary claims. The treaty established the Joint Development Zone and an administrative body, the Joint Development Authority, to oversee the implementation of the treaty and underlying development plan.

The JDZ covers an area of 34,548 km² with water depths ranging from approximately 1,500 m in the northern part of the JDZ to over 3,500 m at its south western sector.

The first licensing round for the JDZ was announced in April 2003 from which the first Production Sharing Contract was signed in February 2005 for Block 1. The successful consortium to develop Block 1, which paid a signature bonus of \$123 million, included Chevron (51 per cent and operator), ExxonMobil (40 per cent) and Dangote-Energy Equity Resources (nine per cent). A second licensing round for the JDZ was announced in November 2004 which made an additional 5 blocks available to potential investors. The results of the second licensing round were announced in May 2005, with the successful bidders including such companies as Anadarko

Petroleum (awarded 51 per cent of Block 3), Noble Energy Inc. and ERHC Energy (jointly awarded 60 per cent of Block 4) and Devon Energy and Pioneer Natural Resources (jointly awarded 65 per cent of Block 2). In addition to the Block 4 Property, the Corporation is in preliminary discussions with some of the successful bidders on other blocks with a view to farming-in to one or more of these blocks.

Joint Development Zone

Note:

(1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Geological Description

The JDZ lies in the Gulf of Guinea which is one of the most prolific hydrocarbon regions in the world. Intensive exploration efforts over the last 35 years in and around the Niger Delta, in particular, have led to a succession of large discoveries, notably the Bonga, Agbami/Ekoli and Akpo discoveries in Nigeria and Zafiro and Alba in Equatorial Guinea.

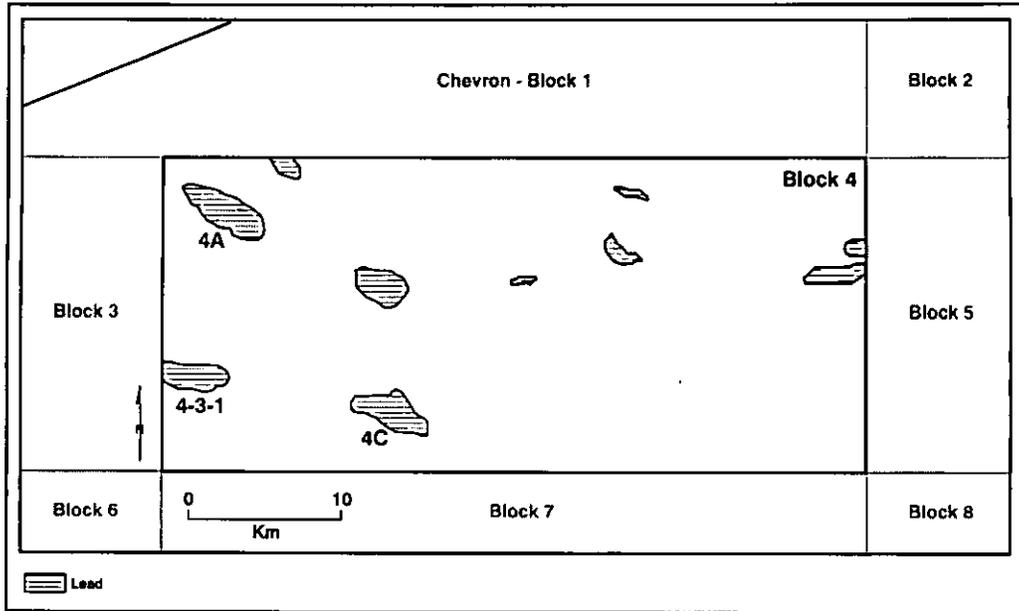

Modern seismic data and improved models of sand distribution indicate that in places prospective acreage can extend up to 300 km from the coastline of Nigeria. Extensive regional 2D and 3D seismic data shot by a number of seismic contractors provide a high quality regional dataset that has provided insight into the region's geological character.

Block 4 Property

Overview

The Block 4 Property is located in the northern end of the JDZ, approximately 170 km south of the Nigerian coastline and approximately 300 km north of the city of Sao Tome. Block 4 covers an area of 211,700 acres (857 km²) in water depths ranging from approximately 1,800 m to 2,200 m.

Block 4 Property

JDZ Agreements

In June 2005, the Joint Development Authority announced that Block 4 would be awarded to ERHC Energy/Noble Energy JDZ (60 per cent), Conoil p.l.c. (20 per cent), Hercules Oil Ltd./Centurion Energy (10 per cent), Godsonic Oil Co. (5 per cent) and Overt Ventures Ltd. (5 per cent). The winning bid provided for a signing bonus of \$90 million and a minimum work program of three exploration wells or a minimum expenditure of \$53 million. In late October 2005, Noble Energy announced that they were withdrawing from the ERHC Energy/Noble Energy JDZ consortium. ERHC Energy entered into a memorandum of understanding with Addax Petroleum in October 2005 pursuant to which Addax Petroleum replaced Noble Energy JDZ as operator for the consortium. In November 2005, Addax Petroleum entered into a participation agreement with ERHC Energy pursuant to which it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property in return for a payment of up to \$18 million and a full carry in respect of ERHC Energy's retained interest. Addax Petroleum would also be required to pay a signature bonus of up to \$23.4 million to the Joint Development Authority. A joint operating agreement and Production Sharing Contract would also have to be negotiated with the other participating parties and, in the case of the Production Sharing Contract, the Joint Development Authority before Block 4 is awarded.

Cameroon

Overview

Cameroon covers a total area of 475,440 km² and is approximately half the size of its western neighbour Nigeria.

Government

Cameroon was formed from a French administered UN trusteeship. In 1961, part of British Cameroon merged with the recently formed independent Cameroon. Cameroon is a republic with a multiparty presidential regime. Opposition parties were legalized in 1990. The current President, Paul Biya, has been in office since 1982 and was last elected with 71 per cent of the vote during the elections held in October 2004. The President is elected by popular vote for a seven-year term. The next elections are due in October 2011. Cameroon has a National Assembly with 180 seats, whose members are elected by direct popular vote to serve five-year terms, though the President can either lengthen or shorten the term of the legislature. The most recent National Assembly elections were held in June 2002.

International Relations

Cameroon is a member of the United Nations, Organization of African Unity, the Commonwealth of Nations and the Monetary and Economic Community of Central Africa. In 2002, the International Court of Justice ruled in favour of Cameroon on the long disputed Cameroon — Nigeria land and maritime boundary. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

Petroleum Industry

Petroleum exploration activity in Cameroon began in the 1950s and concentrated on the Douala Basin in the south of the country where several oil and gas discoveries were made. In the 1970s, activity switched to the Rio del Rey Basin in the west of the country which now accounts for most of Cameroon's current oil production. The Rio del Rey Basin is the eastern extension of the Niger Delta and all of its oil is produced from the Agbada formation.

Oil production in Cameroon began in 1977 and increased to approximately 170 mbbls/d in 1986 before slowly declining to approximately 62 mbbls/d in 2004. In comparison with its neighbours, oil exploration in Cameroon has been modest and is limited by its lack of access to deep-water offshore acreage given its geographical location. However, there has been renewed activity in recent years with the development of new fields. The major oil producers in Cameroon are Shell and Total.

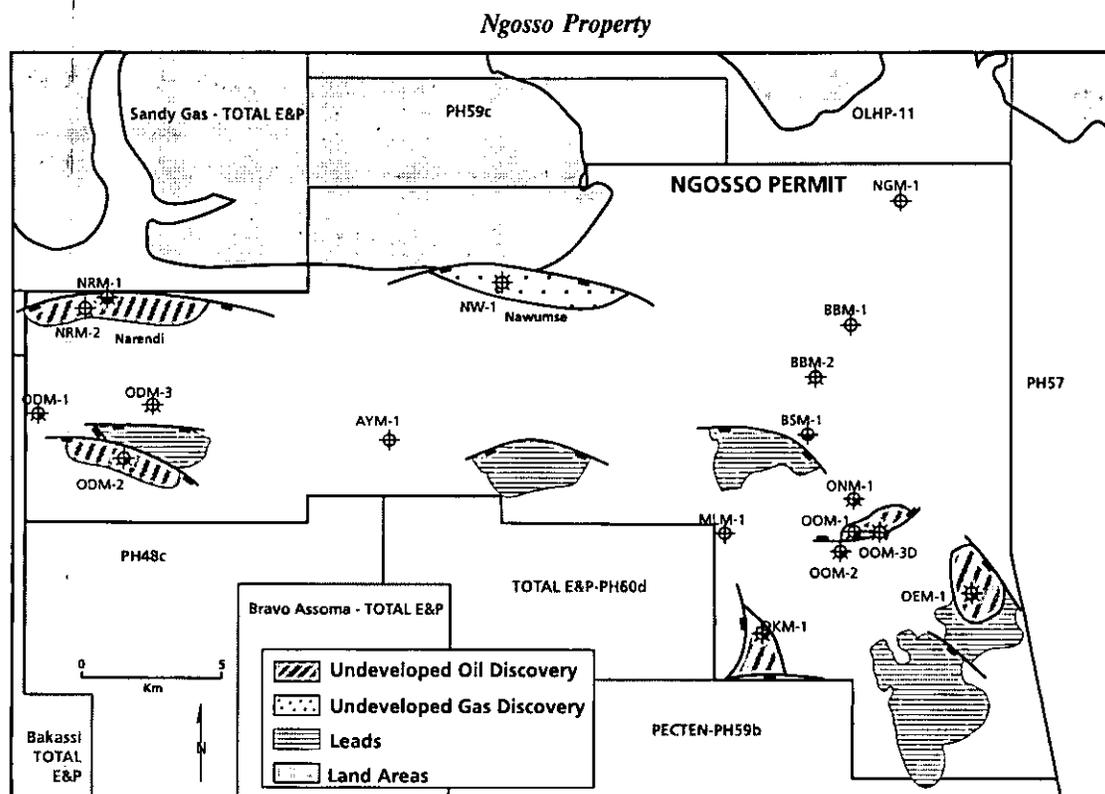

Ngosso Property

In December 2002, Addax Petroleum, together with Tullow Oil, signed the Ngosso Concession with the Government of Cameroon for the Ngosso Property. Addax Petroleum is the operator of the Ngosso Property, with a 60 per cent working interest. The Ngosso Concession has an initial term of three years with a minimum work commitment of 200 km² of 3D seismic and the drilling of two exploration wells. The Ngosso Concession can be renewed twice for an additional two years per renewal.

The Ngosso Concession's initial three year exploration period officially started in April 2004 but the Cameroonian government has indicated that it is prepared to extend the initial permit by one year in compensation for the delays incurred and official confirmation is awaited. The Cameroonian government has confirmed that the cost of work incurred prior to the Ngosso Concession's effective date will be recognized for tax and other purposes under the Cameroon Concession.

To date, Addax Petroleum has not been able to access part of the Ngosso Property, including the western prospective zone, due to the Nigeria — Cameroon border dispute. See "Properties and New Ventures — Nigeria Country Discussion — International Relations". The Ngosso Property itself is not part of the disputed territory, but operations require access to the southern part of the Bakassi Peninsula. The Joint Border Commission between Cameroon and Nigeria had set April 2004 as the period for the transfer of power to a new Cameroonian civil administration for the Bakassi Peninsula, and this should have allowed the Corporation to commence operations in the western part of the Ngosso Property. As the power transfer process is not complete, the Corporation intends to limit its seismic acquisition activities to the offshore with a minor impact on the coverage. The Corporation plans to acquire two 3D seismic surveys in the western and in the south eastern sectors of the Ngosso Property between December 2005 and April 2006.

The Ngoosso Property is located in the hydrocarbon prone Rio del Rey Basin, western offshore Cameroon and covers 117,100 gross acres (474 km²). To the east, north and west, the Ngoosso Property has a common border with two concessions operated by Total and with four open acreage areas. To the south, the Ngoosso Property is bordered by two concessions operated by Total and by Shell and by open acreage.

The Ngoosso Property lies adjacent to the shore in water depths of up to eight m. It has similar operational and subsurface geological conditions to the Corporation's OML123, located approximately 20 km to the west. The Ngoosso Property contains several hydrocarbon discoveries but has not seen any exploration activity for more than 20 years. The Corporation intends to evaluate discovered and potential oil and gas accumulations and, if commercial, develop them using proven technology including 3D seismic and horizontal drilling.

The Corporation has carried out a detailed prospectivity evaluation of the acreage based on existing 2D seismic and well data. Two petroleum plays have been penetrated by wells indicating the presence of good quality sand reservoirs. Both plays are characterized by gas and oil discoveries (oil API gravities ranging between 20° to 24° in the shallow play and 40° to 45° in the deep play) and contain a number of remaining leads.

NSAI reports Addax Petroleum's gross prospective oil resources in the Ngoosso Property, as at September 30, 2005, to be 28 mmbbls (19 mmbbls risked).

The Corporation's capital expenditures for Ngoosso are budgeted to be \$2 million for the fourth quarter of 2005 for seismic surveys of 170 km² and \$16 million in 2006 which includes \$10 million for seismic surveys of 120 km² and \$6 million for drilling two exploration wells.

Gabon

Overview

Gabon is one of sub-Saharan Africa's wealthier countries due to a relatively small population and substantial oil and mineral reserves.

Government

Gabon is a republic which gained independence from France in 1960. A multiparty political system and a new constitution were introduced in the early 1990s, though President Omar Bongo has been in power since 1967. The President is elected by popular vote for a seven-year term. The Parliament is comprised of the Senate and the National Assembly. The next elections for the National Assembly are scheduled for 2006. The most recent presidential election was held in November 2005 and Senate elections were held in early 2004.

International Relations

Gabon is a member of the United Nations, the Organization of African Unity and many other international organizations. As a proponent of regional economic integration, Gabon and five other countries agreed to form the Monetary and Economic Community of Central Africa to converge their macroeconomic policies, stabilize their common currency, create a common market and harmonize their sectoral policies.

Petroleum Industry

Oil was first discovered in Gabon in the 1950s and since then there has been significant development and exploration activity both onshore and offshore. Gabon's two biggest fields are located onshore. The Gamba field was discovered in 1963 with estimated reserves of 250 mmbbls and the Rabi field was discovered in 1985 with estimated reserves of 1,000 mmbbls.

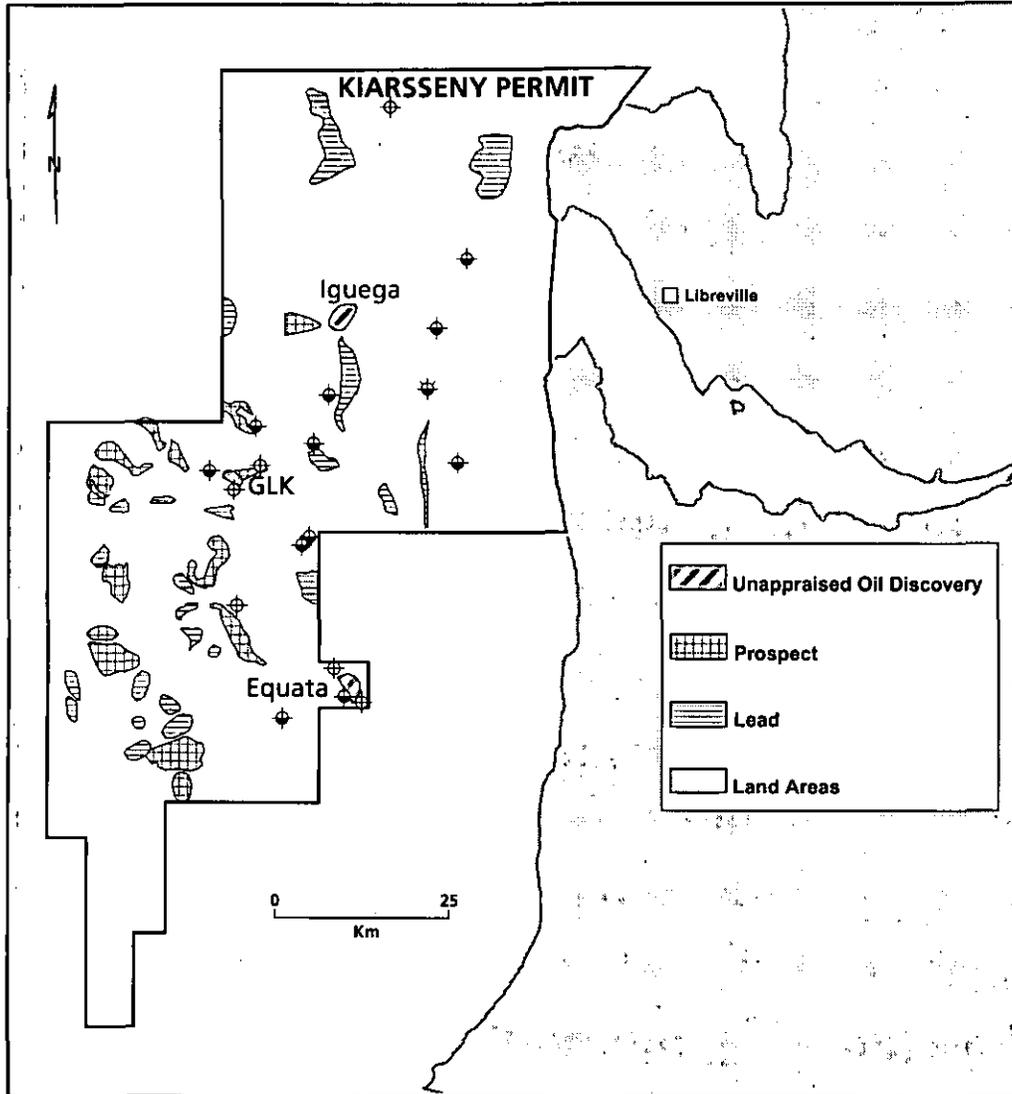

Gabonese oil production first peaked in 1975 at approximately 220 mbbbls/d and then reached a new high of approximately 360 mbbbls/d in 1996 after a period of decline. Current oil production is approximately 235 mbbbls/d, the majority of which is produced by Shell and Total.

Kiarsseny Property

On January 27, 2004, Addax Petroleum signed the Kiarsseny Agreement with Tullow Oil for the acquisition of 42.5 per cent of the Kiarsseny Production Sharing Contract for the Kiarsseny Property. Tullow Oil originally entered into the Kiarsseny Production Sharing Contract with the Government of Gabon in March 2003. In March 2004, Tullow announced that it had reduced its interest to 47.5 per cent through the farm-out of 10 per cent to Sonangol E.P.

The Kiarsseny Property covers an area of 1,345,000 gross acres (5,443 km²) and is located adjacent to shore in the Port Gentil Basin in water depths up to 800 m. It contains three oil discoveries and additional exploration potential. There are 2,643 km² of 3D seismic data, 18,750 km of 2D seismic data and 25 wells in the Kiarsseny Property.

Kiarsseny Property

The Port Gentil Basin contains a prolific hydrocarbon system. The majority of the producing reservoirs are sandstones with good porosities and permeabilities. Oil gravities from major oil fields vary from 20° to 47° API. NSAI reports Addax Petroleum's gross prospective oil resources in the Kiarsseny Property as at September 30, 2005, to be 11.0 mmbbls (10.0 mmbbls risked).

The Kiarsseny Production Sharing Contract is currently in its first exploration phase of four years, ending March 2007, and has a two well commitment. The first commitment well was drilled by Tullow Oil and Addax Petroleum in February 2004 to appraise the Topaze South structure and subsequently a side-track was drilled into the central Topaze compartment. The well failed to prove up sufficient reservoir development in both instances and was therefore abandoned.

The second commitment well is planned to commence drilling in late 2005 or early 2006 and will appraise the eastern flank of the Equata discovery. The main objective is to prove commerciality of this accumulation with an option to suspend the well as a future producing well if at least two reservoirs are oil-bearing and one can be successfully tested. Under the terms of the Kiarsseny Agreement, Addax Petroleum may be obligated to pay 100 per cent of a third well (up to \$5 million) if this second commitment well is successful. In the event that the second well is not successful, the well costs incurred in relation to a possible third well shall be borne by the parties in proportion to their participating interests.

An inventory of the remaining exploration potential of the block is currently being prepared following which an exploration target may be selected by the partners for a discretionary well to be drilled in 2006. The Corporation's capital expenditures for Kiarsseny are budgeted to be \$4 million for the fourth quarter of 2005 and \$6 million in 2006 for drilling one exploration well.

Other West Africa New Ventures

Along with the Corporation's properties in Cameroon and Gabon, Addax Petroleum is looking to expand further its activities in the West African Gulf of Guinea region. Additional countries in this target zone include Angola, Equatorial Guinea, Congo and Côte d'Ivoire. Addax Petroleum has made and is continuing to make efforts to gain a position in these countries for the following principal reasons:

- the Gulf of Guinea is a prolific basin with significant opportunities ranging from the onshore, through shallow offshore to deeper water;
- many geological plays are similar to those that the Corporation successfully operates and produces in Nigeria using horizontal drilling and other techniques that can be employed in these other regions; and
- AOG has been involved in trading activities throughout the region and has developed good contacts and a good reputation for its activities.

Addax Petroleum has made efforts to enter into properties in this region in the past primarily through direct negotiations with international companies who hold properties and, to a lesser extent, through direct negotiations with governments. While there are no transactions currently at an advanced stage of negotiations in the region, the Corporation intends to increase its staffing in order to redouble its effort in this regard.

North Africa New Ventures

Addax Petroleum is pursuing opportunities in North Africa, including the countries of Algeria, Libya and Egypt, as a core investment area for the following reasons:

- the presence of proven prolific hydrocarbon basins ranging from Tertiary/Mesozoic (Gulf of Suez, Western Desert, Sirte) to Palaeozoic (Ghadames, Murzuk and a number of basins in Algeria);
- the region's unique strategic position in respect to oil and gas export to major North American and European markets; and
- the relative stability of the political systems in these countries.

Consequently, Addax Petroleum has made, and continues to make, considerable efforts to gain a position in these North African countries. Addax Petroleum has passed the stringent pre-qualification processes and is recognized as a potential operator in Libya and Algeria. The Corporation is currently evaluating several farm-in opportunities and has participated in various bid rounds in several countries. Addax Petroleum has not yet been successful in any of the bid rounds in which it has participated.

Middle East New Ventures

Kurdistan Region of Iraq

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. The Taq Taq field is located 60 kilometres northeast of the giant Kirkuk oil field and the adjacent city of Kirkuk and 80 kilometres northwest of the city of Sulaimaniyah. The field area of Taq Taq is approximately 680 km².

Under the farm-in agreement with Genel Enerji A.S., Addax Petroleum is committed to expenditures in respect of the Taq Taq field initially of \$30 million and, conditionally, another \$50 million should it acquire any interest in any Production Sharing Contract in respect of the Taq Taq field.

Central and Southern Iraq

Apart from its activities in the Kurdistan Region, Addax Petroleum is currently positioning itself to obtain oil rights in the central and southern parts of Iraq, once the legal framework has been established and the security situation allows the Corporation to work efficiently and safely in the area. To this end, Addax Petroleum intends to enter into a collaboration agreement with the Ministry of Oil of the central Iraqi government to conduct field studies and train Iraqi oil and gas professionals.

Addax Petroleum believes that the future of the Iraqi oil industry will benefit from building-up a strong local, privately owned, industry and is therefore providing financial support to Nawras Oil Services Ltd., a company owned by Iraqi businessmen and former Iraqi Oil ministry executives. Nawras Oil Services Ltd. maintains relationships with the Ministry of Oil and is currently representing Addax Petroleum in Baghdad.

Iran

Addax Petroleum intends to enter into a study agreement with the National Iranian Oil Company. Under this agreement, Addax Petroleum, together with representatives of the National Iranian Oil Company, will study two undeveloped fields located offshore Iran. The study is expected to be completed within the next 12 months. Neither the activities under the study agreement nor any future activities based in Iran will be financed with the proceeds of this offering. All such Iranian activities will be financed with funds from other sources.

FISCAL TERMS

Nigeria

Addax Petroleum's interests in OML123 and OML124 and OPL90 and OPL225 are governed by Production Sharing Contracts with NNPC. The Corporation's proposed interest in the Okwok Property is governed by a Production Sharing Contract and will be subject to the terms of the Oriental Joint Venture Agreement and, once implemented, the Nigerian Marginal Field Terms. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Production Sharing Contracts

In May 1998, the Corporation and NNPC entered into a Production Sharing Contract covering OML123 and OML124 and a Production Sharing Contract covering OPL90 and OPL225. These contracts are supplemented by the provisions of the *Petroleum Act*, and the regulations thereunder, and the *PPT Act*. The fiscal terms of the Production Sharing Contracts were modified by the terms of the letter entitled "Fiscal Regimes for Onshore and Shallow Offshore PSC", issued on November 21, 2001 by the Office of the Presidential Adviser on Petroleum and Energy with retroactive effect to January 1, 2000. Both of the Corporation's Nigerian Production Sharing Contracts have a term of 20 years expiring in May 2018.

Under each of its Nigerian Production Sharing Contracts, Addax Petroleum bears the development and exploration risk for the properties concerned and funds all of the necessary capital expenditures. In return, the Corporation is entitled to sell sufficient oil to recover its capital expenditures and operating costs and to have a designated share of oil production remaining after the payment of royalties and taxes. Each of the Corporation's Nigerian Production Sharing Contracts impose minimum work obligations and Addax Petroleum has fulfilled the minimum work obligations. Taxation of each Production Sharing Contract is calculated independently of Addax Petroleum's other Production Sharing Contract and as a result, capital expenditure recovery is available to the extent of the profitability of the particular Production Sharing Contract on which the capital expenditures were incurred.

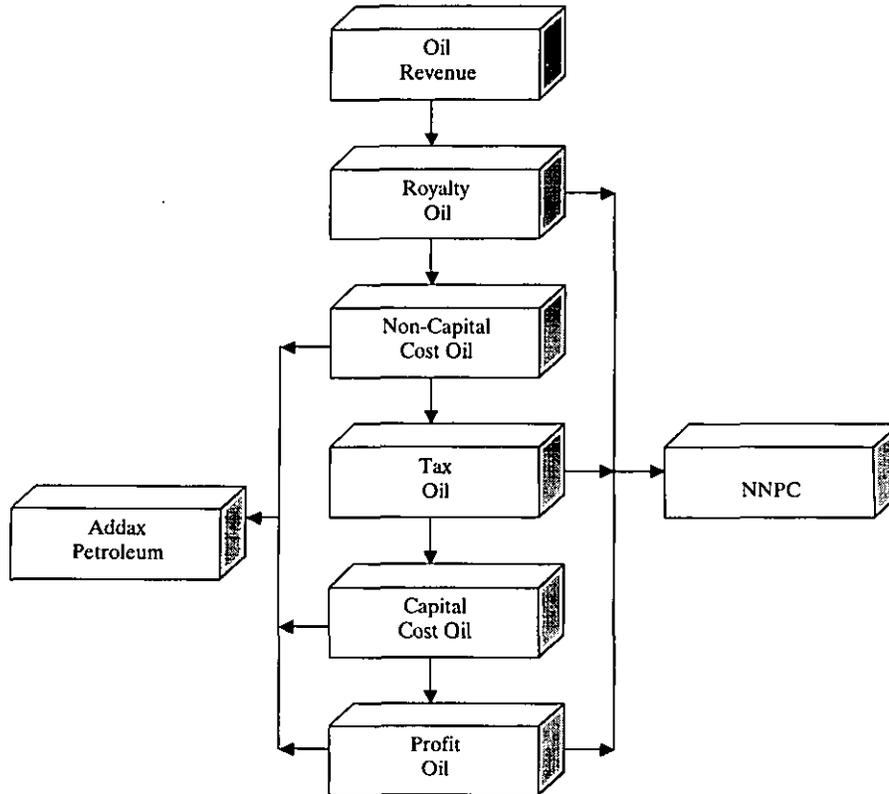

Oil produced under the Nigerian Production Sharing Contracts is notionally allocated to one of four categories in the following order.

1. Royalty Oil
2. Cost Oil

3. Tax Oil
4. Profit Oil

Royalty Oil and Tax Oil are allocated to NNPC while Cost Oil is allocated to Addax Petroleum. Profit Oil is shared between NNPC and Addax Petroleum. The Production Sharing Contracts provide for each party to lift and sell its oil entitlement, though NNPC can request that Addax Petroleum lift and sell on its behalf.

Allocation of Oil Production under the PSCs

The proportion of production that is designated for each of Royalty Oil, Cost Oil, Tax Oil and Profit Oil in a particular time period is influenced by oil prices, production levels, operating costs, capital expenditures and costs and allowances carried forward from previous periods in accordance with the terms of the Production Sharing Contracts. The fiscal terms have the effect of reducing the percentage of revenues paid as Tax Oil during periods of lower oil prices and increasing such percentage during periods of higher oil prices. For purposes of illustration, the tables below show the proportions of production designated as Royalty Oil, Cost Oil, Tax Oil and Profit Oil under the Production Sharing Contracts for OML123 and OML124 and OPL90 and OPL225 for the nine months ended September 30, 2005.

**OML123/124 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	50.80	-	-	100
Royalty Oil and other levies ⁽²⁾	4.94	4.94	-	10
Cost Oil	14.33	-	14.33	28
Tax Oil	18.38	18.38	-	36
Profit Oil	13.15	4.23	8.92	26

**OPL90/225 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005⁽³⁾**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	60.60	-	-	100
Royalty Oil and other levies ⁽²⁾	4.80	4.80	-	8
Cost Oil	53.31	-	53.31	88
Tax Oil	2.49	2.49	-	4
Profit Oil	-	-	-	-

Notes:

- (1) The tax accounts and the financial accounts use different revenue recognition methods.
- (2) Other levies include the NDDC levy and education tax.
- (3) Production from OPL90 began in March 2005. There was no production from OPL225 in 2005.

The calculation of the different categories of oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

<u>Water Depth</u>	<u>Royalty Oil Rates Field Range of Production (bbls/d)</u>					
	<u><2,000</u>	<u>2,000-5,000</u>	<u>5,000-10,000</u>	<u>10,000-15,000</u>	<u>15,000-25,000</u>	<u>>25,000</u>
	(%)	(%)	(%)	(%)	(%)	(%)
Onshore	5.0	7.5	15.0	20.0	20.0	20.0
<100	2.5	2.5	7.5	12.5	18.5	18.5
100-200	1.5	1.5	3.0	5.0	10.0	16.7

Royalty Oil is accounted for on a monthly basis.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below). These levies are paid in cash to the relevant Nigerian authority.

Cost Oil is allocated to Addax Petroleum in such an amount as to enable the recovery of all recoverable costs. The accounting procedure attached to the Production Sharing Contracts divides costs into two categories: non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Historically, under the Production Sharing Contracts, Addax Petroleum has recovered approximately 80 per cent of all drilling and seismic expenditures in the fiscal period in which they are incurred. Capital costs are depreciated over a five year period at 20 per cent straight-line starting in the year of first production, except for the fifth year which is depreciated at 19 per cent. All costs prior to the first lifting on a Production Sharing Contract are capitalized.

Maximum Cost Oil available is calculated as total production less Royalty Oil. Cost Oil is calculated on a monthly basis and any excess costs are carried forward to subsequent months or years. As at September 30, 2005, the Cost Oil balances, including capital depreciation carried forward to future years, were as set out in the following table.

	Cost Oil Balances					
	2005	2006	2007	2008	2009	2010
	(\$million)					
OML123/124 PSC	40.5	37.8	29.0	16.4	5.2	-
OPL90/225 PSC ⁽¹⁾	67.4	67.4	67.4	67.4	64.0	-

Note:

(1) Includes \$10.2 million of expenditure by previous contractor.

Tax Oil is calculated after deducting Royalty Oil and Cost Oil. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Corporation's Nigerian Production Sharing Contracts is 60 per cent. In the event that after the deduction of capital allowances and capital investment allowances the tax to be paid is zero, a 15 per cent tax charge is made on the taxable amount before the deduction of certain capital allowances and capital investment allowances. This currently applies to the OPL90/225 PSC. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 40 per cent of offshore capital expenditures and 25 per cent of onshore capital expenditures.

Due to the capital expenditure on the OPL90/225 PSC, there are unutilized capital investment allowances of \$120.6 million as of September 30, 2005. There are no unutilized capital investment allowances for the OML123/124 PSC.

The Corporation's Nigerian Production Sharing Contracts also contain a tax inversion penalty which is designed to encourage oil companies to contain operating costs. The tax inversion penalty for production rates less than 50 mbbls/d is calculated at 35 per cent of operating costs in excess of \$7.50/bbl. For production rates more than 50 mbbls/d, the tax inversion penalty is calculated at 35 per cent of operating costs above \$5.00/bbl. Addax Petroleum is not currently subject to this penalty as the Corporation's operating costs are below the designated threshold, assuming production from the OML123/124 PSC remains below 50 mbbls/d average for the year 2005. If the production average exceeds 50 mbbls/d for 2005, the maximum exposure to tax inversion penalty is estimated to be \$4.5 million.

Profit Oil is the oil remaining after deducting Royalty Oil, Cost Oil and Tax Oil. Profit Oil is shared between NNPC and Addax Petroleum on a sliding scale based on monthly production from the respective Nigerian Production Sharing Contracts. The varying allocations between NNPC and Addax Petroleum are applied on an incremental sliding scale basis.

Profit Oil Sliding Scale for the OML123/124 PSC

Monthly Average Production from OML123 and OML124 (mbbls/d)	NNPC Share	Addax Petroleum Share
	(%)	(%)
<40	30	70
≥40 and <75	45	55
≥75 and <100	55	45
≥100	60	40

Profit Oil Sliding Scale for the OPL90/225 PSC

Monthly Average Production from OPL90 and OPL225 (mbbls/d)	NNPC Share	Addax Petroleum Share
	(%)	(%)
<40	20	80
≥40 and <75	35	65
≥75 and <100	45	55
≥100	50	50

The following example illustrates how oil is allocated between the four categories under the Corporation's Nigerian Production Sharing Contracts. The example compares two scenarios each with annual revenues of \$200, annual operating costs of \$20 and no loss or allowances carried forward. For the purposes of the illustration, Royalty Oil is assumed to be levied at five per cent, NDDC levy at three per cent, education tax at two per cent, Tax Oil at 60 per cent and NNPC's share of Profit Oil at 30 per cent. The impact of capital expenditures of \$100 in Year 1 has an after tax and Profit Oil cash flow effect of only \$70 reduction in Year 1 and an increase of almost \$15 in the following four years such that the aggregate incremental cash flow reduction over the five year period is approximately \$10, assuming no revenue benefit arising from the investment. The following table has been included as an example only and actual results may vary materially.

	Without Capital Expenditure		With Capital Expenditure	
	Year 1	Years 2 to 5	Year 1	Years 2 to 5
Tax Oil Computation:				
Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i> non-capital costs	20.0	20.0	20.0	20.0
<i>less</i> Royal Oil	10.0	10.0	10.0	10.0
<i>less</i> NDDC levy	0.6	0.6	3.6	0.6
<i>yields</i> Assessable Profit	169.4	169.4	166.4	169.4
<i>less</i> education tax	3.4	3.4	3.3	3.4
<i>yields</i> Adjusted Assessable Profit / (Loss)	166.0	166.0	163.1	166.0
<i>less</i> capital allowances	0.0	0.0	20.0	20.0
<i>less</i> investment tax allowance	0.0	0.0	40.0	0.0
<i>times</i> Tax Oil rate	60%	60%	60%	60%
<i>yields</i> Tax Oil	99.6	99.6	61.8	87.6
Contractor Cash Flow Computation:				
Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i> Royalty Oil	10.0	10.0	10.0	10.0
<i>less</i> operating expenditure	20.0	20.0	20.0	20.0
<i>less</i> NDDC	0.6	0.6	3.6	0.6
<i>less</i> education tax	3.4	3.4	3.3	3.4
<i>less</i> Tax Oil	99.6	99.6	61.8	87.6
<i>less</i> NNPC's share of Profit Oil	19.9	19.9	24.4	17.5
<i>yields</i> Post Tax Cash Flow	46.5	46.5	76.9	60.9
<i>less</i> capital expenditure	0.0	0.0	100.0	0.0
<i>yields</i> Contractor Cash Flow	46.5	46.5	(23.1)	60.9
Oil Allocation of Total PSC Revenue:				
Cost Oil	20.0	20.0	40.0	40.0
Profit Oil — Contractor Share	46.5	46.5	56.9	40.9
Contractor Total	66.5	66.5	96.9	80.9
Royalty Oil	10.0	10.0	10.0	10.0
Tax Oil	99.6	99.6	61.8	87.6
Profit Oil — NNPC's share	19.9	19.9	24.4	17.5
NDDC levy and education tax	4.0	4.0	6.9	4.0
Government Total	133.5	133.5	103.1	119.1

Between the commencement of its activities under the Nigerian Production Sharing Contracts until the end of 2003, Addax Petroleum lifted and sold all of NNPC's oil on their behalf but since the beginning of 2004, NNPC has lifted its entitlement. Under the Corporation's Nigerian Production Sharing Contracts, oil is valued

based upon the appropriate "Realizable Price". The "Realizable Price" is equivalent to the Official Selling Price which is a price issued on a monthly basis by NNPC and is calculated by NNPC to equate to the prevailing international price in arms length transactions, taking into account the properties of each crude blend. The Okwori Blend is being jointly marketed by Addax Petroleum and NNPC for the first six months or 10 liftings, whichever is longer, commencing June 2005. After this joint marketing period, NNPC will calculate and issue an Official Selling Price on a monthly basis for the Okwori Blend "Realizable Price".

Nigerian Marginal Fields

The Okwok Property is subject to the provisions of the *Petroleum Act* and the regulations thereunder, and the *PPT Act*. The fiscal terms of Nigerian Marginal Fields are the subject of legislative proposals to encourage development. The Nigerian Marginal Fields comprise a number of ring-fenced fields located on concessions already awarded to joint ventures between international oil companies and NNPC and which have reserves booked to the Nigerian Department of Petroleum Resources and have remained un-produced for a period of over 10 years. The Nigerian Marginal Fields are assigned to indigenous Nigerian oil companies who conclude farm-in agreements with the joint ventures and can, in turn, farm-out to other operators.

The Nigerian Marginal Fields are subject to Royalty Oil and Tax Oil payable to government agencies.

The calculation of Royalty Oil and Tax Oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

Anticipated Royalty Oil Rates for the Okwok Property Field Range of Production (mbbls/d)					
<2	2-5	5-10	10-15	15-25	25
(%)	(%)	(%)	(%)	(%)	(%)
2.5	2.5	7.5	12.5	18.5	18.5

Royalty Oil is accounted for on a monthly basis and paid within 60 days of the end of the chargeable period.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below).

Tax Oil is calculated after deducting Royalty Oil and non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Capital costs are depreciated over a five year period at 20 per cent straight-line starting in the first year of production. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Nigerian Marginal Fields is anticipated to be 55 per cent. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 10 per cent of capital expenditures for offshore fields where the water depth is less than 100 m.

In addition to the fiscal terms described above, Addax Petroleum's interest in the Okwok Property is subject to the terms and conditions of the Oriental Joint Venture Agreement. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Cameroon

Addax Petroleum has a 60 per cent interest in, and operates, the Ngosso Concession. Tullow Oil holds the remaining 40 per cent interest. The Government of Cameroon has the right to participate as a joint venturer in any development in the Ngosso Property with a participating interest of up to 25 per cent. Should the Government of Cameroon choose to participate in development of the Ngosso Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil or gas fields within the contract area, production will be subject to royalties and taxes. Royalties vary with annual average production and are calculated on an incremental sliding scale basis as follows.

<u>Annual Production Per Contract Area</u> (mboc/d)	<u>Rate</u> (%)
≤5	2.5
>5 and ≤10	5.0
>10 and ≤20	10.0
>20	12.5

A corporate income tax rate of 40 per cent applies to profits in excess of operating costs and capital expenditures.

There is an additional petroleum duty of 12.5 per cent payable in case the "R" Factor (ratio of cumulative net revenues/cumulative investments) reaches more than 1.5. The additional petroleum duty will be increased to 20 per cent in case "R" is greater than 2.5.

The Ngosso Concession also contains provisions for signature and production bonuses and training fees for Cameroonian nationals.

Gabon

Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Production Sharing Contract. Tullow Oil holds a 47.5 per cent interest and Sonangol E.P. holds the remaining 10 per cent interest. The Government of Gabon has the right to participate as a partner in any development under the Kiarsseny Production Sharing Contract with a participating interest of five per cent. Should the Government of Gabon choose to participate in development of the Kiarsseny Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil fields, the Kiarsseny Production Sharing Contract divides production into Royalty Oil, Cost Oil and Profit Oil. Addax Petroleum and the other Kiarsseny Production Sharing Contract parties will be entitled to lift the Cost Oil and a share of Profit Oil.

Royalty Oil will be calculated on a monthly basis per production area. The rates vary with water depth and production levels on an incremental sliding scale basis as follows.

Royalty Oil Rates

<u>Water Depth</u> (m)	<u>Monthly Average Production</u> (mboe/d)	<u>Rate</u> (%)
<100	≤10	2.0
	>10 and ≤15	3.0
	>15 and ≤20	5.0
	>20 and ≤30	7.5
	>30	10.0
≥100	≤15	2.0
	>15 and ≤25	3.0
	>25 and ≤35	5.0
	>35 and ≤55	7.5
	>55	10.0

After the deduction of Royalty Oil, up to 75 per cent of remaining production will be used to recover all costs for exploration, development and production activities under the Kiarsseny Production Sharing Contract.

Oil remaining after the deduction of Royalty Oil and Cost Oil is Profit Oil. Profit Oil will be shared between the Government of Gabon and the Kiarsseny Production Sharing Contract parties based upon monthly production and water depth according to an incremental sliding scale as follows.

Profit Oil Sharing

<u>Water Depth</u> (m)	<u>Monthly Average Production</u> (mboc/d)	<u>State Share</u> (%)	<u>Contractor Share</u> (%)
<100	≤15	50	50
	>15 and ≤30	52	48
	>30 and ≤40	54	46
	>40 and ≤50	56	44
	>50 and ≤75	60	40
	>75 and ≤100	65	35
≥100	>100	70	30
	≤25	50	50
	>25 and ≤40	52	48
	>40 and ≤55	54	46
	>55 and ≤70	56	44
	>70 and ≤85	58	42
	>85 and ≤100	60	40
>100	70	30	

The Kiarsseny Production Sharing Contract also contains provisions for signature and production bonuses and training fees for Gabonese nationals. There is also a domestic supply obligation.

PETROLEUM RESERVES AND OPERATIONAL MATTERS

Reserves

The tables below summarize the petroleum reserves and the present value of future net revenue associated with Addax Petroleum's reserves evaluated in the Reserve Report prepared by NSAI, independent oil and natural gas reservoir engineers, based on constant and forecast prices and costs assumptions presented in accordance with National Instrument 51-101 — *Standards of Disclosure for Oil and Gas Activities*. The tables summarize the data contained in the Reserve Report and, as a result, may contain slightly different numbers than the Reserve Report due to rounding. Future net revenue values, whether calculated without discount or using a discount rate, are estimated values and do not represent fair market value. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserves estimates of Addax Petroleum's petroleum reserves provided herein are estimates only and there is no assurance that the estimated reserves will be recovered. Actual petroleum reserves may be greater than or less than the estimates provided herein. The estimates of reserves and future net revenue for individual properties included in this prospectus may not reflect the same confidence level as estimates of revenue for all properties, due to the effects of aggregation.

The petroleum reserves of the Corporation are limited to crude oil reserves in Nigeria. The Corporation's Nigerian Production Sharing Contracts do not include the right to produce and sell natural gas and therefore the Corporation's reserve evaluations do not include any natural gas reserves. However, the Production Sharing Contracts in Nigeria contain natural gas utilization clauses which permit the Corporation to participate in commercial natural gas development if and when it occurs. The Ngosso Concession and the Kiarsseny Production Sharing Contract treat commercial natural gas in effectively the same manner as crude oil, except that lower royalty rates apply to gas production under the Ngosso Concession. However, Addax Petroleum did not have any booked proved, probable or possible reserves in Cameroon or Gabon as at September 30, 2005.

Notes:

- (1) Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.
- (2) Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.
- (3) Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.
- (4) Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (e.g., when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

- (5) Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.
- (6) Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.
- (7) "Gross" means Addax Petroleum's total working interest before deduction of NNPC's share of Profit Oil and "Net" means Addax Petroleum's total working interest after deducting the amounts attributable to Royalty Oil and NNPC's share of Profit Oil. See "Fiscal Terms — Nigeria".
- (8) Columns may not add up due to rounding.
- (9) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (10) The forecast prices and costs assumptions assume the continuance of current laws and regulations and increases in terminal selling prices, and take into account inflation with respect to future operating and capital costs. In the Reserve Report, operating costs are assumed to escalate at 1.8 per cent per annum. Crude oil prices as forecast by NSAI effective September 30, 2005, are as follows.

NSAI Crude Oil Forecast Prices

<u>Year</u>	<u>Brent Crude</u>	<u>Antan Blend</u>	<u>Brass River Blend</u>	<u>Okwori Blend</u>
	(\$/bbl)	(\$/bbl)	(\$/bbl)	(\$/bbl)
2005	62.87	59.55	63.75	63.26
2006	61.47	58.22	62.33	61.86
2007	55.19	52.28	55.96	55.54
2008	46.61	44.15	47.26	46.90
2009	43.45	41.16	44.06	43.72
2010	42.86	40.60	43.46	43.13
2011	42.85	40.58	43.45	43.12
2012	43.36	41.07	43.97	43.64
2013	44.22	41.89	44.84	44.50
2014	45.00	42.62	45.63	45.28
2015	45.89	43.47	46.53	46.18
2016	46.70	44.23	47.35	46.99
2017	47.58	45.07	48.25	47.88

- (11) The constant price and costs assumptions assume the continuance of current laws, regulations and operating costs in effect on the date of the Reserve Report. Crude oil prices were not forecast beyond September 30, 2005. In addition, operating and capital costs have not been increased on an inflationary basis. The prices were as follows.

	<u>September 30, 2005</u>
	(\$/bbl)
Brent Crude	62.56
Antan Blend	59.26
Brass River Blend	63.44
Okwori Blend	62.95

- (12) Included in the Reserve Report is a capital investment of \$126.4 million to be expended prior 2008 to eliminate gas flaring by constructing infrastructure to supply all produced gas for sale or re-injection.
- (13) Abandonment costs have been estimated for the end of the economic producing life of each property.
- (14) The estimated Net Present Values of Future Net Revenues After Taxes include the effect of all deductions under the Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, NNDC levy, Education Tax and Tax Inversion Penalty. The estimated Net Present Values of Future Net Revenues Before Taxes only include the effect of deducting Royalty Oil and NNPC's share of Profit Oil.
- (15) Estimated Net Present Values of Future Net Revenue include the revenue effects of exploration expenditures of \$103.7 million under the Nigerian PSCs but the costs of exploration activities are not deducted from future net revenue because they do not relate to the reserves being evaluated.

The following two tables set forth the undiscounted elements of future net revenue based on forecast prices and costs and constant prices and costs used by NSAI to determine total future net revenue.

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Forecast Prices and Costs**

	Revenue	Royalties	Operating Costs	Development Costs	Abandonment Costs	Future Net Revenue Before Taxes	Taxes	Future Net Revenue After Taxes
	(\$million)							
Proved Reserves	5,552	629	1,012	697	35	3,163	1,807	1,372
Proved Plus Probable	9,718	1,266	1,716	1,017	45	5,635	3,567	2,107
Proved Plus Probable Plus Possible	13,365	2,004	2,136	1,238	51	7,881	5,190	2,746

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Constant Prices and Costs**

	Revenue	Royalties	Operating Costs	Development Costs	Abandonment Costs	Future Net Revenue Before Taxes	Taxes	Future Net Revenue After Taxes
	(\$million)							
Proved Reserves	6,863	803	1,075	687	32	4,244	2,549	1,718
Proved Plus Probable	12,206	1,677	1,647	1,000	38	7,790	5,056	2,788
Proved Plus Probable Plus Possible	17,322	2,763	2,041	1,209	42	11,190	7,519	3,748

The following table sets forth development costs deducted by NSAI in the estimation of the future net revenue for the Corporation's properties and assets attributable to the reserve categories noted below.

**Future Development Costs (Undiscounted)
as at September 30, 2005**

Year	Forecast Prices and Costs			Constant Prices and Costs		
	Proved	Proved Plus Probable	Proved Plus Probable Plus Possible	Proved	Proved Plus Probable	Proved Plus Probable Plus Possible
	(\$million)					
2005	119.0	144.5	144.5	119.0	144.5	144.5
2006	346.0	462.6	462.6	342.5	458.2	458.2
2007	209.7	346.4	400.4	204.4	337.2	389.5
2008	20.8	58.9	93.8	18.9	56.3	89.9
2009	-	-	70.4	1.0	-	66.2
2010	1.1	4.3	57.2	1.0	4.0	53.0

2017	-	-	-	-	-	-
2018	-	29.6	34.4	2.3	23.7	27.6
Total	731.9	1,062.2	1,288.7	718.3	1,038.2	1,251.2

Oil Wells

The following table sets forth the number and status of wells as at September 30, 2005 which are producing or shut-in and which the Corporation considers to be capable of production.

Property	Producing		Shut-in	
	Gross	Net	Gross	Net
OML123				
Adanga	15	15	4	4
Ebughu (and extensions)	21	21	1	1
Oron West and North Oron	8	8	-	-
Akam	4	4	5	5
Bogi	1	1	1	1
Mimbo	1	1	1	1
Ukpam	2	2	-	-
OML124				
Izombe	6	6	1	1
Ossu	4	4	2	2
OPL90				
Okwori	5	5	-	-
Nda	1	1	-	-
Total	68	68	15	15

All of the Corporation's producing or shut-in wells are located in Nigeria, and with the exception of OML124, are offshore.

Drilling History

The total number of exploratory, appraisal and development wells (excluding placement wells and unplanned sidetracks) within the properties which the Corporation drilled in the periods indicated, are listed below.

	9 Months Ended September 30, 2005		Year Ended December 31,									
			2004		2003		2002		2001		2000

Undeveloped Acreage and Seismic Database

The following table summarizes the undeveloped acreage and the proprietary seismic database in which the Corporation has an interest as at September 30, 2005.

Property	Undeveloped Acreage				3D Seismic		2D Seismic	
	Gross	Net	Gross	Net	Gross	Net	Gross	Net
	(acres)	(acres)	(km ²)	(km ²)	(km ²)	(km ²)	(km)	(km)
OML123 and OML124	136,400	136,400	552	552	392	392	1,529	1,529
OPL90 and OPL225	323,500	323,500	1,309	1,309	467	467	2,120	2,120
Ngosso	117,100	70,300	474	284	—	—	1,536	922
Kiarsseny	1,345,000	571,600	5,443	2,313	2,643	1,123	18,750	7,969
Total	1,922,000	1,101,800	7,778	4,458	3,502	1,982	23,935	12,540

The Corporation's seismic database covers its developed and undeveloped acreage in Nigeria, after giving effect to the Corporation's relinquishment proposals and the Disputed Area in OML123. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Historical — Daily Production Volumes, Operating Netbacks and Capital Expenditures

The following tables set forth Addax Petroleum's daily production volumes, operating netbacks and capital expenditures for the periods indicated.

	9 Months Ended September 30, 2005				Year Ended December 31, 2004
	Q3	Q2	Q1	Total	
Production (mbbls/d)					
Crude oil	74.3	62.3	49.3	62.0	39.9
Operating Netbacks (\$/bbl)

Reconciliation of Reserves

The Corporation has not previously reported its reserves in accordance with NI 51-101 and consequently a reconciliation has not been included.

Alternative Price Forecast Evaluation

The forecast prices used by NSAI in the Reserve Report as at September 30, 2005 differ from those currently in the public domain with respect to a number of the Corporation's industry peers. As a result, at the request of the Corporation, NSAI conducted a price sensitivity analysis of the reserves of the Corporation and the net present value of future net revenue associated with such reserves as at September 30, 2005 using an alternative price forecast supplied by the Corporation. The alternative price forecast correlates with the price forecast used in appraisals of some of the Corporation's industry peers in the public domain and, by comparison to the information set forth in the Reserve Report, provides some measure of guidance in respect of the sensitivity of the evaluation to price forecast changes, particularly having regard to the period over which reserves are, pursuant to the evaluation, estimated to be recovered. NSAI otherwise used the same assumptions and definitions as in the Reserve Report. The tables below summarize the alternative price forecast and the results of such analysis. The information set forth below is supplemental to the disclosure required by NI 51-101 and is not a substitute therefor.

Oil Reserves and Future Net Revenues
Based on Alternative Forecast Prices and Costs
as at September 30, 2005⁽¹⁰⁾

	Crude Oil Reserves ⁽⁷⁾⁽⁸⁾⁽⁹⁾		Estimated Net Present Values of Future Net Revenue Before Taxes ⁽⁸⁾⁽⁹⁾⁽¹⁰⁾⁽¹¹⁾⁽¹²⁾⁽¹³⁾⁽¹⁴⁾					Estimated Net Present Values of Future Net Revenue After Taxes ⁽⁸⁾⁽⁹⁾⁽¹⁰⁾⁽¹¹⁾⁽¹²⁾⁽¹³⁾⁽¹⁴⁾

Possible ⁽⁶⁾	82.7	66.3	2,831	2,246	1,816	1,493	1,245	802	630	505	412	340
Total Proved plus Probable plus Possible	284.7	242.2	9,364	7,781	6,602	5,700	4,995	3,187	2,683	2,301	2,005	1,771

Notes:

- (1) Proved reserves are those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves.
- (2) Developed producing reserves are those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty.
- (3) Developed non-producing reserves are those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown.
- (4) Undeveloped reserves are those reserves expected to be recovered from known accumulations where a significant expenditure (e.g., when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.
- (5) Probable reserves are those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves.
- (6) Possible reserves are those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves.
- (7) "Gross" means Addax Petroleum's total working interest before deduction of NNPC's share of Profit Oil and "Net" means Addax Petroleum's total working interest after deducting the amounts attributable to Royalty Oil and NNPC's share of Profit Oil. See "Fiscal Terms — Nigeria".
- (8) Columns may not add up due to rounding.
- (9) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (10) The alternative prices and costs assumptions assume the continuance of current laws and regulations and increases in terminal selling prices, and take into account inflation with respect to future operating and capital costs. In the Reserve Report, operating costs are assumed to escalate at 1.5 per cent per annum. Crude oil prices used by NSAI for the Alternative Forecast Prices and Cost effective September 30, 2005, are as follows.

Alternative Crude Oil Forecast Prices

<u>Year</u>	<u>Brent Crude</u> (\$/bbl)	<u>Antan Blend</u> (\$/bbl)	<u>Brass River Blend</u> (\$/bbl)	<u>Okwori Blend</u> (\$/bbl)
2005	56.67	53.68	57.46	57.02
2006	57.44	54.41	58.25	57.81
2007	57.25	54.23	58.05	57.61
2008	55.59	52.65	56.37	55.94
2009	54.06	51.21	54.82	54.40
2010	52.99	50.19	53.73	53.32
Thereafter, escalated at 1.5%	52.30	49.54	53.03	52.63

- (11) Included in the Reserve Report is a capital investment of \$126.4 million to be expended prior 2008 to eliminate gas flaring by constructing infrastructure to supply all produced gas for sale or re-injection.
- (12) Abandonment costs have been estimated for the end of the economic producing life of each property.
- (13) The estimated Net Present Values of Future Net Revenues Income Taxes include the effect of all deductions under the Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, NNDC levy, Education Tax and Tax Inversion Penalty. The estimated Net Present Values of Future Net Revenues Before Taxes only include the effect of deducting Royalty Oil and NNPC's share of Profit Oil.
- (14) Estimated Net Present Values of Future Net Revenue include the revenue effects of exploration expenditures of \$103.7 million under the Nigerian PSCs but the costs of exploration activities are not deducted from future net revenue because they do not relate to the reserves being evaluated.

**Total Future Net Revenue (Undiscounted)
as at September 30, 2005 Based on Alternative Forecast Prices and Costs**

	<u>Revenue</u>	<u>Royalties</u>	<u>Operating Costs</u>	<u>Development Costs</u>	<u>Abandonment Costs</u>	<u>Future Net Revenue Before Taxes</u>	<u>Taxes</u>	<u>Future Net Revenue After Taxes</u>
	(\$million)							
Proved Reserves	6,031	679	1,070	695	35	3,536	2,059	1,494
Proved Plus Probable	10,790	1,431	1,723	1,014	44	6,533	4,193	2,385
Proved Plus Probable Plus Possible	15,191	2,350	2,131	1,233	49	9,364	6,241	3,187

Significant Factors or Uncertainties

Other than various risks and uncertainties that participants in the oil and gas industry are exposed to generally, the Corporation is unable to identify any important economic factors or significant uncertainties that will affect any particular components of the reserves data disclosed herein. See "Risk Factors".

Sales and Marketing

Historically, the Corporation has utilized the crude marketing services of its affiliate, ABV, to sell all of its crude oil. See "Interest of AOG in Material Transactions". The Corporation currently sells three blends of crude oil. For these three blends of crude, the table below sets forth the sales and marketing volumes, average realized prices and realized differential to Brent Crude for each of the preceding three years ended December 31, 2004 and for the nine months ended September 30, 2005.

Addax Petroleum Crude Oil Differential Premium/(Discount) to Brent Crude (Volume Weighted)⁽¹⁾

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
Sales and Marketing Volumes (mmbbls)				
Antan Blend ⁽²⁾	12.6	13.3	11.8	10.0
Brass River Blend	0.8	1.3	2.2	1.8
Okwori Blend	2.6	-	-	-
Dated Brent Crude Price (\$/bbl)	53.54	38.22	28.84	24.98
Addax Petroleum Average Realized Prices (\$/bbl)				
Antan Blend ⁽²⁾	50.17	36.56	27.49	24.04
Brass River Blend	54.42	39.37	29.10	25.51
Okwori Blend	60.60	-	-	-
Premium/(Discount) to Brent Crude (\$/bbl)⁽¹⁾				
Antan Blend ⁽²⁾	(3.51)	(1.88)	(1.27)	(1.36)
Brass River Blend	0.79	0.49	0.39	0.19
Okwori Blend	0.38	-	-	-

Notes:

- (1) Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.
- (2) The API gravity of the Antan Blend is dependent on the proportional mix of crudes at any time. Where future individual oil field developments have lower API gravities than the current API gravity of the Antan Blend, then the API gravity of the Antan Blend may be reduced at that time.

Future Commitments

The Corporation uses non-physical oil price hedging arrangements to protect its cash flow against near-term low prices while retaining the opportunity to benefit from high oil prices. Typically, the Corporation achieves this objective by hedging a portion of its crude oil production through the purchase of put options.

Additional Information Concerning Abandonment and Reclamation Costs

The Corporation does not expect to incur any abandonment or reclamation costs within the next three years.

Employees

As at September 30, 2005, Addax Petroleum had 291 employees. Of these, 215 were located in Nigeria, 75 were located in Geneva, Switzerland and one was located in Cameroon. All the Nigerian employees, other than management employees, are unionized.

Environmental and Safety Matters

Addax Petroleum has direct responsibility for HSE in its Nigerian and Cameroonian properties. The Corporation has implemented HSE policies in respect of its operations. These HSE policies are an important part of the responsibilities of the Corporation's managers and significantly influence the operations of the Corporation.

The Corporation requires all employees and contractors to comply with HSE policies. The HSE policies are codified in the Corporation's HSE manual, which define individual HSE responsibilities and suggests ways to promote and support a safe and healthy environment. The Corporation circulates the manual to employees in all locations and managers regularly discuss the policies with staff at periodic safety meetings. In Nigeria, the Corporation has a dedicated HSE department that focuses on accident prevention, monitors operational

compliance with the HSE policies and advises management on statutory and industry requirements. The manager of this HSE department reports directly to the Managing Director of Nigerian Operations of the Corporation and is a member of the management committee, which meets weekly to discuss and direct the Corporation's activities.

The HSE policy of the Corporation emphasizes the following:

Leadership, Commitment and Training: Addax Petroleum requires its managers and supervisors to demonstrate a commitment to the HSE policies of the Corporation. This commitment includes not just responsibility for daily operation but also responsibility for reviewing the training requirements of the Corporation in order to ensure new employees and contractors receive appropriate introduction to the HSE policies. The Corporation then eliminates any identified gaps, to enable all employees and contractors to perform their duties responsibly and with due regard to the health and safety of others and the environment.

Risk Management: The Corporation manages risk by ensuring that all new projects or modifications to existing facilities undergo a hazardous operations and risk assessment. The Corporation also routinely assess the risks of its activities and develops action plans to eliminate or minimize impact on personnel, the environment and facilities.

Health and Safety Operations: The Corporation believes that injury and incident-free operation is achievable and works to promote this mindset throughout the organization. Addax Petroleum conducts periodic in-house inspections and sponsors third-party health and safety audits to evaluate the Corporation's performance and compliance with applicable regulations, guidelines and best practices. Measures recommended through these exercises are diligently implemented to eliminate or mitigate exposure of employees, contractors and the public. The provision of the services of trained medical doctors and equipped facilities at all our field locations enhance the administration of first aid services to the Corporation's and contractors' employees.

Addax Petroleum encourages employees and contractors to report, and the Corporation will investigate, all incidents occurring in the course of operations. Knowledge gained from such investigation is communicated to all operational sites of the Corporation to prevent recurrence of similar incidents within the organization. To this end, Addax Petroleum publishes its HSE statistics and circulates them, with practice updates, throughout the organization.

Environmental Protection: Addax Petroleum conducts studies to assess the impact of planned projects or activities on the environment. Such environmental evaluation studies are conducted periodically to evaluate the impact of the Corporation's activities and opportunities for improvement. Addax Petroleum's waste management plan emphasizes waste minimization and waste reuse in compliance with the regulatory standards and guidelines set by the Nigerian Federal Ministry of Environment and the Department of Petroleum Resources.

Incident Response Plan: The Corporation has developed an integrated incident response plan to address foreseeable emergencies. This plan provides the framework on which a single or multiple emergency situation can be simultaneously managed, while maintaining a disciplined command and control of events. Emergencies such as fire, well control, medical evacuation, oil spill and civil disturbances have developed response annexes. Regular exercises are conducted at all locations to assess the awareness and preparedness of responders and to test the adequacy and state of readiness of emergency response equipment.

Insurance

The Corporation's producing oil and gas properties are all located in Nigeria. Pursuant to the terms of the Corporation's Nigerian Production Sharing Contracts, NNPC is the license holder while Addax Petroleum, as contractor, operates the fields. Addax Petroleum bears all of the risk and costs of exploration, development and operation. However, under the terms of the Nigerian Production Sharing Contracts the field equipment in Nigeria is owned by NNPC and is therefore insured by NNPC under a global policy (the "CIP Policy") which covers all of NNPC's assets and provides property damage and comprehensive general liability insurance coverage. The Corporation is co-insured under NNPC's CIP Policy as a contractor to NNPC. Addax Petroleum

believes that the coverage under the CIP Policy meets international oil industry practice and standards and the limits and deductibles are adequate for the operations in Nigeria.

Addax Petroleum has procured construction all risks insurance coverage in respect of its operations in OPL90. Coverage is for works executed anywhere in the world in performance of contracts relating to OPL90 including loss of, or damage to, the pipelines, risers, umbilicals, christmas trees and completions to be installed. Addax Petroleum has also recently procured construction all risks insurance coverage in respect of its operations in OML123 relating to the subsea works associated with the replacement of the FPSO.

Addax Petroleum's policy is to arrange such other insurance from time to time in respect of its other operations as required and in accordance with industry practice.

SELECTED FINANCIAL INFORMATION

The following table presents a summary of historical consolidated financial data for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended. The summary of historical consolidated financial data set forth below may not contain all of the information that is important to a prospective investor and should be read along with "Presentation of Financial Information", "Selected Financial Information", "Management's Discussion and Analysis of Financial Condition and Results of Operations", and the consolidated financial statements and related notes of the Corporation for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 included in this prospectus. The results for the nine months ended September 30, 2005 are not necessarily indicative of results for the full year. All financial information with respect to the Corporation has been presented in United States dollars in accordance with Canadian GAAP.

Notes:

- (1) All per share amounts are calculated on the basis of 120 million outstanding Common Shares of Addax Petroleum Corporation, giving pro forma effect to the completion of the Pre-IPO Transactions.
- (2) The Corporation does not have any outstanding securities that are convertible into, or exchangeable for, Common Shares.

MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

The following discussion and analysis of the Corporation's financial condition and results of operations should be read in conjunction with the rest of the prospectus, including the Corporation's consolidated financial statements and related notes thereto beginning on page F-7 of this prospectus and the "Selected Financial Information". The consolidated financial statements presented herein are those of Addax Petroleum N.V. and its subsidiaries. After giving effect to the Pre-IPO Transactions, the Corporation will own legally and beneficially 100 per cent of the common shares of Addax Petroleum N.V. See "Addax Petroleum — Pre-IPO Transactions".

This discussion and analysis contains forward-looking statements that are subject to known and unknown risks and uncertainties. The Corporation's actual results and the timing of events could differ materially from those expressed or implied by such forward-looking statements as a result of various factors, including those discussed below and elsewhere in this Prospectus, particularly under the headings "Forward Looking Statements" and "Risk Factors".

Addax Petroleum defines "cash flow from operations" or "CFFO" as net cash from operating activities before changes in non-cash working capital. CFFO is not a recognized measure under Canadian GAAP. Management believes that in addition to net income, CFFO is a useful measure as it demonstrates the Corporation's ability to generate the cash necessary to repay debt or fund future growth through capital investment. Investors are cautioned, however, that this measure should not be construed as an alternative to net income determined in accordance with Canadian GAAP or as an indication of Addax Petroleum's performance. Addax Petroleum's method of calculating this measure may differ from other companies and accordingly, it may not be comparable to measures used by other companies.

For the purpose of the following discussion and analysis, figures expressed on a per barrel basis are derived using sales volumes rather than production.

Overview

The Corporation is an international oil and gas exploration and production company focused on Africa and the Middle East. It has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. The Corporation currently has 11 producing fields, and has increased its crude oil production from an average of 8,800 bbls/d for 1998 to an average of approximately 74,450 bbls/d for October 2005. As at September 30, 2005, the Corporation had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls.

The Corporation is the largest independent oil producer in Nigeria and operates all four of its 100 per cent owned Nigerian properties, which account for all of its oil production. OML123 is located in shallow water and produces the majority of the Corporation's crude oil, a medium to light quality crude called the Antan Blend. OML124 is located onshore and produces light quality crude oil called the Brass River Blend. OPL90 is located offshore in medium depth water and produces light quality crude oil called the Okwori Blend, and OPL225 is an offshore exploration property located in medium depth water adjacent to OPL90.

The Corporation performs its oil activities in Nigeria through two Production Sharing Contracts with NNPC. Under each Nigerian Production Sharing Contract, the Corporation bears the development and exploration risk for the properties and funds all operating expenses and capital expenditures. In return, the Corporation is entitled to recover these costs and expenditures based on a production sharing formula after commercial discoveries are made and production begins and after the payment of royalties and production taxes. The Corporation shares with NNPC the oil remaining after the payment of royalties, costs and expenditures and production taxes on a sliding scale based on monthly production under each Nigerian Production Sharing Contract. All of the crude oil produced from the Corporation's operations is sold on an arm's length basis to ABV, a wholly-owned subsidiary of AOG, under the terms of the Crude Oil Supply Agreements.

In addition to Nigeria, the Corporation is active in Cameroon, where it has a 60.0 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation, and Gabon, where it has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The Corporation is also pursuing a number of new venture opportunities in the Middle East and Africa, primarily relating to the Taq Taq Property, the Okwok Property and the Block 4 Property in the Joint Development Zone.

Material Factors Affecting the Corporation's Results of Operations and Financial Condition

Management believes that the following factors have had, and will continue to have, a material effect on the Corporation's results of operations and financial condition.

Oil Prices

The Corporation's results of operations are influenced significantly by crude oil prices. Crude oil prices have been volatile in the past and are likely to continue to be volatile in the future. Prices for oil are based on world supply and demand and a number of other factors, including government regulation, social and political conditions and the weather.

The prices for oil produced by the Corporation are related to the price of Brent crude oil in the world markets. Brent crude prices have increased from an average price of \$28.84 per barrel in 2003 to an average price of \$38.22 per barrel in 2004 and to an average price of \$53.54 per barrel for the first nine months of 2005. This increase reflects, among other things, an increase in world-wide demand, particularly in the United States and Asia, heightened geopolitical uncertainty in many areas of the world and supply concerns in the Middle East and other key producing regions. For the month of October, 2005, the average price per barrel rose to \$58.61, as supply concerns arose following hurricanes Katrina and Rita and their adverse effect on crude oil production in the US Gulf Coast region. For the nine months ended September 30, 2005, approximately 74 per cent of the Corporation's crude oil production was Antan Blend, which sold at an average discount to Brent crude of approximately seven per cent in the nine months ended September 30, 2005 and approximately six per cent in 2004. Prices for Antan Blend have increased to an average of \$50.02 per barrel for the nine months ended September 30, 2005 from \$36.08 per barrel for the same period in 2004.

The increase in oil prices has had a significant positive impact on the Corporation's net revenue, CFFO and net income, particularly in 2004 and the nine months ended September 30, 2005.

Production and Reserves

The Corporation's revenues and net income also depend on its production levels and its ability to replace its reserves. The Corporation has historically increased production by employing advanced and proven technologies to increase production in mature fields, drilling additional wells on its existing properties and acquiring and developing additional properties. The Corporation had 201.3 mmbbls of proved and probable reserves as at September 30, 2005. The Corporation increased production by 55 per cent to an average of 62.1 mbbls/d in the nine months ended September 30, 2005 from an average of 40.0 mbbls/d during the same period in 2004. The increased production was due mainly to the Okwori Property and the Nda field test well in OPL90 coming on-stream in March 2005 and 11 new wells coming on-stream in OML123.

Operating Expenses and Capital Costs

Operating expenses are the costs of producing oil and consist of items such as labour, FPSO leasing obligations, supplies, maintenance, repairs and utilities. The Corporation maintained an average operating expense of \$6.46 per barrel for the nine months ended September 30, 2005 from \$6.07 per barrel for the same period in 2004. Operating expenses increased in large part because of the costs associated with development at the Okwori Property. Operating expenses relating to the Okwori Property have averaged \$6.88 per barrel during its start up phase in 2005. Production from the Okwori Property is still increasing and operating costs are expected to decline on a per barrel basis as the field reaches full production.

Capital costs are capitalized and expensed to the income statement and include engineering studies, seismic acquisition, drilling of exploration, appraisal and development wells, the acquisition of leases and facilities costs. Facilities costs include the construction and installation of platforms and the purchase and installation of

pipelines. All costs prior to the first lifting are capitalized. The costs of drilling rig and supply boat day rates increased significantly during 2005.

Taxes

Taxes paid in Nigeria pursuant to the Production Sharing Contracts vary materially based upon, among other factors, world oil prices and capital expenditures of the Corporation. The percentage of revenues that the Corporation pays as Tax Oil decreases during periods of lower oil prices and increases during periods of higher oil prices. Tax Oil thus serves as a partial hedge against changes in the price of oil.

The Nigerian Production Sharing Contracts are also designed to stimulate capital investment in the Nigerian oil industry. Certain capital expenditures are recoverable as capital allowances prior to the calculation of Tax Oil and therefore, have the effect of reducing taxes otherwise payable under the Nigerian Production Sharing Contracts at a rate of 60 per cent. However, in the event that deductions for capital allowances and capital investment allowances reduce the taxes otherwise payable to zero, a 15 per cent tax charge is applied to the taxable amount prior to deduction of certain capital allowances and capital investment allowances.

In the nine months ended September 30, 2005, the Corporation was taxed at the 15 per cent tax rate in relation to the OPL90/225 PSC. As at September 30, 2005, the Corporation had \$120.6 million of unutilized capital investment allowance relating to OPL90 and OPL225. In addition, \$55.2 million of costs incurred by a prior operator were available for recovery as Cost Oil. \$44.2 million of these costs have been allocated to operating expenses and utilized, while the balance of \$11.0 million has been allocated to capital costs. The Corporation expects to become subject to the standard tax rate of 60 per cent under the OPL90/225 PSC, if and when it utilizes its capital allowances and capital investment allowances. The Corporation's 2006 budget assumes that the 60 per cent rate would apply to OPL90/225.

Economic Sensitivities

The following table shows the estimated after-tax effect that changes to crude oil prices, crude oil production, operating costs and taxes for the OPL90/225 PSC would have had on Addax Petroleum's net income for the nine months ended September 30, 2005, had these changes occurred on January 1, 2005. These calculations are based on business conditions, production and sales volumes existing in the nine months ended September 30, 2005. The 1,000 bbls/d increase has been allocated evenly to OML123, OML124 and OPL90 once initial production from OPL90 commenced in March 2005. Prior to March 2005, production is assumed to come entirely from OML123 and OML124.

<u>Factor</u>	<u>Change (+)</u>	<u>Net Income Impact</u> ((\$million)	<u>Net Income Impact</u> (\$/share)
Price received for crude oil	\$1.00/bbl	5.4	0.05
Crude oil production	1,000 bbls/d	4.3	0.04
Increase in operating costs	10%	(4.2)	(0.04)
Tax rate for OPL90/225 PSC	45% (15% to 60%)	(20.0)	(0.17)

The impact of the above changes may be compounded or offset by changes to other business conditions. In addition, the table does not consider the relationships between the above factors.

Nine months Ended September 30, 2005 Compared with Nine Months Ended September 30, 2004

Summary

The Corporation's production figures are reported gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period.

During the nine months ended September 30, 2005, the Corporation brought 11 new wells on-stream. The majority of these wells were in the Adanga, Oron West and North Oron fields in OML123. The Okwori Property and the Nda field test well in OPL90 came on-stream in March 2005. The addition of the new wells increased the Corporation's crude oil production by 58 per cent to 16.9 mmbbls for the nine months ended September 30, 2005

from 10.7 mmbbls in the same period in 2004. Average daily production for the nine months ended September 30, 2005 was 62.1 mbbbls/d, representing an increase from the average daily production of 39.1 mbbbls/d during the same period in 2004.

The Corporation's total crude oil production by property for the nine months ended September 30, 2005 was 12.5 mmbbls from OML123, 1.0 mmbbls from OML124, and 3.4 mmbbls from OPL90 (which commenced production in March 2005), as compared with 9.6 mmbbls from OML123 and 1.1 mmbbls from OML124 for the same period in 2004.

Net income increased to \$168.0 million for the nine months ended September 30, 2005 from \$41.3 million for the same period in 2004. The following table summarizes the Corporation's results of operations for the nine months ended September 30, 2005 as compared to the same period in 2004.

	9 Months Ended September 30, 2005	9 Months Ended September 30, 2004	Change	9 Months Ended September 30, 2005	9 Months Ended September 30, 2004
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Petroleum sales	840.6	367.8	129	52.21	35.37
Royalties	(139.8)	(67.0)	109	(8.68)	(6.44)
Net sales	700.8	300.8	133	43.53	28.92
Total net revenue	702.1	302.1	132	43.61	29.05
Operating expenses	(104.0)	(63.1)	65	(6.46)	(6.07)
General and administration expenses	(11.3)	(13.5)	(16)	(0.70)	(1.30)
Depletion, depreciation and accretion	(108.1)	(46.8)	131	(6.71)	(4.50)
Other ⁽¹⁾	(3.2)	(1.9)	68	(0.21)	(0.18)
Total net revenue less total expenses	475.5	176.8	169	29.53	17.00
Current taxes	(256.9)	(109.1)	135	(15.96)	(10.49)
Future taxes	(50.6)	(26.4)	92	(3.14)	(2.54)
Net Income	168.0	41.3	307	10.43	3.97

Notes:

- (1) Includes interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
- (2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales are reported on the basis of production volumes sold gross of royalties and NNPC's share of Profit Oil and exclude any volumes held as inventory at the end of the period. Any overlifts are accounted for as deferred income on the balance sheet.

Due to favourable market conditions, the average realized price for the Corporation's crude oil increased by 48 per cent to \$52.21 per barrel for the nine months ended September 30, 2005 from \$35.37 per barrel for the same period in 2004.

Petroleum sales increased by 129 per cent to \$840.6 million for the nine months ended September 30, 2005 from \$367.8 million for the same period in 2004. The increase reflects both a 48 per cent increase in the average sales price and a 58 per cent increase in average daily production. Petroleum sales volumes for the nine months ended September 30, 2005 were 16.1 mmbbls compared with 10.4 mmbbls for the same period in 2004.

Royalties

The following table summarizes the component parts of Royalties for the nine month periods ended September 30, 2005 and 2004:

	9 Months Ended September 30,		Change (%)	9 Months Ended September 30,	
	2005 (\$million)	2004 (\$million)		2005 (\$/bbl)	2004 (\$/bbl)
Royalty Oil	(58.7)	(24.0)	144	(3.65)	(2.31)
NNPC Profit Oil	(58.4)	(25.5)	129	(3.63)	(2.45)
NDDC	(8.7)	(9.3)	(7)	(0.54)	(0.90)
Education Tax	(9.6)	(4.3)	122	(0.60)	(0.42)
Tax Inversion Penalty	(4.4)	(3.9)	13	(0.28)	(0.36)
Total Royalties	(139.8)	(67.0)	109	(8.68)	(6.44)

Royalties include Nigerian Royalty Oil, NNPC's share of Profit Oil, Niger Delta Development Commission ("NDDC") levy, education tax and tax inversion penalty.

- Royalty Oil is calculated in accordance with the Corporation's Nigerian Production Sharing Contracts on a field by field basis.
- Profit Oil is calculated in accordance with the Nigerian Production Sharing Contracts and is equal to the realized price for crude oil less Royalty Oil, Cost Oil and Tax Oil. Profit Oil is shared between NNPC and the Corporation depending on the licence and the monthly volumes produced.
- NDDC levy is calculated as 3 per cent of budgeted expenditures. For OPL90, this amount was calculated once first lifting occurred in June 2005. Before first lifting, there was no liability for the levy.
- Education tax is calculated as a 2 per cent charge on taxable profit before capital allowances are deducted.
- The tax inversion penalty is designed to encourage oil companies to contain operating costs. The tax inversion penalty for production rates of less than 50 mbbls/d is calculated at 25 per cent of operating costs in excess of \$7.50/bbl. For production rates of more than 50 mbbls/d, the tax inversion penalty is calculated at 25 per cent of operating costs above \$5.00/bbl. Addax Petroleum would be subject to this penalty if the Corporation's average production from the OML123/124 PSC is above 50 mbbls/d in 2005. If, as management expects, the production average exceeds 50 mbbls/d for 2005, the Corporation's maximum exposure to the tax inversion penalty is estimated to be approximately \$4.5 million.

Royalties increased by 109 per cent to \$139.8 million for the nine months ended September 30, 2005 from \$67.0 million for the same period in 2004. This increase was due to the rise in petroleum sales which in turn resulted in Royalty Oil increasing by 144 per cent to \$58.7 million from \$24.0 million and includes \$5.3 million of Royalty Oil resulting from OPL90 crude oil production (2004 — nil), and NNPC's share of Profit Oil increasing 129 per cent to \$58.4 million from \$25.5 million, due to increased profitability from OML123 and OML124, primarily as a result of higher sales volumes and prices.

The NDDC levy decreased by \$0.6 million to \$8.7 million for the nine months ended September 30, 2005 from \$9.3 million for the same period in 2004. Education tax increased by 122 per cent to \$9.6 million for the nine months ended September 30, 2005 from \$4.3 million for the same period in 2004. The increase in education tax was a result of higher taxable income before allowances in OML123 and OML124 and the inclusion of OPL90 income for the first time. The tax inversion penalty increased by 13 per cent to \$4.4 million for the nine months ended September 30, 2005 from \$3.9 million for the same period in 2004 due primarily to management's expectation that OML123 and OML124 will produce in excess of 50.0 mbbls/d for 2005.

Operating Expenses

Operating expenses increased by 65 per cent to \$104.0 million for the nine months ended September 30, 2005 from \$63.1 million during the same period in 2004. The increase was primarily due to (i) an increase in employee costs and benefits of \$4.5 million following the recruitment of 20 additional professionals in Nigeria to support ongoing operations and development in the Okwori field; (ii) an increase of \$5.0 million in Lagos office costs; (iii) an increase of \$4.3 million for production and maintenance work on OPL90; and (iv) an increase of \$7.5 million in FPSO charter costs following the lease of a TPU (temporary production unit) which was used to continue production from the Adanga platform while upgrades were being made. In addition, operating expenses for OPL90 for the nine months ended September 30, 2005 were \$23.2 million, as compared with no operating expenses for OPL90 in 2004.

Per barrel operating expenses increased to \$6.46 in the nine months ended September 30, 2005 from an average of \$6.07 for the same period in 2004.

General and Administrative Expenses

General and administrative charges relate to corporate costs and new venture activities. These costs are not tax deductible for Nigerian tax purposes.

General and administrative expenses decreased by 16 per cent to \$11.3 million for the nine months ended September 30, 2005 from \$13.5 million for the same period in 2004. This decrease was due primarily to the Corporation incurring \$2.2 million in legal and special audit costs in 2004 in preparation for its initial public offering.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 131 per cent to \$108.1 million for the nine months ended September 30, 2005 from \$46.8 million for the same period in 2004. The 2005 figure includes \$30.2 million in depreciation on OPL90 assets which were not depreciated in 2004 as production from OPL90 did not commence until March 2005. Depreciation for OML123 and OML124 assets increased by \$28.6 million for the nine months ended September 30, 2005 compared to the same period in 2004, due primarily to increased production which led to an increase in the unit of production rate used to calculate depreciation. This higher unit of production rate was due primarily to the addition of the Okwori Property costs to the depletion, depreciation and accretion pool. The average development cost per barrel for projects in OML123/124 is approximately \$4.00 to \$6.00 per barrel compared with significantly higher development costs of approximately \$10.00 per barrel for the Okwori Property.

Current Income Taxes

The fiscal terms of the Corporation's main operations in Nigeria are set out in the Production Sharing Contracts as modified by the Nigerian government on November 21, 2001. Taxation is calculated at the statutory rate on income which is taxable in Nigeria as a result of activities under the Production Sharing Contract.

Current Income Taxes increased by 135 per cent to \$256.9 million for the nine months ended September 30, 2005 from \$109.1 million for the same period in 2004. This increase was due primarily to an increase in petroleum sales, which generated a higher taxable basis for the nine months ended September 30, 2005. There were \$6.6 million of current income taxes for OPL90 for the nine months ended September 30, 2005 and no income tax for the same period in 2004. Income from OPL90 for the nine months ended September 30, 2005 was taxed at 15 per cent.

Future Income Taxes

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

Future income taxes increased by 92 per cent to \$50.6 million for the nine months ended September 30, 2005 from \$26.4 million for the same period in 2004. This increase is primarily due to a future tax liability of \$20.1 million for the OPL 90/225 PSC for the nine months ended September 30, 2005 (corresponding period in 2004 — nil).

Year Ended December 31, 2004 Compared with Year Ended December 31, 2003

Summary

During 2004, 15 new wells came on-stream, including two extended well tests. The Corporation also implemented initiatives to optimize production from existing wells. This resulted in an increase in production by 6 per cent to 14.6 mmbbls in 2004 from 13.8 mmbbls in 2003 and an increase in the average daily crude oil production rate to 40.0 mbbls/d in 2004 from 37.7 mbbls/d in 2003.

Total oil production for 2004 was 14.6 mmbbls, 91 per cent of which was from OML123 (13.2 mmbbls) with the remainder from OML124 (1.4 mmbbls).

In 2004, net income increased by 169 per cent to \$62.6 million from \$23.3 million in 2003. The following table summarizes the Corporation's results of operations for 2004 as compared to 2003.

	<u>2004</u>	<u>2003</u>	<u>Change</u>	<u>2004</u>	<u>2003</u>
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)

Net Income	<u><u>62.6</u></u>	<u><u>23.3</u></u>	<u><u>169</u></u>	<u><u>4.38</u></u>	<u><u>1.68</u></u>

Notes:

- (1) Including interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
- (2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales increased by 37 per cent to \$524.1 million in 2004 from \$381.8 million in 2003. The increase reflects both a 33 per cent increase in the average realized sales price and a 6 per cent increase in average daily production. The average realized price per barrel increased by 33 per cent to \$36.65 in 2004 from \$27.47 in 2003.

Royalties

The following table summarizes the component parts of royalties for the years ended December 31, 2004 and 2003.

	Year Ended December 31,		Change	Year Ended December 31,	
	2004	2003		2004	2003
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Royalty Oil	(36.0)	(28.2)	27	(2.51)	(2.03)
NNPC Profit Oil	(45.5)	(28.7)	59	(3.18)	(2.06)
NDDC	(11.8)	(6.5)	84	(0.82)	(0.46)
Education Tax	(6.3)	(3.9)	64	(0.44)	(0.27)
Tax Inversion Penalty	(3.8)	—	—	(0.27)	—
Total Royalties	(103.4)	(67.1)	54	(7.22)	(4.82)

Royalties increased by 54 per cent to \$103.4 million in 2004 from \$67.1 million in 2003. This increase was due to the increase in petroleum sales outlined above which resulted in Royalty Oil increasing by 27 per cent to \$36.0 million in 2004 from \$28.2 million in 2003, and NNPC's share of Profit Oil increasing by 59 per cent to \$45.5 million in 2004 from \$28.7 million in 2003, due to increased profitability from OML123 and OML124, primarily due to higher sales volumes and prices.

The NDDC levy increased by 84 per cent to \$11.8 million in 2004 from \$6.5 million in 2003, due primarily to a \$5.0 million accrual relating to a change in the basis on which the NDDC levy was calculated. The NDDC levy was calculated based on actual expenditures in 2002 and 2003 and budgeted expenditures in 2004. The Corporation had been lobbying to change the basis of the NNDC levy calculation and it became apparent in 2004 that the method which the Nigerian authorities wished to use was budgeted expenditure. This calculation method is still being disputed by the Corporation. The additional increase is mainly due to higher expenditures in 2004 compared to 2003. Education tax increased by 64 per cent to \$6.3 million in 2004 from \$3.9 million in 2003, due to higher taxable income before allowances.

The tax inversion penalty in 2004 relates to a tax audit of the Corporation's 1998 to 2001 financials where NNPC and the Corporation agreed on final tax accounts. The method of calculating operating costs for the costs penalty arrangement is still to be agreed. However, following the audit, and applying the Corporation's method of calculating operating costs per barrel, the cost per barrel for 2000 was greater than \$7.50 per barrel. Thus, the tax inversion penalty was accrued in 2004.

Operating Expenses

Operating expenses increased by 14 per cent to \$87.5 million in 2004 from \$76.8 million in 2003. This increase was primarily due to an increase in employee costs and benefits of \$5.2 million following the recruitment of additional professionals in Nigeria to support ongoing operations and development on the Okwori Property and an increase of \$5.8 million in FPSO charter costs following the lease of a temporary production unit which was used to process crude oil while the Adanga Platform was closed for upgrades. This increase was partially offset by a decrease of \$0.8 million in onshore maintenance costs (pipeline and facilities) and \$0.8 million in custom duties on the importation of well material. The per barrel operating cost increased to \$6.12 in 2004 from \$5.53 in 2003.

General and Administrative Expenses

General and administrative expenses increased by 21 per cent to \$18.2 million in 2004 from \$15.0 million in 2003. This increase was due primarily to the Corporation incurring \$4.0 million in legal and special audit costs in 2004 in preparation for its initial public offering.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 26 per cent to \$77.2 million in 2004, from \$61.3 million in 2003, largely as a result of increased production and a larger depreciable base. On a per barrel basis, depletion, depreciation and accretion expenses increased by \$0.99 per barrel to \$5.40 per barrel in 2004 from \$4.41 per barrel in 2003.

In 2004, the Corporation wrote off \$3.8 million, which represented its portion of the costs associated with the drilling of an unsuccessful exploratory well in Gabon in early 2004.

In 2003, production from two cost pools, OPL90 and OPL225 and the Ngosso Property, had not yet commenced. Accordingly, no depreciation charge for these costs was calculated and all costs were capitalized. The Corporation planned to acquire 3D seismic data in the Ngosso Property in 2003, but the project was postponed due to the Cameroon-Nigeria border dispute. In 2003, the Corporation wrote off capitalized intangible costs of \$4.3 million which were incurred for mobilization and demobilization of a seismic data acquisition team in the Ngosso Property.

Current Income Taxes

Current income taxes increased by \$38.7 million to \$140.4 million in 2004 from \$101.7 million in 2003. This increase is due primarily to a 35.0 per cent increase in petroleum sales which generated a higher taxable basis in 2004 compared to 2003, and an increase in PPT charges of \$9.6 million relating to whether certain capital costs regarding the acquisition of the Nigerian properties should be charged to Cost Oil.

Future Income Taxes

Future income tax expense increased by 17 per cent to \$30.1 million in 2004 from \$25.7 million in 2003. The increase is due primarily to additional capital expenditure of which intangible drilling costs are expensed in the tax accounts and capitalized in the financial statements, offset by greater depletion, depreciation and accretion compared to capital allowances.

Year Ended December 31, 2003 Compared with Year Ended December 31, 2002

Summary

In OML123, five new wells came on-stream in 2003 and initiatives were implemented to optimize production from existing wells. In OML124, the Corporation implemented a drilling program that resulted in two new producing wells being brought on-stream. Principally as a result, crude oil production increased by 20 per cent to 13.8 mmbbls in 2003 from 11.5 mmbbls in 2002. The average daily rate of production increased to 37.7 mbbls/d in 2003 from 31.5 mbbls/d in 2002.

Total crude oil production for 2003 was 13.8 mmbbls, 85.5 per cent of which was produced from OML123 (11.8 mmbbls), with the remainder produced from OML124 (2.0 mmbbls).

In 2003, net income decreased by 66 per cent to \$23.3 million as compared to \$68.2 million in 2002. The following table summarizes the Corporation's results of operations for 2003 as compared to 2002.

	<u>2003</u>	<u>2002</u>	<u>Change</u>	<u>2003</u>	<u>2002</u>
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Petroleum sales	381.8	284.1	34	27.47	24.28
Royalties	(67.1)	19.1	n/a	(4.83)	1.63

Notes:

- (1) Including interest on long term debt, other interest and finance charges, foreign exchange loss (gain) and impairment of property, plant and equipment.
- (2) Figures expressed on a per barrel basis are derived using sales volumes rather than production.

Petroleum Sales

Petroleum sales increased by 34 per cent to \$381.8 million in 2003 from \$284.1 million in 2002. The increase reflects both a 13 per cent increase in the average realized price of the Corporation's crude oil (\$27.47 in 2003 compared to \$24.28 in 2002) and a 20 per cent increase in sales. The number of barrels lifted increased to 13.8 mmbbls in 2003 from 11.5 mmbbls in 2002.

Royalties

The following table summarizes the component parts of royalties for the years ended December 31, 2003 and 2002.

	<u>Year Ended</u> <u>December 31,</u>		<u>Change</u>	<u>Year Ended</u> <u>December 31,</u>	
	<u>2003</u>	<u>2002</u>	<u>(%)</u>	<u>2003</u>	<u>2002</u>
	(\$million)	(\$million)	(%)	(\$/bbl)	(\$/bbl)
Royalty Oil	(28.2)	35.2	n/a	(2.03)	3.01
NNPC Profit Oil	(28.7)	(6.4)	344	(2.06)	(0.55)
NDDC	(6.5)	(8.1)	(21)	(0.46)	(0.69)
Education Tax	(3.9)	(1.6)	143	(0.28)	(0.14)
Cost Penalty Arrangement	-	-	-	-	-
Total Royalties	<u>(67.1)</u>	<u>19.1</u>	<u>n/a</u>	<u>(4.83)</u>	<u>1.63</u>

Royalties increased to \$67.1 million in 2003 from a credit of \$19.1 million in 2002. Royalty Oil increased to \$28.2 million in 2003 from a credit of \$35.2 million in 2002. Royalty Oil in 2002 included a credit of \$53.7 million due to the implementation of new royalty terms during 2002, but made effective retroactively as of January 1, 2000. In addition, the increase in production between 2003 and 2002 resulted in higher royalties. NNPCs' share of Profit Oil increased to \$28.7 million in 2003 from \$6.4 million in 2002, due to increased profitability from OML123 and OML124, primarily due to higher sales volumes and prices. Following an audit by NNPC in 2003, the Corporation agreed with NNPC that capital investment allowance was not deductible in calculating NNPC

Profit Oil. This increased NNPC Profit Oil in 2003 by \$10.3 million. In 2002, NNPC Profit Oil had carried forward losses from prior years, which reduced the 2002 change.

NDDC levies decreased by 21 per cent to \$6.5 million in 2003 from \$8.1 million in 2002. The decrease in NDDC levies was due primarily to lower capital expenditures in 2003. Education tax increased by 143 per cent to \$3.9 million in 2003 from \$1.6 million in 2002. The increase was due to higher taxable income before allowances in 2003. In 2003 and 2002, the NDDC levy was calculated based on actual expenditures (as opposed to budgeted expenditures) incurred on OML123 and OML124. As no crude oil was produced and sold from OPL90 and OPL225 in 2003 or 2002, no petroleum levies were calculated for these properties.

Operating Expenses

Operating expenses increased by 19 per cent to \$76.8 million in 2003 from \$64.8 million in 2002. This increase was due primarily to a \$4.4 million increase in the OML123 FPSO costs following the leasing of a second production processing train for the FPSO, a \$2.2 million increase in employee costs, a \$2 million provision for Nigerian withholding tax in 2003, a \$1.2 million increase in supply vessel costs of the Corporation's offshore operations, a \$1 million restructuring charge incurred in 2003 and a \$0.6 million increase in third party maintenance staff costs. Per barrel operating costs decreased by \$0.01 to \$5.53 in 2003 from \$5.54 in 2002.

General and Administrative Expenses

General and administrative expenses increased by \$3.9 million to \$15.0 million in 2003 from \$11.1 million in 2002. This increase was primarily due to an increase in new ventures activities and office expansion activities in Geneva.

Depletion, Depreciation and Accretion

Depletion, depreciation and accretion expenses increased by 53 per cent to \$61.3 million in 2003 from \$40.1 million in 2002. This increase was primarily due to the increase of the unit of production rate used to calculate total depreciation. On a per barrel basis, depletion, depreciation and accretion expenses increased by \$0.98 to \$4.37.

Current Income Taxes

Current Income Taxes increased by 193 per cent to \$101.7 million in 2003 from \$34.7 million in 2002. This increase was due primarily to a 27.2 per cent increase in petroleum sales which generated a higher taxable basis in 2003. Tax loss and allowance carry forwards were used before 2003, which significantly reduced the 2002 tax charge. A tax accrual of \$8.0 million was taken in 2003 relating to a reserve addition bonus for reserve additions in 1999, which the Nigerian authorities disallowed in 2003 and which the Corporation successfully contested. Another tax accrual, also for \$8.0 million, was taken relating to studies which were capitalized by the Corporation.

Future Income Taxes

Future income taxes decreased by 64 per cent to \$25.7 million in 2003 from \$72.3 million in 2002. The decrease was a result of a \$16 million tax deferral for the Okwori Property, which was offset by an increase in the timing differences in OML123 and OML124 and the accumulation of capital investment allowance carry forwards in 2003.

Consolidated Results of Operations by Quarter

The following table sets forth a summary of the Corporation's results of operations for the periods indicated.

	2005			2004				2003			
	Q3	Q2	Q1	Q4	Q3	Q2	Q1	Q4	Q3	Q2	Q1
	(\$thousand)										
Petroleum sales	387.8	258.2	194.5	156.4	146.6	117.1	104.0	96.2	98.4	89.4	97.8
Net income	85.6	53.5	28.9	21.3	15.8	13.7	11.8	(8.1)	13.8	1.4	16.2
Net income per share — basic and diluted	0.71	0.45	0.24	0.18	0.13	0.11	0.10	(0.07)	0.12	0.01	0.14

Petroleum Sales

The volume of crude oil sold by the Corporation per fiscal quarter for the first three fiscal quarters of 2005 was 4.4 mmbbls, 5.4 mmbbls and 6.4 mmbbls, respectively. Petroleum sales for the first three quarters of 2005 increased as production from OML123 and OML124 increased and as production from OPL90 was brought on-stream in March 2005. Petroleum sales from OPL90 and OPL225 per fiscal quarter for the first three quarters of 2005 were nil mmbbls, 0.9 mmbbls and 1.7 mmbbls, respectively. The average sales price per quarter for the first three fiscal quarters of 2005 was \$43.13 per barrel, \$49.67 per barrel and \$59.89 per barrel, respectively. The increasing volumes and prices throughout the quarters, including first sales from OPL90 and OPL225, accounted for the increasing petroleum sales per quarter.

In 2004, the volumes of crude oil sold by the Corporation per fiscal quarter were 3.3 mmbbls, 3.4 mmbbls, 3.7 mmbbls and 4.0 mmbbls, respectively. Petroleum sales in 2004 were affected by increasing production during the year. The average sales price per fiscal quarter generally increased throughout 2004 as follows: \$30.53 per barrel, \$33.52 per barrel, \$40.22 per barrel and \$40.14 per barrel. The increasing volumes and prices throughout the year accounted for the rising total petroleum sales per quarter.

For the four fiscal quarters in 2003, the volumes sold were 3.3 mmbbls, 3.6 mmbbls, 3.7 mmbbls and 3.3 mmbbls, respectively. The average sales price in the first quarter was \$30.46 per barrel, dropping to \$25.01 per barrel in the second quarter and then rising to \$27.51 and \$28.30 per barrel in the third and fourth quarters, respectively.

Net Income

Net income by fiscal quarter for the first three quarters of 2005 were \$28.9 million, \$53.5 million and \$85.6 million, respectively. The increase in net income in the second quarter compared to the first quarter of \$24.6 million was due primarily to an increase in petroleum sales from \$194.5 million in the first quarter to \$258.2 in the second quarter. Second quarter petroleum sales included initial sales from the Okwori Property of \$53.6 million. The increase in petroleum sales in the second quarter was offset by costs from Okwori production of \$30.1 million. Taxes were flat in the second quarter due to production from the Okwori Property having a low tax rate and large tax allowances obtained from a previous operator of OPL90. Net income increased in the third quarter compared to the second quarter by \$32.1 million primarily due to an increase in petroleum sales from \$258.2 million in the second quarter to \$387.8 in third quarter. Third quarter petroleum sales from the Okwori Property were \$106.3 million as compared to \$53.6 million in the second quarter. The increase in petroleum sales in the third quarter was offset by costs from Okwori production of \$59.3 million. Taxes increased in the third quarter compared to the second quarter by \$60.6 million due to the Okwori Property having utilised its tax allowances. Costs in OML123 and OML124 increased by \$31.2 million in the third quarter compared to the second quarter due to increasing royalties and depletion, depreciation and accretion.

Net income by quarter for 2004 was \$11.8 million, \$13.7 million, \$15.8 million and \$21.3 million, respectively. The increase in net income in the second quarter compared to the first quarter of \$1.9 million was due primarily to an increase in petroleum sales from \$104.0 million in the first quarter to \$117.1 million in the second quarter. Increasing petroleum sales were offset by a corresponding increase in taxes of \$6.1 million and increased administration costs, which were not tax deductible. Net income increased in the third quarter

compared to the second quarter by \$2.1 million due primarily to an increase in petroleum sales from \$117.1 million in the second quarter to \$146.6 million in the third quarter. Increasing petroleum sales were offset by a corresponding increase in taxes of \$17.2 million. Net income increased in the fourth quarter compared to the third quarter by \$5.5 million due primarily to an increase in revenues from \$146.6 million in the third quarter to \$156.4 million in the fourth quarter, a decrease in taxes of \$10.0 million due mainly to a partial reversal of the reserve edition bonus tax accrual and a \$13.5 million increase in depletion costs.

Net income/(loss) by quarter for 2003 was \$16.2 million, \$1.4 million, \$13.8 million and \$(8.1) million. The decrease in net income in the second quarter compared to the first quarter of \$14.9 million was due largely to an increase in administration costs from \$5.1 million in the first quarter to \$16.7 in the second quarter. Administration costs are not tax deductible as they are not incurred for Nigerian activities. Net income in the third quarter returned to levels comparable to first quarter net income. \$16 million of tax accruals and a \$10.3 million additional charge to NNPC Profit Oil were taken in the fourth quarter. These tax accruals were comprised of \$8.0 million for the possible loss of a tax offset for a reserve addition bonus earned in 1999 and \$8.0 million for reclassification of studies from capital cost to operating expense in the tax accounts. This reclassification produced a loss of capital investment allowances, thereby increasing the tax charge.

Liquidity and Capital Resources

Overview

The Corporation's principal source of liquidity has been cash generated from operating activities which has been supplemented as necessary by credit facilities to meet increased capital expenditures, primarily for the development of the Okwori Property in OPL90. The Corporation has not experienced seasonal impact on its cash flows. Currently, the Corporation generates all of its cash from operating activities of its Nigerian subsidiaries. Provided applicable solvency and corporate requirements are satisfied, there are no legal or practical restrictions in Nigeria on the ability of the Corporation's Nigerian subsidiaries to transfer funds to the Corporation in the form of cash dividends, loans or advances. In addition, there are no contractual restrictions on such transfers of funds to the Corporation by its Nigerian subsidiaries. After the closing of this offering, APNV will be a wholly owned subsidiary of the Corporation and transfers of funds by APNV to the Corporation in the form of cash dividends, loans or advances will be restricted by the provisions of the credit facility described below. See "Dividends".

The Corporation held total cash and cash equivalents of \$8.5 million as at September 30, 2005.

The Corporation has a senior secured revolving credit facility with BNP Paribas as Mandated Lead Arranger and Standard Bank as Lead Arranger with a borrowing base of \$300.0 million. This facility expires on December 31, 2008. The borrowing base was initially set at \$100.0 million, and is re-determined semi-annually based on NSAI's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. As at November 30, 2005, \$80.0 million was drawn down on the credit facility.

The credit facility bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilisation on the first day of the interest period. The credit facility is secured by debentures given by APNV and Addax Petroleum Overseas Ltd., assignment by way of security of the principal contracts including the Crude Oil Supply Agreements, a pledge over the bank accounts and share pledges of APNV's principal subsidiaries. The credit facility is for funding Nigerian capital expenditures. This facility restricts dividends to a maximum of one-third of the Corporation's after tax profit.

Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million prior to the closing of the offering.

Management believes that the Corporation's cash flow generated from operating activities, its cash and cash equivalents, the existing credit facilities and the net proceeds it receives from the offering will be sufficient to fund its foreseeable working capital requirements.

The following table summarizes the principal components of Addax Petroleum's consolidated cash flows for the periods indicated:

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
		(\$million)		
Net Cash Inflows (outflows) before movements in working capital				
Cash flow from operations	322.2	171.0	118.6	184.2
Net cash flow used in investing activities	(276.2)	(314.2)	(175.2)	(170.4)
Net cash from (used in) financing activities	(3.5)	35.3	(31.0)	8.0
Net increase in cash and cash equivalents	42.5	(107.9)	(87.6)	21.8
(Increase) decrease in working capital	(37.9)	55.8	100.8	(2.6)
Increase (decrease) in cash and cash equivalents	4.6	(52.1)	13.2	19.2
Cash and cash equivalents at end of year	8.5	3.9	56.0	42.8

Cash Flow from Operations

Cash flow from operations was \$322.2 million for the nine months ended September 30, 2005, compared to \$118.4 million for the same period in 2004, representing an increase of \$203.8 million. The increase was due primarily to the increase in income before income taxes of \$298.7 million, the Okwori Property coming on-stream in 2005, and higher production from OML123/124 in 2005. Additionally, there were increases in non-cash items with the operating activities, specifically an increase of \$86.0 million relating to depreciation and future taxes. This was offset by an increase in current taxes of \$147.8 million.

Cash flow from operations was \$171.0 million in 2004 compared to \$118.6 million in 2003, an increase of \$52.4 million. The increase was primarily due to the increase in income before income taxes and non-controlling interests of \$80.0 million, with a revenue increase of \$106.1 million offset by costs of \$26.1 million. Additionally, there were increases in non-cash items with the operating activities in 2004, specifically an increase of \$19.5 million in depreciation and write-offs. These increases to operating activities were mostly offset by an increase in income tax paid and liftings of Nigerian government entitlement to income tax of \$43.1 million.

Cash flow from operations was \$118.6 million in 2003 compared to \$184.2 million in 2002, a decrease of \$65.6 million. The decrease was due primarily to the increase in current income tax payable to the Nigerian government of \$65.0 million.

Net Cash Flow Used in Investing Activities

Net cash used in investing activities consists principally of the purchase of property, plant and equipment, and intangible assets. Net cash used in investing activities was \$276.2 million for the nine months ended September 30, 2005 compared to \$183.0 million for the same period in 2004, representing an increase of \$93.9 million. This increase is due largely to capital expenditures on the development of the Okwori Property and the Nda extended well test of \$170.2 million in the nine months ended September 30, 2005 and \$95.9 million in the same period in 2004. Property, plant and equipment expenditures on OML123 and OML124 increased in 2005 by \$15.0 million to \$99.2 million in 2005 from \$84.2 million in 2004. Expenditure on intangible assets decreased slightly in 2004 to \$11.4 million from \$14.3 million in 2003.

Net cash used in investing activities was \$314.2 million in 2004, compared to \$175.2 million in 2003, an increase of \$139.0 million. This increase is due to capital expenditures on the development of the Okwori Property and the Nda extended well test of \$165.4 million in 2004. Property, plant and equipment expenditures on OML123 and OML124 decreased to \$135.1 million in 2004 from \$138.2 million in 2003. Expenditures on intangible assets decreased slightly to \$11.4 million in 2004 from \$14.3 million in 2003. Additionally, in 2003 the Corporation purchased the non-controlling interest in the Nigeria Production Sharing Contracts for \$21.0 million (2004 — nil).

Net cash used in investing activities was \$175.2 million in 2003 compared to \$170.4 million in 2002. This increase is primarily due to the Corporation's purchase of the non-controlling interest in the Nigerian Production Sharing Contracts for \$21.0 million in 2003 (2002 — nil). This increase was offset in part by a

decrease in property, plant and equipment and intangible assets of \$16.3 million. This decrease is due to lower capital expenditures on OML123 and OML124 which decreased to \$142.1 million in 2003 from \$161.1 million in 2002. Expenditures on intangible assets decreased slightly in 2004 to \$11.4 million from \$14.3 million in 2003.

Net Cash From (Used in) Financing Activities

Net cash used in financing activities was \$3.5 million for the nine months ended September 30, 2005 compared to a cash inflow of \$6.5 million for the corresponding period for 2004. Drawdowns of \$125.0 million were made in the nine months ended September 30, 2005 as compared to \$25.0 million in the same period in 2004. Dividends paid increased to \$35.0 million in the nine months ended September 30, 2005 from \$18.5 million in the same period in 2004. The Corporation repaid debt of \$90.0 million in the nine months ended September 30, 2005 (corresponding period in 2004 — nil) and paid interest expense of \$3.5 million in the nine months ended September 30, 2005 (corresponding period in 2004 — nil).

Net cash from financing activities was \$35.3 million in 2004 as compared to net cash used in financing activities of \$31.0 million in 2003. Drawdowns of \$65.0 million were made in 2004 (2003 — nil). Borrowing fees of \$2.7 million were paid in 2004 (2003 — nil). Repayment of debt of \$25.0 million was made in 2003 (2004 — nil).

Net cash used in financing activities was \$31.0 million in 2003 as compared to net cash from financing activities of \$8.0 million in 2002. Drawdowns of \$25.0 million were made in 2002 (2003 — nil). Repayment of debt of \$25.0 million was made in 2003 as compared with \$5.0 million in 2002. Dividends paid in 2003 decreased to \$6.0 million from \$12.0 million in 2002.

Off Balance Sheet Arrangements

The Corporation does not currently have any off balance sheet arrangements.

Contractual Obligations and Commercial Commitments

The table below sets forth information relating to the Corporation's contractual obligations and commercial commitments as at September 30, 2005.

<u>Contractual Obligations and Commercial Commitments</u>	<u>Within One Year</u>	<u>From 1 to 5 years</u>	<u>More than 5 years</u>	<u>Total</u>
	(\$million)			
Long Term Debt	-	100.0	-	100.0
Operating Leases ⁽¹⁾	59.8	231.6	128.6	420.0
Purchase Obligations ⁽²⁾	144.6	-	-	144.6
Other Long Term Obligations ⁽³⁾	69.1	-	-	69.1
Total	<u>273.5</u>	<u>331.6</u>	<u>128.6</u>	<u>733.7</u>

Notes:

- (1) Operating leases are the leases of FPSO's and the TPU.
- (2) Consists principally of the purchase of flowlines and pipelines and wellheads in OPL90 and OPL225, and pipelines related to the replacement FPSO in OML123 and OML124.
- (3) Consists principally of obligations related to two long term rig charters.

Capital Expenditures

The following table sets forth the Corporation's capital expenditures for the periods indicated.

Capital Expenditures	9 Months Ended September 30, 2005	Year Ended December 31		
		2004	2003	2002
		(\$million)		
OML 123/124				
Drilling	71.3	77.3	76.2	118.7
Facilities	18.9	48.0	47.4	30.4
Other	9.0	9.8	14.6	12.0
Sub Total	99.2	135.1	138.2	161.1
OPL 90/225				
Exploration	-	21.6	0.5	1.7

Other	1.3	1.5	4.3	0.7
Total	276.1	314.2	154.1	170.4

Budgeted Capital Expenditures

The Corporation has a substantial capital expenditure program for its current properties and new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million for 2006. These budgeted capital expenditures will fund a four rig drilling program (three of which are currently contracted), the Nda field development, replacement of the current OML123 FPSO, redevelopment of the Adanga field and TPU refurbishment, development of the Oron field, development and exploration on the Okwok Property, gas gathering and gas lift infrastructure for associated gas and appraisal activity in Iraq, Cameroon and Gabon. Management believes its cash flow generated from operating activities, its cash and cash equivalents and the net proceeds to the Corporation from the offering will be adequate to fund the Corporation's capital expenditure requirements. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred under the production sharing formula. The estimated development cost per barrel added for selected developments is as follows: Nda field development \$9.96 per barrel, Ebughu North East infill \$6.75 per barrel, Ebughu East in fill \$5.38 per barrel. Of the 2006 budget of \$815 million, \$152 million is for sustaining activities and \$663 million is for growth activities.

Capital Expenditures for the Nine Months Ended September 30, 2005

Total capital expenditures for the nine months ended September 30, 2005 were \$276.1 million. For the nine months ended September 30, 2005, total capital expenditures on OML123 and OML124 were \$99.2 million, including drilling costs of \$71.3 million comprised of \$2.8 million for one exploration well and \$68.5 million for 20 appraisal and development wells on OML123. Facilities costs on OML123 and OML124 were \$18.9 million, which included \$10.0 million for the OML123 FPSO replacement, \$4.8 million for redevelopment of the Adanga Platform and \$2.0 million for development of the Oron Platform. OML124 oil facilities expenditure was \$1.5 million. Other capital expenditures on OML123 and OML124 included capitalized studies of \$5.0 million and \$4.0 million of office capital expenditure.

For the nine months ended September 30, 2005, total capital expenditures on OPL90 and OPL225 were \$172.6 million. Capital expenditures on OPL90 included \$8.5 million for the completion of the Nda extended well test, \$71.3 million for development drilling costs on the Okwori Property, which included \$58.0 million for the completion of two development wells and the fabrication and laying of flow lines from such wells to the OPL90 FPSO. The other costs of \$9.0 million are primarily capitalized interest.

Total capital expenditures of \$2.4 million in Gabon for the nine months ended September 30, 2005 primarily related to geological and geophysical studies and the acquisition of seismic data. Total capital expenditures of \$0.6 million in Cameroon for the nine months ended September 30, 2005 related to geological and geophysical studies.

Capital Expenditures for the Year Ended December 31, 2004

Total capital expenditures for 2004 were \$314.2 million. Total capital expenditures on OML123 and OML124 in 2004 were \$135.1 million, including drilling costs of \$77.3 million, which related to the drilling of 19 appraisal and development wells on OML123. Facilities costs on OML123 and OML124 in 2004 were \$48.0 million, which included \$7.8 million for the Ebughu East structure, topsides and oil and gas lines, \$6.9 million for the Ebughu North East structure and topsides, \$5.6 million for the Oron West extended well test platform and flow line, \$9.0 million for the Adanga riser platform, bridge and piping, \$3.5 million for the Oron wellhead facility, \$2.9 million for the temporary production platform hook-up and \$6.1 million on OML124 oil facilities. Other capital expenditures on OML123 and OML124 in 2004 included \$6.2 million for capitalized studies and \$3.6 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2004 were \$166.2 million, including \$21.6 million for two exploration wells and \$133.3 million for Okwori development costs, which included the completion of two development wells and the fabrication of flow lines from such wells to the OPL90 FPSO.

Total capital expenditures in Gabon in 2004 were \$10.7 million, most of which relate to the Topaze exploration well drilled in early 2004, at a cost of \$7.0 million. Total capital expenditures of \$0.6 million in Cameroon in 2004 related to studies.

Capital Expenditures for the Year Ended December 31, 2003

Total capital expenditures for 2003 were \$154.1 million. Total capital expenditures on OML123 and OML124 in 2003 were \$138.2 million, including drilling costs of \$76.2 million comprised of \$23.2 million for the drilling of 3 water injection wells on OML123, \$32.6 million for the drilling of 4 development wells on OML123 and \$20.4 million for the drilling of 2 development wells on OML124. Facilities costs on OML123 and OML124 were \$47.4 million, which included \$12.4 million for the Ebughu East structure, topsides and oil and gas lines, \$10.1 million for the Ebughu North East structure and topsides, \$10.0 million for the Oron West extended well test platform and flow line and \$8.0 million for OML 124 oil facilities. Other capital expenditures on OML123 and OML124 included \$12.3 million for capitalized studies and \$1.9 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2003 were \$8.1 million relating to pre-development work and studies.

Total capital expenditures for Cameroon in 2003 were \$3.5 million relating to the mobilization and demobilization of a seismic team in Cameroon and studies.

Capital Expenditures for the Year Ended December 31, 2002

Total capital expenditure in 2002 were \$170.4 million. Total capital expenditures on OML123 and OML124 in 2002 were \$161.1 million, including drilling costs of \$118.7 million comprised \$16.7 million for the drilling of 2 exploration wells on OML123, \$66.3 million for the drilling of 16 appraisal and development wells on OML123 and \$34.9 million for the drilling of 7 development wells on OML124. Facilities costs on OML123 and OML124 were \$30.4 million, which included \$12.6 million for two Adanga South flow lines and caissons, \$3.8 million for

the Ebughu to TMMP pipeline, \$3.1 million for the Ebughu to Bogi gas flow line and \$3.0 million for the installation of topsides on Adanga South West. Other capital expenditures on OML123 and OML124 included \$9.1 million for capitalized studies, \$1.0 million for the conversion of OML123 and OML124 from OPLs to OMLs and \$0.7 million for office capital expenditures.

Total capital expenditures for OPL90 and OPL225 in 2002 were \$5.4 million relating to pre-development work and studies.

Total capital expenditures for Cameroon in 2002 were \$3.2 million relating to the mobilization and demobilization of a seismic team into Cameroon and studies.

Transactions with Related Parties

For the nine months ended September 30, 2005, the Corporation sold \$512.3 million of crude oil to AOG. The Corporation also paid \$3.5 million in charges to AOG relating to management services, trademark licence and IT support and \$11.4 million for bunkering oil. See "Interest of AOG in Material Transactions".

In 2004, the Corporation sold \$371.4 million of crude oil to AOG. The Corporation also paid \$5.0 million in charges to AOG relating to management services, trademark licence and IT support and \$10.4 million for bunkering oil. See "Interest of AOG in Material Transactions".

In 2003, the Corporation sold \$386.6 million of crude oil to AOG and paid \$5.8 million in charges to AOG relating to management services, trademark licence and IT support.

In 2002, the Corporation sold \$284.1 million of crude oil to AOG, incurred \$6.2 million in charges to AOG relating to management services, trademark licence and IT support and paid \$0.4 million in interest to AOG.

New Accounting Pronouncements

In an effort to harmonize Canadian GAAP with US GAAP, the Canadian Accounting Standards Board ("AcSB") has issued sections:

- 1530, *Comprehensive Income*;
- 3855, *Financial Instruments — Recognition and Measurement*; and
- 3865, *Hedges*.

Under these new standards, all financial assets should be measured at fair value with the exception of loans, receivables and investments that are intended to be held to maturity and certain equity investments, which should be measured at cost. Similarly, all financial liabilities should be measured at fair value when they are held for trading or they are derivatives.

Gains and losses on financial instruments measured at fair value will be recognized in the income statement in the periods they arise with the exception of gains and losses arising from:

- financial assets held for sale, for which unrealized gains and losses are deferred in other comprehensive income until sold or impaired; and
- certain financial instruments that qualify for hedge accounting.

Sections 3855 and 3865 make use of "other comprehensive income". Other comprehensive income comprises revenues, expenses, gains and losses that are recognized in comprehensive income, but are excluded from net income. Unrealized gains and losses on qualifying hedging instruments, translation of self-sustaining foreign operations, and unrealized gains or losses on financial instruments held for sale will be included in other comprehensive income and reclassified to net income when realized. Comprehensive income and its components will be a required disclosure under the new standard.

These new standards are effective for fiscal years beginning on or after October 1, 2006 and early adoption is permitted. Adoption of these standards as at September 30, 2005 would not have an impact on the Corporation's Consolidated Financial Statements.

The AcSB issued Section 3831, *Non-Monetary Transactions*, which replaces Section 3830 and requires all non-monetary transactions to be measured at fair value unless:

- the transaction lacks commercial substance;
- the transaction is an exchange of a product or property held for sale in the ordinary course of business for a product or property to be sold in the same line of business to facilitate sales to customers other than the parties to the exchange;
- neither the fair value of the assets or services received nor the fair value of the assets or services given up is reliably measurable; or
- the transaction is a non-monetary, non-reciprocal transfer to owners that represents a spin-off or other form of restructuring or liquidation.

The new requirements apply to non-monetary transactions initiated in periods beginning on or after January 1, 2006. Earlier adoption is permitted as of the beginning of a period beginning on or after July 1, 2005. We do not expect the adoption of this section will have any material impact on our results of operations or financial position.

Critical Accounting Estimates

In the preparation of the Corporation's financial statements, management is required to use judgements, assumptions and estimates in the application of generally accepted accounting policies which has an impact on the financial results of the Corporation. These estimates and assumptions are based on the best available information at the time, but may change due to new events and additional information giving rise to changes in the estimates over time. Note 1 of the Corporation's consolidated financial statements for the year ended December 31, 2004 explains the significant financial accounting policies used by the Corporation. The following is a discussion of the critical accounting policies which use significant assumptions and estimates in determining the financial results of the Corporation.

Estimated Oil Reserves

Reserve estimates have a significant impact on earnings due to its impact on depreciation and depletion rates and asset impairment. The Corporation's reservoir engineers perform an internal evaluation on a bi-annual basis of all of its crude oil reserves. The estimation of reserves are based on engineering data, projected future prices, expected future rates of production and the timing of future capital expenditures, all of which are subject to numerous uncertainties and interpretations. The Corporation expects over time that its reserves will change, upwards or downwards, as a result of the results of future drilling, testing, production levels, changes in future price estimates, and economics of recovery based on cash flow forecasts. A change in the reserves estimate may result in a higher or lower depletion charge to the income statement and effect the future tax charge. A lower reserve estimate could result in a write-down of an oil property under the ceiling test.

Independent petroleum engineering consultants evaluate 100 per cent of the oil properties on a semi-annual basis, and a reconciliation is performed between the Corporation's reserves estimates and that of the independent consultants.

Asset Impairments

Annually, an impairment test is performed to ensure that unamortized capitalized costs do not exceed their fair value. An impairment loss will be recognized in the income statement when the carrying value of a cost centre exceeds the estimated undiscounted future cash flows. The future cash flows used in the impairment test include assumptions on oil prices, production, and operating costs. Changes to any of these assumptions such as

a decrease to future oil prices, a decrease in reserves, or an increase in operating costs could result in the impairment of an asset's carrying value.

Full Cost Accounting

The Corporation follows the full cost method for accounting for oil and gas properties as described by the Canadian Institute of Chartered Accountants. Accordingly, costs incurred in the exploration and development of oil and gas properties are capitalized on a country by country cost pool basis. Capitalized costs include land acquisition, geological and geophysical activities, exploration and development wells, both successful and unsuccessful, related plant and equipment, directly attributable interest costs, overhead charges directly related to exploration and development and the estimated discounted cost of the asset retirement obligations.

The capitalized costs are depreciated, depleted and amortized on a unit of production method based on proved reserves for each producing cost pool. See "Petroleum Reserves and Operational Matters". Costs relating to unproved properties and certain development projects are not subject to depreciation, depletion and amortization until production commences. The costs relating to unproved properties are reviewed periodically and any impairment is transferred to the costs being depleted, or if it is ascertained there are no reserves relating to the unproved properties, the impairment is charged directly to the income statement.

Asset Retirement Obligation

The Corporation currently records the asset retirement obligations of fixed assets at fair value when they are incurred, discounted to the Corporation's credit-adjusted risk free interest rate. Retirement costs equal to the fair value are capitalized as part of the related capital assets and are amortized to the income statement over the estimated life of the asset. Estimates of the fair value of the retirement obligations can change over time due to legislation, current costs, technology, interest rates and field life, which can effect the rate of amortization. Differences between the estimated and actual costs to settle the retirement obligation could result in gains or losses in the settlement of the obligation.

Income Taxes

The Corporation follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or, substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Corporation earns capital investment allowances on capital expenditures in Nigeria. The future income tax benefits arising from capital investment allowances are recorded when the capital investment allowances are earned and reduce the carrying amount of property, plant and equipment. Capital investment allowances are charged to future income tax in the statement of operations as the tax benefits are realized.

Financial Controls and Risk Management

The Corporation's activities expose it to a variety of market risks, including the effects of changes in commodity prices, foreign currency exchange rates and interest rates. The Corporation uses derivative financial instruments such as options on commodities, foreign exchange contracts and interest rate swaps to manage certain exposures.

The Board of Directors provides principles for overall risk management, as well as policies covering specific areas, such as commodity price risk, foreign exchange risk, interest rate risk and credit risk. These principles include guidelines on the use of derivative financial instruments.

(a) **Foreign exchange risk**

The Corporation operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to Swiss francs (or "CHF") and Naira (Nigerian currency) against the US dollar. The Corporation uses both local currency borrowing facilities and forward contracts to hedge their exposure to foreign currency risk. The forward currency contract must be in the same currency as the hedged item.

In December 2004 and January 2005, the Corporation entered into foreign exchange forward contracts to purchase CHF 18,000,000 for \$15,578,244 for the year ending December 31, 2005. As at September 30, 2005, the Corporation had bought CHF 13,500,000 for \$11,651,412. These forward contracts fix the exchange rate used to convert a portion of the Corporation's Swiss franc denominated general and administrative expenses to US dollars.

(b) **Commodity price risk**

It is the intention of the Corporation to cover commodity-pricing exposure in order to safeguard a minimum cash income. The option contracts run for 12 months or less and are consistent with the related production estimate. At September 30, 2005, the Corporation had the following crude oil derivative contract outstanding:

	<u>Put Option</u>
Maturity	March 2006
Volume	10 million barrels
Average price	\$21.00 per barrel

(c) **Interest rate risk**

The Corporation's exposure to market risk for changes in interest rates relates primarily to the Corporation's long-term debt obligations.

To manage this risk in a cost efficient manner, the group enters into interest rate swaps, in which the group agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. These swaps are designated to hedge the cash outflows related to interest obligations.

In 2002, in anticipation of receiving a \$50 million loan, the Corporation entered into two interest rate swap contracts to hedge against possible adverse interest rate fluctuations. These contracts resulted in interest expense at an average fixed rate of 4.4 per cent in exchange for a three-month variable LIBOR rate on two notional principal amounts of \$25 million expiring in August 2004 and August 2005, respectively. The Corporation drew down \$25 million on the \$50 million loan facility in February 2002 and repaid this amount in May 2003. One of these two swap contracts expired upon repayment of the \$25 million while the other one was determined to be a hedge from the date of the first drawdown on the \$300 million loan facility in November 2004 until its termination date in August 2005.

(d) **Credit risk**

Concentrations of credit risk with respect to trade receivables are limited due to the high portion of related party debtors. Historical experience has indicated no problem in collecting accounts receivable from related party companies. Due to these factors, management believes that there is no significant credit risk inherent in the Corporation's trade receivables, beyond amounts provided for specific collection losses.

The Corporation has not experienced any material credit losses on the collection of receivables. Of the Corporation's significant individual accounts receivable at September 30, 2005, approximately 80 per cent was due from one related party customer (December 2004 — 59 per cent; December 31, 2003 — 81 per cent).

(e) **Liquidity risk**

The following table represents the estimated fair values of purchased derivative financial instruments considered as non-effective hedges recognized in the consolidated balance sheet as at December 31:

	<u>September 30,</u> <u>2005</u>	<u>December 31,</u> <u>2004</u> <u>2003</u>	
	(\$thousand)		
Currency forwards	519	-	-
Oil options	-	-	890
Interest rate swaps	-	(268)	(1,321)

The estimated fair values of purchased derivative financial instruments that are effective hedges as at December 31 are as follows:

	<u>September 30,</u> <u>2005</u>	<u>December 31,</u> <u>2004</u> <u>2003</u>	
	(\$thousand)		
Currency forwards	-	(66)	955

The fair values of other financial instruments including cash and cash equivalents, accounts receivable, accounts payable and income tax payable approximate their carrying values.

CAPITALIZATION

The following table sets forth the consolidated capitalization of Addax Petroleum Corporation as at November 30, 2005, and as at November 30, 2005 after giving effect to the Pre-IPO Transactions and after giving effect to the Pre-IPO Transactions and the Offering.

	Authorized	Outstanding as at November 30, 2005	Outstanding as at November 30, 2005, After Giving Effect to the Pre-IPO Transactions ⁽¹⁾	Outstanding as at November 30, 2005, After Giving Effect to the Pre-IPO Transactions and the Offering ^(3,4,5)
Debt⁽¹⁾				
Short term debt	-	-	\$ -	\$ -
Long term debt	-	-	\$80 million	\$80 million
Total debt	-	-	\$80 million	\$80 million
Share Capital⁽²⁾				
Common Shares	Unlimited	CDN\$100 (100 shares)	CDN\$ • (120 million shares)	CDN\$ • (• shares)
Preferred Shares	Unlimited	CDN\$ - (nil shares)	CDN\$ - (nil shares)	CDN\$ - (nil shares)

Notes:

- (1) Pursuant to an Amended and Restated Senior Secured Reducing Revolving Credit Facility Agreement dated June 14, 2005 between Addax Petroleum N.V. and a syndicate of banks lead by BNP Paribas S.A., the Corporation has a \$300 million senior secured reducing revolving credit facility available until December 31, 2008. The borrowing base is determined semi-annually based upon an independent engineer's evaluation of the Corporation's oil and gas reserves, subject to the approval of the majority lenders. The facility borrowing base was set at \$300 million in October 2005. The loan bears interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization on the first day of the interest period. The facility is secured by debentures given by Addax Petroleum N.V. and Addax Petroleum Overseas Ltd., assignment by way of security of the principal contracts including the offtake contracts, a pledge over the bank accounts and share pledges of the Corporation's principal subsidiaries. The loan is to be used for funding Nigerian capital expenditure.
- (2) Addax Petroleum Corporation's authorized capital consists of an unlimited number of Common Shares and an unlimited number of Preferred Shares, issuable in series. No series of Preferred Shares will be authorized at the closing of this offering.
- (3) Concurrently with the closing of the offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares in the capital of Addax Petroleum N.V. See "Addax Petroleum — Pre-IPO Transactions".
- (4) Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.
- (5) The net proceeds to the Corporation from the offering of Offered Shares are estimated to be CDN\$ • based on the issuance of • Offered Shares for aggregate gross proceeds of CDN\$ • less the Underwriters' fees of CDN\$ • and expenses of the offering estimated to be CDN\$ •.

DIVIDENDS

Addax Petroleum Corporation intends to establish a policy of declaring quarterly cash dividends on the Common Shares. The payment and the amount of dividends declared in any fiscal quarter will depend on Addax Petroleum Corporation's earnings, financial requirements and other conditions existing which Addax Petroleum Corporation's Board of Directors may consider relevant at such future time, including applicable restrictions arising under the Credit Facility on the ability of APNV to pay dividends or other distributions to the Corporation. Subject to the factors described above, Addax Petroleum Corporation intends to pay its first quarterly dividend for the quarter ending June 30, 2006.

Under the agreement governing the Credit Facility, APNV is not permitted to pay a dividend or other distribution to the Corporation unless APNV is in compliance with a stipulated net worth test and no default exists under that agreement or would result from payment of the dividend or distribution. In addition, the agreement governing the Credit Facility limits the dividends or distributions that can be paid by APNV in any fiscal year to an amount which is equal to the lesser of (i) 33 per cent of APNV's net profit (as defined in that agreement) for its preceding fiscal year plus amounts which APNV could have paid out in dividends in previous years after 2003 but which were instead added to APNV's retained earnings, and (ii) 66 per cent of APNV's net

profit for its preceding fiscal year. However, the lenders under the Credit Facility have provided waivers permitting APNV to pay up to \$120 million in dividends prior to closing of this offering (see "Addax Petroleum — Pre-IPO Transactions") and permitting APNV to pay dividends or other distributions during fiscal 2006 equal to 50 per cent of APNV's net profit for the 2005 fiscal year. See "Management's Discussion and Analysis of Financial Condition and Results of Operations".

Since January 1, 2002, APNV has made cash dividend payments totalling \$82 million. These included a payment of an aggregate amount of \$18 million in 2002, none in 2003, \$29 million in 2004 and \$35 million in the first nine months of 2005. Prior to the closing of the offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long term debt at the November 30, 2005 level of approximately \$80 million. Investors who purchase the Common Shares will not be entitled to receive any part of these dividends. APNV has not declared or paid any other dividends since January 1, 2002 and does not intend to declare any additional dividends in respect of the financial results for 2005. The amount of dividends paid historically by APNV as a private company is not indicative of the dividends that Addax Petroleum Corporation will pay in the future. Addax Petroleum Corporation can provide no assurances that it will declare and pay any dividends in the future.

USE OF PROCEEDS

The net proceeds to the Corporation from the sale of the Offered Shares are estimated to be CDN\$ • million (CDN\$ • million if the Over-Allotment Option is exercised in full) after deducting the fees payable to the Underwriters and the estimated expenses of the offering. Of the net proceeds, CDN\$ • will be used to fund the Corporation's 2006 capital expenditure programs and for general corporate purposes and CDN\$ • will be used to fund the purchase of the issued and outstanding shares of APNV. Pending application of funds for capital expenditures and general corporate purposes, a portion of such net proceeds will be used to temporarily repay amounts outstanding under the Credit Facility. See "Addax Petroleum — Pre-IPO Transactions" and "Addax Petroleum — Capital Expenditure Program".

DIRECTORS AND OFFICERS

The following table sets out the names and municipalities of residence of each of the current directors and officers of Addax Petroleum Corporation and their current positions and offices with Addax Petroleum Corporation and their principal occupations and positions held during the last five years.

<u>Name and Municipality of Residence</u>	<u>Age</u>	<u>Position with the Corporation</u>	<u>Director or Officer Since</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>
Peter Dey ⁽³⁾⁽⁵⁾ <i>Toronto, Ontario</i>	64	Director, Chairman of the Board of Directors and Chairman of the Corporate Governance, Nominating and Compensation Committee	2005	Chairman, Paradigm Capital Inc. Former Partner, Osler, Hoskin & Harcourt LLP. Director of Workbrain Corporation and former Chairman of Morgan Stanley Canada Limited.
Jean Claude Gandur <i>London, United Kingdom</i>	56	Chief Executive Officer and Director	2002 ⁽¹⁾	Officer of APNV. Chief Executive Officer and Chairman of the Advisory Board of The Addax and Oryx Group Ltd. Non-Executive Chairman of AXMIN Inc.
Brian Anderson ⁽³⁾⁽⁴⁾ <i>Kowloon, Hong Kong</i>	62	Director and Chairman of the Technical and Reserves Committee	2005	Chairman and Managing Director of Anderson Energy (Hong Kong) Limited.

<u>Name and Municipality of Residence</u>	<u>Age</u>	<u>Position with the Corporation</u>	<u>Director or Officer Since</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>
James Davie ⁽³⁾⁽⁵⁾ <i>Toronto, Ontario</i>	62	Director	2005	Director of Brompton Funds, Profico Energy Management Inc., Range Royalty Management Ltd., Navigo Energy Inc. and Taylor Gas Management Ltd. Prior to July 2002, Managing Director of RBC Dominion Securities Inc.
Stephen Paul de Heinrich ⁽³⁾⁽⁵⁾ <i>Dully, Switzerland</i>	62	Director	2005	Independent Consultant Associate with Beldi & Cie S.A. Vice Chairman of Advisory Board of The Addax and Oryx Group, Ltd.
Gerry Macey ⁽⁴⁾⁽⁵⁾ <i>Calgary, Alberta</i>	59	Director	2005	Director of Verenex Energy Inc. and PanOrient Energy Corp. Prior thereto, from 2002 to March 2004, Executive Vice President and President, International New Ventures Exploration, Division of EnCana Corporation and from 1999 to 2002, Executive Vice President, Exploration, of PanCanadian Petroleum Corporation.
Afolabi Oladele ⁽⁴⁾ <i>Mississauga, Ontario</i>	54	Director	2005	Vice President, Oil and Gas, Capital Alliance Nigeria. Chairman of Subsurface Assets Management Co. and Formwork Ltd. Director of Freezone Fabrication International Oil & Gas Facilities Fabrication Co., Dorman Long Engineering Co., Sudelletra Nigeria Ltd. and AOG.
Wesley Twiss ⁽³⁾⁽⁴⁾ <i>Calgary, Alberta</i>	60	Director and Chairman of the Audit Committee	2005	Director and Audit Committee Chair of the Canadian Oil Sands Trust, Hydrogenics Corporation, Enbridge Income Fund, Keyera Facilities Income Fund and EPCOR.

<u>Name and Municipality of Residence</u>	<u>Age</u>	<u>Position with the Corporation</u>	<u>Director or Officer Since</u>	<u>Principal Occupation and Principal Positions Held During the Last Five Years</u>
James Pearce <i>Lagos, Nigeria</i>	56	Chief Operating Officer, Managing Director of Nigerian Operations	2005	Officer of APNV. General Manager of Deep Water Operations for Chevron Nigeria Ltd., Managing Director of Chevron Oil Congo.
Michael Ebsary <i>Geneva, Switzerland</i>	44	Chief Financial Officer	1999	Officer of APNV. Director of AXMIN Inc. and Carpathian Gold Inc.
David Codd <i>Geneva, Switzerland</i>	52	Chief Legal Officer and Corporate Secretary	2005	Officer of APNV. Prior thereto, Chairman of Edco Oil & Gas Ltd. and Managing Director, Texaco Limited

Notes:

- (1) Mr. Gandur has been an officer of APNV since 2002 and became a director and officer of Addax Petroleum Corporation in 2005.
- (2) Mr. Ebsary has been an officer of APNV since 1999 and became an officer of Addax Petroleum Corporation in 2005.
- (3) Member of the Audit Committee.
- (4) Member of the Technical and Reserves Committee.
- (5) Member of the Corporate Governance, Nominating and Compensation Committee.

The term of office of the directors of Addax Petroleum Corporation will expire at the next annual meeting of the shareholders to be held in spring 2006.

The officers and directors of Addax Petroleum Corporation, as a group, do not beneficially own, directly or indirectly, any Common Shares. At the closing of this offering, AOG will direct that up to eight per cent of the Common Shares (or • Common Shares) that it is to receive in connection with the Pre-IPO Transactions be issued to existing and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business.

The directors and officers of Addax Petroleum Corporation successfully combine entrepreneurial and management skills with extensive financial and international oil industry experience, particularly in the Corporation's strategic region of Africa. The following are the biographies of the directors and senior officers of Addax Petroleum Corporation.

Peter Dey, Chairman

Mr. Dey is the Chairman of Addax Petroleum Corporation. Mr. Dey is also the Chairman of Paradigm Capital Inc. and a former partner of Osler, Hoskin & Harcourt LLP, a law firm specializing in corporate and securities law. From 1994 to 2001, he was Chairman of Morgan Stanley Canada Limited where he was responsible for the overall strategic direction of Morgan Stanley in Canada. Mr. Dey previously chaired The Toronto Stock Exchange Committee on Corporate Governance in Canada which released a report entitled "Where Were the Directors?" in December 1994. From 1983 to 1985, Mr. Dey was the Chairman of the Ontario Securities Commission. Mr. Dey is the chairman of the Private Sector Advisory Group of the Global Corporate Governance Forum established by the World Bank and the OECD. Mr. Dey is the vice-chairman of the Boardroom Advisory Panel established by the OECD. Mr. Dey has a Bachelor of Science from Queen's University, a Bachelor of Laws degree from Dalhousie University and a Master of Laws degree from Harvard University. Mr. Dey is also a director of Workbrain Corporation.

Jean Claude Gandur, Chief Executive Officer and Director

Mr. Gandur is the Chief Executive Officer and a Director of Addax Petroleum Corporation. Mr. Gandur has worked with major commodity traders including Philipp Brothers from 1976 to 1983, where he was Manager of the African/Latin American division; Sigmoid Resources N.V. from 1984 to 1986, where he was the Managing Director; and Kaines SA from 1986 to 1988, where he was the Managing Director. For ten years Mr. Gandur was honorary consul for the Republic of Congo in Geneva. Mr. Gandur was also awarded a diplomatic passport by

Senegal. In addition, he has received the decorations of Grand Officer of the Lion Order of Senegal and Commander of the National Order of Benin. Mr. Gandur is one of the founders of AOG, of which he is Chief Executive Officer and Chairman of the Advisory Board. Mr. Gandur is also the Non-Executive Chairman of AXMIN Inc. Mr. Gandur is a Swiss citizen and studied law at the University of Lausanne, Switzerland.

Brian Anderson, Director

Mr. Anderson is a Director of Addax Petroleum Corporation. Before retiring in 2000, Mr Anderson had a 34-year professional career, largely in the Royal Dutch/Shell Group of Companies. Mr. Anderson was appointed Managing Director of the Shell Petroleum Development Company and Chairman of Shell Nigeria in January 1994. His last assignment before retirement was three years based in Beijing as Chairman of the Shell Companies in North East Asia, principally involved in China and Hong Kong, but he also had overall responsibility for Shell's interests in Korea and Taiwan. Mr. Anderson is currently Chairman and Managing Director of Anderson Energy (Hong Kong) Limited, a consulting company which he set up in 2000 to specialize in assisting companies mostly in Africa and China in the energy sector. Mr. Anderson was born in Nigeria and is a citizen of the United Kingdom and studied Metaliferous Mining Engineering at Cambourne in the United Kingdom followed by an MSc in Petroleum Reservoir Engineering at London University.

James Davie, Director

Mr. Davie is a Director of Addax Petroleum Corporation. Mr. Davie has over 29 years of investment banking experience with RBC Dominion Securities Inc. before retiring in 2002. Mr. Davie held a number of senior positions at RBC Dominion Securities Inc. including Managing Director of Investment Banking and Head of Equity Capital Markets from 1987 to 1999. Mr. Davie has a Bachelor of Commerce degree from the University of Toronto and a Master of Business Administration from Queen's University. Mr. Davie is also a director of Profico Energy Management Ltd., Range Royalty Management Ltd., Navigo Energy Inc., Taylor Gas Management Ltd. and the Brompton Group of Funds.

Stephen Paul de Heinrich, Director

Mr. de Heinrich is a Director of Addax Petroleum Corporation. He has more than 30 years experience in trading and investment in Africa. He has been instrumental in organizing counter trading export pre-financing and syndicated financial transactions in several African countries. Mr. de Heinrich is now an independent consultant as well as an associate in Beldi & Cie S.A., a Geneva based corporate finance house. He was a non-executive director of AOG from 1988 to 1991 and since then has been the Vice Chairman of its supervisory board. He has been chairman and a director of SAMAX Resources Limited and Carpathian Gold Limited, among other companies. Mr. de Heinrich is a citizen of both Canada and Hungary and has a degree in economics from McMaster University, Hamilton, Canada.

Gerry Macey, Director

Mr. Macey is a Director of Addax Petroleum Corporation. Mr. Macey has over 31 years of oil and gas industry experience. In particular, from 2002 to March 2004, he served as Executive Vice President and President, International New Ventures Exploration Division, of EnCana Corporation, and from 1999 to 2002, he served as Executive Vice President, Exploration, of PanCanadian Petroleum Corporation. Mr. Macey holds a Bachelor of Science degree in geotechnical science from Loyola College in Montreal and a Master of Science degree in geology from Ottawa Carleton University. Mr. Macey is also a director of Verenex Energy Inc. and PanOrient Energy Corp.

Afolabi Oladele, Director

Mr. Oladele is a Director of Addax Petroleum Corporation. Mr. Oladele has over 25 years experience in the oil and gas industry. He worked from 1977 to 1988 for NNPC in the marketing department and from 1988 to 1999 for National Petroleum Investment Management Services (NAPIMS) latterly as Group Executive Director, Refining and Petrochemical. Since 1999, he has been Vice President, Oil & Gas for Capital Alliance Nigeria. Mr. Oladele is also Chairman, Subsurface Assets Management Co, Chairman, Formwork Ltd, Director, Freezone Fabrication International Oil & Gas Facilities Fabrication Co, Director, Dorman Long Engineering Co, Director, Sudelletra Nigeria Ltd, and Director, AOG. Mr. Oladele is a citizen of Nigeria and studied

Chemical Engineering at the University of Ife followed by Petroleum Economics at the French Petroleum Institute (IFP) in Paris and a post Graduate Diploma in Energy Modelling and Large Scale Planning Systems at the University of Southern California. Mr. Oladele also has a Certificate in Applied International Management IFL from Sigtuna, Sweden.

Wesley Twiss, Director

Mr. Twiss is a Director of Addax Petroleum Corporation and Audit Committee Chair. Mr. Twiss is a corporate director with 35 years of energy industry experience, including 13 years as the senior financial officer of two major Canadian companies. He was Executive Vice President and Chief Financial Officer of PanCanadian Energy Corporation from October 2000 until April 2002 and was Executive Vice President and Chief Financial Officer of Petro-Canada from 1998 through 2000. In those roles, Mr. Twiss was responsible for directing all aspects of corporate financial affairs, as well as strategic management and corporate development. He is a director of Canadian Oil Sands Trust, Keyera Facilities Income Fund, Enbridge Income Fund, Hydrogenics Corporation and EPCOR. Mr. Twiss holds a Bachelor of Applied Science in Chemical Engineering from the University of Toronto and a Master of Business Administration from the University of Western Ontario.

James Pearce, Chief Operating Officer and Managing Director of Nigerian Operations

Mr. Pearce is the Chief Operating Officer of Addax Petroleum Corporation and Managing Director for Addax Petroleum Development (Nigeria) Limited. Mr. Pearce is responsible for all of Addax Petroleum's upstream activities in Nigeria including new ventures, exploration, new fields development and operations. Mr. Pearce joined Addax Petroleum in May, 2005 after 30 years with various Chevron subsidiaries. He has held many positions with Chevron including Chief Engineer in Sumatra Indonesia, Manager, Petroleum Engineering in Lagos, Nigeria, General Manager, Asset Development in Luanda, Angola, Managing Director in the Republic of Congo, and most recently General Manager, Deepwater in Lagos, Nigeria. In his most recent assignment with Chevron he was responsible for all deep-water operations in Nigeria including the multi-billion dollar development of the giant Agbami field.

Mr. Pearce holds a PhD in Mechanical Engineering from the California Institute of Technology and has received two US Patents for innovative drilling platform concepts for arctic operations. Mr. Pearce is a Member of the Society of Petroleum Engineers and was past Chairman of the Lagos Chapter. He has published in both international and American journals and has made numerous technical presentations at major conferences.

Michael Ebsary, Chief Financial Officer

Mr. Ebsary is the Chief Financial Officer of Addax Petroleum Corporation. Mr. Ebsary worked at the Bank of Nova Scotia from 1986 to 1987 and the Bank of Montreal from 1987 to 1989, prior to joining the international upstream oil business with Occidental in London in 1989. Following the acquisition of Occidental's U.K. assets by Elf, Mr. Ebsary was appointed Treasurer of Elf Petroleum UK in 1991. In 1994, Mr. Ebsary was transferred to Elf's head office in Paris to the role of Senior Manager, Project Finance, during which time his responsibilities included major project financings in emerging markets, particularly in Nigeria, Chad and Cameroon. Mr. Ebsary joined the Corporation in 1998 and became Chief Financial Officer in 1999. Mr. Ebsary is a citizen of both Canada and the United Kingdom and studied mathematics and statistics, followed by an MBA in finance and accounting, at Queen's University at Kingston, Canada.

David Codd, Chief Legal Officer and Corporate Secretary

Mr. Codd is the Chief Legal Officer and Corporate Secretary of Addax Petroleum Corporation. Mr. Codd has over 25 years experience in the international oil industry. After qualifying with a major UK law firm, Mr. Codd worked from 1980 to 1984 for Burmah Oil. In 1984 he joined Britoil Plc as Senior Legal Adviser. Following two years with ConocoPhillips in the UK, in 1990 he was appointed General Counsel to Texaco's integrated operations in the UK. From 1999 to 2001 Mr. Codd was Managing Director of Texaco in the UK, being Texaco's senior corporate representative in the UK with business responsibility for Texaco's regional upstream Business Development. Following Texaco's merger with Chevron, Mr. Codd was Chairman of a start up company engaged in project development work in the Middle East until he joined the Corporation in February 2005. Mr. Codd is a member of Council of the Energy Institute in the UK and a Trustee of the Energy, Petroleum, Mineral and Natural Resources Education Trust. Mr. Codd is a citizen of the United Kingdom and is a solicitor with an MA (Jurisprudence) and a BCL both from Oxford University.

MANAGEMENT

The following are the biographies of the senior management of Addax Petroleum:

Ian Leslie Blair

Mr. Blair is the Managing Director, Nigeria New Ventures at Addax Petroleum. Mr. Blair has 30 years experience in finance and has worked for such companies as Enterprise Oil and British Gas E&P in Vietnam and, immediately prior to joining Addax Petroleum in 1998, Hardy E&P in India. In 1974, Mr. Blair obtained an M.A. in accountancy and economics from Aberdeen University in Scotland and is a Fellow of the UK Association of Chartered Certified Accountants.

Jacobus Blommerde

Mr. Blommerde joined Addax Petroleum as a Senior Production Technologist in February 2000. In January 2001, Mr. Blommerde was promoted to Manager of Production Technologists. Mr. Blommerde has over 32 years of experience in the oil and gas industry, primarily with Shell. In 1972, Mr. Blommerde obtained an M.Sc. in petroleum engineering from Delft University of Technology in the Netherlands.

Robert Bulstra

Mr. Bulstra has worked with Addax Petroleum since April 2004 as the Manager, Corporate Gas. Mr. Bulstra has over 27 years of experience in exploration and production, of which 19 years was overseas. During that time, he has worked primarily for Shell. Mr. Bulstra holds an M.Sc. in petroleum engineering from Delft University of Technology in the Netherlands.

Joop Cornelissen

Mr. Cornelissen joined Addax Petroleum in October 2005. Mr. Cornelissen has over 30 years experience in the petroleum industry and has worked overseas for companies such as Shell, Wintershall Libya, Al Furat Petroleum Company and ABB - Lummus Global. Mr. Cornelissen obtained an M.Sc. in chemical engineering from the University of Amsterdam in the Netherlands.

Douglas Cowieson

Mr. Cowieson joined Addax Petroleum as Finance Manager in October 1999. Mr. Cowieson has over 23 years of finance experience in the oil and gas industry and has worked for such companies as BHP Petroleum, Sun Exploration & Production Company and Total Oil Marine. In 1975, Mr. Cowieson obtained a B.A. in accounting from Middlesex Polytechnic University in London, United Kingdom.

Pradeep Kabra

Mr. Kabra joined Addax Petroleum in May 2002 as a New Ventures Project Manager. Mr. Kabra has over 17 years of experience in the oil and gas industry, with companies such as Lundin Oil AB, IPC Ltd. and Dublin International Petroleum Limited. Mr. Kabra obtained a Bachelor of Law's degree from Delhi University in Delhi, India. He also has qualified as a chartered accountant with the Institute of Chartered Accountants of India.

Yannis Korakakis

Mr. Korakakis joined Addax Petroleum and is General Manager Assets of Nigerian Operations based in Lagos. Mr. Korakakis has over 17 years of experience in the petroleum industry, including 3 years of academic experience. Mr. Korakakis has worked in Nigeria, the United Kingdom and the Netherlands, primarily with Shell. Mr. Korakakis holds an M.Sc. in petroleum engineering from The Mining University Leoben in Austria.

Giel Krijger

Mr. Krijger is Corporate Head of Reservoir Engineering and joined Addax Petroleum in October 1999. Mr. Krijger has over 29 years experience in exploration and production, including 21 years of experience overseas primarily with Shell. Mr. Krijger holds an M.Sc. in aeronautical engineering from Delft University of Technology in the Netherlands.

George Maxwell

Mr. Maxwell joined Addax Petroleum in January 2005 as General Manager Banners Services for the Nigerian Operations. Mr. Maxwell has over 20 years of experience in the petroleum industry having held senior positions in Europe, the United States and the Far East with Texaco and ABB Veteo Gray. Mr. Maxwell is qualified in business studies and accounting.

Philippe Probst

Mr. Probst joined Addax Petroleum in 2000 as Manager, New Ventures. Mr. Probst has over 25 years of experience in the management, planning and economics of petroleum industry projects, primarily with Shell. Mr. Probst holds a Ph.D in geology from the Geologic Institute of the University of Bern in Switzerland.

Patrick Spollen

Mr. Spollen joined Addax Petroleum in November 2004 and is commercial manager. Mr. Spollen has 24 years of experience in the petroleum and finance industries and has worked for various organizations including ERC Energy Resource Consultants, CIBC World Markets and the Deutsche Bank in London. Mr. Spollen holds an M.Sc. in petroleum engineering from Imperial College London and an MBA from the London Business School.

Paul Van Maren

Mr. Van Maren is a senior production geologist with Addax Petroleum and was recently promoted to the position of Corporate Head of Geology and Geophysics. Mr. Van Maren has 24 years experience in the oil and gas industry, which includes 18 years experience with Shell. Mr. Van Maren obtained an M.Sc. in geology from the Rijksuniversiteit Leiden in the Netherlands.

EXECUTIVE COMPENSATION

Compensation of Executive Officers

The following table presents, for the most recently completed financial year of the Corporation, the remuneration of the executive officers in place during 2004.

2004 Summary Compensation Table

<u>Name and Principal Position</u>	Annual Compensation ⁽¹⁾		
	Salary (CHF)	Bonus (CHF)	Other Annual Compensation (CHF)
Jean Claude Gandur ⁽²⁾⁽³⁾ <i>Chief Executive Officer</i>	144,000	70,000	21,600
Michael Ebsary ⁽²⁾⁽³⁾ <i>Chief Financial Officer</i>	366,400	200,000	54,960
Evert Jan Mulder ⁽²⁾⁽³⁾⁽⁵⁾⁽⁶⁾ <i>Chief Operating Officer</i>	342,000	250,000	81,200
Daniel Mancini ⁽²⁾⁽³⁾⁽⁴⁾⁽⁷⁾ <i>Managing Director, Nigeria</i>	309,100	130,000	200,915
Leslie Blair ⁽²⁾⁽³⁾⁽⁴⁾ <i>Business Development Manager, Nigeria</i>	239,400	90,000	155,610

Notes:

- (1) Based on the noon buying rate in New York City for cable transfers in Swiss francs as certified for customs purposes by the Federal Reserve Bank of New York, the average exchange rate for one Swiss franc, expressed in United States dollars was \$0.8046 in 2004.
- (2) Bonus amounts include compensation for performance in 2004 which were paid in 2005.
- (3) Messrs. Gandur, Ebsary, Mulder, Mancini and Blair participated in the Corporation's non-contributory pension plan and the Corporation's Accident Insurance Plan which is included in "Other Annual Compensation".
- (4) Messrs. Mancini and Blair were paid a hardship allowance which is included in "Other Annual Compensation".
- (5) Mr. Mulder received an accommodation allowance which is included in other annual compensation.
- (6) Mr. Mulder's employment with the Corporation will be ending effective as of December 31, 2005.
- (7) Mr. Mancini resigned from the Corporation on December 31, 2004.

Stock Options

The Corporation has not granted any options or Common Share allocations during the fiscal year ended December 31, 2004 or any time prior to that date and does not intend to grant any options in the future.

Employment Agreements

The Corporation has entered into employment agreements with each of Messrs. Pearce, Ebsary and Codd. The employment agreements are for an indefinite period subject to termination by either party on nine months notice. The employment agreements also provide for non-contributory participation in the Corporation's pension plan and accident insurance, as well as providing for annual bonuses that may be assessed individually at the sole discretion of the Corporation.

The annual base salaries under the employment agreements as of September 30, 2005 were: CHF 148,800 for Mr. Gandur; CHF 500,000 for Mr. Ebsary; CHF 330,000 for Mr. Pearce; CHF 255,000 for Mr. Codd; plus an accommodation allowance of CHF 18,000/year; and Mr. Pearce receives an expatriate allowance of CHF 115,000 plus free housing and cars in Nigeria and three home leave flights for himself and his family.

The Corporation will also enter into a services agreement with AOG, effective January 1, 2006, and terminable on nine months notice by either party, for the procurement of services to be rendered by Mr. Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. The total fees paid by the Corporation to AOG for such services is \$1 million per annum less the salary paid to Mr. Gandur by the Corporation.

Compensation of Directors

During the fiscal year ended December 31, 2004, the Corporation did not pay any directors fees. However, the Corporation did pay \$36,593 to ABN Amro Trust Company Curaçao Ltd. with respect to the services as directors provided to the Corporation by Gerben Wardenier, Francisca Pinedo Sluis and Susanna Panneflek.

Directors of the Corporation are eligible to receive Common Share allocations. During 2004, no options to purchase Common Shares or Common Share allocations were granted. Directors of the Corporation are also reimbursed for their reasonable out-of-pocket disbursements incurred for the business of the Corporation.

Based on the recommendations of the Corporate Governance, Nominating and Compensation Committee, of the Board, the Board of Directors has implemented remuneration and reimbursement arrangements for its directors that reflect current market practices and align the interests of directors with those of shareholders. The Board of Directors has approved remuneration for each director in the amount of \$100,000 per annum, with a further \$20,000 per annum for committee chairs and \$10,000 per annum for committee participation, plus reimbursement of expenses and compensation of \$200,000 per annum to the Chairman of the Board. At least \$40,000 of each director's annual base compensation will be paid in Common Shares and each director may elect to receive additional Common Shares in lieu of cash compensation. The additional fees paid to committee chairs or for participation on committees will be paid in cash, unless the director otherwise elects to receive Common Shares.

Addax Petroleum Corporation intends to adopt share ownership guidelines for directors requiring each director, within a certain period after becoming a director of Addax Petroleum Corporation, to hold a minimum number of Common Shares.

The Corporation plans to obtain directors' and officers' liability insurance to a maximum of \$50,000,000 per claim, subject to an aggregate annual limit of \$50,000,000 for all directors and officers. This policy will cover all directors and officers and various senior managers of the Corporation and its subsidiaries. The deductible applicable to the policy will be determined through negotiations with the proposed insurance provider. The premium payable by the Corporation is currently also under discussion by management with the proposed insurance provider. Neither directors nor officers nor managers will pay any portion of the premium.

COMMON SHARE INCENTIVE PLAN

Currently, all Common Shares of Addax Petroleum Corporation are owned by AOG. Addax Petroleum Corporation intends to adopt an incentive share ownership plan, the purpose of which is to develop the interests of the directors, officers, employees and other persons who provide on-going services to Addax Petroleum Corporation in the growth and development of Addax Petroleum Corporation by providing such individuals with the opportunity to acquire an increased proprietary interest in Addax Petroleum Corporation and to aid in attracting as well as retaining and encouraging the continued involvement of such persons with Addax Petroleum Corporation. The total number of Common Shares issuable pursuant to the Common Share Incentive Plan is

- Common Shares, representing • per cent of the outstanding Common Shares after giving effect to this offering (• per cent if the Over-Allotment Option is exercised in full). The number of Common Shares issuable pursuant to this Common Share Incentive Plan will not exceed 10 per cent of the total number of outstanding Common Shares.

Under the Common Share Incentive Plan, Common Shares may be issued to directors, officers, employees of, and other service providers to, the Corporation in such numbers and with vesting provisions as the Board may determine.

The Common Share Incentive Plan will provide that if a recipient ceases to be a director, officer, or employee of, or service provider to, the Corporation or any of its subsidiaries any Common Shares that have not vested will revert to the Corporation except in certain limited circumstances.

CORPORATE GOVERNANCE

Committees of the Board of Directors

Addax Petroleum Corporation recognizes the importance of adhering to excellent corporate governance standards. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, which will be assessed on a continuous basis, and has adopted a “best practices” approach to corporate governance. The Board of Directors has adopted all of the recommendations set out in National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and a Technical and Reserves Committee, comprised of a majority of independent board members, adopting board mandates and a code of business ethics and conduct as well as approving regular board performance assessments. The Board of Directors may, from time to time, establish additional committees.

The mandates of each of the three committees are set forth below.

Audit Committee

The purpose of the audit committee will be to assist the Board of Directors in fulfilling their responsibilities of oversight and supervision of, among other things:

- the audit of the consolidated financial statements of the Corporation, managing the relationship with the Corporation’s auditors and meeting with the auditors as required in connection with the audit services provided by the Corporation’s auditors;
- the Corporation’s preparation and reporting of its annual and quarterly consolidated financial statements and management’s discussion and analysis;
- the accounting and financial reporting practices and procedures of the Corporation and its subsidiaries;
- the adequacy of internal controls and accounting procedures of the Corporation and its subsidiaries; and
- the quality and integrity of consolidated financial statements of the Corporation.

Corporate Governance, Nominating and Compensation Committee

The purpose of the corporate governance committee will be to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- the monitoring and oversight of the quality and effectiveness of the corporate governance practices and policies of the Corporation and its subsidiaries;
- considering nominees for the independent directors; and
- determining the adequacy and appropriateness of the compensation of officers and employees of the Corporation as well as the directors.

Technical and Reserves Committee

The purpose of the reserves committee will be to assist the Board of Directors in fulfilling their responsibilities in relation to, among other things:

- the independent engineering evaluation of the petroleum reserves of the Corporation and its subsidiaries, managing the relationship with the independent engineer and meeting with the independent engineer as required;
- the public disclosure and filings relating to the Corporation’s petroleum reserves and operations;
- the appointment of the independent engineer and, together with management, defining the scope and supervising the methodology of the independent engineer’s evaluation; and
- the monitoring of the operational performance of the Corporation.

THE ADDAX AND ORYX GROUP LTD.

AOG carries on several different businesses worldwide with particular emphasis on Africa, including petroleum and refined products trading, oil storage, retail petroleum products and mining businesses. AOG was incorporated in 1987 and has established itself as one of the largest independent oil trading companies in Africa and the largest marine fuel supply company in West Africa.

To the best of the knowledge of the directors and officers of Addax Petroleum Corporation, as of the date of this prospectus, AOG beneficially owns, directly or indirectly, and exercises control or direction over 60,030,000 common shares of APNV, representing all of its issued and outstanding common shares and 100 Common Shares of Addax Petroleum Corporation, representing all of its issued and outstanding common shares. After giving effect to this offering and the Pre-IPO Transactions, AOG will beneficially own, directly or indirectly, and exercise control or direction over

- Common Shares of Addax Petroleum Corporation representing
- per cent of the issued and outstanding Common Shares before giving effect to the exercise of the Over-Allotment Option (or
- per cent if the Over-Allotment Option is exercised in full).

After the closing of this offering, AOG will hold a majority of the shares in the Corporation. It is the intention of AOG, post-closing of this offering, to hold an extraordinary meeting of its shareholders and to propose a reorganization of AOG that will give shareholders the ability to exchange their AOG shares for Common Shares held by AOG and other consideration. Following this transaction (if the exchange right is exercised by some AOG shareholders), the shareholding percentage of AOG in the Corporation will be reduced. AOG expects to continue to hold, at a minimum, a large minority stake in the Corporation after this reorganization, if it occurs. See "Plan of Distribution".

AOG has three shareholders who each beneficially own, directly or indirectly, or exercise control or direction over, 10 per cent or more of AOG's outstanding shares. These shareholders are Hydromel Financial Corp., Leblesmouti Trust and Southwind Trust. The beneficial owner of Hydromel Financial Corp. is Jean Claude Gandur, the Chief Executive Officer and a director of Addax Petroleum Corporation. The named beneficiary of the Leblesmouti Trust, which is discretionary and irrevocable, is Frederique Lorenceau and her two children. The Southwind Trust is a discretionary trust whose beneficiaries are the family of Stephen de Heinrich, a director of the Corporation. None of Hydromel Financial Corp., Leblesmouti Trust or Southwind Trust individually holds 50 per cent or more of AOG's outstanding shares.

Addax France SARL ("AFSARL") was an approved lifter under the United Nations Oil-for-Food Programme. AFSARL is an affiliate of the Corporation, as they are both controlled by AOG, though the companies are otherwise separate and distinct. AFSARL had entered into several contracts with the Iraqi Government to lift oil throughout various stages of the Oil-for-Food Programme, lifting an aggregate of 11.8 mmbbls from 1997 to 2000. Under a contract numbered M/08/57, AFSARL had the right to lift 1.5 million barrels, 1.2 million barrels of which were lifted up to September 2000. When approximately 300,000 barrels of oil remained to be lifted under contract M/08/57, the Iraqi authorities informed AFSARL that it would be required to pay a surcharge of approximately \$60,000 (equivalent to a surcharge of \$0.20 per barrel) that was not permitted under the Programme. AFSARL refused to pay the surcharge and no further liftings were made by AFSARL under that contract or any other contract under the United Nations Oil-for-Food Programme. In the Report on the Manipulation of the Oil-for-Food Programme, AFSARL is listed as a contracting company on a contract for which a surcharge payment of \$60,262 was made. The payment was purportedly made under contract M/08/57 in October 2001 (more than one year after AFSARL had lifted any oil from Iraq) by a company named Petroline Fzc. AOG believes that, upon AFSARL's refusal to make an illicit payment, Iraqi officials assigned the benefit of the contract to Petroline Fzc., without removing AFSARL's name as contracting party. No company within the AOG group has ever had any relationship with Petroline Fzc. and this company and its directors and officers are unknown to the AOG group. No AOG group company has ever participated in any payments that would contravene the rules of the United Nations Oil-for-Food Programme.

INTEREST OF AOG IN MATERIAL TRANSACTIONS

AOG owns, directly or indirectly, all of the outstanding common shares of APNV prior to the closing of this offering and the Pre-IPO Transactions.

Addax Petroleum has entered into or will enter into, prior to the closing of this offering the following transactions with AOG:

- the Share Transfer Agreement between a subsidiary of AOG and Addax Petroleum Corporation;
- the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement (collectively defined as the "Crude Oil Supply Agreements");
- the Management Services Agreement;
- the Agreement for Services of Jean Claude Gandur, effective January 1, 2006 between APS and AOG;
- the Trademark Agreement; and
- the Non-Competition Agreement.

Share Transfer Agreement

Prior to the closing of this offering, Addax Petroleum Corporation and a subsidiary of AOG will enter into the Share Transfer Agreement. Under the agreement, Addax Petroleum Corporation will acquire all of the outstanding shares of Addax Petroleum N.V. for consideration equivalent to 120 million multiplied by the Net Offering Price and comprised of • Common Shares and \$ • million. The closing of the transactions contemplated by the Share Transfer Agreement will occur concurrently with the closing of this offering. "See "Addax Petroleum — Pre-IPO Transactions".

The Crude Oil Supply Agreements

Historically, the Corporation has employed the crude oil marketing services of ABV and sold to ABV, on an arm's length basis, all of the crude oil produced from its operations including the entitlement of NNPC and, in the case of Antan Blend, from time to time the entitlement of the OML114 Parties. The Corporation will continue the relationship as it makes available to the Corporation the specialized expertise of ABV in marketing West African crude oils.

The existing Crude Oil Supply Agreements were executed at the same time as the Credit Facility arranged by BNP Paribas, of which assignment of the Crude Oil Supply Agreements and the proceeds from oil sales constitute a significant element of the loan security package. The Crude Oil Supply Agreements shall terminate on the later of the Maturity Date and the Final Discharge Date (as defined in the Credit Facility and anticipated to be December 31, 2008 at the latest).

The price of crude oil is determined for (i) Antan crude liftings, FOB Antan Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties, (ii) Brass River Blend crude liftings, FOB Brass River Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus the differential as quoted in the Official Selling Price for Brass River Blend Crude notified by NNPC to the Corporation for that month, and (iii) Okwori crude liftings, FOB Okwori Terminal as the average of Platt's Crude Oil Marketwire quotations, midpoint of spot assessment for Brent Crude effective for the month of loading, plus/minus a premium on/discount off to be mutually agreed by both parties. In each instance payment terms are in US dollars, paid offshore and 30 days from bill of lading date. By an amendment to be entered into prior to the closing of this offering, ABV will receive a marketing fee of \$0.08 per barrel. The Corporation has the right of audit of ABV's resale of Antan crude, Brass River Blend crude and Okwori crude. The payment obligations of ABV under the Crude Oil Supply Agreements are guaranteed by AOG.

The Crude Oil Supply Agreements offer a reliable and competitive means for the sale of crude oil produced from its operations. The Board intends to have a semi-annual review of the terms and conditions of this arrangement.

Management Services Agreement

AOG provides management services to the various subsidiaries of AOG, including the Corporation. The services include support in relation to financial control and reporting, legal, tax, risk and insurance, human resources, information technology, training and local expertise in-country.

Unless terminated for a breach of terms, the Management Services Agreement will expire in 2009 with the option for both parties to extend its duration for a further period of one year unless notice is given six months prior to the initial expiry date. The fee to be paid under the contract is \$2.5 million per year for the term.

Agreement for Services of Jean Claude Gandur

The Corporation will enter into a services agreement with AOG for the procurement of services to be rendered by Mr. Jean Claude Gandur as Chief Executive Officer and member of the Board of Directors of the Corporation. At present, it is anticipated that approximately 90 per cent of Mr. Gandur's time will be dedicated to Addax Petroleum. The total fee to be paid by the Corporation for such services is \$1 million per annum less the salary paid to Mr. Gandur by the Corporation.

Trademark Agreement

The Corporation identifies itself using names and logos that indicate a relationship with AOG. The Corporation believes that association with the AOG trademark has been and will continue to be beneficial. The Corporation's regional strategic focus is the African continent, particularly West Africa where AOG has established itself in the petroleum trading, oil storage and retail petroleum products industries. The Trademark Agreement will provide the Corporation with the right to use under a sub-license agreement all registered and unregistered AOG trademarks in any territory in which the Corporation has business activities.

The initial duration of the amended and restated Trademark Agreement will expire on December 31, 2009 with the option for both parties to extend its duration for a further period of one year unless notice is given six months prior to the expiry of the initial period. The Corporation will pay AOG a fixed annual fee of \$500,000 under this agreement.

Non-Competition Agreement

AOG will agree with Addax Petroleum that, provided AOG and Jean Claude Gandur together own not less than 25 per cent of the issued and outstanding Common Shares, neither AOG nor any of its subsidiaries will:

- acquire any petroleum properties or facilities or participate in the exploration for or development and production of petroleum or participate in any upstream petroleum business opportunities, unless AOG has first offered such business opportunities to Addax Petroleum and Addax Petroleum has declined to acquire such business opportunities. Such offer must remain open for acceptance for a minimum of 30 business days. For purposes of certainty, petroleum trading, downstream activities or non-petroleum resource activities of AOG shall not be considered directly competing interests; or
- participate in any person, other than acquiring not more than five per cent of the equity of a publicly listed company, which engages in the above prescribed activities.

INTEREST OF MANAGEMENT AND OTHERS IN MATERIAL TRANSACTIONS

Other than as disclosed elsewhere in this prospectus, none of the directors, officers or principal shareholders of Addax Petroleum Corporation or APNV, and no associate or affiliate of Addax Petroleum Corporation or APNV, respectively, has or has had any material interest in any transaction which materially affects Addax Petroleum Corporation or APNV.

Afolabi Oladele has a consulting agreement with Addax Petroleum Development (Nigeria) Limited and Mr. Oladele is paid a fee of \$9,000 per month.

There are potential conflicts of interest to which the directors and officers of Addax Petroleum Corporation will be subject in connection with the operations of Addax Petroleum Corporation. In particular, certain of the directors of Addax Petroleum Corporation are involved in managerial and/or director positions with other oil and gas companies whose operations may, from time to time, be in direct competition with those of Addax Petroleum Corporation or with entities which may, from time to time, provide financing to, or make equity investments in, competitors of Addax Petroleum Corporation. See "Directors and Officers". The CBCA provides that in the event that a director has an interest in a contract or proposed contract or agreement, the director shall disclose his interest in such contract or agreement and shall refrain from voting on any matter in respect of such contract or agreement unless otherwise provided by the CBCA.

PLAN OF DISTRIBUTION

Subject to the terms and conditions of the Underwriting Agreement, Addax Petroleum Corporation has agreed to issue and sell • Offered Shares at a price of CDN\$ • per Offered Share to the Underwriters for a total consideration of CDN\$ • , and the Underwriters have severally agreed to purchase such Offered Shares, as principals, on • , 2006 or such other date as may be agreed upon by the parties to the Underwriting Agreement, but not later than • , 2006. In consideration of the services provided in connection with this offering, Addax Petroleum Corporation will pay the Underwriters a fee of CDN\$ • per Offered Share.

Addax Petroleum Corporation has granted to the Underwriters the Over-Allotment Option, exercisable for a period ending 30 days after closing, to purchase up to an additional • Common Shares at a price of CDN\$ • per Common Share to cover over-allotments, if any, and for market stabilization purposes. If the Underwriters exercise the Over-Allotment Option in full, Addax Petroleum Corporation will be obligated to sell such Common Shares and will receive additional net proceeds of CDN\$ • after deducting fees to the Underwriters of CDN\$ • . This prospectus also qualifies for distribution any Common Shares that are issued pursuant to the exercise of the Over-Allotment Option.

There is currently no market for the Common Shares. Accordingly, the terms of the offering were established by negotiation among the Underwriters, Addax Petroleum Corporation and AOG.

The obligations of the Underwriters under the Underwriting Agreement are conditional and may be terminated at their discretion on the basis of their assessment of the state of the financial markets and may also be terminated upon the occurrence of certain stated events. The Underwriters are, however, severally obligated to take up and pay for all Offered Shares agreed to be purchased under the Underwriting Agreement if any Offered Shares are purchased under the Underwriting Agreement. Addax Petroleum Corporation and AOG have agreed to indemnify the Underwriters, their directors, officers, employees and agents against certain liabilities including civil liabilities under applicable securities legislation or will contribute to payments the Underwriters may be required to make in respect thereof.

Subscriptions for Offered Shares will be received subject to rejection or allotment in whole or in part and the right is reserved to close the subscription books at any time without notice.

Pursuant to policy statements of the Ontario Securities Commission and the Autorité des marchés financiers, the Underwriters may not, throughout the period of distribution under this prospectus, bid for or purchase Common Shares. The foregoing restriction is subject to exceptions, including a bid or purchase permitted under the Universal Market Integrity Rules of Market Regulation Services Inc. relating to market stabilization and passive market making activities and a bid or purchase made for and on behalf of a customer

where the order was not solicited during the period of distribution, provided that the bid or purchase is not engaged in for the purpose of creating actual or apparent active trading in, or raising the price of, the Common Shares. In connection with this offering, and subject to the foregoing, the Underwriters may effect transactions which stabilize or maintain the market price for the Common Shares at levels other than those which might otherwise prevail in the open market. Such transactions, if commenced, may be discontinued at any time.

The Offered Shares have not been and will not be registered under the United States Securities Act of 1933, as amended (the "1933 Act") or any state securities laws. Accordingly, except to the extent permitted by the Underwriting Agreement, the Offered Shares may not be offered or sold within the United States. Each Underwriter has agreed that it will not offer or sell the Offered Shares within the United States except in accordance with Rule 144A under the 1933 Act and in compliance with applicable state securities laws. Moreover, the Underwriting Agreement provides that the Underwriters will offer and sell the Offered Shares outside the United States only in accordance with Regulation S under the 1933 Act. In addition, until 40 days after the commencement of the offering, an offer or sale of additional Common Shares within the United States by any dealer (whether or not participating in the Offering) may violate the registration requirements of the 1933 Act if such offer or sale is made otherwise than in accordance with Rule 144A.

Addax Petroleum Corporation and AOG have agreed that they will not, without the prior consent of RBC Dominion Securities Inc. and Merrill Lynch Canada Inc., which consent may not be unreasonably withheld, offer, sell or issue for sale or resale any Common Shares (or any securities giving the right to acquire Common Shares) other than the sale of the Common Shares pursuant to the exercise of the Over-Allotment Option or agree to or announce the intention to do so at any time prior to the date which is 180 days following closing of this offering. However, RBC Dominion Securities Inc. and Merrill Lynch Canada Inc. have consented to (i) the transfer of up to eight per cent of the Common Shares owned by AOG after the Pre-IPO Transaction to former directors, officers and employees of the Corporation and (ii) the distribution of Common Shares by AOG pursuant to the potential reorganization of AOG described under "The Addax and Oryx Group Ltd.", provided that the recipients of such Common Shares enter into an agreement satisfactory to the Underwriters to be bound by equivalent restrictions as set forth above on the disposition of the Common Shares they have received.

The Corporation has applied to have the Common Shares listed on the TSX. Listing will be subject to the Corporation fulfilling all requirements of the TSX, including distribution of Common Shares to a minimum number of public security holders.

RELATIONSHIP BETWEEN THE CORPORATION AND RBC DOMINION SECURITIES INC.

RBC Dominion Securities Inc. is an indirect wholly owned subsidiary of a Canadian chartered bank that is a lender to APNV under the Credit Facility. Accordingly, the Corporation may be considered to be a connected issuer of RBC Dominion Securities Inc. under applicable securities legislation.

As at November 30, 2005, \$80 million was owed to the lenders under the Credit Facility. The Corporation is in material compliance with all material terms of the agreements governing the Credit Facility and none of the lenders has waived any material breach by the Corporation of those agreements since the Credit Facility was established. Neither the financial position of Addax Petroleum nor the value of the security under Credit Facility has changed substantially and adversely since the indebtedness under the Credit Facility was incurred.

The decision to distribute the Offered Shares and the determination of the terms of the distribution were made solely through negotiations among the Corporation, AOG, RBC Dominion Securities Inc. and Merrill Lynch Canada Inc. The lenders under the Credit Facility did not have any involvement in such decision or determination, but have been advised of the issuance and the terms thereof. As a consequence of the issuance, RBC Dominion Securities Inc. will receive its share of the Underwriters' fee. See "Plan of Distribution" and "Use of Proceeds".

DESCRIPTION OF SHARE CAPITAL

Addax Petroleum Corporation is authorized to issue an unlimited number of Common Shares and an unlimited number of Preferred Shares, issuable in series.

Common Shares

The holders of Common Shares will be entitled to receive notice of, and to exercise one vote per share at, every meeting of shareholders of Addax Petroleum Corporation, to receive such dividends as the Board of Directors declares and to share equally in the assets of Addax Petroleum Corporation remaining upon the liquidation of Addax Petroleum Corporation after the creditors of Addax Petroleum Corporation have been satisfied, subject to the prior rights of the Preferred Shares.

Preferred Shares

The Preferred Shares will be issuable in series, with each series consisting of such number of shares and having such rights, privileges, restrictions and conditions as may be determined by the Board of Directors of Addax Petroleum Corporation prior to the issuance thereof. With respect to the payment of dividends and the distribution of assets in the event of liquidation, dissolution or winding-up of Addax Petroleum Corporation, whether voluntary or involuntary, the Preferred Shares are entitled to preferences over Addax Petroleum Common Shares and any other shares ranking junior to the Preferred Shares and may also be given such other preferences over the Common Shares and any other shares ranking junior to the Preferred Shares as may be determined at the time of creation of each series.

PRIOR SALES

Addax Petroleum Corporation has not issued any Common Shares in the 12 month period prior to the date of this prospectus, except 100 Common Shares issued to AOG on November 23, 2005 for cash consideration of CDN\$100 in connection with the incorporation and organization of Addax Petroleum Corporation. APNV has not issued any Common Shares in the 12 month period prior to the date of this prospectus.

MATERIAL CONTRACTS

A copy of the Underwriting Agreement, the Share Transfer Agreement, and the Non-Competition Agreement will be filed with the Alberta Securities Commission and the Ontario Securities Commission and will be available for inspection during normal business hours at Addax Petroleum Corporation's registered office in Calgary, Alberta and at the offices of Fasken Martineau DuMoulin LLP, in Toronto, Ontario during the period of distribution.

RISK FACTORS

The securities offered hereby should be considered highly speculative due to the nature of the Corporation's business. A prospective investor should consider carefully the risks and uncertainties set out below in addition to the other information contained in this prospectus before making an investment decision. Additional risks and uncertainties not presently known to the Corporation or that it currently deems immaterial may also impair its business and affect the price of its Common Shares. If any of the events described in this prospectus as a risk or uncertainty actually occurs, the Corporation's business, results of operations or financial condition could be materially adversely affected.

Risks relating to the business of the Corporation

The Corporation's failure to replace its current reserves would have a material adverse effect on its business and financial condition.

The Corporation's oil reserves and production, and therefore its cash flows and earnings, are highly dependent upon the Corporation developing and increasing its current reserve base. Without the addition of reserves through exploration, acquisition or development activities, the Corporation's reserves and production will decline over time as reserves are depleted. The business of exploring for, developing or acquiring reserves is

capital intensive. To the extent that cash flow from operations is insufficient and external sources of capital become limited or unavailable, the Corporation's ability to make the necessary capital investments to maintain and expand its oil reserves will be impaired. There can be no assurance that the Corporation will be able to find and develop or acquire additional reserves to replace production at commercially feasible costs.

Exploration and development activities are inherently risky and are subject to change.

Future oil and natural gas exploration may involve unprofitable efforts, not only from dry wells, but from wells that are productive but do not produce sufficient net revenues to return a profit after drilling, operating and other costs. Completion of a well does not assure a profit on the investment or recovery of drilling, completion and operating costs. In addition, drilling hazards or environmental damage could greatly increase the cost of operations and various field operating conditions may adversely affect the production from successful wells.

Whether the Corporation ultimately undertakes an exploration or development project depends upon a number of factors, including availability and cost of capital, current and projected oil and gas prices, receipt of government approvals, access to the property, the costs and availability of drilling rigs and other equipment, supplies and personnel necessary to conduct these operations, success or failure of activities in similar areas and changes in the estimates to complete the projects.

The Corporation will continue to gather data about its new venture opportunities and other projects. Additional information could cause the Corporation to alter its schedule or determine that a new venture opportunity or project should not be pursued, which could adversely affect the Corporation's prospects.

Under its Production Sharing Contracts, the Corporation finances exploration, development and operations and the related facilities and equipment and will only recover its costs if there is successful production in accordance with the terms of the Production Sharing Contracts.

Failure to obtain governmental approvals and fulfill contractual commitments may adversely affect the Corporation's business.

The Corporation's current operations are, and future operations will be, subject to approvals of governmental authorities and, as a result, the Corporation has limited control over the nature and timing of development and exploration of such properties or the manner in which operations are conducted on such properties.

The Corporation's Production Sharing Contracts and other contracts with governments and government bodies to explore and develop the properties are subject to specific requirements and obligations. If the Corporation fails to satisfy such requirements and obligations and there is a material breach of such contracts, such contracts could, under certain circumstances, be terminated. The termination of any of the Corporation's contracts granting rights in respect of the properties would have a material adverse effect on the Corporation's financial condition.

The loss of any of the Corporation's executive officers and key employees could have an adverse impact on its business.

The Corporation is highly dependent upon its executive officers and key employees, and the success of the Corporation will be largely dependent upon the performance of such officers and key employees. In particular, the Corporation's Chief Executive Officer, Jean Claude Gandur, has a number of key relationships that are important to the Corporation's business. The unexpected loss of the services of Mr. Gandur or other executive officers or key personnel could have a material adverse effect on the Corporation. The Corporation does not maintain key man life insurance on any of its employees. In assessing the risk of an investment in the Common Shares, potential investors should recognize that they are relying on the ability and integrity of the management of the Corporation.

The Corporation's operations are subject to potential losses that may not be covered by insurance.

The exploration for, and the production, storage, transportation and marketing of oil involves many risks. These risks include encountering unexpected formations or pressures, premature declines of reservoirs, equipment failures and other accidents, uncontrollable flows of oil, natural gas well fluids or water, adverse weather conditions, blowouts, explosions, fire, gaseous leaks, migration of harmful substances and oil spills, any of which could cause personal injury, result in damage to, or destruction of, oil wells or formations or production facilities and other property, equipment and the environment, as well as interrupt operations. The Corporation's offshore production facilities are also subject to hazards inherent in marine operations, such as capsizing, sinking, grounding, collision and damage from severe weather or tidal conditions. These hazards can cause substantial damage to facilities and interrupt production. The impact that any of these risks may have upon the Corporation is increased because of the large contribution made to the Corporation's overall production by a few select properties.

The Corporation is insured against some, but not all, potential risks; however, there can be no assurance that such insurance will be adequate to cover any losses or exposure for liability. The occurrence of a significant unfavourable event not fully covered by insurance could have a material adverse effect on the Corporation's financial condition, results of operations or cash flows. Furthermore, the Corporation cannot predict whether insurance will continue to be available at a reasonable cost or at all.

The Corporation is dependent on an affiliated company for the marketing of the oil the Corporation produces.

In conducting its business, Addax Petroleum will continue to rely on ABV to purchase and sell all of the crude oil the Corporation produces under the Crude Oil Supply Agreements. If the Corporation's agreements with ABV terminate for any reason, the Corporation may be unable to enter into a relationship with another purchaser and seller of its crude oil on a timely basis or on acceptable terms, which could materially adversely affect the Corporation's business, results of operations or financial condition.

The Corporation shares a trademark and a tradename with a group of companies and any adverse development affecting the trademark or tradename of any of those companies could adversely affect the business, goodwill or reputation of the Corporation.

The Corporation shares a trademark and a trademark with AOG and many of AOG's subsidiaries. AOG engages in petroleum trading and distribution, and mining activities throughout Africa and in Eastern Europe, and it has subsidiaries, local branches and commercial representation bureaus throughout Africa and in Europe and Asia. Pursuant the Trademark Agreement, the Corporation intends to continue identifying itself using names and logos that indicate a relationship with AOG. Any adverse development affecting the trademark or trade name of any of those companies could have an adverse affect on the business, good will or reputation of the Corporation. See "The Addax and Oryx Group Ltd." and "Interest of AOG in Material Transactions".

The Corporation may not be able to secure financing for its future exploration, development, production and acquisition plans.

Depending on future exploration, development, production or acquisition plans, the Corporation may require additional financing. The ability of the Corporation to arrange such financing in the future will depend in part upon prevailing financing market conditions as well as the business performance of the Corporation. If Addax Petroleum's revenues or reserves decline, it may not have the capital necessary to undertake or complete future drilling programs. There can be no assurance that debt or equity financing or cash generated by operations will be available or sufficient to meet these requirements or for other corporate purposes or, if debt or equity financing is available, that it will be on terms acceptable to Addax Petroleum. Transactions financed partially or wholly with debt may increase the Corporation's debt levels above industry standards. The inability of Addax Petroleum to access sufficient capital for its operations could have a material adverse effect on Addax Petroleum's business and financial condition. If additional financing is raised by the issuance of shares from treasury of the Corporation, control of the Corporation may change and shareholders may suffer dilution.

The Corporation could be subject to labour or other unplanned production disruptions.

The Corporation has a significant number of staff belonging to two Nigerian trade unions, Nupeng and Pengassan, which have a record of occasional industrial action. The presence of trade unions may limit the Corporation's flexibility in dealing with its staff in Nigeria. If there is a material disagreement between the Corporation and its trade unions, the Corporation's operations in Nigeria could suffer an interruption or shutdown that could have a material adverse effect on the Corporation's business, results of operations or financial condition.

Future litigation could adversely affect the Corporation's business, results of operations or financial condition.

From time to time, the Corporation is subject to litigation arising out of its operations. Damages claimed under such litigation may be material or may be indeterminate, and the outcome of such litigation may materially impact the Corporation's business, results of operations or financial condition. While the Corporation assesses the merits of each lawsuit and defends itself accordingly, it may be required to incur significant expenses or devote significant resources to defending itself against such litigation. In addition, the adverse publicity surrounding such claims may have a material adverse effect on the Corporation's business.

The Corporation is subject to certain risks related to the nature of the Corporation's business and its present stage and speed of development.

There are numerous factors which may affect the success of the Corporation's business which are beyond the Corporation's control, including local, national and international economic, legal and political conditions. The Corporation's business involves a high degree of risk which a combination of experience, knowledge and careful evaluation may not overcome. The operations of the Corporation in developing countries expose the Corporation to, among other things, political and currency risks.

The Corporation has experienced significant growth and development in a relatively short period of time and expects to continue to grow as production increases from its oil reserves. Management of that growth requires, among other things, stringent control of financial system and operations, the continued development of management controls and the training of new personnel. Failure to successfully manage the Corporation's expected growth and development could have a material adverse effect on the Corporation's business, results of operations or financial condition.

There are risks inherent in the Corporation's strategy of geographic diversification and acquisition of new exploration and development properties.

The Corporation intends to acquire additional oil and gas properties. Although the Corporation performs a review of properties prior to acquiring them that it believes is consistent with industry practices, such reviews are inherently incomplete. It generally is not feasible to review in depth every individual property involved in each acquisition. Ordinarily, the Corporation will focus its due diligence efforts on higher valued properties and will sample the remainder. However, even an in-depth review of all properties and records may not necessarily reveal existing or potential problems, nor will it permit a buyer to become sufficiently familiar with the properties to assess fully their deficiencies and capabilities. Inspections may not be performed on every well, and structural or environmental problems, such as ground water contamination, are not necessarily observable even when an inspection is undertaken. The Corporation may be required to assume pre-closing liabilities, including environmental liabilities, and may acquire interests in properties on an "as is" basis. In addition, competition for the acquisition of prospective oil properties is intense, which may increase the cost of any potential acquisition. There can be no assurance that any acquisition by the Corporation will be successful.

The Corporation is exposed to the risks associated with commodity hedging activities.

The nature of the Corporation's operations will result in exposure to fluctuations in commodity prices. Addax Petroleum may use financial instruments and physical delivery contracts to hedge its exposure to these risks. If Addax Petroleum engages in hedging it will be exposed to credit related losses in the event of non-performance by counterparties to the financial instruments. Additionally, if product prices increase above those levels specified in any future hedging agreements, Addax Petroleum could lose the cost of floors or ceilings

or a fixed price could limit Addax Petroleum from receiving the full benefit of commodity price increases. If Addax Petroleum enters into hedging arrangements, it may suffer financial loss if it is unable to commence operations on schedule or is unable to produce sufficient quantities of oil to fulfill its obligations.

Joint ventures entered into by the Corporation could lead to additional costs.

The Corporation has, in respect of Cameroon and Gabon, and is likely, in respect of the JDZ, the Taq Taq Property and the Okwok Property, to enter into joint ventures. The Corporation may suffer additional costs or other losses if a joint venture partner does not meet its obligations. It is also possible that the interests of the Corporation and those of its joint venture partners are not aligned resulting in project delays, additional costs or disagreements, which could adversely affect the Corporation's business.

Risks relating to the petroleum industry

Volatility of petroleum prices could have a material adverse effect on the Corporation's business, results of operations or financial condition.

The Corporation's business, results of operations or financial condition and future growth are substantially dependent on the prevailing prices for its petroleum production. Historically, the markets for petroleum have been volatile and such markets are likely to continue to be volatile in the future. Prices for oil are based on world supply and demand and are subject to large fluctuations in response to relatively minor changes to the demand for oil, whether the result of uncertainty or a variety of additional factors beyond the control of the Corporation, including actions taken by OPEC and its adherence to agreed production quotas, war, terrorism, government regulation, social and political conditions in oil producing countries generally and in Nigeria specifically, economic conditions, prevailing weather patterns and the availability of alternative sources of energy. Any substantial decline in the price of petroleum could have a material adverse effect on the Corporation's revenues, operating income, cash flows and borrowing capacity and may require a reduction in the carrying value of the Corporation's properties, its planned level of spending for exploration and development and the level of its reserves. No assurance can be given that prices will be sustained at levels which will enable the Corporation to operate profitably.

A substantial decline in oil prices may also require the Corporation to write down certain of its assets. Under Canadian GAAP, the net capitalized cost of oil and gas properties may not exceed a "ceiling limit", which is based, in part, upon estimated future net cash flows from reserves. If the net capitalized costs exceed this limit, the Corporation must charge the amount of the excess against earnings. As oil prices decline, the Corporation's net capitalized cost may approach or exceed this cost ceiling, resulting in a charge against earnings. While a write down would not directly affect cash flow, the charge to earnings could be viewed unfavourably in the market or could limit the Corporation's ability to borrow funds or comply with covenants contained in current or future credit agreements or other debt instruments.

The Corporation could face significant liabilities under environmental laws.

Extensive national, state, and local environmental laws and regulations in foreign jurisdictions affect nearly all of the operations of the Corporation. These laws and regulations set various standards regulating certain aspects of health and environmental quality, provide for civil and criminal penalties and other liabilities for the violation of such standards and establish in certain circumstances obligations to remediate current and former facilities and locations where operations are or were conducted. In addition, special provisions may be appropriate or required in environmentally sensitive areas of operation. There can be no assurance that the Corporation will not incur substantial financial obligations in connection with environmental compliance.

Significant liability could be imposed on the Corporation for damages, clean-up costs or penalties in the event of certain discharges into the environment, environmental damage caused by previous owners of property purchased by the Corporation or non-compliance with environmental laws or regulations. Such liability could have a material adverse effect on the Corporation. Moreover, the Corporation cannot predict what environmental legislation or regulations will be enacted in the future or how existing or future laws or regulations will be administered or enforced. Compliance with more stringent laws or regulations, or more vigorous enforcement policies of any regulatory authority, could in the future require material expenditures by

the Corporation for the installation and operation of systems and equipment for remedial measures, any or all of which may have a material adverse effect on the Corporation.

As a party to various Production Sharing Contracts and the Ngoosso Concession, the Corporation may have an obligation to restore producing fields to a condition acceptable to the authorities at the end of their commercial lives. Each party to such contracts is typically liable for its share of the cost of decommissioning infrastructure installed under that contract. In respect of the Corporation's producing properties that are located offshore, the costs to decommission offshore wells may be substantial. These costs are payable at a time when assets are no longer generating cash flow. Although the Corporation makes an accounting provision for decommissioning and site restoration costs, there are no immediate plans to establish a reserve account for these potential costs in respect of any of the Corporation's current properties or facilities. Rather, the costs of decommissioning are expected to be paid from the proceeds of production in accordance with the practice generally employed in onshore and offshore oilfield operations. There can, however, be no assurance that the proceeds from production will be sufficient to meet the costs of decommissioning at the time when required to be incurred. The use of other funds to satisfy such decommissioning costs could have a material adverse effect on the Corporation's financial position.

The oil reserve and oil and gas resource data in this prospectus are only estimates, and the Corporation's actual production, revenue and expenditure with respect to its reserves may be materially different from such estimates.

There are numerous uncertainties inherent in estimating quantities of proved, probable and possible reserves and prospective and contingent resources and cash flows to be derived therefrom, including many factors beyond the control of the Corporation. The reserves, resources and cash flow information set forth in this prospectus represent estimates only. In general, estimates of economically recoverable oil reserves and the future net cash flow therefrom are based on a number of factors and assumptions made as of the date on which the reserves estimates were determined, such as geological and engineering estimates (which have inherent uncertainties), historical production from the properties, the assumed effects of regulation by governmental agencies and estimates of future commodity prices and operating costs, all of which may vary considerably from actual results. All such estimates are, to some degree, uncertain and classifications of reserves are only attempts to define the degree of uncertainty involved. For these reasons, estimates of the economically recoverable oil reserves attributable to any particular group of properties, the classification of such reserves based on risk recovery and estimates of future net revenues expected therefrom, prepared by different engineers or by the same engineers at different times, may vary substantially. The Corporation's actual production, revenues, taxes and development and operating expenditures with respect to the Corporation's reserves will likely vary from such estimates, and such variances could be material.

Estimates with respect to reserves that may be developed and produced in the future are often based upon volumetric calculations and upon analogy to similar types of reserves, rather than upon actual production history. Estimates based on these methods generally are less reliable than those based on actual production history. Subsequent evaluation of the same reserves based upon production history will result in variation, which may be material, in the estimated reserves.

The present value of estimated future net cash flows referred to herein should not be construed as the current market value of estimated proved oil reserves attributable to the Corporation's properties. The estimated discounted future cash flow from proved reserves are based upon price and cost estimates which may vary from actual prices and costs and such variance could be material. Actual future net cash flows will also be affected by factors such as the amount and timing of actual production, supply and demand for oil, curtailments or increases in consumption by purchasers and changes in governmental regulations or taxation.

The Corporation's exploration and development activities depend on its ability to procure appropriate drilling equipment.

Oil and natural gas development and exploration activities are dependent on the availability of drilling and related equipment in the particular areas where such activities will be conducted. Demand for limited equipment such as drilling rigs or access restrictions may affect the availability of such equipment to the Corporation and may delay its development and exploration activities. In the areas in which the Corporation operates there is

significant demand for drilling rigs and other equipment. Failure by the Corporation to secure necessary equipment could adversely affect the Corporation's business, results of operations or financial condition.

The Corporation operates in a highly competitive industry.

The oil and gas industry is intensely competitive and the Corporation competes with other companies which possess greater technical and financial resources. Many of these competitors not only explore for and produce oil and natural gas, but also carry on refining operations and market petroleum and other products on an international basis. The Corporation also competes with other companies to attract and retain experienced skilled management and oil professionals. If the Corporation is unsuccessful in competing against other companies, its business, results of operations or financial condition would be materially adversely affected. See "Properties and New Ventures — Nigeria Country Discussion".

The Corporation faces foreign exchange, interest rate and inflation risks.

The Corporation's revenues are in United States dollars and most of the Corporation's working capital is in United States dollars. The Corporation converts funds to foreign currencies as its payment obligations become due. Part of the Corporation's costs are incurred in other currencies, including the Nigerian Naira and the Swiss franc. The Corporation's accounts are prepared in United States dollars and dividends, if paid, will be paid in Canadian dollars. Accordingly, the Corporation is subject to inflation in the countries in which it operates and fluctuations in the rates of currency exchange between the United States dollar and these currencies, and such fluctuations may materially affect the Corporation's business, results of operations or financial condition. Consequently, construction, exploration, development, administration and other costs may be higher than the Corporation anticipates. Any increase in relevant interest rates will increase the amount the Corporation pays to service debt.

Risks relating to the countries in which the Corporation currently operates and may operate in the future

There are political, economic and other risks relating to the countries in which the Corporation currently operates or may operate in the future.

The Corporation's current oil production activities are located entirely in Nigeria. It is also currently pursuing exploration and development activities in Cameroon, Gabon and the Kurdistan Region of Iraq. Exploration and development activities in such countries may require protracted negotiations with host governments, national oil companies and third parties and may be subject to economic and political considerations such as the risks of war, actions by terrorist or insurgent groups, community disturbances, expropriation, nationalization, renegotiation, change or nullification of existing contracts or royalty rates, changing taxation policies or interpretations, foreign exchange restrictions, inflation, changing political conditions, local currency devaluation, currency controls, and foreign governmental regulations that favour or require the awarding of contracts to local contractors or require foreign contractors to employ citizens of, or purchase supplies from, a particular jurisdiction. Any of these or similar factors could have a material adverse effect on the Corporation's business, results of operations or financial condition. If a dispute arises in connection with foreign operations, the Corporation may be subject to the exclusive jurisdiction of foreign courts or foreign arbitration tribunals or may not be successful in subjecting foreign persons, especially foreign oil ministries and national oil companies, to the jurisdiction of Canada.

Under the International Court of Justice ruling of October 2002, the border between Nigeria and Cameroon was fixed such that a part of OML123, including the Bogi Platform, is now located in Cameroon. The Joint Border Commission between the governments of Nigeria and Cameroon has not reached a decision about how the Corporation's operations will be treated. Accordingly, the Corporation may be materially adversely affected by a decision of the Joint Border Commission.

Relinquishment obligations under applicable legislation and the terms of Production Sharing Contracts may adversely affect the total amount of the Corporation's prospective resources.

Pursuant to the Nigeria Production Sharing Contracts, Addax Petroleum is required to relinquish 50 per cent of the area of OML123 and OML124 and OPL90 and OPL225, excluding the areas of the properties

in which petroleum had been discovered in commercial quantities. The Corporation has submitted a relinquishment proposal to NNPC in respect of OPL90 and OPL225, but there is no assurance that such proposal will be accepted.

In addition, the Production Sharing Contract in respect of OML123 and OML124 required that not later than five years from the effective date of the PSC (May 1998), 50 per cent of the contract area (excluding any areas in which petroleum had been discovered in commercial quantities) should be relinquished pursuant to mutual agreement between NNPC and the Corporation. Although discussions commenced between NNPC and the Corporation, no area was ever relinquished in accordance with this provision of the PSC. Subsequent to the date required for such relinquishment, the OPLs under which the Corporation held the areas were converted to OML123 and OML124. The Corporation has obtained legal advice to the effect that, as the conversion from the previous OPL's into the OML's required the consent of NNPC, the obligation under the PSC to relinquish the area is no longer effective. However, there is a risk that NNPC could in the future request such relinquishment.

In addition, in accordance with the *Petroleum Act*, 50 per cent of the area covered by an OML must be relinquished within 10 years of the date of grant of the OML. OML123 and OML124 were granted in July 2002 and contain such provisions. There can be no assurance that the area proposed by the Corporation will be accepted by the government, and there is a risk that such relinquishment may necessarily contain reserves already booked by the Corporation, leading to a restatement of its reserves.

The Ngosso Concession contains a change of control provision which provides that "if [the State], pursuant to Article 34 of the Petroleum Regulations shall have become aware of changes in the factors constituting control of the Contractor or of an entity comprising Contractor, [the State] may, within 90 days order the latter to take all necessary steps in order to terminate the operations which led to such changes". Accordingly, any change of control in the Corporation could have an adverse effect on the Corporation's operations in Cameroon.

Interpretation and application of the laws and regulations of the countries in which the Corporation operates can be uncertain and could adversely affect the Corporation.

The jurisdictions in which the Corporation operates may have less developed legal systems than more established economies which may result in risks such as (i) effective legal redress in the courts of such jurisdictions, whether in respect of a breach of law or regulation, or, in an ownership dispute, being more difficult to obtain; (ii) a higher degree of discretion on the part of governmental authorities; (iii) the lack of judicial or administrative guidance on interpreting applicable rules and regulations; (iv) inconsistencies or conflicts between and within various laws, regulations, decrees, orders and resolutions; or (v) relative inexperience of the judiciary and courts in such matters. Enforcement of laws in some of the jurisdictions in which the Corporation operates may depend on and be subject to the interpretation placed upon such laws by the relevant local authority, and such authority may adopt an interpretation of an aspect of local law which differs from the advice that has been given to the Corporation. There can be no assurance that contracts, joint ventures, licences, licence applications or other legal arrangements will not be adversely affected by the actions of government authorities and the effectiveness of and enforcement of such arrangements in these jurisdictions. In certain jurisdictions, the commitment of local businesses, government officials and agencies and the judicial system to abide by legal requirements and negotiated agreements may be more uncertain and may be susceptible to revision or cancellation, and legal redress may be uncertain or delayed.

In the countries in which the Corporation does business, currently Nigeria, Cameroon, Gabon and the Kurdistan Region of Iraq, the state generally retains ownership of the minerals and consequently retains control of (and in many cases, participates in) the exploration and production of hydrocarbon reserves. Accordingly, these operations may be materially affected by host governments through royalty payments, export taxes and regulations, surcharges, value added taxes, production bonuses and other charges. In addition, transfers of interests typically require government approval, which may delay or otherwise impede transfers, and the government may impose obligations on the Corporation to complete minimum work within specified timeframes. In the future, the Corporation may extend its interests in operations to other countries where similar circumstances may apply.

The Corporation must comply with the regulatory regimes of the countries in which it operates, and such compliance may result in increased expenditure.

The Corporation is subject to extensive government laws and regulations governing prices, taxes, royalties, allowable production, waste disposal, pollution control and similar environmental laws, the export of oil and many other aspects of the oil business.

Although the Corporation believes it has good relations with the current governments of Nigeria, Gabon, Cameroon, Iraq and the Kurdistan Region of Iraq, there can be no assurance that the actions of present or future governments in these countries, or of governments of other countries in which the Corporation may operate in the future, will not materially adversely affect the business or financial condition of the Corporation.

While the Nigeria Production Sharing Contracts do not include the right to produce and sell natural gas, the Corporation does produce a significant amount of natural gas which is associated with the Corporation's oil production. The majority of the Corporation's produced associated natural gas is currently flared, as there is no established market in which to sell the natural gas, nor does the Corporation have the necessary facilities to capture or transport natural gas. The Nigerian government has announced what is commonly known as the "Flares Down by 2008" policy that that will require petroleum producers to reduce the amount of natural gas that is flared in petroleum production. The Nigerian government has not officially announced any details on how this policy will be implemented and has not enacted any legislation implementing the "Flares Down" policy. Consequently, no assurances can be given that the Corporation will be able to comply with such policy.

The Corporation's production may be constrained by production or export quotas.

Nigeria is a member of OPEC, and the Corporation may operate in other OPEC-member countries in the future. Production in OPEC-member countries can be constrained from time to time by OPEC production quotas. In Nigeria, NNPC allocates production quotas among oil producers in Nigeria based on the aggregate of the technical production limits per well for a producer as negotiated between the producer and the Nigerian government. If the aggregate of all the producers' technical production limits exceeds Nigeria's OPEC quota, the production allocations among the producers are reduced pro rata. The Corporation has historically exceeded its production allocation but has applied for and been granted additional quota from the Nigerian government for all of its excess oil production. There can be no assurance that if the Corporation exceeds its allocated quota in the future that it will continue to receive additional quota from the Nigerian government.

In addition to OPEC production quotas, oil producing countries can also implement export quotas. The Corporation may be constrained in exporting oil that it produces in the future due to the imposition of export quotas.

Crime and governmental or business corruption could disrupt the Corporation's ability to conduct its business.

The Corporation operates in some countries which have experienced governmental and business corruption. Although the Corporation's policy mandates strict compliance with internal policies and local laws which prohibit corrupt payments to government officials or other businesses or persons, there is no assurance that such internal policies and procedures will be adhered to by its employees. Findings against the Corporation or its employees of its involvement in corruption could result in criminal or civil penalties, including substantial monetary fines, against the Corporation and any allegations or finding of involvement in corruption could damage the Corporation's reputation and its ability to do business.

Western oil and gas companies may be perceived to be targets of criminal or terrorist activities. Criminal or terrorist action against the Corporation, its properties or facilities could have a material adverse effect on the Corporation's business, results of operations or financial position. In addition, the fear of criminal or terrorist attacks against the Corporation could have an adverse effect on the ability of the Corporation to raise capital or to adequately staff its operations or could substantively increase the costs of doing so.

US holders of Common Shares and the Corporation may be subject to sanctions imposed by the US government if the Corporation decides to pursue operations in countries subject to US economic sanctions.

US economic sanctions may be imposed on US holders of Common Shares or the Corporation in connection with future operations in countries subject to US economic sanctions, such as Iran. To date, the Corporation has only had discussions with the Iranian national oil company regarding certain projects. See "Middle East and North Africa — Middle East New Ventures — Iran". Two US sanctions programs, the Iranian Transactions Regulations ("ITR") and the Iran and Libya Sanctions Act ("ILSA") may potentially apply to the Corporation's future activities in Iran if the Corporation decides to undertake substantive activities in that country.

The ITR, which are administered by the Office of Foreign Assets Control ("OFAC") of the US Treasury Department, apply only to US persons and thus would not apply to the Corporation. However, the ITR may apply to US holders of Common Shares. The Corporation has taken steps it feels are sufficient to mitigate the risk to US holders but there can be no assurance that such steps will be successful. If the OFAC takes a different view of these steps and pursues enforcement of the ITR, US holders may be subject to a range of civil and criminal penalties. The imposition of such penalties may have a material adverse effect on the price of the Common Shares.

The ILSA grants the US President authority to impose sanctions against persons or entities found by the President to have knowingly made investments in Iran's petroleum industry of \$20 million or more in any twelve month period. Sanctions could include restrictions on obtaining credit from US financial institutions and the US export-import bank and on the ability of the Corporation to procure goods, services and technology from the US. To date, the Corporation has not invested the requisite amount in Iran to trigger ILSA sanctions. Additionally, the Corporation understands that the US government has not yet imposed any sanctions under ILSA, despite having a number of foreign investment projects in Iran under investigation.

The Corporation may in the future invest sufficient money in activities in Iran to trigger ILSA and cannot predict future interpretation of ILSA by the US government regarding any such future activities. It is possible that the US President may determine that these future activities constitute violations of ILSA and subject the Corporation to sanctions. The imposition of sanctions could have an adverse impact on the Corporation's business, results of operations or financial condition.

Risks relating to the Common Shares

Uncertainties exist as to the market price and liquidity of the Common Shares as there has been no prior public market for such shares.

Prior to this offering, there has been no public market for the Common Shares. The Corporation has applied to have its Common Shares listed on the TSX. The Corporation cannot predict the extent to which an active market for the Common Shares will develop or be sustained after the offering, or how the development of such a market might affect the market price for the Common Shares. An illiquid market for the Common Shares may result in lower trading prices and increased volatility, which could adversely affect the value of an investment.

The initial public offering price has been determined by negotiation among the Corporation, AOG and the Underwriters based on a number of factors, including market conditions in effect at the time of the offering, that may not be indicative of future performance. The market price of the Common Shares may fall below the offer price or could fluctuate substantially due to a number of factors.

The controlling shareholder(s) of the Corporation will exercise significant control over the affairs of the Corporation.

Upon completion of this offering, AOG will own • Common Shares and control approximately • per cent (• per cent if the Over-Allotment Option is exercised in full) of the aggregate voting shares of the Corporation which will allow AOG to control substantially all the actions taken by the shareholders of the Corporation, including the election of directors. It is likely that AOG will have sufficient voting power to, among other things, amend the articles and by-laws of the Corporation, delay, deter or prevent a change in control of

the Corporation that might otherwise be beneficial to its shareholders and may also discourage acquisition bids for the Corporation and limit the amount certain investors may be willing to pay for the Common Shares.

Certain directors and senior management of the Corporation hold positions with AOG and other companies, some of which operate in the petroleum industry. These other positions could create, or appear to create, potential conflicts of interest when these directors and senior management are faced with decisions that could have different implications for the Corporation and their other business interests. In the past, the Corporation has appointed committees of independent directors to evaluate opportunities where conflicts of interest exist or are perceived to exist, and the Corporation will continue to deal with conflicts in this fashion. Although the Corporation expects that such conflicts will be handled in accordance with the CBCA and its corporate governance policies, there is no assurance that all conflicts will be adequately addressed.

Although the Corporation has entered into an agreement with AOG in which AOG has agreed to conduct its upstream petroleum business entirely through the Corporation, to not compete with the Corporation in such business and to offer the Corporation any upstream petroleum business opportunities made available to AOG, it is nonetheless possible that other conflicts could arise that may ultimately be resolved in a manner unfavourable to the Corporation.

Sales of Common Shares by controlling shareholder(s) could have an adverse effect on the price of the Common Shares.

In connection with the offering, the Corporation and AOG have agreed to certain restrictions on the sale or other disposition of the Common Shares for a period of 180 days from the date of closing of this offering, subject to certain exceptions. See "Plan of Distribution". The Corporation cannot predict whether substantial numbers of the Common Shares will be sold in the open market following the expiry of the lock-up period. In particular, there can be no assurance that AOG will not reduce its holding of Common Shares or dividend or otherwise distribute the Common Shares it holds to the beneficial owners of AOG. Sales of a large number of the Common Shares in the public markets, or the potential for such sales, could decrease the trading price of the Common Shares and could impair the Corporation's ability to raise capital through future offerings of Common Shares.

Investors may face risks related to the Corporation's holding company structure.

Following the closing of the offering, the Corporation will hold all of its assets in its wholly owned subsidiary, APNV. In the event of insolvency, liquidation or other reorganization of APNV, the holders of the Common Shares will have no right to proceed against the assets of APNV or to cause the liquidation or bankruptcy of the company under applicable bankruptcy laws. Creditors of APNV would be entitled to payment in full from such assets before the Corporation, as a shareholder, would be entitled to receive any distribution therefrom. Claims of creditors of APNV will have priority with respect to the assets and earnings of the company over the claims of the Corporation, except to the extent that the Corporation may itself be a creditor with recognized claims against APNV ranking at least pari passu with such other creditors, in which case the claims of the Corporation would still be effectively subordinate to any mortgage or other liens on the assets of APNV and would be subordinate to any indebtedness of APNV.

ELIGIBILITY FOR INVESTMENT

Subject to certain assumptions, limitations and restrictions, in the opinion of Fasken Martineau DuMoulin LLP, counsel to Addax Petroleum Corporation and APNV, and Fraser Milner Casgrain LLP, counsel to the Underwriters, the Offered Shares, if as and when listed on a prescribed stock exchange (including the TSX), will be qualified investments for a trust governed by a registered retirement savings plan, a registered retirement income fund, a registered education savings plan or a deferred profit sharing plan under the *Income Tax Act* (Canada) and the regulations thereunder.

LEGAL PROCEEDINGS

Neither Addax Petroleum Corporation nor APNV is a party to, nor are any their respective properties subject to, any material legal proceedings nor are any such proceedings known by the Addax Petroleum Corporation to be contemplated.

LEGAL MATTERS

Certain legal matters relating to the securities offered hereby have been passed upon, on behalf of Addax Petroleum Corporation and APNV, by Fasken Martineau DuMoulin LLP and, on behalf of the Underwriters, by Fraser Milner Casgrain LLP.

AUDITORS, REGISTRAR AND TRANSFER AGENT

The auditors of Addax Petroleum Corporation and APNV are Deloitte & Touche LLP, Chartered Accountants, 3000 Scotia Centre, 700 - 2nd Street SW, Calgary, Alberta, T2P 0S7.

Computershare Investor Services Inc. at its principal office in Calgary, Alberta is the registrar and transfer agent for the Common Shares.

INTEREST OF EXPERTS

None of Fasken Martineau DuMoulin LLP, Fraser Milner Casgrain LLP, Netherland, Sewell & Associates, Inc. or any director, officer, employee or partner thereof, has received or will receive a direct or indirect interest in the property of Addax Petroleum Corporation or APNV or any of their respective associates or affiliates. As at the date hereof, the aforementioned persons, and companies beneficially own, directly or indirectly, (both before and after giving effect to this offering assuming said persons do not subscribe for Common Shares) less than one per cent of the securities of Addax Petroleum Corporation or APNV and their respective associates and affiliates. None of the aforementioned persons or companies, nor any director, officer, partner or employee of any of the aforementioned persons or companies is or is expected to be elected, appointed or employed as a director, officer or employee of Addax Petroleum Corporation or APNV or of any of their respective associates or affiliates.

ADDITIONAL INFORMATION

Additional information relating to the Corporation is available through the Internet on the Canadian System for Electronic Document Analysis and Retrieval (SEDAR) which can be accessed at www.sedar.com.

STATUTORY RIGHTS OF WITHDRAWAL AND RESCISSION

Securities legislation in certain of the provinces of Canada provides purchasers with the right to withdraw from an agreement to purchase securities. This right may be exercised within two business days after receipt or deemed receipt of a prospectus or any amendment. In several of the provinces, securities legislation further provides a purchaser with remedies for rescission or, in some jurisdictions, damages if the prospectus or any amendment contains a misrepresentation or is not delivered to the purchaser, provided that the remedies for rescission or damages are exercised by the purchaser within the time limit prescribed by the securities legislation of the purchaser's province. The purchaser should refer to any applicable provisions of the securities legislation of the purchaser's province for the particulars of these rights or consult with a legal advisor.

REPORT ON RESERVES DATA BY INDEPENDENT QUALIFIED RESERVES EVALUATOR

FORM 51-101F2

To the Board of Directors of Addax Petroleum Corporation:

1. We have evaluated Addax Petroleum N.V.'s (the "Corporation") reserves data as at September 30, 2005. The reserves data consists of the following:
 - (a) (i) proved and proved plus probable and proved plus probable plus possible oil reserves estimated using forecast prices and costs; and
 - (ii) the related estimated future net revenue; and
 - (b) (i) proved and proved plus probable and proved plus probable plus possible oil reserves estimated using constant prices and costs; and
 - (ii) the related estimated future net revenue.
2. The reserves data are the responsibility of the Corporation's management. Our responsibility is to express an opinion on the reserves data based on our evaluation.

We carried out our evaluation in accordance with standards set out in the Canadian Oil and Gas Evaluation Handbook (the "COGE Handbook") prepared jointly by the Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy & Petroleum (Petroleum Society).

3. Those standards require that we plan and perform an evaluation to obtain reasonable assurance as to whether the reserves data are free of material misstatement. An evaluation also includes assessing whether the reserves data are in accordance with principles and definitions presented in the COGE Handbook.
4. The following table sets forth the estimated forecast net revenue (before deduction of taxes) attributed to proved plus probable reserves, estimated using forecast prices and costs and calculated using a discount rate of 10 percent, included in the reserves data of the Company evaluated by us as at September 30, 2005 and identifies the respective portions thereof that we have evaluated and reported on to the Corporation's management/Board of Directors:

**Oil Reserves and Future Net Revenues
Based on Forecast Prices and Costs
as at September 30, 2005**

REPORT OF MANAGEMENT AND DIRECTORS ON RESERVES DATA AND OTHER INFORMATION

FORM 51-101F3

Management of Addax Petroleum Corporation (the "Corporation") are responsible for the preparation and disclosure of information with respect to the Corporation's oil and gas activities in accordance with securities regulatory requirements. This information includes reserves data, which consist of the following:

- (a) (i) proved, proved plus probable and proved plus probable plus possible oil and gas reserves estimated as at September 30, 2005 using forecast prices and costs; and
- (ii) the related estimated future net revenue; and
- (b) (i) proved, proved plus probable and proved plus probable plus possible oil and gas reserves estimated as at September 30, 2005 using constant prices and costs; and
- (ii) the related estimated future net revenue.

An independent qualified reserves evaluator has evaluated the Corporation's reserves data. The report of the independent qualified reserves evaluator is being filed with securities regulatory authorities concurrently with this report.

The Board of Directors of the Corporation has:

- (a) reviewed the Corporation's procedures for providing information to the independent qualified reserves evaluator;
- (b) met with the independent qualified reserves evaluator to determine whether any restrictions affected the ability of the independent qualified reserves evaluator to report without reservation; and
- (c) reviewed the reserves data with management and the independent qualified reserves evaluator.

The Board of Directors has reviewed the Corporation's procedures for assembling and reporting other information associated with oil and gas activities and has reviewed that information with management. The Board of Directors has approved:

- (a) the content and filing with securities regulatory authorities of the reserves data and other oil and gas information;
- (b) the filing of the report of the independent qualified reserves evaluator on the reserves data; and
- (c) the content and filing of this report.

Because the reserves data are based on judgments regarding future events, actual results will vary and the variations may be material.

AUDITORS' CONSENT

We have read the base PREP prospectus of Addax Petroleum Corporation (the "Corporation") dated ● , 2006 relating to the sale and issue of ● common shares of the Corporation (the "Prospectus"). We have complied with Canadian generally accepted standards for an auditor's involvement with offering documents.

We consent to the use in the Prospectus of our report to the directors of the Corporation on the balance sheet of the Corporation as at November 30, 2005. Our report is dated December 2, 2005 (except as to note 2 which is as of ● , 2006).

We also consent to the use in the Prospectus of our report to the directors of the Corporation and of Addax Petroleum N.V. on the consolidated balance sheets of Addax Petroleum N.V. as at December 31, 2004 and 2003 and the consolidated statements of operations, retained earnings and cash flows for each of the years in the three year period ended December 31, 2004. Our report is dated December 2, 2005 (except as to note 18 which is as of ● , 2006).

INDEX TO FINANCIAL STATEMENTS

PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS OF ADDAX PETROLEUM CORPORATION	F-2
AUDITED CONSOLIDATED FINANCIAL STATEMENTS OF ADDAX PETROLEUM N.V.	F-7
AUDITED FINANCIAL STATEMENTS OF ADDAX PETROLEUM CORPORATION	F-27

COMPILATION REPORT

To the Directors of
Addax Petroleum Corporation:

We have read the accompanying unaudited pro forma consolidated balance sheet of Addax Petroleum Corporation (the "Corporation") as at September 30, 2005 and the unaudited pro forma consolidated statements of operations for the nine months ended September 30, 2005 and for the year ended December 31, 2004, and have performed the following procedures.

1. Compared the figures in the columns captioned "APC" to the audited balance sheet of the Corporation as at November 30, 2005 and found them to be in agreement. The Corporation has yet to commence operations and no statements of operations exist for any period.
2. Compared the figures in the columns captioned "APNV" to the unaudited consolidated financial statements of Addax Petroleum N.V. as at September 30, 2005 and for the nine months then ended, and the audited consolidated financial statements of Addax Petroleum N.V. as at December 31, 2004 and for the year then ended and found them to be in agreement.
3. Made enquiries of certain officials of the Corporation who have responsibility for financial and accounting matters about:
 - (a) the basis for determination of the pro forma adjustments; and
 - (b) whether the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similar regulatory authorities in Canada.

The officials of the Corporation:

- (a) described to us the basis for determination of the pro forma adjustments; and
 - (b) stated that the unaudited pro forma consolidated financial statements comply as to form in all material respects with the regulatory requirements of the various Securities Commissions and similar regulatory authorities in Canada.
4. Read the notes to the unaudited pro forma consolidated financial statements and found them to be consistent with the basis described to us for determination of the pro forma adjustments.
 5. Recalculated the application of the pro forma adjustments to the aggregate of the amounts in the columns captioned "APC" and "APNV" as at September 30, 2005, and for the nine months then ended and for the year ended December 31, 2004, and found the amounts in the column captioned "APC Pro Forma" to be arithmetically correct.

A pro forma financial statement is based on management assumptions and adjustments which are inherently subjective. The foregoing procedures are substantially less than either an audit or a review, the objective of which is the expression of assurance with respect to management's assumptions, the pro forma adjustments, and the application of the adjustments to the historical financial information. Accordingly, we express no such assurance. The foregoing procedures would not necessarily reveal matters of significance to the unaudited pro forma financial statements, and we therefore make no representation about the sufficiency of the procedures for the purposes of a reader of such statements.

ADDAX PETROLEUM CORPORATION
NOTES TO UNAUDITED PRO FORMA CONSOLIDATED FINANCIAL STATEMENTS
December 31, 2004 and September 30, 2005
(unaudited)

1. BASIS OF PRESENTATION

The accompanying unaudited pro forma consolidated financial statements (the "Pro Forma Financial Statements") of Addax Petroleum Corporation (the "Corporation") have been prepared by management in accordance with Canadian generally accepted accounting principles for inclusion in a base PREP prospectus relating to the initial public offering of common shares of the Corporation.

The Pro Forma Financial Statements have been prepared from and should be read in conjunction with:

- The audited balance sheet of the Corporation as at November 30, 2005; and
- The audited consolidated financial statements of Addax Petroleum N.V. ("APNV") as at December 31, 2004 and 2003 and for each of the years in the three year period ended December 31, 2004 and the unaudited consolidated financial statements of APNV as at and for the nine month period ended September 30, 2005.

Accounting policies used in the preparation of the Pro Forma Financial Statements are in accordance with those used in the preparation of APNV's audited consolidated financial statements as at and for the year ended December 31, 2004.

Other information which was available at the time of preparation of the Pro Forma Financial Statements has also been considered. In the opinion of management, these Pro Forma Financial Statements include all material adjustments necessary for fair presentation.

The underlying assumptions for the pro forma adjustments provide a reasonable basis for presenting the significant financial effects directly attributable to the transactions discussed herein, however, the Pro Forma Financial Statements are not necessarily indicative of the results of operations expected in future years.

2. PRO FORMA ADJUSTMENTS

The unaudited pro forma consolidated balance sheet gives effect to the following transactions as if they had occurred on September 30, 2005 while the unaudited pro forma consolidated statements of operations for the nine month period ended September 30, 2005 and for the year ended December 31, 2004 give effect to the following transactions as if they had occurred on January 1, 2004.

- 2.1 The initial public offering of • common shares of the Corporation for net proceeds of \$ • .
- 2.2 Concurrently with the closing of the initial public offering, the acquisition of all of the issued and outstanding common shares of APNV by the Corporation in exchange for • common shares and \$ • .

3. EARNINGS PER SHARE

Pro forma earnings per share for the nine months ended September 30, 2005 and the year ended December 31, 2004 have been calculated using • outstanding common shares.

AUDITORS' REPORT

To the directors of
Addax Petroleum Corporation and Addax Petroleum N.V.:

We have audited the consolidated balance sheets of Addax Petroleum N.V. as at December 31, 2004 and 2003 and the consolidated statements of operations, retained earnings and cash flows for each of the years in the three year period ended December 31, 2004. These financial statements are the responsibility of the Company's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, these consolidated financial statements present fairly, in all material respects, the financial position of the Company as at December 31, 2004 and 2003 and the results of its operations and its cash flows for each of the years in the three year period ended December 31, 2004, in accordance with Canadian generally accepted accounting principles.

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS
December 31, 2004 and 2003 and September 30, 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

1. GENERAL

Addax Petroleum N.V. ("Addax") was incorporated on August 27, 1999 and is a registered Netherlands Antilles corporation. Addax is a wholly-owned subsidiary of The Addax and Oryx Group Ltd. ("AOG"). Addax and its subsidiaries (collectively, the "Company") are involved in the exploration, appraisal, development and production of crude oil and natural gas.

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

Basis of presentation

The consolidated financial statements include the accounts of Addax and all of its subsidiaries and are prepared in accordance with Canadian generally accepted accounting principles. Subsidiaries are consolidated from the date on which control is transferred to the Company and ceases on the date on which control is transferred out of the Company.

Inter-company balances and transactions, including inter-company profits and unrealized profits and losses are eliminated.

Measurement uncertainty

The preparation of financial statements in accordance with Canadian generally accepted accounting principles requires management to make estimates and assumptions that affect the reported amounts of assets and liabilities and the disclosure of contingencies at the date of the consolidated financial statements and the reported amounts of revenue and expenses arising during the reporting period. Actual results could differ from these estimates and the differences could be material.

The estimates and underlying assumptions are reviewed on an ongoing basis. Revisions to accounting estimates are recognized prospectively.

The amount recorded for depletion and depreciation of property, plant and equipment, the provision for asset retirement obligations and the test for impairment of property, plant and equipment are based on estimates of oil and natural gas reserves, production rates, commodity prices, future costs and other relevant assumptions. By their nature, these estimates are subject to measurement uncertainty and the effect on the consolidated financial statements of changes in such estimates in future years could be significant.

Property, plant and equipment

The Company follows the full cost method of accounting for oil and natural gas exploration and development activities whereby all costs associated with exploring for and developing oil and natural gas reserves are initially capitalized on a country by country cost centre basis. Capitalized costs include expenditures on acquiring exploration and development licences, land acquisition, geological and geophysical activities, drilling and testing both productive and non-productive wells, acquiring and developing oil and natural gas reserves in place, and financing and administrative costs directly attributable to specific new exploration and development projects until the necessary facilities are completed and ready for use.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

**Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited**

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Gains or losses are not recognized upon the disposition of oil and natural gas properties unless such a disposition would result in a change in the depletion rate by 20 per cent or more.

The costs related to each cost centre are depleted on a unit-of-production basis based on the Company's share of gross estimated proved reserves, before royalties, as estimated by independent reservoir engineers. Reserves and production are converted to equivalent units on the basis of six thousand cubic metres of natural gas to one barrel of oil, reflecting the approximate relative energy content. Costs of acquiring and evaluating unproved properties and certain costs associated with major development projects are not subject to depletion until proved reserves are assigned and production commences or the costs are impaired.

Property, plant and equipment other than oil and natural gas properties is stated at cost less accumulated depreciation. Depreciation is calculated on a straight-line basis over the estimated life of the assets, which ranges from 3 to 10 years.

The Company assesses the carrying amount of its oil and natural properties for impairment annually or as circumstances dictate. An impairment is deemed to exist when the carrying amount exceeds the estimated undiscounted future net cash flows associated with the Company's proved oil and natural gas reserves. In such situations, the impairment is measured as the excess of the carrying amount over the estimated discounted future net cash flows associated with the Company's proved and probable oil and natural gas reserves. The discount rate used is the Company's risk free interest rate. Any impairment loss is charged to earnings in the period in which the impairment occurs.

The carrying values of unproved properties and major development projects are limited to their net realizable value and are reviewed at least annually for impairment. Any impairment is included in costs subject to depletion in the period of the impairment.

Cost centres in the pre-production stage are assessed at each reporting date to determine whether it is likely that net costs, in the aggregate, may be recovered in the future. Costs considered unlikely to be recovered are expensed during the period.

Asset retirement obligations

The Company recognizes the fair value of a liability for an asset retirement obligation in the period in which it is incurred with a corresponding increase in the carrying value of the related asset. The fair value is determined on the basis of independent engineering and environmental studies for each well or facility. The liability is subsequently adjusted for the passage of time, which is recognized as accretion expense and included in depletion, depreciation and accretion in the consolidated statement of operations. The fair value of the liability and the carrying value of the related asset are also adjusted due to revisions in either the timing or the amount of the original estimated cash flows associated with the liability. Obligations settled during the period are charged against the liability recorded. Gains or losses on settlement are recognized in the period of settlement.

Interests in joint ventures

The consolidated financial statements include only the Company's proportionate share of assets, liabilities, revenues and expenses from its corporate and unincorporated joint ventures.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

**Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited**

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

Cash and cash equivalents

Cash includes cash on hand and cash with banks. Cash equivalents are short term, highly liquid investments that are readily convertible to known amounts of cash with original maturities of three months or less.

Inventories and underlift

Inventories, including parts and consumables and crude oil inventories, and crude oil underlifts are recorded at the lower of cost and net realizable value. Cost is determined on a first-in, first-out basis.

Foreign currency transactions

The Company's reporting currency is the United States ("US") dollar as the majority of its transactions are denominated in this currency.

Transactions in foreign currencies are recorded at rates prevailing at the date of the transaction. Monetary assets and liabilities denominated in foreign currencies are translated to US dollars at the foreign exchange rate in effect at the balance sheet date.

Income taxes

The Company follows the liability method of accounting for income taxes under which the future tax consequences are recognized for temporary differences between the tax bases of assets and liabilities and their carrying value for financial reporting purposes. Future income tax assets and liabilities are measured using enacted or substantively enacted income tax rates expected to apply in the years in which those temporary differences are expected to reverse. The effect of a change in income tax rates on future income tax assets and liabilities is recognized in the period in which the change occurs.

The Company earns capital investment allowances ("CIAs") on capital expenditures in Nigeria. The future income tax benefits arising from CIAs are recorded when the CIAs are earned and reduce the carrying amount of property, plant and equipment. CIAs are charged to future income tax in the statement of operations as the tax benefits are realized.

Revenue recognition

Oil and natural gas sales are recognized in the consolidated statement of operations when the significant risks and rewards of ownership have been transferred to the buyer, which typically occurs at the lifting date. Revenue from services rendered is recognized in the consolidated statement of operations in proportion to the stage of completion of the transaction at the balance sheet date. Overlifts are accounted for as deferred income.

Substantially all of the Company's operations are conducted under production sharing contracts ("PSCs") with foreign governments. Under the PSCs, the Company and its other non-governmental partners, if any, pay all operating and capital costs. Each PSC establishes specific terms for the Company to recover these costs in accordance with a formula based on monthly production volumes ("Cost Recovery Oil") and to receive a share of production in excess of the Cost Recovery Oil ("Profit Oil"). Profit Oil attributable to the government includes an amount in respect of all deemed income taxes payable by the Company under the

2. SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES (Continued)

laws of the respective country. All other government interests, other than income taxes, are considered to be royalty interests.

Derivative financial instruments and commodity contracts

The Company may use derivative financial instruments (forward exchange contracts, interest rate swaps and options) to manage its exposure to market risks resulting from fluctuations in foreign exchange rates, interest rates, and commodity prices. These derivative financial instruments are not used for trading or speculative purposes.

Gains and losses on derivative instruments that are designated as and determined to be effective hedges are deferred and recognized in the period of settlement as a component of the related transaction. If a derivative instrument ceases to be effective as a hedge or is terminated, hedge accounting is discontinued and future gains and losses are recognized in the consolidated statement of operations in the current period.

Derivative instruments that are not designated as hedges for accounting purposes are recorded in the consolidated balance sheet at fair value with any resulting gain or loss recognized in the consolidated statement of operations in the current period.

3. PROPERTY, PLANT AND EQUIPMENT

	September 30,	December 31,	
	2005	2004	2003
	(unaudited)		
Oil and natural gas properties	803,279	730,691	455,196
Accumulated depletion	<u>(337,516)</u>	<u>(234,702)</u>	<u>(159,502)</u>
	465,763	495,989	295,694
Corporate assets	12,877	4,648	3,183
Accumulated depreciation	<u>(6,696)</u>	<u>(2,955)</u>	<u>(1,943)</u>
	6,181	1,693	1,240
Balance	<u><u>471,944</u></u>	<u><u>497,682</u></u>	<u><u>296,934</u></u>

During the period ended September 30, 2005, general and administrative expenses of \$15.0 million (September 30, 2004 — \$3.7 million; December 31, 2004 — \$24.0 million; December 31, 2003 — \$19.1 million; December 31, 2002 — \$9.0 million) were capitalized.

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005
 (US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
 Amounts as at September 30, 2005 and for the nine month periods ended
 September 30, 2005 and 2004 are unaudited

3. PROPERTY, PLANT AND EQUIPMENT (Continued)

Property, plant and equipment by cost centre is as follows:

Cost Centre	September 30,	December 31,	
	2005 (unaudited)	2004	2003
Nigeria	452,527	485,802	293,091
Cameroon	3,960	3,321	2,603
Gabon	9,276	6,866	-
Other corporate assets	6,181	1,693	1,240
Balance, end of period	471,944	497,682	296,934

Included in property, plant and equipment are certain costs not subject to depletion and depreciation as follows:

	September 30,	December 31,	
	2005 (unaudited)	2004	2003
Unproved properties			
Nigeria	-	-	10,758
Cameroon	3,960	3,321	2,603
Gabon	9,276	6,866	-
Major development projects			
Nigeria	-	184,686	19,326
	<u>13,236</u>	<u>194,873</u>	<u>32,687</u>

In March 2003, the Company acquired the non-controlling interest in one of its subsidiaries for \$21 million. The excess of the recorded value of the non-controlling interest over the consideration paid has been recognized as a reduction in property, plant and equipment of the Nigerian cost centre.

4. ASSET RETIREMENT OBLIGATIONS

The asset retirement obligation movements are as follows:

	September 30,	December 31,	
	2005 (unaudited)	2004	2003
Balance, beginning of period	12,268	11,953	5,835
Asset retirement obligations incurred	10,912	-	5,593
Revisions of previous estimates	-	(698)	-
Accretion expense	1,565	1,013	525
Balance, end of period	24,745	12,268	11,953

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005
 (US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
 Amounts as at September 30, 2005 and for the nine month periods ended
 September 30, 2005 and 2004 are unaudited

5. LONG-TERM DEBT

Debt financing is provided through a syndicated \$300 million senior secured reducing revolving credit facility (the "Facility"). The Facility expires on December 31, 2008. The borrowing base is re-determined semi-annually based on an independent engineer's evaluation of the Company's oil and natural gas reserves, subject to the approval of the syndicate.

The amounts drawn under the Facility bear interest at floating rates linked to LIBOR plus a margin determined in relation to the percentage of utilization of the Facility on the first day of the interest period. The Facility is secured by debentures given by the Company, an assignment of the Company's principal contracts, a pledge over the bank accounts and share pledges of the Company's principal subsidiaries.

At September 30, 2005, the amount outstanding under the Facility was \$100 million (December 31, 2004 — \$65 million; December 31, 2003 — \$nil). The average interest for the period ended September 30, 2005 was 4.6 per cent (December 31, 2004 — 6.4 per cent; December 31, 2003 — 7.1 per cent).

6. SHARE CAPITAL

	September 30, 2005	December 31,	
	(unaudited)	2004	2003
Authorized: unlimited number of common shares			
Issued and outstanding			
60,030,000 common shares	20,010	20,010	20,010

During 2004, the issued and outstanding common shares were split on a three-for-one basis. Prior periods reflect this split.

7. EARNINGS PER SHARE

Per share information is calculated on the basis of the weighted average number of common shares outstanding during the fiscal period, being 60,030,000 for all periods presented. There are no potentially dilutive shares for all periods presented.

8. PENSION PLANS

The Company has two pension plans.

The employees of Addax Petroleum Development (Nigeria) Ltd. ("APDNL"), a wholly-owned subsidiary of Addax, have a defined benefit plan (the "Nigerian Plan") in which the assets are held in a separate trustee administered fund. The employees of the Geneva branch of Addax Petroleum Services Ltd., a wholly owned subsidiary of the Company, have a defined benefit plan (the "Swiss Plan") complying with the legal requirements of Switzerland in which the assets are held and administered in a separate insurance company. These pension plans are funded by payments by each relevant company, taking into account the respective legal requirements.

The pension costs are accounted for using the projected benefits method whereby the costs are amortized over the service life of the employees in accordance with the advice of qualified actuaries.

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended

September 30, 2005 and 2004 are unaudited

8. PENSION PLANS (Continued)

For Nigerian staff, there is also a gratuity plan funded by APDNL. The plan provides employees who retire at age 60 and who have at least 10 years continuous service a lump sum payment of five per cent of pensionable pay for each year worked to a maximum of 24 months of monthly base salary. The projected benefits method has been used to calculate the liability.

Information relating to the Company's defined benefit pension plans is shown in the following tables:

9. INCOME TAXES

At the current time, the majority of the Company's taxable operations are located in Nigeria under PSCs with the Nigerian government. The deemed income tax rate in the Nigerian PSCs is 60 per cent. The provision for income taxes varies from the amounts that would be computed by applying the combined income tax rates set out in the PSCs to net income before provision for income taxes for the following reasons:

	Period ended September 30,		Year ended December 31,		
	2005 (unaudited)	2004 (unaudited)	2004	2003	2002
Income before provision for income taxes	475,486	176,797	233,107	153,068	184,908
Tax at 60%	285,292	106,078	139,864	91,841	110,945
Adjustments to income taxes:					
Non-deductible costs	47,397	24,465	47,115	33,020	21,086
Non-taxable revenues	(1,783)	4,504	(2,518)	(1,905)	2,185
Enhanced tax allowances	(19,844)	-	2,193	-	-
Adjustments in respect of prior years	-	-	4,643	4,067	2,846
Tax allowances not recoverable	(4,320)	-	(22,064)	-	(5,000)
Deduction for countries with lower tax rates	744	426	1,250	344	344
Change in tax terms	-	-	-	-	(25,400)
Provision for income taxes	307,486	135,473	170,483	127,367	107,006

Components of future income taxes

	September 30, 2005 (unaudited)	December 31,	
		2004	2003
The net future tax liability is as follows:			
Differences between tax bases and reported amounts of depreciable and depletable assets		115,459	107,414
Other		(28,234)	(18,865)
Future income tax liabilities		<u>87,225</u>	<u>91,560</u>

In 2002, the Company was notified by the Nigerian authorities that the fiscal terms (royalties, CIAs and income tax rates) under which it operated had been amended. These amendments were to be applied retroactively to January 1, 2000. The royalty rate on oil production was reduced from 20 per cent onshore and 18.5 per cent offshore to variable rates depending on production which averaged 6.5 per cent in 2002 and the income tax rate was reduced from 85 per cent to 60 per cent. As a result of the new fiscal terms, 2002 petroleum sales were reduced by \$5,500,000 for the impact of the changes on Cost Recovery Oil, royalties were reduced by \$53,700,000 and income taxes were increased by \$25,400,000 for amounts related to 2000 and 2001. The overpaid royalty amounts were recorded as prepaid expenses and applied to reduce

11. FINANCIAL INSTRUMENTS

Market risk

The Company's activities expose it to a variety of market risks, including the effects of changes in commodity prices, foreign currency exchange rates and interest rates. The Company uses derivative financial instruments such as options on commodities, foreign exchange contracts and interest rate swaps to manage certain exposures.

The Board of Directors provides principles for overall risk management, as well as policies covering specific areas, such as commodity price risk, foreign exchange risk, interest rate risk and credit risk. These principles include guidelines on the use of derivative financial instruments.

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

11. FINANCIAL INSTRUMENTS (Continued)

(a) Commodity price risk

It is the intention of the Company to cover commodity-pricing exposure in order to safeguard a minimum cash income. The option contracts run for 12 months or less. At September 30, 2005, the Company had the following crude oil derivative contract outstanding:

	<u>Put option</u>
Maturity	March 31, 2006
Volume	27,400 barrels per day
Average price	\$21.00 per barrel

The estimated fair value is disclosed in section (e) below.

(b) Foreign exchange risk

The Company operates internationally and is exposed to foreign exchange risk arising from various currency exposures, primarily with respect to Swiss francs (or "CHF") and the Nigerian Naira against the US dollar. The Company uses both local currency borrowing facilities and forward contracts to hedge their exposure to foreign currency risk. The forward currency contract must be in the same currency as the hedged item.

In December 2004 and January 2005, the Company entered into foreign exchange forward contracts to purchase CHF 18,000,000 for \$15,578,244 for the year ending December 31, 2005. As at September 30, 2005, the Company had purchased forward contracts for the purchase of CHF 13,500,000 for \$11,651,412. These forward contracts fix the exchange rate used to convert a portion of the Company's Swiss franc denominated general and administrative expenses to US dollars. These contracts have not been designated as hedges for accounting purposes. Estimated fair values on these contracts at period end are disclosed in section (e) below.

(c) Interest rate risk

The Company's exposure to market risk for changes in interest rates relates primarily to the Company's long-term debt obligations.

To manage this risk in a cost efficient manner, the Company enters into interest rate swaps, in which the Company agrees to exchange, at specified intervals, the difference between fixed and variable interest amounts calculated by reference to an agreed-upon notional principal amount. These swaps are designated to hedge cash outflows related to interest obligations.

In 2002, in anticipation of receiving a \$50 million loan, the Company entered into two interest rate swap contracts to hedge against possible adverse interest rate fluctuations. These contracts resulted in interest expense at an average fixed rate of 4.4 per cent in exchange for a three-month variable LIBOR rate on two notional principal amounts of \$25 million expiring in August 2004 and August 2005, respectively. The Company drew down \$25 million on the \$50 million loan facility in February 2002 and repaid this amount in May 2003. One of these two swap contracts expired upon repayment of the \$25 million while the other one was determined to be a hedge from the date of the first drawdown on the \$300 million loan facility in November 2004 until its termination date in August 2005.

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

11. FINANCIAL INSTRUMENTS (Continued)

These contracts have not been designated as hedges for accounting purposes. Estimated fair values at period end are disclosed in section (e) below.

(d) Credit risk

Concentrations of credit risk with respect to accounts receivable are limited due to the high portion of amounts due from related parties. Of the Company's significant individual accounts receivable at September 30, 2005, approximately 80 per cent was due from one related party customer (December 2004 — 59 per cent; December 31, 2003 — 81 per cent). Historical experience has indicated no problem in collecting accounts receivable from related companies. Therefore, management believes there is no significant credit risk inherent in the Company's accounts receivable, beyond amount provided for doubtful accounts.

(c) Liquidity risk

The following table sets out the estimated fair values of purchased derivative financial instruments recognized in the consolidated balance sheet in accounts receivable and accounts payable with resulting gains and losses being recognized in other interest and finance charges in the statement of operations. These contracts have not been designated as hedges for accounting purposes.

	September 30, 2005
Currency forwards	519
Crude oil put options	-
Interest rate swaps	-

The fair values of other financial instruments including cash and cash equivalents, accounts receivable and accounts payable approximate their carrying values due to the short term to maturity of these items. Other long-term liabilities approximate their carrying value due to minimal risk of change in value to maturity. The fair value of long-term debt approximates its carrying value as it is subject to a floating market rate of interest.

12. CASH FLOWS

(a) Items not affecting cash

Expenses	-	-	-

ADDAX PETROLEUM N.V.

NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)

December 31, 2004 and 2003 and September 30, 2005

(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)

**Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited**

14. OTHER LONG-TERM LIABILITIES

	<u>September 30,</u> <u>2005</u>	<u>December 31,</u> <u>2004</u>	<u>2003</u>
	(unaudited)		
Disputed tax payable	6,920	-	-
Royalties	8,134	-	-
Pension	2,095	3,778	1,562
Operational	5,533	-	-
Other	<u>2,973</u>	<u>3,094</u>	<u>137</u>
	<u>25,655</u>	<u>6,872</u>	<u>1,699</u>

The tax payable to the Nigerian government relates to the disputed deductibility of the original purchase price of certain Nigerian assets. This dispute was raised by NNPC in 2003 and is still unresolved.

Royalties due to the Nigerian government relate to tax inversion penalties for 2000 and 2005 where the operating cost per barrel exceeded the allowable threshold. There is a 25 per cent penalty charged on the excess. The method of calculating the operational cost per barrel has yet to be agreed between the Corporation and NNPC. Management believes these two matters will not be settled within a year.

Operational liabilities relate to the following:

- i) a dispute relating to the construction and installation of certain platforms and pipelines in 2003 and 2004, amounting to \$2,533,000. All other claims for this contract have been settled. The outstanding amount has been claimed against Addax's insurance. The insurer has offered a 10 per cent settlement. If the contractor does not receive settlement, the contractor is expected to claim against Addax; and
- ii) a dispute relating to the costs of conversion of an FPSO. The dispute has gone to arbitration, but the formal claim documentation has yet to be received from the contractor.

Management believes these two matters will not be settled within a year.

15. COMMITMENTS

Future total commitments relating to Floating Production, Storage and Offloading vessel ("FPSO") leases and exploration and development activities, after September 30, 2005 are as follows:

2005	77,090
2006	213,849
2007	70,194
2008	70,838
2009	46,667
2010	35,365
Thereafter	<u>119,757</u>
Total	<u>633,760</u>

ADDAX PETROLEUM N.V.
NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS (Continued)
December 31, 2004 and 2003 and September 30, 2005
(US\$, except as noted. Tabular amounts in US\$ 000s, except as noted)
Amounts as at September 30, 2005 and for the nine month periods ended
September 30, 2005 and 2004 are unaudited

15. COMMITMENTS (Continued)

Included in the above table are commitments for the hire of three FPSO vessels ranging from one to eight years.

In addition to the above, the Company has the following work commitments:

Under the Cameroon concession contract there is a first phase work commitment of \$22 million over a three year period, commencing on April 19, 2004, being the date of issuance of the Exploration Authorization by the Cameroon government. The Company has the right to extend the exploration period by an additional two phases of two years each. These additional phases have additional work commitments.

Under the Exploration and Production Sharing Contract offshore Gabon, there is an initial exploration period of four years including a two well commitment that commenced in March 2003. The contract can be renewed twice for an additional three year period per renewal. These additional phases have additional work commitments. The first commitment well was drilled in early 2004, proved to be dry and was subsequently written off, the second remains to be drilled.

16. CONTINGENCIES

The Company is exposed to the possibility of environmental damage arising from its exploration, development and production activities. The Company is responsible for any liabilities arising from such events and has developed a series of strict operating procedures to protect the environment.

Various legal actions arising in the normal course of business have been commenced in Nigeria against the Company. It is the view of management that most of these actions are without any foundation and the Company has provided \$300,000 as its best estimate of losses under these actions.

The Company is liable to pay early termination penalties on its FPSO lease contracts. As at September 30, 2005, the maximum contingent liability arising from early termination of these contracts amounted to \$216.9 million. Management's intent is to carry the contracts to maturity.

The Company's income tax filings are subject to audit by taxation authorities. There are audits in progress and items under review, some that may increase our tax liability. In addition, we have filed notices of objection with respect to certain issues. While the results of these items cannot be ascertained at this time, we believe we have an adequate provision for income taxes based on available information.

ADDAX PETROLEUM N.V.

17. RELATED PARTY TRANSACTIONS

The following transactions took place between the Company and AOG and its other subsidiary companies.

	Period ended September 30,		Year ended December 31,		
	2005	2004	2004	2003	2002
	(unaudited)	(unaudited)			
Sales to Addax B.V.	512,254	291,447	371,444	386,613	284,062
Charges:					
Addax Bunkering Services	(11,437)	(6,698)	(10,406)	-	
AOG	(375)	(375)	(2,809)	(3,860)	(5,219)
Addax B.V.	(1,236)	(499)	(1,067)	-	
Other items	(1,920)	(1,905)	(1,141)	(1,894)	(935)
Interest and related charges	-	-	-	(47)	(390)

The sales to Addax B.V., the sole marketer of the Company's crude oil (net of NNPC liftings), were made on the same terms and conditions as with Addax B.V.'s non-related customers. The charges from AOG include management services, trademark licence and information technology support. Charges from Addax Bunkering Services are for the purchase of fuel for the Company's bunkering operations. Other items include charges from Addax Limited for the refund of services paid on behalf of the Company. Addax BV and Addax Limited are subsidiaries of AOG. Outstanding balances with related companies are as follows:

Amounts due from (to) related parties as included in accounts receivable and accounts payable in the consolidated balance sheet are as follows:

	September 30,	December 31,	
	2005	2004	2003
	(unaudited)

Other	2,376	9,736	141

A director of the Company has a consulting contract with a subsidiary pursuant to which the director is paid \$9,000 per month.

18. EVENTS SUBSEQUENT TO SEPTEMBER 30, 2005

•

AUDITORS' REPORT

To the Directors of
Addax Petroleum Corporation

We have audited the balance sheet of Addax Petroleum Corporation (the "Corporation") as at November 30, 2005. This financial statement is the responsibility of the Corporation's management. Our responsibility is to express an opinion on this financial statement based on our audit.

We conducted our audit in accordance with Canadian generally accepted auditing standards. Those standards require that we plan and perform an audit to obtain reasonable assurance whether the balance sheet is free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statement. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation.

In our opinion, the balance sheet presents fairly, in all material respects, the financial position of the Corporation as at November 30, 2005, in accordance with Canadian generally accepted accounting principles.

ADDAX PETROLEUM CORPORATION

NOTES TO BALANCE SHEET

As at November 30, 2005

1. FORMATION OF THE CORPORATION

Addax Petroleum Corporation (the "Corporation") was incorporated under the *Canada Business Corporations Act* on September 6, 2005. The Corporation issued 100 initial Common Shares on November 23, 2005, for cash proceeds of CDN\$100.

2. EVENTS SUBSEQUENT TO SEPTEMBER 30, 2005

(a) Issuance of Common Shares

Pursuant to an underwriting agreement dated ●, 2006, the Corporation agreed to sell ● Common Shares, at a price of \$ ● per Common Share, for proceeds totaling \$ ●, net of \$ ● of fees payable to the underwriters. In addition, the Corporation has granted the underwriters an option, exercisable for a period of 30 days from the closing of the offering, to purchase up to ● additional Common Shares at the offering price.

(b) Acquisition of Addax Petroleum N.V.

Pursuant to a purchase and sale agreement dated ●, the Corporation will acquire, concurrently with the closing of the offering described in note 2(a) above, all of the issued and outstanding common shares of Addax Petroleum N.V. for cash consideration of approximately \$ ● and ● Common Shares of the Corporation.

CERTIFICATE OF THE CORPORATION

DATED: December 6, 2005

February 7, 2006

To the various Securities Commissions and
similar regulatory authorities in Canada

Dear Sirs/Mesdames:

Re: Addax Petroleum Corporation (the "Corporation")

We refer to the base PREP prospectus of the Corporation dated February 7, 2006 relating to the sale and issue of common shares (the "Prospectus").

We consent to the use in the Prospectus of our report dated December 2, 2005 (except as to Note 2 which is as of February 7, 2006) to the directors of the Corporation on the balance sheet of the Corporation as at November 30, 2005.

We also consent to the use in the Prospectus of our report dated December 2, 2005 (except as to Note 18 which is as of February 7, 2006) to the directors of the Corporation and the directors of Addax Petroleum N.V. on the following financial statements of Addax Petroleum N.V.:

- Consolidated balance sheets as at December 31, 2004 and 2003; and
- Consolidated statements of operations, retained earnings and cash flows for each of the years in the three-year period ended December 31, 2004.

We report that we have read the Prospectus and have no reason to believe that there are any misrepresentations in the information contained therein that are derived from the financial statements upon which we have reported or that are within our knowledge as a result of our audits of such financial statements.

We also consent to the use of our compilation report dated February 7, 2006 to the directors of the Corporation on the unaudited pro forma consolidated balance sheet of the Corporation as at September 30, 2005 and the unaudited pro forma consolidated statements of operations for the nine months ended September 30, 2005 and for the year ended December 31, 2004.

This letter is provided solely for the purpose of assisting the securities regulatory authorities to which it is addressed in discharging their responsibilities and should not be used for any other purpose. Any use that a

This prospectus has been filed under procedures in each of the provinces of Canada that permit certain information about these securities to be determined after the prospectus has become final and that permit the omission of that information from this prospectus. The procedures require the delivery to purchasers of a supplemented PREP prospectus containing the omitted information within a specified period of time after agreeing to purchase any of these securities.

All disclosure contained in the supplemented PREP prospectus that is not contained in this base PREP prospectus will be incorporated by reference into this base PREP prospectus as of the date of the supplemented PREP prospectus.

No securities regulatory authority has expressed an opinion about these securities and it is an offence to claim otherwise. This prospectus constitutes a public offering of securities only in those jurisdictions where such securities may be lawfully offered for sale and therein only by persons permitted to sell such securities. These securities have not been and will not be registered under the United States Securities Act of 1933, as amended, and, subject to certain exceptions, may not be offered or sold in the United States. See "Plan of Distribution".

BASE PREP PROSPECTUS

February 7, 2006

Initial Public Offering

21,000,000 Common Shares

Price: CDN\$ • per Common Share

RECEIVED
 2007 JAN 18 A 10:22
 OFFICE OF INTERPROVINCIAL
 CORPORATE INFORMATION

This prospectus qualifies the distribution of an aggregate of 21,000,000 common shares (the "Offered Shares") of Addax Petroleum Corporation. See "Plan of Distribution".

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005. Addax Petroleum believes that its demonstrated technical expertise, combined with its excellent operational reputation and strong community relationships in Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

The terms of this offering were established by negotiation among RBC Dominion Securities Inc., Merrill Lynch Canada Inc., Scotia Capital Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited (collectively, the "Underwriters"), Addax Petroleum and The Addax and Oryx Group Ltd. ("AOG"). Presently, there is no market through which the common shares of the Corporation (the "Common Shares") may be sold and purchasers may not be able to resell the Offered Shares purchased under this prospectus. The Toronto Stock Exchange (the "TSX") has conditionally approved the listing of the Common Shares. Listing is subject to the Corporation fulfilling all of the requirements of the TSX on or before May 3, 2006. See "Risk Factors" for certain considerations relevant to an investment in the Offered Shares.

	Price to the Public (CDN\$)	Underwriters' Fees (CDN\$)	Net Proceeds to the Corporation ⁽¹⁾ (CDN\$)
Per Common Share	•	•	•
Total Offering ⁽²⁾	•	•	•

Notes:

- (1) Before deducting the expenses of the offering payable by the Corporation, estimated to be CDN\$4.5 million, which will be paid by the Corporation out of the proceeds of the offering, CDN\$ • of the net proceeds of this offering will be used to fund the Pre-IPO Transactions. See "Use of Proceeds".
- (2) Addax Petroleum Corporation has granted to the Underwriters an over-allotment option (the "Over-Allotment Option"), exercisable, in whole or in part, at any time until 30 days after closing of this offering, to purchase from the Corporation up to an additional 2,100,000 Common Shares, at the same price as set forth above, to cover over-allotments, if any, and for market stabilization purposes. If the Over-Allotment Option is exercised in full, the total "Price to the Public", "Underwriters' Fees" and "Net Proceeds to the Corporation" (before deducting expenses of the offering) will be CDN\$ •, CDN\$ • and CDN\$ •, respectively. This prospectus also qualifies the distribution of the Over-Allotment Option and the Common Shares issuable upon exercise of the Over-Allotment Option. See "Plan of Distribution".

The Underwriters, as principals, conditionally offer the Offered Shares, subject to prior sale, if, as and when issued and sold by the Corporation and accepted by the Underwriters in accordance with the conditions contained in the Underwriting Agreement referred to under "Plan of Distribution" and subject to the approval of certain legal matters on behalf of the Corporation by Fasken Martineau DuMoulin LLP and on behalf of the Underwriters by Fraser Milner Casgrain LLP.

RBC Dominion Securities Inc. is an indirect wholly owned subsidiary of a Canadian chartered bank that is a lender to Addax Petroleum N.V. under a revolving credit facility. Consequently, Addax Petroleum may be considered to be a connected issuer of RBC Dominion Securities Inc. under applicable securities legislation. See "Relationship Between the Corporation and RBC Dominion Securities Inc."

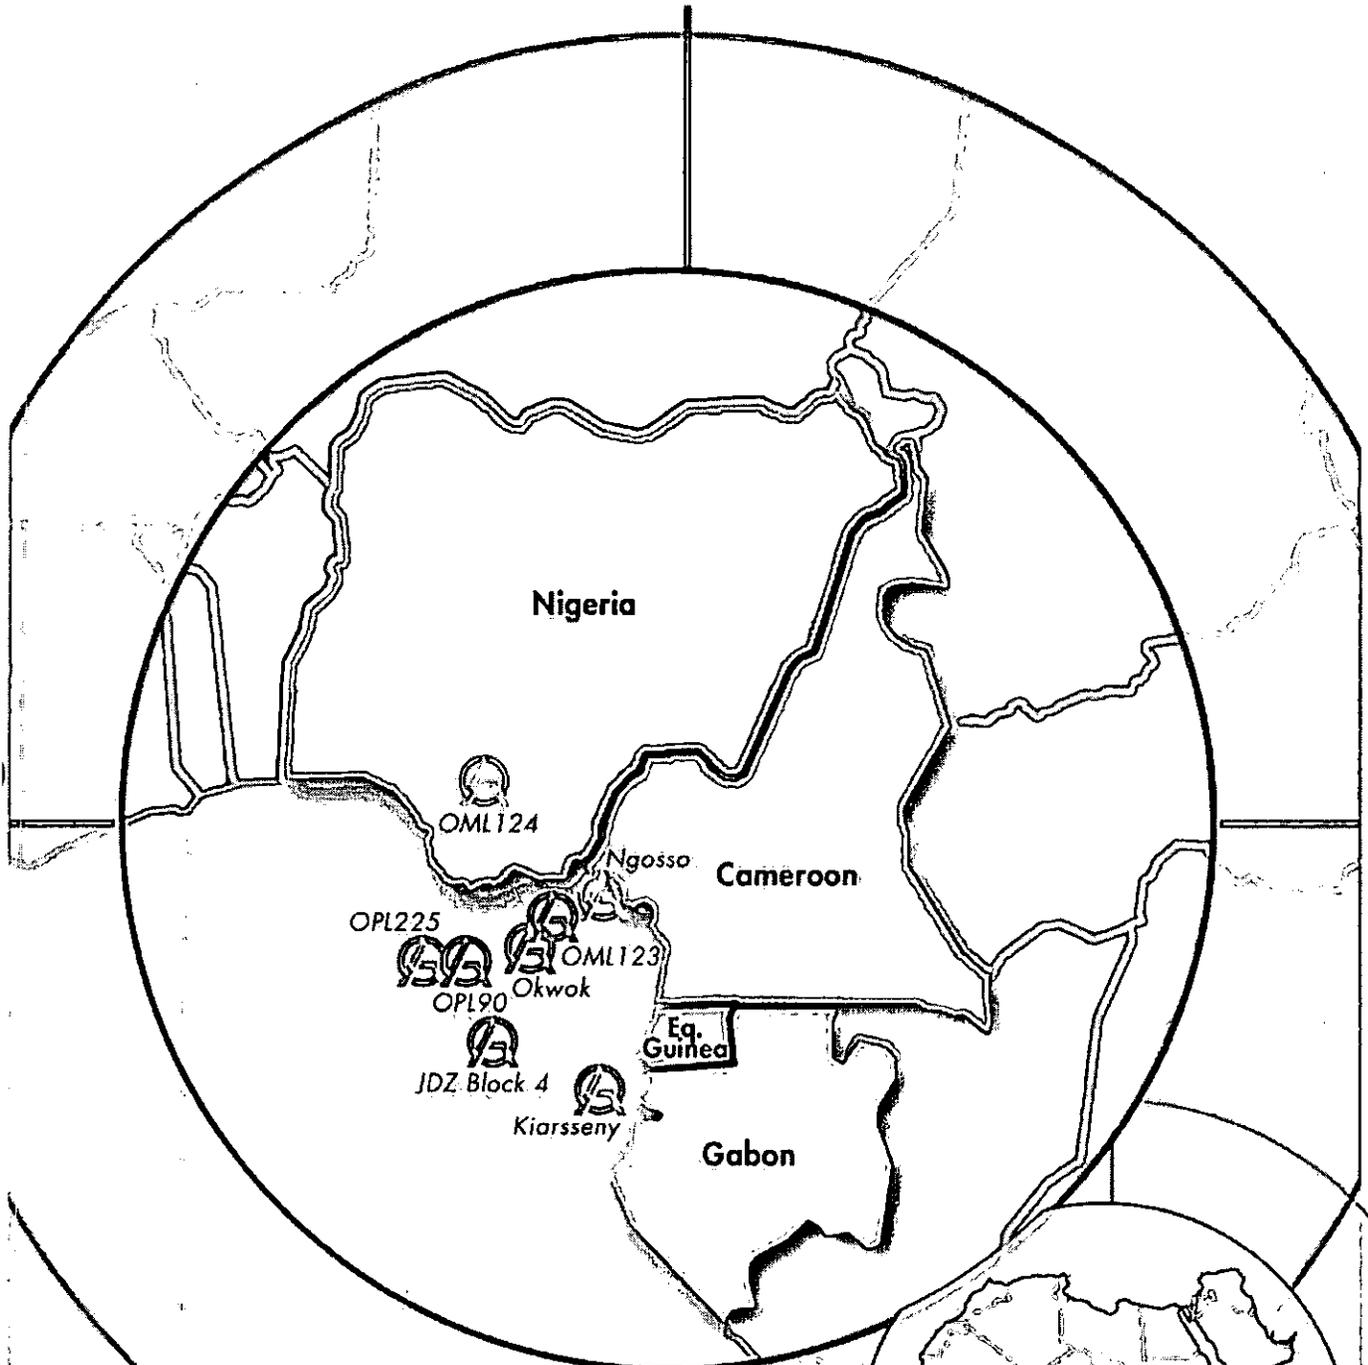

In the opinion of counsel, based on legislation in effect on the date of this prospectus, the Offered Shares are eligible investments as set forth under the heading "Eligibility for Investment".

Subscriptions will be received subject to rejection or allotment, in whole or in part, and the right is reserved to close the subscription books at any time without notice. On closing, a book entry certificate representing the Offered Shares will be issued in registered form to The Canadian Depository for Securities Limited ("CDS") or its nominee and will be deposited with CDS. Shareholders will not receive physical share certificates representing their ownership. A purchaser of the Offered Shares will receive only a customer confirmation from the registered dealer which is a CDS participant and from or through which the Offered Shares are purchased. See "Plan of Distribution". Closing of this offering is expected to occur on or about February 15, 2006, or such later date as the Corporation and the Underwriters may agree, but in any event not later than March 15, 2006.

Except as otherwise indicated in this prospectus, references to "\$" and to "dollar" refer to currency of the United States of America and references to oil reserves and production refer to reserves and production calculated on a gross basis.

SUMMARY

The following is a summary of the principal features of this offering and is qualified by, and should be read together with, the more detailed information and financial data and statements contained elsewhere in this prospectus. Please refer to the "Glossary", "Abbreviations" and "Conversions" for the meaning of certain terms used in this prospectus.

Addax Petroleum

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum believes that its demonstrated technical expertise, combined with its excellent operational reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

*Addax Petroleum's Average Oil Production
1998 - October 2005*

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of Cash Flow From Operations. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of Cash Flow From Operations. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by Netherland, Sewell & Associates, Inc. ("NSAI"), independent oil and natural gas reservoir engineers.

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);

- OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
- OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		1,133,900			74,450	62,090	109.3	201.3	284.1

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. On January 30, 2006, the Joint Development Authority conditionally approved the replacement of the Noble-ERHC consortium with the ERHC-Addax consortium and the designation of Addax Petroleum as operator for the Block 4 Property. Pursuant to the participation agreement the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

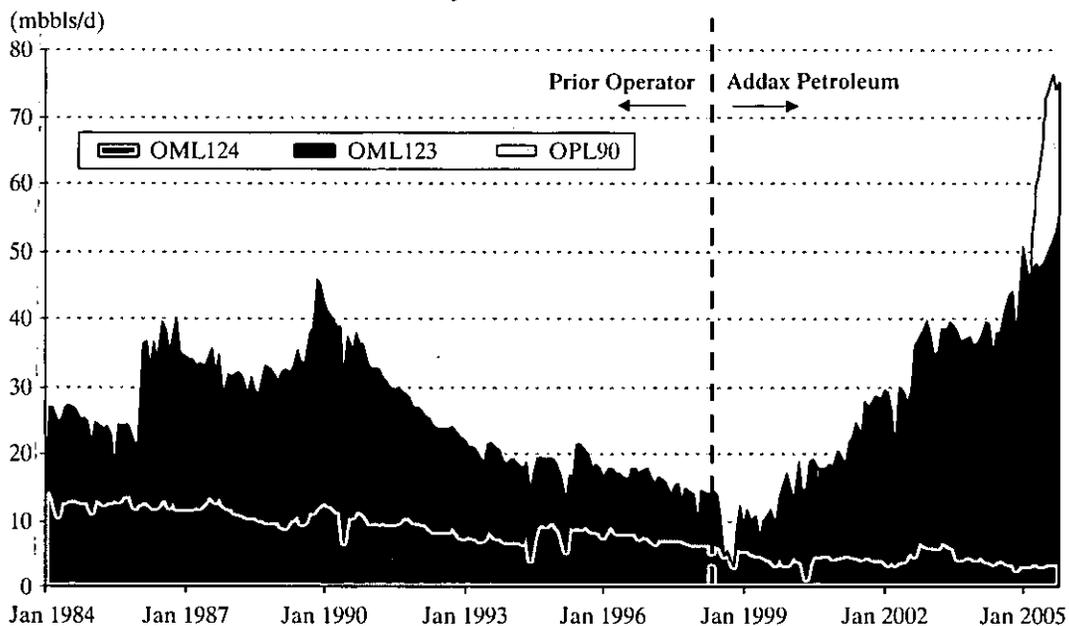

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mmbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

***Average Monthly Oil Production
January 1984 - October 2005***

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mmbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mmbbls/d in 2005 to 85 mmbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI reports Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Operational Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum believes that it has an excellent operational reputation and strong relationships which help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In

addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to 9.6 million Common Shares (representing up to eight per cent of AOG's current shareholdings) be transferred to or for the benefit of current and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, as well as a Technical and Reserves Committee, comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30, 2005		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	Total	2004 Total	2003 Total
		(\$million)						(\$million)		
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

- (1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 will fund significant infrastructure investment to sustain future production as well as a two-rig drilling program that includes development, infill, extension, appraisal and exploration drilling. These budgeted capital expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006. Capital expenditures for OPL90 and OPL225 are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. These budgeted capital expenditures will fund seismic data acquisition as well as a one-rig drilling program that includes development and exploration drilling.

Capital expenditures for the Corporation's other properties and major new venture opportunities will be incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

Petroleum Reserves

The tables below summarize the petroleum reserves and the present value of future net revenue associated with Addax Petroleum's reserves evaluated in the Reserve Report prepared by NSAI, independent oil and natural gas reservoir engineers, based on forecast and constant price and cost assumptions presented in accordance with NI 51-101. The tables summarize the data contained in the Reserve Report and, as a result, may contain slightly different numbers than the Reserve Report due to rounding. Future net revenue values, whether calculated without discount or using a discount rate, are estimated values and do not represent fair market value. There is no assurance that such price and cost assumptions will be attained and variances could be material. The recovery and reserves estimates of Addax Petroleum's petroleum reserves provided herein are estimates only and there is no assurance that the estimated reserves will be recovered. Actual petroleum reserves may be greater than or less than the estimates provided herein. The estimates of reserves and future net revenue for individual properties included in this prospectus may not reflect the same confidence level as estimates of revenue for all properties, due to the effects of aggregation. See "Petroleum Reserves and Operational Matters".

The estimate of gross reserves means Addax Petroleum's total working interest prior to the deduction of NNPC's share of Profit Oil. The estimate of net reserves includes deductions under the Nigerian Production Sharing Contracts for Royalty Oil and NNPC's share of Profit Oil. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

The "after taxes" figures are the future net revenue estimates after all deductions under the Nigerian Production Sharing Contracts including Royalty Oil, NNPC's share of Profit Oil, Tax Oil, Niger Delta Development Commission levy, education tax and tax inversion penalty. The "before taxes" figures only include deductions for Royalty Oil and NNPC's share of Profit Oil. NSAI is of the opinion that the "after taxes" case is representative of the fiscal regime under the Nigerian Production Sharing Contracts.

Selected Financial Information

The following table presents a summary of historical consolidated financial data for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 derived from the financial statements of the Corporation at each of these dates and for the periods then ended. The summary of historical consolidated financial data set forth below may not contain all of the information that is important to a prospective investor and should be read along with "Presentation of Financial Information", "Selected Financial Information", "Management's Discussion and Analysis of Financial Condition and Results of Operations", and the consolidated financial statements and related notes of the Corporation for each of the nine months ended September 30, 2005 and September 30, 2004 and for each of the years ended December 31, 2004, 2003 and 2002 included in this prospectus. The results for the nine months ended September 30, 2005 are not necessarily indicative of results for the full year. All financial information with respect to the Corporation has been presented in United States dollars in accordance with Canadian GAAP.

Notes:

- (1) All historic per share amounts are calculated on the basis of 60,030,000 outstanding Common Shares of Addax Petroleum N.V., before giving pro forma effect to the completion of the Pre-IPO Transactions.
- (2) All Pro Forma per share amounts are calculated on the basis of 120,000,000 outstanding Common Shares of Addax Petroleum Corporation, after giving pro forma effect to the completion of the Pre-IPO Transactions. See "Interest of AOG in Material Transactions — Share Transfer Agreement."
- (3) The Corporation does not have any outstanding securities that are convertible into, or exchangeable for, Common Shares.

The Offering

Offering Price	CDN\$ • per Common Share.
Offered Shares	21,000,000 Common Shares.
Over-Allotment Option	Addax Petroleum Corporation has granted the Over-Allotment Option to the Underwriters, exercisable in whole or in part, at any time until 30 days after closing, to purchase up to 2,100,000 additional Common Shares on the same terms as set forth in this prospectus to cover over-allotments, if any, and for market stabilization purposes.
Use of Proceeds	The net proceeds to the Corporation from the sale of the Offered Shares are estimated to be CDN\$ • million (CDN\$ • million if the Over-Allotment Option is exercised in full) after deducting the fees payable to the Underwriters and the estimated expenses of this offering. Of the net proceeds, CDN\$ • will be used to fund the Corporation's 2006 capital expenditure programs and for working capital purposes and CDN\$ • will be used to fund the purchase of the issued and outstanding shares of APNV. Pending application of funds for capital expenditures and working capital purposes, a portion of such net proceeds will be used to temporarily repay amounts outstanding under the Credit Facility. See "Addax Petroleum — Pre-IPO Transactions" and "Addax Petroleum — Capital Expenditure Program".
Dividend Policy	Addax Petroleum Corporation intends to declare quarterly cash dividends. The payment and the amount of dividends declared in any fiscal quarter will depend on Addax Petroleum Corporation's earnings, financial requirements and other conditions existing which the Board of Directors may consider relevant at such time including applicable restrictions arising under the Credit Facility on the ability of APNV to pay dividends or other distributions to the Corporation. Subject to the factors described above, Addax Petroleum Corporation intends to pay its first quarterly dividend for the quarter ending June 30, 2006. See "Dividends".
Incorporation	Addax Petroleum Corporation was incorporated under the <i>Canada Business Corporations Act</i> on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. The registered office of Addax Petroleum Corporation is located at 3400, 350 - 7th Avenue S.W., Calgary, Alberta, Canada, T2P 3N9.
Pre-IPO Transactions	<p>Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for 117,000,000 Common Shares and \$ • million.</p> <p>Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.</p>

Shareholdings Post-Closing

After giving effect to the Pre-IPO Transactions and the closing of this offering, the Corporation will have 138,000,100 Common Shares outstanding, of which 15.2 per cent of the Common Shares will be held by investors under this offering, 77.8 per cent of the Common Shares will be held by AOG and 7.0 per cent of the Common Shares will be held by or on behalf of current and former directors, officers and employees of the Corporation (16.5 per cent, 76.7 per cent and 6.9 per cent if the Over-Allotment Option is exercised in full).

Closing

The closing of this offering is anticipated to occur on or about February 15, 2006 and in any event not later than March 15, 2006.

Eligibility for Investment

Subject to certain assumptions, limitations and restrictions, in the opinion of Fasken Martineau DuMoulin LLP, counsel to the Corporation, and Fraser Milner Casgrain LLP, counsel to the Underwriters, the Offered Shares, if as and when listed on a prescribed stock exchange (including the TSX), will be qualified investments for a trust governed by a registered retirement savings plan, a registered retirement income fund, a registered education savings plan or a deferred profit sharing plan under the *Income Tax Act* (Canada) and the regulations thereunder.

Risk Factors

The securities offered hereby should be considered highly speculative due to the nature of the Corporation's business and the location of its primary assets and business operations. A prospective investor should consider carefully the risks and uncertainties set out below, in addition to the other information contained in this prospectus, before making an investment decision. Additional risks and uncertainties not presently known to the Corporation or that it currently deems to be immaterial may also impair its business and affect the price of its Common Shares. If any of the events described in this prospectus as a risk or uncertainty actually occurs, the Corporation's business, results of operations or financial condition could be materially adversely affected. See "Risk Factors".

Risks relating to the business of the Corporation

- The Corporation's failure to replace its current reserves would have a material adverse effect on its business and financial condition.
- Exploration and development activities are inherently risky and are subject to change.
- Failure to obtain governmental approvals and fulfill contractual commitments may adversely affect the Corporation's business.
- The loss of any of the Corporation's executive officers and key employees could have an adverse impact on its business.
- The Corporation's operations are subject to potential losses that may not be covered by insurance.
- The Corporation is dependent on an affiliated company for the marketing of the oil the Corporation produces.
- The Corporation shares a trademark and a tradename with a group of companies and any adverse development affecting the trademark or tradename of any of those companies could materially adversely affect the business, goodwill or reputation of the Corporation.
- The Corporation may not be able to secure financing for its future exploration, development, production and acquisition plans.
- The Corporation could be subject to labour or other unplanned production disruptions.
- Future litigation could adversely affect the Corporation's business, results of operations or financial condition.
- The Corporation is subject to certain risks related to the nature of the Corporation's business and its present stage and speed of development.
- There are risks inherent in the Corporation's strategy of geographic diversification and acquisition of new exploration and development properties.
- The Corporation is exposed to the risks associated with commodity hedging activities.
- Joint ventures entered into by the Corporation could lead to additional costs.

Risks relating to the petroleum industry

- Volatility of petroleum prices could have a material adverse effect on the Corporation's business, results of operations or financial condition.
- The Corporation could face significant liabilities under environmental laws.
- The oil reserve and oil and gas resource data in this prospectus are only estimates, and the Corporation's actual production, revenue and expenditure with respect to its reserves may be materially different from such estimates.

- The Corporation's exploration and development activities depend on its ability to procure appropriate drilling equipment.
- The Corporation operates in a highly competitive industry.
- The Corporation faces foreign exchange, interest rate and inflation risks.

Risks relating to the countries in which the Corporation currently operates and may operate in the future

- There are political, economic and other risks relating to the countries in which the Corporation currently operates or may operate in the future.
- Relinquishment obligations under applicable legislation and the terms of Production Sharing Contracts may adversely affect the total amount of the Corporation's prospective resources.
- Interpretation and application of the laws and regulations of the countries in which the Corporation operates can be uncertain and could adversely affect the Corporation.
- Crime and governmental or business corruption could significantly disrupt the Corporation's ability to conduct its business and could materially adversely affect its financial condition and results of operations.
- The Corporation must comply with the regulatory regimes of the countries in which it operates, and such compliance may result in increased expenditure.
- The Corporation's production may be constrained by production or export quotas.
- US holders of Common Shares and the Corporation may be subject to sanctions imposed by the US government if the Corporation decides to pursue operations in countries subject to US economic sanctions.

Risks relating to the Common Shares

- Uncertainties exist as to the market price and liquidity of the Common Shares as there has been no prior public market for such shares.
- The controlling shareholder(s) of the Corporation will exercise significant control over the affairs of the Corporation.
- Sales of Common Shares by controlling shareholder(s) could have an adverse effect on the price of the Common Shares.
- Investors may face risks related to the Corporation's holding company structure.

GLOSSARY

In this prospectus, unless the context otherwise requires, the following words and phrases have the meanings set forth below.

“**ABV**” means Addax B.V. Geneva Branch, a wholly owned subsidiary of AOG which specializes in crude oil and product trading in West Africa;

“**Adanga Platform**” means the production platform located in the Adanga field on OML123;

“**Addax Petroleum Corporation**” means Addax Petroleum Corporation, a corporation incorporated under the CBCA;

“**Addax Petroleum N.V.**” or “**APNV**” means Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles;

“**Agip**” means ENI S.p.A together with all of its subsidiaries in its Agip division;

“**Antan Blend**” means the crude oil produced from OML123, together with the crude oil produced by the OML114 Parties, which is lifted from the Antan Terminal;

“**Antan Crude Oil Supply Agreement**” means the Antan Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum N.V. and ABV, as amended by an agreement between the parties dated November 29, 2005;

“**Antan Terminal**” means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OML123 where oil from OML123 is loaded onto ocean-going tankers;

“**AOG**” means The Addax and Oryx Group Ltd., together with all of its subsidiaries other than Addax Petroleum;

“**API**” means the American Petroleum Institute;

“**APS**” means Addax Petroleum Services Ltd., a directly or indirectly wholly owned subsidiary of Addax Petroleum;

“**Ashland**” means Ashland Inc. together with all of its subsidiaries;

“**best estimate**” means, in relation to prospective and contingent resources, the best estimate of the quantity that will actually be recovered from the accumulation. If probabilistic methods are used, this term is a measure of central tendency of the uncertainty distribution (most likely/mode, P_{50} /median, or arithmetic average/mean);

“**Block 4**” or “**Block 4 Property**” means the property located in the north end of the Joint Development Zone;

“**Board**” or “**Board of Directors**” means the board of directors of Addax Petroleum Corporation;

“**Bogi Platform**” means the Bogi production platform located in the Disputed Area;

“**BP**” means BP p.l.c. together with all of its subsidiaries;

“**Brass River Blend**” means the crude oil produced from OML124 and commingled with crude oil produced by other parties, which is transported to the Brass River Terminal;

“**Brass River Blend Crude Oil Supply Agreement**” means the Brass River Blend Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum N.V. and ABV, as amended by an agreement between the parties dated November 29, 2005;

“**Brass River Terminal**” means the oil production export terminal located on the Nigerian coast where oil from OML124 is loaded onto ocean-going tankers;

“**Brent Crude**” means crude oil produced from the Brent system in the North Sea, a price setting benchmark in the world energy market;

“**Canadian GAAP**” means the generally accepted accounting principles and practices in Canada, including without limiting the foregoing, the principles set forth in the Canadian Institute of Chartered Accountants (“CICA”)

Handbook published by CICA or any successor institute and which are applicable on the effective date as at which a calculation is required to be made in accordance therewith;

“**CBCA**” means the *Canada Business Corporations Act*, as amended;

“**CDS**” means The Canadian Depository for Securities Limited;

“**CFFO**” or “**Cash Flow From Operations**” means cash from operating activities before changes in non-cash working capital. CFFO is not a standard measure under Canadian GAAP. Cash Flow From Operations measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See “Presentation of Financial Information”;

“**Chevron**” means Chevron Corp. together with all of its subsidiaries;

“**CIP Policy**” has the meaning given to it under the heading “Petroleum Reserves and Operational Matters — Insurance”;

“**COGE Handbook**” means the Canadian Oil and Gas Evaluators Handbook prepared jointly by The Society of Petroleum Evaluation Engineers (Calgary Chapter) and the Canadian Institute of Mining, Metallurgy and Petroleum (Petroleum Society), as amended from time to time;

“**Common Share**” means a common share in the share capital of Addax Petroleum Corporation;

“**Common Share Incentive Plan**” means the incentive share ownership plan that Addax Petroleum Corporation plans to adopt, the purpose of which is to develop the interests of the directors, officers, employees and other persons who provide on-going services to Addax Petroleum Corporation in the growth and development of Addax Petroleum Corporation by providing such individuals with the opportunity to acquire an increased proprietary interest in Addax Petroleum Corporation and to aid in attracting as well as retaining and encouraging the continued involvement of such persons with Addax Petroleum Corporation;

“**ConocoPhillips**” means ConocoPhillips Company together with all of its subsidiaries;

“**contingent resources**” means the best estimate quantities of oil or gas estimated at a given date to be potentially recoverable from known accumulations but that are not currently economic;

“**Corporation**” or “**Addax Petroleum**” means (i) before the closing of this offering, APNV, together with all of its subsidiaries and (ii) after the closing of this offering, Addax Petroleum Corporation, together with all of its subsidiaries;

“**Cost Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“**Credit Facility**” means the Amended and Restated Senior Secured Reducing Revolving Credit Facility Agreement dated June 14, 2005 between Addax Petroleum N.V., Addax Petroleum Overseas Limited, Addax Petroleum Development (Nigeria) Limited, Addax Petroleum Exploration (Nigeria) Ltd. and Addax Petroleum Services Limited, BNP Paribas S.A. and other original lenders;

“**Crude Oil Supply Agreements**” means the Antan Crude Oil Supply Agreement, the Brass River Blend Crude Oil Supply Agreement and the Okwori Crude Oil Supply Agreement, each dated November 12, 2004 between Addax Petroleum N.V. and ABV, as amended by agreements between the respective parties dated November 29, 2005;

“**developed non-producing reserves**” means those reserves that either have not been on production, or have previously been on production, but are shut in, and the date of resumption of production is unknown;

“**developed producing reserves**” means those reserves that are expected to be recovered from completion intervals open at the time of the estimate. These reserves may be currently producing or, if shut in, they must have previously been on production, and the date of resumption of production must be known with reasonable certainty;

“**developed reserves**” means those reserves that are expected to be recovered from existing wells and installed facilities or, if facilities have not been installed, that would involve a low expenditure (e.g. when compared to the

cost of drilling a well) to put the reserves in production. The developed category may be subdivided into producing and non-producing;

“**Devon Energy**” means Devon Energy Corporation together with all of its subsidiaries;

“**Disputed Area**” means the area of OML123 awarded to Cameroon pursuant to the October 10, 2002 ruling of the International Court of Justice;

“**EBITDA**” is defined as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest. EBITDA is not a standard measure under Canadian GAAP. EBITDA measures presented in this prospectus may not be comparable to other similarly titled measures of other companies. See “Presentation of Financial Information”;

“**Ebughu Platform**” means the production platform located in the Ebughu field in OML123;

“**ENI**” means ENI S.p.A;

“**ERHC Energy**” means ERHC Energy, Inc. together with all of its subsidiaries;

“**ExxonMobil**” means ExxonMobil Corporation together with all of its subsidiaries;

“**FOB**” means free on board;

“**FPSO**” means floating production storage and offloading vessel;

“**GDP**” means gross domestic product;

“**gross**” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest prior to the deduction of royalties and NNPC’s share of Profit Oil (which reserves are reported as “working interest” in the Reserve Report) and (ii) in respect of acreage, wells and seismic data, 100 per cent of same;

“**GTL**” means gas to liquids;

“**HSE**” means health, safety and environment;

“**Izombe Flow Station**” means the Izombe production and flow station located in OML124;

“**Joint Border Commission**” means the Nigeria Cameroon Mixed Commission established following the October 10, 2002 decision of the International Court of Justice to peacefully apply the decision;

“**Joint Development Zone**” or “**JDZ**” means the zone for joint development of petroleum and other resources established by treaty between Nigeria and the Democratic Republic of Sao Tome and Principe in the overlapping area of their respective maritime boundary claims;

“**Kiarsseny Agreement**” means the Corporation’s farm-in agreement with Tullow Oil for a 42.5 per cent interest in the Kiarsseny Production Sharing Contract;

“**Kiarsseny Production Sharing Contract**” means the Production Sharing Contract between the Government of Gabon and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from Kiarsseny;

“**Kiarsseny Property**” means the Kiarsseny license area, which is located offshore Gabon, where the Corporation is engaged in development and exploration activities to extract crude oil and natural gas liquids pursuant to the Kiarsseny Production Sharing Contract;

“**Knock Adoon**” means the floating production storage and offloading vessel described under the heading “Properties and New Ventures — Nigeria Properties — OML123 — Production Facilities”;

“**Knock Taggart**” means the floating production, storage and offloading vessel described under the heading “Properties and New Venture — Nigeria Properties — OML123 — Production Facilities”;

“**LNG**” means liquefied natural gas;

“LPG” means liquid petroleum gas;

“Management Services Agreement” means the Management Services Agreement, made effective January 1, 2006 between APS and AOG;

“NDDC” means the Niger Delta Development Commission;

“net” means (i) in respect of reserves and production, the total reserves and production attributable to Addax Petroleum’s working interest after deduction of Royalty Oil and NNPC’s share of Profit Oil and (ii) in respect of acreage, wells and seismic data, that share attributable to Addax Petroleum’s working interest;

“Net Offering Price” means the price per share at which the Offered Shares are sold in this offering less the Underwriters’ fees per Offered Share;

“net profit interest” means an interest in an oil and gas property consisting of a share of profits after the recovery of the costs of development and production;

“Ngosso Concession” means the concession contract between the Government of Cameroon, the Corporation and Tullow Oil for development and exploration activities to extract crude oil, natural gas liquids and natural gas from the Ngosso Property;

“Ngosso Property” means the Ngosso license area offshore Cameroon where the Corporation is engaged in development and exploration activities to extract crude oil, natural gas liquids and natural gas pursuant to the Ngosso Concession;

“NI 51-101” means National Instrument 51-101 *Standards of Disclosure for Oil and Gas Activities* of the Canadian Securities Administrators;

“Nigerian Marginal Fields” has the meaning given to it under the heading “Fiscal Terms — Nigeria — Nigerian Marginal Fields”;

“NNPC” means Nigerian National Petroleum Corporation together with all of its subsidiaries;

“Non-Competition Agreement” means the non-competition agreement between Addax Petroleum Corporation and AOG;

“NSAI” means Netherland, Sewell & Associates, Inc., independent oil and natural gas reservoir engineers;

“Occidental” means Occidental Petroleum Corporation together with all of its subsidiaries;

“OECD” means Organization for Economic Co-operation and Development;

“Offered Shares” means the securities offered by Addax Petroleum Corporation to the public hereunder, including any shares issued upon the exercise of the Over-Allotment Option unless the context otherwise requires, at a price of CDN\$ • per share;

“Official Selling Price” means the sales price published by NNPC for the sale of Nigerian government and NNPC crude oil entitlement to trade buyers for export. The Official Selling Price is issued by NNPC for each type of crude oil to be lifted by traders and published by the middle of each month prior to the month of lifting;

“Oil Mining Lease” or “OML” means a lease issued by the Nigerian government upon conversion of an Oil Prospecting License giving the lessee the exclusive right to produce petroleum from the geographical area covered by the Oil Mining Lease;

“Oil Prospecting License” or “OPL” means a license issued by the Nigerian government to one or more oil companies (including NNPC) giving the licensee the exclusive right to explore for petroleum in the geographical area covered by the Oil Prospecting License;

“Okwok Property” means the Okwok license area, located in OML67 offshore Nigeria;

“Okwori Blend” means the crude oil produced from OPL90;

“**Okwori Crude Oil Supply Agreement**” means the Okwori Crude Oil Supply Agreement dated November 12, 2004 between Addax Petroleum N.V. and ABV, as amended by an agreement between the parties dated November 29, 2005;

“**Okwori Terminal**” means the floating production storage and offloading vessel and the tanker mooring and manifold platform located in OPL90 where oil from OPL90 is loaded into ocean going tankers;

“**OML114 Parties**” means Moni Pulo Limited and Brass Exploration Unlimited;

“**OML123**” means the property subject to Oil Mining Lease 123 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OML124**” means the property subject to Oil Mining Lease 124 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to produce crude oil pursuant to a Production Sharing Contract;

“**OPEC**” means the Organization of the Petroleum Exporting Countries;

“**OPL90**” means the property subject to Oil Prospecting License 90 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant to a Production Sharing Contract;

“**OPL225**” means the property subject to Oil Prospecting License 225 issued by the Nigerian government to NNPC, for which Addax Petroleum has the exclusive right to explore for, develop and produce crude oil pursuant to a Production Sharing Contract;

“**Oriental Energy**” means Oriental Energy Resources Limited together with all of its subsidiaries;

“**Oriental Joint Venture Agreement**” means the joint venture agreement effective September 14, 2005 between Addax Petroleum and Oriental Energy;

“**Over-Allotment Option**” means the over-allotment option granted by Addax Petroleum Corporation to the Underwriters which is exercisable, in whole or in part, at any time until 30 days after closing to purchase from the Corporation up to an additional 2,100,000 Common Shares, at the same price as the Common Shares offered hereunder, to cover over-allotments, if any, and for market stabilization purposes;

“**Paris Club**” means the informal group of official creditors whose role is to find co-ordinated and sustainable solutions to the payment difficulties experienced by debtor nations;

“**Petrobras**” means Petróleo Brasileiro S.A. together with all of its subsidiaries;

“**Petroleum Act**” means the *Petroleum Act* (Nigeria) of 1969, as amended;

“**possible reserves**” means those additional reserves that are less certain to be recovered than probable reserves. It is unlikely that the actual remaining quantities recovered will exceed the sum of the estimated proved plus probable plus possible reserves;

“**PPT**” means Petroleum Profits Tax;

“**PPT Act**” means the *Petroleum Profits Tax Act* (Nigeria) as amended;

“**Pre-IPO Transactions**” means the declaration and payment of dividends by APNV and the acquisition of all of the issued and outstanding shares of APNV by Addax Petroleum Corporation as described under the heading “Addax Petroleum — Pre-IPO Transactions”;

“**probable reserves**” means those additional reserves that are less certain to be recovered than proved reserves. It is equally likely that the actual remaining quantities recovered will be greater or less than the sum of the estimated proved plus probable reserves;

“**Production Sharing Contract**” or “**PSC**” means a contract whereby a government or government corporation contracts with a petroleum company to explore for, develop and extract petroleum substances in an area that is

subject to a license held by the government corporation, at the risk and expense of the petroleum company, in exchange for a share of production;

“**Profit Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“**prospective resources**” means the best estimate quantities of oil and gas estimated on a given date to be potentially recovered from undiscovered accumulations. They are technically viable and economic to recover;

“**proved reserves**” means those reserves that can be estimated with a high degree of certainty to be recoverable. It is likely that the actual remaining quantities recovered will exceed the estimated proved reserves;

“**Realizable Price**” means “Realizable Price” as defined under the heading “Fiscal Terms — Nigeria”;

“**Reserve Report**” means the engineering report dated December 5, 2005 prepared by NSAI evaluating the crude oil reserves attributable to Addax Petroleum’s properties and certain resources effective as of September 30, 2005, in accordance with the standards contained in the COGE Handbook and the reserves and resources definitions set out by the Canadian Securities Administrators in NI 51-101 and the COGE Handbook;

“**reserves**” means those quantities of oil and gas anticipated to be economically recoverable from discovered resources;

“**Royalty Oil**” means “**Royalty Oil**” as defined under the heading “Fiscal Terms — Nigeria”;

“**Share Transfer Agreement**” means the share transfer agreement between a subsidiary of AOG and Addax Petroleum Corporation to be entered into prior to the closing of this offering;

“**Shell**” means Royal Dutch Shell p.l.c. together with all of its subsidiaries;

“**Statoil**” means Statoil ASA together with all of its subsidiaries;

“**Tax Oil**” has the meaning given to it under the heading “Fiscal Terms — Nigeria”;

“**Temporary Production Unit**” or “**TPU**” means a temporary production unit which is used to produce petroleum on a temporary basis;

“**Total**” means TOTAL S.A. together with all of its subsidiaries;

“**Trademark Agreement**” means the Trademark Agreement, made effective January 1, 2006, between Addax Petroleum N.V. and AOG;

“**TSX**” means the Toronto Stock Exchange;

“**Tullow Oil**” means Tullow Oil p.l.c. together with all of its subsidiaries;

“**Underwriters**” means, collectively, RBC Dominion Securities Inc., Merrill Lynch Canada Inc., Scotia Capital Inc., CIBC World Markets Inc., TD Securities Inc., National Bank Financial Inc., Canaccord Capital Corporation, FirstEnergy Capital Corp. and Peters & Co. Limited;

“**Underwriting Agreement**” means the underwriting agreement dated February 1, 2006 among the Corporation, AOG, and the Underwriters with respect to this offering; and

“**undeveloped reserves**” means those reserves expected to be recovered from known accumulations where a significant expenditure (e.g. when compared to the cost of drilling a well) is required to render them capable of production. They must fully meet the requirements of the reserves classification (proved, probable, possible) to which they are assigned.

On February 6, 2006 the Noon Buying Rate for \$1.00 United States was \$1.1457 Canadian.

FORWARD LOOKING STATEMENTS

Certain statements contained in this prospectus constitute forward looking statements under applicable securities legislation. In this prospectus, the words "may", "would", "could", "should", "will", "intend", "plan", "anticipate", "believe", "seek", "propose", "estimate", "expect" and similar expressions, as they relate to the Corporation, are often, but not always, used to identify forward looking statements. Such statements reflect the Corporation's current views with respect to future events and are subject to certain risks, uncertainties and assumptions, including, without limitation, those described in this prospectus. Many factors could cause the Corporation's actual results, performance or achievements to vary from those described in this prospectus. If one or more of these risks or uncertainties materialize, or if the assumptions underlying forward looking statements prove incorrect, actual results may vary materially from those described in this prospectus as intended, planned, anticipated, believed, estimated or expected.

In particular, this prospectus contains forward looking statements pertaining to the following:

- oil and gas reserve and resource quantities and the discounted present value of future net cash flows from these reserves;
- the ultimate recoverability of reserves;
- future production levels;
- the amount, nature, timing and effects of capital expenditures;
- plans for drilling wells;
- expectations regarding the negotiation of contractual rights;
- prices for oil and natural gas;
- timing and amount of future production, forecasts of capital expenditures and the sources of financing thereof;
- operating and other costs;
- business strategies and plans of management;
- anticipated benefits and enhanced shareholder value resulting from prospect development and acquisitions; and
- treatment under the fiscal terms of Production Sharing Contracts and governmental regulatory regimes.

The Corporation's actual results could differ materially from those anticipated in these forward looking statements if the assumptions underlying them prove incorrect, or if one or more of the uncertainties or risks described elsewhere in this prospectus materializes. See "Risk Factors". Therefore prospective investors are cautioned not to rely unduly on these forward looking statements. Except as required pursuant to applicable Canadian securities laws, the Corporation does not intend, and does not assume any obligation, to update any forward looking statements.

PRESENTATION OF FINANCIAL INFORMATION

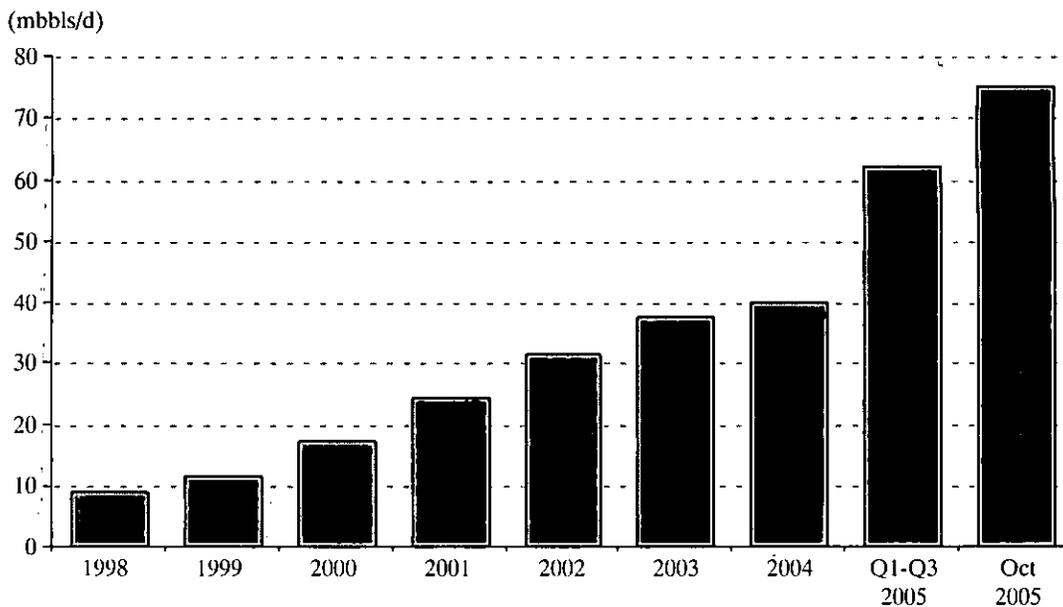

EBITDA, CFFO, average realized price per barrel sold, and operating cost per barrel sold are not recognized measures under Canadian GAAP. Management believes that EBITDA, CFFO, average realized price per barrel sold and operating cost per barrel sold are useful supplemental measures in evaluating the performance of the Corporation and in determining whether to invest in Common Shares. EBITDA or similar measures are used by many investors and financial analysts as a supplementary non-GAAP financial measure in order to evaluate operational performance and a company's ability to service its debt. In addition, Management believes that CFFO, average realized price per barrel sold and operating cost per barrel sold are also useful supplemental measures as they demonstrate the Corporation's ability to generate the cash necessary to fund future growth through capital investment or repay debt. Investors are cautioned, however, that these measures should not be construed as an alternative to net income determined in accordance with Canadian GAAP as an indication of the Corporation's performance. Addax Petroleum's method of calculating these measures may differ from other companies and accordingly, they may not be comparable to measures used by other companies. For these purposes, Addax Petroleum defines (i) EBITDA as earnings before other interest and finance charges, income taxes, depletion, depreciation and accretion, impairment of property, plant and equipment, foreign exchange gains or losses and non-controlling interest; (ii) CFFO as cash from operating activities before changes in non-cash working capital; (iii) average realized price per barrel sold as revenue from petroleum sales for the period divided by the quantity of oil sold in that period; and (iv) operating cost per barrel sold as the operating costs for the period divided by the quantity of oil sold in that period.

ADDAX PETROLEUM

Overview

Addax Petroleum is an international oil and gas exploration and production company focused on Africa and the Middle East. The Corporation is the largest independent oil producer in Nigeria, and has increased its crude oil production from an average of 8,800 barrels per day for 1998 to an average of approximately 74,450 barrels per day for October 2005, representing a compounded annual growth rate of approximately 34 per cent. The Corporation has grown by acquiring under-developed properties in established basins and has increased its production by utilizing advanced and proven technologies. Addax Petroleum believes that its demonstrated technical expertise, combined with its excellent operational reputation and strong community relationships throughout Africa and the Middle East, make it well positioned to continue to grow its reserves and production.

*Addax Petroleum's Average Oil Production
1998 - October 2005*

In 2004, Addax Petroleum produced an average of 39,990 bbls/d and generated \$171.0 million of CFFO. For the nine months ended September 30, 2005, Addax Petroleum produced an average of 62,090 bbls/d and generated \$322.2 million of CFFO. As of September 30, 2005, Addax Petroleum had estimated proved reserves of 109.3 mmbbls and estimated proved and probable reserves of 201.3 mmbbls. The reserves of the Corporation were evaluated as at September 30, 2005 by NSAI.

Corporate History

Addax Petroleum was founded in 1994 by AOG to evaluate and pursue oil and gas exploration and production opportunities in West Africa. Through its other subsidiaries, AOG carries on several different businesses worldwide with particular emphasis on Africa, including petroleum and refined products trading, oil storage, retail petroleum products and mining businesses. AOG was incorporated in 1987 and has established itself as one of the largest independent oil trading companies in Africa and the largest marine fuel supply company in West Africa.

Addax Petroleum is the only subsidiary of AOG involved in the exploration for, and production of, petroleum. AOG's strategy is to conduct its upstream petroleum business entirely through Addax Petroleum

and, therefore, pursuant to the Non-Competition Agreement, it has agreed not to compete with Addax Petroleum in such business, provided that AOG and Jean Claude Gandur together own not less than 25 per cent of the Common Shares. Subject to the same proviso, AOG has also agreed that any upstream petroleum business opportunities made available to it will first be offered to Addax Petroleum; if Addax Petroleum declines the opportunity, AOG may then pursue it.

In 1994, AOG decided to use its experience in Africa and in the oil industry to diversify its business to include oil and gas exploration and production. After the formation of Addax Petroleum in 1994, management began evaluating opportunities in West Africa. In 1995, Addax Petroleum acquired a 90 per cent interest in a Production Sharing Contract with the Government of Côte d'Ivoire relating to an offshore field known as the Espoir field. In 1997, Addax Petroleum sold 24 per cent interests in the Espoir field Production Sharing Contract to each of Ranger Oil Limited (now Canadian Natural Resources Limited) and Tullow Oil. Addax Petroleum sold a further 15 per cent interest in the Espoir field Production Sharing Contract to Canadian Natural Resources Limited in 2000 and the remainder of its interest in 2001.

In May 1998, the Corporation entered into Production Sharing Contracts with the Nigerian government for OML123, OML124, OPL90 and OPL225. Prior to this, Ashland had held their own Production Sharing Contracts relating to these properties, which were terminated by the Nigerian government when Ashland attempted to sell its interests under the Production Sharing Contracts without prior government approval. The Corporation acquired Ashland's remaining assets and rights relating to these properties pursuant to an acquisition agreement dated April 8, 1998 between Addax Petroleum and Ashland. See "Properties and New Ventures — Nigeria Properties".

In December 2002, Addax Petroleum expanded its operations in West Africa by acquiring a 60 per cent interest in the Ngosso Concession, offshore Cameroon. The Ngosso Property is operated by Addax Petroleum. See "Properties and New Ventures — Cameroon".

In January 2004, Addax Petroleum further expanded by acquiring a 42.5 per cent farm-in interest in the Kiarsseny Production Sharing Contract, offshore Gabon. The Kiarsseny Property is operated by Tullow Oil. See "Properties and New Ventures — Gabon".

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. See "Properties and New Ventures — Middle East New Ventures".

In September 2005, Addax Petroleum entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which it agreed to acquire a 40 per cent interest in the Okwok Property, located in OML67 offshore Nigeria, subject to the completion of a farm-in agreement and government approval. The Corporation expects to conduct operations for the property in its capacity as technical advisor. See "Properties and New Ventures — Nigeria Properties".

In November 2005, Addax Petroleum made its first strategic move into deep-water exploration when it signed a participation agreement with ERHC Energy pursuant to which the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property. See "Properties and New Ventures — Joint Development Zone".

Pre-IPO Transactions

Addax Petroleum Corporation was incorporated under the *Canada Business Corporations Act* on September 6, 2005 to facilitate this offering by acquiring all of the shares of Addax Petroleum N.V., a corporation incorporated under the laws of the Netherlands Antilles. On December 5, 2005 the articles of Addax Petroleum Corporation were amended to authorize the issue of an unlimited number of Preferred Shares, issuable in series.

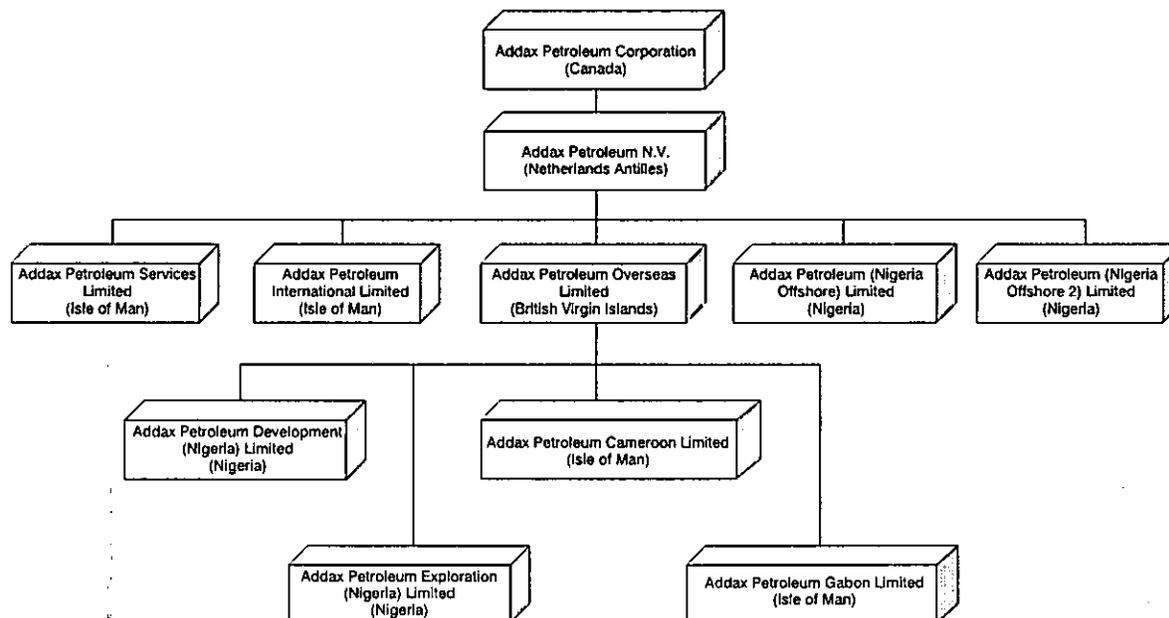

Prior to the closing of this offering, Addax Petroleum N.V. will declare and pay additional dividends of up to an aggregate of \$120 million. The dividend amount will be equal to management's estimate of the Corporation's

CFFO net of capital expenditures from October 1, 2005 to the closing of this offering, while maintaining long-term debt at the November 30, 2005 level of approximately \$80 million.

Concurrently with the closing of this offering, Addax Petroleum Corporation will acquire all of the issued and outstanding shares of Addax Petroleum N.V. from AOG in exchange for 117,000,000 Common Shares and \$ • million.

Corporate Structure

At the closing of this offering, the Corporation will beneficially and wholly own, directly or indirectly, 10 material subsidiaries. The head office of the Corporation is located at 16, avenue Eugene-Pittard, 1206, Geneva, Switzerland. The chart below shows the intercorporate relationships among the Corporation and its material subsidiaries at the closing of this offering.

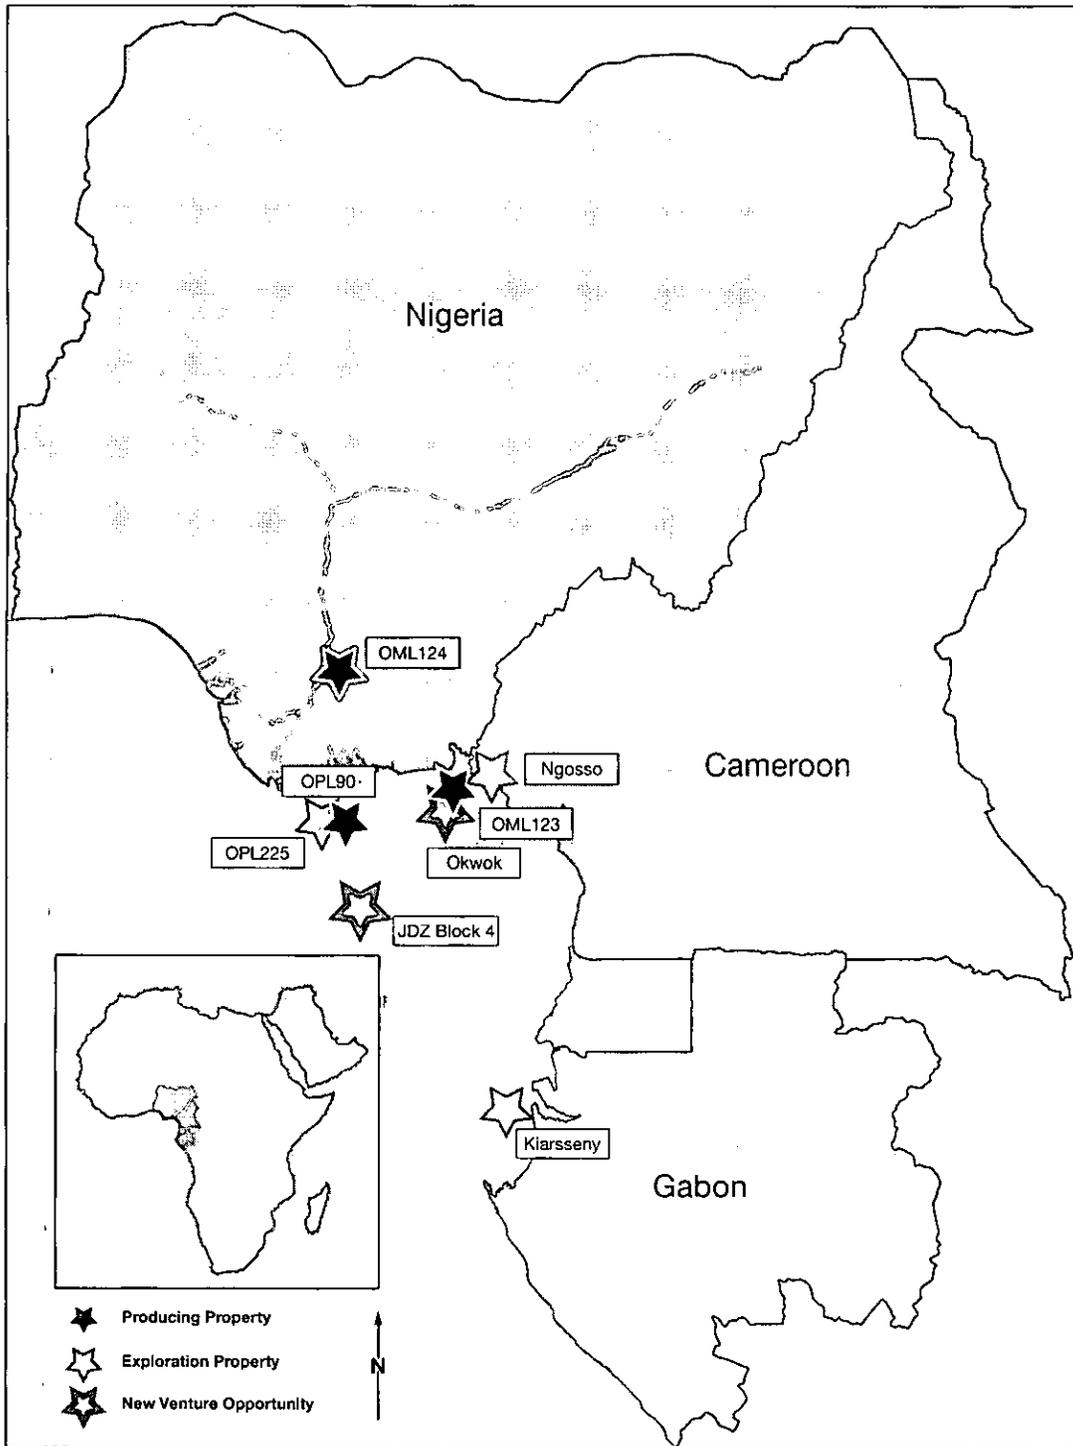

Properties Summary

Addax Petroleum's principal properties in West Africa are as follows:

- In Nigeria, the Corporation has a 100 per cent interest in two Production Sharing Contracts covering the following four Addax Petroleum operated properties:
 - OML123, which accounts for the majority of the Corporation's oil production, is located offshore in shallow water and produces medium to light quality crude oil (29° API);
 - OML124 is located onshore and produces light quality crude oil (36° API);
 - OPL90 is located offshore in medium depth water and produces light quality crude oil (37° API); and
 - OPL225 is an offshore exploration property located in medium depth water, adjacent to OPL90.
- In Cameroon, Addax Petroleum has a 60 per cent interest in the Ngosso Property, an offshore exploration property operated by the Corporation.
- In Gabon, Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Property, an offshore exploration property operated by Tullow Oil.

*Addax Petroleum
Properties and New Venture Opportunities*

The following table summarizes the production, development and exploration properties of the Corporation.

Properties Summary Table

Country	License	Area ⁽¹⁾⁽²⁾ (acres)	Water Depth (m)	Addax Petroleum's Interest (%)	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
					October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Proved Plus Probable (mmbbls)	Proved Plus Probable Plus Possible (mmbbls)
Nigeria	OML123	90,700	3-40	100	50,970	45,970	71.4	144.9	195.2
	OML124	74,100	onshore	100	3,530	3,510	10.0	12.6	28.0
	OPL90	85,300	100-160	100	19,950	12,610	27.9	43.7	60.9
	OPL225	241,900	50-210	100	-	-	-	-	-
Cameroon	Ngosso	70,300	0-8	60	-	-	-	-	-
Gabon	Kiarsseny	571,600	0-800	42.5	-	-	-	-	-
Total		1,133,900			74,450	62,090	109.3	201.3	284.1

Notes:

- (1) The table sets forth the area of the Corporation's interest after giving effect to the relinquishment proposals for OPL90 and OPL225 made by the Corporation to NNPC. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".
- (2) Area presented excludes the area in the Disputed Area in OML123. Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".
- (3) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Major New Venture Opportunities Summary

Addax Petroleum is also pursuing the following major new venture opportunities.

- In Nigeria, the Okwok Property represents the first farm-in for Addax Petroleum in the country. The Okwok Property is located within ExxonMobil's offshore license area, OML67, which is immediately south of Addax Petroleum's OML123. Addax Petroleum has entered into a joint venture agreement with Oriental Energy, a Nigerian company, pursuant to which the Corporation will receive a 40 per cent interest in the field and will conduct operations in its capacity as technical advisor. The joint venture agreement is conditional upon Oriental Energy concluding negotiations for a farm-in agreement with ExxonMobil and Nigerian government approval. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources attributable to its interest as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.
- In the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe, the Block 4 Property is a large deep-water offshore exploration property. Addax Petroleum has entered into a participation agreement with ERHC Energy. Earlier in 2005, ERHC Energy, together with another company (which subsequently ended its participation), were conditionally awarded a 60 per cent interest in the Block 4 Property. On January 30, 2006, the Joint Development Authority conditionally approved the replacement of the Noble-ERHC consortium with the ERHC-Addax consortium and the designation of Addax Petroleum as operator for the Block 4 Property. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.
- In the Kurdistan Region of Iraq, Addax Petroleum has entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Competitive Strengths

Addax Petroleum has grown rapidly by combining the entrepreneurial spirit of its founders with the technical and operational expertise of staff recruited from international oil and gas companies. Management of the Corporation believes that the following competitive strengths should allow Addax Petroleum to continue to increase its production and reserves and maximize value for its shareholders.

Largest Independent Oil Producer in Nigeria with a Quality Asset Base

Nigeria is a prolific oil-producing nation with a competitive fiscal regime. Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be

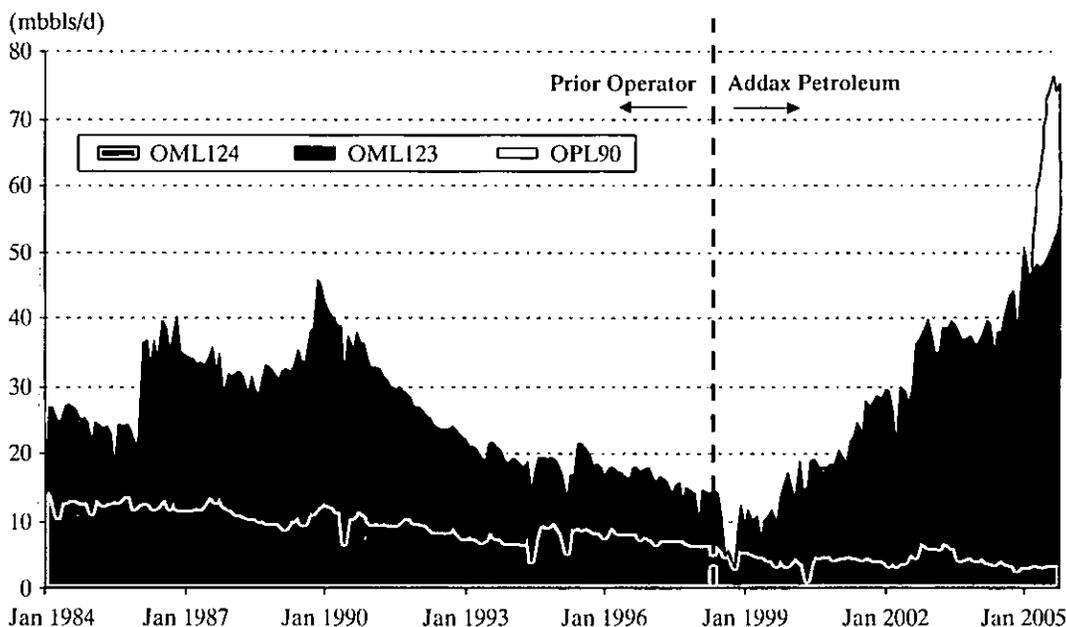

35.2 billion barrels. Chevron, ENI, ExxonMobil, Shell and Total all have significant operations in Nigeria and produce, together with NNPC, approximately 2.2 mmbbls/d of oil, representing almost 90 per cent of the country's total oil production.

Addax Petroleum is the largest independent oil producer in Nigeria and operates all of its Nigerian producing properties. The Corporation produced an average of 74.5 mbbbls/d for October 2005 from 68 wells. The Corporation's crude oil sales are comprised of medium to light gravity sweet crude oil blends (29° to 37° API). Approximately 95 per cent of the Corporation's crude oil production is offshore and all of the Corporation's production is sold directly into international markets. The Corporation has a balanced portfolio of oil reserves, including 109 mmbbls of proved reserves, 92 mmbbls of probable reserves and 83 mmbbls of possible reserves.

Demonstrated Operational and Technical Expertise

Addax Petroleum has increased its production by employing advanced and proven technologies, such as 3D seismic data analysis and horizontal drilling, to optimize oil recoveries from producing but under-developed fields. In particular, the Corporation has developed specific expertise and a unique focus on producing oil from thin oil rims, commonly found in shallow water and onshore properties. Since inception, the Corporation has drilled 126 wells (124.8 net) and has achieved a commercial success rate of approximately 83 per cent. The following chart shows the average monthly oil production from the Corporation's Nigerian producing properties, including the period before the Corporation began operating the properties, and demonstrates Addax Petroleum's operational and technical expertise.

**Average Monthly Oil Production
January 1984 - October 2005**

Addax Petroleum has increased production while maintaining firm control of operating costs. Despite industry-wide increases in the costs of drilling and other third party operating services, Addax Petroleum has maintained operating costs between \$5.50 and \$6.50 per barrel over the past three years.

The OPL90 property development is Addax Petroleum's first major greenfield development and further demonstrates the Corporation's technical expertise. Development of the Okwori field in OPL90 began in July 2004 and the large and technically demanding project commenced production on schedule in March 2005. The Okwori field and adjacent Nda field in OPL90 are estimated by NSAI to contain 43.7 mmbbls of proved and probable oil reserves and are expected to produce at a combined average production rate of 33 mbbbls/d in 2006. In September 2005, Addax Petroleum received a technical excellence award at the 18th World Petroleum Congress in recognition of its successful development of the Okwori field.

Near and Medium Term Growth Opportunities in West Africa

Addax Petroleum's properties contain a number of development projects which the Corporation expects should increase its production in the near and medium term. The Corporation expects its drilling and development program in Nigeria to increase average daily production from 65 mbbls/d in 2005 to 85 mbbls/d in 2006. The Corporation's planned projects in Nigeria include ongoing development of the Okwori and Nda fields in OPL90 and an infill drilling program in OML123 and OML124. The Corporation has contracted three drilling rigs in Nigeria for 2006 and is actively pursuing a fourth drilling rig.

Addax Petroleum also has 20 unappraised discoveries, 23 significant exploration prospects and more than 25 leads on its properties in Nigeria, Cameroon and Gabon. As at September 30, 2005, NSAI estimates Addax Petroleum's gross prospective oil resources to be 298 mmbbls (164 mmbbls risked). In addition, NSAI reports that the gross contingent gas resources on Addax Petroleum's Nigerian properties are 1.25 tcf. In 2006, Addax Petroleum intends to acquire 800 km² of 3D seismic data for OPL225 and 170 km² of 3D seismic data for the Ngosso Property and to drill 29 wells (28.4 net) on its West African properties.

Expansion Potential in New Ventures

Addax Petroleum's current new venture initiatives could have a significant impact on the Corporation. The Corporation expects to begin developing the Okwok Property together with Oriental Energy during 2006. The Corporation believes it is well-positioned to farm-in or otherwise acquire properties in West Africa including properties from major international oil companies that are shifting their focus from onshore and shallow water properties to deep-water exploration and development properties.

The Block 4 Property is a large deep-water offshore block in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe. Pursuant to the participation agreement, the Corporation anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property.

In the Kurdistan Region of Iraq, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field.

Excellent Operational Reputation and Strong Community Relationships

Addax Petroleum recognizes the importance of petroleum resources to its host countries. The Corporation has made it a priority to conduct itself in a socially responsible manner and to develop co-operative relationships with host country authorities, local communities and indigenous oil companies. Addax Petroleum believes that it has an excellent operational reputation and strong relationships which help facilitate timely approval for its projects, avoid unplanned disruptions in production and establish the Corporation as a desirable partner for indigenous oil companies that are becoming increasingly important in the African petroleum industry. Addax Petroleum has not experienced any major unplanned disruptions in production since it began producing oil in 1998.

The Corporation proactively addresses host government policy objectives. In Nigeria, these policy objectives include maximizing reserves and production, developing the local natural gas market and employing indigenous staff and contractors. More than 90 per cent of Addax Petroleum's employees in Nigeria are Nigerian citizens. In addition, the Corporation's community relations policy promotes infrastructure development projects and education programs. The Corporation has funded the construction of schools, expanded clean water supplies, paved roads and provided scholarships to Nigerians for primary, secondary and post-secondary education.

Experienced Management Team with Significant Shareholdings

Members of Addax Petroleum's senior management team have demonstrated their ability to identify and successfully execute business plans in African countries. Addax Petroleum has successfully recruited experienced management who are attracted to the Corporation's entrepreneurial culture from major international oil companies.

The senior executives of Addax Petroleum have on average more than 20 years of experience in the international oil and gas industry and extensive operating experience in Africa. Jean Claude Gandur, the Chief Executive Officer and co-founder of Addax Petroleum, has approximately 30 years of petroleum industry experience and has more than 20 years of experience managing businesses in a variety of industry sectors in Africa. In recognition of his role developing businesses in Africa, Mr. Gandur has received awards and recognitions from countries throughout Africa including the Republic of Congo, Senegal and Benin. James Pearce, the Chief Operating Officer of Addax Petroleum and the Managing Director of the Corporation's Nigerian operations, has approximately 30 years of petroleum industry experience and held senior management positions with Chevron in West Africa for over 15 years prior to joining Addax Petroleum. Michael Ebsary, the Chief Financial Officer of Addax Petroleum, has held management positions with Elf and Occidental for over 10 years. Other members of Addax Petroleum's management team also have experience in West Africa and with international oil and gas companies such as BHP Petroleum, British Gas, Shell and Texaco.

At the closing of this offering, AOG will direct that up to 9.6 million Common Shares (representing up to eight per cent of AOG's current shareholdings) be transferred to or for the benefit of current and former directors, officers and employees of Addax Petroleum in recognition of their contribution to the development of the Corporation's business. Subsequent to the offering, the Corporation intends to adopt a performance based incentive plan to be implemented and administered by the Board.

Commitment to Strong Corporate Governance

Addax Petroleum believes that strong corporate governance is essential to creating shareholder value and maintaining the confidence of investors. Addax Petroleum Corporation has developed comprehensive corporate governance policies and procedures, and has adopted a "best practices" approach to corporate governance. Addax Petroleum Corporation has an experienced Board of Directors, the majority of whom are independent from Addax Petroleum and its controlling shareholder, AOG. In addition, Addax Petroleum Corporation has separated the offices of Chairman and CEO with the Chairman being independent from both Addax Petroleum and AOG. The Chairman of Addax Petroleum Corporation is Mr. Peter Dey, who previously chaired the Toronto Stock Exchange Committee on Corporate Governance in Canada.

The Board of Directors has also adopted all of the recommendations set out in Canadian Securities Administrators National Policy 58-201 — *Corporate Governance Guidelines*. These include, among other things, creating an Audit Committee and a Corporate Governance, Nominating and Compensation Committee, each comprised solely of independent directors, and Technical and Reserves Committees comprised of a majority of independent board members.

Strategy

Addax Petroleum has driven its growth in Nigeria by acquiring oil properties deemed by others to have limited remaining production potential and using its strong in-house technical and operational expertise to grow reserves and production in a cost effective manner. The Corporation has made it a priority to recruit and retain indigenous personnel and to actively participate in and contribute to community development projects. Addax Petroleum believes it has developed an excellent reputation among government authorities, communities and businessmen that has been critical in providing access to opportunities and obtaining the cooperation needed to successfully execute projects. Addax Petroleum is now extending its successful strategy to other regions in Africa and the Middle East where substantial growth opportunities exist.

The Corporation's strategy is to build on the significant growth and profit enhancement opportunities within its existing license areas while also pursuing new venture opportunities.

Existing Properties Addax Petroleum intends to continue its strategy in its existing properties by:

- investing in facilities and infrastructure to increase production throughput, improve operating efficiencies and position itself to monetize natural gas resources;
- completing identified development projects; and
- evaluating unappraised discoveries and pursuing identified exploration prospects.

New Venture Opportunities Addax Petroleum is currently pursuing a number of new venture opportunities in West Africa (Nigeria, Cameroon and Angola), North Africa (Algeria, Libya and Egypt) and the Middle East (Iraq, Iran, Yemen and Oman). The Corporation believes that it is well positioned to capitalize on numerous opportunities in its focus areas that arise as (i) national governments tender new acreage in future bid rounds; (ii) major international oil and gas companies reduce their involvement in onshore and shallow water offshore oil fields; and (iii) indigenous oil companies seek financially and technically strong partners to jointly develop their properties. In Algeria and Libya, Addax Petroleum has passed stringent pre-qualifying guidelines and can bid as an operator in licensing rounds in those countries. The Corporation is implementing its new venture strategy through the following initiatives:

- acquiring or farming-in to additional properties in its focus areas, as the Corporation has done with the Okwok Property;
- obtaining an interest in the Block 4 Property located in the Joint Development Zone of Nigeria and the Democratic Republic of Sao Tome and Principe; and
- acquiring an interest in a Production Sharing Contract governing the Taq Taq field in the Kurdistan Region of Iraq.

The Corporation also intends to continue investing in technologies to improve operating efficiency and establish itself as a leader in areas of corporate responsibility in Africa and the Middle East.

Capital Expenditure Program

Addax Petroleum has a substantial capital expenditure program for its current properties and major new venture opportunities, budgeted to be \$167 million in the fourth quarter of 2005 and \$815 million in 2006. The budgeted capital expenditures for 2006 represent a significant increase over historical levels, as shown in the table below.

Budgeted and Historical Capital Expenditures

Location	License/ Field	Budgeted						Historical		
		2006			3 Months Ended December 31, 2005			9 Months Ended September 30,		
		Drilling & Seismic	Facilities & Other	Total	Drilling & Seismic	Facilities & Other	Total	2005 Total	2004 Total	2003 Total
		(\$million)						(\$million)		
Nigeria	OML123	147	236	383	28	56	84	99	134	108
	OML124	22	5	27	4	5	9	-	1	30
	OPL90/225	197	93	290	39	29	68	173	166	8
Cameroon	Ngosso	16	-	16	2	-	2	1	1	4
Gabon	Kiarsseny	6	-	6	4	-	4	2	11	-
Subtotal		388	334	722	77	90	167	275	313	150
Nigeria	Okwok ⁽¹⁾	18	54	72	-	-	-	-	-	-
Kurdistan Region of Iraq	Taq Taq	13	8	21	-	-	-	-	-	-
Total		419	396	815	77	90	167	275	313	150

Note:

(1) Includes a \$35 million farm-in fee payable by Addax Petroleum prior to the commencement of the capital expenditure program for the Okwok Property.

Capital expenditures for OML123, OML124, OPL90 and OPL225 in Nigeria in the fourth quarter of 2005 and in 2006 are budgeted to be \$861 million in aggregate, representing 88 per cent of the Corporation's total capital expenditure budget for those periods. Under the applicable Nigerian Production Sharing Contracts, the Corporation has historically recovered more than 80 per cent of the drilling and seismic expenditures in the year in which the expenditure is incurred. See "Fiscal Terms — Nigeria".

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production including the replacement of the Knock Taggart FPSO (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007) as well as a two-rig drilling program in OML123 that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

Capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006. These capital expenditures are expected to increase production from approximately 16 mbbls/d in 2005 to approximately 33 mbbls/d in 2006. The budgeted capital expenditures will fund a one-rig drilling program in OPL90 and OPL225 that includes:

- the completion of development drilling in the Okwori field;
- development drilling in the Nda field and tie back to the OPL90 FPSO; and
- seismic data acquisition and drilling of three exploration wells.

Capital expenditures for the Corporation's other properties and major new venture opportunities are budgeted to be \$6 million in the fourth quarter of 2005 and \$115 million in 2006. These expenditures will be incurred to fund seismic data acquisition, technical studies and appraisal drilling necessary to prepare detailed field development plans.

Addax Petroleum expects its portfolio of development projects, unappraised discoveries, identified exploration prospects and new ventures to provide the Corporation with the opportunity to continue a sizeable capital expenditure program in 2007 and beyond.

PROPERTIES AND NEW VENTURES

Addax Petroleum's principal oil and gas properties are in the West African countries of Nigeria, Cameroon and Gabon.

Nigeria Country Discussion

Overview

Nigeria is Africa's most populous country and largest oil producer. The following table highlights some important statistics regarding Nigeria, its people and its economy.

Total Area	923,768 km ² (approximately 1.5 times the area of Alberta, Canada)
Population	128.8 million
Major Cities	Lagos, Kano, Ibadan, Kaduna, Port Harcourt, Abuja (capital)
Language	English (official), Hausa, Yoruba, Igbo (Ibo), Fulani
Literacy	68 per cent of population over 15 years of age can read and write
Government	Federal Republic
Legal System	Based on English common law (Islamic law in the north)
GDP	\$125.7 billion (2004 estimate)
GDP per capita	\$1,000 (2004 estimate)
Oil Production	2.5 mmbbls/d (2004 estimate)
Net Oil Exports	2.2 mmbbls/d (2004 estimate)
Currency	Naira
Inflation	16.5% in 2004

Sources: The U.S. Central Intelligence Agency — The Worldfact Book 2005, the Energy Information Administration and U.S. Department of Energy.

Recent History

Nigeria gained independence from the United Kingdom on October 1, 1960 and has subsequently experienced periods of military and democratic rule. The death of General Sani Abacha in 1998 marked the most recent transition to democratic government, which saw the election of President Olusegun Obasanjo in 1999.

The development of the oil industry in the Niger Delta in the south of the country has been a key factor shaping modern Nigeria. Oil was first discovered in the 1950s and exploration and production increased rapidly in the 1960s. The country's oil industry now accounts for approximately 20 per cent of GDP, 96 per cent of export earnings and 65 per cent of budgetary revenues.

Government and Legal System

In 1999, Nigeria adopted a new constitution and held democratic elections. The Nigerian government has a three-tier structure: the federal government, 36 state governments and many local government administrations. The structure of the federal government is similar to that of the United States. Under the Nigerian constitution, the President can serve a maximum of two terms of four years each. The Parliament comprises two houses: the House of Representatives, with 346 elected members, and the Senate, with 107 elected members. The most recent elections were held in April 2003 and saw the re-election of President Obasanjo of the People's Democratic Party for a second term.

Nigeria's legal system is based on English common law and much of the legislation covering the country's oil industry was originally based upon equivalent legislation in England. Islamic law is also used in some states in the north.

Economic Environment

Nigeria has significant agricultural, mineral, marine and forest resources, but the economy of Nigeria is strongly dependent upon the international oil price. The Obasanjo government is seeking to broaden the country's economy and has initiated structural reforms with new competition policies and a privatization program. The Bureau for Public Enterprise has the mandate to privatize state-owned enterprises in all sectors of the economy, including hotels, insurance, paper mills, fertilizer plants, oil refineries, ports and the electrical, telephone, rail and water utilities. To date, the Nigerian government has privatized its hotel, insurance and cement enterprises. Included in the enterprises scheduled to be privatized are four oil refineries owned by NNPC.

In recent years, Nigeria has attracted significant international support, both from individual governments and international agencies. The World Bank currently has a total commitment to Nigeria of approximately \$444 million in the areas of privatization, power transmission, healthcare, community development, education, water and economic capacity building. Further, representatives of the Paris Club creditor countries met in October 2005 and agreed with the representatives of the Nigerian government on a comprehensive treatment of its debt. In total, this agreement allows Nigeria to cancel approximately \$18 billion of debt (including moratorium interest) representing an overall cancellation of about 60 per cent of its debt to the Paris Club.

International Relations

Nigeria is a member of the United Nations, the Organization of African Unity, the Commonwealth of Nations and the Economic Community of West African States. Nigeria became a member of OPEC in 1971.

On October 10, 2002, the International Court of Justice ruled on the long disputed Cameroon-Nigeria land and maritime boundary and awarded the Bakassi Peninsula and adjacent offshore acreage, including part of the Corporation's acreage in OML123 (the "Disputed Area"), to Cameroon. Nigeria initially rejected the ruling but formed a Joint Border Commission to peacefully resolve the dispute. The dispute relating to the land boundary involving the Bakassi Peninsula is in the course of being resolved peacefully and the Joint Border Commission has initiated steps to resolve the maritime boundary dispute. The issue regarding the maritime boundary continues to have implications for Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Petroleum Industry

Oil

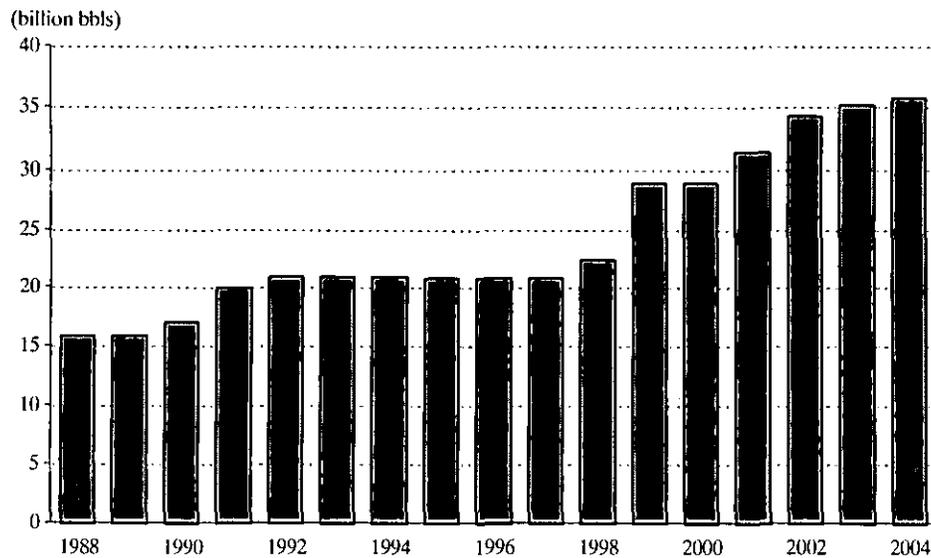

The crude oil supply market is truly global with approximately 31 per cent of 2004 production originating from the Middle East, 23 per cent from Europe and Eurasia, 14 per cent from Latin America, 12 per cent from Africa, 10 per cent from North America and 10 per cent from Asia Pacific.

The oil industry in Nigeria has a long history. Shell D'Arcy (a Shell/BP joint venture) started exploring for oil in the country in 1938. Other foreign oil companies entered Nigeria in the 1950s and 1960s, including Mobil (now ExxonMobil), Texaco (now Chevron), Gulf (now Chevron), Safrap (later Elf and now Total) and Agip. Apart from BP, all of these international oil and gas companies still maintain a significant presence in Nigeria.

Nigeria ranks among the top ten countries in the world in terms of oil reserves, with proved crude oil reserves reported by OPEC to be 35.2 billion barrels. The Nigerian government has expressed its desire to increase the country's proved oil reserves to 40 billion barrels by 2010 and is encouraging the continued development and exploration of the country's oil resources to do so.

The following chart shows the increase in Nigeria's proved crude oil reserves over the past 17 years, with the majority of the increase occurring in the last six years.

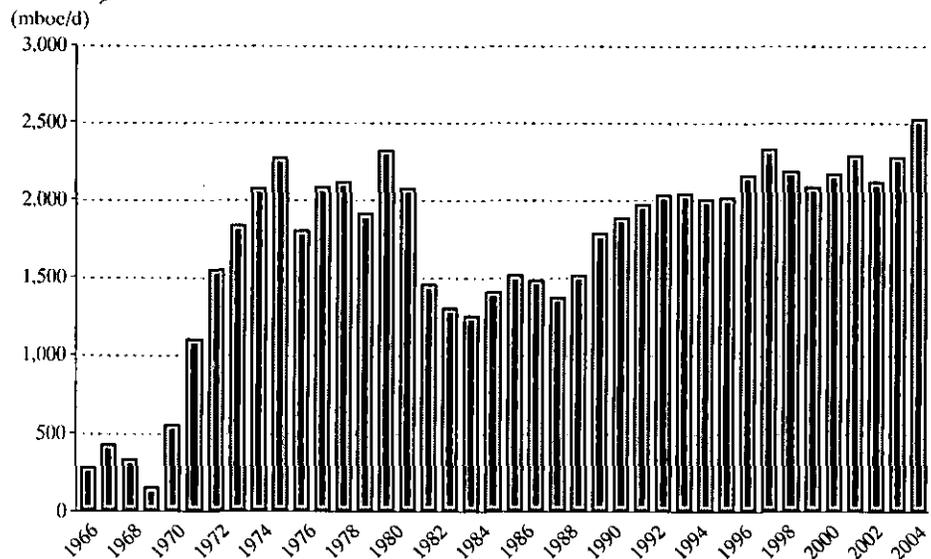

Nigerian Proved Crude Oil Reserves

Source: OPEC Annual Statistical Bulletin, 2004.

The first commercial oil discovery in Nigeria was made in 1956 by Shell D'Arcy and subsequent discoveries and development activity saw production steadily climb to reach in excess of two mmbbls/d in the mid-1970s. During the 1980s, oil production in Nigeria declined in part due to an unfavourable investment environment. However, development activity and production increased after the Nigerian government revised the fiscal terms governing oil production. The history of oil production in Nigeria is shown in the following chart.

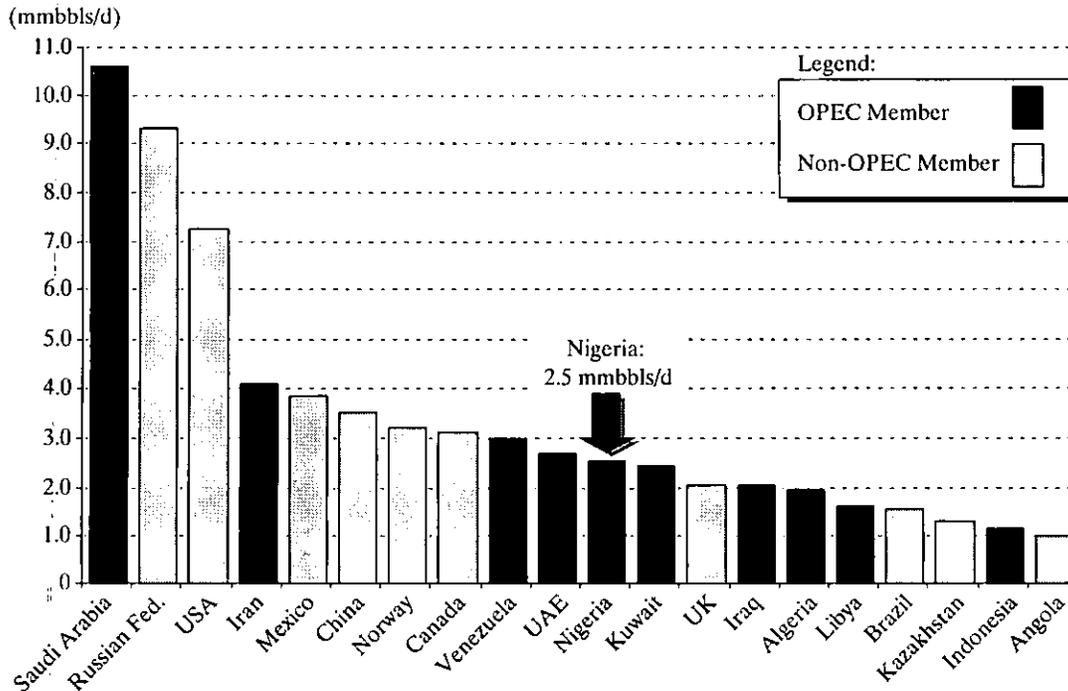

Nigerian Crude Oil Production

Source: BP Statistical Review of World Energy, June 2005.

Nigeria ranks as one of the world's major oil producers and the largest producer of oil in Africa. The country's 2004 oil production is estimated to have been approximately 2.5 mmbbls/d, representing 27 per cent of the continent's total oil production and 3.2 per cent of the world's production (compared to Canada at 3.8 per cent). The following chart, showing 2004 oil production for selected major oil producing countries, demonstrates Nigeria's importance as a global oil producer.

Oil Production by Selected Country, 2004

Source: BP Statistical Review of World Energy, June 2005.

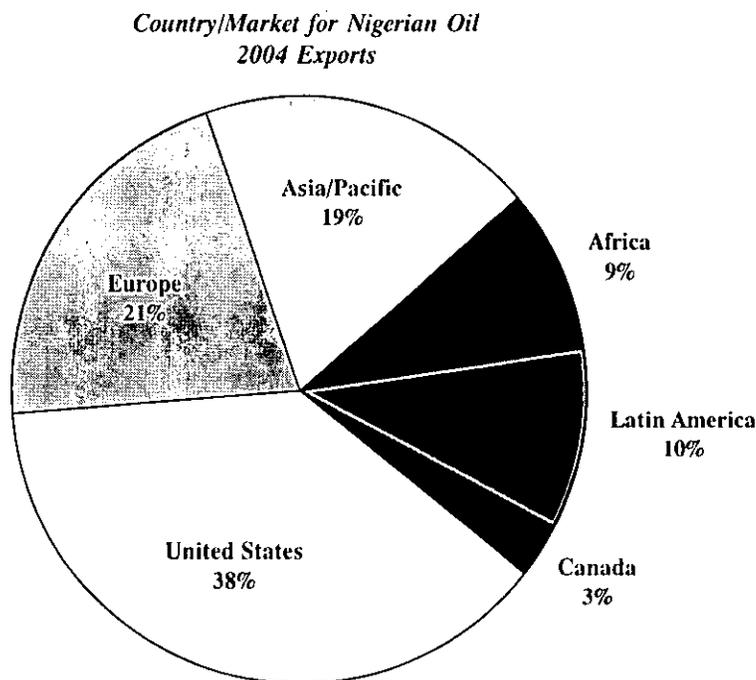

The majority of oil in Nigeria is produced by joint ventures between NNPC and international oil and gas companies, which are the operators of the joint venture properties. There are joint ventures between NNPC and Shell (the largest joint venture), ExxonMobil, Chevron, Agip and Total. NNPC has a 55 per cent interest in the Shell joint venture and 60 per cent interest in each of the other joint ventures. In addition, ConocoPhillips, Devon Energy, Nexen Inc., Petrobras, Statoil and other foreign companies hold interests in Nigeria.

The following table shows the estimated 2004 daily production by principal operators in Nigeria.

	2004 Production (estimated) (mmbbls/d)
Shell	907
ExxonMobil	590
Chevron	352
Agip	185
Total	158
Addax Petroleum	40

Source: Estimates derived from Wood Mackenzie, except for Addax Petroleum.

In 2004, Nigeria exported approximately 2.2 mmbbls/d or 88 per cent of the country's total oil production, with the United States being the largest single export market. Nigeria is the fifth largest supplier of crude oil to the United States, behind Canada, Mexico, Saudi Arabia and Venezuela, supplying approximately 8.5 per cent of total United States crude oil imports. The following chart shows the principal export markets for Nigerian oil in 2004.

Source: OPEC Annual Statistical Bulletin 2004.

The Nigerian government has announced a production target of 4 mmbbls/d by 2010. Future oil production in Nigeria is expected to increase with the continued development of many significant deep-water discoveries. Some of the significant discoveries and development projects announced by international oil and gas companies are described below.

Shell — Shell recently developed the deep-water Bonga field with estimated reserves of 700 mmbbls and expected plateau production of 225 mmbbls/d. Shell has also announced plans to develop the Bonga South West field which has estimated reserves of 600 mmbbls and the EA field which has estimated reserves of 350 mmbbls and expected plateau production of 170 mmbbls/d.

ExxonMobil — ExxonMobil is currently developing the deep-water Erha field which has estimated reserves of 500 mmbbls and expected plateau production of 150 mmbbls/d. ExxonMobil is also developing the Yoho field with estimated reserves of 400 mmbbls and expected plateau production of 150 mmbbls/d.

Chevron — Chevron is currently developing the deep-water Agbami field which has estimated reserves of 1,000 mmbbls and expected plateau production of 250 mmbbls/d.

Total — Total developed the Amenam Kpono field that came on-stream in July 2003 and has expected plateau production of 125 mmbbls/d in its first phase. Total has discovered two further fields, Usan and Akpo, with estimated reserves exceeding 500 mmbbls each.

Agip — Agip developed the first deep-water field in Nigeria, the Abo field, that began production in early 2003. Reserves are estimated to be 700 mmbbls and the plateau production is expected to be 300 mmbbls/d.

OPEC and Oil Production Quotas in Nigeria

Nigeria has been a member of OPEC since 1971. OPEC has eleven members who collectively supply approximately 40 per cent of the world's oil consumption and account for approximately two-thirds of the world's proved oil reserves. OPEC's member countries are Algeria, Indonesia, Iran, Iraq, Kuwait, Libya, Nigeria, Qatar, Saudi Arabia, United Arab Emirates and Venezuela. OPEC's stated objective is "to co-ordinate and unify petroleum policies among member countries, in order to secure fair and stable prices for petroleum producers; an efficient, economic and regular supply of petroleum to consuming nations; and a fair return on capital to those investing in the industry". At its March 2000 meeting, OPEC established a price band mechanism to respond to changes in world oil market conditions. Since its inception, the informal price band mechanism has been activated only once.

At its most recent meeting, OPEC established new production ceilings and quotas for individual members effective March 16, 2005. Nigeria's quota was set at approximately 2.3 mmbbls/d. NNPC allocates production quotas among oil producers in Nigeria. The allocations are based on the aggregate of the technical production limits per well for a producer as negotiated between the producer and the Nigerian government to reflect good oil field production practices. If the aggregate of all the producers' technical production limits exceeds Nigeria's OPEC quota, the production allocations among producers are reduced pro rata.

The Corporation applies for, on a monthly basis, and regularly receives an additional quota for the difference between its production quota and its expected production. At September 30, 2005, Addax Petroleum had a production quota of 65 mbbls/d and an additional production quota of 10 mbbls/d compared to its production of 73 mbbls/d for the same period. The Corporation anticipates increasing its production over the next two years to in excess of 80 mbbls/d. Given the current and anticipated growth of production in Nigeria, there is a risk that quota allocations may force Addax Petroleum to curtail its production in the future. However, except in one instance which was immaterial, the Corporation has not had to reduce its production due to the application of a monthly quota and has succeeded in obtaining an additional quota for the difference between its exportable production and its fixed monthly quota. In the current high oil price environment, Addax Petroleum does not expect that it will be required to reduce its production due to a quota constraint. See "Risk Factors."

Natural Gas

Nigeria's natural gas reserves were estimated by NNPC to be 181 tcf in 2004, making Nigeria the country with the eighth largest natural gas reserves in the world. To date, exploration and development activities in Nigeria have not focused on natural gas because of the lack of readily accessible markets. Approximately half of the Nigerian natural gas reserves represent associated gas, a co-product of oil production, and the other half non-associated gas. Currently, natural gas development legislation in Nigeria relates mainly to the development of associated gas. In late 2005 or 2006, the Nigerian government plans to pass new gas legislation that will address the development of non-associated gas.

Nigerian natural gas production is inferred from various industry sources to have been approximately five bcf/d in 2004, of which an aggregate of approximately 40 per cent was sold as LNG and natural gas liquids into international markets and as natural gas for use in power generation in Nigeria. Of the remaining gas production, the majority was flared and the rest was used in oil field operations.

The Nigerian government has announced its objective to increase natural gas revenue sales to match oil revenues by 2010. To achieve this objective, the government has announced its intention to facilitate gas export-oriented projects and increase domestic gas consumption. The Nigerian government has also announced what is commonly referred to as the "Flares Down by 2008" policy which is intended to encourage oil companies to develop natural gas projects in order to eliminate the flaring of associated natural gas by 2008. Although NNPC does not yet have a legislative mandate to eliminate natural gas flaring by 2008, it is strongly indicating to operators that this will be a requirement. The oil producers in Nigeria are making concerted efforts to eliminate flaring although full compliance may not be practically possible by 2008. By 2010, gas production is forecast to increase to 10 bcf/d of which 8 bcf/d (currently 1.3 bcf/d) will be exported as LNG and 2 bcf/d will be used to meet domestic demand, predominantly for power generation (currently 1 bcf/d).

The most significant natural gas project to date in Nigeria has been the construction of a liquefaction plant in 1999 at Bonny Island by Nigeria LNG Ltd. This company is owned by NNPC (49 per cent), Shell (25.6 per cent), Total (15 per cent) and Agip (10.4 per cent). Presently the plant has three LNG trains with capacity to export 8.7 million tonnes of liquefied natural gas per year consuming 1.3 bcf/d. Two additional trains are planned to be added to the plant to increase its capacity to 16.7 million tonnes per year by 2006 consuming 2.5 bcf/d and further LNG trains may be added thereafter. LNG from the plant is exported to customers in France, Italy, Portugal, Spain, Turkey and the United States.

To meet the projected increase in gas exports, a number of gas export projects are planned including GTL projects, other LNG projects and export pipelines. A GTL project proposed by Chevron is expected to produce 35 mbbbls/d of petroleum products and consume 0.35 bcf/d of gas. Other LNG projects have been proposed including conventional LNG projects at Brass River, led by ConocoPhillips and Agip, and at Escravos, led by Chevron, and two floating LNG facilities located on deep-water discoveries operated by ExxonMobil and Statoil. Export pipeline projects include the West Africa Gas Pipeline project with a consortium of international oil and gas companies (including Shell) led by Chevron, to export natural gas from Escravos to Ghana, Togo and Benin for power generation. Initially, this project will consume 0.14 bcf/d but consumption is expected to increase to 0.45 bcf/d. This project will also increase the capacity of the existing Escravos to Lagos pipeline from 0.3 bcf/d to 1.0 bcf/d. Of the planned projects, the Chevron GTL project at Escravos in western Nigeria is progressing and the other LNG projects are expected to be announced.

A major program is underway in Nigeria to expand gas-fired power generation capacity to meet the projected increase in domestic gas consumption. Major oil companies are anticipated to play an important role in constructing joint venture independent power plants. In connection with the expansion of the country's electrical power generation capacity, the Nigerian government has announced that it is restructuring the electricity sector in anticipation of privatizing the industry later in the decade. The Corporation is presently in discussions with NNPC to provide gas for power generation from OML123.

In addition to promoting gas consumption and domestic power generation, the Nigerian government is promoting the production and consumption of LPG. Compared to its West African neighbours, Nigeria consumes little LPG, most of which is imported. The Nigerian government is stimulating demand by removing import duties and has also begun a program to reactivate under-utilized LPG depots throughout the country to improve the distribution of LPG. The Corporation is presently considering investing in an LPG plant at its OML124 onshore property.

Legal Regime for the Petroleum Industry

The petroleum industry in Nigeria is governed by the *Petroleum Act*. Under the *Petroleum Act*, the ownership and control of oil and gas in Nigeria (including under its territorial waters and continental shelf) is vested in the Nigerian government. The Department of Petroleum Resources, in collaboration with other government agencies such as NNPC and the Ministry of the Environment, has the responsibility for enforcing the *Petroleum Act* and the related legislation and regulations governing the petroleum industry in Nigeria.

The Department of Petroleum Resources has wide regulatory powers which include issuing Oil Prospecting Licenses and Oil Mining Leases under the *Petroleum Act*, the approval of field development plans, the setting of production levels, the monitoring of industry work programs, the administration of fiscal incentives and the monitoring of oil production and exports. NNPC is the state owned petroleum company that holds the Nigerian government's equity shares in joint ventures and enters into Production Sharing Contracts with foreign oil companies on behalf of the Nigerian government.

An Oil Prospecting License gives the licensee the exclusive right to explore for petroleum in a specified area. An Oil Mining Lease gives the lessee the exclusive right to produce petroleum from a specified area. Under the *Petroleum Act*, an Oil Prospecting License may be converted into an Oil Mining Lease when the Nigerian government is satisfied that the license is capable of producing at least 10 mbbbls/d of crude oil. In practice, however, the Nigerian government generally allows production from areas covered by an Oil Prospecting License pending conversion to an Oil Mining Lease. The *Petroleum Act* provides for the relinquishment of certain areas within Oil Prospecting Licenses on their conversion to Oil Mining Leases, and within Oil Mining Leases ten years after the granting of such leases. Under the *Petroleum Act*, relinquishment is

subject to ministerial approval and may be subject to additional conditions as set forth in the applicable Production Sharing Contract. The Production Sharing Contract for OPL90 and OPL225 also requires Addax Petroleum to relinquish part of the license area to be agreed between Addax Petroleum and NNPC.

Oil Prospecting License licensees are required to conduct hazard and operability studies prior to implementing facilities design and construction or major modification projects. The licensee is also required to conduct an environmental impact assessment prior to commencing operations, in addition to the environmental impact assessment required for such specific activities as seismic survey, drilling campaign and installation of facilities and pipelines.

Contractual Framework

Most oil exploration and production activities in Nigeria are carried out under joint ventures or Production Sharing Contracts. All of Addax Petroleum's current production is under Production Sharing Contracts.

Under a joint venture, one or more oil companies enter into a joint operating agreement with NNPC whereby the oil companies and NNPC agree to jointly explore for, develop and produce petroleum pursuant to the terms of an Oil Prospecting License or Oil Mining Lease jointly held by them. Each partner in the joint venture contributes to the costs of exploration, development and production and shares the benefits or losses of the operations in accordance with its proportionate equity interest in the joint venture. Joint ventures currently account for the majority of Nigeria's total crude oil production.

The Nigerian government has more recently moved toward Production Sharing Contract arrangements, particularly with respect to oil exploration, development and production in Nigeria's deep offshore acreage. NNPC is the holder of the Oil Prospecting License or the Oil Mining Lease and one or more oil companies enter into a Production Sharing Contract with NNPC under which they agree to carry out oil exploration, development and production activities as a contractor on NNPC's behalf at the oil company's risk and expense in return for a share of production.

In 2003, the Nigerian government considered alternatives to increase the participation of indigenous or locally owned companies in oil exploration and production. The Marginal Field Development Program is a significant part of this initiative. Marginal fields are defined by guidelines issued by the Nigerian government in July 2001 as being any field that has reserves booked and reported annually to the Nigerian government and has remained unproduced for more than ten years. Marginal fields are subject to compulsory farmouts to indigenous companies under a competitive bid process. There have been a series of acreage awards under this program, the most recent being in April 2003, when 31 indigenous oil companies were awarded acreage covering marginal fields that the international oil and gas companies had chosen not to develop. These indigenous oil companies have been encouraged to enter into agreements with international oil and gas companies for assistance with financing and technical support; however, non-Nigerian companies are not permitted to hold more than a 40 per cent equity interest.

Geological Description

The Niger Delta Basin is Africa's largest and most prolific oil producing basin. It is also one of the world's largest delta systems of Tertiary age and covers an area greater than 75,000 km². Geologically, it is similar to the Mississippi Delta complex of the United States Gulf Coast, in that it has been fed by major river systems that have deposited a thick layer of sediment in a prograding delta system.

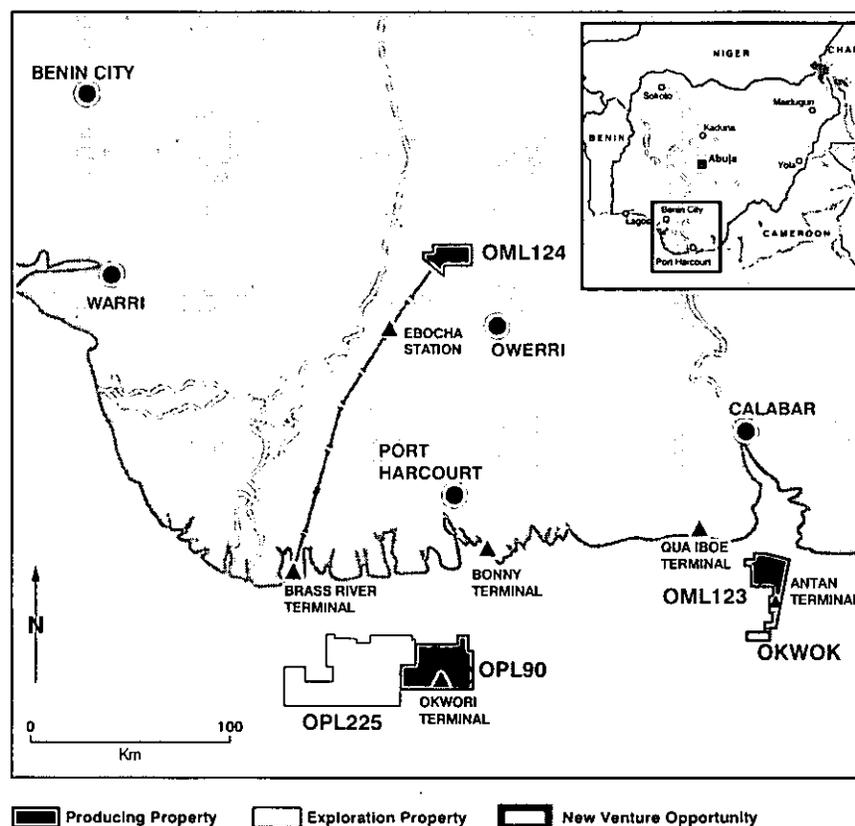

Three main lithologic formations are recognized in the basin: Benin, Agbada and Akata. These formations are usually further divided by each operator for each field. The reservoir sands in the Agbada formation are of good quality, often with Darcy permeabilities. The accumulations consist of primarily sweet, mainly light to medium oil (31° to 41° API) as oil rims with associated gas caps, and secondly, of heavy (less than 25° API) oil rims and unassociated gas. Producing oil rims are relatively thin (10 to 20 m, occasionally extending to 30 m). Most reservoirs are normally pressured with generally strong aquifer support.

Nigeria Properties

Within Nigeria, Addax Petroleum has a 100 per cent interest in a Production Sharing Contract covering OML123 and OML124, a 100 per cent interest in a Production Sharing Contract covering OPL90 and OPL225 and is pursuing a 40 per cent interest in the Okwok Property in OML67 (immediately adjacent to OML123) through the Oriental Joint Venture Agreement entered into in September 2005. OML123, OML124 and OPL90 are operated by the Corporation and contain producing oil fields as well as a number of development and exploration opportunities. OPL225 is operated by the Corporation and contains a discovery and a number of exploration opportunities. The Okwok Property contains the Okwok discovery where Addax Petroleum expects to conduct operations in its capacity as technical advisor. The Corporation has budgeted capital expenditures in Nigeria of \$161 million in the fourth quarter of 2005 and \$772 million in 2006, including budgeted capital expenditures on the Okwok Property but excluding expenditures in the JDZ.

The development of the natural gas industry, including the cessation of associated natural gas flaring by 2008, is a high priority for the Nigerian government. Currently the Corporation's Production Sharing Contracts covering OML123, OML124, OPL90 and OPL225 relate solely to commercial oil development but include the right to negotiate commercial terms with NNPC for gas development in the properties. As at September 30, 2005, NSAI reports gross contingent gas resources on Addax Petroleum's Nigeria properties to be 1.25 tcf. Addax Petroleum's natural gas strategy is intended to ensure that the Corporation complies with the requirement to cease associated natural gas flaring and also to position the Corporation to assist with, and participate in, the monetization of existing and future associated and non-associated natural gas reserves. The Corporation is currently in discussions to supply natural gas from all of its producing properties in Nigeria. See "Properties and New Ventures — Nigeria Country Discussion — Petroleum Industry — Natural Gas".

Nigeria Properties⁽¹⁾

Note:

(1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

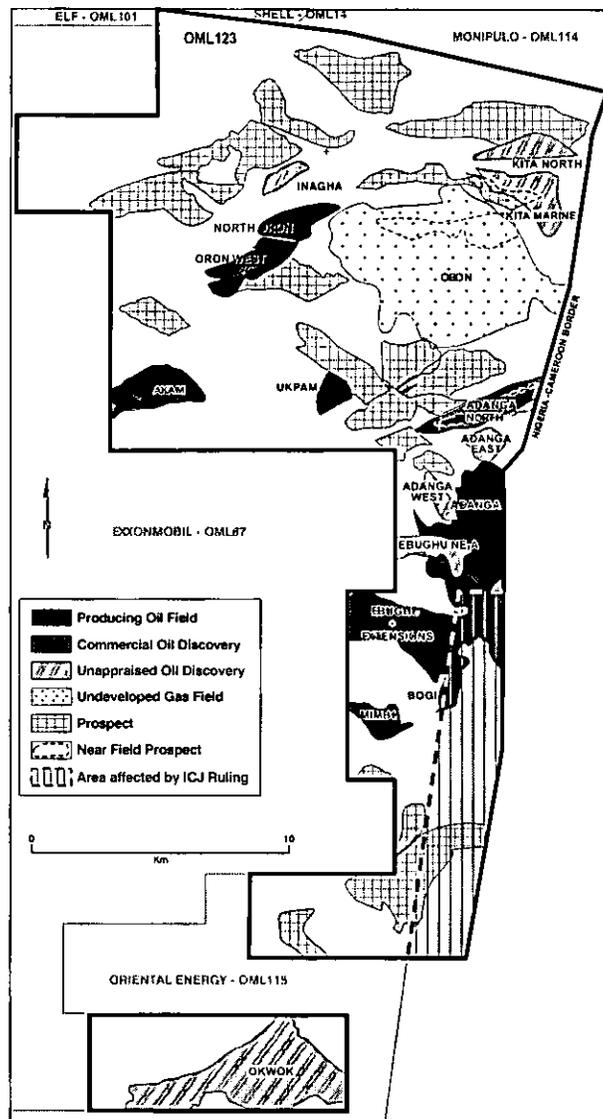

OML123

Overview

OML123 is the Corporation's largest property as measured by reserves and production. In the first nine months of 2005, OML123 produced an average of 46.0 mbbbls/d of oil from 52 wells with an average water cut of 35 per cent. Oil gravity ranges between 19° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OML123 to be 71.4 mmbbls and gross proved plus probable reserves to be 144.9 mmbbls. The Corporation expects production from OML123 to be approximately 48 mbbbls/d in 2006.

OML123 is located offshore approximately 70 km south of the town of Calabar and covers an area of 90,700 acres (367 km²) in water depths ranging from 3 to 40 m on the eastern edge of the Niger Delta. OML123 contains eight producing oil fields (Adanga, Ebughu and extensions, Oron West, North Oron, Akam, Bogi, Mimbo and Ukpam) and one undeveloped oil field (Adanga North). There are also six unappraised oil discoveries (Kita Marine, Inagha, Adanga East, Adanga West, Ebughu NE-A and Kita North), one large 8,600 acre (35 km²) undeveloped gas discovery (Oron) and several exploration prospects. Total capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005 and \$383 million in 2006.

OML123

Production and Reserves

The following table summarizes the production and reserves in OML123.

Field	Number of Wells ⁽¹⁾	Average Oil Production		Gross Oil Reserves ⁽²⁾⁽³⁾		
		9 months ended September 30, 2005	2004	Proved	Probable	Proved Plus Probable
		(bbls/d)	(bbls/d)	(mmbbls)	(mmbbls)	(mmbbls)
Adanga	19	22,720	18,730	23.2	26.6	49.8
Ebughu (and extensions)	22	15,960	12,210	13.6	4.7	18.3
Oron West and North Oron	8	5,420	3,390	25.2	25.4	50.6
Akam	9	960	700	1.4	1.0	2.4
Bogi	2	440	610	0.3	-	0.3
Mimbo	2	360	360	0.7	0.3	1.0
Ukpam	2	110	120	0.2	2.2	2.4
Adanga North	-	-	-	-	11.0	11.0
Kita North	-	-	-	6.9	2.3	9.2
Total	64	45,970	36,120	71.4	73.5	144.9

Notes:

- (1) Number of wells includes shut-in wells.
- (2) Proved and probable reserves as at September 30, 2005, as reported in the Reserve Report under "Forecast Prices and Costs Case".
- (3) Reserves presented exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

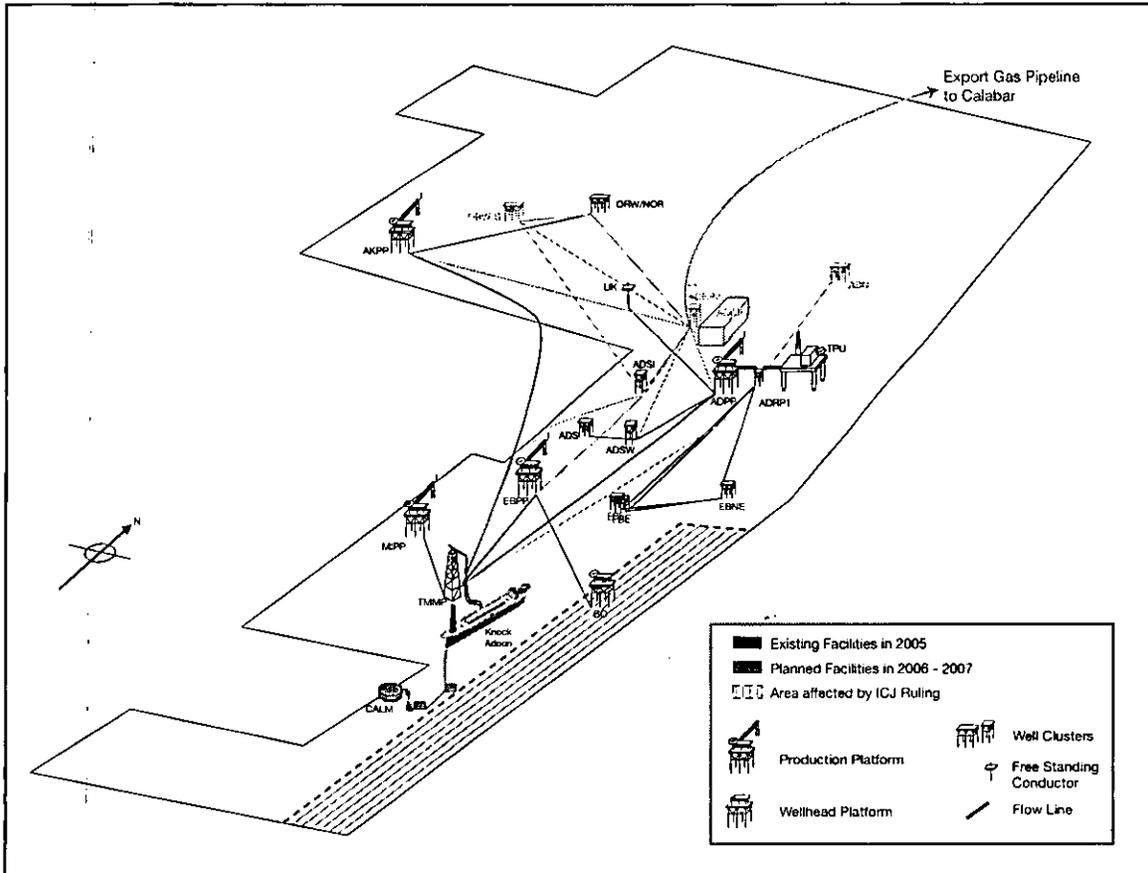

Production Facilities

The producing fields in OML123 are operated as a common development area. The key production facility is a FPSO which gathers produced crude oil from production or wellhead platforms on each field. At the OML123 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The current OML123 FPSO is the Knock Taggart which has a nameplate processing capacity of up to 60 mmbbls/d of crude oil, a total liquids (oil and water) processing capacity of 100 mmbbls/d and a storage capacity of approximately one mmbbls of crude oil. In order to maximize production capacity and improve cost efficiency, the Corporation intends to replace the Knock Taggart with the Knock Adoon FPSO in 2006. The Knock Adoon will have a processing capacity of 60 mmbbls/d of crude oil, a total liquids (oil and water) processing capacity of 140 mmbbls/d and a storage capacity of 1.7 mmbbls of crude oil and will incorporate an off-loading buoy terminal to better facilitate offloading during periods with strong currents. The Knock Adoon will be under a time charter with a subsidiary of Fred Olsen Production AS, the term of which is anticipated to expire in June 2014 with extension periods of up to a further eight years at the Corporation's option.

In order to maximize the use of the OML123 production facilities, Addax Petroleum has entered into an agreement with the OML114 Parties who operate the adjacent OML114, to store and export all of the crude oil produced from their license area. In return, the OML114 Parties pay the Corporation for their share of the expenses for the operation of the OML123 FPSO. For the first nine months of 2005, crude oil liftings totaled 12.6 mmbbls for Addax Petroleum and NNPC and 4.3 mmbbls for the OML114 Parties.

OML123 Production Facilities

Associated gas produced on OML123 is currently used for gas lift and fuel gas to aid oil production while the excess is flared by Addax Petroleum. NNPC, the owner of all natural gas in Nigeria, has informed the Corporation that it has targeted to use OML123 to supply 140 mmcf/d of natural gas to a new power generation plant at Calabar, starting in 2007. This project will aid the Corporation in achieving its objective of complying with the "Flares Down by 2008" policy announced by the Nigerian government. The Corporation believes its participation in this gas supply project will position it to participate in the supply of non-associated gas under separate supply arrangements in the future.

The initial gas supply project from OML123 contemplates the construction of gas gathering pipelines to bring both associated gas from existing oil facilities as well as non-associated gas to a central gas processing unit comprised of gas processing and compression facilities and a gas delivery pipeline to the town of Calabar. The central gas processing unit should be located adjacent to existing oil production facilities in the Adanga field. The capital expenditures for the gas supply project are expected to be funded by Addax Petroleum and NNPC. See "Properties and New Ventures — Nigeria Properties — OML123 — Budgeted Capital Expenditures".

Fields

Adanga

The Adanga field, discovered in 1980 and producing since 1986, is Addax Petroleum's principal producing field in OML123. For the first nine months of 2005, Adanga produced an average of 22.7 mmbbls/d of oil from 15 wells with an average watercut of 15 per cent. Oil gravity averaged 33° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Adanga field to be 23.2 mmbbls and gross proved plus probable reserves to be 49.8 mmbbls.

The Adanga field is located in water depths ranging from 10 to 20 m and covers an area of approximately 2,800 acres (11.3 km²) in the central part of OML123. The Corporation is producing from seven stacked "P" sand reservoirs of Miocene age at depths between 5,000 and 7,600 ftss, but most of the production comes from two reservoirs between 5,900 and 6,200 ftss which contain 90 per cent of the reserves in Adanga.

First production started in 1986 from the Adanga main block through one vertical and eight deviated wells drilled from the Adanga Platform. Following a detailed 3D seismic interpretation, Addax Petroleum modelled the field in 1999-2000 and undertook an extensive appraisal and development drilling program in the southern blocks, beginning in 2001. Since then, the Corporation has drilled a total of 29 wells resulting in 15 horizontal production wells, 12 appraisal wells and two water injection wells. The Corporation continues to evaluate infill and step-out drilling locations at Adanga and, in 2006, plans to drill five appraisal wells followed by up to five horizontal production wells and one water injection well and to work-over and recomplate two water injection wells. Water injection pumping facilities will be provided on the Knock Adoon. Most of the field's well completions are equipped with gas lift capability. The Corporation expects that 2005 production levels from the Adanga field will be maintained in 2006.

Wells from the Adanga field produce through the Adanga Platform, installed in 1986, and three satellite wellhead platforms, installed in 2003. In the second quarter of 2004, a new riser platform tied-in to a leased TPU was commissioned at Adanga, at which time all production was handled by the TPU. The TPU now handles all initial processing in the Adanga area prior to being pumped to the FPSO. In addition, the TPU allows production from the wells in the nearby Ebughu field extensions which could not otherwise be accommodated on the Adanga Platform or on the Ebughu Platform. In the fourth quarter of 2005 and 2006, the Corporation plans to purchase the TPU and refurbish both the TPU and the Adanga platform. The refurbishment project is planned to be substantially complete by the end of 2006.

Ebughu (and extensions)

The Ebughu field, discovered in 1980 and producing since 1988, along with the extensions is Addax Petroleum's second largest producing field in OML123. For the first nine months of 2005, Ebughu produced an average of 16.0 mmbbls/d of oil from 21 horizontal wells with an average watercut of 46 per cent. Oil gravity ranges between 20° API in the Ebughu field and 28° API in its northeast extension. As at September 30, 2005, NSAI estimates gross proved reserves for the Ebughu field and extensions to be 13.6 mmbbls and gross proved plus probable reserves to be 18.3 mmbbls.

The Ebughu field is located in water depth of approximately 30 m and covers an area of approximately 2,600 acres (10.6 km²) in the southern part of OML123. Production is from an 18 m thick oil rim in the "AA" horizon of Upper Miocene age at an average depth of 4,500 ftss. Most of the Ebughu field's oil completions are on gas lift.

Following a successful three-well appraisal program in 1984, Ashland installed the Ebughu Platform in 1988 and completed two wells which began producing in 1988. In 1996, a pilot horizontal production well was drilled between the existing two wells. Since 1999, Addax Petroleum has embarked on an extensive appraisal and development drilling program resulting in the discovery of five field extensions. In the second half of 2006, Addax Petroleum plans to drill three horizontal production wells on the eastern and north-eastern extensions subject to the availability of a second drilling rig for OML123 and authorization being granted to locate wells in the Disputed Area. As the drilling program is budgeted to take place in the second half of the year, the Corporation does not anticipate a material production impact from these new wells in 2006.

In 2004, the Corporation constructed and installed two wellhead platforms and two export pipelines to, and one gas lift pipeline from, the TPU in the Adanga field. No further production facilities are planned to be added at Ebughu.

Oron West and North Oron

Oron West was discovered by Addax Petroleum in 2002 and North Oron was successfully appraised in the same year. Oil production from Oron West and North Oron commenced in 2004. For the first nine months of 2005, Oron West and North Oron produced an average of 5.4 mmbbls/d from eight wells in both fields with an

average watercut of 2 per cent. Oil gravity averages 38° API in Oron West and 27° API in North Oron. As at September 30, 2005, NSAI estimates gross proved reserves for the Oron West and North Oron fields to be 15.8 and 9.4 mmbbls, respectively, and gross proved plus probable reserves to be 29.7 and 20.8 mmbbls, respectively.

The fields are located in water depth of approximately 8 m and cover an area of approximately 1,200 acres (4.9 km²) in the northwest sector of OML123. Production is from two "I" sands of Miocene age at depths between approximately 6,300 ftss in Oron West and at 5,100 ftss in North Oron. In 2005, Addax Petroleum drilled nine appraisal wells on Oron West and five appraisal wells on North Oron in the first development phase of both fields.

In 2005, the Corporation designed and constructed a wellhead platform from which six horizontal production wells have been drilled. Currently production is constrained as it flows to the Akam platform where it is degassed prior to being pumped to the Knock Taggart. In 2006, a second wellhead platform is planned to be installed near the existing platform from which a further four wells are planned in 2006 comprising two horizontal production wells in North Oron and one appraisal and one horizontal production well in Oron West. In addition, an isolated appraisal well is planned in Oron West. A third wellhead is planned to be installed in the second half of 2006 on the southern extension of Oron West from which two water injection wells will be drilled followed by three horizontal production wells in 2007. In order to overcome the production constraint at Akam, a new pipeline from Oron to the Adanga Platform, bypassing Akam, is also planned for 2006. The Corporation anticipates production from the Oron West and North Oron fields to increase to approximately 17 mbbbls/d during 2006.

Akam

The Akam field was discovered in 1980 and has been producing since 1984. In the first nine months of 2005, Akam produced an average of 1.0 mbbbls/d of oil from three deviated wells and one horizontal well with an average watercut of 87 per cent. Oil gravity is 36° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Akam field to be 1.4 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Akam field is located in 15 to 20 m water depth and covers an area of approximately 1,100 acres (4.6 km²) in the central part of OML123. Production is from four stacked "P" sand reservoirs of Miocene age at depths between 4,300 ftss and 6,200 ftss although most of the current production in the Akam field comes from two reservoirs between 4,800 ftss and 5,500 ftss. Some of the Akam accumulations may extend marginally into the adjacent license to the west held by the ExxonMobil/NNPC joint venture.

The Corporation plans to drill one appraisal and one horizontal development well at Akam in mid 2007. Further drilling plans will be contingent on the outcome of this well.

Bogi

The Bogi field was discovered in 1983 and has been producing since 1988. In the first nine months of 2005, Bogi produced an average of 0.4 mbbbls/d of oil from one horizontal well with an average watercut of 42 per cent. Oil gravity is 20° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Bogi field to be 0.3 mmbbls.

The Bogi field is located in water depth of approximately 40 m and covers an area of approximately 150 acres (0.6 km²) in the southern part of OML123. Production is from a 20 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,950 ftss. The eastern flank of the field straddles the international boundary with Cameroon as defined by the International Court of Justice in October 2002. See "Properties and New Ventures — Nigeria Country Discussion — International Relations". As a result, the Bogi Platform is now located in the Disputed Area. No further drilling activity or significant capital expenditures are planned for this field.

Mimbo

The Mimbo field was discovered in 1984 and has been producing since 1989. In the first nine months of 2005, Mimbo produced an average of 0.4 mbbbls/d of oil from one horizontal wells with an average watercut of

32 per cent. Oil gravity is 30° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Mimbo field to be 0.7 mmbbls and gross proved plus probable reserves to be 1.0 mmbbls.

The Mimbo field is located in water depth of approximately 40 m and covers an area of approximately 420 acres (1.7 km²) in the southern part of OML123. Addax Petroleum is producing from a 30 m thick oil rim in the "C-3" reservoir sand of Miocene age at an average depth of 6,910 ftss. No further drilling activity or other capital expenditures are planned for this field.

Ukpam

The Ukpam field was discovered in 1986 and has been producing since 1989. In the first nine months of 2005, Ukpam produced an average of 0.1 mmbbls/d of oil from two wells with an average watercut of 89 per cent. Oil gravity ranges between 38° and 45° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ukpam field to be 0.2 mmbbls and gross proved plus probable reserves to be 2.4 mmbbls.

The Ukpam field is located in 10 m water depth and covers an area of approximately 420 acres (1.7 km²) in the central part of OML123. Addax Petroleum is producing from three stacked reservoirs in the "AC-1", "P-4" and "I" sands of Miocene age at depths between 5,000 ftss and 7,800 ftss. No further drilling activity or other capital expenditures are planned for this field.

Adanga North

The Adanga North field was discovered in 1986 and appraised in 1996, and further appraisal and development plans are in progress. Oil gravity is 19° API. As at September 30, 2005, NSAI estimates gross proved plus probable reserves to be 11.0 mmbbls.

The Adanga North field is located in 10 m water depth and covers an area of approximately 1,100 acres (4.5 km²) in the central part of OML123. Two stacked reservoirs each contain a 18 m thick oil rim with an associated gas cap in good quality sands of Upper Miocene age at depths between 3,300 ftss and 3,650 ftss.

In 2006, the Corporation plans to carry out an extended production test to establish the optimal development plan for the Adanga North field. As part of this process, Addax Petroleum built and installed a wellhead structure from which one appraisal well was drilled in the fourth quarter of 2005 and confirmed the eastern extension of the field. A horizontal well for an extended well test is currently being drilled. If the production test is successful, the field would be developed as a satellite to the Adanga Platform with production expected to start in 2007 at an estimated rate of approximately 12 mmbbls/d. The development plans for the field would include the construction of a four km long pipeline to the Adanga Platform.

Unappraised Discoveries and Exploration

In addition to the existing fields, there are seven unappraised discoveries in OML123 which are the Oron gas discovery drilled in 1975, the Inagha, Adanga West and Ebughu NE-A oil discoveries drilled in 2002 and the Adanga East and Kita North oil discoveries drilled in 2005. Kita North may be a significant discovery as it encountered a total of 100 ft of oil in a reservoir at a depth of 4,750 ftss which tested at 1.0 mmbbls/d of 28° API gravity oil. As at September 30, 2005, NSAI estimates gross proved reserves for Kita North to be 6.9 mmbbls and gross proved plus probable reserves to be 9.2 mmbbls.

The Corporation has concluded an in-depth study of the remaining exploration potential of OML123 based upon full 3D seismic survey and existing well data. The study classed the remaining exploration potential into near field potential clusters, which can be drilled from or which are readily accessible to existing production facilities, and prospect clusters which may require additional platforms and pipelines to connect to existing facilities. Each cluster contains multiple prospects. Four near field potential clusters and five prospect clusters were identified.

Presently, two of the exploration clusters (Inagha and Kita North) have been drilled, both of which discovered oil. The most recent discovery, Kita North, was the most productive. In addition, one of the near field potential clusters has been successfully drilled (Adanga East) and the results are being evaluated. Following on from the recent exploration success on Kita North, the Corporation plans to expand its exploration and appraisal

drilling activity, subject to rig availability, including the Kita North area appraisal of the Oron gas discovery in 2006 and exploration of the Adanga North Graben and Antan prospect clusters in 2006 and 2007.

NSAI reports Addax Petroleum's gross prospective oil resources in OML123 as of September 30, 2005 to be 220 mmbbls (116 mmbbls risked).

Budgeted Capital Expenditures

Capital expenditures for OML123 are budgeted to be \$84 million in the fourth quarter of 2005, comprised of \$28 million for drilling and \$56 million for facilities, and \$383 million in 2006, as discussed below. The budgeted capital expenditures will fund significant infrastructure investment to sustain future production, including the replacement of the Knock Taggart (scheduled to be completed in 2006) and the installation of a centralized gas gathering and gas lift facility (scheduled to be completed in 2007), as well as a two-rig drilling program that includes:

- the ongoing development of the Oron West and North Oron fields;
- the completion of a water injection project in the Adanga field;
- infill and extension drilling in the Adanga and Ebughu fields; and
- appraisal drilling in the Adanga North field and the recently discovered Kita North area.

These expenditures are expected to increase production from approximately 46 mbbls/d in 2005 to approximately 48 mbbls/d in 2006.

The Corporation estimates the total cost through 2007 of the proposed project to supply natural gas to the power plant at Calabar to be \$427 million. Of the total estimated capital expenditure for the proposed project, the Corporation estimates that \$81 million relates to the provision of gas gathering and gas lift infrastructure for associated gas. This \$81 million is included in budgeted capital expenditures and will be the direct responsibility of the Corporation to fund but will be recoverable under the terms of the OML123/124 PSC. Approximately \$55 million of this amount is budgeted to be spent in 2006, with the remainder to be spent in 2007. The balance of the total initial investment of \$346 million is related to non-associated gas production facilities, gas processing and compression facilities and the delivery pipeline to Calabar and is the responsibility of NNPC. Approximately \$264 million of this amount is expected to be spent in the fourth quarter of 2005 and in 2006, with the remainder to be spent in 2007. The Corporation is in discussions with NNPC to clarify the apportionment of the funding responsibility, including a provision whereby the Corporation would carry NNPC's capital investment in exchange for modifications to the OML123/124 PSC, including a temporary increased share of Profit Oil.

Addax Petroleum believes the 220 mmbbls (116 mmbbls risked) of gross prospective oil resources in OML123, as reported by NSAI, provide the Corporation with the opportunity to sustain a sizeable capital expenditure program in OML123 for the near and medium term.

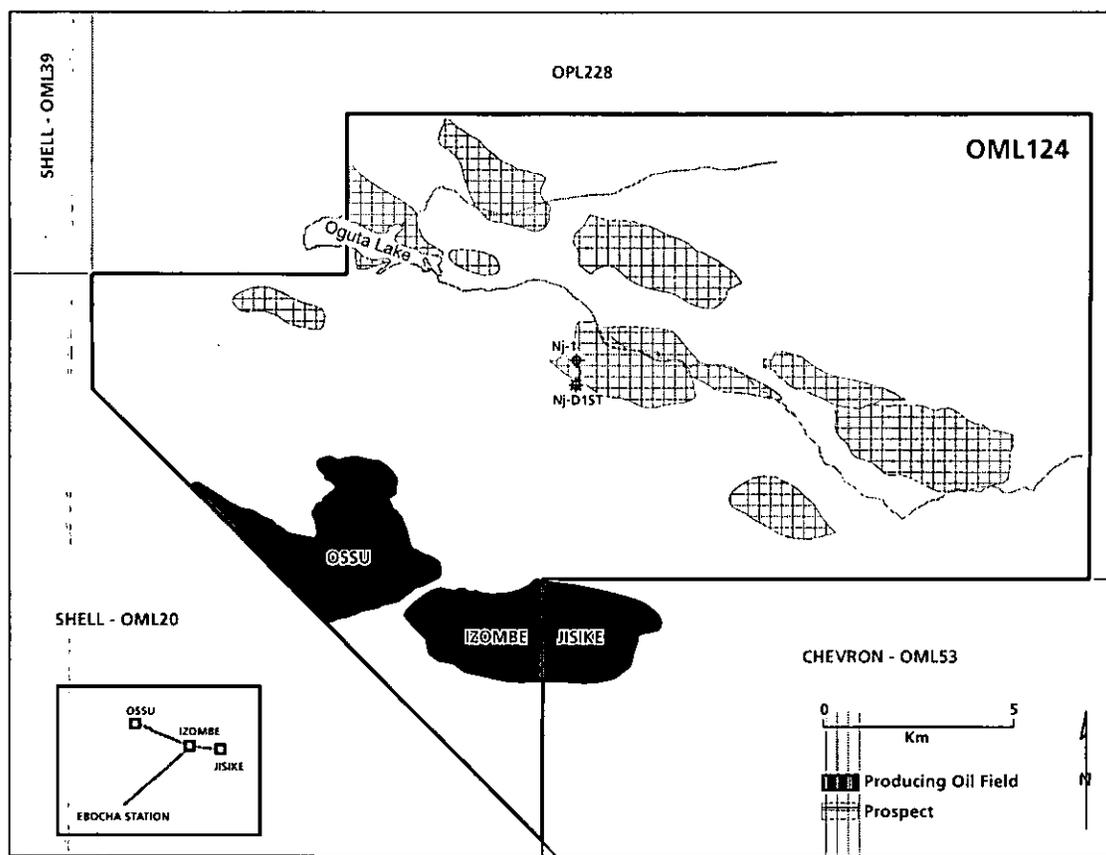

OML124

Overview

OML124 is the Corporation's smallest producing property as measured by reserves and production. For the first nine months of 2005, OML124 produced an average of 3.5 mmbbls/d of oil from ten wells with an average watercut of 84 per cent. Oil gravity ranges between 29° API and 48° API. With the exception of a one week long stoppage to production during September 1999, there has been no unplanned disruption to production from OML124. As at September 30, 2005, NSAI estimates gross proved reserves for OML124 to be 10.0 mmbbls and gross proved plus probable reserves to be 12.6 mmbbls. The Corporation expects production from OML124 to be approximately 4 mmbbls/d in 2006.

OML124 is located onshore in Imo State, approximately 100 km north of Port Harcourt, and covers an area of 74,100 acres (300 km²) on the northeast edge of the Niger Delta. OML124 contains two producing fields, Ossu and Izombe, the latter extending as the Jisike field to the southeast into the adjacent OML53 held by the Chevron/NNPC joint venture. OML124 also contains ten exploration prospects the most attractive of which is Okaka prospect in the southeast part of the property. Total capital expenditures for OML124 are budgeted to be \$9 million in the fourth quarter of 2005 and \$27 million in 2006.

OML124

Production and Reserves

The following table summarizes the production and reserves in OML124.

Field	Number of Wells ⁽¹⁾	Average Oil Production		Gross Oil Reserves ⁽²⁾		
		9 Months Ended September 30, 2005 (bbls/d)	2004 (bbls/d)	Proved (mmbbls)	Probable (mmbbls)	Proved Plus Probable (mmbbls)
Izombe	7	1,810	2,160	5.6	2.0	7.6
Ossu	6	1,700	1,650	4.4	0.6	5.0
Total	13	3,510	3,810	10.0	2.6	12.6

Notes:

(1) Number of wells includes shut-in wells.

(2) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

Production Facilities

The Ossu and Izombe fields are operated as a common production area. Production facilities include the Izombe Flow Station, gas compressors, water injection pumps and three flow lines from Ossu to the Izombe Flow Station. The Corporation has an agreement with a Chevron/NNPC joint venture whereby crude oil produced from the Chevron/NNPC Jisike field is processed at the Izombe Flow Station in return for the payment of a tariff to Addax Petroleum. The Ossu, Izombe and Jisike crudes are all processed at the Izombe Flow Station and transported via an export pipeline to Ebocha. From Ebocha, the oil is transported through the Agip/NNPC joint venture's pipeline to their Brass River Terminal.

At the present time some of the associated gas being produced with the oil from OML124 is re-injected to aid oil production and the remainder is flared. The Corporation together with a consortium of private Nigerian investors, is contemplating the construction of an LPG facility. The Corporation has completed conceptual design studies relating to the supply of gas to and construction of this LPG facility which would be located adjacent to the existing Izombe Flow Station. This project requires a supply of a total of 40 mmcf/d of associated and non-associated gas from the Ossu and Izombe fields. The LPG plant is expected to produce approximately 75 t/d of propane, approximately 75 t/d of butane and approximately 1 mbbbls/d of natural gasoline and approximately 35 mmcf/d of residue lean gas. The Corporation expects that the natural gasoline would be blended with oil at the Izombe Flow Station for export. Butane and some blended propane would be marketed locally. Subject to access to appropriate export facilities, butane and propane may be exported and the residue lean gas would be used for local power generation, as LNG feed stock or re-injected into the Izombe and Ossu fields. See "Properties and New Ventures — Nigeria Properties — OML124 — Budgeted Capital Expenditures".

Fields

Izombe

The Izombe field, discovered in 1974 and producing since 1975, is Addax Petroleum's principal producing field in OML124. In the first nine months of 2005, Izombe produced an average of 1.8 mbbbls/d from six wells with an average watercut of 83 per cent. Oil gravity ranges between 35° and 40° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Izombe field to be 5.6 mmbbls and gross proved plus probable reserves to be 7.6 mmbbls.

The Izombe field is located in a relatively densely populated dry land area covered by farmlands, shrubs and secondary rain forest, at an elevation of 45 to 60 m above mean sea level, and covers an area of approximately 1,600 acres (6.4 km²) in the southern part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 5,300 and 7,400 ftss, but most of the production comes from one reservoir located at approximately 5,400 ftss. Most accumulations extend to the east into the Jisike field operated by Chevron.

In 2006, the Corporation plans to drill an oil production well, a water injection well and to work over an existing oil production well in the Izombe field.

Ossu

The Ossu field was discovered in 1973 and has been producing since 1976. In the first nine months of 2005, Ossu produced an average of 1.7 mbbbls/d from four wells with an average watercut of 85 per cent. Oil gravity ranges between 29° and 48° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Ossu field to be 4.4 mmbbls and gross proved plus probable reserves to be 5.0 mmbbls.

The Ossu field is located approximately 4 km to the west of the Izombe field at an elevation of 25 m above mean sea level in a drowned river valley affected by seasonal flooding which limits the access to the field during the rainy season. The field covers an area of approximately 2,300 acres (9.3 km²) in the south western part of OML124. Production is from four stacked reservoirs in the sands of Early Miocene age at depths between 4,500 and 8,500 ftss, but most of the production comes from three reservoirs at depths between 4,500 ftss and 6,850 ftss. Some accumulations extend to the west into the adjacent OML20, which is operated by the Shell/NNPC joint venture.

In late 2005, the Corporation plans to start a drilling and well work over program, including drilling one appraisal and two oil production wells, and working over two existing oil production wells in 2006 in the Ossu field.

Unappraised Discoveries and Exploration

In 2002, the Corporation concluded a comprehensive acreage and prospect evaluation study based on 3D and 2D seismic surveys and existing well data. Several prospects with possible commercial potential were identified in the north eastern sector of OML124. The Corporation intends to drill the Okaka exploration prospect in 2006, which will be the first exploration well to be drilled by the Corporation in OML124.

NSAI reports Addax Petroleum's gross prospective oil resources in OML124 as of September 30, 2005 to be 32 mmbbls (14 mmbbls risked).

Budgeted Capital Expenditures

Total capital expenditure budgeted for OML124 is \$9 million for the fourth quarter of 2005 and \$27 million for 2006.

In addition to its budgeted capital expenditures for 2006, the Corporation estimates the total investment to complete the contemplated LPG project would be \$94 million of which \$60 million would be incurred by Addax Petroleum to supply feed gas and \$34 million would be incurred by Addax Petroleum and by other private sector investors to fund the construction of the LPG plant. It is expected that private sector investors would hold a 60 per cent interest in the LPG plant and the Corporation would hold the remaining 40 per cent interest. All of the facilities would be constructed and initially operated by Addax Petroleum. The Corporation intends to make a final investment decision regarding the LPG project by the end of the first quarter of 2006. If the Corporation decides to proceed, it expects the plant to be operational in 2007. The Corporation estimates its total share of the capital investment would be approximately \$74 million of which \$58 million is forecasted to be spent by the Corporation in 2006 with the balance of \$16 million to be spent in 2007 after the plant is operational. Of the Corporation's capital expenditure, the \$60 million incurred to supply feed gas would be recoverable over a five year period under the terms of OML123/124 PSC.

OPL90 and OPL225

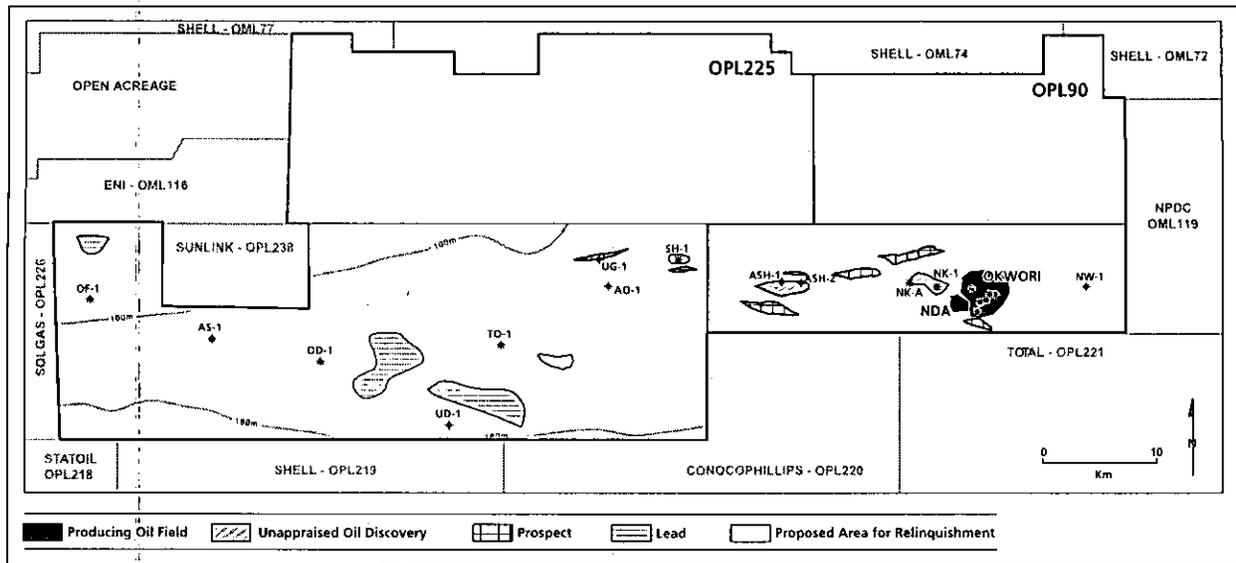

Overview

OPL90 and OPL225 are two contiguous blocks which represent Addax Petroleum's largest Nigerian properties as measured by area and also account for the majority of the Corporation's recent production growth. Production from OPL90 commenced in March 2005 and averaged 20 mbbbls/d for the month of October 2005. In the first nine months of 2005, OPL90 produced an average of 12.6 mbbbls/d of oil from six wells with no watercut. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for OPL90 to be 27.9 mmbbls and gross proved plus probable reserves to be 43.7 mmbbls. As at September 30, 2005,

OPL225 had no reserves or production. The Corporation expects production from OPL90 and OPL225 to be approximately 33 mbbbls/d in 2006.

OPL90 and OPL225 are located 90 km offshore south of Port Harcourt, close to the edge of the continental shelf, in water depths ranging between 50 and 210 m and cover a combined area of 327,200 acres (1,324 km²). The southern half of OPL90 has been completely surveyed by 3D seismic and contains one producing oil field (Okwori), four undeveloped oil discoveries, one of which (Nda) is currently producing from an extended well test and will be developed in 2006, and four exploration prospects. OPL225 has been surveyed principally by 2D seismic and it contains one undeveloped oil discovery, several non-commercial gas discoveries and a number of shallow and deep leads. Addax Petroleum plans to acquire a 800 km² 3D seismic survey across this southern area of OPL225 at the end of 2005. Total capital expenditures for OPL90 and OPL225 are budgeted to be \$68 million in the fourth quarter of 2005 and \$290 million in 2006.

OPL90 and OPL225 Properties

Production and Reserves

The following table summarizes the reserves and production in OPL90 and OPL225. Production from the Okwori field in OPL90 started in March 2005. Production from the Nda field in OPL90 is from an extended well test following which a full field development is planned to take place.

Field	Number of Wells	Average Oil Production		Gross Oil Reserves ⁽¹⁾		
		October 2005 (bbls/d)	9 Months Ended September 30, 2005 (bbls/d)	Proved (mmbbls)	Probable (mmbbls)	Proved Plus Probable (mmbbls)
Okwori	5	16,360	10,080	20.7	12.8	33.5
Nda	1	3,590	2,530	7.2	3.0	10.2
Total	6	19,950	12,610	27.9	15.8	43.7

Note:

(1) Proved and probable reserves as at September 30, 2005 as reported in the Reserve Report under "Forecast Prices and Costs Case".

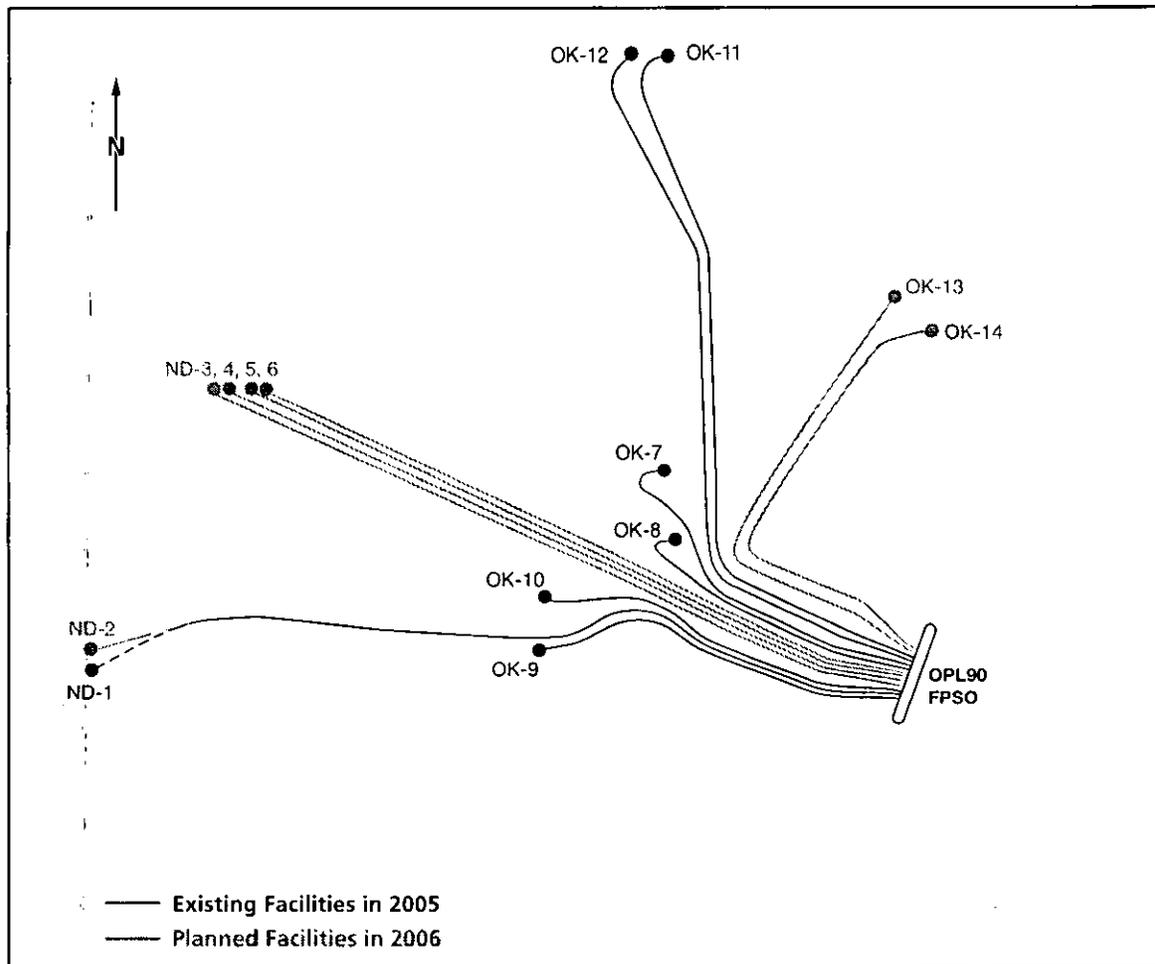

Production Facilities

The Okwori and Nda fields in OPL90 are operated as a common development area. Individual wells in each field are connected to the FPSO Sendje Berge by individual sub-sea flow lines. At the OPL90 FPSO, crude oil is processed to export specifications, stored and offloaded directly to ocean-going tankers.

The OPL90 FPSO has a nameplate processing capacity of 38 mmbbls/d of crude oil, a total liquids (oil and water) processing capacity of 60 mmbbls/d and a storage capacity of approximately two mmbbls of crude oil. The OPL90 FPSO is under a time charter from Sendje Berge Ltd., a company within the Norwegian shipping group Bergesen now owned by Worldwide Shipping of Hong Kong. The term of the charter expires in February 2009, with extension periods of up to an additional four years at the Corporation's option.

The production facilities at OPL90 have been designed to accommodate additional production from future satellite developments, should planned exploration drilling result in commercial oil discoveries. One such discovery, the Nda field, has been producing to the OPL90 production facilities under an extended well test since March 2005 and is awaiting full field development. The Corporation anticipates that throughout 2006 and into 2007 there will be continuous drilling and well hook-up activity on the property.

OPL90 Production Facilities

The Corporation believes that the known associated gas resource on OPL90 is insufficient to justify commercial development. To cease flaring on OPL90, Addax Petroleum has proposed to NNPC to construct a gas gathering pipeline from the OPL90 FPSO to a new gas trunk line to be built by an adjacent operator. Construction of the gas gathering pipeline is expected to take place in 2006 or 2007. The capital expenditures for the gas gathering pipeline will be funded by Addax Petroleum. See "Properties and New Ventures — Nigeria Properties — OPL90 and OPL225 — Budgeted Capital Expenditures".

Fields

Okwori

The Okwori field, discovered in 1972 and appraised in 1973 by Occidental, was further appraised in the mid-1990s by Ashland and declared commercial in 1996. Field development planning was commenced by Ashland at that time, but was suspended when Ashland's Production Sharing Contracts were terminated by a settlement agreement with the Nigerian government in 1998. See "Addax Petroleum — Corporate History".

Addax Petroleum began development of the Okwori field in July 2004 and commenced production from the Okwori field in March 2005. For the month of October 2005, the Okwori field produced an average of 16.4 mmbbls/d of oil from five wells with an average watercut of 3 per cent. Oil gravity ranges between 35° and 38° API. As at September 30, 2005, NSAI estimates gross proved reserves for the Okwori field to be 20.7 mmbbls and gross proved plus probable reserves to be 33.5 mmbbls.

The Okwori field is located in 110 to 150 m water depth and covers approximately 2,700 acres (11 km²) in the southern part of OPL90. The field development plan envisages production from seven stacked reservoirs in the sands of Plio-Miocene age at depths between 5,100 and 9,300 ftss, but the majority of the production is expected to come from two reservoirs (7,000 to 9,300 ftss). The stacked reservoir configuration of the field requires that production wells be selectively completed, choosing the optimum oil zones to be produced.

As of the end of October 2005, six production wells have been successfully drilled on the Okwori field of which five have been placed on production and the sixth is awaiting tie-in to the OPL90 FPSO. All wells have been fitted with downhole expandable sand screens designed to exclude the production of sand dislodged from reservoir rock that may occur. At the end of October 2005, the sand screen in one well had failed and is anticipated to fail shortly in a second well. Remedial treatment of these wells is planned in late 2005 and/or early 2006. The Corporation plans to drill two more development wells to complete the field development plan and is reviewing the methodology for control of sand production. The Corporation plans to complete the Okwori field development drilling program in 2006 and production is expected to average approximately 25 mmbbls/d in 2006.

When the OPL90/225 PSC was awarded to Addax Petroleum in 1998, Total, which held a 50 per cent farm-in interest in Ashland's Production Sharing Contract, was given an option to retain a 50 per cent interest in the area. This option was replaced by a reimbursement agreement between Total and Addax Petroleum dated October 24, 2000, whereby Total is entitled to an eight per cent net profit interest in only the Okwori field.

Nda

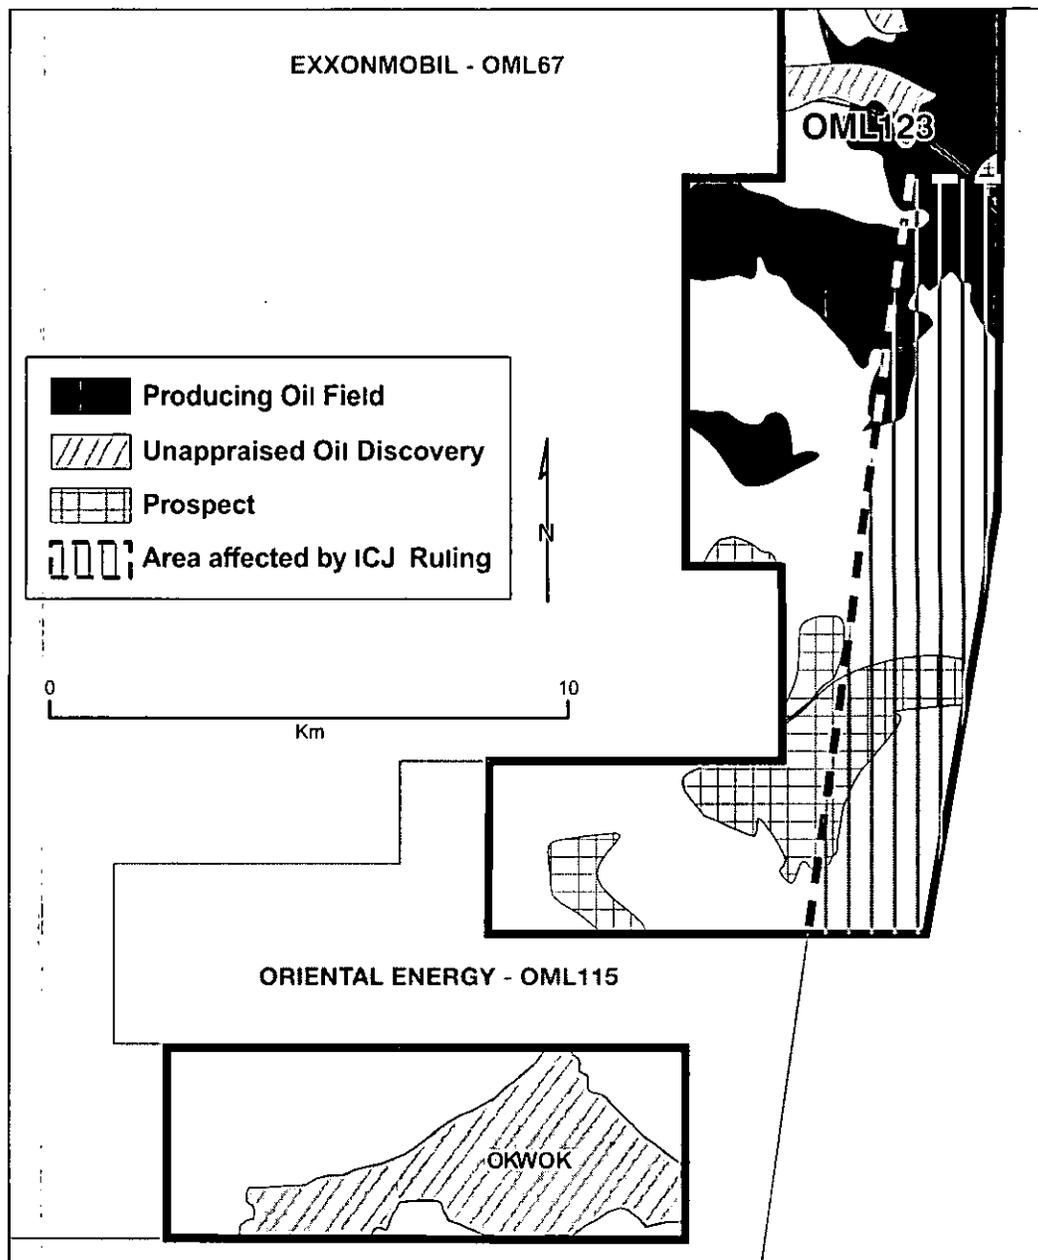

The Nda field was discovered by Addax Petroleum in July 2004. The Nda field is currently producing by means of an extended well test on the first Nda well ("Nda-1") which averaged 3,280 bbls/d in December 2005. The Nda-1 well encountered three oil bearing reservoirs, having gross oil intervals of 19, 31 and 8 m respectively bounded in each instance by individual oil-water contacts. The well is tied back to the OPL90 FPSO and had produced a total of 0.7 mmbbls at September 30, 2005. As at September 30, 2005, based on the Nda-1 well results, NSAI estimated gross proved reserves for the Nda field to be 7.2 mmbbls, gross proved plus probable reserves to be 10.2 mmbbls and gross proved plus probable plus possible reserves to be 19.6 mmbbls.

In December 2005, Addax Petroleum drilled the second well in the Nda field ("Nda-2"), approximately 650 m from Nda-1 with the purpose of further delineating the Nda field reserves and finalizing the Nda field development plan. Nda-2 was drilled up-dip of Nda-1 and encountered oil in the same three stacked reservoirs. The drilling results from the Nda-2 well now demonstrate gross oil column heights in these reservoirs of 62, 73 and 61 m respectively which are in excess of management's expectations prior to drilling the well. Addax Petroleum expects that the December 2005 drilling results for Nda-2 will result in the recategorization of proved, probable and possible reserves for the Nda field and in the addition of reserves in all three categories. The recent drilling results for Nda-2 were not available for review by NSAI in connection with the preparation of the Reserve Report and therefore are not reflected in the Reserve Report.

The Nda field is located adjacent to the Okwori field in a similar water depth and covers approximately 250 acres (1 km²) in the southern part of OPL90. The field will be producing from three stacked reservoirs in the sands of Plio-Miocene age at depths between 6,700 and 8,150 ftss.

The Corporation has finalized a development plan for the Nda field, which has been submitted to the Nigerian government. The field development plan comprises drilling four horizontal wells during 2006,

Okwok Property

In late 2000, the governments of Nigeria and Equatorial Guinea concluded a maritime boundary treaty that removed 62 km² from an Oil Mining Lease held by Oriental Energy that became part of Equatorial Guinea's Block B, the main beneficiary of which was ExxonMobil. Oriental Energy successfully petitioned the Nigerian government for compensation and in October 2001 the Nigerian government approved a compensation area for Oriental Energy in ExxonMobil's OML67 that included the Okwok Property. The farm-in agreement between Oriental Energy and ExxonMobil is yet to be concluded.

In September 2005, Addax Petroleum entered into the Oriental Joint Venture Agreement pursuant to which the Corporation has agreed to acquire a 40 per cent interest in the Okwok Property. The Oriental Joint Venture Agreement will become effective once the farm-in agreement between Oriental Energy and ExxonMobil is signed by the two parties and government approval is received. Pursuant to the Oriental Joint

Venture Agreement, Addax Petroleum will make a cash payment of \$35 million to Oriental Energy and will initially fund all capital and operating costs. During the cost recovery period, the Corporation will be entitled to 80 per cent of production from the Okwok Property until all capital costs have been recovered by the Corporation after which Addax Petroleum and Oriental Energy will be entitled to their pro rata share of production.¹ As broker of the Oriental Joint Venture Agreement, Sovereign Oil & Gas Company II LLC will receive an overriding royalty interest of one per cent of all production from the Okwok Property.

Production and Reserves

There has been no production to date from the Okwok Property. If Addax Petroleum is successful in obtaining its interest in the Okwok Property, the gross contingent oil resources as at September 30, 2005 are reported by NSAI to be 6.7 mmbbls.

Production Facilities

Addax Petroleum believes that there will be significant synergies for the Okwok Property and OML123 as the Okwok Property will be developed using production, storage and offloading facilities on the OML123 FPSO vessel approximately 12 km to the north. Facility sharing in this manner will allow the Corporation to develop the Okwok Property in a cost effective manner while also benefiting unit operating costs at OML123.

Field Description

The Okwok Property was discovered in 1967 by Mobil, with the first well encountering a gross oil bearing interval of approximately 70 ft in two main zones. The second well was drilled in 1968 to appraise a fault block to the east of the discovery well and encountered a gross oil bearing interval of approximately 150 ft. Two further wells have been drilled in the immediate area, the most recent of which was drilled by Oriental Energy and ConocoPhillips in 1993. Both of these wells were drilled on the edge of the main Okwok Property structure and while they only encountered minimal hydrocarbons they are useful in assisting to delineate the structure. None of the wells have been production tested. The Okwok Property has been surveyed by two 3D seismic surveys, the most recent of which was in 2004.

The two main reservoirs are interpreted to be part of the Agbada formation and are of Pliocene age. Reservoir depths vary between 2,750 and 4,000 ftss. Due to the shallow nature of the reservoir, the oil is assumed to have a density of around 20° API. This is supported by a sample taken from an offset well, drilled 10 km to the east of the Okwok Property, which recovered 23° API oil from an interval which correlates with one of the two main zones in the Okwok Property.

Budgeted Capital Expenditures

The development of the Okwok Property is expected to commence in 2006 and the Corporation's capital expenditures are budgeted to be \$72 million in 2006, including the farm-in fee of \$35 million payable by Addax Petroleum to Oriental Energy contingent on the Oriental Joint Venture Agreement becoming effective. The remainder of the budgeted capital expenditures will fund the drilling of three appraisal wells and development planning studies. Subject to appraisal drilling results, the Corporation anticipates the Okwok Property to be developed using a central production processing platform and two satellite wellhead platforms connected by pipelines to the OML123 FPSO. The Corporation's development plan anticipates first oil from the Okwok Property in early 2008.

Oil Sales Arrangements

ABV purchases the Corporation's entitlement of crude oil from OML123, OML124 and OPL90 pursuant to the Crude Oil Supply Agreements. See "Interest of AOG in Material Transactions".

Crude oil produced from OML123 is exported from the Antan Terminal and sold as Antan Blend. The Antan Blend includes oil delivered by the OML114 Parties. The Antan Blend may, in the future, include oil production from the Okwok Property in the event that it is developed by Addax Petroleum.

Crude oil produced from OML124 is transported by pipeline to the Brass River Terminal and commingled with crude oil from several third party oil fields. The resulting blend, known as Brass River Blend, is exported and sold at international prices.

Crude oil produced from OPL90 is exported from the Okwori Terminal and sold as Okwori Blend. The first sale of Okwori Blend took place in June 2005 and to date there have been seven liftings in total. Marketing knowledge of the Okwori Blend is at an early stage. Going forward the Corporation anticipates that the Okwori Blend will sell at a premium relative to the Brent Crude price.

Addax Petroleum Crude Oil Premium/(Discount) to Brent Crude (Volume Weighted)⁽¹⁾

	9 Months Ended September 30, 2005	Year Ended December 31,		
		2004	2003	2002
Sales and Marketing Volumes (mmbbls)				
Antan Blend ⁽²⁾	12.6	13.0	11.8	10.0
Brass River Blend	0.8	1.3	2.2	1.8
Okwori Blend	2.6	-	-	-
Dated Brent Crude Price (\$/bbl)	53.54	38.22	28.84	24.98
Addax Petroleum Average Realized Prices (\$/bbl)				
Antan Blend ⁽²⁾	50.17	36.56	27.49	24.04
Brass River Blend	54.42	39.37	29.10	25.51
Okwori Blend	60.60	-	-	-
Premium/(Discount) to Brent Crude (\$/bbl)⁽¹⁾				
Antan Blend ⁽²⁾	(3.51)	(1.88)	(1.27)	(1.36)
Brass River Blend	0.79	0.49	0.39	0.19
Okwori Blend	0.38	-	-	-

Notes:

- (1) Premium/(Discount) to Brent Crude are reported on a volume weighted basis for both the crude in question and Brent Crude, whereas Dated Brent Crude prices are reported as averages of monthly values for the period. Accordingly, the difference between the reported average realized petroleum prices and Dated Brent Crude prices may not correspond to the Premium/(Discount) to Brent Crude.
- (2) The API gravity of the Antan Blend is dependent on the proportional mix of crudes at any time. Where future individual oil field developments have lower API gravities than the current API gravity of the Antan Blend, then the API gravity of the Antan Blend may be reduced at that time.

Property Boundaries

Under the International Court of Justice ruling of October 2002, the Disputed Area includes a small part of OML123 (8,400 acres, 33.9 km²), including the Bogi Platform. The Joint Border Commission which was set up by the governments of Nigeria and Cameroon to study the implications of the ruling has not yet reached a decision about how the Corporation's operations will be treated. The Disputed Area has been excluded from the acreage and property descriptions in this prospectus. Reserves presented in this prospectus exclude reserves in the Disputed Area except for certain reserves attributable to existing producing wells in the Disputed Area which amount to proved reserves of 0.3 mmbbls. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

In 2003, in accordance with the terms of the OPL90/225 PSC, Addax Petroleum was required to relinquish 50 per cent of the area of OPL90 and OPL225, excluding areas in which petroleum had been discovered in commercial quantities. The Corporation held discussions in 2003 and 2004 with NNPC regarding the acreage to

be relinquished but no formal agreement has been concluded. The area proposed for relinquishment for OPL90 and OPL225 has been excluded from the acreage, property descriptions and reserve and resource estimates in this prospectus except as otherwise stated.

Discussions were also held with NNPC in the same period with regard to the same provisions in the OML123/124 PSC. By certificates issued by NNPC in April 2003, the existing OPL98 and OPL118 were converted into OML123 and OML124 with effect from July 2002. The Corporation has received advice from Nigerian counsel that the formal grant of OML123 and OML124 supercedes these discussions but that further relinquishment will be required on the tenth anniversary of their July 2002 effective date.

Nigeria New Ventures

Overview

Addax Petroleum established a dedicated new ventures team in Nigeria in 2004. This team has made a number of bids and approaches for assets in Nigeria and has recently been successful in organizing and negotiating the Okwok Property transaction and is leading the discussions on the JDZ Block 4 opportunity. The Corporation targets Nigeria new ventures opportunities from three principal sources: (i) new bid rounds, (ii) farm-ins with indigenous Nigerian oil companies and (iii) farm-ins with major international oil and gas companies.

New Bid Rounds

Addax Petroleum participated in the most recent Nigerian bid round that was held in mid 2005 and intends to participate in future bid rounds when they occur. In this most recent bid round, Addax Petroleum finished second in the bidding for two assets and third for another. If the winning bidders do not provide evidence of their financial capability to pay for the signing bonus, Addax Petroleum will likely be invited to take the original position for which it bid but finished second. These assets are OPL135 and OPL280, both of which are onshore blocks close to OML124.

Farm-in to Properties held by Indigenous Nigerian Oil Companies

Indigenous oil companies have gained rights to a number of blocks under the Nigerian government's Marginal Field Development Program, with the 2003 bid round providing rights to a number of new indigenous oil companies. Often such companies seek partners to provide capital and technology needed to develop the properties. Addax Petroleum's Nigeria new ventures team has discussed and continues to discuss a number of these farm-in opportunities with such indigenous oil companies. It is likely that additional blocks will be made available to indigenous oil companies through relinquishment by existing operators and this could provide additional opportunities for the Corporation in Nigeria.

Farm-in or Acquire Properties held by Major International Oil and Gas Companies

The major international oil and gas companies that operate in Nigeria such as Shell, ExxonMobil, Chevron, Total and Agip, through joint ventures with NNPC, hold rights to significant acreage in the country, much of which is unexplored or not fully developed. Opportunities to farm-in or acquire properties in onshore or in shallow water regions are becoming increasingly available as major international oil and gas companies shift their focus to deep-water areas. Addax Petroleum's Nigeria new ventures team has had discussions with most of these major international oil and gas companies and has expressed an interest in taking over their acreage if acceptable terms can be negotiated.

Joint Development Zone

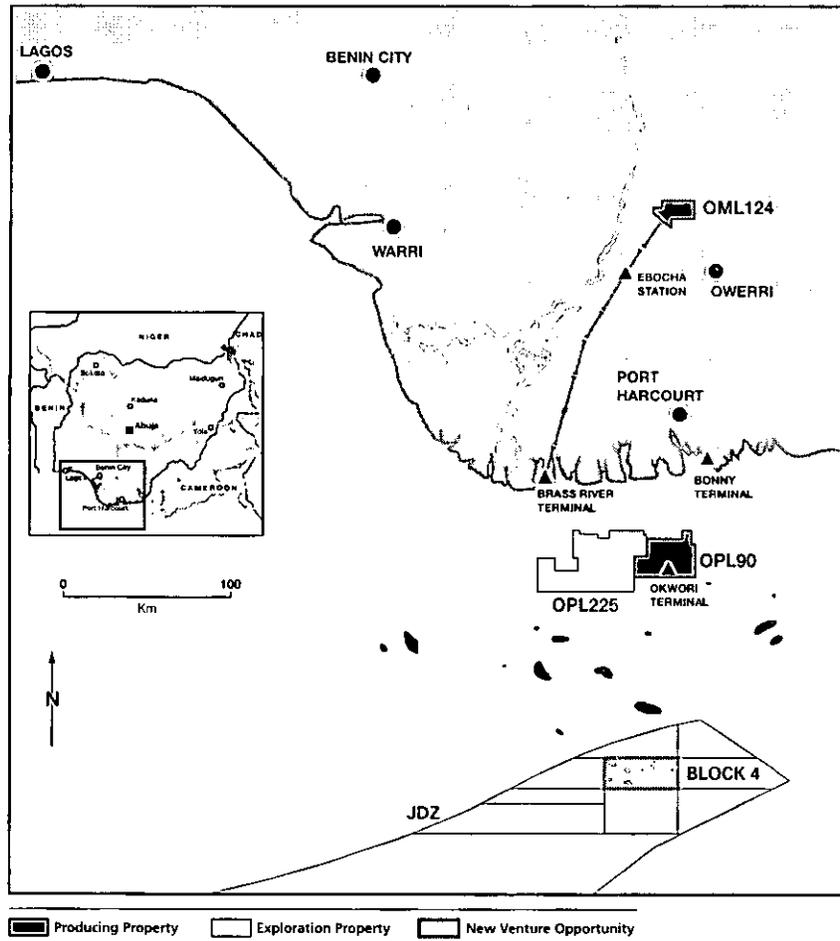

Overview

In 2001, Nigeria and the Democratic Republic of Sao Tome and Principe signed a formal treaty for the joint development of petroleum and other resources in the overlapping area of their respective maritime boundary claims. The treaty established the Joint Development Zone and an administrative body, the Joint Development Authority, to oversee the implementation of the treaty and underlying development plan.

The JDZ covers an area of 34,548 km² with water depths ranging from approximately 1,500 m in the northern part of the JDZ to over 3,500 m at its south western sector.

The first licensing round for the JDZ was announced in April 2003 from which the first Production Sharing Contract was signed in February 2005 for Block 1. The successful consortium to develop Block 1, which paid a signature bonus of \$123 million, included Chevron (51 per cent and operator), ExxonMobil (40 per cent) and Dangote-Energy Equity Resources (nine per cent). A second licensing round for the JDZ was announced in November 2004 which made an additional 5 blocks available to potential investors. The results of the second licensing round were announced in May 2005, with the successful bidders including such companies as Anadarko Petroleum (awarded 51 per cent of Block 3), Noble Energy Inc. and ERHC Energy (jointly awarded 60 per cent of Block 4) and Devon Energy and Pioneer Natural Resources (jointly awarded 65 per cent of Block 2). In addition to the Block 4 Property, the Corporation is in preliminary discussions with some of the successful bidders on other blocks with a view to farming-in to one or more of these blocks.

Joint Development Zone

Note:

(1) This map does not reflect the Corporation's relinquishment proposals for OPL90 and OPL225. See "Properties and New Ventures — Nigeria Properties — Property Boundaries".

Geological Description

The JDZ lies in the Gulf of Guinea which is one of the most prolific hydrocarbon regions in the world. Intensive exploration efforts over the last 35 years in and around the Niger Delta, in particular, have led to a

succession of large discoveries, notably the Bonga, Agbami/Ekoli and Akpo discoveries in Nigeria and Zafiro and Alba in Equatorial Guinea.

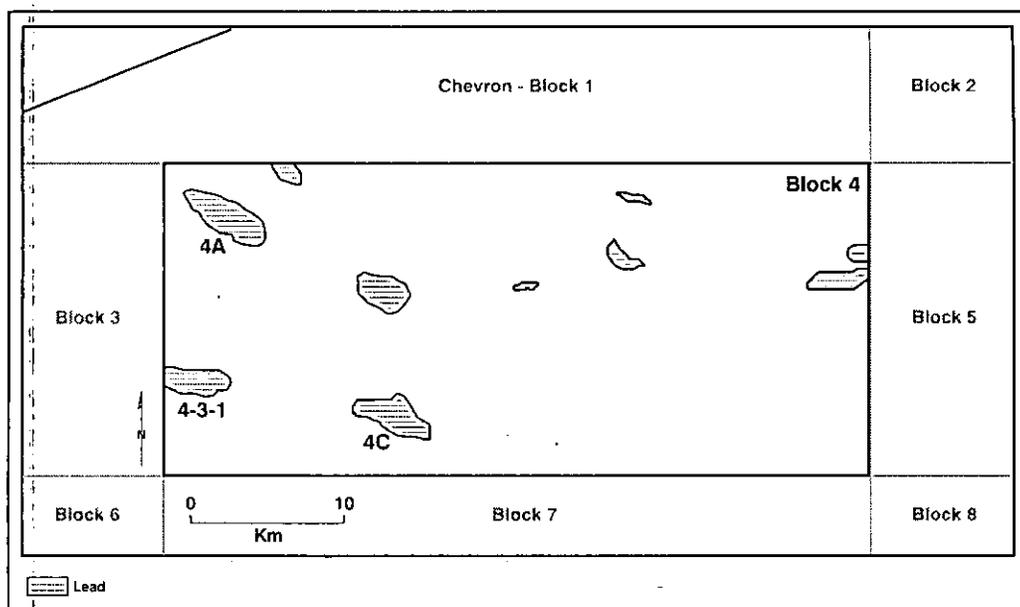

Modern seismic data and improved models of sand distribution indicate that in places prospective acreage can extend up to 300 km from the coastline of Nigeria. Extensive regional 2D and 3D seismic data shot by a number of seismic contractors provide a high quality regional dataset that has provided insight into the region's geological character.

Block 4 Property

Overview

The Block 4 Property is located in the northern end of the JDZ, approximately 170 km south of the Nigerian coastline and approximately 300 km north of the city of Sao Tome. Block 4 covers an area of 211,700 acres (857 km²) in water depths ranging from approximately 1,800 m to 2,200 m.

Block 4 Property

JDZ Agreements

In June 2005, the Joint Development Authority announced that Block 4 would be awarded to ERHC Energy/Noble Energy JDZ (60 per cent), Conoil p.l.c. (20 per cent), Hercules Oil Ltd./Centurion Energy (10 per cent), Godsonic Oil Co. (5 per cent) and Overt Ventures Ltd. (5 per cent). The winning bid provided for a signing bonus of \$90 million and a minimum work program of three exploration wells or a minimum expenditure of \$53 million. In late October 2005, Noble Energy announced that they were withdrawing from the ERHC Energy/Noble Energy JDZ consortium. ERHC Energy entered into a memorandum of understanding with Addax Petroleum in October 2005 pursuant to which Addax Petroleum replaced Noble Energy JDZ as operator for the consortium. In November 2005, Addax Petroleum entered into a participation agreement with ERHC Energy under which it anticipates that it may acquire up to a 33.3 per cent interest in, and become operator of, the Block 4 Property in return for a payment of up to \$18 million and a full carry in respect of ERHC Energy's retained interest. Addax Petroleum would also be required to pay a signature bonus of up to \$23.4 million to the Joint Development Authority. On January 30, 2006, the Joint Development Authority conditionally approved the replacement of the Noble-ERHC consortium with the ERHC-Addax consortium and the designation of Addax Petroleum as operator for the Block 4 Property. A joint operating agreement and

Production Sharing Contract would also have to be negotiated with the other participating parties and, in the case of the Production Sharing Contract, the Joint Development Authority before Block 4 is awarded.

Cameroon

Overview

Cameroon covers a total area of 475,440 km² and is approximately half the size of its western neighbour Nigeria.

Government

Cameroon was formed from a French administered UN trusteeship. In 1961, part of British Cameroon merged with the recently formed independent Cameroon. Cameroon is a republic with a multiparty presidential regime. Opposition parties were legalized in 1990. The current President, Paul Biya, has been in office since 1982 and was last elected with 71 per cent of the vote during the elections held in October 2004. The President is elected by popular vote for a seven-year term. The next elections are due in October 2011. Cameroon has a National Assembly with 180 seats, whose members are elected by direct popular vote to serve five-year terms, though the President can either lengthen or shorten the term of the legislature. The most recent National Assembly elections were held in June 2002.

International Relations

Cameroon is a member of the United Nations, Organization of African Unity, the Commonwealth of Nations and the Monetary and Economic Community of Central Africa. In 2002, the International Court of Justice ruled in favour of Cameroon on the long disputed Cameroon — Nigeria land and maritime boundary. See "Properties and New Ventures — Nigeria Country Discussion — International Relations".

Petroleum Industry

Petroleum exploration activity in Cameroon began in the 1950s and concentrated on the Douala Basin in the south of the country where several oil and gas discoveries were made. In the 1970s, activity switched to the Rio del Rey Basin in the west of the country which now accounts for most of Cameroon's current oil production. The Rio del Rey Basin is the eastern extension of the Niger Delta and all of its oil is produced from the Agbada formation.

Oil production in Cameroon began in 1977 and increased to approximately 170 mbbls/d in 1986 before slowly declining to approximately 62 mbbls/d in 2004. In comparison with its neighbours, oil exploration in Cameroon has been modest and is limited by its lack of access to deep-water offshore acreage given its geographical location. However, there has been renewed activity in recent years with the development of new fields. The major oil producers in Cameroon are Shell and Total.

Ngosso Property

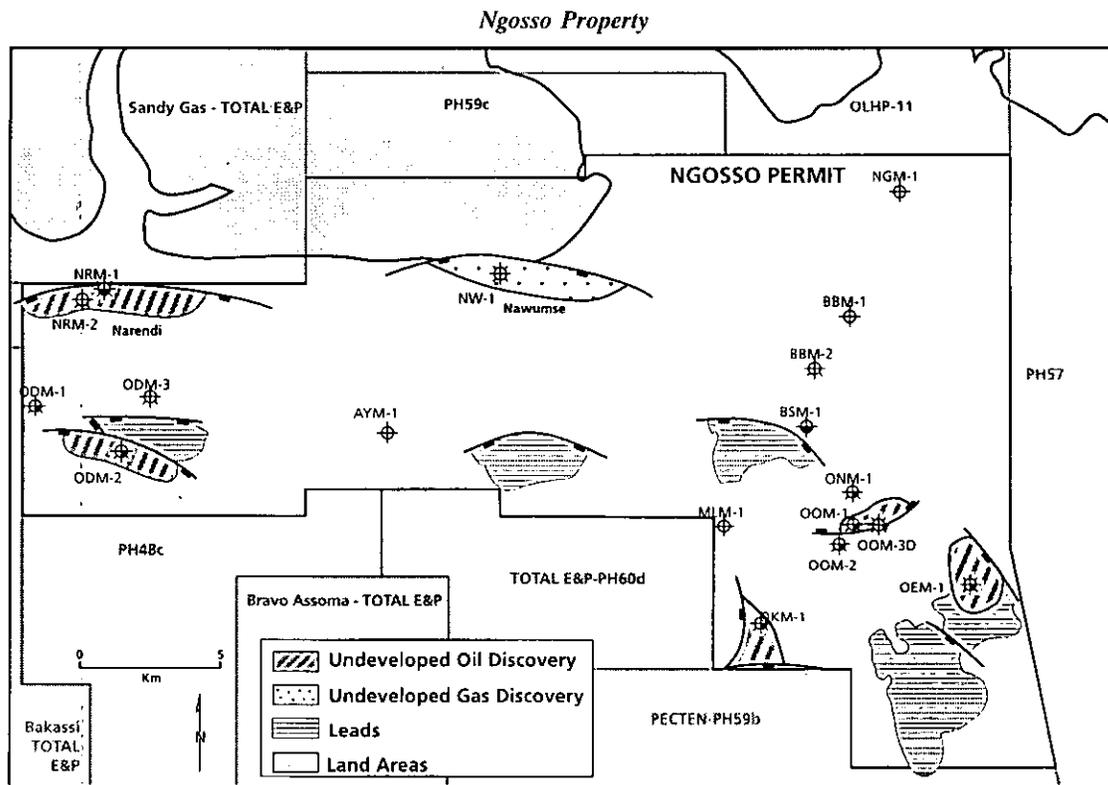

In December 2002, Addax Petroleum, together with Tullow Oil, signed the Ngosso Concession with the Government of Cameroon for the Ngosso Property. Addax Petroleum is the operator of the Ngosso Property, with a 60 per cent working interest. The Ngosso Concession has an initial term of three years with a minimum work commitment of 200 km² of 3D seismic and the drilling of two exploration wells. The Ngosso Concession can be renewed twice for an additional two years per renewal.

The Ngosso Concession's initial three year exploration period officially started in April 2004 but the Cameroonian government has indicated that it is prepared to extend the initial permit by one year in compensation for the delays incurred and official confirmation is awaited. The Cameroonian government has confirmed that the cost of work incurred prior to the Ngosso Concession's effective date will be recognized for tax and other purposes under the Cameroon Concession.

To date, Addax Petroleum has not been able to access part of the Ngosso Property, including the western prospective zone, due to the Nigeria — Cameroon border dispute. See "Properties and New Ventures — Nigeria

Country Discussion — International Relations". The Ngoosso Property itself is not part of the disputed territory, but operations require access to the southern part of the Bakassi Peninsula. The Joint Border Commission between Cameroon and Nigeria had set April 2004 as the period for the transfer of power to a new Cameroonian civil administration for the Bakassi Peninsula, and this should have allowed the Corporation to commence operations in the western part of the Ngoosso Property. As the power transfer process is not complete, the Corporation intends to limit its seismic acquisition activities to the offshore with a minor impact on the coverage. The Corporation plans to acquire two 3D seismic surveys in the western and in the south eastern sectors of the Ngoosso Property between December 2005 and April 2006.

The Ngoosso Property is located in the hydrocarbon prone Rio del Rey Basin, western offshore Cameroon and covers 117,100 gross acres (474 km²). To the east, north and west, the Ngoosso Property has a common border with two concessions operated by Total and with four open acreage areas. To the south, the Ngoosso Property is bordered by two concessions operated by Total and by Shell and by open acreage.

The Ngoosso Property lies adjacent to the shore in water depths of up to eight m. It has similar operational and subsurface geological conditions to the Corporation's OML123, located approximately 20 km to the west. The Ngoosso Property contains several hydrocarbon discoveries but has not seen any exploration activity for more than 20 years. The Corporation intends to evaluate discovered and potential oil and gas accumulations and, if commercial, develop them using proven technology including 3D seismic and horizontal drilling.

The Corporation has carried out a detailed prospectivity evaluation of the acreage based on existing 2D seismic and well data. Two petroleum plays have been penetrated by wells indicating the presence of good quality sand reservoirs. Both plays are characterized by gas and oil discoveries (oil API gravities ranging between 20° to 24° in the shallow play and 40° to 45° in the deep play) and contain a number of remaining leads.

NSAI reports Addax Petroleum's gross prospective oil resources in the Ngoosso Property, as at September 30, 2005, to be 28 mmbbls (19 mmbbls risked).

The Corporation's capital expenditures for Ngosso are budgeted to be \$2 million for the fourth quarter of 2005 for seismic surveys of 170 km² and \$16 million in 2006 which includes \$10 million for seismic surveys of 120 km² and \$6 million for drilling two exploration wells.

Gabon

Overview

Gabon is one of sub-Saharan Africa's wealthier countries due to a relatively small population and substantial oil and mineral reserves.

Government

Gabon is a republic which gained independence from France in 1960. A multiparty political system and a new constitution were introduced in the early 1990s, though President Omar Bongo has been in power since 1967. The President is elected by popular vote for a seven-year term. The Parliament is comprised of the Senate and the National Assembly. The next elections for the National Assembly are scheduled for 2006. The most recent presidential election was held in November 2005 and Senate elections were held in early 2004.

International Relations

Gabon is a member of the United Nations, the Organization of African Unity and many other international organizations. As a proponent of regional economic integration, Gabon and five other countries agreed to form the Monetary and Economic Community of Central Africa to converge their macroeconomic policies, stabilize their common currency, create a common market and harmonize their sectoral policies.

Petroleum Industry

Oil was first discovered in Gabon in the 1950s and since then there has been significant development and exploration activity both onshore and offshore. Gabon's two biggest fields are located onshore. The Gamba field was discovered in 1963 with estimated reserves of 250 mmbbls and the Rabi field was discovered in 1985 with estimated reserves of 1,000 mmbbls.

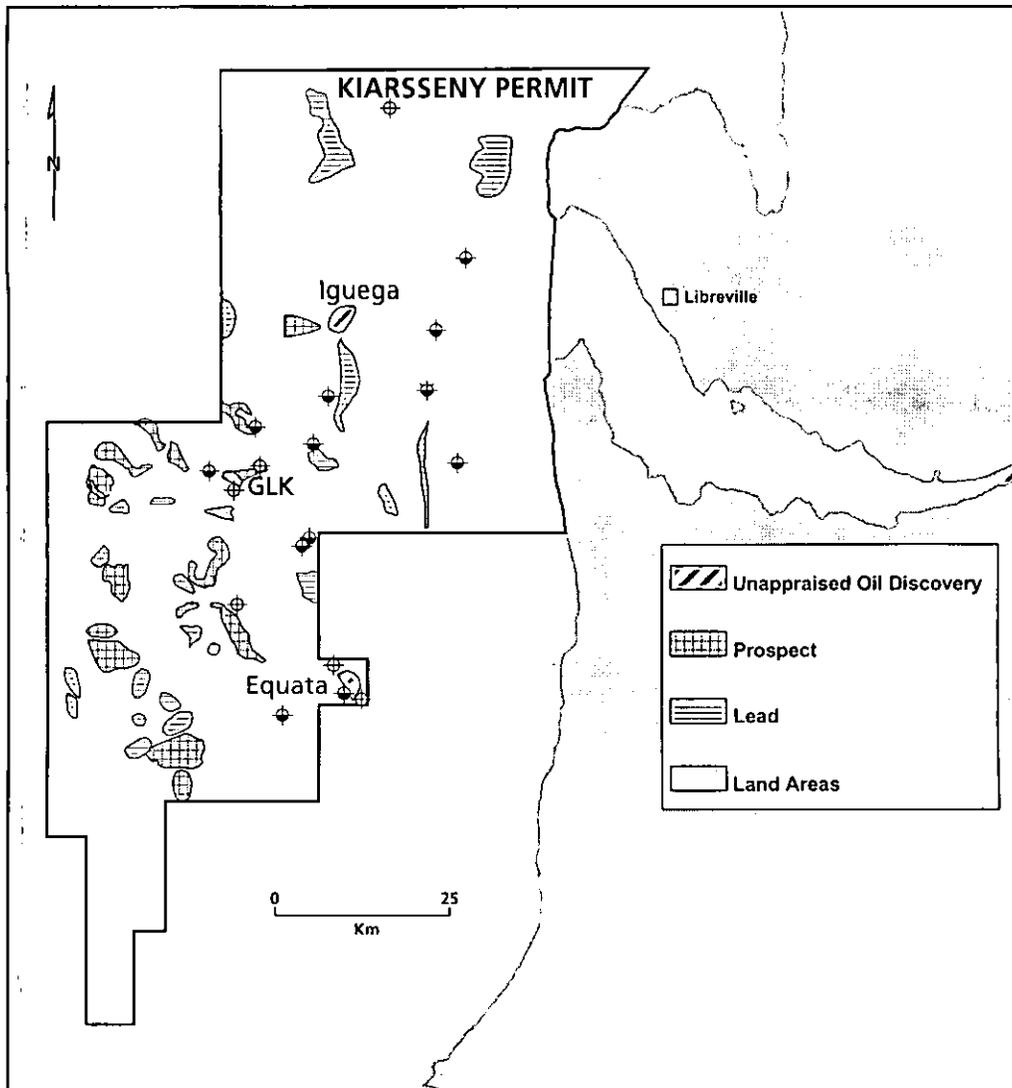

Gabonese oil production first peaked in 1975 at approximately 220 mbbls/d and then reached a new high of approximately 360 mbbls/d in 1996 after a period of decline. Current oil production is approximately 235 mbbls/d, the majority of which is produced by Shell and Total.

Kiarsseny Property

On January 27, 2004, Addax Petroleum signed the Kiarsseny Agreement with Tullow Oil for the acquisition of 42.5 per cent of the Kiarsseny Production Sharing Contract for the Kiarsseny Property. Tullow Oil originally entered into the Kiarsseny Production Sharing Contract with the Government of Gabon in March 2003. In March 2004, Tullow announced that it had reduced its interest to 47.5 per cent through the farm-out of 10 per cent to Sonangol E.P.

The Kiarsseny Property covers an area of 1,345,000 gross acres (5,443 km²) and is located adjacent to shore in the Port Gentil Basin in water depths up to 800 m. It contains three oil discoveries and additional exploration potential. There are 2,643 km² of 3D seismic data, 18,750 km of 2D seismic data and 25 wells in the Kiarsseny Property.

Kiarsseny Property

The Port Gentil Basin contains a prolific hydrocarbon system. The majority of the producing reservoirs are sandstones with good porosities and permeabilities. Oil gravities from major oil fields vary from 20° to 47° API. NSAI reports Addax Petroleum's gross prospective oil resources in the Kiarsseny Property as at September 30, 2005, to be 11.0 mmbbls (10.0 mmbbls risked).

The Kiarsseny Production Sharing Contract is currently in its first exploration phase of four years, ending March 2007, and has a two well commitment. The first commitment well was drilled by Tullow Oil and Addax Petroleum in February 2004 to appraise the Topaze South structure and subsequently a side-track was drilled into the central Topaze compartment. The well failed to prove up sufficient reservoir development in both instances and was therefore abandoned.

The second commitment well was drilled by Tullow Oil in late 2005. The well was unsuccessful as the results indicated likely compartmentalization of the structure which would make the development sub-commercial. The well has been plugged and abandoned. Going forward, any costs incurred in relation to a possible third well shall be borne by the parties in proportion to their participating interests.

An inventory of the remaining exploration potential of the block is currently being prepared following which an exploration target may be selected by the partners for a discretionary well to be drilled in 2006. The Corporation's capital expenditures for Kiarsseny are budgeted to be \$4 million for the fourth quarter of 2005 and \$6 million in 2006 for drilling one exploration well.

Other West Africa New Ventures

Along with the Corporation's properties in Cameroon and Gabon, Addax Petroleum is looking to expand further its activities in the West African Gulf of Guinea region. Additional countries in this target zone include Angola, Equatorial Guinea, Congo and Côte d'Ivoire. Addax Petroleum has made and is continuing to make efforts to gain a position in these countries for the following principal reasons:

- the Gulf of Guinea is a prolific basin with significant opportunities ranging from the onshore, through shallow offshore to deeper water;
- many geological plays are similar to those that the Corporation successfully operates and produces in Nigeria using horizontal drilling and other techniques that can be employed in these other regions; and
- AOG has been involved in trading activities throughout the region and has developed good contacts and a good reputation for its activities.

Addax Petroleum has made efforts to enter into properties in this region in the past primarily through direct negotiations with international companies who hold properties and, to a lesser extent, through direct negotiations with governments. While there are no transactions currently at an advanced stage of negotiations in the region, the Corporation intends to increase its staffing in order to redouble its effort in this regard.

North Africa New Ventures

Addax Petroleum is pursuing opportunities in North Africa, including the countries of Algeria, Libya and Egypt, as a core investment area for the following reasons:

- the presence of proven prolific hydrocarbon basins ranging from Tertiary/Mesozoic (Gulf of Suez, Western Desert, Sirte) to Palaeozoic (Ghadames, Murzuk and a number of basins in Algeria);
- the region's unique strategic position in respect to oil and gas export to major North American and European markets; and
- the relative stability of the political systems in these countries.

Consequently, Addax Petroleum has made, and continues to make, considerable efforts to gain a position in these North African countries. Addax Petroleum has passed the stringent pre-qualification processes and is recognized as a potential operator in Libya and Algeria. The Corporation is currently evaluating several farm-in opportunities and has participated in various bid rounds in several countries. Addax Petroleum has not yet been successful in any of the bid rounds in which it has participated.

Middle East New Ventures

Kurdistan Region of Iraq

In July 2005, Addax Petroleum entered into a farm-in agreement with Genel Enerji A.S. for a potential interest in a Production Sharing Contract to govern the Taq Taq field in the Kurdistan Region of Iraq. The Taq Taq field is located 60 kilometres northeast of the giant Kirkuk oil field and the adjacent city of Kirkuk and 80 kilometres northwest of the city of Sulaimaniyah. The field area of Taq Taq is approximately 680 km².

Under the farm-in agreement with Genel Enerji A.S., Addax Petroleum is committed to expenditures in respect of the Taq Taq field initially of \$30 million and, conditionally, another \$50 million should it acquire any interest in any Production Sharing Contract in respect of the Taq Taq field.

Central and Southern Iraq

Apart from its activities in the Kurdistan Region, Addax Petroleum is currently positioning itself to obtain oil rights in the central and southern parts of Iraq, once the legal framework has been established and the security situation allows the Corporation to work efficiently and safely in the area. To this end, Addax Petroleum intends to enter into a collaboration agreement with the Ministry of Oil of the central Iraqi government to conduct field studies and train Iraqi oil and gas professionals.

Addax Petroleum believes that the future of the Iraqi oil industry will benefit from building-up a strong local, privately owned, industry and is therefore providing financial support to Nawras Oil Services Ltd., an Iraqi registered company that employs a number of former Iraqi Ministry of Oil executives. Nawras Oil Services Ltd. maintains relationships with the Ministry of Oil and is currently representing Addax Petroleum in Baghdad.

Iran

Addax Petroleum has entered into a study agreement with the National Iranian Oil Company. Under this agreement, Addax Petroleum, together with representatives of the National Iranian Oil Company, will study two undeveloped fields located offshore Iran. The study is expected to be completed within the next 12 months. Neither the activities under the study agreement nor any future activities based in Iran will be financed with the proceeds of this offering. All such Iranian activities will be financed with funds from other sources.

FISCAL TERMS

Nigeria

Addax Petroleum's interests in OML123 and OML124 and OPL90 and OPL225 are governed by Production Sharing Contracts with NNPC. The Corporation's proposed interest in the Okwok Property is governed by a Production Sharing Contract and will be subject to the terms of the Oriental Joint Venture Agreement and, once implemented, the Nigerian Marginal Field Terms. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Production Sharing Contracts

In May 1998, the Corporation and NNPC entered into a Production Sharing Contract covering OML123 and OML124 and a Production Sharing Contract covering OPL90 and OPL225. These contracts are supplemented by the provisions of the *Petroleum Act*, and the regulations thereunder, and the *PPT Act*. The fiscal terms of the Production Sharing Contracts were modified by the terms of the letter entitled "Fiscal Regimes for Onshore and Shallow Offshore PSC", issued on November 21, 2001 by the Office of the Presidential Adviser on Petroleum and Energy with retroactive effect to January 1, 2000. Both of the Corporation's Nigerian Production Sharing Contracts have a term of 20 years expiring in May 2018.

Under each of its Nigerian Production Sharing Contracts, Addax Petroleum bears the development and exploration risk for the properties concerned and funds all of the necessary capital expenditures. In return, the Corporation is entitled to sell sufficient oil to recover its capital expenditures and operating costs and to have a designated share of oil production remaining after the payment of royalties and taxes. Each of the Corporation's Nigerian Production Sharing Contracts impose minimum work obligations and Addax Petroleum has fulfilled the minimum work obligations. Taxation of each Production Sharing Contract is calculated independently of Addax Petroleum's other Production Sharing Contract and as a result, capital expenditure recovery is available to the extent of the profitability of the particular Production Sharing Contract on which the capital expenditures were incurred.

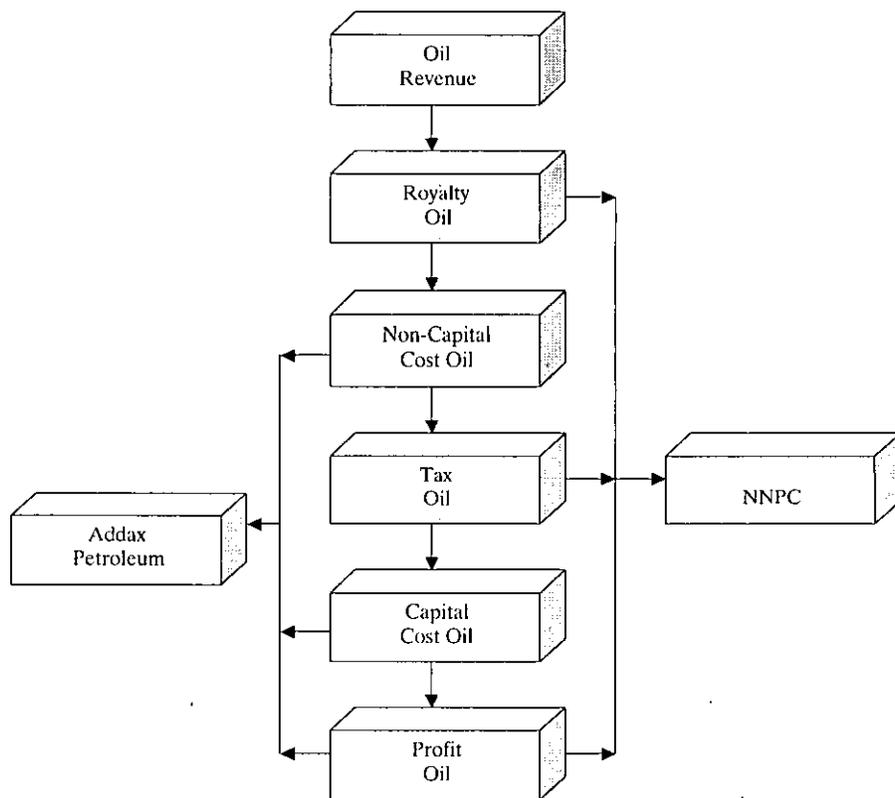

Oil produced under the Nigerian Production Sharing Contracts is notionally allocated to one of four categories in the following order.

1. Royalty Oil
2. Cost Oil

3. Tax Oil
4. Profit Oil

Royalty Oil and Tax Oil are allocated to NNPC while Cost Oil is allocated to Addax Petroleum. Profit Oil is shared between NNPC and Addax Petroleum. The Production Sharing Contracts provide for each party to lift and sell its oil entitlement, though NNPC can request that Addax Petroleum lift and sell on its behalf.

Allocation of Oil Production under the PSCs

The proportion of production that is designated for each of Royalty Oil, Cost Oil, Tax Oil and Profit Oil in a particular time period is influenced by oil prices, production levels, operating costs, capital expenditures and costs and allowances carried forward from previous periods in accordance with the terms of the Production Sharing Contracts. The fiscal terms have the effect of reducing the percentage of revenues paid as Tax Oil during periods of lower oil prices and increasing such percentage during periods of higher oil prices. For purposes of illustration, the tables below show the proportions of production designated as Royalty Oil, Cost Oil, Tax Oil and Profit Oil under the Production Sharing Contracts for OML123 and OML124 and OPL90 and OPL225 for the nine months ended September 30, 2005. Please refer to Note 9 to the Consolidated Financial Statements of Addax Petroleum N.V. for additional information.

**OML123/124 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	50.80	—	—	100
Royalty Oil and other levies ⁽²⁾	4.94	4.94	—	10
Cost Oil	14.33	—	14.33	28
Tax Oil	18.38	18.38	—	36
Profit Oil	13.15	4.23	8.92	26

**OPL90/225 PSC — Allocation of Oil Production
for the 9 months ended September 30, 2005⁽³⁾**

<u>Allocation</u>	<u>Total</u> (\$/bbl)	<u>Government Share⁽¹⁾</u> (\$/bbl)	<u>Addax Petroleum</u> (\$/bbl)	<u>Allocation Share</u> (%)
Average Realizable Price ⁽¹⁾	60.60	—	—	100
Royalty Oil and other levies ⁽²⁾	4.80	4.80	—	8
Cost Oil	53.31	—	53.31	88
Tax Oil	2.49	2.49	—	4
Profit Oil	—	—	—	—

Notes:

- (1) The tax accounts and the financial accounts use different revenue recognition methods.
- (2) Other levies include the NDDC levy and education tax.
- (3) Production from OPL90 began in March 2005. There was no production from OPL225 in 2005.

The calculation of the different categories of oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

<u>Water Depth</u>	<u>Royalty Oil Rates Field Range of Production (bbls/d)</u>					
	<u><2,000</u> (%)	<u>2,000-5,000</u> (%)	<u>5,000-10,000</u> (%)	<u>10,000-15,000</u> (%)	<u>15,000-25,000</u> (%)	<u>>25,000</u> (%)
Onshore	5.0	7.5	15.0	20.0	20.0	20.0
<100	2.5	2.5	7.5	12.5	18.5	18.5
100-200	1.5	1.5	3.0	5.0	10.0	16.7

Royalty Oil is accounted for on a monthly basis.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below). These levies are paid in cash to the relevant Nigerian authority.

Cost Oil is allocated to Addax Petroleum in such an amount as to enable the recovery of all recoverable costs. The accounting procedure attached to the Production Sharing Contracts divides costs into two categories: non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Historically, under the Production Sharing Contracts, Addax Petroleum has recovered approximately 80 per cent of all drilling and seismic expenditures in the fiscal period in which they are incurred. Capital costs are depreciated over a five year period at 20 per cent straight-line starting in the year of first production, except for the fifth year which is depreciated at 19 per cent. All costs prior to the first lifting on a Production Sharing Contract are capitalized.

Maximum Cost Oil available is calculated as total production less Royalty Oil. Cost Oil is calculated on a monthly basis and any excess costs are carried forward to subsequent months or years. As at September 30, 2005, the Cost Oil balances, including capital depreciation carried forward to future years, were as set out in the following table.

	Cost Oil Balances					
	2005	2006	2007	2008	2009	2010
	(\$million)					
OML123/124 PSC	40.5	37.8	29.0	16.4	5.2	-
OPL90/225 PSC ⁽¹⁾	67.4	67.4	67.4	67.4	64.0	-

Note:

(1) Includes \$10.2 million of expenditure by previous contractor.

Tax Oil is calculated after deducting Royalty Oil and Cost Oil. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Corporation's Nigerian Production Sharing Contracts is 60 per cent. In the event that after the deduction of capital allowances and capital investment allowances the tax to be paid is zero, a 15 per cent tax charge is made on the taxable amount before the deduction of certain capital allowances and capital investment allowances. This currently applies to the OPL90/225 PSC. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 40 per cent of offshore capital expenditures and 25 per cent of onshore capital expenditures.

Due to the capital expenditure on the OPL90/225 PSC, there are unutilized capital investment allowances of \$120.6 million as of September 30, 2005. There are no unutilized capital investment allowances for the OML123/124 PSC.

The Corporation's Nigerian Production Sharing Contracts also contain a tax inversion penalty which is designed to encourage oil companies to contain operating costs. The tax inversion penalty for production rates less than 50 mbbls/d is calculated at 25 per cent of operating costs in excess of \$7.50/bbl. For production rates more than 50 mbbls/d, the tax inversion penalty is calculated at 25 per cent of operating costs above \$5.00/bbl. Addax Petroleum's average production from the OML123/124 PSC exceeded 50 mbbls/d for the year 2005. Addax Petroleum estimates that its maximum exposure to the tax inversion penalty is \$6.5 million for 2005.

Profit Oil is the oil remaining after deducting Royalty Oil, Cost Oil and Tax Oil. Profit Oil is shared between NNPC and Addax Petroleum on a sliding scale based on monthly production from the respective Nigerian Production Sharing Contracts. The varying allocations between NNPC and Addax Petroleum are applied on an incremental sliding scale basis.

Profit Oil Sliding Scale for the OML123/124 PSC

<u>Monthly Average Production from OML123 and OML124 (mbbls/d)</u>	<u>NNPC Share</u>	<u>Addax Petroleum Share</u>
	(%)	(%)
<40	30	70
≥40 and <75	45	55
≥75 and <100	55	45
≥100	60	40

Profit Oil Sliding Scale for the OPL90/225 PSC

<u>Monthly Average Production from OPL90 and OPL225 (mbbls/d)</u>	<u>NNPC Share</u>	<u>Addax Petroleum Share</u>
	(%)	(%)
<40	20	80
≥40 and <75	35	65
≥75 and <100	45	55
≥100	50	50

The following example illustrates how oil is allocated between the four categories under the Corporation's Nigerian Production Sharing Contracts. The example compares two scenarios each with annual revenues of \$200, annual operating costs of \$20 and no loss or allowances carried forward. For the purposes of the illustration, Royalty Oil is assumed to be levied at five per cent, NDDC levy at three per cent, education tax at two per cent, Tax Oil at 60 per cent and NNPC's share of Profit Oil at 30 per cent. The impact of capital expenditures of \$100 in Year 1 has an after tax and Profit Oil cash flow effect of only \$70 reduction in Year 1 and an increase of almost \$15 in the following four years such that the aggregate incremental cash flow reduction over the five year period is approximately \$10, assuming no revenue benefit arising from the investment. The following table has been included as an example only and actual results may vary materially.

		Without Capital Expenditure		With Capital Expenditure	
		Year 1	Years 2 to 5	Year 1	Years 2 to 5
Tax Oil Computation:					
	Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i>	non-capital costs	20.0	20.0	20.0	20.0
<i>less</i>	Royalty Oil	10.0	10.0	10.0	10.0
<i>less</i>	NDDC levy	0.6	0.6	3.6	0.6
<i>yields</i>	Assessable Profit	169.4	169.4	166.4	169.4
<i>less</i>	education tax	3.4	3.4	3.3	3.4
<i>yields</i>	Adjusted Assessable Profit / (Loss)	166.0	166.0	163.1	166.0
<i>less</i>	capital allowances	0.0	0.0	20.0	20.0
<i>less</i>	investment tax allowance	0.0	0.0	40.0	0.0
<i>times</i>	Tax Oil rate	60%	60%	60%	60%
<i>yields</i>	Tax Oil	99.6	99.6	61.8	87.6
Contractor Cash Flow Computation:					
	Total PSC Revenue	200.0	200.0	200.0	200.0
<i>less</i>	Royalty Oil	10.0	10.0	10.0	10.0

	NDDC levy and education tax	4.0	4.0	6.9	4.0
	Government Total	133.5	133.5	103.1	119.1

Between the commencement of its activities under the Nigerian Production Sharing Contracts until the end of 2003, Addax Petroleum lifted and sold all of NNPC's oil on their behalf but since the beginning of 2004, NNPC has lifted its entitlement. Under the Corporation's Nigerian Production Sharing Contracts, oil is valued

based upon the appropriate "Realizable Price". The "Realizable Price" is equivalent to the Official Selling Price which is a price issued on a monthly basis by NNPC and is calculated by NNPC to equate to the prevailing international price in arms length transactions, taking into account the properties of each crude blend. The Okwori Blend is being jointly marketed by Addax Petroleum and NNPC for the first six months or 10 liftings, whichever is longer, commencing June 2005. After this joint marketing period, NNPC will calculate and issue an Official Selling Price on a monthly basis for the Okwori Blend "Realizable Price".

Nigerian Marginal Fields

The Okwok Property is subject to the provisions of the *Petroleum Act* and the regulations thereunder, and the *PPT Act*. The fiscal terms of Nigerian Marginal Fields are the subject of legislative proposals to encourage development. The Nigerian Marginal Fields comprise a number of ring-fenced fields located on concessions already awarded to joint ventures between international oil companies and NNPC and which have reserves booked to the Nigerian Department of Petroleum Resources and have remained un-produced for a period of over 10 years. The Nigerian Marginal Fields are assigned to indigenous Nigerian oil companies who conclude farm-in agreements with the joint ventures and can, in turn, farm-out to other operators.

The Nigerian Marginal Fields are subject to Royalty Oil and Tax Oil payable to government agencies.

The calculation of Royalty Oil and Tax Oil is discussed below.

Royalty Oil is calculated on a field by field basis and varies with the field's production rate and the depth of water. For each level of the field's production a specific royalty rate is applied on an incremental sliding scale basis.

Anticipated Royalty Oil Rates for the Okwok Property Field Range of Production (mbbls/d)						
<2	2-5	5-10	10-15	15-25	25	
(%)	(%)	(%)	(%)	(%)	(%)	
2.5	2.5	7.5	12.5	18.5	18.5	

Royalty Oil is accounted for on a monthly basis and paid within 60 days of the end of the chargeable period.

Other levies include the payments to the NDDC levy, calculated as three per cent of budgeted operating costs and capital expenditures, and education tax, calculated as two per cent of assessable profit for Tax Oil (see below).

Tax Oil is calculated after deducting Royalty Oil and non-capital costs and capital costs. Non-capital costs are expensed and include operating costs, a head office overhead allowance, interest on loans approved by NNPC, gas flaring charges, license fees, customs duties, intangible drilling costs, geological and geophysical surveys, exploration and appraisal drilling and funded abandonment provisions. Capital costs are depreciated over a five year period at 20 per cent on straight-line basis starting in the first year of production. The calculation of Tax Oil is specified by the *PPT Act* and the applicable rate for the Nigerian Marginal Fields is anticipated to be 55 per cent. The accounting period for Tax Oil is a calendar year. Taxable profit is equal to revenue less royalties, non-capital costs, capital depreciation and an investment tax allowance. The investment tax allowance is calculated as an uplift of 10 per cent of capital expenditures for offshore fields where the water depth is less than 100 m.

In addition to the fiscal terms described above, Addax Petroleum's interest in the Okwok Property is subject to the terms and conditions of the Oriental Joint Venture Agreement. See "Properties and New Ventures — Nigeria Properties — Okwok Property".

Cameroon

Addax Petroleum has a 60 per cent interest in, and operates, the Ngosso Concession. Tullow Oil holds the remaining 40 per cent interest. The Government of Cameroon has the right to participate as a joint venturer in any development in the Ngosso Property with a participating interest of up to 25 per cent. Should the Government of Cameroon choose to participate in development of the Ngosso Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil or gas fields within the contract area, production will be subject to royalties and taxes. Royalties vary with annual average production and are calculated on an incremental sliding scale basis as follows.

<u>Annual Production Per Contract Area</u> (mboe/d)	<u>Rate</u> (%)
≤ 5	2.5
> 5 and ≤ 10	5.0
> 10 and ≤ 20	10.0
> 20	12.5

A corporate income tax rate of 40 per cent applies to profits in excess of operating costs and capital expenditures.

There is an additional petroleum duty of 12.5 per cent payable in case the "R" Factor (ratio of cumulative net revenues/cumulative investments) reaches more than 1.5. The additional petroleum duty will be increased to 20 per cent in case "R" is greater than 2.5.

The Ngosso Concession also contains provisions for signature and production bonuses and training fees for Cameroonian nationals.

Gabon

Addax Petroleum has a 42.5 per cent interest in the Kiarsseny Production Sharing Contract. Tullow Oil holds a 47.5 per cent interest and Sonangol E.P. holds the remaining 10 per cent interest. The Government of Gabon has the right to participate as a partner in any development under the Kiarsseny Production Sharing Contract with a participating interest of five per cent. Should the Government of Gabon choose to participate in development of the Kiarsseny Property, they will be responsible for their share of the operating costs and capital expenditures.

In the event of the development of oil fields, the Kiarsseny Production Sharing Contract divides production into Royalty Oil, Cost Oil and Profit Oil. Addax Petroleum and the other Kiarsseny Production Sharing Contract parties will be entitled to lift the Cost Oil and a share of Profit Oil.

Royalty Oil will be calculated on a monthly basis per production area. The rates vary with water depth and production levels on an incremental sliding scale basis as follows.

Royalty Oil Rates

<u>Water Depth</u> (m)	<u>Monthly Average Production</u> (mboe/d)	<u>Rate</u> (%)
< 100	≤ 10	2.0
	> 10 and ≤ 15	3.0
	> 15 and ≤ 20	5.0
	> 20 and ≤ 30	7.5
	> 30	10.0
≥ 100	≤ 15	2.0
	> 15 and ≤ 25	3.0
	> 25 and ≤ 35	5.0
	> 35 and ≤ 55	7.5
	> 55	10.0

After the deduction of Royalty Oil, up to 75 per cent of remaining production will be used to recover all costs for exploration, development and production activities under the Kiarsseny Production Sharing Contract.
